ANY SOURCE TO ANY FADER!

THE AUDIOARTS ENGINEERING D-16 IT LOOKS EXPENSIVE — BUT IT'S NOT!

THIS NEW RADIO CONSOLE from Audioarts combines the benefits of a ROUTER and an AUDIO CONSOLE into one COST-EFFECTIVE digital package, letting you route any input to any fader or to any monitor feed, with all sources clearly shown in bright LED dot matrix displays right above the faders and monitor level controls.

A COMPACT TABLETOP DESIGN, the D-16 has the features you need: both analog and digital PROGRAM and AUDITION stereo outputs, 2 MONO analog outputs, 14 input faders plus 2 caller faders, 4 mic preamps, control room and studio monitoring, built-in cue and headphone amps (with concealed headphone jack) — even four internally generated mix-minus outputs!

WITH 24-BIT A>D and D>A inputs and outputs and sample rate converters on every AES digital input, the D-16 will work with virtually any digital source gear you have. It can run your source machines too (up to eight of them) — all opto-isolated. Its DSP DIGITAL METERING simultaneously displays VU columns and peak hold fullscale digital so you can be assured of pristine performance. Its powerful caller tools generate mix-minuses automatically, and you can program any of its four MXM outputs to be pre or post fader.

And with Wheatstone's extensive digital background and reputation you can be assured that the D-16 is a great console!

Networked Audio from Harris? You Betcha!

Want to maximize your facility and studio capacity? Leverage your existing equipment to do more for your talent, station — and bottom line? You can with the power of VistaMax™ from Harris.

VistaMax is a digital audio management system that lets you network your audio studios together. With universal access to all of your resources simultaneously you increase productivity and quality while decreasing maintenance.

You can smoothly migrate from a dedicated analog studio to a digital networked infrastructure with this distributed approach — on your timeframe. Benefits include:

- Autonomous console operation, when needed
- Easily share resources to gain economies of scale
- Quickly reconfigure your facility when program or format changes occur
- Reduce installation time and cost for any reconfiguration

As a natural extension of our BMXdigital™ expertise, VistaMax is built on field-proven technologies such as familiar user interfaces without the complexity of a PC.

Empower your audio management with VistaMax.

Contact Harris today.

2004 Product Source

Indisputedly indispensable, too.

The collection of products in this year's Product Source offer real solutions to everyday needs. There is information on more than 200 innovative products in this supplement, making it an invaluable resource. Each listing offers a detailed description of the product or service, the company's contact information and most feature a photo of the equipment for your evaluation. There are products to fit various station sizes and budgets.

Many of the products featured in this year's Product Source debuted at NAB2004, including a review of the *Radio* magazine 2004 Pick Hit award recipients. Also, check out the new additions to the Product Source. Four pages in this issue have been dedicated to unique items that may be handy at the transmitter site, on a remote, in the field production kit or on your bookshelf. Some of these items are not the usual broadcast fare, so they may fill that special need that you may have.

The *Radio* magazine 2004 Product Source is a resource that you can refer to throughout the coming year.

Also, I welcome your feedback on this annual supplement. Perhaps you use a product that has filled a need like no other. Please e-mail your comments and suggestions to radio@primediabusiness.com.

GET IN ON THE ACTION... ON OR OFF SHORE.

Matrix Portable:

Delivering the sound of the gun going off to listeners around the world is as simple as pressing a button. The Comrex Matrix, equipped with our optional GSM Module, combines an integrated mobile phone and an advanced Comrex codec to deliver broadcast quality 7kHz audio over standard cellular connections (15kHz over POTS). The results? Your listeners hear the wind in the rigging – the sound of a half-a-boat-length victory with detail that's unprecedented.

Matrix Rack:

Sure all the action is in the field (or off shore...), but a great remote needs a great home base. And there's nothing better than the Matrix Rack. It's compatible via POTS and ISDN with ALL Comrex codecs as well as those from nearly everyone else. Perfect for receiving those GSM calls from the field. Make the Matrix Rack the center of communications for ALL your remotes.

Grab your audience by the ears and give them the full experience – not just a story.

Doing a remote? Put Comrex on the line.

COMREX

Digital audio splitter Aphex Systems

148: Designed to feed the same digital audio signal to multiple inputs, the 1/2 rack unit can split eight channels (four pairs) of digital audio into 32 channels (16 pair) through the use of 15-pin Dsub connectors. This product can be mounted in

a rack alone or in pairs with the Aphex Model 44-008SA Rack Kit. The splitter incorporates 20dB of saturated gain to square up the input signal and can be internally configured for 110Ω balanced or 75Ω unbalanced operation. Features of this splitter include one DB15 male input connector (four AES3 stereo inputs), four DB15 female output connectors (four AES3 stereo outputs on each), sample rates to 192kHz and an internal power supply.

818-767-2929; fax 818-767-2641; www.aphex.com; sales@aphex.com

Low-loss cables Belden

RF500 and RF600: These low-loss, 50Ω coaxial cables are lightweight and flexible, and can be used as antenna jumper cable assemblies and short antenna feeder runs in wireless communication systems such as wireless local loop, land mobile radio, PCS and cellular. They can also be deployed in in-building wireless applications such as internal communications systems and wireless LANs. The cables feature copper-clad aluminum conductors, foamed high density polyethylene insulation, an aluminum foil and tinned copper braid composite shield and a choice of a PE or a PVC jacket.

800-BELDEN1; fax 765-983-5294; www.belden.com; info@belden.com

Workstation Omnirax

Forté: The desk holds an 88-note keyboard or several computer keyboards, with 64 rack spaces for equipment. Eighteen of those spaces are in the two sloping rack bays on the top. The remaining rack spaces are in four bays below the desk, 10 each in the two slanted front rack bays and 13 each in the two inside

rear rack bays. A sliding monitor/mixer shelf allows the mixer/control surface on the front part of the shelf to slide forward over the main desk area. The sliding shelf can hold two 21" monitors. The front of the sliding shelf holds any of the smaller format digital or analog mixers, a control surface for DAWs or a 61-note keyboard. The optional computer keyboard shelf slides in and out from under the synthesizer shelf.

www.omnirax.com; info@omnirax.com

Power consumption meter Scientifics

Watts Up? Pro: Users can measure the power consumption of any 120Vac appliance with this meter. The unit fits into any standard 120Vac wall outlet. The sampling rate starts at one-second intervals and displays how much power an appliance is consuming. The unit records current watts, min/max watts, power factor, cumulative cost, average monthly cost and 12 other energy consumption parameters. It can store power profiles of multiple devices and has a non-volatile memory that requires no batteries. The data recorded can be downloaded to a PC. Using the included software, data can be graphed and charted or turned into

spreadsheets for further analysis. The meter measures 7"L x 4"W x 2"H and weighs 1.5lbs.

800-728-6999; fax 800-828-3299; www.scientificsonline.com; cons_order@edsci.com

Wireless systems Shure

ULX Wireless: Designed for live performance and systems integration applications, these frequency-agile models operate between 554MHz and 865MHz and offer as many as 1,440 selectable frequencies that are organized into pre-programmed groups. These groups enable a user to quickly set up and operate 20 compatible systems simultaneously. ULX Professional systems are able to scan all frequency groups to locate the one with the maximum number of compatible frequencies. Additional ULX Professional System features include: frequency and volume lockouts, advanced front panel controls, indicators for RF signal strength, furnished rack hardware, remote mountable halfwave antennas and an extruded metal chassis.

800-25-SHURE; fax 847-600-1212; www.shure.com; sales@shure.com

Subwoofers Tannoy

TS8 and TS10: These compact active subwoofers are designed for studio monitoring and playback of multi-channel recordings. Despite the high power and low frequency performance, both models are less than 1 cubic foot in size, including the coned-shaped spiked feet. The TS8 provides a 12.5 liter closed box design with a down-firing 200mm (8") drive unit driven by a 200W RMS amplifier. The TS10 features a larger 16.75 liter closed box design with a down-firing 250mm (10") drive unit driven by a 300W RMS amplifier. The low frequency output (-6dB) of the TS8 and TS10 operates down to 32Hz and 29Hz respectively.

Digital FM exciter Nautel

M50: This direct-to-channel exciter is designed for use with analog FM and IBOC signals. It uses advanced digital signal processing technology enabling direct conversion of the audio source to the low-level FM signal. The exciter accepts data from Nautel's NE IBOC generator to produce a hybrid or all-digital HD Radio signal. An adaptive pre-equalization process compensates for system non-linearities to ensure the HD Radio signal is transmitted within spectral limits, avoiding the need for supplementary filtering. The exciter is frequency agile and suitable for N+1 applications. It features an LCD graphic display, status flow diagram and 128-event log.

207-947-8200; fax 207-947-3693; www.nautel.com; info@nautel.com

CD player/MD recorder Sony Electronics

MXD-D40: The MXD-D40 is a combination CD player and Minidisc Recorder/player, designed for independent playback of either media as well as normal and high-speed digital dubbing of CDs to Minidisc. The device is designed for speed, flexibility and sonic performance and is well suited for music and radio production applications. The unit features MD long record/play using ATRAC3 compression and high-speed (4x) CD-to-MD dubbing for fast digital recording. The use of the optional Sony PCLK-MN 10 PC link kit makes the CD/MD combination PC-compatible.

800-686-SONY; fax 201-930-4752; www.sony.com/proaudio

Audio control surface Sierra Automated Systems

Rubicon: A stand-alone control surface, the Rubicon integrates into the SAS 32KD Digital Audio Network for its mixing, switching, level control and effects. Modular, customizable and fully programmable, this control surface is for a medium- or large-market facility.

Signal generator Broadcast Electronics

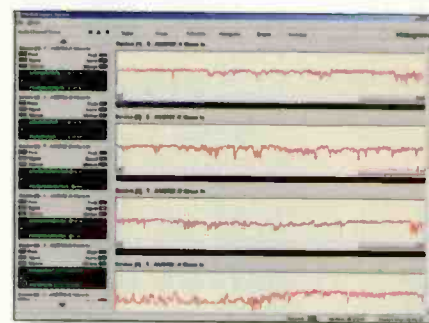

XPI 10: This HD Radio signal generator is installed at the studio, rather than the transmitter to reduce STL bandwidth and repurpose more of the existing equipment when implementing HD Radio. The generator allows the user to take advantage of the revenue-producing opportunities of HD Radio, such as advanced application services and secondary audio

service. It also speeds implementation of Tomorrow Radio. Product features include interface connections for main program audio, secondary audio, program-associated data for main and secondary channels, and advanced data application; a graphical touch screen interface; integrated Ethernet connectivity; integrated audio synchronization and automated bypass functions; and an integrated GPS receiver.

Digital logging device Mediatouch

Imedia Logger: Applications of this digital logger include time shifting and delayed broadcast, auto record without spots, 24/7 logging, mic skimmer and digital archiving. This unit can record as many as 12 audio sources simultaneously, and each workstation can record up to 12 separate stereo sources at the same time. Users can record four streams from each audio source using multiple compression formats and recording qualities. This system provides compression technology for MPEG 1 Layer 1, 2 and 3, PCM, Windows Media Audio and Real Audio.

888-665-0501; fax 204-783-5805
www.mediatouch.net; omt@omt.net

Audio file converter Acoustica

Audio Converter Pro: Besides offering a 32-bit audio engine, this converter also has the following features: converts freely between MP3, WMA, WAV and OGG; converts to and from higher sampling rates and bit depths up to 192kHz, 24 and 32 bit; converts songs directly off a CD by right-clicking on a CD track or CDA file; and automatically tags the new files via freeDB.

High-resolution sound cards Digigram

PCX HR series: The HR series of PCX sound cards features 24-bit/192kHz converters, more advanced functions and more processing power. The PCX882HR and PCX881HR multi-channel sound cards offer hardware sample rate converters on all inputs for simultaneous recording of digital signals

with different sampling frequencies, a 66MHz/64-bit PCI interface and a more powerful on-board DSP. Eight inputs and eight outputs are provided—digital I/Os in the PCX881HR and analog and digital I/Os in the PCX882HR. Maximum levels of the analog inputs and outputs are +24dBu.

Introducing NexGen101

Proven Prophet technology now sold bit by bit.

Run your radio station for \$495! You buy only what you need.
Add on features as your budget allows.

Software Packages

NexGen101 Core License \$495 *Buy Now*

Runs a single station in Automated or Live Assist modes. The core license is required on all NexGen101 workstations, and includes the ability to create and execute logs, basic audio element production, day of the week clock templates, and audio backup/load utilities. All other modules can be added to the core license to create multiple workstation configurations.

Live Control Package \$404 *Buy Now*

Useful for high energy morning shows. Create and play audio elements outside of the log for random access or auto-play, send artist/title information. Includes: Electronic Copy module, Cart Deck module, Button Bar module and RDS Export module.

Satellite Package \$404 *Buy Now*

Enables your station to run in satellite mode and automatically record satellite feeds, with local spot insertion and time and temperature announcements in your staff's voices. Includes: Satellite Mode module, Time & Temperature Announce module, DRR Automated Capture module, and GPI module.

Scheduler Package \$404 *Buy Now*

Schedule your station using either internal or external scheduling systems. Includes: MusicGen101 integrated music scheduler module, Traffic and Music Load module, Multi-User Access module for setting unique user permissions, and the Audio Archive module for enhanced audio management.

VoiceTRAC Package \$404 *Buy Now*

Record breaks, intros and outros for when you can't be live, but still want to sound like it. Includes: Basic VoiceTRAC module, Enhanced Production Interfaces module for third-party audio editors, CD Extractor/Audio Format Converter, and the Graphic VoiceTRAC Upgrade module for graphically based voice tracking and quick segue reviewing.

Buy Individual NexGen101 Software Modules for \$101

- Archive Module *Buy Now*
- Basic VoiceTRAC Module *Buy Now*
- Button Bar Module *Buy Now*
- Cart Deck Module *Buy Now*
- CDX/AFC Module *Buy Now*

- Traffic and Music Load Module *Buy Now*
- Transfer Module *Buy Now*

Proven Prophet Systems technology. Built by Prophet, backed by Prophet, designed for you.

2004 Product Source

POTS to ISDN codec Telos Systems

Zephyr Xport: This codec uses a standard analog phone line to connect with any Zephyr Xstream ISDN codec. Spectral Band Replication coding delivers reproduction of voice and music. A broadcaster can use a standard analog phone line in the field to connect with the Zephyr Xstream ISDN codec in the studio. Custom DSP-based modem extracts bit-rate from real-world lines and prevents audio loss from retraining. With its built-in mixer, this product is useful for grab-and-go remotes. The DSP mixer section has mic and line inputs with selectable dynamics processing by Omnia, plus independent receive audio, headphone and monitor mix outputs. Operation is simple because it offers friendly menus for non-technical users. A built-in Web server and Ethernet port lets the user interact with this codec using a Web browser on a laptop.

RF safety analyzer Narda Safety Test Solutions

Selective Radiation Meter SRM-3000: A hand-held selective measuring device for safety analysis of RF and microwave electromagnetic fields, the unit measures the field exposure that is produced by individual telecom services and assesses the results in accordance with the applicable standards. The analyzer consists of a basic unit and a measurement probe, and evaluates the results on site. The basic unit contains a spectrum analyzer for the frequency

range 100kHz to 3GHz. It can be operated using a triaxial probe from Narda or in combination with measurement antennas. The triaxial probe allows isotropic measurements in the range from 80MHz to 3GHz, covering FM radio up to the W-CDMA and UMTS services. The unit and probe are battery-operated and portable. The unit can also be used as a conventional RF spectrum analyzer for general field strength measurements.

Extended-time profanity delay Prophet Systems

Content Check: The profanity delay equipment allows users to record, listen and edit programs while they are happening, tailoring the programs to the audience, market and timeslot. With more than 60 minutes of user configurable delay, the equipment allows the user to edit seven to 20 seconds of content and to remove the whole joke, bit or segment from the show. This product is configurable for uncompressed or compressed operation. It works with most automation systems, and non-destructive editing enables the user to keep the show for audit purposes.

FLEXIBLE AUDIO LINKS FROM MUSICAM USA for STL, Point to Point, Point to Multipoint

For mission-critical audio transmission, nothing beats TEAM™ and SuperLink™. Both give you these advantages:

- Connect directly to T1 or E1 transmission lines
- Support multiple channels of program audio, data and contact closures
- Linear PCM or encoded audio with multiple algorithms
- Streaming audio
- Automatic backup via ISDN

A variety of hot-swappable Function Modules lets you design a system that meets your needs today, and then expand it for tomorrow.

When you have audio to send, TEAM and SuperLink are the rugged, solid and flexible way to go. Call us, or your MUSICAM USA Distributor, with your application requirements.

SuperLink rear panel configured for bi-directional T1 program transmission with automatic iSDN backup.

MUSICAM USA

MUSICAM USA is the d/b/a of Corporate Computer Systems, Inc.

TDM plug-in Crane Song

Phoenix: A TDM plug-in for Pro Tools, this technology emulates the unique properties of a magnetic tape machine. The plug-in process not only incorporates the nonlinear saturation characteristics created by magnetic the tape itself, but also includes the interrelation of an analog tape recorder's record/reproduce electronics and equalization curves. Five TDM plug-ins emulate tape characteristics, each one incorporating a color change button allowing three choices to modify the process. A level control determines the amount of the process integrated into the audio signal.

www.cranesong.com
staff@cranesong.com

Spectrum analyzer Rohde & Schwarz

FSH3: This spectrum analyzer provides signal measurements from 100kHz to 3GHz. The available measurement functions are suited for mobile radio base stations, on-site fault location in RF cables, IBOC measurements or lab applications. The analyzer provides four hours of continuous operation on battery power. Functions are accessed through functions keys and a menu system. As many as 100 traces and setups can be stored in the unit. The unit includes software to store, review and compare data.

301-459-8800; fax 301-459-2810; www.rsd.de

Graphical allocation tool Dataworld

FM Explorer: A graphical allocation tool, this tool displays permissible areas to locate and provides real-time updated city grade contours. Users can uncheck the box

for a particular station in the data grid, and when the map redraws, the conflict will not be mapped. Change the class or channel in the control panel, and that change is reflected on the map and in the data grid. Move the transmitter by clicking on the map with "move study facility" selected in the control panel, and the coordinates change and the data in the grid is based on the new location.

Broadcast automation software OMT Technologies

Imediatouch 2.2: OMT's flagship Imediatouch digital audio and broadcast system has an enhanced function with version 2.2. The noted enhancement is called Non-Stop Broadcasting, which provides an automatic failover to a separate in-studio slave computer in the case of a main system failure. The system also allows up to four computers to simultaneously connect to one on-air broadcast system to support a seamless on-air talent team approach. The system can also be configured to use a backup audio database in the event that the main database becomes unavailable. Imeditouch supports Dolby AC-3, MP2, MP3 and WAV file formats and includes an Apt-x audio conversion engine.

Commander G3

World's 1st Modular Stereo Audio Codec

Introducing the new Tieline Commander G3

At Tieline, we've taken a fresh approach to audio codec design. Now you can customize your audio codec to suit your exact needs for remote broadcasts and STLs. You only pay for what you need and we're the first to be compatible with most major ISDN and POTS codecs in your rack.

Think of the new Commander G3 as a codec foundation with two expansion slots which accept your choice of POTS, ISDN and GSM modules. You simply buy what you need.

For example, if you need a mono 15kHz POTS codec, simply buy the Commander G3 with a POTS module for one low price. Need 15kHz Stereo or dual mono over POTS? Just add another POTS module.

If you're looking for a mono/stereo ISDN codec without POTS, you can buy a Commander G3 with an ISDN module only. It comes with G.711, G.722, and Mpeg Layer 2. Tieline's "Music" algorithm also delivers an astounding 15kHz stereo over a single ISDN B channel! You can always add a POTS or wireless GSM module later if you need.

Need a stereo ISDN STL with automatic failover to 15kHz mono POTS? Buy the Commander G3 with POTS and ISDN modules plus Tieline's new Freedom Failover software kit.

Plug in the GSM module and deliver up to 7.5 kHz over GSM networks and up to 15 kHz over HSCSD wireless networks.

We've even created digital matrix router software which enables you to cue audio off air, create a local audio intercom, and talkback to the studio all without interrupting your broadcast.

The new Tieline Commander G3 is simply the world's most powerful, flexible and customizable codec. It's even compatible with your Comrex** Vector, Matrix, Blue and Musicam Liberty POTS codecs.

Every Tieline codec comes with a two year warranty plus the support of an experienced engineering team with more than 25 years in the broadcast industry right here in Indianapolis. That's why hundreds of stations, major radio groups and networks across America use Tieline to deliver audio every single day.

Hurry, free demonstration Commander G3's are limited. Call your favorite broadcast dealer or call us at 800-950-0750 to book your free demo.

Studio Telephone Access Center

Comrex

STAC6 and STAC12: These Studio Telephone Access Centers (STAC) for listener lines, talk shows and call-in segments incorporate two digital telephone hybrids handling as many as four callers. It is offered in six and 12 phone line versions with the ability to upgrade in the field. The accompanying control surface supports unique producer and screener configurations. IP-based call screening and control is embedded, enabling operation from virtually anywhere. Other unique features include auto-attendant and support of as many as four control surfaces.

800-237-1776; fax 978-784-1717; www.comrex.com; info@comrex.com

Audio processor

Omnia Audio

Omnia-6EX: This processor offers a parallel processing structure that routes audio from the mixer section

to separate output stages for conventional FM and DAB. The FM section receives distortion-controlled final limiting with pre-emphasis, and an upper-frequency response of 15kHz. The DAB section has a multi-band Look-Ahead final limiter with user-selectable frequency response up to the full audio bandwidth of 20kHz. The processor offers sampling rates of 48kHz and higher.

216-241-3343; fax 216-241-4103; www.omniaaudio.com; info@omniaaudio.com

Automation software Broadcast Software International

Simian V1.6: The upgrade of this software includes improved deckfade macros to increase user control, improved index handling and playback on MP3 files, added control over the Async deck, increased Webcasting functions and serial strings, and a reset cart command to allow the software to go back to the first item in a cart, even if all the items have not been played. Another feature is Dynamic Time Compression, which allows broadcasters to condense their broadcast without any pitch shifting. Smart Carts ensure that out-of-date spots will not be played (and artists can be set to a specific rotation even within randomized carts), and the software can also check a log as of a certain date so that broadcasters can check their schedule days in advance.

www.bsiusa.com; info@bsiusa.com

FM, digital transmitter Nautel

V10: The Virtuoso is a 10kW FM/HD Radio transmitter employing a linear, adjustable bias, broadband design. It is capable of 3.2kW digital, 7.7kW hybrid or 11kW analog operation. Because it is frequency agile, it can be used for N+1

configurations in conjunction with the Maestro digital exciter. RF power modules and associated switch mode power supply modules are hot-plug for ease of service. A provision for duplication of exciters and

IPA provides maximum redundancy. The unit features a graphic user interface, a diagnostic flow diagram and an event log. Compact and lightweight construction allows installation at sites with space and floor loading constraints.

RF station monitor Coaxial Dynamics

81095: This microprocessor-controlled, rack-mounted Watchman monitor/alarm measures and displays forward and reflected power simultaneously in 50Ω transmission systems. Using LCD displays, it also provides direct readings of VSWR. The monitor is compatible with the company's series of 7/8" to 6 1/8" line sections and will accept elements from less than 5W to 100kW full scale from 2MHz to 2.3GHz. Installation consists of the Watchman, a dual socket line section and two elements for monitoring forward and reflected power. The monitor is supplied with two 25' dc cable assemblies for connection to the line section and a 6' ac power cord. An audible single tone alarm will indicate a system or transmitter malfunction. Relay contacts are provided for remote alarm and reset switching.

www.coaxial.com; sales@coaxial.com

Sound cards Audioscience

ASI5000: There are initially three products in this series. The ASI5044 provides four stereo inputs and outputs in balanced analog and AES/EBU digital formats. A digital-only

version, the ASI5041, has four AES/EBU inputs and outputs and the ASI5042

has balanced analog I/O only. With the ASI5042 and ASI5044, the analog interface is balanced and uses 24-bit oversampling converters that support sample rates from 32 to 192kHz. Low noise analog circuitry delivers more than 100dB of dynamic range with THD+N better than 0.002 percent. The transformer coupled AES/EBU interface on the ASI5041 and ASI5044 can operate at rates from 32kHz to 192kHz. The card's sample clock can be synchronized to any of the four AES/EBU inputs. A 200MHz on-board DSP provides 12 play streams and eight record streams coupled to a mixer that allows any play stream or physical input to be mixed to any physical output or routed to any record stream.

Media streaming Warp Radio

Audio streaming services: WarpRadio.com is a provider of streaming audio services for the radio industry. Its team of broadcasters and computer programmers, network administrators, system administrators and designers, is making the convergence of Internet and radio happen through the collective knowledge of both industries. The company's business model is a common sense view of business—you only pay for what you use. All radio stations who have a desire to stream can economically achieve a position on the Internet with minimal setup.

Network-attached storage server

Promicro Systems

Prostore Backup Appliance: Promicro Systems has partnered with Avail Solutions to introduce a backup appliance that provides data storage, backup and recovery capabilities. The server offers 360GB of storage capacity, high-speed throughput with Intel processors, 10/100 Ethernet ports, three PCI slots and as many as six IDE drive bays in a compact form factor. The integrated eight-cartridge automated tape library transfers up to 640GB of compressed data at 6MB/s. A backup and recovery feature set is provided by Avail's Integrity data protection software, including dynamic resource allocation, GUI-based monitoring, remote administration and managed replication and protected data migration.

Station monitoring

Belar

HD Radio Monitor:

This 2RU monitor decodes and analyzes AM and FM/BOC signals. The frequency agile front end can accept signals off the air or through a high-level input for use at the transmitter. The graphic display shows the measured results of the signal and will include basic spectrum analysis. Level metering is displayed as horizontal bar graphs in percents with a user-selectable dBFS level used as the reference. Capability to display SIS data, quality of service information, MPS data and bit-error data is standard. An RS-232 serial and RJ-45 Ethernet connection is included.

High-visibility warning light

CBT Systems

Dual Lens On-Air Light: The retro style, high-polish aluminum light mounts on the wall or ceiling and offers visibility from three approach directions. The unit's Plexiglas windows, which are available in blue or red, can be illuminated by a single 120V bulb or two 12V bulbs. Standard legends include on-

air and recording. Custom lens colors, legends, color powder-coated finishes and a 220V option are also available. All units are UL approved.

Rotary phase converter

Kay Industries

Phasemaster Type TR: Type TR Rotary Phase Converter installs in minutes and operates any three-phase transmitter from a one-phase supply. The signature feature of the new Phasemaster Type TR is a load range controller that enables the converter to maintain a balanced voltage within three percent to all types of broadcast transmitters regardless of power requirements. The Type TR converter also features built-in disconnect switch, fuses, terminal blocks and surge protection that enable the installer to hook up the converter in minutes. It is designed for a simple "two wires in, three wires out" installation.

Introducing Nautel's Newest Cutting Edge FM Technology – Digital Adaptive Pre-Correction

V10 with M50

Worried about not meeting the HD Radio™ mask requirements? After all, you wouldn't want to interfere with someone else's signal. Nautel's new M50 digital FM exciter samples the all-digital or hybrid HD Radio™ output of the V10, 10 kW FM transmitter and dynamically applies digital adaptive pre-correction. This means no expensive external bandpass filter and no additional tuning. Even better, because the M50 continuously monitors and adjusts the RF output, your performance is optimized regardless of environmental changes and your signal will always be within spectral limits.

To learn more about how we can perfect your HD Radio™ signal, visit our website www.nautel.com.

When the work takes you outside the studio

Beyond These Walls

Over-the-shoulder carrier Klein Tools

ToolTote: An alternative to a tool belt, this tool case can be carried with a shoulder strap. It is constructed of rugged, double-layered, 600x300 denier polyester to resist wear and tear. The oval-shaped tool bucket measures 15.5"l x 7.5" w x 10" h. A contoured, padded, slip-resistant shoulder strap provides hands-free mobility for the user. Two-inch wide padded carry handles with comfortable leather wraps are tested for 900 pounds. Five interior pockets (two large collapsible end pockets and three medium-sized pockets) and a large interior compartment accommodate a wide assortment of hand tools, power tools and supplies, while seven exterior multi-tool pockets accommodate a variety of hand tools and a mobile phone. The ToolTote's durable, molded bottom has drain holes to prevent water retention. The ToolTote is water-resistant to avoid mold and mildew build-up. Zinc-coated rivets provide corrosion resistance and provide reinforcement at the seams.

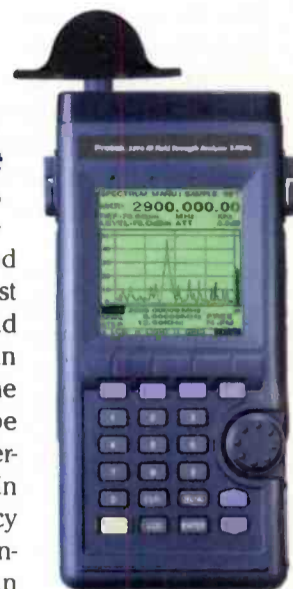

800-553-4676; fax 847-745-4612; www.kleintools.com

Signal strength analyzer Protek Test & Measurement

3290: This hand-held RF signal strength analyzer features 2.9GHz bandwidth, 117dB/m max sensitivity and a scan rate of 125 channels/sec. The extended frequency range and increased scan rate of this model make it a natural for a host of narrow band, wide band, FM, AM and single-sideband signal measurements. As many as 160 preset channels can be loaded into the memory for rapid scans and displays in the field. All functions are menu selectable and all setups can be stored in memory. Other features include: an RS-232 interface, a 50Ω input impedance, audio output with built-in speaker, selectable squelch levels and a 2.9GHz frequency counter. Display modes are spectrum, bargraph, and frequency on a light green LCD and LED backlighting. The unit can interface with a PC or laptop to upload and store measurements and screen displays for future analysis.

Instant-heat solderer Cold Heat

Soldering Tool: This soldering tool heats and cools almost instantaneously: it reaches 800°F in less than one second. The tool uses four replaceable alkaline AA batteries and can solder more than 700 joints per battery pack. The product is portable and comes with a carry case. The tip is hot only when it is being used and includes a tip heat indicator. A replacement tip is included.

Power logging Electro Industries

DMMS350: This multifunction power meter provides access to all voltage, current and power values with the LED display and through a TCP/IP Ethernet LAN. This meter is useful for applications requiring real time metering data streaming to data collection systems via IP. It provides true RMS voltage, current and power measurements and can display bi-directional energy and minimum/maximum electrical parameters. The Ethernet connection is supplied via a 10baseTRJ45 connector. It will display harmonics as a percentage of THD to the 31st order. The unit can be mounted in an electrical box. The device can be useful for locations with problem power feeds, or to monitor main feeds or generator output.

USB pocketknife Victorinox

Switching amplifier measurement filter Audio Precision

This dual channel multi-pole LRC passive filter provides the necessary attenuation of out-of-band signals and reduces the steepness of the fast switching edges. Features of this filter are as follows: frequency response is ±0.05dB, 10Hz to 20kHz; insertion loss is typically 0.05dB; high frequency rejection is greater than 50dB from 250kHz to 20MHz; and harmonic distortion is less than -110dB.

sales@audioprecision.com

LED light Enlux Lighting

LED Flood light: This LED-based drop-in replacement for a 45W or 65W incandescent or halogen flood light uses a fin design to maintain the light at a cool operating temperature. The optimized design results in a light source that is cool enough to safely touch with a bare hand, reducing the risk of a fire hazard. The light uses 22W of power, provides a light output of 500 lumens, has a lifespan of 50,000 hours and is 3" in diameter.

The tools of the trade.

Web-based remote control Broadcast Tools

WRC-4: Providing remote control, this system offers a built-in Web-server with non-volatile memory; 10/100baseT Ethernet port; four channels of 10-bit analog inputs with a large monitoring range; TTL compatible digital inputs; SPST relays; open collector outputs; front panel status indicators and a single front panel temperature sensor. The technology is supplied with removable screw terminals and loaded with a generic Web page that may be edited by the end user. The remote control works with dynamic or static IP addresses. Multiple units may be used with a user provided Ethernet hub.

AC controller Sonifex

RB-LC3: The RB-LC3 is a triple output switching unit for controlling external ac mains indicators for on-air warning lights. Each output can be individually controlled by one of three remote inputs by a telephony input or a combination of two inputs. The type of control is set using the 12-way DIP switch (four switches for each output, allowing 16 settings). All connections are on the rear panel. The three IEC outputs are controlled by zero-crosspoint drivers. When an output is activated, the ac voltage level at that output will be equal to the mains input voltage used to power the unit. External control of the switched mains outputs is via the 15-way D-type plug connector. The telephone line input and handset output are via two RJ11-4 type connectors.

AT LAST, A BOARD GEEKS AND JOCKS CAN BOTH DROOL OVER.

Fact is, SAS packs so much sophistication and capability into the depths of the new **Rubicon™** control surface that even the most

SAS Connected Digital Network™
 Rubicon Control Surface
 32KD Digital Audio Router
 RIOLink™ Remote I/O

intensive major market programmer or board operator will swoon. Yet Rubicon is so intuitive, so comfortable, so easy to use, the weekend intern is sure to sound like a pro.

Here's why:
 Frequently used controls are always right at the operator's fingertips.

And for the power-user, the SAS multi-function "dynamic control matrix" provides quick access to deeper capabilities. In other words, Rubicon has a bucket-load of features for the simplest or most complex of broadcast-related tasks.

And should you think form to precede function, you'll find Rubicon's clean, easy-to-understand interface wrapped up within a custom-configured, drop-dead gorgeous frame.

Best of all, Rubicon is engineered by the brand synonymous with the finest in digital audio routing and network design. When it comes to quality and reliability, our name is **rubicon™** all over it.

Come see for yourself Rubicon's brains and beauty, power and performance. It'll be love at first sight.

Digital STL Broadcast Electronics

Big Pipe:
This STL offers bidirectional capabilities up to 45Mb/s, analog and digital

audio, HD Radio data, Ethernet, serial data and telephony can be interchanged via a wireless or wireline path. Key product features include audio inputs for AES or analog L and R; hot-pluggable modules for easy installation, upgrades or repair without service interruption; 45Mb/s bidirectional point-to-point radios for wireless applications and network access units available in DS3, OC-3C or OC-12C. Various modules and accessories are available to accommodate audio, video and data through a variety of interconnections.

Remote antenna system monitoring RFS Broadcast

Antenna system monitor: Broadcasters can remotely monitor network performance via modem or the Internet with this system. The monitoring system comprises a user-friendly touchscreen connected to a programmable logic controller (PLC) interfaced with a transducer and analog/digital converter. This local set-up provides an active mimic panel, as well as interactive graphical displays depicting parameters such as forward and reflected power, voltage standing wave ratio (VSWR) and temperature. It also allows local control of motorized coaxial switches.

Audio routing frame Harris

Vista Max: This hub enables all console resources and audio assets to be shared throughout the network. Audio is connected to one console in the networked system, but becomes available throughout the entire facility. Modular, and scalable, the console connects BMX-digital or other consoles to its hub via a fiber or CAT-5 connections with an architecture that ensures the shortest physical path between sources and destinations. The platform simplifies network audio management, reducing the need for stand-alone routers, distribution systems and long multi-pair bundles.

Digital/analog silence sensor Danagger Audio Works

Plan B Plus: Building on the capabilities of the original Plan B Silence Eliminator, this silence sensor incorporates an additional level of audio failure detection and backup. An extra set of passively switched analog and digital audio inputs allows automatic connection to an alternate live program feed, such as an STL, dial-up codec or off-air receiver. If both incoming program feeds are down, an internal CD/MP3/DVD drive provides continuous replacement audio while a built-in voice remote control alerts station personnel. Delay range is four seconds to 10 minutes, and users can program a unique system ID number into each unit for multi-site installations. Like the Plan B, the Plan B Plus can also act as a stand-alone remote control/listen line or interface to external remote control systems.

Audio connectors and adapters

Whirlwind

Punchdown XLRs: A new series of punch-down, solderless XLRs, these connectors/adapters speed assembly during installation. Using technology from the telecommunications industry, the connectors offer gold-plated contacts with metal shells and use a common 110-type punchdown tool with Krone tip. These adapters provide faster and easier changes to circuits, and the punchdown contacts are rated for up to 200 insertions and withdrawals.

Fiber optic multiplexer

Multidyne

DAM-2000: The DAM-2000 20-channel, 24-bit audio fiber optic transport will support 20 audio and three simplex data channels. The multiplexer supports 24-bit stereo audio flat from 20Hz to 20kHz with a S/N greater than 90dB and THD less than 0.05 percent. The optical budget exceeds 30dBm. The transmitter and receiver modules plug into a 10-channel frame with redundant power supplies or are available as stand-alone units. The system supports 110/220Vac and optionally for 48Vdc. The system is available with 1,300nm wavelength LEDs for multimode and 1,300nm and 1,550nm wavelength lasers for single-mode applications.

Digital asset management system

Msoft

Music Cue 3.0: A cross-platform hard drive delivery system created for production music library users, this system can search, sort, demo and track anything from the library. The server provides access to the music tracks from any computer via local file server. Users can save any number of music projects, add remarks and classifications of how the music was used—it can create an automatic cue sheet of the productions.

PC mixer

Henry Engineering

Studiosdrive: Studiosdrive makes a PC with a soundcard into a studio-in-a-box. This stereo audio mixer fits in the drive bay area of any PC. It features six inputs (one mic and five line), and provides on-air and soundcard outputs. Sources can be mixed for a live broadcast or recorded and edited on the PC. There is also a built-in telephone coupler, a mix-minus output and provision for remote mic control. The monitor system features automatic muting when the mic is on, plus control of on-air warning lights.

Upgradeable!

Buy a Radio Systems' console with the confidence that you can always upgrade to the next level of performance.

Only Radio Systems protects your console investment by providing a program of significant styling and technical improvements for your still-dependable, but aging Radio Systems boards.

Upgrade from your older RS-Series console to a beautiful, fuller-featured Millennium console today, or buy a new Millennium board and upgrade to digital performance whenever you're ready.

Upgrade kits are inexpensive and available for field or factory installation.

Digital STL transmitter/receiver

consolidated operations. The digital STL consists of a transmitter and receiver pair that accommodates three AES/EBU inputs or six discrete audio channels. The transmitter provides a 2W output and delivers them uncompressed in a configurable digital method to the receiver. Sample rates of 32kHz, 44.1kHz and 48kHz are supported. The RF system is frequency agile and set by software in the transmitter and receiver. The transmitter and receiver can be remotely controlled over an Internet or LAN connection. The 460 transmitter features six channels uncompressed, analog I/Os and 3.125kHz step size. The receiver offers a threshold sensitivity of 84dBm for 256 QAM, analog output levels at -10 to 8dBm and analog audio outputs at 600Ω balanced.

High-definition mapping engine

Softwright

Terrain Analysis Package software v5.0: The centerpiece of TAP 5.0 is the mapping software called HD Mapper. Maps are generated with layers, which can be turned on or off. Layers can be any shapefiles, which conform to the ESRI international standards. Coverage studies now become one of the many layers that can be plotted on the maps. Users have control over each layer including color, line widths, fill patterns, symbols and values plotted. Shapefiles can be plotted as graphics displaying roads, streets, civil divisions and may also contain detailed demographics that are geographically related, such as population and census details.

Dual-channel processor

Lexicon

MPX 550: With 24-bit dual-channel processing and balanced analog and S/PDIF digital I/O, this unit offers 255 presets with true stereo reverb programs. Dual programs combine two effects plus digital compression in four routing configurations. Four dedicated front-panel knobs permit adjustment of 20 effect parameters. A program knob is used to scroll

through single, dual and user programs, jump through program banks and also activates the cue program mode, which enables one program to load while another is prepared for loading. The processor also features a compressor with I/O volume matching, along with other dynamics processing such as limiting, expansion and tape saturation effects.

Radius-xp ... studio furniture

the most POPULAR furniture lines ever...

new for 2003

- ... all plastic surface & trim design
- ... modular for flexibility
- ... highest quality materials
- ... precision crafted
- ... professional features
- ... many options available

This new studio furniture line is engineered for studio decors where non-wood trims are a design goal. Available in a wide variety of colors, this furniture will complement any size market application. The modular design enables the furniture to be ordered in almost any configuration that can be imagined.

Automated profanity elimination

Enco Systems

Guardien:

This system is an automated profanity elimination and spoken word logging system for radio broadcasters. Guardian is a 2RU device with stereo balanced analog and AES/EBU inputs and outputs and features contact closures for control of external devices or alert mechanisms. The unit delays and monitors the air signal, looking for objectionable words, and when it finds them, mutes or bleeps them automatically. Then the system logs the event, along with an audio clip, for future reference.

Auto-backup FM transmitter system Crown Broadcast

RF Sentinel 200: RF Sentinel is an auto-backup FM transmitter system that offers full or semi-redundancy protection. In the event of a failure in the primary transmission stream, the system automatically switches to a backup transmitter. The transmitter controller senses faults based on the present levels. It also fully manages the antenna feeds between primary and secondary transmitters. The system can incorporate two low-power transmitters, one low-power and one medium-power units, or two medium-power units. The RF Sentinel 2000 automatically switches from a 2kW primary output to the 500W output of the company's FM500 exciter should a fault occur in the primary broadcast stream.

Audio switching Broadcast Tools

DAS 8.4: This unit provides digital audio switching of any one of eight AES inputs to be assigned to any of the four AES outputs. No input mixing is permitted. The DAS 8.4 may be controlled via front panel switches, contact closures, 5V TTL/CMOS logic or the multi-drop RS-232 serial port. The front panel is equipped with input and output selection push buttons, output assignment LEDs and a headphone jack with level control. Additional features include a 96kHz/24-bit D/A converter with analog balanced stereo output and a 16 x 16 GPIO port. Installation is simplified with removable screw terminals.

Radio Systems

The routing switcher gets a new twist.

(About five twists per inch, actually.)

Everybody needs to share audio. Sometimes just a few signals — sometimes a few hundred. Across the hall, between floors, now and then across campus. Routing switchers are a convenient way to manage and share your audio, but will your GM really let you buy a router that costs more than his dream car? Unlikely.

If you need a routing switcher but aren't made of money, consider Axia, the Ethernet-based audio network. Yes, Ethernet. Axia is a *true network*. Place our audio adapter nodes next to your sources and destinations, then connect using standard Ethernet switches and Cat-6. Imagine the simplicity and power of Ethernet connecting any studio device to any other, any room to any other, any building to any other... you get the idea.

Routers are OK... but a network is so much more modern. With Axia, your ins and outs are next to the audio, where they belong. No frame, no cards, no sweat.

Put an Axia Microphone Node next to your mics and send preamplified audio anywhere you need it, over Ethernet — with no line loss or signal degradation.

Scott Studios

Axia is already working with some great companies. Like Enco Systems, Scott Studios, Radio Systems, Balsys Technology Group, and of course Telos and Omnia. Check AxiaAudio.com/partners/ to find out who's next.

Scalable, flexible, reliable... pick any three.

An expensive proprietary router isn't practical for smaller facilities. In fact, it doesn't scale all that well for larger ones. Here's where an expandable network really shines.

Connect eight Axia 8x8 Audio Nodes using Cat-6 cable and an Ethernet switch, and you've got a 64x64 routing switcher. And you can easily add more I/O whenever and wherever you need it. Build a 128x128 system... or 1024x1024... use a Gigabit fiber backbone and the sky's the limit.

Put your preamps where your mics are.

Most mainframe routers have no mic inputs, so you need to buy preamps. With Axia you get ultra-low-noise preamps with Phantom power. Put a node in each studio, right next to the mics, to keep mic cables nice and tight, then send multiple mic channels to the network on a single Cat-6 cable. And did we mention that each Mic Node has eight stereo line outputs for headphones? Nice bonus.

With a little help from our friends.

A networked audio system doesn't just replace a traditional router — it *improves* upon it. Already, companies in our industry are realizing the advantages of tightly integrated systems, and are making new products that reap those benefits. Working with our partners, Axia Audio is bringing new thinking and ideas to audio distribution, machine control, Program Associated Data (PAD), and even wiring convenience.

Are you still using PC sound cards?

Even the best sound cards are compromised by PC noise, inconvenient output connectors, poor headroom, and other gremlins. Instead, load the Axia IP-Audio Driver for Windows® on your workstations and connect *directly* to the Axia audio network using their Ethernet ports. Not only will your PC productions sound fantastic, you'll eliminate sound cards and the hardware they usually feed (like router or console input modules). Just think of all the cash you'll save.

Put your snake on a diet.

Nobody loves cable snakes. Besides soldering a jillion connectors, just try finding the pair you want when there's a change to make. Axia Audio Nodes come in AES/EBU and balanced stereo analog flavors. Put a batch of Nodes on each end of a Cat-6 run, and BAM! a bi-directional multi-channel snake. Use media converters and a fiber link for extra-long runs between studios — or between buildings.

Would you like some control with that?

There are plenty of ways to control your Axia network. For instance, you'll find built-in webservers on all Axia equipment for easy configuration via browser. PathfinderPC® software for Windows gives you central control of every audio path in your plant. Router Selector nodes allow quick local source selection, and intelligent studio control surfaces let talent easily access and mix any source in your networked facility.

There's a better way to get audio out of your PC. No more consumer grade 'A' connectors — with Axia your digital audio stays clean and pristine.

An Axia digital audio snake can carry hundreds of channels of digital audio on one skinny CAT-6 cable. We know you're not going to miss soldering all that multi-pair...

Control freaks of the world, rejoice: intelligent Axia mixing surfaces give talent complete control of their working environment. Reconfigure studios instantly and assign often-used sources just where they're most useful.

"This sounds expensive." Just the opposite, really. Axia saves money by eliminating distribution amps, line selectors, sound cards, patch bays, multi-pair cables, and tons of discrete wiring — not to mention the installation and maintenance time you'll recover. And those are just side benefits: our hardware is about half the cost of those big mainframe routers. That's right... *half*. Once you experience the benefits of networked audio, you will never want to go back. AxiaAudio.com for details.

Expecting a little more from your AM processing?

Omnia-5EX for AM delivers.

The new Omnia-5EX HD+AM has enhanced processing for standard AM, and a second limiter section and digital output for HD Radio. Both limiters and outputs are included as standard.

For those who don't need HD Radio capability, there's Omnia-3AM, with a four band limiter, wideband AGC and our famous high-performance, non-aliasing final limiter for sweet, clear, natural audio that keeps listeners hooked.

Many people are saying that HD Radio will benefit AM stations most, because the fidelity improvement will be so dramatic. Probably so. But you'll need a processor that gives you maximum quality on a low-bitrate coded channel. You need a processor designed by people who understand both processing and audio coding - and nobody knows these audio arts better than Telos / Omnia.

The new Omnia-5EX HD+AM is the only processor that accommodates **both your analog and digital channels** in a single unit that easily integrates with your HD encoder and transmitter.

Processing for the HD Radio side is smooth and clean, capably handling AM's programming variety - and really showing off the digital channel to listeners first sampling the new medium.

And you get a **potent upgrade for your analog AM.**

Consider: Omnia AM processing is already on many legendary 50kw stations. Understandably, most of these want to keep their advantage a secret. But if you imagine the major AM signals - the real flamethrowers that sound great - you may very well be hearing an Omnia. CEs at these stations tell us, "Phone calls are clearer than before. And the bottom end is phenomenal, so the promos really punch." "Amazingly clear - even when we're in the 5 kHz analog mode for HD Radio compatibility."

You should expect more from your AM processing. More clarity, more presence, more power, more flexibility. Omnia-5EX HD+AM delivers.

Omnia

Useful items to simplify remotes

LED flashlight Ledtronics

FlashLED FLT-5001: Press the switch and 1,800-foot candles of white light emit from the three 1W Luxeon LEDs. Each LED features an onboard collimator that focuses the light into a tight beam for an intensity of 75 lumens each. The fully integrated flashlight head optimizes light color, intensity and dispersion. The LED lamps operate for more than 100,000 hours (10 years). This energy-efficient flashlight operates for nearly 17 days on three D-cell batteries. It features an anodized aluminum housing and a crosshatched rubber grip. A removable 57" shoulder strap is included.

POTS protector Konexx

Modem Minder: This device prevents damage to modems when plugged into high-current digital phone lines on a PBX. If the line conditions are not safe, the Modem Minder will not allow the modem to connect to the unsafe line. The device also protects the modem from power surges. It automatically configures the line for proper polarity. Measuring 1.3"W x 0.95"H x 2.75"L, the device weighs 1 ounce. It is powered by the phone line.

Portable radio Bosch Power Tools

Power Box: Bosch claims that its weather-proof Power Box radio is durable enough for a construction site. The radio boasts a steel and rubber frame that protects the ruggedized shell, which houses four ground-fault circuit-interrupter-protected outlets for other ac devices. The outlets cut power if water leaks in. There is also a slot on the back to charge the batteries for cordless power tools. When away from an outlet, the radio can run off those same batteries. The radio also includes a mini-plug input for a line input and a 12Vdc outlet to recharge a cell phone.

877-BOSCH-99; www.boschtools.com

Digital signal & test set Ward-Beck

Bit Buddy/Bit Spitter: The ABB-1 Audio Bit Buddy is a convenient way to monitor digital and analog audio signals. Digital and analog program audio can be monitored by the headphone output while the left and right levels are displayed on LED bargraph meters.

Critical signal parameters such as sampling frequency, emphasis, professional consumer format and data errors are displayed when monitoring AES/EBU or S/PDIF signals. Digital input monitors sampling frequencies from 30kHz to 50kHz automatically. The ABS-1 Audio Bit Spitter is a companion to the ABB-1. This portable, battery-powered unit generates digital and stereo analog audio test signals that may be injected into the signal path when testing device performance or signal path continuity. The ABS-1 generates an AES/EBU digital audio signal, 1kHz or 400Hz, sampling rates of 48kHz, 44.1kHz or 32kHz. The unit may also be synchronized to an external digital reference signal. Digital signal levels of -20, -12 and 0dBFS are front panel selectable.

Rotating rack system Middle Atlantic Products

WR series: This series consists of a detachable rack frame that is housed in its own protective host enclosure. Installers can roll the rack out and rotate it 60 degrees for easy access to rear equipment connections. Off-site integration and testing of A/V equipment in the detachable rack frame reduces labor and simplifies the installation. The roll out, rotating design of the series saves a minimum of six square feet of space

per bay. Ample laser knockouts on the side of the rack allow ganging of multiple racks and cable pass-through between each. Slots in the upper rack frame accommodate Velcro ties and the rack frame features pre-punched rack rail brackets for built-in cable management.

BCM 104 High Resolution Broadcast Microphone

Think Of It As A Stealth Fighter For Your Voice

Introducing the BCM 104 Broadcast Mic from Neumann

Neumann has been doing a lot of listening lately. We've been listening to the radio, and what we've heard is that the world really does need a better broadcast mic. A much better one. Introducing the first Neumann mic built expressly for broadcast applications. Our new BCM 104 is a condenser mic that can handle any talent that's thrown at it, and make it shine. And best of all, it does it at a price that's "broadcaster friendly."

Gain the clear advantage - grab the new Neumann BCM 104, and discover what a difference Neumann can make for your voice.

Stereo codec/mixer Tieline America

I-mix G3: Left and right audio channels can be phase locked over two telephone lines to deliver 15kHz stereo programming with this codec. It offers the provision for dual 15kHz mono transmission from a single POTS codec, enabling the use of one 15kHz mono channel for program audio and the other 15kHz channel for a range of communications including production/engineering talkback, telephone coupler for live on-air callers and simultaneous 7kHz voice and 9.6kb/s control data. The design incorporates an expansion slot allowing broadcasters to select from a range of new hardware modules to suit individual remote applications. The modules include GSM to landline wireless, stereo/mono ISDN, stereo or dual-mono POTS plus new IFB and telephone talkback caller facilities.

The modules include GSM to landline wireless, stereo/mono ISDN, stereo or dual-mono POTS plus new IFB and telephone talkback caller facilities.

Audio leveler Ward-Beck

Alfa: This audio leveler for audiophiles maintains a target level at the ingest of play-out point of the program chain. As a card-based system, it offers a method of controlling the level of multiple digital audio signals. The system offers as many as eight AES channels of control in a 1RU frame and 20 channels of control in a 2RU frame. Control can be preset for automatic level adjustment of predetermined levels or dynamic adjustment via a physical control panel. Unlike a compressor/expander, this audio leveler responds slowly to minimize the potential to change the dynamics of the signal. It acts to adjust the long-term average level of the signal.

Powerful Automation from BSI

Series 110
\$9,999

Free system upgrades available now!

Purchase a system from BSI with the confidence that you're buying years of research into what makes an automation and hard-disk play out system reliable, powerful and versatile. Dell Computers with 3-year on-site warranty, professional AudioScience multi-output sound cards and BSI software make a great combination.

Our team of broadcast professionals installs and configures your system so that everything is ready to run out of the box. We include telephone training to help you get started, and the Series 110 comes with a full year of standard telephone support and software upgrades. For added peace of mind, software mirroring synchronizes your machines, so that changes made on one computer are reflected on the other.

BSI systems are used in stations across the US and around the world.

Thousands of users have discovered how easy and versatile BSI software really is. Test and try before you buy.

Bigger, Bolder, Brighter!

THIRD-GENERATION "DAVID" PROCESSING...
SMOOTH AND EXCEPTIONALLY COMPETITIVE!

Improved AGC, 3-band Spectral Loading™ processing, and our proprietary PIPP™ limiter... new features we've merged with the 'elegant simplicity' that characterizes the "DAVID" FM-airchain legacy. The result is performance that rivals processing systems costing several times the DAVID-III's modest price. Your listeners will hear music with dynamics and 'punch,' and live-announce that's natural and non-abrasive.

The DAVID-III is easy to set up and easy to use. It employs quasi-digital PWM processing circuitry, digital synthesis of the FM baseband signal, and it never requires routine calibration. Component parts are common and available worldwide.

Ask your preferred distributor for a demonstration of the DAVID-III at your station.

for full technical details

Indecency Processor

No, this product doesn't remove naughty words, but if you do run a profanity delay or simply have a buildup of digital latency, talent can't listen to the processed air signal. Instead, their feed is probably direct from the console. Compared to the air sound, this can seem weak, dull and lifeless.

Our Model 255 Triband Spectral Loading™ processor has zero delay and can deliver a dense, tight, and punchy "broadcast" sound to headphones and control room speakers... a sound you can't achieve with a general-purpose "utility compressor." Other 255 applications include the program feed to telephone hybrids and IFB processing.

Give talent and other house feeds a sound that's closer to your air sound. See your preferred equipment supplier for a demo of the 255 in your monitor channel.

Power tube CPI Elmac

3CX1500D7: The air-cooled 3CX1500D7 ceramic metal triode operates at a filament voltage of 5V, and delivers the same performance in many applications as a pair of 3-500Z tubes. It has a high-Mu and an anode dissipation rating of 1500W.

Online panel design Horizon Music

Net CAD: Based on Stardraw.net technology, Net CAD is delivered by a Web server and works from within a browser so there is nothing to download or install. It is comprised of a drag-and-drop interface linked to a complete library of all of Horizon Music's and Rapco's panel products. The user selects the panel he wants, drags on the connectors that are needed and sets engraving, finishes and artwork. Once the design is complete, a separate pop-up report delivers a price quote. This system can support complex pricing models, e.g. setup charges, product charges, variable charges and pricing by user profile.

Coaxial cable Dielectric

Flexline Foam: Type FLF is normally used for primary feeders, while Type FLS is typically used for jumper assemblies. Both cable styles feature copper inner conductors, highly closed-cell foamed polyethylene insulator, an oxygen-free copper corrugated outer conductor and polyethylene jackets. The foam cable is available in a full range of sizes including: Type FLF-1/2", 7/8", 1 1/4" and 1 5/8" and Type FLS-1/4", 3/8", 1/2" and 7/8". Connectors and accessories are available.

Frequency-agile transmitter

R.V.R.
TEX500-LCD:
 The stereo encoder offers as much as 500W of RF power that is output adjustable. It covers the FM

band from 87.5MHz to 108MHz and its digital interface can diagnose and control all the parameters displayed. Other features include mono/MPX, two SCA/RDS inputs, 230Vac input, N output connector and all in 3RU. Available options include multi-voltage 90 to 250Vac power input, power factor corrector, fully integrated telemetry and SMS alarms and a built-in GSM modem.

Weather receiver Dayton Industrial

AF630: A NOAA weather receiver housed in a 1RU chassis, this receiver offers a front panel that has a built-in monitor speaker with volume control. There are two 10-segment LED indicators, one for the modulation level indication and the other to indicate received signal level. The receiver has tone detector circuitry for the alarm circuit with front panel indicator, test and reset controls. Input power is derived from a 12Vdc wall-mount converter. The receiver is phase lock loop controlled with the frequency of operation selected using an internal three-position dip switch. A continuous receiver line audio output is provided. The speaker output audio is controlled automatically by a tone detector circuit that monitors the receiver audio for the presence of the 1,050Hz attention tone signal.

FM broadcast analyzer Broadcast Warehouse

Microgen Systems TS9000: Besides providing broadcast measurements, the USB port of this analyzer allows for on-site and mobile monitoring. The unit samples the multiplex signal at 240kHz at 12-bit precision, with all measurements and calculations performed by Windows software. Modulation power is calculated with 32-bit floating-point precision. The band covered is 87.5MHz to 108MHz in 10kHz steps. The unit includes a base-band FFT spectrum analyzer covering 10Hz to 100kHz. With a dynamic range of 90dB and a resolution of 10Hz, the unit can analyze the multiplex signal or be used as a stand-alone audio analyzer using the external BNC input.

DA converter Radio Systems

D-A+A-D: This converter is a broadcast quality device optimized to provide flexibility along with quality conversion of analog and digital signals. The DA/AD is actually two stereo converters, which can provide simultaneous conversion of analog to digital and digital to analog signals. Features include: 24-bit resolution, variable sample rates, internal and external clocking, sample rate conversion, auto sample rate sensing and XLR and RJ-45 connectors. Its input conversion is 20kΩ and its output impedance is 50Ω.

OPTIMOD-FM 8300

new from the worldwide leader in broadcast audio processing

ADVANCED FM AUDIO PROCESSING MADE AFFORDABLE

The OPTIMOD-FM 8300 uses technology from Orban's flagship 8400 to achieve competitive performance that's unexpected in a mid-priced FM processor. Quality sound is what the 8300 is all about - a sound that attracts audiences by providing a polished, outstandingly professional presentation regardless of format or source material. With the 8300, your signature sound is just a preset away.

An easy one-knob Less/More adjustment allows you to customize any factory preset. Exceptional versatility allows you to adjust the processor's audio texture to brand your sound, knowing that the resulting signature sound will remain consistent, cut-to-cut and source-to-source. Branding builds businesses and no other process has the consistency to brand your sound like an Orban OPTIMOD.

Acoustic treatment **Acoustics First**

1014 Acoustikit: This kit contains 24 CuttingWedge 2" Classic 1'x1', six CuttingWedge 2" Classic 2'x2', two Bermuda Triangle Traps 2'x1', and two Art Diffusor - Model F 2'x2'. Also included with the package are installation instructions and room layouts. The designs, created by a professional acoustician, illustrate placement of materials for different listening positions. This kit provides all of the basic elements necessary to treat a room with dimensions up to 10 feet by 14 feet. The kit includes enough acoustical treatment for desktop music production or a small mixing room.

Ethernet audio interface **Axia Audio**

AES/EBU Node: The AES/EBU Node provides eight stereo AES3 inputs and eight stereo AES3 outputs in a 1RU device. It includes its own power supply. The Livewire-enabled Ethernet port connects the AES/EBU Node to an Ethernet media network. A built-in Web server enables remote configuration and control via a standard Web browser. The interface also contains a dot-matrix front-panel display. When used with an Analog Audio Node, the AES/EBU Node can be used as an A-to-D/D-to-A converters. By connecting four AES/EBU Nodes to an Ethernet switch, a 32x32 stereo digital routing switcher is created.

Coverage map service **CMBE**

Realcoverage: This tool offers rapid e-mail delivery of letter-sized coverage maps and RF planning studies for any frequency from 540kHz to 100GHz including AM, FM and TV stations that show

the real coverage of a facility. The service was created for websites, engineering studies and presentations. Coverage maps are carefully crafted using military-grade software and the latest computer methodology. The service can provide coverage maps for existing or proposed facilities anywhere in the world.

Master clock **ESE**

ES-911/CDMA: The ES-911/CDMA is a master clock and time code generator. Using

the signal transmitted from the Code Division Multiple Access cellular mobile telecommunications network, the ES-911/CDMA provides reliable, economical and legally traceable time. The unit displays six digits of time as received via the internal CDMA receiver. Simultaneously, the ES-911/CDMA generates several types of time code - IRIG-B, IRIG-E, ESE, RS232C and a 1PPS signal. These outputs allow the ES-911/CDMA to synchronize and interface with equipment such as CAD/ANI/ALI controllers, voice recorders and radio consoles that meet NENA standards. The ES-911/CDMA can also synchronize computers and other digital/analog clock systems.

310-322-2136; fax 310-322-8127; www.es-web.com; ESE@ese-web.com

Content delivery system **Pristine Systems**

CDS32 Live: The system includes a TTI I/O card for connection to remote buttons or console and can connect to a remote button or a console and fire off spot sets like a cart machine. The system reads logs generated by all traffic software and spot sets are easy to view and edit. Other features include peer-to-peer utilities for easy file sharing, responsive peak and hold digital VU meters and includes CD Trax, the company's custom CD Ripper.

Looking for a Digital Audio Logger? Why not try the Industry

STANDARD

iMediaLogger

Radio's #1 Selling Digital Logger!

Industry Standards - OMT has been setting them for over 35 years. Our iMediaLogger Digital Logger, and our iMediaTouch Broadcast Automation, are proof of this.

Introduced in 2000, iMediaLogger set the bar for all other Digital Loggers. Used in all of the top ten US markets with more features than any other competitor, iMediaLogger has easily become the most popular Digital Logger in Radio.

With non-proprietary hardware, special Corporate Rates and the compatibility with the new ASI Tuner Card, there's no reason to look to any other software.

RADIO ONE

"When we installed the iMediaLogger, we showed our PD what it could do for him. He responded by saying 'This is my newest favorite toy.' The ability to instantly listen to our stations or the competing stations 24 hours a day and preparing airchecks has greatly helped our Production and Sales Departments."

Don Stevenson - Chief Engineer
Radio One Dallas - Dallas, TX

iMediaLogger features:

- This multi purpose tool can simultaneously perform 24/7 logging, Mic Skimming, Competition Monitoring and Back Ground Recording
- On one record input, create four recordings (24/7 log, Mic Skim, Best of show and an internet stream). For example: The 8 Channel iMediaLogger = 8x4 for a total of 32 recordings!
- Station personnel can then access any of these recordings remotely via LAN/WAN with its built-in Web browser interface.

The Original. The Standard. The Innovator.

Universal telephone interface

JK Audio

Compact: This pack provides audio connections to cell phones, PBX phone systems and plain analog phone lines. Plug the unit into the 2.5mm headset jack of a wireless cell phone for use with cell phones. The phone will recognize the Compack as a headset, which will disable the mic and speaker in the phone. For PBX systems, unplug the handset from any analog or digital PBX phone and plug the cord into the device. With analog phones, plug the interface into an RJ-11 jack, go off-hook and dial, or answer an incoming call. The system also functions as a simple telecom interface for a belt-pack intercom system. This allows users to connect the three-pin XLR to a belt-pack intercom group for a full duplex, always-on connection to any telephone network.

Rack-mount mixer

Alesis

Multimix 12R: This 12-channel mixer occupies 3RU and offers eight high-gain mic/line inputs with phantom power, two stereo balanced 1/4" line inputs and two aux sends, stereo aux return, 8 1/4" inserts and two-track stereo RCA in and out. The mixer provides separate 1/4" balanced main and monitor outs and front-panel headphone out. Pan control, peak indicator and a 60mm fader on each channel are also features. Other specifications include a frequency response of 20Hz to 50kHz ±0.5dB; a dynamic range of 108dB; distortion less than 0.005 percent; and a maximum gain of 70dB with 24dB headroom. It is powered by 120Vac. Its dimensions are 5.25" H x 19" W x 4.25" D and it weighs 8lbs.

800-5-ALESIS; fax 310-255-3401; www.alesis.com

Telephone remote control

Conex Electro Systems

DT90: This audio switcher is controlled by DTMF tones over a standard telephone line. It features four stereo channel inputs and one stereo channel output. To control the switcher, call the number the unit is connected to, enter an optional access code, and press the number one followed by a channel number from one to four. There are also four relays and an internal microphone that can be controlled. The relays operate independently of the switcher. They can be programmed to operate momentarily or latching. The built-in mic allows the user to call the unit and listen for sounds where the DT90 is located. All connections are made via plug-in terminal strips. The unit is rack-mountable.

Ethernet signal converters

Cyber Research

ETS series: Converters in the ETS series come with one Ethernet port and one to eight serial ports. Various ETS models support RS-232, RS-422/485 or RS-232/422/485 protocols at data rates from 230 to 460kb/s. Models for RS-485 support full and half duplexing. All ETS models use a 16954 UART that provides FIFO buffers of 128 bytes. All are compatible with Windows 98/2000/XP and come with monitoring

LEDs that indicate Ethernet activity, power status and serial-port activity. Most ETS module cases are 8.6" L x 6.0" W x 2.2" H.

203-483-8815; fax 203-483-9024; www.cyberresearch.com

Modular audio console

Autogram

Pacemaker II Model PM228: This model features a modern styling and color with wood end trim, an exclusive bimodular concept, all DC control, and screw-type plug-in connectors. Uses similar switches and the same Penny and Giles pots as the original Pacemaker. It features up to 60 stereo inputs. The modular design allows it to be added to when expansion is needed. Modules are easy to install and change after installation.

Powered mixer

Behringer

PMH3000: A compact and lightweight powered mixer, this unit incorporates Cool Audio, an amplification technology that delivers power and sonic performance at nearly half the depth and weight of conventional powered mixers. The table-top PMH3000 offers I/O options and features studio-grade Invisible Mic Preamps (IMP) on all or most mono channels. The powered mixer's 24-bit stereo FX processor with 99 Virtualizer presets features reverb, delay, chorus and flanger. The mixer also offers three-band channel EQs, a stereo seven-band graphic EQ for frequency correction of monitor and main outputs and switchable pad and clip LEDs on all mono channels. A standby switch mutes all input channels but does not interrupt the tape inputs.

WHAT WILL YOU SAY?

- When people see the **MusicMaster for Windows** music scheduling system for themselves, we hear a lot of... "Wow"... "You're kidding me"... or "No way".
- When we tell them they can buy it with no lease, we get a lot of... "That's impossible"... "How can you make any money"... "Get the \$#@! out".
- We'd love to get your reaction! Call us to schedule an on-line demo, or an appointment at the NAB Radio Show in San Diego 1-800-326-2609.

LED sign interface Sine Systems

MBC-1: Replacing the basic signaling lights with a customized message on a Beta-Brite or other Adaptive Micro Systems LED message boards, each MBC-1 can control several displays. The unit monitors as many as 15 control room devices and can display a unique message for each one. Any message that can be displayed on the message sign can be triggered by the MBC-1. Several messages are preprogrammed and can be changed. Inputs are individually programmed for a momentary or latched display. Latched messages are cleared with a common reset input.

www.sinesystems.com; info@sinesys.com

Digital broadcast monitor Dovetail Sciences

DBM-300: All setup and local operation of this monitor is performed using the LCD display with an integrated touch screen. The unit is tuned to the desired center frequency and displays the spectrum at the selected frequency span. Audio demodulation of the center frequency is also provided. The detected audio can also be saved in digital format. Spectral and audio captures may be programmed at user-defined start, stop and interval times. Data is stored in a large internal memory, providing for long periods of unattended operation. The unit also features the ability to display captured data.

Rack screws Middle Atlantic Products

Guardian series: Available in quantities of 100, these rack screws feature a square post that requires a

specialized bit, only available to dealers and integrators from Middle Atlantic Products. At 3/4-inch long with 10-32 threads and a black oxide finish, the screws feature a tapered self-guiding pilot point. Also featured is a factory-installed nylon washer that permits installers and integrators to focus more time on the overall project, eliminating tedious, time-consuming tasks.

Large diaphragm mic Neumann

TLM 127: A multi-pattern large diaphragm microphone, this mic features low self noise and high sound pressure level transmission. The dual

diaphragm capsule is acoustically well balanced and offers multiple polarity from the microphone, switchable pad (-14dB) and a high pass-filter. Cardioid and omni-switchable patterns are available on microphone, with a full range of five patterns available via optional remote control and power supply using standard XLR cables. The mic is available in satin nickel or matte black.

Maximize your FM Station!

New! Success Starts with **rfInvestigator V2.5**
The software that works as hard as you do.

rfInvestigator V2.5 is our *most flexible* program yet.

Display Audemat-Aztec Navigator 100 & Navigator 007 field surveys.
Export propagation jobs for display in other mapping programs.
Import contour information from other programs for your use.
One set of TOPO! Maps is included with the program.

Display and Printing Improvements

- Set colors and line weights for easier to read maps
- Invert colors easily for faxing
- Create your own map labels
- Variable job scan range
- Display ESRI Shape Files

"DA Design Tool" Improvements

- Completely redesigned to work faster
- Set your own antenna design limits
- New booster designer

PL-SERVER

With this advanced module you can create path-loss files for propagation analysis in **rfInvestigator**.

DB-BUILDER is a "behind-the-scenes" utility program that downloads data from the FCC website and creates databases for our various products. **Never buy** another database!

Analog STL system Armstrong Transmitter

X Link STL system: Replacing the FML10 system, this transmitter and receiver features microprocessor control that evolves the FML10 to a user-friendly menu driven system. Frequency, power output, signal strength and all metered parameters are available on the front panel LCD display and via remote control. The system's receiver is more sensitive making it useful for long STL paths. This system interfaces easily with Armstrong's two and four channel digital converters to allow a station to add digital audio to the analog platform. The transmitter and receiver operate on 24Vdc, 110Vac or 220Vac.

Digital series console Audioarts Engineering

D-4000: This D-series console features a new look with a stainless steel meter bridge and wrist rest, composite fused finish end caps and new work surface graphics. Other features include a large phone-in capacity (as many as four callers), easy installation and accessories such as remote switches, router control modules and multi-line phone panels. The console offers a hot-swap design, four stereo mix busses, six pointer-style true VU meters and 24-bit A/D conversion on analog inputs.

Time shifter 25-Seven

AudioTime Manager. ATM allows users to delay the start of live programs and shorten their duration, in real-time, to accommodate the unexpected or create additional availabilities on an on-going basis. Its time compression technology is clean so that users can conservatively add about three minutes per hour to a schedule. Depending on the program source, users can more than double that and still maintain acceptable broadcast spoken language quality. The scheduler does not remove important content, change pitch, damage inflection or create artifacts.

888-257-2578; www.25-seven.com; info@25-seven.com

Music scheduling software A-Ware Software

Musicmaster for Windows: Musicmaster for Windows features a user-defined database that can be customized to meet a user's exact needs for fields of information. Each installation becomes unique for its own application. Infinitely scaleable rules allow the system to think more like a music programmer to find the best possible song. The system integrates with virtually all automation and traffic systems. The program is offered on a buy-out basis, with no long-term lease.

Audio tester Terrasonde

Studio Toolbox: Featuring 36 audio functions and a portable, lightweight chassis, this test equipment assists the engineer throughout the recording process. Pre-production functions like the Room Reflection Analyzer analyze room acoustics and speaker array phasing, Clic Trak+ Generator, and Virtual Pitch Pipe for tuning voices save time and ensure that room, equipment and clients are ready to go. Production features include the Mix Down tool that combines an SPL meter with 1/3 octave RTA for fast and accurate mixing, MIDI helper allows a user to display MIDI data on a MIDI cable in several forms, split MIDI events between two output ports and test MIDI cables and time code tools for testing, troubleshooting and fixing time code problems.

ISDN codec frame Harris

Intralink ISDN: This ISDN monitor can control as many as six basic-rate ISDN lines in a 3RU shelf. It handles any combination of program audio, voice and data using standard Intraplex channel modules. Five shelves can be linked for a maximum capacity of 30 BRI, and it is compatible with most industry codecs. The unit delivers MPEG program audio up to 128kb/s and delivers LAN data at 128kb/s. It is Telex and Clearcom voice and data compatible for remote intercom use and is field-configurable via a Windows-based user interface.

Solid-state FM transmitters DRS Broadcast Technology

Continental 815D5 and 815HD5: The new line of FM solid-state transmitters, beginning with the 815D5 and the 815HD5, is a 5kW solid state FM line with an RF combining and splitting system designed and tested to withstand as much as three times its operating RF requirements. This transmitter line wields a combiner system that ensures that the most RF possible gets to the output in the event of single or multiple amplifier module failure. The 815 series includes 24.5" (12 rack units) of user available 19" wide rack space and built-in ancillary equipment power outlets. This area is located in a non-interlocked area and accessible from the front or rear.

800-733-5011; fax 214-381-3250; www.contelec.com; sales@contelec.com

FBX-1020 Plus and FBX-2020 Plus: These dual feedback exterminators offer 20-bit digital conversion and 12 patented FBX filters per channel. The feedback control algorithm identifies feedback and places narrow filters on the ringing tone. Each filter is custom-made at the moment of the feedback, and is placed just deep enough to remove the ringing tone in 3dB steps. It is able to distinguish feedback from program material. These units offer more gain before feedback, increased clarity and intelligibility, more wireless mic mobility and adaptive automatic feedback control.

Environmental sensor MGE UPS Systems

SNMP/Web cards: These SNMP/Web cards include an optional environmental sensor along with instant e-mail and pager notification of UPS status. The environmental sensor provides remote supervision and monitoring of temperature and humidity close to UPSs that are located in server racks, computer and battery rooms and internetworking environments. Monitoring, status indicators and alarms are viewable via a Web interface and via network management systems. User-definable out-of-bounds events will trigger an orderly shutdown of the secured equipment via the UPS and send alerts to specified e-mail addresses, pagers and PDAs. The sensor's software monitoring interface graphically displays current temperature and humidity values, user configuration controls and thresholds. The new sensor also features two external contacts that can interface with door and fire alarms, gen-set start-up or other user-defined systems.

Audio analyzer Neutrik Test Instruments

Minilyzer ML1: Part of the Ministruments line, the Minilyzer is compatible with the Minirator hand-held audio tone generator. This palm-size test instrument continuously measures audio levels as RMS or peak levels, absolute or relative to a definable reference with selectable units. The accurate frequency measurement, with high resolution of 100ppm gives additional functions and acts as the base for distortion measurement. It features a microphone input for polarity tests and a headphone jack for monitoring of the input signal for aural diagnostics. It also features a set of audio weighting filters that can be used in all measurement functions.

Digital audio codec Musicam USA

Netstar: This codec sends and receives real-time audio, contact closures and ancillary data in its self-contained 2RU chassis. Stereo analog and AES/EBU inputs and outputs are standard. This product can send and receive bi-directional audio via IP, ISDN and all types of dedicated data circuits. It also contains coding algorithms including G.711, G.722, MPEG 1 and 2 Layer II, and MPEG 1 and 2 Layer III for compatibility with older codecs. It provides MPEG 2 AAC and MPEG 4 AAC low-delay encoding for high audio performance at lower bit-rates. Featuring four large LED VU meters and a large menu display, this codec is a flexible headphone monitoring system that allows users monitor send audio, receive audio or a blend of the two. The blend function is well suited to voice talents, who often need to monitor both ends of a session.

Audio cables Gepco International

61801EZ: This single-pair audio cable is available in 20 colors with a new riser-rated PVC jacket to allow for more color-coding options and improved flexibility. The cable features stranded, tinned-copper conductors that facilitate quick soldering or punch-down, and a high-grade polyethylene dielectric. In addition, each pair is shielded with an easy-to-strip, bonded foil shield with drain wire. These materials, combined with Gepco's uniform pair twisting process and tight mechanical tolerances, yield exceptionally low loss and noise. As with most Gepco products, this audio cable is UL listed CMR for permanent installation in a wide variety of locations.

Phone editing system Audion Laboratories

Vox Pro PC 3.3: This update revises Vox Pro PC's internal database format, allowing for gain increase of selected audio for one or both tracks. It includes a resizable interface, from minimal to full-screen, and it is compatible with virtually all sound cards (not WDM dependant). It supports mouse click and drag audio highlighting, MP3 import and export of multiple files, streamlined administrative features and faster access to folders containing thousands of files. Other feature upgrades include the ability to display all master recordings in the current users' account; gain control volume adjustments in 1dB increments for a maximum of ± 24 dB on either or both channels; stretch, shrink or maximize the Vox Pro PC screen to fit any size monitor; and import and export MP3 files using LAME encoder/decoder. Users have four customizable, default settings for advanced options.

Terrain analysis software V-Soft

Probe 3: While undergoing modifications to enhance the overall usability of the program, the software maintains all the features of its predecessor, the Probe II. New tools of the software include a polygon creation tool that allows users to define a shape on the map and then calculate its area and population, as well as a D/U Ratio Study that allows for color-coded D/U ratios to be plotted on a map. The software also includes a new database search engine, allowing the user to search by criteria such as service type, licensee, city of license or distance. It supports NAD27 and NAD83 data, includes a new mapping engine for solid and dashed lines of any width, plots census density using gradient shading and imports MIF files as a separate layer to be plotted on the map.

Shared storage network Studio Network Solutions

ISANmp and GlobalISAN: Built on the iSCSI protocol, ISANmp enables audio and video files to be shared over Ethernet, whether in the adjacent editing suite or with a remote location. iSCSI is an IP-based storage networking standard that provides transport

Cable mounts Andrew

Anchor Rail Adapters: This adapter snaps into common strut or anchor rail systems for a secure, neat mounting of coaxial cable runs on any support structure. The adapters clamp into the rail, providing a secure platform to accept all common snap-in hangers. Once snap-in hangers are installed, runs of coaxial cable can be mounted on communications towers, making the most of the often-limited space on these structures. These one-size, self-contained, stainless steel adapters replace spring nuts, square washers, hardware and standard hangers in use today. No tools are required for installation. Adapters can be used for horizontal or vertical cable runs and produce neatly aligned cable installations on large poles, smokestacks, rooftops, walls or any support structure indoors or outdoors.

Expect MORE From Your AM Transmitter

Made in USA

Armstrong Transmitter X-1000B

1KW HD Radio® ready AM Transmitter for under \$10K

Built with dual hot-swappable 600 Watt RF modules capable of 150% modulation, X-1000B can bring that major market sound to your radio station. Engineered with the latest technological innovations, X-1000B offers high reliability, built-in redundancy and it is HD Radio® ready.

Best of all, our customers tell us that the money they save running the X-1000B pays for itself with

savings in electricity and maintenance costs over an older transmitter ... and as a bonus they get exceptional reliability and that major market sound for free.

But, don't take our word for it. Talk to our customers already on-the-air with the X-1000B. Call or email for a users list and decide for yourself why owning this transmitter is a no-brainer.

CD recorder/cassette combo Tascam

CC-222MKII:

This unit combines CD and cassette recording in one rack-mountable package. When recording from cassette to CD, the Sync Rec feature senses when the audio has been silent for more than six seconds and pauses recording. Recording resumes when the audio comes back. A digital attenuation control can now be added to the analog inputs, and the CD's digital converters have been upgraded to 24-bit resolution for better dynamic range performance. This system uses professional and consumer CD-R and CD-RW discs, offers a bi-directional cassette mechanism and features Dolby B noise reduction. The recorder/player uses S/PDIF digital coax and optical digital I/O for the CD recorder.

Handheld mic Heil Sound

Goldline Pro: By mounting the wide frequency response dynamic element into a special sorbothane shock mount system, Heil has created a mic with low handling noise. Features of this mic include a magnet structure and a large aluminum 1 1/8" low mass voice coil assembly; a phasing plug assembly with equally placed ports that sense audio from behind the source entering them out of phase, thus producing a linear cardioid pattern and reducing the proximity effect; a 40Hz to 18kHz frequency response; and an impedance of 600Ω balanced. The mic is usable in high sound pressure levels and is immune to overload conditions. The cardioid pattern offers rejection at 180 degrees off axis, which is directly behind the microphone and creates virtually no off-axis coloration while rejecting unwanted audio.

Selections for your bookshelf reference

The Art of Digital Audio, 3rd edition
By John Watkinson
Publisher: Focal Press, 2000

Written for anyone with an interest in digital audio, the author is an audio specialist who conducts professional seminars and workshops around the world. This new edition includes Internet audio, PC audio technology, DVD, MPEG audio compression, digital audio broadcasting and audio networks.

Principles of Digital Audio, 4th edition

By Ken Pohlman

Publisher: McGraw Hill, 2000

From the basics to the cutting edge, this book is packed with vital information. Through three editions, this text has illuminated the frontiers of digital audio science. The updated and revised fourth edition provides the needed tools to

capitalize on the expansion of digital audio technologies. Widely used as a college text and a professional reference, the book delves into DVD, Internet and PC audio, compact discs, workstations, perceptual coding, and digital radio and television.

Signor Marconi's Magic Box

By Gavin Weightman

Publisher: DaCapo Press, 2003

Guglielmo Marconi doesn't fit the typical inventor stereotype: he lacked wild hair, wasn't absentminded, wore debonair-looking hats and frequently wooed women when traveling by ship. Yet Marconi's aptitude for technology led him to be-

come the father of wireless telegraphy and radio. Born in 1874 to an Italian father and an Irish mother, Marconi was always fascinated by the nascent technology of electricity and, as a young man, was struck by the idea that he could transmit telegraph messages—then carried by cables—through the air. Weightman's text is about the juggling for position among the wireless inventors and their respective companies around the turn of the century.

The Road to Digital Radio in the United States
By Don Lockett

Publisher: NAB, 2004

This book offers a management-level overview of where things stand with digital audio broadcasting in the United States following the FCC's authorization to allow digital radio transmission in October 2002. Terrestrial radio stations are the last broadcast media to transition to digital transmission technology. Radio industry commitments to convert and the availability of digital radio technology to facilitate digital radio are at an infancy stage. This book examines the experiences of early adopters during the first year, highlights developments that occurred and reveals first-hand perspectives of broadcasters, manufacturers and industry players as the transition begins.

Newton's Telecom Dictionary

By Harry Newton

Publisher: CMP Books, 2004

Newton's Telecom Dictionary helps technology and business professionals stay on top of the ever-changing network, telecom and IT industry. With more than 21,000 definitions, the 20th updated and expanded edition includes complete coverage of wireless, broadband, intranet, e-commerce, IT and technology finance terms. While the tech industry hype has cooled, new telecom and networking technology and services continue to be adopted at a rapid pace, and new terms and acronyms sprout just as quickly. Technical concepts are explained in non-technical language.

Digital Audio Broadcasting: Principles and Applications of Digital Radio, 2nd edition

By Wolfgang Hoeg

and Thomas Lauterbach

Publisher: John Wiley & Sons, 2004

This updated edition introduces the recent international standards,

applications and the technical issues of the Eureka-147 DAB system. The book explains the basic concepts of DAB digital radio including audio processing, data transmission and modulation schemes and how the system can be implemented and operated. Features such as perceptual audio coding, OFDM channel coding and modulation, multiplex management (STI) and data transmission protocols (MOT) are described.

OMNIRAX BROADCAST FURNITURE

Omnirax from Design to Production

- At Omnirax we work together with you from initial design concept all the way through finished product, ensuring that your furniture will provide you with years of satisfied use.
- Our strength is forging partnership relations where we can use our expertise to turn your ideas into reality. We are able to work to your exacting specifications or provide comprehensive design services that remove the guesswork from your investment.
- Our CAD/CAM process ensures precision fit and finish, repeatability, and ease of modification. All of our designs are rendered in the computer prior to manufacturing. We are able to make alterations and adjust to your equipment, guaranteeing you not only get what you want, but exactly what you need.
- We are small enough to give every job the personal touch, large enough to outfit a complete facility.
- The measure of our success is the achievement of a synthesis of form, function and ergonomic comfort.

Analog equalizer Klark Teknik

DN370: Aimed at monitoring applications, each channel of this equalizer offers two swept and overlapping 18dB notch filters with illuminated combined frequency and in/out rotary controls. Greater control is provided by swept 12dB per octave high- and low-pass filters on each channel, allowing the frequency response of a given channel to be precisely tailored to its use. Its 45mm faders (with protective dust covers) offer control of the configuration of the 'proportional Q' filter type.

www.klarktechnik.com

FCC license data tracker RadioSoft

License Agent: This service permits the tracking of FCC license data for AM, FM, television, low band VHF, high band VHF, UHF and 800MHz and above. The system will track items of competitive interest or those that could cause potential interference or allocation problems with the subscriber's facility or location. It covers all activity in FCC Parts 22, 73, 74 and 90 in one easy-to-use format. It can be used not only to identify potential interferers, but also to see the details of what is being proposed and the possible effects on the flagged site. Users enter a latitude, longitude and radius distance for each site they wish to flag or simply the call sign. Moreover, users can request a daily, weekly or monthly e-mails of any activity. Any flag will generate an online list of information that pertains to a facility or market the user wishes to monitor. Flags are available for one site or hundreds of sites.

IBOC/analog antenna Shively Labs

IAD-FM 6813: A cost-effective solution for low power IBOC conversion aimed at Class A and similar power stations, this antenna produces a digital IBOC signal using a separate antenna, but without requiring additional aperture. It does not require a 10dB coupler to inject signal onto the analog as is done with high-level combining. This means the 90 percent loss to the digital signal and the 10 percent loss to the analog

signal is avoided. The antenna requires no additional tower space because the digital antenna to be mounted directly to the feedline of the existing full wave spaced antenna. The unit will not affect the tuning of the existing analog antenna.

888-SHIVELY; fax 207-647-8273
www.shively.com
sales@shively.com

Antenna for AM Broadcast Kintronic Labs

Kinstar: The radiation pattern and efficiency of this antenna provide operation equivalent to that of a standard quarterwave monopole, but at about 20 to 25 percent of the height. The low profile antenna consists of four electrically short, vertical closely spaced elements, each of which is terminated in a horizontal top load element. Each vertical element is fed via a phase-matched section of 50Ω transmission line.

Solid-state recorder Marantz

PMD570: Using Compact Flash cards, this recorder provides compact recording with no moving parts. It features RS-232c control of functions, MP3, MP2, WAV and BWF file recording formats, and more than 40 assignable quality settings. The unit's sampling rate is 16Hz to 48kHz and offers a bit-rate setting from 32 to 384. The unit features digital input and output and balanced XLR line inputs with trim, as well as unbalanced line in and out.

630-741-0330; fax 630-741-0652; www.marantzpro.com; info@marantzpro.com

Tube and solid-state transmitters Superior Broadcast

FM Transmitter Line: The 120W PM120 and 300W PM300 solid-state transmitters are rack-mount units with frequency agile tuning in 10kHz steps across the FM band. The KAFM series, available in 2.5kW and 3kW models, use a single tube design and occupy a space that is only 22" x 30" in a package that is 5' tall. The 5kW and 10kW models stand 6.5' tall. All the tube transmitters use a single-tube grounded-grid design for low-cost, dependable operation. They also feature a solid-state, digitally synthesized, high-performance exciter and IPA.

jjoynt@superiorbroadcast.com

LAN/IP audio distribution MDO UK

AudioTX Multiplex: One or more server PCs take multiple, live, audio sources and make them available across an existing network. Any PC on the network can receive the audio feeds by using a small receiver module that emulates a tuner by selecting a channel. New sources and destinations can be added by loading the appropriate software. The system works with standard Windows hardware and sound cards. The system uses multicast technology, and installation tests have shown that 50 stereo audio channels at broadcast quality occupy only 6 percent of a 100Mb/s network. Audio can be broadcast as linear WAV, MP3 or MP2 files. Users can purchase the software only or MDO can supply configured servers.

RECEIVERS

OUTSTANDING specifications and pricing on professional quality receivers for **EAS**, monitoring and translators.

The **AFC3** is a three receiver rack mount that is configured to your **EAS** or monitoring specific application. Each receiver has internal frequency selection (PLL) switches, front panel controls and indicators, and rear panel connections.

Price: Approximately \$1,200 (depending on receiver choice)

Select three receivers from our FM or FM/SCA, NOAA Weather, Public Service and/or AM Monitor/Receivers. All receivers are PLL (synthesized) designs using the latest state of the art components and are available as stand alone receivers as well as in AFC3 combinations.

Quality Receivers Designed and Manufactured In the USA since 1960

2004 Product Source

Condenser mic Neumann

BCM 104: The first product in the broadcast line, this condenser mic offers an independent, functionally optimized design derived from 3D simulations. The large-diaphragm condenser capsule features a cardioid directional pattern with internally switchable proximity effect compensation. A second switch allows the sensitivity to be reduced by 14dB. The microphone head grill twists off for quick cleaning. Optional, color-coded head grills are available.

neumlit@neumannusa.com

Noise-reducing cabinets Noren

ACL-24 Acoustilock: This cabinet eliminates fan and drive noise in critical listening environments such as on-air and production studios. The cabinet provides 38dBA of noise reduction and features heat pipe heat-removal technology. Heat pipes are hollow pipes containing a capillary wicking material and a precise amount of liquid in a partial vacuum. When one side of the pipe heats, the liquid boils and enters a vapor state. The vapor then moves to the cooler side of the pipe, thereby transferring the heat to the cool side. Acoustilock is available in different configurations and sizes to fit a variety of needs. All models include a triple-layer acoustic for maximum noise attenuation; free-floating, vibration-dampened rack to eliminate vibrational coupling; multiple cable channels for cable routing; an internal digital temperature meter and casters for portability.

www.norenproducts.com; sales@norenproducts.com

Red beacon Dialight

D164 series: This medium intensity red beacon was designed to interface into existing systems or in new installations. The beacon withstands severe environments with its cast aluminum base and stainless steel hardware. The dome is made of UV-resistant acrylic and sealed. The beacon can mount onto existing bolt pattern installations. The light was designed to replace 300mm incandescent obstruction lighting fixtures with high flux LED technology. The modular design allows for simple replacement of the light engine. The light can flash or be a steady burn. It uses 90 percent less energy than an incandescent and creates no EMI/RFI.

800-835-2870; fax 732-751-5778; www.dialight.com; info@dialight.com

FM antenna for IBOC ERI-Electronics Research

Dual-feed IBOC antenna: This dual-input, side-mounted FM antenna is designed for FM IBOC applications and is capable of transmitting the analog and digital FM signals without requiring a high-loss hybrid combiner or the use of a circulator to attain the required isolation between the digital and analog transmitters. The antenna is a dual-input antenna that excites all radiating elements with both analog and digital signals. The unit allows the use of a single antenna while eliminating the combining loss as is present in the 10dB hybrid combining method. It achieves 1.05:1 VSWR for analog and digital inputs and provides in excess of 30dB isolation between analog and digital inputs without using an isolator/circulator.

812-925-6000; fax 812-925-4030
www.ERInc.com; sales@ERInc.com

Audio switching router AEO

BC 2000 D Router: More than an audio switching router, this unit allows centralized or decentralized audiomanagement, the link and communications of all studios and as many as 2,048x2,048 channels with no limitation of simultaneous connections. The unit offers a decentralized system linked by MAD1 connections between all the sub-racks. It handles digital, analog and microphone inputs and outputs, as well as non-audio signals such as Dolby E and MPEG. Its signal processing capability includes mixing, equalizations, filters, compression, expansion, limiting, reverb and delay. This product can be configured to be totally redundant, and it has automatic error correction capability, plus remote diagnostic and remote repair abilities. It may be used as an intercom router using dedicated panels.

Programmable relay controller Circuitwerkes

Prex: The controller manages and multiplies contact closures. The controller accepts a variety of input signals and converts them to contact closure outputs. The microprocessor allows each relay to be individually programmed and triggered by any number of inputs, combined together using basic logic functions. Relay operating modes include momentary, toggled, leading or trailing edge, pulse stretching as long as 4.5 hours, input debounce and maximum on time. The controller can be programmed using jumpers or through a computer serial port. The configuration manager provides instant, graphical access to all of the setup commands.

352-335-6555; fax 352-380-0230; www.circuitwerkes.com; info@circuitwerkes.com

Audio editing software Adobe Systems

Audition 1.5: Adobe has released version 1.5 of its audio editing software. The first revision since the product was taken under the Adobe name, new features of the software include integrated CD burning, pitch correction, automatic click/pop elimination and the ability to save custom keyboard shortcuts. In addition, new sample sessions are included to assist users in getting started with the program. Royalty-free loops allow the creation of custom audio tracks. Other updates include: Rewire support, VST plug-in support, frequency space editing, enhanced support for video, clip time stretching and flexible envelopescaling.

800-833-6687; fax 408-537-6000
www.adobe.com

Mic boom riser RAM Broadcast Systems

MBR-12: This mic boom riser features a hollow center to hide the mic cable, a shaft that is bolted to the base, and a no-screws design in the aluminum construction. This riser is useful for Corian-type bases and fits most mic booms. XLR adapters are optional.

800-779-7575; fax 847-487-2440
www.ramsyscom.com
sales@ramsyscom.com

Utility amplifier system Broadcast Devices

UTA-200: By using three standard modules, the system can accommodate a variety of standard and custom D/A configurations. The system is totally modular, including the power supply. All modules plug in from the front panel. There are two analog modules available in addition to a D/A converter module. Each frame is fully configured, labeled and tested before shipping.

Interface system Kramer Electronics

FC-1ETH: This bi-directional, hardware and software interface system controls all Kramer RS-232 controllable machines via Ethernet LAN, as well as via the Internet. The system is comprised of a bi-directional RS-232/Ethernet CAT-5 converter and control software. The system integrates into an existing LAN system, allowing fast and safe IP address definitions a standard TCP/IP protocol. The system also allows using dummy CAT-5 cables without a real LAN system, and does not require a PC adjacent to the controlled device. Using a typical LAN structure, the FC-1ETH allows multi-node operation, having several PCs controlling several machines independently. Remote monitoring and control requires a dedicated IP address and a modem in the remote location, whether it is a stand-alone PC or a LAN system.

www.kramerelectronics.com; info@kramerelectronics.com

Condenser microphones AKG

C414-XL II, C414-XLS: This mic's proportions have been optimized, straight lines have been replaced with sweeping curves, and flat areas now have with gently rounded surfaces. The mic is slightly bigger than its predecessors. The rounded edges also reduce unwanted reflections. A fifth polar pattern has been added to the original set of four selectable patterns: cardioid, hypercardioid, figure eight, omni and now wide cardioid. All switch positions, microphone output overload, and power on/off status are indicated by LEDs. A capsule shock mount minimizes handling and stand-transmitted noise. Other features include sensitivity tolerance of ± 0.5 percent, sensitivity of 6dB and low self-noise. The XL II features a transformer output.

615-620-3800; fax 615-620-3875

www.akgusa.com; akgusa@harman.com

Mic preamplifier Daking Products

Mic-Pre IV: This unit features Class A preamplifiers in a single rack space unit with an outboard power supply. The preamp is configured for four microphone inputs or four line inputs from XLR/TRS Neutrik combo jacks on the back, plus four line inputs (+10 to -50) or 1/4 hi-z instrument inputs on the front. The unit uses discrete Class A circuitry with transformer-balanced inputs and outputs and can be used as a stand-alone or in conjunction with a console. Each input offers continuously variable gain control using aluminum knobs. The preamp offers a 20-segment LED level meter with +24dB peak indicator, switchable +48V phantom power and switchable 20dB pad.

302-658-7903; www.daking.com; geoff@daking.com

Distribution system Fiberplex

Light Viper VIS-1832: This system consists of a 32 x 8 audio input stage box and a complementary 1RU (model VIM-1832) audio output unit. Connecting these two components is a fiber optic cable weighing less than two pounds per 100' of cable run. The cable is immune to ground loops, RFI, EMI and electromechanical noise, and runs of up to 1.25 miles can be accomplished without signal loss or degradation. The inputs on the audio input stage box will accept balanced or unbalanced XLR or TRS mic or line level audio. Industry standard 48V phantom power is supplied to all audio mic inputs.

The AES-302 Digital Audio Switcher/Distribution System

Two Input Switcher
Automatic or Manual Switching
Optional Silence Sensor
Status Monitor with Memory
Front Panel Headphone Jack
High Quality 24 bit 96 KHz D/A Converter

Introducing the next generation digital audio switcher from BDI. Now you can have complete confidence in your signal path with the AES-302. Feed main and back up AES streams to the inputs and the selected feed is routed to four digital outputs and an analog stereo output. If a fault occurs, the automatic switcher selects the alternate feed. There is extensive front panel error and operational status and a headphone jack for confidence monitoring. The AES-302 has a remote control interface for easy attachment to remote control systems. The AES-302 is future proof too. The digital components mount to a plug in pc board which can be upgraded in the future should digital audio standards be enhanced or your requirements change. Call your local broadcast equipment dealer to order. Call us or visit our website for detailed information.

NAB RADIOUPDATE

Radio magazine's
NAB INSIDER

When a convention draws near, we help you prepare by bringing you our convention update e-mail newsletters: NAB Radio Update in the fall and NAB Insider in the spring. Delivered every week leading up to the convention, these newsletters provide insight on sessions, previews of product introductions, tips on visiting the convention city and more.

To subscribe to any of these e-mail newsletters, go to beradio.com and click on the link under Subscriptions.

GENERATION-8: The On-Air Control Surface for High-Traffic Studios

Quality is Easy to Identify with stainless steel construction, easy servicing, and a clean yet compact layout.

The POWER of a Network Surface with the FEEL of a Traditional Console!

ONE CAT-5 WIRE conveys all the control from this surface to Wheatstone's Bridge System. You can bring any system source (inputs or mixes) to any console fader or monitor pot (source visibility software controlled). You can set destinations for mixes, aux sends and MXMs to anywhere in your facility. For example, you could allow (or software disallow) your news console to go to your on-air chain, or feed any mix desired to a talent or remote position.

THIS MAJOR MARKET CONSOLE can handle all the call-ins and remotes you'll encounter. Four faders dedicated specifically to phone segments provide errorfree interface to four callers or remotes, each with independent caller and fader feeds, user

selectable talkback communication and adjacent channel linking. A dedicated LCD display screen keeps the operator informed and in control.

YOU CAN STORE AND NAME switch and fader settings for each operator's task and recall them by simply spinning an encoder and hitting a TAKE button. And like our larger G-9, the G-8 has 12 user programmable switches for salvos and intercoms plus additional programmable TALK buttons for IFB functions. And with full color LCD display screens the operator will know for certain that his signal is clean, his sources correct, and his preset signal is ready and waiting. *The G-8 has the layout and features to let your operators work fast and accurately!*

Behind Every GOOD CONSOLE

There's an EVEN BETTER ROUTER

GENERATION 4

A Straightforward, Easy-to-Use Control Surface

There's no long learning curve required to immediately start using this traditional layout specifically envisioned for operators of all skill levels.

BRIDGE TECHNOLOGY enables the GEN-4 surface to operate far beyond the limits of its studio main-frame. Integration with the Bridge digital audio network router provides system-wide access to all station on-air and off-air audio resources via inter-linked CAT-5 or fiberoptic cable. And of course, we all know **EXPERIENCE COUNTS!** With over eighty Wheatstone Generation and DTV surfaces already operating in the field, you can be assured your installation will proceed smoothly and on time.
