## Make Your Streams Stand Out

**Stream up to eight programs at once**, each with four outputs for a total of 32 streams.

**Full suite of stream-specific audio processing tools.** Optimize performance of audio content.

**AAC, MP3 and Opus encoders.** Reaching a broad range of end user devices and players.

**Metadata agnostic.** Lua transformation filters adapt metadata input from any automation system into any required output format.

**Cloud-ready for the future**, yet compatible with standard CDN and streaming platforms now. Supports HLS, Icecast, RTMP, and RTP streams.

**All-inclusive Linux and AoIP appliance.** No Windows® drivers, updates or PC needed.

Add Streamblade to any audio network via WheatNet-IP, analog, AES3, or AES67 inputs or add Wheatstream to any existing WheatNet-IP or AES67 compatible networks.

### STREAMBLADE & WHEATSTREAM STREAMING AUDIO PROCESSORS

# NABA offers hybrid help

## Provides insights on hybrid radio and metadata

**Paul McLane**  
Editor in Chief

The North American Broadcasters Association has released its new guidance document about hybrid radio and metadata. Radio World previewed this in our March 29 issue.

The authors issued a list of recommendations. They say FM stations should at least adopt static RDS tools, and ideally provide both static and dynamic metadata using

RDS. They encourage AM and FM stations to strongly consider adopting HD Radio's hybrid IBOC mode as well as the best practices for metadata published earlier by the NAB.

They also asked industry associations and network groups to reach out to automakers to "encourage the continued primary placement of broadcast radio within head units." And they particularly encouraged AM broadcasters to express concern to specific automakers that don't include AM receivers in electric vehicles, asking them to reconsider.

The 30-page report was released in conjunction with a session at the NAB Show in Las Vegas. Its goal is to help improve broadcasters' awareness of hybrid radio technology and understanding of the importance of good metadata in this era of large, colorful dashboard displays.

"Proper use by broadcasters of hybrid radio and metadata will help broadcasters maintain their dominant position in the automotive audio landscape and maintain listeners' interest," it states.

The report explains the basics of hybrid radio, which combines internet protocol connectivity and OTA broadcast radio, and summarizes its promised benefits, including brand reinforcement and enhanced and on-demand content. It gives a layperson's explanation of "service following," in which broadcast reception can switch to an internet version of the same content when a vehicle leaves a station's coverage area, and discusses the technical issues involved.

The report provides descriptions of various players in the hybrid radio landscape including RadioDNS, DTS AutoStage, Radioplayer Worldwide, Radioline and Quu Inc. It also has sections about metadata delivery, RDS and HD

Radio metadata; and it discusses licensing and data usage considerations of hybrid radio.

It concludes with a discussion of “creating an environment for success” and explores potential reasons metadata is not deployed properly.

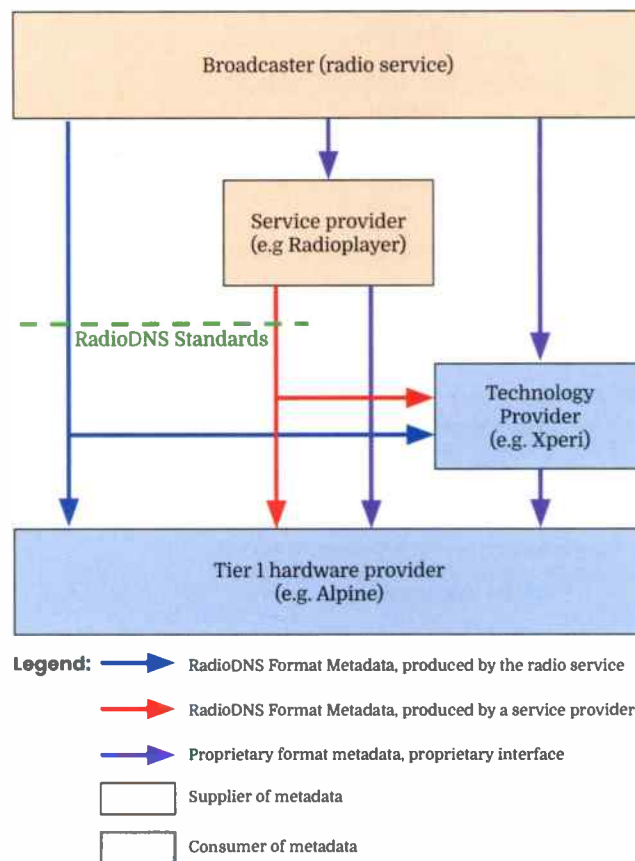

The authors said that radio CEOs have publicly stated support for a competitive implementation of radio in vehicles. “However, scanning across the radio dial in numerous markets so far, there has not been a coordinated effort by radio stations to populate the car radio displays, and thus, it appears that the advantage of these features has not been disseminated throughout the radio organizations.”

Why? Perhaps station management hasn't conveyed the urgency to their staffs, or they don't realize that implementation costs for basic metadata services are minimal. Brand managers and sales staff may not be aware of the visualization capabilities of radio. Employees might not be driving vehicles with this technology yet and are not aware of the benefits.

Among the ideas offered are to have the programming, production and engineering departments set up one of the market's stations with a full-featured connected car demonstration, and use a smartphone to capture a video of the results for a short presentation to staff. Stations also could purchase and install radios in their lobby or studios so the entire staff can see a visual radio experience.

Find the document at <https://nabanet.com/>.

For attendees who couldn't make the show last year, the LVCC Loop and the West Hall were novelties. And for all who wanted to get to and from the West Hall quickly, the Loop was a popular choice.

# NAB Show in photos

NAB President/CEO Curtis LeGeyt said broadcasters must emphasize the relevance of radio. "It's easy to say in a time of disaster, 'Well listen, I got an alert on my phone.' But what does that alert say? 'Tune into your local media.' And those AM stations serve as the backbone for the emergency alerting that goes through the broadcast system." He was with Univision's Gabriela Teissier.

Attendees make plans during the Radio Happy Hour on Monday. The estimated attendance was 65,013, compared to 91,500 prior to the pandemic but up from last year's final total of 53,457.

Applications for generative artificial intelligence were a big topic across the show. Naveen Narayanan of Quickplay discussed uses in broadcasting and streaming, including creation of AI-generated images. Futuri Media's RadioGPT was a buzzy item shown in a suite and discussed in sessions. Other exhibitors with AI offerings included Veritone and ENCO.

Founded in 1923, NAB was originally the National Association of Radio Broadcasters. Its first convention was in New York in October of that year at the Commodore Hotel, with 16 stations and 23 attendees, in conjunction with the National Radio Show.

Photo by Jim Peck

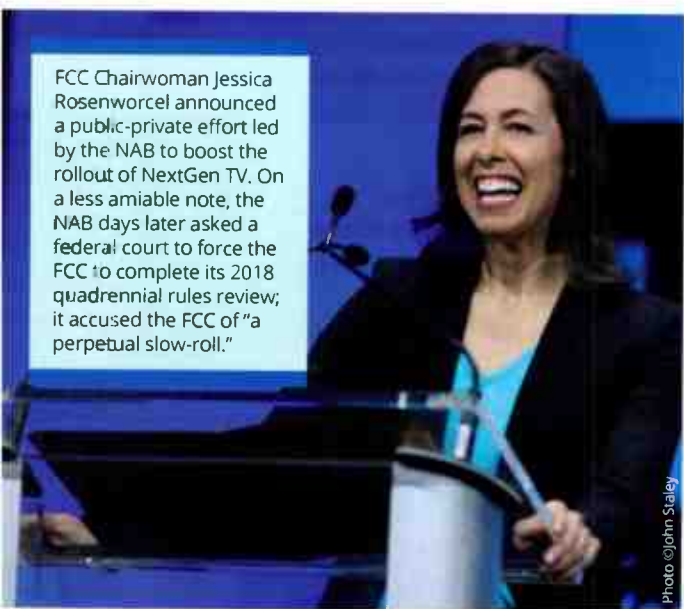

The Association of Public Radio Engineers presented NAB's David Layer with its Meritorious Service Award. Layer is flanked by Scott Hanley, APRE's new president, and Ralph Hogan, its founding president.

Photo by Jim Peck

GatesAir highlighted new FM and DAB/DAB+ radio transmitters. Exhibitors also showing new radio transmitters included Nautek, Elenos/Broadcast Electronics and WorldCast Systems/Ecreso.

Photo by Jim Peck

FCC Chairwoman Jessica Rosenworcel announced a public-private effort led by the NAB to boost the rollout of NextGen TV. On a less amiable note, the NAB days later asked a federal court to force the FCC to complete its 2018 quadrennial rules review; it accused the FCC of "a perpetual slow-roll."

Photo @John Staley

The Society of Broadcast Engineers expanded its spring Ennes Workshop to a two-day event held separately from the NAB Show technical agenda. Fred Baumgartner and Andrea Cummis welcomed a happy crowd.

# As goes your FM processing, so should your HD1

Jurison emphasizes the need to process those two identically

**A**lan Jurison is senior operations engineer for iHeartMedia. Much of his focus has been on advancing its transmission of digital HD Radio data services, RDS and other metadata services. This is an excerpt from the ebook "Trends in Audio Processing 2022," available at <http://radioworld.com/ebooks>.

**RW** How would you describe your approach to radio processing?

**Alan Jurison:** There are a lot of opinions on signature sounds. In my position, I offer advice but allow some of our engineers with audio processing backgrounds to help shape those opinions for our use. A key philosophy to take away is to process your FM and HD1 signals identically. ...

As we've learned in the past few years, as goes FM processing, so should HD1. FM+HD1 processing should be done in the same appliance and processing core for the best blending transition. Separate audio processors for FM vs. HD1 and different sound profiles between the two are now strongly discouraged, and that advice has been acknowledged by the industry as a best practice; see Section 5.1 of NRSC-G203.

For channels that are all-digital, or pure-play digital — HD2, HD3, HD4 or internet streams or other applications well ahead of a transmitter site

— I see the general trend into moving those into software or cloud-based processing services. The industry has already started shifting in this direction...

needed in a lot of common modern signal-box processors to get the FM and HD1 to be processed identically. It's hard for the engineers out in the field to know all this information. These should be the default settings with the latest firmware update and not left up to the user to find out how to update the product to fix some misconceptions in earlier processor design. Any new products leaving the factory need to be set this way, and careful review and analysis in a lab should be done for any future firmware updates or product redesigns to focus in this area. HD is no longer an afterthought.

**RW** What tools are available to mitigate issues involving synchronization of HD Radio and analog signals?

**Jurison:** Single-box, common processing for both FM+HD1. Do not employ multiple devices to process FM and HD1 signals separately. With overall automotive HD penetration in some markets exceeding 40%, this is becoming more important every day. In some markets we are arriving at the point where we have just as many listeners to the HD1 as we do the analog FM.

Using an automated alignment processor is important too. There are various ways to achieve this either in the properly equipped Gen4 Exporters, external alignment processors, audio processors with integrated time alignment features, or external monitors that direct an older Exporter or audio processor to change the delay. **RW**

**“ In some markets we are arriving at the point where we have just as many listeners to the HD1 as we do the analog FM. ”**

**RW** What features or capabilities would you like manufacturers to add to their offerings?

**Jurison:** Making the FM+HD1 audio processing identical, easy for the end-user in a single-box processor. There are scores of firmware updates, tech notes, settings changes and tweaks

10

**T**he company that writes its name as [E3] is a developer and manufacturer of programmable RGB-backlit LCD push-button switches for control panels in broadcasting, military and industrial applications. Its name stands for Engstler Elektronik Entwicklung GmbH. Say that

[3] times fast!

At the NAB Show, the company introduced several series of LCD key technology switches that include MSC Multi-Segment Color, the ability to utilize different RGB background colors in the upper and lower segments of the LCD.

Power consumption is only 25 mA at 4.5 to 5.5V.

Examples are shown. Can you imagine the visually striking control panels you can design with these lighted switches? Browse [www.e3-keys.com](http://www.e3-keys.com).

## Identify it

I'm still getting positive comments about Western Electric 111C transformers. Glad to bring back such great memories!

Ken Lundgren wrote that he inherited several items from the late Bob Seaberg, who had been a Tektronix sales rep for 25 years, worked at broadcast organizations like WBBM and HCJB and was a frequent attendee to the NAB Show.

One of Bob's treasures now in Ken's possession was the transformer shown here. It's obviously an audio transformer, but any markings are obscured by tape

residue. Interestingly, the orange text reads "Special Services Section." That sounds sinister, but years ago, when you needed to set up equalized audio lines to connect a studio to a transmitter or a remote broadcast location

**Above**  
A sample of multi-segment RGB backlit SBE switches from [E3].

**Right**  
Can you identify this "mystery" transformer?

to a studio, you dealt with the phone company's Special Services Division.

Ken says this transformer is a little taller than the one we showed in April. So readers, any thoughts? Email them to me at [johnpbisset@gmail.com](mailto:johnpbisset@gmail.com).

### Shrink it

Rolf Taylor, principal of Rocket Engineering and Consulting, saw our recent mention of heat shrink. He has used DYMO Rhino shrink for several projects and finds it handy.

He says most heat shrink has a 2:1 ratio, meaning it will shrink by about 50% in diameter, though 3:1 heat shrink is also available. The latter is especially useful when you want to slide the shrink over a connector but still assure a snug fit. Search "3:1 heat shrink" for sources. If you have a Micro Center store nearby, look in its hobby department. (Rolf says that's also a decent Radio Shack substitute when you

**Above left**  
An image from the CTAM website. Imagine the possibilities with 4:1 heat shrink!

**Above right**  
Keep dust out of your USB ports with these inexpensive, colorful plugs.

need emergency parts.)

Another heat shrink source is the website CTAM, properly called Cable Ties and More. It carries several brands; it even has some with a 4:1 ratio. Visit [www.cabletiesandmore.com/](http://www.cabletiesandmore.com/).

### Filter it

Dan Slentz has heard a few horror stories about cell companies lighting up 5G in certain markets either unannounced or before the local broadcasters were ready. If you still find yourself in need of information about 5G filtering for C-Band satellite receivers, he recommends a free, archived SBE WebXtra video featuring John Joslin of Dawncore and hosted by Kirk Harnack. At [www.youtube.com/@sbenational/videos](http://www.youtube.com/@sbenational/videos), scroll to the video for June 21, 2021, titled "How and When C-Band Repack Impacts You."

### Put a plug in it

And Dan also has heard broadcast equipment manufacturers express concern about allowing dust into the unused USB ports on their equipment. Well, for 80 cents, why not buy a pack of 16 colorful silicon USB port covers at the online marketplace Temu? The name stands for "Team Up, Price Down." (Today's our day for supplier acronyms.)

At [www temu.com](http://www temu.com), type "anti-dust plug" in the search field. Dan says the funky colors will make the ports stand out. Each pack includes a variety of sizes for different types of ports.

They also have plugs for computers, smartphones, tablets and other devices. Dan says his family loves the crazy stuff you will find at Temu. 🤖

**“When you needed to set up equalized audio lines to connect a studio to a transmitter, you dealt with the phone company’s Special Services Division.”**

# Radio and the blind: an evolving relationship

Modern trends challenge the medium's role in lives of the visually impaired

## Writer

Donna L. Halper

Associate professor of communication and media studies at Lesley University, and a former broadcaster and radio consultant.

## Above

A visually impaired child listens to commentary of an India vs. Australia cricket match over a portable radio in New Delhi in 2014. The proliferation of other audio media forms has challenged the special relationship that broadcast radio long had with the blind community.

In the 1920s, newspaper articles called radio a godsend for the blind. It was both educational and entertaining, and it would help them to feel less isolated.

Today, many people with visual impairment live independent lives and enter a variety of occupations, including broadcasting. Thanks to technologies like screen-reading software, most internet websites are accessible. And a growing number of movies and television programs now have audio descriptions.

So what role does radio play in a world in which blind people have so many information and entertainment choices?

"It all comes down to how you

define radio," says Rick Morin, manager of ACB Media, operated by the American Council of the Blind.

Media consumption patterns among the blind reflect those of the population at large. Morin grew up in Springfield, Mass., in the 1960s, and he loved AM top 40, but he is well aware that listening habits have changed.

"Most blind people I know still listen to some [terrestrial] radio, but ... there has been an explosion of electronic content that is available on internet radio and podcasts."

Peter Altschul is an author and motivational speaker who co-hosts a weekly podcast. He grew up in New York, where he listened to AM top 40 deejays like Dan Ingram and sports announcers like Phil Rizzuto and John

Sterling.

"The announcers back then made you feel as if you were there. They gave vivid descriptions," he said.

These days Altschul lives in Columbia, Mo., and still listens to sports radio, which "is as good as what I listened to growing up." But he misses the live and local stations and the personality deejays he heard as a kid. He gets most of his music from satellite radio.

"SiriusXM has much more variety and fewer commercials," and best of all, "there are no political ads."

## "The same songs over and over"

Doug Hunsinger too finds his local radio stations more political and less informative than he would like.

# Radio Audiences

The retired government employee, 69, lives in Pittsburgh but grew up in Virginia. His memories include personality deejays and listening to distant stations at night, when the local daytimers went off the air.

Radio was almost like an obsession in those days. "I carried my transistor everywhere." He recalls telephoning the local deejays to make requests. He finds local AM dominated by conservative talk. "There isn't as much local news on radio as there used to be. There's more news on TV than on radio." As for FM, he finds that most music stations "play the same songs over and over."

Like Altschul, he gets his music from SiriusXM, and he sometimes listens to internet radio.

The change of a beloved radio format can also push a loyal listener away.

Ann Chiappetta, 58, is a retired therapist who grew up in New Rochelle, N.Y. "In the 1970s and

1980s, it seemed the radio was always on. I listened to FM because AM was for old folks." Her favorite was a Long Island album rocker that played many songs no other stations did. She listened for years, but then one day circa 2004, the format she loved was gone.

"When it went off the air, it was a great loss. After that, my connection to radio began to change."

She still listens to radio, but not as frequently as before — "mostly news on NPR, and sometimes sports radio." But for music, she prefers to choose her own, or she seeks out internet stations. "I use my computer to interact with the world. I have my music on my phone. I'm always plugged in somewhere."

Another common thread is frustration with a lack of variety on most terrestrial stations.

Walden Hughes lives in Costa Mesa, Calif. "I lost my sight at age 9, and radio became very important in

**Above**  
Ann Chiappetta

my life." He liked country music and sports, but he also found talk shows educational.

"The 1970s and 1980s were the golden age of talk radio. There were great debates about issues, and no name-calling. I could learn from it."

Today, the 56-year-old listens to C-SPAN Radio, but he finds most current talk shows too argumentative. Plus, "There are too many nationally

World Radio History

## Radio Audiences

syndicated hosts, and not enough who are local."

Hughes also loves "golden age" radio, especially radio drama, so he decided to do something about it: He operates a popular internet station, Yesterday USA, which features old-time radio shows.

His friend Larry Gassman, 68, lives in Fullerton, Calif. Gassman and his twin brother John co-hosted a weekly OTR show on a Pasadena station for several decades, and are still streaming on the internet.

Gassman recalls that when he was growing up, there were many live and local stations, and "the announcers talked to you. Even the talk show hosts were more laid back. I used to be able to listen to radio for hours at a time." Now, local radio sounds generic. "A lot of it is on satellite. And there's a lot of voice-tracking. As good as [the announcers] might sound, I can always tell that they're not [local]."

Ken Meyer is another former terrestrial broadcaster who now utilizes streaming audio. Meyer spent 14 years at WBZ Radio in Boston, where he became well-known for booking guests for popular talk show host Larry Glick.

Growing up in Rochester, N.Y., Meyer, 76, remembers that "I always loved radio, from the time I was a kid. I used to pretend to be a deejay." And like Doug Hunsinger, he enjoyed tuning in late at night.

"There used to be something magical about picking up distant stations." In fact, WBZ could be heard in 38 states, and other clear-channel

stations came in loud and clear too.

Now, thanks to streaming, he can listen live online to stations from anywhere. There might be less romance in it, but there's no static. And there's another benefit: the ability to reach a national audience. Meyer hosts a podcast for WBCA, Boston Community Radio, a low-power FM station, and his podcasts are accessible via the internet.

### Many forms of radio

To younger respondents, terrestrial radio is just another outdated technology.

Steph Brown, 22, a student of the author at Lesley University in Cambridge, Mass., recalls, "I used to listen to the radio in my parents' car" and nowhere else.

"As I was growing up, I noticed that only older blind people still thought radio was important. People my age had stopped relying on it. In fact, I

Top  
Larry Gassman

Above  
Walden Hughes

don't know many people my age who still listen to radio."

Brown enjoys podcasts but terrestrial radio is not an option. "I don't like the commercials and the repetition. I like to choose my own songs."

Jessica Hodges, a 26-year-old from St. Paul, Minn., also listened to radio in her parents' car. She developed a love for classical music, but she says she can't find enough variety locally because "the stations that play it are all [affiliates] of Minnesota Public Radio," resulting in a certain sameness on the air.

She no longer listens much. "I can get what I want from streaming services," she says, and enjoys being able to curate her own playlists.

**“ I use my computer to interact with the world. I have my music on my phone. I’m always plugged in somewhere. ”**

# Radio Audiences

## Reading services

Despite these trends and challenges, radio remains important for many in the visually impaired community, especially older ones. Some rely on reading services to keep in touch.

"Most of our listeners are seniors who have experienced a vision loss later in life," said Maryfrances Evans, president of the board of the International Association of Audio Information Services. She also is executive director of IRIS, the Iowa Radio Reading Information Service for the Blind.

"Though technology offers all kinds of delivery choices, our listeners grew up on radio. They are a 'don't fix it if it ain't broken' generation, and radio continues to serve them well. It is familiar, it can bring them the hometown high school football game or the national news. Radio does not require a password, monthly fee or download — just turn the knob and it is there."

One of the most dramatic consequences of vision loss, she said, is social isolation. "Radio, especially smaller local stations, keeps listeners connected to the social fabric of their community."

For the reading services, radio — including FM subcarriers — remains critical distribution infrastructure.

"Many of our stations, including right here in Iowa, broadcast on the SCA side of these stations,"

Evans said.

"Iowa Public Radio considers IRIS an extension of their mission. Most of our reading services now have internet delivery options, but those custom SCA radios remain the dominant delivery solution for our listeners. They know how to use a radio. They don't have to pay for internet service, if it is even available in their rural area."

## Multimedia

As Rick Morin of ACB Media reminds us, all of this just proves the point that "radio" can mean many things, and that blind people are using it in different ways.

ACB Media exemplifies this evolving definition. Until April 2022, it was known as ACB Radio. The name was changed to reflect the availability of 10 live internet audio streams, which offer various kinds of content.

"All of our programs are by, for and about blind people." Those programs include talk shows that focus on issues affecting the blind community, but there is also a channel that features music by blind artists.

These days, the media landscape is dramatically more competitive than in the past. While OTA radio is no longer the dominant mass medium, radio and audio in all of their forms are a valuable resource, one that many blind people continue to utilize as listeners, content creators or both. 🎧

## ADJA in Senegal deploys winCam

Studio combines visual radio with winMedia playout and a DHD console

**T**he winCam system from winMedia provides automatic video camera management and production solutions for radio, TV and event environments.

The latest version of winCam, paired with winMedia playout, is in use at ADJA Radio, a Patisen Group media project in Dakar, Senegal.

The air studio, equipped with 4K PTZ cameras, is capable of individual shows as well as duplex transmission. It integrates a DHD audio console for interactive commands and control of winCam and winMedia.

ADJA's team can control the zoom speed of the PTZ cameras from the winCam's main user interface. Features include access to external sources for visual identity graphics; live camera preview within the PTZ adjust tab; individual dedicated

titling tabs associated with each camera; and video-follow-audio live camera changes.

The station can broadcast

their programs on-air and on up to three social media channels simultaneously. The winMedia software can play audio on a radio console and video at the same time for broadcasting on television channels; and winCam can manage the automatic production of 4K PTZ cameras based on detected sound levels of the microphones.

"The entire system is based on audio over IP with DHD consoles, and on NDI for the video part, thus

giving this installation a unique technological advance on the market," the manufacturer says.

"Furthermore, the integration with the winMedia audio or video playout systems is even more refined, allowing the winMedia-winCAM users to imagine and create their own auto production algorithms or scenarios according to the requirements of every talent or show producer."

A live feed is provided at <http://adjaradio.com>.

## Tech Update

### Vislink IQ vPilot Creates Professional Multicamera Productions

"With the Vislink IQ vPilot solution, anyone can be their own news, TV or radio channel."

Vislink says its technology puts the tools of professional content production "in the hands of the masses," increasing flexibility and reducing costs.

Applications for this automated studio system include radio station web streaming, roundtables, live webinars and podcasts, and house-of-worship broadcasting, without a need for camera people or an onsite director.

vPilot includes features such as AI and automated script run-down. Artificial intelligence allows vPilot to direct cameras and automatically switch between shots based on who is speaking and their importance within the discussion. Graphics, dynamic ticker tape, overlays and video insertions can be added by presenters.

Info: [www.vislink.com/product/iq-vpilot](http://www.vislink.com/product/iq-vpilot)

## Tech Update

### Camera One Is an Affordable Visualization System

Broadcast Bionics says its tools help broadcasters generate likes, views and shares by visualizing their best radio content. "Now Camera One offers visualization at a price that every studio can afford, in a package simple enough for any content creator to use," the company says.

"Audio content from every show, studio and podcast can be watchable and shareable."

Using the affordable Blackmagic ATEM Mini video switcher, Camera One can automatically live switch up to eight HDMI or SDI cameras as well as offering recording, editing and streaming to Facebook and YouTube.

With ISO recording, Camera One provides individual recordings from each camera along with an edit decision list to enable content to be recut and repurposed using

popular video edit software.

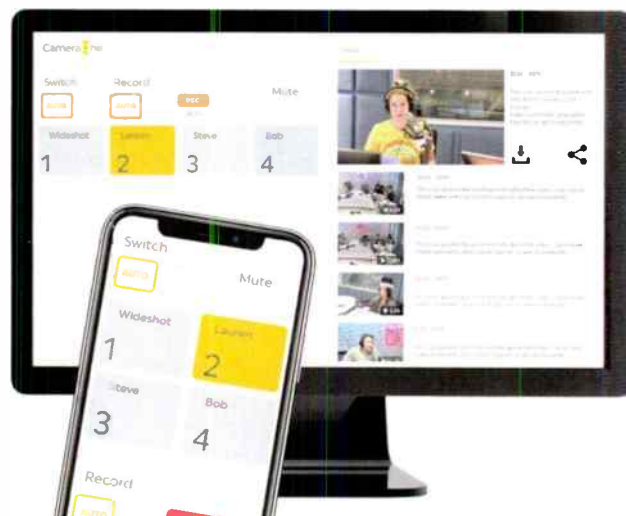

Camera One is a simple software service running on Windows. Control for switching and access to media files is possible from any browser from every device across a network.

It integrates with network audio to offer intelligent audio switching with Axia Livewire and Wheatnet-IP or using a sound card to support traditional analog audio consoles.

Video clips are cut and captured automatically, using the same algorithm that Bionic Director uses to deliver natural and seamless edits.

Bionics highlights its affordability and its ease of setup and use, with a clear, simple visual interface.

**CONTROL YOUR SOUND**

Tech Update

## AxelTech VJ Pro Live Enhances Visual Radio

To support several Spanish Broadcast System stations, AxelTech developed a new version of its VJ Pro Visual Radio Automation System.

"VJ Pro Live improves the camera management functions by adding microphone level to the parameters for automated management of camera switching," the manufacturer said.

"The use of different parameters beside the fader status (on/off) is part of the new Smart Director mode, which allows smoother automation and direction of the camera through different speakers and guests."

VJ Pro Live is being used by Ritmo 95.7 WRMA(FM) in Miami, the beta tester. It also will be installed in SBS stations Amor 93.1 WPAT(FM) in New Jersey, Mega 97.9 WSKQ(FM) in New York and Radio Mega Global Podcast.

The CG core of VJ Pro Live manages program graphics and animations as well as the animated background of the studio videowall, providing a nice final touch and enhancing channel branding.

Like other AxelTech products for playout and encoding, such as XTV/ XPlayout and MultiCrossConverter, VJ Pro Live supports SCTE-104 on SDI outputs and SCTE-35 on IP streaming in Transport stream and SRT, inserting the SCTE metadata in the video signals/streams and triggering customized ad insertion for both SDI and IP streaming outputs.

Info: [www.axeltechnology.com/vj-pro](http://www.axeltechnology.com/vj-pro)

Tech Update

## ENCO Expands Its Visual Radio Offerings

With the recent acquisition of Rushworks, ENCO Systems offers its own U.S.-made multi-camera and graphics video solution to the radio market.

VDesk with Talk-Take is a Windows-based integrated system allowing users to automate most aspects of the process, including one-shots, two-shots, group shots and wide shots; dwell time and logic; intro and outro graphics; logos and titles; and pre-recorded video playback.

"If you have a creative producer or engineer, they can take partial or fully manual control and totally customize each show on the fly," the company says.

"Moreover, since this is an ENCO product, integrating it with our DAD system as well as your audio console will make the quality of the production more seamless."

The system can work with a console that lacks signal presence logic. Streaming is simplified as well, because VDesk can generate the program stream internally, to feed popular streaming content delivery networks.

ENCO says visual radio lets a radio station deploy elements such as automatically controlled robotic pan/tilt/zoom cameras, close-up POV cameras, recorded videos, external live video feeds/webcams, and graphics and on-screen titles including sponsor logos. They can interface with SDI and NDI formats, and during breaks they can cut away to other feeds such as wide shots of control rooms or studios, or run pre-produced videos featuring ad partners.

# NH Radio automates with Visual Radio Assist

Broadcaster serves the Dutch province of North Holland

**V**isual radio broadcasts offer an excellent opportunity to create additional engaging content, allowing broadcasters to reach their listeners on multiple platforms including social media.

Regional Dutch broadcaster NH Radio is using Visual Radio Assist to automate its visual radio

broadcasts.

"NH Radio has been a power user of the product from the start, and has recently upgraded to the latest version, version 4," the supplier said.

Visual Radio Assist automates visual radio broadcasts. The product auto-switches cameras based on audio levels from presenters. NH Radio uses it to create an entertaining experience for listeners via live stream, morning TV or social media posts.

Beyond camera automation, NH Radio uses the dynamic Output Players to display scheduling and show information on alpha layered overlays and physical decor screens. This feature is possible through VisualRadioAssist broadcast-standardized NDI signals, which provide integration with NH Radio's existing video infrastructure.

Broadcast Engineer Bart Schutte said the flexibility of the Visual Radio Assist Scheduler enables NH Radio to automate the control of studio decor screens and overlays on stream and TV, even if radio shows change at the last minute.

Visual Radio Assist is offered with various monthly pricing tiers including Lite, Pro, Plus and Enterprise. The latter features studio redundancy, unlimited users and players, custom dashboards and a large amount of cloud storage.

## IBC2023

BACK AT THE  
RAI AMSTERDAM | 15-18 SEPTEMBER 2023

meow

**Well...not really.** Our LION has the latest Wheatstone DSP algorithms; it is *not* a 90's era processor by any means. The AUDIOARTS LION Five-Band Processor/Multipath Controller has WheatNet-IP, so it can be networked. It has analog and AES3 so it can stand alone. It has Wheatstone SystemLink™ built in, to send full 24-bit linear audio directly to your transmitter over reliable high-speed links – Baseband 192 MPX with FM+HD timing locked (no codec to degrade audio quality). And it comes with 50 presets so you can plug and play.

*Let your signal ROAR on a kitten budget!*

SO...what's really in the box?

#### ALL SIGNAL PATHS

- Analog, AES3 and Wheatnet-IP audio
- AES3 input accepts 32kHz to 96kHz sample rates
- Variable high pass filter and voice phase rotator
- Dynamic L/R correlation meter for proper stereo channel phase
- Front panel setup
- PC-based GUI included
- Ethernet-based remote control
- Four-band equalizer: low/high shelf plus two-band parametric
- User-adjustable multiband crossover frequencies
- Independent multiband compressor and leveler can be operated separately or in combination
- Multiband spectral manager

- Newly developed bass management
- High-performance low distortion multiband limiters
- Metering for all input and output levels and dynamics processing

#### FM PATH

- New distortion-masked FM peak clipper
- Specialized live voice algorithm minimizes vocal distortion
- Exclusive stereo multipath controller
- RDS/RBDS generator, static and dynamic
- Precision FM stereo MPX generator with multiplex mask filter
- Baseband192 built in for 192kHz digital MPX link to transmitter

- Support for ITU.BS-412 MPX
- Ten seconds of FM/HD diversity delay
- Test oscillator

#### HD/STREAM PATH

- Low/high shelf plus two-band parametric equal zer
- HD/Stream final processing accepts audio from unprocessed input, output of AGC, or output from multiband limiters
- Oversampled precision look-ahead limiters for exceptional final peak control
- Specialized dynamic high frequency protection for low bitrate codecs; also operates in wideband (>12kHz) and <12kHz modes
- ITU-BS.1770 loudness metering and controller
