LARGEST CONVENTION  
TAKES CENTER STAGE

# SS8900

A totally new production console incorporating the latest in high-reliability state-of-the-art circuitry housed in a dramatically styled all-welded steel housing. It has been totally engineered from the start to provide the maximum in operational ease and flexibility, maximum cooling with power components and air vents placed for optimum convection air-flow; hinged front panel, service doors and all-modular construction for ease of maintenance; and performance that will meet or exceed any operating specification expected of a modern console. It is available with up to 32 mixers and a range of output, auxiliary and DC control units to suit any requirement.

Our experience gained in over 30 years of engineering broadcast audio systems has been incorporated in the design of the SS8900 console, ensuring the inclusion of the reliability, quality, features and systems compatibility expected by the modern broadcaster.

di-tech knows your needs aren't the same as every other broadcaster, so when we build equipment like audio and video routing switchers we build a whole line of them. That way you can select the exact matrix size and mechanical configuration that meets YOUR requirements, for audio only, video only or audio-follow-video with 1, 2 or 3 channels of audio per input. So why settle for less when you can select di-tech's surprisingly affordable equipment custom-tailored to your needs?

Whether the application be for a radio or television station, mobile vans, remotes or unattended sites, di-tech has equipment for you.

- VIDEO PRESENCE DETECTORS
- TOUCH TONE SYSTEMS
- A/V ROUTING SWITCHERS
- AUDIO MONITOR AMPLIFIERS
- TRANSMISSION LINE SUPERVISION SYSTEMS
- A/V PULSE DISTRIBUTION AMPLIFIERS
- COMPUTERIZED REAL-TIME WEEKLY EVENT CONTROLLERS.

Call or write for more information or our FREE catalog today!

\*Both MODELS 5800 and 5840 feature:

- up to 3 channels of audio per input within the same frame
- expandable inputs and outputs beyond the stated matrix
- audio only, video only or AFV; V.I. switching

Discover for yourself why industry leaders are switching to di-tech!

# NEWSPORT 300

Improve  
your field communications  
with a Newport 300.

The Newport 300 makes everyone happy – the field reporter, the sports caster, and you.

The Newport 300 is a compact, versatile, high performance field production mixer. This 3 channel mixer handles 3 microphones and 2 headphones. And with switch selectable outputs and a built-in cassette recorder, the Newport 300 connects to any telephone or 2-way radio to feed high level studio equipment, air live coverage, or record interviews for later broadcast

And all in one very portable package. The complete console, tape recorder, headset, microphone, news copy stand, writing desk, and all cables, fit into a single carrying case. The Newport 300 runs on AC, DC or internal power, so the story is never out of reach.

Find out just how affordable an investment in one or more Newport 300's can be. Call us at 408/926-3588 and let us show you how, no matter where you go in the field or on the field, the Newport 300 goes with you.

# TOSHIBA'S PK-60 MAKES NEWS... THE SMALLEST, LIGHTEST NEWS/PRODUCTION BROADCAST CAMERA ON THE AIR. WITH A DIGITAL MEMORY THAT WON'T FORGET.

Here's the newest ENG/EFP camera from Toshiba. Just right and so light for broadcast news. It's this combination of features that make the PK-60 a small standout.

- 9.4 lbs.
- Small Size
- Reduced Power — 20.6 watts
- Outstanding Stability
- Digital Data Loc
- Microprocessor-based Auto Setup Unit
- Digital/Analog Base Stations
- Triax/Wireless Transmission

Digital Data Loc is Toshiba's digital memory that can be preset by the engineer and travel to the action scene.

Toshiba's versatile PK-60 with advanced new circuitry, unbeatable overall performance and... Toshiba's celebrated quality.

## 134 NAB '81 Exhibitors

A complete listing of the more than 400 companies exhibiting at this year's convention, complete with description of major product lines and products being introduced.

## 73 The No-Nonsense Map

The NAB floor plan map using the highway map format. You can locate any exhibitor in less than 30 seconds.

## Special Offer!

For a limited time only, the Grass Valley Group is offering a complete 400-series 32x16 AFV routing switcher system at a very special price. This is your opportunity to own the same high quality routing switcher used in hundreds of installations around the world.

Now is the time to eliminate that conglomeration of patch panels and mechanical switchers you're using for VTR, framestore and ENG/microwave switching. Replace it all with world-famous Grass Valley Group equipment – at a most attractive price. If you're in a hurry, you'll be pleased to know that we're in a position to ship these packages in a matter of weeks!

Our special package includes the following:

- (One) 400 series 32x16 video matrix
- (One) 400 series 32x16 audio matrix
- (One) 400 series power supply
- (One) set interconnect cables
- (One) set module extenders
- (One) 400-201 X-Y control panel
- (One) 15 meter control cable
- (Two) instruction manuals

Interested? Don't delay, because this offer is good for a limited time only. Contact your Grass Valley Group representative now, or see us at NAB.

**“IF YOU WANT TO COVER THE  
USE A CAMERA THAT’S ONLY GOOD**

Shot with a Sony BVP-300 camera at f2.5 with approximately two footcandles' light.

# DARK SIDE OF A CITY, YOU CAN'T WITH BRIGHT LIGHTS."

Henry Sheppard,  
WCCO-TV, MINNEAPOLIS

"There are news-gathering and documentary situations where the use of artificial light is just too intrusive or difficult to achieve," says Henry Sheppard, Chief Engineer of WCCO-TV, the CBS affiliate in Minneapolis.

"That's why our Sony portable BVP-300 cameras are such a big plus. With them, we can shoot in low-light conditions and get a lot of detail other cameras might not pick up. We even get good pictures with as little as two footcandles of light."

WCCO-TV owns seven Sony BVP-300's, which the station's photographers use together with Sony BVU-50 recorders. The cameras are used to shoot public-affairs programs and segments of PM Magazine, as well as for ENG and documentaries.

"We're very particular about picture quality," says Sheppard. "And before we committed ourselves to Sony, we evaluated just about every portable color camera available.

"Sony's colorimetry is excellent, its signal-to-noise ratio is high, and it always turns out pictures that meet our standards. Many of our engineers find its quality comparable to studio cameras. And our photographers like the way Sony handles. For example, in a helicopter, they can cradle the camera on one shoulder to reduce vibrations and get a very steady picture.

"And with the Sony system, each photographer can operate independently, without a second person along to monitor sound."

When asked about Sony durability, Sheppard replied: "We don't coddle our cameras here. Each one gets handled by about 15 or 20 different photographers. They come in in the morning, grab their equipment, throw it into the back of the car, and they're off. Sony takes that kind of treatment remarkably well, and it's a good thing, because we can't afford to have our cameras down."

Of course, Sony makes a full line of one-inch broadcast equipment, including cameras, recorders, editors and the BVT-2000 digital time base corrector.

For information, write Sony Broadcast, 9 W. 57th Street, New York, N.Y. 10019. Or call us in New York at (212) 371-5800; in Chicago at (312) 792-3600; or in Los Angeles at (213) 537-4300.

## Some good news, and some bad

News releases from the FCC these days are beginning to sound a lot more like "good-news/bad-news" stories.

The good news is that unless there are legal roadblocks ahead, community ascertainment is gone. Public interest at most operations was always guaranteed by ownership integrity. So ascertainment paperwork and the details it required were more a burden than an aid to anyone.

The good news on logging also will make life a bit freer. But more stations probably will continue logging as usual, because reasonable logging is a good way to conduct a business. So DJs who read agency copy beyond the spot time can be creative without fear of reprisals outside the marketplace.

What's more, if you can sell more than 18-20 commercial minutes an hour, deregulation is good news again. Here's a case where the marketplace will be the judge.

Clearly standing somewhere in the middle is the docket on First Class licensing. Other than the potential for union problems, there are numerous industry counterattacks due for this one. Most engineers want to keep the FCC license.

It's another case, though, of whose ox is being gored. Management could opt for less competent people (at a lower pay scale) to run the technical side of the station. The bad news for management in the face of what should be good news is that (1) the station will still be responsible for meeting rules, and (2) if the chief engineers leave, the stations will lose their technology interpreters at a time when they have never been more important.

And sometimes what starts as good news veers off into wonderland. Like the FCC says non-entertainment programming won't need to be something for everyone. Well-balanced programming in all instances will not be required. But hang on. The FCC says, "...FCC inquiries will focus on whether a licensee's programming judgments are reasonable." So, in fact, it remains a relevant issue for petitions to deny. Sometimes rules are better than open-ended judgment. Was 6 percent for FM and 8 percent for AM unreasonable? I wonder!

As for 9 kHz spacing, the potential for problems here could get a real shove toward havoc if engineering testing is dropped. Maybe it's no small coincidence that reduced spacing, low-power TV and the like are pushed across the table along with deleting the First Class license. If the estimates for hundreds of new stations are true, where would the engineering talent to man these plants come from?

But as the good ship FCC sails into the '80s, the good news will be continued attempts to reach other worthwhile deregulatory ports of call.

And no doubt about it, everyone will applaud the appearances of Bob Hope and Rich Little at this year's NAB convention in Las Vegas.

Rich Little will help kick off the opening-day festivities, while Bob Hope will take over the closing-day luncheon.

And this brings us to the point of "damned if you do and damned if you don't." The NAB will have to face the fact that when there are over 400 exhibitors in the exhibit area, and with just 32 total hours of exhibit time, an NAB convention attendee will get just a few minutes at each booth... and then only if he doesn't take time out to eat or go to the sessions.

In other words, the convention has grown to the point where it is worth considering adding an extra day for exhibit time.

One thing we've found that helps is a good map of the exhibit area. The No-Nonsense Map in this issue is called just that because it uses the state highway map format. If you look up the manufacturer's name, you'll find a location indicator, like F6. Just as you'd use a highway map, the location letters run across the top and the numbers down the side. Zero in the two, and presto, you've found your booth.

To give you an idea of how much time this saves, take the BC challenge: once you've located the company name on the alphabetical list on the side of the map, I say you should find any booth in under 30 seconds. If you're really good at map reading, you should find the booth in less than 20 seconds. An NAB convention veteran could do it in 15 seconds. Turn to the map and try it.

Next month On-The-Air will be back into the mail bag. Of course we invite your comments and ideas on these and any other relevant broadcast issues. Just drop a line to: On-The-Air, Broadcast Communications, 4121 West 83rd Street, Prairie Village, Kansas 66208. We'll put you on the air. **BC**

**Travel with  
the compact  
color monitor**

**that looks as good as your  
studio's best.**

Asaca/ShibaSoku's 10-inch CMM 10-1 Color Monitor is one small way to be sure you have the best possible pictures you can get while on remotes. It's AC/DC, lightweight, and ready to travel. With its special high resolution in-line tube you'll be looking at pictures that match your studio's best monitor. Team it up with our ASW-100 Field Production System and you have a complete mobile broadcast studio with you. Just add the cameras.

The CMM 10-1 likes to travel. But it's still at home in your studio. Wherever it is, it's simply the best 10-inch monitor anywhere.

## ON LINE

# NAB '81 provides right directions

BY VINCENT T. WASILEWSKI

As the communications arena continues to explode, broadcasters are searching continually for the most effective ways to compete in the technology age. The upcoming 1981 convention of the National Association of Broadcasters will supply radio and television broadcasters alike with the "Directions" they need now and in the future.

This year, the convocation, appropriately christened "Directions," represents months of planning—with input from every area that affects the industry. From legal briefs to legislation, from teletext to videotext, from video captioning to MDS, from cable to satellites, we will be reviewing the most significant advances in broadcasting's state-of-the-art during the sessions and providing the practical information available necessary for success in the marketplace, today's and tomorrow's.

On Sunday, we'll start the show with the presentation of the prestigious Distinguished Service Award—broadcasting's highest honor. This year, it goes to Arch Madsen, president, Bonneville International Corporation, Salt Lake City, Utah. Madsen's enormous contributions to the industry will be recognized during the opening ceremony. Comedian Rich Little will then lighten the activities with some levity and laughter before we get down to a serious look at the business of broadcasting.

On Monday, broadcast engineers will meet face to face with the Federal Communications Commission staff who will furnish updates on rule interpretations for directional antennas, composite clipping and television blanking, as well as with rulemakings such as 9 kHz, AM stereo, low-power TV, and FM stations.

Those engineers involved in television will be privy to the most current information on "portable" power through the use of batteries, on the construction and design of broadcast facilities, and how to deal with the government's "design" for your operation. They will find out if those cameras with automatic set-up really work well enough to substitute one for a video operator, and how VHF transmitter efficiency can be increased in order to in-

crease your station's savings. The SMPTE will be with us again this year offering the latest engineering facts, and the EIA will discuss the recommendation of a single teletext standard with representatives of each of the systems, who will describe the pros and cons of their own system.

Radio engineers will be talking about telephones, and learning how to use

them to their stations' advantage. As more and more progress is being made toward the use of satellites for high-quality audio transmission, factors such as stereo, noise reduction techniques, lower costs, smaller dishes, and the sharing of earth stations become increasingly important. There will be a sessions dedicated to understanding why. We will be examining radio use of ENG; taking a look at some of the excellent systems currently in operation; and we'll be reviewing the latest equipment, techniques, and practices in the art of using audio processing equipment.

We've scheduled workshop times so that both radio and television engineers will be able to shop at the "Electronic Supermarket," the largest exhibition of broadcast equipment in the world. Exhibit hours have been expanded so that you will have all the time you need to see this spectacular showcase.

This is an industry meeting—the program is not limited to engineers. Television and radio managers alike have three days of workshops and general sessions designed to prepare them for broadcasting today, tomorrow, and beyond.

Television broadcasters will find out first-hand exactly what the new Congress has in mind for them. Many senators and congressmen will be with us to share their views on broadcasting and regulations facing the industry.

We'll be examining the issues that are important to TV broadcasters, like low-power TV, cable regulation, and FCC requirements. Broadcasters will also have the opportunity to express their views, challenge their opinions, and ask questions.

Representatives from the Television Bureau of Advertising, National Association of Television Programming Executives, and Radio and Television News Directors Association will also conduct sessions.

For those in the small television market, we realize you face special challenges. "Smart Management for Small Markets" will provide you with the solutions for your unique problems.

Radio's small markets also get special attention this year, with a four-hour legal clinic logged in Monday night that will focus on the legal problems of the small-market radio broadcaster. Tuesday's legal clinic is open to all markets—mini, maxi, or medium; and it will supply the answers to any station's legal questions.

NAB believes in closing the convention with a bang, and this year Bob Hope will help do that. Bob will take center stage at Wednesday's luncheon and will supply us with lively live entertainment.

NAB '81 holds every promise of being our best convention ever. It is the one, the only complete broadcasting industry meeting held annually. And it is incumbent upon the members of our industry to be there. I don't think you can find a better buy anywhere. The combination of workshops and sessions—from beginning to end, from exhibit floor to hospitality suite, from speeches to spouse program—makes this the most important broadcasting event in 1981. I look forward to seeing you there.

BC

# WORLD UPDATE

## SMPTE makes digital impact

The SMPTE Television Conference just completed far exceeded the expectations of its organizers, both in the impact of the digital video demonstrations that preceded it, and on the interest the high-definition TV presentation aroused from members and visitors.

Francis Ford Coppola made a special point of visiting the HDTV display put on by NHK Research Labs, and he and his staff spent some time looking at the large screen displays, with an eye toward future applications in electronic cinematography. The exhibits, which all had products related to the technical topics being presented in the lecture hall, spanned a wide gamut of audio and video devices in tune with the latest trends in image and sound technology.

Three major events dominated this conference, and its preliminary and supplementary activities. The pre-conference period (February 2-5) was dedicated to a series of digital video demonstrations set up at KPIX and intended to show the participants' component coded digital video in all its myriad combinations. These included sampling rates of 768, 864, and 912 samples per line, and luminance/chrominance sampling ratios of 4:4:4, 4:2:2, 4:1:1, and 2:1:1.

These demonstrations showed clearly the quality of color television images obtainable through all forms of digital and analog conversions. In addition, there was also a digital VTR demonstration using two modified BVH-1100 tape transports (1-inch Type C helical) and common digital electronics. This DVR, for the first time, showed the possibility of recording and

reproducing color pictures with a sampling rate of 14:7:7 MHz. Pictures from these recorders were excellent, even down to the 20th generation. Error correction and concealment techniques were used to achieve these perfect picture results. As a last part of the DVR demonstration, the shuttle mode was shown, with recognizable but impaired images. Electronic editing was also exhibited with these machines.

At a press conference following the digital demonstrations, Joe Flaherty, executive vice president of the Society, and engineering vice president at CBS, stated that this was really the threshold of digital television, and the decisions made regarding the technical standards adopted are as important as those taken when American television went from monochrome to color. The industry may have to live with this digital standard until the end of the century, so it had better be the right one, Flaherty said.

With that phase completed, the conference opened with a series of papers on digital video recording. The main theme of these papers was to explain the technical complexities of designing and building a commercially viable digital VTR.

The bottom line was that no one seemed ready to bite this magnetic bullet, preferring to wait until some uniformity of purpose comes out of the digital VTR study group that is gathering information about this potential. As one speaker succinctly put it, "The user wants a DVR that is smaller, lighter, cheaper, and less tape consumptive than the current analog machines. Unfortunately, from what we know today about building digital VTRs, it looks like they will be bigger, heavier, more costly, and will use more tape than the 1-inch helicals they are supposed to replace."

The second session on Friday afternoon covered new camera technology and digital techniques—all interesting topics with good papers explaining them. It was on Saturday morning that the delegates' attention focused on a whole new field of television as yet almost untouched in the real world. Under the heading of "Future Directions for Television," a series of papers on high-definition TV and stereo sound for TV broadcasting stirred tremendous interest.

Stereo, high-quality sound is already on the air in Japan, and the first speaker described that system. The next three papers dealt with the future direct

## Uncovering the cover story

Janet Ford, who will be a principal (nude) dancer in the new Donn Arden spectacular for the MGM Grand when it reopens in July 1981, was an understudy for a principal dancer in the Hallelujah Hollywood production which set attendance records during its five-year run at the resort. The new show, "Donn Arden's Jubilee," will go into rehearsal in April.

Ms. Ford is the daughter of Nevada State Senator Jean Ford. She is 24, 6' 1" tall, and single. She was born in Washington, D.C.; attended the University of Nevada at Las Vegas; and previously appeared in the Lido de Paris in Paris, the Lido de Paris in Las Vegas at the Stardust, the Casino de Paris at the Dunes, and the Folies Bergere at the Tropicana.

The costume she is wearing is one of the new costumes for the new show and will not be seen by the public—other than on this month's cover—until July. With high heels and the headdress, Ms. Ford and the costume extend nearly nine feet above the floor. (Cover shot in studios of the Las Vegas News Bureau by Lee McDonald)

Happy 25th birthday to video tape

Circle (13) on Action Card

tion HDTV should take, and descriptions of two proposed systems: a theoretical one in Germany, and a practical one in Japan. The Japanese system, developed by NHK Research Labs, had been brought over from Tokyo and was on display in the hotel. The superb color images, using 1125 lines and a Cinemascope aspect ratio, attracted hundreds of visitors to the NHK display all during the conference.

The closing session dealt with the potential of an all-digital studio, and with a strong plea from the last speaker, Tom Robson of the IBA, for a digital standard which he claimed would be "now or never." A panel discussion that followed, however, revealed that there are still a lot of compromises to be made before the "golden number" of a digital sampling rate can be agreed on, especially on an international basis.

Indeed, the international aspect of this conference was very evident from the fact that the EBU Technical Bureau chose to hold its standard deliberations in San Francisco, immediately following the SMPTE conference. In this way, those delegates could also see the digital component coding demonstrations and could participate in the papers session. Last, but certainly not least, they could have liaison meetings with the SMPTE digital groups, to try to hammer out differences between the 50 Hz PAL, SECAM world and the 60 Hz NTSC world.

Regardless of what commonality is achieved, or what standards are eventually established, there is no question that the SMPTE Television Conference was a watershed event in the continuum of advancing television technology.

## Video Expo adds to program

Video Expo New York is being held in Madison Square Garden/New York Statler on October 20-22, 1981.

This year's program has been expanded to include seminars on over-the-air broadcasting and TV commercial production, and will attract numerous exhibits of broadcast equipment. To accommodate the expanded program and exhibition requirements, the organizers of Video Expo have reserved the Felt Forum at Madison Square Garden, in addition to the Rotunda, the auditorium in the Fox, Kirschbaum, Fox building and seminar rooms in the Statler hotel. This conference will be the only major television exhibition in the eastern U.S. between November 1980 and October 1982.

# The Quantel DPE 5000.

## The digital effects system that will turn your head around.

Rotate it 360 degrees.

Manipulate it into an infinity of forms.

Flip it. Tumble it. Spin it.

But because not every broadcaster needs all these capabilities now, we've built the DPE 5000 to grow. Endlessly.

You can buy the basic single channel system and generate an array of optical quality digital effects. Infinite compression. Variable picture positioning. Freeze. Border generation. Position, size, and transition rate preselect. Horizontal and vertical squeeze. Key tracking.

Later, as your requirements change, you can add to your basic system.

Zoom expansion to four times picture size.

"No-Blank" noise reduction with blanking correction.

"Autosequence" effects recall system.

"Digiflip" flip, tumble, and spin.

"Autoflex" effects package for special shapes.

Picture rotation.

And up to four additional channels to give you effects on five pictures simultaneously.

All these options can be added to your basic DPE 5000 at any time. And this goes for any DPE 5000—all the way back to serial number 1. We want your digital effects system to grow, not become obsolete.

Even if you don't want your head turned around this year, who knows about next year?

## Thanks To You, Ampex Looks Back on 25 Great Years.

As we celebrate our VTR Silver Jubilee, we reflect back on the growth of an industry.

The past 25 years have been exciting! Ampex innovation and the talents of the men and women in broadcasting have made the past quarter century one of significant achievement.

### **You made it happen like this.**

**1956.** Ampex introduces the VR-1000, the first commercial videotape recorder. Later that year, history is

made with the first videotape delayed coast-to-coast broadcast of Douglas Edwards and the CBS News.

**1957.** One of the first videotaped commercials featured Dennis James presenting Kellogg's Corn Flakes.

**1959.** Richard Nixon and Nikita Khrushchev were videotaped in Moscow during their celebrated "Kitchen Debate."

**1960.** Broadcasters began an Ampex tradition by capturing the 1960 Rome Olympics on videotape.

**1962.** Ampex introduces the first electronic editor.

**1964.** Ampex introduces a major breakthrough, high-band color videotape recording.

**1967.** Ampex introduces instant replay.

**1972.** Ampex introduces an automatic video cassette recorder.

**1976.** Ampex introduces an automatic tracking system.

**1980.** The VPR-2B becomes the world's best selling videotape recorder when Datacommunications takes

delivery of number 2,000, in Paris.

**1981.** Delivery to McDonnell Douglas of the 3,000th VPR-2B continues the legacy. The VPR-2B remains the world's most widely used videotape recorder.

**We'll share the future.**

Our dedication is as firm today as it was 25 years ago. Count on Ampex tomorrow for better ideas in video and audio technology.

## SBE certification exam dates set

The Society of Broadcast Engineers (SBE) will give the eighth round of certification examinations from June 6 through June 20. All applications must be received at the SBE national office by April 20.

Since the SBE Certification Program was adopted in November 1975, 1,684 broadcast engineers have been awarded certification. At present, 1,053 of the certified are SBE members and 631 are non-members.

The objectives of the Certification Program are to raise the professional status of broadcast engineers by providing standards of professional competence in the practice of broadcast engineering, and to recognize those individuals who meet those standards of professional competence. It is also the interest of the SBE to encourage broadcast engineers to continue their professional development.

According to Jim Wulliman, certification chairman, interest in the program is growing. During the last six months, the number of inquiries for information on the Certification Program has increased dramatically. Wulliman stated that many employers are urging their engineers to become certified, and when hiring are seeking "certified" engineers.

There are two classes of certification; each are valued for a period of five years:

The Broadcast Engineer level requires that the individual have five years of suitable experience in broadcast engineering to be eligible to take the exam. For the Senior Broadcast Engineer level, one must have 10 years of responsible broadcast engineering experience. Broadcast engineering-related education may be substituted for up to four years of the experience requirement.

The examinations are prepared by the National Certification Committee and are administered by the local SBE Chapters under the supervision of pro-

*Continued on page 24*

# Hitachi-5 Competition-0

That's the score in one-inch VTR technology.

We've gone the first generation of TYPE C machines *five* better...to help you get all the potential of one-inch out of your video installation. Here's what the competition *doesn't* give you.

• Tape guide retracts for threading ease • Air drum eliminates head contact in shuttle/standby modes

## 1. Retracting Tape Guide

Retracts for unequalled ease of threading; repositions with one micron accuracy for up to two million threadings. Provides the reliability of a quad thread system in a one-inch format.

## 2. "PRO" Tape Path

The protective reverse oxide ("PRO") configuration of the tape path means *only* the video and audio heads touch the oxide surface. All other transport mechanisms guide the tape by its reverse side. Result: noticeably reduced dropouts; longer tape life.

## 3. Instant Head Replacement

Pre-aligned head design permits easy replacement of video heads in three minutes. No adaptors or jigs; no adjustments required.

## 4. Audio and Video Confidence

The others only let you *see* what you're taping. We let you *see* and *hear* everything being recorded...simultaneously.

## 5. Non-contact Tape Shuttle

In shuttle and standby modes, tape rides on a cushion of air. Increases head and tape life immeasurably. Cuts frictional

resistance, yielding shuttle times of only 80 seconds end to end.

We could go on. With impressive features like microprocessor control; broadcastable slow motion; one-touch shuttle and jog; front access circuit boards; audio spot erase; and on and on. But why run up the score, when it's already no contest? See the Hitachi HR-200, it's equally impressive portable HR-100 model, and companion TC-200 Time Base Corrector.

• Full audio and video confidence  
• "PRO" tape path reduces dropouts

tors who themselves must be certified. Special arrangements may be made for anyone eligible for the exam who does not live in an area of an SBE Chapter. The fall 1980 certification exams were given in 33 cities in the United States and one in the Philippines.

Due to the workload of *recertifying* the initial group of certified engineers, SBE will not be giving the exams in the fall of 1981. There will be a special exam session in February 1982 for those engineers wishing to recertify by ex-

amination rather than professional credits. (A note to those who were certified by SBE in 1977 under the grandfather provision. If you are *not* a member of SBE, you must update your address with the national office so information on recertification may be sent to you.)

Anyone interested in the spring certification exams may request a copy of the Certification Program booklet and an application by writing to the Certification Secretary, SBE, P.O. Box

50844, Indianapolis, IN 46250. Included in the booklet are sample test questions, suggested study material, and a list of the SBE Chapters where the exam may be taken.

The SBE is also holding its national meeting on Saturday, April 11, in Las Vegas, prior to the opening of the NAB convention.

## Radio voice remains strong

Despite all the discussion about "one voice" in the industry, there is continued, and growing, interest among radio broadcasters to prevent *their* voice from singing backup to television's lead.

An indication of this growing concern for the specific needs of radio is the increasing membership in the National Radio Broadcasters Association (NRBA).

According to figures just released, the NRBA currently has 1500 members, with more than 400 commercial radio stations and radio-related companies joining last year.

Commenting on the growth of the NRBA, Abe Voron, executive vice president, said, "It has been a year of high visibility for radio. National advertisers and advertising agencies re-discovered the pulling power and economy of radio in 1980, while the FCC submitted proposal after proposal that would be either costly or would continue to erode license stability.

The vitality and growth of NRBA is no accident," Voron continued. "More and more station owners and managers recognize the need for an organization whose sole interest is radio and whose management is its board of directors made up of broadcasters rather than a large professional staff."

The 412 new NRBA members include independent and group-owned stations from 47 states, the District of Columbia, Puerto Rico, and Canada.

Of the 342 new commercial stations, 149 are independent and 193 group-owned, while the 70 new associate members are radio-related manufacturers, distributors, suppliers, consultants, and educational radio stations.

States attracting 10 or more new members were Alabama, California, Florida, Illinois, Indiana, Massachusetts, Michigan, Mississippi, New York, Ohio, Pennsylvania, Texas, Virginia, and Wisconsin.

Major, medium, and small markets are represented by the 28 groups that joined NRBA in 1980. They include Bristol Broadcasting; Chartcom Inc.;

*Continued on page 26*

# editors' choice.

**COMMANDER II** — the market's newest video tape editing system offers some significant differences.

United Media has taken a totally new look at the desires and requirements of the industry in developing Commander II.

The results — a technologically superior editing system at a significantly lower price.

Like \$40,000 for a complete 4 VTR system — any combination of playback and record for multiple format masters (expandable to 3 more VTR's plus switcher).

Like automatic switcher control for double re-entry with 3 independent M/E amplifiers.

Like video levels variable in 10% increments with mix rates from 1 to 999 frames.

Like automatic cut listing with a single keystroke — and automatic list management for shortening, lengthening or rearranging scenes.

Now editors can have a real choice. judge for yourself — call Bob Ricci at 714/630-8020 today.

See us at Booth 1711.

## United Media

4075 Leaverton Court, Anaheim, CA 92807

Circle (19) on Action Card

A professional Ikegami HK-357A video camera is shown mounted on a tripod. The camera is white and black, with a large lens and various controls. The brand name 'IKEGAMI' is visible on the front panel. The camera is positioned at an angle, showing its side profile.

## Ikegami's third microprocessor-controlled camera reduces registration set-up time and cost

The ideal camera for field broadcast television assignments must meet three major criteria. It must be air-ready moments after arrival at the camera site. It must deliver pictures of studio-quality color, crispness, and clarity. And it must be consistently reliable.

The Ikegami HK-357A meets those criteria in the field and is equally suitable as a studio camera. And it allows the camera crew to concentrate on creative aspects of their assignment instead of on time-consuming set-up and readjustment tasks.

Once on-site, the HK-357A requires hook-up to only three cables and power source. Then, a push of the microprocessor activate button automatically cycles it

through a check and recheck of all set-up and registration adjustments. This takes approximately 45 seconds per camera (up to six cameras can be handled). No external registration and chip charts are necessary because a test pattern projector (diascope) is built into the lens. Camera distance from the compact base station can be nearly a mile with triax, or 2,000 feet with TV-81 multi-core cable.

Because the HK-357A optimizes the capabilities of the newly developed Diode Gun Plumbicon<sup>®</sup>, the picture output is of very high resolution, low lag, low noise and wide dynamic range. Dynamic Beam Stretch to reduce comet tailing; Geometric Correction for near-perfect registration; auto iris and auto white balance — all contribute to the superior color picture program output of this camera.

The HK-357A is notably versatile too. It offers selectable contrast compression levels; built-in chroma keyer; gen-lock to Sync and SC or VBS BBS; and several other features, including an unusually compact CCU, optional RCU, tiltable and rotatable 7-inch high-resolution electronic viewfinder.

The performance record of Ikegami cameras at the major networks in the United States and around the world attests to their consistent reliability and long, trouble-free service life.

If you are upgrading, a demonstration may well reveal that the other cameras you've considered may already be obsolete when compared against the HK-357A.

## FCC REPORT

### CNN gains temporary use of Satcom I

BY RON MERRELL

The FCC has extended temporary authority to the Cable News Network (Ted Turner's CNN operation) to use one Satcom I satellite channel to transmit CNN's all-news programming to cable operators in the U.S., Hawaii, Puerto Rico, and the Virgin Islands. The extension is for a six-month period that will end in September, and the temporary aspect of it is a blow to CNN.

CNN got onto Satcom I as an emergency relief measure, because CNN had geared up to launch its network on Satcom III. That satellite was lost shortly after its launch, and its failure left CNN in ulcer gulch. While everyone is being enticed to look to satellites for remotes and programming, the fact is that you can't just jump into any old satellite onto any transponder. CNN estimates it could cost as much as \$11 million to establish an alternate distribution system.

On the direct satellite-to-home (DBS) front, the Commission says it has found no basis for the FCC to determine that traditional types of regulation are necessary to assure that this new mode of delivering satellite programming serves the public. So much for consistency!

But deregulation is the buzz word in Washington. Commenting on the most recent actions and striking directly at community ascertainment, the NRBA's Abe Voron makes an interesting point. "Upon first hearing," he said recently, "it appears that the Commission's deregulation action is a mixed bag for radio broadcasters. While it eliminates some red tape and paperwork, it also seems to add a considerable amount of uncertainty, vagueness, and subjectivity. Calling this deregulation seems to me to be a misnomer. Re-regulation is a more accurate term."

Well, even inside the Commission, nagging doubts and unanswered questions exist even today.

Commissioner Abbott Washburn, commenting on the subject, put it this way: "What do we mean by a 'generalized obligation'? This is not clear from our document. Without a fuller explanation, I feel that the broadcasters will be unable to discern what it is that the Commission expects of them. The result will be a good deal of uncertainty and differences of interpretation.

Washburn continued, "I also wonder how the general public will react to our conclusion that the market forces can be relied upon to assure programming responsive to community needs. There are significant portions of a station's community that have little market power—such as the elderly, the urban poor, and the handicapped. How, then, will the marketplace assure these groups of programming responsive to their needs?" Score another one for consistency.

Meanwhile, an Atlanta station was nailed for broadcasting illegal numbers information, and it cost them \$10,000. It had been recommended that the station lose its license, and it was saved only by a public affairs, public service, and non-entertainment record that had the station ranked near the top of these categories in a 21-station market.

In the dits and dahs column . . . the FCC has eliminated the deadline for non-commercial educational Class D FM stations to file construction permit applications to increase their power in the reserved band . . . a Chicago experimental teletext service gets one-year authorization. The service will be run over the broadcast facilities of WFLD-TV, Channel 32 . . . the FCC has allocated a portion of the spectrum for a new digital electronic message service. It'll run between 10.55 and 10.68 GHz.

NRBA's 1980 convention in Los Angeles was a further indication of radio broadcasters' interest in exchanging the latest information on operations, programming, sales, promotion, management, and engineering. More than 4,300 registered for the Los Angeles meeting. NRBA expects a similar turnout at its 1981 meeting, September 20-23, at the Diplomat Hotel in Hollywood, Florida.

## Business Hotline

**HOWELL LABORATORIES**—Paul Wescott, president of Howell Laboratories, has announced the purchase of Shively Laboratories of Raymond, Maine. Shively Laboratories is a leading manufacturer of FM antenna systems and components for the broadcast industry.

The Shively Division's production will continue uninterrupted, using its present facilities and personnel, pending a move to a new facility being built in nearby Bridgton, Maine. This larger plant will permit a significant production expansion. Edward Shively, the founder and president of Shively Laboratories, will continue to be associated with the business on a full-time basis.

Howell Laboratories is a major supplier of shipboard dehydrators to the U.S. Navy. The acquisition of Shively Laboratories gives the company access to non-military markets. The corporate offices for all products will be located at Gibbs Avenue, Bridgton, Maine 04009. The phone number is 207-647-3327.

**SINGER BROADCAST PRODUCTS**—Arthur A. Singer, chairman of Singer Products Company of Westbury, N.Y., has announced the formation of Singer Broadcast Products, which will manufacture both CCA and Sintronic transmitters.

The new company has purchased the assets of CCA Electronic Corporation and will produce the complete line of CCA AM and FM broadcast transmitters and UHF and TV transmitters at CCA Electronic Corp.'s former plant in Cherry Hill, N.J. The Sintronic AM and FM line will also be manufactured at the Cherry Hill plant.

Donald A. Richardson has been appointed executive vice president and Joseph T. Consaldi has been named vice

# ADM

Control the complete audio spectrum

## Our ADM 1600: modest but mighty

Although it's a desk-top model, our 1600 Series audio console offers a brilliant array of features and capabilities for handling the most demanding program material.

One of our new breed of consoles, the ADM<sup>®</sup> 1600 is available with up to 16 discrete inputs, 4 submaster and 2 master outputs. Combined with a host of pre-selector, buss selector and processor modules, the ADM 1600 creates perfect harmony with today's video. Like all ADM consoles, the 1600 is designed to exacting standards and manufactured to the most rigid tolerances. Each ADM console is backed by an exclusive 5-year warranty.

Make sure you control the entire audio spectrum. Contact ADM Technology, Inc., *The Audio Company*, 16005 Sturgeon, Roseville, MI 48066. Phone (313) 778-8400. TLX-23-1114. West Central Sales Representative, Gordon Peters. Phone (817) 467-2990.

president for sales and marketing.

The production of both lines by one company will benefit broadcasters, according to Mr. Singer. Improvements will be seen in customer service, whereby Singer Broadcast Products will offer parts and service for all CCA and Sintronic transmitters. Also there will be a major investment in research and development. "We intend to show a new commitment to broadcasters," says Mr. Singer.

Sinter Products Company Inc. is the parent company of Singer Broadcast and is one of the nation's leading international marketing and management companies.

**CSI ELECTRONICS**—CSI Electronics, a major manufacturer of AM and FM broadcast transmitters, has been purchased by its original founder, Bernard Gelman, and Ft. Lauderdale, Florida-based broadcast equipment suppliers Ken and Betsy Ebert Cameron, owners of Broadcast International Inc. CSI is moving into newly constructed headquarters located at 18248 East Rogers Circle, Boca Raton, FL 33431; (305) 737-5626. CSI will

continue to market through their regional sales managers, and distribution of CSI products in Latin America will be handled by the Electrex Company.

**XEDIT CORPORATION**—Beginning in January 1981, Editall (founded in 1952 by Joel Tall) has been acquired by Xedit Corporation. Xedit, with its own extensive experience in the design and manufacture of precision splicing blocks and electronic products, will base this combined operation from its plant at 133 South Terrace Avenue, Mt. Vernon, N.Y. Their telephone number is 914-668-0388.

**ACRODYNE INDUSTRIES**—Acrodyne Industries, manufacturer of low-power television translators and transmitters, has moved into new facilities. The larger, more spacious facility is surrounded by 10 acres of property located in a modern industrial area on Township Line Road, Blue Bell, Pennsylvania. The company is presently located in Montgomeryville, Pennsylvania.

**CENTRAL DYNAMICS**—Central Dynamics has added more than 20,000

square feet of manufacturing space (30 percent increase) to their existing main plant and headquarters in Montreal, Canada. The latest automated and processing equipment has also been installed, including PCB assembly and metal fabrication equipment, and a REDAC computer system used for PCB design, layout, and artwork. In addition, the most advanced software development DEC computer system has been installed in Central Dynamics' Montreal R&D facility.

**UTAH SCIENTIFIC**—The National Broadcasting Company (NBC) recently purchased a Utah Scientific large audio switching matrix for installation at WRC-TV in Washington, D.C. The matrix was configured as 160 inputs by 180 outputs audio only, with circuit cards initially furnished for 120 inputs by 120 outputs.

**ROBERT WOLD COMPANY**—Cox Broadcasting Corporation and the Robert Wold Company have signed an agreement whereby Cox will acquire 20 percent of Wold stock. The agreement also provides for possible increased participation by Cox in the future.

## SBE MONTHLY LOG

CHAPTER 2 — Northeastern Pa. George Anderson, sales engineer, measurement products, Tektronix, gave a presentation on the Tektronix AA501 Distortion Analyzer/SG505 Oscillator combination.

CHAPTER 9 — Phoenix, Arizona. Jerry Kerr, 3M Company, Mincom Division, presented a program on "Usage of Microprocessors in Switching and Machine Control Application."

CHAPTER 18 — Philadelphia, Pa. Jim DeStefano, vice president of applications engineering, Emcee, discussed low-power UHF. He discussed the FCC decision to license several hundred low-power UHF stations around the country, and what this will mean to other broadcasters.

CHAPTER 20 — Pittsburgh, Pa. Tony Mattia gave a presentation on the new Lenco 300 Sync Generation, Timing, and Distribution System, plus the Lenco model 430 Videoscope.

CHAPTER 22 — Syracuse, N.Y. Emery Grady of Videotek gave a presentation on picture and waveform monitors.

CHAPTER 26 — Chicago, Ill. C.E. Anderson, director of long-range product planning of Ampex, presented a paper on the latest development of digital techniques. He covered digital audio as well as digital video. This was a joint meeting with the Chicago SMPTE.

CHAPTER 28 — Milwaukee, Wis. Howard Elovitz and Lyn Bienert of Tektronix presented an interesting and detailed program on the uses of spectrum analysis.

CHAPTER 43 — Baltimore, Md. Wally Warren, Pat Morgan, and Nick Hudak of RCA gave a talk on the new RCA BTA-5ss, their new all-solid-state 5 kW AM transmitter. This machine has been under development for several years and is now being released for regular broadcast use. It is the first solid-state machine in this power class.

CHAPTER 47 — Los Angeles, Calif. Dale Manquin of Altair Electronics demonstrated a comprehensive diagnostic method of measuring tape transports for flutter, scrape flutter, and amplitude modulation.

CHAPTER 48 — Denver, Colo. The chapter meet for a round-table discussion on experiences and topics of current interest.

CHAPTER 50 — Fort Collins, Colo. The chapter is starting a technical library that will be for the use of members, who will be allowed to check out the books. First books to be ordered are the group written by the late Harold Ennes on AM, FM, and TV broadcasting. All current officers were re-elected for another year.

CHAPTER 53 — South Florida. Dave

Walters of Tektronix demonstrated and discussed the new AA501 digital audio analyzer plus the model 308 data analyzer.

CHAPTER 60 — Richmond, Va. An appreciation award was given to Mrs. Edythe Kyle in honor of her late husband, James Kyle. Mr. Kyle was a pioneer of television engineering and a friend of his fellow engineers. New officers for the coming year are Leonard Cowherd, chairman; Joe Sheets, vice chairman; and Donny Stevenson, secretary/treasurer.

CHAPTER 62 — Salt Lake City, Utah. Harris Video Systems Division of Harris Corp. brought in for display and operation their model 630 digital frame store synchronizer/time base corrector. They explained the design and uses of such devices as related to broadcast and other related fields.

CHAPTER 68 — Birmingham, Ala. Sonics Association Inc. demonstrated the new microphone PZM. Use of real time analyzer with computer demonstrated the superiority of the PZM mike in most situations and applications, especially in stereo.

CHAPTER 69 — South Texas. Russ Thalaker of Lenco, gave a presentation on using the SCH timing monitor scope to read and adjust color burst phase to meet FCCRS-170-A specifications.

# Profitable Production starts here!

Profitable production in the 80's requires efficient, cost-effective operation...which starts with cost-effective cameras. And Philips offers the greatest value in field and studio cameras today!

At NAB, Philips will combine live and taped demonstrations to focus on:

- New products, new features designed for the 80's.
- Demonstrations of production techniques used by some of

the most quality and cost-conscious broadcasters and production companies in the U.S. and Europe.

- How to increase bottom-line profits without sacrificing creativity or quality.
- Financing for equipment, van and studio.

It just may be one of the most profitable half hours you (and your Chief Financial Officer) spend at NAB. Don't miss it.

## Profitable Production starts here!

# GLOBALVIEW

## A video encounter

Video professionals from around the world will gather May 11-15 in London for the first International Video Week, a multifaceted encounter featuring several major video events running concurrently.

Site of the events is the National Film Theatre, located in the middle of London's arts complex, with the nearby Royal Festival Hall, Hayward Gallery, and Queen Elizabeth Hall. Sponsors of the events are the British Film Institute, the British Industrial & Scientific Film Association, The Economist, and the International Television Association.

The Economist Video Conference, scheduled for May 11-12, will feature sessions on current business and technical developments in video. Emphasis will be on the interaction between video and satellite TV, cable TV, video theatres,

broadcasting, publishing, and the film industry.

The First International Video Festival, May 13-15, will cover non-entertainment videotapes in a variety of categories, including sales, education, public welfare and social questions, public relations, recruitment, training, medical, and internal communications.

The International Video Forum, slated for May 12, is being hosted by the British Film Institute. The forum will bring the video press and those professionals involved in the industry together with subjects of mutual interest on the agenda.

Other events for Video Week include a video banquet, ITVA video workshops, and independent video production session.

For more information, contact Coordinating Chairman of International Video Week, John Chittock, 37 Gower Street, London WC1E 6HH (tel. 01-580 2842).

/// The 1980s will be a decade of reaction to big monolithic institutions and organizations. If commercial television continues to try to appeal to a mass audience that never really existed in the first place, then commercial television is doomed to go the way of Life, Look and The Saturday Evening Post. ///

—Sy Yanoff, vice president and general manager of WBZ-TV, Boston, in comments before the Harvard Graduate School of Business Administration.

## "R" you ready?

Who says sex doesn't pay?

In Phoenix, Arizona, the local subscription TV service, ON TV, is reaping the rewards from adding an "R" factor to its program offerings.

In this case, the R-factor consists of R-rated motion pictures shown late at night.

Since October, when ON TV began promoting its "Adults Only" programming package, over 12,000 new subscribers have signed up.

Commenting on the success of ON TV, Richard Whitman, vice president and general manager, said 65 percent of all new subscribers purchased the service during its inception period and to date, 63 percent of ON TV's subscribers have responded to the innovative adults-only service.

ON TV's success is even more incredible when it is considered that there has not been any advertising push regarding Adults Only programming since October.

In keeping with the public interest, ON TV has agreed to show movies containing R-rated material no earlier than 11:30 p.m., Tuesdays through Saturdays.

## The violence factor

The effects of television on children is perhaps the most thoroughly researched, hotly debated subject in the English-speaking world.

The controversy is still simmering in the U.S., and it is gathering momentum in such countries as Canada and Australia.

But what does the evidence show?

In a recent article in COMBROAD, Dennis List, senior research officer for the Australian Broadcasting Commission, summarized some of the findings.

In a review of 67 studies on the impact of television violence on children, three found viewing TV violence was inversely related to personal violence, 14 showed no relationship, and 56 showed a positive relationship between viewing and committing violence.

As far as the effect TV has on children's other activities, List says since children view television during their spare, unstructured time, there is "little effect on social activities, hobbies, and reading."

Despite the many studies on the effects of television, however, little has been done in the area of imitation of behavior, speech, and thoughts seen on television.

Says List: "... studies of TV's effects have mostly concentrated on unusual behavior, such as violence, which by definition, does not affect everybody. Therefore, much of the research on imitation of behavior seen on TV (apart from violence) has focused on altruistic or pro-social behavior. Studies have found that TV can teach children to share, increase their self-control, and allay fears about dogs and dentists.

# BRING THE EVENT HOME WITH

News, sports, entertainment . . . whatever the event, big or little, bring it home with Wold Communications. Wold offers what it takes to get your live broadcast signal off the ground and where you want it.

Terrestrial long lines, space-borne transponders, satellite earth stations, both fixed and transportable. Uplinks and downlinks. Wold Communications has this and more to meet your radio and television electronic delivery needs.

From its first satellite transmission of a live sporting event in 1975 to the return of the freed hostages from Iran in 1981, Wold Communications has been there. For almost a decade Wold has handled point to point feeds of nearly every major league team.

Cost efficient, unchallenged in experience and reliability, Wold has interconnected radio and television networks to meet the specific needs of broadcasters, producers, syndicators and sponsors.

Call a Wold representative and see how we can bring your next event home.

# NEWSMAKERS

**Leonard Kahn**, president of Kahn Communications, was recently honored by the Radio Club of America for his outstanding achievements in the field of AM stereo broadcasting. For his contributions, Kahn received the prestigious Armstrong Medal, named after the inventor of FM radio.

**Ron Seaberg** and **Dick English** of the TelComm Products Division of 3M Company accepted the annual Anixter-Pruzan Suppliers Appreciation Day award for 1980 during ceremonies at Anixter-Pruzan headquarters in Skokie, Illinois.

**Dr. Douglas A. Pinnow**, director of optical fiber research and development at Times Fiber Communications, has been appointed chairman of the Optical Communications Technical Group of the Optical Society of America. Pinnow's primary job will be organize various sessions of the Group and to contribute to the Society's annual report. Dr. Pinnow was also elected chairman of a joint steering committee for planning future meetings on optical fiber communications that are sponsored by the IEEE and OSA.

**Mark O'Connell** takes over as news director for KGCT-TV in Tulsa, Oklahoma. O'Connell came to KGCT from Tulsa radio stations KRAV/KFMJ where he also served as news director. He is a member of the board of directors of the Oklahoma Associated Press Broadcasters, and has experience as a reporter and anchor with WRIT/WBCS in Milwaukee.

**Darrell Aune**, sports director of Portland radio station KEX and voice of the Oregon State Beavers, has been named Oregon's "Sportscaster of the Year—1980" by the national Sportscasters and Sportswriters Association. Aune became sports director at KEX in 1970. This is the seventh time in those 11 years that he has received this award. He will be honored at the annual Sportswriters Association's awards program in Salisbury, North Carolina, April 5-7.

**Richard Kale** resigned as president of Golden West Broadcasters' radio division to pursue other interests. Commenting on his decision, Kale said, "This is solely a personal decision. After 12 years with the company, I feel I need to pursue some new challenges.

**Vincent Casalaina**, **Frank Jett**, and **Edith Munk** have joined the staff of Premiere, the newly formed satellite programming network. Casalaina is the new director of in-studio productions. Jett, named network uplink manager, will be responsible for the administration of the broadcast origination facility in Bristol, Conn., for the East and West Coast network feeds. Munk was named affiliate services coordinator.

**Lee Ann Lee** has assumed the position of director of development for Vermont ETV. Lee, a Vermonter who has been managing public television development for a Texas station, will head fund-raising activities at ETV.

*Continued on page 36*

## Building Blocks for System Automation

**171 NAB 33**

How would you like computerized videotape editing, automatic program start/stop & VTR switching, and automatic window dub production? Too expensive? Not with CVC's "Building Block" approach to system automation.

### It's All In The Cards

Begin with CVC's micro-processor-based Intelligent Controller™. Plug in the Controller card, and you have machine control. Touch a button, and the Intelligent Controller automatically inserts time code and puts your VTRs in the appropriate recording mode.

Add CVC's Keyer and Reader cards, and you can burn in a window so you can position SMPTE, machine status, X's play, and other data on the monitor.

Plug in CVC's Synchronizer card and you can lock video to video, or video to audio.

### The Lightfinger™ Touch

So far, you've got machine control and synchronization. Add the exciting new CVC Lightfinger Edit module, and you're ready for computerized editing.

Anything from a simple SMPTE writer to two-machine editing — that's CVC's "Building Block" approach. All within the same Intelligent Controller unit!

### Begin Building Today

CVC's modular approach and advanced microelectronics allow you to begin building your system today. Without worrying about obsolescence tomorrow. To add to or upgrade your system, you simply plug in a card. That's affordable automation. And, our user-oriented software makes using the Intelligent Controller easier than you might think.

Find out more. Call or write for more information and the name of your nearest dealer.

# "WHY USE WELLFLEX"

## Optimum Design

Cablewave Systems offers Wellflex Transmission Lines designed to meet your most stringent electrical and mechanical requirements.

Highly reliable, the unique Wellflex construction provides a combination of strength and flexibility with optimum performance.

Outstanding electrical parameters include extremely low RF loss, smooth impedance coefficient, and conservatively rated power handling capability.

Wellflex is available with either air or foam dielectric with copper corrugated outer conductor, solid and corrugated inner conductor (depending on size), and with a tough, curable, corrosion resistance polyethylene jacket suitable for burial and prolonged life.

Air Dielectric Wellflex in smaller diameters, ( $1\frac{1}{2}$ " and  $7/8$ ") offer a field proven, fixed helix design called Spirafil II—a single, continuous extrusion which locks the center conductor coaxially within the outer conductor, resulting in a near perfect impedance coefficient throughout the entire length of line.

## Optimum Performance

Larger Diameter Air Dielectric Wellflex Cables, ( $1\frac{5}{8}$ ", 3",  $3\frac{1}{2}$ " and  $4\frac{1}{2}$ "), feature a unique vertebra helix design to achieve optimum crush and tension strength. Its "pillar effect", using less volume of dielectric, provides lower loss and higher power handling capability due to the more rapid dissipation of heat from the center conductor.

Wellflex has it all: low loss, low VSWR, higher power handling, smoother impedance coefficient, and rugged, long dependable life.

Cablewave System's Wellflex is type accepted for sampling systems in accordance to FCC Part 73.38.

# We've been since it was

# big in video small.

We've believed in video from the beginning. Just like many of the producers we service today. And as they've grown, we've grown. Because we always had the best equipment, and the guys who could help you work it right. And maintain it to keep it working right.

Today, nothing's changed. Except now we have over 100 helpful pros and the most complete line of equipment available any-

where. Everything including video cameras, lenses and accessories, terminal equipment, processing equipment, switchers, video projectors, videocassette recorders, editing systems, etc. We carry virtually every important equipment name you could name. And all at competitive prices, whether you buy, lease or rent. After all, we didn't get big by being small.

## Business Moves

Jesse Blount, Jr., has been named vice president and general manager, and William H. Borman, director of marketing, at the ADDA Corporation. Blount is a founder of the four-year-old company and was formerly vice president, marketing. Borman, who was national sales manager, will assume Blount's marketing responsibilities. In his new post, Blount will be responsible for all line operations including marketing, manufacturing, engineering development, and special products.

Andy Rector has been appointed executive vice president of manufacturing at International Tapetronics Corp. Rector has been with ITC since its formation in 1969. Also at ITC, Larry Cutchens has been appointed marketing manager. Cutchens joined the company in 1978 as technical service manager and assumed the duties of sales manager in 1979.

Jeffrey Halnon and John Paul Grogan have joined Candex Pacific, an engineering consulting firm in Redwood City, California. Halnon comes to Candex with experience in both circuitry and software design of data-communications and military-testing systems. Grogan is a recent engineering graduate of Purdue University, where he was involved in several projects in microcomputer digital design.

J.A. "Tony" Martinex is the new regional sales manager for Central and South America and the Caribbean area for Opticom S.A. of Geneva, Switzerland, general sales agents for

Angenieux products in most parts of the world. Martinex, formerly with RCA, will be based in Miami, Florida.

Ian Robertson, formerly engineer for KING-AM/FM in Seattle, has joined Audio & Design Recording, the U.K.-based signal processing equipment manufacturer. Robertson will head up the broadcast division at Audio & Design's U.S. headquarters in Seattle.

Steve deSatnick recently accepted the position of vice president, operations, at California-based U.S. Video Corporation. DeSatnick was formerly with Community Television of Southern California; KCET, as vice president, operations and engineering; and prior to that was director of engineering for Boston Broadcasters Inc. He will be in charge of all operations for the Hollywood and Burbank facilities of U.S. Video.

Patric Donaghy is the new national marketing coordinator for AKG Acoustics. His responsibilities include the management of the artist endorsement program at AKG and other public relation activities. All promotional literature, sales/incentive programs, and advertising scheduling will also be coordinated by Donaghy.

James G. "Butch" Fadely, recently named regional manager for RF Technology, is representing the company in sales of microwave systems and wireless microphones in the Midwestern states from the Canadian border to the Gulf of Mexico.

## Unbeatable with this single SFX fader!

One SFX Amplifier gives you...

- complete control of 4 video sources, individually or in any combination...
- you are never locked out...
- plus, you can preview any transition without affecting the On-Air signal...
- all with the same fader handle!

And that's just part of the CD-480 story... the first new generator switcher and still the most powerful available today. Plus there are 7 models designed to meet any requirement, and priced from \$25,000.

Remember. When it comes to switcher power, make sure you talk to CDL for the full story. Over 300 customers have, and they now have the CD-480 competitive advantage.

The CD-480 Möbius Loop logo symbolizes the recirculating effects capability of the CD SFX Amplifier.

You can cut, mix or wipe between 2 Background and 2 Key sources individually or in any combination with a single SFX fader handle.

BROADCASTERS PROMOTION ASSOC.

# Inflate your station's promotions

BY LYNNE WALKER

Imagination has always played an important part in the appeal of radio; though mental images differ from listener to listener, the old timers among us know exactly how "The Shadow" looks, while our children have strong pictures of Elton John's "Pinball Wizard."

In the past few years, imagination, coupled with a taste for the innovative and a feel for whimsy, has led some stations to conjure up images of their own, in the shape of oversized air-filled figures and billboards that use "the third dimension."

Designed and manufactured in San Diego by Robert Keith & Company, the cold-air filled forms are made from colorful puncture-resistant, heavy-gauge, vinyl-coated nylon, sewn and welded into all sorts of shapes.

"Though we've designed inflatables and 'The Third Dimension' billboards for hundreds of clients throughout the world for five years, we haven't focused on the radio market, so stations still have the opportunity to be 'first in town' with an inflatable," says Robert Vicino, president of Robert Keith.

Word of mouth has been effective; even without a sales campaign, the number of inflatables made for radio promotion is increasing.

The newest—and sexiest—of the radio figures is KRAM's 30-foot-tall cowboy, who can assume the reclining pose of Burt Reynolds a la *Cosmopolitan* magazine or sit more sedately atop a building, legs dangling over the side (see illustration). Booted and blue-jeaned, haystack in mouth, the Las Vegas cowboy can hold either a banner or a 6½-foot diameter helium ball that may also be used separately for remotes. Already booked for a March parade and rodeo, the inflatable's first major Las Vegas appearance will be at the NAB convention in April.

The cowboy will travel in his own van to several locations daily, chaparoned by a three-person crew, according to Bill Berkey, KRAM's general manager.

In tandem with the oversized figure, KRAM also commissioned a 12-foot-high cowboy head for rotary billboard displays throughout the year, spending two months at each of several prime

hospitals, toured neighboring communities, all the while creating positive public response.

With uncertain winter weather, use of the camel has been limited, but during the rest of the year demand is high—school dances, resorts, grand openings for station clients, auto and boat shows, shopping malls—the settings vary daily.

At KMEL's sister station in St. Louis, there's Sweet Meat the Pig, a pig's head named 14 years ago in a KSHE listener contest, now reproduced in red nylon, complete with earphones and sunglasses. With blinking lights installed inside the head, Sweet Meat appeared at KSHE's "Night at the Blues" to honor St. Louis' pro hockey team; he's also attended rock concerts and was part of a national cerebral palsy telethon. As an album-oriented rock station aimed at listeners between 18 and 34, KSHE also uses Sweet Meat in

community projects involving young adults.

"We chose an inflatable for promotions for three reasons: our pig's head lent itself well to the unusual structure, our sister station had incredible luck with the KMEL camel, and we wanted to have the first inflatable in St. Louis," according to Shelley Grafman, KSHE executive vice president.

Not all radio inflatables are "living." A cross between Toonerville and "I think I can," WTRW's Tower Trolley was inspired by Detroit's three renovated trolleys that run alongside the city's river.

"We think of the trolley not as a promotional vehicle," puns Terry Sobania of WTRW, "but as the station's tribute to Detroit." The 15-foot-long streetcar, the first self-propelled inflatable that Robert Keith has made, can carry people on each of two platforms. After making its debut in the nationally

*Continued on page 40*

locations in the city. Imprinted on tee shirts and belt buckles, the cowboy head has long been a part of KRAM promotions, but the body is new... designed by Robert Keith.

"If a radio station already has a mascot, adapting the design into an inflatable is easy; it only takes imagination on the part of the station and a willingness to try something different in promotion," notes president Vicino, who cites the success of one San Francisco station that transformed its mascot into an enormous bit of whimsy.

"When I suggested a larger-than-life inflatable replica of our camel, the powers-that-be at KMEL looked askance but took the risk," remembers Rick Lee, vice president and general manager of the album-oriented rock station.

It paid off. Known as "The Beast of the Bay," the 30-foot fellow has drawn free publicity, appeared in numerous area benefits, visited children's

When It Comes To Professional Editing,  
**VANGUARD** Creatively Does It All

- Controls 5 VTRs plus switcher and DVE
- Performs A/B rolls and A/B/C/D sync'd rolls
- NTSC/PAL/SMPT/EBU code or control track operation, insert or assembly
- Interfaces for over 40 types of tape decks and film chains
- Dual VaraScan™ variable speed tape search controls
- 999 event edit list memory
- Uncomplicated, powerful edit list management
- Auto-assembly from up to 4 sources

- Paper tape or floppy disk edit list I/O in industry-standard formats
- Five-tier time code scratchpad memory
- Built-in scratchpad time code calculator performs mixed drop/non-drop frame addition and subtraction
- Edit and split times can be marked on-the-fly or keyboard-entered
- Auto-tag, with override
- Well organized editing status display on eye-soothing green CRT screen; dedicated function, color-coded keyboard
- Selectable preroll, postroll and reaction time

Vanguard leads the way in giving creative editing professionals innovative new editing system features that add new dimensions to the editing craft. Latest in a long list of Datatron firsts is SmartScan™ learn mode variable motion editing. This feature opens the door to a dazzling array of slow-mo, high-speed and freeze-frame edit effects. SmartScan lets you speed the action up, slow it down, freeze it or change directions, all with a single slide control; every move you make is memorized by the Vanguard system, faithfully repeated in your next edit, and reflected in the edit decision list. Perform freeze-frame edits automatically, with or without

subsequent learned motion; compress or expand edit segments to fill time slots — automatically; select exact, calibrated play speeds for your VTRs over their full speed range. All this and more can be accomplished quickly and easily with Vanguard's SmartScan feature. There simply isn't another editing system you can buy that comes close to Vanguard's capabilities. **BE A TREND SETTER; GET A VANGUARD**

MAKING CREATIVE EDITING AFFORDABLE

Circle (17) on Action Card

televised J. L. Hudson's Thanksgiving Day parade, the trolley was displayed at Detroit's Renaissance Center, home of Tower 92. No extensive plans have been made for station promotionals, but Sobania anticipates use of the trolley in parades and for community celebrations.

Not all radio inflatables are free-standing. The KRLD football billboard has generated more positive response than any other KRLD outdoor campaign, observes the station's vice president and general manager, Carl Brazell.

Extending 12 feet from the board, the football was flanked by "Cowboy Football, CATCH IT!" on one side and "KRLD" on the other, calling attention to the Cowboy's flagship station.

"It's difficult to come up with visual concepts to advertise radio, especially for an all-news station. We want all our promotions to say *wow*," Brazell says. "The football board was an exciting exploitation of a novel concept in outdoor advertising, a natural for an inflatable, and was received enthusiastically by the Dallas team."

KRLD used the same design of four flat boards. "The effect of the inflatable was fantastic, especially if you'd seen the one-dimensional boards. People who say the 3-D version certainly did a double take," he says.

Only one television station has entered the "inflatable market," so the chance to be a front-runner in outdoor promotionals is available, Vicino notes. WTOG in Florida saw the local version of *PM Magazine* gain in shares after putting up two billboards, each featuring a 15-foot-tall hot-air balloon in rainbow colors and with real wicker baskets, promoting *PM Magazine*.

Look closely for four Portland disc jockeys peering through the windshield of a flying KEX Volkswagen. The winged auto extends 12 feet from the board.

Robert Keith is in the process of developing two- to three-foot-long mouth-inflated versions of larger inflatables, to be sold as premiums or given away as contest prizes.

Recognizing how difficult it can be to find a design for a station that has no visual theme piece or mascot, Vicino finds that his company becomes an ad agency by suggesting possible designs. "There are hundreds of possibilities for interesting and novel inflatables or billboards—call letters or a symbol that represents the station, such as cowboy boots or hat for a country music format," Vicino says. His firm has already designed a generic billboard that features a transistor radio along with phrases that identify individual stations.

The station that has a small advertising budget might consider purchasing a

helium balloon or blimp that costs as low as \$350, can be personalized with call letters or a station logo, and works well as a continual display or for remotes, Vicino suggests. A banner can be hung from the form, to customize the display for each promotional event.

One or two people can inflate and anchor a cold-air free-standing figure in less than a half hour, using a 110-volt electric fan/blower system that forces cold air into the form. The oversupply of air compensates for normal air leakage and keeps the form inflated in case of punctures, which are easily repaired. The billboards operate on the same principal, but are easily mounted on existing boards with as few as 12 bolts.

While durability of the inflatables makes permanent display practical, portability and ease of installation makes it possible to transport the figure to different sites, an asset for varied radio promotions. Resistant to puncture or damage from high winds, rain, snow, or freezing temperatures, the inflatables are guaranteed for one year, though Vicino estimates a five-year life and suggests amortizing the cost over a 24-month period. He notes that, despite almost constant use over nine months, the KMEL camel is still in mint condition.

Cost depends on the complexity of the figure and detail of artwork. Robert Keith & Company is located at 8847 Complex Drive, San Diego, California 92123; (714) 565-1507.

It's catching on... The "Third Dimension" in outdoor display advertising is illustrated by this oversized puncture-proof inflatable football that seems to explode through a Texas billboard. Killer whales and aluminum cans are also among the nylon figures that can protrude up to 10 feet, are quickly attached and easily rotated to existing boards. Designer is Robert Keith & Company of San Diego, California.

Lynne Walker is with Nuffer/Smith Associates, San Diego, California. For more information on the Broadcasters Promotion Association, contact BPA, 248 W. Orange Street, Lancaster, PA 17603; (717) 397-5727.

## TECHNICAL SYMPOSIUM

# Voice synthesis sounds like help

BY PETER BURK

Speech synthesis is not a new concept. Development work has been under way for years (particularly in Europe) and practical systems are now serving a wide variety of applications.

Until recently, most systems were expensive or required extensive software support. Now, thanks to several relatively inexpensive synthesizer boards, automatic speech is well within the reach of many industries, including broadcast.

One particularly useful synthesizer is produced by Telesensory Systems Inc. of Palo Alto, California. The unit is self-contained (except for power supply and audio amplifier) on a three-inch square PC board, and features up to 64 words of vocabulary. The speech synthesis micro-controller was originally developed for the Speech Plus calculator, but with different vocabulary chips, the applications expand dramatically.

BROADCAST COMMUNICATIONS evaluated the S2C model, which contains a 64-word "ASCII" vocabulary. We found many broadcast applications, and tried several of them in a radio station environment.

Just to see what the unit sounded like, we bread-boarded simple TTL interface and made the 64 words switch-selectable. The voice is very intelligible, but certainly no challenge for your morning man. You probably wouldn't want to use the voice on the air except for special effects or novelty application. There are still many applications that the unit can handle well. Here are a few that we considered:

A means of checking the operation of the transmitter plant while away from the station has always seemed like a good idea. If the system required no special hardware at the remote location, even better. The S2C handles this chore easily. We interfaced the synthesizer to the transmitter control system at WKBW. By calling a special number you can listen to a report on the plant status. It sounds something like this:

"BEEP... EP equals nine point two six KV... IP equals six point zero three A... ICP equals three two point four A..." etc.

The loop repeats indefinitely. While

it would be possible to make the system interactive using a touch-tone decoder, it would then be restricted to touch-tone phones with polarity guards, and would of course be much more complex.

Another application involves using the synthesizer to verbalize alarm messages, both in the station and by pager to the on-call engineer. WKBW

presently uses an automatic alarm dialer to report any of eight alarm conditions to a list of phone numbers, including several tone and voice pagers. The number of each alarm that is active is beeped out any time there is a change in alarm status. The addition of an inexpensive S2A synthesizer will permit an untiring male voice to calmly announce the eight alarms. The house monitors can be fed with the same information.

Some stations provide a weather line for listeners to call for current conditions and the forecast. The forecast and sponsor messages are best done on tape, but the current conditions can easily be reported by synthesizer.

The unit could be interfaced to a Heath weather computer or similar digital weather instrumentation to constantly provide the most recent readings. In fact, this system would allow a simple means of gathering remote weather information in locations where the weather at the studios is not typical of the area being served.

The weather station can be located at a remote point such as someone's house, and accessed by telephone with no special equipment required to decode the information.

Automatic RPU transmitter identification is another candidate for synthesis. The synthesizer and logic to control it represents only a slight increase in cost over a CW identifier, and makes a nice enhancement to the system.

A voice slate in the production room can be used to mark master tapes with sponsor identification and the number of the cut. The number can be entered by setting BCD thumbwheel switches. The BCD values are then sequentially sent to the synthesizer using a simple TTL interface.

If you use a slow-speed logger or a recorder activated by the mike switch to air check, you might consider putting the time on the second channel using a synthesizer. Certainly not as elegant as a SMPTE time code generator, but a lot less expensive.

Your imagination is the only limit on the number of broadcast applications for a speech synthesizer. Custom vocabularies can be created for just about any imaginable use, although their cost suggests that an attempt should be made to live with the standard vocabularies now available.

Another approach is to use a synthesizer that allows programming in "phonemes," a sort of phonetic language. The only real objection to this approach is that it commits you to using a mini- or microcomputer to build and store the vocabulary. Most of the applications discussed here don't require that much support. That's the biggest attraction of the mini speech synthesis boards from Telesensory Systems: add an amplifier, power supply and a handful of TTL parts, and you have a system ready to operate.

*Editor's Note:* As we pointed out in last month's Technical Symposium, Telesensory Systems uses a linear predictive coding (LPC) speech-synthesis device.

LPC breaks the speech parts into four parameters (amplitude, frequency, pitch, and voicing) and puts them into a ROM (read-only memory) chip. The advantage of LPC is that software uses these basic parameters to create sound,

# "Frankly, we couldn't handle our current volume of business without our Computer Concepts System"

Harley Drew  
Operations Manager  
WBBQ, Augusta, Georgia

Harley Drew knows the radio business and computers. He knows the importance of preparing billing documents the way clients want to see them. "A customer may be flooded with invoices, but ours are paid first." Why? Because each customer of WBBQ gets his invoice the way he wants to see it, even with exact times listed, if desired. "We don't have the manpower to prepare these invoices by hand, but our computer can do it, error-free, in less time than a lunch break."

But a computer system from COMPUTER CONCEPTS CORPORATION will do more than produce impressive billing documents. It will also schedule spots and print logs, all with electronic speed. Similarly, it will pay your employees and vendors, and produce your balance sheets and operating statements.

Let's face it. A system from COMPUTER CONCEPTS CORPORATION can save you time and money. Ask Harley Drew. Or any of the other users of the Broadcast System (there are over 100 of them, coast to coast). Or see us at the NAB and make us prove it.

## "We'd be sunk without it..."

# SC39 meets all the demands of professional cartridge users.

The SC39 offers the professional undistorted playback, even on the toughest-to-track, "hottest" recordings—plus the kind of durability necessary to stand up to the job: even to slip-cuing, backcuing, and occasional stylus abuse.

What's more, the SC39 offers three unique features:

**SIDE-GUARD Stylus Deflector:** Protects against side-thrusts by withdrawing stylus tip and shank safely into cartridge body.

SIDE-GUARD Stylus Deflector

FLIP-DOWN Stylus Guard

**FLIP-DOWN Locking Stylus Guard:** Offers stylus tip positive protection when not in use; snaps out of way with a flip of the thumb, positioning a high-visible cuing aid.

**MASAR™ stylus tip:** Minimizes noise buildup and cue-burn on lacquer masters, as well as on often-played recordings, or 45 rpm's pressed on substandard vinyl.

taking advantage of the slow time constants of the human vocal tract.

An LPC speech device, such as the S2C, can predict upcoming filter characteristics for the next sounds. The predicting process is aided by our studies of human word-forming sounds.

Although the voice produced by speech-synthesis devices may not challenge the morning DJ now, further refinements in such units will eventually take us closer to *space odyssey* applications.

# Make your Earth Station System part of a greater design.

If you're looking to get a new broadcast system off the ground, or expand the reach of an existing system, MAC engineers will supply the equipment configurations that are just right for your growing needs. We design, engineer, install and service every part of the total earth station system. To provide you with single-supplier accountability that brings down costs, improves operating efficiency and speeds up service. And MAC can integrate an earth station with a terrestrial microwave network to take care of your entire signal distribution system.

Our new VR-5B and VR-6B frequency agile receivers are the heart of any state-of-the-art earth station

system. The products of over thirty years of microwave experience, they feature full 24-channel capability, broadcast quality performance plus a built-in digital demodulator not found in any other receiver.

Our VE-6B Uplink Exciter is equally important to your earth station system. A frequency agile, high power exciter, it delivers up to +21 dBm output in the 5.925-6.425 GHz C-band. When we put these components together with the right amplifiers, antennas and custom-designed switching equipment, you get the most versatile reliable earth station system available.

All this advanced technology will bring you years of trouble-free performance; but should you ever need it,

there's our seven day, 24 hour service capability. One phone call brings fast action from your single source supplier. Like our systems approach, it's just part of a greater design to keep you broadcasting more efficiently, effectively and reliably. For more information call the Broadcast Division at (617) 272-3100 ext. 1806 or write us at 63 Third Avenue, Burlington, Mass. 01803

# IN SEARCH OF . . .

# New remedies for architectural headaches Part 2

BY GEORGE GHETIA

**P**art 2 of our series will cover flooring and ducting options; the cost of energy-efficient upfront design costs vs. standard construction; how fuel savings help pay off initial costs; how to save fuel costs even when you have cathedral ceilings; and where to draw the line between renovation and new facility costs.

The questions *BC* posed were based on problem areas fed to the editors by broadcasters. So the responses by the architects at Rees Associates Inc. are relevant to all markets and facility sizes. If there are additional problem areas in station design and construction down the line for your station, contact the editor and we'll help you find the answers.

For now, let's get back to our interview and ask the architects about computer floors in the engineering and production areas of the station.

*Computer floors (also called access floors) are popular in stations, especially in engineering areas. How much do computer floors add to the design and construction of a new station?*

Computer, or access floors, are virtually a must in engineering equipment areas within the broadcast facility. Typical access flooring is

designed as 24- by 24-inch removable panels that can quickly and easily be removed with simple suction lifting tools.

The cost of the materials for this type of floor may not add cost to a project. At KAUT-TV, Oklahoma City, the cost of access flooring and standard flooring were compared. The access floor finally specified for the building cost about \$8.50/square foot. Conventional floor materials would have run about \$1.50/square foot in the same facility. However, electrical and air conditioning to technical equipment would have increased the cost of constructing "conventional" floors.

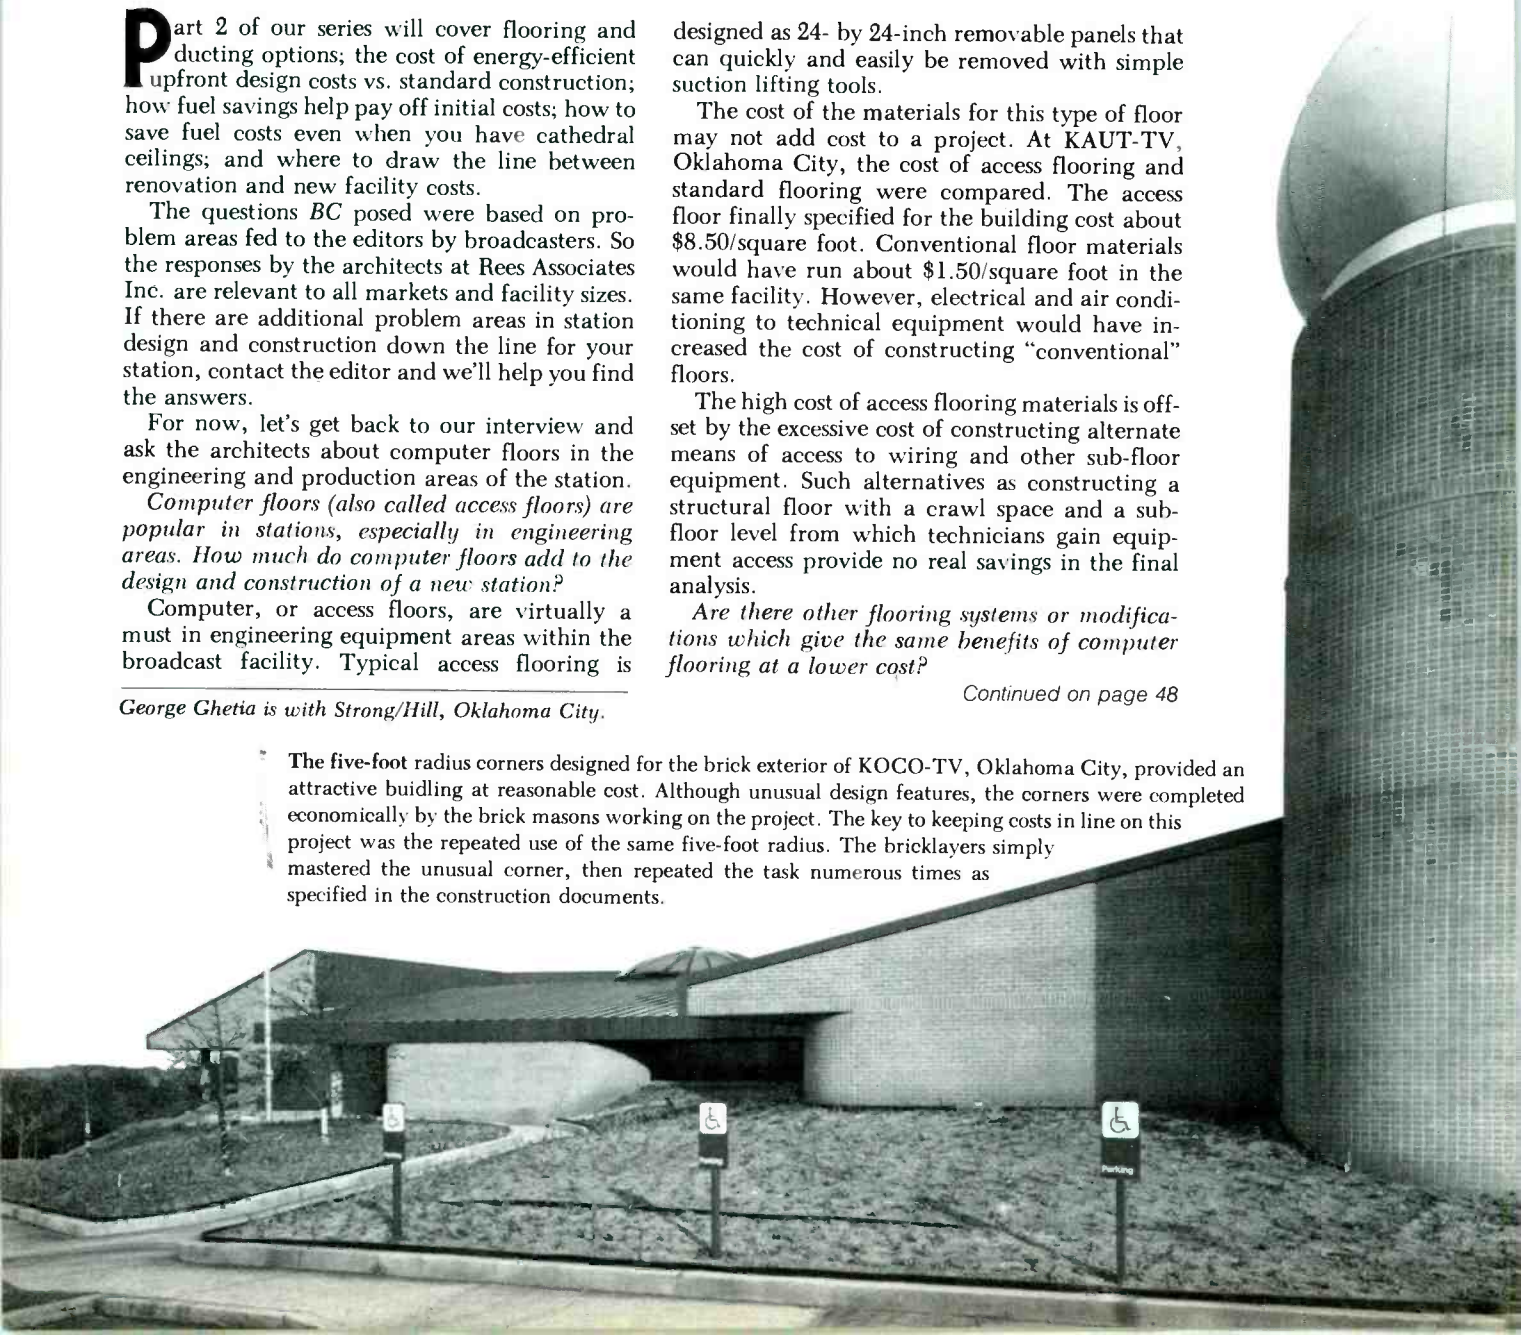

The high cost of access flooring materials is offset by the excessive cost of constructing alternate means of access to wiring and other sub-floor equipment. Such alternatives as constructing a structural floor with a crawl space and a sub-floor level from which technicians gain equipment access provide no real savings in the final analysis.

*Are there other flooring systems or modifications which give the same benefits of computer flooring at a lower cost?*

*Continued on page 48*

*George Ghetia is with Strong/Hill, Oklahoma City.*

The five-foot radius corners designed for the brick exterior of KOCO-TV, Oklahoma City, provided an attractive building at reasonable cost. Although unusual design features, the corners were completed economically by the brick masons working on the project. The key to keeping costs in line on this project was the repeated use of the same five-foot radius. The bricklayers simply mastered the unusual corner, then repeated the task numerous times as specified in the construction documents.

**THANKS...  
for a great year.**

Circle 32 on Action Card

There are two basic ways to allow below-floor access to equipment. The first is to recess the floor slab and make the access flooring at the same floor elevation of the building. The second method is to raise the access flooring so that anyone entering the area walks up two or three risers to the floor level.

There are some floor design alternatives, such as bus duct areaways, which provide access to electrical distribution to equipment. Structural floors with crawl space underneath, and standard floors can be designed to provide access to electrical service through the ceiling. For the type of space in which computer flooring is normally used (master control, tape air film projection) the overall benefits of a computer floor are difficult to develop in other ways. Flexibility of design is required to enable changes in the kind of equipment which may be added after the station is built. Often, areaways in the floor for electrical distribution don't fit new equipment requirements. In such cases, computer flooring actually costs less than a structural floor, which must be drilled through for the distribution of electrical service underneath the floor.

Also, using a computer floor is a very good method of getting cool air and

ventilation to equipment, keeping down the operating temperature of equipment that generates excessive heat. If equipment is added at a later date, access can often be provided at the base of the equipment rack so that cool air can be passed through the rack from below. This can be done without any specific relocation of heating or air conditioning ducts under the floor, something that's impossible to accomplish under a standard slab on grade.

*Is an energy-efficient broadcast facility more costly to design and construct than a standard building?*

An energy-efficient broadcasting facility can mean many things. Energy-efficient facilities, the way we design them, are more likely less expensive than a "standard" building or a building with no concern for energy efficiency. While design work or material costs may be higher than those for a standard building, a building that is designed with energy efficiency in mind will more than likely require a reduced expenditure for heating and air conditioning equipment. This savings is realized because of the way the building envelope is designed, and reduced operating costs often offset the initial cost incurred in designed for energy ef-

iciency in a very short period of time.

For example, money spent for insulation in walls and roof construction will probably be less than the capital expenditure for a larger heating and air conditioning system, which would be necessary if there was not a highly efficient building exterior.

Many times the architect will utilize berms (soil) to cover the bottom four to eight feet of an exterior wall. The berm provides thermal insulation and reduces energy use within the building at low cost. At the same time berms eliminate the need for expensive exterior surface on the portion of the wall covered by the berm. Consequently, a berm, if properly designed, will actually reduce the cost of the wall.

When an architect considers using berms in a building design he also strives to locate the building at the site in accordance with the resulting cut and fill requirements. If a site has a low area which rises to a higher area, the elevation of the building floor is set to reflect the average elevation at the site. This type of placement evens out cut and fill requirements. Earth that is removed to get down to the floor elevation is used to fill the low areas at the site. This eliminates the need to haul material to or from the site at high cost.

When a berm is to be used, floor elevations are set to produce excess excavation. The additional material removed provides the fill used to construct the berm.

A knowledgeable architect is capable of designing an energy-efficient building at the same cost as a non-efficient building. However, a designer can very easily spend more money developing an energy-efficient building design. In other words, the answer to the question relates to professional competency more than any direct increase in building cost.

Design options open to the architect for developing an energy-efficient design include passive solar systems, location at the site, insulating materials and methods, and aspects of the building design itself.

Passive solar systems include the consideration of building orientation. Southern exposure enhances solar heat gain. Window overhangs admit the sun's rays during the winter while shading glass building surfaces from hot summer sun. Glazing is often kept to a minimum to keep building operating costs in line. It should be noted that there is a point at which the surface area of glass greatly limits the energy savings associated with window overhangs and the use of insulated or reflective glass.

*Continued on page 50*

Earth berms at KOCO-TV provide thermal insulation and reduce energy use within the building. Other design features which contribute to the building's energy efficiency include wide window overhangs, insulating glass, and extra insulation in the building roof and walls. Sprayed-on insulation runs along the top of the building roof and continues to the top of exterior walls. The insulation system seals the building and prevents the escape of tempered building air to the outside. (Illustration courtesy of i.f. magazine)

# The TV Transmitters of **TOMORROW** are at Acrodyne **TODAY**

1kW UHF

10kW VHF

5kW UHF

**ACRODYNE, traditionally the leader in low power television equipment, brings tomorrow's technology to 1981 with its line of advanced transmitting equipment.**

Acrodyne's newest addition, the TT-3500VH 10 kW VHF transmitter, features totally solid-state drivers and single tetrode output for ultra-high energy efficiency. Low level diplexing and straight forward broadband solid state design completely **eliminate** tuning except for the broadband final stage. Fully automatic operation, remote control capabilities and unique forced air / liquid cooling insure ease of operation

and maintenance. The TT-3500VH achieves full specifications to 12.5kW.

Acrodyne achieved major breakthroughs with the TT-3400U 1 kW UHF and the TT-3480U 5kW UHF transmitters. The TT-3500VH is just one more reason why Acrodyne is looked to first for TV transmission requirements world-wide.

Circle (33) on Action Card

**A**lternate insulation systems each have their specific benefits. To make the best choice, the architect must consider the building itself, the climate at the site, and any special space requirements within the building. For example, some insulation material provides a higher R-value (the greater the R-value of the material, the greater its insulation properties) than other materials.

The greater the R-value of the material, the less material need be used to do the job. Thicker insulation in walls means less usable space within a building. The cost and associated benefits of each material must be considered in the process of selecting the system to be used. Insulation alternatives available include air spaces designed into walls, loose "spray type" materials, batt insulation (Fiberglas), rigid insulation (styrofoam), and berming (earth).

KOCO-TV, Oklahoma City, for example, is completely sealed with a sprayed-on insulation which runs along the top of the building roof to the top of the exterior walls. This system prevents any tempered air inside the building

from escaping to the outside.

Extremely sophisticated energy-efficient systems and equipment quite often will add only moderate additional costs to a project. Such investments are usually paid off between three and five years from the purchase date.

One example is the water-cooled air conditioning system at KOCO-TV. The system was specified instead of a standard air-cooled air conditioning setup. This equipment cost an additional \$2,000, but it generated savings which will pay for the system in less than two years. Variable-speed fans were used for the air-handling units that provided heating and cooling in the studios at the same facility. This equipment cost an additional \$1,500, which was recovered in the first eight months of operation.

*Will the fuel savings associated with energy-efficient equipment and designs pay back the owner for any additional front-end costs?*

Fuel savings very often can pay back the cost of any special energy-efficient design feature such as computerized control systems that turn air-handling systems on and off. With some systems the amount of outside air entering a

building is determined by computer. Quite often, pure outside air is used during the period of time when its temperature will actually heat or cool the building. However, minimal outside air is utilized at a time when the differential in temperature between inside air requirement and ambient exterior temperature are too divergent.

This type of a computer system will usually take two to three years to pay for itself, but will generate significant long-term savings for the owner. At KAUT-TV a sophisticated heat-transfer system was utilized to use the waste heat energy from the UHF transmitter to provide the majority of the heating for the television station. The system is projected to require approximately four and a half years to pay for itself, and after that will provide something in excess of \$5,000 per year to the owner in ongoing savings.

*Are there specific design procedures that will save both energy and original design and construction costs?*

There are specific design procedures that do help to regularly save both energy and original construction costs. These procedures are a function of the

*Continued on page 52*

The KAUT Energy Savings Profile was prepared by the Rees Associates project team to enable the client to evaluate the savings associated with the insulation of the station's unusual transmitter cooling/building heating system. Although the system required an initial investment above and beyond that of conventional equipment, the cost in ongoing energy savings makes the custom-designed cooling/heating system an excellent long-range investment. management of the design process more than any specific approach to design or materials.

Time is money, and the management of the time spent on the design process on the part of the architect and the owner has a significant effect on the cost of a building.

An example, based on current inflation rates and interest costs, is that every month spent designing a project means that the project will cost 1½ percent more, or with a fixed budget, the

client will receive 1½ percent less building. With KAUT-TV, the amount of time saved by the rigid management of the design process resulted in a savings to the client which was greater than the total fees paid to the architect.

The five-month time savings generated as a result of the working relationship equalled about 7½ percent of total building cost.

*Open areas in new buildings or design features such as high or cathedral ceilings, give a feeling of*

*openness; however, it is the opinion of many broadcast executives that the public tends to think of these design features as energy wasters. Is there anything which can be done to make these design amenities more energy efficient?*

Many large-volume areas are really not energy wasters when they are properly designed. As an example, the news department of KOCO-TV makes use of a very high-level clear storey to provide an appropriate lighting level within the news department. This results in a greatly reduced use of electrical energy for lighting based upon the extensive natural light brought into the building. The net result is that this large space is, in effect, an energy saver vs. an energy waster. However, large cathedral ceilings, unless properly designed, can be energy wasters.

In essence, there are steps which can be taken to make design amenities energy efficient. It is merely a result of appropriate design and design management decisions.

*How can a broadcast executive determine when it will cost more to renovate an existing structure than it will to design and build a new one?*

One important aspect of such planning is instructing the architect to initiate a comprehensive master plan to project future facility needs, and therefore, costs.

The broadcast facility executive can make an intelligent decision as to whether or not to remodel or to build a new facility by going through a very detailed, yet simple process with the architect. Steps in this process are as follows:

- Determine the long-term and short-term goals and objectives of the broadcast facility.

Does the organization intend to own and operate the station for an extended period of time? Or, as an example, is this the smallest station owned by the company that probably will be sold if the company has an opportunity to acquire a station in a larger market?

- Determine the long-term organizational status with regard to the number of people who will be working in the broadcast facility.

- After determination of long-term goals, and the number of people and pieces of equipment necessary to achieve the long-term goals, the size of a building can be projected using a mathematical modeling process similar to the approach used for WTNH-TV, New Haven, Connecticut. WTNH was able, with assistance from Rees Associates, to project the quantity of building necessary to serve the needs of

# CREATIVITY TAKES FLIGHT ON AMPEX VIDEO TAPE.

## BROADCASTERS AND PRODUCTION COMPANIES DEPEND ON AMPEX TAPE.

From videotape equipment to the video tape itself, broadcasters and production companies throughout the world depend on Ampex. High quality, durability, reliability, and prompt service are just some of the reasons.

Ampex 175 Highband Quadruplex Video Tape has proven itself under every conceivable type of operating condition within every video standard. Excellent color performance, low drop-outs, and a tough durable formulation with low headwear are features which have contributed to this dependability.

And now Ampex 196 High Energy Broadcast Helical Video Tape has been specifically engineered to fill the increasing needs of a particularly demanding group of video professionals—those who have chosen **one** of the new broadcast helical VTRs.

No matter what your video tape needs are, there's an Ampex video tape for you. And, once you've tried Ampex tape, you'll see why broadcasters and production companies have grown to depend on Ampex.

1980-85 with an estimate of their requirements in 1990.

•Once the quantity of building necessary has been determined, an evaluation can be made regarding the cost of providing a new building to serve the space needs. This can be compared to the cost of renovating or expanding an existing facility to meet the same needs.

•The cost of the renovation project vs. the cost of the new construction project can be compared and if the salvage (sales) value of the existing facility is appropriate. Quite often, a new building might provide the lowest cost solution. If there is not a market for the existing television facility, the overall lower cost may be realized through renovation or expansion of the existing building.

This approach will provide a broadcast executive with the information he needs to make a decision as to the future of his facility. This information can be generated by experienced broadcast facility planners and architects at a relatively low cost to the client. This enables the client to make an appropriate decision.

A detailed discussion of this process can be found in a recent issue of *i.f. Magazine*, a publication of the television division of the National Association of Broadcasters (Volume II, No. 4, Winter 1980).

The importance of consulting a competent estimator quickly becomes evident in attempting to evaluate the benefits of renovation vs. new construction. The estimator works as a consultant to the architect and specializes in gathering and comparing building trends and their associated costs.

His evaluation takes into account local construction indexes which detail the cost of various construction methods and materials.

*Editor's Note:* To our knowledge, this is the first article series in this industry that tackles the most asked questions and sheds light on the most commonly misunderstood procedures in new station construction. At the upcoming NAB convention, Frank Rees will conduct a session dealing with many of these points. It should be a session your staff will want to attend.

For a direct interface, you can reach Frank Rees at Rees Associates Inc., Fifth Floor, 722 North Broadway, Oklahoma City, Oklahoma 73102. The business number is 405-235-8240.

Meanwhile, this magazine invites your comments and ideas on this and any other subject of interest to broadcast stations. Whether remodeling, renovating, or starting new, we'll help you share your pride worldwide. **BC**

# THIS MAY BE THE ONLY WAY TO GET A BETTER WEATHER PICTURE THAN OURS.

Our new Weatheration Satellite Digital Color System II\* delivers a weather satellite picture unlike anything you've ever seen on broadcast TV.

In fact, it's such an incredible picture, the only way you're going to be able to get a better one is to go up into space and take one yourself.

Like most weather radar systems, (even our own industry-leading Color Radar System I) our Weatheration Digital System II translates GOES images of clouds into color digital display of selected geographical areas of North America.

Weatheration System II receives a fully digital signal more precise than any weather picture ever possible before.

It lets you acquire and display this more precise image of the weather in any area of North America within 15 minutes of when it happened.

Obviously this allows your local television station to produce weather reports at a technological level you've never been able to achieve before.

But System II also includes display options that can make the weather broadcast of any local station the equal of any network.

You'll have a choice of numerous colors and levels of shade, and different areas of North America that can be as large as the whole continent, or as small as your own county. There's also the capability for animation and a floating enlarger that will enable your weathercaster to pinpoint precise conditions.

But perhaps the best feature of the Weatheration System II is that all these capabilities can be accomplished in a local phone call that won't last more than 2½ to 3 minutes.

Yet, a system that can change the shape of your weather reporting forever is not all that expensive.

So call us at 312/263-6921 or write Weatheration, 190 North State Street, Chicago, Illinois 60601, for details. Or better yet, come by our Booth #1625 at the NAB Convention, and we'll show you a weather satellite picture unlike anything you've ever been able to see before.

The new Weatheration Digital Color System II.

It lets the folks at home see what only an astronaut could see before.

*Weatheration*

# Cost-effective remotes are waiting in the sky

## PART 2

BY RUTH MACY

**A** little girl and a yellow macrame bracelet. That's what Paul Conti, projects manager at WAST-TV, Albany, will tell you is the reason for his station's recent and unexpected plunge into satellite ENG.

"Believe me, as late as Monday, we had absolutely no dream that on Wednesday we'd be on the air live from Washington, D.C., with our own correspondent standing in front of the Capitol," says Conti.

All this came about, according to Conti, because of a story WAST had done at the time the 52 American hostages left Iran for Algiers. The story showed a young Albany girl removing the yellow bracelet she had worn during the hostages' captivity.

The engaging seventh-grader captured the attention and hearts of many in Albany. And so on Monday night, when a local congressman secured a VIP pass for the girl to Wednesday's welcome home ceremonies at the White House, Paul Conti decided to send a crew down to Washington to follow her.

But Conti soon realized that there would not be enough time to tape the story, ship it back to Albany, and edit it before the 6 o'clock news. He decided to find out how much it would cost to use a transportable satellite uplink.

"We didn't feel that the cost was exorbitant," says Conti. "And those of us in news certainly felt that the news value of the event justified the expense. But we needed the approval of the general manager.

"Since several other stations were to be using the transportable uplink on a shared basis, the price we were quoted reflected that sharing arrangement. So we told the general manager first what the sharing price would be and then we

told them what the cost would be if there weren't any other sharers."

"He coughed once and said 'let's do it.'"

On Tuesday Conti phoned Wold Communications, and within about 45 minutes he completed the arrangements.

But within those 45 minutes, Conti laughs, "It seemed like every five minutes I was calling back with another question. I felt like a real pest, but I had never done anything like this before."

According to Conti, who served as field producer (he was accompanied to Washington by one correspondent and one photographer), Wold's engineers asked him what he was planning to do and then told him what equipment he would need to do it (e.g., lights, cable, camera and microphone, power source, telephones, adapter devices, etc.). A Woldcom technician also asked if Conti had made downlink arrangements on the Albany end. Conti told him that, by coincidence, WAST had just accepted delivery on a new 7-meter Scientific-Atlanta RO (receive-only) antenna, and that installation would be completed by the next day. He hoped.

From approximately 6 p.m. to 6:15 p.m. Wednesday night, Albany viewers got their only opportunity to see 12-year-old Cory Chartrese and Congressman Gerald Solomon live in Washington. During this 15-minute segment, which opened the WAST newscast, correspondent Ellen Miller interviewed the girl and the congressman and introduced network pool tapes of the day's events, which were rolled from Albany. In addition, by using a telephone hook-up, Miller was able to field questions from the anchors in Albany.

The live-via-satellite feed marked the first use of WAST's downlink, which had become operational just hours before the telecast.

"It was so exciting," says Conti, who, now that he's had a chance to reflect on

the experience, adds: "Considering that you're at the mercy of who-knows-how-many silicon chips, it's really a miracle that it worked."

The fact that it did "work" has brought praise from many sources. "Some of the nicest compliments came from our competition," says Conti. "Some of them were a bit green-eyed."

The competition, in fact, is one of the reasons why WAST elected to do the live satellite feed in the first place. The station currently is number three in a three-station market. Conti believes that such innovative newsgathering techniques may just give the station the edge that it needs.

Another station that tested the satellite ENG waters for the first time to cover the hostages' return was KSTP-TV, St. Paul. (Actually, KSTP, an ABC affiliate, had covered the 1980 Democratic and Republican national conventions live via satellite facilities that the ABC Television Network had provided its affiliates. This, however, marked the first time that KSTP had to make its own uplinking and downlinking arrangements.)

According to KSTP news director Stan Turner, two of the hostages had families in Minnesota and KSTP had been following these families closely throughout the ordeal.

"The story was very important to the people in this area," says Turner. "We knew that the network wouldn't be able to cover the local angle of the story as well as we could, so we decided to do it ourselves.

The competition was also a factor. KSTP is close on the heels of WCCO-TV, Minneapolis, which currently is on top in the four-station market. WCCO also used a transportable satellite uplink in Washington.

"Since we began transmitting on Saturday and WCCO didn't start until Monday, we actually had exclusive coverage over the weekend," beams

*Continued on page 58*

# TV test equipment from the inventors of the Plumbicon® tube.

At long last a new, reliable source of TV test equipment. One that offers fast, predictable delivery. One with a name all the world trusts—Philips. Four quick examples:

## PM5565 Waveform Monitor

Enjoy the luxury of examining one line and one field at a time. On top of this, there's a convenient front probe input so you can use the monitor as a troubleshooting oscilloscope.

## PM5567 Vectorscope

If you want more accurate decoding and the ability to have an external reference from composite video signals, choose our vectorscope.

Both waveform monitor and vectorscope mount side by side, fit all existing hardware and use less power than the competition.

## PM5539 Color Analyzer

Take it on a quick trip through your studio or control room and adjust all monitors to the same color temperature in a matter of minutes.

With four different memories, there's no problem in quickly calibrating four different phosphors.

Variable full-scale, from less than set up to more than reference white, allows measurement of color tracking as a function of APL.

## PM5534 Color Pattern Generator

Our universal pattern contains all the signals needed to verify overall system operation—directly from the picture. No wonder virtually every set manufacturer uses our pattern for their TV set alignment.

Of course our TV test equipment line doesn't end here. Today Philips offers a wide range of equipment including sync and pattern generators, VITS generators and analyzers, and TV modulators and demodulators.

For nationwide sales and service information call 800-631-7172, except in Hawaii, Alaska and New Jersey. In New Jersey call collect (201) 529-3800, or contact Philips Test and Measuring Instruments, Inc., 85 McKee Drive, Mahwah, New Jersey 07430.

# Philips, of course.

Test & Measuring

# PHILIPS

Circle (39) on Action Card

Turner.

When asked how much of a factor cost was in the decision to feed or not to feed live from Washington via satellite, Turner replied: "Cost is always a serious consideration, but in our view, the weight of the story easily justified the expenditure."

Whereas WAST's crew numbered only three, KSTP's Washington contingent included two reporters, three photographers, one editor, one engineer, and one field producer. Likewise, the amount of equipment the KSTP crew brought along, including a BVU 200 videotape machine, a time base corrector, a TK-76 camera and a BVU 110 field VTR, color monitors, and an IFB system, greatly eclipsed the resources of WAST.

But despite its extensive array of equipment and despite the advance planning, KSTP found itself on location without phones.

"Luckily," says KSTP assistant news director Tom Wayne, "we found that, in this situation, everyone sort of bands together and shares. We were able to pick up a couple of phones by bartering our BVU 110 and time base corrector."

But phones weren't the only problem that the KSTP crew encountered. They found themselves engaged in last-minute scrambles for standup locations and for downlinks, too.

"We had wanted to originate on Monday from the Rayburn Office Building," says Wayne, "and we understood that cable had already been laid. But when we got there, we found out that the cable had been laid by WCCO—our competition. Rather than put anyone on the spot, we just decided to go find another location."

That situation was resolved by the next day, when Wold Communications laid its own cable at the Rayburn Building. But by this time, KSTP personnel were scrambling for downlinks.

"We weren't familiar with satellites, and therefore weren't prepared for the quick operational changes that sometimes have to be made," says Wayne. "At one point, we were switched from one satellite to another, which meant that our receive dish had to be repositioned in order to receive the signal."

KSTP transmitted both live standups and preproduced tape packages over a four-day period.

"Although a small part of our video wasn't 100 percent, I'd have to say that, overall, everything went very well," says Wayne. "Especially considering that it was our first time."

Wayne is anxious to use a transportable satellite uplink again, but hopes to have his engineer attend a "how-to"

Engineer Bob Sutherland operates the controlling devices for the earth station. The Scientific-Atlanta package will automatically locate and polarize for each satellite which is currently airborne and can be expanded to include future "birds" without additional cost or equipment.

course prior to the next use. (The International Association of Satellite Users in McLean, Va., is prepared to offer such a course if it receives sufficient interest.)

On-the-job experience, however, seems to be the best teacher. For Elden Hale, executive producer, KXAS-TV, Dallas, the Reagan inauguration marked his station's third use of a transportable uplink.

Both Monday and Tuesday, the KXAS 5 o'clock newscasts included live inserts from Washington. The 6 and 10 o'clock newscast were co-anchored in Dallas and Washington. Behind the Washington anchor stood the Washington Monument.

"Of course, you can't out-network the networks," says Hale, who used network pool tape for the ceremonies and the parade. "We were in Washington to cover the Texas angle, people like George Bush and Senator John Tower."

And cover it they did—so well, in fact, that the *Dallas Morning News* labeled their coverage of the local angles "enterprising and entertaining... a mission accomplished."

The transmissions went off without a hitch, and, as Hale himself admits, "We've gotten to be pretty good at setting up these satellite feeds."

But Hale still finds downlinking to be a bit tricky. A Woldcom traffic coordinator assisted KXAS chief engineer Tom Bedford in arranging for an RCA downlink in Houston and then for AT&T landlines from Houston to Dallas.

"The only difference between doing

ENG here in town and doing it by satellite," says Hale, "is that when you're going by satellite, you've got to stay on top of things more closely. At any moment, they may have to change transponders on you."

Another satellite ENG veteran, Dave Underhill, chief engineer of WCVB-TV, Boston, arranged (and pulled off) what were probably the most complex remote transmissions done by a local station at the inauguration.

Using the mobile production facilities of Mobile Video in Washington, WCVB was able to switch not only between Boston and Washington, but also between live remotes from two different Washington locations. And at one point, a WCVB reporter in Washington did a live voiceover while an edited ABC tape rolled in Boston. (So that the Washington reporters would not hear an echo in their earpieces—caused by the slight time delay of satellite transmission—mix-minus was sent down from Boston to Washington and the Washington reporters were then added in real time.)

**S**ince the advent of portable ENG cameras several years ago, going live clearly has been where it's at. And going live by satellite has become an economical means for providing up-to-the-minute, localized coverage of national events—coverage that is unavailable from any other source.

"I think our audience has come to expect that we will be live, whether that means locally or anywhere else," states Rick Gevers, executive producer of KSDK-TV, St. Louis.

Jim Thistle, vice president of WCVB-TV, Boston, has come to the same conclusion. "It's expected that Channel 5 will provide live coverage. In fact, I think we would have heard about it had we not been in Washington for the inauguration. This is a very political state."

Paul Conti of WAST-TV, Albany sums it up:

"Satellite technology has opened new doors. It has become clear to local stations that their local boundaries have been redefined. You used to stop your coverage where your signal area ended. Now your coverage area extends as far as whatever affects your viewers."

And what is the cost for this enhanced local coverage?

Wold's base price for exclusive use of a transportable uplink is \$10,000 for the first day and \$1,000 for each successive day. Added to this base rate is a \$250-per-hour uplinking charge, satellite transponder time (which varies by satellite and by time of day), and a ground transportation charge, billed at

50 cents per mile to and from the site and Washington, D.C.

A shared-use package similar to those Wold Communications has offered at the 1980 Republican and Democratic national conventions, and for coverage of the Reagan inauguration and the hostage return, can be had for a small fraction of the above rates.

How these costs are viewed, of course, will depend on the value that the station places on the benefits to be achieved. In any event, the cost of satellite transmission is almost always less expensive than telco.

"In 1977, we covered the inauguration live via telco. This year, we used satellite, and I know it cost us a lot less to do it this time," says Jim Thistle of WCVB.

For those local stations considering getting their feet wet with satellite ENG, it all begins with a phone call. In addition to Wold Communications, other organizations that provide transportable uplink service include the Public Service Satellite Consortium, Southern Satellite Systems, and Western Tele-Communications Inc.

Sometimes it is the news director who places the call; other times it is the chief engineer.

In the case of a shared-use package, the caller may be responding to a telex sent out by Wold Communications, advising stations of the availability of transportable uplink service for coverage of a specific high-interest event. Or, the caller may be phoning on behalf of a group of stations that have

gotten together on their own and decided to share a transportable unit.

Whoever the caller is, whether he or she is interested in shared use or exclusive use, there are certain basic questions that will be asked: What is to be the origination site? What are the date(s) and time(s) of transmission? What is the receive location(s)?

"Basically, the transportables can go anywhere in the contiguous 48 states," says Robert E. Wold, vice president in charge of radio and television sales for Wold Communications. "And the only restrictions on where they can be parked are that they must have a clear, unobstructed view of the satellite and they cannot interfere with any local terrestrial microwave."

Wold Communications will arrange for microwave or a local telco loop from the point of origination to the uplink location. For stations participating in a Woldcom shared-use package, the price for the microwave or telco loop usually is included in the package price, according to Wold.

Stations are advised to call in as early as possible, both to reserve a transportable unit and, in the case of a shared-use situation, to reserve specific time slots.

"As far as lead time is concerned, the only limiting factor is on-the-road travel time. Sometimes it may require as many as three days for a transportable uplink to reach its destination. That would be the case, say, if the unit had to travel from Washington, D.C., to Washington State," says Wold.

"Once in place, however, the unit can be transmitting within an hour and a half."

Because certain time slots tend to be more popular than others (namely, those that fall within the 5, 6, and 11 o'clock local newscasts across three time zones), Wold urges stations to reserve early for the slots they need.

Sometimes, because of heavy demand, limitations must be placed on the amount of time available to any one station. "During our uplink service for the return of the hostages," says Wold, "we had to limit stations to one 15-minute block of time every three hours."

Stations planning to use the transportable for both feeding tape and doing live remotes will have to coordinate their transmissions with such limitations in mind.

Broadcasters who are unsure about what equipment and/or personnel they will need to bring along also can get assistance with those matters.

"When a broadcaster seeks our advice, the first thing we need to find out is what he wants to accomplish," says Wold. "And once we know what he wants to do, we can determine what facilities and personnel are needed."

"Some stations come with crews of three—a correspondent, a photographer, and a field producer. Others come with three of each plus a couple of technicians. Some stations will need only one phone; others may need four. Some stations can get by with their everyday ENG gear. Others will require remote studios and switching and editing facilities. It all depends on the complexity of what they're doing."

In case there are still any raised eyebrows out there regarding the simplicity of satellite ENG, consider the words of Jay Newman, news director of KOVR-TV, Sacramento, who used a transportable uplink for the first time to cover the inauguration.

"It's not that complicated. Basically, it's not different from doing any remote via either telco or microwave. You use the same equipment. You plug in and you're ready to go."

Well, almost.

*Editor's Note:* If it had been questioned before, the local station satellite ENG coverage of dramatic news events in the last six months proves that it's neither blue sky nor technical overkill. And, as some of the stations covered in this article see it, satellites are one way to get the competitive edge you need.

Our thanks to the Robert Wold Company for their cooperation in bringing satellites down into the real world. By the way, the Wold telephone number is 213-820-2668.

# Small-market remotes can be cost effective

BY W. LEROY SCHNECK

**J**ust reading the January issue of *BROADCAST COMMUNICATIONS* demonstrates that radio is getting out of the studio and into the streets...and that's good. At WNAE/WRRN, a small-market operation in Warren, Pa., we have been doing remotes for a long time.

For three or four years we used a motor home for a remote studio. This had some advantages. A 5000-watt generator made us self-sufficient from outside power sources and we did have our kitchen and bath facilities, but these contributed very little to the

quality of our remotes.

The energy situation prompted the sale of the motor home and left us without a mobile studio. Equipment for broadcasting from the motor home was lugged in and out, and on more than one occasion someone had to go back to the studio to get something that had been forgotten. A rolling studio for broadcast-purposes-only was our goal. So we went shopping.

A small, used, 16-foot travel trailer in very good condition was found at a decent price for the basic vehicle. A 16-foot trailer has a floor area about 12 feet long, which gives adequate space for a disc jockey and the other people and equipment necessary or desirable

for a variety of remotes.

Most of the trailer's normal housekeeping equipment was removed and a much larger rear window was installed. This became the main studio window. To make the mobile studio habitable, a combination air conditioner-heater was added. This unit was one of the major expenses, but it was worth it.

We have two AC input connections. One for the electronic gear and the other for the atmospheric control.

For a decent studio sound, we carpeted not only the floor but also the walls. To give us a permanent studio we had a console table built in, and then

*Continued on page 62*

*W. LeRoy Schneck is general manager of WNAE/WRRN, Warren, Pennsylvania.*

Large rear window and awning were added for maximum visibility in both directions.

# BANK ON US.

## In the Rack or out of the Rack, Videotek products are a wise investment.

And for good reason. Videotek concentrates only on monitors; the most comprehensive line of rackmount and tabletop professional color monitors. In addition, Videotek is emerging as a leading manufacturer of Broadcast Test Equipment.

We are committed to provide quality products,

personalized service and excellence in field back-up. Large impersonal corporations sometimes forget the Human Factors in conducting customer relations on a day to day basis. We don't!

Videotek products represent a solid capital investment. One you can bank on year after year.

## Small-market remotes

audio input, turn it on and wait for a cue from the studio.

A permanent base for the antenna is mounted on the trailer hitch and two or three sections of extension pole with either a halo or yagi antenna can be put in place in a matter of minutes.

We tried to consider all contingencies in designing the equipment layout. An additional mike outlet was installed at the front of the trailer where the benchtable had been retained, an ideal spot for separate interviews or additional staff people. In a small panel behind a locked door on the outside of the trailer, a telephone block was installed along with additional mike outlets, additional speaker connections, and terminals for a separate remote amplifier.

Regular trailer jacks are carried along to level the unit and give it stability when on location.

Our total investment was around \$3,000. Originally we had considered doing a good deal of the build-in work ourselves. But since we are a little shy of carpenters and carpet layers on our staff, we had this done by pros and the results were well worth it.

Naturally, the engineering staff did the wiring. Some of the original lockers

we permanently installed most of the equipment.

A five-channel Sparta console used for a number of years in a news studio was moved into the trailer and a new console was bought for the news studio. All the trailer wiring is in place for cart machines. And to date we have been taking a couple of machines out of the studio for remotes.

To avoid as much as possible the "plumber's syndrome" (having to go back to the shop for forgotten tools) most of the equipment was built in. An AM/FM tuner is rack-mounted along with a PA amplifier for the speakers (mounted outside at both ends of the unit) and the regular monitor speaker inside.

We have not reached the degree of affluence that allows us to dedicate a Marti RPU to this unit alone, but all the wiring is in place so all that has to be done is to set the transmitter on a shelf, plug in the AC, the antenna and the

An extra mike setup (bottom left) was installed in the front end of the trailer.

(Above) Antenna mast bottom section is mounted permanently. Tourist information sign was part of a two-week on-the-street promotion. "Kinzua" refers to a large up-river dam that is the focal point of the tourist business locally.

The control room (below) includes two turntables and a five-channel Sparta mono console.

were retained to provide space for additional equipment such as mikes, stands, cable, etc.

Since this mobile studio is not pulled over long distances, it should serve us for years. It is light enough that it can be towed by almost any vehicle. The company stationwagon, the chief engineer's car, and the news director's Jeep are all equipped to tow it.

It has been used on the main street, in front of business establishments, at malls and shopping centers, and at the county fair. It generates additional revenue, gives the station a good image, and it's the only moving billboard in town.

**BC**

## Computer set-up and triax too

Today, broadcasters are classing computer setup and triax as necessities. Ikegami offers you a choice of two such cameras. Both are proven in the studio and field.

- The HK-312, with 1/4-inch pickup tubes, is a proven computer setup camera. More than 100 are in service throughout the ABC Network, at WGBH, and at other major stations.
- The HK-357A with 1" diode gun pickup tubes offers the same high standard of performance along with the convenience of field capability.

Both are extremely stable cameras that can be operated manually. And both accept computer control for automatic setup for on-air readiness in 45 seconds.

Both cameras can be used with multi-core cable. With triax the cameras can be a mile from their base station.

Of course, in colorimetry, automatics, circuitry excellence, and range of options, both are incomparable. But seeing is believing. Experience a demonstration soon at Ikegami Electronics (USA) Inc., 37 Brook Avenue, Maywood, N.J. 07607; (201) 368-9171. West Coast: 19164 Van Ness Ave., Torrance, CA 90501 (213) 328-2814; Southwest: 330 North Belt East, Suite 228, Houston, TX 77060 (713) 445-0100; Southeast: 522 South Lee St., Americus, GA 31709 (912) 924-0061.

## STATION CONSTRUCTION:

# Building today for tomorrow's needs

BY MIKE HENDRICKSON

**W**JON Broadcasting Company is located in one of Minnesota's fastest growing areas, St. Cloud. Fortunately, this has been reflected in a similar growth at WJON. Eventually, the price of growth for a growing station is lumped into a new facility.

Life was simple in 1950 when WJON went on the air. It wasn't until 1970 that the real growth began to take place. That year the company added WWJO-FM. We had 15 full-time employees and three part-timers.

In 1975 WWJO changed frequency

and jumped its power to 100 kW. In three short years the WJON Broadcasting Company had grown to a staff of 40 employees and four part-time employees. All these people were working in a 3,000-square-foot building. Obviously, a major facility expansion program was in order if the company was to give first-class service to central Minnesota.

It was during the summer of 1978 that planning began for some type of building expansion. A number of meetings were held between department heads and Fred Wemlinger of Frederic Wemlinger and Associates, a local architectural firm. At these meetings, the department heads were requested to project their growth over the next five to ten years. They also had to relate the relationship of each department to each other. As part of this planning, Fred Wemlinger and I visited several stations in the upper Midwest and Winnipeg, Manitoba. The purpose of these visits was to gain ideas from other stations. Pictures were taken of each station to help convey these ideas when we returned.

By the summer of 1979, the planning was complete and we began considering the actual construction. The decision was made at this point to hire the construction management firm of D. W. Hutt Consultants. The reason for hiring the construction management firm was to enable WJON to act as its own general contractor. This permitted WJON to negotiate directly with the subcontractors.

Ground was broken during November 1979, and the building was completed 10 months later. We moved into the new facilities on October 3, 1980.

The new building is located by the AM broadcast tower. The size of the lot required that it be positioned beneath the guy wires. The ground radials had to be replaced beneath the new parking lots and the building floor slab.

The building is 12,027 square feet, all on a single floor. It consists primarily of two physically separated areas of production and general offices planned to control access to production spaces. The production area consists of two broadcast studios and three production studios. These five studios have support areas of three announce booths, a newsroom, record library, transmitter room, and a shop area.

The studios have been constructed with soundproof walls, ceilings, windows, and doors; they also have extensive interior acoustical treatment to accommodate the broadcast function. The studios are constructed, in effect, in a building within the basic building to provide excellent vibration and sound

*Continued on page 66*

*Mike Hendrickson is chief engineer at WJON, St. Cloud, Minnesota.*

WJON Broadcasting Company's new facility is located by the AM broadcast tower. The building is one floor and covers over 12,000 square feet of space. It consists primarily of two physically separated areas of production and general offices planned to control access to production spaces.

# Two Assignments

## Canon J13 x 9B IE plus Canon J25 x 11.5B IE and your camera

Two assignments, one location. For example, get great action shots of a football game and also get player interviews at half-time. You can do it with one cameraman and one camera—like the one shown here—with Canon's amazing E.F.P. lenses. Here's how:

Mount our J25 x 11.5B IE on a tripod at your principal location. Its 2/3" system was designed specifically to work with ENG cameras, yet this lens provides a 25-to-1 zoom ratio, power zoom and focus, automatic iris and the image quality you'd expect from a Canon broadcast lens. Another choice is the Canon J20 x 8.5B IE, with a 20-to-1 zoom ratio. Both these lenses have built-in extenders, too! With your ENG camera attached, you've got full capability.

Detach your camera from the fixed lens, mount the famous

Canon J13 x 9B IE and head for the locker room!

You've got a 13X f/1.6 lens now and can move about freely for your interview shots.

The J13 x 9B IE is unsurpassed as an ENG lens, with Cable Drive and auto-iris capabilities

plus built-in extenders and auxiliary wide-angle and telephoto accessories available as well.

Electronic Field Production is a reality. A practical reality because you don't have to send two crews or even two cameras to a single location if all you really need is one ENG camera and two Canon lenses. And, costs notwithstanding, sometimes you just don't have enough cameras to go around. Selecting the right combination of Canon lenses could actually double the utility of the ENG cameras you already own. And that's something even your accountant can appreciate!

Find out more. Use the coupon or write on your letterhead for the facts on the Canon J25 x 11.5B IE and J20 x 8.5B IE lenses, as well as our popular J13 x 9B IE. We'll also be happy to arrange a practical demonstration for you. A very practical demonstration!

transmission control and isolation.

The studios are designed to permit any one studio to go on the air if the main control room fails. Each of the studios are laid out identically to permit a board operator to go from studio to studio with a minimum of trouble. The operating position requires the announcer to either be standing or to use a high stool if he/she wishes to sit.

All the audio and control wire is routed from each studio to the audio terminal closet in the transmitter room. All studio interconnections are made at this location. This design permits a change to be made in the audio feed to a studio without extensive rewiring.

The general offices include a reception area with a children's room, executive offices, sales offices, meeting rooms, lunch room, washrooms, and other support areas. The sales office contains the sales office proper, plus the bookkeeping offices, traffic department, and copywriting department. The north wall of the sales office can be knocked out later when WJON requires additional space.

The building is gas heated and electrically cooled by multiple roof-top units, providing flexibility and back-up systems, should failures occur. The production studios are provided with a separate sophisticated air-handling system to provide silent, individual studio temperature control.

The electrical system of the building consists of three separate parts. The first part is the studio complex wiring and selected lighting throughout the building.

This part is backed up by a stand-by 30,000-watt generator. The third part is the air conditioning wiring. The electrical system was divided like this to prevent surges in the last two parts of the system from bothering the studio operation. WJON made a point of insuring that the incoming electric service

was of low an impedance as we could get.

**A**fter this summary of the new facility, it should be pointed out that we ran into a few snags (and learned a lot) before life in the new WJON facility settled down to business as usual.

Behind any interesting new broadcast facility, there are moments in the building process of agony and ecstasy. So the following may help you the next time the subject comes up at your station.

The first problem WJON Broadcasting ran into was educating the architect. He was familiar with standard office buildings, but was not aware of the special needs of a radio station. These needs concerned locating the studios in relatively quiet areas of the building; using the hallways next to the studios as a sound lock; locating the restrooms not closest to the highest number of people, but closest to the studios; and getting the specifications worded so that no site work could be done unless a station engineer was present. (The new building was within the ground system of the AM broadcast tower.)

The next problems we ran into were with the mechanical and electrical engineers employed to design the air-handling and electrical systems. We had to convince the mechanical engineer that if we could hear the air movement in the studios, it was too noisy. Each studio had to have its own thermostat because the studio might not be occupied for a time and then have four people in it for a recording session. We also had to get the air-handling systems located as far as possible from the studios.

The electrical engineers had to be educated on ground loops. We specified that all studio outlets had to have an

isolated ground with an insulated ground wire pulled back to the electrical panels. They had to specify incandescent lighting in studios. (Not energy efficient, but does not cause electrical noise.)

After we received the first specifications for the project, we had to change several things. The electrical system was overdesigned. We required a major overhaul of that system. The mechanical system was overhauled as well.

At this point, I have several recommendations. When you sit down with the electrical and mechanical engineers, discuss different options and *discuss prices*. Typically, architects and engineers are paid a percentage of the total project cost. The higher the project's cost the more they get paid. It is your responsibility to see that the project cost does not get out of line. Keep an eye on the quality of everything installed. You generally do not need top-of-the-line quality in everything that goes into a building. You may have several hundred light fixtures and outlets in your building. A difference of only a few dollars can quickly amount to a large sum of money. In other words, ask questions! Don't let them lead you blindly down the road to a new building. You have to use the building as well as pay for it, not the architects or engineers.

As soon as the building construction begins, be sure the station engineer is there or is quickly available. The engineer should be on site at least once a day. Be sure you notify the police that you are building and request night patrols to prevent theft and vandalism. (WJON's new building just about went up in smoke because some vandals turned on the propane lines in the building; 370 gallons of propane were vaporized in the building.)

At some time in the building project, one of the contractors will want to make some changes. As the owner or owner's representative, you have the final say as to whether a change is made. If you have any questions regarding the change, check with the architects. They should be approving any changes as well as you.

Finally, do not pay anyone in full until you are completely convinced their part of the project is complete and works as specified.

The WJON building project was aimed at accommodating the present operation and anticipating future growth. But a key factor was that no cost overruns were permitted. The result was an on-target investment and a functional facility that will keep out stations in step with our area as it continues to grow.

**BC**

The size of the parking lot required that the building be positioned beneath the guy wires. The ground radials had to be replaced beneath the new parking lots and the building floor slab.

# NOUB VEGAS

**THE COMPLETE  
GUIDE TO THE  
'81 CONVENTION**

# Editing starts with CMX

If you think you can't grow from absolute simplicity to total performance look at the world standard for editing.

Editing starts with the CMX 340X because it performs exactly the same simple functions competitors' limited systems do. Two machine cuts editing, for instance, requires the same number of keystrokes. But for you that's only the beginning. The expandability of the 340X will not restrict its simplicity at any point in your growth.

CMX 340X keys are grouped conveniently, color coded, dedicated and easy to reach. That's one reason it's as easy to operate as most limited capacity editors.

Editing never ends with CMX because the 340X is the most expandable and sophisticated editing system in the world. All the new techniques in post-production developed over its five-year history have been added to the earliest 340X systems. The simplicity of the 340X does not

restrict its expandability at any point in your growth.

Editing starts with CMX because every 340X system installation includes basic training in operation and maintenance. CMX has the world's largest staff of editing system specialists to keep you going and growing. These experts are available to install and train you on new features at every point as you grow.

Editing never ends with CMX because our staff editors provide complete 340X training that never stops growing. This training is supported by advanced seminars, newsletters, an editors' advisory panel, plus worldwide experience in post-production that only the editors at CMX have.

Editing starts with CMX because it did. CMX built the first simple, practical, computer-assisted editing system over ten years ago. Along with our original customers we

have continued to grow and to lead. While others have come and gone, CMX continues to be the world standard for editing. We have the ten-year track record to support you at any point in your growth.

Editing never ends with CMX because your initial investment is protected from absolute simplicity to total performance. Before you invest in post-production, look at the difference in total investment between competitors' limited systems and CMX.

The 340X has replaced many other systems; and every CMX user has stayed with us when he expanded his system. Editing never stops with CMX when editing starts with CMX.

AT THE NAB . . .

# We Could All Be WINNERS

BY RON MERRELL

It's about time for the NAB convention again. So shuffle up the deck, and what do you get? A return to Las Vegas, April 12-15, and a very familiar looking hand. Our aces look more like jokers, and there aren't any wild cards.

As for the setting, it's a return to that strange place where people are entertained by losing money. And a place where hotel fires will be on our mind.

It's a city where some said an NAB convention would be a loser. Too many distractions and all that. The record of past Las Vegas NAB conventions will show they were the best ever... both for attendees and exhibitors. But the agenda record will show that the best place to deal with the nagging problems of our industry is the forum the show provides... no matter where it's held.

Now if anything has happened since the last NAB convention—and plenty has—the NAB has been involved. If the NAB were always as effective as it is vocal, broadcast communications would have a different look today.

One strong suit of any NAB convention (and it may be even more true this time) is the opportunity to hear other broadcasters in sessions and informal discussions airing the issues. Unfortunately, the crunch of time at the convention (for example, 32 hours of exhibit time) has cut so severely into the dialogue between broadcasters and exhibitors that we tend to forget how vitally interested they are in the problems that plague the industry. That's unfortunate because while they do want to sell equipment, they are as concerned about the issues as broadcasters are. Look around the room in any session, and you'll find exhibitors ready to participate.

Well, we can change dealers, but the results are alarmingly familiar. The more we change, the more we stay the same!

Looming changes, especially in the last year, aren't as dramatic as command-performance FCC actions. But they're equally important. For example, if we're getting closer to an acceptable teletext system, won't that affect the way television stations do business? And won't AM stereo at least get radio sales people in a more competitive frame of mind?

The prospects for the future are in line for a real boost from the technology, and this makes the broadcaster-manufacturer interface infinitely more important.

Any satellite-related booth in the exhibit area should get a priority. As another article in this issue says, satellite ENG is not just a new catch word or quarterly trend. Instead, it adds a new dimension to the news slot and it is very cost effective. Anyway, the whole subject of satellite programming will be pushed to center stage. The eventual programming flexibility satellites will provide are enticing our industry entrepreneurs to accept the competitive tidal waves as a challenge to surfing.

Further down the aisles, we can talk about digital's growing importance to the industry with the people who breathe life into chips. Or with those who want an audience for fiber optics.

While there's little doubt that endless conversations will focus on technology, it's a sure bet that the new administration and the FCC will be vowing for equal time. Generally, broadcasters will at least initially see the new administration as a positive move for the industry. However, the educational broadcasters might want to argue that point.

But over the past year we've seen a number of actions by the FCC that prompt good-news/bad-news jokes. At the last NAB we heard that a system

had been selected for AM stereo. Then when we got home we found the subject on hold again. At the last NAB there were indications that deregulation and relief might really be on the way.

Community ascertainment could have been a major victory. The way it looks now, the latest action does away with some of the red tape, but the uncertainty of how the FCC will access what is reasonable programming is a lot more frightening than red tape ever was.

Community ascertainment falls neatly into what the NRBA's Abe Voron calls re-regulation, not deregulation.

Dropping the First Class license and its exam, now that's deregulation. And where that idea came from, no one is sure. The barrage of negative responses filed by industry engineers has forced this one onto the back burner. The NAB and other interested parties would like to see a new, more comprehensive exam. No would would disagree with that. But early on, the NAB and the NRBA came out backing the docket that would drop the First Class license. And even if they were really more interested in a new exam than in dropping the license, these were very unpopular actions in the industry.

Chances are that the licensing matter will get the long, hard look it deserves. If so, everyone will benefit.

But most of the deregulation action is aimed at radio. TV? Too complicated, too political, and too hot to handle.

The input BROADCAST COMMUNICATIONS is getting from TV broadcasters is that they feel they can live with the increasing competition, but they don't know how long they can live with it if they are not given the same freedoms as their competitors.

Radio deregulation looks as if it's going to leave survival to the marketplace. Somehow, that's not appropriate for

*Continued on page 70*

TV. But it is for cable?

Since the last NAB convention the industry has argued about 9 kHz spacing, low-power TV, TV drop-ins, and renewals. And it's been downright

discouraged about rising energy costs. And that's what makes an NAB convention so essential to the industry. It provides the platform and the forum we all need for the important issues that come

to us whether we solicit them or not.

Fortunately, when each convention day ends on its own, we can slip into the Las Vegas night life and appreciate a bargain in comic relief. **BC**

(At right) The first broadcast via tape took place at CBS in 1956. CBS in Hollywood, shown here, replayed *The Douglas Edwards Show* three hours after it aired in New York.

## Videotape recording marks 25th year

It was 25 years ago that videotape recording was introduced to broadcasters at an NAB convention. Actually, it was first demonstrated at a meeting of 200 CBS affiliates in Chicago. The Chicago audience of TV engineers, realizing they were witnessing history, stood up, stamped, cheered, and whistled their approval. Indeed, it revolutionized the industry.

Ampex, no doubt, will come to the convention with innovative products. But they will be exhibiting the pride they have for the part Ampex played in the videotape revolution. Charles P. Ginsberg is credited by his colleagues for not only the concept but, more importantly, the momentum of the project in the face of seemingly unattainable objectives. The Ampex team included Ray Dolby, Charles Anderson, Alex Maxey, and Fred Pfof. Shelby Henderson was the machinist who designed and built the mechanical components.

Today, the worldwide broadcast industry has absorbed well over \$1 billion worth of high-quality VTRs and accessories.

And it should be remembered that companies like 3M also made a historic contribution with videotape that, like the machinery itself, is under constant research and improvement even today.

Chief engineer Ed Benham checks one of KTTV's (Los Angeles) recorders (at left) for one of the first tape syndications of local programs, *Divorce Court*.

No less than eight commercials were shot in two days at the Englewood Golf Club in New Jersey (above) back in 1959. The producer says it was the first time videotape facilities had been used in this manner for making network commercials.

(At left) *What's My Line?* In this photo it's announcer Dennis James (in the pool) doing a Kellogg commercial in 1959.

Best Picture:

**SCOTCH ONE-INCH  
VIDEO TAPE**

Scotch™ is a registered trademark of 3M.

For the second year in a row, Scotch® 479 won the award for the best picture of the year in a test of one-inch video tapes.

We scored well in all of the twelve categories tested, but especially well in the categories that commonly represent picture quality: color dropouts, high frequency dropouts, chroma noise, signal-to-noise ratio and stop motion.

These were scientific, quantitative tests, conducted as you would conduct them yourself, with no room for brand bias. The meters didn't play favorites. The standards were the same for every brand tested. And we tested every brand.

These kinds of test results don't surprise us. We pioneered the invention of video tape. And we've been setting the standard for quality ever since.

Our quality has always been consistent from the first replay to the

last. In fact, our sophisticated binder and oxide coating are more advanced than the binders and oxides on some quad tapes. They had to be advanced to meet the special durability demands of one-inch video production.

So choose Scotch 479 for your one-inch video production. You'll find it looks good from repeated mastering all the way through post production. And we've seen the test results to prove it.

# FIND ANY EXHIBIT IN 30 SECONDS

The no-nonsense

to help you locate any exhibitor  
without really trying

NAB Vegas: more than 400 companies exhibiting thousands of pieces of equipment spread over 200,000 square feet of exhibit area. And you have just 32 hours to see, hear, touch, and comprehend it all.

Impossible? Yes, unless you plan your time well before the trip to the convention . . . and especially before you begin your trip down the aisles.

You can make your convention experience a successful one by using BROADCAST COMMUNICATIONS' exclusive, proven No-Nonsense Map—designed to help you move down the crowded aisles . . . without getting spun around, trampled, and confused.

Turn to the exhibitor alphabetical listing on the following page. When you find the company you want, you'll notice a map locator number following it. E3, for example. It's as easy as using a highway map. Look for the letter E along the top, then the number 3 down the side. Presto! There's your exhibitor.

The NAB has opened a new area this year, so don't get confused. As last year, exhibitors are

located in the North Exhibit Hall and the East Exhibit Hall. But because of the growing demand for booth space, the NAB has now opened the South Exhibit Hall to exhibitors.

The No-Nonsense Map actually includes three comprehensive maps: one for each exhibit area. Booths 100 through the 700s are located in the North Exhibit Hall; booths from 800 through the 2000s are in the East Exhibit Hall. In addition, several companies are located in the South Hall; these are signified with an "S" following their booth number.

When reading the map locator number, just remember that map key numbers A through I are in the East Hall, and J through N are in the North and South Halls. For example, a booth with a locator code of D4 would be in the East Exhibit Hall, while one located at M2 would be in the North Hall.

To determine which companies you would like to see, use the NAB Equipment Directory and list of NAB exhibitors included in this NAB Convention Guide.

# NAB SESSIONS: A move in the right DIRECTIONS

BY MICHAEL SCHEIDACH

The glamour and glitter of NAB Vegas is about to unfold. But in the midst of all the excitement will be a convention featuring the world's largest broadcast equipment exhibit—with more than 400 companies—and sessions, papers, and workshops designed to answer the questions plaguing many broadcasters:

Where is broadcasting headed? Will prime-time TV shares suffer at the hands of improved pay TV and cable services? Will the new communications industries, such as cable, force commercial stations to move in new directions? What must radio do to compete in the marketplace of the future? Will satellite distribution provide the answer to worried broadcasters concerned with the quality and timeliness of local news programming? How will the new technologies impact radio and television? How can broadcasters improve programming, promotion, and sales? How will this affect the bottom line? And what is going to be the position of the federal government on deregulation, DBS, 9 kHz, AM stereo, and low-power TV?

The communications industry is moving in many directions, and it is vitally important that broadcasters choose the right road. With this in mind, the NAB has appropriately called this year's convention "Directions in Radio, Television, and Engineering."

From the opening session to the final walk through the equipment exhibit, the emphasis will be on moving in the right direction to better ratings, better programming, better signals, and better profits.

Along the way will be entertainment

by Bob Hope and Rich Little, and special awards presentations to Arch Madsen, president of Bonneville International (the 1981 Distinguished Service Award) and Wallace Johnson, executive director of the Association for Broadcast Engineering Standards (the 1981 Engineering Achievement Award).

The Third Annual Ham Radio Operators Reception will again be hosted by the NAB. Plus self-help seminars on handling stress and success; broadcasting mini-courses; the second annual tennis tournament; and a shopping spree.

### Radio sessions include:

- *Sales Forum.* RAB, NAB, and industry sales and marketing experts will

be on hand to conduct an all-day session on sales tools and techniques. Included will be clinics on raising your rates, pitching agencies, raising revenues by selling to chain stores, and getting more co-op dollars. In the afternoon the session will be divided into small- and large-market groups, with the emphasis on selling techniques for your market.

- *New Technologies Forum.* Paul Bortz will lead a panel of experts in a discussion of what the new technologies will mean to you in the way of improved programming and higher profits.

- *Spanish Language Station Forum.* This session is specifically designed for Spanish language formats, with the focus on proven techniques in programming, ratings, marketing, and promotion.

- *The Small-Market Legal Clinic.* A Monday night session for small-market managers hosted by the NAB legal department. This four-hour session will cover the legal problems of small-market radio broadcasters.

- *Night Court In Session.* On Tuesday night, the legal "counseling" continues with NAB's legal staff answering questions on FCC requirements, EEO regulations, copyright laws, license renewal, and more.

- *The Five-Hatter, One-Headed, Small-Market Manager.* A session just for the small-market manager who also serves as GM, PD, and CE.

- *What's Your Station Worth?* A 75-minute mini-course on how to figure what your station is worth... in dollars and cents.

- *Getting Numbers (and \$\$!) With*

*Continued on page 80*

*News.* A how-to workshop on making radio news better, more timely, more comprehensive, and more important.

- *Finding the Bucks for Buying, Building, or Remodeling.* This session will talk money. Broadcast finance specialists will discuss where to obtain the money for station improvements.

- *Changing Formats... And Living to Tell About It.* Those that have changed formats successfully will share their experiences and advice on how you can do the same.

- *Getting More Profit and Production from Your People.* Jim Hooker and Chris Lytle of Media Sales Training Systems will conduct this session on people, production, and profits.

- *Radio Earth Stations.* This session will help you plan for today and tomorrow with advice on buying or leasing a satellite receiving station, doing it now or waiting, selecting the right size dish, etc.

- *Promotions That Make \$\$\$.* Creating effective radio promotions is the name of the game here.

- *Five Reasons Why Managers and Sales People Fail.* James F. Clarke, executive vice president of Management Research Associates, will conduct this session on succeeding in a highly competitive business.

- *Is Your PD A Pro?* Guidelines for the GM in the selection and grooming of an effective program director.

- *Selling AM in the '80s.* A panel of sales experts representing all markets will show you how to sell AM.

- *Classic Rock??* This session will answer that classic question, Are you what you think you are?

**Television sessions Include:**

- *Sales: Sell It Like It Is.* TvB experts will show you how to motivate and train your sales force. Features of this general session will include a report on the state of the industry, a discussion of new sources for training top station management, and a special presentation of TvB's comprehensive study on the compensation and composition of today's sales department.

- *Peaceful Co-existence: The News/Programming Relationship.* NATPE is conducting this session which will emphasize cooperation between programming and news departments. The bottom line of the session is reduced production costs and better news programming, including personal glimpses, features, and magazine formats.

- *Local News Isn't Local Anymore.* A panel of RTNDA members will discuss how new technologies—from helicopters to satellite receiving sta-

tions—are changing the shape of local news.

- *Good Looks: Promotions That Work.* The Broadcasters Promotion Association presents new techniques for promoting your station.

- *Smart Management for Small Markets.* This session is designed for small-market station managers. The emphasis will be on being a better manager through understanding what does and does not work in your market, how to improve your profits without sacrificing quality, how to hire and motivate your staff, and more.

- *A Building for Your Future.* Frank Rees Associates is presenting this two-part series on designing and planning the best broadcast facility... for present and future needs. The discussion will include employment projections, energy requirements, architectural considerations, market trends, and more.

- *Is the Sky Really Falling?* Discussion of the impact of pay TV and improved public television on network prime-time TV shares. Representatives from the networks, ad agencies, and the rating services will be on hand to help you solve the problem in your market.

- *Satellite Distribution: A New Way of Life?* How satellites can benefit you, from handling on-the-spot news reports, syndicated programming, advertising, and more.

- *Issue Advertising: Keeping It Legal.* A panel of experts will discuss law and advertising, including compliance with FCC rules and regulations.

- *MDS: A Billion Dollar Baby?* Mark Foster, president of Microband National Systems, will moderate this session that focuses on the rapid rise of MDS.

- *STV: Boom or Bust?* A look at subscription television service and whether this might be the right system for your station.

- *Teletext or Videotext: Whither Thou Goest?* Experts will be on hand to look at which system is more reliable, which is the best investment, and how the FCC views each system.

**Television engineering sessions Include:**

- *Facilities Design and Construction... Within the Tangle of Regulations.* Before you plan that new facility, you'd better attend this session. Design experts will lead you through the do's and don'ts of building that new station, such as ramps for the handicapped, zoning and tower lights, position of fire extinguishers, and more.

- *Experience with Auto-Setup TV Cameras.* A discussion of color cameras

with automatic features, including automatic setup. Find out if they really can replace a video operator, how to maintain them, and what the future will bring.

- *UHF Transmitter Efficiency.* This session will tell you what is being done to improve UHF transmitter efficiency. Included is a look at klystrons, anode pulsers, stability, remote control, servo loops, control of sync levels, and semi-automatic transmitter control.

- *The SMPTE Workshop.* The latest in the state-of-the-art will be covered by the Society of Motion Picture and Television Engineers.

- *Teletext Standards.* This session will feature a report on the work of the Electronic Industries Association subcommittee on the recommendation of one teletext standard. Representatives of each of the systems will describe their system, followed by a question and answer period.

**Radio engineering sessions Include:**

- *Telephone Talk Shows.* A panel of experts will review telephone company equipment and terminology, protection of the "switched network," devices for converting to four-wire, hybrids, bridges, new automatic devices available, conferencing, RFI, and more.

- *Satellites for Radio.* A discussion of the installation, maintenance, and testing of radio earth stations. Plus, a look at the use of satellites for high-quality audio transmission, sharing earth stations, reducing costs, and noise reduction techniques.

- *Radio ENG.* This workshop will show you how to use remote pick-up radio equipment to get a quality sound on the air. Focus is on low fi, hi fi portable units, walkie talkies, multiple receivers, duplex and cueing, working out the intermod, antennas, modifying standard equipment, and licensing.

- *Audio Processing.* A review of the latest equipment, techniques, and practices in the use of audio processing equipment. The emphasis will be on quality vs. loudness; how to get along with the program director and his favorite black box; the FCC and composite clipping; modification of equipment; and AM stereo audio processing.

There will also be joint sessions on *Batteries for Portable Equipment* and *The FCC Panel.* *The FCC Panel* will be your opportunity to find out what lies in store from the Commission on 9 kHz spacing, AM stereo, low-power TV, new FM stations, deregulation, and more.

## 50 kW VHF power, greater efficiency. 4CX40,000G tetrode and cavities from Eimac.

Eimac's new CV-2200 series of practical, low-cost cavities are available now. Combined with Eimac's 4CX40,000G VHF tetrode, this efficient, compact package is recommended for FM broadcast service, VHF-television, particle acceleration and VHF radar.

Generating a measured power output of 60 kW, the 4CX40,000G tetrode offers power gains of 20 dB up to 218 MHz. High stability is achieved with the pyrolytic graphite grid structure. And a highly efficient, economical and quiet anode cooling system is inherent in its design.

Eimac supplies cavity and tube to match your requirements.

We back it up with know-how and application engineering information.

50 kW FM broadcast cavity CV-2200 with 4CX40,000G tetrode.

# NAB '81 EQUIPMENT DIRECTORY

This NAB exhibit hall equipment directory includes more than 400 companies that will spread millions of dollars of broadcast equipment across the more than five acres of exhibit hall space.

To make your search-and-find work a lot easier, we're preceding the directory with an index. Once you find the category you need, you'll see that its page location in this

issue is listed in front of the category. This directory was compiled from responses by the exhibitors. However, you can expect some companies to unveil new products and lines at the convention. It's all part of the showbiz atmosphere of the NAB convention.

This comprehensive directory lists more than 100 categories of equipment as well as listings of programming/production services.

If you're planning to attend the convention, and if you're seeing and evaluating specific types of equipment, this directory should help you plan your way through the aisle traffic.

Here's how it works.

Within each category is an alphabetical listing of the companies exhibiting those products. We've also included the company's booth number and a no-nonsense booth locator number. Once you have the map locator number, turn to the BC No-Nonsense Exhibit Hall Map and you'll quickly find the booth you need.

For more information on the products to be exhibited at NAB '81, turn to the NAB Exhibitor section. By using that section, scanning the ads in this issue, and looking over our Product Premier section, you'll be geared up to make the most of your exhibits visit time. Who knows, you may even end up with time to browse. But only if you plan carefully now.

UNDER THE WEATHER TOWER  
SOUTH HALL... 525

# Here. Now!

## The world's first and only Weather Forecasting Computer.

### WEATHERCASTER CT-1000

Real-time local weather forecasting... animated weather presentations... weather graphics... whatever the weather occurrence, Weathercaster CT-1000 is ready.

The CT-1000 creates lives "weather character" animations of its weather forecasts and other weather simulations; also time-sequenced weather

map presentations showing present, past and future weather locations and conditions.

The CT-1000 will also create news graphics. Weathercaster's NTSC video output permits full-screen personalized chromakey presentations.

For a live demonstration come to NAB... Booth 525... South Exhibit Hall. Hospitality Suite at Landmark Hotel.

# THE CHOICE IS YOURS!

## THE AUDIOPAK A-2 OR THE STEREO PHASED AA-3 BROADCAST CARTRIDGE

**Capitol Audiopak Broadcast Cartridges—  
for stations who care how they sound.**

Both Audiopak carts offer extremely low wow and flutter; a positive brake system which stops the tape, not the hub, assuring accurate cueing. Unsurpassed reliability is assured because we manufacture the tape and all other components in the cartridge. Moreover, all carts are 100% tested before shipping.

The AA-3 offers excellent stereo phase stability. It's loaded with Capitol's own Q17 HOLN tape which extends frequency response and headroom to provide studio sound quality.

# *The New Workhorse*

Quietly, you have made the OTARI tape machine a standard for reliability and performance in literally hundreds of studios and thousands of production studios—worldwide! The legendary 5050 series were the first compact professional recorders accepted by the industry and remain, dollars for dB's, the best tape recorders made. Whether moving 1/4" or 1/2" tape, these SMPTE adaptable machines are complete with every necessary production feature.

Our ARS Series Reproducers have been accepted by the most prestigious automation manufacturers in the business. These people must have a reliable product before they put their name on it. Our MX-7800 1" transport production machine remains the most functional eight track on the market.

The OTARI pre-eminence in engineering is more than fifteen years old and encompasses tape formats from full track to twenty-four track and tape speeds from 3 3/4 to 240 ips. To the broadcaster, OTARI has earned its envied reputation for reliability with technological leadership and 100% pre-shipment check-out.

Behind our product is a further commitment: factory support with a large domestic parts inventory, thorough documentation and communicative personnel. A qualified and dedicated dealer network is the final link in OTARI's comprehensive approach to the broadcaster.

You have made OTARI—*The New Workhorse*. We have made them the most comprehensive line of tape machines in the world.

Call or write today for your nearest dealership. They will be happy to put you on top with an OTARI.

## Howe Audio History Is Made . . .

### Howe 7000 Stereo Console

#### Simply Reliable.

Those words introduced the Howe 7000 in 1979. Since then the Howe 7000 consoles have rapidly grown in popularity. Engineers are impressed with Total Harmonic Distortion of .09% or lower, noise floor of -74 dBm, equivalent input noise of -124 dBm or lower, channel separation of better than 60 dB, frequency response of 20 Hz to 20 kHz  $\pm$  1 dB, and maximum output of +24 dBm.

"Since the installation of our first Howe Series 7000 console last summer, we have enjoyed consistently high quality and no down-time. The operators are delighted with the clean, straight-forward layout of the controls and the useful special features of the Howe Series 7000. The second Howe Series 7000 console is being installed in the KIMN newsroom, a high-volume, 24-hour mobile news operation. Again, the Howe Series 7000 console offers the reliability, special features, and error-free operation that we demand." Chuck Waltman, Engineering Director, KIMN-KYGO, Jefferson-Pilot Broadcasting, Denver, Colorado.

### Introducing the Howe 8000.

The 8000 has all the same performance specifications and high reliability of the 7000, but with many new features, including slide attenuators, push-button logic systems for on/off/cue and remote start/stop, simultaneous audition/program bussing, fluorescent VU meters and a built-in real-time clock. As in the 7000 there is a full width option panel and D.C. audio control.

## Leddicons...

the image standard for quality camera tubes.

The Leddicon® family of 2/3", 1" and 30mm lead oxide tubes are the best available today... and include integral and variable light bias types, extended reds, high resolution greens and H.O.P.'s for anti-comet tailing suppression.

## Vidicons...

the established imaging tube standard for all broadcast color telecines and caption scanners. A wide range of photosurfaces means that there is an EEV vidicon to meet any requirement.

## Klystrons...

that pay for themselves in 1 to 2 years. Our 55 kW high efficiency klystrons have operated reliably at over 45% efficiency for the past two years... worldwide. EEV klystrons are available from 10 kW to 55 kW.

Power tetrodes... a complete power range is available for TV, AM and FM transmitters.

# Perfect Timing

## MASTER CLOCK SYSTEMS

### CHOOSE THE RIGHT ONE FOR YOU!

If seeing the same time on all your clocks is important, select **ES 192** — Line Frequency timebase, for only \$312.

If a guaranteed accuracy of three seconds per month is what you want, choose **ES 160** — \$1005.

How about one second per month? **ES 160/1** — \$1179.

Or National Bureau of Standards accuracy! **ES 190** is synchronized to Radio Station WWV to provide a Master with unquestioned accuracy. \$1179 with receiver and antenna.

For a Time/Temperature Master, ask for **ES 196** — \$737.

**ESE Master Clock Systems are simple to install. All Masters have a Serial Time Code output, able to drive twenty slave displays without buffering. Slaves range in size from .3" LED to 2" gas discharge displays, priced from \$152 to \$432.**

IF YOU ALREADY HAVE A SYSTEM AND WANT TO EXPAND IT, get the **ES 167** Serial Time Code Generator (\$141), then add any number of our low cost slaves.

Many, many options and accessories are available. Ask us about them. Our brochure tells the whole story, but not for long. We keep adding new products.

### “Handy as a pocket on a shirt!”

The Model 12AV1 routing system has been designed with new electrical and mechanical techniques to provide high quality signal distribution in video only, audio only, or AFV configurations. The system accommodates 12 inputs, with 1 output bus providing 2 video and 1 audio output. Units can be stacked as systems expand up to 15 outputs without external DA's. All switching is vertical interval. Switching reverts automatically to random upon loss of vertical drive for minimum down time.

# Comark must be doing something right... you be the judge!

- ★ **1978** Comark introduces most efficient transmitter design
- ★ **1979** Comark installs most efficient transmitter plant in the world\* at Tarpon Springs, Florida
- ★ **1980** Comark scores high in PBS report E8012 nine (9) point criteria for Optimum Efficiency Transmitter system... seven (7) out of nine (9) desirable features *isn't bad*
- ★ **1980** Comark stuns industry with introduction of Maximum Transmitter Plant Efficiency concepts
- ★ **1980** Comark advances Automatic Transmitter System concept with full local-remote computer control and advanced R.F. switching systems
- ★ **1980** Comark captures considerable portion of UHF-TV marketplace through innovative engineering and customer service

\*Standard design not using mod anode pulser or other energy saving features

- ★ Comark will introduce the most modern, exciter, compatible, mod anode pulser available in the industry
- ★ Comark will introduce a complete VHF transmitter system product line
- ★ Comark will continue its on-going effort to improve the lot of the UHF broadcaster to compete profitably in the marketplace

# "The TDF-2 Gives Us the Jump on Our Competition."

...Pete Wood, Project Engineer • The Vidronics Company, Inc., Hollywood

Vidronics' clients are picky. And Pete's a perfectionist. He wants them to have the best product possible.

This is what he told us about the Fernseh TDF-2 Digital Noise Filter:

"Many of our clients are film-oriented, so they look for grain and noise. With the TDF-2, we can reduce the intensity of scratches and random noise, especially when transferring film to videotape for integration into a live show or when editing pre-recorded videotape.

"The TDF-2 gives us the jump on our competition. In fact, we thought enough of it at the time of our original purchase that we immediately ordered a second unit. And our option package with the enhancement and chrominance-to-luminance correction features gives us an extra edge.

"Our clients definitely get a better end product through the use of the TDF-2."

That's what the man said.

If you want to improve the SNR of cameras, videotape recorders and microwave/satellite links by as much as 18 dB, take Pete Wood's advice.

Call or write us today for complete technical information. For literature only, call 1-800-821-7700, ext. 701; in Missouri, call 1-800-892-7655, ext. 701.

# AKG

**When we set out to "naturally" enhance the quality of sound, we came up with an idea that's reverberating around the world.**

The patented AKG Torsional Transmission Line System shown here is the heart of our new BX5. It's the same principle as used in our world-famous BX-10E2 and BX-20E.

This AKG innovation gives you flutter-free performance and truly balanced reverberation at any of the selectable decay settings.

The TTL system is just one of the many advanced features you'll find in the same

reverberation units used in most major recording and broadcast studios around the world.

Ask your AKG dealer for a personal demonstration and hear the benefits of each AKG reverberation unit... "naturally."

# Meet The Chairman Of The Boards

...a chairman that really makes decisions, executes and acts as a leader should. Introducing the Harris MICRO MAC™ audio console, the new brain in your control room. One that won't let you down.

Credentials? You bet!

- Prevents playing the same commercial back-to-back
- Alerts operator when to change cart
- Won't accept start command to non-ready source
- Linear attenuators impervious to smoke, coffee, dust and dirt
- Virtually noise and maintenance free

- Microprocessor controlled
- 1 to 16 modular input channels
- Up to 3 stereo outputs, plus 1 mono output

The Harris MICRO MAC audio console will hold its first board meeting in the Harris exhibit at the NAB Convention in Las Vegas, April 12-15. Come witness a real chairman in action. Or, for those who can't attend, write today for a full report on the remarkable Harris MICRO MAC audio console: Harris Corporation, Broadcast Products Division, P. O. Box 4290, Quincy, Illinois 62301. Phone 217-222-8200.

Designed to  
put vibration  
and resonance  
in their place.

In a professional quality turntable, you want musical vibrations, not mechanical ones. That's why our Professional Audio Division presents the Technics R&B Series SL-1015 turntable and EPA-500 interchangeable tonearms. They put vibration and resonance where they belong—out of the audible level.

The SL-1015 turntable system has a visco-elastic base that absorbs external and mechanical vibrations instead of transmitting them. The extra-heavy platter is damped 3 ways to help cancel platter resonance and acoustic feedback. A high-torque motor provides instant starts. And quartz-synthesized pitch lock with digital display precisely controls speed.

The EPA-500 tonearm system is a series of 5 independent, instantly interchangeable titanium nitride tonearms that let you match the correct tonearm mass to the correct cartridge compliance. The result is music in focus, with inaudible resonance.

The SL-1015 turntable and EPA-500 tonearms are available at select locations. For one near you, call 800-447-4700 (in Illinois, 300-322-4400). We challenge you to hear anything but the music.

# The Total VTR Battery System

- Power-packed, higher performance Nicad Cells deliver more VTR running time, longer life, never need maintenance, fast charge in one hour.
- Exclusive electronic circuitry and quality construction provides the identical total reliability of Cine 60 Powerbelts... standard of the industry.
- "Total Charge Capability, anywhere..."
- On location, fast charge from any 12 Volt car system — unattended, in one hour, with our 3 lb. Car Fast Charger — no heavy inverter needed.

- From A.C., one hour fast charge with our 3 lb. Universal Model 9400 or BP 2500.
- Fast Charge four batteries — automatically and unattended — with our new, multiple, High Frequency, Regulated Fast Charger, one per hour, four in 4 hours.
- Standard charge 2 batteries overnight, with our two channel, regular Charger.
- Directly replaces original VTR batteries — Sony BP-20, BP-20A, BP-50, BP-60, BP-80, BP-90 and JVC/Panasonic PBP-1.
- See your local authorized Cine 60 Dealer. Ask about the Total VTR Battery System you need.

## Mark 200 Full Duplex Communicators Systems

**Complete Systems From \$995**

A new generation of Full-Duplex **SWINTEK** communicators is now being offered which warrants the name **MARK 200S** family. Specifically designed to provide Continuous Closed-Circuit Wireless headset intercommunication for industrial or reinforcement sound market. This can be a telephone-type network between a football coach and his spotter or behind-the-scenes voice link between a show director and his sound, lighting and stage crews. With the proper headsets a race track pit crew can communicate with the driver in ambient noise exceeding 120dbA WITHOUT WIRES. In industrial plants, such a system keeps continuous contact between production control and a worker in a hazardous or high noise environment.

Unlike a conventional walkie-talkie, no transmit buttons have to be depressed to establish communications between two remote stations. This mode of operation limits false triggering of the transceiver system, thus blocking interfering signals. Any break in communications is immediately apparent at all stations due to loss of voice sidetone information.

**MK 200S Communicator**

- True hands Off Operation, full duplex
- One-half mile usable range, typical
- Push To Talk for system expansion
- Data information input

**MARK 200/RPL Rack Mounted Communicator**

- Over Five channels of Full Duplex communications

**MARK 200/CPS Communicator**

- Powered from external camera power supply
- Push to talk for system expansion
- One-mile usable range, typical

# IF IT'S FROM RUSSCO, IT'S A SOUND INVESTMENT.

RUSSCO is broadcast equipment designed by professional broadcast engineers... Built Rugged, built to work and save downtime. That's Good Investment. When you look over our quick-starting Vari-Speed turntable and our performance boosting stereo and mono audio mixers, you begin to understand RUSSCO Quality. RUSSCO phono pre-amps, power and distribution amplifiers are the finest state-of-the-art. You'll look good when you buy RUSSCO, and the money you Save will Sound Good going into the bank!

• Call Barbara Gaudin for Catalog sheets with our great specs.

You can Rely on **RUSSCO**

RUSSCO ELECTRONICS INC., 5690 E. Shields Ave., Fresno Calif. 93727 • Phone (209) 291-5591

The Investment that grows

## DATATEK D-2000 ROUTING SWITCHERS

### Industry leading technical performance.

For example, maximum audio output is +30dBm without requiring transformers and noise is over 105dB below maximum output.

### Inherent reliability.

For example, the D-2000 **avoids** putting multiple inputs and outputs on a common PC board, **avoids** party lining control systems in preference to private lining and **avoids** reliance on a central microprocessor system. Instead, each input and each output bus are on individual plug-in modules and each output bus has its own independent microprocessor control system. A fault therefore can only affect one input or one output and not the entire system.

**NAB  
BOOTH #1227**

**Expansion Capacity to 250x250 Systems,** with up to 8 control levels. There is no need to specify initially the ultimate matrix size.

### Large Selection of Control Panels.

For example, there are over 25 different standard control panels, including individual pushbutton, keypad, alpha numeric and CRT matrix status display. Datatek can also design control panels for special requirements. Control is over a single coax line.

# We stand alone

There are no fewer than 7 television transmitters up there at the top of the world's tallest free-standing structure... including some of the most prestigious names in the world.

*Townsend recently joined them.*

The CN Tower in Toronto stands 1,815 feet. It houses 7 T.V. stations and 9 radio stations, along with the world's highest public observation area (1,455 feet) and the world's largest revolving restaurant (1,150 feet), which seats 420 people.

How did we get to join this lofty group? Our growing market share suggests that we earned our way through some important unique accomplishments.

#### Here's where we stand alone:

- Townsend is the only source of a full line of completely solid state, low power transmitters.
- Townsend is the sole supplier of the "Tetron" type transmitter for 10 and 30 kilowatts. It employs a tetrode rather than a klystron for the aural amplifier.
- Townsend alone offers high power klystron trans-

mitters with either integral or external cavity klystrons — the choice is yours.

- Only Townsend offers high power UHF klystron transmitters employing completely solid state, fiber optic pulsers for high efficiency operation.

Get full information. Send for our new descriptive brochure or visit us at the NAB Convention, Booth 1007.

See the 15 ft. model of the CN Tower in our booth.

**Special:** We are a recently appointed U.S. distributor for Alan Dick & Co., Ltd. antennae. One of their sales engineers will be in our booth.

### NEC DME® System features:

- Single or dual channel operation with DME dual system for simultaneous single-studio multi-channel or two-studio single channel use.
- Complete frame synchronization on all inputs including TBC, freeze and Velcomp capabilities.
- Intelligent digital control system with 18 complete memory locations of start and finish position/size and special effects.
- Automatic pan and tilt control with limit for not going out of frame.
- New vertical and horizontal inversion effects including "tumble" using new digital control.
- New "mosaic" effect with adjustable tile size for dramatic visualization of show openings and closings.
- TTL pulse circuitry for sequential and external triggering to permit extensive interface with editors and other creative controllers.

### NEC DME Control features:

- Operation with DME or existing DVE® Digital Video Effects System for full digital control of all system functions.
- Memory capacity for 18 complete pattern manipulations including start position and size, finish position and size, posterization and

- solarization effects, freeze frame or freeze field and real time frame entry of effect duration ... all effects instantly and exactly repeatable.
- Automatic pan and tilt functions with selectable limit to prevent pattern transition beyond blanking.
- Memory reveal function to permit image-track effects by revealing the entire memory and removing normal mask.
- Bridging of all memories to permit multiple effect sequences up to 999 frames each for a total capacity of 17,982 frames of pre-programmed effects.
- Auto-freeze for pre-timed incremental freezing.
- All digital construction including digital shaft encoder instead of conventional faders.

## TRANSPARENT Performance in Compact Routing Systems

NOW. Simplified Control of a Transparent Switcher. HEDCO Audio and Video Switchers have single-wire-per-crosspoint control systems and superb specifications! Premium quality at reasonable prices in single bus (8x1 to 64x1), or multibus units (8x8, 16x4, 40x2), in Audio or Video, or AFV with redundant power

supply. Two full-level Audio or Video outputs per bus. Sizes can be configured or expanded as needed. You can use our LED/switches, new push-button rotary switches, or design your own panel. Single-wire priority logic allows only one signal transfer, plus fault override. Two week delivery. Call for a quote today.

**"Their innovative design makes RDS/HMI Fresnels ideal for all film and video location shooting: especially live mass events and sports specials..."** Bill McManus

"Working as we often do under less-than-controlled circumstances — where power is sparse, cables have to be stretched across large areas, and there are large crowds to contend with — we've come to appreciate the enormous versatility and rugged reliability of the RDS/HMI Fresnels," says Bill McManus, president of McManus Enterprises, the prominent production lighting design company (based in Bala Cynwyd, PA) and member of the official 1980 Winter Olympics lighting team.

"I applaud their original and innovative design!" says McManus. "Their unique cube-shaped design and rugged modular construction provide RDS/HMI Fresnels with distinct advantages over other HMI lights currently on the market.

#### **Stackable**

"An obvious advantage is that several luminaires can be vertically stacked for ease of transportation and convenient storage. It allows you to cut down on the size of the truck you're taking along... Stack them three or four high at the edge of a tail gate and strap them to the truck. When you pull up to a location, just undo one strap and start handing the lights off. This makes setups real quick and easy.

#### **Convertible**

"Another important feature is that RDS/HMI luminaires can be easily converted to incandescent Fresnels by simply replacing the HMI insert assemblies with optional insert assemblies which accept standard tungsten-halogen lamps. That means a lot to a company like McManus which is involved in both sales and rental of equipment, because shelf space is so valuable.

#### **Wider Focusing Ratio**

"The lights have such long range, such reach, we were able to use them at Lake Placid from the roof tops of two hotel buildings as if they were regular follow-spots!

"And the specially designed RDS/HMI Fresnel lens provides a smoother field of light as well as a wider focusing ratio from spot-to-flood.

#### **Safe, Rugged and Reliable**

"The entire RDS/HMI insert assembly — including lamp socket, ignitor circuitry and switches — can be removed easily without the use of tools for safe, convenient relamping.

"At Lake Placid, a couple of lights were knocked down accidentally. In both instances the lamps were not broken, and the fixtures fired right up within minutes of the accidents. I credit this to the specially designed, shock-mounted heat sink lamp sockets. We had no major breakage, no downtime, no leaks, and no loss of life to the lamps!"

**Bill McManus (right) with Joe Tawil of The Great American Market, one of Cinema Products' major dealers for RDS/HMI 575W, 1200W, 2500W and 4000W Fresnel spotlights.**

## Color Monitors For Editing Suites

RV 902 9"

RV 1301 13"

A new series of small screen color monitors and receiver/monitors ideally suited for your off-line editing suites featuring:

- Accurate color rendition
- Excellent frequency response to 4.2 MHz for superior horizontal resolution
- Compact size
- Precision-in-line picture tube
- Full "E to E" capability
- CMOS Electronic switching
- May be equipped with pulse-cross, under-scan, internal/external sync selection and other options

Contact your nearest World Video dealer or sales office for additional information on the complete line of World Video products.

# AM TRANSPARENCY

Typical phase and square wave performance: Continental's 317C-2

20 Hertz

1000 Hertz

7500 Hertz

50 Hertz

1000 Hertz

7500 Hertz

**Continental's  
317C-2 50 kW  
AM transmitter  
gives broadcasters  
a new standard  
of performance.  
Here's why.**

The 317C-2 offers broadcasters transparency and high efficiency.

Continental's 317C-2 is a 50 kW broadcast transmitter built for today's programming demands.

It delivers superb audio quality and faithfully reproduces the most complex audio processing. It is ready for AM stereo.

Continental's newest transmitter comes from a field-proven design and offers broadcasters excellent performance with unmatched efficiency, reliability, simplicity and maintainability.

Continental transmitters meet today's sophisticated programming requirements. And

they'll be ready for the coming evolutions in AM broadcast programming.

For information and a brochure on the 317C-2, phone (214) 381-7161 or write to: Broadcast Marketing Dept. Continental Electronics Mfg. Co.; Box 270879 Dallas, Texas 75227; Telex: 73-398

# TIRED OF PATCHING FEEDS TO THE GM'S OFFICE?

(OR TO OTHER OFFICES, CLIENT VIEWING ROOMS, EDIT SUITES, ETC.?)

Give them one of these Utah Scientific Routing Switcher Controllers and let them do their own patching.

Utah Scientific's new CPD/PL control is a Party Line panel with a single coax control connection — no bulky cables to install. It is powered by a transistor radio battery providing many years life expectancy. It features a pull-out directory to aid the operator in source selection.

Since multiple CPD/PL's can all be connected to a single party line, many stations are installing coax drops throughout their plants giving them complete flexibility for present and future routing switcher control using these versatile panels.

SINGLE COAX CONNECTION — BATTERY POWERED — UNOBTRUSIVE

## It makes good management sense...

When you support SBE's certification program by hiring certified engineers and encouraging your current staff to earn certification, you're endorsing the highest standards of technical professionalism in the engineering community.

Which means you also end up with a better managed, more profitable station. And a better signal.

SBE certification represents the highest degree of technical achievement. Applicants must meet a minimum experience requirement at-station or in related fields in the broadcast industry, submit to review and approval by the certification committee, then pass a written exam on state-of-the-art engineering. And after all that, they must submit to periodic review and recertification.

Pretty tough standards, to be sure. And a pretty smart way to make sure yours is the best engineered station in your market.

Support the SBE certification program. *It makes good management sense.*

**For complete information  
on SBE certification,

# Cleaner, Brighter, Louder

OPTIMOD-AM permits progressive AM broadcasters with quality plants to broadcast a standout signal with improved coverage.

The signal is processed for common automobile, table and portable radios to achieve outstanding speech intelligibility, musical definition and freedom from distortion.

And the versatile new OPTIMOD-FM Model 8100A is even cleaner, brighter and louder than the industry-standard Model 8000A it replaces.

The new 8100A was computer designed and refined by hundreds of hours of listening to set the new quality standard for FM in the 80's.

AM or FM—OPTIMOD creates sound that dominates the dial. For all the details, call Toll Free (800) 227-4498, in California (415) 957-1067, or write for the name of the Orban Broadcast Dealer nearest you.

# THE 6112 IS SO ADVANCED IT SURPASSES ALL SWITCHERS IN ITS CLASS AND BEYOND

Two fully independent special effects generators each with double re-entry; downstream keyer.

**Price N.T.S.C. \$7,345.**  
**P.A.L. 8,345.**  
**Encoded Chroma Keyer \$1,050.**  
**Not Available in P.A.L.**

The production flexibility afforded by two fully independent mix-effects systems, each with its own keyer, has to be seen to be appreciated. The 6112 makes maximum use of its buses and controls. For instance, the preview bus is not tied up just to get an ME system into the program line. Ask your dealer for a demonstration.

The circuitry is rock stable — and we mean exactly that. Dual back porch clamps, patterns that snap into position, inherent timing accuracy with no lag or bounce, standardized interchangeable plug-in boards with gold fingered card edge connectors, all contribute to a sense of quality.

For further information on the 6112 or our other switcher products call or write for information.

# LISTEN TO THE DIFFERENCE.

## THE DELTA RCS-1 REMOTE CONTROL SYSTEM

*A simple, yet sophisticated approach to AM, FM and TV Remote Control*

### SIMPLE.

- All parameters are displayed for the operator.
- Hands-off operation until an actual control function is required.
- Automatic logging option ends the nightmare of forgotten or incorrect log entries.

### SOPHISTICATED.

- Features not found on other remote control systems:
- Modulation bargraph with peak flashers.
- Direct antenna monitor interface.
- Telephone coupler with speech synthesizer providing telephone interrogation.

The RCS-1 is designed to grow with your plant. Additional control, input, and alarm boards can be added to the systems, thereby meeting any new station requirements. In addition, the RCS-1 contains the fundamental building blocks for ATS, permitting conversion to a combination Remote Control/ATS System at a later date.

Write or call for a descriptive data sheet and pricing.

### **DATATRONIX NEW APF-48-1** provides reliable multi-channel patching in limited space

For use in signal routing . . . maintenance testing . . . and audio mixing. This new audio patcher contains 48 normalled circuits in a compact panel. Has gold cross-bar contacts and printed wiring throughout. Printed circuit is designed to minimize circuit coupling. Has time-proven telephone type cable connectors.

- Compact—1¾" × 19" panel, 4½" deep.
- Rugged & reliable
- Low crosstalk
- Simplified installation
- Simultaneous bridging jacks optional

For further information, call

# Eventide Clockworks ends the tyranny of the clock.

## Introducing the Eventide Timesqueeze system.

It lets you control time. Specifically, the running time of videotape and audiotape playbacks. With no editing, no "Donald Duck" audio effects and no material eliminated. In fact the process is virtually undetectable in use.

Think what this can mean! Did a local commercial come in at 32½ seconds? With the Eventide Timesqueeze system, that spot will fit in a 30 second slot. A 100 second news spot can fit a 90 second news slot. You can even program a 95 minute movie package in a 90 minute slot. And the system works the other way too. It can stretch time. For example, a 36 second musical background can be stretched to cover a 40 second scene.

For television use, the Eventide Timesqueeze system controls your one-inch variable-speed-capable VTR. Radio stations can use the system to control most any pro-audio recorder. And Eventide delivers full 15KHz audio response.

How much does it cost to control time? Amazingly, as little as \$3500 for the most basic system. The fully computerized system is only \$8500. So not only can you control time, you can control costs.

The Eventide Timesqueeze system. It gives you freedom of time.

See us at N.A.B. booth 177—S

## Ask Eventide:

**Q:** How does the Eventide Timesqueeze system work?

**A:** In order to change the timing of an audio or video recording, first the tape playback speed must be varied so that the original play time is changed by the amount desired. Second, the detrimental effects of the speed change must be negated or corrected. In audio this means restoring the pitch so that the announcer doesn't sound drunk (on slowed tapes) or like Donald Duck (on sped-up tapes, of course.) In video it requires signal manipulation so that sync is not lost as the VTR speed changes. Compatible one-inch VTR's, equipped with their companion TBC's can provide stable pictures at slow and fast speeds.

The Eventide Timesqueeze system accomplishes time compression and expansion by first computing and generating tape machine control signals to vary tape speed by the proper amount, and then by correcting the audio pitch, using the H949 Harmonizer.\* The system can be configured in several ways. To control an audio recorder, often the H949 Harmonizer alone can be used. In other cases, such as when very precise final timing is required, the crystal-controlled PTC945 Precision Tape Controller should be added, to generate both the control signals for the tape machines and to control the pitch ratio of the Harmonizer. If the PTC945 is used, the final component of the system becomes a computer. We recommend the Hewlett-Packard HP-85 for its overall quality and reliability, but any small computer with an IEEE-488 interface, including the inexpensive Commodore PET can be used. The computer takes overall control of the system, by sending messages to the PTC945 and thence to the H949. All functions, including tape timing can be controlled by the computer. The computer-controlled Eventide system is unrivalled in operating simplicity. Just answer the questions the computer asks on its CRT readout:  
COMPUTER: HOW LONG IS YOUR TAPE?  
OPERATOR: 67 SECONDS.  
COMPUTER: HOW LONG DO YOU WANT IT TO BE?  
OPERATOR: 59.5 SECONDS.

What could be simpler? In fact you don't even have to answer the first question. Just cue up the tape and the computer will time it for you and then automatically set the correct pitch and timing.

A few words about the heart of the Eventide Timesqueeze system, the H949 Harmonizer. This unit performs the most difficult part of the task, pitch change. Pitch changing requires digitally sampling audio at a high speed and then "reading out" that data at a variable rate. The varying input vs. output rate makes it necessary to "splice in" or delete small segments of signal. To prevent "glitches" caused by this process Eventide uses a proprietary splicing algorithm which permits broadcast quality to be maintained. Broadcasters and producers will find many other uses for the H949 Harmonizer, when it is not in time compression/expansion and pitch change use. For example, the H949 can perform flanging, time reversal, digital repeat and many other audio "special effects." TV and radio program and commercial producers will find these additional uses invaluable.

Got a question about time compression or digital audio effects? Send it to "Ask Eventide" 265 West 54th Street New York, N.Y. 10019. If we use your question in print we'll send you an Eventide T-shirt, so include your size.

VIDEOSCOPE

## Verify your RS-170A with a dynamic, easy to read video display that's light years ahead.

The new RS-170A Video Line Output specifications are designed to insure a consistent relationship between video burst and sync phase, particularly during tape record and playback.

The specifications are relatively easy to achieve; however certifying and timing the signals is a different story.

We at Lenco have taken a careful, thoughtful approach to the challenge. We have developed the Videoscope.

The Videoscope will display a full cycle of sub-carrier and will tell you when correct SC/H phase is (or isn't) on the mark.

In addition to certifying, you can phase compare sync and burst of two video signals. Now you have a truly usable system analysis device.

Another plus. The Videoscope can give equally accurate results in source-to-source timing in a Non-"A" System.

And because it is viewed on a standard video monitor—any monitor—you can look at the Videoscope display and quickly relate it to what is actually happening in your system. No more looking at faint lines on scopes in dark corners. To certify your RS-170A, all you need is Videoscope. Anywhere in your plant. Light years ahead.

Want to know more about the Videoscope? Write on your letterhead for a complimentary copy of "An Accurate Method for Certifying, Timing, and Analysis of RS-170A."

# IF WE SAID YOU COULD MAINTAIN HIGH PRODUCTION STANDARDS FOR LESS THAN \$2000, YOU'D SAY WE'RE UNBALANCED.

By using a -10 unbalanced system, instead of +4 balanced, we eliminated hundreds of dollars of line amplifiers, transformers and balanced audio cables.

And that's how the Tascam 35-2B recorder/reproducer can save you money.

Without compromising your professional quality one nanoweber.

Unless you're running cable hundreds of feet long, there's no real difference between balanced and unbalanced. Since input/output levels and impedance aren't factors in recording quality.

So it pays to use the Tascam 35-2B in production, where you're

## Balanced vs. Unbalanced

not running long cables.

Which brings us back to quality. We know the most important thing in broadcast production is the signal that goes on the tape. That's why the 35-2B meets NAB standards.

185 nanowebers per meter.

And with a switchable 1/4-track playback head built in, you get greater flexibility at no extra cost.

What's more, the 35-2B features a

rugged three-motor transport system and full IC logic transport controls. Cue and Edit functions and a flip-up, hinged head cover help make editing easy and effortless.

For more details, see your Tascam Series dealer. He'll be happy to show you how being unbalanced can improve your balance sheet.

## Now, more effective coverage with available ERP!

Broadcasters operating high power transmitters can now optimize their coverage with the new generation of ADC antennas.

ADC's unique panel design permits total control of the radiation pattern shape. This flexibility enables the broadcaster to make maximum effective use of available transmitted power to put his signal exactly where he wants it.

The result is precise and complete coverage, with proven reliability, and the economic benefits this combination of factors brings.

It's one more way that ADC engineering provides better products with greater value. Ask one of our specialists to do a survey on your installation, without obligation, and he'll produce convincing data about the advantages of an ADC System, be it FM, VHF or UHF, (linear or CP).

# NAB '81 EXHIBITORS

The 59th annual NAB convention is returning to Las Vegas, a city that could become the permanent site of NAB conventions. And since this year's equipment exhibit will set another record—over 400 companies spread out over an area equal to five football fields—the odds are mounting that you won't get to see everything in the 32 hours the exhibit doors will be open.

While it will be a point much discussed this year, the four-day convention will unfold in a city where two major hotels have been burned in the last few weeks.

To improve at least your odds on seeing all you really need to see in the exhibit areas, a little help is in order. BROADCAST COMMUNICATIONS has prepared this special Convention Guide with weary convention attendees in mind.

This section is an alphabetical listing of the companies exhibiting at NAB '81 as we go to press. Included is a rundown of the product lines in each booth where advance information was available. The bold type in each writeup will alert you to new product introductions.

The "state of the industry" has never been more challenging. And this year's exhibit area will be loaded with products that are sure to keep everyone moving forward. Digital will reign, of course, but interest is peaking in satellites. Cameras seem to be introduced every five minutes. But audio, too, will get a boost from a variety of new lines, including compressor/limiters, exciters that beef-up old transmitters, test equipment that makes the proof of performance less of a chore, and consoles with enough variations off the theme to please anyone in the market.

(In another section of our Convention Guide, we've prepared a special NAB exhibit hall equipment directory.)

If an exhibitor listed in this section has an ad in this issue, it is noted by a line at the end of the write-up which says, "See ad on page \_\_\_\_." Many of the products advertised in this issue will be on exhibit for the first time at NAB.

The BC No-Nonsense Map to the exhibit area, our exhibitor list, and the equipment directory should help you plan your way through the crowds so that at least you will know what equipment is new and where to find it.

# WHEN YOU THINK OF THE LEGENDARY AMPEX VR-1200's AND VR-2000's THINK OF AFA...

## We're keeping the legend alive!

AMPEX VR-2000's and VR-1200's are the stuff legends are made of. . . they're the best. So if you can't afford a New VTR. . . consider owning a "pre-owned" legendary AMPEX VTR instead.

Our customers, including TV Stations, Manufacturers, Institutions, TV and Film Production Facilities have purchased \$8 million in AMPEX VR-2000's; VR-1200's AVR-1's, HS-200's and paid only half that price. They know they're still getting the best in VTR's.

AFA VTR's are fully rebuilt and good as new. . . even better! These "legends" are in a class of their own. . . and at prices that are becoming legendary in their own rights.

And when the New AMPEX VTR's become legend. . . AFA will be there to keep them "alive" too.

Who knows. . . some day someone will have to keep our legend alive.

AFA...the largest rebuilder of the best VTR's in the world.

# The Cetec 2000

## The only add-ons are electricity and talent

Cetec introduced these compact consoles about six months ago, and supply is still just barely ahead of demand.

This 2000 family of 5- and 8-mixer mono and stereo consoles has three great characteristics: small size and weight (they're portable); excellent performance specs (with high reliability); and very modest cost (how about more for less, for a change?).

These consoles are ready to go—plug in the inputs and the speakers, and hit the

"on" switch. Monitor amplifier and muting relays are built in.

The 8-mixers (16 inputs) are great production room consoles that easily double as on-air boards. The 5-mixers (10 inputs) are at home in the newsroom, small studio, or on remote site.

Cetec 2000's start at \$1595 for the 5-mixer mono console, and top out at \$3195 for the 8-mixer stereo model.

Write or phone for our color catalog!

# DIGITAL REMOTE CONTROL SYSTEMS

MOSELEY OFFERS A FULL LINE FOR ALL APPLICATIONS

## NEW MRC-2 BOOTH 505 NAB '81

- USER-DEFINED EXECUTIVE ACTION
- CLEAR ENGLISH DISPLAY
- MULTI-CONTROL POINT OPERATION
- NON-VOLATILE MEMORY STANDARD
- AUTOMATIC MULTIPLE INTERCONNECT TRANSFER

The new **MRC-2** offers the flexibility that only a high technology, microprocessor-based system can supply. User-defined programming allows executive action of control functions. The system provides CRT displays for simplified operator interface of control, telemetry tolerance, status, and automatic muting. Full fail-safe capabilities and indirect power calibration are standard. Multiple direct commands, multiple CRTs, and multiple automatic loggers are available optionally.

With proven reliability the **MRC-1** provides up to 64 command lines and 32 channels of status and telemetry from up to nine separate remote sites. Comparable only to much more expensive systems, its versatile capabilities assure long-term stability and accuracy with straightforward microprocessor-controlled operation.

The **TCS-2A** is designed to supply maximum value at minimum cost. With reliability, speed, and accuracy, it handles the needs of broadcasters, industrialists, ENG system users, and earth station operators. It offers eight command, status, and telemetry functions, affords one-person calibration, and has multi-site capabilities to simplify expansion.

FOR FURTHER INFORMATION PLEASE CONTACT OUR MARKETING DEPARTMENT.

# The end of the endless loop.

## Eumig's new FL-1000 makes cassettes the broadcast medium.

The Eumig FL-1000, an extraordinary new cassette tape deck, has started a revolution in the world of broadcasting. We believe—and radio engineers agree—that it will soon make the cassette the standard tape format in the broadcast industry.

**The FL-1000 is the world's first computer-inter-faceable cassette recorder.** Up to sixteen FL-1000 decks can be controlled by any 8-bit computer. Some of the decks can be used for commercials; others for news and weather; still others for music and station ID's. And the location of every item on every cassette can be stored at the beginning of each tape and then in the computer, so *any* sequence can then be played back—automatically, with no human intervention, all day and all night long.

Watching a bank of FL-1000's working together

is an awesome experience. One deck is rewinding while another is playing, and still another is moving in fast-forward to locate the next selection. Meanwhile, other decks are copying from a network feed and recording an air check.

The technology of the FL-1000 is so advanced that half a dozen units can do the work of more than 100 individual cartridge players—plus several reel-to-reel recorders. And they do it better, at far less cost, with sound quality comparable to that of the finest open-reel equipment. And the Eumig FL-1000's have none of the mechanical problems that plague endless-loop broadcast cartridges.

To see the end of the endless loop, call Eumig about the new FL-1000. Once you see and hear this amazing new recorder in action you'll agree that this is the long-awaited deck that will make cassettes the standard medium in the broadcast industry.

# THE IMAGE MAKER<sup>®</sup>

Imagine... an incredibly versatile disc recorder which can animate, store stills, and record and playback in real time (30 frames per second) to single frame. Or, at the touch of a button, 24 frames per second for film transfer. Add to this full random access, with preview, of up to 500 images on line and the ability to pre-set 64 locations, standard serial digital interface, and a built-in frame by frame editing/animation previewer. □ That's Arvin/Echo's total production tool: The Image Maker. Whether your requirement is to store still frames, produce exciting animation sequences or preprogrammed motion loops from 16 frames (or less) to 500 frames, this high band color recorder is capable of delivering direct or processed video. Rugged, reliable and portable. The Image Maker is the only real time random access recorder—featuring interchangeable Discassettes<sup>®</sup>—which doesn't break the bank. □ Remember, Arvin/Echo has more video disc recorders operating in the broadcast field than any other manufacturer. Based on this unique experience, we have built The Image Maker to meet the rapidly changing challenges of the professional television industry. Its potential is limited only by your imagination. □ Visit us at NAB, Booth #1001

# VICTOR DUNCAN VIDEO

For more than 20 years, the Victor Duncan 'check and double check' symbol has assured producers that the equipment they needed was as clean and mechanically perfect as skilled technicians could make it. Every camera package, each light, even the smallest piece of production gear has been carefully *checked*, not once — but twice; before it ever leaves our office.

## The Standard for Electronic Production Equipment

This attention to detail begins with a comprehensive physical inspection. Each mechanical function of our video cameras is carefully checked. Housing screws are tightened, lens functions are

verified. The camera is mechanically and electrically registered. The white and black balance is adjusted. Colorimetry is *double checked*. The signal to noise level is carefully monitored.

Each Video recorder is also subjected to the same physical inspections, including the signal to noise levels. The interchange of tapes from deck to deck is carefully checked.

And then a second *check* is made of the complete system as a unit; camera, recorder, switchers and accessories. These same careful steps are used on each piece of equipment ordered. Switchers, monitors, CCU's, all are put through the same detailed electronic tests before they ever leave our department.

These *double check* procedures insure flawless performance in the field, and guard against costly production tie-ups. "Check and double check" at Victor Duncan Video.

## The New FM Performance Leader Broadcast Electronics' FX-30 Exciter.

With almost 50 already in use  
Broadcast Electronics' new FM Exciter  
— the FX-30 — provides superior on air performance.

### For the Purist, Purest Sound.

The FX-30 has the lowest distortion, with THD and IMD less than 0.08%. And, it's the first exciter to specify Transient Intermodulation Distortion (TIM) at less than 0.1%.

### Loud, yet Quiet.

The FX-30 is loud and sparkling clean with your programming, yet it's the quietest exciter of all, with a typical S/N ratio of 78 dB.

### Broadband and Synthesized.

Advanced dual speed phase locked loop puts more than 2000 channels at your fingertips.

### Set It and Forget It.

Automatic control circuits eliminate adjustments after initial setup. Exciter output is automatically stabilized and fully protected. Set it and forget it.

### The Perfect Retrofit.

RF power output is adjustable up to 30 watts. The FX-30 will improve the performance of any transmitter and will fit directly in place of your present exciter.

### Styling Elegance.

Elegant in styling as well as in performance, the new look in FM is the elegant look of the FX-30.

For more information on the FX-30 Exciter and BE's exciting new FM transmitters, call or write Joe Engle at: 217-224-9600

# Beyer. We make the best broadcast mics, too.

In recording studios, concert halls and theatres worldwide, Beyer is the premier name in microphones. Loved by performers and respected by engineers.

Now that same Beyer quality is available in a full line of innovative broadcast microphones, to meet every need and solve every problem.

The Beyer MCE 5 is the world's smallest electret condenser and provides true broadcast-quality audio from a 7 x 23 mm. cylinder weighing just 6.5 grams. It has wide frequency response, but is immune to most body noises. And you can hide it almost anywhere and connect it to a cable or a wireless transmitter.

If you can't get the mic near the sound source, try our Beyer MC 717 shotgun. It has a directional gain of at least 20 dB and a 40-20K frequency response.

The MC 717 is part of a modular condenser mic system consisting of six different transducer capsules plus amplifiers and phantom power supplies that can be perfectly tailored for a wide range of broadcast situations. They're all ruggedly built to handle ENG as well as studio work and can accept temperatures up to 160° and 99% humidity.

Other mics include: the M 55 — an omni-directional dynamic mic that is especially suited for reporters and field interviews; the M 69 — a uni-directional hypercardioid dynamic mic that is perfect for announcers on TV and a studio mic in radio stations; the M 88 — a uni-directional cardioid dynamic mic with warm and full bass response that is ideal for booth or radio announce. This is easily one of the best mics in the business — with a special suspension that eliminates transmitted noise if hand held. Our M 201 is another microphone with excellent vocal characteristics that is favored by singers and reporters alike.

There are many more mics in the Beyer line, plus stands, booms, headsets and accessories. Visit your local Beyer distributor for more information and specs.

# videotape editing system

# VANGUARD

by datatron, inc.

## SMPTE Editing for 3/4" U-Matic 1" Type C 2" Quads

DATATRON INTRODUCES VANGUARD, A TOTALLY NEW GENERATION OF VIDEOTAPE EDITOR DESIGNED TO GET THE MOST OUT OF THE NEW GENERATION OF VERSATILE TYPE-C VTRs.

Vanguard is the most exciting development in SMPTE videotape editing since the introduction of the Type-C format.

The excitement begins the moment you sit down at the dedicated-function, color coded keyboard with its superbly organized interactive CRT display. From this position, you've got full control over five VTRs and a switcher. VTR motion control is effortless and precise; dual Varascan™ controls allow you to utilize the shuttle capabilities of Type-C VTRs to their fullest — — on two VTRs at once.

You can enter edit and split times on-the-fly or manually. You can perform cues, previews, edits, all automatically. You can even perform A/B/C/D sync'd roll edits involving up to four sources.

But that's just the start; Vanguard lets you set your own preroll and postroll times. It provides variable operator reaction time compensation. The edit list memory can store up to 999 edit events — — enough for even your longest editing sessions. And powerful, easy-to-understand edit list management lets you modify the edit list any way you choose.

Auto assembly from up to four sources is standard, as are paper tape edit list input/output, teletype edit list printout, and scrolled CRT edit list output. And if you wish, floppy disk is available.

It's all here, and at a price that's about half of what you'd pay for just one Type-C VTR with TBC.

And, just in case you're not ready to convert to Type-C, it will probably come as no surprise that Vanguard also interfaces to more than 35 other makes and models of decks, including quads, 3/4 inch cassettes, 1" Type-A/B, multi-track audio recorders, and the Rank Cintel scanner.

Continued on page 156

**BUT NOW, THE RPG 1000 IS HERE.**

Now, you can guarantee safe title or picture area, do perfect zooms, even calibrate monitors!

And, best of all, the RPG 1000 works in the camera—not in rack-mounted equipment.

The reticle pattern provides right, left, top, and bottom limits (to SMPTE specs) and a dead-center cross reference with four quadrant division markers to make composition even easier. The RPG 1000 is designed to fit within current portable news gathering and field production color cameras, and with minor modification, it will even work in studio-based systems.

**It's been a long time coming...**

The versatile **RPG 1000** can be switched to on-line output, if desired, and has a flasher circuit to alert the camera operator.

Accuracy is guaranteed since the reticle pattern is locked to the master clock frequency in the camera circuitry, an invaluable alignment tool for slide-to-tape transfers.

So...**STOP** running titles off the screen, cutting off heads, or guessing picture center. The easily installed **RPG 1000** from **R.A.V.E.** will help you look better, because your production will look better.

## LIGHTING CONTROL SPECIALIST

### Portable Dimming Systems

TCC/T series 2 scene, 6 to 36 channels  
Prices start at \$650.00.

TPP series power packs 2.4KW to 12KW Dimmers  
Prices start at \$2,870.00.

### Permanent Control Systems

DCC/T series 2 scene w/ submasters, 24 to 96 channels  
Prices start at \$2,330.00.

TAM series Add-on Memory w/ disk, 24 to 96 channels  
Prices start at \$10,145.00.

### Fixtures

Complete line of fixtures available  
Examples shown: 8" fresnel @ \$135.00;  
16" scoop @ \$100.00. Both units are quarts w/ C-clamp  
and color frame included.

### Dimmer Bank

Our U.L. listed modular Dimmer Bank (DB) provides power to various lamp loads. A small DC voltage originating at a control console (memory or manual) operates all dimmers, non-dims, worklights, etc. Thus, nearly any lighting distribution requirement is available.

Multiple racks, internally wired, can provide all dimmers, a slider patch panel, load meter, non-dim contactors, main circuit breaker, load circuit breakers, constants, worklights, transfer circuitry, panic contactors, etc., as well as any auxiliary control panel desired. This integral unit conserves materials and adds to a significant labor savings during installation.  
Price: P.O.A.

## MODULAR ELECTRONIC CABINETS - DESKS and CUSTOM INSTRUMENT PANELS

EQUIPTO ENCLOSURE SYSTEMS — first in choice for excellence! Hundreds of standard sizes available in both our top-of-the-line Heavy Duty Modular Cabinets and the value-engineered Challenger/Solid System line. We also offer a totally new Electronic Desk System in a variety of styles. And since every electronic equipment company is unique and has different enclosure needs, we'll modify our cabinets to meet those requirements.

You can depend on us, just as many leading corporations do, for dependable products and service. The reputation we've earned is our proof! Choice of colors at no extra charge. Also, ask about our Engineering Evaluation program.

## ARISTOCART will deliver the finest AM/FM sound of any NAB cartridge on the market

Alone among commercial tape cartridges Aristocarts are fabricated in a single cavity precision mold from engineering grade plastic. Before shipping, each cartridge is individually checked for optimum phase stability and frequency response. On any properly aligned cart tape recorder we guarantee performance to or beyond NAB standards. Or we replace at our expense. And we'll gladly show you how to make the simple modification to your equipment to ensure peak efficiency with any cartridge. Call or write us.

### We guarantee it!

# LOUD OR CLEAN?

## That WAS the question.

Introducing the C.N. ROOD SC-200 Series Digital Stereo Generation

Imagine this:

- Signal to Noise ratio up to 95 dB!
- Channel Separation up to 70 dB!
- SCA to Main 85 dB; Main to SCA 60 dB!
- A stereo generator that is transparent in your signal!

Using your own audio processing equipment, or our specially designed equipment, even your old transmitter can be *the best sound in town!*

The SC-200 Series equipment is represented exclusively in North America by:

**MARCOM**

P.O. Box 66507

Introducing

## Telectret® An Ultra-Light Miniature Headset

Engineered with a Studio Quality Electret Microphone and space-age plastics to be light-weight and more reliable than anything else on the market.

- 3/4 ounce total weight
- Modular replacement parts
- Available with glasses clip, customized earpiece, or foam pad with wire band
- Not "in the ear", not a "muff"
- Compatible with all intercoms
- Telephone adapter available
- Coil cords to 25'

Represented exclusively by:

**MARCOM**

P.O. Box 66507, Scotts Valley, CA 95066

decoders; routing switchers; video test generators; time code equipment; video signal enhancement and correction equipment. Introducing: video distribution amplifier; sync generator; color bar generator; back color generator; automatic level controller; color corrector; character generator; 1/4-inch VTR and remote control box; VITC generator-reader. BOOTH 1826.

FORT WORTH TOWER COMPANY—Towers and lights; earth station equipment and services. BOOTH 819.

FREZZOLINI ELECTRONICS—Battery packs and chargers; film cameras; lights and lighting accessories. Introducing: "On-Board" Frezzi battery packs that mount directly, without need for camera modification or alteration, on the backs of most portable video cameras; production-line "Frezzi-Flex®" lightweight portable model FR-16 series of 16mm motion picture cameras; production-line models of "Frezzi-Lite" portable camera lights with improvements that include a more efficiently-cooled socket; production-

line models of "Frezzi" "Stick" battery packs. (Products names trademark Frezzolini Electronics Inc.) BOOTH 1608.

FUJI PHOTO FILM USA—Video and audio tape and accessories. BOOTH 1307.

SEE AD ON PAGE 123

FUJINON OPTICAL—Lenses and lens services. Introducing: A30X11 ESM lens for 2/3-inch ENG cameras; full line of electronic cinematography lenses. BOOTH 1117.

# Storeel is dedicated to conserving energy. Yours.

Energy conservation is much in the news these days. Like the weather, many talk about it but few do anything about it. We haven't figured how to change the weather, but we do have several systems specifically engineered for broadcasters that both conserve energy and add efficiency. The very latest (shown installed) is called **STOR-MAX.™**

Save energy (yours) by converting your overcrowded film and VTR libraries to the new "Instant Access" high-density systems engineered and distributed only by Storeel. Modular Rapid Transit Storage™ maximizes units stored per square foot of floor space, minimizes retrieval time, optimizes energy efficiency.

Our many years of design and engineering pay off in solutions to your storage problems.

Call or write "The Railriders" at Storeel today for free estimate. No obligations, of course.

*Illustrated catalog of Storeel's "confusion eliminators" available on request. Write on your letterhead or telephone for your free copy.*

See us at the NAB in Las Vegas, Booth 911.

**GREAT AMERICAN MARKET**—Lights and lighting accessories; Excalibur custom cases; special effects in projection. Introducing: HMI battery-operated lights by RDS; 2000-watt Scene Machine; light curtain and Lightesizer 212 control system; 20 new designs in the Great American Pattern Collection. BOOTH 1628.

**DAVID GREEN BROADCAST CONSULTANTS CORP.**—Amplifiers, pre-amps, DA's; audio monitoring, measuring, and timing equipment; microphones. Introducing: Excalibur six-channel stereo console. BOOTH 125.

**GREGG LABORATORIES**—Amplifiers, pre-amps, DA's; limiters and compressors; processing and equalizing equipment; TV audio processors; on-air phone equipment. Introducing: Multiband AM audio processing amplifier; five-band compressor and five-band distortion cancelling peak limiter; self-contained hands-free on-air telephone system; multiband TV audio processing system with loudness controller; turntable; pre-amplifier. BOOTH 403.

**MERV GRIFFIN RADIO**— BOOTH 400S.

**GROTON COMPUTER**—Business computer systems; program services. Introducing: Color video display for business/traffic automation; production services and buy back of unsold commercial radio time as featured by Groton Computer's subsidiary, Groton Radio Network. BOOTH 118.

[SEE AD ON PAGE 164](#)

**HM ELECTRONICS**—Intercoms; microphones. Introducing: Full duplex wireless intercom system, which allows for up to five stations to function in a full duplex mode, or as many as desired in a "push-to-talk" mode. Base station can be interfaced with any RTS or Clear-Com hard-wired intercom. BOOTH 1509.

[SEE AD ON PAGE 144](#)

**HALLIKAINEN & FRIENDS**—ATS equipment; audio automation systems; audio consoles. Introducing: Production unit of transmitter control and logging system which is user programmable in BASIC and works with existing remote control systems. BOOTH 514.

**HARRIS CORPORATION, BROADCAST PRODUCTS DIVISION**—Amplifiers, pre-amps, DA's; AM stereo generators; transmission lines, towers and lights; FM antennas; UHF, VHF antennas; ATS equipment; audio monitoring, measuring, and timing equipment; audio automation systems; studio cameras and accessories; cart machines and accessory equipment; cartridges and tone arms; business computer systems; audio consoles; earth station equipment and services; AM, FM, TV exciters; film chain equipment; frame store synchronizers; FM stereo generators; pattern signal generators; headphones, speakers/intercoms; lenses and lens services; lights and lighting accessories; lighting control systems; limiters and compressors; microwave, STL and remote pickup equipment; microphones; processing and equalizing equipment; pedestals, tripods and heads; video remote controls; remotes audio equipment; SCA equipment; routing and video switchers; audio tape and accessories; audio and video test generators; time base correctors; transmission lines, AM & FM transmitters; camera and transmitting tubes; turntables and accessories; vans and ladder vehicles. Introducing: TC-85 live color TV camera, featuring computer setup system that accomplishes

pre-production setup of any number of TC-85 cameras in 45 seconds or less; 16-channel digital-control audio console, offering programmable keyboard entry, digitally controlled linear attenuators, and software-oriented control; TV-L line of low-band VHF TV transmitters; Autotron Star System, a business automation system; three new medium-wave transmitters, the MW-5B, 5 kW; MW-10A, 10 kW; and the MW-50B, 50 kW. BOOTH 301.

[SEE AD ON PAGE 99](#)

**HARRISON SYSTEMS**—Audio automation systems; audio consoles; limiters and compressors. Introducing: High-performance, low-cost post-production/sweetening console. BOOTH 507.

**HEDCO**—DA's; routing switchers; terminations. Introducing: Single-bus audio and video routing switchers featuring configurations of 8 x 1 and 16 x 1 in a IRU frame; combined audio and video distribution frame; pulse distribution amplifier; equalizing distribution amplifier. BOOTH 1635.

[SEE AD ON PAGE 112](#)

**HOWELL LABS**—BOOTH 128A. (See Shively Labs listing.)

**HUGHES HELICOPTERS**—Helicopters and tracking systems. Introducing: Hughes 300C/ENG, a complete turnkey airborne electronic news gathering system at only one-third the cost of other airborne ENG systems. Booth not assigned at press time.

**IGM COMMUNICATIONS**—Audio automation systems; business computer systems; multiple-cartridge playback units. Introducing: Interface between broadcast automation system and traffic billing system. BOOTH 101.

**IKEGAMI ELECTRONICS (USA)**—Studio and ENG cameras and accessories; film chain equipment; video monitors. Introducing: ENG/EFP

3/8-inch prism camera with capability for attachable VCR; high-quality, medium-priced studio field camera; sophisticated digital control studio/field camera, with full automatic setup and triax capability; high-resolution color monitor line utilizing in-line gun CRTs. BOOTH 817.

[SEE ADS ON PAGES 25, 63](#)

**ILLINOIS CABLE**—Electrical and electronic wire and cable. BOOTH 2015.

**IMAGE VIDEO**—Audio and video automation systems; video remote controls; remotes audio equipment; routing and video switchers. Introducing: Automation system; machine assignment system; new routing switcher; border generator; voltage monitor. BOOTH 1822.

**IMERO FIORENTINO**—BOOTH 523S.

**IMPACT CASES**—BOOTH 1724.

**INDUSTRIAL SCIENCES**—Amplifiers, pre-amps, DA's; video automation systems; audio consoles, encoders/decoders; film chain equipment; pattern signal generators; processing and equalizing equipment; video special effects equipment and generators; routing and video switchers; video test generators; captioning equipment. Introducing: Video production switchers with 20 inputs and 1-3 PolyKey Effects; gen/lock sync generators; 560 SMPTE alignment color bar generator. BOOTH 1115.  
[SEE AD ON PAGE 139](#)

**INFORMATION PROCESSING SYSTEMS**—Weather instruments, satellite and accessories. Introducing: Color Graphics System, an add-on unit to the IPS Weather Satellite Recorder. It enhances the weather satellite images with three functions from memory for instant playback: color political boundaries; color and land and water; interactive addition of freehand notations and lettering right on the satellite images. BOOTH 1908.

**INMARK**—BOOTH 329.

**INNOVATIVE TELEVISION EQUIPMENT**—Studio and ENG cameras and accessories; microwave, STL, and remote pickup equipment; pedestals, tripods and heads. Introducing: Fluid heads; tripods; portable counterbalance pedestal for EFP applications. BOOTH 1405.

**INOVONICS**—Audio automation systems; limiters and compressors; noise reduction systems; processing and

equalizing equipment; audio reel-to-reel recorders. BOOTH 214.

SEE AD ON PAGE 140

**INTEGRATED SOUND SYSTEMS**—Audio consoles; special effects equipment; processing and equalizing equipment; time compressor. **Introducing:** Broadcast-quality time compressor suitable for music and voice; stereo-compatible version for FM broadcasting. BOOTH 2013.

**INTERAND**—Weather computer systems; electronic slides; video special effects equipment and generators; electronic animation slides. **Introducing:** Telestrators for video art and animation including Auto-Probe electronic trajectory systems for moving and coloring all video sources via stylus. BOOTH 929.

**INTERNATIONAL TAPETRONICS**—Cart machines and accessory equipment; audio reel-to-reel recorders; library storage device. **Introducing:** Reel-to-reel recorders and recorder/reproducers (the 770 Series). BOOTH 501.

**JAM CREATIVE PRODUCTS**—BOOTH 121.

**JATEX**—Edit code generators and receivers; video editors; encoders and decoders; video remote controls; time code equipment. **Introducing:** A-B roll editing controller; rack-mounted color bar generator, full and split field display; rack-mounted black burst generator. BOOTH 1639.

**JEFFERSON DATA SYSTEMS**—Character generators; business and newsroom computer systems; software for sales, traffic, general accounting, and newsroom systems. **Introducing:** In-station sales/traffic and general accounting system that runs on an IBM 34 computer; electronic news processing (ENP), an in-station computer for television and radio news department. BOOTH 1613.

**JENEL CONSULTANTS**—Audio and video automation systems; newsroom computer systems; earth station equipment and services; satellite distribution services; vans and ladder vehicles; consulting engineers. **Introducing:** Architectural services. BOOTH 1813.

**JENSEN TOOLS**—Tool kits. BOOTH 1833.

**KALAMUSIC**—Program services. BOOTH 128B.

**KAMAN SCIENCES/BCS**—Business and newsroom computer systems. BOOTH 1419.

**KAPPA SYSTEMS**—BOOTH 202S.

**KINGS ELECTRONICS**—Coaxial and triaxial connectors; video patch panels. BOOTH 1026.

**KLIEGL BROS.**—Lights and lighting accessories; lighting control systems. **Introducing:** Studio, location and remote lighting and control equipment; portable lighting kits; Kliegpac 9 portable dimming systems; Klieglights 1550 series; TV fresnels; Performer; Performer II; and Command Performance memory lighting control systems. BOOTH 923.

**KNOX VIDEO PRODUCTS**—Character generators. BOOTH 1033.

**LPB**—Amplifiers, pre-amps, DA's; audio consoles; AM, FM, TV exciters;

limiters and compressors; AM & FM transmitters; turntables and accessories. **Introducing:** Citation Series 8 x 10 mixer dual stereo audio consoles, with mono mixdown, clock, timer, reference oscillator options available. BOOTH 402.

SEE AD ON PAGE 96

**LTM CORP. OF AMERICA**—Battery packs, belts and chargers. BOOTH 1016.

**L-W INTERNATIONAL**—Film projectors and cameras; film chain equipment. BOOTH 939.

**LAIRD TELEMEDIA**—Character generators; film chain equipment. **Introducing:** high-resolution character generator; video pointer. BOOTH 901. SEE AD ON PAGE 118

**LANDY ASSOCIATES**—Character generators. BOOTH 1102.

**JAMES B. LANSING SOUND**—Studio monitors; microphone mixer. BOOTH 203.

**LeBLANC & ROYLE COMMUNICATIONS TOWERS**—Antennas, transmitters. *Continued on page 166*

### TEST SIGNAL GENERATOR — SOURCE IDENTIFIER

TS-1

Our TS-1 is the smallest source of NTSC split field color bars and audiotone. It works on AC or battery. Price starts at \$900.00 and many options are available.

TS-3

Our TS-3 produces NTSC color bars, black burst, a fixed line of typing and audio flatness test. Through the keyboard the instrument can be made to type on the screen; sweep the audio at 100 different rates; produce a tape leader countdown, and a lot more. Special logos can be preprogrammed. All graphics can be keyed over an external input. An audio/video bypass switch allows fast changeover from test to program. This unit is also available in standard rack mount configuration 1 1/4" x 19".

## NAB exhibitors

sion lines, towers, and lights; earth station equipment and services. BOOTH 1319.

LEE-RAY INDUSTRIES—BOOTH 1707.

LEITCH VIDEO—Amplifiers, pre-amps, DA's; processing and equalizing equipment; video test generators; video signal enhancement and correction equipment; master clock and clocks. Introducing: Digital video test signal generator; NTSC video processing amplifier; SPG140P PAL sync generator; APU170 PAL automatic phasing unit; FR660 and FR661 six-output DA frames and DA's. BOOTH 1212.

LEMO USA—Audio components and hardware; video components and hardware. Introducing: Triaxial TV camera connectors; stereo and mono audio patch panels. BOOTH 1000.

LENCO, ELECTRONICS DIVISION—Amplifiers, pre-amps, DA's; encoders and decoders; processing and equalizing equipment; routing switchers; video test generators; video monitoring, measuring, and timing equipment; video monitors. Introducing: Videoscope (to certify and time a television system); encoder (encodes RGB to NTSC); color monitor, 14-inch VTR bridge and lab monitor. BOOTH 1206.

SEE AD ON PAGE 129

LEXICON—Digital effects equipment; audio special effects equipment and generators; audio time compressor. Introducing: Audio time compressor, allowing playback of recorded audio and video tape and film faster or slower without altering the original pitch and retaining broadcast-quality sound. BOOTH 206.

LIBIN & ASSOCIATES—Sanyo electrical products; Tri-flex indoor equipment. BOOTH 339S.

LIGHTNING ELIMINATION ASSOCIATES—Lightning protection systems; power line surge eliminators. Introducing: Surge eliminators for coaxial systems and transmission lines; guy charge dissipation chokes. BOOTH 317.

LISTEC TELEVISION EQUIPMENT—Audio components, tubes, and hardware; pedestals, tripods, and heads; video promoters. Introducing: Studio pedestal for EFP-type cameras; counterbalanced remote dolly for field cameras; ENG pan and tilt heads. BOOTH 1027.

LIVE SOUND—Program services; syndicated music sales and production aids. Introducing: Country Beautiful. BOOTH 127.

LOGICA—Digital effects equipment; video editors; teletext systems. Introducing: Context, a range of teletext systems providing enhanced editing, subtitling, page storage, archiving, and other features; Paintbox, a TV graphics system using tablet and stylus. BOOTH 175S.

LOGITEK ELECTRONIC SYSTEMS—Amplifiers, pre-amps, DA's; timing equipment; audio consoles; accessories. Introducing: Audio distribution amplifiers; Bright-VU LED audio displays. BOOTH 136.

SEE AD ON PAGE 156

LOWEL-LIGHT—Lights and lighting accessories. Introducing: Space Clamp mounting device; Grand Stand; Screw-In Stud; Roll Up Carrier. BOOTH 1004.

LYON LAMB—BOOTH 439S.

McCURDY RADIO INDUSTRIES — Amplifiers, pre-amps, DA's; audio consoles; processing and equalizing equipment; remotes audio equipment; routing switchers; turntables and accessories. Introducing: SS8900 Series television audio production console; SS9800 Series radio air and production consoles. BOOTH 308 and 113.

SEE AD ON INSIDE FRONT COVER

McMARTIN INDUSTRIES—Amplifiers, pre-amps, DA's; AM stereo generators; FM antennas; audio monitoring, measuring, and timing equipment; audio consoles; earth station equipment and services; encoders and decoders; AM, FM, TV excitors; FM stereo generators; limiters and compressors; microwave, STL and remote pickup equipment; modulators and demodulators; processing and equalizing equipment; remotes audio equipment; SCA equipment; turntables and accessories; AM and FM transmitters. Introducing: 50 kW AM transmitter. BOOTH 300.

3M COMPANY, MAGNETIC TAPE —Audio tape and accessories. BOOTH 815.

SEE ADS ON PAGES 15, 71

3M COMPANY, VIDEO PRODUCTS

Digital effects equipment; character generators; video special effects equipment and generators; routing switchers; VTRs; digital audio mastering system. BOOTH 815.

MCI—Audio consoles; audio reel-to-reel recorders; video/audio synchronizers. Introducing: Audio mixers for broadcast and production use. BOOTH 133.

MCI/QUANTEL—Digital effects equipment; video special effects equipment and generators; time base correctors; synchronizer/TBC; still/slide store (digital). Introducing: Digital framestore synchronizer/TBC, a full function synchronizer/TBC packaged in 1¾-inch and featuring production freeze capability, heterodyne TBC, automatic non-phase detection; digital library system; digital still/slide store, storing 340 pictures on each Winchester-type disk drive. BOOTH 1207.

SEE AD ON PAGE 17

MAGNASYNC/MOVIOLA—Film chain equipment. Introducing: Film-to-tape transfer systems. BOOTH 1825.

MAGNUM TOWERS—Fabrication of radio and TV towers and related hardware. BOOTH 324.

MARCOM—FM stereo generators manufactured by C. N. Rood. BOOTH 214.

SEE ADS ON PAGES 160, 161

MARCONI ELECTRONICS—Studio cameras and accessories; slow-motion replay equipment; time base correctors; AM, TV transmitters; video monitoring, measuring, and timing equipment; VTRs. BOOTH 927.

MARTI ELECTRONICS—Limiters and compressors; microwave, STL and remote pickup equipment; microphones; SCA equipment. Introducing: 30-channel all-digital remote control system; transmitter-studio links; portable remote pickup equipment. BOOTH 307.

MATRIX INFORMATION SYSTEMS—Newsroom and business computer systems. Introducing: Data General installed traffic/billing/accounting computer systems; self-installed traffic/billing software for most CP/M microcomputers; music rotation software and systems; call-out music research software and systems. BOOTH 152.

MATTHEWS STUDIO EQUIPMENT — Location and stage equipment for lighting and camera control; lighting control systems. Introducing: The Tulip Crane; The Video Mini-Jib; The Mini-Vator. BOOTH 1806.

MAXELL CORPORATION OF AMERICA—Audio and video tape and accessories. BOOTH 1832.

MEDIA SERVICE CONCEPTS—Computer systems; program services. Introducing: RECALL, a microcomputer software package for use in radio station ratings analyses. BOOTH 227S.

MERLIN ENGINEERING WORKS—Audio monitoring; time base correctors; VTRs. Introducing: Ultra-wideband VTR; conversion to Sony and Ampex 1-inch Type C VTR. BOOTH 1128.

MICMIX AUDIO PRODUCTS—Reverberation and signal processing devices. Introducing: Master-Room reverberation system; signal processing devices for radio and television. BOOTH 406.

MICRO COMMUNICATIONS—Antennas and transmission lines; FM, UHF antennas. Introducing: Low-power diplexers and combiners for VHF, UHF, and MDS power levels (10 watts, 100 watts, 1 kW); low-power antenna for VHF; high-power UHF waveguide switches (3-, 4- and 5-port). BOOTH 1108.

MICRO CONTROL ASSOCIATES—Microwave and STL; transmitter remote control. Introducing: Transmitter remote control system. BOOTH 310.

MICRODYNE—Antennas; earth station equipment. BOOTH 1317.

MICROPROBE ELECTRONICS —Audio automation systems. Introducing: Control-3, a random select mini-programmer for carousels, instacarts, or go carts. Use by itself or with your present automation system. BOOTH 408.

MICROTIME—Noise reduction systems; frame store synchronizers; video special effects equipment and generators; time

## Ground Isolation Problems in VIDEO/DATA LINES?

Your answer: **NORTH HILLS** ultra-wideband isolation transformers.

We have a comprehensive line of standard models, designed for —

- 75 ohm coax and 124 ohm balanced video lines with flat frequency and linear phase characteristics over video range.
- High-frequency 50 and 75 ohm coax pulse transmission systems in 1:1 and 50 to 75 ohm adapter versions.
- 10 kV isolation in public utility data transmission with 6 kHz to 2.5 MHz bandwidth in 75 ohm coax, 124 ohm balanced line and hybrid versions.

# Behind every great camera is a great battery

## Philips new LDK-14S Camera

The years-ahead, 2/3-inch field and studio camera is now greater than ever. Greater sensitivity, greater flexibility, greater value. Plus, the LDK-14S offers several design advantages for battery operation: • Provides remote control capability when operating from battery (snap-on or battery belt) for studio control in EFP. • Exclusive flat bottom design allows positioning of shoulder brace for proper balance with or without snap-on battery. • snap-on mount for battery pack is compatible with Philips triax adaptor mount for quick conversion.

A great camera, like the Philips LDK-14S, deserves a great battery. The battery Philips selected as standard equipment on their camera is an Anton/Bauer

Snap-On™, the same battery selected by every major camera manufacturer.

The engineers who designed the Philips LDK-14S demanded the best power source available. When you buy your next battery can you afford anything but the best?

QEI—BOOTH 417.

QSI SYSTEMS—Character generators; encoders and decoders; modulators and demodulators; time code equipment. Introducing: Color bar generators with video source identification; 6x1 utility video distribution amplifier with gain and equalization controls; new video source identification boards; 10-second countdown timer; numerical video slate; master clock systems with time and temperature displays. BOOTH 1603.

Q-TV—Prompters. Introducing: Virtual Image VideoPrompTer featuring 5-inch monitor with magnifier thru-the-lens viewing; Mini Q Prompter for on-location prompting. BOOTH 907.

QUAD EIGHT ELECTRONICS—BOOTH 300S, 302S, 304S.

QUICK-SET—Pedestals, tripods, and heads. BOOTH 1012.

QUINTEK—Amplifiers, pre-amps, DA's; digital effects equipment; frame store synchronizers; processing and equalizing equipment. Introducing: Synchronizer; reverberation module for advanced music systems; disc mastering preview digital delay. BOOTH 1959.

R-COLUMBIA PRODUCTS—Headphones and intercoms; microphones. Introducing: FM wireless intercom headphones with base stations that allow interface with existing "hard wired" intercom systems. BOOTH 1703.

RCA AMERICAN COMMUNICATIONS—Satellite distribution services. BOOTH 700.

RCA BROADCAST SYSTEMS—FM antennas; VHF, UHF antennas; studio and ENG cameras and accessories; film cameras and projectors; cart machines and accessory equipment; audio consoles; video editors; film chain equipment; time base correctors; AM, FM, TV transmitters; VTRs. Introducing:

Power level moduls of the TTG Series of VHF transmitters. BOOTH 700.

RCA SOLID STATE—BOOTH 700.

RF TECHNOLOGY—Antennas, transmission lines, towers, and lights; helicopter and tracking systems; microwave, STL and remote pickup equipment; modulators and demodulators; wireless microphones. Introducing: Ultra miniature, high-power microwave transmitter for ground or airborne applications; hand-held 950 MHz wireless microphone. BOOTH 1624.

RPM (RADIO PROGRAMMING/MANAGEMENT)—Radio format syndicator. BOOTH 333.

RTNDA—BOOTH 150.

RTS SYSTEMS—Amplifiers, pre-amps, DA's; battery packs, belts, and chargers; intercoms; microphones. Introducing: Microprocessor-assisted communications system; self-contained squawk system; dedicated line master station switchboard; TW intercom power supply; 24-channel dry line in-

tercome system; 26-output source assignment panel; connector distribution panels; cosmetics for the entire line. BOOTH 1525.

RADIO COMPUTER SERVICES—Music programming, newsroom, and call-out research computer systems. Introducing: The News Machine, a complete news system; traffic system for radio; accounting system. BOOTH 184S.

RAMKO RESEARCH—Amplifiers, pre-amps, DA's; cart machines and accessory equipment; audio consoles; speakers; limiters; audio reel-to-reel recorders; remotes audio equipment; routing switchers; turntables and accessories. Introducing: Phasemaster cart machine. BOOTH 146.

RAMTEK—Business and newsroom computer systems; encoders and decoders; video monitors. Introducing: Complete line of raster scan color graphics and imaging display systems; 6214 color graphic computer with many broadcast applications, such as special effects, titles, election news coverage, and mapping. BOOTH 434S.

## The moving coil replacement from Stanton Magnetics... the revolutionary 980LZS!

Now, a low impedance pickup that offers all the advantages of a moving magnet cartridge without the disadvantages of a moving coil pickup. It offers a dramatic new crispness in sound, a new crispness resulting from its rise time of less than 10 micro seconds. Low dynamic tip mass (0.2 mg.) with extremely high compliance assures maximum smooth trackability. The 980LZS connects to either a moving coil input or a separate preamp.

For moving coil advocates the 980LZS offers a new standard of consistency heretofore unattainable. For moving magnet audiophiles it provides one more level of sound experience without sacrificing the great reliability and sound characteristics of the best moving magnet assemblies.

For further information write to Stanton Magnetics Inc., Terminal Drive, Plainview, N.Y. 11803

## Our Beaucart MONITOR II speaks for itself

**\$800**

The Beaucart Monitor II has its own built-in amplifier and speaker plus a headphone jack for private listening and a convenient front panel volume control, making it ideal for your NEWSROOM, CONTINUITY DESK, SALES OFFICE, PROGRAM DIRECTOR or anywhere you need to play cartridges without the inconvenience of an external amplifier and speaker. Flip a switch and the Monitor II is a conventional reproducer—ready to go on the air or feed a phone line. All these features—plus Beaucart's rugged reliability—at an affordable price.

BOOTH 1819 and 1505.

**UNARCO-ROHN**—Towers and lights. BOOTH 1021.

**UNI-SET**—BOOTH 1106.

**UNITED MEDIA**—Edit code generators and receivers; video editors. Introducing: Commander II, an electronic video editor providing the latest computer technology with control of up to eight VTRs, either 3/4-inch, 1-inch, or 2-inch; automatic switcher control of up to 3 M/E and audio with precise individual control of up to 999 frames; list management with clean list, including comments, block deletes, inserts, etc. Standard features include sync step, cut/list, auto/sync for built-in time code generator, selectable control track, automatic assembly, independent address track control, jog, and variable search control tailored to the individual video/audio tape recorders. BOOTH 1711.

SEE AD ON PAGE 24

**UNITED PRESS INTERNATIONAL**—BOOTH 903.

**UNITED RESEARCH LAB**—Amplifiers; audio tape and accessories; audio reel-to-reel recorders; replacement parts. Introducing: Auto-Sense, electronic motion sensing. BOOTH 414.

**UREI**—Amplifiers; audio analyzers; audio consoles; processing and equalizing equipment. Introducing: Power

amplifiers (6500, 6400, 6250, 6150). BOOTH 607S.

**URSA MAJOR**—BOOTH 414A.

**U.S. INSTRUMENT RENTALS**—Amplifiers, pre-amps, DA's; audio analyzers; audio and video automation systems; earth station equipment and services; FM stereo generators; pattern signal generators; microwave, STL, and remote pickup equipment; audio and video tape and accessories; audio test generators; vertical interval test sets; time base correctors; video monitoring, measuring, and timing equipment; video monitors; VTRs. Introducing: Microwave Associates' equipment. BOOTH 105S.

**U.S. JVC CORPORATION**—Studio and ENG cameras and accessories; video editors; slow-motion replay equipment; VTRs; video monitors. BOOTH 1519.

**U.S. TAPE & LABEL**—Pressure-sensitive labels, bumper strips, and inside window labels for the broadcast industry. BOOTH 407.

**UTAH SCIENTIFIC**—Routing switchers; video switchers. Introducing: Metallic contact switching matrix, and a hard-copy printout device that records all switching events while flagging discrepancies and operator errors; new versions of a line of alphanumeric displays designed for recessed mounting in production switcher panels manufactured by others (with these displays, names of currently assigned sources are displayed adjacent to the production switcher buttons associated with assignable inputs). BOOTH 1629.

SEE AD ON PAGE 117

**UTILITY TOWER**—Actual tower sections; lighting equipment; galvanized hardware. BOOTH 500.

**V & B TOWER**—Towers. BOOTH 320.

**THOMAS J. VALENTINO INC.**—Music library; sound effects library. Introducing: '60s and '30s music library. BOOTH 412.

**VALTEC COMMUNICATION FIBEROPTICS**—Fiber optic video system; fiber optic cable. BOOTH 1811.

**VARIAN ASSOCIATES, EIMAC DIVISION**—AM, FM, TV transmitters; camera and transmitting tubes. Introducing: FM broadcasting cavity amplifiers (1.5 - 25 kW); solid-state ex-

Continued on page 180

citers for FM broadcasting (150 watt); VHF TV cavity amplifiers; UHF cavity amplifiers. BOOTH 306.

SEE AD ON PAGE 81

**VARIAN ASSOCIATES, MICROWAVE TUBE DIVISION**—Amplifiers; tubes. Introducing: High-efficiency UHF klystrons and RF audio couplers. BOOTH 306.

**VERSA-COUNT**—Amplifiers, pre-amps, DA's; FM exciters; FM stereo generators; STL equipment; SCA equipment; AM & FM transmitters; FM modulation monitors. Introducing: FM exciter, 88-108 MHz. BOOTH 516.

**VIDEO ASSOCIATES LABS**—Video special effects equipment and generators. Introducing: VB-1. BOOTH 1716.

SEE AD ON PAGE 108

**VIDEO DATA SYSTEMS**—Character generators. Introducing: TPT-2500 Television Production Titler; MCG-2500 Message Character Generator; VITL Vertical Interval Transmission Link. BOOTH 1523.

SEE AD ON PAGE 90

**VIDEOMAGNETICS**—Video heads and refurbishing services. Introducing: Ferrite quad refurbishing with unique "compatible" design for best match to past and current equipment electronics—750-hour warranty (\$1,495). BOOTH 1808.

**VIDEOMEDIA**—Video editors. Introducing: Multi-source editing system. BOOTH 1808.

**VIDEOTEK**—Modulators and demodulators; video monitoring, measuring, and timing equipment; video monitors. Introducing: Full NTSC vectorscope; 26-inch color picture monitor; dual-channel audio-program monitor. BOOTH 1611.

SEE ADS ON PAGES 61, 140

**VIDICRAFT**—DA's; video test generators; video monitoring, measuring, and timing equipment; video signal enhancement and correction equipment. Introducing: Modular video test signal and sync generator; digital video level meter; low-cost proc amp for 3/4-inch and 1/2-inch VTRs. BOOTH 180S.

**VISCOUNT INDUSTRIES**—Video special effects equipment and generators; video switchers. BOOTH 1802.

SEE AD ON PAGE 150

**VITAL INDUSTRIES**—Video automation systems; digital effects equipment; processing and equalizing equipment; routing and video switchers. Introducing: New series of microprocessor-controlled production switchers, with models ranging from one to four mix/effects systems; SqueeZoom Video Manipulation Unit, a new control system for the SqueeZoom which permits complete operator programming of all video effects via a CTR terminal. BOOTH 921.

SEE AD ON PAGES 84-85

**WARD-BECK SYSTEMS**—Amplifiers, pre-amps, DA's; audio monitoring, measuring, and timing equipment; audio automation systems; audio consoles; intercoms; routing switchers. Introducing: Microprocessor-based intercom systems. BOOTH 1216.

SEE AD ON BACK COVER

**WEATHER SERVICES INTERNATIONAL**—Newsroom and weather computer systems; computerized colorgraphics; real-time information. Introducing: Real-time on-air computerized colorgraphics system. HOSPITALITY SUITE; The Dunes.

**WEATHERCASTER**—Weather forecasting computers. Introducing: CT-1000 weather forecasting computer with unique computer animated colorgraphic weather presentations and news-graphics for TV weather/news broadcasting; R-300 weather forecasting computer for radio weather forecasting. BOOTH 525S.

SEE AD ON PAGE 83

**WEATHERMATION**—Earth station equipment and services; weather instruments, radar and accessories; satellite receivers. Introducing: The next generation in satellite receivers—for the first time, fully digital satellite data are available to the broadcast industry with user-selectable background colors, locations, and sectors in addition to user-selectable maps.

New features for color radar are pan and zoom, two-color underlays, pseudo-sweep, and 8-frame storage capacity. BOOTH 1625.

SEE AD ON PAGE 55

**WESTERN UNION**—Earth station services; satellite distribution services. BOOTH 1401A.

**WILKINSON ELECTRONICS**—Audio consoles; exciters; FM stereo generators; AM and FM transmitters. BOOTH 302.

**WINSTED CORPORATION**—Cart machines and accessory equipment; editing consoles; tape storage systems. Introducing: 1-inch VTR console with full bridge; "Super-Pak" tape storage for 3/4-inch videocassettes (maximum capacity); low-profile editing/production console; vertical equipment racks. BOOTH 823.

SEE AD ON PAGE 114

**WOLD COMMUNICATIONS**—Satellite distribution services. Introducing: Transportable earth station; trailer-mounted Andrew 4.5-meter antenna which accompanies van (located outside convention center). BOOTH 1221.

SEE AD ON PAGE 31

**WOLF COACH**—Vans and ladder vehicles. BOOTH 1225.

**FRANK WOOLLEY & COMPANY**—Video animation. Introducing: Motionmaster video animation stand. BOOTH 507S.

SEE AD ON PAGE 158

**WORLD TOWER COMPANY**—Antennas, transmission lines, towers, and lights; lights and lighting accessories; lighting control systems. BOOTH 420.

SEE AD ON PAGE 116

**XEDIT CORPORATION**—Audio and video tape and accessories; drift and flutter meter test equipment. Introducing: Drift and flutter meter; long-angle splicing block for 1/4-inch audio tape; trough-type splicing block for 2-inch audio tape. BOOTH 223S.

**THE ZEI-MARK CORPORATION**—Film cameras and projectors; film chain equipment; lenses and lens services; telecine automatic light controls. Introducing: 3-input/2-output large image optical multiplexer. BOOTH 1643.

**ZENITH RADIO**—BOOTH 505S. **BC**

## PRODUCT PREMIER

# NAB to spotlight new products

For more information on products highlighted in this section, use BC's convenient Action Card.

The products in this month's Product Premier throw the spotlight on a selection of products that will be in the exhibit halls of the Convention Center in Las Vegas. This should give you a head start on reminders of company booths you'll want to visit.

If you're not going to the convention, just stay tuned. This issue and the May issue will take you down the aisles and into the sessions. Combine that with the ads, and you'll save the plane fare and avoid a bad case of tired feet. Just pull out the Action Card to mark the products that interest you, and BROADCAST COMMUNICATIONS will make the trip for you.

Before we get into the array of new products, in this issue in the Technical Symposium column (see page 42) we're taking a second swing at speech synthesis. The module tested and covered in the column is from Telesensory Systems. You can get more information about this module and others by using Circle Number 140 on the Action Card in this issue. In a later issue, we'll include a complete list of speech synthesis module manufacturers.

### Rack-model weather receiver (Circle 208)

GORMAN-REDLICH — One of the key products at the Gorman-Redlich booth at the convention will be their model CRW rack-mounted, fully remotable weather receiver.

An internal relay in the CRW provides contact closure across another set of rear terminals when an alert takes place. The contact closure can be used to start a tape recorder or set off a buzzer or light at a location remote from the receiver.

The double conversion crystal-controlled receiver is equipped with all three weather service frequencies. The company told BROADCAST COMMUNICATIONS that the price is \$325.

The company also will have a new digital antenna monitor in the booth.

**Remote control system (Circle 207)**  
DELTA ELECTRONICS — With any luck

the RCS-1 Delta remote control system will be demonstrated at the NAB convention. It's a chance to hear for yourself how one company has integrated speech synthesis into a piece of broadcast hardware.

The RCS system will display all parameters of your system on a CRT. Automatic logging (optional) ends your hassle with incorrect logs. Part of the display is a modulation bar graph with peak flasher indicators. And the RCS-1 has a direct antenna monitor interface.

The system can easily be enlarged by adding boards for additional control, input, and alarms. The system has the fundamental building blocks for ATS, allowing remote control/ATS at a later date.

But synthesis steals the show. The RCS-1 includes a telephone coupler

with a speech synthesizer, so the operator can interrogate the system by phone and listen to speech readouts. (Next year, engineers can attend the convention and call the station for a voice readout of all system parameters.)

### Pro turntable cartridge (Circle 121)

SHURE BROTHERS — The company has introduced a strictly professional broadcast cartridge, and they're dubbing it the SC39. And according to Shure, the SC39 was designed to take the kind of abuse that's typical at AM and FM stations and yet survive.

The Masar<sup>TM</sup> stylus tip minimizes noise buildup and cue-burn on masters as well as often-played recordings . . . even 45's pressed on substandard vinyl.

The SC39 comes with a side-guard

*Continued on page 182*

## Video Delay Lines

ALLEN AVIONICS Video & Pulse Delay Lines replace 75 ohm coaxial cable, provide a more suitable method of achieving precise short delays. The units reduce size, weight, installation costs, and save time and effort in making delay changes.

Circle (188) on Action Card

stylus deflector that protects the stylus against bumps and whacks from the side. When pressure is put on the deflector, the stylus tip withdraws into a safety shank, eliminating the possibility of damaging the stylus and/or leaving a scratch across the record's grooves.

When the cartridge or the tone arm it's in are not in use, you can flip down a stylus guard. It protects the stylus and cartridge from any accidents that might damage it.

**Field video camera (Circle 141)**

**IKEGAMI** — Sure to be fired up in the Ikegami booth will be the HK-357A. For quality field and EFP operations, the HK-357A is a quick setup camera. Once on site, you hook up three cables and a power source. Then, a push of its micro-processor activate button automatically cycles it through a check and recheck of all setup and registration adjustments. It takes about 45 seconds per camera, and six cameras can be handled.

No external registration and chip charts are necessary because a test pattern projector (diascope) is built into the lens. And camera distance from the compact base station can be about a mile with triax, or 2,000 feet with TV-81 multicore cable.

The camera makes good use of the newly developed Diode Gun Plumbicon®, producing high resolution, low lag, low noise, and wide dynamic range. The design also has Dynamic Beam Stretch to reduce comet tailing. Iris and white balance are automatic. The camera also has selectable contrast compression levels and a built-in chroma keyer. Its 7-inch viewfinder is tiltable and rotatable.

**2 & 4-track recorders (Circle 142)**

**OTARI** — Two professional broadcast/studio tape recorder/reproducers are at center stage now for Otari. The MTR-10-2 is a ¼-inch two-channel machine, while the MTR-10-4 is a ½-inch four-channel machine. Aside from the head differences and the electronics requirements from two to four channels, these machines share the same specs and features, so let's refer to them as the MTR-10 series production/mastering recorders.

The features begin with dual DC PLL servo tape transport operation governed by an integral microprocessor-based system. The transport logic and an exclusive, dual real-time counter are controlled by a separate proprietary microprocessor. The hinged-top transport deckplate makes access a snap.

The outputs are direct-coupled with active balancing on inputs and outputs, but transformers are optional. Total control includes adjustable phase compensation, bias, and record and playback levels (aided by an internal multi-frequency sine/squarewave generator). Their return-to-zero feature is standard. There is an optional tape locator with a 10-position memory and shuttle.

Also important, these recorders have a rear-panel interface available to transport and time base functions for SMPTE interlock.

Boosting its overall flexibility, the model MTR-10-4 can be changed from a ½-inch to a ¼-inch two-channel machine with a simple plug-in head-block change.

**Video character generator (Circle 130)**

**BESTON ELECTRONICS** — The Aston 2 is the hottest new item out of Beston Electronics. Any operator with a flair for originality will appreciate this character generator.

Standard features of the Aston 2 include a quickly mastered keyboard con-

trol. It has multi-font display capability and an internal 150-page disc memory. It has three speeds of roll and crawl with auto-stop, an internal foreground and background color generator, and symmetrical or drop shadow edging.

You can get italics at a keystroke, word flash and underline, and a double logo. If there's a problem, the Aston 2 comes with an engineer's service diagnostics card.

Complete fonts of any size between 18 and 84 TV lines high and with almost any complexity can be created in less than eight hours. Individual logos can be done in less than a half hour.

**ENG-EFP-studio camera (Circle 131)**

**PHILIPS** — The Philips LDK-14 cameras have already established an excellent reputation in the broadcast industry, but there is a new version that will be new at the NAB convention. It's called the LDK 14S, and it has several new features.

According to Philips, the 14S includes the following improvements: improved signal-to-noise ratio; improved colorimetry/sensitivity; protection of switches to avoid accidental operation; a high-resolution viewfinder with an adjustable eye piece; a new contour processor; direct-drive filter wheel mechanism; and an automatic iris closing in standby.

New options on the 14S include an on-camera battery, diode gun tube, a triax adaptor, and 18 dB high-gain option.

**Computer-controlled switcher (Circle 132)**

**CENTRAL DYNAMICS LTD.** — The MC-990 model 7 master control switcher from CDL may be operated as a manual/semi-automatic Preset-Take switcher, or as a fully automatic system under the control of CDL's APC-900 automation systems.

The MC-990 is a 7-bus microcomputer-controlled audio/video switcher. It's available with either 24 or 32 inputs. It also has 6 separate audio inputs and a full complement of audio and video transitions plus 4 special separate audio transitions. These special audio transitions can be modified for changing

Circle (203) on Action Card

PROMs, start and end-of-message audio cart machine commands, a full range of graphic keying facilities, and a dedicated character generator input.

Options include chroma keying, bordered keys, wipe transitions, PPMs, and loudspeaker power amplifiers.

CDL's APC-900 automation system can be easily added to an installed MC-990, which allows the station to expand its control of on-air operations at any time.

#### **1-inch video recorder (Circle 133)**

**HITACHI DENSHI AMERICA** — The Hitachi model HR-200 1-inch VTR is worth a visit to the company's booth at the convention. The HR-200 has some unique Type C format features that make it interesting.

The HR-200's tape guide retracts for ease of threading, and it repositions with one micron accuracy for up to two million threadings. The recorder also uses a "pro" tape path, meaning that the protective reverse oxide (PRO) configuration of the tape path allows only the video and audio heads to touch the oxide surface. All other transport mechanisms guide the tape by its reverse side.

Head replacement is a snap because the pre-aligned head design requires no adaptors or jigs, and it takes just three minutes to make the change.

In the shuttle and standby modes, the tape rides on a cushion of air. This cuts tape and head wear and gives shuttle times of only 80 seconds end to end.

#### **Noise reducer/TBC/synchronizer (Circle 134)**

**THOMSON-CSF BROADCAST** — The Thomson-CSF 9100 is a true digital video processor. It gives the capabilities of noise reduction, time base correction, as well as being a frame synchronizer.

Noise reduction delivers up to 15 dB of signal-to-noise improvement in four programmable settings. (This should prove helpful with satellite pictures.) It makes film-to-tape transfers less noisy and grainy.

For ENG applications, the 9100 helps make signals sharper, without the excessive low-frequency chroma noise identified with 3/4-inch VTRs.

The frame synchronizer gives an added freeze-frame capability. Also, a built-in time base corrector will handle 3/4-inch VTRs. What's more, a 4 x 1 switcher frees valuable crosspoints while a processing amplifier provides complete output signal control.

**ENG camera Leddicon® (Circle 135)**  
**EEV INC.** — EEV will have a booth at the NAB convention, and it affords a

good place to stop for a lot of information on camera tubes. The newest addition to the EEV Leddicon family of tubes is their P-8160. It's directly interchangeable with all existing lead oxide tubes.

According to EEV, the P8160 is the best-rated tube for lowest lag and no blooming. These 3/8-inch Leddicons meet the same high performance standards as the 1-inch and 30mm Leddicons. The P-8160 is well suited to field use in ENG and EFP camera operations.

#### **Hand-held light device (Circle 136)**

**ANTON/BAUER** — The company will introduce their rugged hand-held LG-30 light. Appropriately named the "Black

Beauty," the unit was designed for professional broadcast portable applications. The light works well with the Anton/Bauer LB-30 30-volt lighting belt and can also be powered by the Anton/Bauer 12-volt batteries by using a 100-watt F.A.V.-type bulb.

The LG-30 can be operated with one hand, and that includes focus and power controls. Other features include a unique spring-loaded, snap-action, swing-away dichroic filter that locks in place. This avoids mounting problems since it can be adjusted to any of four positions.

A special lamp socket insures maximum bulb life and prevents bulb damage. When the bulb does go, spares can be taken from storage space in the handle.

#### **ENG-EFP diode-gun camera (Circle 137)**

**PANASONIC VIDEO SYSTEMS** — Sure to draw attention at the Panasonic booth, the diode-gun Plumbicon AK-760 camera by Panasonic features three of the 3/8-inch pickup tubes. Since the diode-gun Plumbicon tubes have a thinner photoconductive layer than conventional Plumbicons, the resolution is excellent (600 lines center).

The AK-760's feedback beam control reduces comet tailing by stabilizing highlights that exceed normal white levels. Also, the camera S/N ratio is 45 dB at standard illumination of 200 foot-candles at f/4.0. With the 18 dB high gain switch on, all you need is 5 foot-candles at f/1.8.

The AK-760's impressive circuitry includes horizontal aperture correction, 2-line vertical enhancement, automatic white balance, and a built-in color conversion filter. If the camera is needed in the studio, an optional 5-inch viewfinder is available.

#### **Synthesizer/detector (Circle 118)**

**POTOMAC INSTRUMENTS** — The SD-31 synthesizer was designed for antenna impedance measurements in the presence of strong interference. It's another product in their line that will be in the booth at the NAB convention.

Typical of Potomac's practical approach to test instruments, the SD-31's high-level oscillator is compatible with General Radio's 916 and 1606 series as well as Delta's OIB-1 impedance bridges.

When making measurements in the face of strong interference, the unit's special coherent detector circuit rejects the interfering signals. It's crystal controlled from 100 kHz to 1999.5 kHz in steps of 500 Hz. The unit is powered by rechargeable batteries.

#### **Stereo consoles (Circle 120)**

**QUANTUM AUDIO LABS** — Quantum will show the console line at the convention, including the QM-8P and QM-12P. The model number tells you how many channels are available.

These consoles feature up to 24 inputs, with all inputs and outputs balanced. The input channels have three knob EQ with in/out switch, echo, headphone and cue send, channel on and remote start, and high-quality conductive plastic faders.

There are four balanced output channels, with low noise and distortion figures. The series also has four independent monitors, flexible control room selection, and talkback to studio muting.

TELEX 125 237

Circle (204) on Action Card

**EFP time code reader/gen (Circle 139)**

**SKOTEL** — The new Skotel time code reader/generator model PTC-100 is a rugged, compact unit that's been designed especially for TV and film EFP requirements.

The PTC-100 identifies color field sequence in time code, meets film standards for 24, 25, and 30 fps, and is compatible for NTSC, PAL, and PAL-M TV standards. The unit generates and reads user bits.

Among its other operating features, the PTC-100 has an internal jam sync reader that permits slaving several units together. New user bits can be preset and entered without disturbing the time counter, and the time counter can be operated remotely. Thumbwheels are used to preset the time counter or loads for user bits.

The unit's power-saving circuitry allows five days of normal operation with four AA cells (NiCad batteries and charger are optional) or the unit can be plugged into an external 6-12 VDC source while out on assignment.

**SMPTE code reader (Circle 110)**

**DATAMETRICS INC.** — The company is introducing a low-cost model SP-710 SMPTE code reader. Designed to fill the needs of modern production facilities, the 710 decodes and displays SMPTE time code from 1/20th to 60 times play speed with accuracy.

The integral character generator inserts numerical time data in any position over the raster in four selectable sizes. Character display in the vertical blanking interval is a standard feature.

Additional features include a "hold" function to freeze the display count and a switch to delete the character display.

Also standard is a loop-through video input, two video outputs and regenerated code output.

The SP-710 is low-profile rack configured, and comes with a price tag at just under \$1,900.

**News/production camera (Circle 123)**

**TOSHIBA AMERICA** — Headed for the spotlight at Toshiba's NAB booth is their new PK-60 camera. When *BC* editors saw it for the first time at a recent SMPTE convention, division VP and general manager Ron Fried said the camera was designed for news/production applications with enough features to draw crowds on its own.

The PK-60 features Digital Data Loc, an advanced plug-in digital memory adapter that operates in conjunction with the microprocessor-controlled automatic setup unit. Information stored in the non-volatile memory of the Digital Data Loc maintains centering, black levels, and white levels.

As Fried explained, the camera can be setup at the studio and then used on remotes with no additional setup required.

The PK-60 weighs 9.4 pounds. It's 11 inches long, 9 inches high, and 3.7 inches wide. Its 20.6 watts power consumption allows over 2 hours of camera operation with a NiCad battery.

The camera also features a digital base station, monitor selector setup box, microphone holder with built-in amplifier, and a wireless/triax transmission system.

**Digital FM stereo generator (Circle 124)**

**C.N. ROOD** — Marcom will be offering a complete "front end" stereo transmitter

package for the update of older FM transmitters as well as new transmitters with the C.N. Rood SC-200 series stereo generator.

Typical specifications include 70 dB channel separation, a S/N ratio at 95 dB, harmonic distortion at 0.01, and temperature stability from 5 to 50 degrees centigrade.

In designing the SC-200 series, a method was sought which would keep the pilot-tone and the 38 kHz phase equal under all circumstances, eliminating the necessity of complex adjustments. The result is a patent pending sinusoidal switching system that yields excellent performance.

Tracking the design concept, especially the patent, it's easier to understand if you picture a single shaft, double pot.

One potentiometer generates the multiplex signal while the other generates the sinusoidal pilot tone, and the runner of the potentiometer is moved sinusoidal between a positive and a negative DC voltage at the extremes of the potentiometer. The phase of both signals can be influenced only if the potentiometers are not tracking. Since this is a construction feature of the potentiometer, the phase difference is fixed. A maximum phase deviation of 0.04 degrees (0.01 microsecond) is guaranteed.

In its final design, this circuit accomplishes the potentiometer function digitally! This eliminates the problem of instability, offset, etc., in an adjustment-free, exchangeable module. (Our thanks to C.N. Rood president Matthieu Moors and Marty Jackson of Marcom for explaining the patent.)

This unit can be seen in operation with an audio processor in the Inovonics booth at the NAB convention. The SC-200 series will be represented exclusively in the U.S. by Marcom (P.O. Box 66507, Scotts Valley, CA 95066, Telephone 408-438-4273).

**Portable time code gen (Circle 128)**

**AMTEL** — The company is introducing their 3500 model time code generator/reader. It's available as a desktop or belt mountable unit. It's a high-performance unit that produces code conforming to the EBU/SMPTE specifications.

The model 3500's 5-volt output will accommodate balanced or unbalanced audio inputs used on many VTRs. Other outputs are available by special order.

Data entry follows a calculator format which permits one-handed operations in the field. The 3500 also includes NiCad batteries, or it can operate from AC. When the unit is on AC, the built-in battery charger can charge the battery while it is being operated.

The 3500 is available in either NTSC or PAL. In the absence of any video signal, the unit is driven from its own internal crystal.

**Low-impedance pickup (Circle 111)**  
STANTON MAGNETICS — The Stanton 980 LZS is a low-impedance pickup designed as a replacement for moving coil cartridges. Output of the 980 LZS can be connected either into the moving coil input of modern receivers-preamps or can be used with the Stanton preamplifier, whose output is fed into the conventional phono input. Features include a stereohedron stylus, rare earth magnet stylus assembly, replaceable stylus with Stanton long-hair brush, low impedance coils, low dynamic tip mass, and high compliance for superb tracking.

**Video editing system (Circle 119)**  
UNITED MEDIA — Commander II is the market's newest videotape editing system. It has a totally new and functional look (it'll be on display at the United Media booth at the NAB convention), and it's available at a significantly lower price than you'd suspect.

It'll handle a complete four VTR system with any combination of playback and record for multiple format masters (expandable to three more VTRs and a switcher).

Video levels are variable in 10 percent increments with mix rates from 1 to 999 frames.

The Commander II also features automatic cut listing with a single keystroke and automatic list management for shortening, lengthening, or rearranging scenes.

This is a reminder that the products featured in this issue will be on display at the NAB convention. If you're going to attend, be sure to mark the booth locations of the companies with products that meet your needs. And if you're not going, combine this and the next two issue's Product Premier sections and you can do your shopping at home by using the appropriate "circle" numbers on our Action Cards.

### **Weather forecasting computer (Circle 117)**

WEATHERCASTER — Here's a product sure to draw crowds at the NAB convention even though they have a small booth away from the mainstream traffic. It's a weather forecasting computer that in-

cludes a sensing system. That's right, it computes your weather. Based on a built-in chip that includes the history of your regional weather patterns, and inputs from the outdoor sensing system (along with an operator's scan of current outdoor conditions, the CT-1000 will predict your weather for you for a 12-, 24-, 36-, or 48-hour period.

Weathercaster's NTSC video output permits full-screen personalized chroma-key presentations, and it can be used to create graphics for the news department. The radio version uses an LED readout.

**Automatic setup camera (Circle 129)**  
HARRIS CORP. — The Harris TC-85 will be introduced at the NAB convention. It's an automatic setup camera, allowing setup in pre-production in less than 45 seconds.

An independent computer is used with each TC-85, eliminating camera interdependence. With the touch of the setup button, you automatically adjust fine registration, black balance, white balance, gamma, and flare.

A unique feature of the TC-85 is that it allows the operator to dial in an artistic characteristic and override the system.

Although the computer setup is standard in the TC-85, it can be ordered without this feature. Later, the computer setup can be added in the field. The camera also is available with triax or multicore options.

**Reel-to-reel recorder (Circle 127)**  
INTERNATIONAL TAPETRONICS — The company will bring its new, designed-for-the-broadcaster 770 series recorder/reproducer to NAB. While it has several broadcast applications, it's ideally suited for automation systems. It combines the ruggedness and simplicity of its predecessor, the 750 series, with greatly improved reliability. Of course the 770 is designed to meet or exceed the NAB standards for reel-to-reel machines.

And the 770 series includes numerous configurations, including one or two tracks, mono or stereo, and tape speeds from 3% to 15 IPS.

These recorders are equipped with a unique, high-quality, professional head assembly that uses two torque motors for supply and take-up, a DC servo capstan motor for tape drive, and a low maintenance, positive action differential disc brake design.

### **Distribution switcher/monitor (Circle 138)**

DYNAIR — Of course Dynair's System 21 will be on display, and with the SCA-250B status monitor system, you know first-hand how you can call for any one of the System 21's 1,000 outputs. You can connect it to any of 1,000 inputs, different video and audio if desired.

To show its flexibility, the system can be loaded with 80 preset selections. You can edit at will, and then make all switches on the same vertical interval. Status by the output also is available. Just punch up the number you want and you'll see that output plus the next 49. You can roll through outputs 50 at a time. If you want status by the input, you just key in a source and the display lists all the outputs on line in numerics or mnemonics.

**Video editing systems (Circle 126)**  
DATATRON — The Tempo and Vanguard editing systems will be on display in the exhibit area at the NAB convention.

Tempo provides A/B roll editing capability with up to three decks and a switcher. Vanguard as A/B roll and A/B/C/D synched roll editing capabilities with up to five decks and a switcher. It also has selectable pre-roll, post roll, and operator reaction times.

Both systems can handle SMPTE or control track editing, and they can be interfaced with over 40 makes and models of decks.

VaraScan<sup>®</sup> is a Datatron feature that allows variable speed tape search in forward/reverse tape shuttle from high speed to freeze frame. Tempo can handle one of these controls, Vanguard can handle dual controls.

Tempo can store up to 300 edit decisions, Vanguard will handle 999. Tempo performs auto-assemblies from up to two source decks. Vanguard can draw upon up to four source decks. **BC**

# Elector introduces new high resolution cost-effective color monitors from **BARCO**

**CM33HRA**  
High resolution 13"  
monitor with  
underscan  
\$2,475

**AVD33 \$995**

**CRM2650**  
High brightness, 4 standard,  
26" receiver-monitor;  
PAL/SECAM/NTSC 3.58 and NTSC 4.43  
available with optional RGB  
\$2,775

**CM51HRA**  
The highest resolution, most  
cost-effective 20" color  
monitor with underscan  
\$3,275

Barco has earned an enviable reputation around the world for producing high quality color monitors and related equipment for all video applications. And every year the selection grows larger.

Models shown here range from the lightweight portable CM33HRA weighing only 31 lb. (14 kg.), through the CM51HRA and digital remote controlled receiver-monitor CRM2650. All are fully modular and are available in multi-standard combinations. In addition, a range of options can adapt Barco monitors to specific functions including mobile installations, teletext decoding, or information display. The AVD33 tuner, shown at the top of the grouping, can be used with any monitor for off-air reception.

Other accessories and models combine to round out a very versatile line that meets the needs of ENG

crews, broadcasters, A/V producers, cable operators, or computer programmers. Screen sizes range from 13" to 26".

But the main reasons for choosing Barco are quality, durability and service! Ask us for details and a demonstration.

These Barco products are distributed and serviced exclusively throughout North America by the Elector Group.

In the US: E&O Systems Ltd., 5128 Calle del Sol, Santa Clara, CA 95050. Tel: (408)727-1506.

In Canada: Electro & Optical Systems Ltd., 31 Progress Court, Scarborough, Ontario M1G 3V5. Tel: (416)439-9333.

Leaders in digital technology.
