have you called recently?

In what we affectionately refer to as the good old days, when the studio was made up of a more or less infinite number of interconnected bits, upgrading was a fairly simple process. If you needed more channels, you bought a bigger mixer or an expander; if you needed more tracks, you bought a bigger multitrack recorder, and if you wanted more effects or processors, you bought more boxes. With the possible exception of the multitrack recorder and mixer, you never had to sell anything unless you got tired of it, because, as any studio owner knows, you can never have too much 'stuff'. Manufacturers of rack systems flourished, jack-plug designers bought villas in the Bahamas, and everybody was happy. Then came the revolution.

Progress has now brought us the tapeless, integrated recording system based around the inexpensive home computer. You no longer need all that hardware — one computer, a couple of cards and a CD-ROM will do everything your old studio did, and more. However, progress doesn't move at a linear rate: it accelerates, sweeping along all before it. It's taken over 100 million years for man to evolve to the stage where he can program a VCR and actually record the film he intended to rather than ending up with the last half of yesterday's *News At Ten* plus the first 20 minutes of a documentary on restoring garden gnomes. Yet this triumph may be short-lived, because the computers upon which we rely so heavily are often obsolete before the software upgrade that we bought them to run is even available in a useable form.

In the early days of computer audio, expensive hardware did all the tough work, leaving the computer the job of looking after the mouse, updating the screen and composing the odd interesting but meaningless error message. Then, as computers got faster, it became possible to make them record audio, manipulate MIDI, mix audio and generate digital effects, all at the same time. (They also learnt how to generate more frequent and more convoluted error messages.) The concept is obviously very appealing because, with no additional hardware other than, possibly, a

multi-channel breakout box and a MIDI interface, the user can have a complete automated MIDI studio. MIDI instruments and samplers are also computers of sorts, so why not give the computer that job to do as well?

Very soon you get to the state where even the fastest computer is falling over through overwork. So you consider

upgrading, but it's not like buying another synth or a second effects unit: this time you need a bigger, faster computer. In theory you can upgrade the processor, but then you find that you need more memory, a bigger, faster hard drive, more cache, a different type of motherboard, more slots... and before you know it, a brand-new computer is easily the cheapest option.

But you know you'll have to pay through the nose for a state-of-the-art computer, and even Intel are saying a Pentium Pro MMX200 will be the entry-level machine before Christmas, with a street price of £700, so you decide to wait. By next spring, anything less than a 166Mhz Pentium MMXs will be destined for the car boot sale, to sit alongside those Sinclair Spectrums and Commodore Vic 20s. Unfortunately, the software writers don't wait — they carry on competing by adding more and more features to their programs so that the lucky few with 400MHz HyperPentiums and 20Gb drives will be able to do even more improbable things at the same time. I don't pretend to know the answer, but to come from an era where a good 24-track recorder could be made to last 15 years to a situation where your entire setup needs replacing every six to nine months doesn't seem all that much like progress to me. And remember, the process is still accelerating: by this time next year (maybe the year after), your SOS dropping through the door may double as a reminder that it's time to pop out for a new computer and an updated suite of software.

Life's Hard

I am sure Paul Wiffen knows more about hard disk recording than I do, but I could not help feeling led up the garden path by his review of the Vestax HDRV8 (SOS March 1997). As someone who upgraded to hard disk recording last year — with a Fostex DMT8 — I was surprised to read his glowing appraisal of a piece of hardware which costs £2300 in its basic form, yet does not appear to have a significant number of hardware functions when compared to other machines at almost half the price.

Although it only records on four tracks at once, my Fostex DMT8 also supports non-destructive edits with instant undo, pipes the master mix (or any other combination of tracks) through the digital out for true digital mastering, allows for five separate songs on the hard disk, and, yes, it feels just like a tape recorder. It can't bounce in the digital domain, but it is equipped with a solid hands-on mixer, which may be a bit easier to use than a finger and jog wheel job for each individual function of each track for the HDRV8 (though some

might prefer the parameter memory that gives you). No arguments about sound quality in either case, since having no data compression means that it can sound as good as you let it.

The point is that my machine now costs £1199 retail, with a somewhat scaled-down version available for £1099, or a rackmount for £1499. Yet, reading Mr Wiffen's review, it appears that £2300 is a steal; virtually no negative points are listed, and we only find in the small print that the optional SCSI card would cost another £440. Don't get me wrong: I'm not denouncing or promoting either product. I'm sure the HDRV8 is a good machine, and the DMT8 is not perfect. This letter is about unbiased reviewing.

Thomas Kunze
Monmouthshire

Paul Wiffen replies: *Mr Kunze says that the HDRV8 "does not appear to have a significant number of additions to machines at almost half the price" and then immediately admits that his DMT8 is unable to record all eight tracks at once or bounce in the digital domain, and has no SCSI option (although Fostex have just launched a £199 SCSI board for the DMT8). On top of this, although I have never examined the DMT8 in detail, I believe its mixer is analogue and has no automation facility and therefore cannot be used in automated all-digital productions, as can the HDRV8. I also believe its recording time is unexpandable (unless you add the optional SCSI card). Other expansions, like the ADAT interface, are also unavailable. We obviously disagree on the meaning of the word "significant". Are these not significant additional features? I would have thought so.*

I am not criticising the DMT8 (I certainly would want to investigate its facilities more before venturing an evaluation) but merely trying to point to reasons why the Vestax is higher priced. When reviewing the HDRV8, I had in mind machines with much higher price tags which provided the same or fewer facilities. No letters in defence of such machines have been forwarded to me, so I must still conclude that in the ranks of true 8-track hard disk recorders with an all-digital pathway for bouncing/mixing, the HDRV8 is good value for money. I am especially impressed by its expandability and I wanted to draw attention to the excellent work of one designer whose valiant attempts to produce high-

quality tools at reasonable prices have impressed me personally. If Mr Kunze is happy with his DMT8, that's excellent: I congratulate him on his wise buying decision.

All I was trying to do in the HDRV8 review was alert those with that sort of budget that the machine stacks up well against more expensive models with the same spec. If they then choose to buy something else, I have at least brought the unit to their attention, which is part of a reviewer's job. All I try to do is get people to look past their preconceptions about certain manufacturers' brand names and examine more carefully what they can get for their money. If Mr Kunze has done that, he should be in his studio making music with his purchase, not pointing the finger at me for recommending something else for consideration.

Divide & Conquer

I am in the process of updating my home studio setup with a Fostex D80 hard disk recorder, but before I go ahead and spend all the cash I need to know whether there is a way of hooking it up to my Yamaha ProMix 01 using a patchbay. As you may know, the ProMix 01 doesn't have any tape outs, but I'd (understandably) like to hang on to it. Your help would be greatly appreciated.

Cameron
London

Paul White replies: *This isn't an easy thing to do, as the ProMix 01 isn't designed as a multitrack mixer and isn't*

over-generous with its ins and outs. However, I've often thought that it would be nice to have an 01 permanently connected to the multitrack outs, and use a good-quality channel or small mixer to feed signals into the recorder. For example, you could use a little Mackie 12:2 or Spirit Folio to feed in two groups, plus as many insert sends (direct outs) feeding individual tracks as you like. With a setup like this, you get the simplicity of analogue for recording, and the flexibility of digital for mixing. What could be better?

Voice of Reason

We use our recording booth purely for voice-overs, but we cannot seem to get very good levels to DAT. The mic is a Neumann TLM193 which hangs in front of the speaker; this is sent to a Symetrix 528E voice processor, which then feeds the processed signal to a Sony PCM2600 DAT recorder via the analogue XLR inputs. Even without any processing (compression and so on) we cannot seem to get a maximum signal of more than 12dB to the DAT without distortion from the Symetrix preamp or output stage. Even in these situations the levels are scarcely any higher. Is there something we've missed, or is this just the best level possible from our mic? Dave Morgan via email

Hugh Robjohns replies: *This sounds like a simple line-up problem, which I believe is caused by the poor output capability of the 528E. The Symetrix*

provides 60dB of microphone gain, which should be more than enough for a sensibly placed condenser mic in a voice booth. However, Gary Ashton, the technical director at Fuzion (01392 882222), the UK distributor of Symetrix products, tells me that the 528E runs on 15V rails internally, so its maximum audio output level will be lower than most professional gear. The Symetrix is calibrated at the factory so that a reading of 0dB VU on its meter produces an audio output signal of +4dBu, but there's only another 6dB of headroom above this before the 528E starts to clip, giving a maximum clean output level of about +10dBu; most pro gear doesn't clip until +18dBu or 22dBu.

The Sony PCM2600 is set up at the factory for +4dBu to equate to -20dBFS (dB Full Scale, a digital audio measurement reference) on its digital meters, so I can quite believe that the Symetrix is sounding nasty while you only see peaks of -12dBFS on the DAT. You will be pleased to know that there is an easy solution to your problem. The PCM2600 has adjustable input sensitivity on its analogue inputs, via a pair of trimmers above the XLR sockets. These

offer a 16dB gain range and will allow the +4dBu reference output of the Symetrix to be aligned anywhere you like between -20dBFS and -4dBFS. In your case, I would suggest turning the trimmers almost all the way up so that suitably controlled speech from the Symetrix approaches a level on the DAT that you feel comfortable with (peaks in the range of -10dBFS to -6dBFS). Be careful not to make the DAT input too sensitive, or you will risk digital overloads, and take care to balance the gain of the two channels accurately (the PCM2600's display provides 0.1dB accuracy).

Just for your information, EBU-standard DAT line-up levels equates +4dBu to -14dBFS (the Sony is aligned to the American standard of -20dBFS) and you may find that just having the machine professionally re-aligned to this format produces DAT tapes at a more acceptable level. Talk to Dan Page at HHB Communications (0181 962 5000) about having the PCM2600 tweaked.

For further information on recording speech, see my article 'Speech Therapy: Recording the Spoken Voice' in the January 1997 issue.

Balanced Approach

I might be stating the unbelievably obvious, but I seem to have hit upon a simple way of exploiting my mixing console's balanced inputs, even when running unbalanced equipment into it. This is provided the sound source in question has multiple outputs, such as a sampler whose four outs are configured as stereo pairs.

Recently, upon connecting such a unit, I found there to be a small amount of operating noise, plus a little unavoidable earth hum which refused to be cured. This wasn't a problem for general use, but when a lot of gain was required at the mixer end, it became a little more noticeable. The console — a Behringer Eurodesk — has a normal balanced TRS configuration on its inputs. By connecting the first stereo pair to the tip and the sleeve and the second pair to the ring and the sleeve, any noise which appears in both pairs is cancelled out in the mix. This is, of course, provided that both pairs of channels are at roughly the same gain and fader position, although the effect is still achievable to a lesser degree if they aren't. Obviously, if the same actual sample appears at both pairs of outs, it too will be

cancelled out!

When committing samples to tape, or when only one pair of outs is actually carrying sounds, I've found that the effect can be fine-tuned by boosting the offending frequencies on the second pair of outs, and increasing their level in the mix until the noise from the first pair disappears. This offers the bonus of eliminating the small, but inevitable, increase in channel hiss from the second pair.

As far as I'm aware, reversing the phase of the signal doesn't alter the sound quality.

Many thanks for the only consistently good hi-tech music mag.
Gary White
Herefordshire

Paul White replies: *It sounds like you've hit on a perfectly sensible and valid way to cancel noise — but only providing you're dealing with uncorrelated sources. If you try to do this with two halves of a stereo signal, or two sounds sharing the same effect, something is likely to get cancelled out that you'd rather not lose, but when the two signals are truly independent, it should work fine. Thanks for the tip.*

Clunk Click

I have recently noticed that each time I start my MIDI sequencer, I get annoying clicks through my monitors. The clicks are heard each time MIDI information is sent either from my sequencer (Atari ST with *Breakthru v2*), or when I hit a key on my Cheetah MK5V master keyboard. The clicks are most noticeable with my Yamaha TG100 sound module turned down and my amp turned up. I recently changed my keyboard to a Korg DSS1, but the clicks remain, and even moving the mod and pitchbend wheels produces clicks. How can I remedy the situation?

Paul Lennon
Northampton

Paul White replies: *I've only heard something like this once before, and on that occasion it was caused by a mutual dislike between a Kawai K1 and an Alesis mixer. Placing a DI box between the offending synth and the mixer cured it. Other things to suspect are MIDI interfaces and expander ports that don't have proper opto-isolators, and equipment with missing earths or inadvertently swapped live and neutral wires. Unfortunately, sorting these things out always tends to be a bit of a detective job, so try unplugging things from your system to find out what the common element is. By the way, you didn't say what kind of mixer you were using! Noises will always be worst with modules turned down and amps turned up, but it's a good way to track down gremlins.*

MORE BUSES, MORE PREAMPS, MORE EQ, MORE FEATURES. INTRODUCING THE NEW CR1604-VLZ.

Five years of user input, new materials, new technologies and the soul of our 8-Bus...at a super-low price.

TRIM control on the channel strip! 60dB total mic gain; -10dB "virtual pad" for line inputs.

6 AUX SENDS per ch. Aux 1 & 2 switch-able pre/post. Post-fader Aux 3-4/5-6 selectable via Shift switch.

HI EQ. ±15dB shelving at 12kHz.

SWEAPABLE MIDRANGE. Wide, musical peaking EQ with 100Hz to 8kHz range. ±15dB range.

LO EQ. ±15dB shelving at 80Hz.

LOW CUT FILTER is a must for live sound and acoustic (microphone) recording. Sharp, 18dB/octave @ 75Hz high-pass filter lets you add Lo shelving EQ to vocals without boosting undesirable mic thumps, stage rumble, wind noise, P-pops, etc.

PAN control with constant loudness to maintain stereo perspective.

MUTE switch. **MUTE & OVERLOAD LED.** -20dB SIGNAL PRESENT & SOLO LED.

SOLO. In-place AFL or PFL.

BUS ASSIGN for Subs 1-2, 3-4 & Main L/R.

60MM FADERS with 8-Bus log taper; special lip seal & long-life wiper material.

The original CR-1604 defined the modern compact mixer. Now we've "raised the standard" by adding over 20 new features like true 4-bus design, our famous mic preamps on every channel, flexible routing and monitoring, and swept mid EQ — for just scarcely more than the original CR-1604. Call for a free 40-page brochure.

5-WAY PHYSICAL CONFIGURATION via our famous rotating input/output "pod." In minutes you can switch the CR1604-VLZ between ultra-compact 8-rack space configuration with pod to back ①, rackmount jacks-to-top ② or tabletop/ jacks-to-back ③. Optional RotoPod-VLZ bracket places input/output jacks on same plane as the controls (tabletop ④ or rackmount ⑤).

MONO OUTPUT (bal./ unbal.) has separate level control.

RCA TAPE inputs and outputs- (unbalanced).

Separate **CONTROL ROOM OUTPUT** (bal./unbal.).

DIRECT OUTPUTS (bal./unbal.) channels 1-8.

SUBMASTER OUTPUTS (bal./unbal.).

16 STUDIO-GRADE MIC PREAMPS means the new CR1604-VLZ actually costs less than our classic CR-1604 & XLR10 expander combination!

VLZ (Very Low Impedance) CIRCUITRY developed for our 8-Bus consoles, further reduces noise and crosstalk in critical signal path areas.

SOLID STEEL main chassis. **SEALED** rotary controls.

AUX SEND 1 & 2 MASTERS.

Stereo **AUX RETURNS 1 & 2** with 20dB gain above Unity for boosting weak effects.

EFFECTS TO MONITORS controls fold Aux Return 1 & 2 back into Aux Sends 1 & 2 so that on-stage performers can hear effects.

AUX SEND 1 & 2 SOLO switches with LEDs.

Stereo **AUX RETURNS 3 & 4.**

Aux Return 3 **ASSIGN SWITCHES** to Main Mix, Subs 1 & 2 or Subs 3 & 4.

Aux Return 4 **ASSIGN** to Control Rm/Phones.

CONTROL ROOM/PHONES level control.

TAPE INPUT LEVEL control and **TAPE TO MAIN MIX** switch.

SWITCHING MATRIX. This fantastic creative feature lets you route any combination of Tape, Subs 1 & 2, Subs 3 & 4 or Main Mix to Control Room/Phones bus. Lets you create custom headphone or broadcast mixes, monitor 2-track output or route a cue/click track to phones, create a second stereo main output with its own level control & more (covered in the extensive manual).

Global **SOLO** level control.

Global **AFL/PFL SOLO** switch.

SUB ASSIGN to Left or Right Main Mix.

MAIN MIX FADER.

BNC lamp socket.

Global **AUX RETURN SOLO** with LED.

LED METERS with -30 to +28 range & **LEVEL SET LED.**

RUDE SOLO LED.

HEADPHONE output.

60mm SUB-MASTER log-taper faders.

BUILT-IN power supply.

PHANTOM POWER switch.

Studio-quality **DISCRETE MIC PREAMP** on every channel.

Pre-fader **INSERT** on every ch.

Super Modal

I am writing concerning a comment made by Andrew Parry in his 'Better by Design' article on control room acoustics in January's *Sound On Sound*. While I found the article both articulate and informative, I have to disagree with an assumption he makes with regard to the modal distribution in rooms conforming to ratios such as the Bolt ratios he mentions. I understood (from a section on room acoustics in *Handbook for Sound Engineers: The New Audio Cyclopedia*, published by Sams, and my own calculations) that although these ratios do offer a logical way of starting a design for a room from scratch, they are also not to be relied upon without first calculating the third-octave band modal distributions for the 'actual' dimensions, and therefore the volume, of the room.

It would seem unfortunate if people constructing their own studios were to use these ratios without first understanding their great fallibility. Generally speaking, the larger a room, the better the modal distribution is likely to be with regard to sounds in the musical spectrum of frequencies — about 40Hz to 20kHz. It is possible to calculate modal distributions for a room with dimensions quite dissimilar to those by Bolt, either large or small, and still get results. It is also possible, however, to calculate modal distribution for a large room based on these ratios and get a bad result. I felt that this should be pointed out, as I can see hundreds of DIY studio designers rushing out to their local DIY store to buy breeze block, cement, timber and gypsum board for their Bolt ratio room designs, only to find, upon completion, that an extremely irritating 'honk' accompanies the music played back over monitors costing a couple of grand that are flat down to 35Hz.

I would like to end on a less critical note by agreeing that ESS (Early Sound Scattering) in general does seem to be a logical way forward with regard to studio design, especially given its practical and financial accessibility when compared to other solutions. Indeed, if you consider that nearfield or closefield monitors are often, nowadays, a studio's sole monitoring source, it would seem a good idea to implement large amounts of diffusion in such studios — firstly to counteract room characteristics that are present even when listening to nearfields, and secondly to increase the perceived 'size' of the soundfield that such monitors produce when being used for tracking,

checking the mix with the band, and so on.

Mark Easton
Marky's Music
Dorset

Andrew Parry replies: *Mr Easton makes a valid point — that there is rather more to getting the bottom end right than simply making it fit an ideal ratio. However, the method he describes for predicting the third-octave modal distribution doesn't go very far towards solving the problem. The method was first propounded by Oscar Bonello in 1979's A New Criterion for the Distribution of Normal Room Modes at a time when computing was in its infancy. In order to save on computing time, Bonello made a simplifying assumption — namely that all modes would exhibit similar decay times and so be equally damped, with uniform bandwidth and intensity, and that it would be sufficient to know only the number of modes falling within any third-octave band to know the steady-state response in that band.*

For this assumption to hold true in practice, a control room would need to be uniformly treated on all surfaces, which, for practical reasons, isn't possible. For the method to have any real value, it therefore becomes necessary to calculate the decay time of each individual mode. It is then possible to plot the individual mode, in order to extract its level and bandwidth. The spectral density of the response can then be plotted and examined for holes and peaks. Even this extended evaluation is far from perfect, as account ought to be taken of the relative phases in any overlapping regions, and this will vary from point to point in space.

The formula for the frequencies of individual modes was given in the article, although those for one- and two-dimensional reverb times were omitted, as was the relationship between modal decay time, level and bandwidth. Algorithms for computing these values are quite complicated, and in many cases it is sufficient to estimate the density by eye from a plot of decay times versus log frequency.

The article was never intended as a full course in studio design, and I didn't feel that it would hold readers' attention sufficiently if this area were discussed in such detail. My main intention was to inform the reader of the role of the acoustical designer, and in particular to throw some light on the suns that need to be done even on projects where the budget is limited. I do concede, however, that, for a few readers, the section on room shape may have been over-simplified.

GAME OVER

in Britain using 21st century manufacturing techniques and the highest quality components, for the same price as a cheap imitation.

Wallow in the combination of digital audio quality, thoughtful design, attention to detail and value for money that's made Spirit mixers so sought after.

All of which leaves you with just one choice.

Mix it with Spirit. Game Over!

There used to be a choice: quality or price.

Your heart wanted a Spirit but your budget may have forced you to compromise on a cheaper, lower quality mixer.

That was until we decided to make our Folio Range even more cost effective.

So now you can take home a mixer that's conceived by one of the world's most respected designers and built

Spirit products have won countless awards, many of them voted by the people who actually use them. If after you've read through the main feature lists below you still need convincing, visit your Spirit dealer and compare them for yourself. You'll soon discover there's no contest.

FOLIO Notepad

£149
UK RRP inc VAT

Spirit's Classic "Personal" 10 Input Mixer

- 4 Mono Mic/Line Channels with 2-band EQ and Phantom Power available
- 2 Stereo Inputs, RIAA switchable to take turntables
- Post-Fade Aux Send on every input
- Dedicated Stereo Effects Return and 2-Track Return

FOLIO

14/2: £299
UK RRP inc VAT

16/2: £349
UK RRP inc VAT

Multipurpose Mixer in 14/2 and 16/2 Frame Sizes

- 6 or 8 Mono Inputs with Inserts and Ultramic™ Preamps providing 60dB of gain range, plus 4 Stereo Inputs
- British 3-band EQ on mono inputs with Swept Mid, plus steep 18dB/Octave High Pass Filters
- 100mm Faders throughout
- 3 Auxes allowing 2 Pre-Fader + 1 Post-Fader or 2 Post-Fader + 1 Pre-Fader
- Rackmount Option

FOLIO (Sx)

20 Input 4-Bus Mixer for Live or Studio Work

- 12 Mono Inputs with Inserts and Ultramic™ Preamps giving 60dB of gain range
- British 3-band EQ on mono inputs with Swept Mid, plus steep 18dB/Octave High Pass Filters
- Pre/Post Switchable Direct Outs on inputs 1-8
- Up to 18 Outputs
- 2 Subgroup Outputs
- 3 Auxes allowing 2 Pre-Fader + 1 Post-Fader or 2 Post-Fader + 1 Pre-Fader
- 100mm Faders throughout
- 4 Stereo Inputs
- Rackmount Option

£479
UK RRP inc VAT

Crosstalk

Chips with Everything

I've just read the article on upgrading PCs in April's *Sound On Sound*, and I feel that it contained one or two misleading suggestions. I recently constructed a budget PC hard disk recording system using *SAW Plus v3.3*, *Sound Forge 4.0a* and *Cubase Audio*. The card is a borrowed Turtle Beach Tropez, although I'm aiming for an Event Electronic Darla PCI card when it's released.

The points I want to pick up regard the Cyrix P166+ CPU and the disk drive choice of Quantum Fireball. I've spoken to many manufacturers about using this processor, and it is definitely not recommended for hard disk recording or effects processing, for just the reason mentioned in the article — its floating-point calculation performance. Sonic Foundry have tested it and were of the opinion that whilst it would be fine to use with *Sound Forge*, its performance would be roughly equivalent to an Intel Pentium 100. Steinberg were of the same opinion. In nine out of ten situations the Cyrix chip outperforms Intel equivalents, but unfortunately most modern music software is the one in ten that doesn't like Cyrix-style architecture.

Secondly, the Quantum Fireball drive is no longer a good choice for audio, due to a change in spec which has resulted in a reduction of the spindle speed.

David Puttick
London

Having bought a PC to stand alongside my Mac, I was interested to read Martin Walker's recent article on PC upgrades. I also decided to get a Cyrix P166+ as a cost-effective option, upgrading my cheap SB16 sound card to a AWE64 at the same time — the spec claims compatibility with a Pentium 90 or better. And then my problems started. The Cyrix P166+ is higher than a P90 isn't it? In a word, no. The AWE64 needs an Intel processor or you will only get 32 voices and not the expected 64. As far as the AWE64 software installer is concerned, a Cyrix P166+ is a fast 486, not a Pentium. Please tell any unsuspecting PC upgraders that maybe Cyrix isn't such a bargain after all with some of the more popular soundcards. I was lucky, since my dealer gave me a good deal on an Intel processor swap, but some may not.

Steve Bell
via email

Martin Walker replies: *I made further comments about the Cyrix P166+ processor in May's PC Notes, but its floating point performance is a drawback. However, I've never heard of comparisons with a Pentium 100 before. The Cubase Audio performance test shows that my machine is capable of the maximum eight stereo*

audio tracks. Sound Forge runs several of the Waves plug-ins quite easily in real time (apart from the Trueverb, which needs a more powerful processor altogether), and WaveLab 1.5 will run three or four simultaneous effects blocks. In general, I am happy with its performance. The point I was trying to make in the upgrade feature was that an equivalent Pentium processor will cost more than double the price of a P166+, and an MMX version three times as much. I would not like people to go away with the impression that the Cyrix P166+ is a cheap equivalent to a Pentium in all cases.

Regarding the Quantum Fireball hard drives, you've found the Achilles heel of all monthly magazines — by the time they are published, the information may already be slightly out of date. In this case, Quantum have recently replaced their Fireball range with an identically named series with a lower spindle speed (4500rpm). I won't discuss any other drives here, as they may be obsolete by the time you read this!

And now to the second Cyrix P166+ query. I really seem to have stirred up a hornet's nest with this one. Although I mentioned the AWE64 problem in May's PC Notes, it is worth reiterating that there are several issues at stake here. When any software checks for a Pentium processor, it normally does so by looking for certain combinations of internal bytes, or the result of a specific internal function. If this isn't found, then unless specific checks are made for a Cyrix chip the software assumes that a 486 processor is present. This doesn't mean that the Cyrix chip is equivalent to a 486, just that the software assumes that anything but an Intel Pentium must be an Intel 486.

The fact that the AWE64 only gives 32 voices

with a Cyrix processor is a totally different problem. After trying to achieve acceptable performance with Cyrix processors and the WaveSynth/WaveGuide feature of the AWE64 (which uses a lot of real-time floating-point arithmetic), Creative Labs decided that the Cyrix would just not run their software fast enough without slowing down overall system performance, so if the AWE64 software specifically detects a Cyrix processor it will not run. Nearly all other software (including Cubase and Logic Audio) should run quite happily with a Cyrix.

Since the whole Cyrix question has turned into a bit of a minefield, I am going to try to produce some actual figures. I currently use a Cyrix P166+ processor, and my local PC supplier has kindly loaned me a Pentium 166MHz and a Pentium MMX 166MHz processor. Look out for a forthcoming feature where I will be highlighting components that potentially cause bottlenecks in PC hard disk recording, including rough-and-ready performance comparisons for these three processors running a selection of music software. I hope this will resolve once and for all the question of whether a Cyrix P166+ is equivalent to a 90/100MHz Pentium — or not, as the case may be!

Non-Standard Standard

With reference to Bob Townley's letter in May's *Crosstalk*, the reason he is having problems dumping samples from an Akai S950 to his Yamaha SY85 is that the S950's sample dump format is slightly different from MIDI Sample Dump Standard in a number of minor ways. All of Akai's samplers up to the S1000 use this older pre-SDS format, which originated (I think) on the Prophet 2000. If you used a

generic software sample editor which understands the Akai format (such as Microdeal's *Replay 16* on the Atari) to get the sample, you would be able to re-transmit it in correct MIDI SDS format to the SY85.

I hope this sheds some light on the problem.

Tom Newton

Our customers' comments

"Ghost is Killer! Classic fat British EQ like you've always dreamed of. And the faders are awesome...the taper on them is as smooth as anything I've ever used. Incredible. Ghost has just about everything I look for in a quality console; great tone....great feel...looks...even the name! I'd swear you custom made this for me. I could not have picked a better console for sound, features and feel."

Geno Porfido, Boulevard Recording Co. New Milford, NJ

"Other consoles I've worked with in the past just couldn't deliver the levels of punch and clarity I felt the music deserved. I never have this problem with my Soundcraft Ghost. The Ghost gives me the flexibility I need over a wide range of frequencies and has the body and warmth to really bring my music to life."

Johnathan Moffett, Drummer with Michael Jackson and Madonna

"After the first mix I did, I realised I was in a whole new league. This thing sounds beautiful. Very silky in the high end and full in the lows. The EQ is totally cool and the board has a quality feel to it. I know of nothing that touches it in its price range and I have been recommending Ghost for months to anybody who's looking for a console."

Garth Webber, Red Rooster Studio, Berkeley CA

"I've worked on many competing 8 bus consoles and none can compare to the Ghost in features, ergonomics and, most importantly, sound. The Ghost, simply put, sounds warm and musical - you don't have to work hard to get great sounding mixes on this board. The EQ is very flexible and we compared the mic preamps (using a Neumann U-47) to the Neve 1066s in our studio. We were very surprised at how favourably they compared to these megabuck classics."

Peter Thorn, What If? Productions.

Just about the only sound as sweet as our EQ!

shape of things to come

by Derek Johnson

Star gate

If you use noise gates while miking drums, to minimise spill between mics, or to gate out unwanted noise (breaths, headphone bleed-through and so on) on multitrack tapes, and find the task of applying a precise trigger to imprecise audio a little daunting, Symetrix may have developed the tool for you: the new two-channel 562E Windowing Expander/Gate. AutoWindowing is a processing technique that allows users to maintain control of the

gate's envelope parameters; its dynamic smoothing process helps to "reduce the pops typically produced by envelope edges, overshoot and instabilities." The 562E's monitoring facilities also allow users to identify the signal to be gated, and how it's affected in both the direct and side-chain paths. The gate offers an external key input, balanced and unbalanced ins and outs, XLR and quarter-inch jack connectors and an internal power supply.

Re-experience the Experience

It's 30 years since the first Jimi Hendrix Experience album was released, and over a dozen years since it was first transferred to CD. But at last all the studio albums and the live set he played as 1969 turned into 1970 are now available, in an aurally acceptable way.

Since his tragic death in the summer of 1970 there have been more rows about who owned and controlled Hendrix's legacy than on *Eastenders*, *Coronation Street*, *Brookside*, *The Bill* and all of Martin Scorsese's films put together. Some of the decisions as to how the posthumous releases should be produced and administered were questionable, to say the least. Studio master tapes of below-par out-takes were stripped of the original backing tracks and replaced by LA session players — the kind who regularly worked with the Carpenters and Art Garfunkel. The

original CD releases by Polydor were processed from third- or fourth-generation quarter-inch tapes; sound quality was poor, tracks were not annotated properly, and someone, in their executive wisdom, programmed the double album *Electric Ladyland* combining sides 1 and 4 on one disc and sides 2 and 3 on the other, ruining the flow of the record. It was then released on a single disc — in the correct order this time — but this was before CD technology had the capacity to contain over 70 minutes of music, so someone simply edited (or, to be more accurate, butchered) some of the tracks to fit.

After a long and bitter lawsuit over these seminal recordings, Hendrix's father became the owner to the rights of all his son's work. Now on Universal/MCA records, the original master tapes have been tracked down from various sources by John McDermott and re-mastered by noted engineer George Marino and original session engineer Eddie Kramer. They've produced a beautifully processed, full-bandwidth, analogue-to-digital delight.

Alongside the four official records Hendrix released while still alive is an album containing the best material he left 'in the can'. The tracks on this album, *First Rays Of The New Rising Sun*, have seen the light of day many times before, but these are without doubt the best versions of the last things that Hendrix ever played. *Big George Webley*

SCV's new Wave

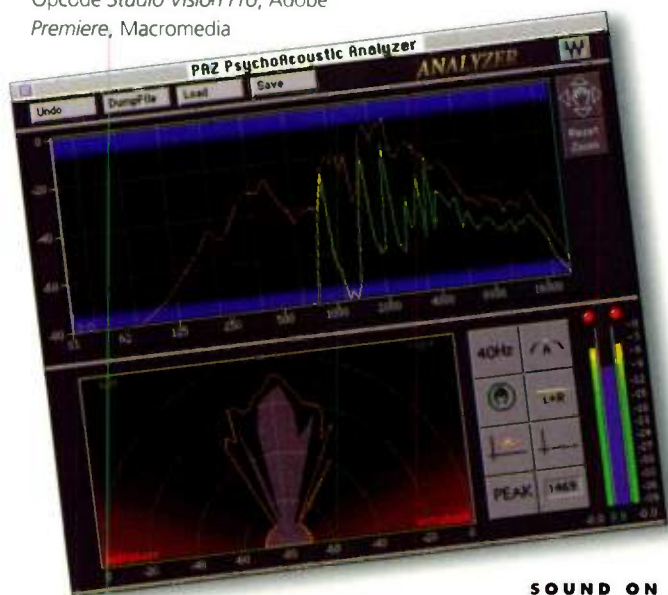

SCV London are augmenting their distribution activities with the launch of a new Software Division. Hardware such as that produced by Fostex, LA Audio and Audix will be joined by software from DSP plug-in specialists Waves, who have just appointed SCV their UK distributors. The move coincides with the launch of Waves' new PAZ psychoacoustic analyser with metering (see below) and *Renaissance Compressor*. The Waves product line supports all major audio applications including Digidesign Pro Tools (TDM & AudioSuite) and *Sound Designer II*, Steinberg *Cubase VST* and *WaveLab*, BIAS *Peak*, *Opcode Studio Vision Pro*; Adobe *Premiere*, Macromedia

Deck II and *SoundEdit 16*, *Cakewalk Pro Audio*, and Sonic Foundry's *Sound Forge*. Waves plug-ins include the *Q10* parabolic EQ, *C1* compressor/gate, *L1* limiter and ultra-maximiser, *S1* stereo image processor, *AudioTrack* multi-function processor, *PS22* pseudo-stereo maker, and *TrueVerb* reverb. Waves utility programs include the *WaveConvert* file format converter and *TrackPac Pro*, a no-loss audio file compression and expansion program.

Microtech's polar exploration

Microtech Gefell's new UMT800 is a large-format condenser mic for studios. It features a transformerless design, and its capsule offers five polar patterns (omni, wide cardioid, cardioid, hypercardioid and figure of eight), the first time this feature has appeared on one of the company's mics. Sensitivity can be reduced by 10dB, and a low-frequency roll-off switch reduces the proximity effect when close miking. The mic is claimed to have a wide dynamic range, a low noise floor and a frequency response of 40Hz-18kHz. It's recommended as particularly suitable for instrumental and vocal reording, as well as for use on film scoring stages.

Gone with the Win

Back in February and March of this year, we ran a competition with a 24-channel Soundcraft Ghost mixing desk, worth the best part of £6000, as a prize. The time has come to announce the winner, and the very lucky reader is one Doug Smith, of St Leonards-on-Sea, who is shown above being presented his new desk by Soundcraft Sales Manager Jon Ridell. Well done, Doug, and thanks again to Soundcraft for donating such a fabulous prize.

SOS can be reached on CompuServe; our email address is 100517.1113.

Our full Internet address is 100517.1113 @compuserve.com.

Les Jumeaux, a project of occasional SOS contributor Nigel Humberstone and his brother Klive, have just released their second CD. *Cobalt* features contributions from Beaumont Hannant and guest remixers The Protagonist and Lunatic Eclipse. The CD is released on the ITN Corporation label, catalogue number corp016. Incidentally, music from In The Nursery (the Humberstones' alter ego) has been chosen for inclusion in a new series from Warner Brothers TV, *La Femme Nikita*.

Sunrise Audio Systems, the company behind the Falcon-based Sunrise Audio workstation reviewed in last month's issue, have a new contact number: try 01379 853845.

Steinberg's summer tour has grown by two dates: July 23 at Syco Music Software, London, and July 31 at Pro Music Technology, Oxford. You'll be able to see *Cubase VST v3.4*, the *Rebirth 338* virtual synth/drum machine and the *X-Pose v1.1* visual sampler/sequencer. Contact Harman Audio for details of how to attend. **T** 0181 207 5050.

Remember Q Logic's MIDI Metronome, the novel hardware visual timing reference? Well, it's still around, and Q Logic have ventured onto the worldwide web. If you visit <http://www.qgroup.demon.co.uk/midimetr.html>, you'll be able to check out a video clip of the MIDI Metronome, and obtain full details about this useful device.

Sample specialists East West have launched a fully interactive web site, where customers can audition, purchase and download sound files from home via phone lines or ISDN links. Point your browser at <http://www.soundsonline.com>.

book corner

The books keep pouring in — here's the latest batch to tempt your wallet.

Readers after basic MIDI information should find Jon F Eiche's ultra-simplistic 62-page *What's MIDI?* a useful investment, especially given its user-friendly price of just £3.95. (Order code B347, postage £1.95 UK, £5.50 Europe, £8.50 ROW.) If you're not a complete beginner, *The MIDI Companion*, by Jeffrey Rona, is a popular book recently expanded. The new edition contains comprehensive coverage of all areas of MIDI, with helpful explanations of System Exclusive, using computers, troubleshooting and new explanations of the General MIDI standard. (Order code B348,

priced £7.95, postage £2.50 UK, £6.95 Europe, £9.50 ROW.)

If you're after some help with recording, *Modern Recording Techniques* (Fourth Edition), by David M Huber and Robert E Runstein, is a weighty, up-to-date textbook that address all areas of the project studio recording market — digital recording, MIDI, mic placement, signal processing and the business side of things are all covered — and there's even a comprehensive glossary. The price is £23.95 (order code B349, postage £4.50 UK, £7.50 Europe, £14.50 ROW). Also out now is Bruce and Jenny Bartlett's *Practical Recording Techniques*, another recording textbook that's a mine of information in a single volume. Mic placement, recording the spoken word, and working with MIDI and digital audio are all covered, and there are even sections on location recording and recording classical music. All this will set you back £22.95. (Order code B350, postage £3.50 UK, £5.50 Europe, £8.50 ROW.)

Now for what appears to be a unique book: *The Studio Business Book*, by Jim Mandell, deals solely with the business side of the recording industry. There's no information on mic placement or working with MIDI here — simply sound advice on running your studio as a going concern. While the bias is definitely American, much of the advice and tips can easily be translated into useable techniques on this side of the Atlantic. This is a good, friendly read, with plenty of case studies, and costs £24.95. (Order code B351, postage £3.50 UK, £5.50 Europe, £8.50 ROW).

Last up is the latest book from John Harris, SOS's Demo Doctor. *Recording the Guitar* focuses specifically on all aspects of getting the sound of the guitar, electric or acoustic, onto tape — or into your sampler or onto your hard disk. John starts with setting up, strings, intonation and playing techniques, which can affect the sound you ultimately put on to tape. Electric guitarists will learn when to mic up

and when to DI (and when to do both!), and diagrams illustrate a range of different mic positions to coax the sweetest sounds from your acoustic. Different preamps — valve, transistor, digital — are discussed, and you'll find out how to use compression, reverb, delay, gating, flange, chorus, harmonisers and so on. MIDI is also on the menu: you'll find out about pedalboards, MIDI controllers, program switching and MIDI patchbays. There's also a section on recording MIDI guitar and using sequencers, as well as sampling your guitar sounds. *Recording the Guitar* is priced at £10.95, and is, of course, available from our mail order department. Quote order code B353 (postage £1.95 UK, £5.50 Europe, £8.50 ROW).

period

We've broken the sound barrier

again

Introducing Sound Blaster AWE64 Gold

The ultimate, affordable sound card for the audio enthusiast or semi-professional musician

The amazing Sound Blaster AWE64 Gold offers you incredibly realistic audio with 64 simultaneous voices and stunning solo instrument sounds previously used in only very high-end professional products. All this channelled through a single MIDI port!

The AWE64 Gold gives you unmatched sound reproduction and lets you take advantage of advanced audio technologies such as SoundFont® 2.0 and E-mu® 3D Positional Audio. Create your own sound samples and edit them with Vienna, the AWE64's powerful voice editor. And for a limited period, the AWE64 Gold comes with Steinberg's Cubasis Audio for realtime music editing and digital audio recording.

On the other hand, if you're a power gamer or budding musician, the Sound Blaster AWE64 Value will give you incredible audio realism also by breaking the 32 voice barrier.

You'll experience incredibly realistic instrument reproductions as well as stunning sound effects.

Both AWE64 Gold and AWE64 Value are fully compatible with all previous Sound Blaster products.

Either way, with AWE64 Gold £149 inc. VAT and AWE64 Value £79 inc. VAT you've got golden opportunities which you can't afford to miss.

	AWE64 Value	AWE64 Gold
EMU8000 Synthesiser	Yes	Yes
Creative WaveSynth/WG	Yes	Yes
SP/DIF digital output	No	Yes (120 db signal/noise ratio)
Gold plated RCA output	No	Yes (90 db signal/noise ratio)
Onboard RAM	512KB (upgradeable to 24MB)	4MB (upgradeable to 28MB)

shape of things to come

Neumann Wisdom

Neumann's famous TLM50 studio condenser mic is now back in production. This mic's valve-equipped predecessor, the M50, was used on most of the Beatles' Abbey Road sessions, and is often the mic of choice of many classical recording engineers. The mic's omnidirectional pickup pattern provides a smooth rise in frequency response, with increased directivity at higher frequencies, and a linear response down to extremely low frequencies. It is these characteristics, say

Neumann, that allow the TLM50 to capture both the direct sound of an instrument and a balanced image of the environment. The mic comes complete with a wooden case, dedicated cable, swivel mount and auditorium hanger. Also now available are replacement capsules for both the TLM50 and the M50.

Hey small Spondor!

A new pair of powered monitors have been released by Spondor. The shielded QT100s combine a 190mm elliptical driver and a 28mm soft-dome tweeter with integral amplifiers and an asymmetrical, acoustically damped, reflex-ported cabinet. Power handling is a respectable 60W a side, with an SPL of 103dB at 1 metre; frequency response is 68Hz-22kHz. These

compact monitors weigh just 7.5kg each, and cost £704 a pair (including VAT). Watch out for an SOS review soon.

Crimewatch SOS

We've received notice from a band called Backchat, who hail from East Sussex, that they had the bad luck to have their gear stolen recently. The date was April 19, the place was Eastbourne's Grand Hotel. Missing equipment includes the following: Roland D50 (serial number 727902); Yamaha SY85; Ibanez SR1305 5-string bass, in black alpine, plus gig bag containing three sets of Kaman strings; Squier Strat, red, in black gig bag; and a Beyer NE170 true-diversity receiver unit. A reward is being offered for information leading to the recovery of the gear; anyone who can help or has been offered equipment matching this description in dodgy circumstances should contact PC May on 01323 412299.

HHB Communications' US office has relocated to the West coast, due to an increase in business in the area.

Virtually free sounds

Yamaha have produced a new free library of sounds for the VL70M physical modelling sound module. The library of over 300 patches features many of the sound originally produced for the VL1, VL7 and VL1M. The files are saved in .mid format so that they can easily be dumped via MIDI from most sequencing software or a Yamaha MDF2 data filer, and include sounds ranging from classic oboes to aggressive lead synth voices. Get your disk from any Yamaha Hi Tech Main Dealer, or call the Yamaha Information Line on 01908 369269.

O2's Company

Yamaha's O2R digital recording console is selling well to the pros, with two recent customers buying a pair each. Orbital have recently installed two O2Rs in their recording studio, and the desks' first task was the multitracking and mixdown of the duo's recent revamp of the theme tune for *The Saint*.

Ilan Jones of HHB experiences Christmas all over again.

The desks are used as a single 40-input console, courtesy of Yamaha's dedicated *O2R Project Manager* software for Apple Mac.

Planet Audio, a programming and production suite based at London's Metropolis Studio complex, has also recently installed two O2Rs. The desks join three Alesis ADATs and a 16-track Digidesign Pro Tools system. Producer Rod Gammons notes: "Every analogue input and output comes up on the patchbay, as do all the ADAT and Pro Tools ins and outs, in analogue form, as well as all the analogue auxiliary sends on the desk. This allows us to insert a lot of our classic valve and esoteric outboard processors." Gammons' patching system also means that every keyboard is normalised to a mic/line in, or a free input on the O2R's (optional) analogue card; every AES input and S/PDIF in and out is also centralised, allowing the studio to distribute any clock or signal source from anywhere, to anywhere else, in any format.

Frontline Video have bought a single O2R, supplied by Aspen Media (01442 255405), as part of a package that also includes a Digital Solutions BVE02 audio-follow-video interface, which allows the facility's Sony video editor to work in tandem with the O2R. And to finish off the sales talk, HHB Communications (0181 962 5000) recently sold its 100th O2R, to Central Television. The occasion was marked by a

Rod Gammons of Planet Audio.

Orbital.

celebration, with Yamaha handing over a gift-wrapped O2R to HHB MD Ian Jones.

Spain Killer

DaD Tape, from Spanish company Duy SA, is an analogue tape simulation plug-in for Digidesign

TDM and *Sound Designer II* systems; Pro Tools 4.0 with automation is supported. The plug-in is designed to simulate four distinct tape recorder types: a vintage machine with valve circuitry, a transistor-based machine of the late '60s, an op-amp machine from the '70s, and an up-to-date machine. Most noise-reduction systems can be simulated, and a switchable virtual tape speed control offers even more control over the resulting effect. *DaD Tape* is suitable for processing

individual or sub-mixed audio tracks, and is said to be particularly good for percussive sounds, since it tends to round off peak transients.

The new Zefiro Acoustics ZA2 (£379 plus delivery) is a full-duplex, ISA-format PC soundcard based around a 24-bit DSP. Notable features include three sets of digital ins and outs — co-axial and optical S/PDIF, and AES/EBCU on XLR — and all digital outputs can operate simultaneously, allowing format conversion. There's an analogue stereo monitor output on board, and the card can convert from sample rates of 48kHz to 44.1kHz while recording, which is ideal for converting DAT masters that have been recorded at 48kHz to the CD standard of 44.1kHz. Sophisticated features include the ability to generate PQ subcodes for CDR, and selectable SMCS copy inhibit via the S/PDIF output. The ZA2 comes with all necessary cables and drivers and utilities for Windows 95, Windows 3.x and DOS.

Holding all the cards

Owners of Yamaha's SY85 should have no trouble getting new sounds for their synth in the foreseeable future: Techmate UK have got hold of a pile of Yamaha ethnic card sets, available for just £49. For this entirely reasonable sum, you get a card full of new sample waveforms, plus one packed with single and multi patches that make use of the samples.

Incidentally, Techmate inform us that they've also nabbed 100 Turtle Beach Maui PC MIDI/audio cards — the last you'll be able to buy new — and are selling them for an accessible £69 each including VAT (this card used to retail for £199). The Maui card (which SOS featured in our June 1995 issue) offers 128 wavetable instruments in ROM, and lets you use up to 8Mb of RAM to turn WAV files into MIDI instruments. Wave SE software is included, and an MPU401-compatible MIDI interface is also built in.

Kindred Spirits

Spirit consoles have been moving in some pretty conspicuous circles lately. First of all, no less than four Folio SXs are being used to provide talkback and foldback for the four sound

rooms at Grand Central Studios, who specialise in audio for TV and cinema advertising. Spot Grand Central's Ivor Taylor sitting within touching distance of one of his new SXs in the picture (see bottom left). George Shilling, engineer or producer for Blur, Primal Scream,

Wannadies and Eternal, has installed a 32-channel Spirit Studio in his home recording studio, along with a pair of Spirit Absolute 2 monitors (see picture, left). George, who's recently been working with Teenage Fanclub, hopes to spend some time working on solo material. Another home studio getting the Spirit treatment is the one installed in the attic owned by newcomers Alisha's Attic. They wrote their top 10 debut album on a 32-channel Spirit Studio (and recorded most of the vocals with it), and have recently added a pair of Absolute 2s.

Turn Demos INTO HITS

What distinguishes a hit record from a demo tape of the same music? Production values would be an all embracing answer, from the final arrangement and the number of overdubs, to the engineering expertise and ...the equipment used.

That's where Focusrite comes into the equation. Thousands of engineers and recording-musicians rely on Focusrite to get the best possible results onto tape (or hard disc), avoiding the compromised performance of most mixing boards.

The Focusrite Green Range is a family of microphone pre-amps, equalisers and dynamic controllers in configurations optimised for recording vocals, instruments and mixing.

Green One: Dual Mic-Pre. Two channels of the outstanding Green Range mic-pre, to get the most from your mikes. **£699***

Green Two: Focus EQ. The Mic-Pre, line and instrument inputs, plus the legendary Focusrite EQ. **£799***

Green Three: The Voicebox. The Mic-Pre plus a compressor, de-esser and a three band, voice-optimised EQ. **£849***

Green Four: Compressor Limiter: A two channel mono/stereo compressor with a unique look-ahead limiter, essential for digital recording. **£899***

Green Five: The Channel Strip. One channel with all the elements: the Mic-Pre, line & instrument inputs, 6-band EQ, gate and compressor. **£999***

The Green Range delivers outstanding performance; after all there is no point buying similar facilities to those in your console unless there is a quantum benefit.

Try before you buy - ask your dealer for an on-site evaluation. Contact Focusrite direct for your local Green Range Dealer and a brochure pack. Check out our web-site too.

DJs day out

The second annual Dance Tech 97 event is due to take place on July 20, at the Complex Club, in Siington, London. Organised by Sound Division, the event will allow various companies

from the hi-tech world (Yamaha, Roland, Akai, Emu and Korg) and the DJ market (Vestax, Pioneer, Denon and Gemini) to demonstrate their products in one place. This year Dance Tech 97 is being staged in association with DJ magazine, and sponsored by Yamaha and Vestax; it's fully supported by the Mean Fiddler and Universe Organisation, as it was last year. Tickets costs £5, including a free £50 discount voucher to spend on the day.

A Sound Division, Adelaide House, 383-385 Liverpool Road, London N1 1NP.

Rack magic

Allen & Heath are launching a new desk in the Wizard series. The WZ20:8:2 is a dedicated 8-track recording mixer offering 8-buss routing and eight tape returns, with stereo cue and effects sends; a unique 'mixdown' switch instantly configures the inputs, giving multitrack signals the benefit of full channel EQ, effects sends and inserts, while tape return paths are available as additional inputs, making a total of 28 at mixdown.

There are eight mic/line inputs on balanced XLRs or jacks, with insert points. Each of the six auxiliary sends are on individual controls, and the switched 4-band EQ offers two swept mids. Remaining inputs are configured as six stereo line inputs, each of which have 2-band EQ and access to all six aux sends. Full 100mm faders are employed throughout, and additional features include a 1kHz line-up oscillator and

a talkback facility. The desk can even be configured for desk or rackmounting usage without exposing the circuitry. The WZ20:8:2 is expected to retail very much on the friendly side of £1000.

If a stereo desk is what you're after, try out the Wizard WZ16:2, which has a similar spec, but no sub-grouping.

If you want to **look** at equipment we'll send you some brochures...

If you'd prefer to **listen** and evaluate a wide range of products by strict A/B comparison there is currently only one option.

Turnkey's revamped and enlarged demo facilities feature what we believe to be the world's largest digital comparator systems for pro audio* and the only one of its type in the U.K.

Over 70 effects processors are available for instantaneous A/B via relay switching, eliminating the repatching time which makes good comparisons so difficult. 16 pairs of studio monitors, 10 power amps, 16 mixing consoles and around 30 sources and recorders from DATs, CDs, HDRs and Multitracks are on the same matrix so you can instantly configure complete systems.

Take 8 bus consoles - hundreds are bought each year on recommendation. Bearing in mind the sums involved it's hard to believe that the opportunity to properly compare the various brands for EQ and noise has not previously been offered.

We've taken the same innovative approach to demonstrating all our products from CD Rom samples to analog synthesisers.

Most dealers will tell you which products best suit your needs. Only one can show you.

One side of the switcher-equipped recording room.

Compare 6 mics. by recording simultaneously to ADAT.

Pro-Tools III and Soundcraft DC2020 in Studio 1.

Huge range across Mac, PC and Acorn platforms.

KORG

ALL DIGITAL EIGHT BUSS MIXER

SOUNDLINK 168RC

Over the last few years, Korg's SoundLink digital recording and editing system has gained wide respect in the post production and broadcast areas, with its combination of flexibility and excellent sound quality. Using the experience they have gained with this product, they have now produced the SoundLink 168RC digital mixing console, which offers unprecedented facilities in an amazingly compact format.

There are 16 digital inputs and outputs in the ADAT optical format, allowing connection not only to ADAT's themselves, but also to the vast range of other equipment now supporting the format, as well as eight analogue mic / line inputs, two of which have phantom power. The master outputs are also available as coaxial SPDIF. For those of you who would prefer more analogue connections, Korg are also producing high quality external 8 channel A/D and D/A converters, again using the ADAT format. And if all this isn't enough, you can cascade multiple 168RC's together for as many channels as you like, also leaving plenty of room for future expansion.

Internally, the 168RC has 8 subgroups, 3 band EQ, each of which is sweepable, and with 'Q' on the mid band, two external and two internal auxiliary sends. The

- 24 Input 8 Buss Digital Mixer
- Snapshot & Full Dynamic Automation
- 2 Built In Effects Processors
- 16 Channels of Digital Ins & Outs
- Optional Outboard A/D & D/A Convertors

internal aux sends are routed to two high quality effects processors with some of the finest algorithms around, including reverb, delay, distortion, pitch shift, dynamics processing and even speaker simulation. For automation, up to 100 'scenes' can be stored internally, taking a snapshot of every single parameter of the desk, which can then be recalled at the touch of the button, and in addition to this all parameters can be dynamically controlled in real time via MIDI. All in all, a tour de force product with far too many features to detail here. Call now for a demo!

EUROPE'S LOWEST

12 CHANNELS FOR UNDER A GRAND?

The card that everyone's been waiting for! Now you can use Cubase VST (amongst others), and have multiple inputs and outputs, without spending a fortune!

But the PCI 1212I/O is far more than just a soundcard - it can become the very heart of your studio. There are stereo analogue ins and outs featuring 20 bit delta-sigma ADC's and 18 bit linear DAC's, SPDIF in and out, and 8 more digital ins and outs in standard ADAT format. The best part is that all these connections can be used independently giving you a total of 12 inputs and outputs! What's more, word clock and ADAT 9 pin connectors are provided, allowing sample accurate synchronisation with ADAT's and many other digital devices.

If you're not a MIDI user, the highly capable Deck II is an ideal choice. Fully featured with multitrack recording and extensive cut and paste editing facilities, Deck can sync to almost anything, including Quick Time movies and standard MIDI files, does file format conversion and supports plug ins.

Call for more details or to arrange a demo - this card could change your whole way of working!

- 12 Ins, 12 Outs and Digital Sync on 1 Card
- ADAT Format Ins & Outs
- Compatible With Cubase VST
- Optional Deck II Software bundled for £249

XR7 The XR7 breaks new ground in price and performance - 6 inputs (2 mics), 2 separate aux sends, low/high plus sweep mid EQ. Records up to 4 tracks at once - double speed transport, Dolby C.

D5 INC 5 FREE 90min DATs FOSTEX

D5 DAT RECORDER

Exclusive scoop purchase on a genuine professional machine brings quality within reach of the rest of us. Now that Sony's domestic machines are discontinued, this is one of the cheapest DATs around, but just look at the specifications as well as all the usual DAT features from the makers of the industry standard D200 timecode machine. Huge reduction.

RRP £1299
£769

DA20 DAT MACHINE

If you need a 19" rack mount DAT machine, they don't come any cheaper than this! But that's not at the expense of a quality machine: reliable tray-loading mechanism, SCMS is switchable in or out, both analog and digital recording at all 3 sample rates and coaxial SPDIF in and out. High sound quality is guaranteed by 1-bit DAC playback, and there's a special 'Table-of-Contents' feature.

RRP £709
£639

DA30 MkII DAT RECORDER

Professional machines start here! Tascam's DA30 and it's current Mark II equivalent are probably the most commonly found machines in professional studios, and with good reason: they combine a range of pro features such as 44.1kHz recording, AES/EBU digi I/O, balanced analogue connections, and now a jog / shuttle wheel, with sturdy build quality and excellent reliability. Incredible new low price makes pro quality affordable!

RRP £1299
£975

102MkII & 202MkII TAPE DECKS

Fantastic deals on Tascam's superb professional quality mastering cassette decks. Both are full 19" rackmount units.

RRP £249
£199

RRP £349
£269

PCM-R500 DAT RECORDER

Sony lead the way in the DAT market once again with the new PCM-R500. A professional machine through and through, it features a four motor direct drive transport, jog shuttle wheel for fast precise transport control, balanced ins and outs, AES/EBU digital connections, and Sony's proprietary Super Bit Mapping system, to get the maximum possible quality out of the unit's ADC's. Unbeatable price only from Turnkey!

RRP £1175
£999

DTC-ZE700 DAT RECORDER

We have exclusively secured a small supply of the Sony DTCZE700 to bring you the cheapest full size DAT machine on the market, but this is not at the expense of features: SPDIF coaxial input and optical In and out, digital and analog recording at all three sampling rates (32 kHz, 44.1 kHz, 48 kHz), as well as all the usual ID functions and a full function infra red remote control. Also features Sony's exclusive Super Bit Mapping technology for incredible recording quality. Another DAT exclusive from Turnkey!

RRP £729
£449

MDS-JE500 MINIDISC RECORDER

Although DCC looks to have died as a format now, Minidisc is thriving, and rapidly becoming a standard in radio stations and other institutions around the world. With sound quality almost as good as DAT, and a range of editing features like Combine, Move, and Auto Cut, it makes an ideal choice for mastering on a budget. If Minidisc is for you, there's no better value on the market than the MDS-JE500, with digital input, jog dial and full function remote control as standard.

NEW PRODUCT
£269

MDR30 PORTABLE VERSION ALSO AVAILABLE only £299

SV3800

INDUSTRY STANDARD DAT RECORDER

The Panasonic SV3800 has been the industry standard mastering DAT recorder, and is now superseded by the SV3800. Using 1 bit, 44k oversampled (equivalent to 20 bit), you can be sure of the highest possible sound quality. Records and plays back at all 3 sample-rates via analog and digital inputs. Highly usable jog/shuttle wheel. AES/EBU and SPDIF digital connections, error counting and many other software features. In stock now!

RRP £1291
£904

MT50

MULTI-TRACKER

The MT50 can record on all four tracks simultaneously, and works at double the normal speed for improved frequency response and reduced wow and flutter. Each channel has it's own two band EQ, an auxiliary send for use with effects units, and DBX noise reduction incorporated to keep background noise to a minimum. A special 'sync' output bypasses this so as not to interfere with timecode.

RRP £309
£299

MT4X MULTI-TRACKER

The MT4X is Yamaha's top of the line machine and has a specification to go with it! It's logic controlled transport means that as well as auto locate points and 'return to zero' function, you also get a special 'rehearsal' mode, so that you can practice dropping in and out as many times as you like, without risking erasing your precious recording! Other great features include three band EQ on each channel, two auxiliary sends, LCD metering, double or single speed operation, and individual track outputs for use with an external mixer.

RRP £569

A DIGITAL HURRICANE IN YOUR PC?

99% of available sound cards use the old-fashioned "DMA" system of recording audio in order to be compatible with Soundblaster games. With the Pinnacle and Fiji, Turtle Beach abandoned this system in favour of their proprietary Hurricane architecture. Basically, it gives you more tracks than DMA on the same PC hardware, and leads to less driver conflicts.

The Turtle Beach Multisound series has long been considered the "Rolls Royce" of sound cards, from the very first Multisound in 1993, through to the highly respected Tahiti card, and now - the Multisound Pinnacle.

The audio quality of the Pinnacle is beyond reproach, based around a Motorola DSP with 20bit converters on both record and playback, 64x oversampling, and Delta/Sigma converters. An on-board Kurzweil chip provides a top-quality set of synth sounds, which can be augmented with your own Kurz samples which can be mapped to a MIDI keyboard via the SampleStore™ control panel. (Up to 48 Meg of samples can be loaded, depending on the size of SIMMs fitted). Create your own drum-kits, mix in break-beats sampled from CD etc... etc...

Other upgrade options include a synth daughter-board (eg DB50XG), cable for MIDI interface, and S/PDIF daughter board allowing direct digital transfer to/from DAT, CD player, MiniDisk etc... (£99 for either card). The Pinnacle is bundled with Voyetra's D.O.P. sequencer which gives up to 16 audio tracks with digital effects (eg reverb, delay...) depending on hardware specification.

- 20 BIT DAC / ADC
- Enhanced or Std Duplex
- Sample Store (up to 48 Meg)
- Kurzweil Wavetable synth
- WaveBlaster™ connector (for DB50)
- Optional S/PDIF daughterboard

DA38 DIGITAL MTR

The DA38 has become the industry standard digital MTR in professional film, and audio recording. The new DA-38 looks set to build on this with features that include 18bit x 64 oversampling A/D's, 20bit x 8 D/A's plus via T-Dif 24bit digital recording at 48 or 44.1 kHz. An internal electronic patchbay allows any input to be routed to any track and output. Plus up to 16 DA-38 units can be connected together and with the optional MMC-38 allows for sequencer and timecode control. Incredible price reduction only at Turnkey.

RRP £2999
£1999

DD8 HD MULTI-TRACK RECORDER

Aka's new DD8. Records and/or plays back 8 tracks at a time directly onto hard drive, or crucially, 24 bit magstripe optical cards. There is finally no lengthy backup at the end of a session, or reload at the beginning (of course you can still make a safety copy if you wish to). Sync multiple machines together; use it with the DL1500 remote for DD1500 style SuperView operation and editing, choose from a myriad of expansion options TDF, ADAT, AES/EBU and analog I/O, digital EQ, Ethernet, SMPTE, MIDI, 9 Pin and Biphase synchronisation - the list is endless! Call for a Turnkey Professional Brochure and a free trial.

DIGITAL PROBLEM SOLVERS

FRIEND-CHIP

In today's increasingly digital world, many people are still using their equipment's analogue ins and outs, because of the difficulty of inter-connection and synchronisation. Friend Chip's new sensibly priced digital patchbays and "black box" problem solvers end the misery and make the digital studio a reality! The DigiMax digital patchbay (£299) has 8 inputs and outputs (2 each on optical), can accept both AES/EBU and SPDIF signals, and is MIDI controllable. An XLR version (£499) is also available for greater AES/EBU reliability. The Audio Time Base (£499) is a 1u 19" rack which acts as a master clock source for your studio, outputting word clock, Digidesign Super Clock and SPDIF. The master clock can be internally generated, or a reference taken from mains, SPDIF word clock, Super Clock, video or LTC (SMPTE). Lockup from timecode is in around 1 second!

Also in the range:

DP-COM: optical to co-axial and vice versa	£69
PRD-COM: SPDIF to AES/EBU and vice versa with 56 MS stripping	£129
D 4-2 COPY COM: switcher with 1 optical & 3 co-ax ins, 2 co-ax outs and SCMS stripping	£99
SMMA-1: convertor almost any incoming sample rate to 44.1kHz (ideal for ProTools) and non-44.1 DATS	£149
SRG-W: sample rate conversion to 32, 44.1, 48kHz, with lock to external word clock	£249
Super Clock Driver: converts Digidesign superclock to word clock and vice versa, 3 outputs	£129
Silent Audio Clock: converts Super Clock to word clock and vice versa with synchronous SPDIF output	£129
ADAT Audio Clock: ADAT 9 Pin to word clock, Super Clock and SPDIF clock converter	£129
ADAT Word Clock Synchroniser: ADAT 9 Pin to word clock and Super Clock converter, also sends MTC (synchronises your sequencer) with MIDI merge	£199
ADAT SPDIF Synchroniser: as above but with converters only to SPDIF	£199
ADAT MIDI Machine Control: MIDI to ADAT 9 Pin converter with MIDI thru (add to either of the above for full remote ADAT control from your sequencer)	£69
Rack Kit: holds up to three "black boxes"	£49

EUROPE'S LOWEST

A JOURNEY TO THE MOON!

Zoom is a Japanese company that was set up a few years ago by disgruntled staff from some of the major Japanese manufacturers. Their sole aim was to produce innovative new effects processors, that represent the best value for money on the market. Have they achieved that aim? We certainly think so!

1202 TRUE STEREO FX PROCESSOR

The 1202 is a full 19" rack unit, featuring true stereo 16 bit processing at 44.1kHz. The quality of the reverb alone would

make it worth the price, but there's lots more: two simultaneous effects are offered, including delay, chorus, flanging, tremolo and pitch shifting, as well as various reverb types including reverse. If one of the 512 presets doesn't suit exactly then using the two parameter knobs will allow you to tweak the program until it does, and the addition of 2 band EQ will further tailor the sound to your mix.

RRP £149
£99

- 16 Bit 44.1kHz True Stereo FX Units
- Great Quality Reverb & Multi FX
- Vocoder Effect and Mic Input on 1204

- Over 500 Different Presets
- Free Rack Unit & Cables Only at Turnkey!

1204 TRUE STEREO FX PROCESSOR

The 1204 builds on the success of the 1202 by adding MIDI control, 100 extra user presets for storing your own edits, and a two digit LED display. On top of this, there is also a rotary speaker effect, and a vocoder - a front panel mic input is even provided for quick and easy setup.

RRP
£199

Nothing else touches these units at the price - check one out today!

INC FREE 10u DESKTOP RACK & 4x 3m JACK LEADS

XR300 SYNCHRONISER TURNKEY EXCLUSIVE

Long the synchroniser of choice in professional studios, we now exclusively bring you this industry standard unit at an unheard-of price. Features include true SMPTE at all standard sample rates, MIDI clocks, Song Positioner or MTC for compatibility with all MIDI sequencers. Large LED time-code display. Merged MIDI input. Straight-forward operating system. Full 19" rack unit.

RRP £299
£159

STEREO VITALIZER ENHANCER/EXCITER PROCESSOR

The Vitalizer is the Rolls Royce of enhancer / exciter processors. Using a significantly different process to other such products, the effect deals with the full frequency range and is substantially smoother and 'flatter'. Also included is a 'Turnaround' effect, which varies the width of the stereo field. massive bulk purchase allows the unbelievable price - check one out now - we guarantee you'll be impressed.

RRP £569
£299

MIDIVERB 4 PRO QUALITY FX UNIT

The MidVerb 4's excellent Alesis effects algorithms produce digital, natural reverberation-rich Chorus and Flange, Delay and Pitch effects that are designed for professional use. There are thirty-two effects algorithms, and 128 Preset and 128 User Programs to choose from. Large backlit LCD, online help, MIDI controller routing and programmable footswitch give you complete creative control. Choose £50 worth of cables absolutely free - only at Turnkey!

RRP £325
£289

INC £50 WORTH OF CABLES FREE

G4 ROTARY SPEAKER SIMULATOR

Ever wondered why you can't quite get your organ sounds to sound like a real Hammond? That's because half the secret of the sound lay in the special rotating Leslie speakers used to give the characteristic vibrato effect. The G4 allows you to control acceleration, speed, rotor / horn balance, and even mic placement, giving a superb reproduction, complete with overdrive.

Loads of creative uses including loop processing, guitars etc, as well as organs.

This incredible end of line clearance deal with a 75% reduction means they will sell out fast. Buy now to avoid disappointment!

RRP £369
£99

COMPOSER WORKHORSE COMPRESSOR

A natural sounding and fully featured compressor at a great price! Built-in gate removes any unwanted noise, soft-knee action makes compression much less obtrusive, 'auto' mode makes quick setup a doddle and side-chain access means it can also be used for de-essing etc.

RRP £349
£199

dbx 1066 DUAL COMPRESSOR LIMITER GATE

DBX build on the success of their highly acclaimed dynamics processing range with the flexible new 1066. In addition to all the professional features expected from this respected brand, the 1066 offers switching between their patented "Overeasy" soft-knee and hard-knee modes, sidechain switching, ultra-low distortion "Peak Stop Plus" limiting and meticulous US hand-built quality. AVB this product at Turnkey to hear why DBX remains an industry standard in signal processing.

NEW BOXED
£479

dbx 266 DUAL COMPRESSOR GATE

Two channels of classic dbx compression with new Auto-Dynamics™ Attack and Release controls, program-adaptive expander gates, balanced inputs, precision LED metering and sidechain insert. Front panel selection of stereo or dual mono operation. In a standard 1U rack design. Entire dbx range on demo at Turnkey!

RRP £229
£199

286A 'CHANNEL STRIP'

These days, in the age of MIDI and hard disc recording, most people tend to only record one audio track at a time, and have less time to invest in a good quality microphone. However, a mic is only as good as the circuitry you pass it through afterwards, and for some time, high manufacturers have produced 'channel strip' style boxes which include all the essential acoustic recording processes in one device. Now the DBX 286A brings you a high quality mic pre amp, Over Easy compressor / de-esser, enhancer and expander / gate all in one device, offering you a premium quality signal path at a budget price. The ideal enhancement to any project studio!

RRP £229
£199

163A COMPRESSOR/LIMITER

Compressors and de-essers are an essential part of the recording process, but the plethora of controls that many of them are fitted with can often lead to confusion and ending up with a worse result than you started with. The DBX 163A and 263A are designed to give you high quality results with total simplicity - a single control gives you 'more' or 'less', and the rest is all taken care of for you. The units are also ideal for portable and budget mixer owners, as they sport a front panel mic input, so no insert points are required. Buy one of each and get a free universal rack tray. Limited stocks only - order now to avoid disappointment!

RRP £169

263A DE-ESSER/COMPRESSOR

BUY THE 163A & 263A AND GET A FREE UNIVERSAL RACK TRAY

VTP-1 DIGITAL MIC PRE

The all new 2 channel VTP1 tube mic amp / EQ looks set to take the market by storm. It combines four bands of semi-parametric EQ with a high definition mic amp based around a proprietary valve design. Phase reverse, high pass filter, 20dB pad (line inputs also available) and 48 phantoms power are provided, together with high quality balanced analog outputs, and AES/EBU and S/PDIF outputs at 44.1 or 48 kHz. Ideal front end for any digital system.

NEW BOXED
£999

VCS1 COMPRESSOR

The VCS1 is combining with innovation and quality, and brings you a sensibly priced dual channel valve dynamics processor with plenty of useful features. The compressor has the usual envelope, threshold and ratio controls, but is also switchable between hard and soft knee compression, and has an auto mode for ease of use. There are also separate gate and limiter sections, to give highly detailed signal control. Valve gain is variable to give a range of sound from subtle colouring through to controlled distortion. Call for more info.

STUDIO QUAD 4 CH. STUDIO FX PROCESSOR

At last! Multi effects as they should be! The new Digitech Studio Quad features not only its custom designed and ultra-powerful 3-DISC chip, but also 4 independent inputs and outputs, which using the built-in sub-mixer, can be configured as 4 mono line feeding 4 effects processors, feeding 4 stereo outputs. Huge screen, and new intuitive operating system make adding a breeze. 20 bit converters give greater than 90 dB signal to noise ratio. Effects include reverb, delay, detuning, chorus, flanging etc... Hundreds of other features too numerous to mention.

RRP £529
£POA

PCP330 VOCODER

Freeform Analog Technologies FreeBass is already one of the most successful sound modules of the year, and now following hot on its heels comes the PCP330 ProCoder. One of the most asked questions in the industry must be "Why doesn't anyone make a vocoder anymore?" - well here it is, with a fantastic feature list, great sound quality and a down to earth price. The carrier can be either an internal VCO or external line input, whilst both line and mic inputs are given for the modulator signal. Eleven filter bands each have their own level knob on the front panel giving true hands on control of your sound, and the silbance (unvoiced) control also has an external input if required. The final output can contain any mix of modulator, carrier, vocoded signal and a special filtered version of the signal. Remember, this doesn't only create robot voices, there are thousands of creative uses, and it's also ideal for processing drum loops. Order now and own an instant classic!

PRICES GUARANTEED*

If you've previously used valve equipment, you'll be well aware of the magical quality that tube circuitry produces, and if you haven't used it - try it now! Many manufacturers use the word valve as an excuse to charge exorbitant prices for their product, but not Bellari, and our factory direct exclusive makes the range unbelievable value for money!

PREMIUM QUALITY VALVE OUTBOARD EQUIPMENT

The RP583 Studio Tube Compressor / Limiter

has become an instant hit, offering as it does two channels (stereo linkable) of some of the finest sounding compression money can buy, with a smooth and natural compression characteristic. Ratio is continuously variable from 2:1 to infinity, and there are separate controls for attack, release, threshold and make-up gain. Dual VU metering is provided, as well as jack and balanced XLR ins and outs, and sidechain access is fully catered for. Ideal for a variety of instruments, vocals and complete mixes.

NEW PRODUCT

FACTORY DIRECT

RP533 Studio Tube Multi-Processor

Whilst mixers these days are of a better quality than they used to be, to get the best possible signal to tape or disk, you can't beat a dedicated unit - and for value for money, you can't beat the Bellari RP533 Studio Tube Multi-Processor. The all tube 2u box, features a premium quality transformer balanced mic pre amp with switchable 30dB pad, phase reverse and true 48V phantom power. The compressor has all the features of the RP583, and the exciter section adds a wonderful sheen to virtually any sound, as well as beefing up the bottom end. Each stage has it's own bypass switch, sidechain access is provided, and the large VU meter can monitor input, output, or gain reduction. No serious recordist should be without one!

NEW PRODUCT
£499
FACTORY DIRECT

RP520 Studio Mic Pre Amp

A true dual tube mic pre amp at a bargain price, with tubes used at all the crucial gain stages, not just strapped across the outputs. Features include phase reverse, input and output pads, separate gain and output level controls, true 48V phantom power, jack and XLR outputs and dual VU meters. Bypass your desks mic amps and feel the quality!

NEW PRODUCT
£399
FACTORY DIRECT

RP562 Stereo Exciter

Traditional exciters usually do a good job of brightening up the extreme top end, but can often leave you with a rather harsh signal lower down. The incredible warmth of the Bellari Sonic Exciter ends all that, providing a sparkling top end with no harshness, and a huge bottom end to boot. The stereo unit has both Jack and XLR connectors, dual VU meters, and even a separate subwoofer output with it's own cutoff and level controls. Superb sound quality at a fraction of the price of similar devices.

EUROPE'S LOWEST

PLUG-IN ARCHITECTURE PC WAVE EDITOR

WaveLab is a native 32-bit Windows 95/NT application which makes full use of the latest developments in 32 bit technology. It is the fastest Audio Editor currently available on the market, and can utilise any Windows compatible Sound Card as well as the Digidesign Session 8 PC. An integrated Audio database for managing audio files on multiple media is included, and it is also the first program on the PC that incorporates high-quality Time Stretching/Pitch Shifting using the same algorithms as the famous Steinberg Timebandit program on the Mac. True multitasking is supported - you can edit, process, undo/redo, load and save, all while the file is being played back!

WaveLab is the only Audio editor that provides unlimited and instantaneous Undo and Redo, and basic editing operations like copy/paste are equally fast, regardless of whether the file contains five seconds or one hour of audio! Other features include the ability to simultaneously process an unlimited number of files (batch processing) and advanced Spectrum analysis time stretching, pitch correction, harmoniser, hi-fi chorus, parametric equaliser,

dynamics processor, markers, advanced zooming, real time scrolling on playback, Windows 95 context help in all dialogs, and even "Tips of the day" on startup! All in all, there is no finer wave editing program available for the PC, and the plug-in architecture means the program is totally open ended, allowing enormous scope for future expansion. Get £50 off the price of any soundcard when purchased with WaveLab. Another Turnkey megadeal!

- 32 bit Windows 95 Native Application
- Plug In Architecture Allows 3rd Party Algorithms
- True Multitasking Environment

MUSICTIME NOTATION ARRANGER

MusikTime has been our best selling music package for 4 years. Based around the industry leading "Encore" software (as used by Disney, and many film & TV producers), it allows you to perform all editing functions without leaving the notation environment, making it simple and clear to use, especially for people with some classical music training.

Keyboard Reviewer - "Overall I found MusikTime an extremely well thought out program as well as being versatile, user friendly and very good value for money. As a music type-setting package I have no hesitation in giving it the highest recommendation. (rated 94% Diamond Award)

With MusikTime Deluxe, you get both CD-ROM and floppy versions in the box, and many more features including part extraction, cross-staff beaming, correct playback of complex repeats (DC, Coda etc), and automatic part extraction. Also includes a free Soundblaster™ type MIDI interface cable.

RRP £89

MPC 2000 SAMPLING DRUM MACHINE

Ever since the launch of the Roger Linn MPC60, Akai have led the way in sampling drum machines. Its latest evolution, the MPC2000, is a lot more than a glorified drum machine however - the 64 track sequencer is a synthesis of what most people consider to be the only real alternative to computer based setups (32 MIDI channels are available), the sampling section is virtually identical to the best selling S2000, SCSI is standard, and the outputs can be expanded from 2 to 10 and digi I/O for only £249. There are far too many other features to mention here - on demo now at Turnkey.

NEW
£1175

REMIX 16 SAMPLING UNIT

The ultimate performance sampler/mixer. Akai are world leaders in sampling - just try loading a production studio without one of their machines - and now they have brought their knowledge to the DJ market. 16 pads trigger fully editable samples live, whilst the removable cross fader (with transformer buffers) fades between the deck/live input, and the sampler.

RRP £989
£599

SU10 SAMPLING UNIT

Yamaha's SU10 is a ground breaking unit, making professional quality stereo sampling available to everyone. Up to 64 seconds of sampling is available and 48 samples can be held in memory at any one time. Samples can be filtered, reversed, varied, crossfaded, pitched and even scratched using the ribbon controller. The built in sequencer means you can produce your own tunes using just this unit! The SU10 comes bundled with 2 free Time & Space CDs containing almost 800 samples.

RRP £289
£269

ALSO AVAILABLE WITH 4 OCTAVE MIDI KEYBOARD only £349

Virtual Multitrack Recorder

The bundled VMR software gives a clear virtual representation of an 8 track tape recorder, making operation incredibly straightforward. Multiple takes can be recorded per drop, and your favourite version selected afterwards. The large smooth scrolling waveform display makes editing a doddle!

This is just the start of the good news though - the Audiowerk 8 integrates seamlessly with Logic Audio on either platform, you can use 2 cards in the same computer to give 24 track recording with 16 outputs, and a daughter board socket will allow future options like an ADAT 8 channel optical digital i/o, or 4 extra stereo SPDIF outs! The card is only 7" long, so it fits in virtually any machine, and uses state of the art bitstream converters for pristine sound quality. The card is on permanent demonstration at Turnkey, and the first 50 purchasers will receive a free loom for connection to your mixing desk. Call us now!

NEW PRODUCT
£499
INC FREE 8 WAY LOOM

MU10 GM SOUND MODULE

The Yamaha D850XG daughter-board took the market by storm. Yamaha release the MU10 external sound-card! No more screw-drivers, no IRQ conflicts, no DMA problems, just connect to the serial-port (cable included) and install the software. This beats even the latest plug-in-play cards. FOR SOFTWARE, Yamaha wouldn't settle for the "stocking filler" programs often thrown in with lesser products. MU10 includes the CD-ROM version of Steinberg's brand-leading Cubase. (not Cubase Lite) Also you can route any sound through MU10 effects!

RRP £199
£189

CLUBMAC EIGHT SPEED CD-ROM DRIVE

If you want access to large amounts of sample library in a hurry, then there's no better way to do it than via CD-ROM. Hundreds of discs are now available full of everything from orchestral instruments to hip hop loops, all ready prepared to load into your sampler. In theory SCSI is SCSI, but in practice it's just not the case, particularly when it comes to samplers. Drives that function perfectly with one machine will often flatter refuse to work with another. So we've taken the guesswork out, and come up with a bargain priced CD-ROM drive that works with all current Akai, Emu and Roland machines, and what's more, it runs at its normal speed for ultra quick loading. Guaranteed to work! (Please specify which sampler when ordering)

RRP £329
£189

AUDIOMEDIA II STEREO HD RECORDING CARD

Turn your Mac into a hard-disk recording system with the AudioMedia II, which comes with Sound Designer II non-destructive editor software. Features stereo in and out (both digital and analog), and SMPTTE sync, as well as real-time compression / Parametric EQ / Pitch Shift and Time Stretch.

RRP £999
£399

SAMPLE LIBRARIES

We have two 100 CD jukeboxes in store holding the complete Time & Space range of sample CDs. Whether you want drum loops for techno, drum & bass or deep house, ethnic instruments & textures or a sound FX library - there's sure to be something to suit your needs. These discs make ideal fodder for all kinds of sampler, from those built into mixers to full blown stand alone units.

DIGITAL ONLY Card PC SOUND CARD

Even the cheapest PC sound cards will inevitably pick up some electronic interference just by being in the same case as your VGA card, cooling fan etc... If you've got a DAT machine, the Digital Only Card could be the ideal choice, since it provides SPDIF terminals which allow you to use your DAT machine as the DAC and ADC converter - basically the audio is already in the digital domain before it gets anywhere near the PC. If your source material is already on DAT, you can get it into the PC directly without re-recording it - just a direct digital transfer.

TECHNOX SOUND MODULE

If you need to get your hands on some top quality dance sounds on a budget, look no further than Quasimidi's Technox. All sounds can be edited via the LCD display and two front panel dials, which are also used for sound selection - sounds are divided into groups to make it easy to find the one you want. 16 part multibrain and always 24 note polyphonic with built in effects, it makes a perfect addition to an existing MIDI setup, but is comprehensive enough to use on its own, and the superb arpeggiator means you'll never get bored! Call for a free demo CD. Money back within 7 days if not satisfied (ask for conditions).

NEW PRODUCT
£499

RAVE-O-LUTION 309 DANCE WORKSTATION

The Rave-O-Lution 309 is undoubtedly Quasimidi's best and most innovative product to date. Imagine the raw powerful sound quality of Roland's TR909 and TB303, give them 50 times as many sounds, add resonant filters to the drums, and you've still only got half the instrument that is the Quasimidi 309! Knobs for all functions all send out MIDI controllers, built in real-time and step-time sequencer, 2 on board effects processors & EQ, optional rack ears, typical German build quality - far too many features to mention here! The ultimate dance production workstation, must be heard to be believed. "superb bass synth... excellent drum sounds... one of the most immediately useable products on the market" - Sound On Sound. Call for a free demo CD. Money back within 7 days if not satisfied (ask for conditions).

NEW PRODUCT
£649

QUASAR SOUND MODULE

Quasimidi's first groundbreaking product, and still a stormer! The simultaneous use of multiple types of synthesis including Analog Emulation and FM, give this module a huge range of sounds from standard General MIDI tones through their famous dance sounds (including 909 etc) to incredible special effects. Huge LCD and dual digit LED displays in conjunction with a plethora of front panel knobs and buttons make use of the comprehensive editing facilities child's play. 2 MIDI inputs, 6 audio outputs, always 28 note polyphonic, and superb onboard effects and arpeggiators. Two sound expansions are also available to turn it into the ultimate dancefloor machine - Hardcore and Techno, both only £169. Sorry, no demo CD available! Call for a free demo CD. Money back within 7 days if not satisfied (ask for conditions).

NEW PRODUCT
£799

JV1080 SYNTH MODULE

In the same way as the S1000 became the industry standard sampler, Roland's JV1080 has become the industry standard synth module. It's not hard to see the reason why - straightforward operation combined with top flight sound quality and a huge range of useable sounds. But expandability of the machine is where it really comes into it's own. There are over 10 different expansion boards which can be fitted (up to 4 at once), each one with as much ROM as the original machine, covering sounds from Vintage to Orchestral and Dance to World. At Turnkey we have the full range in stock, as well as an unbeatable price on the machine itself. Buy with any four expansion boards for only £499 extra!

SYNTH MODULES EMU

Emu have taken their wealth of experience in making modules such as the Proteus, Vintage Keys and Morphous, combined it with the filters from the incredible Emulator 4, and with their usual innovation, come up with the Orbit, Planet Phatt and Carnaval. The Orbit is stacked full of classic drum sounds, pulsating basses, ambient pads, as well as a huge variety of hits and effects, Planet Phatt brings a new definition to swing, and the Carnaval is ideal for dance grooves as well as Latin specialists. The inclusion of the E's 16 different types of 6 pole filters mean that these modules have more power-ful filtering than any other synth. Finally the BEATS MODE includes a wide selection of loops and grooves, which can have their pitch changed without tempo change and vice-versa, and even their sounds too! V2 software now gives improved beats mode and other enhancements. Orbit upgrade available for only £69.

RRP £869
£749

MICRO PIANO KURZWEIL

The MicroPiano is the most highly regarded piano module on the market, featuring Kurzweil's breathtakingly realistic true stereo samples - 32 note polyphony means you won't suffer from notes-stealing and the wide range of other keyboard sounds and strings make it useful in many other situations. Built in effects including very high quality reverb mean there's no need to use up another effects unit. Strictly limited quantities at this price mean that stocks won't last long. Order today - you won't be disappointed!

JUPITER STRIKES BACK!

JP8000 ANALOG MODELLING SYNTH

So far, modelling technology has been used to recreate acoustic timbres, but Roland are the first to specifically model true analog synthesis with their new Analog Modelling technology, and believe us, the results are spectacular!

Analog Modelling not only produces superb emulations of the great synths of the 60's and 70's, but also totally unique timbres never before heard. Realtime control is excellent, and all knobs, sliders, buttons and the ribbon controller send out Continuous Controller messages. For instant creativity, a powerful arpeggiator and real time phrase synthesiser are included, which can be easily synchronised to an external MIDI clock. This is very likely to be the hottest synth of '97 - order now!

- Superb New Analog Modelling Synthesis
- Unrivalled Realtime Control
- Highest knob Count Around for Easy Programming
- Built in Arpeggiator and Realtime Phrase Synth

RRP £1499

FREEBASS TB303 CLONE

If you need the unique sound of an original Bass Line™, but can't afford the inflated prices that go with it, then Freeform Analog Technologies' Freebass is the product for you!

It's the only authentic sounding TB303™ clone on the market, and it's got MIDI! 1U rack with 1 knob per function, all the sound controls of the 303 are duplicated, Cutoff, Resonance, Envelope Mod, Accent, Tune and Decay. Waveform is continuously variable from square wave to sawtooth, and an auto tune button is included to retune the oscillator - no more continual drifting!

On top of this, there's an audio input to the filter stage, allowing you to process any external signal with the FB303's powerful synthesis. The ultimate analog bass machine - this incredible price means these will fly out of the door! Another Turnkey exclusive.

- Superb Sounding TB303™ Clone
- Fraction of the Price of an Original
- External Input to the Filter
- Exclusively Available at Turnkey

NEW PRODUCT
£199
FACTORY DIRECT

The enduring popularity of the TB303, MC202 and TR909 has just refused to go away but increasing rarity has meant that secondhand prices have been driven up to ridiculous levels. Roland, the creators of these machines, now bring you the MC303 Groovebox which combines all their classic drum machine sounds, a step time / real time sequencer, 303 'acid' bass sounds complete with

front panel filter controls and a whole host of other useable sounds (it's 16 part multi-timbral). This box is an all in one dance music solution, and believe us, it sounds the business! Initial supplies will be very limited, order now to avoid disappointment!

NEW
£POA

ALSO AVAILABLE WITH MK149 MIDI KEYBOARD only £599

The Microwave II combines all the famous features of the original Microwave together with today's requirements for user interface, signal to noise ratio and sonic purity. It's simplicity of use is obvious with the use of just 5 rotary dials and a 2x40 character back LCD. On the back the Microwave II has 2 fully modulatable stereo outputs (configurable as 4 monos with panning). Tone generation comes from a powerful DSP generating wavetables, the 10 voices each feature two oscillators, 2 wave generators, a mixer, two filters in series, a stereo amplifier, four envelopes, 2 LFOs, a modulation matrix with 16 slots and several 'modifiers', more than enough to keep even the most demanding programmer satisfied!

NEW PRODUCT
£999

XM1 & XMc1 ORGAN MODULES

Analogue modelling of all new organ modules with remote drawbar control. Based on the guts of the (8800 MKII) there is nothing as realistic as this on the market. Built in Leslie simulator and overdrive, up to 3 registrations simultaneously, variable release envelopes, percussion and two many more features to list here. Exclusively supplied by Turnkey.

RRP £1089
£999

BASS STATION BUDGET MONO SYNTH

END OF LINE CLEARANCE EXCLUSIVE TO TURNKEY

If you need to get two analog synths on a single then the Bass Station keyboard is for you. But this is no mere toy! Two oscillators, pulse width modulation, two LFO's and knobs that send out MIDI information, make this a versatile sound creation tool, capable of a wide range of bass sounds and effects. An ideal addition to any MIDI setup!

RRP £349
£219

PULSE MONO SYNTH

Millard quality at a previously unheard of price. These fine synths have been long awaited in the market, but have been universally acclaimed, and rightly so. The Pulse's three oscillators provide some of the finest sounds around, and its modulation matrix allows a far higher degree of programming complexity than anything else in its range. Add to that the fact that editing any parameter sends out a MIDI controller and you have a fantastic all round performer.

RRP
£499

DR-660 Dr. RHYTHM DRUM MACHINE

BOSS have been making Dr. Rhythm drum machines since the early eighties, combining value for money and ease-of-use with the best drum and percussion sounds. The DR-660 builds on the success of the DR-550 Mk2, but offers 16 full velocity and aftertouch sensitive pads, 4 separate outs (unheard-of at this price), and 253 drum sounds including the best of TR808 / 909. The 660 also boasts the 'human feel' control first introduced on the R8 which allows velocity to control a real-time crossfade between several waveforms. Process your sounds with on-board digital reverb and chorus - fully editable, with individual effect send control for each drum sound.

RRP £469
£299

SUPER BASS STATION NEW MONO SYNTH

Novation's Bass Station Rack has been one of the most successful monosynths ever, and now they take the concept one further. These oscillators give warm fat sounds, whilst ring modulation and oscillator sync, along with noise and distortion generators give it a hard edge when required. Even the MIDI sync bits from LFO to MIDI clock sync, and there's an arpeggiator. Initial stocks very limited - get your order in now.

NEW PRODUCT
£499

PULSE PLUS MONO SYNTH

£699

SR-16 DRUM MACHINE

The SR-16™ Stereo Drum Machine is an excellent tool for songwriting and performance. It features a great selection of 233 sounds, offered both in dry form and with reverb. Alesis's exclusive Dynamic Articulation™ feature enables a drum sound to change to some extent as it's played harder for truly realistic performances. The SR-16 features 200 preset patterns that write actually played in by real studio drummers - not just programmed and quantized. Of course, the SR-16 also provides complete MIDI reprogramming, a footswitch input, flexible programming and editing features and velocity-sensitive pad buttons.

RRP £289
£189

DM5 DRUM MODULE

The DM5 offers superb performance features and an excellent selection of drum, percussion & FX samples putting over 540 all-new studio drum sounds into a 1U rack space, many recorded in true stereo and with ambient effects. It's Expanded Dynamic Articulation feature allows sounds to change volume, tone, and pitch according to MIDI velocity. The Random Sample feature realistically varies the sound of the drum as you play. The DM5 includes an ultra-fast trigger-to-MIDI converter with 12 trigger inputs, 4 audio outputs and a backlit LCD display. The drum sound for you is waiting right here! Another Turnkey exclusive!

RRP £429
£269

PROGRAMMER FOR MATRIX 1000 OR MICROWAVE

There's no doubt that the Oberheim Matrix 1000 and Waldorf Microwave deliver powerful sounding results. However, when it comes to programming your own sounds, the producers have tended to go for older synths like the Hammond and Super Jupiter, because their knobs and sliders allow for easy creation of new sounds. The Alesis programmer gives you the best of both worlds - now you can freely reprogram your great analog synths using the same intuitive front panel and backlit still, record every twist of a parameter into your sequencer.

76 NOTE MIDI WORKSTATION KEYBOARD

This TOP OF THE RANGE Casio has 128 sounds, 100 auto accompaniments and a 76 note keyboard. It is also fully General MIDI compatible and all 16 MIDI channels can be controlled from the keyboard. With an onboard 8 track sequencer all your songs can even be recorded on the instrument itself. This is unbelievably good value for such a great instrument.

RRP £549
£299

MASSIVE DISCOUNT SAVE OVER 45% ON PRICE

K5000s ADDITIVE SYNTH

In this age of many 'soundlike' sample synth keyboards, it's not often you get something coming along with a completely fresh approach. Kawai have dared to be different though with the K5000s, and reintroduced additive synthesis. This has been tried in the past, but the limited DSP power has severely curtailed the possible results. The only method of synthesis that can theoretically produce any possible sound, additive has a palette which ranges from superb acoustic simulation, to timbres quite unlike those offered by any other synth. The inclusion of a traditional synthesis section complete with an incredibly powerful filter means it's also a cinch to create fantastic analogue style sounds, and a generous complement of knobs which all send MIDI controllers add to the ease of use. Far too many features to mention here - call for more information or for a demo.

NEW PRODUCT
£1299

BACK VERSION ALSO AVAILABLE only £999

XP-10 MULTITIMBRAL SYNTH

XPRESSION MONITORS FROM HARBETH ACOUSTICS

Many of today's popular budget monitors sound impressive in the store, with tremendous bottom end and sparkling treble. But mixes made on these monitors can still sound wrong when played on other systems. The problem? Lack of clarity and detail in the mid-range, particularly vital when working with vocals and lead instruments. Harbeth, manufacturers of monitors for the BBC and others for many years, now address this problem with their new expression near-field monitors, offering not only great overall frequency response, but unrivalled mid-range clarity for any speaker even close to this price bracket. Return for credit within 1 week if unsatisfied - we're that confident! Another turnkey exclusive.

- Prestige Manufacturer with Years of BBC experience
- Superb Detail and Stereo Imaging Capabilities
- Separate Subwoofer Available for Only £349

SPIRIT STUDIO CONSOLES BY SPIRIT

Soundcraft's Spirit Studio desks revolutionised the project studio market when they were introduced over 5 years ago offering sound quality and features only previously found on desks several times the price. Even then they were great value for money, but because Soundcraft have recouped their R&D costs, and because of our substantial buying power, they are now available at an unbelievable price. No other desks represents such fantastic value for money, just check out the feature list:

1 in 1 layout means 40, 56 and 72 inputs respectively for the 16, 24 and 32 channel desks. 4 band EQ with 2 mid sweeps, 6 aux. sends, 8 true subgroups, direct outs on every channel, LED metering, fader reverse - the list is endless!

RRP £1597 **RRP £2063** **RRP £2994**

SPIRIT FOLIO NOTEPAD PORTABLE MIXER

For quality mixing on a budget, this has to be the nearest solution around. Typical Soundcraft quality has been further enhanced by the use of surface mount technology and custom designed rotary pots. 4 mono inputs are provided along with 2 stereo, which also feature RIAA preamps for record deck connection. 2 band EQ and an auxiliary send complete a highly flexible package.

RRP £1099
£149

FOLIO F1 NEW MIXER

The introduction of the new F1 uses the Williams team of mixer manufacturers in top gear! Features include 3 aux. sends, 100mm faders, 3 band mid sweep EQ and insert points. Available in 14 or 16 channel versions.

RRP £379
£299

FOLIO SX MULTITRACK RECORDING CONSOLE

The Folio SX represents incredible value for money offering as it does 12 mono and 2 stereo fader channels, 3 band mid sweep EQ, 3 aux sends and a whole host of other goodies. Optional rack ears also available.

RRP £619
£479

GHOST CONSOLES INC FREE METER BRIDGE

Ultra low noise inputs, 4 band EQ with 2 fully parametric mids, up to 12 auxiliary sends, MIDI mute automation and MTR transport control are a few of the features that put other project consoles to shame (no MIDI on LE versions).

SERVO 150 AMPLIFIER

Samson's Servo 150 is specifically designed for use with nearfield monitors, and does an excellent and unobtrusive job, tickling as close as possible to the "wire with gain" ideal for an amplifier. It offers a power rating of 80 Watts per channel RMS, making it an ideal partner for most of today's nearfield studio monitors. The standard 2u design means it fits neatly into your rack system, independent left and right volume controls are green, and there are built in signal and clip indicators, together with protection circuitry to help prevent blowing your speakers. At this price you won't last long - another Turnkey exclusive!

RRP £349

Retrospec Juice Box

Tube DI Unit

PAUL WHITE turns on the Juice and finds it a perfect excuse to get in his monthly 15 minutes of guitar practice.

USA-based Retrospec build a range of valve products for both live performance and studio use, and the Juice Box reviewed here could be used for either. Apart from its all-tube circuitry, the Juice Box is a conventional instrument DI box, with an unbalanced high-Z jack input, a unity-gain buffered output for feeding an instrument amplifier, and a balanced XLR output for recording or feeding a PA console. The circuitry comprises two double triodes in a class-A circuit (one 12AX7 and one 12FQ7), and the output stage is transformerless. There's no EQ and no speaker simulators — just a +20/0/-20dB rotary gain switch and a gain-trim pot, plus a

ground-lift switch.

Retrospec have obviously hedged their bets on the XLR wiring protocol, because they carefully explain the origins of the NAB pin-3-hot and IEC pin-2-hot systems, then go on to deliver both! When the -20 or 0dB gain settings are engaged, the output is pin 3 hot (the opposite way to the AES/IEC standard), but when the +20 option is selected, an extra valve gain stage is placed in circuit, inverting the phase of the signal and making pin 2 hot. In practice, this isn't really going to matter unless you use two devices to DI a stereo signal, then for some reason set one unit to 0dB gain and the other to +20dB gain — hardly a likely eventuality.

Constructionally, the Juice Box is impressively tough, appearing to be built from 1/8 inch sheet steel. The case is perforated to allow cooling and the design purports to conform to the EEC's EMC directive, though there's no CE mark, and I doubt the ventilation slots would pass the 'granny with a hat pin' test for electrical safety. Power comes from a toroidal transformer, and a recessed selector switch allows 110V or 220V operation. The mains lead is captive, and a small toggle switch is used for the mains power, while a status LED indicates that the unit is powered up.

pros & cons

RETROSPEC JUICE BOX £495

pros

- Transparent, natural sound.
- Rugged construction.

cons

- Output polarity switches at high gain setting.
- High cost compared to solid-state equivalent.

summary

A great-sounding valve DI box, which combines detailed tonal transparency with warmth.

SOUND ON SOUND

PERFORMANCE

Valve gear is credited with all kinds of magical properties, but in this design the distortion is kept to a very low 0.05%, and any impression of clarity is more likely to be due to the fast transient response that results from a 10Hz-100kHz frequency response. Background noise is better than 90dB, with 18dB of headroom before clipping — though the manual points out that any connected mixer shouldn't present a load of lower than 10kΩ if the full gain range is to be realised. Most mixer-line inputs have a 47kΩ input impedance, so this shouldn't be a problem, though it does mean that you can't go in via your mixer's mic inputs.

Tested with my Fender Strat Plus, the DI'd guitar tone was clean, articulate and responsive, with a lot more tonal change between the different pickup switch settings than you might expect. The sound had that even, 'ringing' characteristic that you get from the best tube amps, but without any of the noise or distortion. Of course, this is only of any use when you're recording clean sounds, but the sort of clean sounds that you get make you want to keep playing, even when no additional EQ is used. Having painted such a rosy picture, I must admit that I obtained similarly transparent results from one of my better solid-state guitar DI units, though, to be fair, the Juice Box is slightly warmer sounding in a direct shoot-out. Even so, I feel that the main benefits come from its high input impedance and wide bandwidth rather than from any mystical tube-distortion mechanism. Whatever the reason, this is a very nice-sounding DI box that's close to perfect for use with undistorted electric guitar and bass. **SOS**

For 25 years musicians the world over have made it with Roland Instruments.
No others sound as real. No others have the warmth and the depth.
When you want to make music, make it with a Roland.

Make it with a Roland

In 1996, the Roland VS-880 Digital Studio Workstation revolutionised the hard disk audio recorder market. New for '97, the V-Expanded package is even more dynamic. On-board auto-mixing function. Built-in effects board. COSM. Mic simulation. Voice transformer. 19 band Vocoder. 1.4 Gbyte hard drive. 64 virtual tracks. Editing with 999 levels of undo. SCSI port as standard. Linear and compressed recording. All in the digital domain. Make it with a Roland.

For details of this and other new Roland products call the Roland brochure hotline: 01792 515020
Roland (UK) Ltd, Atlantic House, Swansea Enterprise Park, Swansea SA7 9EJ, UK web site: <http://www.roland.co.uk>

Amek System 9098

Dual Mic Amp

Pro quality at an affordable price? HUGH ROBJOHNS inspects a preamp with a prestigious name.

Amek's association with the legendary Rupert Neve has led, over recent years, to a range of highly regarded studio desks and related stand-alone equipment. The System 9098 Dual Mic Amp reviewed here is derived from a highly specified recording desk and has been designed to meet the needs of the most critical professionals. The key to the professional environment, of course, is quality, since any degradation to the microphone signal can never be replaced. However, price is equally, if not more, important because the whole music and recording business is so very competitive.

As you might expect from any mic-amp design originated by Rupert Neve, the System 9098's sonic purity and excellence can be assumed, but the really impressive thing is that Amek have been able to price it significantly lower than its immediate competition (such as the Focusrite Red 8). Scoring high in the value-for-money tables, the 9098 is potentially within the reach of the aspirational home studio owner.

OVERVIEW

The System 9098 Dual Mic Amp accommodates a pair of microphone or DI inputs and provides up to 72dB of gain through a combination of a switched coarse setting and separate fine-gain control. The usual collection of mic-amp facilities is provided, including polarity reversal, high-pass filter and phantom power, but —

somewhat unusually — the unit also incorporates a Mid-Side (MS) decoder and stereo-width control. Each channel has its own level metering and the signal output is fully balanced and isolated.

MECHANICS & ELECTRICS

The 9098 is a solid 1U rackmount unit with most input and output connections on the rear. The box weighs in at about 4kg and is 330mm deep (including connectors). The upper and lower surfaces contain a few ventilation slots around the linear power unit, which are necessary as the unit seems to run slightly warm.

Internally it's well built, with a large motherboard covering the whole floor area of the case. The power supply is mounted directly on this PCB within a separate screened case, and two small daughterboards carry the front-panel metering and some push switches. The integrated circuits are all socketed and the few internal jumpers and test points are labelled clearly. Intriguingly, the circuit board has provision for two additional plug-in peak-limiter cards. The manual states that these are not available at present, but may possibly be provided as an option at a later date.

The rear panel carries an IEC mains socket with associated voltage selector and fuse holder. A pair of 4mm binding posts with supplied linking bar bring out the chassis earth and analogue ground connections. Microphone inputs and line-level outputs are catered for with 3-pin XLRs; the inputs are electronically balanced but the outputs incorporate substantial transformers.

Without wishing to bore you with detail, I will explain that the microphone amplifiers are of the TLA or 'Transformer-Like Amplifier' design which has been seen on many other products from Rupert Neve. Active components are used to simulate the operational characteristics of conventional transformer coupling, but with far better

pros & cons

AMEK SYSTEM 9098 £1056

pros

- Well-designed, classy circuit design from 'the master'.
- Sound quality up with the established leaders, but priced more attractively.
- Stereo width control and MS facilities make this a very flexible tool.

cons

- Quality still doesn't come cheap.
- Manual could be a tad more helpful in the MS department.

summary

Extremely high-quality 2-channel microphone pre-amplifier. Excellent sound, easy to use, and with all the facilities you could need, including proper DI inputs. The addition of MS facilities and stereo-width control is unusual but very welcome, making this a superbly flexible unit.

SOUND ON SOUND

performance. In this case, the topology includes a discrete transistor front end feeding an OP275 and a pair of NE5534 ICs (for the tech-heads out there). All technical specifications are exemplary — particularly the channel crosstalk, which is better than 100dB at all frequencies: these figures translate directly into the kind of sound quality that really does make a difference.

KNOBS & LAMPS

The front panel is neatly separated into three sections, with the two channels separated by the Mid-Side facility. The operational controls for each channel are completely separate, so the unit really is a dual-channel design rather than a stereo one, although the provision of a switched input gain control and a centre detent on the fine control will allow accurate gain matching between channels.

On the extreme left of each control section is a 3-pole quarter-inch jack socket for DI inputs. The System 9098 will happily accept either a balanced signal or a conventional unbalanced one on a normal 2-pole plug, and the DI input is activated by pressing the adjacent DI button. This input has a 100kΩ input impedance; when it's active, the gain range is restricted to 30dB.

The next control is a large knob to set the coarse gain in ten 6dB steps (only the first five steps of which are functional on the DI input). To the right is a fine gain-trim knob which offers ±6dB with a centre detent at unity gain.

Four push buttons provide the essential

facilities of phantom power, polarity reversal, 120Hz high-pass filtering and an output mute (post meter); each has an associated LED to show when it is active.

Above the buttons, a horizontal LED bargraph meter shows the channel output level. The meter is scaled between -30 and +14dBu and the topmost LED, labelled Over Load, illuminates at a pre-defined peak threshold (adjustable on internal jumpers between +18, +20 and +22dBu — the last being the default).

FAT OR THIN STEREO

The 9098 Dual Mic Amp is unusual in its provision of a stereo width control and MS matrices, but is all the more versatile for it. The MS facilities comprise a knob and three buttons. Two of the buttons apply the MS matrix converters to the input or output signals; the third activates the stereo width control. If an MS stereo microphone is connected, the input MS decoder may be inserted to convert the signal to conventional LR (Left Right) format. Alternatively, the output of the Dual Mic Amp can be converted to MS format from a conventional LR input signal (although few people would want to, these days...).

When activated, the width control allows the stereo image to be reduced to mono, or increased such that the S component of the signal is 6dB higher than normal. Since this facility increases the amount of 'out-of-phase'

information in the stereo signal it should be used with care to retain mono compatibility, but the 6dB limit is a sensible one and the control provides an effective range.

The manual for the System 9098 is generally very well written, but it falters when it comes to the section on MS operation. For example, it erroneously suggests that signal processing should not be performed on an MS signal. While I would agree that, in unskilled hands, great damage can be done to an MS stereo signal if it's mistreated (although no more so than when an LR signal is mistreated), much of the advantage of the format comes from the way in which the two legs *can* be processed independently. Indeed, one of the most commonly used treatments is to apply severe high-pass filtering to the S signal to reduce inevitable low-frequency rumbles and image imbalances, yet this is specifically discounted in the manual!

IN USE

This unit is everything I expected it to be: a very competent performer, and well up to the standards anticipated of a product with Rupert Neve's signature on the front. Although I wasn't able to make a direct head-to-head comparison with the top-flight Focusrite Red 8 mic preamp, I was left with the impression that the Amek unit is very much in the same class and can certainly extract every last bit of information from the microphone.

It's simple to set up and operate, and has masses of headroom and an extremely clean and accurate sound quality. It makes top-flight mics sound fantastic, and even cheap ones perform far better than they have a right to. The DI input works remarkably well: I recorded a wide variety of guitars without any hint of a buzz or hum. The wide bandwidth and enormous headroom of the System 9098 ensures that every element of even the fastest transient is faithfully captured.

The MS facility is useful — many potential purchasers may doubt it at first, but I'm confident that most will find it indispensable after a short time. The use of MS microphone techniques tends to be confined to broadcasters, but MS has a much broader application and this unit might encourage music studios to experiment and discover the benefits of the format for themselves.

At £1056, the System 9098 is not exactly bargain basement, but this is an attractive price when you consider its superb sound quality, let alone its facilities and design pedigree. **SOS**

Korg Pandora

Multi-effects Unit

It's small, sleek and extremely covetable. DAVID MELLOR opens the box...

The original Korg Pandora was one of those pieces of equipment that screamed, "Own me! Own me!" as soon as you saw or handled it. The new, updated Pandora PX2 is similarly attractive and I'm sure that your hand twitched in the direction of your wallet as soon as you saw the photo on this page. In the original Pandora, Korg put together a wonderful combination of simple design, ease of use, and excellent effects to interest any guitarist, and even synthesists who might like to add guitar-style processing to their lead lines. In the PX2, the Pandora concept is extended with drum programs and additional auxiliary input functions, but the emphasis is still on simplicity and ease of use.

EFFECTS & OPERATION

As soon as the PX2 appeared through my letterbox, I rushed for my trusty (or is that rusty?) Fender Stratocaster, jack lead and headphones. I plugged in, set the input gain switch, and that was the rest of the day gone. My fingers did the walking all over the fretboard of my guitar, and all over Pandora too. I found myself improvising in styles ancient and modern, and some that I don't believe I've ever heard before. It's quite an inspiration. I've always claimed to be a great believer in creating effects from individual building blocks, such as compression, distortion and reverb, to match the sound that already exists in your

mind's ear. But a good selection of presets can inspire musical creativity beyond what you can imagine — and if I could impress myself with my Pandora-inspired creativity, I am more than sure that you will too.

As I said, the Pandora PX2 is a simple device: you would be disappointed if you'd thought that it could create any sound in the known universe of guitar sounds. But if Pandora's range is limited, what it does it does very well. As on the original Pandora, the building blocks of the effects are Drive, Tone, Modulation, Ambience and a Cabinet Resonator, with noise reduction thrown in too. Any of the 38 presets (compared with the original Pandora's 20) can be edited and stored, and you can always go back to the original factory presets if you need to.

In editing mode, the Drive parameter offers eight alternative types, ranging from compression through mild overdrive to high-gain distortion. As always, it's impossible to say that a digital box of tricks can sound exactly like a real amp and speaker, but the results are perfectly good enough to record directly, and you always have the option of amplifying if you feel you need to. For each type of drive there is one editable parameter adjusted by the Value buttons — in the case of compression, this is the strength of the compression effect, and for the other types of drive, the 'amount'. The Cabinet Resonator, which is, along with noise reduction, curiously separated from the rest of the editing functions, is not a cabinet simulator in the sense that it's frayed round the edges, weighs 40kg and rattles when driven hard, but it does give the flavour of a real speaker in a box, if not the substance. The

pros & cons

KORG PANDORA PX2 £199

pros

- Good presets.
- Easy to edit.
- Brilliant practice aid.

cons

- Can't use reverb or pitch-shift in the same program as modulation.
- Tuner difficult to use.

summary

Simple, inspiring and a pleasure to use.

SOUND ON SOUND

Value buttons adjust the strength of the resonance. The Tone parameter comes, usefully, after the Drive section and offers two bands, low and high.

Possibly the most interesting section is Modulation, which, even though it can only do one thing at a time, has a wide range of options. I always look first to the phaser in a digital effects unit, because the digital versions hardly ever come up to the standard of the old analogue phaser foot-pedals dating from the 1970s. This one, however, is certainly comparable, if a little on the clean side. There are four phaser types and in each the Value buttons set the modulation speed. For funk-heads, there's a selection of four auto-wah effect types. I normally can't stand auto-wah myself, so if say that I can't stand the PX2's auto-wah either then that must be a

WHAT'S IN THE BOX

Low EQ	Pitch shift 1-8
• MODULATION	• CABINET
Chorus 1-4	RESONATOR
Flange 1-4	Combo 1-2
Vibrato	Stack 1-2

PX2

compliment of a kind. Although each of the remaining chorus, flange, vibrato and tremolo effects has only one variable parameter, the simplicity of not having too many options to meddle with actually means that you find the sound you want more quickly — hence more music-making!

SOUND QUALITY

I continue to be amazed at how natural digital reverbs can sound, considering that real acoustic reverb contains an almost infinite complexity of reflections. Korg, I feel, are the unsung heroes of digital reverberation. If you listen to the variety and useability of the reverb effects on their keyboards, you'll find that they stand comparison with almost anything the major reverb manufacturers have to offer. On the Pandora PX2 you will only find two reverb types, Room and Hall, but there are a total of 12 delay types as well: although the delay times can't be adjusted precisely, the options are more than sufficient for a unit of this type. Pitch-shifting is

possible too, with a useful detune setting as well as semitone intervals.

BELLS & WHISTLES

If you thought Pandora was just an effects unit, then think again, because there's more! The PX2 can also act as a tuner with settings for signal through and signal off, as appropriate. I didn't find the digital display nearly as useable as a needle-type tuning meter, but perhaps I could get used to it, and it would be one less gadget to have to plug in. As well as an effects unit and a tuner, Pandora also incorporates rhythm programs — it's a drum machine too. Don't expect a TR909 or anything like that: the rhythms are really only there as a practice aid. But it's great to be able to play along to one of the 32 preset rhythm patterns, or a sampled metronome, not just for practice at keeping time but as a songwriting tool too. If a simple rhythm track isn't enough, you'll need to consider using the auxiliary input. In this case, you can plug in your Walkman and strum along to a backing track, or even play along with your heroes. And if the backing track just happens to be in the wrong key, you can pitch-shift it: if necessary, you can also adjust its tuning. If you're pitch-shifting the auxiliary input, any ambience applied to the input signal is switched off, but you would expect this — processing power

“Korg, I feel, are the unsung heroes of digital reverberation.”

can't be infinite. Also, there's an option to cancel the centre image of the stereo auxiliary input, with the object of removing the vocal or lead instrument which is probably balanced equally left and right. As usual with this kind of function, it works better on some recordings than others, but that isn't Korg's fault.

In conclusion, the Korg Pandora PX2 may be simple, but it's simple in the sense that you can easily use it to the full. It's a terrific little box and you couldn't possibly be disappointed with it.

Bellari RP562

Stereo Tube Sonic Exciter

PAUL WHITE tests one of the few low-cost tube enhancers on the market, from a new name in excitement.

Back in the early '80s, exciters were — well... exciting, but now everyone builds the things and, though there are subtle differences, few stand out from the pack as being truly different. Bellari's claim to individuality is the use of tube circuitry and an all class-A signal path. Rather than using conventional harmonic regeneration, they've used an approach that seems closer to BBE's, where the various harmonics of the sound are restored to their original time relationships after the phase-mangling that goes on in a typical audio chain. The tubes are there just to add a little compression and coloration.

In order to access as wide a market as possible, the designers have also included a sub-bass output, which makes the Sonic Exciter useable in home-theatre and PA applications as well as in studio work. The brief manual describes some of the techniques used to restore the correct phase relationships, and these include all-pass filtering, frequency-compensated gain adjustment (EQ?), and frequency-compensated domain delay — which seems to be another way of saying that some parts of the frequency spectrum are delayed slightly with respect to others. Using all class-A circuitry means that any distortion components will be mainly second-harmonic, and this tends to sound more musical than odd-harmonic distortion.

The hardware is conventional, with the exception of the two tiny, circular moving-coil level meters, and the fact that the main left/right audio connections are duplicated on both unbalanced jacks and balanced XLRs. The power cable is fixed, which avoids the irritation of an EC lead becoming dislodged in the back of a busy rack, and there's a further jack output to feed a mono sub-woofer.

Bellari have done a lot of work on restyling their products, but I'm not convinced that they've quite got it right yet. The gold anodised panel is nice enough, but the rather cheap-looking plastic knobs seem out of place on a piece of pro audio gear.

INSIDE STORY

Before proceeding further, I just had to take off the lid and have a look around. What I found was a pair of 12AX7/ECC83 dual-triode valves, run at a proper high-tension voltage, plus a few IC-based circuits, most of which looked like filters of one kind or another. I must admit that I'd expected the circuitry to be a little more complicated, but the constructional standard is OK and the accessibility of parts for servicing is good.

All the controls are ganged for stereo operation, and the first two controls relate to the sub-bass output — something that few studio users will have an application for, though it could be interesting to compress the sub-bass output, then add it back into the mix for more low-end energy. One control sets the upper frequency limit of the sub-bass output, between 35Hz and 200Hz; the other sets the sub-bass level. The controls that deliver the excitement are labelled Bottom and Definition, but there's no drive control to set up and no way to adjust the frequency range that's excited. The lack of a drive control is a good thing — it makes setting

pros & cons

BELLARI RP562 £299

pros

- Attractive price for a valve processor.
- Easy to use.
- Smooth, forgiving sound.

cons

- Only really offers effective control of high frequencies — the low control is basically EQ.

summary

I have to admit to being surprised at the low cost of this unit though it is fairly limited in what it can do, it does it extremely well.

SOUND ON SOUND

up easier — but not being able to vary the part of the spectrum that's being excited could be seen as slightly limiting.

Bottom is, as you might imagine, a bass control of sorts, and it is centre detented, though the manual implies that the flat position is with the pointer at about 11 o'clock. The book then goes on to talk about spectral spread in the first half-turn of the control but, as far as I can tell, turning the knob left of centre reduces the amount of bass, while turning it clockwise increases it. An Active button with status LED lets you know when the process is in circuit, and the Definition control adds brightness as it's turned up from its minimum position. Interestingly, when the unit is switched into circuit with the Definition control set to minimum there still seems to be a very slight excitement effect, possibly due to the valves in the signal path.

(RACK) MOUNTING EXCITEMENT

To test this unit, I tried it on a couple of CDs that I felt were slightly on the dull side, and I also used it to beef up a drum submix,

something it did extremely well. The Bottom control seems to be little more than EQ, but it's well designed and adds the requisite weight to the low end, providing you use it sparingly. Definition does just what it says on the tin, and the effect is reasonably smooth, sounding more like a BBE than a typical harmonic exciter; again, though, it has to be used sparingly if you're processing a whole mix. Transient details are lifted out of the mix and the overall clarity and transparency of the material improve, as does the apparent separation between instruments.

When it came to processing the drum mix, I needed a modern sound that would cut through, so I used far more processing than I would dream of using on a full mix, but it worked beautifully by sharpening up the snare drum, adding edge to the hi-hats, and giving the bass drum more attack. The mid-range seems completely unaffected by the process so the overall timbre of the sound isn't changed too radically, which can be a good thing; on the other side of the coin, you can't address mid-range problems when they do show up as you can with something like SPL's Vitalizer. Being ruthlessly honest, I don't think I managed to do anything that I couldn't have done almost as well using one

“Transient details are lifted out of the mix and the overall clarity and transparency of the material improve, as does the apparent separation between instruments.”

of the better solid-state exciters — but then again, the RP562 is a good deal cheaper than many solid-state models!

SUMMARY

The pricing on this processor is very competitive, and the unit does everything you'd expect an exciter to do, and does it rather more smoothly than many of its competitors. The use of valves also seems to add a little something to the tone, as evidenced by the slight timbral sparkle you hear when the unit is switched in, even with the Definition control turned right down.

The Bottom control behaves more like a regular EQ, but it operates at the right point to prop up ailing bass and kick-drum sounds, and the sub-bass output, although unbalanced, is fine

for feeding a sub-bass amp and speaker system in a small PA or home theatre. Another major point is ease of use — the Bottom and Definition knobs can be used in exactly the same way as a 2-band equaliser, and everything is done by ear rather than by watching meters or LEDs. Given its sub-£300 price, the RP562 is a strong contender in what's becoming an increasingly crowded market place.

Alesis Nano

Stereo Piano Module

A very, very big piano inside a very, very small box:

DEREK JOHNSON

investigates Alesis' latest impressive conjuring trick.

Squeezing over £100,000's worth of grand piano into a box the size of a largish personal stereo might appear to be an impossible task — but not for Alesis. The company's recent moves into miniaturisation include the Nano series of one-third rack-width processors, and newswatchers among you will know that the range is due to grow to include sample-based sound modules. First off the production line is the 64-voice polyphonic NanoPiano.

Taking pride of place in the NanoPiano's 8Mb collection of 16-bit, 48kHz sampled waveforms are the phase-accurate stereo multisamples of a very expensive 97-key, nine-foot-six Bösendorfer Imperial grand (the largest

possibly fit in the unassuming black box whose picture illustrates this review. Don't let the size and small number of controls fool you. While the NanoPiano can be very simple to operate, it does have hidden depths. Let's start with the technology-shy interface: from the left, there are knobs for volume, effects level (which adjusts one effect per Program), MIDI channel (the NanoPiano is most definitely monotonimbral), Program Category (there are 16), and Program (with 16 Programs in each Category). A pair of LEDs indicating power and MIDI activity winds up the options available. It's just as simple at the back: MIDI In and Out/Thru, a stereo pair of audio output jacks and a PSU socket (for the wall wart, which is gratifyingly compact). There's no power switch, no display, and no headphone socket, but you can't have everything. Note that a supplied rackmounting screw fixes the module to a compatible rack tray alongside two other Nano products.

If you're wary of MIDI, then go no further, although your MIDI controller will undoubtedly be equipped with pitch-bend and

piano commercially available), which have already graced such Alesis products as the Quadrasynth Plus Piano and QS8. For many musicians, especially those searching for an affordable, compact, high-quality piano sound source, this would be enough. But Alesis use it just as a starting point: in addition to the magnificent piano just described, the NanoPiano's 256 preset Program collection also includes assorted electric pianos, organs, basses, strings, and synth pads, plus a variety of splits and layers. The samples for these Programs are sourced from elsewhere in the Alesis synth family, and the icing on the cake must be Alesis' QS Parallel Matrix Effects — four independent stereo multi-effect processors.

WHAT IT'S GOT

Having read the preceding overview, you might be left wondering how all this could

modulation wheels, and will transmit velocity, aftertouch and Program Changes, to which the NanoPiano will happily respond. However, if you're willing to get your hands dirty, there's a TARDIS of an editable instrument waiting inside — providing you have the technology to generate System Exclusive data. The downside here is that the module has but one edit buffer (it's equipped with 256 *presets*, remember), so any alterations you make will be temporary, unless they're saved externally — a profile should be available for your generic software synth editor soon, and if you have a suitable mixer map for your sequencer, you can make changes on the fly. A NanoPiano voice can consist of a waveform, sweepable (but not resonant) filter, three envelope generators, three LFOs, and four programmable effects. Unfortunately, the (admittedly preliminary) manual lacks precise System Exclusive data.

pros & cons

ALESIS NANOPIANO £339

pros

- Very compact.
- Easy to use, yet contains a hidden MIDI powerhouse.
- High-quality, true stereo piano.
- 64-note polyphony.
- Huge collection of presets.

cons

- No display.
- Flimsy front-panel knobs.
- No user memories.

summary

If it's piano without the price — or bulk — you're after, you must hear Alesis' module first. A hit.

SOUND ON SOUND

HOW IT SOUNDS

The NanoPiano's 8Mb of waveform ROM is divided into 80 separate groups of waveforms, although the vast majority of these make up the left/right pairs of several stereo piano samples. The manual provides a full list of these waveforms, and also names all 256 preset Programs.

The 16 Program Categories mentioned above are called Acoustic Piano, Piano & Strings, Piano Layer, Piano FX (strange piano variants), Electric Piano, Electric Piano Layer, Chromatic (clavichords, vibes, harpsichords and more), Organ, Bass, String, Synth Pad, Lead Synth, Split (mostly bass and some sort of piano), Effect (strange sounds), Piano & Pad, and Piano & Vox. Each Category has a selection of 16 programs.

That's a lot of presets, and a varied collection they are. Quite apart from the stereo pianos, there are some fine organs (including the delightfully cheesy Surf Organ), a good selection of acoustic, electric and synth basses that augurs well for the forthcoming NanoBass module, a variety of synths and pads, and some excellent electric pianos. Virtually all the layered presets — combinations of acoustic or electric piano and strings or synth pads — are excellent to play. Personally, I could do without the piano/vox layers and the so-called Effects and Piano Effects, although these last two do show how far the idea of a 'piano module' can be stretched. Even more variation is available when you simply waggle your controller's mod wheel: on pianos, this opens the filter, dramatically brightening the sound; on electric pianos or organs it alters the modulation speed or depth of the effects.

Piano

The quality of the raw samples is good, and the module as a whole offers low-noise audio output. Sample loops and multisample crossover points often let budget sound modules down, but not the NanoPiano. Looping is excellent, and the changes between different samples within a waveform have been so smoothly disguised as to be virtually unnoticeable unless you listen *very* carefully. You won't find here the buzzing loops and jarring transitions that make solo work impossible. The pianos even sound good dry — they have a natural 'in your room' quality.

One of the nice things about the NanoPiano is its 64-voice polyphony. Arpeggios? Sustain pedal? No problem! This polyphony is halved or quartered on some (unspecified) two- and four-element Programs: to combat note stealing. Alesis have implemented 'Dynamic Allocation', a clever bit of software that steals notes intelligently — it seems to work.

IS IT GOOD?

Already, the NanoPiano is a personal favourite. Its stereo pianos are, to my ears, much less produced or processed than some of the competition's, and it was quite easy to forget that I was controlling it from a plastic 61-note synth keyboard. The rich, full-bodied sound quality really did affect how I played, and the module responded well at all dynamic levels — I found it great for romantic and classical

“The rich, full-bodied sound quality really did affect how I played.”

repertoire (Mendelssohn's *Songs Without Words* had never worked for me on a sample-based instrument before), but it has the presence to fit into more contemporary settings — jazz, rock, or even triggered from an arpeggiator and treated by some MIDI-clocked delays.

Black marks are few. The lack of display and internal PSU are excusable in a module so small, but I hope that the final manual will contain more MIDI detail. Personally, I found the Program and Category knobs a little unstable. They're fiddly to get into the right position and sometimes slip; on my unit, the Program knob pointer didn't line up with all 16 Program numbers.

But enough negativity. If all Alesis had provided was a sampled Bösendorfer Imperial, the NanoPiano would have been a serious contender for your money. Add the extra sounds, the effects and the editability, and it's unmissable — it's even cheaper than the competition. Whatever your piano needs, I'm sure the NanoPiano will fill them.

Quested VS2205

Active Nearfield Studio Monitor

Some of the most prestigious names in monitor design are getting into the project studio market. PAUL WHITE auditions Quested's new baby powered monitors, affordable enough for the project studio owner and portable enough for the producer on the move.

Roger Quested has been building studio monitoring for more years than I can remember, and though his reputation was forged by monitors you could park your car in, his range of smaller monitors has also found its way into both professional and project studios the world over. The VS2205 is a compact, active 2-way monitor designed as an accurate

nearfield reference, and is small enough to make it ideal for those producers who like to carry their own monitoring around with them.

INSIDE & OUT

Because engineers tend to put their speakers sideways atop a console's meter bridge (regardless of manufacturer's recommendations), the VS2205s deliberately present a low profile. To achieve this, the design uses two identical 5-inch bass/mid drivers, each mounted in its own ported chamber, while the cabinet edges are rounded to help reduce HF diffraction — and to prevent dented shins when the monitors are being transported!

Handling the top end is a ferrofluid-damped 28mm soft-dome tweeter with wide dispersion characteristics, the aim being to deliver a wide listening angle rather than a single, tightly focused 'sweet spot'. From the Quested literature, I get the impression that Roger disapproves of horns or waveguides because of their intrusive effects on the phase response of the system, and instead prefers to use a tweeter with a naturally wide dispersion characteristic. The crossover frequency is a fairly low 1.25kHz (though the steep 24dB/octave slope prevents

pros & cons

QUESTED VS2205S £1716

pros

- Smooth, unfatiguing tonality.
- Excellent vocal reproduction.
- Compact, yet adequately powerful.

cons

- Transient detail could be slightly better.

summary

These are nicely built active monitors that combine true portability with Roger Quested's characteristic 'tell it like it is' tonality. Some may find them slightly lacking in detail, but you can listen to them for hours without feeling fatigued.

SOUND ON SOUND

the tweeter from working too hard at the bottom end of its range), and the overall frequency response is 75Hz to 19kHz within +/- 2dB. The maximum quoted SPL is 108dB (C weighted).

The box itself is extremely solid, not least because of the internal baffling that divides the two bass/mid enclosures, and extra weight is added by the 100W and 50W (LF and HF) RMS power amplifiers, plus the active crossover circuits. Clip-on grille covers are fitted as standard, but the top end definitely sounds more transparent when these are removed. A cutout in the bottom of the grille shows the new purple Quested logo, and a green LED lights when the speaker is powered up. There's also a front-panel clip LED to warn of imminent speaker abuse, and habitual abusers are protected from their own folly by full thermal protection.

Separate recessed rear-panel switches allow both the high and low end to be rolled off if required; the low-end switch introduces a rolloff for use with Quested's optional subwoofers, while the high switch puts in a 1dB drop at 20kHz for room matching. There's also -10dBv or +4dBm sensitivity switching. Power comes in via standard EC mains connectors. Each cabinet measures just 340 x 265 x 282mm, and weighs a manageable 29lbs, with

the power amp heatsinks recessed into the cabinet sides out of harm's way.

LISTENING TESTS

When I auditioned the very familiar set of test CDs in my collection, the first thing that struck me was how smooth and comfortable these speakers are to listen to, with none of the 'tizz' or brashness associated with so many popular nearfield speakers. On the downside, though, I feel that percussive transients could be just a hint crisper. The bottom end is delivered with a solid thump that belies the 75Hz lower frequency-response limit, and for use in a small studio I think the bass goes quite low enough, though I feel that bass sounds lack a little definition. I guess the bottom line is that good transient detail goes hand in hand with a bright sound, and over-bright monitors can be very hard work, especially if you're using them for long sessions.

As claimed, the acceptable listening angle is very wide, and vocal reproduction is particularly smooth and well behaved. Stereo imaging is good — not too surprising, considering the small physical size of these speakers — and the available level is adequate for nearfield use.

“The acceptable listening angle is very wide, and vocal reproduction is particularly smooth and well behaved.”

SUMMARY

These are good monitors and, though they're not perfect, I prefer their understated, neutral tone to the brash pyrotechnics of many American models. But, while they're not unreasonably priced, neither are the VS2205s exactly cheap, and for the same money, you could choose a pair of small Dynaudio active speakers, the new mini Genelec system, some

excellent Spondors or, for rather less money, the Event 20/20 actives. Which ones you prefer depends largely on what you expect from your monitors — though I'm a stickler for smooth, accurate monitoring. I have to admit that I found the overall sound of the VS2205s just slightly unfocused, though not seriously so. You really need to hear these speakers side by side with the competition in a decent listening room to put them in perspective, but I think you'll be impressed by their smooth vocal delivery and by their tendency towards honesty rather than flattery.

On balance, I think it's fair to say that these little monitors have more virtues than vices, and their compact format makes them a good idea for mobile recording or as a producer's portable reference.

Rob lends an ear to the mix.

and making music. Rob, John and Thor are Morphonic Productions and are essentially living that dream (cue Police Academy-style theme music).

CRUISING ON IMPULSE POWER

How did Morphonic get started?

Thor: "At Thames Valley University, doing a course in Music Technology."

Rob: "I was sharing a house with Thor and we had a little setup there — just a sequencer, sampler and the [Casio] CZ5000."

Thor: "I managed to nick a Seck desk from college for a while. Then John bought a load of stuff as well."

John: "I had an option on this loan, and I asked these guys whether they wanted to share the brunt of it, going with what they had and what I had."

You've got the talent but you haven't got the gear. Sound familiar? CHRISTOPHER HOLDER visits a production team who decided to do something about it, and are reaping the rewards.

the young ones

MORPHONIC PRODUCTIONS & STUDIO

Esaling, West London: a classic scene of middle-class suburbia. Leafy streets of terraced housing are filled to capacity with parked cars — here a Mondeo, there an Escort, further on a Cavalier nestled behind... a Yugo? The spluttering example of precision Eastern European engineering falters to a stop, the occupant unfolds himself from the cockpit and invites me indoors. Amongst manicured gardens, polished brass doorknobs and contrastingly coloured eves proudly stands a bastion of *Young Ones* living. The front yard looks like a building site: inside, the hall and ground floor looks as though it *should* be a building site. Up a flight of crotchety stairs and through another door is an environment you're less likely to expect — a recording studio, meticulously laid out and obviously maintained with absolute care. The Morphonic studio is the spiritual home of the bright young production and remixing team I've come to meet.

We've all looked at the gear in our home studio and fantasised about making a living out of what is more often a serious hobby than any foray into the heady realms of commerce. Just think of it, being able to dedicate all your time to your studio

trying to get a decent studio up and running. The three of us then began teaming up on projects at college."

Rob: "It was about that time that we were invited to audition a track for an advertisement."

John: "It was an Impulse ad, and I think it was Underworld that got it in the end."

Thor: "They gave us a brief on a Monday to do this advert, and gave us a week to write a track and mix it. They put us in a studio that was still being built!"

John: "We spent a good part of the time rewiring. Effectively we only had about 30 hours to finish it."

Thor: "Later on, in June of last year, we approached a guy we knew of who was producing a charity compilation album, because we knew that they always have a couple of unknowns on it, to keep the balance of the CD. We eventually put a track together after three and a half weeks of slogging our guts out. We played it to this guy and he really loved it. So that was like, 'yes, we're onto something' — somebody likes our stuff and is willing to sign a contract to that effect. A little later, John was working at Koch Studios as an engineer for Painting By Numbers, and through

The three Esses: SOS, a smoke and bacillus *staphylococcus*.

that we were given a few remixes to accompany their releases."

THREE'S A COMPANY

But Morphonic is more than a funky-assed name for three guys tinkering around in a studio in their spare time.

Thor: "Morphonic actually began life as a college project, when we decided to set about starting a production company. At the time we thought, 'we've got the studio, we've got the talent, we've got the right team, we've got the technical ability; in actual fact we've got everything we need', so we started from that point. As soon as we made that start we had projects on the go, so Morphonic had an identity from the start."

John: "There's two elements to Morphonic: Morphonic Studios Ltd, and Morphonic Productions, so when we use the studio as a production team we have to charge ourselves for the time, just to make it easier for tax purposes."

Rob: "We have investors in the studio, and we wanted to make it clear from the start that they were buying into the studio, but they couldn't really buy into *us* as such — we might go off and do different things later on, or we might stay together or whatever. That's the easiest way to make that distinction, otherwise they might want 10% of everything we earn for the rest of our lives."

It all sounds a bit like heavy going.

Thor: "Absolutely, but we can't afford not to be organised."

Rob: "We're beginning to be quite clued up on the business side of things. We've got an accountant, Alice, and for things like checking contracts we use an old one that we know to be correct, as a template."

Thor: "When you're starting up you've got to do everything on the cheap — if there's somebody you know who can do something for you, use them."

John: "It's like the brochure we're doing; we're hoping to get some time on this guy's computer, designing and printing it all off, in exchange for a couple of days in the studio. It's like a bartering tool."

Perhaps, chaps — but is mum due a couple of weeks studio time for all that washing she did last weekend?

GETTING SERIOUS

Rob: "Being a business does force you to take it all more seriously, which can be good if that motivates you. If things aren't formalised it's very easy to say, 'we'll do it tomorrow'. When it's turned into a business there is always this air of seriousness, so that's a good thing. The bad point is that I can't get any cash out without one of these two guys signing the cheque!"

Thor: "Ideally, the Morphonic bank account was created for expanding the studio. So the money the studio makes is used to make this a better place. In the future that'll mean finding premises, so we can incorporate a live room and expand the amount of work we do — without a studio bank account the money can just vaporise."

John: "I think we're quite lucky, in that we all get on so well, that's a major part of it. We do trust each other completely. I think you have to, really, to make any kind of go of it."

SMELLS LIKE COMMUNITY SPIRIT

You've got a good collection of gear: how did that happen?

Thor: "A lot of the gear in here isn't actually ours. We've struck a few deals here and there to try and expand it, so we can get better results. But that's what you have to do really — beg, borrow

John: "We're all for the community spirit thing, because there are a lot of people trying to get going without having the resources."

On the rack: note the Lloyds Bank complimentary delay time calculator.

GEAR LIST

- **MACKIE 24:8:2 CONSOLE:** "It's expandable, which is the main thing."
- **ALESIS MONITOR 2 NEARFIELD MONITORS:** "The bulk of our work is dance. People who do dance listen to it very loud, and these monitors come across as being quite loud."
- **MASS 500 POWER AMPLIFIER:** "We've had a few problems; the VU meters keep popping out!"
- **ATARI 1040 (4Mb RAM) RUNNING CUBASE:** "That's with a Midex that gives five Outs and three Ins, one of

which has been used by the output of the Fostex D80 — when used, we run it as the master. The other inputs are taken up by the master keyboard and the JV1080. That's mainly for data dumps — we're great believers in SysEx dumps; that way everything's saved and you haven't edited your original sounds out of existence."

- **EMU E64 SAMPLER:** "We've got 10 Meg of RAM in there, and it comes with eight outputs — absolutely wicked machine — and excellent editing. It's the best sampler."

- **FATAR STUDIO 610+ MASTER KEYBOARD**
- **ROLAND JV1080 SYNTH MODULE:** "We're still doing our best to get the most out of the editing. It's good for layering sounds, though. You can make some luscious pads."
- **NOVATION BASSSTATION RACK SYNTHS (x2)**
- **KORG PROPHECY SYNTHS (x2)**
- **ROLAND JUNO 106 ANALOGUE SYNTH**
- **CASIO CZ5000 PHASE DISTORTION SYNTH**
- **ROLAND SH09 ANALOGUE SYNTH:** "Good for weird effects, but you've

- got to resign yourself to the fact that you're not going to get the sound back next time you turn it on."
- **ROLAND OCTAPAD MIDI DRUM PADS:** "Rob's a drummer, so for percussion parts it's useful for getting a more human feel."
 - **TASCAM DA20 DAT MACHINE**
 - **BEHRINGER COMPOSER**
 - **ENSONIQ DP4 MULTI-EFFECTS**
 - **DIGITECH STUDIO QUAD MULTI-EFFECTS**
 - **ALESIS MIDIVERB EFFECTS:** "All the effects are on loan."
 - **TECHNICS 1210 RECORD DECKS (x2)**

Mission control: Thor samples the delights of the Prophecy ribbon controller.

Rob, Thor and John (l to r) are Morphonic. Would you buy body spray on the recommendation of these men?

Rob: "Being a business does force you take it all more seriously, which can be good if that motivates you."

▶ and steal to get the gear together. For the [Ensoniq] DP4, and one of the [Novation] BassStations we did some work for Koch Studios, helping to set up a little mastering suite. Pretty easy work really, just plugging in a few leads."

Rob: "They had just broken down their main studio, which myself and John had worked in. They'd recently stopped production, and closed down their studios and this gear was lying about, not being used. We thought it was such a waste that we convinced them to strike a deal with us."

John: "We met these two guys, Matt and Charlie, they come down and take a couple of sessions a week, and for that they leave their [Roland] Juno 106. They like the arrangement, because they get a lot more done than they would in their own little setup."

Thor: "Everybody's happy."

John: "We're all for the community spirit thing, because there are a lot of people trying to get going without having the resources."

Thor: "We know another guy who has offered to lend us his Yamaha desk and [Roland] TB303 for use during mixdown. We reckon he'll try and ask for time in our studio for that, which is fair enough — the more people involved, the better."

John: "The more stuff happening in a studio the better as well. If you've got five or six different projects on the go, even if you're not personally involved, it's all revolving around the studio. So if something comes of it, you'll benefit from it anyway. We've got involved with people who

think pretty much the same as we do. It works out really well. We're getting more work, and lots more interest from various quarters — having a great time and making some good tunes as well."

Thor: "When we've got time."

MORPHOLOGICALLY SPEAKING

Producing professional results from your home setup can be incredibly frustrating — fighting against faulty equipment, not enough equipment, not the right equipment... and so on. What's worse is hearing stories of people with great studios that they've got together because their father owns most of Latin America, or they've just scored £50,000 from Swindon Council for falling down an open manhole. Morphonic are a lesson to us all to stop our whingeing. Without the rich parents, or the windfall, or the high-up connections, they're making a go of things, producing professional material and running a fully functioning MIDI suite and studio. It can be done. No regrets, then?

John: "It's great, definitely, it's been brilliant."

Thor: "It's been better than plugging away on your own. There's more input, more people to carry the load."

Rob: "If you enjoy soldering, it's great." **SOS**

the debit side, the R and the S have only one set of MIDI connections each, are only 4-part multitimbral (to the W's 32 parts), and lack GM compatibility; the W's PCM-based sound set, which included drums and doubled the workstation's polyphony, is also out. Both rack and synth are equipped with two pairs of stereo audio outs (as is the K5000W), and also retain a floppy drive.

SYNTHESIS ENGINE

Kawai's additive synthesis system — Advanced Additive — is more sophisticated than that offered by the company's '80s vintage K5. Let's start with a Single (in Kawai speak) patch; this is formed

Just a few months ago you couldn't buy a new additive synth; now you can pick from no less than three, and although they're from the same family, there are enough differences to make the choice less than straightforward. DEREK JOHNSON adds it all up.

K is for Additive

KAWAI K5000R & K5000S ADDITIVE KEYBOARD SYNTH & MODULE

pros & cons

KAWAI K5000S/K5000R

pros

- Sophisticated (but under-explained) arpeggiator.
- Real time control (on S).
- Unique additive sound.

cons

- Only four-part multitimbral.
- Manuals could be better.

summary

The K5000R and K5000S are two more aspects of Kawai's great-sounding and unique Advanced Additive synthesis, and provide viable alternatives for different purposes and pockets.

SOUND ON SOUND

When we ran our exclusive review of Kawai's K5000W additive synthesis workstation in January, it was mentioned in passing that sequencer-less keyboard and rackmounting versions were imminent. Both have now materialised, and they differ enough from the workstation to justify their own quick review.

The most visible differences between the K5000W and the K5000S are the absence of the workstation's sequencer and the addition of 16 real-time control knobs (Macro Controls) on the synth. Obviously, the 2U rackmounting K5000R lacks the synth's 61-note keyboard and knobs; otherwise, the two new instruments are essentially identical to each other. The K5000S and K5000R are both more and less than a K5000W. For example, both feature a sophisticated arpeggiator, and the K5000S has two programmable footswitch sockets (in addition to sustain and volume pedal sockets) plus three switches (two programmable, one activates portamento) above the wheels. On

from up to six Sources — 'oscillators', if you like — and each Source can be additive or chosen from a collection of 123 attack waveform, transient and loop samples (note that these are not the comprehensive set of samples used to create the K5000W's GM and PCM patch banks). The more Sources you use in a patch, the less of the 32-voice polyphony is available, and dynamic patch memory will also fill up more quickly — there are nominally 128 memories in each of two banks, but there's not enough patch RAM to allow you to save, say, 128 six-source patches in each. Luckily, a two-bank memory expansion is available.

Advanced Additive is built around the additive Wave Set, a collection of 128 sine wave-based harmonics available in two groups of 64 (harmonics 1-64 and 65-128, so use two Sources if you want access to all 128), each with its own level and 5-stage looping amplitude envelope. Further filtering is provided for each additive Source, in the shape of a 128-band formant filter, ▶

The JBL 6208 Bi-Amplified Reference Monitor

For the power hungry with an appetite
for **PERFECTION.**

RADIO WORLD MAGAZINE
COOL STUFF AWARD WINNER
NAB 1995

The Best System Starts with the Best Parts.

JBL has more experience in designing and building transducers for professional studio monitors than any other company in the industry. We not only use the latest engineering and design equipment, but also the most important test device of all, the human ear. We believe in physics, not fads, so while other companies pick parts off somebody else's shelf, we create our components from scratch. And by utilizing more than 50 years of experience in transducer design, we create the perfect transducer for each system.

Multi-Radial Design - An Ideal Solution to a Complex Problem.

Combining individual transducers into a system is a delicate balance of acoustics, electronics and architecture. Our exclusive Multi-Radial baffle is contoured to bring the drivers into perfect alignment, so the high and low frequencies reach your ears simultaneously. This reduces time smear for a smooth transition between the low and high frequency drivers. In addition, the gently rounded edges of the 6208 provide controlled dispersion and balanced power response. That means even off-axis, you will hear an accurate representation with wide stereo separation and an immense depth of field.

Gold/Titanium Hybrid Dome.

By mating the materials to a large magnetic structure, the 6208 can produce extremely flat frequency response and low distortion for hours of fatigue-free listening. JBL pioneered the use of the light but rigid gold/titanium hybrid construction to provide a transient response that is quick and precise for pinpoint accuracy.

Shielded Drivers for Flexible Placement.

JBL shields all of the drivers so you can place the 6208 right next to your audio workstations without interaction. Gone are the days of compromised monitor placement in your production environment.

Why Bi-Amplification?

It's a simple fact, a separate amp for each speaker produces the most accurate sound. Each of the 6208's two amplifiers is designed to reproduce the assigned frequencies. And by combining the amplifiers inside the cabinet, you improve the amplifier's ability to control the speaker it's driving for controlled low end punch.

Q We played just about every type of instrument through these speakers and they reproduced it with flying colors.

Bobby Owsinski
EQ Magazine

Active Crossovers Provide Accurate Response Tailoring.

By carefully tailoring each amplifier's performance to the response characteristics of the drivers, you get the most faithful reproduction possible. By using active crossovers, power is not robbed by passive components like inductors and resistors. The result is clear, accurate sound at the highest levels.

The passive 4200 Series provides accurate, natural and powerful value for about \$400 per pair.

KAWAI K5000R & K5000S

UPS AND DOWNS: THE ARPEGGIATOR

Arpeggiators have made a comeback over the last few years, led, no doubt, by their use in contemporary dance music. Kawai, therefore, have seen fit to equip their new synth and module with this feature. Note that only the K5000S has dedicated front-panel controls (labelled Pattern, Mode and Speed), although both have an arpeggiator switch. It's a pretty good implementation, too, though Kawai don't give it much coverage in the manual, with no explanations of the preset patterns and sequences. This is especially missed in the case of the module, since you have to go to a special page, not discussed in the manual, to access Pattern and Mode parameters (it's obvious from the display which button to push, but that's not the point).

The Pattern switch offers 11 options: Up, two variants of Up/Down, Down, Key Order, Random, Chord Trigger, Chord Gate, two Sequence Patterns and User. The Mode knob selects between one-, two- or three-octave ranges, with three options: Normal, Hold, and Hold & Retrig. Parameters such as note value (regular and triplet values between quarter note and 32nd note), gate time and key range are accessible from a separate menu.

Creating or editing User arpeggiator patterns is fiddly, but rewarding, especially given the options available. Each of eight User patterns can be up to 32 steps long, and you can create gated or triggered patterns, or programme up to four notes per step in a more or less standard arpeggio. There's comprehensive control over gate time, velocity level and pan position, and you can save arpeggios to disk.

One of the few disappointing aspects of the Kawai arpeggiator is that none of its parameters can be saved with a patch (something which Yamaha's CS1x allows). But one thing the K5000 does (that the CS1x doesn't) is transmit arpeggiated notes over MIDI, which is great. As expected, the arpeggiator syncs to MIDI clock.

▶ and this can itself be controlled by envelope generators or LFOs. Whether you choose to use additive or PCM Sources, each is equipped with a comprehensive set of synth parameters, including pitch envelope generator, resonant filter, filter envelope and digitally controlled amplifier. The whole works are passed through four effects processors (offering preset configurations from a list of 37 effects, including delays, flanging, distortion, and so on), reverb (11 types) and EQ.

As you can see, there's a lot of parameters; fortunately, Kawai have provided some short-cuts, especially when it comes to managing the additive harmonics, their envelopes and the formant filters. For a start, you don't have to work on each individual harmonic or formant filter band. Kawai allow you to work on groups of harmonics (labelled Bright, Dark, Even, Odd, and so on), and you can also work on groups of filter bands. The so-called 'Morf' display offers another short-cut, whereby the K5000 creates new harmonic shapes using four Sources selected from other patches.

There's just one other programming level on the K5000R/S: the Multi, of which there are 64. Up to four Single patches can be layered, split, or assigned to separate MIDI channels to form a Multi. This is confusingly similar to what's called a Combi in the K5000W (although Combis lack the MIDI channel assign option).

MACRO CONTROLS

Now to the K5000S's Macro Controls. This 16-knob matrix offers instant real-time access to 16 parameters, live or in the studio. All 16 knobs also transmit their movements over MIDI, and these could be recorded into a sequencer for reliable playback at any time. Once a patch has been Macro-tweaked, the result, which might be a drastically different sound, can be saved as a new patch — editing doesn't get any easier than this. It's just what the newcomer needs while coming to terms with the complexity of additive synthesis.

Four of the knobs are user-assignable, and can be set to control such things as attack, decay and release times, formant filter envelope/LFO depth and high and low harmonics (called 'destinations' in Kawai-speak). Up to two 'destinations' can be assigned to each knob, with the display keeping you informed of which destinations each knob controls. With a few minor restrictions, the Macro Controls can also be used on Multis. In use, zipper or quantisation effects rarely occurred, and when they did (while tweaking at speed), they often added interesting effects.

Although the module lacks the physical knobs of the synth, the same thing can be done using the display, though parameter access makes the process slower and you can only deal with one 'virtual knob' at a time.

IN USE

Both synth and module are reasonably easy to navigate. The keyboard synth will have the edge for many, due to the Macro Controls and front-

panel arpeggio knobs, although both instruments can be confusing, simply because there are so many parameters. Luckily, there are some short-cuts, and generic synth editors should have profiles soon; I've heard that an Emagic *SoundDiver* K5000 profile is currently being tested.

The display on both keyboard and rackmount is huge, and very helpful — although not large enough, it seems, to provide PCM waveform names in the DCO window; like the K1 a decade ago, the K5000 expects you to manage with numbers in the display and a name list in the manual. The eight function buttons across the bottom of the display are great, but the four buttons on either side of the display don't always line up to their respective parameters in quite the way you'd like. I also found the manuals lacking, with odd organisation, many explanations lacking depth (especially for novices), and no index. Kawai US's web site (<http://www.kawaius.com>) provides a couple of general articles on additive synthesis; it would have been nice to see something like this in the manual.

CONCLUSION

There hasn't been so much variety in the world of synthesis for a long time. After what seems an age of "You can have any synth you like, as long as features Samples + Synthesis", the serious synthesist now has a choice of S+S, genuine analogue, analogue under digital control, physical models of analogue, wavetable, and, thanks to Kawai, a family of additive options.

But the significant differences between the members of this family mean that for the customer the choice isn't simply between a workstation, a synth and a module. If you've got £1800 to spend and want a one-stop box for composition, the K5000W is a good bet: PCM sounds, 32-part multitimbrality, decent sequencer, and the novelty of additive synthesis. If, however, you enjoy the process of sound creation, like the idea of the dedicated edit knobs and arpeggiator, are itching to check out the possibilities of additive, and won't find the limited multitimbrality and halved polyphony a problem (most current physical modelling synths are similarly restricted), go for the K5000S — use the £400 difference to pick up another module for increased multitimbral capability. At close to a grand (£1059), the K5000R is the bargain of the family; though it lacks some of the immediacy of the 'S', everything else is still there, and it's simply the cheapest off-the-shelf additive synth you can buy. It might not be a simple one, but the choice is yours.

At last, a multi-effects processor that offers the flexibility and versatility of a dedicated multi-effects processor. The ART Network is a compact and portable multi-effects processor that is perfect for live performance and studio recording.

NETWORK £299

Both of these stereo 2 channel digital multi-effects processors feature Dual Processing and ART's ASIC audio chip, providing astounding quality at an unbelievable price. The FXR is a quick set up, plug and play processor with 255 presets.

FXR £149

The new FXR Elite II adds MIDI real time control, MIDI mapping and the ability to edit parameters and store your changes. It takes the proven, popular technology of the original FXR elite programmable multi-effects processor and introduces a more intuitive, more powerful interface.

ELITE II £199

Sound Generation Nord Lead is the first digital synthesizer to use 'Virtual Analog' Synthesis. Clear but analytical analog synthesis design is copied and implemented in a digital model. Nord Lead creates mathematical oscillations of the electrical signal generated by analog oscillators, instead of using waveform tables. This makes it possible, for example to sweep the pitch smoothly over a very wide range and allow for true pulse width modulation.

Filters - 4 voices independently to 12, 4 part multi-destination.
Special Features - Vibrato programming. Each function controlled by a knob, can be programmed to vibrato. Morphing. Each function, controlled by a knob, can also be controlled by the modulation wheel, pedal to continuously fade between two values.
Performance controllers - 8 active velocity sensitive keyboard switches (left bottom 32 key), Modulation wheel, the 'Pitch Stick' (feature no dead zone at zero crossing), pedal input for sustain or expression pedal. Filter pre-boost for the 'Pitch stick'.
Oscillator section - Two oscillators generating triangle, sawtooth or pulse (with adjustable width) waveforms. Oscillator 2 can also generate noise with a random control. Oscillator 2 can be hard 'sync'd' to oscillator 1. Large deep frequency modulation of osc 1 from osc 2.
Filter section - 12dB 2 pole, 24dB 4 pole, 48dB, bandpass or highpass. Cut off, resonance, resonance amount, envelope amount controlled by velocity, keyboard tracking and ADSR envelopes.
Amplifier section - ADSR envelope, gain control.
Modulation section - LFO 1 generating triangle, sine or random related to Osc 1-2, Osc 2, filter or pulse width. LFO 2 produces a triangle waveform, routed to Osc 1 and 2 or amplifier. It also controls the rate for the arpeggiator. Arpeggiator: Range: 1-4 notes; Mode: Up, down, up/down; Modulation envelope (attack, decay) for one 2 pitch or FM amount.
Performance section - Play mode, poly, legato, mono, instant stereo, instant poly.
Memory - 4 program slots for layering possibilities. Parameters - auto parameters. Audio out - Stereo output. Modulo stereo, mono and multitracked (LC-1/DI) mode. Headphones out. Stereo 18 bit DAC.
Memory - All user programs, 21 factory programmes and 100 factory performances. With the 8 voice expansion card, the Nord Lead can hold an additional 297 (99x3) user programs and 320 user performance programs on a PCMCIA 128 Kbyte; battery backed RAM card.
MIDI features - All control knobs and switches for program subprogram and receive. Control Change messages. System exclusive bulk dumps. One program in all programs. MIDI clock or synchronizing LFO 1 and LFO 2 arpeggiator. Triggering of the filter and amplifier envelopes and velocity control from separate programme's MIDI channel and note numbers.

£899

ASR-X
RRP
£1199

COME AND SEE THE INCREDIBLE MR RACK AND MR KEYBOARDS FROM ENSONIQ. ALSO AVAILABLE FANTASTIC NEW DANCE/TECHNO BOARDS

ENSONIQ ASR-X

We went to the masters of sampling and asked them to list the top features they would like to see in the ultimate groove machine. They said to make it easy to sample, resample and loop, include a built-in synth and some incredible effects, resonant filters, an easy to use sequencer and put it all into a portable box with pads.

IT WAS TIME TO TAKE SAMPLING TO WHOLE NEW LEVEL - So we took the best features of the famous ASR-10, added great sounding 20-bit A/D converters, made the RAM expandable to 34MB and stuffed all this into one portable table top box. We put a lot of effort into making it extremely fast and fun. Just sample, shoot it to a pad and start jamming. Never before has so much power been so easy to use.

The ASR-X is expandable in many ways. You can add up to 34 MB of RAM for sampling, add an EXP synth expansion board, or add 8 outputs or SCSI.

Every aspect of the interface was developed to be fun and easy to use. After all, you probably write your best grooves when you're having a great time. The 14 custom designed velocity sensitive pads feel great. They're fast and responsive, smooth and sensitive, just begin to be hit.

Our new VLSI 24-bit digital signal processor with 26 MIPS of DSP power gives you incredible sounding FX. That power can be used to make your sound mysterious or bold, rich or thin, big or small. There are plenty of fun effects like Chatterbox, Vocal morph and speaker. In fact you can also use the Low-Fi processing algorithms to get that cool muffled sound.

- Track**
Play back eight tracks - both providing two additional tracks. You can name each track and access a virtually unlimited number of alternative values.
- Multi-Resolution Level Waves**
Always provide accuracy: increase the levels of your recording as you track.
- Left/Right Level Displays**
Shows you the currently selected level points. Values can be easily edited with click-drag tactics.
- Quick Buttons**
Enables quick playback and record between the left and right location.
- Track**
Buttons: Buttons for manual matches such as solo, mute and record, the master buttons allow you to group 3 tracks together in one track for easy handling.
- Wave display**
The graphic waveform of your recorded file is visible across from left to right during playback and recording.
- File Transfer Buttons**
These buttons allow you to write the current 'tape' position onto the master display on the fly. It's available either with the mouse or with a key stroke, these buttons allow you to quickly grab the current left and right location.
- Track Indicator**
Indicates your track space on your tape. You have 800 for your recording. It also indicates your current position within the recording.
- Auto Stop Button**
With this button enabled, the VNR will automatically switch to record mode using the currently displayed left location as record to and the right location as record (C1).
- File Transfer**
You'll need to choose a 'tape' before you begin your recording. Pressing this button gives you a variety of tape lengths depending on the size of your hard drive.
- Copy Button**
This button allows you to copy, paste, or move the data of 'locked' source tracks between the left and right location in the tape position on a record enabled destination track.
- Input selection**
Press 'A' to choose the Analog input, or 'D' to choose the digital input on your Audioerks card.
- File selection**
Clicking on this button opens a dialog, where you can simply select the desired track value by clicking and dragging. Clicking any time is safe as it starts in range of 0.0175.
- Position - Memory Bank**
Up to 24 positions can be stored with each tape. It can be implemented automatically. To view others, simply click on the slider and drag left or right. Clicking on the 'zero' button between 2 positions numerically gives you a 'zero selection' which can be displayed on both master display simultaneously. Previous memory is in same format and recalled on keyboard.
- Position Display**
Optimized for legibility, the position display shows you the current tape position. A maximum tape length of 1 hour, 59 minutes and 59.99 seconds can be displayed.
- Tape position**
An example for use in the context of any conventional recorded tape recording.

POINTS OF INTEREST:

THE CARD - INCREDIBLE POWER:
 At the centre of the PARIS system is the powerful EDS-1000 card. This PCI card not only manages all audio I/O but also packs heavy duty signal processing power. It uses six of ENSONIQ'S most powerful ESP-2 custom signal processor chips to do an entire studio's worth of work.

THE EDS-1000 PROVIDES:
 The EDS-1000 provides mixing for 32 channels of audio with sends to as many as 16 mono or eight stereo aux buses, 20 inputs and 20 outputs with full 24-bit resolution, 24 streams of 24-bit audio data, 32 digital parametric EQ's simultaneous multiple effects and a 175-point patchbay.

TWO PLATFORMS, ONE SOLUTION:
 PARIS works identically on both Pentium PC and PowerPC Macintosh computers - and the same card plugs into both. Unlike older ISA and NuBus cards, the EDS-1000 card takes advantage of the huge bandwidth of the PCI bus, which allows it to play back 24 streams of digital audio, all without taxing the computer's main processor.

EFFECTS:
 PARIS comes with a library of world class reverbs, compressors, EQ's and popular digital effects right out of the box. And they all run in real time! For even more variety and special applications, additional libraries and third party plug-in modules will be available.

ProTools
£CALL

It's not just our Pro Tools... Master's MIDI studio console can give you productivity and versatility!

Now you can literally get your hands on Pro Tools digital audio workstation software. Mackie Design's HUI is designed to control and respond to Digidesign's Pro Tools Version 4.0 and in the near future, DAE! compatible software too. HUI lets you mix via a real, tactile control surface complete with motorized faders... rather than with a mouse or a unidirectional fader pack. Perform real-time, hands-on multi-channel fades, mutes, select and adjust sends, create subgroups, and change dynamics. In short, track and mix down just the way you would on a large, automated console, yet with complete bi-directional interaction with Pro Tools 4.0. HUI will immediately reflect all standard mixing values, functions and pointers. HUI controller architecture supports standard MIDI protocol in either 7-bit or higher resolution 9-bit applications as well as utilizing simple controller and note values. Rear panel I/O includes analog jacks for three stereo audio pairs, a footswitch jack, ADB mouse thru, MIDI in and out and RS422 port for direct computer connections.

PreSonus

Audio Electronics

The DCP-8 is an eight channel, digitally controlled analog dynamics processor, plug it into the inserts of your mixer, MIDI it up to your sequencer and it will give you a compressor limiter, a noise gate, automated fader levels, automated mutes and glitch free real-time control of parameters (even compression ratio) across all eight channels. Settings may be saved as a snapshot into one of the 100 user memories. A DCP-8 environment is available for EMAGIC Logic.

Presonus will make you a custom DCP-8 if you have a specific need that is not addressed in the stock unit, how's that for service!

The ACP-8 is 8 high quality compressor gates housed in a steel 2U rack mount unit. Each compressor allows control of threshold, ratio, attack release and output gain. Each is individually selectable for hard or soft knee, peak or auto compression. Each gate features threshold, release and attenuation controls. It's all here!

YAMAHA

REV-500
£CALL

The REV500 is an extremely good digital reverb which holds its head up confidently in any company. In light of its price, however it really is something special and certainly worthy of an audition. It may not represent the ultimate in reverb simulations, but it's not very far off and certainly offers an adjustable and worthwhile upgrade from its ancestor.

JOEMEER

VC3
£CALL

VC3 Pro Channel
The Joemeek "banned" philosophy on a budget. This box is stunning! A classic high performance microphone pre-amplifier, Joemeek optical compressor and Joemeek enhancer. The Joemeek VC3 Pro Channel is essential when warming up digital sound, playing live or any function which demands the highest quality signal processing on a budget. The Joemeek VC3 Pro Channel will out-perform many similar boxes costing 3 times the price.

SPL

VITALIZER
The unrivalled Virtualizer equalization system has been creating a highly complex system of variable, interactive filters and microprocessor controlled phase shifters. These are under the control of a specially designed analogue computer that responds to both the dynamics and frequency content of the input signal. Specially developed to be compatible with the way the human ear perceives sound, digital impromptu re-shapes the entire sound spectrum, so it appears louder, more detailed and commercially appealing.

Rola

SX-700
£CALL

SX-700
Don't underestimate the SX-700 Studio Effect Processor. It's rack mount unit that features standard spatial effects like reverb and delay, the latest four-stage Harmonic (non-linear peak) filter and other modulation effects, as well as RMS V-D filter that can place your signal anywhere in a three-dimensional field. It's small, it processes signal processing in real time, it's better than a whole slew of dedicated effects. As for the SX-700, better in better performance and a more user friendly interface than most before.

Red Hot & Dance

I was quite excited about getting my hands on the Carnaval, partly because I had a very enjoyable (though brief) encounter with an Emu Orbit last year. Coincidentally, the Carnaval arrived with the new Orbit V2 in tow, so I was able to make some interesting comparisons between the two. But I'm afraid, dear reader, that you'll have to wait for one of my esteemed colleagues to review the V2 in full next month. Meanwhile, back in Rio...

The Carnaval follows a slightly predictable Emu path, repainting and relaunching sound modules with new samples and 'Beat' patterns for specific musical styles. In the case of the Carnaval, it's Latin music. What next? The Hoe Down country and western module?

CARNAVAL TIME

In common with the new Orbit V2 and the Planet Phatt [reviewed SOS June 1997] the Carnaval is a 32-voice polyphonic, 16-part multitimbral MIDI synth-cum-sample player. There are 640 performance presets (384 ROM and 256 RAM), 100 Beat loops, 28 user-programmable Beat songs and 400 or so raw samples. In addition to this arsenal of sounds, there are all the usual Emu bells and whistles — 32 resonant filters, Z-Plane filtering, X-Factor Beat control, MIDI sync-able LFOs and six assignable audio outputs — but, unfortunately, still no effects to speak of.

Navigating your way around the Carnaval is straightforward enough, though a little long-winded. There are two cursor buttons that move the blinking cursor across the screen, and a stepped data knob to alter parameter values. As with other Emu modules, the Carnaval can operate in one of four modes. The default mode is Play, but pushing the Master button brings up a global control menu; the Edit button allows you to enter the deeper sound Edit mode; and pressing both Master and Edit buttons together switches the machine into Beats

EMU CARNAVAL LATIN SOUND MODULE

Given the size of the Spanish-speaking world, it makes good commercial sense to produce a Latin-style sound module — but only if it's sufficiently authentic to sell to those in the know and sufficiently versatile to be attractive to other musicians simply looking for a bit of spice in their rack.

CHRIS CARTER and JOE ORTIZ play with fire...

mode. Personally, I'd like to have seen a couple of +/- incremental buttons for editing and a dedicated Bank button for easier navigating through patches — it's too easy to zoom past the patch you want using the data wheel, which then means dialling your way back to relocate it. Using a MIDI keyboard to select patches would be another solution to this problem.

TURN UP THE HEAT

Emu have given the Carnaval a pretty wide remit, considering the different types of Latin styles there are. They've done a pretty good job of it — and then some — by expanding the range well beyond traditional Latin percussion. Styles covered by the Carnaval include Latin, Salsa, Songo, Merengue, Cumbia, Banda, Brazilian, Tejano, Afro and Jazz. Quite a list — and I haven't listed the more obscure hybrid styles, either. But that's not all: in Beats mode there are patterns and styles for Techno, ▶

Emu Carnaval

pros & cons

EMU CARNAVAL £899

pros

- Hundreds of great-sounding presets and samples.
- Expressive, versatile filters.
- Beats mode a nice bonus, particularly with the ability to send patterns to an external MIDI sequencer.
- Six configurable audio outputs.
- Looks good.

cons

- Specialised Latin tag may limit appeal.
- No effects.
- Basic, sometimes cryptic display.
- Overpriced.

summary

A great-sounding module for a specialised market but capable of successfully crossing over into many other styles of music. If you can justify the high price, get one to add a bit of spice to your rack.

SOUND ON SOUND

► Euro, Funk, Bhangra, Brazilian Pop, Latin-Techno, Latin Dance, Latin-Jazz, Mexican Pop and Afro-Cuban! As you can see, there's a pretty impressive selection of styles to choose from.

GRRR, YEEOW, CHACHUCHA

Many of the sounds and presets are grouped into categories similar to those above, but there isn't room to list all 640 here. However, I'll cover a few of them to give you an idea of how the Carnaval differs from the Orbit V2 and the Planet Phatt.

For a start, there are 40 or so very non-Latin synth presets, including cheesy Depeche Mode types, warped sweeps, grungy types, raw square wave, sawtooth and sine wave, smooth tones and beefy Minimoog types. There are also 20 to 30 bass samples, ranging from some very convincing acoustic and upright types, through lots of good synth basses, to digital DX types and even a few gut-wrenching sub-bass tones. There are countless pads, washes and strings, flutes and various pianos. Guitars are everywhere — acoustic, electric, 12-string, nylon, steel and so on. As you might expect, there's an overwhelming number of brass sounds, including samples of individual instruments, and some powerful stabs and takes from big bands and brass ensembles. The 20 or so 'sync'ed LFO' presets

offer some impressive effects, ranging from quirky, rhythmically filtered synths to slowly evolving ambient pads. The SFX section is also splendid, and includes random bleeps, eerie portamento'd sweeps, weird reversed sample snippets, strange ethereal loops, and ambient washes with embedded sequences. The vox category features lots of multiple shouts, chants and phrases along the lines of "ChaChuCha", "Eh!", "Rrrrr", and "Salsa". [See 'Carnaval — an American Puerto-Rican's Perspective' box for more on this.] There's also a slightly creepy, looping manic laugh that sounds like something from a horror film when played lower down the keyboard, or like a mad scientist at the other end of the scale — great stuff!

CRASH, BANG, WALLOP

But the vast majority of raw samples in the Carnaval concentrate on percussion, with only about a third covering musical sounds, which is to be expected on a Latin module. About 75% of the performance presets have been programmed for melodic instruments, however, with the majority of the remaining presets programmed as Beat kits. About 30 drum kits have been specifically programmed for the Emu/Kat range of MIDI percussion controllers, and there's even a couple

CARNAVAL — AN AMERICAN PUERTO-RICAN'S PERSPECTIVE

Hola! Me llamo José Ramon Ortiz and I've been asked by *Sound On Sound* to give my two centabos on Emu's new Latin groove module, Carnaval.

When I first began playing around with the Carnaval (skipping the manual, naturally, and blindly pushing buttons), I thought it was a pretty clever but gimmicky box of tricks. A more thorough peek behind the few front-panel buttons proved to be rewarding: the Carnaval sports some excellent and well recorded percussion voices. Latin percussion is not easy to record or sample, because it's necessary to capture not just the sound of the instrument, but the player and the space the player and instrument occupy in a soundfield — even when it's a mono recording.

The Carnaval's congas and bongos, in particular, have certainly benefited from a combination of close and distant microphone technique to give them clear transients, while ambient miking adds the roominess needed to make the sound come alive. The claves, woodblocks, cowbells, shakers and cabasa would complement virtually any style of music. The surdo and other large drum samples are toppy enough to cut through the busiest of tracks, while retaining body in the low end. I felt as though I was playing the instrument, not the keyboard. Some of the timbale samples really sparkle and, when using some of the performance patches, I was in salsa heaven, playing

rolls and flams for over an hour!

Quica is always a funny instrument to capture, as it always sounds too 'vocal', with not enough of the 'finger element'. If you know what this instrument looks like and how it is played, you'll know what I mean. The acoustic bass sounds are good but, having played a 'baby' bass in my days, I wasn't totally convinced by the sound of this one. Is it supposed to be a wooden acoustic upright or an Ampeg fibreglass-bodied five-string baby bass?

The vocal samples are authentic enough, with that virtually-impossible-to-imitate hispanic tone. Care must be taken to ensure that these samples are not over-used. They're phrases that I grew up with, and still use myself on personal projects, though. For the uninitiated, a brief explanation of what these vocal phrases mean might be in order. Although Latin music has a reputation for dealing with real-life, everyday issues — love, sex, money, jealousy, envy, hard and good times — there are the odd bits of verbal nonsense that have become a trademark of the more upbeat Latin styles. These phrases would be comparable to, say, James Brown, when he says HUH, OW, HIT ME and so on. Think of it as Spanish Jive talk.

- "Carnaval": usually means what it says.
- "Cumbia": would sound totally out of context if you stuck it in a cha cha.
- "A gozar": fits almost anywhere, as it

means you're going to have a jolly good time, but don't use it on a ballad.

- The laugh: is usually placed in a bass and guiro section of a Latin track before a buildup.
- "Cha ku cha": a vocal percussive riff.
- "Que Rrrrico": how rich — a more hip translation would be "way cool".
- "Arrrrrr": the percussionists in our bands in New York would do this when they spotted their prey for the night!
- "Salsa": Sauce — not the kind of phrase that comes to mind when performing a ballad.
- "Merengue": best used when actually doing a merengue, which no self-respecting Latin band would omit from their repertoire.
- "Baya": Cool, easy, enjoy, get into this...
- "A bailar": get dancin'.
- "Como": Say what?

I suppose it would be silly to question the inclusion of instruments such as the Chapman Stick or TB303 in what is supposed to be a Latin percussion groove module. It's the 1990s, however, and almost anything goes nowadays. From an educational viewpoint, Carnaval will introduce many people to both the delicate and the bolder elements of Latin and salsa music. Jazz features heavily in the scheme of things too, so the benefit could be two-fold, and this can only be a good thing.

Once I found my way into the preset grooves section, I was pleasantly surprised. Most of the grooves are highly authentic, and while I'm not a dancer by any means, they more than got my toes tapping.

- Tres Dos: excellent, displaying the loose, laid-back nature of this groove faithfully.
- Plena: very good use of the guiro and congas on this one.
- Guaracha: simply oozes feel. Unmistakeable.
- Motuno: similar to cha cha. Used more as a link or solo section in a typical Latin piece.
- Mambo: you'd die and come back a few times jamming over this one. The improvisational possibilities are staggering.
- Batucada & Carnaval: tweak up the tempo on this one, fill your tank and point your car towards Rio.
- Coolio: no business being anywhere near this box.

The only thing that can let a groove down a little are the maracas samples, which aren't 'loose' enough. But it's a minor gripe, considering the high quality of most of the other sounds.

José Ramon Ortiz — aka Joe Ortiz of Heavenly Music — has been a Latin musician for well over 25 years and has worked as guitarist, pianist, upright bassist and percussionist with such salsa luminaries as Ruben Blades, Ricardo Marrero and David Valentin.

Emu Carnaval

► of GM drum kits.

The easiest way to start playing around with percussion sounds is to dial up one of the three Master Kits — Salsa, Brazil or the AllTraps kit — which together contain every percussion sound available on the Carnaval. Emu say that they've tried to include multisamples of all the important percussion instruments so that they can be played as authentically as possible. They've also included a few instruments, such as the Tambora, which are often heard in Latin music but rarely included in drum machines or modules. I found the best way to experiment with the percussion kits was by hooking up my Roland Octapad — not quite a Kat, but still more expressive than a keyboard.

I couldn't even begin to review the percussion sounds in depth — there are just too many — and my best advice is to pop along to an Emu dealer, dial up the Master Kits: I062/P000/0 (Salsa), I063/P001/1 (Brazil) and I061/P003/0 (AllTraps) and have some fun trying out the sounds. Overall, the samples and kits sound pretty good — punchy and bright, with quite a few variations and types. Emu haven't skimped on memory, either: some of the sounds are quite long and don't suddenly cut off, although a few do begin looping a little too soon.

LATIN LOVER?

In a way, Emu have done the Carnaval a disservice in calling it a Latin sound module, because it encompasses a much wider range of sounds and styles than this tag implies. However, if your inclination is toward Latin styles, the Carnaval is an obvious choice because this is what it does best, and there's very little else available quite like it. On sound and MIDI facilities alone I have no problem with it — great filters, plenty of polyphony. Emu

FEATURES LIST

- 16-part multitimbrality
- 32-voice polyphony
- 32 6-pole VCFs
- 640 presets (384 ROM, 256 RAM)
- 100 preset Beat Patterns
- 28 user-programmable Beat songs
- 3 stereo outputs (6 polyphonic submixes)
- MIDI In/Out/Thru

FEEL THE KARAOKE BEAT

I have always had mixed feelings about the Emu 'Beats' mode. I appreciate that it can yield some instantly useable rhythms, and I think the X-Factor control for stepping through different Beat kits is a great idea, but I find things start to sound a little 'samey' after prolonged use. This is probably due to the Beat patterns not being editable. I'm always hankering to tweak them a little — which, of course, you can do by recording them into a MIDI sequencer, but not within the Carnaval itself. I worry that all the other Emu Orbit/Planet Phatt/Carnaval users out there might decide to use one of the Beats I've decided to use on a commercial release, and we'll all end up sounding the same. This said, the Beats offered by the Carnaval are, subjectively, at least as good as the Orbit and the Planet Phatt and are a lot of fun to mess about with, for inspiration. Some good ones to try, if you get the chance, are:

- B:02, B:32 & B:34 You could be standing right there at the Rio Carnival.
- B:06 A techno groove plus a gut-wrenching sub bass.
- B:07 & B:31 Gloria Estefan without the vocals.

- B:40
- B:43
- B:43
- B:50 & B:54
- B:51
- B:71
- B:72
- B:86
- B:73

Slow and sexy Latin lurve vibe.
Imagine if Yello were a club band in Blackpool.
At Blackpool without Yello.
Good impressions of alpine folk music.
Simply Red without Mick Hucknall.
The Barry Manilow band without Bazza.
Euro-disco on heat.
A Bhangra/Techno groove.
An uncannily accurate version of 'Hey Macarena', without the Los Del Rio vocals. Try and stop yourself singing along.

With the ability to chain some of these very convincing and often instantly recognisable Beats together into songs (28 user-definable), the Carnaval becomes the first 1U rackmount MIDI module I have come across, from Emu or anyone else, that could pass itself off as a self-contained Karaoke machine. Is this a good or bad thing? That's not for me to say, but it could be a very useful facility for some cabaret bands or solo singers.

FURTHER INFORMATION

The Emu Orbit and Planet Phatt are functionally identical to the Carnaval. For a comprehensive appraisal of their deeper workings, and those of a couple of related instruments, check out these issues of SOS.

- Planet Phatt: June '97.
- Orbit: June '96.
- trapKAT drum controller: July '95.
- KAT dk10 drum controller: June '93.
- Launch Pad: Oct '96.

have, as usual, produced a quality piece of gear, but here's the rub: I have some misgivings, not just about the Carnaval but also about the Orbit and the Planet Phatt. For a start, why no effects? Even dinky little GM modules have delays and reverbs, and a few integrated effects would add such a lot to the overall sound and make these machines awesome. Another gripe I have is the basic 2-line, 32-character display. This is a real inconvenience — as the saying goes, it's like trying to decorate a room through a letter box. Alesis, Roland and

“...if your inclination is toward Latin styles, the Carnaval is an obvious choice.”

Yamaha all use much better and more informative displays on their current 1U rackmount modules. Another problem I have is the overall concept of these units, which harks back to the original Proteus — repackaging of essentially the same machine with a new badge and new samples. This isn't too bad really, but when they keep producing such great-sounding modules, how on earth is a struggling musician supposed to keep up? I think a much better and more cost-effective approach is the one Quasimidi and Roland have adopted, using optional plug-in voice boards. But my biggest problem with the Carnaval is the price of £900 (less a quid), which I think is too much considering the facilities on offer. If it were £150-£175 cheaper I'd consider buying one myself. Because of these points, I feel I can't wholeheartedly recommend the Carnaval, but try and get a demo of the machine, and if you like it and think it justifies the price, I have no doubt that you'll have a lot of fun with it.

NEW LOW PRICES ON TASCAM DATS

DA30 BEST SOUNDING DAT

Listen to Tascam's DA30 DAT Recorder next to any other brand of DAT machine and hear the difference.

£975

The secret is in its unique AD and DA converters. They are really 'musical' sounding. Thus they ensure your valuable masters actually sound better. Add to this Tascam's famous workhorse build quality and long feature list.

AT R&W YOU CAN NOW SAVE 15% OFF THE DA30 LIST PRICE OF £1199!

DA50 Budget DAT

£639

Tascam's most recent studio DAT recorder. At a price more associated with delicate Hi-Fi DATs. The difference is that this machine is heavier duty by far. And it comes with some unique features. You can record a 60-character message at the start ID of each track and this is displayed as the track plays. You can turn off SCMS copy limiting without the need for a modification. It even comes fitted with 19" rackmounts as standard.

DASE NORMALLY COSTS £799. NOW YOU CAN SAVE 19% AT R&W!

Portable & Affordable

£1227

The Tascam DA-P1 is the world's lowest-cost professional portable DAT recorder. With the sort of facilities you expect in a studio DAT. Along with XLR microphone inputs and 48V phantom power for condenser mics, plus a built in record limiter to ensure your recordings don't distort at those unexpectedly high points that always happen when you're recording your most important work on location.

A DA-P1 NORMALLY COSTS £1499. NOW AT R&W IT DOESN'T SAVE 17%!

APOGEE ADAT TO DA88 INTERFACE

New from Apogee, here's a real problem solver for you. The FCB Digital Format Converter allows cost-effective transfer of 8 channels of audio between ADAT & DA88/DA38 recorders. Either machine can act as master or slave. With an FCB, an ADAT and a DA88 will perform as if they were two ADATs or two DA88s. Transparently. And for modest cost.

2 NEW MiniDisc PORTASTUDIOS

Yamaha & Tascam, the inventor of the cassette Portastudio, have now taken the concept into the MD (MiniDisc) format. With the triple advantages of non-linear digital multitrack recording on cheap and very small, portable media, these two feature-rich 4-track machines are now the new face of entry level recording.

Both units allow up to 37 minutes of 4-track recording per disc (more than a C60 cassette), and provide comprehensive mixing and MIDI features. Here are the basics - Tascam 564: 8-inputs, 3-band sweep EQ, Shuttle search, Bounce Forward, MTC out & MIDI Clock. Yamaha MD4: 4-inputs, 3-band EQ, MTC out, Quick Locate, flexible editing, clear LED control display. Only the Tascam has a digital out. Official costs are £1099 for the Tascam 564 and £899 for the Yamaha MD4. But we're doing much better than that.

Ask us for some FREE MiniDiscs with these too!

£925

£750

Tascam RRP £2999

MultiStory

MULTI-EFFECTS EXPLAINED

PART 1: To start off this short series on multi-effects programming, PAUL WHITE explores the key building blocks found in today's versatile units.

A little over a decade ago, effects units were mainly dedicated devices; you'd buy a reverb unit that produced only reverb, a digital delay line for delay or echo effects, a pitch-shifter for transposition effects, and so on. This meant that we got to know the parameters relating to the various effects pretty well, but then along came the multi-effects unit, offering all the above, and more, in a variety of configurations. With the multi-effects unit came presets and easy edit options, which meant that a lot of newcomers to recording skipped over the essentials of effects creation. But creating a multi-effects patch is a skill in its own right — you need to know how the different effects are created, and how they interact with each other, depending on their position in the signal chain. For the benefit of those who haven't studied the workings of effects before, I'm going to start by looking at the main effects types.

REVERBERATION

Reverberation is now a very familiar effect and has been discussed at length within these pages on numerous occasions, so I'll get through the essentials as quickly as possible. Natural reverb is created when sound reflects around a confined space such as a building, and the resulting reflection patterns are immensely complex. For example, a single handclap in a cathedral can generate thousands of reflections within the first second, and the complexity continues

to increase while the reverb decays, as each reflection is re-reflected from multiple surfaces. The first set of reflections from the walls and ceilings is known as Early Reflections; their pattern provides strong psycho-acoustic clues to the nature of a space, even when you can't see it. In a large hall, the first few echoes may well be quite distinct before they build up into a dense reverberation, whereas in a smaller room the distances are much shorter, so the reverb density builds up far more quickly.

Though they're technically quite complicated, the low cost of DSP chips (Digital Signal Processors) has brought us a whole range of affordable reverb and multi-effects devices. These invariably have stereo outputs which create a wide, spacious effect, even when the input signal is in mono.

The most obvious parameter of reverb is the time that it takes to die away (decay) after a percussive sound such as a handclap or drum beat. For contemporary music production, decay times of between one and three seconds are the most useful, though most units have a far wider range, to allow the creation of special effects. Reverb settings with strong early reflections and a fairly fast decay are an effective way of creating a wide stereo effect from a mono source, such as a voice or instrument, recorded with a single microphone.

In a large space, there is a delay between the original sound and the first reflections being heard — it takes around a tenth of a second for a sound to travel to a wall 50 feet away and then bounce back to the listener. Most reverb units have a pre-delay parameter, and the effect of adjusting this is to vary the apparent size of the room without changing the overall decay time. It also helps give a mix more clarity, by leaving a breathing space between the original sound and the reverb that follows it. Reverb treatments are based on algorithms (in this case, a mathematical model simulating the reflective properties of a room), and a typical unit will include algorithms for halls, rooms, chambers and plates (a plate is a mechanical studio reverb device based on a large metal plate), as well as non-natural reverbs, such as gated and reversed versions. Figure 1 shows how reverb develops from a percussive sound.

Soft furnishings in a room will absorb more high-frequency energy, hence reducing the high-frequency decay time, but a tiled room or stone cavern will reflect well at high frequencies, resulting in a very bright reverb. To emulate these environments, the basic algorithms include parameters for adjusting the relative HF and LF decay times. Brighter sounds work well with drums, electric guitars, acoustic guitars and pop

MULTI-EFFECTS EXPLAINED

► vocals; more classical acoustic instruments often work better with a more natural-sounding reverb.

Gated reverb was probably one of the first multi-effect treatments, as it was first achieved by miking a drum kit in an extremely live room, then using a noise gate to cut the reverb off abruptly at the end of each beat. Examples of this treatment are to be found on many early Phil Collins tracks, though the effect is less fashionable in this context today. Most multi-effects devices and reverb boxes provide gated reverb as a single algorithm, though some still allow you to create it from separate reverb and gate 'blocks'.

Reverse reverb is a burst of early reflections starting off at a low level and gradually increasing, before ending abruptly. This reverse envelope is responsible for the reversed illusion the effect creates. Figure 2 shows the envelopes of gated and reverse reverb.

DIGITAL DELAY

Digital delay is the successor to the tape-echo unit, a special type of recorder using one record head and between one and four replay heads. A continuous loop of tape was used on most machines to prevent the tape running out part-way through a performance, and the principle was simply that any input signal was recorded,

then played back a short time later via the replay heads. An erase head then cleaned the tape before returning it to the record head. The delay time was set by the tape speed and the head spacing; the inclusion of a variable speed control, and on/off switching for the replay heads, made various delay effects possible. Repeat echoes were achieved by feeding some of the output signal back to the input (as shown in Figure 3).

Digital delay, or DDL, is one of the key elements of a modern multi-effects unit, and performs essentially the same task as the tape-loop echo machine used to, but there are no tapes to wear out and the range of adjustment is far greater. It's also possible to modulate the delay time to create effects such as chorus, vibrato, flanging and phasing. Whereas most tape echo units were mono, today's digital effects are invariably stereo. A typical DDL effects block offers variable feedback, to produce multiple decaying repeats, and some offer multi-tap delay, so several repeats at different delay times can be created. This is directly analogous to the multiple heads of the tape-loop echo; feeding back some signal from all the taps makes the density of the repeats build up very quickly into a kind of pseudo reverb. Figure 4 shows how a multi-tap delay operates.

Further interest can be created by arranging for the repeats to come from alternating sides, or by feeding some of the left-channel output back into the right input and vice versa. These options are usually presented in the form of 'algorithms', where the routing is set, but the user generally has control over the values of various parameters, including delay time and feedback. There's also a mix parameter or control on most multi-effects units, which allows you to adjust the balance between the original sound and the delayed sound.

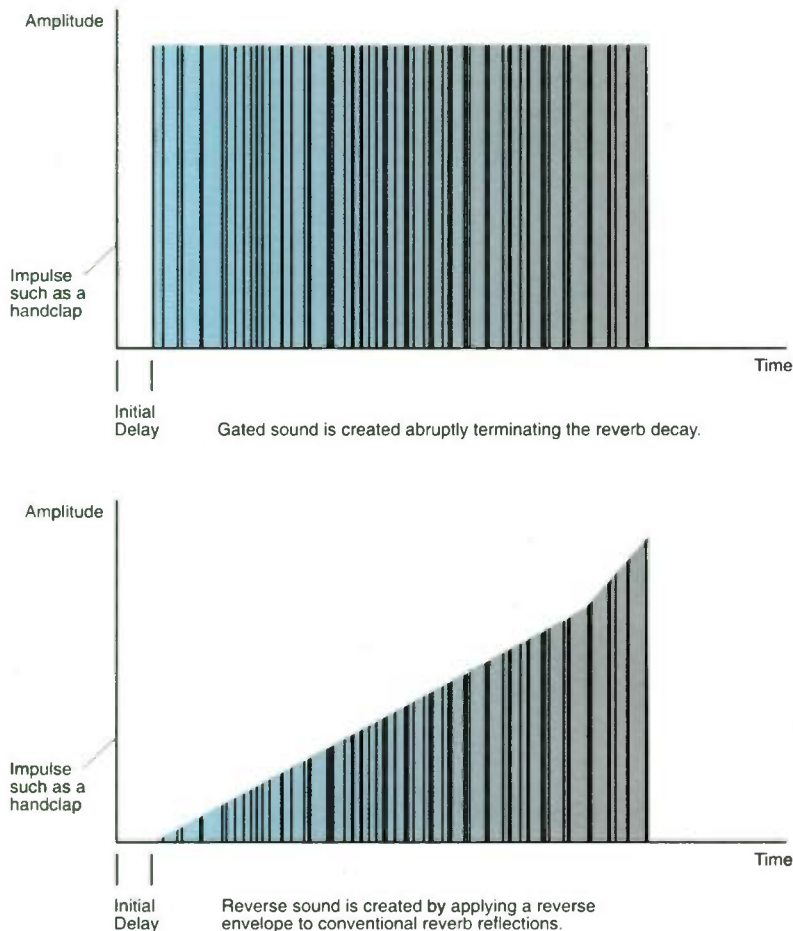

DELAY EFFECTS

The simplest DDL effect is a single repeat using no modulation and no feedback; the delay time can be varied up to the maximum range of the unit. Short delays of between 30 and 100ms are used to create slap-back echo effects or pre-delays for reverb effects, while longer delays produce a distinct single echo. Echoes timed to coincide with the tempo of the song can sometimes be effective.

You can get multiple, equally spaced, delays by increasing the feedback value. At longer delay times, you'll hear the familiar repeat echo effect but as the delay time is shortened, you'll notice that the echo effect disappears and is replaced by a metallic resonance, sometimes called tunnel echo. The frequency of resonance depends on the delay time; increasing the feedback will maximise this resonant effect. Several good examples can be found on the more adventurous dance records and dance-loop sample CDs.

Using a multi-tapped delay lets you create a less rhythmic echo; for the best effect, the delay times of the various taps should not be set to exact multiples of each other. Adding feedback causes the echo decay to become quite complex, and

Figure 2: Envelopes of gated and reverse reverb.

MULTI-EFFECTS EXPLAINED

- ▶ this effect is popular on electric guitar (from the Shadows to U2), on vocals, and on instruments such as synth lead lines, sax and flute. As we'll see later in this feature, combining delay with reverb often produces the most interesting results.

MODULATED DELAY EFFECTS

Modulating the delay time using an LFO makes the pitch of a delayed signal waver both sharp and flat at the rate set by the LFO speed. The depth of modulation determines how far sharp or flat the sound goes. The simplest modulation effect is pitch vibrato, where only the processed (sometimes called 'wet') sound is used — the original, unprocessed ('dry') sound is turned off using the mix parameter. The sound you hear from the output will be delayed slightly, but if the delay time is set to less than 10ms, it will be too short to notice. If you set a modulation rate of, say, 4Hz, then turn the depth control up slowly, you should hear the sound being processed take on a wavering effect, not unlike that produced by the mod wheel on a synth.

• PHASING

To convert vibrato to phasing, set the mix parameter to give equal amounts of dry and delayed sound and experiment with delay times between 1 and 10ms. As you adjust the modulation speed and depth, you'll hear the individual harmonics that make up your sound moving in and out of phase with each other, which has the effect of filtering the sound in a very dynamic and complex way. This is known as comb filtering, because a frequency graph would show lots of narrow spikes and troughs, rather like the teeth of a comb. As the delay is modulated, these 'teeth' move up and down the audio spectrum, and you'll probably recognise the effect as being similar to what you get from guitar phaser pedals. You can vary which harmonics are affected by changing the basic delay time; the shorter the delay time, the higher the frequencies that are

affected, and vice versa. If your unit has a feedback invert function, try switching this in, as it too affects the harmonic structure of the effect.

In the context of a multi-effects unit, modulation effects are likely to have their own algorithms, rather than relying on the user to create the effect from scratch using a general DDL block. Irrelevant parameters will normally be excluded and the delay-time range restricted to that relevant to the particular modulation effect being created. This helps steer the non-experienced user in the right direction, and may allow some other non-standard parameters to be added by the manufacturer.

• FLANGING

Flanging was first created by simultaneously running two tape machines carrying copies of the same music, then mixing the two outputs. If the two machines are perfectly in time (sync), with each other the two signals add normally, but if the timing between the machines drifts for any reason, you hear a phasing effect due to comb filtering. By deliberately slowing down one machine and then the other, using hand friction on the supply reel, you can control the phasing effect, though it takes some practice to get it right.

Flanging can be simulated digitally, though the result is never exactly the same as you get from doing it the hard way. DDL flanging doesn't exactly duplicate tape flanging because the delay can never pass through the zero-delay point, as it does when one tape machine overtakes the other. It's possible to fake this so-called 'through-zero flanging', though, by using two DDLs. This is achieved by setting a fixed short delay on one DDL, then arranging for the second DDL's delay time to be modulated either side of this value. The settings for flanging are similar to those used for phasing, except that longer delay times — typically 10 to 50ms — are used, and the feedback value increased to make the effect more resonant. On more sophisticated units, it may be possible to modulate the delay using some source other than the LFO — for example, the input signal's envelope. This can help make the effect less obviously repetitive, and hence more like its tape counterpart. Extensively used in the psychedelic '60s, flanging is making a bit of a comeback in dance music, but if overdone it can become a cliché, so it's often best combined with other effects, as will be described later.

Inverting the phase of the signal fed back to the input allows different harmonics to be accentuated by the filtering process, just as it does with phasing. Try both options and see which you prefer.

• CHORUS

The chorus effect is essentially the same as vibrato, but with an equal proportion of the dry sound mixed in. The idea is to produce the illusion of two instruments playing together, where the ensemble effect is created by slight timing and pitch differences. By setting a longer delay time than for vibrato, between 30 and 150ms, say, you can make the effect of the timing differences

VOCODER

A vocoder is a special type of multi-band filter that automatically mimics the frequency-spectrum characteristics of a signal being fed into its control input. You can visualise it as a graphic EQ that's able to listen to any signal, and constantly adjusts its fader settings to match the spectral content of that signal. When a signal is passed through the vocoder's filters, it takes on the same spectral characteristics as the control input, which is how the effect of talking keyboards is produced — but there are far less clichéd ways of using vocoders. For example, you can trigger them from more rhythmic sounds to turn a pad synth into a melodic rhythm. Some of the better sample CDs make extensive use of vocoders in unusual and interesting ways, so check out a few of these for inspiration.

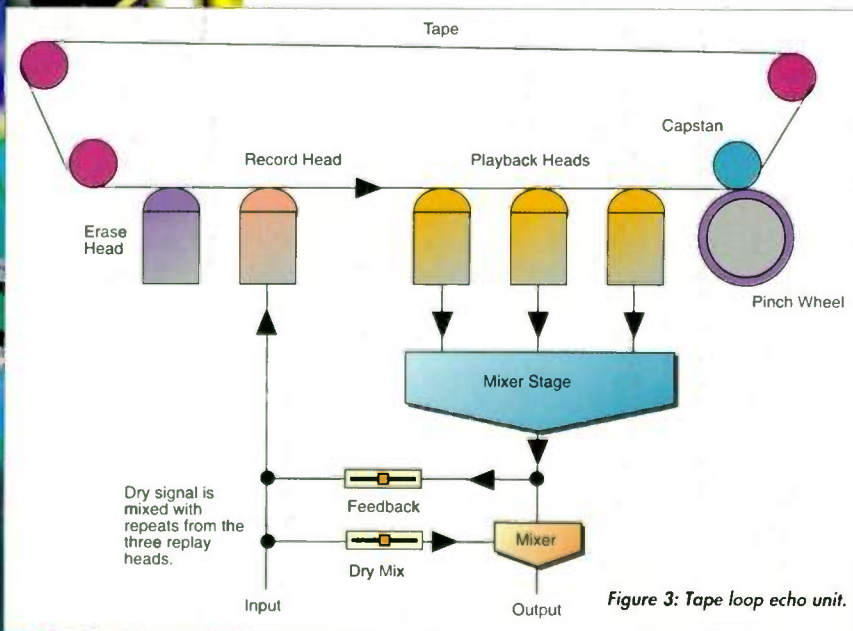

Figure 3: Tape loop echo unit.

SUPER BASS STATION

ANALOGUE SOUND HEAR THE DIFFERENCE

- Two main Oscillators and Sub Oscillator
- External Signal Input with AutoTrigger
- Ring Modulation and Oscillator Sync
- White Noise Generator
- 12db/24db Analogue Resonant Filter
- Analogue Chorus, Stereo Panner and Distortion Effects
- Rotary Controls Transmit MIDI Controllers
- Arpeggiator with Trigger Clock Out
- Both LFO's and the Arpeggiator Sync to MIDI Clock
- Over 100 Arpeggiator Patterns - TB303* types with slides through to 9/8 and Shuffle

Recommended Retail Price £449

The new Novation Super Bass Station features all the Classic methods of Analogue Subtractive Synthesis with Two Main Oscillators plus a new Sub Oscillator, Oscillator Sync, Ring Modulation, a White Noise Source and an External Audio Input. The Mixer Section makes it easy to combine these sources together. The Analogue filters offer selectable, 12db or 24db, cut-off curves making it easy to faithfully recreate anything from a TB303* to a more traditional synthesiser sound.

The Super Bass Station has 50 ROM and 150 RAM Program locations. All the knobs transmit MIDI Controllers for easy recording of any movements in real-time on a sequencer. Additionally there is an Analogue Distortion Effect with all the warmth analogue can deliver plus a Stereo Analogue Chorus that not only fattens up the sound but also provides boost to the bottom end. The Stereo Panner can be assigned to LFO's and Envelopes. The LFO's and Arpeggiator can sync to MIDI Clock. When syncing to MIDI Clock it is possible to have different signatures assigned to either LFO or the Arpeggiator for really complex movements of sound. The Analogue Trigger Output generates trigger pulses from the incoming MIDI Clock and there is a built in MIDI to CV / Gate Converter. Trigger signals are generated from the External Audio Input allowing an external signal to be processed automatically by the internal Filters and Envelope Generators without the need for MIDI note or Gate signals. Super Bass Station - Analogue Sound - Hear the difference.

Also from Novation - The DrumStation - Featuring Classic TR909* and TR808* drumsounds with realtime control. RRP £ 449. *TB303, TR909 and TR808 are Trademarks of Roland Corp. Japan.

Please send me information on the Novation Super Bass Station.

MULTI-EFFECTS EXPLAINED

▶ between instruments more pronounced. You can also use very gentle modulation on even longer delays to create a combined chorus and echo effect. The modulation speed is usually set in the range 2-6Hz and the depth set by ear so as not to sound too out of tune. The longer the delay time, the less depth will be needed. More sophisticated chorus effects blocks may include multi-tapped algorithms, which produce the effect of multiple chorus devices operating at the same time.

Chorus was first used on electric guitars and synth string machines, but it can be used on virtually anything, from fretless bass to synth pads. However, it doesn't usually work too well on vocals: the effect is too regular to sound entirely natural. Though most chorus effects now come as stereo, you can fatten up a mono chorus by panning the original, untreated sound to one side and the modulated delay to the other. The result is a moving wide sound source that seems to hang between the speakers.

ROTARY SPEAKERS

Many multi-effects units include an algorithm to simulate rotary speaker cabinets, devices originally used by organ players to add an interesting chorus/vibrato to their sound. The cabinets work by means of a rotating baffle around the bass speaker, and a rotating horn to carry the high end. A motor-and-pulley system provides two operating speeds; because of mechanical inertia, the system takes a finite time to switch between these two speeds. In a multi-effects unit, the effect is usually created by a combination of modulated delay and filtering but, as far as the user is concerned, there may only be 'fast', 'slow' and 'off' speed options to select from. The inertia effect is simulated by using a special LFO that changes speed over a period of a second or so rather than instantly, and the skill of using a rotating speaker

RESONANT CHORDS

Pioneered by Lexicon, the resonant-chord effect is achieved by using several delay lines, each set to a very short delay with feedback, and each tuned to resonate at one note of a musical chord. Any harmonically rich sound fed into these resonant delays will 'ring' at the appropriate notes, and if you use MIDI control to change the pitch at which the delays resonate, the ringing-chord effect can be played from a keyboard. The effect has to be heard to be fully appreciated; depending on the input source, the results can range from ethereal to disturbingly mechanistic.

(or emulation) is to operate the speed change at appropriate points during the performance to provide the right feel. This effect also works well on guitar, synth pads, and sometimes even on voice.

PANNER

A panner is simply a device that automatically pans a mono signal from left to right and back again, usually under the control of an LFO. It is closely related to tremolo, an effect created by modulating the level of a signal using an LFO, except that in the case of the panner there are two modulating circuits, one of which is at maximum gain while the other is at minimum — as shown in Figure 5. Some effects units incorporate options for triggering the pan to MIDI notes or sync'ing it to tempo via MIDI Clock, in which case it's possible to synchronise the panning to the tempo of the music. While panning raw sounds around the place is a little dated, it can be effective to leave the original sound where it is and just pan the reverb or delay element of the sound.

A more recent advance is three-dimensional panning, an effect that combines left/right panning with psycho-acoustic front/back panning. Continually changing levels and EQ changes make the signal sound as though it's moving in a circle in front of the listener rather than simply following a straight line. As the sound pans, it seems alternately closer to the listener, then further away.

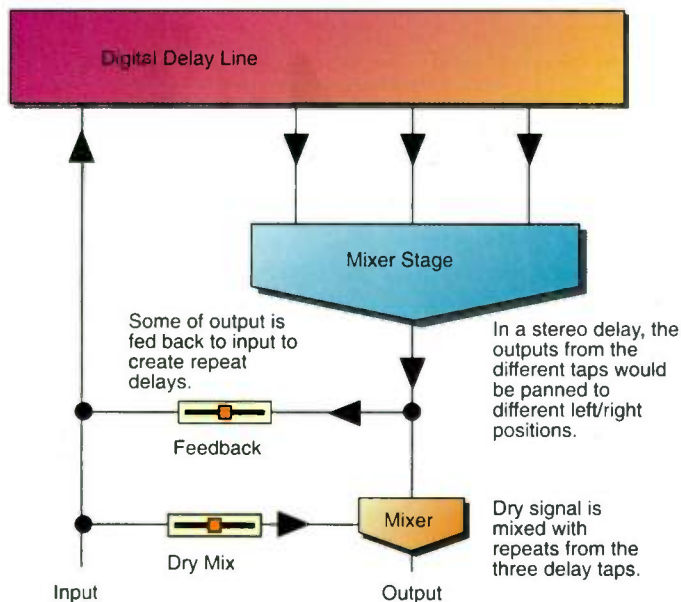

PITCH-SHIFTING

Pitch-shifting is a process for changing the pitch of a sound without changing its length. (If you change the pitch of a recorded sound by speeding up the tape, the shifted sound will, obviously, get shorter.) The range is usually one or two octaves up or down, with fine tuning as well as semitone step adjustment.

The effect works rather like an automatic sampler that samples very short sections of the sound, loops these sections, then plays them back at a different speed. Clever algorithms are used to hide the splicing between subsequent loops, but, on all but the most sophisticated units, the splicing shows up as a warble when large amounts of pitch-shift are used.

Most multi-effects devices include a pitch-shifting section, which may allow simultaneous shifting up and down in pitch. If small shifts of between five and ten cents, both positive and negative, are applied to a signal, you get a nice alternative to chorusing without any obvious cyclic sweeping. It's also common to find an option for ▶

MULTI-EFFECTS EXPLAINED

Figure 5: Panner block diagram.

▶ adding delay to shifted sounds, and for feeding the shifted output back to the input so that it will be shifted again. This can be useful as a special effect to create fixed-step arpeggios.

Such a basic pitch-shifter is of little use in creating true musical harmonies, because the only useful fixed intervals tend to be octaves and fifths. However, some models now include intelligent pitch-shifting, where the user defines a musical scale, and the device automatically picks the correct harmonic interval. This is done by tracking the pitch of the input signal (which must be monophonic for clean tracking), then applying the correct amount of shift to produce the desired harmony note. The musical scales may either be presets or user-programmable.

Though 'formant-corrected' pitch-shifting is not yet available in typical multi-effects units, it can only be a matter of time before it becomes standard issue. With a conventional pitch-shifter, moving the pitch up creates a Mickey Mouse effect, because not only does the musical note change, but the timbre of the sound also changes, just as though you were speeding up a tape. But when a real singer sings a new note, certain components of the sound actually stay the same — their throat and chest cavity resonances remain constant. Using formant-corrected pitch-shifting, it should be possible to move notes to any pitch but leave them sounding natural. Alternatively, you could deliberately move the formants to make a male voice sound female or vice versa.

This is going to be a hugely important area in the not-too-distant future, and when something affordable arrives, we'll be the first to let you know! At the moment, the only affordable formant-corrected pitch-shifters are built into hard disk recording systems and require off-line processing, though Digitech's Vocalist range of devices, designed by IVL, employs a couple of clever techniques to help make the shifted sound seem more natural.

Next month I'll be looking at the more common dynamics and EQ-based processing blocks before focusing on how the different blocks work together.

Feeling Even Better...

Reporting on our best-selling Studio 900, **Sound on Sound** magazine said the action was "the closest thing to a real piano yet".

As good as it was, our all new **STUDIOLOGIC** series take the modern keyboard to a new level of playability and dynamic response.

It's all down to our new hammer; redesigned lighter but longer to distribute mass exactly as it is in an acoustic piano hammer. It's increased travel through a wider arc results in unprecedented control through the spectrum from *ppp* to *fff* whilst the dynamic resistance (or inertia) it provides, makes for a truly sympathetic and responsive instrument, playable for hours without the fatigue.

What's more, the new **STUDIOLOGIC** range includes a host of new features as a direct result of feedback from professional users worldwide.

Surveys show our Studio series out-sold all the other weighted motherboard brands combined - First reaction to the new **STUDIOLOGIC** feels even better.

• 88 weighted keys with STUDIOLOGIC weighted hammer-action • velocity sensitive with aftertouch • Backlit display • 4 sliders, 64 memories • 4 MIDI ins/outs • 2 programmable control wheels

• 88 weighted keys with STUDIOLOGIC weighted hammer-action • velocity sensitive with aftertouch • pitch/mod wheels • 4 zone, 2 assignable sliders, 32 memories • 2 MIDI outputs 1 MIDI in

• 88 weighted keys with STUDIOLOGIC weighted hammer-action • velocity sensitive with aftertouch • pitch-bend wheel and modulation wheel • 4 zones for splits and programmable layers

• 76 weighted keys with STUDIOLOGIC piano style • velocity sensitive with aftertouch • pitch-bend wheel and modulation wheel • 3 zones for splits and programmable layers

• 61 non-weighted keys, synth type • velocity sensitive with aftertouch • pitch-bend wheel and modulation wheel • 2 zones for splits and programmable layers

The StudioLogic key/hammer
The hammer spends most of its time at rest.
The hammer spends most of its time striking a rubber stop. This causes a constant contact with the piano string.

Some of the international artists who are working with us in developing the new StudioLogic range of digital keyboards.

Distributed exclusively by ARBITER GROUP PLC

DIFFERENT CUSTOMERS, SAME SERVICE

Although our customers include many professional producers, Artists, Studios and record companies, we offer the same quality of service to everyone. This claim is supported by the fact that we win more new customers from recommendations than all of our advertising put together.

INSTALLATION & TRAINING

We employ specialist staff to advise, design, install and train. We have experience of many successful, major installations.

EXPORT DIVISION

Join our many customers in Europe, Africa, Asia and the USA. We will arrange documentation and shipping anywhere in the world.

RECORDING SERVICES

As well as supplying equipment, we also use it. Recording, editing, mastering and CD cutting are all available in house.

EDUCATIONAL DISCOUNT

We supply a great many educational customers with everything from DAT tapes to complete studio design. Call us to register on our educational mailing list and receive limited offers and our regular newsletter.

MANY WAYS TO PAY

Choose whichever option best suits your needs, we accept Cash, Cheque, Bankers Draft, Credit Card, Switch, or we are more than happy to arrange Personal Finance, Leasehire or a free 30 Day Credit Account

TRY BEFORE YOU BUY

Some equipment is difficult to appraise without your other equipment, and your own environment. For certain items we will give you a 7 day trial, no obligation, free of charge!

HARD DISK RECORDING

If you're thinking of investing in a Digidesign Pro Tools system then you *need* to speak to us. No one knows more about ProTools than us on a day-to-day basis, or how to integrate it into existing systems Pro Tools IV Now 24 bit and powermac native, this is a significant upgrade with new enhanced mixing features and total dynamic automation (inc TDM plug-ins) and built in Audio Suite Program

AKAI S20 MIDI DIGITAL PHRASE SAMPLER

The release of the S20 means that £500 now buys you into the prestigious Akai name — and gets you a supremely easy-to-use sampler which will perform both on stage and in the studio.

CHRIS CARTER goes completely loopy...

In an interview some years ago I was asked what I thought was the most essential piece of gear in my line of work, and without a second thought I said "a sampler". "Ahh", said the interviewer, "but aren't they instruments of the devil, don't they put musicians out of work, and wasn't a sampler responsible for that awful 'NNNNineteen' record?". OK guv, it's a fair cop. I admit everything, except the bit about 'NNNNineteen'.

For the hard-up musician (aren't we all?) who can't afford banks of keyboards, a sampler is invaluable — with a decent sample library it can take on the guise of almost any instrument or sound, so I still stand by the answer I gave then. Give me a sampler, an effects unit and a DAT machine, and I'll give you a CD, a gig, or both. Death to the Luddites: long live the RAM chip!

S01+R16=S20

Good-quality samplers, on the whole, have never been what you might call affordable. Until now, that is, when along come Akai with an expandable, 8-voice, 16-bit stereo sampler, with a few novel features (including a basic real-time sequencer and a useful automatic bpm-calculation mode), for only £499. The S20 is essentially a repackaged hybrid of the original mono Akai S01 (reviewed in *SOS* November 1992), with some added Remix 16 (Akai's DJ sampler). It has the typical Akai look, unlike the Remix 16, and is compact but chunky, with a footprint a little smaller than the magazine you're holding.

Editing is achieved with the minimalist edit matrix approach first seen on the aforementioned S01. This arrangement uses two rows of LEDs, with printed columns showing which mode is current, and four cursor buttons to navigate around the matrix. There's a large 4-digit display, with + and - buttons for entering parameters, and a coarse button to speed things up. A further eight buttons (Rec, Erase, Hold/Loop, Stop, All Stop, Reverse, Seq, Edit) cover the real-time playback, record and sequencer functions, and there's a large Tap button for repeat triggering of samples, or for entering the bpm of a sample loop manually in Beat mode (more on this later). The Reverse button, by the way, allows you to instantly and temporarily reverse a loop or sample. Finally, 16 Bank buttons (unfortunately not velocity sensitive) are used to trigger the samples. The stereo inputs and outputs are on line-level phono sockets and there's a quarter-inch headphone socket. Power is supplied by a small 12V DC unit — not a wall-wart type.

Before I go into too much detail about the

S20, I should briefly explain a little about Akai's use of the term Bank. Each of the 16 Banks in the S20 contains one sample and a VCA — that's it. If you've used other Akai S-series samplers before, these Banks are the equivalent of a single keygroup, containing a single stereo or mono sample. This begs the question: if Banks only contain one sample, why didn't Akai call them samples instead of Banks? Anyway, from now on, for Bank read sample.

THREE STEPS TO SAMPLING

Out of the box the S20 is loaded with 1Mb of RAM, enough for only 14 seconds of mono sampling at 32kHz, but it can accept an additional 4Mb or 16Mb SIMM. With 17Mb installed, the sampling time jumps up to 131 seconds in stereo at 32kHz. Memory is dynamically allocated, so any Bank can use as little or as much as it needs — in theory you could have a single stereo loop over two minutes long at 32kHz, or even a sample over 17 minutes long in mono at 4kHz.

Sampling on the S20 is a piece of cake, and with its default settings it offers one of the simplest sampling methods I have ever come across, on any sampler. To sample and play back a stereo

pros & cons

AKAI S20 £499

pros

- Good-quality 16-bit stereo sound.
- Expandable memory.
- Fast, fun and easy to use.
- 16-part multitimbral.
- Simple, logical layout, great for live use.
- Small, well-built and rugged.
- Good price-to-power ratio.

cons

- No playback while sampling, saving or loading.
- The 4-digit display is a bit skimpy.
- No panning of mono samples.
- No ADSR envelope editing.
- No metronome.
- Saving and loading a fully-expanded S20 will mean buying floppies in bulk.

summary

A versatile, quality sampler let down only by the 1Mb basic memory and the 4-digit display. At this sort of price, though, there's little to complain about. If you can live with these limitations, the S20 makes an ideal and reasonably-priced introduction to desktop sampling, and if you're a DJ looking for a fast, easy-to-use looping machine with some useful dance-orientated features, the S20 is a good choice.

SOUND ON SOUND

loop from a cold start involves only three button pushes: no parameters to set, no pages to wade through — just switch on and sample. Here's how.

Assuming you've already connected your sound source, a record deck or CD player, or, indeed, any line-level signal to the S20's inputs, the first thing to do is press the Rec button, which puts the S20 in Record stand-by mode and starts the Rec LED flashing. You can hear the audio signal and see how loud it is on the left-hand row of Edit matrix LEDs, which now act as an input meter. Adjust the audio level (with the red Level knob) and choose whether to sample in mono or stereo. You can also select a sample rate (4kHz, 8kHz, 16kHz or 32kHz) and whether to use auto-triggered sampling. However, to begin sampling at the default settings (32kHz, stereo) just press a Bank button and the Red LED glows steadily to let you know that you are now recording into that Bank. There are two ways to stop sampling, depending on whether the sound is to loop or not. Normally, pressing any button other than a Bank button ends the sampling, and the sample will play back if you press the same Bank button again. However, things get more interesting if you want to sample a loop. To stop while sampling a loop involves hitting the

Hold/Loop button at the point where you want the sound to start looping. This seamlessly ends recording and starts playback of the sample, which is now in Loop mode, so you can hear the results immediately. This is a really fast and efficient way of achieving decent loops of any kind.

COMPLETELY LOOPY

Successful looping on any sampler is an art, and that old idiom 'practice makes perfect' is just as true on the S20 as it is on an S3200XL. There is also often a 'knack' involved, and for the first few days of using the S20 I had it. It seemed as if I had magic fingers, because almost every loop I attempted worked first time, no matter what the tempo or style of music. Then I got flu for a couple of days and nothing would loop properly — it wasn't the fault of the S20: I had acquired a woolly-headed feeling and lost my sense of timing, and the knack of hitting those buttons just right was gone (I feel a lot better now, thank you).

Even though the S20 may be considered a basic sampler, there are enough parameters available to allow you to achieve pretty decent loops, including Sample Start and Length and Loop Length (all with fine and coarse adjustment) ▶

MESSING ABOUT

While researching (for which read *messing about*) with the S20, I came across something even Akai UK weren't sure about: the S20 supports MIDI Sample Dump Standard — after a fashion. I managed to transfer samples to the S20 from an Akai S3000XL and from *Cubase* — a little slowly, but it worked. Strangely, the S20 wouldn't accept MIDI SDS files from Passport's *Alchemy* or Steinberg's *ReCycle*, and I couldn't persuade it to work in reverse at all.

Akai couldn't help, but they did say that some older Akai S01 editors and mixer maps may work with the S20, as it has a lot in common with the earlier machine.

Akai S20

CD INCLUDED

Included with the S20 are four HD disks of various loops and samples to get you started. In addition, with the UK package you get a free sample CD compiled by AMG, including hundreds of samples and loops from a dozen or so of the best AMG CD releases. There is so much stuff on this CD that it could take you a week to get through it all — everything from dub to disco, SFX, vocals, beats, bops and blaps, licks and loops, and all with listed bpm's — icing on an already fine cake.

▶ but, because of the simplistic 4-digit display, manual loop adjustment on the S20 can be quite laborious. It's well worth trying to get a loop right while sampling, even if it means attempting the job two or three times. Achieving a good loop through careful timing means you can move on to grabbing and looping more samples a lot more quickly, because you don't need to get side-tracked into Loop Edit mode to tidy things up, which can be a slow and frustrating process.

Other options available in Edit mode are Sample Tune, Transpose, Loop/One Shot and Release. Unfortunately there isn't any ADSR (Attack, Decay, Sustain, Release) control, only Release, so there aren't that many options for shaping a sample once it's inside the S20. An annoying quirk is that if you attempt to transpose or tune a sample that has been adjusted with the Beat Loop function (about which I'll tell you more in a moment), it goes out of sync.

Although sample editing on the S20 is hampered by the meagre display, there are still quite a few options available. In Trim mode you can edit the start and length of a sample, to the minutest amount if needed, by using the Coarse and Fine parameters. Discard mode allows you to permanently remove areas outside the start and end points of a sample — the bits you can't hear. It's always good practice to do this, as it frees space and makes the most of the available memory.

A sub-page of this mode is Copy, which allows you to copy one bank to another. Copy is also useful for making temporary backups of samples, prior to editing, and is a lot quicker than backing up sounds to disk. There are two other sub-pages here: Reverse, which does what it says; and Initialise, which erases a sample and resets the parameters in the current Bank. Other edit parameters available are: Sample Level; Fine Tuning; Constant Pitch; MIDI Velocity Response; MIDI Bend Amount; Mono or Multiple Triggering. There is also a Resample mode, which can progressively downgrade a sample to a lower bandwidth, to conserve memory.

BEATS WORKING

While I'm on the subject of looping, I should go into that Beat Loop function, because you can't really have one without the other in the S20. By using the Beat parameters you can match loops with different bpm's to each other. There isn't any fancy time-stretching going on here — just raising and lowering the playback speed of the sample — so loops can sometimes sound out of tune, but all the adjustments are calculated for you by the S20. To achieve this trick you need to enter a beat count figure (anything from 1 to 64) then the S20 measures the length of the sample, calculates the bpm and displays what it thinks the current sample bpm is, instantaneously. You then enter a new bpm, either manually or by using the Tap button, and the loop is instantly recalculated to that figure — pretty impressive. Well, it would be if it came up with the right bpm, but the S20 often displays a slightly different bpm. A loop at 128bpm, for instance, could be calculated as 127.1 or 128.9 — not out by much, but enough to make things fall out of sync over time. Apparently, these discrepancies are due to how accurately you've edited the sample length: although a loop may sound fine by ear, the S20 may not agree. After a lot of annoying (and unnecessary) loop adjustments and sample editing, it occurred to me that if the S20 insisted on telling me that a loop's speed was 127.1bpm, when I knew for a fact that it was 128, I should set a new tempo for my other loops (which were 120 and 135bpm) of 127.1bpm. Voila! Everything was now in sync, happy, happy, joy, joy... If the bpm needs further adjustment, it's just a matter of changing the Master Tempo setting, which shifts the tempo of all the loops relative to each other while still keeping them in sync.

It's a shame that the manual doesn't explain the Beat Loop function as well as it could (less than one page), considering that it's such a big selling point. Although it isn't foolproof, it's possible to get some impressive results if you are aware of its quirks.

SPECIFICATION

16-bit stereo, 64x oversampling DAC	
SAMPLING RATES:	4kHz, 8kHz, 16kHz, 32kHz
POLYPHONY:	8-note
MULTITIMBRALITY:	16-part
BEAT MODE:	bpm adjustable from 000.1 to 999.9
MEMORY:	1Mb, expandable to 5Mb (with 4Mb SIMM) or 17Mb (with 16Mb SIMM).
SAMPLING TIMES:	
1Mb, 32kHz rate:	7 seconds stereo, 14 seconds mono
1Mb, 16kHz rate:	14 seconds stereo, 28 seconds mono
17Mb, 32kHz rate:	131 seconds stereo, 262 seconds mono
17Mb, 16kHz rate:	262 seconds stereo, 524 seconds mono
REAL-TIME SEQUENCER:	4 tracks, 30,000 notes
FLOPPY DISK DRIVE:	3.5-inch DD/HD
CONNECTORS:	L+R audio in and out (phonos) MIDI In and Out (soft Thru). Stereo headphones socket.
SIZE:	11.5 inches x 8 inches x 3.25 inches

REAL TIME

Although the S20 real-time sequencer spec looks good on paper, with 30,000 notes across four tracks, it's a bit of a mixed bag and is only really useful as a musical scratchpad. Apart from the fact that it only offers Record, Play and Stop controls, if you try to get clever with your paradiddles it tends to throw a wobbly and its timing flies out of the window. The review unit also had a strange tendency to leave some samples muted when All Stop is pressed. The S20 does record the Bank Hold and Reverse functions but it doesn't record the neat repeating effect you get from pressing the Tap button (see 'Totally Tapped' box) and, unfortunately, doesn't receive or transmit MIDI start, stop or clock signals, although the front-panel buttons can be controlled by a MIDI sequencer or keyboard. However, it does ▶

Fostex

8 tracks,
no compression,
SCSI back-up,
seamless studio
integration.

And all from less
than £1,500 inc vat.*

So what do you want from an 8 track digital multitrack? Non-compressed CD quality audio with 18/20bit converters? Simultaneous 8 track recording? Non-linear copy / move paste and erase editing? Varipitch? Removable expandable recording media with up to 1 hour of recording time? Analogue & Digital I/O? Versatile Chase mode?

With the new D-90 you get all of that. And then some.

Standard equipment also runs to an ADAT™ Digital Interface for simultaneous 8 channel input and output via optical data I/O - making it easy to transfer existing recordings to and from our non-linear format and connect directly to the new wave digital mixers. Balanced inputs and outputs are via an optional card.

SCSI INTERFACE
For ultra-fast back-up
& restore to
removable
media

And there's a SCSI option for the fast back-up and restore of sessions to removable drives such as SyQuest, MO, Jaz, external hard drive, etc.

Flexible, expandable, easy to interface and loaded with the features you want.

It has to be the new Fostex D-90.

MULTIPLE 16 AND 24 TRACK MACHINE SET-UP
Use a D-90 to control further D-90s and/or D-80s (backwards compatible) all from one remote control, locked to sample accuracy.

Fostex D-90

Non-Compressed Digital Multitrack

Also from Fostex...

- 16 track digital multitrack with no compression
- 8 further 'ghost tracks' for additional takes
- ADAT™ Digital Interface (simultaneous 16 channel)
- +6% pitch control with no loss in audio quality
- Optional LTC Timecode board with Word & Video sync
- SCSI interface as standard for fast back-up of sessions
- Balanced I/O option

D-160
16 Track Digital Multitrack

Akai S20

- ▶ transmit MIDI note data, so you can transfer any sequences tried out on the S20 to another sequencer for more sophisticated editing.

MIDI CONTROL

This brings me nicely to using the S20 as a multitimbral sampler module — though Akai don't seem to be as interested in emphasising this aspect of the sampler as they are in promoting it as a DJ tool. Setting up the S20 to receive MIDI on multiple channels is just as easy as everything else on this unit. I managed it without referring to the manual, which can't be said of many samplers. Under MIDI control, the S20 takes on a different personality altogether. For a start, it now responds to velocity and MIDI note numbers (across 10 octaves) on all 16 Banks. Each Bank can receive on different MIDI channels or share the same channel, with the facility to assign samples to specified ranges on a keyboard. So, for instance, with an external sequencer and keyboard connected, on MIDI channel 1 you could have a sample (not a loop) playing a bass line in the lower octaves and another sample playing a melody higher up, with loops and percussion samples playing on other MIDI channels. Important samples, such as drum loops, can be given higher priority over others, so that there aren't any embarrassing gaps if you exceed the S20's 8-note polyphony.

KILLER HURTS

At the 32kHz sampling rate the S20 sounds pretty damn good. I loaded some Akai S3000XL loops into the S20 for a side-by-side comparison and found little subjective difference — even the loop points played back perfectly. On the S3000XL, samples sounded a little more full, particularly in the sub-bass area, and they had slightly more sparkle in the upper regions, but I think most everyday users would be hard-pressed to tell the difference between them. However, with the S20 at 16kHz the sound

quality isn't nearly as bright and has a distinctly digital graininess — though this rate is still perfectly acceptable for things like bass samples/loops, kick drums and SFX. At 8kHz, the sound quality becomes dirty and grungy, great for lo-fi loops. The 4kHz setting has pretty limited usefulness.

CARRY ON SAMPLING

I haven't had so much fun sampling and looping for ages, and using the S20 is a piece of cake even for a newcomer to sampling. After using it for a day I knew where most of the deeper edit sub-pages were without needing to refer to the manual. My 15-year-old son got his hands on the S20, and within ten minutes, without any help from me and not a peek at the manual, he was triggering, looping, reversing and layering samples. It took me another half an hour to get it back so I could carry on with this review! Most users will be flying this machine with ease after a week or so, because, even at its most complex editing level, the S20 is very easy to get to grips with. From switching on to sampling takes a mere eight seconds, making the S20 perfect for quickly grabbing samples and assembling ideas that can't wait. Seasoned S20 users are sure to become sampling speed demons.

AND FINALLY

The S20 is undoubtedly a wolf in sheep's clothing and a wolf wearing two hats, at that. On the one hand it's presented as a phrase-sampling, live DJ tool, for grabbing loops and matching bpm's, which it does extremely well. On the other hand, if it's expanded to the full 17Mb of memory and connected to a MIDI keyboard, it's a perfectly capable 8-voice, 16-part multitimbral sampler. Some may find the 4-digit display a limitation, and the editing facilities may be a little on the basic side when compared to more expensive samplers, but this is compensated for by the ease of use and the sound quality, which, at 32kHz, is superb.

There are a few other sub-£500 samplers on the market, notably the dinky Yamaha SU10 at £299 and the Roland MS1 at £399, but neither of these offer Akai compatibility, which could be a deciding factor, considering the overwhelming amount of Akai-compatible sample libraries available on floppy disk (see 'CD included' box). Whether you're a DJ or a musician thinking of entering the wonderful world of sampling, the S20 offers a pretty convincing combination of power and price, and could be a rewarding and productive addition to any setup, be it turntable or desktop. Just make sure you budget for some extra memory.

SOS

TOTALLY TAPPED

Holding down the S20's Tap button and pressing a pad causes the very start of the sample being triggered by that pad to repeat rapidly (a bit like the dreaded 'NNNNineteen', but better). You can adjust the speed of the repeats using the + and - keys.

IT'S STORAGE, JIM...

The S20 is a fast machine to work with, and ideas can be developed and worked out very quickly. The only fly in this speedy ointment is the slow saving and loading to floppy disk. If you're sampling with the full 17Mb, in full flood with tons of great loops and sequences, and you want to move on to another song or try out some new ideas, you can't do anything until you've spent nearly 10 minutes shunting a dozen disks in and out of the S20 to back up your work. This tends to dry up the creative juices pronto, and I thought it seemed a bit short-sighted of Akai not to have included the option to add at least either a battery back-up, flash RAM or a SCSI connector — this machine is crying out for something like a Zip drive. However, after I had voiced my opinions to Akai they told me that the S20 is mainly intended for the DJ market — hence the inclusion of the Beat Loop function and the sample pads — and they see it more as a live looping tool, where saving and loading won't be an issue. They also anticipate that most people will go for the 4Mb

upgrade rather than the full 17Mb, and in this case saving and loading will be a lot faster. Also, offering any of the above solutions (even as upgrade options) would have meant additional chips and a more detailed and expensive display, and this would have added too much to the cost of the unit.

I don't entirely agree with this: for a start, I think that many people will be tempted to go for the full 17Mb upgrade, particularly with the current price of RAM (approximately £75 for a 16Mb SIMM, if you shop around). Being multitimbral, the S20 is ideally suited for the GM/DTM market, which Akai do (rather half-heartedly) admit. Also, after seeing my son's reaction to it, I can see a lot of up-and-coming electronic dance bands buying S20s and connecting them to MIDI keyboards as a cheap way into quality sampling.

As is usually the case in this industry, there will probably be a mark 2 or an XL version in a couple of years time; let's hope it includes some better external storage options. In the meantime, have fun!

**Focusrite's new Green processors
are enough to make anyone
envious, as PAUL WHITE discovered
when he had to give them back!**

Over the past few months, we've reviewed several processors from the Focusrite Green range, so I'll spare you all the obvious jokes about the front-panel appearance. These two new units are based on the circuitry used in previous Green processors. The compressor/limiter is a fully featured, dual-channel device for line-level operation; the channel strip combines a mic/line/instrument input stage with EQ, compression and an expander/gate. Like the other Green units, these two feature transformerless input

side-chain path, they don't affect the quality of the audio being processed, only the way in which the compressor responds.

Auto release responds to the dynamics of the input signal in such a way that the more it exceeds the threshold, the longer the release time. All the rotary controls are standard compressor issue: threshold, ratio (1:1 to 10:1), make-up gain, attack and release. Two further rotary controls are provided for the limiter, to control the threshold level and release time, but, interestingly, there's also a Look Ahead button. This introduces a very short delay (based on analogue circuitry) into the compressor's audio path, but doesn't delay the limiter's side-chain, enabling it to respond to peaks fractionally before they arrive. In digital recording applications where clipping is completely unacceptable, this can be a very useful safeguard — but, for most routine jobs, the manual suggests that you leave Look

Green Party

FOCUSRITE GREEN 4 DUAL COMPRESSOR/LIMITER & GREEN 5 CHANNEL STRIP

and output stages and the distinctive sculpted front-panel styling. In fact, the case is moulded in one piece using aircraft-grade aluminium, and the green front panel and circuit board sub-assembly are fitted via the rear of the case. The mains voltage may be switched from 240V to 120V by means of a recessed slide switch, just in case you were thinking of taking one on holiday.

DUAL COMPRESSOR LIMITER

Unlike many compressor/limiters, the Green version includes separate compressor and limiter sections, each with its own threshold controls. Both operate on the same class-A VCA, and stereo linking is implemented for applications such as mix or stereo subgroup processing. The audio inputs and outputs are on balanced XLRs with switchable +4/-10 operating levels; according to the manual, a balanced jack version is also available.

In the Green units that combine several processor sections, the compressor tends to be somewhat simplified, but this one has five rotary controls, plus switches for the selection of soft or hard-knee operation, variable-frequency high- and low-pass side-chain filters, bypass, and an auto-release mode. All the buttons on the Green range have integral status LEDs. The filters cover the ranges 15Hz-10kHz and 65Hz-25kHz, and may be used for frequency-conscious applications, such as de-essing. Because the filters are only in the

Ahead switched off, as it reduces the audio bandwidth to 35kHz. Limiter operation is signalled by a red status LED; the compressor has a 10-section gain-reduction meter LED display.

Gain Change buttons in the central Link section allow the meters to be switched from monitoring gain reduction to monitoring the input signal level, whereas Link ties both channels' side-chain together for consistent stereo tracking, in which case the left-channel controls act as masters. However, the Link button doesn't affect the setting of the Filter or Look Ahead buttons, so these should be matched manually.

IN USE

Not only does this compressor sound very nice, it's also surprisingly flexible, partly due to the unusual soft-knee characteristic. Most soft-knee compressors come in gradually and then level out, but in this circuit, if you drive it hard enough, you reach a point where the curve folds back on itself — the higher the input signal, the lower the output signal becomes. This is great for those vintage pumping effects where the cymbals actually increase in volume as they decay, and it's also stunningly good for guitar. By choosing the appropriate settings, you can make the available effects range from near-perfect transparency to overtly effected — but if you want a simple life, the Auto release will work on most types of signal. One particularly impressive result is that the vocals can be evened up without sounding as though the singer is moving back and forth in relation to the microphone.

The inclusion of side-chain filtering also makes

it possible to process complex material more successfully, by preventing certain parts of the spectrum from dominating the proceedings. For example, in very rhythmic music the bass tends to control the compressor, but by setting the low filter at between 100 and 200Hz, you can prevent this. For de-essing, you simply have to bracket the offending frequency range, usually between 2 and 8kHz.

The Green limiter is a valuable ally, especially when you're recording digitally. Even with Look Ahead switched off, the limiter was fast enough for any normal job, and also nicely unobtrusive, and even when the threshold was set way too low, the limiter sounded no more harsh than many compressors I've heard: deliberate over-limiting can actually work rather well when you need a more creative effect.

CHANNEL STRIP

The Channel Strip is such a logical product that I'm surprised it wasn't introduced into the line-up earlier. Essentially, it provides a one-box solution to getting mic-, line- or instrument-level signals into a recorder without the need for a mixer. This is recognised as one of the cleanest ways to record, and many professionals use this method whenever possible. In addition to one of Focusrite's super mic amps, based on the Linear Technologies LT1028 mic amp chip, the Channel Strip incorporates high- and low-pass filters, a 4-band sweep EQ with switchable mid-range Q, an expander/gate and a compressor. Though ideally suited to recording vocals, the Channel Strip is also useful for high-impedance instruments, such as electric guitar or bass, and for re-processing line-level signals that have already been recorded. An Instrument/Line jack is on the rear panel, along with a Hi Z/Line selector button; there are also dedicated XLRs for the line and mic inputs. A Link jack enables two units to be made to track for stereo applications, and there's an external key input for the gate, which has its on/off button on the rear panel. I can imagine these rear-panel switches being awkward in some situations, but

there really is nowhere left to put them on the front panel.

In addition to Mic Gain, Input Trim and Output Fader (Level) controls, there are buttons for 48V phantom power and phase reverse. A red LED shows when the high-impedance instrument line input is selected, and you get Mic/Line selection by turning the switched Mic gain control fully anticlockwise. There's no high-pass filter or mute as there is in the dedicated mic preamp, and, because of the high headroom provided, there's no need for a pad switch. A 10-section meter monitors the signal level, post the input Trim control, but it may also be used to indicate the compressor gain reduction and expander/gate operation.

At first glance, the EQ section looks pretty busy, but that's mainly due to the inclusion of the high- and low-pass filters. These cover the same frequency range as the ones in the compressor,

“It's not until you use a good EQ that you realise just how much cheap EQs screw up your sound!”

and may be switched into the audio path or the side-chain. When Side Chain is set, the filters appear in the gate side-chain if Key is selected; otherwise they appear in the compressor side-chain, for de-essing and so on. The remaining EQ is dedicated to the main signal path and comprises variable-frequency high- and low-shelving filters, plus two swept mids with switches to sharpen up the Q for more 'surgical' applications. Like the EQ on other Green products, the EQ here has a very wide range, with the low section sweepable between 30Hz and 480Hz, and the high shelving filter from 2.5-18kHz. Even the low mid extends right down into the bass, with a 40Hz-1.2kHz span, and the upper mid goes from 600Hz right up to a bat-sizzling 18kHz, all

Focusrite Green 4 & 5

▶ with a $\pm 18\text{dB}$ range. Twin Fine buttons select the narrower Q option, while bypass buttons are fitted for both the filters and the EQ.

Moving into the expander/gate section reveals a simple two-control system for Threshold and Release, with a further button to switch from gating to expansion. There's also a gate bypass button and a Fast switch for use with percussive sounds. Interestingly, the gate circuit side-chain uses discrete transistors, and when an external key signal is connected and the unit switched to Key (on the rear panel), the Ext status LED lights. Selecting the Key button on the front panel puts the high- and low-pass filters into the gate side-chain, while 'To Meter' displays the expander/gate gain reduction on the red LEDs of the bargraph and compressor gain reduction on the amber LEDs.

Finally comes the compressor, once again based around a class-A VCA, but with rather simpler controls than the dedicated compressor/limiter. Essentially, the user has control over Threshold, Ratio, Release and make-up gain; the attack-time control is reduced to a single Fast button and the release can be switched to Auto. An overload LED warns of clipping at the output. De-essing can be achieved if you commandeer the filters.

PERFORMANCE

It's pretty hard to fault the Channel Strip on performance, though I did find having the Key and Inst switches on the back panel a little awkward. I also found that, unless the unit was above eye-level, it was difficult to see the legending — it's hidden either by the edge of the front panel or by the buttons, but then I don't suppose that this would take getting much used to.

Used as a mic preamp, the unit gives a front end that's just as clean and transparent as it is on the other units in the series, and I have to concede that this is an extremely nice-sounding mic amp. When switched to Instrument, the unit becomes the ultimate DI box, and you're quite likely to hear details in the sound of your instrument that you never realised were there before. As far as I can tell, the EQ section is based on the circuitry used in the Focus EQ, and this has the wonderful ability to let you re-balance different parts of the audio spectrum without introducing unnatural or harsh artifacts. It's not until you use a good EQ that you realise just how much cheap EQs screw up your sound! Having the narrow Q settings is great for notching out rogue frequencies, and the high- and low-pass filters are good for 'bracketing' sounds to exclude unwanted lows or highs, without affecting what goes on in the middle.

Expander gates are rarely exciting, but this one is easy to set up and smooth in operation, and has a useful display if the To Meter button is pressed. Having the expansion option is good for situations in which you want the gating to be as subtle as possible, and the compressor section that follows is equally friendly. Though there aren't many controls to play with, the compressor works fine on just about any type of programme material and, used

in moderation, can sound extremely transparent. Again, cheap compressors may keep the levels under control but they often play havoc with the tonality. No trouble on that front here, but if you crank up the ratio and bring down the threshold, you can still get a nice snappy bass or guitar tone with as much or as little pumping as you require.

SUMMARY

Both these units are worthy and logical additions to the Focusrite Green range, and both display the attention to circuit-design detail that makes Focusrite a world leader in analogue signal

“You're quite likely to hear details in the sound of your instrument that you never realised were there before.”

processing. As far as the cosmetics go, you either like them or you don't, but what concerns me more is the small, easily obscured legending. As stated earlier, you do soon learn where the controls are, but unless you get close up and read the dials, there are no real visual clues.

The Channel Strip is the ideal solution for anyone wanting to record directly to a hard disk recorder, modular digital multitrack or open-reel analogue machine, and the choice of mic, line and high-Z instrument inputs makes it very flexible indeed. The dual compressor may only do one job, but it does it beautifully, with plenty of control range and flexibility. The limiter section works extremely well; though Focusrite excel at transparent compression, this one sounds great when worked hard too.

The Green range is the budget baby of the Focusrite range, but there is no compromise in circuit design. As a consequence, the units aren't actually cheap; but if you've been recording for any length of time, you'll appreciate the advantages of spending that little bit extra on certain pieces of key equipment.

SOS

£ Focusrite Green 4 Dual Compressor/Limiter £1056.32; Green 5 Channel Strip £1173.82. Prices include VAT.

info

pros & cons

FOCUSRITE GREEN 4 & 5

pros

- Classic Focusrite performance and transparency.
- Easy to set up.
- Channel Strip is particularly versatile, as it can double as the ultimate DI box.

cons

- Legending small, and sometimes obscured by the controls unless you're looking straight on.

summary

Even though this is a budget range, it isn't cheap, but the quality of processing is beyond reproach. The Channel Strip is my favourite so far, as it has so many applications, in both recording and mixing.

ASR
SAMPLER RESAMPLER

The new ASR-X™ features:

- ASR Sampler •
- MR Synthesizer •
- 24-Bit Effects •
- On-Board Sequencer •
- Resample w/Effects while sequencing! •
- New Resonant Filters •
- 44.1 Khz Sampling rate •
- 20-Bit Analog to Digital converters •
- Velocity sensitive pads •
- Expandable to 10 outputs •
- Optional SCSI •
- Expandable to 34MB of RAM with 72-pin SIMM slot •

- Expandable to 26MB of ROM with optional MR-EXP board •

We went to the masters of sampling and asked them to list the top features they would like to see in the ultimate groove machine. They said to make it easy to sample, resample, and loop, include a built-in synth, add some incredible effects, resonant filters, an easy to use sequencer and put it all into a portable box with pads.

Introducing the new ASR-X™ from Ensoniq—pick one up today and get into a groove!

Mixing in the Digital Domain - on a Budget

At last there are cards with us for **Mac** and **PC** that give ADAT optical inputs & outputs and with the new range of Digital Mixers from Korg & Yamaha it's now possible to add high quality FX to Audio sequencer audio tracks keeping everything digital and having the advantage of total recall. These mixers are the **Korg 168RC Soundlink** and the new **Yamaha 030** and the cards - the **Korg 1212 I/O** and the **EMAGIC Audlowerk8** (with a soon to be released ADAT output on a daughterboard). You might also consider adding an ADAT interface to your **Pro Tools** rig for use with one of these amazing mixers. Ring for more details and how they can be used with your current rig and come in for a demo.

Korg 168RC - up to 24 inputs (8 analogue, 2 x ADAT standard) / 22 outputs 3-band EQ mid parametric & two internal FX processors, 18 bit AD DA. **RRP £1899 Inc VAT**

Yamaha 030 - up to 26 inputs (18 analogue standard) / 18 outputs, 28 dynamics processors, 28 x 4-band fully parametric EQ, 20 bit AD DA, motorised faders, mouse input, Midi machine control, two internal FX processors, large integral screen, 4 aux sends, surround sound. **RRP £2999 Inc VAT**

Yamaha 02R - up to 40 inputs (24 analogue standard), 40 x 4-band fully parametric EQ, 20 bit AD DA, motorised faders, 8 aux sends, large integral screen, optional meter bridge. **RRP £6999 Inc VAT**

Coming in the near future - Mackie Digital Desk 48 input (48 analogue standard) internal meter bridge, 5V6A output, 12 analogue inserts, V-Pots, motorised faders, 12 Famous mackie Mic pre-amps, 48 compressor / gates, two internal FX processors, transport controls, hard disk drive & floppy drive. **RRP £7999 Inc VAT**

Opcode

GREG D'ALESSIO
of Opcode Systems offers some hints, tips, and advice for Mac users running Vision, Studio Vision Pro, and Overture software.

At Opcode Systems we receive a wide range of questions from our users, concerning everything from basic troubleshooting to specific features of our applications. The following tips and setup instructions answer a few of the most commonly asked questions, but there are also a couple of more sophisticated, 'high-end' techniques to help you get the most out of *Vision*, *Studio Vision Pro*, *Overture* and OMS, the Open Music System, running on a Macintosh.

MIDI COMMUNICATION PROBLEMS

A great many problems with MIDI software revolve around input from a controller not reaching the software, or output from the software not getting to a MIDI device.

These are MIDI communication errors and probably have one of several causes:

Your OMS Studio Setup is improperly configured or not current.

- Go through your Studio Setup very thoroughly to make sure that all of your devices are properly defined and depicted (Figure 1). Pay special attention to whether the ins and outs (virtual patch leads with arrowheads) to all device icons reflect the physical patch cords of your actual studio. Also, double-click on each device icon to open up its MIDI information window and check that it's set up to receive on the channels to which you want to send MIDI; make sure that you've established whether it is a controller and whether it is multitimbral. This is all especially useful if you haven't been using the program for a while, or if you've opened up an old Studio Setup in a later version of the program, as it's easy to forget about any changes you've made in your studio that might not be reflected in your OMS Setup.

- Make sure that there's a diamond by the name of your Setup in the title bar to indicate that it is the current studio Setup. If there isn't a diamond, choose Make Current from the File menu.

- Go to the Studio menu and select Test Studio. When you move the cursor over one of your device icons, it should turn into a note. (If it doesn't, check back in the Studio menu and make sure there's a check mark next to Test Studio.) Single-click on the device icon. You should hear random bursts of MIDI signals from your device — and these can be quite loud, so make sure your volume is down! Now go over to any

controller keyboard that you have and play a key. You should hear a voice in your Macintosh say "MIDI received", and see the input arrow in the Studio Setup flash.

Your physical studio is not set up correctly.

- Check and double-check that all devices have the desired MIDI Ins and Outs going to the opposite kind of port (In to Out/Out to In) on your MIDI interface.

- If the communication problems are only with one device, try substituting different MIDI cables connected to it, to see if you have a bad one.

- If the problem is only on playback, check that the device's volume is

CORRUPTED PREFERENCES

Occasionally, one of the files that an application uses when it's running can become corrupted, usually resulting in small glitches or strange performance in a previously functioning program. If these files are trashed or moved when the program is not running, they will be recreated afresh when you re-launch the application.

For *Vision*, *Studio Vision Pro* or *Overture*, the file is in the Preferences folder (Inside the System folder) and will be called 'Vision Preferences' (or 'Prefs'), or 'Studio Vision Preferences', and so on. If you develop an odd or anomalous problem in the application, simply quit the program, drag this preferences file into the trash and reopen the program. You will have to reset a few of your application's parameters — the Metronome's assigned MIDI note, for example.

turned up, and that any mode or other front-panel settings that allow it to send or receive MIDI are correctly configured.

- Try using a different serial cable from your Mac to your MIDI interface.

EXTENSION CONFLICTS

A very large percentage of the problems people have with their software on Macintoshes results from a conflict between various system extensions. Extensions are programs or parts of programs that are automatically loaded into RAM when you turn on your computer — you will see them as little puzzle-piece icons at the bottom of your screen when you boot up. In general, it's best to run with as few extensions as possible to avoid any conflicts.

Macintoshes with system 7.5 or later have an Extensions Manager control panel, where you can turn off extensions so that they won't be loaded into RAM when you restart; on Macs with earlier systems you can achieve the same result by dragging extensions from the Extensions folder (in the System folder) to any other folder on your computer — though creating a special Disabled Extensions folder and placing it in an obvious locale, such as your desktop, is highly recommended. There are also several commercial start up managers, such as *Now Utilities*, which will perform this same task.

When you're using Opcode software, you actually need only two or three active system extensions. The first of these is always necessary, and that's the Open Music System (OMS). If you're using MIDI only, without any digital audio, you can boot up your computer with only OMS enabled as a system extension and run all Opcode applications fine. If you're going to be doing any digital audio, you'll need either Apple's Sound Manager extension (recent operating systems have this built in) or Digidesign's Digisystem init, if you're using any Digidesign audio

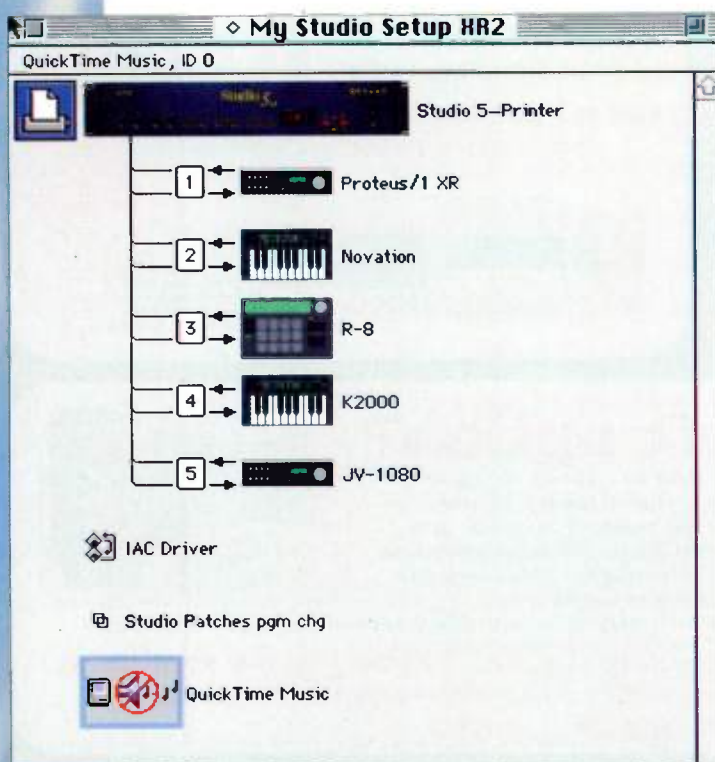

Figure 1.

Figure 3.

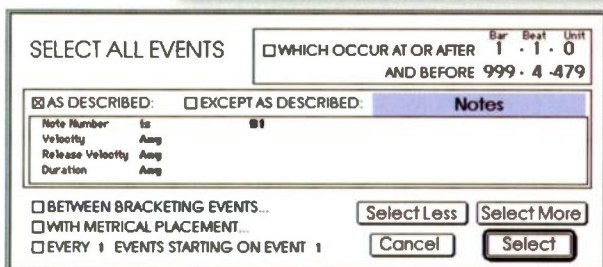

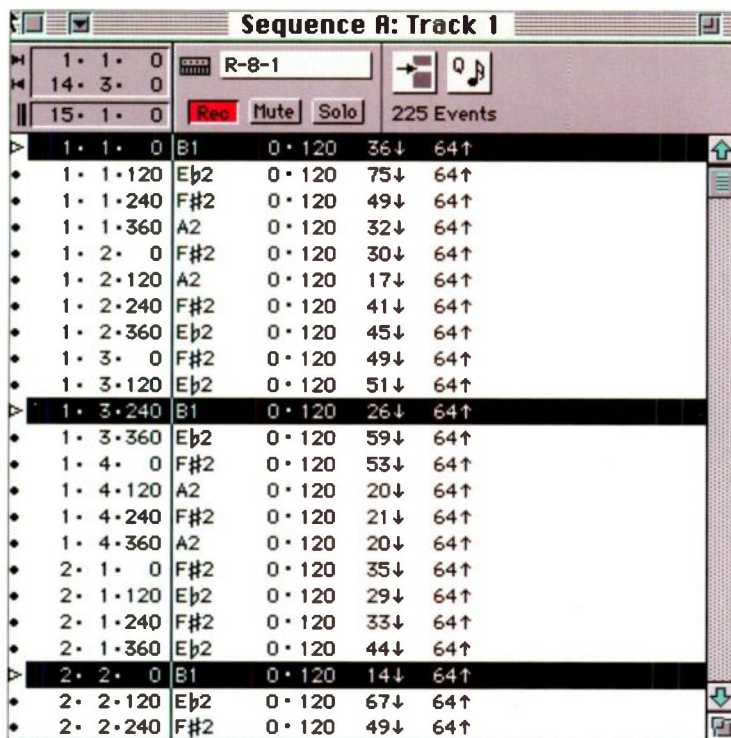

Figure 2.

hardware. In addition, if you're using a card or interface that requires an extension — Digidesign's Samplecell card, for example — you'll need that as well. You might also need your printer driver if you intend to print something from an application.

SEPARATING A DRUM MACHINE TRACK INTO MULTIPLE TRACKS

Suppose you record a track of drums into an Opcode sequencer from a drum machine or other MIDI device which has different sounds assigned to different notes, and you want to edit the volume or other parameters of the individual sounds separately.

- Make sure that the track is selected in the tracks window (the dot at the beginning of the track will be a triangle).
- Open the Select by Rule window — Edit then Select or Command+[E] — and choose Note in the decryption pop-up by clicking and holding on Events (see Figure 2). Then select 'is' from the description conditions (click and hold on the word Any in the description area), and either click and hold on the note name and select the note corresponding to the patch you want, or single-click on the note name and play the appropriate note on your keyboard controller, then hit Select. (If you have the drum machine set as the Thru Instrument by

the keyboard icon, you will be hearing the actual drum sound as you do this.)

- When you open an edit window (list, graphic or notation) the selected notes will be highlighted (Figure 3). Cut them (by choosing Cut from the Edit menu or pressing Command+[X]), then select a different track in the tracks window and paste the notes you selected in the main track into the new track (using Paste from the Edit menu, or Command+[V]).

REPLACING MIDI EVENTS WITH AUDIO EVENTS

Obviously, this tip is only relevant to MIDI + Audio sequencer owners! This is what to do if you have a sequence with a MIDI drum track and you want to replace it with some sampled drum sounds that you've recorded to your hard drive.

- Separate the different MIDI notes in the drum track, as above.
- Import your drum soundfile into *Studio Vision* (Option+[H]), select it, and copy it —

Electro-Voice®

BEING PROFESSIONAL

MEANS NEVER HAVING TO SAY YOU'RE SORRY

Being professional means there are no excuses. That's why professionals in every field, from Metallica to the Ministry, from Riverdance to the Russian State Ballet, from Wembley Stadium to Wet Wet Wet trust Electro-Voice.

Inside every EV cabinet — from the DeltaMax and MT Concert Sound systems, through the T-series to the best-selling Sx range — you'll find top end technology (our components are a favourite with system installers the world over) put together with the expertise that comes from over 70 years of acoustic research.

Listen to them and you'll be convinced. The highs cut, the mids are rich and the lows really kick you in the chest. And rugged. Take them on the road, and you can be sure they'll go on night after night, just like you. Because, like you, they're thoroughly professional.

MADE TO GIG. MADE TO LAST.
MADE IN THE USA.

CALL 0181 646 7114

Shuttlesound

Opcode

- ▶ this writes it to the clipboard.
- Open the Graphic edit window for the MIDI drum track and select the MIDI notes that you want to substitute with the audio file.
- Open the Substitute window in the Do menu. Click the 'Replace each selected event with the contents of the clipboard' radio button, and hit Substitute. *Studio Vision* will then put the audio file drum sound from the clipboard into the sequence in place of each MIDI note.
- Repeat this procedure with the other MIDI drum notes and different audio files and you can create a new audio drum part in place of the original MIDI file. Once you have substituted audio files for all the MIDI tracks, you can select all the audio tracks and choose Mix audio from the audio menu. This will create a single track of all the audio files which will play back well from hard disk.

RECORDING FROM AN EXTERNAL SEQUENCER

Imagine that you've created songs in an external MIDI device's built-in sequencer and want to record them into *Vision*. Here's what to do...

- Go to the Setups menu and check 'Input Map Enabled'.
- Open the Input Map Window and choose 'Make one line per channel' from the pull-

down menu in the title bar.

- In the Options menu, set the Receive Sync mode to either External Beat Clock or MIDI Time Code, depending on what kind of timing data your external sequencer actually sends. Set the Receive Sync Device to be the external sequencer that's sending the data — make sure that the device has been defined as one that sends sync in your OMS Studio Setup. If you have a Studio 4 or MIDI Time Piece interface/patchbay, choose that instead. Note that in the 3.5 versions of *Vision* and *Studio Vision Pro*, there's a new Sync Options window which consolidates most of the above functions.
- Open the Record filter window in the Setups menu and choose All Except, then click the check box for Tempo. Filtering the Tempo data will allow for more accurate transcription when recording multi-channel data.
- Put the sequencer in Wait For Note mode, record-enable a track, click the Record button (or hit the tab key) and begin playing your sequencer. When the external sequencer has finished playing, hit Stop (or the return key).

The data from your external sequencer will be recorded all in one 'multi' track. If you select this track and choose Separate

Multi Track from the Edit menu, each channel will be placed in its own track and you can assign them to different MIDI devices and patches, and edit the data exactly as if you had created the sequence in *Vision* itself (see Figure 5).

ASSIGNING MIDI CHANNELS TO DEVICE MODES

Many MIDI devices access their patches in different modes: Patches, Performances, rhythm, and so on. It is an inherent limitation that you can only send to one mode at a time for any given MIDI channel. You can, however, set up *Vision* so that certain channels of the device will always be set to certain device modes — so that, by switching between various MIDI channels, you can access all the different modes on your device at any given time.

- From the Windows menu in *Vision* or *Studio Vision Pro*, or the OMS Names window in the Options menu of *Overture 2.0* or later, open the Names window.
- Select the device that you want to reassign, go to the Names menu and select Show Channels. *Studio Vision* will then list all the various channels of the device in the names window.
- In the Device Mode column, assign different channels to different modes.

At this point, if you go to the Trumpet icon in the control bar you will see different names when you select different MIDI channels.

CREATING A PATCH-NAME LIST

If you get a new synthesizer and there is not yet a Librarian module in *Galaxy* (Opcode's editor/librarian software) or a patch name document in OMS for it, you can create your own patch name list in *Vision*, *Studio Vision Pro* or *Overture 2.x*.

- Define the device in your OMS Studio Setup and run a Test Studio to make sure that the device is

Opcode

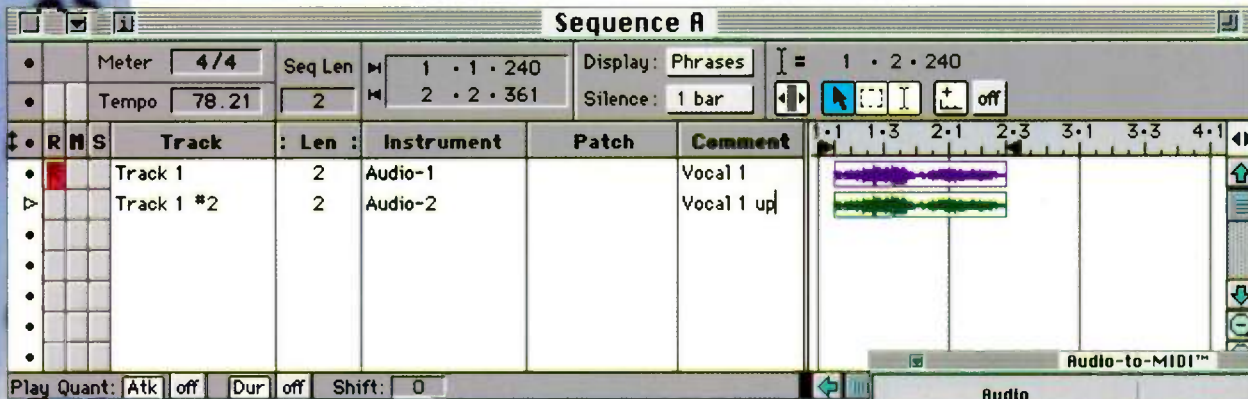

Figure 6.

- ▶ sending and receiving MIDI signals.
 - Go to the Names window in the Windows menu of *Vision* or *Studio Vision*, and single-click on the icon for your device in the Device column — if it's not there, check that the OMS Studio Setup has been made current.
 - Double-click on the Patch Name Document column for the new device; this opens up the Patch Name Document window. Single-click on the patch name column for the first patch number (which defaults to 0). This will highlight the field and allow you to type in the name for that patch number.
 - Repeat this procedure for all the patches you want to list. If you have multiple banks in your device, you can configure them in the Add Bank window in the Patches menu. When you've entered all the patch names, click OK and then save the document. This will take you back to the Patch Names from OMS window.
 - At this point you can Subscribe to this document in the Names menu as though it was loaded from a synthesizer: select the device in the Names window and choose Subscribe from the Names menu — select your new Patch document and hit Open. Once you've done this, the names you entered will be available to you in the patch name window next to the Trumpet icon.

HARMONISING A VOCAL LINE WITH DSP

Suppose you have a vocal line that you want to sweeten up with a little close harmony. Rather than call in a bunch of back-up singers, you can use either the pitch-shifting or Audio-to-MIDI and MIDI-to-Audio Digital Signal Processing (DSP) functions in *Studio Vision* to get the same results in a fraction of the time.

PITCH SHIFTING

If you want to harmonise at a set, parallel interval, the best DSP function to use is Pitch Shift.

- Select the vocal line that you want to harmonise in the Track Overview window and copy it to a new track.
- Open the Pitch Shift DSP window and choose the interval you want to transpose the line to. Check Maintain Voice Character (version 3.5 only) to avoid 'munchkinising' the sound, and hit OK. This will create a new sound file that's a transposed version of the original (see Figure 6).
- With the original file on one track and the transposed version on another, on

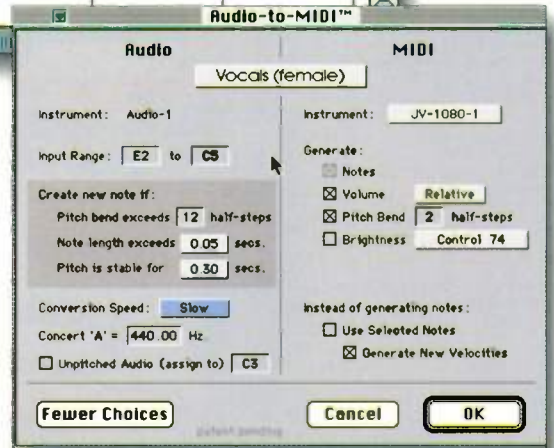

Figure 7.

playback you will get an incredibly tight, smooth vocal harmony.

AUDIO-TO-MIDI & MIDI-TO-AUDIO

If the line you want to use as harmony isn't a straight parallel transposition of the original, you should use the Audio-to-MIDI DSP function.

- As before, select the vocal line in the Track Overview window and copy it to another track.
- Open the Audio-to-MIDI window in the DSP menu. You'll want to choose the appropriate template for the sound file you are using, and set the range as close as possible to the actual range of the soundfile for faster processing (see Figure 7).
- Once the MIDI notes have been generated, you can edit those notes (in terms of pitch level or pitch bend) in any way you want, as long as you don't add or subtract notes from the original. (You can play the MIDI notes back along with the audio to test the line — see Figure 8.) Select the MIDI notes and audio file in the Track Overview window, and choose MIDI-to-Audio in the DSP menu. Choose the functions you want to process and hit OK. *Studio Vision Pro* will take the changes you made to the MIDI notes and apply them to the original sound file. This produces an audio event with the same sonic characteristics as the original but a completely new melodic shape. You will probably want to delete the MIDI notes so that they don't play back with the audio.

Electronic

INTERACTIVE COMPOSITION SOFTWARE FOR THE PC

Muse

Shakespeare had his Dark Lady for creative inspiration, Dante had his Beatrice, Petrarch had his Laura — and you? You've got your PC! JANET HARNIMAN COOK compares three different interactive composition packages which aim to provide that elusive spark...

It's a quiet afternoon with no one around to disturb or distract you; everything in the studio is working fine, and the PC is running as sweet as can be. The only thing wrong is that you're totally devoid of musical inspiration. Does this sound familiar? And what can you do about it? Well, you could play safe and rewrite your best tunes, you could recycle some clichés — you could even go away and do something completely different. But a better option might be to accept a little help from your PC...

BEATING THE BLOCK

Your PC can help you beat the block if you have one of the interactive MIDI composition applications on the market. These are actually a specialised variety of MIDI sequencer, and if you're familiar with sequencing basics you should have little difficulty understanding the principles involved.

In this article we'll take a look at three packages: the Steinberg *Cubase* Styletrax module, PG Music's *Band-in-a-Box* v7.0e, and Sseyo's *Koan Pro* v2.0. Each of these applications generates music by applying style templates to live and sequenced musical input. *Band-in-a-Box* and the simpler *Cubase* Styletrax are primarily orientated towards providing auto-accompaniment conforming to conventional musical forms, whereas the enigmatic *Koan Pro* is directed towards the creation of more abstract evolving and mutating atmospheric soundscapes. *Koan Pro* has been endorsed by Brian Eno, who used it for his *Generative Music 1*, released in 1996 — not on CD, as might be expected, but on floppy disk in *Koan* album format.

Both *Band-in-a-Box* and *Koan Pro* pieces can be exported as MIDI files, and the output from Styletrax can be converted to standard MIDI data and edited directly in *Cubase*. In practice, these programs should be useful production aids, but I feel that their strength lies in originating and developing ideas rather than in creating complete musical pieces — I usually find it necessary to port the results over to a dedicated MIDI sequencer for more precise and quicker editing. It may also be productive, when experimenting with these applications, to record the audio output to DAT or HDR, and edit it in a wave editor such as *Sound*

Forge or *WaveLab*.

But these programs can do far more than help you beat writer's block: by partially automating the production process, they liberate you from some of the more tedious and repetitive chores involved in song production, freeing up your time for other, more creative activities. The use of style templates can introduce new influences into your music, and the ability to build templates customised to your own styles and studio setup could revolutionise your writing process. You could even use these applications on stage if you are not averse to taking your PC to gigs. *Band-in-a-Box* and *Styletrax* are also powerful educational tools, and even students with minimal formal musical ability should be able to produce musical results without too much difficulty.

The processing requirements of these programs are quite modest, and you don't need a big PC to run them. A modest 486 DX2-66 machine with 8Mb will do the trick, as long as it's equipped with a GM soundcard or linked to an external GM module via a MIDI interface.

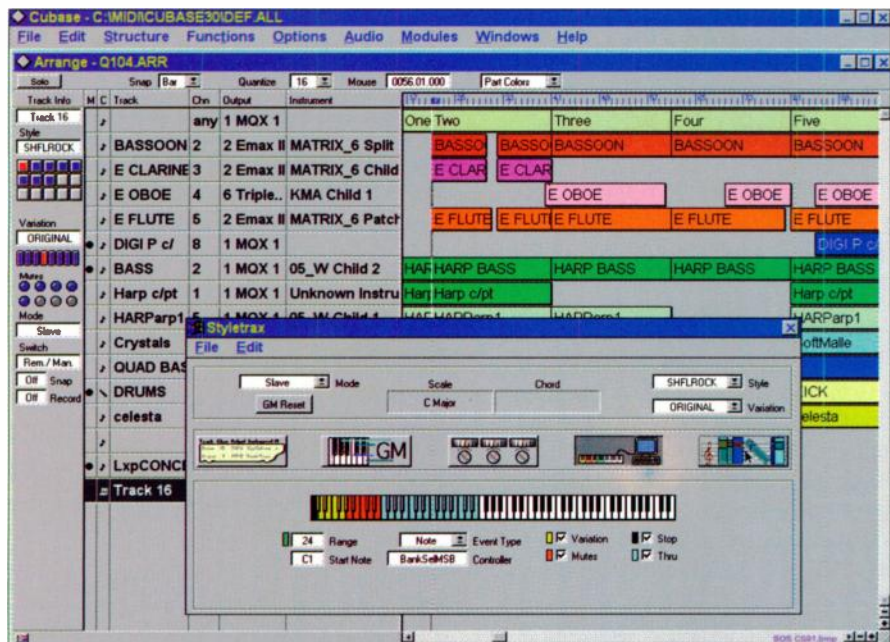

STEINBERG CUBASE STYLETRAX

Although *Styletrax* is the simplest of the three applications, it is nevertheless a very capable creative tool and is great fun to use. The *Styletrax* module integrates fully into the *Cubase* environment and has been included with the *Cubase* PC range from version 3 onwards. *Styletrax* has its spiritual roots in the *Cubase* IPS (Interactive Phrase Synthesizer) but is much more user-friendly and has a simple interface and a clearly-written section devoted to it in the *Cubase* Modules manual. However, as yet, *Styletrax* does not feature in the *Cubase* on-line help.

USER INTERFACE

The user interface comprises two software elements: the *Styletrax* Inspector on the main *Cubase* arrange page contains information about the currently active styles, variations and play modes, and complementing this is the *Styletrax* editor, which is made up of five modules:

- Library mode lets you see at a glance the names of the different styles and variations in use.
- From Remote Keyboard mode you can edit the keyboard zone configuration that governs the remote selection of variations, instrument mutes and playback stop, together with the Thru keys which are used to input chords during record or playback.
- Trigger and scale preferences are defined in Parameters mode.

Styletrax's user interface consists of two software elements: the Styletrax editor and the Inspector pane.

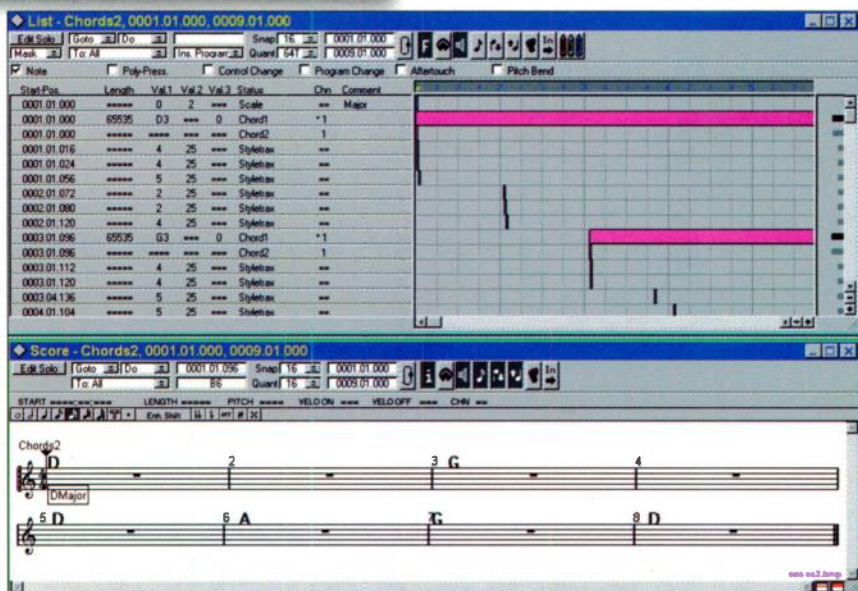

- MIDI instrument definition is found in Tracklist mode and handles the settings of the MIDI instruments.
- GM mode defines the instrument map; although Styletrax defaults to a standard GM MIDI map of 128 voices and five drum kits, it can be configured to accommodate multiple MIDI port configurations.

To explore Styletrax, first create a new track and then look in the *Cubase* Track Class list to check that the Styles module is loaded. Select a Style, click on the Inspector mode list, select Listening and put *Cubase* into play. Chords on the octave above middle C are added from your MIDI keyboard to determine the key and modulation patterns that are imposed on the Styletrax backing parts.

STYLES & CHORD TRACKS

Up to 15 different Styles can be loaded at any one time, each containing up to eight Variations which, in turn, may have nested Variations that allow different chords to produce individual patterns. Variations are sequenced from *Cubase* Chord tracks, or may be triggered from a MIDI keyboard. There are five other keyboard input modes in addition to Listening mode: Slave mode locks to the chord playback sequence defined in the Chord track; Easy mode allows one-finger chord input; and the remaining three modes — Roland, Yamaha and Casio modes — conform to the home keyboard auto-accompaniment chord-triggering conventions. Chord tracks do not contain MIDI data and are used exclusively for Styletrax control information. The MIDI channel and program change parameters in the Track list do not affect the finished recording, and are there simply to define the MIDI thru sound that is heard whilst recording the Chord track.

Another way of entering chord progressions is to convert MIDI tracks into Chord tracks, but one thing to remember when creating Chord tracks is that your input must consist of at least basic triads, otherwise the Styletrax chord recognition routines

Styletrax information on view in the *Cubase* Score and List editors.

will not function correctly. Once you're happy with your track you can change it back into a standard MIDI track — the Styletrax instrument parts will then be transformed into normal MIDI parts on discrete *Cubase* tracks. To customise your Styletrax setup you can create your own Style templates, which may contain up to eight *Cubase* MIDI tracks.

SUMMARY

The *Cubase* Styletrax module can be great fun, and is accessible enough to be suitable for musicians of all abilities and ages. An added advantage is that if you're a *Cubase* user, it's free!

E Steinberg *Cubase* from £329.

INTERACTIVE COMPOSITION SOFTWARE FOR THE PC

PG MUSIC BAND-IN-A-BOX

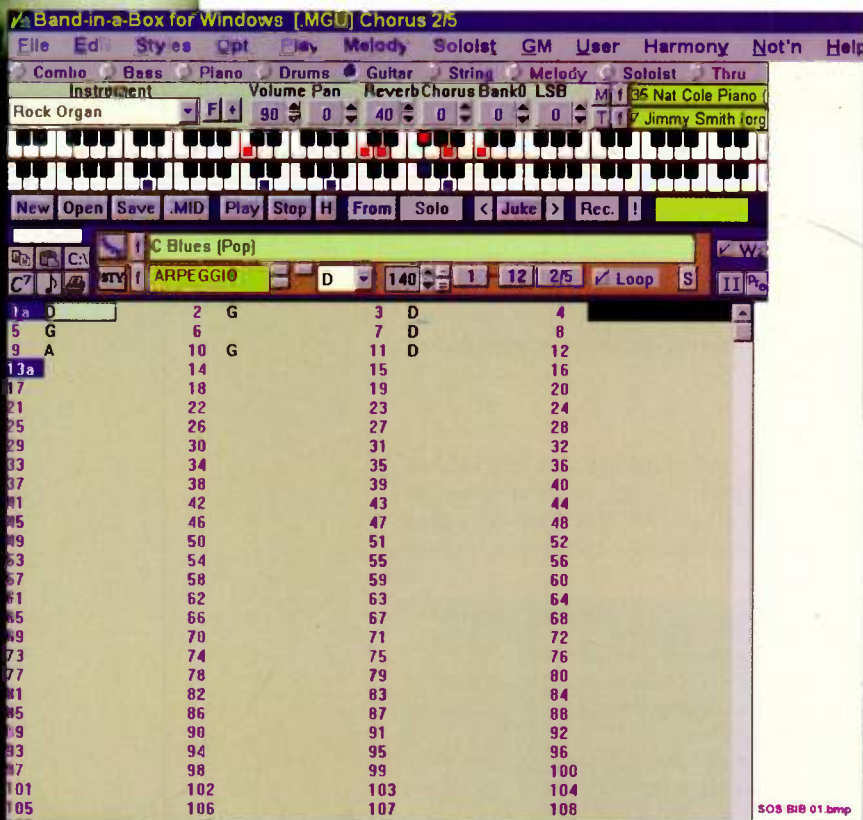

Band-in-a-Box has been around for quite a few years now in Atari, PC and Mac versions. The standard edition of the program (£89) is a 16-bit application for Windows 95 and legacy Windows 3.1, and comprises six floppy disks — four program disks and two soloist disks — plus a comprehensive 314-page manual supplemented by on-line Help and Tip of the Day. The user interface is a little dated, but reasonably well laid out. Although it is not possible to use more than a single MIDI port on your PC with *Band-in-a-Box*, there is special provision for Roland GS and Yamaha XG extended General MIDI. I hooked up the Yamaha DB50XG daughterboard on my soundcard, and took advantage of *Band-in-a-Box*'s user bank function, with which I was able to customise the default instrument map to include instruments from not only the DB50XG's GM bank, but also those located in its higher voice banks. In addition, a wide range of general customisation options, such as harmonisation templates, styles, default instrument ensembles and drum maps, is available.

Band-in-a-Box is a versatile program that can generate drum, bass and various instrumental accompaniment styles, based on a chosen Style and your choice of chords. It can also harmonise solo lines, or even improvise solos, and those with higher ambitions can create their own Styles.

SONG CONSTRUCTION

You construct a Song by entering chord and part markers onto the Worksheet bar window, and

Songs are constructed by entering chord and part markers onto the *Band-in-a-Box* worksheet bar pane.

RANDOM COMPOSITION SYSTEMS

Random composition is not a new idea; Mozart developed such a system, based on short musical phrases and using dice to determine the play sequence. Not surprisingly, the results were less than satisfactory. A similar random-choice technique can be used for writing song lyrics or poetry:

- Cut 40 pieces of paper to about the size of a playing card.
- Write a different word on each and shuffle them.
- Pick a piece of paper at random.
- Write the words down as phrases on your lyric sheet.

If you're very lucky you might find yourself with a stunning ready-made lyric; on an average day you may find an interesting juxtaposition that fires up your imagination.

then defining the key, the tempo, and a performance style. On the basis of your selections, *BIAB* can generate an arrangement of up to nine players or parts, each on separate MIDI channels. The melody can then be entered from your MIDI keyboard, and as you do so you can instruct *BIAB* to create harmony lines. You can type in lyrics from the PC keyboard, add 'improvised' Soloist parts, and, during playback, mute instruments, adjust MIDI parameters (such as patch, volume, pan and reverb) and rearrange song sections. Styles and instrumental ensembles can be mixed and matched between *BIAB* songs according to your own musical taste, and apparently incongruous musical styles can often provide the spark of inspiration that leads to new ideas and songs.

EDITORS

The MIDI editing power available in the *BIAB* score and key editors is limited compared with that found in dedicated MIDI sequencers, but you can export your song as a MIDI file, or copy it to the Windows clipboard prior to pasting it to your main sequencer for fine-tuning. It's a shame you can't import MIDI files, as this would enable you to build your own style templates more easily, but the template customisation options are extensive and you can save your piece, with all its parts and settings, as a *Band-in-a-Box* songfile. There are good basic score-printing facilities, and the copyright on all the music you create using the program resides with you.

SUMMARY

One of my only criticisms of *BIAB* concerns the gaps in the range of styles included with the package — for example, there's lots of lounge jazz and MOR, but no rave, bhangra, or Celtic; the rap tracks are pretty lightweight, and the hip-hop is... well, more hop than hip! However, the quality of the arrangements is often surprisingly good, and although a GUI face-lift and the addition of PC

THE STUDIO 400 TOWERS OVER THE COMPETITION.

- Extensive Library of Effects Including Intelligent Pitch Shifting
- 101 Factory Presets, 100 User Presets
- Up to 8 Effects at Once (in Any Combination)
- Easy To Use Interface
- Large, Graphic Display
- Auto Level Automatically Sets Input Level
- Dual 8-DISC® Twice the Processing Power

What if you could get the processing power of four independent multi-effects processors, capable of doing up to 8 different, truly professional quality effects at once all in one affordable box? And how about throwing in balanced XLR analog and digital I/O capability?

Well, it's here, the new Studio 400 from Digitech. It does all of the above and much more! Use up to 8 high quality effects at one time in any order in an endless number of combinations. Choose from multiple Reverbs, Delays, Choruses, Flangers, Auto Panner, Intelligent Pitch Shifting, Rotary Speaker Simulator, Compressors and more.

The Studio 400's quick and easy editing capabilities make changing effects and parameters painless. And for automated studios, an extensive modifier section lets you control up to 8 parameters per program via MIDI or with the Studio 400's unique dynamic and LFO parameters. Digital studios can access the Studio 400 in the digital domain using both AES/EBU and S/PDIF formats with the optional digital I/O.

Looks like the competition just can't measure up. Get the facts. Then get the Studio 400 from your local Digitech dealer.

INTERACTIVE COMPOSITION SOFTWARE FOR THE PC

Styles on offer in Band-in-a-Box.

- ▶ multiple MIDI port support would not go amiss, *Band-in-a-Box* for Windows represents amazing value for money. It's a genuinely useful songwriting and music creation tool that should have a place in any well-equipped MIDI studio — and if you want to swap files between different computer platforms, this is easy to do, as the standard *BIAB* file format can be read by PC, Atari and Macintosh.

E PG Music *Band-in-a-Box* v7.0e £89.95; upgrade from previous versions £45. Optional accessories include four performance styles disks, two tutorial videos and a CD-ROM.

SSEYO KOAN PRO 1.2

A Koan is a paradox or an unanswerable puzzle and derives from Japanese Zen Buddhism, where Koans are employed by Zen masters to confound the rational, mundane mind and facilitate enlightenment. *Koan Pro* is a powerful generative music application from UK developers Sseyo and is best suited to creating free-flowing ambient music liberated from the constraints of conventional musical forms. This is achieved using the Sseyo Koan Music Engine (SKME), which generates music in response to your input.

The *Koan Pro* package consists of two floppy disks containing the installation files for 32-bit Windows 95 and 16-bit Windows 3.1, plus a well-written manual. To help get you started there are tutorials, a selection of good

demo songs, rhythm templates, and comprehensive on-line and contextual Help. The *Koan Pro* mouse and keyboard shortcuts conform to standard Windows conventions, and there is extensive use throughout of the right mouse shortcut menu. Values are entered from mouse or keyboard, and *Koan Pro* will respond to input from an external controller such as a MIDI keyboard or MIDI guitar. Musical pieces can also be imported or saved as a type 0 MIDI file.

POWER VIEW

The main page in *Koan Pro* is the Power view: tracks are displayed horizontally, with the Track Definition table to the left. The Envelope view scrolls left to right along the time line. Track and patch names, MIDI channel and Mute status are constantly on view, and the *Koan* edit windows for voice types and playback parameters are shown via the buttons situated above the display. The top tool bars feature the usual file-handling shortcuts, transport controls, piece definitions, and the rule definitions dialogues. The status bar displays information about menu, grid and toolbar items, together with tempo, time signature and play timings.

BASICS

Koan Pro operates through the interaction of Voice types, Rules and Envelopes, which together determine the playback characteristics of a track and govern how a connected instrument's voices react over time. The five Voice types determine the basic role of each instrument that is used:

BRIAN ENO: GENERATIVE MUSIC 1

If you get the chance, check out Brian Eno's *Generative Music 1* (available from Sseyo at £39).

This is wonderful atmospheric music created with *Koan Pro* and is certainly worth a listen. The package consists of a well-presented package featuring an eerie Anton Corbijn photograph of Eno on the box front, a booklet containing extracts from Eno's diary and a floppy disk with the musical pieces, plus *Koan Plus* playback software. The pieces should be played through a Creative Labs

AWE32, SB32, AWE64 or TDK soundcard, as extensive use is made of the EMU 8000 controllers exclusive to these cards.

Total Harmony

The new Vocalist Performer from DigiTech brings incredibly life-like three-part harmonies within the range of every performer. The most affordable harmoniser yet - and so easy to use! Just hit the key and scale buttons and you're free to concentrate on *your* performance!

- Up To 3 Part Harmony (Original + 2 Voices) Of Stunning Quality

- Auto Doubling Effect

- 50 User Presets With 6 Style Variations

- XLR Mic Input/ Stereo Outputs

- Digital Reverb

- A/B Part Programming (For Bridge, Chorus Etc.)

- Optional Footswitch For A/B Switching, Reverb and Bypass

- Ideal For Live Use

INTERACTIVE COMPOSITION SOFTWARE FOR THE PC

The Koan Pro Power view displays instrument voice parameters and the envelope view.

The Koan Pro scale rule editor determines the pitch of each note played.

- ▶ The 'Follows' Voice type references and mimics the qualities of another voice and is used to create echo and counterpoint.
- ▶ The 'Repeat Bar' Voice type reiterates material used in earlier bars.
- ▶ The 'Fixed Pattern' Voice type plays notes based on a note sequence and/or note lengths entered in the Pattern Editor grid, and can be used to introduce melodic material.
- ▶ The 'Ambient' Voice type is used to create notes with specific durations and can produce drones.
- ▶ The 'Rhythmic' Voice type is primarily controlled by the program's Phrase Length and Phrase Gap parameters. The Harmony and Scale rules calculate the pitch of each note that is played, and note durations conform to the Rhythm rules.

Rules are based on measures of probability — that is to say, they determine the likelihood of an event occurring over the duration of the piece. For example, when applied to the Scale rule, an event probability of zero means that that particular note will not be played at all, while a probability of 20 means that the note has a 20% chance of being played.

Envelopes are edited graphically, with changes entered from the envelope toolbar, and can be applied for the control of volume, pan, tempo, velocity range, velocity change and velocity change range. Every value in *Koan Pro* can have a List associated with it: this forms a pool of possible factors that the voice can be influenced by — for example, a list of specific instrument voices could

be used to restrict a random program change selection setting. In fact, the interaction between the rules can be a mind-boggling affair, since there are around 150 parameters to tweak and rules can be applied at the Piece level (globally), or to individual instruments at Voice level. You must be prepared to adopt an experimental approach!

Space prohibits more than a cursory examination of the staggering range of voice- and phrase-shaping possibilities afforded by *Koan Pro*, but a few of the other options include controllers for reverb, chorus, portamento, sustain, expression, damper and softness. If you have a Creative Labs AWE32 soundcard, you can also take advantage of the special provision made within *Koan Pro* for controlling this card's EMU 8000 sound generator (featuring LFOs, oscillators and voice envelope parameters) and Creative's proprietary SoundFonts.

To get an idea of how *Koan Pro* works, load in the '55-56'

“These programs can do far more than help you beat writer's block.”

demo song — a slow, pleasantly mutating piano and choir piece written by Tim Didymus — from the SKD folder in the *Koan Pro* directory. Soloing a track will enable you to listen to it in isolation, to assess its content and hear accurately the effects of parameter changes as you make them.

SUMMARY

As a significant proportion of my own musical output falls into the ambient/minimalist category, I was keen to find out what *Koan Pro* could do, and I was soon able to produce simple evolving ambient pieces, which were spoilt only by the occasional dissonant note or inappropriate phrase. These glitches were almost certainly caused by my lack of expertise, and were easy to correct in *Cubase* and *WaveLab*. Although *Koan Pro* is well written and stable, I did not find it a particularly easy program to learn; the user interface appears rather daunting initially, and although this is partly due to the stark, almost DOS-like graphics and minimal use of colour, it's mainly down to the number and interactive complexity of the features available. But it's well worth persevering, and the more I used *Koan Pro*, the more I liked it. I'm sure that newcomers with an interest in making ambient music will find that, after the initially steep learning curve, *Koan Pro* is a very intriguing and exciting program with tremendous depth, and will prove to be a valuable musical asset.

A final remark on copyright: when you use *Koan Pro* to originate your own musical recordings, copyright resides with you as the author. However, if the program is used to generate music in real time for public broadcast or performance, or for commercial purposes (such as to provide background music for public places such as hotel foyers, reception rooms and lobbies, and telephone hold systems) a license must be first obtained from Sseyo.

SPEC CHECK

CHECKING THE FULL SPECIFICATION OF YOUR PC

Sometimes a new PC will be delivered with parts missing, or incorrect ones fitted. MARTIN WALKER breaks down a typical specification into byte-sized chunks, and shows you how to find out what's actually inside the case.

When you buy a new computer, it can be difficult to get to grips with everything at once; unless you know where to look, it's hard to check that what you actually receive is what appears on the invoice. It's not unknown for a PC to arrive with an odd component missing (8Mb of memory instead of 16Mb) or a wrong part accidentally installed (a different size of hard drive, for instance). A full check will only take a few minutes, and it will be easier to get the problem sorted out if you discover it within the first few days of ownership. Much of the information can be found on the initial page of text data that appears courtesy of your BIOS during the initial boot-up of the PC. When this is on screen, use the Pause key (above the cursor keys) to give you time to read everything. Pressing any other key allows you to continue.

It is also useful to re-check this data after any upgrades have been fitted, to ensure that they are being recognised by the system. For instance, if you upgrade with unsuitable types of memory for a particular machine (you should use a reputable supplier who can advise you properly), these checks will highlight installation problems. For instance, a friend of mine upgraded from 16Mb to 32Mb of memory, but his BIOS still insisted that only 24Mb were present. This turned out to be because one of the two SIMM boards supplied contained slower RAM chips — a phone call resulted in a quick replacement being sent.

For hard disk recording, it is often useful to know the make and model of your drive. Unfortunately, the only way to determine this is to physically remove the cover of your PC and look inside at the drive label. Even then, if the maker's name is fairly easy to find, the model number may

not be as obvious. This information tends to be useful only when you're telephoning sequencer help lines in case of performance problems, or if you need to find the performance figures to check against software requirements — unless you're just paranoid, and want to check that you have been supplied with what you paid for. Knowing the model number of the drive allows you to find out technical data such as Average Access Time from the manufacturer's web site, which can be useful when you're choosing a MIDI/Audio sequencer.

Finally, when buying a new monitor, remember that it's the diagonal dimension that determines the rated size. However, not all the tube can be used for display purposes — some will be under the edge of the casing, and not all monitor screens allow you to use all the visible tube area — some still have a significant black border beyond the active display. If you are buying a machine with such a display from a high-street shop, ask to see the viewing area increased to a border of half an inch or less on each of its four sides. If this is not possible, don't accept promises that it can all be changed by software settings — some 15-inch monitors end up no bigger than 14-inch ones, but you will still pay more for them.

SOS

PROCESSOR SPEED & TYPE

The speed will be shown on the BIOS screen, along with the manufacturer's name. If the speed is not what you expected, then either the supplied processor is the wrong one, or the machine has had its internal jumper settings incorrectly adjusted. Unless you are confident fiddling about inside PCs, this is something that is best sorted out by the manufacturer. Cyrix chips are rated by their performance comparative to the nearest equivalent Pentium, and in fact a P166+ runs at 133MHz rather than 166MHz, so in this case don't worry if your machine shows a different clock speed. 'MMX Upgradeable' is often a crafty ploy by retailers to make you think initially that you're getting a faster MMX processor, when in fact it simply means that you get the standard Pentium, but can pay more money in the future and buy the real thing as a direct plug-in replacement (which also means writing off the existing one). If you actually have an MMX processor fitted, the BIOS screen should normally show this.

CASE

The box in which your PC components sit can be supplied in several varieties. Desktop cases, as you might suspect, normally sit horizontally on the desktop with the monitor screen perched on top, and are very popular. PC musicians may prefer to opt for a mini tower case (normally about the same price). This stands vertically, and is often placed at the side of the monitor on the desk, but the advantage for musicians is that it is easy to place on the floor, or under a desk, where the noise of the internal cooling-fan will be far less obtrusive. Midi tower systems are slightly larger, allowing more individual disk drives to be accommodated, and the Full Tower system case is larger again — if you anticipate fitting multiple removable drives for hard disk recording, have a look at these options before buying.

HARD DISK DRIVE SIZE

The hard disk drives supplied nowadays tend to start at about 1.5Gb, and this is adequate for many people. If you want to try audio hard disk recording then a better alternative might be a 2 or 2.5Gb version — when you're buying a complete system, the price increase will often only be a few tens of pounds. To find out the size of your drive, double-click on the Your Computer icon on the Windows 95 desktop. You will see an entry labelled 'Hard Disk (C:)', clicking on this will show you the amount of free space, as well as total capacity, but for a more graphic representation, click with your right mouse button on the hard disk icon and then select 'Properties' to see a bar chart with the same information. Normally, drives will be of the EIDE (Extended Integrated Drive Electronics) type. If you have one of the alternative SCSI (Small Computer System Interface) devices, their size can be checked in exactly the same way.

Windows 95 UK keyboard

Mouse

Windows 95

KEYBOARD, MOUSE & WINDOWS 95

The difference between the Windows 95 and the standard keyboard is the three extra keys (one on the left, two on the right of the spacebar). You'll find more information about these in May '97's PC Notes. A UK keyboard is one that has a pound (£) sign appearing above the '3' key, and several other keys are in different places from the American version. You are unlikely to be offered anything but a UK keyboard in this country. The mouse will either have two or three buttons — in my experience, very few people ever use the extra middle button (or even find a suitable three-button driver to use with it).

The Windows 95 operating system may be provided already installed, but even if it is, insist that the Windows 95 CD-ROM is also supplied. If, for whatever reason, you ever have to re-install Windows 95, you will need it. Sometimes the installation data will be copied as an image of the entire CD-ROM onto your hard drive, so that installation can be carried out without the separate disk, but ask for it even so: it's better to be safe than sorry!

RAM & CACHE SIZE

The BIOS screen will also tell you what memory has been installed in your computer. This will be in the form 'Base Memory: 640K' (the full amount of the bottom 1Mb that is available, as the remaining 384K is overlaid by the BIOS), and 'Extended Memory: 15360K' for a 16Mb machine, and 31744K for a 32Mb machine). If your memory is of the EDO type then most BIOS entries will show this. Mine displays 'EDO RAM in Banks: 1, 2' showing that both pairs of 8Mb SIMMs are of the EDO variety.

The processor contains a small amount of fast memory called an internal cache, to speed up the

retrieval of recently used information. A secondary cache, sitting between this and the main RAM, can result in some spectacular performance boosts. Pipeline Burst cache memory is used in conjunction with the EDO type of main RAM. The BIOS screen will again show the amount currently installed in your machine, along the lines of 'Cache Memory: 512K'. The figure will be either 256 or 512K; the latter gives you slightly better performance. Often 256K is hard-wired to the motherboard, and an additional 256K supplied on a small plug-in circuit known as a COAST (Cache On A Stick). If your machine only shows 256K when you've paid for the full 512K, this extra board has not been fitted.

GRAPHICS CARD

The amount of memory on the graphics card (used exclusively for drawing the screen) determines the maximum resolution and maximum number of colours available. For music use, with a 14- or 15-inch screen, most people will be happy with a screen of 800 by 600 pixels in size, with 256 colours. Up to 800 by 600 at 64,000 colours, or 1024 by 768 displays at 256 colours can be achieved with only 1Mb on board. If you need a higher-resolution display (1280 by 1024 is readable on a 17-inch screen), or more simultaneous colours, then a 2Mb card is a better proposition: this will manage 1024 by 768 at 65,000 colours. Normally the graphic drivers supplied

with the card will check on RAM amount, and any resolutions higher than those that are supported will either not appear at all, or be 'greyed out' in any display menu. Make sure that both the graphics card and the monitor screen support your desired resolution at a minimum of 75Hz refresh rate. This means that the entire screen will be redrawn at least 75 times a second, which results in less flicker, so less eyestrain and fewer potential headaches.

MONITOR

The size of the screen is always measured by the diagonal dimension of the tube, not all of which is displayed. Fourteen-inch monitors should have an active diagonal display size of about 12.75 inches; 15- and 17-inchers have diagonals of about 13.75 and 15.5 inches respectively. For those with white Rolls Royces and holiday homes in the Bahamas, your 21-inch monitors end up at about 19.5 inches. The figure 0.28 in our monitor specification refers to the 'dot pitch', and the lower this figure, the better the picture definition. Cheaper and smaller monitors are likely to have 0.31 inch, better is 0.28 inch, and 0.25 inch should give one of the crispest pictures you could hope for with larger screen sizes. 'L/R' stands for 'low radiation', and this is a measure of how small the electromagnetic emissions are — nearly all monitors nowadays meet stringent regulations, to ensure that you don't get headaches or start glowing in the dark after spending all day in front of the computer. 'N/I' stands for non-interlaced, and this determines the amount of flicker of the picture. An interlaced display is drawn by first scanning all the odd-numbered lines from top to bottom, and then returning to the top to draw all the even-numbered ones. This results in flicker, whereas a non-interlaced display is completely redrawn each time, giving a much better picture. All of these details can be checked in your monitor manual.

CD-ROM & FLOPPY DRIVE

The speeds of CD-ROM drives are referenced to the data-transfer rate of a standard single-speed CD audio drive (150K per second). So a typical 8x speed drive should have a theoretical speed of 1.2Mb per second, and a 12x drive of 1.8Mb per second. I say theoretical, because many of the higher-speed drives occupy your computer's processor 60% or more of the time in shifting this data elsewhere, such as into graphics RAM to appear as on-screen images. In the real world, these figures may not be achieved all of the time. Since many CD-ROM drives show no front-panel model numbers, you might like to check that the actual speed is as stated, using one of the many testers available.

All floppy-disk drives currently supplied are of the 3.5-inch 1.44Mb variety. The only thing to watch out for when you first buy a machine is that the floppy drive will successfully read disks written on a previous drive. Sometimes one or the other will be slightly out of alignment, and it's far easier to get a replacement if you spot this quickly. This happened to me on my latest upgrade. Although floppy disks I had written using my previous PC were struggling to load on the new machine, this could well have been the fault of the previous drive. However, when I tried to install several applications from floppies supplied by a manufacturer, the same problem occurred, pointing to the new drive as culprit. My supplier replaced the faulty drive in about 10 minutes (another advantage of using a local dealer).

LEANER, HARDER, FASTER

SPRING-CLEANING YOUR PC

Computers have a habit of attracting more than their fair share of unwanted files. MARTIN WALKER shows you how to clear away the cobwebs, and streamline the operation of your PC at the same time.

Spring-cleaning is one of those traditional activities that's calculated to clear away the winter blues. It involves lots of dusting and airing, cleaning of windows to let in more of the spring sunshine, and, more often than not, checking that your favourite paintbrush still has some bristles left and making a few trips to the local DIY superstore. It's still not too late to provide the same treatment for your PC. After all, many people's hard disks end up containing a host of outdated applications, stray and lost files, and forgotten shareware programs that earned no more than one quick look after falling off the cover of a computer magazine. With a little bit of effort, it's not unusual to regain 50Mb or more of hard disk space. While having a clear-out, many people will find that the contents of their hard disk strongly resemble Steptoe's yard, with hordes of disorganised folders everywhere. If nothing else, re-organising the contents of your hard drive will make it easier to find files in future, and you may well also uncover yet more candidates for deletion.

There are additional benefits to PC spring-cleaning above and beyond that of increased hard disk space and organisation. Badly behaved installations don't just leave a trail of files in their wake: sometimes they leave drivers installed, even if the program itself is long gone. By finding and removing these, you may speed up the operation of your PC (faster boot-up times and more memory available when it's up and running). While we're about it, this is also an ideal time to check on the Internet that you have the most recent driver versions, to get maximum performance from your hardware. So, just like traditional spring-cleaning, this gives you a chance not only to tidy up and thoroughly clear out the system, but also to streamline the way your PC works, and make it just that little bit more pleasant to use on a day-to-day basis.

FIGHTING THE FLAB

If you want to clear a bit more space on your hard disk, there are probably plenty of superfluous files. If you already follow a sensible regime when installing new versions of programs on your hard disk, at least you won't have the clutter of obsolete applications (see 'Removing Old Programs', later in this article). For most people, the first and easiest way of regaining some space will be to search out and destroy any remaining temporary files. Many applications create files for temporary use, perhaps holding previous edits of programs (for Undo functions), or blocks of text saved during editing (used by cut, copy and paste functions), but normally a well-behaved application will delete all of these on exit. However, not all applications are well behaved, and if you ever suffer from a crash, any temporary files open at the time will remain on your system. These are easy to find, though, as they normally have filenames that end in 'TMP'. You can root them out using the standard Find function on the Taskbar, typing in *.TMP and then, if you're happy that they contain no useful data, delete the lot. Occasionally, their contents may be of use — if you've just had a crash, a remaining temporary file may just contain some or all of the data that you were working on shortly before it happened. In this

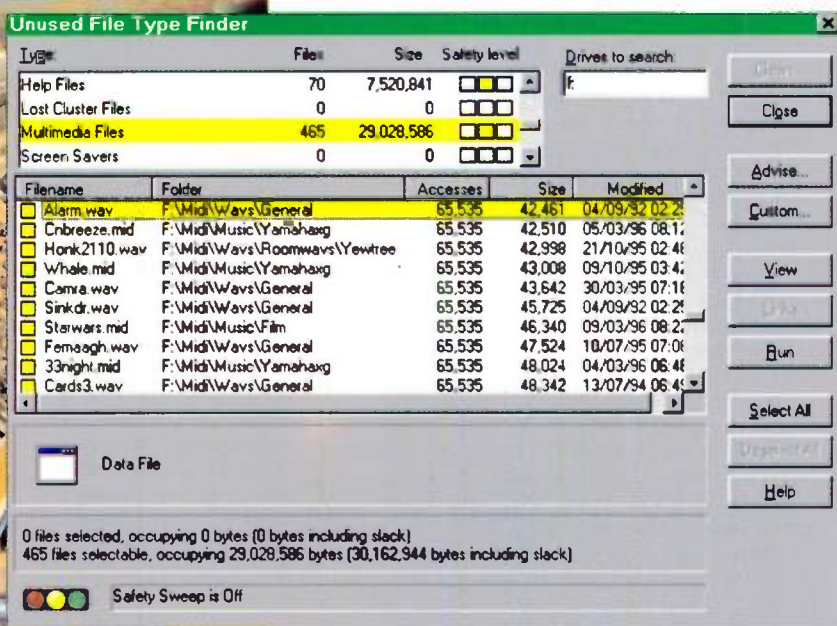

Figure 1: Clearing out the clutter is easy with a program such as CleanSweep, which sorts appropriate files into categories for you to inspect before possible deletion.

For 25 years musicians the world over have made it with Roland Instruments.
No others sound as real. No others have the warmth and the depth.
When you want to make music, make it with a Roland.

Make it with a Roland

After 20 years of continuous Roland guitar synthesis, you might think you know what a Roland guitar synthesizer can do. Think again. The all-new GR-30 has even better tracking and even more stunning sound quality. The truly innovative new harmoniser and arpeggiator will make you sound better than you ever thought possible. And it's more affordable, too. It's never been so easy to sound so good. Make it with a Roland.

 **Roland**

For details of this and other new Roland products call the Roland brochure hotline: 01792 515020
Roland (UK) Ltd, Atlantic Close, Swansea Enterprise Park, Swansea SA7 9FJ. UK web site: <http://www.roland.co.uk>

SPRING-CLEANING YOUR PC

► case, it's well worth looking at the file in the original application — it could save you a lot of retyping.

The next most popular category for extinction is the BAK file, created automatically by many programs when you save a new version (just in case you change your mind). Making backups is a sensible way to work, whether you do it manually or use the Autosave feature provided by many programs; but, periodically, it's worth clearing out ancient ones. The best time to do this is just after you've saved a backup version of your data in compressed format onto another drive, so you still have copies of it in case of accidents.

When some installations put updated versions of system files onto your hard disk, they keep the file that was replaced, but change its filename extension to .001 (or .002 if .001 already exists, and so on). You can delete these if you know that the old version will never be needed again, but this can be a dangerous area — the QSound plug-in for *Sound Forge* writes a hidden file called Dkmtu.000, and if you delete this you lose an install. Be careful!

Windows 95 often seems to leave things in the Windows\spool\printers folder: this holds files that you have printed, but Windows doesn't always clear them out after printing is completed. Anything found in here can normally be deleted. If you use the Internet, your browser will probably have a cache of several megabytes. This is used to store recently used pages and graphics — to speed things up if the same pages are required again. You can purge these periodically from an option in the browser itself, although their total size will never grow beyond the size you've chosen for the cache.

There are many other types of files that you could probably whittle away at, to give you a bit more hard disk space, but on a musician's machine, multimedia files are the gluttons: it's often quite easy to free up tens of megabytes at a stroke by removing unwanted audio and video files. Many software packages provide helpful tutorials — *Sound*

“People who blindly press the 'OK' button when an installation folder is suggested often end up with hard disk contents resembling tribal totem poles.”

Forge is one example; during installation it places a 5Mb batch of WAV files in its folder. If you have looked at these tutorials, they can safely be deleted. After all, most of today's software is now supplied on CD-ROM, so the files will still be there if you need to refer to them again. The only downside here is that most programs supplied on floppy disk (as well as certain CD-ROMs) hold their data in compressed format, only expanding it when you install the software. In such cases, you may have to re-install the software to get the tutorial files back. Any WAV or MID files supplied for demo purposes with sequencers, audio editors, and soundcards can also be deleted if you don't use them.

On the video side, some packages install multimedia tutorials on your hard disk, which, more often than not, have filenames ending in AVI. These tend to be huge but, thankfully, many manufacturers now leave them on the CD-ROM to be run directly, providing a Start Menu shortcut that prompts you to place the correct disk in your CD-ROM drive. Another example of

CLEANSWEEP 3.0 REVIEW

When I was writing 'Essential Accessories for the PC Musician' for April '97's *SOS*, I mentioned *CleanSweep v3.0* in the text, but it arrived a month later than promised and missed the deadline, so it was actually the previous *CleanSweep 95* that I reviewed, and which appeared in the screenshot. To save any confusion, the packaging of the version 3 is shown here — do make sure that you get this one, as there are significant improvements. Once again, its main claim to fame is the ability to monitor the installation of applications. It not only records a full list of new files added to your computer, but also notes any overwriting of existing files with older versions, and any alterations to existing INI files such as adding or deleting lines, as well as recording any

changes to the Registry. What this means in practice is that whether the new application provides its own uninstall facility or not, if you want to remove it, *CleanSweep* will exactly reverse the process, not only removing every single file associated with the application, but also removing all traces of it elsewhere.

The beauty of this technology is that it happens automatically — *CleanSweep* sits in the background, and when you run any Setup or Install it will pop up to ask if you wish to monitor the installation. This new version even copes with programs that insist on re-booting the machine to finish their installation — popping up again to let you save its install log when your PC returns to the desktop. Quite frankly, without this program I

would rarely try out 'cover-mounted' CD-ROM software, and it would certainly be a nightmare removing review software when the associated hardware goes back to the distributor.

New features include Safety Sweep (which prevents you deleting any questionable files unless you specifically ask it to give you full control), Update-It (which can automatically download the latest version of *CleanSweep* over the Internet for you), and Registry Genie (a safer way to edit the Registry, if you're feeling brave). The far more useful Registry Sweep cleans up your Registry by removing redundant references, and a new and improved knowledge base of 1000 applications allows much more thorough removal of pre-*CleanSweep*-monitored applications, now the program knows what files are involved. The graphics have been tweaked, and

CleanSweep 3.0 is one of the most thorough uninstallers you can get!

you can now easily view logs to check what actually happened during an installation. Although this new version took up 15Mb on my system as opposed to 5Mb for the previous version, it's so useful that I won't grumble. *CleanSweep 3.0* is available from most software outlets, and the street price is about £40.

SPRING-CLEANING YOUR PC

WE HAVE THE TECHNOLOGY

Although you can do all this trimming by hand, using Find for each category of file, there are several programs that can automate the process. *WinDelete* is excellent value, *CleanSweep* is very comprehensive, and *Norton Utilities* provides the Space Wizard, which has an interesting additional feature. Although it can take a long time, it will compare the contents of identically sized files to find duplicates, even if they have different names. This produced several surprises on my machine, including two graphics files belonging to *First Aid 95* that, despite having different filenames, were identical. However, you still have to be careful if you're deleting one of any pair of duplicate files, since if they have different filenames you're likely to get a 'Missing File' error next time an associated program calls them.

Figure 2: It's well worth exploring the options provided in Tweak UI — you might even discover an option to change some little thing that has annoyed you for months!

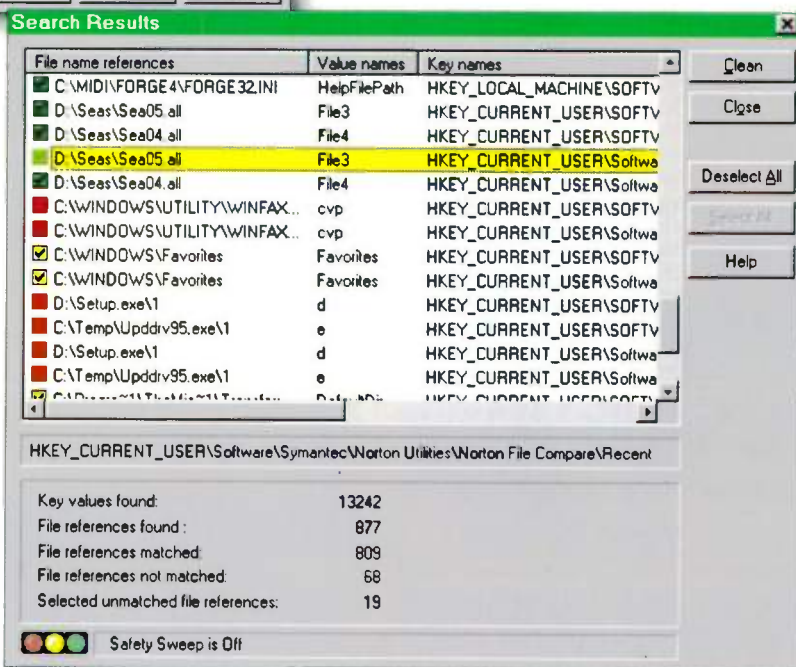

Figure 3: This is the results screen from my CleanSweep Registry Sweep — 68 references with no matching files! Of these, 19 were deemed safe enough to back up and then delete. The highlighted entry, for example, is because I deleted Norton File Compare from my system — this entry in the Registry was made the final time I compared two files, and is now obviously redundant.

POWER TOYS

If you don't already have these (and there are numerous copies on the cover disks provided with many computer magazines), they are well worth installing, particularly the Tweak UI option. This provides an extra applet in Control Panel, allowing you to tweak many aspects of Windows 95 that would otherwise only be accessible by directly editing the Registry. For instance, you can get rid of all those little arrows that appear on Shortcut icons, and speed up the menus that cascade from the Taskbar (Menu Speed). These default to waiting about a second before displaying the next menu, and this feels to me like walking through treacle. The Documents section on the Start menu allows you to quickly open a document you've worked on recently by clicking on it. If you currently have a huge list of file entries in the Documents section, you can arrange for this to be cleared automatically every time you boot up (in the Paranoia section!). There are also several repair functions that can be useful (see Figure 2). Although there's no help file as such, you can click on the question mark at the top of the dialog box, and then get an explanation for each option by clicking on it. Considering that Microsoft provide the Power Toys free of charge, they are an absolute bargain!

▶ wasted space is 'cosmetic' backdrops and designer screensavers. Although some packages come with screensavers advertising the company (these will have an SCR suffix and can be quickly disposed of), other glamorous packages include whole suites of designer backdrops for you to use as wallpaper when running the application. The latest version of *Norton Utilities* comes with a 1Mb selection of 14 designer styles, ranging from fluffy clouds, through hi-tech metal and marble, to a particularly natty walnut finish — just right for personalising your programs! Although it's nice to have these options, once you've chosen a personalised colour scheme, it's silly to leave the rest of the options on your drive: the most popular graphics formats to investigate here are BMP and GIF.

REMOVING OLD PROGRAMS

Although removing programs by hand is far easier to do if you've previously installed a program into its own unique folder, many initialisation files and Windows system files are dropped into unexpected places on your hard disk, and these can be very difficult to track down. Also, the Registry is still likely to contain various references to the program, which are best removed by an automated utility. If you have ever used a dedicated uninstall program such as *WinDelete*, *Uninstaller* or *CleanSweep*, you will never want to return to the old ways of attempting to remove files by hand (see the *CleanSweep 3.0* review on page 118). If applications do provide their own

AN1x
CONTROL SYNTHESIZER

FAT is BEAUTIFUL.

Fill your ears with the biggest, fattest sounding keyboard ever conceived - the Yamaha AN1x. Thanks to Yamaha's unique Analog Physical Modeling synthesis, the AN1x digitally generates all the analogue power you ever dreamed of in an unbelievably flexible and controllable, 10-note polyphonic synth. It's a breeze to use with intuitive knobs and a single operating level giving access to the very heart of the machine. There's an arpeggiator, a 16-step Sequencer for quickly generating sophisticated loops, and a 4-track parameter recorder capturing real time knob movements. Take control by visiting your nearest Yamaha Hi-Tech dealer, or call 01908 359269 for a free information pack.

SPRING-CLEANING YOUR PC

- ▶ uninstall option, this will often look for an associated Install.log file that was created during installation, so leave any log files well alone. Thankfully, most recent programs seem far better at removing themselves — using their own uninstall routines — than they were in the past, some even providing a reassuring check list of what they're currently doing. If any uninstall program leaves the program folder behind after deleting the program files, this is probably because there are still files in it saved after the Install.log was created, such as your data or preference settings. Have a look with a text editor, and then delete them along with the folder itself if you're happy that nothing of value remains.

CLEANING THE REGISTRY

For many people, the Registry is an area shrouded in mystery, despite many references to it, and remains a no-go area. It first appeared in Windows 95, and was designed to streamline the approach used in Windows 3.1, which used individual INI files for each and every application.

“By all means try published tweaks to the Registry which appear in magazines and application help files, but don't underestimate the damage that can be done if anything goes wrong.”

Although Windows 95 still recognises INI files used by 16-bit applications, most 32-bit native Windows 95 versions incorporate equivalent data within the Registry. Grouping all the information in this way not only makes it easier to maintain a full backup in the event of system failure, but also allows different users to have their own set of preferences. Each PC will have its own unique Registry, and this is first created when you install Windows 95. It consists of two hidden files: SYSTEM.DAT holds the hardware- and computer-specific data, and USER.DAT holds the entries relating to the individual user.

During the installation procedure, Windows 95 builds up a database of what hardware you have in your PC. It does the same as each subsequent piece of software or hardware is installed. Having full details of system hardware and software gives it a much better chance of spotting hardware incompatibilities, driver errors and so on. Unfortunately, this level of sophistication means that any editing of the Registry should not be undertaken unless you know exactly what you want to change, and have detailed instructions on how to do it. I've had six pieces of software published over the years, and am currently on my fourth PC, but I still steer clear of fiddling about

WHEN I WERE A LAD

People whose PC experience stretches as far back as the DOS era may well have more ordered ways of dealing with folders. In those halcyon days of text-only screens (like those you still see when first booting up your PC), only 25 lines of text normally appeared on screen before the topmost rapidly scrolled out of sight, never to return. To

make things easier to read, the general rule was to try to have no more than 25 entries in any one folder, so that its entire contents could be viewed on screen at once. This may sound laughable now, but there's some sense in this philosophy, as you will probably appreciate when scrolling through a typical Windows folder with its hundreds of entries.

with the Registry. By all means try the published tweaks to the Registry that appear in magazines and application help files, but don't underestimate the damage that can be done if anything goes wrong. Always make a backup of the Registry before changing a value. If the worst happens, and your machine freezes next time you boot it up, you can recover by manually restoring the old version of the Registry.

The main difficulty is that a single piece of software may have a dozen or more references within the Registry, all in different places. Changing or removing two or three of them may leave your system with a permanent 'limp', which might only be resolved by completely re-installing Windows 95. The easiest way to approach the Registry is to use one of the semi-automatic maintenance programs provided with *WinProbe95*, *First Aid 95*, and *CleanSweep 3*. These trawl through the Registry looking for references to programs that no longer exist on your hard drive. With the amount of software that goes in and out of my machine, I tend to run one of these once every month or two. Even so, the references it comes up with (see screenshot) will mean little to most people, and it's still worth backing up the Registry before allowing the program to remove these entries, just in case. You've probably guessed by now that I think this area is a bit of a minefield. Editing the Registry is sometimes the only way to change certain aspects of the system, and I suspect that this was why Microsoft released *Tweak UI* (see the 'Power Toys' box): to allow people to perform the commonest system tweaks from the comfort of a point-and-click interface.

INSTALLING NEW SOFTWARE

When you're installing new applications, rather than accepting the suggested default destination folder, it's well worth spending a little time coming up with a approach that'll make finding your files easier in the future. People who blindly press the 'OK' button when an installation folder is suggested often end up with hard disk contents resembling tribal totem poles. This is because of the vast number of applications that prefer to create a new folder in the root (C:\) directory; better applications at least place themselves inside the existing 'Program Files' folder, and leave the root folder uncluttered.

Everybody will evolve their own approach, but on my system I like to keep documents and MIDI stuff in their own separate folders, and so have

FAVOURITE FOLDERS

One thing that makes day-to-day work more pleasurable is making sure that, when you open or save a file from an application, the default directory is where you like to store files associated with that program. There are several ways to do this, depending on the program. Many allow you to specify it in the 'Start In' entry of Properties (right-click on the Shortcut to the program to find this, either on a desktop shortcut or a shortcut when editing the Taskbar). Others have an entry in the appropriate INI file, with a default folder, accessed either through a preferences menu in the program itself, or, falling this, by editing the INI file directly using something like *Notepad*. This may sound complicated, but it only has to be done once, and it's a good feeling when you want to load a file and the correct folder always opens up automatically.

SPRING-CLEANING YOUR PC

► created two folders in the root directory called DOCUMENT and MIDI. Inside the DOCUMENT folder live all my SOS articles and reviews, personal and business letters, accounts and so on, each in their own sub-folders. The big advantage of separating out the documents (rather than allowing them to pile up by default in several word-processor or database folders), is that you can then back up the entire DOCUMENT folder on a regular basis without having to separate out any program files. Having regular backups is also a godsend if any of your files ever get corrupted or accidentally deleted.

In my MIDI folder, each main application has

install a new version, it's easy to see which is which, if you need to manually remove the bulk of the files used by the old version to release hard disk space. Always use a new folder filename when you're installing an updated application — putting it in an existing folder 'over the top' of the previous one is tempting providence, to say the least!

There are several schools of thought on the cleanest way to deal with a major software upgrade. Until recently, I always preferred to leave the previous version on the hard disk until the new one had been checked out, as manufacturers have an annoying habit of removing old features when

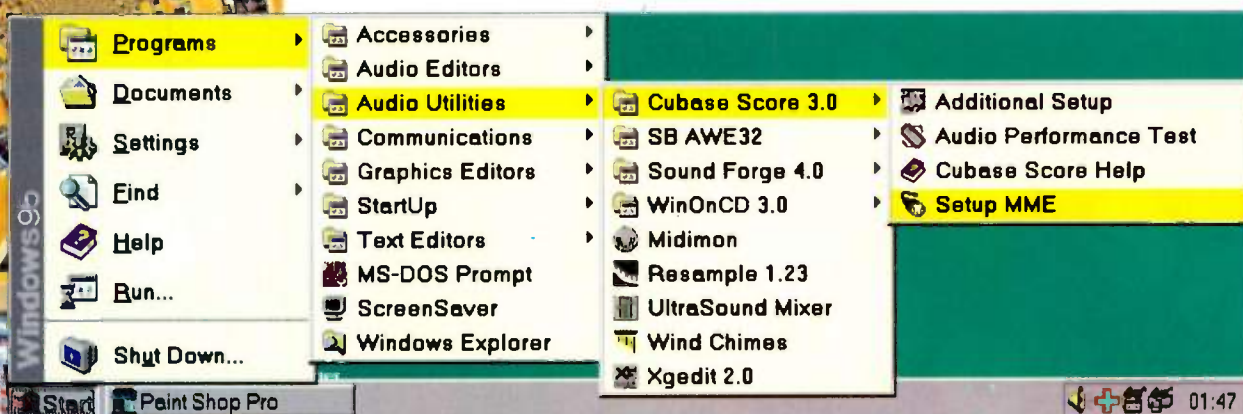

Figure 4: A neatly organised Start menu can make it far easier to find applications in a hurry. Grouping your programs into several sub-folders lets you avoid wading through huge lists of applications every time you want to start up something new.

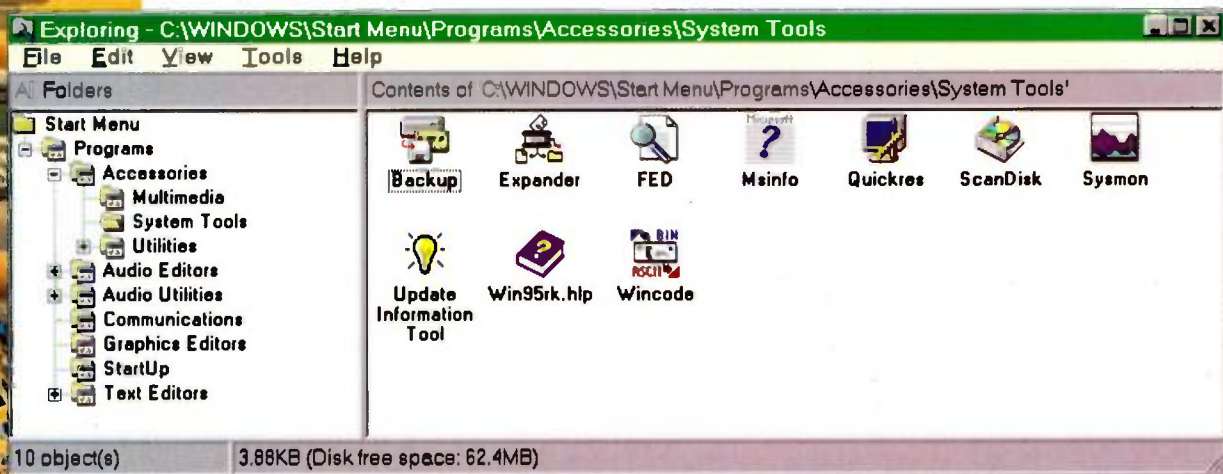

Figure 5: Editing the Start menu is exactly the same as file housekeeping in Explorer — simply drag and drop the icons where you want them, and create new folders to provide sensible categories for your applications.

its own separate folder within; data files end up in the MUSIC folder, and the smaller programs all end up in a folder labelled UTILITY. Again, the advantage of this approach is that as and when you get an upgrade or a new version of a particular program, you know instantly where the old one lives, which makes it far easier to dispose of it if you don't have a dedicated uninstall program. A useful technique is to choose a folder name containing the version number of the application, for example 'Cubase20' for *Cubase version 2.0*. Then when you

adding new ones. This also gives you a chance to double-check that any personal preferences, colour schemes and data files are copied across to the new folder before you delete the contents of the old one. However, with the arrival of uninstall utilities (which are far more thorough at removing every reference to the previous version), you may end up uninstalling a few system files common to both versions, which the newer version still needs.

Just ignoring the old version that's still on your hard disk may cause you a lot of head-scratching ►

You need accurate monitors? You need Active Monitors.

Genelec have been producing active monitors for the recording and broadcast industry for nearly twenty years. Their relentless R&D program and manufacturing expertise has made the 1029A possible. 1029's are equally at home in use with a DAW, in mobiles, on a meter bridge, in edit suites or in project studios. **With a list price of £750 per pair (inc. VAT),** they'll fit into almost any budget too.

In my experience, the three key elements of any Genelec monitoring system are quality accuracy & consistency, which pretty much says it all!

Hugh Robjohns - Sound on Sound, February 1997.

These baby Genelecs are quite simply stunning! ...clean, neutral and well balanced - everything a decent monitor loudspeaker should be.

Anthony Timson - Audio Media, February 1997

GENELEC®
ACTIVE MONITORING

SPRING-CLEANING YOUR PC

- ▶ later, if you ever accidentally boot up the old version of the program without realising it. Various DLL files in the Windows System folder will probably have been updated by the newer version and, while well-written programs tend to maintain compatibility as they evolve, there's no guarantee that an older program will function properly with system files rewritten for the newer version. Probably the best solution when installing a major upgrade is to double-check that you've saved any preference files into a temporary directory (for subsequent use by the new version), and then run your uninstall to give you a clean slate before installing the new version.

ORGANISING THE START MENU

The easiest way to make day-to-day PC navigating easier is to organise your Start menu. Rather than leaving the host of root entries that appear by default, re-arrange them into several new folders and you'll end up with an easily navigated selection (see Figure 4), which makes it easy to launch any application without wading through a huge list of entries. You can edit the Start menu either through Explorer (in the Windows\Start Menu folder), or arrive at the same place by selecting Settings, then Taskbar, from the Taskbar itself (see Figure 5). Most people prefer to have an entry for each application in the Start menu, but create shortcuts only on the Desktop for the most frequently used applications. Probably the quickest way to add a desktop shortcut is while you're editing the Start menu — simply right-click and drag an icon from a Start menu folder, and then drop it on the desktop, and select the Create Shortcut Here option.

CONCLUSION

Some people still prefer not to bother about adopting a more careful regime during program installation and day-to-day use, ending up with bloated hard drives and often unnecessarily sluggish performance as well. There is a remedy, although it's somewhat more drastic and time-consuming, and not for the squeamish. Back up all your data, reformat the hard disk, then reinstall Windows 95, and all of your applications, finally restoring your data files from the backup. Although this sounds a bit frightening, and takes some hours to do, I certainly know some people who work this way: they start from scratch several times each year, whenever, as they put it, 'things start to go flaky'. I've never had to resort to this method, although I have had to reinstall Windows 95 over the top of itself three or four times to recover from small inexplicable problems, probably caused by badly behaved installations (or my fiddling with the Registry!). I much prefer to try to keep things a little more organised in the first place. It's a bit like having a library — in an organised PC, when you want to find something, at least you know the right shelf to start looking on. I've seen other people's PCs that resemble nothing more than a huge mountain of books piled up in the middle of the room. Everything is in there — somewhere!

A PANASONIC SV3800 PROFESSIONAL DAT RECORDER FOR £935*

**WE'VE COMPROMISED ON PRICE, SO YOU
DON'T HAVE TO COMPROMISE ON QUALITY**

*** PREVIOUSLY £1099 EX VAT, NOW £935 EX VAT (£1099 INC VAT). SUGGESTED SELLING PRICES.**

Legendary sound and build qualities have made Panasonic Professional DAT Recorders the choice of countless major recording studios and broadcast facilities around the world. And features like 20-bit DACs, 44.1/48kHz sampling rates and a full complement of consumer and professional digital I/Os have made the excellent SV3800 the most popular model in the current Panasonic range.

For consistently low block error rates and superior archival security,
always use HHB Professional DAT Tape.

Remarkably, it's also the least expensive. Just £935* (excluding VAT) now buys you the mastering DAT recorder that professionals swear by.

So why compromise with an 'uprated' consumer DAT recorder when you can have a fully professional Panasonic SV3800 in your rack?

For details of your nearest HHB DAT Centre, call HHB Communications today.

Planet Phatt

640 of the newest, hippest, phattest dounds on the planet. Whether you do rap, hip hop, R & B, funk, or are looking to add some new earthliness to your current rig, Planet Phatt delivers the groove with a new, improved BEATS mode which features 100 BEATS and 28 Songs.

£POA

MUTRONICS

The Mutator

is a stereo analogue filter and envelope follower with full control facilities. It contains two independent voltage controlled filters similar to those found in analogue synthesizers, which can be used to treat any external sound source. Each filter can be controlled from it's own LFO and/or it's envelope follower section, which extracts the envelope contour of an input signal and applies it to control the cut-off frequency of the filter.

"this is without a doubt the best-sounding retro-filter I have come across.

Hear it and weep."

TUBE & TRAIN INFORMATION

We are 2 mins walk from Tottenham Court Road tube. Approx 10 mins from Euston, Kings X, Charing X & Paddington

As Martin Russ explained in his 'Model World' feature on the theory behind physical modelling synthesis, last month, the principles behind this type of synthesis needn't be applied only to digital synths. One forward-thinking individual who's been using analogue modular synths to put modelling techniques into practice for many years is veteran UK electronic musician Ron Berry. (See *SOS* February 1996 for an interview). Ron leads a multi-faceted life, dividing his time between various music recording activities, freelance designing for electronics companies, and converting country abodes into home recording studios.

he promptly set about adding the necessary modules to his modular synth to enable him to put his own new-found theories into practice: "I found more articles by people who'd been analysing musical instruments to find out how they worked. Various American, French and Swiss institutions were also trying to make acoustic models, but they were all working on massive computer mainframe installations and it took them a long time to compile and write these programs. I thought I could make better use of my time by doing it in the old-fashioned analogue way, because I already had the synthesizers. All I needed to do was add a few modules and all of a sudden

The Modular

RON BERRY • ACOUSTIC MODELLING WITH AN ANALOGUE MODULAR SYNTH

Somewhere in the North-East of England, electronic musician and designer Ron Berry has been applying an old-style analogue modular synth to the creation of a very contemporary phenomenon — physical modelling synthesis. JONATHAN MILLER finds out how it's done.

While renowned for having always built his own electronic instrumentation and recording equipment, Ron has also been experimenting with acoustic modelling, using techniques gleaned from an article he read in a specialist computer magazine as far back as 1980. This admittedly heavy reading detailed pioneering research being carried out by Americans Kevin Karplus and Alex Strong, who took a computer register, loaded it with random numbers, then created a type of cyclical delay to reorganise the numbers. The result, apparently, was a very realistic string sound — pretty impressive stuff at a time when UK popular music circles were still awed at the simplistic analogue synth tones of Gary Numan and *Orchestral Manoeuvres In The Dark*.

THE WONDERFUL WORLD OF ACOUSTIC MODELLING

Looking back, Ron claimed his first thought upon assessing this breakthrough was, "Hey, you could do that by using an analogue delay line and feeding pulsed noise into it." Spurred on by his initial success in wiring up a flanger unit with a built-in delay line to a noise envelope generator, and looping it around itself until it was almost feeding back — "...a most impressive noise!" —

I was in the wonderful world of acoustic modelling, although this eventually took 12 months to do successfully!"

Realising he was possibly onto a good thing, Ron looked into patenting his analogue acoustic modelling techniques, only to find this prohibitively expensive. Instead, in 1988, he published his findings in a paper entitled *Experiments In Computer-Controlled Acoustic Modelling (A Step Backwards?)*; the abstract describes a series of experiments in the electronic modelling of the acoustics of a variety of real instruments, and a truly affordable computer system used to construct them. Ron wrote: "This work arose out of the desire to create electronic instruments very cheaply and in a reasonable amount of time, but which,

nevertheless, sounded like *real* instruments. As a musician working with, and tiring of, traditional synthesis methods, obtaining that peculiar quality of sound that only real instruments have was the goal, within limits set by time and expense."

PET SOUNDS

Several years ago, I attended a seminar held at the now defunct Projects UK arts centre and recording complex in Newcastle-upon-Tyne, in which Ron ably demonstrated his findings, to a small but suitably captivated audience, by way of a series of taped acoustic modelling sound examples. I recall

Ron's self-built analogue modular synth, on which he carried out his physical modelling experiments.

M^Todeller

being particularly impressed by a strange, physically impossible 'instrument' producing the interesting effect of famed astrologer Patrick Moore's voice exciting the resonant modes of a bell model! So, to paraphrase another popular television show, how does he do that?

For the majority of us, this is mind-boggling subject matter. I was therefore delighted when Ron invited me to his spacious countryside studio for a spot of hands-on acoustic modelling — of the more basic variety, of course! For the purpose of this introductory lesson, Ron chose to guide me through the creation of two simple acoustic models of real instruments — a trumpet, then the slightly more complex saxophone. First, though, let's explore a

few basic principles. Over to Ron...

"Acoustic modelling goes back to the days when people were experimenting with echoes. With an echo, if you stand 50 feet away from a high wall and clap your hands, you'll first hear your own clap. The sound then heads for the wall at 1,100 feet per second, where it comes across a different medium — something solid instead of air — reflects 50 feet back again and you hear the echo, roughly a tenth of a second later.

"In the '50s and '60s electronic designers started looking at what an echo did, and produced electronic devices that allowed you to send sound into something and get it back again a tenth of a second later, or whatever. One such device was

Bondage. A subject close to our hearts.

A specially developed formulation bonds the ultra-fine magnetic particles of HHB DAT Tape to the base film, ensuring that block error rates stay consistently low — even after 100 passes. It's just one of the reasons why HHB is independently proven to be the most dependable DAT tape that money can buy.

ADVANCED MEDIA PRODUCTS

► the tape echo, where sound is converted into an electrical signal, put onto tape, then taken off the tape a little later, converted back into an electrical signal, then back into sound.

"Later effects such as phasing and flanging are really about modelling air movements, so when you're discussing the modelling of musical instruments, it must be remembered that you're also modelling acoustic phenomena. That's really the methodology of acoustic modelling: you look at how something functions acoustically, and try to look for ways of simulating it electronically. If you're working with pure electronics, then you're working with voltages, trying to find ways of getting electrical signals to go around a circuit in a similar way to a sound propagating around an instrument. If you're using a computer, you're looking at electrical signals converted to numbers, and the success of the model is related to the way in which the numbers flow through the algorithm you're using."

MODELLING PRINCIPLES

"Obviously, there are degrees of accuracy in acoustic modelling. By way of an analogy, you could have a crude plastic model roughly in the shape of a steam engine. This model is *recognisable* as a steam engine, yet you could have another model that is absolutely perfect in every detail, but with no moving parts. Or you could have a full-scale working model that pulls kids around a park. They're all steam engines, but different sorts of models.

"Acoustic modelling with electronics in a modular synthesizer limits the number of devices that are available to you — once you run out of modules, that's it. All the models that I do are

modelled trumpet on a keyboard is a lot different to playing the real thing using your mouth, and it's the same with a saxophone. The saxophone is an *extremely* expressive instrument and this expression is directly related to how the performer plays it. Breath control is a very sensitive and subtle achievement. Again, by playing a model of a saxophone on a keyboard, you've simply got a keyboard that sounds like a saxophone, but you haven't got the expression of the real thing. To get this expression, you really have to get the model to behave like a saxophone, with some kind of breath control and a set of valves so you can pick out all the possible notes and harmonics.

"In the case of a trumpet, the valves make it possible to reach notes that aren't in the natural horn overtone series. To model a trumpet really accurately you should theoretically have an instrument that's got push buttons, to represent the valves, and a breath controller — but then you're not that far away from a real trumpet, so why bother, since it would be just as hard to play!"

PIPE DREAM

"Before moving on to the specific modelling of these instruments, we need to briefly look at the acoustic working mechanics of a pipe. After all, both the horn and saxophone are essentially musical 'pipes'. If you analyse a musical horn at its most basic level, you've got a pipe and somebody putting their lips around one end — obviously with some kind of mouthpiece to make it easier to blow — and a flare at the end. But we'll go into that later.

"Let's see at how this works: the first thing you've got [see Figure 1] is the pipe, with lips at one end. When the lips are closed the pipe is blocked, but when you make a sound with the lips, this sound has to travel down the pipe at 1,100 feet per second, or one foot per millisecond. If we say the pipe's four feet long, this first sound is going to arrive at the end of the pipe after four milliseconds. Since this is a fairly high-pressure situation, the sound emerges into the air at the end of the pipe and suddenly expands, creating a big disturbance. The sound carries on through the air and into the ear, but because of this sudden transient drop in pressure as the sound spreads out into the air, some of the pressure drop travels back down inside the pipe and hits the lips again eight milliseconds later — like the hand-clap hitting the wall, as described earlier.

However, in the case of the pipe, the sound then reverberates back out of the end again, so you eventually get a reverberation effect, with a series of echoes eight milliseconds apart but decaying with each echo as the sound loses energy.

"The next thing you have to look at is what is happening with the lips. If the person is vibrating their lips at a certain frequency to produce a note, the lips could be closed when this first signal gets back to them, as above. Alternatively, they could

Figure 1.

really basic, but that doesn't bother me because I'm not interested in producing a model that's perfectly accurate in every detail. By using computers and working with algorithms you have access to a more elaborate set of functions and create a more detailed model, but the principles are the same. With computing the limit is processing power.

"When acoustically modelling real instruments, there's a difficulty in that you have to decide how the instrument is going to be played. Playing a

IT'S MORE FUN TO COMPUTE?

Computer software provides another way of getting into modelling, using the same kind of building blocks as the analogue modular approach, and is capable of producing some interesting

results for relatively little outlay, providing you already own the necessary computer platform. The only source of commercial acoustic modelling software I know of is IRCAM

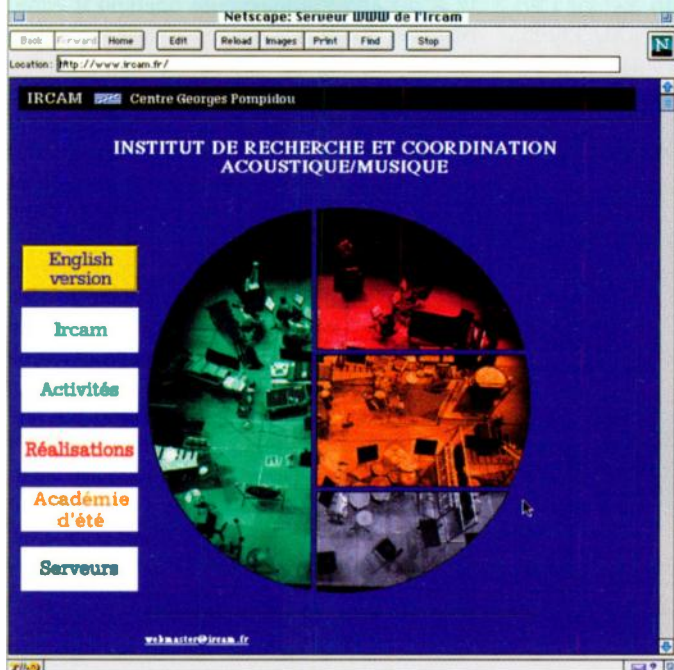

(the Institute for Research and Coordination in Acoustics and Music, in Paris — check out Paul Tinggen's revealing tour of the facility in *SOS* December 1996). Software is obtained by subscription to their Forum user group. Subscribing to the 'Analysis/Synthesis' section for a private individual costs around 1700 Francs per year, for which you get a wealth of Apple Macintosh-compatible software, plus updates. The modelling software section is called *Modalys*, and allows the creation of virtual instruments from scratch, using parameters that relate to the physical sound and sound-production mechanisms of real instruments, but which are not constrained by the limits of the real world.

Ron: "The models developed by institutions up to now have been scientifically based and very mathematically correct — reams of formulas on waveguide theory and much more in-depth study of reed behaviour; complex formulas I can

barely understand, let alone manage on the modelling synth. The horn models I've heard are very complex, taking into account things like valve position — the ones you press — along the tube reed/housing shape. Some sound very good, but take an immense amount of computing power and some I've seen you still play by typing! Perhaps the *Modalys* software will allow you to play around with things as easily as my modelling synth can. I have a feeling that Opcode or Digidesign, both of whom work closely with IRCAM, will produce something more commercial before too long."

be open, to let some more air through, so this time the sound reflection could be different as it meets a partially blocked pipe. The reflection is governed very strongly by whatever conditions it encounters: if the lips are fully open and there is air coming out, you get the force of two air pressures against one another — they might cancel; they might not. If the lips are only partially open, because the air has dispersed and the lips are collapsing, or the air pressure is building up and forcing the lips apart, then there's going to be

a non-linear reflection. The amplitude of the reflection is being changed. It's being heavily modulated by the action of the lips. When the rate of vibration of the lips roughly matches the fundamental of the pipe, this is when the horn player produces a constant note."

THE MODEL

"We should now have some understanding of how it's working: sound travels down a pipe and each time it comes back it meets a different condition. The

Consumers.

Take their formats (but let them keep their error rates).

Block error rates on HHB professional MiniDiscs are 10 times lower than those of some consumer media.

ADVANCED MEDIA PRODUCTS

► lips are like a valve opening and closing very rapidly, letting air through. So if you wanted to make a model of that, first you'd have to ask yourself whether you were working with a computer program or with electronics. Electronically, I need something that I can send a signal into and get a signal out of some time later, which is a standard electronic device — a delay line.

"As previously stated, a four-foot pipe would require an 8ms delay. Likewise, we've already

pattern, which is easily achievable with an oscillator that is connected to the VCA control input — the sine wave minimum shutting the VCA off and the maximum opening it wide. However, the sine wave is not only controlling the reflection down the pipe, but also providing the 'air' that is coming in, so we also feed the sine wave in via a mixer, so it's controlling itself [a look at Figure 2 will help you to understand this more easily]. And that's an electronic model of our musical pipe, at its absolute basic level.

"All that's needed to complete a basic horn model is something to turn the sine wave source on and off at the start and end of the note; an envelope generator and a second VCA can do this. Also, some way of controlling the sine wave frequency and the horn length (delay time) loosely together is needed to play different notes. As these two devices [the sine wave oscillator and the delay line] are voltage controlled, connection to a voltage source such as a keyboard can do this.

"Playing with settings is the key to getting a wide variety of horn sounds, and even substituting the sine wave can produce interesting horn effects on source sounds."

BLOW YOUR OWN TRUMPET

"The reason why a trumpet sounds so nice is that you've got this wonderful thing going on where a sound is evolving by going up a pipe and then being modified by itself, creating overtones and distortions. These overtones are also being modified and reflected up and down the instrument, producing even more overtones, each one different to the one before. So you've got this beautiful overlapping system where, as the sound is dying away, it's producing more and more overtones each time it's reflected by the lips mechanism. This is why a trumpet sounds as it does. If you think about it, it's very hard to reproduce that sound in any way other than by making a model of it. I think that's why many electronic instruments' trumpet patches don't sound very realistic, because they're not taking into account that continually evolving harmonic mechanism.

"A number of additional modules are required to electronically model a trumpet [see Figure 3]: firstly, as I already mentioned, you can't have a trumpet unless you can play notes and stop notes, so there has to be a way of turning the sine wave on and off. To do this we need another VCA. We also need something, such as a keyboard, to play the sound. Something to give expression would also be handy, so here an extra couple of modules are used simply to produce vibrato. We could also add an extra length of 'pipe' so that the same notes can take longer to build up.

"Trumpets have flares on the end, so we also

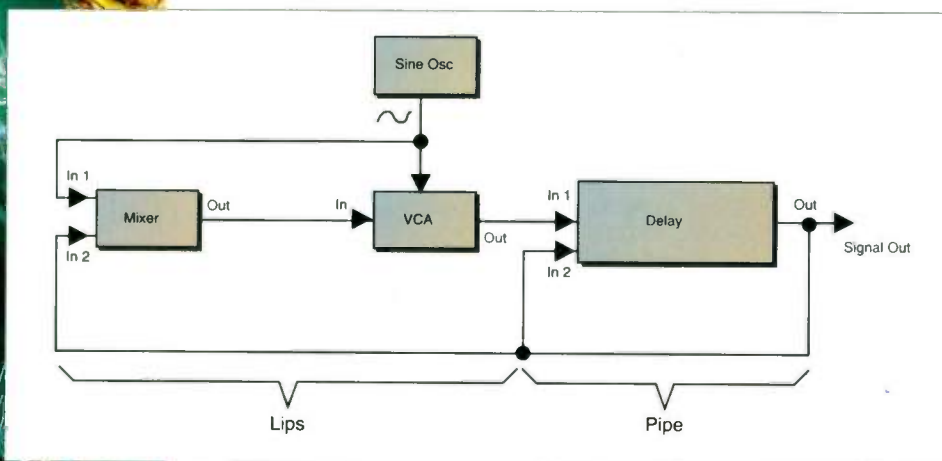

Figure 2: Ron's basic pipe model, described as a modular synth routing diagram.

established that the lips are vibrating like a valve that is, in turn, controlling a reflection. In the electronic world [as depicted in Figure 2] this is achieved with a voltage controlled amplifier (VCA). A VCA is also just like a valve, with input, output and control stages. When there's no control voltage nothing gets through, and, conversely, when the voltage is set to maximum everything gets through — what goes in comes out. If you can rapidly control that, you can control the frequency, as in the pipe. By connecting the output of the VCA to the input of the delay line, and the output of the delay line back into itself and back to the VCA you, in effect, create the pipe using a delay, with the VCA acting as a valve or 'lips'.

"Next, we need something to vibrate the lips — some kind of oscillator. Through stroboscopic experiments with a glass pipe, researchers have found that lips actually vibrate in a sine wave

HERE'S ONE THEY MADE EARLIER...

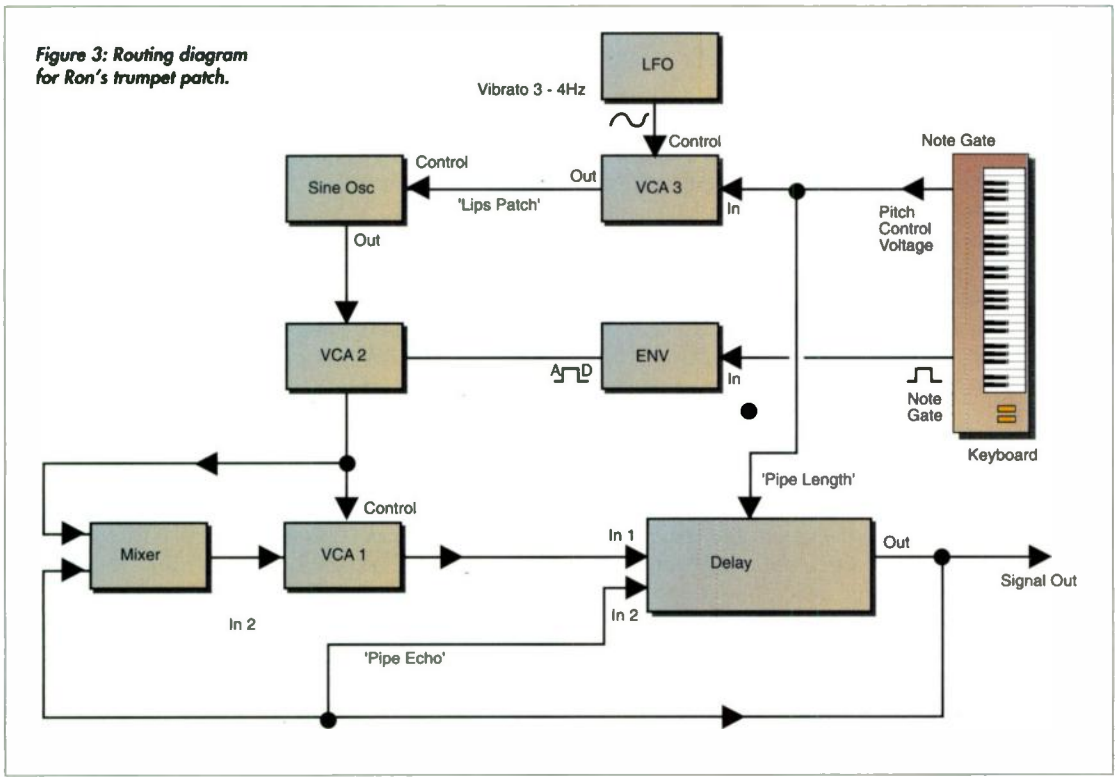

Those with an overwhelming desire to put Ron's findings into practice for themselves may be interested in the fact that Gateshead-based Digital Audio & Computer Systems (DACs) Limited — for whom Ron often freelances — are developing a commercially viable modular synthesizer with acoustic modelling capabilities, based upon Ron's unique instrument as referred to in this article. They are not envisaging mass production, but instead plan to offer custom-built systems in a small way for whoever might want them, much along the same lines as America's Serge and Germany's Doepfer standard modular synthesizers. Models of such

things as plucked strings, drums, gongs, bells, wind and brass, plus unusual hybrids, imaginary instruments and, of course, really weird effects, can be achieved with the type of system Ron has designed.

A DACs Limited, Stonehills, Shields Road, Pelaw, Gateshead NE10 0HW.

Figure 3: Routing diagram for Ron's trumpet patch.

need to know how a flare works. On a computer you could add another 50 lines of code, or whatever, to simulate this, but in electronics we need extra modules — or do we? From a listener's point of view, one of the things the flare on a real trumpet does is project sound forward. If it simply came out of a straight pipe, the sound would go all over the place, but since it's a horn shape, it tends to go forward. You get an increase in the level of the sound at certain frequencies that the horn can control. When the frequency is very low, the horn really has no effect, because the horn is so small and the wavelengths are so big. One thing you can do is use a bit of EQ to make it sound more raspy.

"The delay line I use for these models includes a simple low-pass filter, like a tone control. It's also got a feedback control, for convenience. I call these Voltage Controlled Resonators, or VCRs. They control the way in which high frequencies propagate through the circuit. The overtones are being generated by the VCA and mixer, and then filtered off, so the high-end ones decay faster than the lower ones. This has a mellowing effect — like having an instrument with a wide-bore pipe."

MISTER SAX

"Moving on to the saxophone, the same kind of considerations apply but the action is slightly different. Very simply, a saxophone has a reed at

Warning.

Too much slack in your pack can hit you where it hurts.

Slack windings can result in tape snapping. HHB ADAT tapes use precision engineered cases and hubs to minimise tape pack slack and ensure accurate tape handling.

ADVANCED MEDIA PRODUCTS

► the end of a pipe, so first you must create a patch to represent the pipe — we can use the same one as in the trumpet. The thing that's different is that the reed is a vibrating membrane with its own mass and resonance. This time it's the reed trying to control things, in sympathy with a variable-length tuned pipe, rather than a trumpet player controlling and vibrating his or her lips to target the required pipe harmonic. The reed is a valve, as explained in the trumpet example, so the delay and the valve work in something like the same way. The main difference is that in the saxophone model the valve is driven by the reed and the pipe working closely together into a self-oscillating system, with the lips almost passive, except for articulating the note. In the real instrument, the reed is the valve, of course, and the energy from the air pressure flowing from the mouth sustains the note.

"To play a note, the gain through VCA2 [see Figure 4] is raised until the whole system oscillates when a key is pressed. The limiter shown in the diagram works electrically like the elastic limit of a real reed and stops the whole thing from going into overload. The first voltage-controlled filter (VCF1) has a resonant peak that can be adjusted and tuned to make the 'reed' more live or dead. A live reed picks up overtones or overblowing more readily.

"Again, to make the saxophone model a bit

more realistic, I use extra modules to add playability and bring more life into the sound. The keyboard triggers an envelope generator that provides the signal that turns VCA2 on or off. This is modified *en route* by another VCA that is set to add a little tremolo from a low-frequency oscillator (LFO) to the system gain. No human can, nor would want to, play a perfectly static note, so the tremolo helps to keep the sound 'live'.

"The other thing you need to bear in mind is that there is air turbulence around the reed — how much depends on how it's played. Players use this to create a sleazy jazz-sounding saxophone. I personally love that sound, so I've included some extra modules to try and simulate aspects of this — a noise source, with another VCA to turn the noise on and off, and another VCF set to match the kind of turbulence you might expect to hear around a reed.

"Since the saxophone is a resonating, self-oscillating system, there needs to be something that will limit the amplitude of the vibrations. A real reed does this when it reaches the limit of its travel one way or the other. In the model, a limiter is needed to prevent system overload clipping. For convenience in the model, a simple soft-amplitude limiter is included in the delay line module — crude, but it works. With a real trumpet it's more to do with how loud you can blow it

NEW WAVE: MODELLING WITH THE KORG WAVESTATION

After I saw Ron Berry's techniques in action, I was inspired to try to replicate some of his experiments, in the hope of getting a few interesting new sounds for my sampler. After a few abortive attempts using a digital delay, I hit on the idea of using the effects section of my Korg Wavestation. After a bit of fiddling, I came up with the technique detailed below. Before going any further, I'd better make something clear: this technique is purely for sample fodder — you're not going to turn your Wavestation into a Prophecy, more's the pity. Compared to Ron's modelling synthesiser, it's a bit primitive, too!

Although I used a Wavestation for my experiments, I'm sure any modern Korg synth with two effect processors could replicate or even better this sound with a bit of fiddling. It's a kind of hybrid of flute, clarinet and didgeridoo, using a pair of simple waveforms as a driver, the stereo parametric equaliser as a kind of 'pre shaper' and the stereo delay as a resonator.

1. First you need to set up a waveform to drive the effects. I used wave 138, 'Ch', and wave 427, 'Cello'. Combine them with wave 427 at a lower level and you should hear an unimpressive quacking sound.

2. Now assign the stereo parametric

EQ to FX1 and enter the following

- parameters:
- High freq: 20.0Hz
 - High level: +3dB
 - Mid freq: 100
 - Mid width: 59
 - Mid level: +12dB
 - Low level: 0dB

3. Next, assign the stereo delay to FX2 and enter the following:

- Dry/wet mix: WET
- Delay time: see below
- L/R delay factor: 1:1
- Feedback: 96

4. Set the delay time to the shortest value (1ms), and play the keys in turn until you hear a strong resonant note — in this case, B5, the second highest on

the keyboard. You should hear a nice flutish sound with a distinct chuff at the beginning. If you then add vibrato to the driver waveform, you'll notice that by the time it gets through the resonant stage, it's gained an unusual and very natural sound which can't easily be replicated by adding it in the sampler.

5. Now increment the delay time, finding the delay time that produces the right resonance for each note.

Here's what I got from the top down:

- 1ms B5
- 2ms B4
- 3ms E4
- 4ms B3
- 6ms E3
- 8ms E2
- 9ms A2

By giving the L/R delay factor different settings, you can get a lot more resonant notes, and I've also noticed that a few notes have more than one good-sounding delay time, so using the dual delay could produce more complex timbres. Changing the EQ settings alters the character of the sound considerably — perhaps there's scope for some sample crossfading there. It's also interesting to drive the resonator with a noise pulse, which yields an interesting harsh pluck sound. Try changing the polarity of the delay feedback too, as this generates different harmonics.

If any readers come up with a good combination of waves and resonators, perhaps they could share them with the rest of us. Join the society of stone-age sound modellers! *Norman Fay*

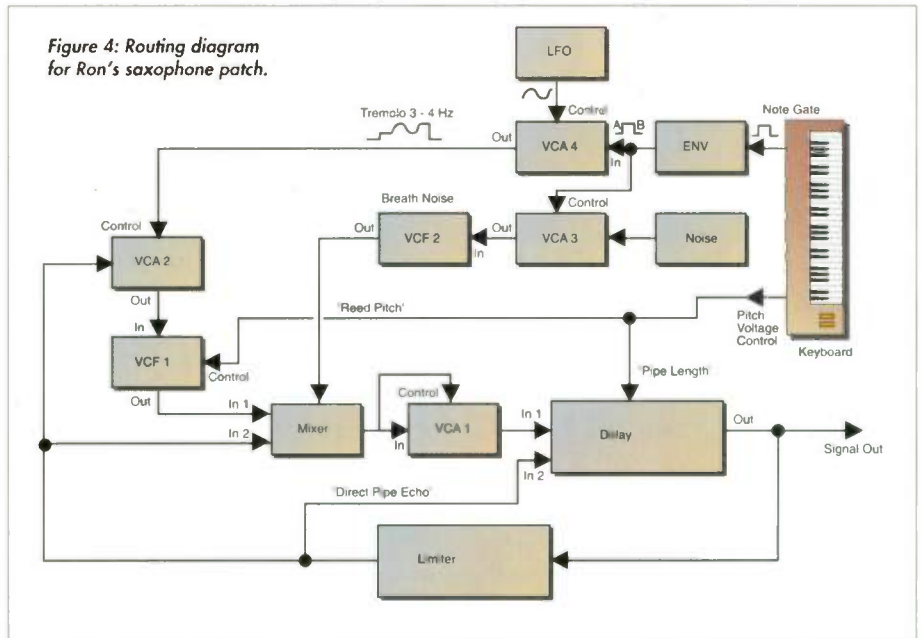

before your lips hurt! In the trumpet model, amplitude is mostly controlled by the sine wave level, which is actually quite low."

MODULAR MODELLING

It should be remembered that the block diagrams featured in this article are really just the simplest building blocks of acoustic modelling, the key to which is experimentation. As Ron says, "I've continued to experiment with patches, but I didn't get into acoustic modelling just to make an instrument that allowed me to sound like a saxophone or piano. What interests me is that you can take the models apart, rearrange and feed things into them. You can make models that can't really exist in reality, but are possible in the electronic world.

"When you make an acoustic model of something — say a saxophone — the fact remains that even if you have a realistic-sounding saxophone on a keyboard, you simply end up finding out what a terrible sax player you are. Playing a *bona fide* saxophone with a reed in your mouth is a totally different ball game to playing one on a keyboard. You have to work really hard just to make it sound like a third-rate sax player, so you won't find me using those kind of timbres

Figure 4: Routing diagram for Ron's saxophone patch.

in my own music that much. You're more likely to find me trying out models that go through from trumpet to sax, say, or feeding a sax sound into a trumpet model. Or how about a plucked trumpet?

"It's for these reasons that I feel I'm treading a different path to people like Yamaha who naturally are making commercially orientated acoustic modelling synthesizers because they want to sell lots of keyboards." SOS

GLYPH

Are you serious about storage?

After taking America by storm, the Glyph range of storage solutions are now available in Europe.

Glyph differ from the rest by optimizing the GHD series for maximum performance and throughput in digital audio & video applications. All single drive 4GB or 9GB tabletop & rack mount units come with a 24 hour advanced replacement* warranty in the first year. The rack mount units come equipped with their unique SuspenShock - shock mounting.

1 & 2U HD > 2 x 9GB Hot Swap
The following are available in both Rack & super quite table top:
2, 4, 9GB HD SCSI AV optimized
CD-ROM, CD-R, SCSI Switchers
Jazz, Tape Backup & Hot Swaps.
The AutoLoader - freedom!
Unattended duplication of CDR's.
Now Burn 25 CDR's from PC or Mac in 8 hours.

ESI 32

There really is nothing to beat this sampler at just £899.00. Did you know it had resonant filters, excellent midi control, 4 outputs and timestretch. Neither did we - we just thought it sounded good! Forget other pasty white boxes these things are the best!! We supply a package including a SCSI ESI-32, Zip Drive with 100MB RAM for just £1049.00 Inc VAT and free access to the complete EMU sample library on CD ROM.

E-MU

£899

Millennium PC Packages

We supply tailor-made computer systems to suit your requirements and your budget. If you want to get started in the world of making music we can take the headache out of buying a music computer. We install all the software / soundcards / interfaces etc. and get the whole thing up and running so that everything works from day one. And get this - it's cheaper than you might think!!

Pro Audio V6.0

It's here at last! The world's favourite Windows midi sequencer has just taken a giant leap forward to bring new audio processing features and herald a new era in PC Music Production.

Features Include:
Time Stretch/Compression
Pitch Shifting
EQ
Delay
Chorus Reverb Flanger
ActiveX support for audio plug-ins
StudioWare™ Design your own virtual work surface for all your midi/sysex gear and control it all from Cakewalk Pro Audio 6.0

Pinnacle / Fiji

Stereo 20 bit digital audio card with optional S/P DIF interface, Kurzweil synth, midi interface with 3 ports, daughterboard connector AND a stereo sampler upgradeable to 48MB. Also includes Midi Orchestrator plus midi/audio sequencer. £439.00

Turtle Beach Fiji also in stock. Same as the Pinnacle but with no synth or sampler £339.00

£439

Sound Forge

Never before has audio editing been so easy. This is so cool! Loads of effects and tools, almost every audio format catered for, and loads of on-line help and tutorials. This is the choice for those who want to get the job done!! Optional plug-ins for Noise Reduction, Spectral Analysis and Batch Processing

£279

Music Time

This must be the world's favourite 16 staff notation package.

Now only **£79**

creamw@re

triple DAT

The magical system from Creamw@re goes from strength to strength. We have shipped several fully configured TripleDAT systems and they are quite simply amazing. You can literally add multiple audio tracks alongside your midi sequencer. When you've got the song done complete with audio tracks (vocals, guitar, himalayan nose flute etc) you can record all the midi stuff into TripleDAT as well so you have a multi-track audio master, (just like the real thing!) Add effects (in real time!!) without having to loop out to your FX rack - just load up the effects in TripleDAT and away you go! Once you've done that you're ready to master the whole lot down to a stereo track still within TripleDAT. When you've got the track(s) done don't bother with the DAT - just pop in a blank CD and create the ultimate demo - a finished Red Book compatible

Audio CD ready to take to the pressing plant!! If off line editing is your game then TripleDAT will save you time and money - it's perfect for quickly overlaying audio tracks for commercial production or for broadcasters who want to do their own editing at home rather than having to go to a studio. We can supply this Dreamw@re fully configured including one of our now legendary super fast pentium PCs, CD Writer and 2 GB SCSI hard disk for less than the price of a Makie 8 Buss !! Frightening isn't it?

Yamaha CDR 400

E-MU

E-MU Systems Top Samplers

"When you choose your sampler, you have to really ask yourself how you are going to use it!! If what you are looking for is a simple sample playback machine just to do time compression, then the market is full of products for you. However, if what you need is going to be at the heart of your midi setup and not only provide you with the basic features but also more hardware capabilities, fabulous synthesis abilities and astonishing realtime control functions, there is going to be no contest...E-Mu is for you!!!! E-Mu Systems has the edge in all departments:

- easy to comprehend and use interface
- 64 voices expandable to 128
- 8 analog outputs expandable to 16
- 4MB of RAM expandable to 128MB
- Numerous quality DSP functions with undo facility, bpm time compression, sample scrub on pitch wheel and 3-D doppler effect
- 22 brilliant filters ranging from 2-pole lowpass to highpass, bandpass, vocal, phasers, morphing and everybody's favourite, the Bat-phaser.
- Audition from SCSI : Choose from your 500 loops without loading every single one of them in.
- 18 step realtime control patchbay which enables you to control your filters frequency or resonance per zone using any midi controller
- 16 midi channels expandable to 32
- You can add a 18-bit digital dual effects board and a digital I/O and Ascii keyboard input board to your e6400 while the EIVx and EIVTurbo have them as standard.

When version 3.0 comes out, E-Mu systems products will reach a different dimension:

- You will get fully fledged 48 track sequencer
- You will have the ability to install their 16MB Rom board containing around 700 presets. This will transform ANY of the current top E-Mu samplers into a powerful ROM based synthesizer.
- You will have access to 8MB or 16MB flashram boards
- And a lot more.

Please note that all the top E-MU samplers are compatible with Akai S1000/S1100 and all Roland S700 series automatically.
Come in and try one and be "E-Mued" for life....!!!"

Organ

ROLAND VK7 VIRTUAL MODELLING TONEWHEEL ORGAN

transplant

Much hard graft has been put in by electronic instrument manufacturers over the years in an attempt to transfuse the essence of the tonewheel organ into a MIDI-compatible keyboard. NICK MAGNUS dissects Roland's latest virtual modelling approach, and pronounces the operation a complete success.

VK1000 used S+S synthesis to achieve its goal, and more recent units have employed sample replay methods in the quest for the perfect tonewheel emulation. So can Virtual Modelling show any appreciable improvements over these older methods? Let's take a closer look.

A CLOSER LOOK

Apart from the different panel placement and controls, the VK7 bears more than a passing resemblance to a Hammond XB2, sharing a practically identical wooden cabinet and dimensions, although it's actually slimmer, being a mere 10cm high. While not perhaps the most exciting instrument to look at, it is nevertheless very solidly built, and everything about the design is sensible and uncluttered. The panel switches are fat and chunky, with embedded LEDs where appropriate, and the legending is a good size, easily readable even in my dimly lit studio.

The keyboard is a 61-note C-to-C affair with a pleasant, firm action that doesn't rattle disturbingly when subjected to those wild glissandi beloved of organists. To the left of the keyboard is a panel that houses the drawbars (Roland call them harmonic bars, presumably for copyright reasons), the rotary effect controls, and three buttons which determine whether the drawbars will affect the Main, Sub or Pedal registrations.

The panel above the keyboard is home to all the remaining controls: eight grey patch-selector buttons and Bank select, plus four similar buttons for organ percussion (no, not the drum type); at the right-hand end, six more grey buttons select a category of Orchestral Voices, more on which later. Four rotary

As the Editor of this magazine has remarked before, it's ironic that physical modelling, the most recent development in synth technology and a result of the latest in high-speed processor chips and DSP power, has so far been most successfully used to recreate the sounds of the past. Take a look at Clavia's Nord Lead, and Roland's JP8000 — both unashamedly and deliberately designed to impersonate those analogue synths of years gone by. Even Roland's V Guitar system uses sophisticated modelling techniques to emulate the sounds of knackered old valve amps.

Roland's newest Virtual Modelling instrument, the VK7, continues the nostalgia theme. The VK7 is a recreation of the tonewheel organs first developed in the 1930s, and still hugely popular to this day. Although various Hammond soundalikes have been unleashed on the market lately, this is Roland's first effort in this area for seven years (since the VK1000), so perhaps it's time they had another crack at it, using the new technology that's now available. In 1980, Korg launched the analogue-based CX and BX organs, arguably the first successful dedicated Hammond impersonations. In 1990, Roland's

ADDICTIVE AUDIO QUALITY

(just ask anyone who's listened)!

"THE PROJECT 8 SOUNDS FABULOUS. FROM THE MOMENT I FIRST HEARD IT, I WAS IMPRESSED."
- MIX MAGAZINE USA. (TOPAZ PROJECT 8 REVIEW) JULY 1996

"THERE ISN'T A LOT TO SAY ABOUT THE SOUND QUALITY. EXCEPT THAT, WHAT COMES OUT IS REMARKABLY CLOSE TO WHAT GOES IN."
- THE MIX. (TOPAZ MAXI REVIEW) DECEMBER 1996

"OVERALL THE SOUND QUALITY IS CLEAN AND MUSICAL, WITH PLENTY OF RANGE ON THE EQ."
- SOUND ON SOUND. (TOPAZ PROJECT 8 REVIEW) MAY 1996

"I CAN'T SAY ENOUGH GOOD THINGS ABOUT IT. THE EQ IS A STANDOUT IN THIS FINE SOUNDING MIXER."
- MIX MAGAZINE USA. (TOPAZ PROJECT 8 REVIEW) JULY 1996

"IT HAS A CLEAN AND TRANSPARENT SOUND QUALITY TO IT. MANY APPLICATIONS IN LIVE, HARD DISK RECORDING AND GENERAL STUDIO APPLICATIONS."
- SOUND ON SOUND. (TOPAZ MINI REVIEW) NOVEMBER 1995

"THE OVERALL SOUND QUALITY WAS IMMENSELY BOUNCY, CAPTIVATING AND ENORMOUSLY WELL-LIKED. ADDICTIVE SOUND QUALITY"
- THE MIX. (TOPAZ PROJECT 8 REVIEW) JANUARY 1997

Console shown is the award winning Topaz Project 8.

The reviews are in - the verdict is unanimous. Soundtracs Topaz mixers are simply the best sounding consoles out there. Ask anyone who has heard a Topaz at full tilt and they'll agree that the combination of superior audio quality, incredible ease of use and massive feature set is just unbeatable. In fact, completely addictive. So why degrade your sound with an inferior mixer.

Choose the best.

Choose a Soundtracs Topaz.

Roland VK7

pros & cons

ROLAND VK7 £1699

pros

- Extremely authentic tonewheel sound.
- Good amp simulations.
- Great effects.
- Very easy to edit and operate.
- Well designed and solidly built.

cons

- Expensive compared with existing alternatives.
- Not an ideal master keyboard due to lack of performance controllers, namely pitch and modulation wheels.

summary

Excellent, authentic tonewheel organ sounds without the need for external units to compensate for any deficiencies in the effects. Easy to operate, easy to edit, full MIDI spec: price aside, a must for any organ aficionado's arsenal.

SOUND ON SOUND

► knobs give access to overdrive, Orchestral level, reverb and master volume. The remaining small black push buttons perform tasks such as edit on/off, vibrato on/off, keyboard assignments, and cursor, value and write functions. At the centre is an LCD display to aid navigation through the editing process.

Around the back are the usual connections — stereo out, phones, MIDI and mains power, plus sockets for two external controller pedals and an expression pedal. As on the XB2, an 11-pin connector is provided should you wish to connect a mechanical rotary speaker to the VK7. The MIDI sockets vary from the norm: there are two In and one Out, as opposed to the usual In/Out/Thru. This is to allow various combinations of external keyboard, bass pedals and sequencer to be connected; the thru status of each input is changeable from the System MIDI Edit page.

SOUND ARCHITECTURE

The VK7 is 4-part multitimbral, consisting of Upper Manual (Main), Lower Manual (Sub), Orchestral Voices and Pedals. These can be addressed on separate MIDI channels in a studio or sequencer environment. For live performances, all four parts can be accessed at once using combinations of keyboard splitting, layering, and a set of MIDI bass pedals or remote MIDI keyboard. There are 64 (8x8) organ presets (the Main registration plays across the entire keyboard), and these can be used as a sort of library of sound templates when you're creating any of the 16 user-programmable presets (which can contain splits, layers, effects, and so on).

There are now a fair number of instruments dedicated to tonewheel organ impersonations, ranging in authenticity from excellent to indifferent.

In this review, I'll be drawing comparisons with the 1991 Hammond XB2 (see the 'Feature Comparison' box), regarded by many as one of the best examples, and also at present one of the closest equivalent keyboard-equipped units to the VK7.

What often takes the edge off even the most accurate basic sound on many units is their inbuilt effects, specifically the rotary effect and overdrive. To achieve a believably authentic sound, you often need to acquire external valve preamps, Leslie simulators and so on, bypassing the internal effects altogether — and these can increase the cost of the instrument by several hundred quid, as well as making a lot more kit to cart around if you're playing away from home. So do the wonders of Virtual Modelling mean that the VK7 can stand alone, without need of outboard processing?

PRESET SOUNDS

I have to confess to being biased towards butch, beefy organ sounds that purr, grind and swirl. On first play, the VK7's presets appear to dwell largely on Diapasons, Tibias, Theatre organs and those cheesy jazz organ sounds that DX7s excel at. Sure, the presets have to appeal to the widest range of potential users, but I still felt that I wasn't hearing what I'd really hoped for. It turned out, though, that this was largely due to the way the rotary effect had been set up for most of the presets. Generally speaking, the rotary's slow speed was too slow, sometimes to the point that I found myself hitting the bypass switch repeatedly to make sure it was working at all. Coupled with that, the acceleration and deceleration times were extremely long: well out of line with your average Leslie. Happily, all these things and more can be edited and saved, and once the requisite adjustments have been made, the rotary effect acquits itself very well indeed — so much so that I found little to choose between the VK7's rotary and my beloved Dynacord CLS222: the need for one external processor had already been removed.

AMP & SPEAKER SIMULATIONS

The VK7 has six simulated amp/speaker settings: Rotary Types 1 & 2, Stacks 1 & 2, Stack Mix and Combo. The stacks and combos also allow the application of overdrive while the rotary is bypassed. Rotary types 1 and 2 sound similar; type 2 allows for some pretty severe overdrive settings, while type 1 is somewhat cleaner and brighter. The Stacks have a distinctly different quality, with pronounced peaks in the low-mid range, and an undeniably boxy 'speakerish' quality. These all respond quite readily to overdrive. Lastly, the Combo setting produces a sound which is comparatively small and slightly telephonic — useful for simulating the combo organs of the '60s. These amp simulations can be further coloured with a 3-band equaliser.

Also in the effects category is one unusual inclusion — a ring modulator. This prompts the same question as the DLM parameter found on the Roland D70: it's interesting, but what do you do with it? The ring-modulation frequency can be varied, but once set it's fixed (it doesn't track the

CONTROL FREAK

The VK7 can transmit and receive every single control (bar the cursor and write buttons) as SysEx data. Roland are thoughtful enough to provide the choice of sending the drawbar movements as either SysEx or control changes, with the option of defining which controllers are assigned to which drawbar — great for making tonal adjustments from an external master keyboard. The one snag with SysEx is that the task of inserting events into a sequencer retrospectively (such as Leslie fast/slow, Percussion on/off) means typing in a SysEx string — a rather more tedious job than popping in a quick control change. Still, full marks should be given for including the kitchen sink in the MIDI implementation.

▶ keyboard), so it's not possible to create a consistent musical sound that can be played across the keyboard. Its usefulness is further limited by the fact that the ring-modulated sound is stuck with an organ-shaped envelope. I'd be intrigued to know what application the designers had in mind!

WHEELS & PEDALS

Play a vintage Hammond and what do you hear? Extraneous grunge — the more the better! This grunge is the result of crosstalk from all the tonewheels breaking into the sound, creating a whiney, whistling background noise that was once considered undesirable, but is now seen as a distinct asset for a true vintage sound. The VK7 offers the choice of Clean and Vintage settings. Select Vintage, and the whine appears — there's even a parameter to vary the amount. Still in the grunge department, the Key Click level determines how much 'fluffy' spit is heard at the beginning of the note. The VK7 is very thorough in providing for both key-on and key-off click levels.

As is the norm, the VK7 offers both second- and third-harmonic percussion, but with the proviso that you use either one or the other, not both. This is a mild disappointment, as I remember that my old Hammond L100 allowed for both to be on at once, as does the XB2. The XB2 also allows the percussion to be velocity sensitive, as well as having multiple triggering, whereas the VK7 remains staunchly true to the original — no velocity, and single triggering only, so all notes must be released before the percussion will re-sound. On the plus side, the percussion can be assigned to either Main or Sub (upper or lower manual) sounds. Soft/Normal levels are individually definable, as are the fast and slow decay times.

For you pedal wizards, the VK7 is able to simulate either Composite or Individual pedal registrations. Composite uses two drawbars to create the bass sound (as found on models such as the L100); Individual makes use of all nine drawbars to finely sculpt the sound, as on B3 organs.

EFFECTS

The reverb has seven variants — three rooms, two halls, a plate and a delay. The rooms and halls are similar to (if not the same as) those found in the JV-series synths. The plate is reminiscent of the old spring reverbs built into some organs; delay is of the mono type, with a very respectable maximum of around 1500ms available.

True to the original instrument, there are six types of vibrato. The three V settings are of the pitch-vibrato type associated with theatre organs and Blackpool summer holidays, while the three C types are the pulsating variety loved by jazz organists everywhere. The speed of all the vibrato settings is fixed (the XB2 offers slow, medium and fast options).

It's often the case that solid-state overdrive circuits have more in common with fingernails scuffed down a blackboard than the smooth growl they aspire to. Roland have made a laudable effort in this department: an overdrive that purrs gently at the

lower settings (even on single notes) and rips satisfyingly at full shred. Much of the success of the effect depends on the drawbar registration and chord voicings you're using. You may have noticed that (on an equal-tempered instrument such as an organ) distorted minor chords sound far less pleasant than major ones, but even taking this into consideration, the VK7 copes very well. Overall, the subtler applications of the VK7's overdrive seem to work the best, but one shouldn't complain about being given too much of a thing...

ORCHESTRAL VOICES

Back in 1990, Roland's VK1000 organ sported not only the principal organ sounds, but also a selection of additional voices: some were beautiful, some were strange, but the electric piano sounds were to die for. Making full use of the S+S synthesis around which the instrument was designed, they were totally customisable, with all the constituent harmonics available on the organ drawbars. You could control the levels of second harmonic, hammer thump, tine zing... whatever you wanted. The sound was worthy of being marketed in its own right as a lightweight alternative to the MK80.

Times change, and S+S has fallen by the wayside, to be replaced by samples. I presume that the VK7's Orchestral voices are PCM sounds as opposed to Virtual Modelling — there's nothing in the documentation about this. What you do get is a wider range of extra sounds than the VK1000 had, including a selection of Strings, Choirs, Basses (see the 'Voices' box for the full list). This is fine, but I feel that the sounds are somewhat run of the mill, even too safe. Then again, some of the VK7's voices are quite enjoyable to play — Strings 1 is nice if you're in a sombre mood, the VP330 Choir is a fun salute to the past (why no VP330 strings as well?), and the Full Church Organ is worthy of Vincent Price on one of his spookier days. However, if you don't use assignable foot pedals or an external keyboard controller, the sounds remain static snapshots, due to the VK7's lack of any performance wheels or levers — which were included on the VK1000.

CONCLUSION

The VK7 certainly seems to cut the mustard, with great onboard effects — no outboard gear is necessary short of a mixing desk or suitable amplification. The basic tone is the best I've encountered so far, with plenty of beef and presence, and, incidentally, a very powerful upper octave that screams like a good 'un. So, when's the module coming?

Gold Standard

*How much more
can Creative cram onto
a single PC soundcard?
PAUL WHITE finds out.*

CREATIVE LABS AWE64 GOLD SOUND CARD

Reviewing soundcards is never straightforward, because what seems at first sight to be a simple sub-£200 budget bundle is often a very complex synergy of hardware, bundled software and potential cooperation with third-party software. Creative Labs' AWE64 Gold (named after its gold-plated connectors) has evolved from the original Soundblaster, but it's been upgraded in several areas in order to make it appeal to those interested in making desktop music. To maintain Soundblaster compatibility for the benefit of the games market,

some design choices have been made that don't initially seem to make complete sense — but, once you understand what this card offers, its potential soon becomes apparent. Intriguingly, the card also includes the ability to apply physical modelling to some of its General MIDI sounds in order to make them more lifelike, although, on the other side of the coin, it also retains the ability to provide you with the extremely nasty FM synth characteristic of earlier Blaster cards.

Like most soundcards, the AWE64 Gold is a multi-functional device which can be broadly described as a GM/GS S+S synth; a GM FM synth; a multitimbral sampler based on Creative Lab's own SoundFont technology; a stereo in, stereo out audio card with additional S/PDIF output and multitrack audio support; and a MIDI interface (via the joystick port, using the cable that's included). It comes with a whole bundle of support software, including a full version of Steinberg's *Cubasis Audio*. There's also a proprietary 3D sound processor built in but, as far as I can see, this is really only applicable to the games soundtracks that support it; the card's overall performance is quieter if you leave this switched off.

Connections are provided to handle the audio from a CD-ROM drive, and various jukebox- and karaoke-style software modules are included to support this. Naturally, some of the support software is of the kind that most musicians would rather leave in the box (anything to do with karaoke, for example), but along with *Cubasis* there are several soundbanks ready to load onto the card, comprehensive sample-editing and sample-creation software, and enough drivers to start a road haulage company. Because the board covers so many functions, it's best to look at them one at a time, starting with the physical board itself, though please forgive me if I leave out the karaoke and singing word-processor functions!

ON THE CARDS

The AWE64 Gold is a shorter-than-average ISA card conforming to Windows 95 Plug and Play standards, though it can be used with Windows 3.1. There's no room on its rear panel for the S/PDIF out phono connector, however, so this is provided on a second panel and is attached by a flying lead. Fitting it is no problem providing that you will have at least one free rear-panel slot location after fitting the card. This is obviously less than ideal, as is the

fact that there's no S/PDIF in, but if you don't need the S/PDIF out, you don't have to fit it. The stereo analogue line ins and the mic input are on stereo mini jacks, though the audio outputs are on phonos. A cheap and cheerful mic comes as part of the package, but, surprisingly, this sounds quite good, especially if you use it with a pop shield.

One feature lost in the AWE64's evolution process is support for a daughterboard. The only expansion socket is for a memory card, with which the on-board 4Mb of RAM can be upgraded to 8 or 12Mb, depending on which expansion board you decide to fit. These are Creative Labs' own RAM expansion packs, not SIMMs, though the prices are reasonable. A complete 8Mb RAM board costs around £60, and comes with a disk containing additional sounds, including an 8Mb GM set. The bundled software comes on CD-ROM, with *Cubase* on a separate CD-ROM.

Like the original AWE32 card, the AWE64 Gold has a 1Mb GM synth sound set in ROM, but there's the option to load a bigger and better sample set into RAM. GM sets of 2Mb and 4Mb come with the basic card, and the 8Mb set comes with the memory expansion kit. As the name implies, the card offers a total polyphony of 64 notes, though this is something of a conjuring trick, as 32 voices come from the on-board Emu 8000 wavetable chip and the remaining 32, including the physically modelled voices, are created in software and require a genuine Intel (not a clone) Pentium processor to run. Creative call this software synth the WaveSynth. Whether you address the 'soft' or hardware voices is an option in the MIDI Mapper, so you don't have to use a full GM bank of one or the other — you can mix and match if you like.

Though no hardware full-duplex operation is available for the digital audio side of the package, a software duplex driver is provided with the card. On the review sample, which came with a pre-release version of the software, the playback quality was limited in overdub mode, and both the Instrument Mapper and the WaveSynth voices had to be turned off during recording. It was also necessary, in *Cubasis*, to enter an audio delay compensation while overdubbing, to keep all the tracks in time. By early summer, a better full-duplex driver will be included, which should circumvent these problems and allow full-fidelity monitoring while overdubbing.

The card is built on a multi-layer circuit board, the intention being to improve screening and reduce background noise, and production cards are specified with a signal-to-noise ratio of better than 90dB. Unlike previous Soundblaster cards, the AWE64 has shipping software that will allow digital audio and the on-card synthesizers to be mixed internally and piped to the S/PDIF

pros & cons

**CREATIVE LABS
AWE64 GOLD £199**

pros

- Combines a GM synth, a MIDI interface, a sampler and an audio interface for less than the cost of most sample CD-ROMs.
- Excellent selection of bundled software, including Steinberg's *Cubasis*.
- Interesting waveguide physical modelling possible on some GM sounds.

cons

- Audio path could still be a little cleaner.
- Some of the support software could be better integrated.
- The provision of on-line help as an alternative to paper manuals isn't always conducive to unimpeded progress.

summary

Where else could you buy a sampler, a GM synth, a MIDI interface, an audio interface (with S/PDIF out), a Steinberg sequencer, support software and a selection of CD-ROM samples for under £200?

SOUND ON SOUND

output port. Thoughtfully, *Cubasis* offers the option of recording even mono tracks as stereo files so that they can be played out over the S/PDIF output.

Software drivers are provided for the external MIDI port, AWE Synth, WaveSynth/WG, Creative Music Synth (FM), and the AWE Instrument Mapper. How many channels of audio you can play back at one time depends on the power and speed of your computer as well as on the speed of your hard drive — my Pentium 90 came up with six mono tracks, or eight if they were used as stereo pairs according to the *Cubasis* diagnostic routine included.

GM SYNTH

Anyone who's heard an AWE32 will know what sounds to expect from the 1Mb GM synth, except that in the case of the AWE64 Gold the sound quality is cleaner and brighter due to a better output stage. This is strictly line-level — the ability to feed passive speakers from nasty on-board amplifiers has gone. The sounds are, however, exactly the same, and can most fairly be described as perfunctory for any semi-serious musical application. The same is true of the software-based sounds, though I have to say that they weren't at all as bad as I'd expected. The GM synths fare rather better if you load the 2Mb or 4Mb versions (stored on your hard drive during installation) or, if you have the memory expansion, the full 8Mb version: these show a marked improvement in artistic quality, especially the pianos and sustained string sounds, although audio fidelity remains about the same.

Any GM set may be changed or replaced using the AWE32 Synth Control software; if they're addressed via the Instrument Mapper

Creative Labs AWE64 Gold

► driver, up to 15 of the GM sounds can be replaced by physical modelling versions, and banks of mixed hardware- and software-generated sounds can be constructed. Physical modelling is quite a novelty in a low-cost soundcard: the AWE64 uses a system developed by Sondius, though this is a very simple implementation of their modelling software and doesn't allow any user interaction; rather, the harmonic content of the note changes automatically as the note evolves. For example, the timbre of the overdrive guitar changes as the note develops and

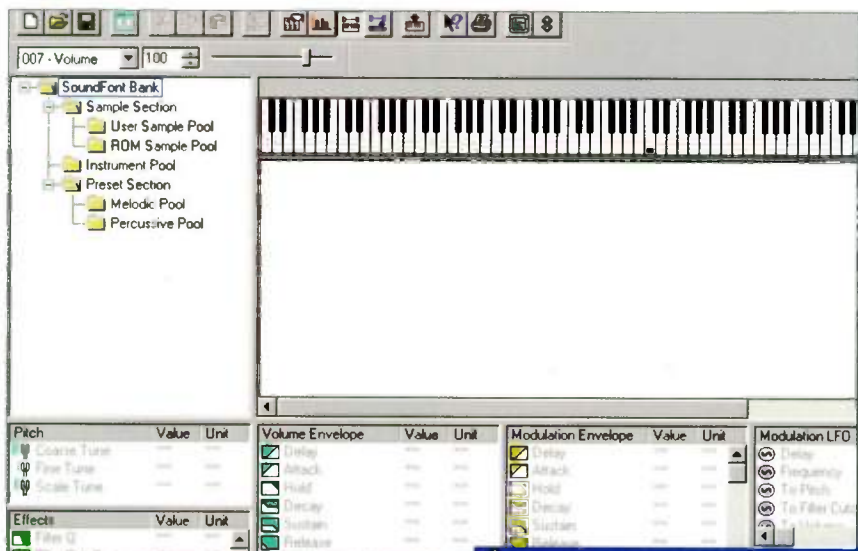

eventually mutates into a rather nice feedback sound, rich in second harmonic.

There's no straightforward means of editing the GM synth sounds, as there is with, for instance, Yamaha's DB60XG synth card, but if you want something a little bit different, there's always the SoundFont section (see the 'Font City' box) to explore, as well as GS and MT32 emulations.

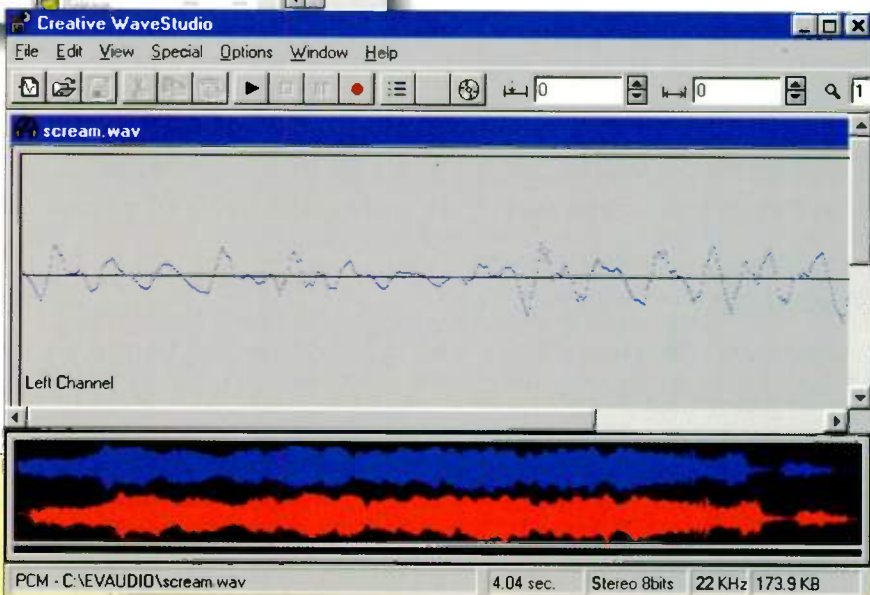

CREATIVE USE

I tested the MIDI side of the card using *Cubase*, *Cubasis*, *Logic*, and a couple of different Evolution sequencing packages; once the Creative software was properly installed, there was no problem. Apparently, the number of physical modelling voices you can use at once is limited by the type of PC processor you have, but my Pentium 90 didn't throw any obvious tantrums with normally busy music. The GM sounds are actually quite good, although some are better than others; a few seem to have a noticeable amount of noise mixed in with the sample, especially some of the string pads. Considering the high technical spec of this card, I also found a slightly unnerving level of background hiss — make sure you mix your sounds at as high a level as possible, with the maximum velocities up near the 127 mark.

Each SoundFont bank is loaded into its own MIDI patch bank, though you may find several versions of the sample set accessed via MIDI

Vienna.

WaveStudio.

FONT CITY

SoundFont banks are Creative Labs' equivalent of sample programs, comprising sets of keymapped multisamples with envelope settings, loop points and so on. A fair selection of SoundFonts is provided with the card, though anyone with Net access can download countless new ones from Creative's web site. The more altruistic can also create their own and leave them on-line for others to use.

The Vienna software that's included with the card provides a means to record and edit your own samples, either by recording audio directly into the card, or by importing WAV files from suitable sample CDs (for example, Time & Space's Creative Essentials series, which considerably includes all the samples as separate WAV files). Vienna is a largely graphical module and works in conjunction with a wave-editing module, *WaveStudio*, shown above, in which individual

samples can be truncated, looped and otherwise processed. The only disappointment here is that you can only loop the left and right tracks of a stereo sample individually, so it's almost inevitable that the two channels of a looped stereo sample will start to drift out of phase with each other after a while. In practice, most instrumental samples are best used in mono, whereas loops are best used as one-shots and triggered from the sampler every bar, so the stereo looping limitation should rarely cause problems. However, if you're going to include stereo wave editing, not allowing stereo wave looping is pretty inexcusable.

Vienna's virtual keyboard can be used to set keysplits and to test notes; a huge selection of tools allows levels, tunings, envelopes and modulation facilities to be adjusted. Even the envelope adjustment is graphic, which is great to see on a piece of software that's virtually a giveaway. I won't pretend that everything about the program is as intuitive as it could be, but the on-line help (which is virtually the only instructive help you get with the system), is pretty good, and most tasks can be sorted out without too much grief.

[For more information, see the article about SoundFonts in June's SOS.]

Creative Labs AWE64 Gold

- ▶ Program Changes in the usual way. Once you increase the MIDI Program Change number past the point where there are no more SoundFont programs, the GM sounds corresponding to those patch numbers are played instead. Banks are switched using Controller 0, and the number of banks you can use at once is limited only by the amount of memory you have available. Included with my review sample were acoustic guitar, hammer dulcimer, and synth and drum samples, as well as a number of groove construction sets with drum loops, bass loops, vocals and so on, mapped to different keys. The quality of some of these is really very good, especially the looping. If you create your own SoundFont banks, these are saved onto your hard drive.

DIGITAL AUDIO

Creative Labs claim to have worked very hard to coax a decent signal-to-noise ratio out of this card, though the final figure will be influenced by the type of PC you have, the quality of the power supply, and which cards are slotted in next to the AWE64 Gold. In a typical PC, the quality isn't equal to that of a high-end audio card or a system with separate outboard converters, but, used with care, it's fine for serious demo work, provided you keep an eye on your recording levels and make the best use of available headroom.

When I visited Creative Labs to pick up the review package, I took the opportunity to try the *Cubasis* version using their faster PC. Because of the early version of the duplex driver, though, whenever I tried overdubbing, the original audio tracks played back around 100ms late. You can be sort this out by visiting the Advanced Audio Hardware window and inserting a negative delay to compensate, but you have to go back and switch this off after recording, before you can assess your work. Though this is tedious, it does make the job possible, and the monitoring quality of the existing audio during overdubbing is much better than Creative Labs led me to expect. Also, as stated earlier, you have to disable both WaveSynth and Instrument Mapper before you can do any audio recording — though you can

turn them back on again when you've done. Once the updated support software is available, it should be possible to record, overdub and play back at 16-bit resolution with no delay problems, but as I didn't have this at the time of the review, it's something that you'll need to confirm for yourself.

SUMMARY

Though any consumer soundcard is effectively a shoebox full of compromises, cut corners and pinched pennies, all squashed flat and given an edge connector, the AWE64 Gold offers incredible value for money, especially from the perspective of

anyone who's used to paying more in VAT, for just about any audio product, than this whole card costs. Creative Labs have quite obviously compromised some aspects of the card's performance in order to achieve a rock-bottom price: in the games market, low price is important. For example, it's great to see an S/PDIF output on such a cheap card, but the lack of an S/PDIF input pretty much eliminates it from the running as a serious engine for stereo digital editing.

The GM synths are perfectly useable, especially the larger RAM-based versions, and the physical modelling adds a new element of realism to certain sounds, especially the lead guitar patches. Even so, I found that even the 8Mb GM set wasn't as clean-sounding as the Yamaha DB60XG synth card I have fitted in the same PC.

The bundled software is generally good, and my main criticism in this area is that the software comes in so many different parts, and that you seem to have to make so many trips to remotely located drivers or accessory programs to get things running properly. For the newcomer to PCs, the lack of paper support may also be a problem, because, although there is a comprehensive on-line help system, it often doesn't seem to categorise its information in the terms you're likely to use.

The SoundFont capability is potentially very powerful, as it enables the card to be used as a quite serious on-board sampler, and the *Vienna* editing software that comes along with it is no slouch either. If you have the patience to transfer WAV files from sample CD-ROMs, it's possible to build up a library of excellent sounds very cheaply, all of which can be stored on your hard drive.

To address audio performance for a moment, the sound quality available from this card is surprisingly good considering the market sector at which it's aimed, and even the bundled mic sounds pretty reasonable. The early version of the drivers makes working within audio sequencers a bit of a pain, but the imminent revised versions should make things a lot easier in this respect. Oddly, I couldn't get *Logic Audio* to recognise the card, though the product specialist at Creative Labs has experienced no problems with his own *Logic Audio* system. This is just another 'one of those things' that makes living with PCs so interesting — in the 'May you die in an interesting manner', meaning of the word! However you look at it, though, this card does a hell of a lot for a minimal outlay and provides virtually a complete home studio in a box for the Pentium owner on a budget.

SOS

"The AWE64 Gold offers incredible value for money, especially if you're used to paying more in VAT, for just about any audio product, than this whole card costs."

The Power of 12

KORG SOUNDLINK DRS 1212
MULTI-CHANNEL PCI AUDIO I/O CARD

Although it also forms part of the all-encompassing digital SoundLink system, Korg's 1212 PCI card offers a stand-alone, cost-effective option for getting multitrack digital audio in and out of your Mac.

PAUL WHITE discovers that digital audio recording relies on going through the proper channels...

but unlike most other systems, the main interface is the ADAT standard optical port. Two further inputs and outputs are provided on conventional S/PDIF ports, and there's also an analogue stereo pair of connectors accessible via stereo quarter-inch jack sockets on the rear of the card. Moveable jumpers on the card allow the analogue audio level to be set to either -10dBv or +4dBu. The audio converters are very much state-of-the-art, and are allegedly the same as those used in the new Alesis ADAT Meridian (see the interview with Marcus Ryle in the last issue of *SOS*). The input is 20-bit enhanced dual-bit delta-sigma, while the output is 18-bit linear. Because the converters reside within the computer, the noise performance is somewhat at the mercy of adjacent circuitry and the quality of the computer's power supply, but a weighted figure of 90dB is quoted. This is typical of the better soundcards, although the digital I/O shouldn't suffer because of being on a PCI card.

Adding up the eight ADAT channels, the two S/PDIF channels and the two analogue channels makes up the 12 in the board's title, but for professional use, there's also word clock in and out connections (see the 'Word clock' box elsewhere in this article for more on this), and an ADAT 9-pin Sync socket, allowing the host software application to run in tight sync with an ADAT.

Does this mean that the 1212 I/O PCI is only of any use to ADAT owners? Not at all — the ADAT optical interface is now a widely adopted standard, and looks set to become even more so. Even Korg's Trinity has an ADAT output option, and of course, Korg's 168RC recording console uses the ADAT interface. Yamaha's new digital consoles all have optional ADAT interfacing, and the same is true of other affordable digital consoles, such as Mackie's digital 8-buss. However, I'll concede that in an otherwise all-analogue environment, the 1212 is of limited use unless you have an ADAT to link it to, or unless you buy the optional onboard converters, which will set you back more than the price of the card.

This is undoubtedly the year of the multi-channel audio I/O card, and with so many low-cost variants coming onto the market, computer-based audio without the restriction of a single stereo input and output seems certain to win over a lot of users. Multiple inputs and outputs are standard requirements for serious users — multiple inputs to allow the concurrent recording of multi-instrument sessions, and multiple outputs to interface with an external mixer. Exactly how those inputs and outputs are presented accounts for the main differences between competing products. Korg have built their card to form part of the SoundLink DRS system, and you may recall that we reviewed the SoundLink 168RC digital recording console in the December '96 issue of *SOS*, but while the 1212 I/O PCI card is designed to integrate fully with this mixer, it may also be used as a stand-alone breakout box for a MIDI + Audio sequencer, or a tapeless multitrack recorder.

12 TIMES ABLE?

Built on a full-length PCI card, the 1212 I/O PCI can handle 12 simultaneous inputs and outputs,

pros & cons

KORG 1212 £599

pros

- Inexpensive.
- ADAT interfaces as standard.
- Ready for PC use once software support is forthcoming.

cons

- Costly to add the analogue converters for use with analogue mixers.
- As with most cards, usefulness is limited by the software.

summary

An inexpensive way to get into multitrack digital audio for those with digital mixers or ADAT-compatible hardware.

SOUND ON SOUND

SOFTWARE SUPPORT

A multi-channel audio card is only as good as the software that supports it, and by the time this card is first on sale, it will probably only be supported by Macromedia's *Deck II* (version 2.6 of this is being bundled with the 1212 by Korg, but only for the first few months the card is on sale), and *Cubase VST v3.5* for Power Macintosh (apparently due in the summer). There's also a piece of utility software (see Figure 1) included which enables the 1212 to be used as a digital router, allowing any input to be piped to any output. A DSP chip on the card handles the routing, and also allows the various gains to be changed, but there's no mixing facility.

Emagic are reputedly including the card in their future support plans for some time towards the end of the year (apparently it's different enough in concept from Audiowerk8, also reviewed in this issue, not to cause a conflict of interests), and most of the American big players have been approached, though it's too early to say who's signed up, other than BIAS for *Peak*. At the time of writing, there's no PC software support for the card, though future PC integration seems likely.

I checked out the card in an Apus Power Mac clone, and though Korg had apparently tried the board in a number of Macs and clones with no problems, I found the fit so tight that I had to remove the securing nuts from the two jack sockets on the rear panel before the card would fit. After a little shoving and swearing, I managed to coax the card into place (while heeding the usual anti-static warnings, of course). Bundled with the card was a CD-ROM containing Macromedia's *Deck* software, the necessary 1212 I/O PCI support files, the 1212 software on floppy disk, and two breakout cables, one for the S/PDIF phonos and one for the ADAT sync and word clock connectors. These cables are an inescapable fact of life due to the tiny amount of rear-panel space available for a typical card, though the ADAT and analogue I/O is fitted directly to the rear panel. The software installation is straightforward, after which the machine must be re-started to allow the 1212 system extension to load.

Though the card will run in pretty much any PCI Power Macintosh or clone, the way that the

applications are increasing in power means that anything slower than a 166MHz machine is likely to find its way to a car boot sale in well under two years. Indeed, the word from the industry is that what we currently consider to be state-of-the art will be entry-level by the year end, and that anything running below 200MHz is a poor investment. You just have to look at *Cubase VST* to see where the power goes — once you start running a few bits of plug-in software at the same time, you're pushing the limits of even the fastest current machines. Korg were able to show me a beta version of *Cubase VST v3.5* which supports all 12 inputs and outputs of the 1212 I/O PCI card, and I'd love to tell you about the other features (such as the proper internal bussing system), but this will have to wait until the full *SOS* review of *Cubase VST v3.5*, when we'll let you know how the software interfaces with other PCI

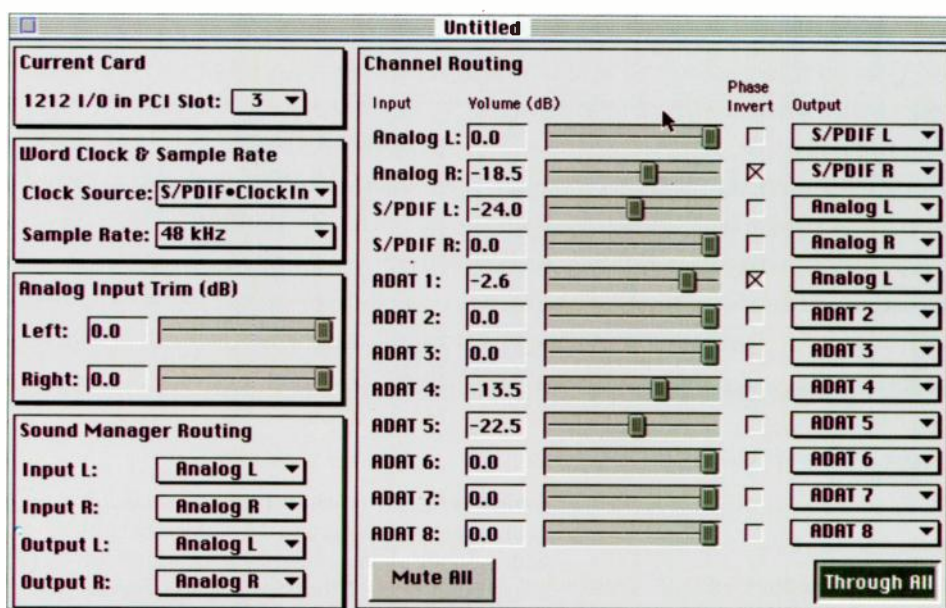

Figure 1: The 1212's router utility.

I/O cards like the 1212. However, I can tell you that the beta version runs OK with the card, and I was allowed to take a screen dump to show you what the interface looks like (see Figure 2).

APPLICATIONS

The problem with reviewing any card like this one is that its capabilities are limited mainly by the software that supports it. For example, you might ask me how many tracks of audio you can run

ALL HANDS ON... MACROMEDIA DECK II

Since its original manufacturers OSC were taken over by Macromedia in 1995, *Deck* has evolved to incorporate a lot of the functionality that was previously only available as add-ons, and the universally disliked limited-install disk protection system has been dropped. *Deck II v2.6* is basically a multitrack recording package capable of handling up to 32 tracks on a 604 Power Macintosh, and fewer tracks on less powerful machines, as well as supporting Apple's internal AV hardware. Note that no matter how powerful your Mac, multiple drives will be needed to get anything like 32-track playback, and a more realistic figure is around 12

tracks per single hard drive.

Although *Deck II* is a multitrack recording package and not a MIDI sequencer, it is possible to import MIDI files for playback along with the audio, and there are facilities for MIDI and SMPTE sync as well as for mapping *Deck II*'s level and pan sliders to MIDI control. The software is also compatible with Digidesign hardware, including Audiomedia cards, Sound Tools II or the original Pro Tools 422 4-channel systems. Version 2.6 of *Deck II* also has full support for the 1212 I/O card.

Screen redraws have been accelerated, there's a

scrolling cursor (on Power Mac only) and the handling of imported stereo regions has been improved. Extensive non-destructive editing is also available, along with crossfading between regions, and digital mixing. As an existing Pro Tools user, I perceive *Deck II* as providing a similar working environment, but with a largely simplified facility set. This similarity extends to the support of plug-in effects and processors from the likes of Waves, though these are in Adobe *Premiere* format rather than Digidesign TDM. These plug-ins process audio destructively insofar as a new file of the processed data is created, but if sufficient disk space is available, the original files may be maintained intact.

Korg 1212

▶ with this card, but to be honest, that isn't the card's concern. The card can give you up to 12 simultaneous outputs, but these could come from submixes of more than 12 tracks. On the other hand, your system might only be capable of

how to route data from a DAT machine or similar source to any pair of ADAT tracks, or vice versa, and it's also possible to take the output from an ADAT, process it via an S/PDIF device, such as a Lexicon reverb, then route it back onto two other ADAT tracks. The sync source for the card can be set to word clock, ADAT or internal. The common sample rates may also be selected, and transfer methods are described for ADAT systems both with and without an Alesis BRC. Using the included *Deck* multitrack software, audio may be transferred from ADAT, edited, and then returned to the ADAT with very precise synchronisation between the two systems. To use the 1212 I/O PCI with *Cubase VST*, in a situation where the system needs to be sync'd to MIDI Time Code (MTC), a synchroniser box that can convert MTC into word clock is required (Korg recommend MOTU's Digital Time Piece).

As part of the test, I loaded the card into a Mac that already had an Emagic Audiowerk8 card fitted, and found no conflict problems, even when both pieces of software were booted up. The

“Given its surprisingly low cost, the 1212 is rather special.”

1212 I/O PCI also runs happily alongside a Digidesign Audiomedia III card, though there seems to be no way to use them simultaneously.

SUMMARY

This PCI card is perhaps best suited to the ADAT user and/or digital mixer user, but because the ADAT protocol is so widely supported, the possible applications are far greater than this. What's more, the ADAT link can handle up to 20-bit audio, so there's a certain amount of 'future-proofing' built in to allow for higher resolution digital recording. Korg have their own stand-alone external

Figure 2: Cubase VST v3.5 (beta version).

6-track playback, in which case you shouldn't spend your time looking into the other six outputs and waiting for something to appear as if by magic! Furthermore, if the host application has on-board mixing and routing options, you might want to use some of your I/O to service aux sends and returns for outboard effects. The number of tracks the host application can provide depends to a large extent on the model of computer and the speed of data transfer to and from the hard drive. Some systems enable you to employ multiple hard drives to get more tracks of playback, and although this is not currently supported, there are plans to allow multiple 1212 I/O PCI cards to work together in the near future.

Even without a host software application you can use the 1212 I/O utility to route digital audio between S/PDIF and ADAT. The manual explains

WORD CLOCK

Word clock is a valuable addition for professional applications, including any application that requires continuous audio resync, as without a word clock to sync to, it's possible that long audio tracks within a sequence containing MIDI and audio data could drift out of time with the MIDI sequence. Whenever two digital audio devices are connected, there needs to be some way of keeping the sample rates of the two machines synchronised. If data arrives slightly too early, or slightly too late, it is lost or corrupted. The

rate of data transfer is synchronised using word clock, a clock that 'ticks' once for every bit of data transferred, and when data is being transferred between two machines, one machine (usually the sending machine), must provide the word clock for both — or both must be slaved to the same external word clock generator.

In simple digital applications, such as transferring data from one DAT machine to another, the word clock is sent along with the data, so a single co-axial cable is all that's needed. However, more sophisticated systems send the word clock

separately, the Alesis BRC being one example. This means that when S/PDIF signals are being routed to ADAT via the 1212 I/O PCI, the BRC must be fed a separate word clock to keep the signals synchronised. When transferring data from ADAT via the 1212 I/O PCI, the card should be set so that the ADAT is the clock source. When editing ADAT audio data alongside MIDI sequencer tracks, it is advisable to leave the sync source set to ADAT, even when the ADAT is not running. Failure to do this can result in the timing of the ADAT audio and the audio files played back via the 1212 I/O PCI drifting slightly.

SOUND MANAGER

To make full use of the 1212 I/O PCI's facilities, the host digital audio application has to be specifically written to support the card, but limited functionality can be accessed by any application that supports Apple's *Sound Manager*. *Sound Manager* controls the computer's sound input and output facilities, from warning beeps to multimedia sound, but most computers' audio facilities are far inferior to those found on a dedicated professional audio card such as

the 1212. Via *Sound Manager*, the 1212 can be used instead of the computer's own audio facilities, but with the limitation that *Sound Manager* supports only two inputs and two outputs. These may be either analogue or digital, but ADAT sync can't be accessed from *Sound Manager*. The 1212 I/O utility is then used to decide which audio inputs and outputs will be used.

However, configuring *Sound Manager* to use the 1212 I/O card doesn't automatically shut off *Sound Manager's* own signal routing, which means that you could route the same signal to the same destination

twice — once via *Sound Manager*, and once via the 1212. Because of slight delays, this usually results in a metallic or flange-like sound, so to avoid this the host software should be used to turn off the audio patch-through feature for *Sound Manager*. Alternatively, you could turn down the volumes of any channels assigned to *Sound Manager*, or even mute the 1212's channel routing. If you think this sounds like an unnecessary fiddle, I agree entirely, but it seems inevitable in a situation where you're effectively running two routing systems at the same time!

converters for anyone wanting to go the analogue mixer route, but to be quite honest there are probably more cost-effective solutions for people wanting to work in this way.

As with any computer audio card, though, the main limiting factor is not what it can do, but how well it is supported. For the immediate future only, the card will be bundled with *Deck II* v2.6, but other than that, the choice is limited to *Cubase VST* v3.5, and later on, *Logic Audio* and *BIAS Peak*. Success in the States hinges on the acceptance of the card by such products as Opcode's *Studio Vision*, MOTU's *Digital Performer* and Cakewalk Music Software's *Cakewalk* embracing the concept.

Given its surprisingly low cost, the 1212 I/O PCI is rather special. Not only does it have 12 outputs, it also has 12 inputs that can be used simultaneously, and the ADAT sync facilities look impressively tight. From my viewpoint, the main attraction of the system is that you can patch into a digital mixer

using simple optical cables to create a very flexible desktop studio that has the ability to interface with other digital components, such as ADATs, DAT machines and effects units with S/PDIF connections. If you're staying analogue, this may not be the best card for you, but if you want to build your studio around a digital mixer, then, for the money, there's nothing to touch the Korg 1212.

ONE FOOT IN THE PAST.....
BOTH EYES ON THE FUTURE

MIDI-CV CONVERTERS

Our MIDI-CV converters are recognised world over, as the finest that money can buy. From the Pro-Solo to the Pro-Four, via the brand new PRO 2000, all of them are packed with features, including built in LFOs, Portamento, and enough Auxiliary connections to drive parameters such as Slide and Accent on your TR303. But whichever synth you own, our converters are the best that money can buy.

RETROFITS

If you are unable to connect up your synth via one of our many MIDI-CV converters, the chances are that we can supply a Retrofit for it. From Junos to Jupiters, Arps to Oberheims, we supply a range of over 50 retrofits for drum machines and synthesizers. We can supply these in kit form, or if you would rather, we can fit them for you.

PLUS OF COURSE...

In addition to our PRO-SOLO, 2000 and FOUR, there are now the PRO-DCB for controlling Junos and Jupiters, and the PRO-KADI for the control of Roland drum machines. Plus our range of socket kits, which give CV and gate sockets to an ever expanding range of monophonic analogue synthesizers. And of course we supply all the leads, plugs and accessories to complete your set-up.

Blue Systems for all your professional needs.

With impressive improvements in power, speed and flexibility, Digidesign's software upgrade for their flagship digital audio production system keeps them ahead of the pack. PAUL D LEHRMAN wonders where the catch is...

Pro Tools 4 is a software-only upgrade for Digidesign's industry-leading studio-in-a-Mac, and its myriad new features, enhancements, and general fixes are for the most part successful and welcome. Always known as a brilliant editing platform, Pro Tools' new version brings the quality of its mixing, automation, signal routing and processing functions up to the same exalted level.

The new features would fill a book — several, in fact: the manual (just for the software — the hardware gets its own documentation) runs to over 400 pages. We covered a lot of these features in our preview (*SOS* December 1996), so what I'll do in this review is to hit the highlights, and also point out some of the places where things aren't quite what they could be.

HARDWARE & INSTALLATION

While Pro Tools 4 is Digidesign's flagship product, it's now available over a wide range of price points. The cheapest way in is to use it without any additional hardware, in 'PowerMix' mode. For this you need a PowerMac with at least 32Mb of RAM, taking advantage of the computer's internal 16-bit, 44.1kHz sound engine (see 'Hardware Options'

box). To get all the features in the new software, however, you have to have a full-fledged Pro Tools III system, which consists of a Disk I/O card, a DSP Farm card, and an audio interface. You also need an external disk drive, dedicated to audio, which is hooked up to the Disk I/O card. Digidesign say that you must have Apple's System 7.5.3 or later to run the 4.0 software, but I had no trouble at all running it with System 7.5 on a 100MHz 601-based clone. The new software will *not* run on older Pro Tools '442' systems, nor on Audiomedia II cards

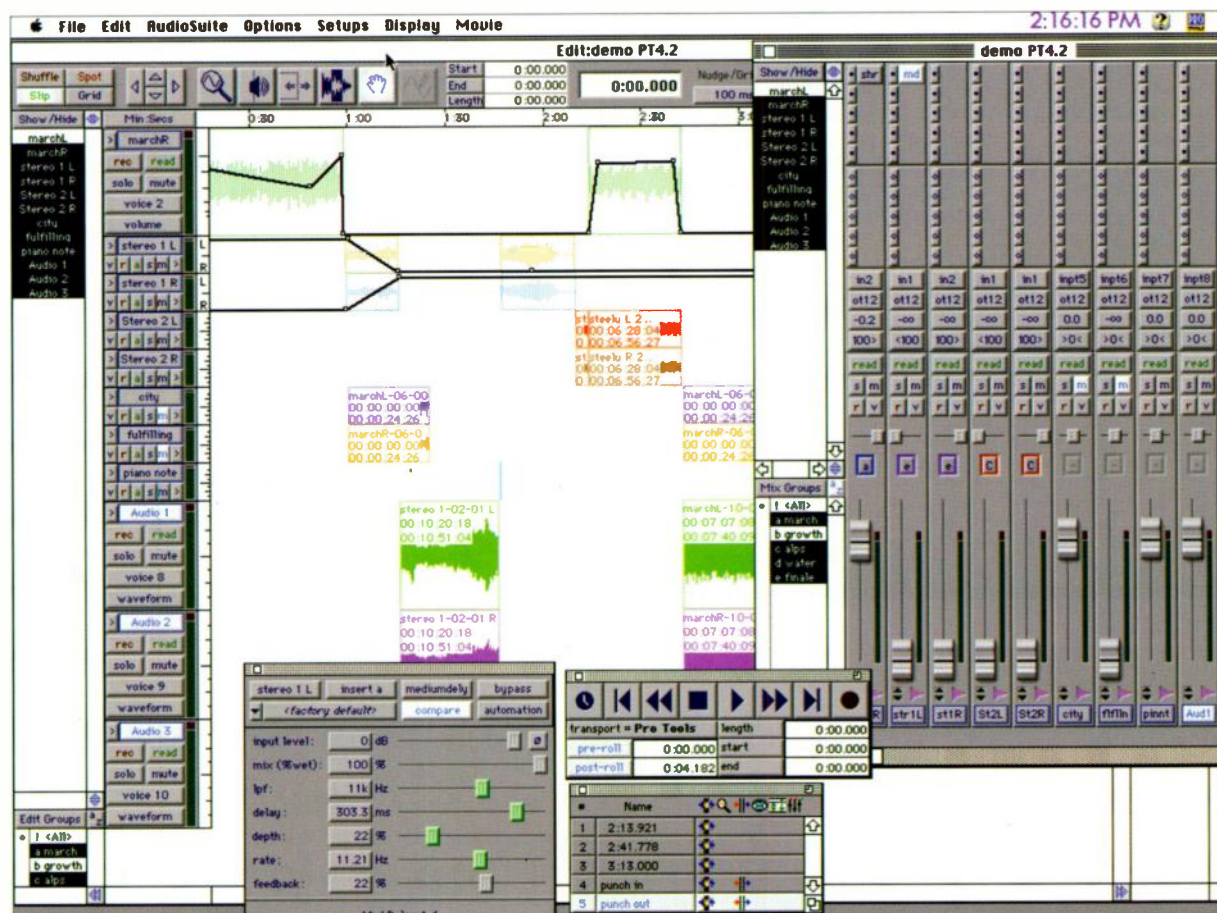

Installing the software upgrade is easy, since it now comes on a CD-ROM (floppy disks are available on request). The process, however, takes a little longer than you might expect, and seems to stall at one point. The reason is that some rather brutal housekeeping is being done on your hard disk: in order to guarantee that the installation is successful, the procedure 'idiot-proofs' your system disk by removing all traces of older versions of Pro Tools — and not only the software: all Digidesign INITs and Sound Drivers, as well as Opcode's OMS MIDI management system and Apple's QuickTime, both of which are now required, are replaced with new versions. The old files are not just put in a disabled Extensions folder — they are *erased*. Fortunately, you get a warning that tells you that if you want to save any of them (which you will, if you're using other software, such as BIAS' *Peak*, that doesn't like these versions) you'll have to move them not to a separate folder, but onto another *disk*.

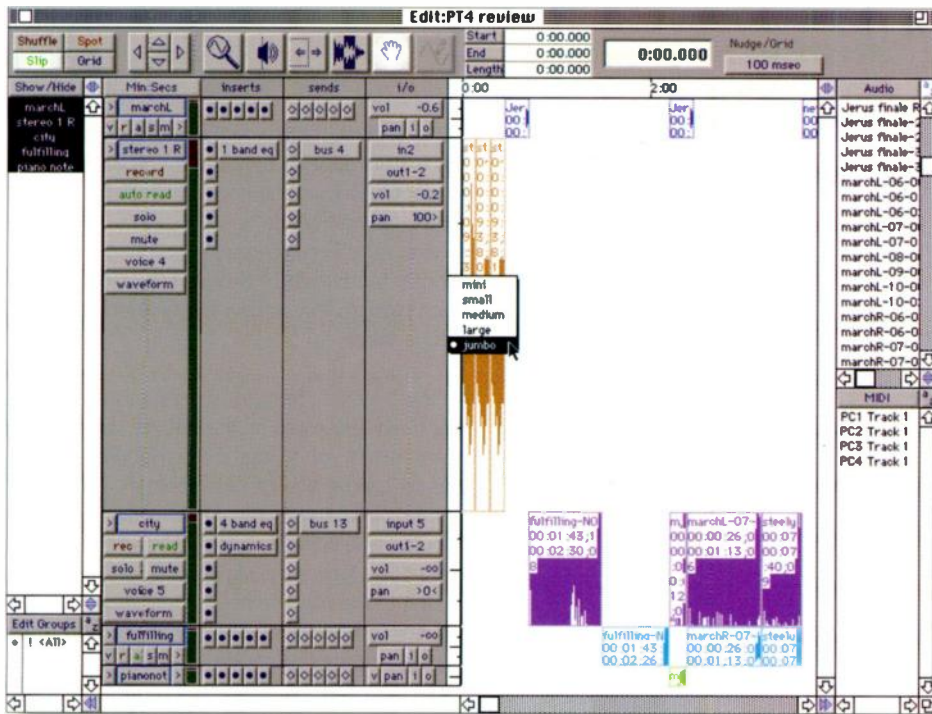

DISPLAYS

The first thing you notice after launching the software is that the edit screen, where tracks are viewed in a linear fashion, has become quite a

4 Score!

DIGIDESIGN PRO TOOLS 4.0 SOFTWARE

In the Edit screen, you can now view inserts and sends. Each track can have its own height, from mini to jumbo, and track layouts can be saved in memory locations.

bit more complicated. It's now possible to re-size tracks individually (there are five size options), so you can shrink the ones you're not working on and blow up the important ones to *Sound Designer* size, or even choose not to show particular tracks at all. Sends and inserts can be included in the edit screen, which means that it's quite possible to do a session without ever opening the Mix window.

You also notice that the increased screen complexity hasn't affected performance — on the contrary. On a Power Mac, at least, the program feels a lot faster and more fluid than previous versions. Most of the code has been made Power PC-native, which provides a tremendous boost to screen redraws (the SMPTE window — now available in a 'big counter' version — and the level meters have lost their annoying lurching quality) and mouse response. The screen now scrolls smoothly as the audio plays, overcoming a limitation of previous versions. I didn't get to test the software on a 680x0 Mac, but I would imagine that the benefits are not nearly as obvious.

On the other hand, the complexity does add greatly, at least when you're first learning the program, to the confusion factor. There are so many Preferences (five pages of them!) and various other kinds of toggles, that a new user could spend a lot of time quite befuddled over why the program is behaving in the way it is.

Once you set up your edit window, you can store its configuration — zoom settings, pre- and post-roll times, track heights, show/hide toggles, and/or group enables — in any of 200 memory locations, along with current time and region start and stop times.

The region list has become much more flexible, allowing you to see source file names and/or disk names in addition to region names. Regions can be sorted by name, start time, stop time, length, date, or disk location. Most of the housekeeping chores dealing with regions have been moved to a sub-menu within the window itself, which

makes a lot of sense.

One thing that hasn't changed, unfortunately, is that when you are using plug-ins such as EQ, compression or reverb, you can see the parameters of only one plug-in at a time — so, for example, you can't compare EQ settings on two channels. On the other hand, if you want to make sure that two modules are identical, you can copy (or save) the settings from one and paste (or load) them into the other.

Over at the Mix screen, where the tracks are shown as faders on a console, you now have the option to cut the width of all the faders in half. While the names on the faders are abbreviated when you do this, it lets you see twice as many faders (27 of them on a 17-inch screen) without scrolling, which is a very welcome improvement.

RECORD AND PLAYBACK

There are a number of key record options in this version.

pros & cons

DIGIDESIGN PRO TOOLS 4.0

pros

- Works with or without external hardware.
- Extremely powerful.
- Lots of new tricks.
- Very fast.
- Stable.

cons

- Doesn't work with 442 hardware.
- Ever-more-complex user interface.
- Manual needs to be task-orientated.
- Taking advantage of all features requires large hardware investment.

summary

The most powerful audio production system on any platform; good value if you need all that power. Must-have upgrade for Pro Tools III users.

SOUND ON SOUND

Digidesign Pro Tools 4.0

Faders can be displayed at half-width, allowing twice as many to fit on a screen.

- ▶ Loop Record, a familiar feature in MIDI sequencers, lets you automatically repeat a section of a track, laying down a new sound file each time. When you're done, you can retrieve the takes you want from the regions list and assemble a 'comp' track from bits and pieces of each. A new pop-up menu shows you only the track regions that have the same time stamp as the one you're working on, to help you to select the right takes from the list.
- ▶ QuickPunch lets you instantaneously record-enable a track during playback, and punch in and out on the fly. Up to 100 punches can be made, on any number of tracks, in one pass.
- ▶ Record Safe prevents selected tracks from going into record mode.
- ▶ Half-Speed Record does just what you'd think: if you've ever overdubbed a track at 15ips on a

30ips multitrack tape, you'll know how this works. This feature appears only in the Keypad Shortcuts part of the documentation, although it isn't that hard to comprehend.

- Destructive Record erases everything on a track that's 'underneath' a new take, so that you don't keep piling up new files and regions as you do re-takes.

A new playback feature, which was apparently specifically requested by the BBC, is 'shuttle lock', which allows you to use the computer's numeric keys to specify any of nine speeds of playback, forward or backward. I find this a little clumsy, but it could come in handy once you're used to it (and if you don't have an external transport controller).

One of the more annoying features of the old Pro Tools was that whenever you changed anything on the edit screen, playback would stop. That's now history. Not only can you scroll and change views on the fly, Pro Tools 4 also lets you edit audio while in playback, just like a MIDI sequencer. You can change TDM and automation parameters, drop in new regions, switch edit playlists, nudge regions, and even change the tempo map while the audio is playing. (If you have a MIDI metronome playing, however, and you change the tempo map, the metronome doesn't reflect the new map until you stop and start playback again.) You can even — if the 'Active in Background' toggle is on — switch into another application entirely. You'll have to turn 'Active in Background' off, however, to use any program that accesses the audio hardware, such as *Sound Designer* or *Studio Vision*.

There are a few restrictions on what you can do while audio is playing: you can't change the type of plug-in on any channel, or open up any new plug-ins, and when you disable a track's automation, you can't turn it back on again without stopping playback. Also, when you're moving around the screen during playback the cursor doesn't always change when it should on my 100MHz machine — you might find yourself trying to move a window with an I-beam text cursor instead of an arrow. Digidesign say that this is related to the speed of my computer.

AUTOMATION

Some of the most significant changes in the software are in the area of mix automation. Instead of just volume and pan, Pro Tools 4 gives you total snapshot and dynamic control over *all* mix parameters, including EQ, solos, mutes, and send levels, as well as any or all of the parameters of TDM plug-ins (see 'Plug-Ins' box). As with volume and pan, when you're in 'auto record' mode and you change a parameter that's been designated as automatable — either using an on-screen fader or an external controller (see 'External Control' box) — that change becomes part of an automation 'playlist', which is simply a list of instructions with time stamps. The nomenclature is a bit clumsy, because nowhere is there an actual *list* to look at —

EXTERNAL CONTROL

Knowing that using a mouse to move a bunch of on-screen sliders and buttons is a pretty clumsy way to do a mix, Digidesign have long supported, at least in theory, external hardware controllers that can operate the software over MIDI. In Pro Tools' earliest versions, you could assign any MIDI controller command to any on-screen control, so that you could use the sliders and wheels on a keyboard, or foot pedals, or a dedicated controller like JL Cooper's FaderMaster, to help with your mixes. There were a few versions of the software in which this feature was not supported, and it was subsequently revived, but now Digidesign have taken a completely different tack: on-screen controls in Pro Tools 4 are hard-wired to specific incoming MIDI commands.

The software has command sets, or 'personalities', built in to accommodate three popular hardware controller families: Peavey's PC1600, Penny & Giles's MM16 and DC1 endless-belt controllers, and JL Cooper's CS10 and CS10². These devices have eight or 16 faders, plus several buttons, which Pro Tools

uses for soloing, muting, track arming and transport control. You tell the software which device(s) you're using in a special Setups window (which allows you to use as many as four devices), and you can mix and match models. Each device can, using onboard 'bank switching', control up to 32 Pro Tools tracks. The MIDI connection is bi-directional: some of these controllers have indicator lights showing transport status, fader position, and so on, and the software will send the proper MIDI commands to the devices to control the indicators.

You can use any other MIDI source (including the old FaderMaster) as long as it can be made to conform to one of these personalities. The most straightforward is apparently the CS10, so the manual gives the complete MIDI command setup for the CS10, which you can then try to emulate. There seems to be no sign of Digidesign's previously announced ProControl, so I suppose that product never made it out of the lab. There's also no mention in the documentation of Mackie's forthcoming HUI (Human User Interface), but it's probably safe to assume that this will be supported as soon as it is available.

Digidesign Pro Tools 4.0

► it's leftover terminology from *Sound Designer*, where you really do see the information in list form.

The automation playlist is separate from the track playlist — the one that determines the order in which the sound files on a track are being played — and can be edited separately, although when you cut and paste a track playlist, the automation goes with it. One of Pro Tools' best features has been that you can have an unlimited number of edit playlists on any track, which allows you to assemble alternate takes into a 'comp' track. However, you are only allowed one *automation* playlist per track, so those alternative takes hadn't better need different levels, or sends, or EQ settings. You can always create new tracks and mute the ones you don't want to hear, but if you're using plug-ins this can eat up your DSP power quickly. Another workaround, suggested by Digidesign, is to create an auxiliary track and buss the comp tracks to it. Perhaps a future version will allow multiple automation playlists, which could be attached to specific edit playlists, or even mixed and matched.

Again, as with volume and pan, all automated parameters can be displayed and edited as line graphs on the edit screen, so if you want to draw in a long, slow change in a delay line's mix level, or put a wah-wah effect on a track by wobbling the center frequency of a band-pass filter, you

can do it graphically, as well as in real time. Trim controls can be used to raise or lower the level of a parameter over time, while preserving individual moves, and automation can be copied from any track and pasted to the same parameter in an identical plug-in on any other track. Using a special paste function, you can even clone automation moves to a *different* parameter, or to a parameter in a completely different type of plug-in.

Unfortunately, you can still only view the automation data for one parameter at a time (volume, pan, sends, toggles, or processing) on any particular track. So even though, for example, you can see how an EQ's centre frequency moves or how its gain changes, you can't see both simultaneously. One way around this, if you're automating a linked stereo pair, is to display one parameter on one channel and a different one on the other, but that means temporarily un-linking them so that you can set up the different views.

Automation moves are recorded every 5ms, which can result in a lot of data, and the manual warns that, in particularly dense situations (although I never encountered this), the automation data may clog up and not play at the right time (sounds suspiciously like 'MIDI choke'). A System Load meter is provided, to warn you when this might be the case, and there's a four-level 'Thin Automation'

You can select any or all parameters in a plug-in to be automated. Automated parameters then appear in the plug-in window in colour.

function, similar to the 'Thin Controllers' feature in many MIDI sequencers, to address the problem. Since the slopes between automation points are maintained (unlike with a MIDI sequencer, which can only record discrete values), smoothness of automation within a thinned track should never be adversely affected.

Solos and mutes now work intelligently, so that soloing a reverb, for example, doesn't shut off

all of the inputs to that reverb. As has always been the case with Pro Tools, however, there's a delay that varies inconsistently, from about 1 to 2 seconds, between the time when you un-mute a track and the time when the track actually sounds, whether you do this manually or automate it (again, this may be down to CPU speed). To add to the problem, I was able to get the software to refuse to un-mute a track at all — I had to close

Digidesign Pro Tools 4.0

TDM PLUG-INS

Pro Tools' ability to accept third-party processing modules, in the form of TDM plug-ins, has inspired engineers all over the world to design tools for the platform, and today there are dozens of the little buggers out there, including fairly standard utility plug-ins, some brilliant new applications, and some totally insane ways to manipulate audio — not to mention emulations of old hardware designed to allow this advanced digital platform to sound like a 1950s valve studio.

Up to five plug-ins can be used on any track, in any combinations your DSP hardware will allow (which is actually a problem, as the main body of this article explains). Plug-ins now have internal Copy, Save, and Load pop-up menus for dealing with settings, and saved settings have their own folder inside the session folder.

The program ships with several TDM plug-ins built in: 1-band and 4-band parametric EQs; a dynamics module (compressor, limiter, expander, gate); a delay line with adjustable feedback and modulation; a longer delay, called the *Procrastinator*; a dither generator; a 'channel tool', which is basically a simple gate with a phase-reverse switch; and a 'time adjuster', which delays a track by up to 1024 samples, in increments of a single sample, to compensate for processing delays caused by other plug-ins. All of these are automatable.

TDM plug-ins from previous versions of Pro Tools, with some minor exceptions, will work fine with 4.0, although they will not be automatable, and you can't save and load settings. Most third-party developers are working on new versions of their plug-ins that will have automatable parameters.

▶ and re-open the session to hear it. On the positive side, this is the *only* serious bug I found in several weeks of testing. Digidesign are apparently working to fix it in the next update, and suggest another workaround: close the plug-in, open and close another, then return to the original.

TOUCH, LATCH & GROUPS

Besides Read, Write and Off, the software automation provides two special modes for updating moves, similar to those found in megabuck moving-fader consoles. One is called 'Touch', and is an overdub mode: automation is recorded only if the fader is actually being touched, and when you take the mouse away the fader glides back to where it's supposed to be. The glide time is programmable. The other mode, 'Latch', starts recording automation as soon as you move a fader, and only stops when you stop playback, at which time a new automation event is written to bring the fader back to where it was — again, at a programmable speed. A nice touch is on-screen null indicators, to show you the current position of a fader being recorded relative to the previously-recorded position.

Faders can now be grouped, and groups nested within each other or overlapped. Up to 26 groups can be defined, and they can be enabled or disabled, individually or globally, without changing their configuration. Moving any fader in a group moves all of them, and they all move proportionately to each other. Besides automation groups, you can define editing groups, within which slicing and dicing one track affects all of the others. Any group can be designated as an edit group, or an automation group, or both.

EDITING

A significant change in Pro Tools 4.0 is that destructive file editing is now available inside the program itself. In previous versions, in order to do a destructive cut and paste, a gain change, a reverse, or a pitch change, you had to export the file to a

separate program, such as *Sound Designer II*, mess about with it there, and then re-import the altered audio back into the session. Pro Tools 4 has included many of *Sound Designer's* capabilities in a feature set called Audiosuite. Edits can be made even while the file is playing, although the alterations don't occur in real time — you'll hear them next time you play the file. Altered files are conveniently left where they are in the session. You can have the new file overwrite the old one on the disk, or save it under a new name; regardless of which you choose, you always have Undo capability. A terrific convenience is that multiple tracks and regions can be selected and processed by Audiosuite in batch mode.

Since Audiosuite functions don't depend on DSP hardware, they will run with any version of Pro Tools, including PowerMix. This also means that you can perform as many Audiosuite operations as you wish on a session without using up your DSP power — though it may take a while.

Audiosuite, like TDM, can expand its capabilities through the use of plug-in modules. Audiosuite plug-ins, however, are not the same as TDM plug-ins and, unfortunately, older *Sound Designer* plug-ins can't be used with Audiosuite either. On the other hand, many third parties who made *Sound Designer* plug-ins are porting their products over to Audiosuite, as are a number of TDM plug-in manufacturers.

Functions included in the new software are:

- Normalising
- Pitch shift
- Time compression/expansion
- Sample-level pencil-point waveform editing
- DC offset removal
- Reverse
- Phase reverse
- Gain change
- Duplicate

In addition to Audiosuite, there are some major improvements in non-destructive editing ▶

HARDWARE OPTIONS

Pro Tools 4.0 is available in four flavours.

• The PowerMix version (£703.83 — all UK prices quoted here include VAT) uses no external hardware but relies on the Power Mac's internal sound hardware. You can record two tracks and play 16 tracks using the Mac's stereo analogue input and output, although the number of playback tracks will be lower if your CPU speed is less than 120MHz. Obviously you get no TDM capabilities or effects sends, but you do get Audiosuite, and can use its plug-ins, plus you have 2-band EQ on each channel. The QuickPunch and scrub/shuttle functions don't work in this configuration.

• If you add an Audiomedia III card (PCI Macs only), for £703.83, you get the advantage of lower-noise hardware and RCA jacks on the analogue connectors (as opposed to those hideous stereo mini-jacks Apple use), plus a stereo pair of S/PDIF digital inputs/outputs. You can also scrub and shuttle.

• Then there's the Project version, formerly called Session 8. This is essentially a Pro Tools III system but without any TDM hardware. It uses Digidesign's

Disk I/O card, and therefore requires a dedicated hard disk. Available either for PCI or older NuBus Macs, Project costs £2231.33, plus the price of an audio interface, of which there are two to choose from. The 882 (£891.83) provides eight balanced analogue I/Os and a pair of digital I/Os, while the 888 model (£2677.83) provides four pairs of AES/EBU digital I/O. Project lets you record up to eight tracks simultaneously, and perform QuickPunches. It gives you two post-fader effects sends and up to eight returns, but the send levels are not automatable.

• Finally there's the full-blown Pro Tools III system. The NuBus version of this costs £6249.83, while the PCI version costs £7131, again plus interface. This is the only version which supports all the features the new software has to offer, and of course it is the only version which lets you use TDM plug-ins. You can stack Disk I/Os and interfaces — up to seven of them on PCI systems and eight on NuBus systems — for a total of 56 or 64 analogue and digital I/Os. However, you can only simultaneously record on a maximum of 48 tracks (this bothers you, I know).

At £4463.82 (NuBus) or £5356.83 (PCI) per extra

eight channels, we're starting to talk real money here. Plus, if you weren't smart enough to buy a 6-slot Mac in the first place, you'll need an expansion chassis if you crave all that connectivity. Digidesign themselves have had one for a while for NuBus Macs, which costs £1959.90, including a card that's required to make the thing Power Mac-compatible. It has 12 slots, but not all of them may be useable with a particular computer.

In their current literature, Digidesign make no mention of the products they used to endorse from Texas-based Second Wave, but the company is still quite healthy (www.2ndwave.com), and offer, along with NuBus expanders, several models that let you use old NuBus hardware in PCI computers, and which, they say, are completely compatible with Digidesign hardware. A four-slot NuBus-to-PCI model is \$1195, and there are two 8-slot models: a desktop version for \$1895 and a rackmount for \$1995. Magma, based in San Diego, California (www.magma.com), make a 7-slot PCI-to-PCI expander for \$1500, and a 13-slot chassis for \$2500 is due out this summer. Bit 3, in Minneapolis, Minnesota (www.bit3.com), also have a 7-slot PCI expander for \$1420.

Digidesign Pro Tools 4.0

The Fades window now allows different custom curves for fade-in and fade-out, and displays the two waveforms affected by the fade, either separately or superimposed on each other.

- ▶ operations. You now have much more control over crossfades: fade-out and fade-in curves are independent of each other, and can be drawn manually. The crossfade can occur before, after, or surrounding the 'splice' point, and you can view what happens to the waveforms as a result of the fades before you execute them. It's also possible to audition a fade, though only through the Mac's audio hardware.

The Strip Silence feature, which decides where silences occur in a track and separates the track into regions accordingly, has likewise been improved, with separate on- and off-threshold settings, minimum silence time, pre- and post-roll (to make sure attacks and decays aren't cut off) and automatic sequential naming of the separated regions. You can select what you consider to be a silent region and, using the 'Identify Silence' command, tell the program to set the Strip parameters to recognise it as such.

MIDI, QUICKTIME & FILE FORMATS

Pro Tools' treatment of MIDI sequences has always been one of its weakest points: regardless of how complex your MIDI system was, it was only possible to choose either the Modem or Printer port to play back a MIDI track, whether it was recorded into Pro Tools directly or imported as a MIDI File from a sequencer. That has finally changed, and now, with OMS fully integrated into the software, a MIDI track can be routed to any instrument in your OMS Studio Setup. You can specify a MIDI channel or let the track play back on whatever channel it was recorded on originally.

If you've been jealous of MIDI + Audio sequencers that can play QuickTime movies along with music, or you lusted after Digi's old *PostView* software, which let you scrub picture with the audio, you'll be pleased that Pro Tools 4 lets you import a QuickTime movie and play it on the screen while locked to the audio, either in real time or scrubbed. You can't adjust the window size, but you can set the SMPTE offset of the

movie. An extremely neat feature is that an imported movie shows up on its own track as a series of 'picons' (picture icons), which makes lining up audio events to video frames an actual joy. If the movie already has an audio track, you can import that too, either with the video or by itself. The software does not, however, recognise when a movie has a MIDI track.

Borrowing one of the best features of Digi's low-end *Session* software, Pro Tools 4 also lets you export everything you've done — stereo audio and video — to a QuickTime movie, a process usually called 'flattening', but here referred to as 'Bounce to Movie'.

Besides QuickTime, a lot of other file formats are now supported, including WAV and SND, and you can work with files in a wide range of sampling rates and word lengths. Format conversion is automatic when you import a file. When exporting, you can down-sample the session to 8-bit resolution, using a proprietary 'Squeezer' algorithm that sounds pretty good. You can also change the sample rate, and there's a choice of five levels of conversion quality, from 'Low' to 'Tweak Head'. I experimented with all of the different settings and, oddly enough, found that the 'Low' setting provided the best-sounding results — the others had lots of low-frequency grunge in spots that were supposed to be silent.

ARE WE HAVING FUN?

If I told you that learning Pro Tools 4 was a breeze, and anybody could be up and running in no time, I'd be lying. This is a complex, sometimes daunting program that will cause a lot of beginners to lose a lot of hair. Most of the problem is simply that over the years Pro Tools has become more and more things to more and more people, and has achieved a level of complexity probably unsurpassed in the music and audio software world. There are programs out there that are far simpler to use — *Audiovision*, from Digidesign's parent company Avid, comes to mind — but they don't do anywhere near as much as Pro Tools now does. If you want this much power, you'll have to learn how to use it. Fortunately, with patience the software can be mastered, and seasoned users, once they get over the initial shock, will make sense out of it in a not-unreasonable amount of time.

A big help is a whole set of new Macintosh key combinations that get you around quickly. The Option, Shift, Command and Control keys are all used liberally, singly and in combinations. For instance, if you're in Select mode the Control key turns the cursor into a scrubber, while the Control and Option keys together turn it into a very fast scrubber. Moving a fader while holding the Command key increases the resolution of the fader so you can adjust it in 0.1dB increments. Moving a fader that's in a group, while holding the Control key, temporarily releases it from the group so that you can trim an individual channel without disabling the group entirely. Playing with the key combinations for a while gives you the feeling that you're developing an intuitive understanding of

DISK DRIVES

Pro Tools III systems let you daisy-chain up to five hard drives onto the Disk I/O card's SCSI2 connector, which means you can have a humongous amount of storage, backups, redundant arrays, or whatever.

Apple's current System software, however, won't recognise a volume that's larger than 4Gb, so if you have a larger drive (and you can now get a 9Gb drive for what I paid for a 20 Meg drive only 10 years ago) you'll have to partition it. A neat new feature called disk allocation lets you specify which tracks go to which drives, and you can choose to automatically assign each new track to a different drive or partition, 'round-robin' style.

Omega's removable 1Gb Jaz drives are a natural for Pro Tools, because you can give each project its own cartridge, and when it's done you don't have to archive or back it up, you simply put the cartridge on the shelf. In previous versions of the software, however, these drives were shunned: Digidesign said that they were unreliable. The software that controlled the Disk I/O card refused to recognise Omega's formatting, so if you wanted to use one for your audio files, you had to pretend it was a different kind of disk by reformatting each cartridge using software other than Omega's. Thankfully, in 4.0, Digidesign have changed their mind, and Jaz drives are now supported without so much as a whimper, although you do have to wake them up every once in a while if you have let the system lie idle for any length of time.

Digidesign Pro Tools 4.0

When you import a QuickTime movie, it can be shown in its own window, and also displayed as 'picons' on its own track.

► the logic behind them, and you'll be able to stop constantly referring to the Quick Reference Card.

The screen does get very cluttered, however, and sometimes it resembles those old astigmatism tests where you were told to distinguish finer and finer lines on a grid. While I welcome the ability to set different track heights, when you mix up tracks in that way you can go cross-eyed just trying to figure out what you're looking at. I would not recommend using the software on anything smaller than a 19-inch screen, and if you can get a second monitor on line, even a small one just to deal with the mixer window, you'll be even better off.

One thing to note is that it's very easy to run out of DSP power in a single-DSP Farm system. While it's true that buying processing tools in the form of software is cheaper than buying all the same tools as discrete pieces of gear (not to mention the fact that it keeps your studio cooler), there's a serious trade-off: when you've got a rack full of individual boxes there's never any question about being able to use as many of them as you want simultaneously. In a PCI

Pro Tools system, only three of the four DSP chips are actually available for plug-ins (in NuBus systems only two are available), so once you've set up some compressors, some EQs and a single reverb, you've used up your DSPs. According to Digidesign, one DSP chip will allow you to load up to 12 compressors and up to 24 bands of EQ.

The solution is to buy extra DSP Farms, but they ain't cheap, and you need the computer slots to put them in. So, unless you have unlimited funds and expansion slots, you'll have to learn Digidesign's complex formulae for what you can use in conjunction with what else. The supplied *Allocator* software at least helps you to keep track of what's going on, but it doesn't change the fact that if you want to do a lot of processing you have to be prepared for a constant juggling act: setting up auxiliary buses, bouncing processed tracks, and doing off-line processing with Audiosuite. If you have assigned a plug-in to a track and then de-assign it, the DSP it was using is not automatically freed up — you have to close and re-open the session to do that.

I suppose I shouldn't complain — it still beats dealing with £100,000 worth of analogue gear — but it's important to realise that if you want to take advantage of all of the cool features Pro Tools offers (especially those mouth-watering plug-ins), you're going to have to put together a pretty large system.

DOCUMENTATION

Not helping things as much as it could, unfortunately, is the documentation. I'm very sympathetic to the folks who wrote it — they had a gargantuan task on their hands — and they've produced an exhaustive and well-organised manual, but it still is extremely tough going for the new user, and even a little intimidating to old hands. There is a 'What's New in 4.0' chapter for experienced users, and an excellent

UPGRADES

If you already own Pro Tools, with the current version 3 software, a simple software upgrade to version 4.0 costs £351, although many owners — for example, anyone who purchased Pro Tools Project or Pro Tools III new after June 1st 1996 — will be eligible for a free upgrade.

Conspicuous by its absence in the new software's propaganda or documentation, however, is any mention of the original Pro Tools 442 hardware. This is because that hardware is no longer supported by the software — and neither are the NuBus-based Audiomedia and Audiomedia II cards. So if you have one of these old systems (which Digidesign now call "classic") you'll have to dump it and get new stuff if you want to use the new software; if you don't, you're stuck forever

with version 3.2 software.

On the plus side, Digidesign have an extensive upgrade program — they call it 'Exchange' — for taking in old hardware for new. It's quite a complex program; here are one or two examples. Say you have an Audiomedia II and want to trade up to Pro Tools Project. This will cost £1749.58, instead of £2231.33, but you still have to buy an 882 or 888 interface. You might be better off in this case buying an Audiomedia III for £703.83 and a new PCI computer to go with it! If you have more recent hardware, you'll find the Exchange terms are more advantageous: Going from a Pro Tools Project PCI system to Pro Tools III PCI costs £4899.75. Compared with £7131 list for a new PT III system, you save over £2200, which is what you would pay for a new Pro Tools Project — so at least you've protected your original investment.

'Essential Concepts' chapter, which is really required reading for *all* users, regardless of experience. Beyond that, however, the software cries out for a series of tutorials, which at least touch on all of the numerous parts of the program, but there are none. Like too many manuals, the emphasis is squarely on 'What does this do?', when what's really needed is 'How do I do this?' For instance, the concept of a 'comp' track, which seasoned Pro Tools users talk about all the time, is never once mentioned in the manual. If you have the patience to read and understand all the various manuals and Read Me files, you may have no trouble, but if you're the type who likes to dive in and explore a new program (and who isn't?), you're going to be doing a lot of floundering.

If ever a program called out for a spiral-bound manual that could be left open on a flat surface, this is it. Digidesign used to use loose-leaf notebooks, but unfortunately a few years ago they switched over to conventional bindings that require you to sacrifice a hand to keep them open, or else smooch them down hard enough to break the binding and eventually cause the pages to fall out. And if you need to look up something in one of the *auxiliary* manuals while keeping your place in the main manual, you'll need three hands. (Where's that assistant?)

CONCLUSIONS

Minor complaints aside, Pro Tools 4 is great stuff. It does more than ever, better than ever, and faster than ever. Digidesign's engineers have thought a lot about how to make the new features accessible and logical, and while you may find yourself scratching your head from time to time and asking 'Why did they do that?', a little reflection and practice reveals that in most cases their decisions were good ones. With this release, Digidesign once again pull way ahead of the pack, and confirm Pro Tools' position as the most versatile, most bang-for-the-buck, best-supported digital audio workstation on the Macintosh, or any other platform.

And it's very clean — as I said before, I found only one minor bug in the program, and it literally never crashed. One can only assume that a major part of the five-month period between Pro Tools 4's first announced shipping date and its actual release was spent bullet-proofing.

Of course, this much power comes at a price, and it will take a while to get used to all the new tricks, take advantage of all the features, and fully assimilate what's under the bonnet, especially with all those Preferences to set. It's unfortunate that the documentation doesn't offer much in the way of hand-holding, but at least (almost) all the information is there to be found.

There's another price, which I suppose could be called 'DSP lust'. With all the amazing third-party add-ons available, and more being announced almost daily, the prospect of putting together a super-duper system that does everything you could ever want is highly tempting. But if you go for all the plug-ins without also making a hefty investment in extra DSP Farms, you'll feel like a carpenter with a box full of fancy tools but only one hand.

Even at the lowly PowerMix level, however, Pro Tools 4 is one heck of an audio production program, and the more you add to it, the better it gets. If you can afford to indulge your lust, it can become a studio on your desktop with powers and abilities far beyond what anyone could have imagined would be found in a whole roomful of gear just a few years ago.

Q.2... "JUST WHY SHOULD I BUY A YAMAHA MIXER?"
TWO WORDS DISCLOSE YAMAHA MIXERS - "QUALITY" & "RELIABILITY". JUST LOOK AT THE YAMAHA PROMIX-02R - WOW! NOW THAT WE HAVE ADDED "AFFORDABILITY", THERE IS NO REASON NOT TO CONSIDER A YAMAHA MIXER FOR YOUR NEEDS. HOWEVER, IT IS CONCEIVABLE THAT WE DO NOT HAVE A MODEL HERE THAT WILL EXACTLY SUIT YOUR REQUIREMENTS - DON'T PANIC! WE ARE STILL OFFERING ALL OUR USUAL STOCK OF MIXERS AT THE BEST PRICES POSSIBLE. WE WANT TO MAKE SURE YOU BUY THE RIGHT MIXER FOR THE JOB, WHETHER THAT IS A YAMAHA OR NOT!

Q.3... "WHAT ABOUT AVAILABILITY?"
WE HAVE BRAND NEW, BOXED STOCK IN ALL OUR STORES - NOW!

Q.4... "IS THERE ANY CHARGE FOR DELIVERY?"
NO, WE WILL SHIP NEXT DAY TO MOST PLACES IN THE UK, BUT REMOTE AREAS MAY TAKE TWO DAYS. PLEASE ASK FOR DETAILS.

Q.5... "WHAT ABOUT A GUARANTEE?"
YOU HAVE A FULL 12 MONTHS WARRANTY AS STANDARD, NO FUSS, AS THE U.K.'S BIGGEST YAMAHA DEALER, WE ARE WELL PLACED TO RECTIFY ANY PROBLEMS THAT MIGHT ARISE, AND WE PLY FOR ANY CARRIAGE CHARGES SHOULD YOUR DESK HAVE TO BE RETURNED TO YAMAHA FOR REPAIR.

Q.6... "WHAT IF I CAN'T AFFORD ONE NOW, WILL YOU RUN OUT?"
WHILE WE DO HAVE A VERY LARGE STOCK AT PRESENT, WE ARE SELLING ALL THE MODELS SHOWN HERE THROUGHOUT OUR STORES AND BY MAIL ORDER, AND CONSEQUENTLY OUR STOCKS WON'T LAST FOREVER. HOWEVER, IF YOU LEAVE US A 10% DEPOSIT, WE WILL HOLD YOUR ORDER SAFE IN OUR WAREHOUSE READY FOR IMMEDIATE DISPATCH UPON BALANCE OF PAYMENT. PLEASE ASK FOR DETAILS.

EMAGIC AUDIOWERK8 PCI I/O CARD

Digital audio recording on computers has been possible for several years now, but without expensive multi-channel I/O units, the inputs and outputs from computer-based systems have been limited to simple stereo jacks. Now, several inexpensive multi-output PCI I/O cards are coming onto the market. PAUL WHITE looks at Emagic's solution, and decides he knows what he likes...

I get the impression that a lot of people would like to move into hard disk recording, but are put off by the fact that multiple-output systems tend to be very expensive (with the exception of C-Lab Falcon-based setups), while more affordable systems usually rely on a cheap stereo in/out soundcard or use the built-in audio capabilities of a Power Macintosh or similar computer. This year's NAMM show promised some improvement in this situation, with several companies showing more reasonably priced I/O hardware. One system that attracted a lot of interest was Emagic's Audiowerk8 PCI card, offering eight audio outputs and two audio inputs plus S/PDIF I/O. The card comes bundled with its own 8-track software, called *VMR*, short for Virtual Multitrack Recorder, and this is a pretty good description of what you get — an on-screen virtual representation of a tape machine with a smattering of hard disk-type copy and paste edit functions. Fun though *VMR* is, of greater importance is the fact that Audiowerk8 also runs with *Logic Audio* (version 2.61 upwards), providing an incredibly powerful MIDI + Audio desktop studio at a very accessible price. Prior to Audiowerk8, the only satisfactory way to get multiple audio outputs from *Logic Audio* was to use Digidesign's Pro Tools hardware, and while this is actually very powerful and well supported by third-party DSP plug-ins, it is priced well beyond the reach of the majority of recording musicians. Though *Logic Audio* doesn't currently provide on-board effects in the same way as *Cubase VST* does, version 3.0 (due this summer), promises to redress the balance, making the Audiowerk8/*Logic Audio*-based studio potentially more self-contained.

Two Audiowerk8 cards may be used at the same time to provide 16-track operation, but when used with *Logic Audio*, a single Audiowerk8 card can support up to 24 tracks of audio, computer and hard drive permitting. Optional daughterboards are planned for later in the year which will provide three more S/PDIF digital I/O ports or an ADAT optical interface.

The question all non-*Logic Audio* users are asking concerns the compatibility or otherwise of Audiowerk8 with other leading audio sequencers. At their press conference in January, Emagic were a little non-committal on the subject, but said that they were engaged in dialogue with other manufacturers, so I guess we'll just have to wait and see. However, according to the CD-ROM that comes with the package, the card is compatible with the Apple *Sound Manager*, and therefore will work within any third-party programs that can use *Sound Manager*. The catch is that the current version of *Sound Manager* only supports 2-in, 2-out operation, which rather defeats the object of having an 8-output card!

Audiowerk8, complete with its bundled software costs under £500, and because of its PCI format, it will run on any of the newer Apple, Mac clone or Pentium PC machines that support PCI expansion slots. The 18-bit oversampling audio converters and S/PDIF I/O phono sockets are all located on the circuit card, but because of the lack of panel space, the analogue ins and outs come as a short bunch of cables terminating in phono sockets. At the card end, these connect via a single 'D' connector with securing screws. A weighty ferrite block is clamped around the cable bundle, presumably as a means of reducing the amount of RF (radio-frequency interference) getting into and out of the card. Each of the phono circuits is identified by a small, printed fabric flag.

As the Mac version of the software was ready first, I installed the card into a modestly specified (603e/166MHz) Apus Power Mac clone rather than into my Pentium PC (which still isn't right in the head since the last time I installed new hardware!), and the installation went without hitch. Providing you remember to ground yourself to the computer chassis before installing the card (to avoid static problems), the process is a doddle — just plug in the card, then click on the Install icon for *VMR* on the supplied CD-ROM. Moments later, *VMR* is installed, and after restarting the computer you're ready to roll.

VMR

Using *VMR*, Audiowerk8 provides the virtual equivalent of an 8-track tape machine, including transport buttons, input meters with record select,

pros & cons

EMAGIC AUDIOWERK8
£499

pros

- Inexpensive way of getting multiple outputs from a computer-based recording system.
- Easy to install.
- Includes digital S/PDIF I/O for DAT transfers and so on.

cons

- Still limited to two simultaneous inputs.
- Noise performance isn't as good as from a system using external converters.

summary

Audiowerk8 is an inexpensive card that delivers the flexibility users have been asking for, to allow them to use an external mixer. Only time will tell which other applications come to support the card, but the more the better.

SOUND ON SOUND

solo and mute buttons for each track (see Figure 1 and its key for an indication of where each of the buttons is to be found in the software). The file format is *SDII* (mono) for Mac users and *WAV* for PC users. There's also a 20-point Location memory and an auto punch-in/out system based on the left and right locators, though you can also punch in and out on the fly, as you can with a traditional hardware recorder. The system uses the familiar

tape analogy, so before you start work, you have to click the button with the tape icon to set up your virtual tape. Another good point about creating a virtual tape to store your songs is that a separate folder is created for each tape, enabling you to keep track of your audio files.

Though the tape recorder model has been adhered to pretty rigidly in the way *VMR* is presented, the track waveform display rather gives

Emagic Audiowerk8

Figure 1.

“Audiowerk 8 is just what the recording musician has been asking for.”

► the game away. Furthermore, there are many editing functions that would be impossible on a normal tape-based machine. For example, you can remove a track to free it up for re-use, but the audio data doesn't have to be deleted — the file still exists, so it may be brought back in later if needed. Track data may also be copied, so that if you're doing a lot of risky editing or punching in, you can still go back to the original if there's a disaster. It's also possible to normalise track data to get the peak signal level up to maximum.

Most digital recorders come with a manual the size of the Yellow Pages (the *really* big ones have manuals the size of *SOS!*), but Emagic's proud boast is that most of what you need to know is printed on the back of the box. While this is both laudable and impressive, it isn't exactly convenient to have a squashed cardboard box on your manuals shelf, but to be fair, once you've read it, you probably won't need to refer to it again. Such information as you can't glean from the box comes in a small supplementary manual of less than 20 pages.

Above the transport controls is the main time readout (the largest time display in the *VMR* window). The two smaller time displays above the main readout are the left and right locators, upon which all the main editing functions rely. The values of these locators can be changed from the keyboard, or via the mouse, either by clicking on the Set Locator buttons (see Figure 1) or, even more simply, by clicking on values in the main time display and dragging them onto the relevant locator display. The reverse is also true; you jump to the stored locator values by dragging the value from the relevant locator onto the main time display. The

- ### KEY
1. Tape Indicator. This tells you how much 'virtual tape' (ie. hard disk space) you have left to record on.
 2. Waveform Display.
 3. Level Meters.
 4. Track Solo, Mute, and Record buttons.
 5. Stereo Link buttons.
 6. Tape Button. You click on this to set up your 'virtual tape'; ie. the folder in which the audio files you record with *VMR* will be stored.
 7. Analogue/digital input toggle selector.
 8. Pitch control (acts like varispeed on a tape-based multitrack); range -9.99% to +9.99%.
 9. Autolocate position displays (only six of the available 24 shown).
 10. Left and right locator displays, with the Cycle (loop) mode button between them.
 11. The two Set Locator buttons (at either end of this row of controls), with the Autodrop (centre left) and Edit buttons (centre right).
 12. Main time display.
 13. Transport controls.
- Matt Bell

left and right locators are useful when using the Autodrop function (Emagic's term for auto punch-in) in combination with Cycle (loop) mode to record a number of alternative takes of a part — the left and right locators then mark the ends of the part you want to keep recording. After recording various takes in Cycle mode, you can then audition them all and select the best one. The Autodrop function includes a pre-roll time, and Cycle may also be used simply to loop around a section for rehearsal.

Above the left and right locators are the Position Displays (see Figure 1 and key), which show the

inspired
TASCAM

The digital portastudio[®] 564

**In 1979
Tascam
introduced the
world's first
Portastudio[®],
revolutionizing the
world of recording.**

Now, almost twenty years later, **Tascam** has invented a unique 4x faster **MiniDisc Drive** – the only drive powerful enough for the world's first **Digital Portastudio[®]**.

The **Tascam 564** has all the simplicity and ease of use of a traditional cassette Portastudio but with digital sound quality and unique new features like **sequencer-style editing** and **"non-destructive" track bouncing**. The Tascam 564 uses **MD Data Disc** – a new removable digital recording format – to give **37 minutes** of digital 4-track recording on a single disc.

The 564 **Mixer Section** is equipped with all the superior features you'd expect to find on a top Tascam Portastudio: **balanced XLR and jack mic/line connectors; 3-band sweepable mid EQ; 4 additional stereo inputs and 2 effects sends** on each channel; flexible monitoring; individual track outs, 2 stereo outs and a stereo **S/PDIF digital out**.

A **Looping and "Best Take" Function** continuously loops any section of a song and records and stores up to **five different takes** of a solo or drop-in before you Select and Save the

best one! **Powerful Digital Editing** functions allow you to cut and paste recordings **like a sequencer**; moving, erasing and copying different song parts and programming them to repeat and play-back in any order you choose. And up to **five levels of full 4-track bounce** can be achieved before any tracks are erased.

The Tascam 564 also features advanced synchronization capabilities, with both **MIDI Time Code and MIDI Clock** output, as well as all the usual varispeed, auto punch-in/out and rehearse mode features.

564

Emagic Audiowerk8

- ▶ stored autolocate points. You can store up to 24 of these, but you can only see six of them at any one time, as there are only six displays in the VMR window. Again, autolocator points may be stored by dragging values from the main time display, or the left or right locators, and you jump to the autolocate points by dragging the values from the position display to the main time readout. For those who don't like mousing around, a comprehensive set of key commands is also provided to enable users to access the left/right locators and position memories very quickly.

During editing, source tracks are selected using Solo buttons, and the destination track with Record.

Sections may then be copied, moved, exchanged, or replaced with silence. A similar process allows multiple sources to be selected (between the same time locations, of course), and bounced to a new destination. The Edit button (the one marked with the diagonal arrow above the main time display) is instrumental in all editing activities; after selecting your source and destination tracks and times, pressing this button brings up a simple on-screen dialogue box that allows you to select the precise function you want (for example, Copy, Move, Exchange, Silence and so on, as described above). Audiowerk8 supports both mono and stereo file recording using the stereo link button between the track pairs, located under the level meters. If stereo files are bounced, they must be sent to

a stereo destination. It's also possible to bounce all eight tracks down into stereo, via an external mixer, onto two of the original tracks, without losing the original audio data. This means that you can create submixes using external effects and EQ, as with a conventional tape machine, except that you don't have to leave two tracks free to do it.

IN USE

Using VMR isn't unlike using one of the new stand-alone 'personal' digital multitrackers, such as Fostex's D80 or Roland's VS880, in that the

Plugging into PCI — how the Audiowerk8 fits into the back of a Power Mac.

tape analogy is combined with the basic essentials of digital editing, but without any frills. However, VMR doesn't have any sync facilities, as it's assumed that if you're working with MIDI or as part of a more professional system, you'll be using *Logic Audio* with the card.

VMR's user interface has a reassuringly simple, robust 3D feel to it, with large, familiar buttons and clear displays of both 'tape' position and recording level. A large button marked with an 'A' and a 'D' toggles between digital and analogue inputs, and tracks are armed for recording exactly as with a hardware machine. There's also a useful varispeed-style function in the form of the Pitch button. You can name tracks, either by choosing a preset name from a pull-down menu, or by entering up to 12 characters of your own, and as the track is recorded, its waveform is displayed in the track waveform window. Track data may also be moved from one track to another. Despite all of VMR's useful features, I can't help thinking of Fisher Price whenever I look at the screen (if they don't currently produce a 'My First Digital Multitrack Recorder', it's only a matter of time!).

When used from within *Logic Audio*, Audiowerk8 comes up as one of the available audio device options in the Audio Object parameter box, and, once selected, it works in pretty much the same way as any other audio interface device. Track 1 and 2 Audio Objects have faders, panning and stereo linking, as well as record buttons, mutes and solos, but there's no EQ, as there is if you use Pro Tools hardware. The remaining Audio Objects are outputs only, as Audiowerk8 can only record on up to two tracks at any one time.

Recording is at 16-bit, and though some background hum and interference is evident when you turn the monitoring up, at moderate volume settings with replay stopped you'd have to put your ear to the monitor to notice anything. While a more expensive system with external converters is undoubtedly better in this respect, Audiowerk8 can produce excellent results if you're careful with your record levels. For stereo editing, the S/PDIF I/O provides a much cleaner path, and anyone who has a good DAT machine with an S/PDIF output might want to consider using it as a front end (ie, just using the converters) while recording, to ensure the quietest results.

The Audiowerk8 card, with the attached eight analogue outputs. The S/PDIF connectors can be seen on the card itself.

AUDIOWERK8 SPECIFICATIONS

Card type	32-bit PCI Busmaster
Digital audio format	16-bit linear
Nominal sample rate	44.1 kHz
Sample rate	Range 40-50kHz, resolution 1Hz
I/O	Two analogue inputs (-10dBV, unbalanced RCA connections), eight analogue outputs (-10dBV, unbalanced RCA connections), stereo digital input and output (S/PDIF)
Oversampling	128 x
D/A converters	18-bit continuous calibration
A/D converters	1-bit bitstream, 18-bit equivalent
Total Harmonic Distortion	Less than 0.006% @ 1kHz, 0dB signal level
Dynamic range	Greater than 90dB, input-to-output, A-weighted
Frequency response	20Hz to 20kHz, 0.5dB, Input-to-Output, 44.1kHz
Maximum audio tracks	8 tracks with VMR, 12 with <i>Logic Audio Discovery v1.1</i> , 16 tracks with <i>Logic Audio v2.6.5</i> , 24 tracks with <i>Logic Audio v3.0</i>

HARDWARE REQUIREMENTS

Audiowerk8 requires a computer with a free PCI slot, and will work with either MacOS machines or Pentium PCs running Windows 95. Both sets of software will be shipped with production systems, though only the Mac version was available for this review. Windows users may use anything from a Pentium 60 upwards, though a P100 or better is recommended, while Mac users may pick any PCI Power Mac upwards from the 601 processor. A minimum of 16Mb of RAM is required.

VMR is able to run with virtually any up-to-date SCSI or IDE drive, and around 5Mb of disk space is needed for each track-minute of recording. Iomega Zip drives apparently allow up to 4-track operation, whereas an Iomega Jaz drive will support eight simultaneous tracks. Emagic have not tested the later Syquest removable drives, but say that their technical specifications indicate that they should work OK.

At the time of writing, the current version of *Logic Audio* throws up a couple of problems when working with Audiowerk8 (older versions don't recognise it at all), although this problem should have been fixed in the version available by the time you read this. The problems I found related to the input meters not registering until one attempt at recording had been made, and, more seriously, tracks being recorded couldn't be monitored during recording. Check that you have the appropriate version of *Logic Audio* to avoid disappointment.

SUMMARY

Like all systems with on-card converters, Audiowerk8 is vulnerable to a certain amount of hum and noise pickup from other parts of the computer, or from adjacent cards, but Emagic have done their best to keep this to a creditable minimum. Installation is straightforward, the bundled software is very friendly for non-MIDI sessions, and having multiple outputs finally means that the user on a budget can exploit the full capabilities of an external mixer and effects units. All you need is a small mixer, plus some form of monitoring system, and you can make very sophisticated recordings.

For serious applications, where sync'ing and mix automation are required, Audiowerk8 teams with *Logic Audio* to produce a very powerful desktop

music production system. It'll be interesting to see which, if any, of the other sequencer platforms Emagic decide to support with Audiowerk8, as there are several multi-output audio systems poised to hit the market over the next few months (and one is featured in this very issue — see the Korg 1212 card review starting on page 156), most of which have multi-platform support. Audiowerk8 is the most cost-effective solution to the multiple output problem to date, but those demanding the best possible sound quality may either have to wait for the digital daughterboard (expanding the system to four stereo S/PDIFs plus ADAT digital I/O), or look at one of the more costly systems based on external converters.

Ultimately, Audiowerk8 is just what the recording musician has been asking for, and though you can get better performance from a professional system, you still have to pay quite a lot more to get it.

Cubase VST + Korg Digital £3449
 First in the UK to test and deliver this amazing system. It's what we've all been waiting for - a complete digital Multi I/O system from start to finish. New Cubase Version 3.5 is astounding. If you already have an ADAT you can use your ADAT as an 8 channel A/D & D/A converter. If you want to get multiple outputs into your Analog mixer without an ADAT you'll need the Korg 880AD Unit. For completely Digital Thruput you'll need a Digital Mixer such as the Korg 168RC. Unlike other systems the Korg 1212 will work very adequately in a less powerful Mac. See "Previous PM Models" to cut the cost.

PowerMac 7300/166 • x12 CD-ROM • 64Mb RAM • 2Gb Hard Disk • Cubase VST 3.5 • MultiScan 17 Monitor • MidiMan Interface • Korg 1212 I/O Card

New Recipe

WALDORF MICROWAVE II WAVETABLE SYNTHESIZER

Waldorf have been cooking up something special for the son of their acclaimed synth dynamo, the Microwave.

PAUL NAGLE gets quite a taste for it...

After the remarkable success of their Pulse monosynth, German company Waldorf have returned to their first love: wavetable-based digital synthesizers. The Microwave II continues in the Microwave tradition, replacing the famed analogue filter with an all-digital counterpart and improving and changing many other features. It's great to play a new instrument not devised out of a desire to jump on a bandwagon or to follow fashion but with the simple aim of perfecting an already classic design.

PHYSICAL THINGS FIRST

Two rack spaces high and only 220mm deep, the Microwave II is sleek and distinctive. The front panel has five edit-selection switches, a play/shift switch, a power switch, seven bright LEDs, and four continuous knobs which are used to perform all edit operations. It features the familiar large red Microwave knob which, depending on the current mode, is used to select sounds or to scroll through edit pages. The knob is positioned in the centre of an outward spread of ripples used to delineate the programming matrix (does that make sense?). One obvious improvement is in the form of the 2-line x 40-character LCD. This isn't as large as some, but does a great job of showing what you need to know. At the rear of the instrument are the

obligatory MIDI In, Out and Thru, plus assignable twin stereo outputs and the external power connector.

IN USE

Power up and you enter Sound mode, from which you can access 256 patches divided into banks A and B. Patch name, mode (Sound or Multi) and the main volume level are shown, and pressing the Play switch brings up the value of four patch-programmable parameters to be tweaked during performance. You might choose Cutoff Frequency, Resonance, Filter Envelope Amount and Wavetable selection in one patch, and parameters relevant to the arpeggiator in another. In this mode, the knobs do not send MIDI control changes, presumably because most of the available controllers are already directly allocated to specific Microwave parameters. Don't worry, though, as MIDI controllers *are* sent during patch edits — almost 80 in total — chosen where direct control would be most useful. The remaining parameters are controlled via SysEx so you can easily record an entire editing session into your sequencer.

TWEAKING

Once you've sniffed through the factory sounds (see 'Sounds' box), it's time to enter the wonderful world of sound creation. Pressing one of the edit

buttons lights its corresponding LED and gives you access to a series of pages. These are helpfully labelled in the top right-hand corner by a 'title' which times out after a user-definable period. Each edit screen has up to four tweakable parameters and when you've altered any, a small 'e' appears after the patch name in the Play screen. You can store your changes, compare them with the untweaked version, or even recall the original without storing — but be careful with this last function: if you recall the patch by mistake, your edits are gone forever. Like the old Microwave, the Mark II has up to eight edit buffers to maintain tweaked versions of your patches.

Waldorf have done a good job with their four continuous knobs, avoiding the sudden leaps that usually happen when knob position doesn't match the parameter value. You scroll through the pages using the Big Red Knob, then use the control knobs directly under the LCD to increment or decrement the displayed value. I am pleased to report that these feel quite heavy but respond positively to a fast turn, taking you to the extremes of any scale; a slow turn is accurate enough for single increments. It's a great pleasure not to have to flick a small cursor around the screen to edit each value.

RIDE THE WAVE

If you look back at the last review of the original Microwave (August 1995's *Sound On Sound*), you'll get an idea of how this unique synthesis engine works. Suffice it to say here that each oscillator draws its waves from one of 128 wavetables; that's 64 factory, 32 user (created by computer software) and 32 currently 'reserved'. The position in a wavetable can either be static or swept by a variety of modulators for some dramatic harmonic effects. At the end of each table are the

traditional sawtooth, square and triangle waves — so you can get pretty near to most analogue sounds too. If you wish, wavetable modulation can be restricted to avoid accidental selection of these three waveforms, preventing an unwanted jump from otherwise related waves. A phase parameter for each wave allows you to home in on individual start samples; if you leave it set to 'free', a new random phase value is set for each note.

The two-oscillator design of the Microwave II has many of the classic features beloved by synth programmers. Using oscillator sync, those rich harmonic sweeps and searing leads and basses become a reality. The ring modulator takes the output from both oscillators and produces a signal containing both the sum and the difference of the frequencies — useful for clangorous bells, gongs and so on. There's a noise generator for sea, wind and percussive effects too.

The outputs from oscillators, ring mod and noise are all blended in a mixer stage. Also here is Aliasing, described in the manual thus: "a digital artifact that is audible as soon as a wave has harmonics higher than half the sampling frequency. Usually, aliasing is reduced to a minimum by some magical mathematics, but here you can override this and listen to aliasing distortion just like on [sic] the dawn of the first digital musical instruments like the PPG Wave or the old Microwave". Another new feature, Time Quantisation, allows you to undo some of the clean-up computations done by the instrument, adding extra 'fizziness', especially at the lower end. It overrides the new super-smooth wave interpolation algorithm, adding some traditional Waldorf harshness. Finally, Clipping selects the type of distortion that is applied when the sum on all mixer levels exceeds 128. Options to choose from are 'saturate', which effectively limits the signal to the maximum level and sounds rather like analogue distortion, and 'overflow', which has a harder, more digital effect. The Microwave II's richness is derived from the raw sound-making engine and not from some mega effects unit. In fact, there are no effects as such, apart from a quite respectable 'Juno-style' chorus/ensemble, which is a simple 'on' or 'off' affair.

MODES

You can set each patch to be polyphonic or monophonic and use Assign mode to bring forth gut-wrenching power. Three modes are available: Normal, in which every note played uses one of the Microwave II's 10 voices; Dual, in which each note uses two voices; and Unisono, in which all voices are used, divided by the number of notes played. If you play just one note, you get a massive 10 stacked voices, complete with variable detune between them. Unisono with OTT detune turns just about any patch into a rampaging monster, and I had to resist the temptation to use this trick in everything I created. Other performance modes include glissando and portamento, with linear or exponential response available.

FILTERS

The 'classic' Microwave was a fascinating hybrid combining analogue filtering with a digital wave generator. Its owners, offered another machine,

pros & cons

WALDORF MICROWAVE II £999

pros

- Unique sound.
- Superb programming power.
- Painless upgrades and expandability.
- Great MIDI implementation.
- Continues familiar Microwave tradition.

cons

- No effects.
- External power supply.

summary

From the first monster unison solo to the last swirly string pad, the Microwave II pulses with dark power. Rich resonant sweeps, PPG-like wails, delicate solo voices and strange, shifting digital soundscapes are all here. Potential buyers of a Microwave II won't be looking for a GM logo or realistic piano samples; instead they will be explorers in synthesis determined to uncover sounds that can't be produced by other means.

SOUND ON SOUND

NEW FEATURES AT A GLANCE

- 10-note polyphony
- Oscillator sync
- Ring modulation
- New filter types (the filter is now digital, not analogue)
- No card slot.
- Operating System can be upgraded by SysEx commands
- Arpeggiator
- 256 patches, 128 multis
- Improved envelope speeds
- External PSU
- Improved display and access
- Performance knobs
- MIDI controllers for the majority of parameters
- Ensemble/chorus
- Twin stereo outputs

Sounds from the original Microwave can be converted (although some patches will sound different because of architectural changes).

WALDORF MICROWAVE II

UPGRADING

Open up most modern synths and you'll meet a computer stuffed full of complex software. If you've ever had to send one back for an upgrade or a fix, you'll know how frustrating that can be. Waldorf's solution (seen previously on devices such as Roland's VS880) is to provide operating system updates in the form of MIDI files. You play the file to the synth, it responds with 'Receiving System Update...' then 'Updating System...' and, hey presto, you're upgraded! Now that's what I call impressive — let's hope everyone else follows suit.

Updates are available at <http://www.waldorf-gmbh.de/waldorf/microwave2/system.htm> along with notes on what has been added or fixed; if you don't have internet access, the file is available from your dealer.

MODULATION MAYHEM

Waldorf synthesizers are well known for their impressive modulation matrices, but with the Microwave II Waldorf have really gone to town. Sixteen modulation routings can be set up, four of which require you to have at least 'O' level maths to understand them. I've reproduced the matrix here to whet your appetite for the kinds of Micro Meals you can serve up:

• SOURCES

LF01, LF02, Filter Envelope, Amp Envelope, Wave Envelope, Free Envelope, Keytrack (MIDI Note number), Keyfollow (as Keytrack but plus pitch-bend and glide), Velocity, Release Velocity, Pressure, Poly Pressure, Pitch Bend, Mod Wheel, Sustain, Foot Controller (CC 4), Breath Control (CC2), Control W, X, Y and Z (4 assignable controllers), Control Delay, Modify 1, 2, 3 and 4 (more about these later), MIDI Clock, Minimum, Maximum (these last two being constant values).

• DESTINATIONS

Pitch, Osc1 Pitch, Osc 2 Pitch, Wave 1 start position, Wave 2 start position, Wave 1 mix level, Wave 2 mix level, Ring Mod level, Noise level,

Filter 1 Cutoff Freq, Filter 1 Resonance, Filter 2 Cutoff, Master volume, Pan, Filter Envelope Attack, FE Decay, FE Sustain, FE Release, Amplifier envelope Attack, AE Decay, AE Sustain AE Release, Wave Envelope times, Wave Envelope levels, Free Envelope times, Free Envelope levels, LFO1 rate, LFO1 level, LFO2 rate, LFO2 level, Amount of modulation assignments 1-4.

A note on modifiers: up to four modifier units can be set. These consist of two modulation sources and a mathematical relationship between them. The functions available are: Addition, Subtraction, Multiplication, Division, XOR, Or, And, Sample & Hold, Ramp, Switch, Absolute value, Minimum Value, Maximum Value, Triggered Ramp, Low-pass filter, Differential Function. If this all seems a little heavy, that's because it is!

It's a little beyond the scope of this review to examine each of these in all their glory, but all kinds of interactions between modulation sources can be used creatively, from the simple addition of control signals to the building of a modulation signal governed by the mathematical criteria listed.

► will always ask first: what's the filter like? Can Waldorf really make an all-digital filter that sounds as good? To my ears, they've largely succeeded. I might have guessed that this was a digital filter by the very slight harshness that sneaks in as you hit maximum resonance — but then again, I might not. It's reassuringly smooth and responsive, but perhaps most impressive is the way it self-oscillates even with no driving signal from the oscillators present.

In fact there are actually now two filters in series, the first being more versatile with (currently) six settings: 24dB Low Pass, 24dB Band Pass, 12dB Low Pass, 12dB Band Pass, 12dB High Pass and SinX>12L — this last being particularly ballsy and a main component of many of the MWII's most powerful bass patches. I asked the Waldorf team for a technical explanation, and they say that it's a signal shaper with a sine function; the input signal is included in a sine function and its output is used for the 12db filter, so it's simply a kind of saturation which produces nice side-effects. Anyway, it's rapidly becoming my favourite filter of the lot. The second filter is much more simple: a 6dB slope and either Low or High Pass mode with no resonance setting. If you wish to disable it, simply set the cutoff to fully open.

Having these new filters to choose from permits more delicate sound sculpting than is typically associated with a Microwave — high- and band-pass sweeps cut through beautifully. Now the entire synth is DSP-based, there's no reason that future developments can't include morphing filters or other, as yet undiscovered, delights.

LFOS

No synth would be complete without some form of cyclic modulation. The Microwave II has two LFOs with all the expected sine, sawtooth, square, and sample & hold waveforms that we hold dear, plus

some additional parameters too. Symmetry adjusts the relationship between the rising and falling edge of the waveform; its values can be positive or negative, so you can continuously vary the modulation shape rather as you can on the Korg MS synths; because a little unpredictability is always useful, a Humanise function adds a random variation to LFO speed. I'd like to have seen these as destinations in the modulation matrix so that you could, for example, modify the LFO waveform or its randomness by velocity. The second LFO is identical except for an additional parameter, Phase, which enables its frequency to be locked to the frequency of LFO1. The Phase offset is an amount in degrees. Both LFOs can be sync'd to MIDI clock and, like other Waldorf synths, the MWII lets you generate a new Sample & Hold value for each incoming note by specifying a rate of 0. If by any chance this isn't enough control for you, more complex modulation sources can be created using one of the envelopes.

ENVELOPES

The Microwave II has four envelopes. Three of these are logically connected to specific destinations, but all of them can be overridden. The filter and amplifier envelopes are of the familiar (and most intuitive) ADSR variety; the Wave envelope has eight different times and levels with programmable key-on and key-off loops. Finally, the Free envelope has three times and levels plus release time and level.

Using the modulation matrix (see box), any envelope can be assigned to any destination. You can do unusual tricks such as modulating the Wave envelope times (or levels, or both) with the Free envelope while simultaneously using another control source to modulate aspects of the Free envelope itself.

ARPEGGIATOR

Arpeggiators are very much back in demand again, and the Microwave's is a great deal of fun. Similar to that of the Pulse, it has 16 factory patterns in addition to the usual up, down, alternate, and random sort modes. Notes may be triggered as played, reversed, in note order or in reverse note order, over a range of up to 10 octaves. In an early draft of this review I wrote "some form of programmable pattern would have been nice" but after I upgraded the operating system, which I did not once but twice during the review period (see 'Upgrading' box), this facility magically appeared! So now you can create a user pattern of up to 16 steps and, better still, you can do it in each patch — marvellous. Arpeggio velocity is taken from either the root note or the last note played, this latter being great for emphasising acid blips if you hold a chord and just repeat a single note from it at different strengths.

MULTIPLE (MICRO) ORGASMS

Multi Mode is where you stack, layer, velocity- or key-split up to eight patches on the same, or multiple, channels. You can route individual

SOUNDS

During the obligatory tour, some of the patches that particularly impressed me were: A01 Unisono, a monster lead patch using oscillator sync and unison mode; A25 Deep Spaces, a strange ambient backdrop; A28 Ocean, another magical pad; A48 Mello Choir, an eerie choral interpretation; and A78 Why TB?, which you'd swear was one of those new-fangled computers pretending to be an analogue synth — great use of the mod wheel mapped to filter cutoff. A88 Sub Woof shows off a speaker-

shaking bass end (a result of cleaner circuitry and new filters, apparently); A18 Big Balls is, as it implies, powerful; and B15 18dB Acid is a squelchy synth. There's also the usual collection of weirdies, but many serve as starting points for patches of your own, and I suppose it would hardly be a Waldorf synth without some unfathomable noises...

The preliminary manual is a slender tome of 60 or so pages with tantalisingly scant detail on the meat of the programming. A full manual is promised as an incentive for owners filling out their warranty cards.

sounds to the alternate stereo outputs or use panning to create up to four separate polyphonic outputs. It's handy to be able to override a patch's panning at this stage and thus save the trouble of a search through the modulation matrix to see why your solo is hurtling from left to right.

You get 128 Multis, which is a generous number with a variety of uses — not least to create an absolutely mind-blowing arpeggiator. Yes folks, in Multi mode you can have up to eight arpeggiating patches, each with its own clock divisions, patterns, sort orders, directions and ranges. This can become an incredible maelstrom of frantic throbbing rhythms and of course you can sync to MIDI clock too — could be the most fun you can have and still discuss it in mixed company...

CONCLUSION

Lovers of the 'old' Microwave will appreciate the improved user interface, increased polyphony, cleaner sounds, and other new features. Other people, baffled by the original, will probably be equally baffled by the Microwave II, although it's possible that an earful of those huge unison/sync solo patches and that arpeggiator may prove tempting enough to make them take another look.

I'd like to have seen still more enhancements, such as 16-bit wavetables or — better still — the ability to convert user samples to wavetables via an onboard floppy drive. Maybe we'll see these things in the Microwave III? The characteristic grunginess is very cool, but I feel that the raw sound is still quite similar to that of the first machine; and a synth in this price bracket should, I think, have at least some basic effects included, if only to save you taking a reverb unit to gigs. But the Microwave I is obviously cherished by many users and whether existing owners will trade in their machines to get the new one or keep both, only time will tell. Personally, if I could make a case for 'just one more synth', this would be it. It's different enough to sit comfortably between analogue and sample playback machines, powerful enough to stand out in a mix, and distinctive enough to be a true classic. I was delighted by little touches such as the ease of operating system upgrades and, although I don't think I've done much more than scratch the surface in this review, the potential I've attempted to outline will be mouthwatering for some and daunting for others. If you're not into programming sounds, this synth probably isn't for you — but if you want to cast off the shackles of analogue wannabes and explore a gritty, vibrant digital synth, you simply must test-drive the Microwave II.

POP ART

FLOOD & HOWIE B — PRODUCING U2's *POP*

U2 have always striven for a new sound on each of the records they make, and during the sessions for their latest album, their aim was once again 'to construct a new sound for U2 whilst still making them sound like U2'. To this end, they brought in production wizard Flood and Scottish dance artist Howie B and set about new methods of recording. PAUL TINGEN investigates the art of Pop...

How many times is it possible for a band or an artist to successfully re-invent themselves? Is there a point beyond which one is doomed to repeat oneself, because another re-invention means losing an established musical identity? Is it necessary to keep re-inventing oneself at all, or is it acceptable to coast along, regurgitating a successful formula, purely for the pleasure of the fans and one's own enjoyment? And by what criteria is a re-invention judged to be a failure, or a success? These questions have been given new relevance and received new answers with the arrival of U2's latest album, *Pop*. Everybody knows that U2 have always believed regular re-invention to be an absolute necessity, and the way they have maintained their adventurous musical spirit, whilst still sounding undeniably like U2, has contributed greatly to their continuing critical and commercial popularity. This is quite an amazing achievement, given that it's now 20 years since the quartet first met in Dublin, and 17 years since they burst onto the international stage.

Other bands and artists with long careers have found different answers to the tensions between commercial demand and artistic renewal. The Rolling Stones will sound forever like, well, The Rolling Stones; and David Bowie has changed his style so many times that he's alienated and bewildered many of his fans. U2 have trodden carefully between these two extremes, first changing direction from their early, raw sound with the more intimate and colourful *The Unforgettable Fire* (1984), produced by Brian Eno; then with *The Joshua Tree* (1987), which featured a more rootsy sound, and was produced by Eno and Daniel Lanois. The next big re-invention happened with *Achtung Baby* (1991), a grungy, desperate, distorted affair that was produced by Lanois, with help from Eno. *Zooropa* (1993), produced by The Edge, Eno and Flood, was their most recent album under the group name until this year. Recorded in short, spontaneous

outbursts during their *Zooropa* tour, the album was an experimental but rather disjointed record that might have been better as a 4-track EP (which was how it was originally planned — Engineer Robbie Adams described the recording process for both *Zooropa* and *Achtung Baby* in *SOS* March '94). And now, there's *Pop*. The hit single 'Discothèque' that preceded the release of the latest album immediately made clear that this was U2 — but not as we know them. The record completely lacked 'classic' U2 trademarks (such as Larry Mullen's big drum sound, Edge's sustained guitar-playing and Bono's falsetto vocals) — and the prominent dance influences also surprised many people. When the news of the new album's title was released, some were eager to jump to the conclusion that U2 had bowed to the pressures of commerce and fashion. Was this a re-invention too far?

In fact, large parts of *Pop* are excellent. There are a number of truly great songs, such as 'If God Will Send His Angels', 'Staring At The Sun', and

U2 at Hanover, Dublin, August 1996: (l-r) Adam Clayton (bass), Bono (vocals, guitar), Larry Mullen (drums), and Edge (guitar, keyboards).

'Please', and much of the album is executed in new and fresh ways, with many innovative, dry-sounding multi-rhythmic drum patterns, highly unusual guitar textures, and a relaxed and mostly understated Bono. And yet, somehow, it still sounds like U2. So, how did they manage to successfully reinvent themselves again? The answer can in part be found in changes in the personnel with which U2 surrounded themselves for the making of this album. *Pop* is the first U2 album since *Rattle & Hum* (1989) which does not feature either Lanois or Eno. Instead the album was produced mainly by long-standing U2 engineer, mixer and *Zooropa* co-producer Flood, with lots of help from Scottish DJ and dance artist Howie B. They also had some help from Steve Osborne (known for his work as one half of the remix/production team he formed with DJ-turned producer Paul Oakenfold), as well as dance producer Nellee Hooper (who produced Björk's *Post* and Massive Attack's *Protection*). Howie B's account of his work on *Pop* can be found elsewhere in this

article, but to find out about the making of *Pop* from the man who is credited as main or sole producer on seven of *Pop*'s 12 songs, and co-producer on the other five tracks, I travelled to North-West London, to meet Flood in his own studio.

THE GREAT FLOOD

Flood is a busy man, and this was reflected in the state of his studio, which was full of flightcases and cardboard boxes (see the panel on the studio elsewhere in this article). He started the interview by explaining the idea behind the large *Pop* production team: "Part of U2's working method is bouncing off each other's and other people's ideas. With the exception of *Rattle & Hum*, they've always had two or three people on the production side; if they have only one producer, they're likely to veer towards one particular style, and that's not what they want. So on *Pop*, they asked Howie B to be there because he comes from a dance music background, and I was there because I come from

HOWIE B ON U2

"What I admire about U2 is this hunger, which they still have, for making a challenging record. They really do want to push the barriers back. The way they involved dance culture on this record was really good. It's not as if the album they've made is a club record, but there are definite influences from the club scene in there. It's very brave of them to take this stance."

FLOOD & HOWIE B — PRODUCING U2's POP

► a radically different background. Basically, the idea is to throw everybody into the studio at the same time, and see how they rub off each other."

Flood's background is not easily defined, but it is definitely not in dance music and related music styles. His list of production, engineering and mixing credits is so eclectic that it almost defies definition, including '80s synth pop (Soft Cell, Depeche Mode and Erasure), experimental industrial (Nine Inch Nails, Nitzer Ebb and Renegade Soundwave), experimental and straightforward rock (PJ Harvey and Nick Cave as well as The Charlatans), trip-hop (a remix of the Massive Attack single 'Protection'), and even Tom Jones (the single 'A Girl Like You'). Eclectic indeed: the only common aspect is that it's almost all experimental in nature. Flood started this leftfield career in 1978 when he was taken on as runner at Battery Studios in London, and was named Flood within weeks because of the floods of tea that he made one particular late-night session! He continued his engineering apprenticeship at Marcus and then at Trident Studios, going fully freelance as an engineer/producer in 1985. His involvement with U2 goes as far back as *The Joshua Tree* in 1987, which he engineered. Flood picks up the story: "After *The Joshua Tree*, I worked on *Achtung Baby*, which I engineered and mixed, and on which I also had creative input. And then *Zooropa* was

very much Eno, Edge and myself working on songs individually and then taking what we'd done to the other and seeing what they did with it. It was an experimental record: we weren't very precious about what we were doing." On *Pop*, Flood graduated to the role of sole producer on most of the tracks, keeping his hands free to leave almost all engineering to Mark 'Spike' Stent (known for his work with Massive Attack) and Howie B. The youthful-looking Flood (he's 36, but could easily go for 26), explained the division of labour on *Pop* in more detail: "On *Pop* I was what you could call the creative coordinator. There were some tracks where I didn't necessarily have a major involvement, hence the four co-production credits with Howie, and the one with Steve Osborne, but ultimately the buck stopped with me. I had the role of the creative supervisor who judged what worked and didn't work."

Steve Osborne also worked on some of the tracks on *Pop* which were considered as potential singles, like 'Do You Feel Loved', 'Staring At The Sun' and 'Gone'. As Flood explains, Steve was brought in when these tracks were two-thirds finished, "as someone from the outside who could give an objective opinion, and be ruthless about what they were doing"; a role that U2 had in the past given to the producer of their early albums, Steve Lillywhite. The other name producer who was involved in the

FLOOD ON ANALOGUE

When I asked Flood whether the last-minute edits he did on the *Pop* track 'Mofu' during mastering were performed with a digital editor, he reacted immediately: "You must be joking! I did it on half-inch tape". He also quickly added that he's a "bit of a diehard analogue fan." Apparently U2 and Howie B also have a love affair with analogue — the reason why the band's studio has two Otari tape multitracks, the MTR90 and the MTR100. However, Flood loves analogue for reasons which are slightly different from those of the increasingly widespread back-to-analogue movement. For starters, he didn't argue for a moment that analogue actually sounds more accurate than digital, like many others: "Rock 'n roll isn't about accuracy, rock 'n roll is about feel. Analogue isn't accurate, but it is musical. I love the sound of it, especially at 15 inches per second, because I love what it does to the bottom end at that speed. And with Dolby SR, noise is not an issue. Analogue also has

wonderful tape compression that's inherent to rock 'n roll. When you are aware of the fact that analogue isn't accurate, but realise what it can do, you can use the medium as if it's an effect."

Flood continued by saying "it's very dangerous to be negative about change, but it's also dangerous to assume that everything from the past is wrong. I think that a marriage of analogue and digital will give you something very powerful." He professed his love of digital effects, especially the Eventide H3000 and H4000, and stated that he liked hard disk recording and editing for the writing process. But with his argument that analogue isn't accurate but musical, he clearly didn't mean to imply that digital therefore sounds more accurate: "There are harmonics above 20KHz [the limit of human hearing] that influence the way we perceive music, even if we can't hear them as such. Digital can't even reproduce those. And all sounds produced by, or recorded on, digital have inherently the same quality: there's an element of blandness.

"There's not just a sonic, but also a psychological reason why I prefer recording on analogue. Particularly when working with a band like U2, when you're dealing with continuously changing options and approaches to each song, you want a point of focus. Digital recording is a bit like MIDI, it's way too fluid. You can all too easily chop and change things, and you have potential options all the time. Whereas when working with analogue tape, you commit yourself to some degree when you record something. You'll work harder at getting a part to fit into a piece of music, and that brings out the musicianship in people and the interaction between musicians. Even during an overdub, a musician is reacting to other musicians, and he or she will create a sound that pushes the song on in a different way. But when you're working digitally, things are so fluid that you often tend to not bother getting it right, and say: 'let's just play this little bit, and we'll chop and change it around later on.' To me, that's denying the ability of the musician."

making of *Pop*. Nellee Hooper, played a large role in the germination of the album. Flood: "U2 started off work on *Pop* in the summer of 1995, when they did sessions with Nellee in London, France and Ireland. During the autumn, Howie and I came in, and we all worked together for quite a while. I think the idea was to combine the influences of Nellee, Howie and me. What also really affected U2's way of working, and therefore the way the record turned out, was the fact that Larry had a bad back problem and couldn't

play very much. He had major surgery on his back over Christmas '95, so during January '96 we didn't work on the album. Normally, U2 work their ideas out in the studio with the four of them actually playing together. But when Larry couldn't play, we had to find new ways of working."

LARRY'S BACK

Although it was tough on poor Larry Mullen, his back problems did prove to be a musical blessing in disguise, as they forced U2 out of their usual methods of working. This in turn opened the doors to new influences, which is where Howie B came in. Awarded the loose and potentially confusing

CREATIVE INSPIRATION

JUST A FEW OF THE WORLD'S BEST QUALITY SAMPLED SOUNDS FROM THE WORLD'S LARGEST DISTRIBUTOR - SEE 100'S MORE CDs IN OUR FREE CATALOGUE.

Best Service (Germany)

ADVANCED ORCHESTRA
Produced by PETER SIEDLACZEK. A complex yet compact and user-friendly sound library setting new standards for symphonic samples. • 5 CD-ROMs or audio CDs • 5455 samples of all instrument groups.

Numerous characteristics distinguish this library from others (too many details to mention here - read the full story in our new free catalogue)

Vol 1 - String Ensembles Vol 2 - Solo Strings
Vol 3 - Woodwinds Vol 4 - Brass & Effects Vol 5 - Percussion & Harp. Each Volume Audio £59.95 / ROM £149.00. Or purchase the whole ROM set for only £599. (Choose AKAI or ROLAND for the CD-ROM version)

Spectrasonics (USA)

LIQUID GROOVES
Grooves that have existed only in your imagination.

Fluid rhythms forged by a synthesis of propelling live drum grooves and unusual, organic percussion loops performed by some of LA's most creative session players. Unique sonic textures! State-of-the-art instruments such as Korg Wavedrum™. The full-blown CD-ROM version (organised to make mixing & matching effortless) includes a wider selection of grooves & killer Wavedrum™ single hits. The liquid concept is two-fold: Sparse "hand-played" grooves that feel great, combined with focus on uncharted sonic territory. Another inspiring & unique library from Eric Persing to reinforce Spectrasonics' reputation as second to none. Audio CD: £59.95. CD-ROM: £119.

A.M.G. (England)

BLACK II BLACK KILLER VOCALS VOLUME 3!

AVAILABLE NOW!

Yet another 2-CD package of almost 2000 vocals from McIntosh & Charles - this is the third and final part of this five-star international smash hit series. CD 1 features hooks in a similar vein to volumes 1 and 2. CD 2 runs for almost an hour, and features 'Percussion vocals', Vocal Fills, a DJ section, Ragga section, and a section of advanced chords. **DO NOT MISS THE THIRD AND FINAL PART OF THE BIGGEST AND BEST VOCAL COLLECTION EVER RELEASED!** Audio CD: £59.95

A.M.G. (England)

TERMINALHEAD: UNDERFIRE
Vol. 1 & 2 (AMG)

The World's first futurefunk sample CDs, eagerly awaited by those who heard the preview on "Promotion" (the AMG demo CD). You won't find any more current & inspiring library for modern dance music.

An Terminalhead put it: "There are no rules. There are no BPMs. No keys. Only the need for Pushing the boundaries of people's perception into ways of creating music for tomorrow that fully embraces all technologies and forges solid bonds with all that is known to funk and groove. This material has been borne out of serious experimentation and is totally unique"

Both Terminalhead CDs feature: • Drum Loops & Chops - distorted, filtered and phat. Watch them bass bins flap. • Lo-Fi Drum Loops, Chops and drum effects utilising 8 and 4 bit lo-fi crunch technology - sample, fly in and enjoy - they're funky. [Warning - some of these sounds are REALLY hard] • Synth Riffs/

Sounds! Sequences created using old analogue boxes. • Funky Hard Chops - hard as nails, but smooth as silk - you're certain to find one to suit your track. • Dub FX - loads of fresh sexy NEW dub effects. • Pascal Benadjoud gets phased, phreaked and dubbed out and delivers new Percussion grooves for Terminalhead, using bongos,

congas, darbuka, tambourines, triangles, shakers and vocals. • Trippy Oddness - an assortment of those hard to categorise sounds. • An unusual collection of very usable processed guitar. • Synth FX - many weird, wonderful and wide synthetic FX. • A collection of filter sweeps and beautiful organic moments. All samples are specially recorded, filtered and phat. Two Audio CDs: £59.95 each

XX-LARGE THE KILLER VOLUME 2

This is the sequel to the triple-5-star-rated XX-LARGE THE KILLER, and it includes over 1000 accurately tuned new drumloops from 120 to 165 BPM and many more hot killer samples.

XX-LARGE THE KILLER has been one of our best sellers and rightly so - now Best Service have pulled out all the stops to bring you a sequel that once again truly deserves the title KILLER. All we can say is: miss it at your peril. Audio 2-CD Set only £59.95. Akai/EMU, Roland or SampleCell CD-ROM (500MB). Only £99.00

HEART OF AFRICA VOLUME 2

Following the success of Heart of Asia, the equally unique sequel is a smash hit. The library comes in two parts. Volume 2 (shown) features all-new tribal phrases, vocals, performances and effects.

mostly recorded at a huge tribal competition in Kenya. This material is very primitive & really enhances the volume 1 samples. "Heart of Africa" is heartily recommended to anyone seeking beautifully recorded authentic ethnic sounds & rhythms, and complements "Heart of Asia" perfectly. Volume 2 audio CD: £59.95. CD-ROM: £119. [Volume 1: Audio 2-CD set: £79.95. CD-ROM: £179.00]

METHODS OF MAYHEM

Brutal & sweet sampling for Industrial/ Intelligent Techno, Goth Techno or anything in need of an Experimental Edge. Uniquely twisted, bizarre and savage stuff. Drum-, Bass-, Synth-, FX-,

Vocoder-, Feedback- & Noise-loops. Grinding Guitar Riffs & Feedback. An Analog Heaven with Synth FX, Sweeps, Zaps, Bases, Drum & Perc Sounds etc. All programmed on vintage equipment and treated without any mercy. Creepy & Cheesy Sound FX, Music FX & Voices. Over 1000 samples. A unique collection. Loops are in set tempos that match other Sounds Good titles. Audio CD: £59.95

congas, darbuka, tambourines, triangles, shakers and vocals. • Trippy Oddness - an assortment of those hard to categorise sounds. • An unusual collection of very usable processed guitar. • Synth FX - many weird, wonderful and wide synthetic FX. • A collection of filter sweeps and beautiful organic moments. Created by one of the top European design studios, you can be sure that X-FX is made by professionals for professionals. Audio CD: £69.95. Akai CD-ROM: £119.00

SUPREME BEATS

The most comprehensive library of percussion grooves & instruments ever developed, featuring percussionists from all over the world. This highly acclaimed library is now available on 2 CD-ROMs: 1. **AFRICAN/ CONTEMPORARY**, & 2. **WORLD/DANCE**. "A feast of human feel, energy & emotion... a knockout. Supreme Beats is a winner. 20 stars out of 20." (Keyboard, USA) African/Contemporary CD-ROM: £119.00. World/Dance CD-ROM: £119.00. Audio CDs: 1 to 4 (boxed set): £199.00. Audio CD 5 (NEW!): £59.95. (CD-ROM versions include all the sounds from Vols 1-5 audio CDs).

ON A JAZZ TIP

This is Hip Hop In Full Swing! This superb release from Swedish developer Sounds Good features stomping grooves, licks and loops, played in pre-determined keys and tempos to be used inter-actively.

Includes Bass, Guitar, Keys, Horns, Drums and Percussion, Jazz pads, riffs and chords. Perfect for all HipHop, Rap, Soul, TripHop, Acid Jazz and Funky flavors

"On a Jazz Tip" is ideal for any music project that needs a sting, swing or that Jazz Thing. Produced and played by musicians who love and respect music. Audio CD: £59.95

Big Fish Audin (USA)

D-DAY
2CDs/145 minutes of all-new construction kits, drum loops and hits, synth & percussion effects and more. This is the second release in the Megaton Bomb series. Styles include: jungle, electro, west coast breaks, trip-hop, hard-hop, gagger- and of course, House & Trance (goa, hard trance, melodic trance, etc). Several of the contributors are internationally recognized and have toured and/or released records all over the world. The quality really shows. Also features drum machines, Junk yard and industrial clanks and scrapes, individual hits, loops and layers, vocal sounds, west coast breaks, live drummers, Synth loops (TB-303's, MC-202-controlled synths, Nord Lead and lots more). Audio 2-CD set: £69.95

A.M.G. (England)

STEVE WHITE: ON THE BEATEN TRACK

NEW FROM AMG! Steve's worked with Difford & Tilbrook, The Style Council, Galliano, James Taylor Quartet, Young Disciples, Working Week, Carleen Anderson, and Paul

Weiler. His work has been a major influence on the embryonic London Acid Jazz, and British R&B and Jazz scenes. Everything about this CD - the grooves, samples, and production - illustrates why Steve White won "Making Music" magazine's Best Drummer poll and, of the 8 categories available in the prestigious "Rhythm" magazine's poll for 1997, he won two and came 2nd in two. The release of Paul Weiler's latest LP "Heavy Soul" will ensure Steve retains his position amongst the foremost drummers in the UK. Audio CD: £59.95

DISTORTED REALITY

Cutting Edge Textures, FX and Loops from the labs of top Hollywood sound designers and techno-heads. From 3D atmos transformed via Harmonic Morphing, to incendiary fuzz mutations, Trance-inducing ambiences, loops, enormous modular drones and astonishing timbral contortions - an essential resource for the producer, composer, or sound designer in search of the magic noise. "If you're making any kind of edge music, this is a library YOU MUST HEAR... gorgeous curtains of sound... will get your listeners' blood pumping... For the progressively minded this disc is a least 5 stars out of 5 in every category" (Keyboard, USA). A spine-tinching sample collection. Audio CD: £59.95. CD-ROM: £119.00

FIELDS OF MOTION

This stunningly innovative CD from ZERO-6 (UK) utilises raw and organic sources for the creation of rhythms and soundscapes which will appeal to everyone looking for a creative edge. Loops are accompanied by the individual components allowing infinite variation, plus lots of exciting single hits and ambiences. All material is 100% original, gathered from unlikely sources such as theme parks, factories and industrial sites. Fields of Motion is for the kind of samplist that hungers for inspiration to take their music into the 21st century. Due for release in June/July 97. Audio CD: £59.95. Akai CD-ROM: £119.00

FREAKY JAZZY FUNKY

From Rich Mendelson, the five-star producer of Phat & Phunky and Dance Industrial, comes the new standard in construction kits. Rich assembled the East Coast's premiere session talent and contributed his own amazing production and programming skills to make this set his best yet. With the included midi-file disk, it's a breeze for the producer to customize the loops and swap sample elements. Exploring the funky side of dance music, Freaky Jazz Funky is the set to beat for 1997 and with three CDs and a Midi file floppy disk, this collection has to be one of the industry's best value products! Audio CD: £59.95

A.M.G. (England)

PASCAL'S BONGO MASSIVE

Rhythm of Life Vol. 4 is a 2-CD set from Pascal Benadjoud, the top percussionist whose credits include Stereo MCs, Bob Marley, Lisa B, Gypsy Kings etc. Also well known on the UK club scene, he's worked with top UK DJs like Paul Oakenfold & Danny Rampling often adding live percussion to their mixes. Features lengthy grooves with various mixes accompanied by solo patterns and hits. Lots of tight, inspirational performances to explore. All in all this is another high quality and useful collection from AMG that's sure to become another classic. This CD has received truly FANTASTIC reviews in all the music press. Audio CD: £59.95

CUCKOOLAND VOL.2 'GHOST IN THE MACHINE'

'Ghost in the Machine' is the second title by the Cuckooland team, & delivers everything you'd expect and more from this innovative and highly acclaimed production team! Dark & menacing mind-altering ambiences, heavenly pads, extraordinary arpeggiations... this CD is packed full of some of the most amazing textures & effects ever created. Lie back, shut your eyes, and let the ghost take control... "Very bizarre... a multitude of creative possibilities... you can't get much scarier than this monster" (The Mix). Audio CD: £59.95

THAT JUNGLE FLAVOUR VOL.2

Just arrived - the latest in the Zero-6 line-up of jungle CDs! Rinsing out the drum 'n' bass flavour, That Jungle Flavour Vol.2 is a superb addition to extremely popular Vol.1 & must for the serious junglist producer. Featuring 350 rough & ready breaks, an enormous selection of pads, stabs and fx, plus voices and scratches to step up the dancefloor pressure. Rollin', rough, hard-steppin' and firing on all cylinders! Audio CD: £59.95

DOUBLE PLATINUM DRUMS

Multi-Platinum record winners, producer John Boylan and drummer Michael Batts have put together one of the smartest, most tightly assembled collections of live drum loops to date. Phenomenally well-recorded and mixed in true stereo with the same high quality you expect from platinum records. These acoustic kits are played with raw, rockin' energy and plenty of feel. Loops & Hits, Dry & Room, Intros, fills and ends for assembling complete tracks! Audio CD 2-disc set: £79.95. CD-ROM 2-disc set formatted for Akai, Roland or SampleCell: £199.00

JUNGLE WARFARE

For Jungle this is the one that EVERYONE says is the best of the bunch. • Loops • Rolls & fills • Perc Kits • Pads & Chords • Bass • FX • Vocals. "Excellent fidelity, balance & punch, & variation in feel & sound... there's no serious competition. Rated 5 stars out of 5 ☆☆☆☆☆" (Sound on Sound, UK). "Kicking grooves... a wide range of styles... highly useful... AS UP-FRONT AS YOU CAN GET." (The Mix, UK). "Jungle Warfare gives you just about everything you need to survive in the remix rain forest." (KEYBOARD USA) Audio CD: £59.95

CUCKOOLAND VOL.1 'UNHINGED'

The incredible rhythms, textures & FX on 'Unhinged' will blow your mind! Grooves from 67 to 170 bpm provide rhythmic backing unlike anything else available, & the textures & FX are not of this world... This collection is ideal for all - from Trip Hop to Film. "Rhythm & sound simply aching to be sampled & used in new & exciting ways... this is no ordinary CD" (Sound On Sound, UK, Sept '96). "Loops wonderfully diverse in style... Production is exemplary throughout. musicianship is of a high standard" (The Mix, UK, October '96). "The off-beat, rhythmic nature of the loops make them extremely useful as inspirational tools" (Future Music, UK, February '97) Audio CD: £59.95

SYNCLAIVIER LIBRARY (AUDIO)

The five-CD-ROM Synclavier Library from Ilio (USA) has been compiled into two audio CDs containing over 2000 samples. **VOLUME 1 'ESSENTIAL'** covers Electric and Acoustic Guitars, Electric Pianos, Synths, and Drums & Percussion. **VOLUME 2 'ORCHESTRAL'** covers Strings, Harp, Brass and Woodwinds, Grand Piano, Orchestral Percussion including Timpani, Bells, Chimes, Gongs and more! Accompanying manual gives loop points for every sample so it's extremely easy to loop samples quickly and effectively. Each Audio CD: £69.95. (See also our Catalogue, or call us, for full details of CD-ROM versions).

NEVER CAME THIS FAST

EXCLUSIVE UK DISTRIBUTORS FOR: AMG, BEST SERVICE, BIG FISH AUDIO, E-LAB, ILIO, INVISION, SOUNDS GOOD, SPECTRASONICS, USB, WC MUSIC, ZERO-G, AND MORE...

E-Lab (Sweden)

X-STATIC GOLDMINE 4
E-Lab have done it again! Over 1500 Ambient and Chill Out Loops & Samples from the dark side of the Moon. TRIPHOP & CHILL-OUT LOOPS, SPEEDY JUNGLE BEATS & SMOOKIN BASS BOOSTERS, ETHNIC CHANTS & BUBBLE BATH DIDDGIDDOS. WET CHILL OUT CHORDS & XPERI-MENTAL SYNTH VIBES, ANALOGUE SEU FX & ON-STATE

X-FILES OF HOUSE
Hot new CD from E-Lab - a new goldmine of Deep & Progressive House loops & samples. To give you an idea, the loops and samples are in the style and mood of Armand van Helden, Tod Terry, or Deep Dish. These loops & samples will make your Hair Stand Out - pure joy! You won't be able to stop moving your feet when you hear this one. All samples provided with variations so you can create your own deep house tune instantly - perfect for injecting The New York club sound into your music - the sound of people like 'Masters at Work'.

X-FILES OF TECHNO
NEW! Another unmissable CD from the makers of the X-Static Goldmine series (E-LAB) ACID/ HARDCORE/ TEKNO LOOPS & SAMPLES - the styles which have been dominating Europe's underground scene for years. The TR909, TR808, TR303 are all in there - Distorting like crazy. These are the hard beats of the The Underground Charts that set the Trends which others need to follow. Created by a successful Producer of this underground rave phenomenon. Audio CD. £59.95

STRICTLY 12-INCH
Important new CD from E-Lab. Features Dance/Remix/House LOOPS & DRUMS. THIS CD IS FOR DANCE. The idea is similar. Loops, with variations, together with separate hits. A Remix CD for anyone in the need for good stomping House & Garage Loops. Very much DJ sounding, & produced by a Remix/DJ team. If you want the sound of the dancefloor - get this one. All Loops have been tested for reaction on the floor! Audio CD. £59.95

Best Service (Germany)

VOODOO ELEMENTS (CD-ROM for PC)
This extraordinary CD-ROM for PC contains comprehensive archives of 200 fascinating drum and percussion loops, ceremonial chants and shouts and more, from the mystical realms of another culture, taken from the Best Service audio CD "Voodoo Grooves". An arranger program enables you to combine the sounds of this CD to create new rhythms. All recorded in Africa specially for this CD. Special bonus: videos of Voodoo Ceremonies filmed during the recording sessions! CD-ROM for PC. £19.95

RAVE ELEMENTS
This PC CD-ROM contains comprehensive archives of drum and percussion loops, drum grooves, bass lines, melodic chords, synth lines, House Pianos, Synth Strings at 120, 130, 140, 150, 160, 170, 180 & 190bpm. "Circle Elements" software is included helps combine the sounds to create new and exciting club tracks. All material has been recorded especially for this CD. PC CD-ROM £19.95

IK Multimedia (Italy)

AXE. This innovative sampling CD-ROM for Mac or PC contains 817 Brazilian percussion loops, plus an easy-to-use "Auto Groovemaker" 8-track interface to compose your own combinations of the samples on the CD. The loop collection includes individual components of the complete Brazilian Batuque set recorded at tempos from 60 to 160 bpm, precisely edited and tempo-tuned. "Auto Groovemaker" supports save-on-the-fly and incorporates a beautiful and easy-to-use browsing system. A great tool for professional and non-professional musicians alike. Available in audio format (loops only) or Interactive CD-ROM for £59.95

FREE* CD WITH EACH ORDER>>

Each time you order from Time+Space you'll receive one free showcase CD from one of the following sound developers: Time+Space, Sounds Good, Spectrasonics, Ilio Entertainments, Best Service or AMG. (*Offer limited to one of each per household).

Music Mind (Denmark)

MICRO WAVE-IT
Not even in your wildest dreams could you imagine that your AWE-32 soundcard could sound so good! MicroWaveIt is simply packed with entirely new, revolutionary SoundFont™ compatible instruments and sounds, all ready to kick new life into your SoundBlaster™ card.

All the hard work has been done for you. It has taken more than two years to develop the MicroWaveIt CD-ROM. The sounds have been recorded by professional musicians in professional studios to give you the most beautiful strings, wonderful guitars, the nastiest techno-drums, dreamy synth sounds, exotic ethnic percussion, drumloops, classical instruments and much, much more. All this to give you the opportunity and enjoyment of working with the same high quality sounds you can hear on your favourite records.

Fantastic sounds are a fantastic experience! Why make do with second best when you can get the sounds of top quality professional instruments for a fraction of the price? Take a listen to Pop, Dance, Film music, Rock or even Classical music. MicroWaveIt can do it all - once you've tried MicroWaveIt, you'll be able to wave goodbye to uninspiring sounds!

PC CD-ROM (for use with SB32, AWE32 or AWE64 soundcards (please call for further details and minimum system requirements))
ONLY £24.95

Invision (USA)

PERCUSSION SLAM
Hot new disc from Invision (USA), comes with loops, samples and standard MIDI-files. Multiple layers of percussion instruments were played live and the MIDI-files were created directly from the loops. Killer material for Dance, Pop, Latin, R&B, HipHop, etc. Enhanced construction kit format includes: multiple tempos of each groove, alternate instrument mixes, fills, MIDI-files & samples. Gives you the power to quickly create and modify tracks. Performed by Rafael Padilla and meticulously recorded at Mama Jo's Studios. Audio CD. £59.95 Akai CD-ROM £149.00

Time+Space (UK)

CREATIVE ESSENTIALS HOUSE+GARAGE CONSTRUCTION
A complete sampling construction kit for House/Garage styles. Focussing mainly on loops, you'll find it delivers tons of top-class raw material. From frenzied funk to kool kongz, this is a great tool for remixers, producers and composers alike. Approx 300 samples.
AUDIO CD / Mixed-mode CD-ROM for PC or MAC - only £19.95

CREATIVE ESSENTIALS JUNGLE FRENZY
All the jungle elements you need! Breaks run at 160bpm to make cutting up and mixing easy. Features drum rolls & fills, percussion loops & hits, basses, pads and jungle MC-ing, and the latest stabs, pads, noises and FX - flavours from every tree in the Jungle - Intelligent, rough, hard, steppin' breaks & FX for today's Drum 'n' Bass samplers. This is unmissable - it's just about as UP-FRONT as you can get. Approx 300 samples. AUDIO CD / Mixed-mode CD-ROM for PC or MAC - only £19.95

CREATIVE ESSENTIALS SAMPLER DISC FREE! CREATIVE ESSENTIALS SAMPLER DISC including 300 samples (10 hot samples from each of the 30 volumes in the Creative Essentials Series). Plus! - an amazing interactive journey through the sounds of the whole series. It's FREE! when you buy any Zero-G sample CD or any three releases from the Creative Essentials series! AUDIO CD (includes CD-ROM part for PC or MAC) - Or you can purchase this Disc for only £9.95. (*Offer limited to one per household, while stocks last)

LISTEN BEFORE YOU BUY

The licence expressly forbids resale or other distribution of these sounds, either as they exist on the CDs, or any modification thereof. You cannot sell, loan, rent, lease, assign or transfer all or any of the enclosed sounds to another user, or for use in any competitive product.

► to get the groove *and* the song, *and* do it so that it sounds like the band, *and* do it so that it sounds like something new."

Flood called this period "quite difficult", because "it was all this feeling around, and not quite knowing where we were going. We first started with trying to get the band to integrate the moods of the pieces, so it wouldn't sound like U2 on top of a load of loops, and then we tried to get the loops themselves back into the U2 mould. Larry listened to the feels of the drum loops, and recreated them himself; we then used his loops as a basis for him and the band to play live on top of. So we gradually replaced all inspirational loops and samples, apart from a few that were too integral. We credited those on the CD cover, leaving the sample in the song in a few cases. In other cases, like with Naked Funk and 'You Showed Me' by Gene Clark and Roger McGuinn, we just acknowledged their influence. But it was quite hard for the band to shift from having played to loops of other people to playing to

loops of themselves. We felt it was essential to do that, though, because you can get very lazy with samples. They're an easy way to get the ball rolling, but you're always in danger of sounding like some basic samples with the band on top. You're in danger of being dictated to by what's there, rather than saying: 'this is just our springboard'."

Sampling was nevertheless not abandoned. In keeping with the band's aim to incorporate a dance music ethic, the crew then went on to sample, loop, and fly in all members of U2, not just the drums. Flood: "There were many guitar and vocal loops. On 'Mofo' there are little guitar and vocal samples that they played and we sampled. We selected the bits that we liked, and then Edge played them back in off a keyboard. We did that quite a lot, and ended up with maybe 20 or 25 percent of the sounds on the album being loops, samples, or programmed stuff, although these parts were always supplementary; we took great care not to clutter things. That reflected another aim that we had, and that also came from the dance world: we wanted to give the illusion of there being a lot of space in the music. In dance music, you only bring things in when you really want them, and even then you'll hold off for ages. Everything has a reason for being there. That affected how the music came out a great deal. It's knowing when to leave out, rather than when to put in, and knowing when to change things in subtle ways, by gradually enhancing them with an effect as the song moves on, or taking them out for another section."

BOLD STROKES

Giving the illusion of space is certainly something that the production team succeeded in on

Pop, for even though some of the arrangements are quite complex, there's a clarity and logic to them, and Mullen's multi-layered rhythmic patterns, that is impressive and a far cry from many of their previous efforts. Flood acknowledges (a point backed up by Howie B elsewhere in this article) that this sense of space was also achieved by carefully layering all the elements of the arrangements and giving them places in the frequency spectrum where they didn't get into each other's way, and

also by applying relatively little reverb in the mix. But before it came to the mix, shaping *Pop*'s songs and arrangements into their final, carefully crafted form took a lot of blood, sweat and tears. According to Flood, it was a continuous process of invention and re-invention that continued until the very last moment: "People ask me when I know a song is finished, and I say: 'when it's finished'. We had three different mixes of 'Mofo', and during mastering in November '96 in New York, I edited a final version of 'Mofo' from these three mixes. So even during mastering, we were trying to push the song to another level. It was a long process of experimentation; the album didn't actually come together until the last few months. Nellee left in in

FLOOD'S STUDIO

Flood's own studio is a rather chaotic-looking affair, where he clearly doesn't spend a lot of time — apparently he only uses it for pre-production and the odd mix. Nevertheless, it's well-equipped, containing a Mackie 32:8 mixer, Tascam D488 multitrack, and an Apple Mac with an Opcode Studio 5 MIDI interface which runs a Digidesign Pro Tools system. There was also a rack containing two Zoom effects units (the 9200 and 9010 used on the *Pop* sessions), an Akai S1000 sampler, an EMS Vocoder 3000, a Roland Super Jupiter module, a Helios EQ and mic preamp (also used with U2), a dbx 120XP bass enhancer, and an Ampex half-inch tape recorder. In the middle of the room stood two huge flightcases full of Flood's portable equipment, containing, amongst other things, an ADL Valve compressor, Summit

sequencer and 2600 synth, a Moog Series III, an EMS VCS3, a battered Yamaha SK10 string machine, an Oberheim 4-Voice and a Roland RE501 Chorus Echo.

"I started collecting these synths when I played in a band called Node, which was a four piece with all of us playing modular synths [see Node interview in SOS December '95], and when I was working with Mute Records bands like Nitzer Ebb and Renegade Soundwave. I use some of them during recording sessions; on *Pop* I used the

Above: Flood's vintage EMS VCS3, Yamaha SK10, and Oberheim 4-voice.

Left: The ARP sequencer and 2600 synth used on *Pop*. Also visible on the right is Flood's Moog Series III modular synth.

ARP sequencer on 'Discothèque', and the backing track of 'Staring At The Sun' was played to the ARP running in free time, playing a really bizarre log drum-like sequence. I also put some guitar through the ARP 2600 on 'Mofo' and 'Please'. I used the VCS3 quite a bit on *Pop* as well. It's great because you can feed things into its line or mic input. I applied some VCS3 spring reverb and ring modulation in a few places, and used it a lot on the basic rhythm track of 'Gone'."

compressors and preamps, the prized Eventide H3000 and H4000 processors, and even some vintage Neumann microphones from the '30s (Flood: "I call them the world's brightest and greatest"). But most eye-catching was the huge collection of vintage synths that graced the room: two enormous Roland System 700 synths, an ARP

Sound Tools for Creativity

SPL

STEREO VITALIZER®

from £369.--

This ingenious processor combines dynamic equalisation, harmonic filtering and phase shift manipulation. It is designed for simplicity of operation with one set of controls handling both channels.

The STEREO VITALIZER has become famous for its superb low end enhancement with extra punchy sub lows.
 »The last word in one-stop mix fixing.«
 (Home & Studio Recording)

RECORDING AND MIXING

- ◆ Fattening up thin bass guitar and kick drums
- ◆ Gives a professional gloss to all recordings
- ◆ Makes vocals stand out from the mix
- ◆ Ideal for and home and project studios
- ◆ Invaluable tool for heavy duty ambient/ techno dance tracks

from £549.--

CLASSIC VITALIZER®

RECORDING AND MIXING

- ◆ Replacing or supplementing mixer EQ
- ◆ Adding extra edge to final mixes or single tracks

MASTERING

- ◆ Reprocessing material for CD release
- ◆ Enhancing existing master tapes during post production

from £899.--

OPTIMIZER®

EXTENSIVE EQ FACILITIES

- ◆ 4 separate bands of parametric EQ
- ◆ Separate notch filter for each band
- ◆ Mono 4-way or stereo 2-way operation
- ◆ Variable roll-off in low, high or band pass for each EQ band

VERY HIGH SPEC

- ◆ Low noise (-93 dB)
- ◆ Huge dynamic range (114 dB)
- ◆ Wide 10 Hz to 23 kHz frequency range

from £899.--

EQ MAGIX®

RECORDING AND MIXING

The EQ Magix is the latest unit from SPL combining a high quality preamplifier, the legendary Vitalizer EQ system, an exceptionally high quality parametric equalizer and a panoramic output stage with ppm metering. The EQ Magix comes in a professional RF-proof chassis with a stunning front panel that is unique to every unit.

FLOOD & HOWIE B — PRODUCING U2'S POP

- May '96 because he had commitments to work on the *Romeo & Juliet* film score, and it took a couple of months after that before things really started to take shape. They changed radically during the last few months, which is why Nellee isn't credited."

The 'last-minute' edits to 'Mofo' seem typical of the band's working methods during the construction of *Pop*. According to Flood, U2 always expect their production team to challenge them with, as he puts it, "bold strokes". Flood continued: "Even though there was a lot of programming and sampling going on, most of the time things went straight to tape. Laying something to tape, and committing yourself, rather than keeping them 'virtual', as they are with MIDI or on hard disk, is a bold stroke. When you change as much as U2 does, you do need to commit yourself somewhere. People will work to what's on tape as being the part. That's why I prefer to work with analogue tape [see the 'Flood On Analogue' box]. There were periods of doing rough mixes, during which we tried out different arrangements, and they would always be bold moves, rather than nitpicking here and there, because the band reacts

far more strongly to that. Like on 'Please' — for ages the rhythm track played all the way through the track. It's a fairly tight groove/bass thing, and then we suddenly decided to drop out the rhythm section in the middle and add a load of strings and these weird synthetic sounds at the end of that break. With those three simple moves, you've created something very strong, and it's far simpler and more effective than just changing the hi-hat pattern in the chorus or something. Of course, we get into that too, but generally with U2, it has to be bold, it has to be strong. Otherwise, you get stuck working on small things that get

Bono listening to a playback at Hanover.

DECONSTRUCTING DRUMS

Three years ago U2 engineer Robbie Adams explained in *SOS* how he recorded Larry Mullen's drums with just three mics, an approach he had picked up from Flood, who, said Adams, "is bored with all this traditional, big stereo nonsense." Flood explained that his way of recording drums was partly born from necessity, and partly from reading Mark Lewisohn's classic book on The Beatles' recording sessions: "When we were working on *Achtung Baby*, we had two drum kits set up, and I had very few channels on the desk, so that was a bit of a problem. I noticed from the photographs in the Beatles book how there was always one mic parked just above the drum kit. I thought it was maybe just for the photo or something, but then I saw it in other studio shots as well, and so, because of the problem I had with too few channels, I decided to try it out on one of the two kits. I put one mic on the bass drum — an AKG D12 or Neumann U47 — a Shure SM57 on the snare, and an SM58 as the overhead just above the kit.

"What started to happen was that people would prefer that drum sound, even though it's virtually mono. I also noticed that with Larry, who is a powerful drummer, when you put the drums in stereo you have to have the levels up higher on playback, whereas the mono drums were more powerful, even at lower levels. When I thought about it, I realised that if you're standing in front of a drum kit, you hear it in mono — you don't hear the toms panning neatly from left to right in your ears. Also, a mic just above the kit compresses the sound. And that's the same

effect that happens in the ears of a drummer or when you stand close to the kit; the sound is compressing in your ears because of the level of air pressure. So when you have a cheap, lo-fi overhead mic in that position, and add compression on a mic that's already compressing, it brings out the excitement, the same feel and natural balance that the drummer is getting."

"I've used the three-mic approach as a starting point ever since. You can do all sorts of things with it. For example, if the room you're recording in is rather dead, you can add a bit of room reverb just on the mad-sounding compressed mic. That will give the illusion of the drums having space, and yet the physical punch still comes from the middle. I will sometimes add two more overheads, like a 414 or 87, placed a bit higher up, or at the same height as the drummer's ears. A lot of the times we end up monitoring kick, snare and these higher overheads, and then if the track sounds a bit lame, we'll feed that extra low overhead mic in, which can bring out all the reflections that the drummer gets and that you may not hear normally. It's always good to experiment and listen to the sound the drummer gets in the room. When we were working on *Pop* in Miami, we were in a room that had very little character, so we put the two ambient mics right in the corner, pointing towards the ceiling, away from the drum kit, thus deliberately creating a woolly, booming drum sound that went well with the brightness of the drum kit. We were always pushing for character, and trying to stay as far away as possible from a generic rock drum sound."

dbx you can afford?

dbx are renown in recording studios and concert arenas throughout the world for their classic sound, professional specification and professional cost. Now you can experience American made dbx products at incredible prices; The Project 1 series from dbx

266A Compressor/Gate

In direct contrast with inexpensive compressor/gates which feature knobs and lights but lack superior audio performance, the dbx 266A provides it all.

Featuring the newly developed AutoDynamic™ attack and release circuitry to deliver compression for a wide range of applications. In addition to an OverEasy® switch, plus an advanced new dbx gate circuit which over-comes the functional limitations of traditional "utility" gates—all at a price suitable for almost every application.

When using the 266A's AutoDynamic™ Attack and Release controls, the centre settings deliver classic dbx compression, while the full control range produces voicings that extend from slow "levelling" to aggressive "peak" limiting.

The 266A's advanced gate circuitry uses a completely new timing algorithm to produce ultra smooth release characteristics. We use the wide dynamic range and high precision of the dbx VCA and true RMS detector to design in an extra wide threshold range.

Other dbx classics...

1066 Dual Compressor Limiter Gate

Dual channel compressor limiter gate driven by the all-new dbx V2™ VCA featuring True RMS Power Summing™ stereo operation

120XP Subharmonic Synthesizer

Patented Waveform Modelled™ Synthesis; individual control of two ranges of subharmonics level, low frequency boost and separate subwofer output level.

296 Spectral Enhancer

Two channels of patented spectral processing add detail, sparkle and definition to tracks, mixes and live sound while reducing background hiss.

262 Compressor/Limiter

Classic Stereo dbx compression in a easy to use, rugged metal chassis. Amazing value for money

- OverEasy® Hard-Knee Operation
- 2 Channels of Classic dbx Compression
- Balanced Inputs and Outputs
- Internal Power Supply
- True RMS Power Summing™
- Stereo Coupling

286A Mic Preamp/Processor

Perfect for use with Digital recording, the 286A is all the tools you need in one compact unit—at a fraction of the cost of buying the units separately.

- Mic Preamp with +48VDC Phantom Power
- OverEasy® Compression
- Frequency Detailable Spectral Enhancer
- Frequency Controllable De-Esser
- Expander / Gate
- Internal Power Supply

Project

► magnified out of all proportion.”

Another bold stroke was the band's move to Miami halfway through the project. They went there to do a photo shoot, but then ended up recording for 10 days in South Beach Studios, because “the change of environment gave them new inspiration”. Unsurprisingly, the track ‘Miami’ was written, and in part recorded there, as well as a “a lot of drum stuff, replacing loops and overdubs.”

FATTING

When listening to Flood's descriptions of *Pop's* recording process, the question arises of how on earth he kept his 24-track analogue tapes from wearing out over the course of more than a year of chopping and changing, and replacing overdubs. The answer, according to Flood, lies in the huge amount of submixes that he did to other analogue 24-track tapes, and the ‘fating’ process that Robbie Adams described in *SOS* three years ago: “I did

mixes of key components of songs to other multitracks and then did edits on that multitrack, making sure I kept track of everything with timecode. I never worked on more than one multitrack tape at the same time, because synchronisation always takes time and awareness. But because of all the submixes and overdubs to and fro, there are some songs on which the basic rhythm track is fourth generation. We also did ‘fating’ to a sync'd Tascam DA88; when someone wanted to quickly try some guitar overdubs, or do loads of vocal overdubs, and the 24-track was full, we put the overdub down onto the DA88. Then, later, you can select the bits you want, and fly them back onto the multitrack. The DA88 was also used for archiving.”

A CHANGE IS AS GOOD AS A REST

Flood repeated several times during the interview that the main aim during the recording sessions of *Pop* was to “try to construct a new sound for U2 whilst still making them sound like U2.” As well as by incorporating new musical influences, especially those of dance music, this was also done by consciously deconstructing mannerisms and sounds that the band had been using in the past; a lot of work went into developing new sounds and new ways of performing for all four members. As described above, drummer Larry Mullen was forced into this because of his back problem, and consequently had to react to loops from other records, sample CDs or programmed drums, whereas in the past, it had always been a rule that any loops and programmed drum patterns would only be taken from Larry's own drum playing. But as Flood explains, it wasn't just the working methods, it was also the sounds that were changed for *Pop*: “Larry was always known for his high-pitched ringy snare, and big drum sound, and this time we were trying to get a drum sound that was bone dry. It was very simple; we tuned

HOWIE B: SONGWRITING & HI-TECH PRODUCTION

What was U2's songwriting process for this record?

“Apart from maybe two songs which Bono and Edge had written before we started, during pre-production, it was fairly freestyle — there were jams, and songs were built from those. After the end of that jam, we'd look at that track and see if there was anything worth keeping; and if there was, what it was and how we would keep working with that tune. For example, we might stop working that day, and each work away on our own with a cassette, thinking of our own melodic ideas, or structural ideas. Bono would then start looking for a character to the song; what it might be about, and so on. It was a quick process in one way, but also fairly slow in another; it was fairly quick to get the song started, and then it was a case of moulding that piece of music into a song. That's where the production started.”

Which equipment did you use in the studio?

“The main thing I was using was record decks, which I would use to turn them onto stuff. I also used an Akai S3200 to sample bits of Larry's drumming, and put them into completely different songs. For example, on ‘Please’, there was a sampled loop of Larry's drums which I had taken from his drumming on ‘If God Will Send His Angels’, which was interesting. I made a lot of loops of Larry's playing, as well as guitar loops. I sampled Edge all the time, too, and made sequenced guitar sample patterns, which was an interesting thing to happen to Edge — they'd never thought of doing that before. Sometimes I would sample, say, a guitar, but it wouldn't come back sounding like a guitar; it might sound more like a pneumatic drill, because I would take the raw sound and filter it, really destroy the guitar sound, and rebuild it into something completely different [see the ‘Sampling’ box for more on this].

“I also used a Clavia Nord Lead an awful lot, along with filter banks, voltage-controlled oscillators, and an Oberheim Echoplex for tape delays. The Nord Lead really shone out on this record — it's a fantastic synth. I'd just started using it when we began the album, so it was a fresh sound for me. It's a very quick keyboard to

get a sound out of, because the way you work it is very ‘analogue’, even though it's a digital synth. The analogue-style controls are fantastic. Apart from the Nord, we used a Roland Juno 106, an EMS VCS3, and a little bit of Yamaha DX7. There's also a Hammond in there, and a fair bit of Rhodes.”

Is there anybody within the band that can use sequencers?

“Yeah! Larry uses sequencers; he'll demo some ideas, maybe program a groove for himself, and play around with it; and Edge uses a very basic sequencing package to work on ideas. But sequencers aren't really the best thing to work on sometimes... you can become a slave to them. There were a few keyboards sequenced on the album, and I sequenced some guitar loops and a few bits of percussion, but generally, sequencers were not used much on this record. When we did, we used an Atari running C-Lab Creator.”

Edge, Flood, Bono and Howie B working on a track. Note the whiteboard detailing track ideas and work-in-progress.

▶ down his snare to see how he reacted off that. Big drum sounds do work, and they're exciting, so it's very easy to get lulled into using them. But you have to think how you can do things in a different way; you have to keep pushing and pushing, and the beauty of working with U2 is that that is what they want." [see the 'Deconstructing Drums' box for more on how Flood miked up Mullen's drums].

To change Adam Clayton's bass sound, the team worked a lot with heavy processing, to the extent that several tracks sound as if they feature keyboard bass, but apparently it's all Clayton playing, with the exception of most of 'Mofo', which is indeed a keyboard bass. As far as Edge was concerned, he apparently wanted to show himself moving on. Flood: "Edge has been given this tag of having a certain type of sound, which isn't really fair, because on the last two or three albums he's already moved away from it; but people still perceive him as the man with the echoey guitar sound. So he was up for trying out all sorts of ideas, from using cheap pedals

Edge and Larry Mullen: "You looking at me?"

and getting the most ridiculous sounds, like in 'Discothèque', to very straight, naked guitar sounds, like in 'The Playboy Mansion'. The guitar sound that starts 'Discothèque' was him playing an acoustic guitar through a ridiculously loud amp and a filter pedal. I was sitting next to him without any headphones, so I couldn't hear the track at all; I was fiddling with the pedal. We then processed the guitar through an ARP 2600 synth, getting a different feel again. The nasty distorted guitar in the break is Edge playing through a Big Cheese, an effects pedal made by Lovetone. We wanted to shock with that sound, rather than: 'here comes the break and the really nice sound.' It takes you aback, and stands for something, and many songs were like that."

Bono also wanted to take his singing into new territories, and so he and Flood discussed his voice right at the beginning of making the album. "I think Bono is one of the great singers of our time, but he

was very conscious of areas that he felt he'd gone into too often, like the bombastic style and his use of falsetto singing. So a lot of effort went into getting him to come over in a different way. It was a process of trying to make him sound as intimate and upfront and raw as we could — so that you

get his emotional involvement with the songs through the lyrics and the way he reacts to the music — without him having to go to 11 all the time. All his vocals were recorded with a Shure SM58, as usual, and then went through a Neve mic preamp, and had a little bit of valve compression added from an LA2 or a Summit. We only used extreme effects on his voice during the recording, for him to get himself into a different place, and then, gradually, we pulled most effects out. We didn't add many effects to his voice during the mix. In fact, we didn't add many effects in general in the mix. There is a lot of effects processing on the album, but much of it was added during recording."

EFFECTS & MIXING

The effects units actually used (described iconoclastically by Flood as "whatever worked") ranged from budget Zoom 9200 and 9010 units to more expensive gear like the Lexicon PCM70 and Yamaha SPX1000, as well as the unashamedly pro Eventide H3000 and H4000 ("the ultimate piece of

HOWIE B: MIXING & EFFECTS

Which console and multitrack did you use on *Pop*?

"We used a Otari MTR90 multitrack, with mainly a 1972 Neve desk. Rupert Neve made that for EMI — it was the first 24-buss desk that he made. It's a split console too, which was interesting, as most mixing and recording desks are in-line these days, and I did my apprenticeship on a split console. It was great to come back to that — a split console has its own character, and the way you record and mix is a bit different. The desk was also a fantastic tool for me — I used that like another instrument."

Is that how you achieved some of the amazing sounds on the album? For example the vocal treatments and heavy bass sounds all over the album, the echoes on the vocals and bass drum in 'If God Will Send His Angels', and the distorted drum sound on 'Miami'.

Were these effects created during the mix or when recording?

"It was very easy to record the vocals; very little EQ, just a little compression, and off we went. Sometimes, depending on the song, there'd be an effect used later, but when we started off, it would just be Bono with his SM58 going for it. Sometimes he'd sing to an effect; delay, flanging, distortion or whatever, just to react to it. But it wasn't as if we spent three weeks looking for a particular vocal treatment; we didn't do that at all.

"The trick with the bass sounds is really to make sure the bass is there when you record it! Because later on, you can only bring out sounds that were already there. I didn't add anything; the bass was already there, it was just a case of putting it in a place where you can hear it. Sometimes that's purely a matter of level — it can be as simple as making the bass track louder — and sometimes you need to use EQ.

"On 'If God Will Send His Angels', there's no reverb at all on the drum kit, so again, the echoes you hear are just to do with the sound of the kit when it was recorded, and the balance that I set up later. On the vocals on that track, the reverb you hear is just an analogue plate reverb; two

pieces of metal with a spring between them. The balance on that song is like the balance on all the others; there's nothing fancy going on there. It's the space that song happened in that gives it its incredible character.

"The drum sound from 'Miami' comes from quite a few things — it's basically very extreme EQ used sparingly, on particular tracks. The main groove is actually just Larry's hi-hat, but it sounds like a mad engine running or something really crazy — about as far away from a hi-hat as you can imagine. Part of the effect was deciding when to use it and when not to. Sometimes when you use something extreme and then take it away, the space that you leave when it's not there is just as extreme, even though there's no longer anything extreme going on! For me, the task in 'Miami' was to make it unlike anything else on the album, and also unlike anything else you'd ever have heard before.

"'Miami' was a live mix; I didn't use any computers or automation, which made it really interesting. Most of the album was like that, but with that track in particular, there was no need for automation, as it was a very simple track in the end; there were only maybe nine tracks of audio used on it. It was also more fun and more musical to do it live — I think I got a fairly large sound out of just nine tracks, and several of the things that happen on it only happen because I was doing it live. If you go into a mix with preset rules — you know, that you use this reverb on drums, and that processing on vocals — I think it ends up sounding very straight, and very contrived. But if you go in with the approach that anything can happen, with no set rules, that's when it gets exciting. That's how I attack mixing. It makes it more interesting, and it's more creative. You open new doors that way; you discover things that haven't happened before. Like I said, the desk was a very important instrument in the making of this album, especially the way that me and Flood use it. It's something we can both play, the way that Edge can pick up a guitar and play a fantastic song. I can go onto a desk and use it in a way that no-one else will, and it's the same with Flood."

HOWIE B: SAMPLING & DRUM PROGRAMMING

U2 have previously been quite controlled in their use of samples, employing only loops of their own playing, but it seems they were a lot freer this time around. Which tracks particularly benefited from the new approach?

"Well, we approached 'The Playboy Mansion' with a bit of a hip-hop attitude; and it worked really well. On that track, the rhythm track is two loops of Larry playing, and he's also playing live to those loops. So at some points, there are three drum kits going at once, in quite a controlled way — the arrangement is particularly interesting. The track started off as a live jam, and then we took that and programmed it up. Larry went off into a side room and made some sample loops of him playing his kit, and gave the loops to me and Flood. It was the same with the guitars; there's a guitar riff which comes in in the verse and chorus, which is a sample of Edge playing."

As well as loops, are some of the drums we hear on the final

album programmed?

Not really. 95 percent of the drums on the record are 'real'. There are just the odd moments where you can hear loops; and it's fairly obvious where. 'The Playboy Mansion' is one of the places where people will say, 'OK, they've had a different attitude to recording here'. But on all the other songs, the drums are live."

I understand the track 'The Playboy Mansion' samples Gene Clark and Roger McGuinn's 'You Showed Me'

"No, we didn't sample that — it was a Turtles song which I played them, and U2 were inspired by that. One of the guitar riffs Edge plays on 'The Playboy Mansion' is inspired by that song, but we didn't actually use any samples on it. Edge played the riff and made it his own, but we thought we'd better respect the fact that we had been inspired by that song; that's why there's the credit. That happened on a few other songs; another one was 'Do You Feel Loved', where the inspiration was a Naked Funk song."

outboard gear"). But it would seem that in their use of these tools, too, the production team were guided by a well-developed set of ethics, as Flood explains: "I have been cited as using a lot of effects on U2 records in the past, but on this album we wanted to create space and avoid clutter, so we didn't use effects in a standard way, like putting reverb on the vocals because it's the done thing. We were only using effects for really creative purposes. They had to be there for a reason. We also tried to approach the whole mix like that. Instead of going through the ludicrous practice of spending five hours solo'ing the bass drum sound, EQing it and looking for the right effect for it, and then finding that it doesn't fit in context, we would simply bring everything up, get the balance right, and then go: 'OK, so what's missing or wrong?' If the track was a bit dull, we'd add some high to the predominant sound, or even to the whole mix. We were always listening to things in context."

Flood recounted that half the album was mixed at Hanover and the other half at Dublin's Windmill Lane Studios. Echoing Howie B's statements about approaching the mixing desk like a musical instrument (see Howie B's box on effects and mixing), Flood stressed that non-automated mixing was also important to the team: "When you have two or three people sitting at a desk doing a mix, pushing and pulling and changing the music, it becomes like a performance. I like the excitement of doing that and the excitement at the end when you go: 'yeah, this is it!' After all these months of creating, you want to be really excited about getting your final result. I hate the anti-climax with automation where you've just done the final version of your mix in the computer, and you go: 'oh, I'll have a cup of tea now, and then put it down.' Ultimately, doing a live mix with a group of people at the desk follows the same principle as we had for the making of the whole album: throw ideas around amongst everybody, so that people will be pushed into new territories and will react in a different way. My role as a producer in this project was to make sure that wherever they went, however new and unique the style, it would still sound like a U2 record. It had to become U2's best record so far, and if we hadn't achieved that, I would have felt that I had failed." From the evidence of *Pop*, Flood need not have sleepless nights.

Tailor Made Studio Design

Blue Heaven?

YAMAHA A3000 DIGITAL SAMPLER

Given the wide range of studio and synthesis equipment Yamaha make, it's perhaps odd that there's been no serious sampler in their catalogue for almost 10 years. Now, after putting a toe in the water with the well-received SU10 mini-sampler, they're taking the pro sampling plunge once more with the A3000. CHRIS CARTER finds that still waters run deep...

Do you ever wonder how all these marvellous machines that we use are designed? I do, all the time. Are there a lot of tech-heads in lab coats, or nerdy net-head types in pizza-stained T-shirts, sitting around telling the company execs about their great ideas? "Yeah, we'll include 64-note polyphony, unlimited samples, 54 different effects, editable parameters for everything, tons of output options, a sequencer, masses of storage, and it will have lots of red and green flashing LEDs and we'll include a really cost-effective display." And the marketing manager says "but won't it be a bit difficult to use?". "No," they say, "we'll include a REALLY BIG instruction manual!". A possible scenario, I suppose, and in the case of something like the A3000, very likely.

Despite what you may have read elsewhere, the A3000 is not the first serious sampler Yamaha have ever made. Their TX16W was launched way back in 1988, and was pretty uniformly received as being very powerful but also unnecessarily hard to use. Of course, since then Yamaha have made the successful SU10 mini-sampler (reviewed in SOS March 1996), but what a way to re-enter the pro sampler market: at last, a machine which is both affordable and powerful, a turning point in sampler evolution. However, it's not all lovely in the garden: the A3000 is amazing and infuriating in equal measure. Read on...

OPERATING THEATRE

Before we get down to the nuts and bolts of using the A3000, let me say that for £1299 it has some pretty mind-boggling features. Yes, most of the rumours you may have heard about it are true. The standard model is 16-bit stereo, 64-note polyphonic, comes with 2Mb of on-board memory and is capable of accommodating an additional 128Mb of sample RAM, using standard SIMMs. There is no upper limit to the number of samples it can hold, subject to how much memory is installed. As if that wasn't enough, each sample has its own envelope generator, LFO, single-band EQ and resonant, multi-mode filter (VCF), while the main stereo mix also has

an additional 4-band parametric EQ. There are three effects banks, with 54 extremely versatile, editable effects patches in each bank, and a 'feed-through' feature for real-time effects treatment of external audio sources. It also incorporates an AWM2 tone generator and a basic MIDI sequencer, and can load SMF (Standard MIDI File) sequences, AIFF, Emu and Akai samples. It has space for an internal SCSI hard drive (with no size limit) and can directly control (automatically or manually) the playback of an audio CD from an external CD-ROM drive, while most of the front-panel knobs and function buttons can also be used as MIDI controllers for internal and external MIDI functions.

The A3000 is presented in a 2U rackmount case almost as deep as it is wide. To the left of the neat blue/grey front panel there are two audio input sockets and an input level knob; the inputs are capable of handling microphone or line levels. Next is a (very loud) headphone socket and the main stereo output volume control for the rear left/right output jacks. Below the basic, 2-line yellow LED

pros & cons

YAMAHA A3000 £1299

pros

- Sounds excellent.
- 64-note polyphony.
- Unlimited number of samples.
- Lots of on-board effects and EQ.
- Unprecedented features in this price range.
- Good compatibility, including Akai, Emu, WAV and AIFF.
- Can be used as a MIDI controller.
- Cheap, practical expansion options.

cons

- Limited and sometimes inscrutable display.
- Arcane operating system.
- No waveform display.
- Unconventional and frustrating sample/program implementation.
- Inaccurate and 'jumpy' control knobs.
- Fan hum.

summary

With slightly too many 'idiosyncrasies' for comfort, the A3000 could give you a fair few headaches, but the condition isn't chronic. On sound, features and price the picture is a lot more appealing and seductive. This sampler is going to stir up a nest of trouble with the competition and should be taken very seriously indeed, because even with its faults it is a formidable beast. Even though I may have given the impression I don't like it, I would like one.

SOUND ON SOUND

display there are what look like five rotary controls, which also double as push buttons. Each knob has an LED arrow above it, which, when lit, means that the button can be pushed to execute an action or function — simple, but effective. On the right-hand side of the front panel are 11 illuminated selector buttons arranged in a 5x6 matrix configuration (six 'Function Keys' and five 'Mode Buttons'), with a printed list of modes beneath. There are three other buttons, labelled Command (usually for accessing the disk drive), Audition (for triggering samples) and Assignable (see 'MIDI Play' section, later). Below the Mode matrix is the floppy disk drive. Around at the back (on the base, unexpanded machine) are the usual AC in, MIDI In, Out and Thru, left and right main outputs, and left and right assignable outputs, plus a little SCSI2 connector (see 'SCSI1 or SCSI2' box). Finally, there's a small fan.

IN THE DRIVING SEAT

When the A3000 is switched on, it runs through a little performance with all the LEDs dancing

around for a few seconds. You're then presented with the default screen, Program Play. Worryingly, the switch-on default mode doesn't produce any sound, even though the sampler loads up with a nice selection of raw synth waveforms, courtesy of the internal AWM2 tone generator. To hear anything you must first access Sample Edit mode and perform a procedure called 'ToPgm' (to program). This 'selects' a sample (or waveform) and makes it available to the current program.

The sampler uses an unusual system for arranging programs: there are always 128 of them resident in memory, and although you can rename them, you can't have any less or more than the default 128. The programs themselves don't deal with the parameters you would normally associate with synth or sampler programs: instead they're just empty slots for placing banks or individual samples into. Only one program can be active, and to use the A3000 multitimbrally involves setting MIDI channels for each individual sample or bank of samples in Sample Edit mode.

THE SAMPLER THAT NEVER WAS

In the A3000 manual there are occasional references to an instrument called the Yamaha A7000; apparently the A3000 can load and convert A7000 disks containing drum voices, normal voices and programs. Hmm... We at SOS had never heard of an A7000 and initially thought it might be a new, as-yet-unannounced, Yamaha sampler. Not so: a call to Yamaha UK elicited the information that the A7000 was a development prototype/super synth/sampler that Yamaha were thinking of producing a couple of years ago, but decided against and instead came up with the A3000.

Yamaha A3000

FEATURES LIST

- 64-note polyphony.
- 128 programs.
- Three multi-effects banks (54 effects in each bank).
- AWM2 Tone generator.
- Unlimited number of samples (dependent on memory).
- Multi-mode VCF per sample.
- 16-part multitimbrality.
- 4-band parametric EQ.
- 2Mb of memory (11 seconds at 44.1kHz stereo).
- Expandable to 128Mb using standard 4Mb, 8Mb, 16Mb or 32Mb SIMMs in pairs.
- Maximum sample time with 64Mb (6 minutes 20 seconds at 44.1kHz stereo).
- Imports samples from: Akai, Emu, WAV, AIFF, TX16W, A7000, MIDI SDS and MIDI SMF.
- CD-ROM, five demo floppy disks.
- Internal HD connecting kit.
- Options: AIEB1 I/O board with six audio outputs, co-ax digital in/out, optical digital in/out.

SAMPLE THIS

Sampling involves first going to the Record Monitor page and setting some parameters so that you can hear the input signal; here you also set a monitoring level and get a metronome click going, if you need one. Then it's off to Record Set-up mode, where you can specify a sampling frequency (5kLoFi, 5kHz, 11kLoFi, 11kHz, 22kLoFi, 22kHz or 44.1kHz), sample pre-trigger time (0ms-500ms), stereo or mono sampling, analogue or digital input, Auto Normalise (to achieve the optimum level for a sample), manual trigger or auto sampling, and sample key range. Next, you visit Meter mode, where you can adjust trigger levels for sample start and sample stop, and visually monitor the input signal on a bargraph meter. Unfortunately, you can't stay here while you sample, because you now have to go into Sample Record mode, which doesn't have an input meter to check the signal level. So far we've been in four different modes and not a sample in sight.

On the only page in Sample Record mode there are two options: Go and Optimize. Maybe I should briefly explain the Optimize feature. If there are a lot of samples in memory and you've been editing, trimming and deleting them, the sample memory becomes fragmented, with bits of unused memory floating about and unable to become part of the mothership memory — you know what I mean. Anyway, press Optimize and all are one again. Are you still with me? Choosing Go starts sampling, and while the A3000 does its stuff you have the option to Abort or Finish the process. Once the sample is in memory, you then have to go to Sample Play mode and select the sample to audition it, because you can't hear it from Sample Record mode. This has to be one of the slowest, most convoluted sampling procedures I have ever come across. The only part of the process I like is the fact that you can hear, in real-time, the effect the different sampling frequencies have upon the input source. This is a useful feature if there isn't much memory available, as you can decide whether or not a sound can take being sampled at a lower bandwidth.

TRIM THAT LOOP!

Once you have some samples in memory (and, apparently, if there's enough memory on board there's no upper limit to the number of samples)

you must first assign them to a program to hear anything, as the A3000 doesn't allow monitoring of raw samples. Now, I know I just said a moment ago that you can audition a sample in Sample Play mode, but all this option does is temporarily assign a sample to the nearest free program location, so that you can hear it.

Many of the parameters you'd normally associate with program editing are instead handled in Sample Edit mode. This is rather unconventional, but I suppose you'd get used to it. Sample key span, output destination, LFO depth, effect send, filter setting, envelope shape, pan, MIDI channel, and more, are all handled at the Sample Edit level. Unfortunately, this imposes some creative restrictions on how the samples can subsequently be used and grouped into sample banks and programs (see the next section for more).

The A3000 uses three types of samples:

- Mono
- Stereo
- Sample Banks

The first two are pretty self-explanatory; the third, however, is the equivalent of what would usually be regarded, in synth or sample terms, as a program. When you've edited the parameters in a sample (key span, ADSR settings, pan, tuning, LFO depth, and so on) you can make a new Sample Bank and begin adding samples, a bit like filling a folder full of documents. This Sample Bank is now treated as a sample, and can be placed within programs as if it were a normal mono or stereo sample. It sounds like a good way of organising a lot of samples into manageable chunks until you try to edit one of them, because you can't edit individual samples within banks! First, you have to go through the Remove Sample process, which takes it out of the bank, then you can edit the sample, and finally add it back into the bank again. What a palaver!

Taking into account the pretty central role of editing and looping in any sampling process, Yamaha have tried to give some thought to making the most of the limited display. In Sample Trim/Loop mode, you can view sample waveforms in five ways: by the obscurely named End Address Type; by Length; by Time; by Beat; and by Graph. The first four display options show the sample in numerical

form (if the Beat display is selected, the A3000 calculates the bpm and shows it with the number of beats in the loop). The last option, Graph, is a way line that bears no visual relationship to the actual sample. The best method I found — and none are what you might call intuitive — was to edit the loop by ear *and* eye, switching between the different display options until I got the results I wanted.

There are also a number of DSP effects available for applying to samples. Resample, for example, is actually time-stretching and pitch-changing and, while it's considerably faster at stretching a sample than an Akai S3000 or something like the *Alchemy* sample editor, the results can be a little lumpy and distinctly flabby-sounding, even at the best setting.

There's an interesting feature called Expand in Sample Edit mode. This has Detune, Dephase and Width parameters, and can thicken a mono sample or widen the image of a stereo sample. This is a really useful feature if you want to add a chorus effect to a sample and all the effects banks are being used. Another useful feature is the Random parameter (found in Sample Edit Pitch mode). This applies an adjustable, brief, random pitch variation at the start point of a sample. Using the Expand and Random features together is a great way of adding some movement and life to individual bland-sounding samples.

Yamaha say that a free software package, called *Wave Editor*, will be available soon, and support from Steinberg's *ReCycle* is also imminent. This kind of software should help to strengthen the A3000's acceptance in the sampler market because although in terms of features it has everything needed to achieve impressive results, sample manipulation, editing and looping are definitely an uphill struggle.

EASY ON THE EDIT

Samples are arranged in programs in a fairly unusual way on the A3000, because although a particular sample can be used across more than one program (up to and including all 128 programs, if needed) any parameter settings that have been applied to the sample, such as keyboard span or effect assignment, remain with that sample when it is used in any other programs. So parameter changes made to any individual sample will have a knock-on effect for other programs using the same sample.

One solution is to apply any new settings to a duplicate copy of the sample, but this is a memory- and time-consuming process. Another solution is to use the so-called 'Easy Edit' feature, which overrides the original parameter settings for a sample in a new program. But there are some annoying limitations to this 'solution'. For instance, you can't exceed a sample's original key span: if it was set at C2-B3 you can't extend it to C2-B4. Also, if the original sample is panned hard right and you try to 'Easy Edit' the pan to the left, it will only pan as far as the middle. The list goes on, but I'm sure you get the idea. Both solutions are inelegant, and it's a shame that Yamaha couldn't have come up with a more versatile arrangement.

MIDI PLAY

This sampler is full of little surprises, and one of these is Panel Play and its associated 'Assignable' function. This mode allows most of the front-panel buttons and knobs to be used as MIDI controllers for either A3000 programs or external MIDI gear. The six 'Function' keys can be programmed to play MIDI keyboard notes — with adjustable velocity, and on different MIDI channels if you wish — while the five rotary knobs can be programmed to transmit MIDI controller information such as pan, volume and portamento time. This is a really handy feature (originally seen on the Emu ESI32) and, once set up, is a quick and easy way of triggering samples and loops and altering a few basic MIDI parameters, without delving too far into the inner workings of the A3000.

NOTEPAD

The A3000 features a basic, single-track notepad sequencer for trying out ideas, but it only has Record, Pause, Continue and Playback controls, so don't expect too much from it. There are no restrictions on the number of sequences you can record, and you can load in banks of previously saved sequences or MIDI files (from DOS floppy) recorded on an external sequencer. The sequencer also includes a speed control to vary the playback between half and double the original tempo but, annoyingly, once the sequencer is in play mode the rest of the sampler is locked out to you, until you press Stop.

EFFECTS & EQ

Two of the A3000's most impressive redeeming features are its effects and EQ. The effects are nicely diverse, excellent in quality, and all have a dozen or more editable parameters. There are no restrictions on how they're used, either. You can have three different effects in series, or three of the same effect type in parallel and, unusually, effects banks can also be configured so that the front-panel audio inputs are routed through them for real-time monitoring. Indeed, so flexible and sophisticated are the effects that there's no reason why the A3000 couldn't be used as a very capable stereo multi-effects unit. Tied in with the real-time effects monitoring feature, and assuming you have

PLEASE PLEASE ME...

Despite the enormous number of features and editable parameters in the A3000, there are a few frustrating omissions and oversights. As I said elsewhere, once the sequencer is in playback the A3000 refuses to let you do anything else until Stop is pressed (even the dinky Akai S20, reviewed elsewhere in this issue, lets you edit samples while its sequencer is running). In addition, samples can't be split and saved across more than one floppy disk, so unless you have a hard drive don't use any single samples longer than 1.4Mb. The A3000's envelope generators are difficult to program, because of the limited display and because the parameter values seem to work in reverse, but this situation is exacerbated by the fact that there are no preset envelope shapes, even basic ones. Finally, I could find no mention anywhere in the manual of direct-to-disk recording. Surely if you can connect massive internal and external hard drives this facility should be provided. Almost every current SCSI-based sampler I can think of has a D-to-D option.

Yamaha A3000

SCSI1 OR SCSI2?

Originally, the A3000's SCSI connector was to be an optional extra. However, at the last minute Yamaha decided to include it in the base machine specification — which was nice. The instruction manual gives very detailed instructions (six pages) on how to install your own internal hard drive, and the A3000 even ships with a useful hard drive connection kit, consisting of internal SCSI and power leads. The manual describes the type of drive you should buy in great detail, and specifically says, on page 334, that it should be a SCSI1-compatible type. However, the SCSI2 connector is a small half-pitch, 50-pin type, so if you're going to use an external hard drive, optical drive or CD-ROM drive with the A3000, make sure it has a compatible connector or budget for an adaptor.

► enough memory, is the ability to record effects with samples, in mono or stereo. These effected samples can then be assigned to individual or paired outputs, leaving the effects banks free to work with other, un-effected, samples. This is a very versatile arrangement that, given enough memory, allows you an almost unlimited number of effects for your samples and programs.

Some effects, such as the Digital Scratch, Voice Cancellor, Digital Turntable and Auto Synth, are a little gimmicky, and the reverbs have a definite 'love 'em or hate 'em' Yamaha-ness about them. However, there are lots of positives: the 'Beat Change' effect is actually a powerful number-crunching, real-time, MIDI-controllable time-stretch feature that works almost as well as the 'Resample/Time Stretch' feature in Sample Edit mode, and although it's optimised for rhythm loops it has enough editable parameters to cope with almost anything. (See box on page 209 for full effects list.)

Although the effects banks contain some very good filter and EQ setups, the A3000 has another trick up its sleeve: separate multi-mode VCFs (Voltage Controlled Filters) for each sample. These babies can do some seriously extreme filtering, from radical bass cutting and boosting to ear-bleeding resonant shrills. The filter modes available

THE IMPORT & EXPORT DEPT

When it comes to importing samples, the A3000 just pretty much got all the popular formats covered. It can read DOS-format (or PC disks formatted on a Mac) DD and HD floppy disks containing WAV, AIFF, Yamaha A7000 and TX16W samples and, although it doesn't say so in the manual, you can import Emu and Akai samples from floppy disk (unfortunately, Roland sampler users have been left out in the cold). My first attempts to load Akai samples from an Akai floppy were a little problematic, because although the A3000 cannot read Akai keygroups and programs, it refuses to recognise an Akai sample unless it's part of an Akai program. Strange. In the end I managed trouble-free loading of Akai samples, complete with intact loops. Also supported are MIDI SDS (Sample Dump Standard) files, and MIDI SMF (Standard MIDI Files) type 0 files, for playing back sequences. Unfortunately, the A3000 won't save data onto PC, Emu, Akai or other non-Yamaha format disks. Apparently, the A3000 can also read WAV, AIFF, Emu and Akai sample data from an external hard drive or CD-ROM, and can control the playback functions of an audio CD mounted in a CD-ROM drive, which is a rather neat feature.

EXPANDABLE IN EASY STAGES

About two thirds of the space inside the A3000 is occupied by the power supply, floppy disk drive and the main PCB, with a sizeable area left free for an optional internal hard drive.

Detailed instructions are included on the type of SIMMs the A3000 can use, how to install them, and also how to install the optional AIEB1 I/O board. If this expansion board is fitted, an additional pair of digital input and output ports (S/PDIF optical and co-ax) and six assignable audio outputs are made available. The digital input allows recording at 48kHz, 44.1kHz and 32kHz, and playback at 44.1kHz. The cost of this board is a very reasonable £149 including VAT, and it's likely to be an essential purchase.

All these DIY options are a nice change from the usual 'No user serviceable parts, contact your dealer' sticker, and I think it's about time that manufacturers started to treat their customers like adults. After all, many of us are quite capable of upgrading our PCs with new drives and memory, and a sampler is a lot easier to deal with than a PC. Nice one, Yamaha.

SUMMING UP

The A3000 sounds great. When sampling from CD it's impossible to tell the difference between source and sampler. Stereo samples are rock solid, with no phasiness, and samples imported from other machines sound as good as the originals.

After using the A3000 for a week or so, I had developed a strong love-hate relationship with it. There are still elements of the machine that

The A3000's back panel. The included SCSI connector is standard on all UK A3000s. The slot on the right is for the optional AIEB1 I/O expansion board.

are Low Pass 1 and 2, High Pass 1 and 2, Band Pass, and Band Eliminate. Each filter mode offers control over cutoff frequency, gain, Q/width, filter sensitivity and filter scaling. In addition, each VCF has its own envelope generator, LFO depth and separate single band, +/-12dB equaliser, with a range from 32Hz to 16kHz. And this isn't all, because the main stereo output also has its own, entirely separate 4-band, +/- 12dB parametric equaliser. Phew! What a line-up.

ATTACK OF THE MASSIVE MANUAL

It's a shame that Yamaha haven't learned from the mistakes they made with their first sampler, the TX16W. Some of the terminology used in the A3000's manual is downright confusing. Sometimes a sample is described as "waveform data", sometimes not. At the beginning of the manual "start, end and loops" are described as having "points" (naturally), but the manual later insists on calling them "addresses". Try this: "Each end address is shown by distance from the corresponding start address, in address increments". Or "End and loop end addresses are indicated by their absolute address values on the waveform". What? This sounds like techno-babble from the 1980s. Why? Are Yamaha intentionally trying to confuse people or has the manual been badly translated?

I thought Roland and Akai manuals were long, at 200 pages or so, but the A3000 instruction manual is massive, at over 370 pages. Admittedly, the sampler needs one this big because there are so many features and functions, and if you don't read it through at least a couple of times you'll be banging your head against a wall within hours of turning the A3000 on. On the bright side, once you get used to the style, layout and arcane terminology, it is readable, and to help you along there are two very good indexes and lots of explanatory diagrams. There is also a basic 'Starting Out' section meant for the sampling novice, and all users would be well advised to start there anyway, as it eases you gently into the Yamaha mind-set and prepares you for the rest of your journey through the manual and eventually the A3000.

continue to mystify and infuriate me — its sluggish and sometimes puzzling response when changing modes, and the way parameter values don't keep up with knob rotations sometimes made me feel as though I was wading through treacle, and the limited display prevented me from getting the whole picture. One of the A3000's problems, especially considering the basic display, is that Yamaha have given it so many features and an arcane interface with which to access those features. Yamaha themselves admitted that the ill-fated TX16W suffered from 'over engineering' and the A3000 is undoubtedly subject to the same malady. If the Yamaha R&D department had given half as much thought to the human interface as they obviously have to the wealth of features they've poured into this sampler, it would be unstoppable. As it is, the balance may be way off for some people, particularly professional samplers. As a fairly short-term user/reviewer, my biggest problem with it was productivity — or lack of it. It's a bit like going from an Apple Mac to a DOS PC: you feel as if there must be an easier way to do this or that simple task, but there isn't. Working with the A3000 and an Akai S3000XL side by side, it became apparent that what I considered fairly speedy everyday tasks, such as sample editing,

looping, arranging samples into keygroups, putting samples into various programs and setting up multitimbral programs, took at least three or four times longer on the A3000. Even taking into account my familiarity with Akai machines, I still think I would outrun a seasoned A3000 user doing similar tasks, with ease. Some may not see this as much of an issue but, believe me, if you're doing a remix or some other fast turnaround work, you need the speed.

Having said all that, if the A3000 was my only sampler, I think I could live with it. On sound, features, expandability and price the A3000 is miles ahead of the competition, and if it was your only sampler purchase, I'm pretty sure you'd eventually be content with your acquisition. Just be prepared to invest some time negotiating the steep learning curve.

Info

THE ALTERNATIVE CIRCUIT

Alternatives at this price are decidedly thin on the ground. The Akai S3000XL looks thoroughly under-specified compared to the Yamaha, but is a lot easier to operate, and you do get the bonus of the superb MESA sample editing software package. What lets the whole Akai range down is the price of upgrade options — almost double what Yamaha are asking. Other alternatives could be the Emu ESI32 or the highly respected Roland S760: both use nice resonant filters, and the S760 has an RGB output. All the above alternatives have Akai compatibility, and are a lot easier to get to grips with than the A3000. However, they're also more expensive than the Yamaha, though dealers are beginning to discount some of these samplers and some offer freebies (such as extra memory or CD-ROM). It has to be said that, for its price, the A3000 has a very generous feature set, which would be hard to replicate from another manufacturer's range without spending more money.

With most of the pieces I write for this magazine and its excellent sister title, *Gigging Musician*, I try to be as objective as possible. This time it's personal.

If passports still stated occupation, mine would say: 'Composer of music with an average duration of 29 seconds'. I'm not proud: the fact is that I would far rather be composing soundtracks for Steven Spielberg. I've tried to do it, too, a couple of years ago. I visited Hollywood on a reccy (reconnaissance) and after a series of meetings with incredibly shiny happy (but non-committal) people, an opportunity arose to blag my way into his office. He wasn't in, but his security officers were and I had a very nice day getting thrown out.

Of course, I don't just compose 30-second pieces of tosh for the highest bidder. Last year I composed the score (eight songs, three refrains, two scene changes and an Overture) to a new Christmas play written by the incredible, funny, mad-as-a-March-hare Elly Brewer. The play was

record the theme tune, ad break stings and 'spotting' (the incidental music) to an entire TV series.

There would be a film screen showing the pictures in black and white, with a countdown line at the bottom, in sync with the click track, to cue the piece in. These techniques are still used today by actors when they do post-production ADR (Automatic Dialogue Replacement, more commonly referred to as Looping). It's also used by Foley artists (the people who smash a watermelon covered in cream crackers with a hammer to emulate the sound of a head getting smashed in with an axe).

At these sessions there was always another screen, to separate the rhythm-playing riff-riff (me, the guitarist and the drummer, mainly) from the real, classically trained orchestral players. Whether this was for audio separation or musical snobbery I really can't say. But it was hilarious to see the Principal Cellist and viola players, in full evening dress (one has standards you know, pip

HAVE I GOT JINGLES

A PERSONAL VIEW OF THE COMMERCIAL MUSIC INDUSTRY

BIG GEORGE WEBLEY recounts some personal experiences of the jingle music business and drops a few hints about how you might get in on the action...

called *Beaten By Toffee — The Witch Who Hated Christmas*, and including scoring out over 50 pages of manuscript, driving over 1000 miles to attend rehearsals, and demo-ing up all the songs, my total fee for the job was £500. This is not to be sniffed at by any means, but if you work it out as an hourly rate (excluding travel time and cost) it comes to considerably less than I would earn collecting supermarket trolleys. On the other hand, if the play gets picked up by a West End entrepreneur and goes on to become a national institution, like *Oliver*, I'll be rich enough to buy a small country on the royalties. Mind you, these kinds of overnight successes usually take 30 years or so to pay off. But, in truth, I'd have done it for nothing, as the exhilaration of the first night has been burnt into my soul for eternity.

ANCIENT HISTORY

When I first started out as a session bass player in the late '70s (I'm now 39), the big jingle sessions were recorded at either Abbey Road Studio 1 or the legendary, but now demolished, Anvil Studios in Denham. These sessions could feature up to 100 musicians playing together for a whole day to

pip), sweating their way through a ten-hour mid-summer session with no noisy air-conditioning during recording, whilst the rocking section of the ensemble were in dayglo beach wear, surrounded by ripped-up fag paper packets and cans.

MODERN TIMES

Sessions like these happen very rarely today — which is bad news if you play French horn or oboe but not if you have a MIDI setup in your bedroom. Nowadays the majority of TV budgets goes into the pocket of two or three of the principal participants: the presenter, producer and executive producer. Theme tunes, and music in general, are very low down on the financial priorities list. Mind you, being badly paid in TV terms can seem like winning the pools for someone who has spent years building up a home studio to earn the odd £50 doing backing tracks for a club singer.

With Channel Five being beamed into almost a dozen houses across the country, and the prospect of trillions of high-quality new channels (I mean high-quality in terms of the digital method of delivery, and most certainly not in terms of programme content), the need for home-produced TV jingles will increase dramatically.

ADD A LITTLE PITCH

One of the most annoying things TV production companies ask composers to do is "pitch an idea". In theory this seems like a perfectly reasonable request. The trouble is that they don't want you to pitch an idea; they want you to complete the job.

FOR YOU!

for no money whatsoever, before they decide. This wouldn't be so bad if you knew who 'they' were. Often the person who gave you the brief of the show hasn't actually got a say in commissioning the music — which means that you're pitching an idea to someone who then has to decide whether to pitch it to the right person.

The policy of many TV departments and independent production companies is to put the music out to tender. Generally, this means that although someone has already got the job of doing the music (usually an old friend or relative of someone high up in the production) three or four other composers are asked to pitch for the show. I've been on both sides of the equation, and when I confronted a top executive about this the answer was "it will go in your favour for next time". In my humble opinion that's complete bollocks. If someone has already been given the job, other people should not be asked to spend a lot of time working for nothing. Give someone the job, and if it's not up to standard, sack them.

STOP THIEF, OR I'LL DO NOTHING

If someone samples your music without your permission in the pop industry you take them to court and sue for massive damages (see the June issue of *SOS*). But if you pitch an idea to a TV

company and they pinch it, what can you do? I said this article was personal, so I can only relate my own experiences, but just about every composer I know in the industry will have a similar story to tell, and will have done the same as me: nothing!

So here's one of four tales I could tell: once upon a time a top producer from a major independent TV company asked me in to chat about a forthcoming show, fronted by one of our leading presenters. The music brief I was given was: a fairground tune with a hardcore rave backbeat, "and make it sound mental". I went away and wrote a rather excellent traditional fairground tune, if I say so myself, which leaned a little towards a military band (this was my creative input) and then added said backbeat. In truth, I didn't like the rhythm at all, but that was the brief and I was just the Monkey in this relationship. I duly took the Organ Grinding TV producer a cassette containing my tune, followed by a version without the rave beat and, lastly, a breakdown of the various fairground tune voices

►

"Being badly paid in TV terms can seem like winning the pools for someone who has spent years building up a home studio to earn the odd £50 doing backing tracks for a club singer."

HAVE I GOT JINGLES FOR YOU!

► (tubas, trumpets, glockenspiels, and so on). The reaction was a little muted, maybe because the tune and the beat didn't marry up particularly well, but, as I've said, that was the brief I was given.

The next thing I heard, about a fortnight later, was that they had commissioned someone else to write the theme. Well, you can't win them all — maybe whoever got the job had been able to make more sense of the brief than me. A month later the programme was broadcast, and I was surprised to hear how very similar the theme tune was to the one I had composed, only a with different beat. On checking the end credits (all media whores do this religiously) I saw the composer was someone I had played with years before in a band. I called them up to congratulate them on the theme (bastards) and asked how they'd come up with such a superb piece of music. They told me they'd been given a tape of a tune with and without a hardcore rave beat, as well as all the elements of the orchestration (my tape), and told to write something exactly like that but with a jazzy backbeat. I didn't say anything, as they weren't to know it was my tape. But what to do about it? I

“If you pitch an idea to a TV company and they pinch it, what can you do?”

hadn't registered the piece, and even if I had, what could I do? Sue a leading production company for passing my idea onto someone? Every production company in the world would be queuing up to use me if I did that — I don't think! Put it down to experience — a rotten, stinking, unfair experience which you just have to swallow, more than once.

IT CAN BE MURDER

It's not all bad manners and deceit. Sometimes you can be in fear of your life. One job I had was for a Middle Eastern finance company who wanted a 30-second TV ad in a western style but with a traditional beat. It seemed easy enough and I went

HAVE WE GOT OPPORTUNITIES FOR YOU

Being a composer shouldn't be about making money as much as doing good work. Yes — and pigs fly. Sometimes it's worth doing two soundtracks for the Royal National Theatre and a 20-minute dance for the Royal Ballet, which collectively pay less than £1000. Not just because they are serious musical compositions for stuck-up luvvies, but because you can boast about it when someone from the wonderful world of showbiz asks you what you've done recently.

Making a living out of music has never been a strong point with careers advisers. The local Job Centre isn't any better; in fact, the more colleges and community groups that run music and media-related training courses, the fewer the opportunities available. So just how do you go about making a living?

Well, if it was easy, everyone would be doing it, so don't expect a clear-cut answer on how you'll become a multi-millionaire composer. How would I know! But if you're looking for a way into the cut-throat world of media music composition, I have a couple of ideas you might want to try. They won't pay initially, but they will give you something more important than a couple of hundred quid — namely: a track record.

• TUNE IN AND DROP OUT

Every home in the country has access to at least one 'All New' local FM radio station. The DJs who are so cheerful on-air about everything, are, on the whole desperately sad individuals in need of mainstream recognition. They are your first prey. Compose one of them a jingle. It will mean you have to sit through a few hours of their shows to listen to their style (sic). Do a number of versions. Start with a couple of seconds of crash bang wallop with their name intoned low and slow in an American accent — they seem to like that sort of thing. Go up to a couple of minutes of background music for them to chat over. They will almost certainly use your jingles, and if they don't, try another DJ.

• PLAY SCHOOL

Next, offer to do a soundtrack to a play for a local theatre group. They may be the worst actors to ever

stand on a stage, but the play will only last a couple of performances and be watched by half a dozen people, whereas the credit you get will last forever. You'll get your name on the poster, but don't expect much remuneration — you probably won't get much more than £50. However, the discipline of writing mood music for a village hall play is not a million miles away from writing a tense scene for a horror film.

• MUSIC OFF THE SHELF

Library albums (and there are more of them on the market than there are drops of water in the ocean) are CDs full of jingles and musical beds that no-one wants — at the moment. Some people can literally make £100,000+ a year from these, and others can make less than £1.73. Personally I've never done any library music, as I come from the lazy bastard school of composition, and need a deadline to panic me before I can even be bothered to remember where middle C is.

This is how library albums work: a company releases a CD full of tracks which the composers give them free of charge (maybe musician costs are covered, if you're established in this field). Thousands of copies are given to production companies, TV and radio stations, and so on. Then the waiting starts — it could be a couple of years. Eventually one of the tracks will be used by a broadcaster who doesn't want the hassle of getting a talented composer to write music specifically for their needs but would far rather wade through a million generic CDs full of tracks called 'Evening Mist'. The composer and the library company split the performance royalty 6/12ths each (see 'Right Royalty Rip-off?' box for an explanation of royalties).

Library albums are usually set out with tracks at full length (approximately two and half minutes) as well as in convenient 30-second, 20-second, 10-second and 5-second versions. For a full list of the relevant library companies, look through your industry directory. What do you mean, you haven't got one? A good industry directory is as essential to being in the media business

as headed notepaper. The classified section at the back of this magazine has a selection of the best directories on the market. [Also see our feature on library music in the February '96 issue of SOS.]

• JINGLE SELLS

There are a number of jingle production companies in and around Soho who can turn round any length or style of music in an afternoon. On the whole, the results they achieve make Karaoke backing tracks sound like the greatest music ever produced. They will inevitably expand as the TV and radio networks increase, and maybe there's a place for you on their conveyor belt. We all have to start somewhere: the experience a composer could gain working in that environment might be invaluable, and you'd be paid a wage, which is something most composers never have. Fortunately, though, quite a few commissioners hate that calibre of music production, and the route into TV for independent composers is still very much open.

• MONEY TALK

When the time comes to actually get paid by a proper media company for your work, remember that money isn't a dirty word. One of the greatest lessons I was ever taught was to answer "I'm £250 per day" without stuttering, being embarrassed or backtracking when the questioner looked aghast. That was in the early 1980s; these days instinct helps me get the maximum amount on offer, which can be as low as £100, but that's the 1990s. If you come across as cheap, that's what they'll think of you and your work. Having said that, asking for a grand a day isn't going to cut any ice until you've got a couple of Oscars and a toilet full of BAFTAs.

The fact is, lots of money is made making music that never goes out on record. From the lifeless audio (I can't call it music), that brainwashes you in a lift, to the eerie, slow one-note pulse that accompanies a dark alley scene on a TV cop show, to the techno beat accompanying a corporate training video, music is bigger, more imaginative and certainly more fulfilling than the record industry's output would lead us to believe. And a piece of that action can be yours.

TUBE - TECH

*Superior
Valve
Technology*

LCA2B

Compressor / Limiter (Stereo)

- **Separate compressor and limiter**
- **Freq. response: 5Hz to 50kHz (-3dB)**
- **Very Low Noise: <-85dBu**
- **Compressor ratio from 1, 6:1 to 20:1**
- **Compressor threshold: off to -10dBu**
- **Output gain control**

MPIA

Two Channel Mic Preamp

- **Gain from +20dBu to +70dBu in 5dB steps**
- **Pad in front of input transformer (-20dBu)**
- **Tube push-pull output amplifier**
- **CMRR > 60dB @ 10kHz**
- **microphone input impedance = 1200Ω**
- **DI input impedance > 1MΩ**
- **Built in 48V phantom power**
- **Noise figure typical 5dB @ 200Ω**
- **freq. response 15Hz to 60kHz (-3dB)**

HAVE I GOT JINGLES FOR YOU!

The Have I Got News For You theme band, left-right: Steve Sidwell (trumpet), Phil Todd (tenor saxophone), Terry Disleyworld (piano), Ian (Stubby-R) Thomas (drums), Steve Donnelly (guitar) and some dodgy old bass-playing composer with sad sideburns (allegedly).

► to the library to borrow a CD of that country's traditional music, in order to get the groove of their rhythm. The beat sounded like badly timed clapping accompanied by someone whacking a biscuit tin with a hammer. I duly recreated a similar backbeat and added an inoffensive MIDI top line. It sounded just the ticket — to me — and I sent it off by Data Post. The next morning I got a call from the angriest man I have ever had on the other end of the phone. He was going absolutely ballistic because I had used the wrong type of biscuit tin, or something as insignificant as that, which made the music sound as though it was from a neighbouring country, who just happened to be their mortal enemies. They didn't pay and with Salman Rushdie in mind, I didn't chase them up about it.

ALLEGEDLY

Probably my most notable jingle to date is the theme for the BBC2 series *Have I Got News for You*. It was recorded in one take, live, during a one-hour session in the depths of a basement studio in Soho. I used top session players to sight-read their parts and I doubt if the sax player and trumpeter had their instruments in their hands for more than five minutes. The first time they even looked at the parts (which are not easy) was as I was counting them in with the click track. As for the music itself, I'd only written it the night before and had scored the parts out on the train journey to the studio.

Due to circumstances beyond my control, the original theme I'd written for the show, which had been accepted, needed to be changed, along with other aspects of the show. I was told this news the day before the recording session was

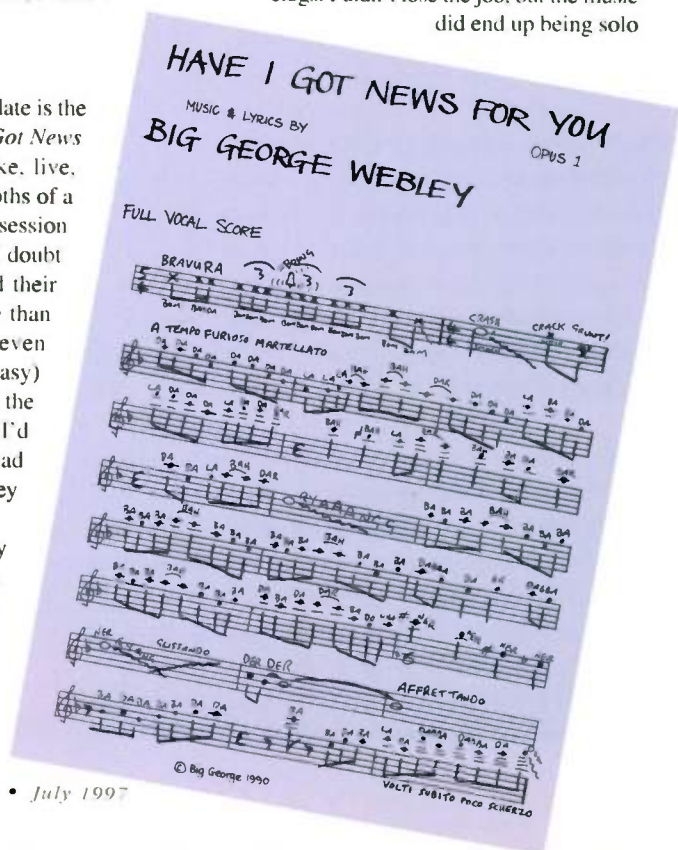

scheduled. It was too late to cancel, the players had been booked, and so there was nothing for it but to pen another theme. I knew the opening title sequence was 32 seconds long, but that included the four-second tympani drumming and Big Ben boinging sequence already completed in conjunction with the animator's storyboard. The end credits would be a little longer, so I decided to write a 45-second opus which I could edit down.

I knew the piece had to be manic, with a big kick at the end, and have a few demented twists and turns in the middle. So that evening I fixed a tempo (192bpm) and charted out the right number of bars. Next, I structured the piece — chord patterns, drum fills, stops, and so on — then it was time for bed, at 2am. Then it was up again at 7.30am for a nice cup of tea before getting the train to London, where I ignored the strange looks of my fellow commuters while I merrily "dah dah dahed" the top line to the piece, which I completed during the 45-minute journey. That was back in the summer of 1990 and the rest, as they say, is history.

HERE'S TWO I DONE EARLIER

I got a call to do some music for *Catch Five*, a series written and presented by Joseph (Catch 22) Heller, about the long-time dead artist Rembrandt. He was the bloke who painted voluptuous naked ladies laying about doing nothing much at all and old geezers either looking miserable or holding up pieces of paper. They wanted the music to be authentic to the period, although one of the producers said, with great authority, how Rembrandt used to listen to the solo pianoforte whilst working. I was more than pleased to inform him that the piano wasn't invented for over a hundred years after Rembrandt had popped his clogs. I didn't lose the job, but the music did end up being solo

"One of the greatest lessons I was ever taught was to answer 'I'm £250 per day' without stuttering, being embarrassed or backtracking when the questioner looked aghast."

piano, as that's what Rembrandt *would* have listened to, had it been around while he was alive.

Another piece for Channel 4 was the sport series *The Big Eight*. Once again, the budget didn't allow for an ensemble of musicians. Wheelchair basketball, featured in the series, is a fast-growing sport played by dedicated, tough athletes who are definitely not disabled in their approach to competitive action. I wanted to reflect the lightning speed of the game and the massive hardware pile-ups that occur on a regular basis in the music (wheelchairs move very fast and the crashes are spectacular). For the rhythm track I recorded the sound of a basketball bouncing in an empty school hall, which became the rhythm, and layered screeching guitars over the top. It is one of my favourite pieces.

DEADLINES

Deadlines are a crucial element of jingle writing. One minute the production team say they'll be listening to the latest version of (you hope) your 30 seconds of telly notoriety at their next meeting, early next week. The next thing you know, they've decided it's not quite right and they don't know why. Could you do a version a bit more... "umm, consumer driven" (sic), and can they have it early this afternoon? You, of course, panic, comply immediately and they in turn get round to listening

RIGHT ROYALTY RIP-OFF?

The most important fraction in a composer's life is 12/12ths. It's how PRS (the Performing Right Society) work out the royalty payments from film, TV and radio performances. These days it's almost impossible to earn that fraction, as most production companies have cottoned on to a source of income they have no right to, and you

have no choice but to let them have it. PRS made a suggestion a while ago that TV production companies who only administer a piece (that means 'do nothing whatsoever') are only entitled to 2/12ths of the income, but all production companies contract for 6/12ths of the royalty income. In theory you could kick up a stink about this, but it would probably end up in you earning 0/12ths, as they would get someone else.

to it in two days time. And before you know it the *Radio Times* is advertising the series with the producer's best friend from university doing the music that you were assured was 100% yours.

Don't worry: that doesn't happen all the time — just most of it. But if your work is good, you're able to bring it in on time and you've got a good (and flexible) attitude, you'll get on. Getting kicked in the teeth is just one side of the coin; the other is knowing that millions of people are listening to your music every week.

"It's not all bad manners and deceit. Sometimes you can be in fear of your life."

# THE GUITAR, AMP &

You name the price you want to pay (within reason)  
Yes we are huge!

Phone: 01273 671971 - 676835

We are not just a guitar shop. Here are a few facts:

We are one of the largest outlets for hi-tech in the south

we are not box shifters & offer superb after sales service with 2 on site engineers + 7 experienced sales people.

We simply refuse to be beaten on price and will beg, steal or borrow to get you the best deal.

We stock all items & much more than our advert suggests. All are on demo within our huge 5000 sq ft showroom.

All members of staff run their own digital studios.

We are young and hungry for your business

We love P/X & secondhand deals

We specialise in crossover music, we offer 700 guitars & 25 drum kits to back up our huge hi-tech department

We can't print most of our prices because they are so low.

In just over 4 years we have gone from a £3000 bank loan + dingy backstreet guitar shop to one of the largest outlets in the south, why don't you ring or come in and find out why.

We are proud to offer the incredible 0% finance over a period of 24 months

Here are a number of amazing finance deals we can arrange in under one hour. It's easy!

1. Fill in a simple form over the phone 2. We send you the form to sign 3. Send it back & we despatch the goods  
It really is that simple, Read on.

Our regular look at the hottest new sample CDs and CD-ROMs.

**SAMPLING  
SOUND SYSTEM:  
ROOTS REGGAE**

(MIXED-MODE CD/AKAI CD-ROM)

Sampling giants East West and the Swedish company Sounds Good have put their heads together and come up with a budget library that delivers a good selection of sounds for a third of the price of regular sample CDs. Retailing at £19.95, all the discs in the library (currently seven releases) come as either dedicated Akai CD-ROMs (for the slightly higher price of £39.95), or as mixed-mode CDs featuring all the sounds in standard audio, WAV and AIFF formats. Volume seven, *Roots Reggae*, is a good example of how keeping the cost down doesn't have to mean compromising on quality. The standard of the material is just as you might expect from a major big-budget sample CD, but the actual recorded tracks take up only 32 minutes of CD time.

*Roots Reggae* contains a smaller than usual but none the less sensibly chosen selection of samples in the form of drum-kit loops, guitar grooves and licks, and Hammond B3 and Clavinet sampled phrases, as well as a good number of percussion and bass parts.

Interestingly, this CD has a very 'traditional' reggae feel in that all of the parts are performed and recorded live; if some of the samples are a touch rough around the edges, it all adds to the overall laid-back style that any good reggae track delivers by the truckload. Although the drum loops and fills represent a good cross-section of current reggae flavours, the emphasis seems to be on the excellent Hammond and guitar chords and licks. The recording quality is good throughout. The layout of the samples within the tracks has also been thought through well: chords are provided in both major and minor for each of the 12 semitones in the octave. This flexible approach is also evident in the Clavinet licks and guitar loops: although not every possible combination of key signature is accounted for, there's still more than enough here to render this release useful and often quite inspiring.

Percussion-wise, all the reggae trademarks are featured (including some wonderful Timbale parts); the tempos range from 60 to 90bpm in increments of 10. Scattered among the groove and loop tracks are a handful of the individual percussion and single drum hits (mostly cymbals, hi-hats, snares and kick drums). These work well enough, and while the modest number provided here could never hope to compete with bigger releases, the sounds themselves are a welcome inclusion and eminently useable just the same. The presentation of these sounds as WAV files worked fine on my PC and I didn't find any major glitches to speak of, either.

In conclusion, for less than £20 you get access to a great source of raw, unprocessed reggae sample material. Sure, at only half an

hour it's unlikely to keep sample-hungry power users amused for very long, but samplers working to a tight budget who are unwilling to sacrifice quality in their search for good material could do a lot worse than consult the Sampling Sound System. *Paul Farrer*

**SAMPLING  
SOUND SYSTEM:  
POPPED VOL 1**

(MIXED-MODE CD/AKAI CD-ROM)

Another volume in the Sound Sampling System from Sounds Good, *Popped* is part of the 'Drum Tools' section of the library. It basically consists of two drummers (Mats Persson and Christer Jansson) performing a series of loops, fills and individual single samples on a number of standard studio drum kits. As the title suggests, these loops have a strong pop bias — as is freely admitted in the track titles, which name the bands or artists who 'inspired' the loops: Peter Gabriel, Tom Petty, The Who, XTC, Cream, The Small Faces, Blur and New Order among them. The audio section of the CD times out at just over 24 minutes and the drum loops are categorised according to tempo and stylistic content; as usual, the tempos go up 10bpm at a time, in this volume from 80bpm up as high as 150. This gives library owners a huge degree of flexibility when it comes to interchanging sampled loops and grooves between discs, and will also prove a big help to anyone without the ability to perform complex time-stretching or compression functions within their sampler.

The emphasis seems to be on more raw-sounding indie pop styles as opposed to hipper or more polished drumming. This effect works extremely well for a good number of the loops, but occasionally the 'rough and ready' approach gives the impression that the recording quality is not as good as it might be. There's a good range of snare and bass drum sounds, and the loops are faithful in tempo and style to the classic pop songs they have their roots in, but as the disc progresses to individual drum samples, there's more than just a hint of grottness to a good number of the sounds.

As an introduction to the world of drum-sample CDs, *Popped* really does quite well: the flexibility of the tempo structures and the good number of fills and loops more than make up for the slightly disappointing single-hit samples — and, of course, the fact that all the samples have been chopped up and are ready to load into your computer as WAV or AIFF files will be a great help to many users. The playing is of a suitably high quality, the layout is logical, and if you're looking for some solid beats with a rich 'indie' feel to them, *Popped* will satisfy most samplers for a short while, if not longer. *Paul Farrer*

**F** 01273 328881.

The intelligent choice for digital mastering has to be 18 bit DCC. Why? - mirror-image reproduction, a greater dynamic range than 16 bit DAT or CD and a price that just can't be argued with. Philips 18 bit DCC recorders are used in thousands of studios across the UK. Like them, why not examine the facts then make the intelligent choice?

**COMES COMPLETE WITH REMOTE**

**DCC730**  
**£219** INC. VAT  
 18 bit digital stereo recorder with SP/DIF I/O ports, optical input, alpha-numeric infra-red remote control and all cables.

**BONUS PACK**  
**£269** INC. VAT  
 ADD A PHILIPS DCC HEAD CLEANING SYSTEM PLUS 10 PHILIPS DCC 90 MINUTE TAPES WORTH AN EXTRA £82!

**DCC170**  
**£199** INC. VAT  
 18 bit portable stereo digital recorder with optical I/O ports, SP/DIF input, remote control, earphones, rechargeable battery pack, mains adaptor, carry case & cables.

**BONUS PACK**  
**£249** INC. VAT  
 ADD A PHILIPS STEREO MICROPHONE PLUS 5 PHILIPS DCC 90 MINUTE BLANK TAPES WORTH AN EXTRA £75!

**Intelligent Comment**

'The recording quality is to all intents and purposes indistinguishable from DAT or CD. Indeed, if you're using the analogue input, you'll actually get a little more dynamic range than you would with a DAT machine.'

**Sound On Sound**

'...it's easy to forget you're listening to tape and not a silver disc... the improved dynamics of the 18 bit system are again apparent... certainly there's no feeling that this is CD's poor relation.'

**What Hi-Fi**

'...the Philips exhibited excellent dynamics and a beautifully seamless sound that caught the air and space of the hall, subjectively far superior to when it was recorded from either analogue or 16 bit CD... All in all, I was seriously impressed with the DCC's.'

**Hi-Fi World**

'In contrast to the two MiniDisc (MD) machines, the DCC sounded bold and vital, and ultimately more engaging... there was more going on, giving the aural senses more of a workout. The treble sounded clean and crisp, without the fried-eggs quality of the MD recorders, but with plenty of detail and a more palpable sense of presence... the mid band was similarly more vital and engaging. The Philips was much more consistent than the others, with none of the rather crudely drawn quality that becomes apparent on MD when the music turns stressful... by far the best sounding of the three.'

**Hi-Fi Choice**

**Discerning Rightly**

'These new generation DCC machines start out by sampling the incoming signal not at 16 bits but at 18 bits which gives rise to a potential improvement in both dynamic range and residual noise of around 12 dB... DCC sounds just the same as DAT... The way DAT keeps going up in price, DCC could well become the home recording standard of the latter half of the nineties.'

**Sound On Sound**

'...DAT is starting to get out of reach with its escalating, almost elitist price range... The DCC730 is much better and cheaper than the recordable MiniDisc; it even makes a handsome partner for a direct-to-disk system. If only you could use it to back-up data I'd give up on DAT altogether. Go out and buy one...'

**The Mix**

'Philips allegedly invested £500 million in the research and design of DCC... the low-cost DCC730 could seriously challenge DAT's hold on the high tech market... could encourage small studios to adopt the format over the increasingly expensive DAT alternative.'

**Future Music**

'I've used a good quality DAT machine for years and am no stranger to the way digital tape can render analogue sound dry and antiseptic. But the Philips simply wouldn't entertain the possibility, giving a surprisingly warm and fulsome rendition. The bass was particularly well rounded and lacked the sense of sterility so common with digital. There was no trace of hardness higher up the frequency range.'

**Hi-Fi World**

'All DCC recorders will accept a digital input at 32, 44.1 & 48kHz, which is good news for anyone who wants to transfer a DAT collection to DCC. DCC's ability to handle any sampling rate you can throw at it might even precipitate a glut of second hand DAT machines!'

## ▶ STRICTLY 12 INCH (AUDIO CD)

E-lab started out by releasing rave-orientated sample CDs with attitude, and carved a unique niche for themselves in a market that was maybe just a little too precious. Since then they've expanded their repertoire dramatically, often extremely successfully.

The brief for *Strictly 12 Inch* is to enable you to strip down a song and make it so boringly repetitive that it becomes a hypnotic dance-floor utility — there are drums with percussion, drums without percussion, and yet more drums with percussion, with four on the floor provided by the ubiquitous 909 throughout. All loops are prepared in stereo, and not too wide, and there's little or no reverb to be heard anywhere.

Track 1's demo is a typical mid-'90s 'remix' example, complete with 'Come on!' shout, sparse bass and drums, and a long-winded evolution: very stock in trade. (Though it sounds as though it was it knocked up in 15 minutes, it probably took all day.) Tracks 2 to 70 comprise several bars of programmed drum loops with parts dropping in and out, followed by the component loop snippets and single hits, but the beats never break beyond the bounds of 120 and 130bpm — safe as houses!

Tracks 71 to 86 feature around 10 programmed drum loops each, with the bpm between 120 and 130; most are one-bar, some are two. All fade out after two or three cycles, annoyingly and for no good reason. Full beats with snare, kick and hats all going predominate, and several versions of many patterns are offered, with the only difference being how many voices are currently playing.

Then come banks of single hits, mostly from old Roland drum machines. This section I found the most interesting. Some drum-machine samples have been taken in quick succession while knobs are being twiddled; others have been successfully tweaked. I found tidy examples of 909 kick, snare, hats and claps, enough to set you on the right track if you're still looking for an authentic club sound. Unlike 16-bit drum machines and multitimbral synths, which only ever seem to be stocked with thin cymbals and toppy hats, these tracks have hi-

hats with a bit of meat in them.

None of the beats are useless, but neither are there any really roasting rhythms, though I did pick off about 20 patterns into my sampler which I thought had sufficient movement in them to justify a little experimentation later. Don't expect to get inspired to write a hit tune when auditioning this CD, either: I found it somewhat lacking in both inspiration and usefulness. After all, if you're going to base a remix around a new programmed (as opposed to live or rare groove) drum beat, then having individual kick, snare, and hi-hat tracks is a must. A set of MIDI files corresponding to specified keyboard sample maps would have dramatically expanded the flexibility of this product — and other products have done this before. There is, in fact, a second CD demo-ing several e-lab products which does contain some MIDI files, but none correspond to *Strictly 12 Inch* as far as I could ascertain — a chance missed. And why didn't e-lab offer a set of topped and tailed ready-to-sample short loops, instead of a single long sequence per track which leaves significantly more twiddly work for hard-pressed samplers already suffering from terminal RSI to do? Because a half a minute or so of unbroken drums gives the untrained ear a clearer picture of how beats might work in a mix. Which prompts the question: who is this product aimed at? Not, I suspect, at experienced re-mixing engineers, or even your average *SOS* reader. No, you're looking at bedroom jocks with a couple of Technics turntables and a PC. That must limit the potential market for *Strictly 12 Inch* to about two million hopefuls in the UK alone... *Wilf Smarties*

£ £59.95 including VAT and UK p&p.

## THAT JUNGLE FLAVOUR VOL II

(AUDIO CD)

This is the sequel to Zero-G's useful *Vol I* (though it wasn't called that then). Loops come first, 350 of them. One-, two-, and four-bar loops are presented as four-bar patterns with no sleeve indication of how many bars you really need to sample. I guess with RAM at a fiver for 128Mb nobody cares about wasting digital space any more, but my S770 can only stock up to 16Mb and there must be thousands of time-limited S1000s still in active service out there. The loops are mono, not entirely clean, and quite heavy on the snare. Nearly all are programmed using single hits or very short live snips, usually an eighth of a bar long. This tends to give a gated, nervous feel.

The initial impression is authentically jungly, but not as leftfield or as original and diverse in content as the very first Zero-G Junglist product, *Jungle Warfare*. This relied heavily on

cliffhanger fills to provide drama, whereas the loops here chug along almost inconspicuously. Tempos are all around the 170 mark, though the occasional half-speeder is included.

Track 18 and a rubbery fade-in fill is the first pattern to really grab my attention; a bit of Keith Le Blanc-esque rrrrrrrrr sticks out on track 20. Tracks 25 and 26 espouse some pretty wild distortion. Track 28 includes some digital springiness and a time-stretched percussion part playing in more than one key, in the same pattern, at constant tempo. Interesting. Track 33 is worth checking out for a variety of reasons, filter-swept dub echoes and dual-speed cut-ups being two of the most persuasive. I do like the sound of filter envelopes mapped to key off or key on, or both. An old trick for S770 owners...

Suddenly it's stabs and tones time. Now this is more interesting: cartoons, horror and sci-fi, all with a light touch. Old classics re-appear, filtered or speeded up. A mish-mash of organ tones, orchestral strikes, weather, ethnic, rare and retro-synth samples (some of this reminds me of the excellent Cold Cut sample CD *Kleptomania*, in attitude if not in content). You can tell that these grubby samples are regarded with genuine affection by the creators of this disc.

Later you're hit by a set of spurious straight-from-the-synth shots, which are much less characterful than the found sounds, and probably irrelevant if you've got a decent soundcard: file under 'filler'. Some sustained chords suffer a three-semitone pitch-bend downwards after a second or two — a typical jungle cliché, in case you hadn't noticed.

The last section features some West Indian bantering with the content shrouded in dub. This is followed by the world's shortest scratching section — four OK samples — and a digital tone, infuriatingly placed at the end of the CD as usual.

Could these loops be out-takes from the first volume? They certainly don't improve on the original. With a few notable exceptions, they steer a pretty safe course over well-charted territory — more game park than jungle. And, of course, it's a year on, and a month is a long time in dance-floor styles. *Wilf Smarties*

# GET YOURSELF A PIECE OF CLASSIC

## VS-880

Roland

DIGITAL STUDIO WORKSTATION

**-FOR ONLY A PIECE OF WHAT  
YOU THOUGHT IT COULD COST!**

### Roland VS-880 V Xpanded

- includes auto mix function, 3 band eq for input mix / track mix mode
- easy recording with eq and effects inserted at input - track mode

### VS8F-1 Offers:

- 370 effects within 3 banks - effects are recordable and any two effects can be used simultaneously.
- effects can also be added to the final mix
- new effects such as Voice transformer and Mic simulator now feature on the V Xpanded upgrade

### 2,1Gb Hard Disk (2,100Mb)

- finally to complement this amazing package we are including a 3 year warranty on the Hard Disk

## SNAPSHOT MIXING ON A BUDGET

*Fully automated mixing could make your life a whole lot easier, but if you can't get your hands on a suitcase full of banknotes, CRAIG ANDERTON has some ideas for achieving similar results at minimum cost.*

**H**ow many times have you been working on the perfect mix, only to blow it in the last few seconds by forgetting to bring down (or up) a particular instrument? (Those with expensive automation systems can flip to the next article.) Well, don't feel bad: it's a common problem, and one of the solutions is automated 'snapshot' mixing.

The snapshot approach assumes that mixer settings are relatively constant for several measures at a time. Therefore, a mixer with snapshot automation stores all control settings (or at least level settings) as a recallable 'snapshot'. As you play a song, each time the mix needs to change, you move the controls and store the settings as a snapshot. You can then superimpose the occasional dynamic fader change (such as ducking a bad note, turning up an effects send briefly, and so on) without having to think about the rest

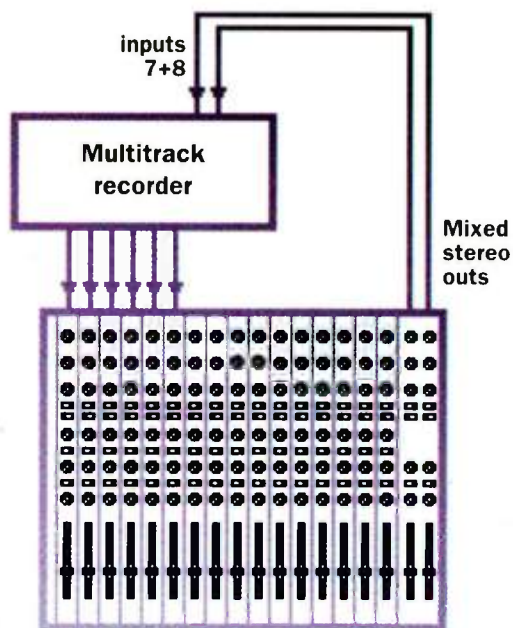

Figure 1.

of the control settings.

Some mixers use manual snapshot recall, others are triggered by MIDI program changes, and still others use an internal sequencer to trigger a series of snapshots in order. In any event, the end result is a more precise and recallable mix.

However, mixers with this capability are relatively expensive. Even low-cost external fader boxes (the Niche ACM, for example) might be too much for a budget already strained by buying a hard-disk- or digital-tape-based system. Fortunately, there are some low-cost snapshot solutions using gear you probably already own. We'll cover two methods: one for those with analogue multitrack tape recorders who mix down to DAT and also have access to two tracks of hard-disk-editing capability; the second, simpler method is for those with multitrack machines that use digital tape (Alesis ADAT, Tascam DA88, and so on) or hard-disk technology (Roland VS880, Vestax HDR, Emu Darwin, Otari Radar, and so on).

### SNAPSHOTS A LA DAT

Here's the procedure if you're mixing down to DAT from an analogue multitrack. The idea is to record the mix section-by-section to the DAT, changing settings between each section as necessary, then using the hard disk editor to 'splice' all the pieces together into a final mix. Note that if you don't have a DAT but prefer to mix down to half-inch analogue or something similar, you can follow the same basic idea but do your splicing with (gasp!) razor blades instead of using a hard disk system.

1. Set up your mix, and start mixing to DAT.
2. As long as the mix is okay, keep recording to DAT.
3. As soon as there's a problem, or you want to make a change, stop the analogue tape, then, a few seconds later, stop the DAT.
4. Rewind the analogue machine to before the place where you need to make the change.
5. Play back the multitrack without recording to DAT, and set the mixer controls as desired for the next section.
6. Rewind the analogue machine to about 10 seconds before the point before you made the changes (the reason for rewinding before the splice point is to make sure that the signal after the splice point includes any reverb tails or other time-based processing).
7. Set the DAT to record, then put the multitrack into playback. Record the next section of music to DAT.
8. Repeat steps 2-7 until the entire song is mixed.
9. Your DAT now consists of several sections of the song, each mixed optimally and separated by a little silence.
10. Bounce the DAT over to your hard-disk editing system.
11. Play back the hard disk until you reach the splice point that will define the end of the first section. Define a region between this point and what will be the splice point in the next section, then cut. Caution: make sure the 'splice' occurs on the beat, or where there's something like a heavy snare hit, as this will tend to mask any abrupt level changes.
12. Keep splicing the various parts until you end

up with a final mix, then bounce this back to DAT for archiving.

Although this method helps create perfect mixes, it is time-consuming and requires two processes: making the original mixes, then doing the off-line editing on the hard disk. The next method is faster, easier, and more intuitive.

### SNAPSHOTS A LA DIGITAL MULTITRACK

One side-effect of digital recorders (tape or hard disk) is that they have brought back the art of pre-mixing. This is partly from necessity: with eight tracks as the standard entry-level format, you'll probably need to pre-mix if you want a complex, layered sound. But digital audio also makes quality pre-mixing possible — unlike pre-mixing with analogue machines, the digital process doesn't build up noise and distortion.

Our second snapshot method uses two unused tracks on your digital-tape or hard-disk multitrack to hold the final mix. The downside is that, with an 8-track, you'll only have six tracks left for basic recording; this method works best if you have a lot of tracks available to start with. However, the advantages of this type of mixing are quite compelling (especially with 16 or more tracks) as it gives snapshot mixing 'for free.' Here's how to do it.

1. Connect the system as shown in Figure 1, where the recorded tracks go through the mixer to two unused tracks.

2. Go to the beginning of the song, put the multitrack into Record, and start mixing to the two unused tracks.

3. As long as the mix is okay, keep recording.

4. As soon as you want to change the mix, stop the multitrack and rewind prior to where you wanted the mix to change.

5. Play back the multitrack and adjust the mix levels, EQ, and so on.

6. Rewind the multitrack to about 10 seconds before the point where you want these changes to kick in.

7. Punch in at the precise moment where the new mix should take over. Unlike analogue, there's no punch-out gap to fret about (you can optionally use a rehearse mode, if available, to set and audition the punch points).

8. Repeat steps 4-7 until the entire song is mixed.

9. Your final mix is now located in what had been two unused tracks. Bounce them over to DAT (or whatever your mastering machine might be) using analogue or digital outputs, and you're done.

This is really a great way to mix, as it gives the advantage of intuitive, real-time mixing up to the point where you need to make a change, at which time you reset a few controls and carry on.

Fully automated mixing that recreates all fader and control moves is convenient and effective. But when you have to do more with less, either of the above approaches can give you a perfect mix without too much effort — and very little cost.

SOS

“How many time have you been working on the perfect mix, only to blow it in the last few seconds?”

## DMAN - The PC Digital Audio Card for All Musicians

DMan makes it possible to turn your PC (486 DX 33 or better) into a digital recording studio. DMan is a high quality, full-duplex PC Digital Audio card. DMan allows you to monitor what you are recording while listening to previously recorded tracks - just what you would expect from a serious digital audio card. DMan also includes a high impedance microphone input and a standard wave table header for adding any quality wave-table daughter board. Oh, and it's guaranteed for life!

### Features:

16 bit ISA card. 6 Available IRQs.

High quality digital specs: better than 85 dB S/N.

Stereo line level inputs and outputs.

Full-duplex for simultaneous stereo record and playback.

Full Windows 95 plug-and-play compatibility,

Windows 3.1 drivers also included.

Auxiliary stereo input is mixed with main stereo inputs.

High impedance microphone input internal 20 dB gain block can be switched on from included

software to support mics with smaller signal amplitudes. Built-in, standard wave table header

for addition of any wave table daughter board (optional). MIDI interface and cable included.

Built-in MPU-401 (UART mode) interface provides 1 MIDI In and 1 MIDI Out (16 MIDI channels).

The MIDI out can be used to drive either an optional on-board wave table daughter board or an external MIDI module.

### Specifications:

16-bit A / D and D / A converters.

Sample rates of 11.025 kHz, 22.05 kHz, 44.1 kHz and 48 kHz.

Total Dynamic Range: 95 dB.

Instantaneous Dynamic Range: 85dB.

Signal-to-Noise: 85dB.

Total Harmonic Distortion: 02%.

Inter-channel Isolation: 95dB.

Frequency Response: 20Hz to 20 kHz.

Line Level Impedance: 13.6 k Ohms.

Line Level Amplitude Acceptance: 2 volts rms or less.

16 channel, UART mode MPU-401 MIDI interface.

DMan Digital Studio combines Dman with a 4 track version of Samplitude, the Award Winning PC hard disk recording software. Dman Digital Studio provides you with everything you need to turn your PC into a digital audio recording system.

# Cool World

## COOL EDIT 96

PETER RIDSDALE gives his personal impressions of cult shareware program *Cool Edit*.

The two big windows show a waveform of Ronald Reagan's speech plus a spectral view, with one syllable highlighted and the small window showing colour customisation.

I don't know about you, but I tend to be deeply suspicious of shareware — it usually conjures up an image of something hastily cobbled together by a nerd, possibly containing some hideous undetectable virus and bound to play havoc with your IRQs and DMAs. However, my prejudices have been shaken by *Cool Edit*, a sample editor created by David Johnston of the Syntrillium Corporation, which is the nicest software sample editor I have ever used. Updates seem to come thick and fast from Syntrillium, and the latest is *Cool Edit 96*, a sleek, glossy, streamlined version of the already excellent *Cool Edit 95* (a *Cool Edit Pro* is in the pipeline). Frequent updates might suggest that the program is in need of perpetual bug fixes, but this seems not to be the case — in my experience, *Cool Edit* is absolutely rock solid. It's just that Syntrillium aren't content to

rest on their laurels: they exude a real enthusiasm about the development of their software.

I didn't intend this review to end up as a testimonial, but I feel that I should let you know that I registered my copy many months ago — just as soon as I found out how powerful the program was. Like most good shareware, this has some limitations deliberately built into the freely distributable version of the program, which are unlocked when you register it.

Excellent value though *Cool Edit* is, it's only fair to point out at the outset that the program has no MIDI sample dump capability and no SCSI sample dump support. If you're transferring your finished edits to a soundcard sampler that can deal with any of *Cool Edit's* supported file formats (see below) then this may not be a problem, but those working with hardware samplers will either have to resample via the audio outs on their soundcard or find a third-party utility able to convert one of the supported file formats into their chosen format.

To say that *Cool* profoundly changed my life would perhaps be a bit of an exaggeration, but to say that it radically changed

my working methods would be closer to the mark. I had absolutely no problems downloading *Cool*, and it recognised my soundcard immediately. After connecting a CD player to my soundcard's phono sockets, I was ready to start.

### RECORDING AND EDITING

Recording samples with *Cool* is straightforward — you first decide whether you want to work in mono or stereo and at 8- or 16-bit resolution. The default sample rate is 44.1kHz, but you can sample at any frequency from 6kHz to 48kHz if you need to. All the common soundfile formats are supported (including Macintosh AIFF and SND, Amiga IFF, RealAudio, *SampleVision*, SoundBlaster VOC, and of course WAV and RAW files), and there are some less common ones tucked away in there too. Hit the Record button, press Stop when you've done, and Bob is instantly elevated to close relative status. The sample waveform can be seen graphically displayed in green on black, but all

# NOW YOU CAN GET A BUILT-LIKE-A-TANK, 4-BUS, SWEEPED MID, PFL/AFL LIVE SOUND CONSOLE GOOD ENOUGH FOR DIGITAL RECORDING... MACKIE'S NEW SR24•4 & SR32•4 MIXING CONSOLES.

**GREG MACKIE DID IT AGAIN...** The new 4-bus SR24•4 & SR32•4 mixers are the first live sound consoles with the high headroom, low noise, VLZ circuitry and superb sound quality of our 8•Bus consoles.

That's because the SR Series consoles are equipped with many of the same features, components & design.

Through economies of materials and manufacturing processes, we're able to offer the SR24•4 & SR32•4 at astonishingly low prices.

Call us for full information, or visit your nearest Mackie dealer. The SR24•4 & SR32•4 consoles are in stock right now.

**A NEW MACKIE INNOVATION: FACTORY "AIR" EQUALIZATION** on each submaster! A unique peaking EQ circuit for enhancing guitars, vocals, drums — and sound reinforcement speaker systems themselves. Centered way up at 16KHz, AIR applies a gentle boost to the extreme high end without affecting lower treble octaves like HI shelving EQ does (red line).

You've gotta hear AIR to believe the "high fidelity" effect it has on PA systems, especially those with horns and compression drivers.

**CHS. 1-20** (1-28 on the 32•4) are mono with 1/4" TRS balanced line inputs, and the same renowned high-headroom, low-noise XLR mic preamps found on our 8•Bus series (including individual mic TRIM controls & globally-switched phantom power), HI SHELIVING EQ with 15dB boost/cut at 12kHz, SWEEPABLE MID EQ from 100Hz to 8kHz (1.5 times wider bandwidth than other consoles), and 80Hz LO SHELIVING EQ and LOW CUT FILTER with 18dB/octave roll-off at 75Hz just like on our 8•Bus consoles.

**ALL CHANNELS feature 60MM FADERS** with the same precision log-taper as our 8•Bus series. New design uses a recently-developed, long-wearing wiper contact material for extended fader life and improved resistance to solid and liquid contaminants.

**CHANNELS 21-24** (29-32 on the 32•4) are stereo line input channels with HI & LO shelving EQ plus 2 peaking Mid bands.

**-20dB SIGNAL PRESENT LED**

**SOLO** switch. PFL or Solo In Place (SIP/AFL) via Master Section Solo mode switch.

**"DOUBLE-BUSSED" SUB OUTS** let you feed an 8-track recorder without repatching.

**Balanced XLR MAIN OUTPUTS** (plus balanced 1/4" TRS outs).

**Dual HEADPHONE OUTPUTS.**

**INSERTS** on every mono channel, sub & main buses.

**Balanced MONO MAIN OUT** with output level control.

**6 MONO AUX SENDS** per channel, ALL accessible at any time. Aux 1 & 2 are pre-faders, 3 & 4 are switchable pre/post; Aux 5 & 6 are post-fader.

**STEREO AUX RETURNS** also feed Aux Sends 1 & 2 via separate controls for returning delay or reverb to stage monitors.

**TALKBACK** has separate rear XLR input, level control & assign buttons to send Talkback to Main Mix or to Aux 1 & 2 for stage monitors.

Globally switchable **PFL or AFL (SIP) SOLO.**

**PHONES/CONTROL ROOM** level control drives two stereo Phone outputs plus Control Room output. Switch can route stereo Tape Return to Phones/Control Room for monitoring 2-track recording.

**TAPE RETURN TO MAIN MIX** also disables other inputs to mains so you can play music during breaks without losing channel and submaster settings.

# Cool Edit 96

Cool Edit 96 displaying a waveform of Ronald Reagan's speech.

► colours — and even the toolbar — can be customised, if you're that kind of person. You can also see a spectral view of your sample, and there's a frequency analysis window as well, which analyses the slice of audio marked by the current cursor position. In earlier versions this was static, but now it tracks in real time, providing frequency and dB (level) information relating to whichever part of the waveform the cursor is passing over.

If you want to examine a small portion of the sample, just click and drag — the selected portion is highlighted in pale blue. The display at the bottom right-hand side of the screen will tell you how long your selection is (down to three decimal points) and, by continuing this process, you can zoom all the way down to individual sample level. There used to be a slight delay as the screen redraw itself, but in this version, it's virtually instantaneous. Any highlighted section can be copied and pasted in the usual way, and you have the option of deleting it using the Cut command; alternatively, you can keep the selected section and discard everything else using Trim.

If you're interested in creating loops, there's an automatic zero-cross function; combined with the visual enhancement offered by the zoom facility, this makes looping quite effortless. It's generally much easier to transfer the edited sample to a MIDI sampler and set the loop length to maximum, rather than fiddling with the start and end points in the sampler itself. If you have a sequencer that can handle audio tracks, you can simply import your edited WAV files directly into the sequence, which means you don't lose any sound quality. *Cool Edit 96* has been designed to be compatible with *Cakewalk*, which means that you can edit audio files without even leaving the sequencer program, and I find it works fine with *Logic Audio* on the PC.

## THE TRANSFORM MENU

So far, what's on offer is pretty conventional, but it's in the processing of samples that *Cool Edit* really lives up to its name. In the unregistered

version, only two of the Transform functions will work at a time and, although it's still possible to work with the program, you have to re-boot it every time you want to change functions — which rapidly becomes tiresome. This is, of course, quite intentional: once you've paid the modest registration fee, all 20 functions become available. At this point, I'll run through the processes as they appear...

- **INVERT:** this simply turns the wave over on its horizontal axis, providing a 180° phase inversion. This will make no appreciable difference to mono signals, but if you have a stereo file where one channel has somehow become inverted, you now have a means of fixing it.

- **REVERSE:** reverses the selected section of audio so that it plays backwards. An interesting effect can be achieved by copying a sound with a long decay, such as a cymbal or gong, then pasting a reversed version of it to its beginning. This produces a sonic palindrome, which sometimes disguises the original sound to the extent that it's no longer recognisable.

- **SILENCE:** this function replaces any selected section of audio by digital silence. You can also generate any amount of the golden stuff in the Generate menu.

- **AMPLIFY:** does what it says, but you can attenuate sounds here, too. Presets enable you to fade in and fade out, and level changes can be expressed in either decibels or percentages.

- **CHANNEL MIXER:** this provides control over stereo signal levels, and also lets you invert left or right channels independently. Aside from correcting problem files, you'll also be able to experiment with central image cancellation, which can sometimes allow you to remove the vocals from a track — though this is seldom entirely successful, in my experience. However, on some tracks the vocals are much diminished, and sound as if you're only hearing the output of the reverb without the direct signal.

- **DYNAMICS:** includes a compressor, an expander, a limiter and a noise gate. Control of this function is by means of a graph where the input value is along the x axis (horizontal) and the output value is along the y axis (vertical). A straight line from left to right has no effect on the sound because all input values match the output values. When compression is taking pace, the input/output gain line bends at the threshold point. Like many of these functions, this one could almost be the subject of a whole article on its own.

- **ENVELOPE:** this is one of the programs I use most often. For example, I often use a fade-in on the first few milliseconds of the sound being edited, and I'll sometimes fade out a little more

## pros & cons

### SYNTRILLIUM COOL EDIT 96

#### pros

- Extremely easy to use.
- Many sound-processing possibilities.
- Easy superimposition of samples.
- More than just a sample editor.

#### cons

- No MIDI or SCSI interface.
- No de-clicking.

#### summary

A brilliant sample editor which proves that shareware can be 'professional'. Syntrillium are constantly updating their software and a multitrack version of *Cool Edit Pro* complete with de-clicking and many other features is at the beta testing stage.

# Cool Edit 96

## LIFE'S A BATCH

Cool also has a macro or batch processor called Cool Scripts, which records every operation you undertake until you get it to stop. The subsequent batch file can be edited, then stored, and is useful if you want to repeat some long and involved chain of events. It also serves to remind you exactly how you arrived at a sound that you made six months previously; compared with an audio file, it takes up very little memory space. Use of this feature combined with the Info notepad means that you don't have to clutter up your hard drive with memory-guzzling WAV files.

A drum-loop waveform with the frequency analysis window open.

► generously at the end of the sample. This completely eliminates start and end glitches.

- **NORMALISE:** will amplify the waveform to any specified percentage of maximum — the point where the peaks reach, but don't exceed, the digital clipping level. You can also equalise the two sides of a stereo signal, and there's the facility to set a DC bias, presumably for countering unwanted DC offsets.

- **DELAY:** allows up to 100ms of delay to be added, producing a slapback effect — good for those Duane Eddy sounds. There are, however, far more versatile time-altering functions elsewhere.

- **ECHO:** this provides repeat echo effects; the presets include both canyon and shower emulations. As with most of these functions, you can add your own presets. If you require even more control over your echo, then the next function might interest you...

- **ECHO CHAMBER:** presents you with a virtual room in which you can not only specify the room length, height and width, but also damping factors and the position of the sound source and microphone. If you've ever wanted to know what a room four feet high and 2000 feet long would sound like, here's the place to find out!

- **FLANGER:** this one also incorporates stereo phasing, and a brief glance at the names of the presets will give you a good idea of what's on offer — Under Water, High School Movies, Sci Fi 60s and so on. You also get more parameters to play with than on a typical effects pedal.

- **REVERB:** this section gives you control over reverb length, attack time, high-frequency absorption and perception/timbre as well as the

usual mixing facility — but don't expect top-end reverb from an unassisted PC processor. If you want to put a canyon effect on a short sample, make sure it's followed by enough silence to allow the reverb to do its thing.

- **FFT FILTER:** another one that could have a PhD thesis written about it but, fortunately, you don't have to know the difference between a Von Hann and a Blackman-Harris windowing function to use it. Presets include the really useful stuff — notch, low-pass and band-pass filters, and so on — and you can learn a lot just by studying their settings, as in all the other parts of the program. I might also add that the on-line help is generally clear and informative.

- **QUICK FILTER:** essentially, this is an 8-band graphic equaliser.

- **NOISE REDUCTION:** an invaluable tool if you ever take samples from noisy sources, such as TVs or audio cassettes. It uses the same method as Digidesign's *DINR*: you first sample a bit of tape hiss or noise so that the program can subtract this from the wanted signal. You can eliminate mains hum, and even the residual noise, from your soundcard, but you can also get strange effects by taking away signal information from your signal. Noise profiles can be saved as FFT files, and, providing you are modest in your expectations, you can achieve a worthwhile reduction in background noise without doing too much damage to the wanted audio.

- **BRAINWAVE SYNCHRONIZER:** this is definitely the most curious part of the program, and, to be quite frank, I haven't yet got to grips with it. According to the Help notes, it's a way of 'waving' audio in order to stimulate brainwave activity. It's claimed that alpha, beta, delta and theta waves can thus be produced, inducing meditative states of mind. Sounds great for the New Age writers out there, but for the moment make mine a strong cup of coffee.

- **DISTORTION:** from light fuzz to the heaviest of metals is available, if you don't have some other means of generating the effect. Call me old-fashioned, but I'm usually more interested in getting rid of distortion than actively seeking it out — this might be just the job for grunging up dance loops, though.

- **MUSIC:** this one's a sample sequencer. By dragging notes onto a music staff, you can write a piece of music of up to 256 notes. *Cool Edit* will automatically transpose your sample to the pitches specified. You can also specify which key and octave to put it in, and it will even turn your sample into chords.

- **STRETCH:** allows you to expand or contract soundfiles, and you can choose to preserve either the original pitch or the tempo. If you have a sample

# Cool Edit 96

Cool Edit with four different windows open.

► that is, say, 11 seconds long, but you want it to fit into a space 14 seconds long, you just set the time you want and *Cool Edit* will automatically work out the ratio. This is the place to transpose samples: you simply click through 11 semitones in either direction — octaves can, of course, be expressed as percentages. As you might expect, the bigger the shift you apply, the more the side effects show up.

## USING COOL EDIT

Apart from the usual copy and paste options, *Cool Edit* also features Mix Paste, which allows you to superimpose samples. You can paste either from the clipboard or from any file on your hard drive, which is handy if you have a file that's too long to fit on the clipboard. Simply place the cursor at the point where you want your new sound to begin and then choose whether you want it to overlap or modulate. (The modulation is somewhat akin to ring modulation.) You can also specify how many times the sample is copied. If you make a mistake, it doesn't matter, because there are multiple levels of Undo: the default is five, but you can add more if you're cautious by nature. You can also open any number of screens and freely copy and paste between them.

Either side of the stereo can be treated separately, and this combined with Mix Paste enables *Cool Edit* to transcend its sample-editor status. Indeed, you can make whole compositions without ever leaving the program, and the experience of working with it isn't so much of editing but rather of sculpting. There's a kind of facility about the shaping and collaging processes involved that makes this program a real joy to use.

Let me give you a practical example in order to illustrate the kind of thing you can do. First sample two minutes of orchestral music — something fairly abstract such as Debussy works best. Double-click anywhere near the centre of the screen and the whole piece will be highlighted. Reverse it

and stretch it by three semitones, preserving neither the tempo nor the pitch. Move the cursor towards the bottom of the screen until an R (Right) appears. Move it to the top of the screen, and L appears. Double-clicking selects either the left or right channel. Cut the right channel and then paste it onto the left channel, but offset by a few seconds. (Debussy should now be clearly audible turning in his grave, as his piece will be rendered totally unrecognisable.) Next, Mix Paste a drum loop into the empty right-hand channel, then click on Loop Paste in the pop-up box and specify how many cycles you want. If you now want to add different sounds to the drum pattern, you can see very clearly where the beats are, and Mix Paste will quite seamlessly mix that prize bedspring sample right into the body of the rhythm. Without taking it any further, you already have a new piece of music that's a million miles away from both Debussy and Ragga.

You can also use *Cool Edit* to turn your CD-ROM into a normal CD player, providing you have the correct driver installed. If you take the trouble to enter track names, it will recognise the CD the next time you play it and will display the appropriate track listings.

As well as generating noise and simple waveforms, *Cool Edit* will generate and store telephone number tones. Hold your telephone receiver to the speaker as you dial, and then *Cool Edit* can automatically call up your local pizza outlet next time you're so engrossed in the program that you can't bear to tear yourself away to make food.

## CONCLUSION

*Cool Edit* is the best sample editor I have ever used, and at the price, there's very little to criticise other than the lack of MIDI sample dump support. It might be nice if it had a de-clicking facility, and I'd like to see it being made MIDI-compatible but, given its low cost, these are hardly fair criticisms. True, it has a few features not directly related to the business of editing sounds, but who's complaining about that? No-one is actually forcing you to meditate or to set up an auto-dial telephone number database. All in all, it's extremely easy to use and does what it sets out to do elegantly and efficiently.

SOS

# FACE

MIDI INTERFACES FOR THE MACINTOSH

# VALUE

*When it's time for your Mac to start talking MIDI to the rest of your rig, the technology, like the truth, is out there. But should you spend a few pounds, or a few hundred? MIKE COLLINS has the information you need.*

MIDI interfaces for the Macintosh have come a long way since the first simple one In/three Out designs, which have been available since 1984. The first enhancement was to provide for 32 channels of MIDI, by allowing the interface to be connected to both modem and printer ports, with 16 channels through each. Around the same time, SMPTE sync capabilities were developed, and units such as the Opcode Studio 3 became very popular. The next major development came from Mark of the Unicorn with their MIDI Time Piece I, which had eight Ins and eight Outs, each of which could carry 16 MIDI channels separately, making 128 in all. These units could be linked together to support more connections for larger rigs, making this the obvious choice for professional users. Opcode followed suit with their Studio interfaces, all supporting this Mark of the Unicorn multi-port standard — they can even be networked with the MOTU interfaces.

Opcode currently offer the widest range of interfaces for the Macintosh, many of them offering useful MIDI-processing capabilities. The Opcode Studio interfaces are actually good choices for live work as well, as they can be used to reconfigure your entire MIDI rig at the push of a button, to suit each new song.

Those on a budget will probably want to take a look at the Apple, Anatek, Altech and MIDIMan interfaces, which represent good value for money, but check out the budget MOTU units as well, as you may find extra features such MIDI Thru switches well worth the extra cash.

## ANATEK

### POCKET MAC

This is a neat little interface aimed at those on a budget. It does the trick — and won't cost you an arm and a leg!

- 1 In, 2 Outs.
- Supports 16 MIDI channels.

- LEDs to indicate MIDI activity.
- Self-powered.
- £39 including VAT.

## APPLE

### APPLE MIDI INTERFACE

Measuring just 1.3 x 2.1 x 2.9 inches, the Apple MIDI Interface has one input and one output — the most basic type of interface you can get.

- 1 In, 1 Out.
- Supports 16 MIDI channels.
- Self-powered.
- Expect to pay around £65-70 including VAT.

info

## ALTECH

### MIDIFACE SX

This is the smallest, simplest MIDI interface available, and, like the Apple interface, only allows you to connect allows you to connect a single keyboard or sound module to your Macintosh.

- 1 In, 1 Out.
- Supports 16 MIDI channels.
- Self-powered.
- MIDI/operating status LED.
- £32.95 including VAT.

### MIDIFACE LX

This is one of the simplest designs of self-powered interface available, and it only really provides for the most basic of needs. But it's perfectly adequate

The Altech Midiface SX.

for anyone using just one keyboard with a couple of additional sound modules.

There's just one MIDI In socket, to which you connect your master keyboard, and three MIDI Out sockets to hook up three MIDI modules — or more if you take some MIDI Thrus from these to other devices. This type of interface only provides the standard 16 channels of MIDI, and you can't connect all the outputs of your MIDI devices to the computer using just this interface — so it's not really suitable if you are using a synthesizer patch editor/librarian, for instance.

You can connect the interface to either the modem or printer serial ports of your Macintosh, and you can connect two units if you want to use 32 MIDI channels.

This interface is also sold by various other companies, re-badged for marketing purposes. The relevant specifications of this model and others of similar design are identical.

- 1 In, 3 Outs.
- Supports 16 MIDI channels.
- Self-powered.
- MIDI/operating status LED.
- £39.95 including VAT.

#### MIDIFACE EX

This basic interface has a Thru switch so that you can have your modem or printer connected through the interface, rather than having to remove the MIDI interface and plug in the modem or printer when you need to use these.

- 1 In, 3 Outs, plus Thru switch.
- Supports 16 MIDI channels.
- Self-powered.
- MIDI/operating status LED.
- £49.95 including VAT.

The Altech Midiface MX.

#### MIDIFACE MX

The MX interface adds SMPTE and MTC features along with input-message filtering and channel-remapping capabilities.

- 1 In, 3 Outs, plus Thru switch.
- Supports 16 MIDI channels.
- Self-powered.
- MTC (MIDI Time Code) generator — 30, 29.97, 25, 24 fps.
- SMPTE (Reader/Generator/Regenerator) — 30, 29.97, 25, 24 fps.
- Adjustable SMPTE-reader freewheel over dropouts.
- Adjustable SMPTE-reader Stop/Shuttle detection.
- SMPTE to MTC conversion.
- SMPTE output level control (-10 to +4dB).
- SysEx programmable (Channel Remapping, Message Muting).
- MIDI/operating status LED.
- £129.95 including VAT.

#### MIDIFACE DX

The DX, suitable for slightly larger MIDI rigs using perhaps a couple of keyboards and three or four additional sound modules, will be released later this year.

- 2 Ins, 6 Outs.
- Supports 32 MIDI channels.
- Self-powered.
- MIDI/operating status LED.
- Price to be confirmed.

#### MIDIMAN

##### MINIMACMAN

This tiny 1 by 2.5 by 2.5-inch MIDI interface takes its power from the Mac, to which it connects via the supplied cable. This has to be one of the simplest interfaces available, and would suit a hobbyist with just one MIDI keyboard or sound module.

- 1 In, 1 Out.
- Supports 16 MIDI channels.
- Self-powered.
- £35 including VAT.

## MIDI INTERFACES FOR THE MAC

### ► MACMAN PT

This is a one In/three Out interface. It takes its power either from a standard Mac via the serial connection or from some models of PowerBooks. A Thru switch is provided so you can switch your Mac through to a modem or printer running off the same serial port.

- 1 In, 3 Outs.
- Supports 16 MIDI channels.
- Serial Thru switch.
- Self-powered.
- £45 including VAT.

### MAC SYNCMAN

This is a two In/six Out MIDI interface which includes synchronisation capabilities.

You get both SMPTE-to-MTC and Smart FSK sync, and the SMPTE reader/writer supports 24, 25, 30 drop and 30 non-drop SMPTE formats. Jam-sync and freewheeling are supported, with a high-quality SMPTE regenerator for repairing damaged SMPTE stripes. There is one MIDI In and one MIDI Out on the front panel for easy access, along with two switches to select printer and modem Thru, and LED activity indicators for MIDI In and Out. The Macintosh desk accessory supplied allows you to write any SMPTE formats from any offset directly from your Mac.

“Guaranteed for life”! says the blurb. Wow, does this mean that when I am 95 I will still be hooking up a Mac to MIDI and using one of these? Hope I die before I get that old!

- 2 independent Ins, 6 Outs for 32 channels of MIDI.
- Supports 24, 25, 30 drop and 30 non-drop SMPTE timecode. (Doesn't support 29.97 non-drop format SMPTE.)
- External power supply.
- £169 including VAT.

info

### MARK OF THE UNICORN

MOTU have recently revamped their range of MIDI interfaces. Gone are the MTPII and the original Midi Express models for Mac and PC, and in come the MTP AV, MIDI Xpress XT and Micro Express to

join the Pocket Express and FastLane products which have been available for some time.

### FASTLANE

The FastLane is a basic self-powered one In, three Out MIDI interface with a couple of neat features not found on the Altech or similar units. You get a printer Thru button so you can switch easily between playing MIDI and printing, and there's also a MIDI Thru button that lets you play your MIDI gear when your computer is turned off without having to re-connect any cables. It is worth paying an extra few pounds for this

attractively styled unit — if only for the Thru buttons — and you could find it a better choice than either the Altech or the Opcode units.

- 1 In, 3 Outs.
- Printer Thru and MIDI Thru buttons.
- £59 including VAT.

### POCKET EXPRESS (MAC & PC)

The Pocket Express is one feature-packed little gizmo! It is a 2-input, 4-output, 32-channel MIDI interface which works with either a Mac or a Windows PC. It will also read and write SMPTE, supporting virtually all timecode formats — it reads, but does not write, 29.97 frame-rate

SMPTE. It will freewheel across up to four frames of SMPTE dropouts which would otherwise cause loss of sync. It even features front-panel SMPTE controls for fast convenient striping and lockup.

It doesn't feature any MIDI processing, but you can get MIDI Thru with the computer off. Also on the minus side, there is no MMC, no click to MIDI, and no Panic button — and it uses an external power supply. The Pocket Express would suit a small MIDI rig for home use or a small multimedia setup. (For a review using a PC, see December 1996's SOS.)

- Compatible with Macintosh and Windows (3.1 and 95).
- 2 Ins, 4 Outs for 32 MIDI channels.
- Supports virtually all timecode formats.

“MIDI interfaces for the Macintosh have come a long way since the first simple one In/three Out designs...”

## MIDI INTERFACES FOR THE MAC

- ▶ • Reads 29.97 frame-rate SMPTE.
- £199 including VAT.

### MICRO EXPRESS

The Micro Express is a mini version of the MIDI Express XT (described next) with most of the same features, but in a smaller and more affordable package. It is a half-rack unit with four inputs and six outputs — otherwise the specs are as for the MIDI Express XT. The features closely match those

of the Opcode 64LX — although the Micro Express has more patch memories, it lacks the MIDI-processing features available on the Opcode unit.

- 4 Ins, 6 Outs for 96 MIDI channels.
- Other features as the MIDI Express XT.
- £299 including VAT.

### MIDI EXPRESS XT

The MIDI Express XT MIDI interface and SMPTE synchroniser is the natural successor to the MIDI Time Piece II and now works with Macintosh- and IBM-compatibles running Windows 3.1 or Windows 95. You get eight inputs, nine outputs,

128 MIDI channels and lots of other features at a relatively affordable price — making it ideal for medium-sized MIDI setups.

The accompanying *Console* software for Mac and PC provides comprehensive routing, merging and muting. The Express XT also converts and stripes all SMPTE formats including both 29.97 drop and non-drop. Adjustable freewheeling over up to 32 SMPTE frames provides dropout-free sync. It supports MMC and a pedal input provides support for a standard momentary foot switch or for audio click-to-MIDI conversion.

Packed with features, this is stiff competition for the Opcode Studio 4. It doesn't offer the advanced MIDI processing capabilities of the Studio 4, but it is programmable from the front panel — a more useful feature for many users — and it works with Mac or PC.

- Compatible with Macintosh and Windows (3.1 and 95).
- Can connect to both Mac and PC at the same time.
- Works without the computer as a stand-alone

MIDI patchbay/merger/processor.

- 16 front-panel presets — eight programmable — with battery-backed RAM.
- 8 Ins, 8 Outs with 9 Out ports for 128 MIDI channels.
- Front-panel Panic button, buttons and LEDs for choosing presets, SMPTE stripe button, SMPTE Lock and tach LEDs.
- Status lights for MIDI In/Out and computers.
- Supports all frame rates and MMC.
- Recalls setups via MIDI program change.
- One PC parallel 25-pin 'D' connector.
- Two Mac mini-DIN 8 serial connectors.
- One quarter-inch jack for switch pedal or for click-to-MIDI conversion.
- Two SMPTE quarter-inch line-level jacks.
- Internal Power Supply/IEC power connector.
- £399 including VAT.

### MIDI TIMEPIECE AV

The MIDI Timepiece AV is a professional eight-input, eight-output MIDI interface, MIDI patchbay, SMPTE-to-MIDI converter and digital audio/video synchroniser for Macintosh or PC. You can connect this unit to a Macintosh serial port — modem or printer — or to a PC, either via a serial port or parallel port.

The AV can be programmed from either the front-panel LCD or from the *Console* software provided, and you can store your setups in the AV's internal memory locations. Using the software, you can call up and modify any of the preset Base Setups supplied as starting points. Once you have completed your edits, you can store this setup into a preset memory

location within the AV. You can also store your setups to disk on your computer, so *Console* is basically an editor/librarian for the AV. Once you've edited and stored your setups, you can use the AV as a stand-alone, customised MIDI processor, with no need for an external computer. On the other hand, if you intend to use the unit with a MIDI sequencer, such as *Performer* or most other popular software, you don't actually need to use *Console*, as you can control the unit directly from within the sequencer.

Anyone with a larger MIDI rig can use the AV's network serial port to connect a second unit, to provide connections 9-16.

You can actually connect up to four MTP devices to your Mac using two on each serial port, modem and printer — a feature not available for Windows. In this case, you'll have a free Mac port on each of the daisy-chained units, as you connect the pairs of MTPs using the network socket. You can use these to hook up a second Mac, which will then have equal access to the complete MIDI system. You can even connect both a Macintosh

# VS880 V-XPANDED

The VS880 digital multitrack recorder has found a place in many project recording studios around the world. Roland have now taken the VS880 to new heights with the introduction of automated mix features, 3D Sound processing, voice transformer, vocoder, mic simulation, improved effects routing, 3 band EQ at input mix / tape mix and much more.

CALL US NOW FOR PACKAGE PRICES ON THIS GROUNDBREAKING ALL IN ONE STUDIO SOLUTION.

# JP-8000

The JP8000 Synthesizer offers analogue modelling and real time sound shaping control and programmability that every serious synthesist and keyboard player dreams of.

This synth not only sounds like the analogue monsters we've all loved over the years, but it also looks like one!

The 8 voice JP8000 features 2 oscillators, 7 waveforms, pulse width modulation, total real time filter control, portamento, osc. sync, arpeggiator, RPS, delay & chorus effect, EQ controls, motion control, ribbon controller and full midi control!

CALL US TO ARRANGE YOUR DEMONSTRATION - YOU HAVE TO PLAY IT TO BELIEVE IT!

# JV-2080

The JV2080 is definitely the MOST EXPANDABLE synth module ever produced.

8 expansion slots provide access to upto 64MB of

industry standard synth and acoustic sounds from Roland's SRJV Boards. Plus the JV2080

boasts dedicated chorus and reverb FX busses plus 3 EFX (multi effects) busses for even greater creative possibilities!

## MIDI INTERFACES FOR THE MAC

▶ and a PC to the AV at the same time.

An ADAT Sync Out port is provided, and the AV features MIDI Machine Control so you can arm your ADAT tracks from within your sequencer software, and control the ADAT via the sequencer's transport controls. If you are working to picture, you can sync the AV to any incoming video signal — a standard video signal or a blackburst video sync signal — to achieve frame-accurate sync however long your video cue is. The AV is also both a SMPTE/MTC timecode converter and a generator.

A front-panel jack, the Pedal B input, lets you connect an Alesis LRC remote controller or any device that emulates the LRC, such as the Fostex Model 8312 controller. And if you want to convert an audio click to MIDI, you can use the Pedal A input. You can also connect a foot pedal or footswitch to Pedal A or B, so, for instance, you can make a pedal act as a tempo source or as a volume controller for various synths in your rig.

The AV also acts as a digital audio synchroniser for Pro Tools, Pro Tools III, Pro Tools Project and Session 8 (for both Mac and Windows) systems, and works with any software that uses Digidesign hardware — such as MOTU *Digital Performer*, Emagic *Logic Audio*, Steinberg *Cubase Audio* or Opcode *Studio Vision*.

This has to be one of the most versatile choices available for the professional MIDI musician or studio owner: it works with either Mac or PC, and lets you hook up both ADAT and Pro Tools systems with audio and video tape recorders — acting at the heart of your system to interface with your computer, providing synchronisation for virtually anything that 'moves', while providing comprehensive MIDI patching and processing facilities. (For a full review, see January 1997's SOS.)

- Compatible with Macintosh and Windows (3.1 and 95).
- Can connect to both Mac and PC at the same time.
- Can be used as a stand-alone MIDI patchbay/

merger/processor for stage work.

- Fully programmable from the front panel.
- Provides ADAT Sync Out, Word Sync Out and Video Sync In.
- 8 Ins, 8 Outs for 128 MIDI channels.
- Battery-backed memory with eight scenes and 128 patches.
- Recalls setups using MIDI patch changes.
- Two units can be networked for 16 MIDI Ins and Outs and 256 MIDI channels on Mac or Windows with a single serial cable.
- Four units can be networked to a Mac, and the AV can be linked to the MTPI, MTPII or Opcode Studio 4.
- Supports all SMPTE frame rates (24,25,29.97 drop/non-drop, 30 drop/non-drop).
- Converts LTC to MTC, ADAT Sync and word clock (1x or Digidesign 256x 'Superclock').
- Converts MTC to LTC, ADAT Sync and word clock or Superclock. SMPTE Jam-sync and adjustable freewheeling.
- 16 x 2 backlit LCD display.
- Two pedal inputs for continuous pedals or switches.
- Panic button.
- Two SMPTE quarter-inch jacks.
- Internal power supply/IEC power connector.
- £649 including VAT.

“Those on a budget will probably want to take a look at the Apple, Anatek, Altech and MIDIMan interfaces, which represent good value for money”

### OPCODE

#### MIDI TRANSLATOR II

The MIDI Translator II is a basic 16-channel self-powered MIDI interface. But it goes one better than the standard interfaces such as the Altech LX:

you can access peripherals such as modem or printer with a flip of the Thru switch to avoid cable swapping. With its simple, rugged design and great value for money, this makes a good choice for portable applications.

- 1 In, 3 Outs.
- Supports 16 MIDI channels.
- Serial Thru switch.
- Self-powered.
- £57.58 including VAT.

#### TRANSLATOR PRO

The Translator Pro provides twice the power of the MIDI Translator II, with two Ins and six Outs and 32 MIDI channels. Dual Thru switches select between MIDI and peripherals; status LEDs monitor the MIDI activity for each port. The rugged lightweight design makes this ideal for smaller studios or portable applications. ▶

Opcode's Studio 4, Studio 5, Translator Pro (large white unit), Translator ProSync, and Translator II (small white unit).

## MIDI INTERFACES FOR THE MAC

“The Opcode Studio 5LX is probably the most advanced MIDI interface available.”

- ▶ Supports 32 MIDI channels with 2 independent Ins, 6 Outs.
- Two MIDI Outs accessible from front panel for quick MIDI equipment changes.
- Self-powered.
- £116.33 including VAT.

### TRANSLATOR PROSYNC

The Translator ProSync features 32 channels of MIDI, with two independent MIDI Ins and six Outs. Thru switches are provided for both modem and printer.

As its name suggests, the ProSync also reads and writes SMPTE timecode. This is the lowest-priced unit available that supports SMPTE — making it a good choice for the smaller home studio, audio-for-video applications, or multimedia work, where you're not using too many MIDI devices.

- Provides 32 channels of MIDI, 2 independent Ins, 6 Outs.
- Supports 24, 25, 29.97 and 30 non-drop SMPTE timecode. (Doesn't support 29.97 non-drop format SMPTE.)
- External power supply.
- £198.58 including VAT.

### STUDIO 64X

Replacing the Studio 3, the 64LX features front-panel control of all MIDI patchbay programs, one-button SMPTE read and write, a Panic button for 'All notes off', and a rugged steel enclosure; it's a good buy for the gigging musician. In the studio, the Thru switch lets you connect to a modem, printer or other peripheral — so you can record MIDI then surf the web at the flick of a switch!

You get four MIDI inputs and six MIDI outputs for a total of 64 separate MIDI channels, and the 64LX will support all formats of SMPTE synchronisation — with adjustable freewheel and regeneration. The integrated MIDI patchbay functions can be programmed in software, stored in the interface, and then accessed directly from the front panel. There are eight program memories, four user and

four preset, which are stored in the unit in battery-backed RAM. OMS compatibility allows the setting and routing of MMC to any device on the system and the supplied *Studio Patches* software (Mac only) offers full MIDI mapping and processing, along with creation of Virtual Instruments and Virtual Controllers for use in Opcode sequencers. (For a full review, see May 1997's SOS.)

- Macintosh and Windows (3.1 and 95) compatible.
- Auto-detection for Mac or PC without

hardware switching.

- 4 Ins, 6 Outs.
- 64 MIDI channels.
- Modem/printer Thru switch for instant access without cable swapping.
- Full SMPTE support — reads and writes all timecode formats.
- Stand-alone patchbay with eight programs.
- Front-panel control of MIDI patchbay programs and SMPTE striping.
- MMC software routing.
- £269.08 including VAT.

### STUDIO 4

The Studio 4 is a 1U rackmountable eight-In, 10-Out MIDI interface that reads and writes SMPTE timecode. As your studio grows and your MIDI setup gets larger, you can expand the system to get more MIDI channels by networking multiple Studio 4s together. Two pairs of MIDI Ins and Outs are provided on the front panel so you don't have to go groping around in the back of your rack just to plug in a MIDI instrument.

OMS and patching software provides graphic display of studio setups, patches, virtual controllers and virtual instruments; patches for the Studio 4 let you set up different routings of your master keyboard to the synths in your rack. (For more information about OMS, Opcode's Open Music System, see this month's Soft Focus on Opcode software.) You can also apply various types of MIDI processing to these patches. Virtual Controllers let you set up keyboard splits, velocity scalling, remap controllers, or filter out events such as aftertouch. Virtual Instruments let you group multiple MIDI device destinations and processing into one 'virtual' instrument which then appears ready for you to use alongside the other devices in your OMS setup. This is the standard interface to choose for a medium-sized MIDI setup in a project studio or MIDI room.

- MIDI Interface/Processor/Synchroniser.
- 8 independent Ins, 10 Outs.
  - Supports 128 MIDI channels per Studio 4.
  - Up to four units can be networked, to give 512 channels.
  - Integrate with *Vision* software for creating Virtual Instruments and Controllers.
  - Uses host computer's RAM and processor to create and store patches to Filter, Split, Transpose and so forth.
- Reads and writes 24, 25, 29.97 drop/non-drop and 30 non-drop SMPTE formats and handles all MTC conversions.
- MIDI activity LEDs for each MIDI In and Out and SMPTE.
- 8x MIDI communications speed with OMS-compatible applications.
- External power supply.
- £410.08 including VAT.

## STUDIO 5LX

The Studio 5LX is probably the most advanced MIDI interface available — and with the 15 independent MIDI Ins and Outs you can work with up to 240 MIDI channels. Besides acting as a MIDI interface, the Studio 5LX also functions as a MIDI patchbay, a MIDI processor and an SMPTE synchroniser. As a MIDI processor, the Studio 5LX adds filtering, channelisation, note range splitting, controller mapping, velocity and control value modification. As a fully functional patchbay, it routes MIDI from any combination of MIDI Ins to any combination of MIDI Outs, stores several setups of routing and processing, and recalls any of them with a single program change.

OMS patches are stored in the Studio 5LX RAM, which lets it function as a stand-alone MIDI patchbay/processor without the Mac connected. Great for 'live' situations or in the studio where each setup may be different, this interface is the choice of top industry professionals — who inevitably have the most demanding studio and 'live' performance needs.

- Intelligent Macintosh MIDI Interface/Processor/Synchroniser/Patchbay.
- 15 independent Ins and Outs.
- Supports 240 MIDI channels per Studio 5LX.
- Multiple Studio 5LX interfaces can be

networked to give more than 1000 MIDI channels.

- Stores up to 128 MIDI processing patches to Filter, Split, Transpose, Modify, re-Map controllers and more.
- Unlimited virtual controllers and Instruments.
- Digital patch-number display with program change buttons.
- MIDI activity LEDs for each MIDI In and Out, plus a SMPTE LED.
- Two footswitch inputs and one continuous controller input.
- Reads and writes 24, 25, 29.97 drop/non-drop and 30 non-drop SMPTE formats and handles all MTC conversions.
- 8x MIDI communications speed with OMS-compatible applications.
- Internal power supply and detachable power lead.
- £938.83 including VAT.

**MARTIN RUSS goes all virtual this month — with a freeware software synthesizer, plus more on registering shareware.**

The flavour of the moment seems to be software synthesis, and so this month I thought I would present one of my favourite Mac tools for tinkering with sound synthesis. Not for the faint-hearted, unfortunately, but then it makes up for the investment in learning by providing huge possibilities.

But first, a few thoughts on the sudden appearance of a number of software synthesis tools which claim to provide powerful synthesis capabilities at a bargain price. My first observation concerns the price: by the time you've bought a computer fast enough to do the calculations in a reasonable time, how much is the whole package costing you? The second concerns the control mechanism: since many software synthesizers only produce AIFF or WAV files suitable for loading into a sampler, how can they be controlled in real time? And finally, why do the majority seem to concentrate on subtractive synthesis or analogue modelling?

**OUT OF PHASE**

*Out Of Phase* is a software synthesizer for the MacOS platform — it will run on 68K machines with or without an FPU (floating point unit), as well as PowerPC-based machines. It was originally called *Synthesizer*, but this eponymous naming apparently clashed with another

program and so it was changed to something rather more mysterious and intriguing. I'll call *Out Of Phase* by the much jollier abbreviation *OOP* in the rest of this text.

*OOP* describes itself as a wavetable synthesizer, which is slightly inaccurate: it can do wavetable synthesis, but it also does Wave Interpolation, Dynamic Waveshaping, and Wavesequencing — and probably others as well. What seems to be the current version (1.3) was released in 1995, with the usual litany 'Version 1.4 should be out soon...'. It's refreshing to finally find some software that doesn't rush ahead too quickly with new versions every couple of months. *OOP* is

freeware — in fact, it comes with the GNU licence, which goes to great pains to ensure that it stays free.

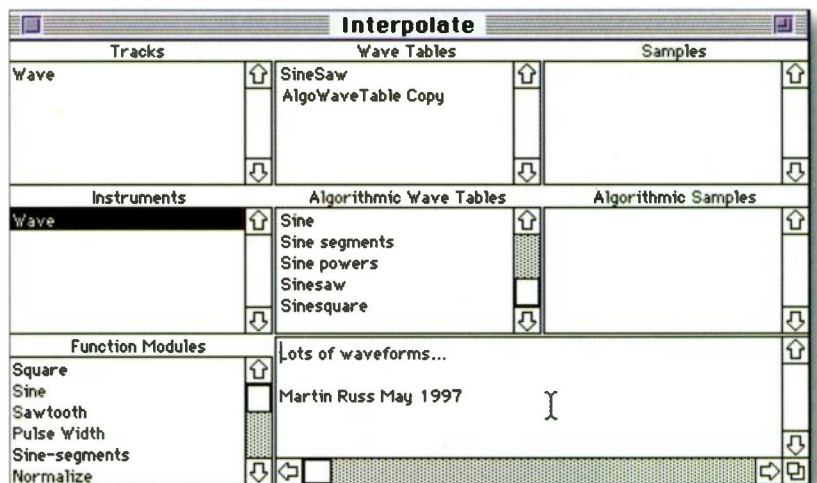

**PROGRAMMING**

*OOP* does not have a graphical interface, so you don't merely plug together someone else's pre-prepared blocks. Instead it provides a programming language which you use to build up your own set of virtual instruments; arrange them into your own orchestra; incorporate into your song; and then generate the final song as an audio file (AIFF format). Programming *OOP* requires a clear head, patience, and some programming knowledge. A little bit of mathematics experience might also be useful.

To give some of the flavour of *OOP*, here's a simple project which produces an interpolation from a sine wave to a square wave (see the screen dump below). To achieve this, you need to produce a function which will fill two tables with a sine wave and a square wave; the sine wave and the square wave are themselves produced from basic maths. You then need to define an instrument that will play this interpolated sine-to-square sound.

First, there's the function to produce square waves, as shown in Figure 1 (see page 250). The very similar function to produce sine waves does not have the 'if x >= 0 then set x :=1 else set x := -1;' line in, of course.

In fact, I combined the sine and the square-wave generating functions into one by making that 'if then else' line controlled by the number of the table: table 0 for the sine wave, and table 1 for the square wave. Then you need something to fill the tables with the sine and square — as in Figure 2 (also on page 250).

**APPLE NEWS IN BRIEF**

**• RAW SPEED**

We can expect to see clock speeds of 266MHz, 275 and even 300MHz by the end of the year. But, more significantly, the underlying buss speed is also likely to rise: from the current 50MHz maximum to 60MHz, or beyond (perhaps beyond 80MHz by 1998). This means that the

overall performance will continue to rise for the foreseeable future.

**• WEB TV**

Perhaps this belongs on the PC pages, but given the number of MacOS-based AVID video systems (and their associated Digidesign audio systems) that you see in studios these days, this snippet may well be significant. Recently, Microsoft

bought a small Californian start-up company for \$425 million. Not earth-shaking news, but what is interesting is what the company make: set-top boxes that allow ordinary TVs to display internet pages. With their foot in this door, Microsoft then went to the NAB exhibition and suddenly seemed to be part of the video industry too — and that finally gives them access to potentially

every household, especially those that don't have a computer. Luckily, Microsoft are ramping up their MacOS division at the moment, and so, given the MacOS's multimedia-friendly reputation, who knows where this will lead? Personally, I suspect that it won't be long before the average living room has a Microsoft logo lurking on a piece of black hi-tech equipment.

► And finally, an 'instrument' to play the sound, shown in Figure 3. The 'Index' envelope controls the interpolation from the sine wave table (0) to the square wave table (1). As you can see, it takes five seconds to change from sine to square and another five seconds to change back to the sine again. The end result is an instrument that sounds a little like a low-pass filtered square wave being opened and closed, but not exactly — and

## THE NAME'S THE THING

There's a surprisingly good set of shareware utilities available for members of the MacOS family of computers. Many of these have commercially priced alternatives, but you might be surprised at the quality and support that you get from the shareware world. I've recently

become involved in a couple of projects that required some automation of common desktop operations (clicks, drags and so on), and so I looked around for something to make it easier.

One thing that I'm always doing is renaming files. The MacOS's Finder is okay for changing one name, but it tends to become a

little tiresome for more than a couple of renames, and a major annoyance for more than three files. Now, on a computer with a command line interface (Unix, Linux, DOS, AmigaDOS) this would be relatively easy, although learning about topics like Unix's regular expressions or 'grep' function might be more of a challenge. But the MacOS does not provide anything remotely like a command line — so how do you

number of files: they were all called variations on 'File nnn copy'. Why? Because when you try to open a file, the order shown is normally related to the sort order as shown on the desktop, and is normally alphabetical. So 'File' and 'File copy' tend to be next to each other, which reduces the number of files you can choose from by half — unless you actually enjoy scrolling down through a list box (there's a way out of that too, but that's another story). So I wanted to change the name to something like '\_File' — that 'underscore' character just happens to come after A-Z in sorting order, and so appears at the bottom of list boxes.

On the desktop, this would require quite a bit of clicking, waiting and typing. But a quick wander through my favourite Utility CD-ROM (*BBS in a Box*) produced an application called *Drop+Rename*, which not only allowed me to make the changes on all the files with one 'drag and drop', but it also allowed me to create an applet which did that and nothing else. It also does automatic renumbering and a host of other operations on filenames. And the cost of this marvel? Ten US dollars, which is just over six pounds sterling.

## REGISTRATION CLASS

Okay, so I mentioned Kagi software last month, but since I've been registering software with them for some time, I thought that perhaps I ought to let a few other people into the secret. If you've ever declined paying for shareware software in the past, then look at how easy it can be now.

First off, you need to find the shareware. The two major methods are the Internet or a CD-ROM compilation. You then try out the alternatives and pick the one that suits your requirements. If a shareware author uses the Kagi system, then alongside (sometimes built into) the application, there will be a small program called 'Register' — normally blue with a picture of a dollar, yen or other currency symbol on it. You double-click on this and fill in the details: your name, address, email and so on, and then print it out or save it to disk. The application encrypts important details, such as your credit card number, and produces either a barcoded printout, or an email-ready text file. You then send this to Kagi — by email if you are paying by credit card, or by mail if you are enclosing a cheque (the email/credit card method is much easier than posting US dollars).

In my experience, the following day you get an acknowledgement from Kagi to say that they have your email, and this is usually followed (often that same day) by another email which confirms your registration and which tells you how to personalise the copy of the software program that you've just bought. It's very easy, very quick (often quicker than buying from a mail order company) and there are no problems with delivery — you already have the software!

SOS

```

Square
# generate a square wave
func squarearray(data:fixedarray, start:int, freq:int, phase:double,
len:int):fixedarray
(
  var i:int = 0;
  var x:double = 0;
  while i < len do
  (
    set x:= sin(((phase*2*pi)/360)+(i*2*pi*(freq/len)));
    if x >= 0 then set x :=1 else set x := -1;
    set data[i + start] := fixed(x);
    set i := i + 1;
  );
  data
);
  
```

Figure 1.

```

Sinesquare
# frames : integer; tables : integer; data : fixedarray
# phase in degrees!
proto sinesquarearray(data:fixedarray, start:int, freq:int, table:int,
len:int):fixedarray;
var i:int = 0;
while i < tables do
(
  sinesquarearray(data, i * frames, i, frames);
  set i := i + 1;
);
  
```

Figure 2.

```

Wave
instrument
(
  loudness 1.0;
  oscillator s
  (
    samplerlist ("Sinesquare" 10000);
    type wavetable;
    loudness 1;
    loudnessenvelope(points(delay 0 level 0; delay 0.5 level 1;
                           delay 10 level 1; delay 0.5 level 0;
                           )););
    indexenvelope(points (delay 0 level 0; delay 5 level 1;
                        delay 5 level 0; delay 0 level 0;
                        )););
  );
)
  
```

Figure 3.

there's a very interesting halo of digital noise caused by the limited number of interpolated steps. The basic output audio quality is 44.1kHz, 16-bit, although you can lower the sampling rate and degrade the bit resolution if you want (you can use 48kHz as well). If you've never played around with the mathematics behind synthesis, then a little wavetable synthesis can be quite fascinating; and you can end up with some very useful raw samples to load into your sampler and play S+S with.

You'll find the *Out Of Phase* home page at

• <http://www.upl.cs.wisc.edu/cold/code/outofphase.html>

and a download location at:

automate things?

AppleScript might be your first port of call.

This enables you to write 'scripts' that use a simple, HyperCard- or HyperTalk-like language to control what the Finder does — or, more frequently, to record what you do with the mouse and then let you edit it and replay it. The trouble is that not all applications support AppleScript, and it can sometimes be tricky to get it to do exactly what you want. It also makes your System bigger, requires yet more precious RAM and makes the machine slower to re-boot. In many cases, AppleScript is a bit over the top.

For my renaming problem, I wanted to remove unwanted text at the end of a large

# 32 BIT REVERB

# 2 BIT PRICE

Have you ever wondered how those scintillating vocal reverb effects are created on your favourite recordings? Until now there was only one way - a seriously large investment in signal processing. But all that just changed with the Yamaha REV500. Using 32-bit technology pioneered in our world beating 02R digital mixer and ProR3 professional reverb, the REV500 delivers state of the art DSP at a run of the mill price.

True stereo processing creates unrivalled realism, while 20-bit A/D and D/A convertors faithfully preserve the integrity of the source signal.

There are 100 user programs and 100 factory presets plus instant, intuitive control over all basic parameters with dedicated front panel knobs.

And a comprehensive array of connections including professional, balanced XLR inputs and outputs.

For a free info pack on the new REV500 call 01908 369269 today.

▶ streaming. However, it was the *Native Power Pack* from Waves that really made people sit up and take notice. For the first time, plug-ins originally created for high-end Mac use, with added DSP farms (extra processing modules to take much of the load from the main processor) could run without any additional hardware. A further carrot arrived shortly after this, when Steinberg announced that the next version of *WaveLab* (version 1.6) would also be compatible with ActiveMovie. Cakewalk's *Pro Audio* version 6 was also upgraded in the same way. Once plug-in manufacturers realised that they simultaneously had access to owners of *Sound Forge*, *WaveLab*, *Cakewalk* and the forthcoming *Cubase VST* as well, allocating development time to PC versions became much more feasible; with a much bigger potential market, prices could also be more competitive, resulting in even better sales.

## THE DIRECT APPROACH

DirectX technology is something different again. It's primarily a set of application program interfaces (APIs) that sit between hardware and applications. Until its arrival, it was difficult for Windows games to compete with their console equivalents for speed, especially as dedicated drivers needed to be written for each different piece of audio and video hardware. Since there are so many graphics accelerator cards and soundcards in the market, what Microsoft have done is remove the need for each game developer to write individual software drivers. The APIs sit between the hardware and the application, so that all the developer needs to do is use standard calls to the DirectX layer, to send audio or graphic data to any make of hardware that has DirectX drivers. This transparent

**Figure 3:** If you like the look of *Sound Forge* but want a low-cost entry-level version, take a look at the 'Song Construction Kit', which includes *Sound Forge XP 3.0* (a cut-down version of the high-end *Sound Forge 4.0*). Shipping with two CD-ROMs full of ready-mixed musical phrases in various styles, this package is designed as a fun 'cut n' paste' song builder. The best part is the price — RRP is £49.95! Thanks to distributors BCK for sending this one in.

approach should result in many more sound and graphics cards being fully supported.

There are several components in the DirectX system for graphics, including DirectDraw (for normal 2D graphics), and Direct3D (for fast 3D rendering), but the two components that will be more of interest to musicians are DirectSound and DirectSound3D. DirectSound was written primarily for low-latency mixing of sound, as well as some giving volume, pan, and frequency control, so that multiple channels of sound can be quickly mixed down to emerge as a single stereo channel. Latency is the time delay that occurs between your sending the data and your hearing it through the soundcard; including the DirectX drivers as part of Windows 95 minimises this time delay.

Once again, streaming is involved, and Microsoft estimate that up to 32 simultaneous audio streams can be sent to a DirectSound audio system if it uses the PCI buss, without grabbing too much of its total bandwidth.

Although DirectX 3.0a has been out for some time (see Figure 1 on page 252 to see how you find out whether you already have these drivers installed), Microsoft have since released the spec for the DirectSound3D component, and the actual release of this (as part of DirectX version 5.0) is scheduled for June '97. Again, the benefits of an open standard are that soundcard manufacturers no longer have to re-invent the wheel. Three-dimensional sound positioning is much more likely to appear in mainstream products if software writers know that they don't have to write different drivers to suit each proprietary 3D system. Every soundcard manufacturer is likely to provide DirectSound and DirectSound3D drivers.

Just when people were finally getting their heads around all these new terms, Microsoft got up to their old name-changing tricks. A new *Sound Forge* upgrade to version 4.0b has just been released (see Figure 2 for more details), and this new version incorporates Microsoft's DirectX Media Streaming Services (DMSS), which, Sonic Foundry say, was formerly known as ActiveMovie! Although the further change of name is confusing, it does make sense to move DMSS (the technology formerly known as ActiveMovie) across to become a part of DirectX 5.0, since ActiveX is now primarily associated with the Internet, as opposed to DirectX, which deals with sound and vision for Windows. The crossover seems to be ASF (Active Streaming Format), which is now supported by DirectX, as well as being part of ActiveX. Got that?

## ON THE CARDS

As I mentioned in May's PC Notes, the AC97 audio hardware specification should result in a much wider variety of PCI audio solutions, because it provides a standard that all manufacturers can use, rather than each of them having to re-invent the PCI wheel. Creative Labs played a significant role in helping to thrash out this spec, and they have now announced an advanced new PCI audio chip intended for OEM motherboard applications. The EMU8008 is an AC97 digital controller chip, providing 100 percent SoundBlaster 16 compatibility and advanced wavetable synthesis with 64-voice polyphony. Hardware acceleration for DirectSound and DirectSound 3D is built in, and

once again (as on the AWE64 soundcard) a full S/PDIF digital output is provided, which will allow direct connection to an external DAT machine or D/A converter. The new chip will be available in production quantities in the third quarter of '97, so expect to see the first motherboards including it starting to appear by Christmas.

I suspect that Creative will be releasing a high-spec soundcard to take advantage of this chip as well — it has significant performance advantages over the EMU8000, which is currently used by both the AWE32 and AWE64 cards. It will be interesting to see what happens to current high-end soundcards, as audio quality soars while prices

plummet. However, as always, theoretical specs tend to be compromised by the unreal world inside PCs — we'll have to wait and see what 'typical' performance figures are.

On the subject of the AWE cards, yet another has just joined the range — the AWE64 Value. The main differences between this and the AWE64 are that it comes with only 512K of RAM, and has a smaller software bundle, without *Cubasis Audio*. It is already shipping, and with a retail price of £79 including VAT, it should do extremely well. This new card effectively replaces the AWE32, and so this disappears from the range, leaving the SB16 at the bottom. At the same time, the AWE64 has a new lower retail price of £99, with the AWE64 Gold at £179.99.

**The recent Goodman PDL computer shows proved that music is alive and well in the Atari world. DEREK JOHNSON features a show report, rounds up a bargain shareware collection and generally keeps you up to date with all things Atari.**

**P**D Library Floppyshop have released a six-disk, 51-program pack of Atari MIDI and audio software. Priced at an amazing £8 plus postage (£1.25 UK, £2.25 Europe and £3 rest of the world), *MIDI Programs Volume 1* gathers together sundry useful PD and shareware programs, utilities, desk accessories and MIDI help files, Standard MIDI File players, System Exclusive utilities (including Ben Hall's excellent *Dump It*), algorithmic composers (with *Schoenberg*, offering instant 12-tone compositions from user-defined note rows, a stand-out) and arpeggiators. Martin Russ' *IROS* (Instant Randomising Octave Sequencer) is one of three arpeggiators featured, one of which works as a desk accessory. I've never used Petri Sinisalo's *Real Arp* or the Phonix *MIDI Arpeggiator* before, but they offer plenty of possibilities. Martin Russ is also further represented with his test utilities (*MIDI Rat* and *MIDI Channel Scope*). There are a few delay-time calculators as well, which let you quickly work out the values needed to produce timed delays. All in all, it's a fine collection, but paper documentation is scant, so head to the Read Me files. I may well give some of this software specific coverage in future. Can't wait for *Volume Two*! Just

**Phonix's MIDI Arpeggiator, part of Floppyshop's MIDI Programs Volume 1.**

remember that some software in this pack is shareware: if you use it, pay the registration fee.

Incidentally, Floppyshop are also marketing a four-disk MIDI file pack (just £5, plus postage as above), which contains a large and varied collection, including classical, jazz, pop files and more. Because these are SMFs, and the disks are PC-formatted, the collection isn't restricted to ST users: PC and Mac users can also take advantage of it. One last Floppyshop snippet: the library is now on the Internet: point your browser at <http://www.netkonect.net/tachyon/floppyshop/>.

## NET GAINS

Wessex Atari Group, whom we featured briefly several months ago, have moved their web site to a new server (<http://www.users.zetnet.co.uk/rgoring/wag/>). The new site is steadily expanding, and contains loads of info and links for all users of the Atari. As an Internet service provider ZetNet (telephone 01595 696667, fax 01595 696548) offer good value, at £80 a year, or slightly more if you pay in instalments. They've also recently upgraded their hardware (as a ZetNet user myself, I can vouch for the improvements), and quite a few 'Atarians' are on hand to help, via ZetNet Atari-specific newsgroups. Tell 'em I sent you!

## SHOWING OUT

Regular readers of this column will know that Goodman's PDL (01782 335650) ran a couple of Atari shows at the end of April; Sunrise Audio Systems' Sol Barnet was actually there, and he files this report.

"The general feeling of the two shows was positive and encouraging, with attendance up on the last event, and we also got proof that plenty of musicians are still using the ST and

Falcon for making music. On display was a host of new products and software updates. Titan Designs and Black Scorpion [telephone 0121 693 6669, fax 0121 414 1630, email 100345.2350@compuserve.com], two companies fully behind the Falcon as a platform, showed off two new system accelerators — Nemesis and Afterburner 040 — both working in conjunction with their new screen-resolution enhancer, *Vidality*. Titan also announced that they will be staying with the Falcon platform for the foreseeable future, with forthcoming products including *Apex Audio*, an audio manipulation

program with advanced DSP and audio editing and recording.

"Best Electronics are a good company to know, in spite of being based in the USA [telephone 001 408 243 6950, fax 001 408 243 8274]. They had on show every conceivable Atari spare part, and offer a quick and reliable service.

"The biggest stand was manned by System Solutions, and plenty of bargains were on offer, including new STs, packaged with Steinberg's *Cubase Score* and a monochrome monitor. Also on show were software updates for *Zero X*, which now includes hard disk recording, *Audio Master*, *Audio Tracker* and *CD Recorder* from SoundPool, all supporting new colour interfaces, bug fixes and new features. Incidentally, System Solutions' web site is undergoing a revamp; log on to the old address [<http://www.ssolutions.com/>], and you'll find a forwarding address when the new site is up and running.

"ST music software specialists Electronic Cow [1462 281347] showed off the latest versions of their *MIDI Arpeggiator*, *Sound Chip Synth* and *Snippit Synth*, and we at Sunrise Audio Systems [01379 853845 — note new number] showed our new audio workstation, and provided the music for most of the weekend. We can also now supply the whole of the SoundPool range.

"Last, but not least, The Upgrade Shop [01925 503448], who also had a presence at the show, have designed a new internal IDE adaptor for the ST, which provides a cost-effective way for ST users to access low-cost IDE drives (the difference in price between SCSI and IDE hard drives and CD-ROM drives can be quite staggering) and install them *inside* the STE. Sharing The Upgrade Shop stand were Keychange Music [01925 266120], and apart from touting their service and repair service, they were showing off a very sturdy 19-inch rackmounting case for ST computers. The options are vast here, but the case can accommodate an ST or Falcon motherboard (or two), two 5.25-inch bays (for CD-ROM or extra floppy drives), an IDE interface and a hard drive — the dongle port can even be sited internally. All that's required is to plug in a Mega keyboard."

SOS

# VS-880

Roland

## Roland VS-880 Expanded with V2 Software

The Roland VS-880 has already established itself as a major force in Hard Disk Recording.

The VS-880 offers high quality recording with comprehensive editing, at an affordable price.

Features include:

- Up to 8 tracks of CD quality
- 64 virtual tracks
- 4 tracks simultaneous recording
- 3 band equalisation
- Digital mixer
- Automation of volumes
- Studio quality effects - with the VS8F1
- Master or slave - synchronisation

Includes 1.4 Gig Hard Drive + VS8F1 Effects Board.

# demo DOCTOR

## ▶ STUART PENNINGTON

**Recording Venue:** Home.

**Recording Equipment:** Aiwa ADF450 cassette deck, Brother PDC100 sequencer, Panasonic RPHT96 headphones, Roland XP10 synthesizer.

Proving once again that you don't need a room full of equipment to produce a good recording, Stuart's tape has clarity and a good instrumental balance. You could argue that he doesn't have a lot to deal with, because there are no vocals or acoustic instruments — simply a sequencer and one multitimbral synth! Yet he's still got to choose sounds that fit together well and get the balance right — all without the aid of outboard effects, too.

Aiming at the 'Incidental Music for Documentaries' market, the music, with its clear ethnic flavour, is favouring the wildlife kind of documentary, I'd say. Although a lone piano often takes the theme, much of the backing is held together by percussion patterns looped on the sequencer. It actually makes a nice change to hear the congas right up front in the mix. Stuart has also used some interesting fast modulated effects on the reverb, which work in tempo with the pattern on at least one track.

My main criticism of the tape would be that it doesn't show enough variety. Piano and percussion on every track don't really show the variety in style that a potential patron is going to require for incidental music. Another problem is the end of the compositions: they just — well... stop. The lack of a tasteful fade-out or definite ending makes them sound a little unprofessional. Otherwise, for a first attempt, the recording is very good and I loved the sub-bass, which was amply reproduced over my new monitoring system! □

## QUICKIES

**THE NEXUS EFFECT:** Featuring music that's a mix of Latin, bluegrass and jazz, The Nexus Effect live up to their band name! The instrumentals are cunningly put together using a Pentium running *Cubasis* and several synthesized sound sources:

there are no 'real' instruments. Despite this, they've come up with a passable impersonation of someone playing bluegrass banjo on the first composition, which is lacking only in the dynamics department. The second instrumental introduces a Latino flavour with brass that is mixed a tad low to give the required impact, but a well-programmed percussion section featuring most of the tried and tested favourites such as timbale, wood block and congas. Again, the mix sounds a little restrained — Latino should be bubbling with an energy that's barely contained, so the occasional accented timbale placed higher in the mix would add to the vibrancy.

**SQUISH:** The electronic dance music of Squish won the Top Tape award some time back. Here Darren Cleare, Squish's main man, returns with an offering that begins in an understated, ambient sort of way but doesn't really go far from there. It's interesting that he chooses to play the first mix off a loud, soft kick drum and keep the congas and log drum way down in the mix. The unusual pulse is quite hypnotic, and around it a string and bell mix weave and loop while the other instrumentation changes. Sounds like hand claps are added, as is the

occasional synthesized whistle melody, and the percussion comes up in level as the mix progresses, but there's precious little really

developing in an over-long track. Sub-bass accenting is one of Squish's strong points, and there's a nice little rhythm going on in the more techno-orientated second composition. This track features more changes and breaks than the opener, but would probably be more suitable for the clubs, given a tighter kick-drum sound to weld the bass end into a form that makes more sense of the sub-bass.

**GRAEME MONTGOMERY:**

Graeme's tape was recorded some time ago, but he's had a little difficulty getting his hands on the master tape for one reason or another. Eventually a copy finds its way to these pages — and it's not at all bad. The cassette copy sounds slightly dull, but a little HF shelving tweak of a few decibels brought out the presence. Basically the recording holds together in a very radio-friendly way, with a tight, compressed mix that would translate well to the airwaves. The playing is also good, with tasty guitar and keyboard solos — the latter running into a sax break which duels with the synth on the fade-out. Township-style backing vocals lend the song a world-meets-rock-and-pop flavour somewhat reminiscent of Johnny Clegg; over it all, Ali Cut gives a fine vocal performance. Graeme hopes to get a release on this track now he's relocated the master tapes, but things have moved along in the last 10 years and what may have been groundbreaking then is almost par for the course now.

**DRIFTING SUN** started this tape as a studio-orientated project, but have found that record companies are interested in their brand of fairly technical rock. The recording was done at various studios in Surrey and Middlesex, and has a clean sound that's obviously been heavily compressed for maximum impact on a variety of systems. My feeling is that the drums, and in particular the snare drum, have been given a bit too much high-frequency EQ, but this does mean that they cut through well in the mix. In fact, it's the snare that suffers more than anything else: it plays such an important part in rock production that I'd like to have heard more weight in the sound, and also less tight noise-gating on the snare.

However, I can't fault the playing of drummer John Lyngwood, or of any other members of the band. Leaving the songs open for interpretation as videos is a good move, and songs such as 'Jamie Was A Vampire' certainly have all the ingredients for today's teen market, particularly in America or Europe — which is where the band should aim their demos if they want to get on.

**TRACE:** Showing my age, I remember that there was a prog rock band called Trace in the '70s, which featured the ex-drummer of Focus and his brother on keyboards. How ironic that the new Trace are indeed a prog rock band with all the trimmings — portamento synth breaks, big orchestrated sound and complex arrangements. There's even the classic rasping bass sound, Chris Squire-style, but it does lack a bit of bottom end — as does the whole mix. Sonically, there's also too much

going on in the upper mid-range, where the hard sounds of digital drums fight for space with some buzzy keys and guitar. Here the whole clarity thing needs sorting out and there are a number of ways to do it: panning, use of more effect on one of the sounds to give it a different place in the mix, or, preferably, a little more attention given to the sounds at source. For example, in the second song there are two lead guitars playing at the same time in the lead break, some pad keyboards with a lot of mid which are fighting for space with the guitars, and a Hammond organ sound which is actually louder than both guitars! Technically, it's a bit of a mess, but the energy in the playing really comes across well, and the keyboard player's technique is very good. It makes a nice change to hear keyboards that haven't been quantised. Now it's just a question of a little discipline. For instance, the third track, 'Fishbury Meadows', has a clear mix because there's less going on, and that leaves space for the sounds to breathe. □

# Roland D50

LA SYNTHESIZER

*Roland's D50 became the sound of the late '80s. Does it still have a place in the late '90s? PAUL WARD takes a trip around LA...*

**M**y first couple of chords on a D50 back in 1987 convinced me that I was witnessing something special. Those lush strings, the mind-blowing (and, subsequently, mind-numbing through overuse) 'Digital Native Dance', and the swirls and swooshes of countless choir, string, and blown-bottle pads came as a revelation to ears jaded by years of analogue bleeps and FM clangs.

## OOH LA LA

Roland proudly labelled their new technology 'Linear Arithmetic' synthesis — or LA for short.

Despite the swish name, the internal architecture of the D50 is not particularly exciting by today's standards, and does little to convey the reason for the machine's lasting appeal. LA synthesis was essentially the first of the Sample+Synthesis (S+S) instruments, which have dominated music technology for the last 10 years — only now being overtaken by the new wave of physical modelling synthesizers. At a time when we were all fed up of not being able to program our FM synthesisers, it came as something of a pleasant surprise to find that Roland had essentially stuck to the analogue terminology with which most synthesists were familiar. OK, the VCA and VCF of old had become the TVA and TVF in the D50, but they worked in pretty much the same way.

A D50 'Patch' is the standard unit of currency, consisting of a pair of 'Tones', designated Upper and Lower. Within each Tone are a pair of 'Partials', each of which can be thought of as a single-oscillator synth. A number of 'Structures' specify whether each partial is to produce a standard synth

waveform (sawtooth or square, with adjustable pulse width), or make use of one of the 100 PCM samples. With memory costs at a premium at the time of the D50's release, Roland had to work hard to make the most of the available space. Whereas the short attack samples, such as trumpet spits and flute chiffs, are generally good, some of the looped sounds are questionable. Of the 100 samples, 47 are attack portions, 29 are static looped waveforms, and 24 are actually loops that scan across several of the D50's shorter ROM samples to create some strange rhythmic effects — 'Digital Native Dance' being a prime example.

But what the D50 lacked in refined sample material it certainly made up for in the synthesis department. PCM partials have a relatively easy life of it, being subjected to LFO and envelope pitch modulation before being routed through the Time Variant Amplifier (TVA). Synthesizer waveforms enjoy the added pleasure of being mangled by the Time Variant Filter (TVF). This resonant filter is one aspect of the D50 that holds much of the machine's lasting appeal, I'm sure. It doesn't have the slurpy resonance of an analogue synth, admittedly, but it has plenty of warmth and character to keep you coming back for more. ▶

*The Roland D50 on its release, with the optional PG1000 Programmer (see original review in SOS May '87).*

# SOS PROFESSIONAL CABLES

## MICROPHONE CABLES

## INSTRUMENT CABLES

## SPEAKER CABLES

## MIDI CABLES

Please add your cable colour code R (red), B (blue), Y (yellow), G (green) or K (Black) at end of each Order Code to specify cable colours required when ordering. Example: INS-03JJ-Y means a 3 metre Jack-to-Jack Instrument cable in Yellow.

Some of the most important, but most often overlooked, elements in the signal path are your audio and MIDI cables. Why sacrifice signal quality when you can rely on Piranha cables — available now direct from SOS Mail Order.

### WHY CHOOSE PIRANHA CABLES ?

- Piranha cables are designed for professional use and manufactured to the very highest quality.
- Piranha cables use top quality connectors from Neutrik, the industry leaders.
- Piranha cables are manufactured to combat any external interference.
- Piranha cables use braided shields to counteract AC interference whilst allowing maximum 'bendability'.
- Piranha cables are designed to minimise ground loops.
- Piranha cables use fibre fillers to pack out the jacket, maintaining dimensions and mechanical stability in all stage and studio conditions.
- Piranha cables are exceptionally soft, whilst offering unsurpassed flexibility and durability.
- All Piranha cables come with a Lifetime Guarantee.

**MICROPHONE CABLE** - Twin Core oxygen-free copper cable made to the highest specification, using high density spiral braided shield to provide superior performance and rejection of hum and noise. Special supersoft Polymer jacket makes this probably the most flexible cable available, giving the ultimate in protection against mechanical interference noise. Overall cable diameter: 6.5mm.

**QUAD MIC CABLE** - Our Piranha supersoft mic cable is now available in a Quad version, offering further protection against susceptibility to outside interference. If you think of your cable as being 'double balanced', it is not difficult to understand the dramatic improvements in noise rejection that this cable affords. Overall cable diameter: 6.7mm.

**INSTRUMENT CABLE** - Single Core oxygen-free copper cable, as above spec. Cable diameter: 6.2mm.

**MIDI CABLE** - Fitted with professional Neutrik metal "crush-proof" DIN plugs.

**Tel: 01954 789 888 Fax: 01954 789 895**

or complete the Order Coupon on the SOS Mail Order page at the back of this magazine

Please add postage per cable UK £1.75 Europe £3.50 ROW £5.25

▶ Three assignable LFOs are available, and pitch, filter and amp each have their own dedicated multi-stage envelope generators, making a very flexible set of sound-producing tools. The range of modulation options is quite sophisticated, with the ability to use positive or negative phases of the LFOs, and to adjust the key-follow curve based on a bias level and keyboard-split point. Several of the Structures include a ring modulator, which is capable of some excellent effects when patched between a pair of PCM samples.

## THE EIGHTH DIMENSION

Tone parameters include the three LFO waveforms' delays and speeds, pitch-envelope and chorus settings, and there's also a very useful high/low EQ section with variable

"It doesn't have the slurpy resonance of an analogue synth, admittedly, but it has plenty of warmth and character to keep you coming back for more."

frequency and gain. The high EQ even has adjustable Q (frequency bandwidth). The chorus is typically Roland and typically good, with eight different types of chorus including flangers, tremolo and Roland's hugely desirable 'Dimension' chorus effect.

Two Tones do a Patch make, and here it is that reverb or delay is added, key modes are set, and split points are defined. Usefully, each Patch can be set to transmit on a different MIDI channel and to send a program number between 1 and 100, which makes it a good master keyboard for live situations. Another aspect worthy of note is the 'Chase' play option. Chase can essentially be thought of as similar to the MIDI delay processors found in many software sequencers, but the D50 switches between the Upper and Lower Tones between repeats. This is a very inspiring feature, which has helped my creativity along on more than one occasion. If only Roland had added an arpeggiator into the bargain!

The D50 can be used as a bi-timbral instrument if you specify a second channel to which the Upper Tone can be assigned.

The D50's keyboard is quite smooth and pleasant to play, making it a good master keyboard, provided that a weighted action is not a priority. Much less successful is the bender/modulation lever, which is far from ideal. For pitch-bending, I am more than happy with Roland's device, but as a modulation source it has too short a travel to be much more than an on/off switch! The onboard joystick can be used in editing and also pressed into service as a performance device for fading between the Upper and Lower Tones and also between the Partial of either of the Tones. This is a neat feature, but don't expect to go recording the results into your sequencer, because the joystick doesn't transmit any MIDI data. External storage is possible via MIDI System Exclusive, although a card slot is available.

The times, they have been a-changing, and the D50 has much less impact on ears well used to the complexity of sound offered by later instruments. Those lush strings now have some dubious loop points and there's a whole lot of nasty aliasing noise going on in the higher octaves; the rhythmic loops that sounded so inspiring are now annoyingly dated, and there's no way of changing them. But there are still sounds of which only the D50 seems capable. The ethereal 'Glass Voices' is still the mainstay of much new age and electronic music, and the gritty Hammond organ emulations are among the best of their kind.

## OF LUSH, MUSH AND CHEESE

If the D50 has an Achilles heel it is that although many of its sounds are extremely

"Many players turn off the D50's internal reverbs altogether."

lush and sexy when heard in isolation, they tend to turn into an unpleasant mush when placed in a mix. A lot of the blame for this must be placed at the door of the effects section, which is often overused (especially in the factory presets) to make up for the short loops and gritty samples. With a few judicious edits, things can get a whole lot better — I've known many players who turn off the D50's internal reverbs altogether. Although the results may be thinner and less impressive on their own, the same sound in a mix is much more comfortable. Don't expect any realistic instrument emulations, and forget the piano patches (unless you're looking for a piano that sounds as if it was made for the Early Learning Centre!). But marvel at the powerful strings, the breathy, tinkly pads and the cheesy organs — and if you ever get hold of the 'Star Trek Voices' patch then you'll be one step closer to becoming a film-soundtrack writer, perhaps...

Korg's M1 was arguably the synth most responsible for deposing the D50. Capable of a similar style of sounds, aided and abetted by a considerably more powerful effects processor, and — most importantly — multitimbral, the M1 stole the D50's glory and went on to become a milestone itself. Many LA synthesis spin-offs were to see the light of day following the D50's release, the best known of which is likely to be the multitimbral D110. Roland were also later to release the D70, which was based on the same LA synthesis technology pioneered by the D50. But whereas the D50 was fairly easy to get to grips with, the D70 proved to be more difficult to master, and somehow never had the sound texture of the earlier machine.

So is a D50 worth tracking down? Well, as always, that is essentially down to the individual. If you're after the aggressive bite of FM sounds, then the D50 is not going to satisfy. Similarly, if you want the squelch and immediacy of an analogue synth, then the D50 will probably disappoint. But I would defy anyone not to be impressed by the power and depth of many of the D50's pad-type sounds — they swirl and swoosh in a most appealing manner, which few synths since have been able to emulate. It can't be denied that there is a definite late-'80s edge to the D50's sound, but that has much to do with the fact that the D50 was the late '80s sound!

## BUG ALERT

The rackmounting D550 is a good option, given that the D50 itself doesn't lend itself particularly well to on-the-fly editing. The D550 has a slightly better MIDI specification, making life easier for librarian software to get Patches and reverb settings. Several operating-system upgrades were made available by third-party companies. The Musitronics M-EX is probably the best known, and gives the D50 multitimbrality among a host of other useful features. Early versions of the M-EX were reportedly troubled by some unpleasant bugs, so try to check things out thoroughly before buying a machine with any such options added. Aim to find a machine that still has the factory ROM card and at least one RAM card too, if possible, as this effectively doubles the number of Patches available. And watch out for broken D550 joysticks — they stick out from the front panel and are particularly prone to damage.

## Digital Portastudio

Prize kindly  
donated by  
TEAC UK Ltd.  
Tel: 01923 819630

**S**ubscribe to *Sound On Sound*, enter this wonderful competition, and you could be the proud owner of a stunningly versatile Tascam 564 Digital Portastudio, worth over £1,000!

The 564 offers 37 minutes recording time across four tracks (with a maximum of five separate song recordings per disk), and no waiting around for the tape to rewind! The system has built in MIDI timecode and MIDI clock facilities, so there's no need to sacrifice a track for timecode. The MiniDisc transport permits very fast track access, making it possible to replay isolated sections of digitally recorded audio in any order you choose. It's even possible to copy, move and insert sections to create a new physical recording

of the complete song elsewhere on the same MiniDisc. This 'Bounce Forward' feature makes the 564 truly powerful, allowing you to build up a 12-track recording without leaving the confines of the 564. Naturally, the sound quality of the MD system is streets ahead of any analogue cassette multitracker.

Other welcome features include: sweepable Mid EQ (250Hz - 5kHz); two auxiliary sends; versatile automatic punch-in system allowing up to five takes to be recorded for later comparison; trimming and naming of index marks so that each section of a song can be identified accurately, with completely non-destructive copy and move functions. MIDI-wise, the 564 allows full tempo-map editing, with up to 32 signature changes per song! It also understands MIDI Machine Control for fully remote operation.

In his December 96 review, *SOS* author Hugh Robjohns described the 564 as "the Portastudio for the '90s, with some very clever features and facilities. The leading machine in the MD format at present. Easy to integrate into a MIDI setup and works well as a MTC system controller. Excellent sound quality with superb editing facilities, safe overdubbing mode and convenient format." What more need we say? To enter, all you have to do is subscribe (or renew) to *Sound On Sound*, answer the tie-breaker question, fill in the form below and return it by the closing date of 30 September 1997.

Existing subscriptions expiring within the competition eligibility period are also entitled to enter. When you receive your Renewal Notice, just attach your answer to the competition question on a separate piece of paper, or use the application form below.

**APPLE MAC LCIII** Unused £395 ono, Opcode Overture Proscopic music notation programme £295 ono, Behringer Intelligator, boxed as new £275 ono, Lexicon Reflex, boxed new £300 ono, MXR mini limiter £100 ono. **Terry** 0191 386 2896

**APPLE MAC LCIII** 4/80, Apple colour monitor £250, Cubase v2.5 for Mac with Opcode MIDI interface £110, Fatat 610+ master keyboard £100. **01376 344807**

**APPLE POWERMAC 71/66** 32/350 256K L2 cache, 15-inch monitor and extended keyboard, Audiomediam II card, excellent condition £1100 ono. **Andy** 0116 233 1591

**APPLE RAM SIMMS** 3x8Mb, 72 pin £20 each, 2x2Mb, 30-pin £10 each, 2x1Mb, 30 pin £5 each. All in perfect working condition. **Mick** 0181 667 0108

**ATARI 1040STE** with 14-inch mono monitor, under guarantee, £240 ono. **Craig** 01203 598368 Coventry

**ATARI FALCON** 4Mb, 65Mb hard drive, video adaptor and loads of software £300 ono. **Andy** 01223 276311

**ATARI RESOLUTION EMULATOR** Converts any TV or monitor into high resolution,

complete with instructions £15. **George** 0181 785 9862

**ATARI SM124** Hi-res monitor, good condition £70. **Dave** 0181 656 0434

**ATARI STE** Plus monitor £200, Cubase v3 with manuals £170. **01246 207530**

**ATARI ST** Computer with 1Mb memory and monitor, includes leads, manuals and software £150. **James** 01484 865137

**ATARI 2MB STE** Hi-res monitor, Twiddly Bits dance/termo disk £275, Roland MCS1 analogue synth £225, prices include insured delivery. **Steve** 01553 674076

**ATARI 520STE** With Hollis Research Trackman v2.2A, boxed, loads of accessories and extras, 14-inch colour TV thrown in as monitor, complete sequencer package! £150. **Chris** 0181 464 0158 eves

**ATARI 1040ST Plus** accessories £200, Yamaha YPP55 £400, XR1300 Synchroniser £200, JBL Control 1 £150, EVS1 £50, Digitech Studio Quad £300, Westone Fretless Bass £100. **01324 622530**

**ATARI 1040STE** 4Mb upgrade, SM124 monitor, £250. **01386 832391**

**ATARI 1040STE** 4Mb, hi-res monitor, NVDI v2.5, 270Mb hard drive, Soundpaal M04, four MIDI outputs, expander, all boxed with manuals £550 ono. **Keith** 0161 747 5372

**ATARI 1040STF** £100, 60Mb hard drive £80, SC1224 colour monitor £80, 520STFM £80, 24-pin printer £50, Yamaha PS5580 keyboard £35, all include relevant leads and software. **Dan** 01737 219083

**ATARI STF1040** SM124 monitor, external floppy drive, 48KHz replay professional amplifier, Steinberg Pro12 sequencer, Quartet, all originals with manuals, accessories £280, can split. **01342 713422**

**ATARI 520 STF10** With 1Mb upgrade, SM125 monitor, manual, dongs etc. **Ian** 0171 266 3906

**ATARI 520 STF10** With virtually brand new hi-res monitor, 1Mb installed £250, Roland MDC1 module boxed with manual, as new £200. **Mat** 0115 969 3574

**ATARI 520STE** 4Mb RAM, SM124 hi-res monitor plus colour monitor, 100Mb hard disk, Cubase v3.0 with manuals, disks, Steinberg Midas plus complete system, hardly used £400. **0181 393 2738**

**ATARI 1040 STE** 14-inch mono monitor and external 3.5-inch drive for sale £160. **Chris** 0161 950 6642

**ATARI HI-RES MONITORS** Suitable for Cubase/Notator, two monitors for sale, 14-inch screen with sound, as new condition with original cartons, can dispatch £90 each or two for £80 each. **0181 668 6077**

**ATARI MEGA ST** 4Mb, high-resolution monitor, mouse and 50 disks £265, Casio CZ1000 with data cartridge £100, Korg DM1000 £180. **0115 938 2468** Notts

**ATARI ST** Floppy drives/printer cable/cystick £25. Atari platform Emagic Editor for all Yamaha keys and module £50. **01865 776587**

**ATARI STE** Full system, 2Mb, two monitors, hard drive, sampler, many boxed original games, utilities, cover disks, mags, the lot for £500 ono, may split. **0114 2214727**

**ATARI STE** 4Mb with high-density drive reading both DD and HD floppies with hi-res b/w Atari SM146 monitor, 14-inch, Falcon computer £350. **0181 933 3248**

**AUDIOMEDIA II** Card for all NuBus Mac computers and Sound Designer II software £230, Formac Promitron 24-bit graphic card for monitors up to 21-inch £75. **01332 776244**

**CUBASE AUDIO 16** V2.06 for Atari Falcon, all manuals, clock and dongs complete, open to serious offers around £375. **Duncan** 0141 401 1720

**CUBASE AUDIO 16** Version 2.06 for Atari Falcon, boxed with dongs, manuals, 44.1kHz clock £250. **0113 225 3087**

**CUBASE 3** With Audio tracks for PC, new, still boxed with dongs and MIDI lead £210. **0181 520 8370**

**CUBASE V3** Official Atari version plus dongs £250, Gastemer external 540Mb HD £200, Midex MIDI expander £180, Award Mb10 DI box £60, DMA to SCSI lead £60, Sincex 44 patchbay £60, Cakewalk Express sequencer £25, as as new with manuals. **0181 902 9784**

**DIGIDESIGN SAMPLE CELL PC** Boxed £650, Mark Of The Unicorn MIDI Express £200, Steinberg Midex £190, all cheap, any serious offer considered. **01438 833222**

**EMAGIC LOGIC** For PC version 2.57 £150. **0121 605 0508**

**FALCON 14MB** 32MHz accelerator, CPU clocked for audio recording, 250Mb drive, Cubase Audio 16, FDI FAB, 8 outputs, plus other software £1000, may split. **Tim** 01474 703304

**HARD DISK** Recording and editing software for Atari Falcon 4TFX/D2D, cost £300 will accept £50. **Chris** 01509 507188 East Midlands

**LOGIC AUDIO PC V2.5** Unregistered £270, Atari STE 2Mb, B/W monitor £220, JL Cooper M5B Rev2 8X8 MIDI p/b £140, Yamaha TG55 module £250, Emagic

Notator v3 £200, Yamaha RX21L drum machine £40, Akai XE8 drum module £110, Casio CZ1 £300, Kawai K1M, £180, Peavey PA speakers £180, all ono. **Nick** 01548 531334

**LOGIC AUDIO** Ver 2.5.3 for PC £240, Custom-built guitar, exotic woods, two octave full access rack, vintage Les Paul pickups, case, swap or sell value £1000. **01733 371773**

**MOTU MAC MIDI INTERFACE** rack mount, 96-channel, full SMPTE, as new with manual and software £280. **Phil** 01707 323864

**MPC MIDI CARD** For PC, New sealed in box, full warranty £50. **0181 691 1900**

**NOTATOR UNITOR SL** Boxed as new £220 ono, Atari 1040STE boxed with hi-res monitor sequencing, editing, games, software and joystick £250 ono. **Paul** 0468 165230

**PRO TOOLS III** £3500, 882.10 E550, Nuverb plus TDM £1100, Quadra 800 plus 21-inch monitor, £925, 2Gb AV-drive £400, lots of extras offers. **Andy** 0121 449 8024

**QUADRA 650** 48Mb RAM, Digital Performer version 2.0 included with CD-ROM and manuals, Lexicon PCM70 £900 each or £1700 for both. **0468 254252**

**SOUND FORGE** Cakewalk Pro Audio, Koan Pro, PC, 120MHz, 16Mb RAM all bullocks, Roland MK570, Casio VZ10M, Roland RB+card, 808, 909, Korg SR, Yamaha SY35. **0181 698 7447**

**STEINBERG CUBASE V3.0** PC, includes registration card, all manuals as new package, must sell due to new Apple-based studio £240 ono. **01473 617961**

**STEINBERG MIDEX+** MIDI/SMPTE interface for the ST £160, Steinberg Cubase 3.0 for the ST, with manuals and dongs, fully featured and legal £150, excellent condition, home use only. **0181 670 6578**

**STEINBERG SMP24** SMPTE/MIDI processor which adds 64 extra MIDI channels on Cubase with SMPTE or MTC sync for multitrack machines £495 ono. **0181 883 4329** or 0956 339577

**WESTERN DIGITAL** 1.2Gb HD, ideal for PC Audio MIDI software, 6 months old £120 ono. **01332 756993**

**ZERO X** digital sound processing software for the Atari, excellent for drum and bass programming, brand new, n box with manual, reluctant sale £120 ono. **01604 401096**

**AKAI EW11000** Wind MIDI controller and module, very good condition, boxed with manual, offers. **Steve** 01748 812477 answerphone, 0370 650834 eves

**ANATEK MIDI FILTER** and Pocket Sync, filter ideal for omni moze synths, £40 each. **Simon** 0181 599 4668

**BEYER HME50** Headband/hands-free microphone, omni-directional dynamic, fully adjustable, perfect for keyboard player, very good condition £85 ono. **Mick** 0181 6670108

**BOOKS FOR SALE** 'An Introduction To Digital Audio' by John Watkinson, 'Success In Electronics' by Tom Duncan, 'Sound and Recording' and some others, reasonable offers accepted. No dealers! **0171 720 3702**

**BOOSEY SOPRANO SAX** with case, solid silver Selmer 'C' lay mouthpiece, Linn ebony mouthpiece, good playing condition £275. **0191 372 2621**

**BOSE AND JBL** PA systems for sale, give me a call for the details. **01535 645233**

**BOSS CE2** Chorus footpedal, good condition, perfect working order £30 inc P+P. **01480 353306**

**C-AUDIO RA3001** 1250W amp, £625 ono, CP cases EM5500 9U modular rack, £135 ono, Fair Share SH48 mics, cables and three stands £250 ono, all in vgc. **0181 244 4476**

**DYNAMIX** Sound mixing system, 12-channel £95 ono. **01503 230653**

**FLIGHT** case 12U with lds and casters £60, Atari STE1040 and SM124 hi-res monitor £175, buyer collects. **Ian** 01482 708863

**GRUNDIG GRD280** 280 channel satellite receiver, boxed, manual, remote, one year old, great condition, with two LNB ins, three SCARTs, LNB and 60cm dish, £150. **01354 695239**

**HI-WATT STACK** Vintage, recently serviced 100W head plus matching 4x12 cabinet with heavy duty Fane speakers, very good condition, on casters too! Very reluctant sale £650. **0181 809 0145**

**MIDIMAN SYNC BOX** As new, boxed £70, An Pro II left-handed guitar, never played, cost £170 sell for £130 ono. **Ed** 01597 840287

**PAIR OF 265W JAMO SPEAKERS** With 12-inch woofers for sale, top condition £200. **0161 950 6642**

**ROLAND PG800** Programmer for JX8P, JX10, MKS70, excellent condition £250. **01403 272098**

**ROLAND VINTAGE SYNTH** Expansion board, JDIV dance drums PCM set, offers, Notator Logic Mac v2.0 £125 ono, Anatek Pocket Plus Mac merger/MIDI interface £40. **Clive** 0181 265 1980

**YAMAHA MDC32** RAM card, suitable for SY or TG synths £25, RAM 4 cartridge £15, Alesis ADAT for spares £40, Carslro Coit 45 keyboard speaker £50. **Duncan** 0121 444 2681

**YAMAHA PZ500** Power amp, 350W per channel, 700W bridged, ideal for studio or PA use, as new £300. **Jason** 01483 272543 Surrey

## PERSONNEL

**ADVERTISING NEEDS MUSIC** If you can make short interesting tracks and live in the London area. **Steve** 0958 631407. Ill call you straight back.

**DJS/PRODUCERS** Wanted, any style of dance music. Send mix tapes/demos to Xenon Promotions, 111 Moore Street, Gateshead NE8 3PN or **0589 351228/0589 638353**

**FEMALE SINGER REQUIRED** By established band, original songs and style, gigs waiting in London. **0171 252 3158**

**FIREWALL RECORDS** Urgently require original material from up and coming performers, send demos/DATs to A&R Manager at 17 Greenfields Avenue, Bromborough, Wirral, Merseyside L62 6DB

**HELPI** I am into hardbeat, drum + bass. I am looking for people in the Wellingborough/Kettering area to help me get to grips with Cubase v3. Score v3 and Audio XT v3 on PC. **01933 227034**

**IYUNX PRODUCTIONS** Requires quality electronic compositions, abstract drum n bass, electro techno, house, nondescript electronica. Send demos to Iyunx Productions, 41 Stanhope Road, Bowdon, Cheshire WA14 3JU

**LENNON SEEKS MCCARTNEY** For co-writing partnership and lady singer needed for pop songs (influences Beatles, Queen, E Costello). I'm 23 with group plus gear. Write Paperback Writer, 31 avenue Armand Guillebaud, 92160 Antony, France.

**MANAGER WANTED** For house material, must be exp for 20%, send details CV to RIC, 29 Harmer Street, Gravesend, Kent DA12 2AR

**MIDI ZONE** Fanzine needs demo to review, also if you would like a copy write to: Mark Nobes, Newholme, Aston Road, Chipping Camden, Glos GL55 6HR

**NEW LABEL** Interested in electronic, techno etc. Bands with guts and attitude. Tapes to: RPT Sign Records, PO Box 3945, Brentwood CM13 1LS

**PLEASE SIGN ME!** I am a 15-year-old male who wants to enter into the dance music scene, if you want to hear more contact 'Appacalips' **01505 634402**

**PRODUCER/SONGWRITER** Required to collaborate in making pop/dance music. I own a pretty good studio. Send demos to: 41 The Fairway, Fixby, Huddersfield HD2 2HU. **01484 513961**

**SINGER/SONGWRITER** Looking to collaborate and form a group, must be professionally minded and have that extra to bring music above the rest, varied music tastes. **Seb** 01452 307663

**SINGER/SONGWRITER** Who seeks the big time, requires good female vocalist with creative input to form duo for the '90s, transport an advantage. **Jamie** 01287 660146

**TRANSMISSION RECORDS** Requires trance/techno tracks for upcoming release, submit your demo and info to: Transmission Records, PO Box 4314, 6202VA Maastricht, Netherlands. (Please include an international reply coupon for sure reply.)

**TRULY TASTY RECORDINGS LTD** Require demos, trance, house, techno, chemical style, hip-hop. 20 Rennie Court, Aberdeen AB11 6NZ

**VERY WELL CONNECTED** Drum and Bass label seeking quality new talent, your demos will not disappear. **Leo** 0181 341 0382

**WANTED** Bjork. Write to Paperback Writer, 31 avenue Armand Guillebaud, 92160 Antony, France

**WANTED** Bass player and drummer/junk percussionist — any gender — for original music which is simple and different. **Rog** 01803 211167

**WOMEN WANTED!** Are any female engineers, at whatever level, willing to be interviewed for a college project? **Lisa** 01954 789888

## WANTED

**AKAI MPC60 MKII** Drum machine required, cash waiting. **0181 883 4329** or 0956 339577

**AKAI S1100** Expander with 10Mb, clean and tidy £550. **Bobby** 01703 493441

**AKAI S2000** With eight output expander fitted. **0141 638 6687**

**AKAI S2800** With some expansion, must be in vgc with manual, will pay £600, Technics SL1210s, SL200s, will pay £200 each. **Jim** 01494 442983

**AKAI S3000XL** Or Emu E64/E6400, must be in good condition, cash waiting, best offer. **Andy** 01633 613342

**AKAI VX600** Synth. **Danny** 01582 41923

**ALESIS ADAT** Or similar 8-track, preferably digital, might consider 4-track, GM module and synth, effects unit and sampler, plus non-

GM synth. **01869 347167**

**ALLEN & HEATH** GS3 8-channel desk extends on to upgrade 16- to 24-track, will consider purchasing 24-track GS3. **01223 560379**

**AMS RMX16** Reverb, Eventide DSP4000 harmonizer, Drawmer M500 dynamics, TC2290 digital delay, Roland SDE330 delay, Td60 740 and BSS DRP 402/404. **01535 645233**

**APPLE MAC 7100** or similar with 17-inch monitor, Session 8 system with 882 interface for NuBus Mac, cash waiting for best offer. **Andy** 01633 613342

**BOSS SE70 EFFECTS**, Sequential Circuits Pro 1, Roland SE70 Echo. **Tom** 0161 860 5028

**CAN ANYONE HELP?** I urgently need the circuit diagrams for a Putec EQ1A equaliser. **01535 645233**

**CASIO DIGITAL HORN** DH100 or DH200, will pay up to £100 based on condition. **01344 368066**

**CUBASE V3** Upwards, official Atari complete with full manual and dongs, cash waiting. **0114 255 7707**

**EMAGIC NOTATOR SL** v3 with Unitor, £100 or Logic £150, both for Atari. Cash waiting. Any Edinburgh labels seeking a D'n'B artist? **010438 880470**

**EMU ORBIT** Reverb-Lution and Major Pro Synth, analogue mono synths, especially Warp Special. **01243 830697**

**ENSONIQ SQ80** Writable sound cartridge. **Tony** 0181 941 8998

**HAMMOND X2** ORGAN. Must be in full working order. **Michael** 01438 220457

**HELP WANTED** Prophet 5 manual/tech service manual, photocopies or originals, also any info on service centres/clubs. **Alan** 01232 797759

**KORG MS10** In good condition, I will travel to UK to collect. **Ken** 353 4549941 Ireland

**KORG M550** Bought with manual, preferably good condition also, looking for Effectron effects box. **John** 0181 995 1208

**KORG M550** Semi-modular expander, preferably with manual, will pay good price. **0181 985 1208**

# Anatek Pocket Products to solve your MIDI headaches!!!

At SOS, we have regularly found ourselves referring readers to one or other of the Anatek Pocket range of MIDI accessories to solve their all too common MIDI interconnection and transmission problems. Trouble was, Pocket Products were previously hard to find... until now!

To order, just fill out the Order Coupon at the back of the Mail Order section (remember to add postage for each product) or simply call our Mail Order hotline on 01954 789888. Please allow up to 28 days delivery on Pocket Products. Postage: UK £2.50 Europe £4.95 ROW £6.95

**DON'T DELAY ORDER TODAY!**

## POCKET MERGE

- Merges 2 MIDI signals into 1 • Handles System Exclusive
- Merges on all 16 MIDI channels
- Merges Clock and MIDI Time Code • Merges all controllers • Handles large volumes of data
- Stackable for 3 or more inputs

POCKET MERGE is an essential tool for sequencing or live use. Operating as a 2-In, 1-Out MIDI Merger, several Pocket Merges can be stacked to merge more than 2 inputs. Now any controller can be a 'master'. In live setups, POCKET MERGE allows any two controllers (keyboard, drum pads, guitar synth, etc) to share a sampler or sound module. Use one keyboard as a master, while using a favourite pitch bender from another, or combine two keyboards for a multi-tiered, organ-style controller. In the studio, POCKET MERGE is a must for sample dump editors, allowing a keyboard and a computer to be connected to the sampler at the same time. POCKET MERGE handles data very quickly, making buffer overflows a thing of the past.

Order Code: PP007

**£59 inc VAT.**

## POCKET FILTER

- Filter on all MIDI channels • Filter controllers, System Exclusive and real-time data • Combine data types/channels • DIP switch selectable filtering
- Select channel from any keyboard • Filter all data on selected channels

POCKET FILTER is a vital tool for problematic setups. With MIDI data becoming increasingly complex, POCKET FILTER can unclog the MIDI data stream, sending only the most useful info. Use it to remove unwanted clock messages or System Exclusive data or memory-intensive aftertouch and controller information. POCKET FILTER frees-up unused MIDI Channels from multitrack synths, making them available for other modules. In addition, it can be used to channelise older synths that only receive in Omni mode.

Order Code: PP008

**£69 inc VAT.**

## POCKET CHANNEL

- Remaps Receive channel • Remaps Transmit channel
- Sends multiple MIDI channels
- Velocity-switch mode • Footswitch controllable

POCKET CHANNEL takes data from any MIDI channel and remaps it on to one, several, or all 16 MIDI channels. Up to 16 different channel assignments are possible. A unique velocity-switch feature allows automatic switching between two different sound modules depending on the key velocity. Use POCKET CHANNEL to organise channel assignments for a multitrack sound module, or send a controller's output to two or more MIDI channels. With POCKET CHANNEL, for example, two drum machines or two samplers can share the same note assignments and be set to two separate MIDI channels.

Order Code: PP014

**£69 inc VAT.**

## POCKET MAC

- Economical Macintosh MIDI interface • No external power supply required • 1 MIDI In, 2 MIDI Outs • LEDs indicate MIDI In/Out data • Uses serial or modem port
- High speed CMOS design
- Improves signal to minimise data errors.

POCKET MAC opens up a whole new world of MIDI programs for the Macintosh computer user. With many Macintosh programs simultaneously supporting both the serial port and the modem port, one POCKET MAC could be connected to each allowing access to twice as many MIDI devices.

Order Code: PP004

**£39 inc VAT.**

## POCKET SYNC

- 'Smart' FSK Tape-to-MIDI synchroniser • Starts anywhere in song • MIDI In to Out merging • Automatic read/write switching • 'Jam Sync' protects against tape dropouts
- Records tempo changes • MIDI and FSK status LEDs

POCKET SYNC is the way to expand the capabilities of any multitrack studio. No longer is it necessary to allocate more than one tape track for sequenced parts. Now, shuttling to different points in the song is quick and effortless. POCKET SYNC writes a special FSK sync tone on one track of tape that is converted to MIDI Clock and Song Position Pointer on playback. Merging of data from the MIDI input to the output allows new sequencer tracks to be added while remaining synchronised to tape. Automatic switching between write (recording FSK) and read (playback FSK) cuts downs on confusing switches and buttons. Tape oxide dropouts are no longer a problem with POCKET SYNC's variable dropout protection. The sequencer can continue playing over a dropout for a short time, even if FSK code is completely lost!

Order Code: PP003

**£69 inc VAT.**

## POCKET PEDAL

- Sends on multiple MIDI channels • Supports 1 continuous controller • Supports 1 momentary footswitch • Sends pitch-bend, modulation, portamento time, and MIDI Volume • Sends sustain, portamento on/off, sostenuto, and start/stop • Auto pedal/footswitch calibration
- Forward/Reverse pedal operation • 3 mode pitch-bend operation • Combine data types

POCKET PEDAL is an indispensable controller for the performing musician. Use it with an ordinary volume pedal and footswitch to send MIDI volume, modulation, and sustain controls on all 16 MIDI channels simultaneously. For owners of multi-effects processors, POCKET PEDAL provides a convenient cost-effective way of providing dynamic control over effects parameters. It is also a handy controller for automated midowns, converting any resistive input into MIDI Controller messages for VCAs. Connect a photocell to POCKET PEDAL and control MIDI parameters with a light source!

Order Code: PP009

**£69 inc VAT.**

## POCKET TRANSPOSE

- In-line 16 Channel transposer • +/- 5 Octave transpose range • Switch between normal and transposed modes
- Separate intervals for each channel • Transpose key signature and octave simultaneously • All non-transposed MIDI data is passed • Harmonisation mode • Footswitch controllable.

POCKET TRANSPOSE is a performance-orientated transposer that supports separate transpose intervals for each MIDI channel. Although many keyboards have a transpose function, it's usually too cumbersome for live use. POCKET TRANSPOSE makes transposing easy. Intervals can be set while playing, and the user can select the normal or the transposed setting from a footswitch. Guitar synth players can use the POCKET TRANSPOSE to set intervals on 6 separate MIDI channels, or use it to transpose all strings by a certain amount. POCKET TRANSPOSE provides an easy way to try different arrangements without altering sequencer data. You can even set it so that the drum machine channel remains intact.

Order Code: PP011

**£69 inc VAT.**

## POWER PACK

- 'Phantom' powers all Pocket Products • Functions in-line with MIDI signal • Powered by most AC adaptors
- Automatic polarity switching • Fully regulated supply
- Passes all MIDI data
- Alleviates hook-up problems • Boosts MIDI signal

POWER PACK provides power to Pocket Products in instances where upstream devices from other manufacturers have neglected to meet MIDI specifications, or in any instance where power is unavailable. POWER PACK can be placed anywhere in the MIDI chain and accepts power from a standard AC adaptor (not included). It provides additional power when more than 4 Pocket Products are used in a row or allows POCKET PEDAL and POCKET FILTER to retain their channel settings when the master device is turned off. What's more, POWER PACK can be used to boost the MIDI signal and extend the maximum distance between two devices.

Order Code: PP012

**£29 inc VAT.**

## POCKET THRU

- 1-in, 3-Out MIDI Thru box • High-speed CMOS design
- Very low power requirements • Buffered outputs clean up data • Handles all MIDI data
- Stackable for more outputs

POCKET THRU is an essential building block for any MIDI setup and an excellent companion product for all Pocket Products. POCKET THRU provides 3 buffered outputs from a single MIDI input. Use POCKET THRU to minimise MIDI delays, or expand the outputs of a POCKET MERGE unit. POCKET THRU also allows POCKET FILTER to be placed anywhere in the MIDI chain, when using it to channelise older synths. Up to 4 POCKET THRU's can be combined to provide a total of 9 outputs.

Order Code: PP010

**£35 inc VAT.**

One of the most important, but most often overlooked, pieces of equipment in the signal path are your audio and MIDI cables. Why sacrifice performance quality when you can rely on Piranha cables — available now from SOS Mail Order.

- Piranha cables are designed for professional use and manufactured to the very highest quality.
  - Piranha cables use top quality Neutrik connectors, the industry leaders. • Piranha cables are manufactured to combat any external interference. • Piranha cables use braided shields to counteract AC interference while still allowing maximum 'bendability'. • Piranha cables are designed to minimise ground loops. • Piranha cables employ fibre fillers to pack out the jacket, maintaining dimensions and mechanical stability in all studio/stage situations. • Piranha cables are exceptionally soft, whilst offering unsurpassed flexibility and durability. • All Piranha cables come with a lifetime guarantee.
- MICROPHONE CABLE** - Twin Core oxygen-free copper cable made to the highest specification, using high density spiral braided shield to provide superior performance and rejection of hum and noise. Special supersoft Polymer jacket makes this probably the most flexible cable available, giving the ultimate in protection against mechanical interference noise. Overall cable diameter: 6.5mm.
- INSTRUMENT CABLE** - Single Core oxygen-free copper cable, as above spec. Overall cable diameter: 6.2mm. **QUAD MIC CABLE** - Our Piranha supersoft mic cable is now available in a Quad version, offering further protection against susceptibility to outside interference. If you think of your cable as being 'double balanced', it is not difficult to understand the dramatic improvements in noise rejection that this cable affords. Overall cable diameter: 6.7mm.

Postage per cable: UK £1.75 Europe £3.50 R.O.W. £5.25

Please add your cable colour code R (red), B (blue), Y (yellow), G (green) or K (Black) at end of each Order Code to specify cable colours required when ordering (use coupon at end of Mail Order section). Example: **INS-03JJ-Y** means a 3 metre Jack-to-Jack Instrument cable in Yellow.

**CREATIVE RECORDING**

**CREATIVE RECORDING EFFECTS & PROCESSORS**

Code B315 £9.95  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**CREATIVE RECORDING TWO MICROPHONES & RECORDING TECHNIQUES**

By Paul White  
A complete guide to understanding and using microphones in a recording environment. In plain English, it explains how the different types of microphone work, discusses the advantages of the various different types, and shows how they can be used to get the sound you want onto tape.

Code B316 £9.95  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**CREATIVE RECORDING THREE ACOUSTICS, SOUNDPROOFING & MONITORING**

By Paul White  
Soundproofing, Acoustics and Monitoring is designed to take the mystery out of studio design, whether you run a bedroom studio or a commercial recording facility. In plain English, it explains how soundproofing works, how you can change your room acoustics to give the optimum monitoring environment and how to choose and use your monitor system.

Code B317 £9.95  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**RECORDING**

**PRACTICAL RECORDING TECHNIQUES**

By Bruce & Jenny Bartlett  
Another recording textbook that offers a mine of information in one volume. Mic placement, recording spoken word, working with MIDI and digital are covered, and there are even sections on location recording and recording classical music.

Code B350 £22.95  
Postage: UK £3.50, Europe £8.50, R.O.W. £8.50

**RECORDING TECHNIQUES FOR SMALL STUDIOS**

By David Mellor  
This well written, user-friendly book is designed to offer accessible and helpful tips on how to get the most out of the equipment in your studio. Chapters cover: mic placement; musical arranging for recording; recording; the mixer; preparing for a session; recording drums; vocals; integrating MIDI; using digital signal processing; location recording; digital recording. The book is rounded off with an "any questions?" section, a glossary and a list of recording studios in the UK. As you would expect from a book based on an SOS series this is a must have!

Code B198 £10.95  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**HOT TIPS FOR THE HOME RECORDING STUDIO**

By Hank Linderman  
Learn how to lay down music the way you want it to sound, with advice for getting the best from your mixer, multitrack, compressor etc. Discover tricks and what traps to avoid, unlock the mysteries of timecode, prevent noise problems. Packed with sound advice.

Code B326 £12.99  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**HOME RECORDING MADE EASY**

By Paul White  
All you need to know to make your own recordings is presented here in clear terms with the minimum of jargon. Using the information in this book, you'll be able to make your own professional sounding recordings, no matter how tight your budget.

Code B352 £11.95  
Postage: UK £1.95, Europe £3.95, R.O.W. £3.50

**PRACTICAL STUDIO TECHNIQUES**

By Tom Misner  
This book and audio CD package comes from the School of Audio Engineering's Tom Misner. It's an excellent source of basic recording facts and figures, and if you want concrete examples of the subjects discussed, then listen to the free mixdown demonstration CD.

Code B301 £15.00  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**THE MUSICIANS GUIDE TO HOME RECORDING**

By Peter McLean & Larry Wichman  
(Revised and Updated)  
This is the book every serious songwriter, musician, and home recordist needs, with a new chapter on MIDI and the latest digital recording technologies. A problem-solving guide as well as an instructional text, it is designed to explain in simple terms how professional recording techniques can be applied at home.

Code B314 £16.95  
Postage: UK £4.95, Europe £7.50, R.O.W. £14.50

**MACKIE COMPACT MIXERS**

By Rudy Trubitt  
Journey through the design and features of mixers so you can maximise the use of this essential and very flexible audio component. Using Mackie's wildly popular MS1202 and CR1604 mixing desks as a foundation, the book explains general concepts as well as model specific operating tips. Topics include mixing basics, real world applications, hooking things up, mixing tips, block diagrams and a glossary.

Code B330 £14.95  
Postage: UK £2.95, Europe £6.95, R.O.W. £9.50

**TIPS FOR RECORDING MUSICIANS**

By John Hams  
Today's studio equipment is affordable but sophisticated, and it takes a lot of know-how to use all this technology effectively. This book details the equipment you need - mics, effects, tape machines, etc. It has separate sections on recording of vocals, electric guitar, drums and acoustic instruments, as well as the use of MIDI in the recording process. You will learn how to get the best from delay and reverb, as well as effects like compression and gating. There are some useful tips on using the mixing desk and post production work. All in all it's a handy guide that will improve your recording techniques at a stroke.

Code B309 £8.50  
Postage: UK £1.95, Europe £3.95, R.O.W. £3.50

**HOW TO SET UP A HOME RECORDING STUDIO**

By David Mellor  
If you are thinking of setting up a home studio, a project studio or a DJ studio, this book is the place to start. It takes a highly practical "nuts and bolts" type of approach to help you produce an efficient and productive studio. It covers soundproofing, keeping the sound in and the noise out, acoustics, studio layout, and studio equipment, and advice on the kit you are likely to need. The book ends with an invaluable questions and answers section, a glossary of terms and a list of contacts.

Code B116 £8.95  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**SAMPLERS**

**WHAT'S A SAMPLER?**

By Freff  
Ideal starter book for sampling novices. Whether you are serious about sampling or merely curious, this book is for you.

Code B104 £4.50  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

**MUSIC BUSINESS**

**THE STUDIO BUSINESS BOOK**

By Jim Mandell  
This is a rare, a book dealing solely with the business side of the recording industry. No mic placement or working with MIDI, but simply good sound advice on running your studio as a going concern. While the bias is definitely American, much of the advice and tips can easily be translated into useable techniques on this side of the Atlantic.

Code B351 £24.95  
Postage: UK £3.50, Europe £5.50, R.O.W. £8.50

**MUSIC PUBLISHING**

By Randy Poe  
This book demystifies music publishing, explaining what it's all about and what it means to a songwriter. Learn what your publishing options are, from a single song contract to a staff writer to a self-publishing operation. By the time you have finished this book you will never make an uninformed decision about publishing your songs that you will later regret.

Code B327 £12.95  
Postage: UK £3.95, Europe £6.95, R.O.W. £9.50

**WRITING BETTER LYRICS**

By Pat Pattison  
In depth approach to lyric writing examines 17 songs to discover what makes them so effective. Learn a warm up exercise that will revolutionise your songwriting imagery, how to use a rhyming dictionary to unlock fresh, unexpected rhymes, avoid cliches and create imaginative metaphors and similes.

Code B325 £12.99  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**SHOWCASE INTERNATIONAL MUSIC BOOK 1997**

"The Bible of the music industry" - all the contacts you need in one handy volume. 544 pages, thoroughly researched and totally updated. This is the book the professionals within the industry use to find studios, producers, manufacturers, record companies, publishers, management, promoters, venues, tour support services, etc. UK, plus sections of Europe, Middle East, USA/Canada, Australia, South Africa. Accurate, comprehensive information in a well thought out and easy to use format. Highly recommended.

Code B192 £35.00  
Postage: UK £3.50, Europe £6.95, R.O.W. £9.50

**SONGWRITERS MARKET 1997**

To get your songs published and produced, you must know who the music industry's players are and how to approach them. This directory identifies those seeking the work of songwriters. Lists 2500 lyric and music markets, clubs, associations, contests, workshops and songwriters publications. Includes "The A & R Roundtable", where pros discuss their role in a songwriter's career, business side of songwriting, music industry trend report, and interviews with music industry professionals.

Code B324 £12.99  
Postage: UK £3.50, Europe £6.95, R.O.W. £9.50

**CAN YOU SING A HIGH "C" WITHOUT STRAINING**

By Thomas Appell  
This book features extensive coverage of the vocal cords and explains clearly how to sing high notes without going into falsetto, and without straining. You'll learn how to extend the range of your voice, and why most singers either strain or "break" into falsetto when attempting to sing above their normal range. It comes with 2 CD's jam packed with over 2 hours of vocal examples and exercises that you can practice with. Many singers have increased their range by several notes after the first week of practice. If you can't sing high notes without straining, but would like to know how, then this book is for you. 122 pages.

Code B319 £24.95  
Postage: UK £3.50, Europe £5.50, R.O.W. £8.50

**SUCCESSFUL LYRIC WRITING**

By Sheila Davis  
Superb guide to the art of writing words to music. Learn how to create a memorable song title, choose the best music form for each idea, apply writing principles and avoid common pitfalls, write with both sides of your brain, find your voice. Includes songwriter's bibliography and lists over 60 songwriting organisations to help you connect with your chosen marketplace.

Code B327 £12.95  
Postage: UK £3.95, Europe £6.95, R.O.W. £9.50

**THE COMPOSER'S GUIDE TO MUSIC PUBLISHING (2nd Edition)**

Written & compiled by Annie Gunning  
This book has been produced by the Association of Professional Composers and examines the business of musical copyright and music publishing from the composer's point of view. It aims to educate composers of all kinds of music in the operation of the music publishing business to help them obtain, negotiate and benefit from publishing agreements and avoid expensive mistakes. Apart from publishing, the book also covers copyright legislation, performing and mechanical rights, the royalty administration societies, music in film, broadcasting, theatre and ballet and commissioning agreements. There is also advice for composers setting up their own publishing companies. An exhaustive and useful book.

Code B297 £18.95  
Postage: UK £3.95, Europe £6.95, R.O.W. £9.50

**THE WHITE BOOK INTERNATIONAL PRODUCTION DIRECTORY 1997**

This is the latest edition of the essential source of contacts for artists, performers, venues, services and facilities associated with music, concerts, shows, festivals, film, TV, video, conferences, exhibitions and corporate hospitality. There's even a comprehensive international section. The layout is logical and an index makes fact finding an easy task. Altogether an indispensable B64 pages. The new edition once again comes with a complementary copy of The Little White Book, which distils the contents of the larger volume to a pocket sized list of names and phone numbers.

Code B259 £55.00  
Postage: UK £5.50, Europe £8.50, R.O.W. £16.95

**SONGWRITER'S WORKSHOP**

Edited by Harvey Rachtin  
If you want to work systematically at improving your songwriting skills, then try this book. It's divided into four individual "lessons", each of which is backed up by audio material on cassette. This allows you to listen in the car or walk around with your personal stereo and still absorb useful information. The four sections are: On Songwriting by Janis Ian (yes, the Janis Ian); Making Demos by John Barila; Understanding MIDI by James Becher; and The Art of Pitching Songs by Teri Munch (ex A&R director with RCA and publisher). Also included is an intro, a quick and breezy glossary and an index. Includes two cassettes.

**CREATING MELODIES**

by Dick Weissman  
Learn how to create memorable melodies, from love ballads to film scores and jingles. Using lots of examples of popular songs and styles by top-name musicians, Weissman covers the full range of melody writing. Learn how to marry music to lyrics, relate rhythm to the message of your song, read and write musical notation, write instrumentals for films, TV, commercials and theatre, and put together a demo tape.

**CODE B322 £12.99**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**THE SONGWRITER'S GUIDE TO COLLABORATION**

by Walter Carter  
This book describes what to expect when entering into a co-writing situation and how to make the arrangement work. Covers the pros and cons, how to find a partner, publishing your songs, who writes what, money matters, sharing success and rejection, growing together or apart plus co-producing and pitching.

**CODE B323 £8.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**THE SONGWRITER'S MARKET GUIDE TO SONG & DEMO SUBMISSION FORMATS**

From the Editors of Songwriter's Market  
If you've got the songs and you've got the contacts, this book will help you to choose a format that will get your demo heard as well as overall packaging and presentation and dealing professionally with publishers, A&R reps and other industry people. Plenty of example documents (lyric sheets and letters) are given, and the book is nicely rounded off with a glossary and index. Hardback.

**CODE B258 £12.95**  
Postage: UK £2.50, Europe £5.95, R.O.W. £9.95

**BEGINNING SONGWRITER'S ANSWER BOOK**

by Paul Zollo  
If you're just starting out as a songwriter or haven't progressed very far, perhaps you have questions about the art and business of songwriting that you can't find answers for. Chances are, they're covered in this book. Over 200 of the questions songwriters most often ask are answered in this book. There are 11 chapters, covering subjects such as lyrics, theory, song structure, collaboration, demos, publishing and the music business. Some answers - such as "What makes a professional-sounding demo?" are actually mini articles - and an index allows you to target subjects without wading through the text. A friendly, informative read.

**CODE B253 £10.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**ALL YOU NEED TO KNOW ABOUT THE MUSIC BUSINESS**

by Donald S Passman  
This book is a must: the author manages a portfolio of high profile clients and teaches music business law at the University of Southern California, and has produced a clear overview of the music business. He starts at the beginning of your career, with advice on choosing a manager, lawyer and agent, and moves through getting a record deal, songwriting and music publishing and finishes with details of copyright, mechanical royalties, songwriter deals, films and more. An exhaustive and entertaining read. 415 Pages.

**CODE B302 £19.99**  
Postage: UK £3.50, Europe £5.50, R.O.W. £8.50

**88 SONGWRITING WRONGS & HOW TO RIGHT THEM**

by Pat & Pete Luboff  
This is a real workbook for songwriters, dealing with both the craft and art of songwriting. Song structure, rewriting, matching lyrics to music, collaboration, making the right demo, pitching the final result, and business matters.

**CODE B254 £11.95**  
Postage: UK £2.95, Europe £5.50, R.O.W. £8.50

**NETWORKING IN THE MUSIC BUSINESS**

by Dan Kimpel  
Think of this book as a popular psychology course for musicians. If you feel you could benefit from developing a positive attitude to getting ahead in your area of the music business, then *Networking* is for you. There's nothing like it for good, sensible advice: it's often not enough to have talent. To be successful, you'll need to persevere, have good "people skills", and exercise good networking skills. Success depends on what you know, who you know, and perhaps most importantly, who knows you. An essential book, and a snap at £11.95. Hardback.

**CODE B251 £11.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**THE MUSICIAN'S GUIDE TO READING & WRITING MUSIC**

It's an entertaining but practical introduction, well, to reading and writing music. This is as friendly as it comes. Learning to read and write music isn't easy, but at least the process is lightened up with considerable doses of wit.

**CODE B224 £8.99**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**SONGWRITERS IDEA BOOK**

by Sheila Davis  
If you want a textbook, this is it: 250 pages of serious, intelligent insight into songwriting. Loads of good advice and a friendly tone make this a useful read to anyone, whether beginner or seasoned pro. The focus is firmly on lyrics rather than music, and the prominent references to poetry terminology shouldn't really be a surprise. Use Davis' 40 strategies and you could soon be "designing distinctive songs". Hardback.

**CODE B250 £9.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**SINGING FOR A LIVING**

by Marta Woodhull  
The title says it all. If you're already a singer, this book gives you everything you need to know in order to exploit your talent further, looking after your voice and voice exercises, business advice and marketing and audience interaction are all covered in this straightforward book.

**CODE B252 £12.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**MIDI INFORMATION**

**WHAT'S MIDI**  
by Jon F Eiche  
This slim 62-page book introduces MIDI in very simple terms. If you're a total beginner, then this could be an essential purchase.

**CODE B347 £3.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**PRACTICAL MIDI HANDBOOK (3rd Edition)**

by R A Penfold  
This book is completely updated, and features a section on General MIDI. It provides a "straightforward, non-mathematical introduction to MIDI", and features a full glossary of MIDI terms.

**CODE B273 £9.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**MIDI SURVIVAL GUIDE**

by Vic Lennard  
Whether you're a beginner or a seasoned pro, the "MIDI Survival Guide" shows you the way. No maths, no MIDI theory - just practical advice on starting up, setting up and ending up with a working MIDI system. Contains over 40 cabling diagrams, and how to: connect synths, sound modules, sequencers, drum machines and multitracks; how to budget and buy secondhand; using switch, thru and merger boxes; transfer songs between different sequencers; get the best out of general MIDI; and understand MIDI implementation charts.

**CODE B196 £7.95**  
Postage: UK £1.95, Europe £3.95, R.O.W. £5.50

**THE MIDI COMPANION**

by Jeffrey Rona  
A recently expanded edition of a popular book. The new edition contains a comprehensive rundown of all areas of MIDI, with helpful explanations of System Exclusive, using computers, troubleshooting and new explanations of the General MIDI standard.

**CODE B348 £7.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

**HANDBOOK OF MIDI SEQUENCING**

by Dave Clackett  
Hands On MIDI Software's Dave Clackett has boiled his knowledge into a collection of tips for getting the best out of hardware or software sequencers. Dave covers the hardware and software you need to get sequencing, and introduces the basics of sequencing and notation, with particular emphasis placed on using General MIDI/GM/XG sound sources. Recommended.

**CODE B333 £13.95**  
Postage: UK £2.50, Europe £4.95, R.O.W. £7.50

**THE MIDI FILES**

By Rob Young  
This book comes from Prentice Hall and aims to help you get the most out of your MIDI system, by providing loads of tips on programming realistic instrument and rhythm parts, using sequencers to create advanced effects. Basic MIDI concepts are covered, along with advice on setting up a MIDI based home studio. More advanced discussions cover specific types of MIDI messages and what you can achieve with them. All the techniques in the book are illustrated on a supplied floppy disk.

**CODE B334 £19.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

**MAKING THE MOST OF MIDI**

By Paul Overaa  
This is a MIDI book unlike any other. It explains the fundamentals of MIDI and MIDI sequencing for the beginner, and it goes much further, dealing with issues that will be of help to more established users. Advice on MIDI fault finding, help for musicians using sequencers with live bands, MIDI messages and MIDI files, plus programming material. So if you are a keen first time user or a MIDI veteran, there will be something in this book to interest you.

**CODE B321 £14.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**MIDI FOR THE PROFESSIONAL**

by Paul D Lehman and Tim Tully  
Co-written by SOS contributor Paul D Lehman, this substantial, exhaustive work covers pretty well any aspect of MIDI that you could think of. As an overview of what MIDI is and does in 1994, this 229 page book couldn't be better.

**CODE B227 £12.95**  
Postage: UK £4.50, Europe £7.50, R.O.W. £14.50

**MUSIC TECHNOLOGY REFERENCE BOOK**

by Peter Buick & Vic Lennard  
Written by Peter Buick and Vic Lennard (author of SOS's Alan Notes column) this book offers information at your fingertips. It's an indispensable reference for any musician or sound professional. It covers: digital, broadcast, live, video, multimedia, post production, and other industries. It includes comprehensive MIDI spec, General MIDI, MFC, MIDI implementation charts, and ideas, plus a directory, list of contacts and a comprehensive indexed, it is also organised into convenient sections. 150 Pages.

**CODE B305 £12.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**ADVANCED MIDI USER'S GUIDE (2nd Edition)**

by R A Penfold  
Most MIDI users do no more than scratch the surface of MIDI's potentialities. But dare to dig a bit deeper and you'll find a whole new world of creative possibilities. With the Advanced MIDI User's Guide, you'll learn how to optimise your MIDI system to get the best results from your particular setup, and you'll find out how to use gadgets like switchers and mergers to enhance your system. If you want to incorporate a multitrack tape recorder into your MIDI system there's a section on synchronisers, SMPTE and MIDI time code, and retro freaks will learn how to hook up that dusty old analogue synth to their MIDI systems.

**CODE B152 £10.95**  
Postage: UK £1.95, Europe £3.95, R.O.W. £5.50

**A BEGINNERS GUIDE TO MIDI**

by RA Penfold  
The title says it all: all aspects of MIDI are explained, and many common beginner's problems are discussed.

**CODE B287 £4.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

**ELECTRONIC PROJECTS**

**HIGH POWER AUDIO AMPLIFIER CONSTRUCTION**

**CODE B282 £3.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

**ELECTRONIC MUSIC AND MIDI PROJECTS**

by RA Penfold  
Want a MIDI THRU box, patchbay or switcher? Well they're all here - And you don't need a degree in electronics either. All the projects are explained in detail, with full instructions on assembly. So if you into MIDI and you want to expand your system without taking out a second mortgage, fear not. Here's the book to help you build up your MIDI system without laying out thousands on hardware.

**CODE B203 £9.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**VINTAGE SYNTHESIZERS**

By Mark Vail  
This well-illustrated, 300 page book covers synth history, interviews with designers and overviews of important instruments. Mark Vail's book could be the most entertaining and useful synth book yet - check out the definitive history of the Minimoog, complete with pre-production designers' sketches. While not strictly a buyers guide, there is a comprehensive section to sourcing, valuing, upgrading and servicing classic instruments

**CODE B199 ONLY £16.95**  
Postage: UK £3.50, Europe £6.95, R.O.W. £9.50

**THE A-Z OF ANALOGUE SYNTHS PART ONE: A-M / PART TWO: N-Z**

by Peter Forrest  
Complete rundown of all the major analogue synths and keyboards ever made, spread across two books. Each is a testament to the massive amount of research and effort put in by the author. Featuring pocket company histories and detailed data on the instruments produced, each book provides a comprehensive overview of the qualities of various instruments; charts and tables assess second hand values and maintenance levels necessary to keep a given instrument playable as well as such intangibles as sound quality, collectability and user interface. Includes colour photos of many classic instruments.

**PART ONE: A-M CODE B294 £14.00**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**PART TWO: N-Z CODE B338 £16.00**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**KEYFAX 2**

by Julian Colbeck  
1989 version of Keyfax provides individual summaries and specifications of the last of the great mono synths, digital polysynths like the Roland JX10 and Prophet VS - forerunner of the SY22 and Wave Station. Early Keyboard and rack-mount samplers are covered in this indispensable guide. Still a great buy.

**CODE B096 ONLY £5.99**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**THE MUSEUM OF SYNTHESIZER TECHNOLOGY**

by Martin J Newcomb  
If you liked our feature on the opening of the Museum of Synthesizer Technology in October, but haven't got the time or the cash to visit in person, then the next best thing has to be the museum's guide book. This 118 book is printed on glossy paper and contains

full-colour pictures of a large selection of exhibits from the museum, together with some descriptive text and company backgrounders. The text reads a little like a fanzine, but the hardcore synth fanatic will want this book for the pictures. In these pages you will glimpse instruments that you are unlikely ever to experience in the flesh: an exceedingly large Roland System 100 modular set-up, an EMS Synthi 100, an ARP 2500, a large Emu modular and what must be the comprehensive collection of Moog equipment anywhere.

**CODE B291 £12.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

**DRUM MACHINES**

**DRUM MACHINE RHYTHM DICTIONARY**

By Sandy Feldstein.  
For use with Roland drum machines or any grid-based pattern system. First 75 pages on programming huge range of rhythms in rock, latin, jazz and funk styles. Remainder analyses styles and patterns of world's top drummers - Phil Collins, Billy Cobham, Steve Gadd, Stewart Copeland, etc. Highly recommended.

**CODE B110 £16.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**RHYTHMICAL GROOVES & PATTERNS**

By Siegfried Hoffman.  
Looks at how drummers compose rhythm patterns to add emotion, swing or groove. Contains examples for you to programme into your drum machine or sequencer.

**CODE B115 £11.50**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**260 DRUM MACHINE PATTERNS**

By Rene-Pierre Bardet.  
Even more drum pattern styles (paso doble, charleston, etc)

**CODE B019 £7.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**DRUM MACHINE PATTERNS**

By Rene-Pierre Bardet.  
200 drum patterns and breaks presented in one-measure grid notation. Funk, R'n'B, ballad, pop, reggae, afro-cuban and many other styles.

**CODE B018 £7.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**PLAYING TECHNIQUES**

**SOLID GROOVES**

By Dieter Peterleit & Herb Quick  
128 pages dealing with both bass and drums, the 'heart' of the pop group, together. Although written primarily for drummers and bass players, anyone interested in understanding rhythmic music in popular styles will find this book invaluable.

**CODE B172 £11.50**  
Postage: UK £2.50, Europe £4.95, R.O.W. £7.50

**CLASSICS IN SEQUENCE**

by William Lloyd & Paul Terry  
Takes concepts behind Music In Sequence and applies them to all-time favourite classical music scores. Authors show how to make fresh, exciting interpretations of classic scores. Info on reverb and effects, interpreting scores, editing synth voices. Highly creative - an ideal workbook for the music classroom. Covers Medieval, Renaissance dance music, Bach's Toccata in D minor; Vivaldi, Purcell, Handel; opera excerpts from Rossini, Verdi, Borodini; Mozart, Schubert, Tchaikovsky, music from Carmina Burana; Debussy, Satie, Steve Reich's Piano Phase and more. Highly recommended.

**CODE B193 £12.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**MUSIC IN SEQUENCE**

by William Lloyd & Paul Terry  
Still one of our best-selling books. Easy to follow, practical guide to making real use of your sequencer, written by people who really understand music and how to create it using today's technology. This brilliant, unique book carries the SOS seal of approval

**CODE B155 £12.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**1000 KEYBOARD TIPS**

by J Dreksler & O Harle  
The hi-tech musician's guide to the basics of music, scales, chords and harmonies. 256 pages covering chord relationships, improvisation, suggested drum machine patterns, plus comprehensive chord table. Too good to miss!

**CODE B113 £13.95**  
Postage: UK £3.50, Europe £6.95, R.O.W. £9.50

**ROCK IN SEQUENCE**

by William Lloyd & Paul Terry  
The latest book from the authors of Music In Sequence and Classics In Sequence is now available: Rock In Sequence offers detailed scores of 17 rock and pop hits from the '50s to the present day, alongside a collection of helpful sequencing tips. Songs are included from the likes of Eurythmics, Blur, The Beatles, Led Zeppelin, Abba and others. 112 pages.

**CODE B320 £14.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**COMPUTER & MUSIC**

**THE DESKTOP MUSICIAN**

By David M Rubin  
A comprehensive guide to MIDI and audio on PC and Macintosh computers. Purchasers are provided with a CD-ROM full of MIDI software demos to get them going, and the text - over 400 pages of it - covers all aspects of music and computers, from first concepts to advanced arrangement techniques.

**CODE B335 £27.95**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

**COMPUTERS AND MUSIC**

By P A Penfold  
2nd edition. Covers hardware and software applications. Excellent glossary of jargon, and now bang up to date

**CODE B098 £8.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**MULTIMEDIA ON THE PC**

By Ian R Sinclair  
If you want to know what multimedia is and what it can offer you, then this is the book for you. Much of the information is general enough for everybody, but as the title suggests, the book is aimed at PC users. The book explains the installation and use of a CD ROM drive and a sound card and covers all key concepts behind multimedia. As an added incentive, if you buy this book, you can send away for a free copy of Picturesbook, a multimedia authoring package.

**CODE B272 £11.95**  
Postage: UK £2.50, Europe £4.95, R.O.W. £7.50

**PC MUSIC HANDBOOK**

2nd Edition  
by Brian Haywood & Roger Evan  
This book will show you how to turn your PC into a creative music-making machine. It explains how you can create very sophisticated music on your PC by running sequencing software, how to create your own sounds with a soundcard, how to use your PC as a sound librarian, or a sample editor, or even use it as a hard disk recorder or a sound sampler. All these things are possible with today's sophisticated PC. The use of sound in multimedia applications is also covered, and there is a chapter on PC hardware with advice on which type of PC is best for your particular needs. There's advice too on getting connected to the Internet, where you can contact other PC music aficionados world wide!

**CODE B332 £10.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**THE COMPLETE SOUND BLASTER**

by Howard Massey  
Explains in simple, non-technical terms, how to install the Sound Blaster hardware and software for use in both the DOS and Windows environments, the two sound processes used by the card, MIDI, the Sound Blaster's MIDI capabilities, and the many different applications for the Sound Blaster, including the various software utilities provided with the card, and many of the third party support products that enhance its operation.

**CODE B313 £10.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

**SEQUENCER SECRETS**

by Ian Waugh  
Ian's book aims to "go beyond the manual" in telling you how to get the best from your sequencer. The book features 29 hands-on sequencing projects and is suitable for use with all software sequencers. The book hopes to help you optimise your MIDI system and use your sequencer to create all sorts of useful effects. A troubleshooting section helps you track down stuck notes, double notes and so on.

**CODE B299 £7.95**  
Postage: UK £1.95, Europe £4.50, R.O.W. £6.50

**MUSICAL APPLICATIONS OF THE ATARI ST's**

by R A Penfold  
Includes a general introduction to MIDI, a handful of MIDI add-on circuits (Thru box, MIDI switcher and so on), plus a collection of programs, in Fast BASIC, that allow you to use the ST's internal sound generator and create little MIDI applications.

**CODE B280 £5.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

**LIVE SOUND**

**LIVE SOUND**

Peter Buick has produced a book written for live sound engineers and gigging musicians with practical applications and real life scenarios very much in mind. The whole ambit of live sound engineering is addressed, including the equipment used and how to get the most out of it, the problems you will confront and how to fix them, and various other related subjects such as safety, feedback, as well as automation and MIDI in the live sound field.

**CODE B337 £14.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

**PUBLIC ADDRESS LOUDSPEAKER SYSTEMS**

by V Capel  
All aspects of PA speaker systems are covered in this book, including low-impedance matching, 100V systems, transmission lines and how to install inductive hearing aid loops. At the heart of the book is the Line-Source Ceiling Array, a system that is claimed to improve clarity, even coverage and reduce feedback. Full step-by-step construction and installation details are given.

**CODE B283 £3.95**  
Postage: UK £1.50, Europe £5.50, R.O.W. £8.50

**SOUND REINFORCEMENT HANDBOOK**

by Gary Davis and Ralph Jones  
From recording to broadcast, fixed installations to touring, this 400 page reference covers live sound setups, equipment, techniques and jargon.

**CODE B105 £27.95**  
Postage: UK £4.50, Europe £7.50, R.O.W. £14.50

**LOUDSPEAKERS FOR MUSICIANS**

**CODE B284 £3.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £4.50

**INTRO TO LOUDSPEAKER & ENCLOSURE DESIGN**

by V Capel  
The book provides both useful background to speakers and enclosures in general, plus practical information on crossovers and full details on constructing the so-called 'Kapellmeister' design of speakers.

**CODE B281 £2.95**  
Postage: UK £1.50, Europe £6.95, R.O.W. £9.50

**LIVE SOUND MIXING**

by Duncan R Fry  
This is a hands on, friendly introduction to all aspects of mixing live. It hails from Australia, and is an SOS Bookshop exclusive. The author is an experienced live sound engineer and has packed his book with loads of information, diagrams and hints to take you from basic principles through to trouble shooting when things go wrong.

**CODE B256 £19.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## GUITARS

### PLAY BLUES NOW!

A complete guide to blues guitar playing that shows a variety of blues rhythm and soloing styles — for both beginners and advanced players alike. Learn the blues style of Eric Clapton, Steve Ray Vaughan, Peter Green, etc. The programme not only covers the usual blues shuffles and scales but using 4 complete songs, gives you the resources and techniques to create professional blues parts and solos in a wide variety of blues styles.

**CODE V051 £12.99**  
Running time approx 50 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### ACOUSTIC BLUES GUITAR

Presented by Mel Reeves  
Whether you can already play fingerstyle guitar, or are simply familiar with basic chords, this programme will show you all of the necessary techniques to play great blues guitar. All of the technical aspects are explained in the clearest possible way before getting down to the real business of learning 5 real blues that are great to listen to and terrific to play.

**CODE V058 £12.99**  
Running time approx 63 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## SYNTHESIZERS

### KORG PROPHECY VIDEO MANUAL

Written by Phil MacDonald  
Korg's new Prophecy Synthesizer now has its own video manual!  
The video covers all the major features over 6 sections, with lots of examples of the amazing effects that are available using the 'log' and 'mod' wheels. The video's visual interest is maintained by the extensive use of Chroma Key and multi camera effects. This is a video that is ideal for new owners, and those who want to know more about the Prophecy before they make a purchase.

**CODE V049 £14.99**  
Running time: 36 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### ROLAND GR-1 GUITAR SYNTH

**CODE V014 ONLY £29.99**  
for 2 videos  
Total Running time: 4 hours Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### ROLAND MS-1 VIDEO MANUAL

**CODE V047 £24.99**  
Run time: 50 minutes (approx) Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### KORG X3

This video offers an easy way in to this powerful workstation. It starts from absolute basics, including audio connections and volume levels, and the clear and helpful script covers all basic facilities of the X3. The video features a sophisticated use of picture in picture, with the X3's display cut into the main image to show you clearly what Phil is actually doing, and main points are reinforced with on screen text and graphics. The main section headings are:  
• X3 Audio Connections • Getting Around the X3  
• Factory Desk • Disk Drive Modes  
• Selecting Sounds • Global Modes • Sequencer Mode • Quick Sound Editing  
• Playing MIDI Files on the X3 • Using the X3 with an external sequencer  
Note that these are loose headings, with each section also containing information on connected subjects in varying amounts of detail. A lot of ground is covered, and we can recommend the tape to any X3 owner.

**CODE V018 £19.99**  
Running time: 55 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### PLAY HEAVY METAL NOW!

A concise, easy to follow video guide to real heavy metal playing for guitarists of all levels. A guide to hard rock/heavy metal techniques for guitarists of all levels. The programme covers RHYTHM, SOLOING, and TECHNIQUE. All of the techniques, solos, etc are clearly demonstrated. No need to read music. Free booklet contains tab, chord and scale diagrams.

**CODE V052 £12.99**  
Running time: approx 65 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### PLAY GUITAR NOW!

**ACOUSTIC & ELECTRIC**  
An easy-to-follow video to take you from the basics to a full rock solo. The programme covers TUNING, CHORDS, FINGERSTYLE, 12 BAR BLUES, BARRE CHORDS and ROCK SOLOING for both electric and acoustic guitars. Includes free chord/tab booklet. It is not necessary to be able to read music to learn from this video.

**CODE V053 £12.99**  
Running time approx 51 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### ROLAND G800

Presented by Roland UK's product demonstrator Sara Raybould, this video covers every essential feature and function of the Roland G800. Sara provides the user with a wealth of knowledge on this sophisticated instrument, with recourse to many practical examples and close-up shots of the LCD screen. The video was produced in association with Roland USA and Roland UK to ensure that the content is accurate and informative.

**CODE V060 £19.99**  
Running Time 92 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### ROLAND GR09

Presented by Roland UK product demonstrator Nick Cooper, this application based tutorial video for the Roland GR09, produced in association with Roland USA, covers every function completely. Covered topics include; the GK2A Synthesizer Driver, pickup sensitivity, use of the tuner, what a patch consists of, use of the pedals, patch edit 1 & 2 (including layering and detune, chromatic function, reverb & chorus, edit target, pitch shift), the use of external midi devices, saving to an external sequencer & more.

**CODE V061 £19.99**  
Running Time 57 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### ROLAND JV-1080 VIDEO MANUAL

Roland's amazing JV-1080 synthesizer module is covered in detail in this informative video. Presented by Tim Walter the video guides you through the basics, and leads you painlessly onto the advanced features. The video even shows you how to fit the expansion boards & gives demonstrations of some of the wonderful sounds they contain. Once again this video has been produced in association with Roland UK & USA to ensure that everything it contains is accurate, and relevant to the new and more experienced users alike.

**CODE V046 £19.99**  
Running time: 80 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### COMPLETE ELECTRIC GUITAR

Presented by Mel Reeves  
Learn how to create solos and rhythm parts in any style! The programme covers ROCK 'N' ROLL, BLUES, JAZZ, COUNTRY, ROCK and FUSION and much, much more. Plus the clearest possible guide to chord and scale construction, tonal centres and working out parts for yourself. Includes free construction booklet.

**CODE V050 £12.99**  
Running time approx 65 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### COMPLETE ACOUSTIC GUITAR

Presented by Mel Reeves  
Whether you only know a few chords, or are already proficient, this easy-to-follow programme will show you all of the main guitar styles, as performed on the acoustic guitar. As well as learning tips and 'tricks of the trade' Mel Reeves will show you 6 great instruments, step-by-step and take your playing to new heights. Plus, open tuning, the capo, high-strung guitar, reading music and more!  
Styles include: Guns 'n' Roses, Bon Jovi, Hendrix, Blues, Mississippi Blues, Django Style Jazz, Nuts En Moscow, Classical, Romance, Carter Style, Buffalo Gals and Bottleneck/Slide Style.

**CODE V056 £12.99**  
Running time approx 78 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### GETTING THE MOST OUT OF THE KORG M1

Written and presented by Julian Colbeck  
The Korg M1 is a classic instrument. The range and quality of its sounds has made it one of the most successful synthesizers of all time. But because the M1 is so immediate, it's too easy just to scratch the surface, leaving many of its exciting capabilities undiscovered. This highly informative video enables M1 owners to unleash the full creative potential of this enormously powerful workstation.

With plenty of musical examples, tips and inside information, the video offers clear, concise explanations of the instruments features and operating procedures, helping you to greatly expand your dexterity and creativity across the whole range of this world-beating instrument.  
**CODE V002 £24.95**  
Running time: 1 hour 10 minutes Format: VHS

### ANALOGUE HEAVEN

Remember our feature on the opening day of the Museum of Synthesizer Technology which we ran back in October 1994? Wish you'd actually been able to attend? Well, now you can have the next best thing: the museum has released a fascinating 50 minute promo video that features footage shot on the day as well as a lightning tour of the facility. The programme is hosted by SOS contributor Julian Colbeck. The tape opens with synth pioneer Bob Moog making the inaugural speech and officially opening the museum, followed by a nostalgic run through one of his old modular systems. Analogue Heaven makes diverting viewing for anyone interested in vintage synths, represents good value, and offers the perfect companion to the Museum's guide book, also available from the SOS Bookshop.

**CODE V026 £12.95**

### ACOUSTIC FINGERSTYLES

Presented by Mel Reeves  
In this video there are 5 major instrumental studies to work through including country, classical and blues. Each style is broken down into small sections allowing you to learn more quickly and efficiently. Each piece is demanding, but great fun to play. The final section looks at styles and techniques used by players such as R.E.M., The Eagles, Sheryl Crow and Paul Simon, and provides an insight into creating new and interesting fingerstyles of your own.

### KORG X5 SYNTH

Korg's new X5 synthesizer, reviewed in SOS' January 1995 issue, now has its own video manual. Presented by Tim Walter in an entertaining and lighthearted manner, and explains all basic aspects of Korg's highly affordable instrument in very clear terms. If you're in any way daunted by your new purchase, or want to get a feel for the instrument before laying out your cash, this is the video for you.

**KEYBOARDS**

**YAMAHA PSR6000 KEYBOARD VIDEO MANUAL**

Yamaha's PSR6000 is a home keyboard with a difference, and offers many professional features plus excellent sound and quality. Tim Walter starts at the beginning and makes the instrument look easy and fun. His enthusiasm is catching, and yes, the PSR6000 is a very capable instrument. The tape runs for 75 minutes, which makes for excellent value.

CODE V029 **£19.99**  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**PLAY KEYBOARDS NOW!**

Presented by Mel Reeves  
An up-to-date video/booklet that gets to the heart of modern keyboard playing with no need to read music!  
All you need to be able to create pop, rock and even jazz chord accompaniments using major, minor, seventh, sus 4th and added 9th chords. Learn arpeggios, random arpeggios, chord 'chording', crushed tones, boogie blues, inversions and much more.  
Free instruction booklet and stickers included.

CODE V054 **£12.99**

Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**PLAY KEYBOARDS NOW!**

**MELODIES**  
Presented by Mel Reeves  
This programme will not only teach you note reading, rhythm, rests, ties and how to move up and down the keyboard with ease, but will also teach you 6 complete melodies familiar to lovers of rock, pop and classical music.  
In addition, there is a further look at improvising, making use of melody and scales contained. Clear computer graphics and the booklet enclosed will mean you won't miss a thing.

CODE V057 **12.99**  
Running time approx 55 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**HOW TO GET THE MOST OUT OF HOME RECORDING**

**3 TOP CLASS VIDEOS**

*A superbly presented set of videos which no home recordist should be without. Have you got your set yet?!*

**LEVEL ONE**

This well presented video explains how to set up and operate a simple cassette-based multitrack home studio. It clarifies all the basic terminology and demonstrates the recording of a song from beginning to end, covering how to record guitars, keyboards, vocals and drums machines, which microphones to choose, how to patch in effects units and use them well, what makes a good arrangement, what makes a good mix, plus what to master on to and why. Full of professional tips and clear examples, this superb video offers the musician with no recording experience a fast route to successful operation of a simple home studio.

CODE V005 **£24.95**  
Running time: 1 hour 10 minutes  
Format: VHS/PAU HiFi Stereo  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**LEVEL TWO**

This is, in our opinion, the best ever guide to the equipment and skills needed to produce high quality results from a home studio. Full of clear examples and graphic information, the video makes on effects and how to use them well. It also covers the do's and don'ts of track bouncing, microphones and mic techniques for different applications, getting the most out of multi effects units; plus an analysis of guitar effects with top session guitarist Milton McDonald and an enlightening interview with ace producer Alan Parsons. Wiley presenter Julian Cobock packs the programme with professional tips, allowing musicians of all kinds to get the most out of their home studio.

CODE V006 **£24.95**  
Running time: 1 hour 45 minutes  
Format: VHS/PAU HiFi Stereo  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**LEVEL THREE**

This video is packed with information and professional tips on advanced MIDI applications in the home studio, including interfacing with sequencers, which sync code is best for which application and why. Hi producer Marty Phillips (Easura, London Beat) discusses modern recording techniques, and top programmer Paul Wilton examines the opportunities and benefits offered by hard disk recording. It offers practical advice on sampling - how to save time and tracks; plus professional tips on advanced mixing and mastering techniques, including spectrum mixing.

CODE V007 **£24.95**  
Running time: 1 hour 30 minutes  
Format: VHS/PAU HiFi Stereo  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**EMAGIC**

**EMAGIC NOTATOR VIDEO TRAINING MANUAL**

This video manual is detailed and helpful, and is presented in a most friendly and approachable manner by session musician Tim Waller, whose tone throughout the video encourages and inspires confidence. If you are new to Notator and are still in awe of its power, this is the video to bring you down to earth. An introduction and 28 tutorials take the user from the absolute basics - including playing in the dangle - to working with Undo and SHIFTE, and synchronising to video. As well as actual recordings of MIDI data and sequencing, comprehensive coverage is given to using the score layout and printing facilities that are so much a part of Notator. Topics covered include: sequencing pages, score editing, lyrics and text, graphic arranger mode, hyper edit, the printer page, using the part box.

CODE V012 **£19.99**  
Running time: 2 hours 20 minutes  
Format: VHS/PAU  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**THE EMAGIC LOGIC TUTORIAL VIDEO**

Produced by Emagic themselves, this video once again sees Tim Waller. Rebased on the excellent Notator version in the tutor's chair. There are also plans for a series of videos, which become ever more detailed and informative, but for now Volume 1 takes you through the first steps of getting the software up and running, and covers virtually all the controls you'll need. This video is used for all versions of Logic, whether being run on an ST, Mac, or PC. Presentation is rather simple, with a mobile camera that helps to hold the interest more than the average training video and some interesting graphics that aid comprehension and help to quickly find specific tutorials and bits. Contents are as follows:

- Tutorial 1: The Arrange window and basic sequencing
- Tutorial 2: Playback parameters & Toolbox
- Tutorial 3: Controlling MIDI data flow
- Tutorial 4: Manipulating sequence data
- Tutorial 5: Moving around in Logic
- Tutorial 6: Windows and key commands
- Tutorial 7: Mixer sequencing
- Tutorial 8: Score
- Tutorial 9: Looking at the Event List
- Tutorial 10: Editing the Event List
- Tutorial 11: Using the Environment
- Tutorial 12: The best of the rest: HyperEdit, Mark Editor, Cycle Mode and more.

CODE V023 **£29.99**  
Running time: 70 minutes  
Format: VHS/PAU  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**SEQUENCERS**

**YAMAHA QY300 VIDEO MANUAL**

Complete overview of Yamaha's new QY300 sequencer/hard source. Presented by Joe Ortiz of Heavily Music, the video offers a hands-on tutorial on what is potentially a very powerful piece of hardware. Starts off with a runthrough of QY300 features, followed by a clear, step-by-step tutorial that introduces you to creating your own sequences and styles. As a bonus, the video comes with a free disk loaded with 6 new QY300 styles and 6 demo sequences.

CODE V025 **£19.99**  
Running time: 60 minutes

Running Time: 45 Minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**CUBASE**

**STEINBERG CUBASE**

This manual is presented by Chris West, Steinberg expert. It's very much a practical, 'get up and running' video, showing the novice user exactly how to install and begin using Cubase, whether they're running the program on an ST, Mac or PC computer - there's even a basic background on using the computers themselves! All of Cubase's controls are shown, explained and demonstrated in depth. Once you're familiar with the basic controls, Chris takes you slowly through recording your first session, followed by overviews of the various edit screens. It's rather like having an expert tutorial that you can run again and again in the comfort of your home, until you can use Cubase like a true pro. Topics covered include: the main screen, customising names and outputs, copying and pasting between arrangements, MIDI filter, cycle mode recording, the tool box, all edit screens.

CODE V011 **£29.99**  
Run time: 1 hour 30 minutes  
Format: VHS/PAU  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**YAMAHA QY20 MUSIC SEQUENCER VIDEO MANUAL**

by Tom Robinson  
Yamaha's popular QY20 portable sequencer/sound source is a deceptively simple device to use; if you think you might be getting that little bit extra out of the device, then look no further. Produced in co-operation with Yamaha, the video features mobile musician Tom Robinson showing you how to get the best from this portable marvel. Tom, who has used the QY20 extensively as a writing tool on the road, says: "I never leave home without it".

CODE V016 **£19.99**  
Running time: 30 minutes  
Format: VHS/PAU  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**BOSS ME-8**

Nick Cooper (Roland UK product demonstrator) explains every single feature and function of the ME-8 in detail. The unit is clearly explained in a logical sequence with examples given of how the functions affect the available sounds, a perfect aid to new users of the ME-8 and those who would like to get that little bit more from it. Just some of the main points covered are: What is a Patch?, Selecting a Patch, Copying a Patch, Edit Mode, Using The Effects, Control Effects, The Tempo Function, Manual Mode, and lots more.

CODE V064 **£19.99**  
Running Time: 72 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £5.95

**DRUM MACHINES**

**BOSS DR-5 DRUM MACHINE**

Presented by Nick Cooper (Roland UK Product Specialist) this video covers all the functions of the DR-5 in a clear and concise manner. Produced in association with Roland UK & USA. By using the information gathered from Roland 'toppers', particular attention has been paid to the areas that many users find most difficult in. This makes it of interest to beginners and experienced users alike. Nick imparts the information with ease and a professional manner, making it enjoyable and entertaining.

**F**X Rentals Ltd are the UK & Europe's largest pro audio rental company, with thousands of items of equipment in stock and a 24-hour service. FX supply hire equipment to all areas of the industry, from the top studios down to individual musicians. Hiring from them, to fill out your studio for a particular project, or while your own equipment is being serviced or mended, needn't be expensive — check out FX's web site (<http://www.fxrentals.co.uk>) for a full rate card, and bear in mind that individual deals can always be negotiated.

FX Rentals will be celebrating their fifth anniversary in business this month, and to mark the occasion, they've teamed up with *Sound On Sound* for this month's competition, offering the great prize of a Sony TCD D8 portable DAT machine. Each month, FX Rentals publish the top ten most popular pieces of rental equipment, calculated by their computer system, in their newsletter. For a chance to win this great prize, worth £600, take a look at the list below. This is the most popular 50 items from FX Rentals' stock of thousands. We'd like you to choose the ten pieces of equipment from the list shown below that you think are most likely to be in the top ten, then put them in the order you think they'd appear. Since this is a tricky one, there's no tie-breaker to complete this month. Just use your skill and judgement. Good luck! Entries must be with us by the closing date of Friday, 1st August 1997.

Prize kindly donated by FX Rentals,  
0181 746 2121. Email: [fx@fxrentals.co.uk](mailto:fx@fxrentals.co.uk).

# Sony TCD D8 Portable DAT Recorder

Choose the top ten pieces and prioritise them opposite...

- Akai S3200 sampler
- AKG C12VR valve microphone
- Alesis ADAT 8-track digital recorder
- Ampeg SVT II bass amp head
- Apogee AD1000 A/D converter
- Atari Mega 4 computer
- Beyer DT100 headphones
- BSS MSR604 mic splitter
- Bose 802 speakers
- Clavia Nord Lead keyboard
- DBX 902 de-esser
- Dobro guitar
- Dolby XP24SR noise reduction
- Drawmer 1960 compressor
- Drawmer DL221 compressor
- Emu Vintage Keys sound module
- Eventide H3000 processor
- Fender Precision bass guitar
- Focusrite Red 2 stereo EQ
- Friendchip SRC/AT synchroniser
- Gibson Les Paul electric guitar
- Hammond C3 organ
- Klark Teknik DN360 graphic EQ
- Kurzweil K2000 keyboard
- Lexicon 300 digital processor
- Lexicon 2400 time compressor
- Lexicon PCM70 digital reverb
- Mackie 1604 mixing desk
- Massenburg 8200 2 channel EQ
- Neumann U87 microphone
- Neve 33609 compressor
- Opcode Studio 4 timecode interface
- Otari MTR90 24-track analogue recorder
- Panasonic SV3700 DAT recorder
- Roland JD800 keyboard
- Roland JV 1080 sound module
- Shure SM58 microphone
- Sony 7030 time code DAT recorder
- Sony PCM3348 48-track digital recorder
- Sony C800G valve microphone
- Steinberg Cubase sequencing software
- Summit DCL200 2-channel compressor
- Takamine 6-string acoustic guitar
- Tascam DA88 8-track digital recorder
- Technics SL 1210 record deck
- TC Electronics M5000 processor
- Timeline Lynx II synchroniser
- Tube Tech LCA2B valve compressor
- Yamaha 9000 drum kit
- Yamaha SPX900 processor
- Yamaha NS10M speakers

# America's ultimate MIDI drum controller

E-mu Systems® is now the exclusive worldwide distributor for the legendary KAT family of electronic percussion controllers. Only KAT controllers feature ultra-sensitive Force Sensing Resistor (FSR) technology which makes them the first choice among studios and performing artists alike. Teamed up with E-mu® samplers and sound modules, KAT controllers are brilliant.

**trapKAT** – The ultimate one-piece drum kit. The trapKAT is amazingly comfortable for drummers to play, and offers great feel and dynamic response. With ten large “flat” pads, 14 raised edge “rim” pads, and kick and hi-hat footpedal inputs, the trapKAT gives you a 26-piece drum kit in one package. It's all you need.

**dk10** – KAT performance that is simple and affordable. The dk10 delivers the same great playability and response as all

of the KAT controllers. It features a 10-pad playing surface in a compact package with kick and hi-hat footpedal inputs. The dk10 is the perfect way to tap the world of MIDI without taxing your brain or your budget.

**drumKAT** – Uncompromised power and flexibility. The famous drumKAT offers a 10-pad playing surface with nine additional trigger inputs for acoustic or electronic pad triggering. The drumKAT is our flagship controller and represents years of software development. It has no equal in terms of musical expression. The creative possibilities are endless.

# MUSIC LAB

*The UK's leading professional audio supplier*

## Sony DTC-ZE700 New standard in affordable DAT

**T**he **DTC-ZE700** is the latest in a long line of affordable DAT recorders from Sony. With its serious spec list this machine is the logical choice for a budget DAT. Whats more, we have an incredible discount of £200 from Sony's RRP.(All Sony products available from Music Lab are sourced directly from Sony UK)

- 44.1kHz Analogue In
- Optical In and Out
- Coaxial input
- Super Bit Mapping
- Full Remote Control
- Rehearsal Function
- 48kHz, 44.1kHz, 32kHz
- Time Display
- Re-number Function
- Absolute Time Display
- AMS

**DTC-ZE700 £499 inc vat**

**SAVE  
£200  
ON NEW  
SONY DAT**

**M**usic Lab has often heard customers complain that although their DAT recorder appears to function perfectly, the tapes just don't sound the same on other machines.

To encourage more users to do something about this worrying situation, we have introduced fixed-price calibration services for DAT machines, starting at £75 ex vat (£88.12 incl vat). This will guarantee the recorder meets the Sony DAT

## Time to set your DAT straight

**Demo Days**  
Steinberg June 10th  
Digidesign July 29th

## The Yamaha 03D Digital Mixer is here

**A**fter the release of the O2R - the world's first really affordable digital multitrack desk - everyone has been wondering what Yamaha could possibly pull out of the hat for an encore. The answer is the 03D, a digital desk based on the O2R but with a more compact control surface and a stunningly attractive price. The new system offers a total of 26 inputs, which include eight digital inputs. Coupled with four bus outputs, six aux sends and eight digital outputs via YGDAI, this makes for a wide variety of mix possibilities. The first eight channels have mic inputs on balanced XLRs and individually switched phantom power. It's also possible to create larger configurations by cascading two or more desks together. Although the 03D is a four bus desk, it has been designed so that it can be used for eight track recording. This is achieved by assigning the four bus outs and auxes to the YGDAI outputs. Automation on the desk is based on 50 scene memories which can be recalled manually, via MIDI or using the internal automix. The settings cover EQ, channel setting, effects and dynamics. There are two effects processors and 40 dynamics processors, as with the O2R and the audio quality is up to the same high standards. The control surface may be more compact than the O2R but it's still easy to use, thanks to the back-lit LCD in the centre of the desk. It's also possible to connect a PC for quick navigation and parameter editing. To reserve a 03D call now, as they are selling through as fast as we can get them!

**03D £2999 inc vat**

## New low price on Pro Mix 01

This feature packed 16 input digital desk is now available at an even lower price.

# Sega Digital Studio

## Client of the month

One of Music Lab's many satisfied customers is the Sega Digital Studio - the production centre that creates sound tracks for some of the world's best selling computer games. Small wonder that computers play a large role in putting the material together.

Sega composer/AV engineer Richard Jacques explains how the London facility came together.

"We set up the studio in the summer of 94, and we met Andy Brooks at the APRS show. (An annual pro audio event which used to be held in London). "The first reason we went to Music Lab was that there was no bullshit. We met two other dealers at the show and one in particular wouldn't leave us alone. We had a budget of £200,000. Andy just said, 'If you want something, just give us a call', so we thought we'd go with them. "Obviously they wanted to sell us the gear but they were very relaxed about it." These days, £200,000 goes a long way and the Sega Digital Studio was originally two facilities based around an 8 channel Pro Tools system in each case.

These have now been combined into a single facility with a 16 channel Pro Tools - heavily loaded with TDM Plug-ins - on an Apple Quadra 840. Other goodies include a Mackie 32/8/2 desk with Ultramix automation, two Akai S3200 samplers with maximum RAM, a Fostex RD8 eight track recorder, plus an impressive amount of outboard and MIDI sound modules

"Steve (Selfe, the famous Dr Bloyd) co-ordinated the installation here. We had a few quirky problems just because we hadn't really used Pro Tools before. They are very good on after sales support, unlike some companies that really don't want to know. "Since then we have bought a few bits and bobs, including the Ultramix automation which Steve installed. That was cool." If we want anything, we just send them an official order and they send the gear as soon as it is in. Accounts sort it out afterwards."

Visit Sega Europe's Website: <http://sega-europe.com>

## Rorke A/V Hard Drives

The Rorke Data series of A/V drives are a professional alternative to standard drives.

The range are built to order and use drives that are up to the demands placed on them by audio HD recording. Options include Extra I/Os including SCSI 2 & 3, Ultra, Fast/Wide, Split Bus, Fixed or removable drives and world wide support. Please call our sales team with the spec you need and we will be happy to give you a pro price.

PC multitrack HD recording and CDR Red Book mastering

# triple DAT

Following last month's demo sessions at the Labs, more and more of you agree that Creamw@re is a package that turns a P90 PC or above into a Hard Disk workstation, *that works*.

Not only that, it has impressive and powerful software for sound recording editing, mixing and mastering.

For a modest **£1097.88 ex vat** (£1290 incl VAT), this system is probably the only practical HD choice for PC users who want a minimum investment in additional hardware.

For a one-to-one demo, please call to arrange a time.

- 10-16 Tracks on P90, 16Mb
- 14-20 Tracks on P133, 16Mb
- 4 channel in/out (stereo analogue & digital)
- Digital I/O Optical/Coaxial (Optional AES/EBU)
- 18 bit, 128 times oversampling
- 256 virtual tracks

- Sync to MTC
- Full non-destructive editing
- 4 band parametric EQ
- Full dynamics processing
- Room simulator and delays
- CD mastering to Red Book standard
- Time-stretch and pitch control

## New Apple Power Macs

The latest generation of desktop machines from Apple offer more power and features for less money than ever before. Check these three machines out:

### Power 7300/166

7300/166MHz: 16Mb RAM, 2GB hard disk, 12 x internal CD drive, on-board Ethernet, keyboard and mouse. An ideal machine for Audiowerk8, Pro Tools Project 8 DTR (used for this flyer)

specification. This is for entry level machines such as the Sony DTC 600, DTC 600 and Tascam DA20. Music Lab also offers two further fixed-cost calibration for users with high-end machines. A intermediate level calibration for machines such as the Sony DTC1000 or Tascam DA30 is available for **£120 ex vat** (£141 incl vat), with fully pro units like Sony PCM7010 and Postex D20 time-code equipped DAT recorders costing **£200 ex vat** (£235 incl vat).

A full service is also available for *all* machines with prices available on request.

## Active monitors - more choice than ever

### Genelec monitors are

respected in the music recording and broadcast communities and rightfully so.

The 1029A brings bi-amplified systems to a new level of affordability. The package can include nearfield monitors, subwoofer, amplifiers and electronic crossovers in one integrated system.

1029 Call

### Mackie is not the name you

would normally think of for powered monitoring, but that is about to change with the HR824. With a 8.75 inch woofer, and a one inch alloy dome tweeter, these monitors must be heard. System frequency response is an impressive 39Hz to 22kHz and SPL 121dB.

HR824 £1063 ex vat £1249 incl vat

**D**ynaudio's **BM15A** is a logical progression from the very successful passive BM15 (very popular in our hire dept!). A 40Hz to 20kHz frequency response and an SPL of 119dB combined with internal amps delivering 150w LF and 80w HF is awesome. The HF driver is upgraded from the BM15 resulting in increased IIRF headroom. Call to arrange a demo.

BMA15A £1616 ex vat £1899 incl vat

## Neumann M149 tube offer

**T**he **Neumann M149** Tube, is a microphone which couples the same K49 capsule found in the U47 and M49 with a triode valve and a transformerless output. There are nine switchable polar patterns: omnidirectional, wide angle cardioid, cardioid, hypercardioid, figure-of-eight and intermediate steps.

A seven position slider switch selects a high pass filter in half octave steps. The frequency range is conservatively rated at 20Hz-20kHz, while S/No ratio CCIR 468-3 is quoted as 16dB-A in omni mode.

Music Lab has used its position as a major purchaser of Neumann microphones to obtain a unique offer. As a result, we have a very limited quantity of units available for £2382 ex vat (£2799 incl vat), as against the suggested price of £3233 ex vat (£3799 incl vat).

7300/166 £1699 ex vat

### Power 8600/200

8600/200MHz: 32Mb RAM, 2Gb AV hard disk, 12 x internal CD drive, L2 cache, internal Zip drive, 6 PCI slots, RAM capacity to 768Mb. Mid range machine for Pro Tools and general use.

8600/200 £2200 ex vat

### Power 9600/233

9600/233MHz: 32Mb RAM, 4Gb AV hard disk, 12 x CD drive, L2 cache, 4Mb VRAM, 4 drive bays, 6 PCI slots, RAM capacity to 768Mb. Top of the range and great for multiple Pro Tools systems.

9600/233 £2950 ex vat

### Apple PowerBook 3400c

Billed by MacUser as "the best portable ever", the PowerBook 3400c is actually a series of four dream machines with processor speeds ranging from 180MHz to 240MHz. That's the kind of power that will give a 9600 a good run for its money. Having kitted out a fair percentage of the rock 'n' roll industry with PowerBooks, Music Lab confidently predicts that the 3400s will rapidly become the machine for producers and musicians on the move. Here's a few reasons why. The "slower" machines come with a 1.3Gb hard drive and 16Mb RAM. The 200MHz machine has a 2GB HD and 32Mb RAM, while the 240MHz unit sports a 3Gb drive and 16Mb RAM, expandable to 32Mb. Three of the four machines have CD drives and the top model has a 12 x, rather than the 6 x speed fitted to the others. The 16-bit sound system includes four speakers with active crossover and enough clout to fill a medium sized room.

3400/180MHz: 16Mb RAM, 1.3Gb hard disk, CD, ENet

3400/180 £3100 ex vat

*Please remember, Music Lab is an authorised Apple Re-seller that supplies only genuine Apple computers. Machines bought from Music Lab benefit from a high level of pre-sales and after-sales support.*

## Digital 8 Bus Affordable Mackie Quality

**H**aving created one of the world's favourite analogue desks, Mackie has turned its attention to digital multitrack. The brand new Digital 8-Bus has 48 audio channels and is designed to be as easy to use as an analogue board. The system has high-level features such as 7.1/5.1 surround panning but is aimed price wise to appeal to project studios. The relatively minimal control surface is assignable in two directions but is highly intuitive in operation. The 24 fader strips use a bank switching system. Channels 1-24 are for track laying (12 are equipped with mic preamps). Channels 25-48 are the second bank and are for tape returns or extra line inputs.

Beyond this, there are three banks for automation, utility and bus functions. Almost every function is dynamically automated and the system can be used with an SVGA monitor. Functions such as eq, dynamics and DSP effects are addressed from a single Fat Channel, which is assigned to the channel in question. Eq bands mimic a typical desk but more extreme settings may be created at another level. Rotary controls are a LED indicated system called V-Pots. These enable the correct position to be shown for successive channels/functions. Machine control is also catered for and the desk has a jog/shuttle wheel for precise location. In Help mode, any button on the Digital 8-Bus brings up an explanation of its function on an integral screen. Software updates are possible from floppy but the desk also has a built in modem for *on-line* updates. Call for a demo or quote

Digi8 £6805 ex vat £7995 incl vat

## HUI and cry

**Mackie's newest mixer is actually HUI, a Human User Interface for Digidesign's Pro Tools 4. Providing a tactile, assignable work-surface for mixing and editing, HUI also addresses MIDI devices and will soon control Plug-Ins as well. Please call for details.**

"Everyone on the Music Lab sales team has a wealth of knowledge about audio to share. Perhaps more importantly, they are all good guys who make looking after our customers their number one priority." Paul Eastwood, managing director Music Lab.

# Mac-based workstation packages from Music Lab

When you buy a Power Mac Hard Disk system from Music Lab you get a professional package that works from day one, and is supported by trained engineers!

## Producer's power package

One for the professional on the move, this package brings all the power of a desk top system to an up-market lap-top

**Digidesign Pro Tools DAE Power Mix and Apple Power Book 3400C**

Digidesign's Pro Tools 4 software with 16 tracks of 16 bit recording, editing, mixing and Audiosuite FX processing. Includes system installation by an engineer.

- Apple Powerbook 3400C/180 16/1.3 CD (Total RAM 32 MB) • Digidesign ProTools 4 DAE Powermix • Kingston RAM16-DIMM 16Mb • Seagate Barracuda Ultra 2Gb ex HD • Flight case **£5,100 Ex VAT**

## Digidesign Hard Disk Systems

### Digidesign Project PT and Apple Power Mac 7300CD

Full eight channel I/O, coupled with Digidesign Pro Tools Project Core system. Supplements the Mac with dedicated Digital Signal Processing. 8 tracks of simultaneous recording editing and automated mixing.

- Apple Power Mac 7300CD/166 16/1.2 CD (Total RAM 24 MB) • Apple Mac 1710 multiscan display • Apple Mac keyboard • Digidesign PCI ProTools Project Core System • Digidesign 882 I/O PCI interface • Kingston RAM16-DIMM 16Mb • Seagate Barracuda Ultra 2Gb ex HD **£6,236 Ex VAT**

### Digidesign Pro Tools 4 Core System and Apple 7300/166 CD

The powerful 7300 now has a clock speed of 166Mhz, making it a superb choice for the delivery of real-time digital audio. Package price includes system installation by an engineer.

- Apple Power Mac 7300CD/166 16/1.2 CD (Total RAM 24 MB) • Apple Mac 1705 multiscan display • Apple Mac keyboard • Digidesign PCI ProTools 4 Core system • Digidesign 882 I/O PCI interface • Kingston RAM16-DIMM 16Mb • Seagate Barracuda Ultra 2Gb ex HD **£10,350 Ex VAT**

## Audiowerk8

- Apple Power Mac 7300 166Mz/16/1.2Gb, 12x CD, keyboard and 17" display • 16Mb Kingston DIMMS • Emagic Audiowerks8 PCI I/O 2in/8out with VMR software • Emagic Logic Audio V2.6 • Seagate Barracuda Ultra 2Gb External HD • MOTU Midi Express XT **£4,699 Ex VAT**

### Virtual Studio System

- Apple Power Mac 4400 160Mz/16/1.2Gb CD, keyboard and 15" display • 16Mb EDO Kingston DIMMS • 2nd level cache • Steinberg Cubase 3 VST • Seagate Hawk 1Gb External HD • Midi Interface **£2,395 Ex VAT**

**Twiddly Bits.... The First name in MIDI samples.**

We were the first company to provide MIDI performances from 'name' musicians using the corresponding MIDI controllers - Offering you a more flexible alternative to audio samples. 1000's of hours are spent sourcing, recording and editing performances from some of the worlds finest players from Rio to London & San Francisco.

And with programming tools? Again we are the worlds first: The first to provide the Vol 2 Gate Effects disk, the first to bring you GS/XG Filter templates with Vol 7. And with Vol 8 the first to bring you GS/XG Dual Drum Mode loops. Perhaps that's why we're the only MIDI Sample company to achieve two seperate Platinum awards in Future Music and a coveted 5 Star killer review in Keyboard US magazine.

We've some more firsts planned for this year but in the meanwhile here's something that maybe of interest - Our One World Song Contest, the winner of which will be able to experience in the world music scene in Japan, USA, Australia & Europe.

**Twiddly Bits...the ultimate MIDI accessory.**

Vol 1 - Gen Insts £19.95  
"If you only buy one MIDI File Disk Buy this" The Mix

Dolphin Music UK are EMI & MCPS registered

EUROPE'S WIDEST SELECTION OF NEW,  
SECONDHAND AND VINTAGE SYNTHESIZERS,  
SEQUENCERS, DRUM MACHINES,  
SAMPLERS AND RECORDING EQUIPMENT

OVER 10,000 ITEMS

OF SOUGHT AFTER SECONDHAND MUSICAL EQUIPMENT AVAILABLE

Whatever you're after, however elusive,  
if it exists we'll find it.

Our unique database lists the whereabouts of over  
10,000 items of sought after musical equipment.

Whether you're after a Moog Modular System, a  
mint condition TB303

or a lovely Stylophone

we can locate it for you.

A quote is given to you before

we source the equipment!

and if we end up paying less for it than

we expected to...

we'll lower the price accordingly!

Prices are worked out from the average of those  
listed in the secondhand classified ads.

So you don't pay for fashionable inflation.

All secondhand equipment is serviced by our qualified  
service department and  
guaranteed for 3 months!

We are the only company in Europe that can offer  
our customers this search facility.

#### Control Rooms: The Next Generation...

At last, you can have a control room where you hear the same mix everywhere, and can vary the equipment in it without compromising the accuracy of the monitoring.

The Early Sound Scattering room out-performs most LEDE and RFZ rooms like nothing you've ever heard before.

If you're serious about your new control room, you should be talking to

## National Sales and Marketing Manager

East-West is the #1 Soundware and Music Software company in the world, with distribution centres in the US, UK and Australasia and is looking for a qualified person to help build and manage its sales channels in the UK. Responsibilities include -

- Expanding East-West's direct sales.
- Expanding the shelf presence of East-West and East-West distributed products in Musical Instrument, Record, Book and Computer stores.
- Expanding East-West's media exposure.
- Installing and managing in-store demonstration equipment.
- Making forecasts, tracking sales, ensuring products are on store shelves, managing co-op programs, blowing away your quota and making East-West the #1 Soundware and Music Software company in the UK.

Applicant must have direct marketing and vendor software sales experience to the retail channel. Music software selling experience a plus. Must be enthusiastic, energetic, self-motivated and ready to challenge the status quo.

Email, mail or fax us a resume and cover letter stating you want the National Sales Manager Position and your salary requirements.

For more details contact: Zennor Ph 01273-736-733 Fax 01273-328-881- email zennor@pavilion.co.uk

**When less-than-satisfactory service from a music store begins to border on the distinctly dodgy, JUDY LEMON asks: how do they think they can get away with it?**

**H**aving decided to join the ranks of home-studio owners, I spent months researching different setups and getting quotes. One store (which advertises with this magazine) seemed to have an enticing package, so I visited them in mid-March with two friends. With the exception of two items, I was purchasing everything new, so we're not talking about a small sum of money here.

Problem number one: the two used items were a Roland D50 keyboard, of which I had the choice of two, and a set of monitors. The monitors were in excellent condition; of the keyboards, one was mint and the other was, let's say, well loved. I was told the price was the same for both keyboards, so naturally I chose the one that was in better condition. The prices quoted seemed fair, so I was happy — until I bought my April SOS. There were my used items advertised in black and white, but not at the prices I had paid! I immediately phoned the store and asked why they had charged me more than their quotes in a national magazine. The monitors were said to be "a misprint"; as for the D50, I was told that the cheaper price was for the unit that had been well used. As my friends remembered, this was not the case; but, as I had already paid for these items, the shop refused to do anything about it. What really disturbed me, though, was when one of the

people working there said: "Oh, we frequently put in fake prices to bring in the punters..."

Problem number two involved a Digitech Studio Vocalist. Again, the shop had this in their ad, at quite an attractive price for a new unit. This time, their in-store quote matched their ad — until I decided to order one, when the price suddenly went up. I argued until I was blue in the face, pointing out that with all the money I had spent in their shop they could at least stick to their original written quote. I ended up ordering one for £899, figuring that for the extra £20 I'd get something in kind or whatever. This is when the real nightmares began.

My friends and I had noticed the salesman making snide remarks about the distributor, which I thought was surprising. But the store told me that an order had been placed, so I waited. And waited. Five weeks after I'd paid for it, the computer side of my system arrived — without the Studio Vocalist. I was told that the distributor did not have them in stock, and could not foresee a delivery date in the near future. This sounded extremely odd to me, and when I started voicing my doubts, I was told that the store had cancelled their order with the supplier, but hey presto

— they'd found one in Glasgow! Two more weeks went by ("They're obviously waiting for the cheque to clear. You know how the Scots are..."). I'm not saying that I fell for all this, but they'd had my money for some time and I just wanted the damn unit. Lo and behold, it arrived from the Glasgow store — but wait, there's, uh, kind of a problem, they say. It's not new, it's ex-demo. Well, that was it. Even my ladylike tolerance evaporated. Still the store continued to lie, making it appear that the Scottish store had somehow pulled a fast one. But the worst part was that they actually thought that, having paid for a new unit and waited all this time, I would take an ex-demo — and pay the new price! They also refused to refund my money. As the level and unprintability of my language increased, the story altered again. They were so upset about what this sneaky Glaswegian store had done that they rang and shouted at them. Quaking in its boots, the store had offered to send a new one within the week. In the meantime, my lovely store generously offered to bring me over "the dud" (their words) until the new one arrived. Thank goodness I refused this: I'm convinced that had I accepted it I would never have seen another unit. I gave them a week to deliver the unit, otherwise I would be raising hell. In the meantime, I called the supplier and was told that they could not understand the situation, as they had units in stock and there were no delivery problems. I waited. D-day arrived and no-one called, so I did. By now I had managed to scare away the entire staff except the poor guitar technician — suddenly various people had errands at the bank or the post office. In the end I had to call in some muscle; I managed to get my money back, but I feel I was lucky.

The only explanation I can think of is that, due to bad credit with the supplier, the store could not place the order with them, and never did so. They tried to hold on to my money while they searched for a unit that would make them a profit, like the ex-demo one. They're still advertising these units in SOS as if they can get them new, as well as advertising the monitors that I bought at the cheaper price. And how many other stores are doing the same thing? It's false advertising and it shouldn't be allowed.

I had to do most of my dealings with this store by phone; perhaps if I had been able to visit them every day and scream until all the other customers left, the whole thing wouldn't have dragged on for so long. But what about more inexperienced buyers, who don't have the strength (or the alcohol tolerance) to fight?

And what did the store get out of this, in the end? My lost custom for the future, and that of my friends who have much larger studios than I do, and their friends. They've lost an inestimable amount of money trying to gain a few hundred extra out of me. How many other readers have had similar experiences? And can we do anything about this?

SOS

# Choosing a Gate and Compressor just got a whole lot easier.

## AND HERE'S WHY...

A quality built and sonically specified dual channel 1U unit which offers dual mono, or 'master-slave' stereo gating and compression for a measly £189 inc VAT\*. At this price you would expect corners to be cut, compromises to be made. Not a bit of it.

You get 2 stereo-linkable channels of soft knee compression featuring fully variable Threshold, Ratio and Gain controls plus two program dependent Attack and Release modes: slow for music and fast for solo instruments. There's also a side chain insert for frequency conscious compression.

The gates are no less impressive: 2 fully-featured gates with variable Threshold and Release controls, an ultra-fast Attack rate plus a side chain insert for frequency conscious gating.

Yes, choosing a gate and compressor just got a whole lot easier.

It's got to be the new LA Audio GCX2.

LA AUDIO GCX2

- Dual Mono or Stereo (Master-Slave) gating and compression
- Fully controllable, yet easy to use. Soft knee compression
- True RMS level detection and dual channel level sensing in stereo mode
- Side chain insert point for Frequency Conscious Gating or Compression
- Balanced inputs and outputs on both XLR (+4dBu) and TRS jacks (-10dBV)

# New standards

*Since we invented the Music Workstation with the legendary M1, Korg workstations are the standard foundation of home and professional studios the world over.*

Now, we bring you the new standards. Our philosophy with the N364 was simple – add more and more.

We expanded the PCM memory with classic and new samples, the N364 has a massive range of over 900 sounds and true 64 voice polyphony. Then we developed Real Time Pattern Play and Record, to get grooves happening straight away and a programmable full function arpeggiator.

The NS5R 64 voice Module packs a massive 12mb of PCM samples and more sound programs than anything else in its class.

NS5R RRP £549

Add to that a user friendly graphic display plus GM, GS and XG compatibility and you can begin to see why Sound On Sound magazine were moved to say that "the NS5R is a joy to operate".

**N Series – the Professional's choice**
