INTRODUCING THE MACKIE D8-B. DIGITAL MIXING DEFINED.

The most powerful, intuitive, creative digital console ever offered at any price. Twenty-four-bit definition. The superb sound quality and intuitive interface that Mackie's famous for. Expandable with cards and software plug-ins. The Digital 8•Bus. Well worth the wait.

It's Not Science Fiction. It's Reality.

Every bit you add doubles the resolution of a digital recorder. Compared to 16-bit formats, ADAT Type II's non-compressed, linear 20-bit recording offers a wider dynamic range, less quantization distortion at low levels, more headroom and even lower noise. Result: detailed, full-spectrum audio fidelity that far exceeds the quality of any analog recorder.

Don't get fooled by the science fiction of some "24-bit" recording systems. Just read the fine print: the state-of-the-art ADAT Type II recorders offer audio specs that rival any 24-bit system, without resorting to tricks like data compression or track sharing.

While the rest of the world is trying to figure out the final frontier of recording formats, you need to make a decision. What's the best choice today that will keep you ahead of the game tomorrow?

The answer: **ADAT Type II**. It's the next generation of Alesis' award-winning digital audio technology that combines the proven power of ADAT with the astonishing fidelity of true 20-bit linear recording.

With the new **XT20™**, you get a serious improvement on the world standard for professional recording. The new **LX20™** is the most affordable ADAT ever made. Both provide all the real-world qualities that made ADAT the most popular professional recording format: modular design, efficient tape-based media and complete compatibility with over 110,000 ADATs around the world. Plus, as the only modular digital multitracks that write 20 bits to each track of tape, the new ADAT Type II recorders offer audio quality that's miles ahead of any 16-bit system, period. And with the introduction of the **ADAT-PCR™** interface card, you get the advantages of nonlinear editing on your Mac® or Windows® computer seamlessly integrated with ADAT format recording.

Most importantly, the intuitive ease-of-use, comprehensive features and incredible affordability of the ADAT Type II systems put no limits on your creativity. Because, after all, the final frontier is really your imagination.

adat TYPE II

There are over 110,000 ADATs in use today, and the new ADAT Type II recorders are compatible with all of them. The XT20 and LX20 will work with your 16-bit ADAT tapes, and you can combine the Type II recorders in a system with any model of older ADAT.

If you think tape isn't as advanced as other removable recording media, think again. You'd need more than 30 Zip® disks to equal the 3.4 gigabyte storage capacity of just one inexpensive ADAT tape.

For more information on ADAT Type II, the XT20, the LX20 and the PCR, see your Authorized Alesis Dealer. Or call 800-5-ALESIS to order the ADAT Type II Systems video and brochure (\$4.95 for shipping and handling).

® Alesis and ADAT are registered trademarks. XT20, LX20 and PCR are trademarks of Alesis Corporation. Mac is a trademark of Apple Computers. Windows is a trademark of Microsoft. Zip is a trademark of Iomega.

Gate

Start with the gate. Set parameters for threshold, ratio, attack, hold, release, and output gain. See the effect of your settings on the graphical display, as well as on the gain reduction and audio level meters, they all interact in real time with your manipulation of the parameters. Start with a threshold setting of about -60dB to clean off the noise in between the vocal takes. You can save your final gate settings as a "gate preset" building block and recall it into any other setup you do.

Compressor

Then move to the compressor. The effects of the gate settings are still visible on the graphic display, so let that help you determine where to set your compressor's threshold. The parameters you change here will also effect the curve on the graphical display in real time. Move through all the regular parameters, like threshold, ratio, attack, release, and output gain. For vocals use a threshold of about -25dB, a ratio of about 3:1 or 4:1, and a slow attack and fast release for the most natural sounding effect. Your compressor settings can also be saved off as a building block to be called up into any other preset.

Limiter

On to the limiter. Changes you make to the limiter settings are also seen on the graphical display. Adjust the level up or down to suit your needs. The flat top line of the display moves up and down as you adjust the level. You can also set the speed at which the limiter lets go of the signal as it goes below the threshold. This is truly smooth limiting, with patented dbx PeakPlus™ algorithms, so rest assured that where ever you set your threshold level, your tape will not distort, and your signal will not get butchered as it goes across the threshold. And like the other parts of the processor, your limiter settings can be named and saved for later recall.

but never forgets...

All the classic dbx trademark sounds in gating, compression, limiting, de-essing, and sidechain EQ.

Compression controls: threshold, ratio, gain, OverEasy®, auto, attack, hold, and release

Variable Transient Capture Mode™.

Hi-res graph shows composite output vs. input plot of audio signal

Gate controls: threshold, ratio, attack, hold, release

Ultra-smooth continuous Auto mode.

Limiting from -60dB to 0dB, with gain, attack and release.

Precision control over every parameter

De-ess from 800Hz to 8kHz, vary the amount.

Utilities: sample rate, A/D input and output, Midi functions, Sysex functions.

XLR and V4™ balanced ins and outs.

Sidechain functions for advanced filtering applications. Sidechain monitor included

EQ offers 20Hz to 20kHz, Q, ±12dB, and 5C Monitor.

Midi bypassable via midi program changes.

De-esser

De-essing works the same way: see the effects of your settings displayed on the graph. Parameters here are the common ones: threshold in frequency, 800Hz to 8kHz, and amount in percent. Other available processing includes EQ - both in-path and sidechain, for special-effect types of processing. When you are editing any of the building blocks, its icon is visible on the display, and the parameters are shown on the graph, so it's always easy to know where you are. Parameters are easy to see in this page driven operating system. When it's as complex as this, it's nice to know somebody was thinking when it was put together.

and More

You can also work in stereo, or set up a completely different and independent processing chain for the other channel. Also, notice that the audio meters are capable of showing both peak and average levels for input and output. Optional digital output with the TYPE IV™ Conversion System with TSE™ (Tape Saturation Emulation) provides up to 24-bit output in either AES/EBU or S/PDIF formats with the trademark digital processing of TYPE IV™. The DDP also has full MIDI/Automation capability, with separate midi in and thru jacks. Entire processing setups may also be saved into one of 50 user defined presets, or use one of the 50 factory setups.

dbx digital

IT FORGIVES

- New dbx technology, the TYPE IV™ Conversion System with TSE (tm) (Tape Saturation Emulation) gives you the pleasant overload characteristics of analog tape without the harsh distortion of most digital input systems. No more dancing around with the input levels to protect the integrity of your audio.

- Ultra-wide dynamic range 24 bit A to D converters with TYPE IV™ make your signal sound better than you ever thought possible. Capturing the full dynamic range of your analog signal and coupling it with the powerful dynamic range of this patent-pending dbx process, TYPE IV™ will make your digital signal sound like it came from the quietest high-quality analog source you could imagine.

- With the extensive metering of the DDP, you can see EXACTLY what is going on with ALL parts of your signal: input, internal processing, and output, with peak and VU, as well as gain reduction for both sides of the stereo image.

- And speaking of stereo, you can work in stereo with dbx's True RMS Power Summing™ for phase-coherent tracking, or in dual mono mode, without the two channels interacting at all, making the DDP a great processing value.

IT NEVER FORGETS

- The DDP works right out of the box. It comes with 50 factory setups that are guaranteed to knock your socks off. There are presets for every application you can think of, and then some. dbx engineers are musicians and recording engineers. We know what a compressor is supposed to sound like, and we know it better than anyone else. We invented compression. We eat, sleep and breath compression.

- Want to duplicate that perfect compressor set-up? Each processor in the chain has all the parameters you would expect. After you set the parameters the way you want them, save it as a processor preset, available to be recalled any time. These building blocks allow you to save entire setups just for the way you like to work. It doesn't matter that you are doing a live gig one night, then mixing the tracks in the studio the next night, the DDP will be there, just the way you left it.

- When you save a preset, you also save the information that makes it work behind the scenes, too. Digital output (optional), sample rate performance, MIDI setup, as well as any of the other utilities, like sidechain setup and monitor, EQ settings, and SysEx functions.

- When you make changes to any parameter, you can see where your adjustments are affecting the signal, simply by looking at the Hi-Res graphical display, which shows the processing curve in real time as you make your adjustments.

Check out the DDP at your local pro audio outfitter, and experience DIGITAL performance you'll never forget.

Software vs. Hardware: A PARIS Perspective

If you have real microphones, real outboard gear, and a real need to interact with your music, you're ready for the real power of PARIS.

Virtual isn't Reality ...

Software DAWs fall short when they perform in the real world. PARIS gives you all the advantages of an expandable computer-based recording and editing system. *But there's more.* PARIS adds extensive hardware options, 24-bit inputs and outputs, 100mm faders, and world class signal processing to a single, integrated studio. Combine all that with pedal-to-the-metal *Intelligent* software, and you have the most effective integrated audio workstation in the world.

In with the MEC (Modular Expansion Chassis) ...

PARIS stands out because it fits in. The Interface MEC gives you more ways to expand your inputs and outputs than any other digital audio workstation – all with the addictive sound of 24-bit resolution. With all of these ins and outs, you can track live music, mix with outboard effects, import and export to digital tape

– all in real time. PARIS connects to what you have – now, and in the future. It fits in.

Out with the Mouse ...

How much control could you possibly muster with one measly mouse? **Never enough.** PARIS includes a dedicated control surface that lets you mix your music with all 10 fingers, as nature intended. Put yourself back in control.

A Final Perspective ...

One reality you can bet on – PARIS is, by far, *the* most complete integrated studio on earth. *And it's available today!* Compare for yourself. Who else is shipping a 128 track, Mac and PC compatible system, with real-time effects and a dedicated control surface? **No one.**

PARIS – It's time to get REAL!

Production Notes

THE BIG PICTURE

IT'S NOT JUST WHAT YOU USE, IT'S THE WAY THAT YOU USE IT!

As an EM subscriber, you expect the most up-to-date information available about music technology and production, particularly as it pertains to the personal studio. Last year, we published the first edition of *Electronic Musician's Personal Studio Buyer's Guide*, and it received a very enthusiastic response. We're hoping that this second edition of the PSBG will be even more popular.

In the 1999 edition, we have compiled specifications for over 1,300 products and added three new product categories. But we haven't just given you technical information about recording products; we also have tried to help you understand how the various types of products relate to one another. To that end, we have assembled four articles that focus on connectivity and system design.

First up is "Holistic Studio Design," written by EM Editor Steve Oppenheimer. Applying holistic systems theory to studio design, Steve has created a model that will help you see the "big picture" when determining your current and future studio needs. Steve O. has also contributed a very informative article on power conditioning and its importance as a fundamental part of any recording environment.

Once your equipment is powered up you'll want to be able to make and change audio connections easily, which means that you'll need a patch bay. EM Associate Editor Brian Knave explains what patch bays are, how they work, and how they can make your life much easier.

So far so good, but what if you purchase several digital devices and connect them to each other, only to find that they seem to be operating in different time zones? Perhaps they are! Erik Lovell explains why and what you can do about it in "The Word on Clocks."

As you can imagine, acquiring and organizing all of the information supplied in this guide was no picnic. For example, the unsinkable Carl Weingarten contacted hundreds of manufacturers and helped direct the seemingly endless stream of data that they provided. EM Assistant Editor and resident database genius Joe Humphreys created and managed the custom database used to contain and control the data, and Production Director Ellen Richman added a touch of beauty to our otherwise bland proofing forms.

At the other end, PSBG Art Director Linda Gough labored mightily while creating the many product tables, and even Publisher John Pledger rolled up his sleeves and helped out when one particularly threatening deadline loomed large on the horizon. As PSBG's Editorial Director, Steve O. conceived and assigned the feature stories and generally acted as the volunteer fire department.

We hope that you will make all of our efforts worthwhile by using this guide to realize your personal studio dreams.

Holistic Studio Design

**How to
design a
studio that
helps you
achieve
your goals.**

Many musicians assemble or expand their personal studios by simply buying gear that catches their fancy. But if you're trying to build a workable recording studio, it's not enough to simply check out pieces of gear and buy what excites you (assuming you can afford it).

Even when you buy quality equipment and use it in accordance with the manufacturer's instructions, the results can sometimes be disappointing. Some equipment doesn't "play well with others," causing interfacing problems, degraded audio quality, software conflicts, and so forth. Features are wastefully duplicated, and money flows to buy more gear to make the gear you bought do what you thought it would do to begin with. Poor ergonomics can make working in the studio unproductive or even unpleasant. Eventually, this gets frustrating, which dulls the pleasure of producing music. What's a personal-studio owner to do?

THE HOLISTIC MODEL

Admittedly, sometimes we all get surprised by "gotchas" that couldn't have been anticipated. But in many cases, you can avoid these problems with systematic planning done in advance. You need to carefully analyze your studio needs and plan how the elements will integrate into a functional whole. In short, a well-integrated studio can be thought of as a single, complex machine.

How does one go about analyzing a studio in this way? I suggest you apply a structural-functional model in which you conceive of your studio as a holistic system that has a structure—that is, an organized arrangement of parts. Each part of the system—each piece of gear—has a function, which is the contribution the part makes to the whole system. The parts occupy "statuses"—sound source, controller, effects processor, acoustic condi-

Four track digital recording

ATRAC version 4.5

On the road with Davey Johnstone and John Jorgenson, the red lights always mean go.

MIDI time code for multi-machine sync

Individual track editing

10 input mixer

Hot Start instant playback

Sometimes it's hard to tell where the road ends and a song begins. That's why Davey and John are recording every chance they get during their world tour with Elton John. Their new acoustic release is going from the Sony MDM-X4MKII MiniDisc multitrack direct to CD. "The editing features make the possibilities endless," says John, "but the sound quality was really the determining factor for this project." Hear what the Sony MiniDisc multitrack recorder can do and you'll be running some red lights, too. And to find out more about their new CD, Groovemasters Vol. 2, visit www.acousticmusicresource.com.

ANALOG COLLECTION FREE !**

The analog collection is a thirty disk set that virtually turns a K2000VP into twenty of the most famous analog synthesizers of all time. We have searched garages, studios, attics, and basements the world over to find these most sought after classics and have spent hundreds of hours faithfully reproducing the original factory presets and controls. So buy a K2000VP and it's like getting thousands of dollars worth of classic keyboards from Moog, Sequential Circuits, Arp, Roland, Yamaha, Oberheim and more. A \$249.95 value **Free!**

Now anyone can afford Kurzweil sound quality with the K2000VP featuring a 32-Track fully editable sequencer, **Expandable** Sound ROM, **Expandable** Program RAM and **Expandable** Sample RAM. Get a great upgradeable and affordable professional keyboard; a Kurzweil K2000VP for MSRP **\$1,995.00**

Does Size Matter?

Only When It Comes To The Size Of Your Sound.

The KM-184 may be small, but it delivers that big rich classic sound you expect from Neumann. Plus, it's affordable enough for anyone. When it really matters, you can count on Neumann—the choice of those who can hear the difference.

DESIGN

tioner, cable, etc.—in a network made up of the relationships between individual pieces of equipment.

The studio exists in a physical environment—a room of a certain size, with structurally determined acoustics and considerations such as outside noise, ventilation, temperature, humidity, and so on—and its growth depends on available resources: your time, space, and money. By considering all of these aspects, you can plan a total studio system that is a functional unity.

DEFINE YOUR OBJECTIVES

Of course, a recording studio serves a definable purpose, so let's start there: consider what you plan to do with the studio now, tomorrow, and a few years down the line. Are you doing preproduction with the intent of mixing in a commercial studio? Are you producing music CDs, audio for picture, live recordings, or something else? What styles of music do you want to produce? Will you have outside clients or record only your own music? Will some of the gear be used on stage or hauled to other studios in addition to serving in your studio?

Next, thoroughly analyze all aspects of your production methods until you clearly understand how you like to work. How important is automation? Do you feel comfortable recording with a computer? Do you want to do in-depth, complex editing—in which case some form of hard-disk recording might be best—or would you rather keep it simple and just record to tape?

Based on your objectives and preferred working style, consider which functions are necessary to achieve your goals. Will you use only electronic sound sources, or will you record acoustic instruments and vocals? If the latter, for example, you probably need to take a look at preamps and dynamics processors, and you might need a cleaner, more detailed reverb. Do you like to do elaborate, automated, real-time effects processing? If so, you might want to invest in MIDI-controllable outboard processors, even if you also use audio software with real-time DSP plug-ins, so you can do a lot of processing on multiple tracks without overly taxing your computer CPU.

If you want to do a lot of in-depth audio editing, a hard-disk recorder with

SCSI, good sync features, and both digital and analog I/O might be a good idea. Then again, if you like to work with a lot of tracks simultaneously, an MDM might be a sensible investment—or maybe you need both. How important is portability? That could call for a modular hard-disk recorder, MDM, or Mini-Disc machine. Continue this process as far as you can take it.

STATIC VS. DYNAMIC SYSTEMS

Of major importance is whether your studio will be a static system or a dynamic system that will undergo change in the foreseeable future. Small, tightly integrated “studio in a box” systems (such as MIDI keyboard workstations and various types of integrated audio mixer/recorders) are generally easy to use and require minimal maintenance, troubleshooting, and expense. If you are likely to keep doing the same thing in essentially the same way, this type of system might be an excellent choice. On the other hand, an “all in one” system is relatively inflexible by definition.

As noted earlier, a well-integrated studio is, for practical purposes, one machine. As with many machines, depending on how you design it, you might be able to reshuffle its components, changing its structural type. In many cases you can even absorb it, as an integral part, into a larger studio. Following that line of thought, if you expect your needs to change any time soon, your studio should have the ability to admit new links between gear you don't even have yet. The continuity of the studio's structure should not be destroyed when you change parts, forcing you to dump central pieces. Component systems are generally much more flexible than all-in-one systems in this scenario.

Remember that no change occurs in isolation; each part in a system is linked to other parts. If you expect that your studio will change, you need to design a system of components that ideally have multiple uses, are expandable, and have an assortment of connections.

Rapid change promotes problems, though, so make changes in increments. In addition, you will save money, frustration, and time if you can build on what exists. If old, familiar gear is still in good shape, why not keep it in service, perhaps in a different role? In addition,

Introducing Cakewalk® Pro Audio™ 7

NEW! Put the power of a professional mixing console on your desktop. The new Console view enables you to record, edit, and mix all your MIDI and audio tracks from a centralized window.

NEW! Get more help with online tutorials, context-sensitive online help, and a redesigned User's Guide.

NEW! Access the Yamaha DSP Factory's on-board, real-time effects processing.

NEW! Open and edit multiple files simultaneously. Share MIDI and audio data between projects with ease. Simply drag and drop from one file to the next.

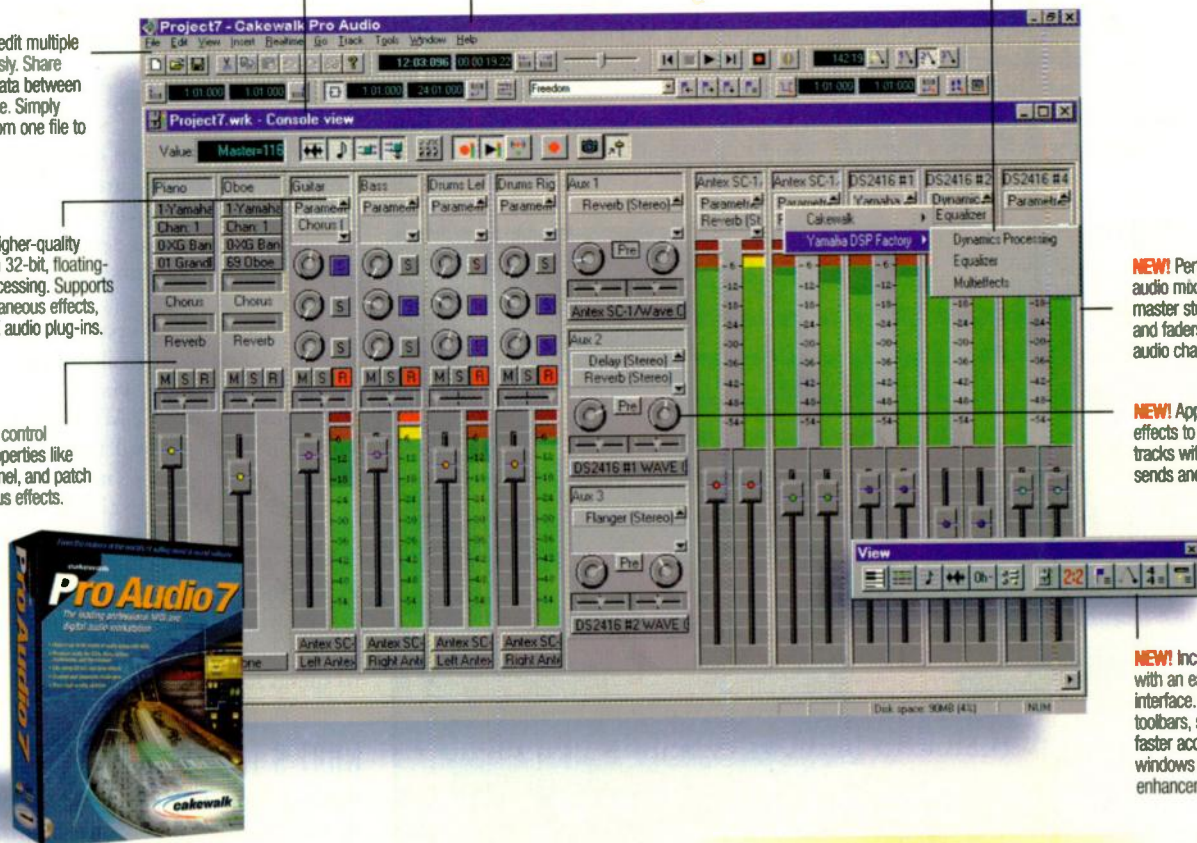

NEW! Produce higher-quality audio mixes with 32-bit, floating-point effects processing. Supports up to 128 simultaneous effects, including DirectX audio plug-ins.

NEW! Real-time control of MIDI track properties like port, bank, channel, and patch assignments; plus effects.

NEW! Perform final audio mixing with master stereo effects and faders for each audio channel output.

NEW! Apply real-time effects to multiple tracks with auxiliary sends and returns.

NEW! Increase productivity with an easier-to-use interface. Includes dockable toolbars, streamlined menus, faster access to editing windows and other enhancements.

The #1-selling MIDI and digital audio software is now hotter than ever. With more recording and effects processing power. New editing tools. New online tutorials. And an enhanced interface that lets you produce music and sound faster and more efficiently.

Introducing Cakewalk Pro Audio 7, the newest edition of the world's top solution for CDs, film and video soundtracks, multimedia applications, game titles, live stage productions, and Internet content.

Whatever the application, Cakewalk Pro Audio 7 is for you. Pick it up today at the music or computer store nearest you.

UPGRADE ONLINE!

Upgrade today at incredibly low prices. Save even more when you upgrade online. Check out other great Web specials. Visit www.cakewalk.com or call 888 CAKEWALK.

Key Features

- Up to 64 simultaneous tracks of audio; 256 tracks of MIDI
- Up to 128 simultaneous real-time effects
- Supports DirectX audio plug-ins, including Cakewalk Audio FX 1 dynamics processing effects and QTools/AX 3D audio effects
- Control and automate studio gear
- Supports multi-channel audio cards and hard disk recorders
- Fast, flexible notation editing and printing
- Advanced MIDI and audio editing commands
- Chase-lock MIDI and audio to film/video via SMPTE/MTC
- Save MIDI and audio tracks in RealMedia format for streaming on the Internet
- Native support for Windows 95/NT

Also available—
Home Studio 7 and
Professional 7.

DESIGN

it's easier to remain productive if you don't try to completely reinvent your work habits overnight.

COMPATIBILITY AND CONNECTIVITY

As you consider various components, analyze the relationships you will set up among them. Before buying a new mic or mic preamp, test how the mics and mic preamps under consideration interact. Think about which synths comple-

ment each other sonically for your purposes. Determine whether the software and audio card you want to use are compatible.

Beware of mixing gear that operates at different audio levels (e.g., +4 dBu and -10 dBV) or that uses incompatible types of I/O. Make sure your cables and connectors are of high quality and are appropriate to their intended uses. (Good cables make more difference than you might imagine.) Where you must

mix and match, be sure to use the proper adapters and format converters. Sometimes you may be forced to improvise here, but then you risk degrading the audio quality. Keep your cable runs short wherever possible. (This is especially important with audio, SCSI, and video-monitor cables.)

ERGONOMICS

An important and often overlooked issue is where you will locate everything to achieve optimal ergonomic and sonic results. It's crucial to design a comfortable working environment, or you won't want to work there.

For instance, my system is complex, but the gear is strategically placed, and it is tightly integrated via MIDI control (including fader box, MIDI keyboards, custom XYZ pad, and two networked MIDI patch bays). I've moved the noisy gear to an equipment closet, and I can control pretty much everything without leaving my chair and while remaining in the monitor speakers' sweet spot. I feel comfortable in my studio's control area; in fact, I only wish I had more time to spend there.

WHAT'S THE PLAN, MAN?

By now, hopefully, you get the point: to design a studio you can use productively and want to use, you should look at the big picture and plan in advance at many levels. The structural-functional method I've presented isn't a magic solution, but it can provide a useful framework for designing a studio or live-performance system. (For that matter, the same principles apply to planning an album or a mix.)

The *Personal Studio Buyer's Guide* is an excellent tool for planning your studio purchases. Just keep in mind, as you read through its tables of features and specs, that as important as it is to choose the right tools for the job, success is far more likely when you configure and use them properly.

Electronic Musician Editor Steve O spent much of his life performing on tour, playing sessions, mixing sound, building bands, and generally acting like a keyboard player. Somehow he earned an anthropology degree along the way. After ten years at EM, he appears to have finally settled down.

Patch Bay Primer

PHOTO: COURTESY REAN

This seemingly simple device keeps patching problems at bay.

For a piece of gear with no knobs, faders, MIDI control, or even an on/off switch, the audio patch bay sure causes its share of confusion! But there's no reason to let confusion reign. By getting a handle on the options that patch bays have to offer—and then simply thinking in terms of signal flow—you can master the ins and outs of this very useful device.

The purpose of a patch bay is to ergonomically simplify a studio so that all (or most) audio connections can be accessed and rerouted from a single, easy-to-reach location. Once the patch bay is set up, you should no longer have to crawl around behind gear to change cables. This not only leaves more time for making music, but it may also inspire you to experiment with alternate ways of hooking things up—which in turn can lead to interesting new sounds. Furthermore, by providing extra points of entry into the signal flow, a patch bay can extend the functionality of your gear.

Much of the confusion about patch bays stems from the fact that there is no single “correct” way to configure one. The whole point of a patch bay, after all,

is convenience—and because every studio is different, what is convenient for one might prove inconvenient for another. The idea, then, is to set up the bay to accommodate the gear you have and the way you most often work. Certain connections are pretty standard—for example, patching the console's main stereo outputs into the inputs of a 2-track mix-down deck. The possibilities, however, are endless. (For more information than can be offered here about patch-bay use, refer to “Square One: Patch Me Through” and “Recording Musician: Patch-Bay Profiles” in the September 1995 and June 1996 issues of *EM*, respectively.)

JACK TYPES

Three different types of jacks are commonly used in audio patch bays: RCA, ¼-inch, and TT (Tiny Telephone). For the personal studio, RCA and ¼-inch patch bays are most common. Commercial studios, however, typically employ TT patch bays, which conserve space by allowing for up to 48 jacks in a standard rack-size row (as opposed to 20 or 24 for RCA and ¼-inch patch bays).

Also available are patch bays that provide (on the rear panel) a mix of RCA and ¼-inch jacks, to accommodate studios using gear with both types of I/O. However, it's generally best, where applicable, to use ¼-inch, 3-conductor (tip-ring-sleeve, or TRS) patch bays because they allow you to connect either 2- or 3-conductor cables without problems.

WHAT'S NORMAL?

The first thing to understand about patch bays is the direction of signal flow. Remember: outputs are on the top of the patch bay and inputs are on the bottom.

The New PCM 81 Digital Effects Processor

"You'll run out of ideas before you run out of effects."

Scott Martin Gershin
Sound Designer

NEW FEATURES • Pitch Shift algorithms on-board • 20 seconds of delay • AES Digital I/O

The new PCM 81 Digital Effects Processor has everything that made the PCM 80 the choice of professionals – and more. More effects, more algorithms, longer delay and full AES/EBU I/O. Each effect has an uncompromised stereo reverb with several voices of additional effects. A full complement of *Pitch Shifters* provides everything from pitch correction to unique special effects. 300 meticulously-crafted presets give you instant access to pitch, reverb, ambience, sophisticated modulators and dynamic spatialization effects for 2-channel or surround sound applications.

With its huge assortment of superb effects, the PCM 81 is the

perfect tool for a sound designer like Scott Martin Gershin of Soundelux Media Labs. Scott, who used the PCM 81 to process his voice as the voice of *Flubber*, says, "This is the best pitch shifter I've used. Our job is to create emotional illusions in audio and the PCM 81 is a powerful tool to get us there. I feel I have only scratched the surface of what can be created on the PCM 81 and encourage everyone to explore the depths of this processor."

Explore the depths with Scott's customized presets – Send us proof of purchase and your PCM 81 serial number by July 30, 1998, and we'll send you the Scott Martin Gershin Preset Card – FREE.

circle #119 on reader service card

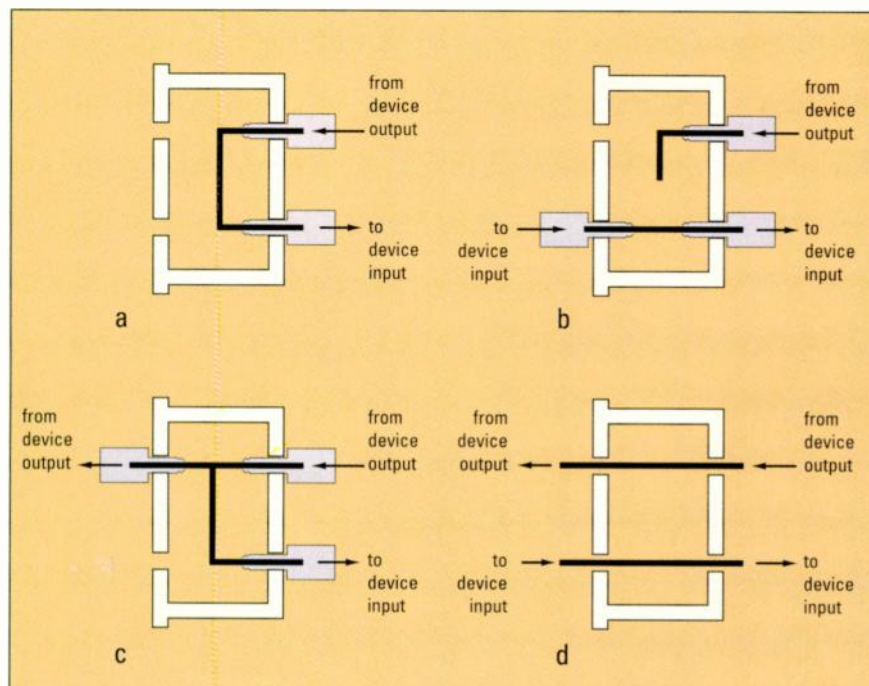

FIG. 1: These diagrams illustrate signal flow in normaled (a, b), half-normaled (c), and denormaled (d) patch bays. In a normaled configuration, the rear-panel jacks are internally connected as long as the front-panel jacks are unused (a). When patch cables are inserted into the lower front-panel jack, however, the normal connection is broken (b). A half-normaled configuration splits the incoming rear-panel signal to both the rear- and front-panel outputs (c). In a denormaled setup, the upper and lower jacks are internally disconnected.

That is, you connect outputs of gear into the top row of rear-panel jacks and inputs into the bottom row.

The next thing to understand is the three different types of signal-flow options that patch bays typically provide: normaled, half-normaled, and denormaled. A normaled patch connection (see Fig. 1a) passes a signal appearing at a top rear-panel jack directly to the jack beneath it—without the need for a patch cable connecting the front-panel jacks. Let's take the previously mentioned example of patching your console's main stereo outputs into the inputs of your 2-track mixdown deck via a patch bay. The connection is easy to make: simply run two cables from the console's stereo outputs (left and right) into two rear-panel, top-row jacks on the patch bay. Next, connect two more cables from the patch bay's bottom-row jacks (the ones directly beneath the other two) and send them to the inputs of the mixdown deck.

The console and mixdown deck are now "normaled" together through the

patch bay (i.e., assuming the specified patch points are in normaled or half-normaled mode). In other words, the signal flows freely from the console's outputs through the patch bay and into the mixdown deck's inputs. In addition, the patch bay allows you to "break" the normal by simply patching into either the top or bottom two front-panel jacks. For example, you could patch into the top-row jacks to send the console's output signals elsewhere, or you could patch into the bottom row to send different signals to the mixdown deck. You could even do both simultaneously. But either way, you temporarily break the normal connection (see Fig. 1b).

A patch bay in half-normaled mode functions similarly, allowing the signal to flow unimpeded from output to input (top to bottom). However, a half-normaled setup also provides the option of breaking the normal partially, or "halfway." For instance (using the same example), by patching cables into the top two front-panel jacks, you could send the console's output signals to both

the mixdown deck and to another destination of your choice (see Fig. 1c). In this case, you are splitting the signal and sending it to two different places—an application commonly called multing. On the other hand, if you patch two cables into the bottom front-panel jacks (inputs), you again break the normal, but this time, only the new signals are sent to the mixdown deck.

In a denormaled patch-bay setup, the upper and lower jacks are not internally connected (see Fig. 1d), so the signal does not "normally" flow through. In other words, to make a connection, you have to physically connect the two points (output and input) with a patch cable.

STEP ONE

There are two basic steps to configuring a patch bay. The first is determining which devices to route through the bay. In commercial studios, virtually every input and output in the studio goes through the patch bay. This allows for maximum convenience and versatility for guest engineers.

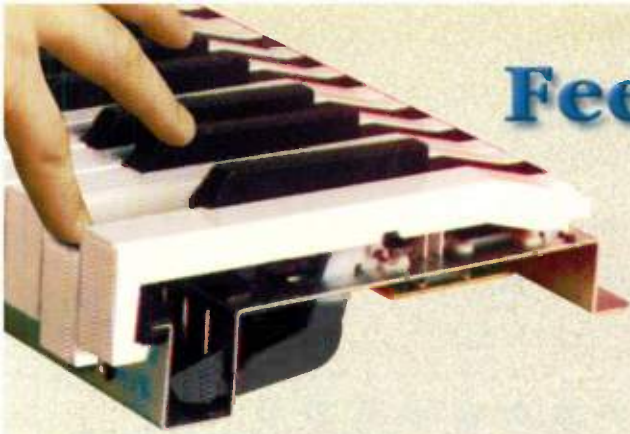

In the typical personal studio, however, where a single operator usually runs the whole show, this approach is probably excessive—not to mention expensive. (Apart from the cost of the patch bay itself, each piece of gear routed through a patch bay requires twice the usual number of cables.) Instead, you should determine which devices would benefit most from the convenience and increased options that patch bays provide—and which can do without. Ultimately, these decisions must be based on your style of producing music.

STEP TWO

The second step is determining which devices to normal or half-normal and which to denormal. (Nowadays, the half-normaled bay, with its increased functionality, has pretty much replaced the normaled bay.)

Commercial studios often favor denormaled patch bays so visiting engineers can readily customize connections. However, a fully denormaled patch bay, while providing maximum flexibility, takes more time and thought to use because nothing is already connected. In

Feeling Even Better...

Experts around the world
have called the Fatar action
“...the closest thing
to a real piano yet.”

88 weighted keys with STUDIOLOGIC hammer-action • velocity sensitive with aftertouch • pitch/mod wheels • 4 zone, 2 assignable sliders, 32 memories • 2 MIDI outputs 1 MIDI input

88 weighted keys with STUDIOLOGIC hammer-action • velocity sensitive with aftertouch • pitch/bend wheel and modulation wheel • 4 zones for splits and programmable layers

76 weighted keys with STUDIOLOGIC piano style • velocity sensitive with aftertouch • pitch/bend wheel and modulation wheel • 3 zones for splits and programmable layers

61 non-weighted keys, synth type • velocity sensitive with aftertouch • pitch/bend wheel and modulation wheel • 2 zones for splits and programmable layers

Not the type of company to rest on its laurels, Fatar takes the modern keyboard to a new level of playability and dynamic response by introducing the next generation of master keyboard controllers—**STUDIOLOGIC**.

It all starts with the hammer, redesigned lighter but longer, to distribute mass exactly as it is in an acoustic piano hammer. Its increased travel through a wider arc results in unprecedented control through the spectrum from *ppp* to *fff*, while the dynamic resistance (or inertia) it provides makes for a truly sympathetic and responsive instrument—playable for hours without fatigue.

What hasn't changed is the tremendous performance vs. price ratio pioneered by Fatar. STUDIOLOGIC improves upon that high-value tradition by providing even more for your money.

Add to the new hammer action a host of new features requested by professional users from all over the world and you have the best feeling, most responsive master controllers available—**STUDIOLOGIC**.

circle #120 on reader service card

PATCH BAY PRIMER

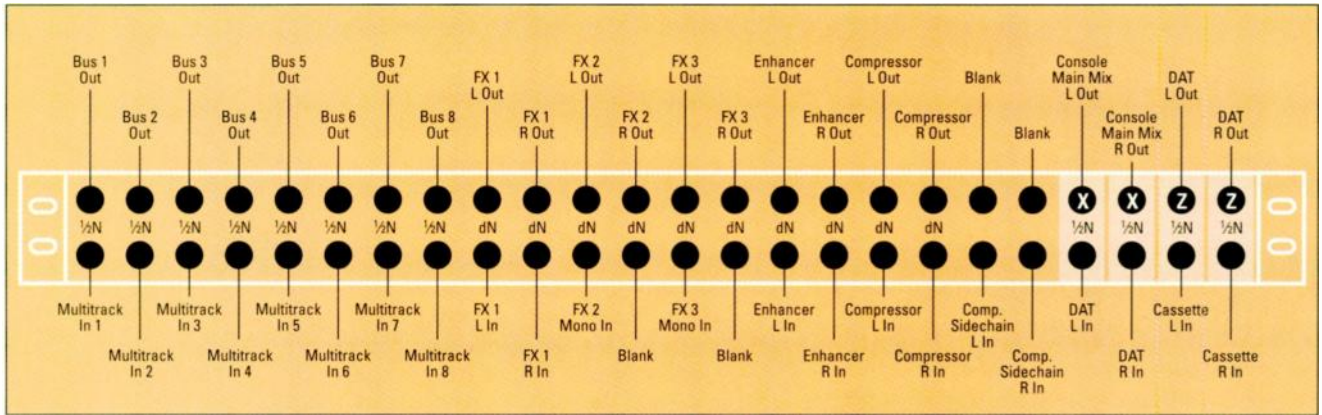

FIG. 2: This sample patch bay provides direct-to-tape recording access: ins and outs for three effects units (one with stereo sends and two with mono), one stereo enhancer, and one stereo compressor; sidechain access to the compressor; and connections for recording the console main mix to DAT and the DAT mix to cassette. The X cables mult the console main mix to a secondary monitoring system, and the Z cables mult the DAT mix to the console's 2-track inputs. (Note that in this setup, it doesn't matter whether the jacks to the compressor's sidechain inputs are normaled, half-normaled, or denormaled, because the corresponding output jacks are not being used.)

other words, before recording or mixing, it's first necessary to patch together all the gear you'll be using. Obviously, this can prove cumbersome and time-consuming.

The more sensible approach for the personal studio is to determine the studio's "normal" setup. Finding the optimal arrangement usually requires some trial and error, but once you've established what's normal, the patch bay allows you to "permanentize" that arrangement. Thereafter, you can easily deviate from the norm by inserting patch cables.

HALF-NORMALED

Good candidates for half-normaled connections are any that connect the outputs of one device to the inputs of another and for which multiple I/O access is convenient. For example, in my normal setup, the console's stereo outputs are half-normaled to my DAT recorder, my DAT recorder is half-normaled to my primary cassette deck, and

my primary cassette deck is half-normaled to a secondary cassette deck.

This arrangement offers several options. For example, I can print a DAT mix and simultaneously dub two cassette copies of the same mix. Also, I can readily patch my CD player (which is also connected to the patch bay) into either cassette deck or into the DAT. Furthermore, I can keep my DAT outputs multited to the console's 2-track inputs and the console's stereo outputs multited to a nearby boom box which I use as a secondary monitoring system.

Another very useful place for half-normaled connections is between the console tape sends (or bus outputs) and the inputs to the multitrack recorder(s) (see Fig. 2). This setup allows for easy direct-to-tape recording as well as sending channel or subgroup outputs to another recorder.

DENORMALED

Denormaled patch points are good for any outboard gear that you might want

to reroute in the course of production, for example, effects and dynamics processors. Moreover, once these devices are configured in denormaled mode, you can still have a "normal" setup simply by inserting the appropriate cables into the front of the patch bay.

For example, I have my best stereo compressor denormaled to a patch bay. During tracking or mixing, I can access the compressor via standard Y-insert cables. However, if I want to run an instrument—or a whole mix—through the compressor, I can easily remove the Y-cables and patch in. (I don't find it necessary to have all of my compressors go through a patch bay; the rest have Y-cables "permanently" connected directly to their rear panels.)

PATCH 22

It's impossible in a short article, of course, to catalog very many of the countless possible patch-bay configurations. To get you started, however, we've provided a drawing of a sample setup (see Fig. 2) that should prove applicable to many personal-studio setups.

Like studios in general, patch bays are usually works in progress. As you get familiar with using patch bays, don't hesitate to experiment with different configurations until you find the normal setup that works best for you.

Brian Knave is Associate Editor at Electronic Musician.

A CHANGE FROM NORMAL

How do you change a patch-bay connection from normaled or half-normaled to denormaled? Depending on the make and model of patch bay, this usually requires removing the circuit board (typically an individual card for each top/bottom set of jacks) and forcibly breaking a designated contact by scratching through it with a knife or screwdriver. Some patch bays (see opening photo) offer patch points on easily removable, reversible cards. To change from half-normaled to denormaled (or vice-versa), you simply remove, reverse, and replace the card.

PS-3

Personal Studio
Powered Monitoring System

- This self-contained system consists of one 5 1/4" ported bass reflex subwoofer and two 2-way shielded satellite speakers each with a 3" midrange driver, 1" balanced dome tweeter and protective metal grills.
- The subwoofer contains its own 15 Watt RMS power amplifier, a crossover network and two 5 Watt RMS power amplifiers for the satellite speakers. Speaker connections are via high quality, reliable binding posts.
- Since low frequencies are non-directional, the subwoofer can be placed virtually anywhere without affecting the integrity of the stereo signal.
- The satellite speakers are computer designed to provide an accurate 'stereo stage' panorama without requiring critical placement.
- The power amplifiers and all individual speaker components are engineered to ensure precise audio conversion from an electrical to acoustical signal with minimal loss.
- Optional hardware is available for mounting the satellite speakers to a wall or on mic stands.

Sound, Size and Price — everything is designed to fit in your personal studio or project room.

synchin' is
stinkin'!

When your digital audio system's timing is out of whack, the problem often turns out to be *synchronization*. Several types of synchronization (or "sync") are commonly in use in the personal studio, including MIDI, SMPTE, black burst, and word clock, just to name a few.

Studios with a lot of digital audio gear are especially susceptible to sync problems, and it can be difficult to figure them out. As a first step toward understanding the source of these problems, I'm going to introduce you to what's really making your digital audio tick: the digital audio clock.

MASTER THE CLOCK

Let's start with the basics. Every digital device needs a timing-reference signal, often called a *clock*, in order to trigger its internal operations. When several clock sources are available, you must select one to serve as a master clock.

There are many ways to generate a master clock. One of them is to use a device's internal *crystal*, which is an electronic component made from a piece of quartz crystal. Because it is a stable and accurate frequency generator, the crystal is used in many electronic devices (such as wrist watches) to generate a timing reference.

Another way to get a master clock is to recover it from the digital audio signal itself. A digital audio signal carries its own clock signal, and you can often set a device to "lock" (synchronize tightly) to this clock and ignore its internal crystal.

WHAT'S THE WORD?

Yet another way to set a master clock is to use a *word clock*. The word clock is a square-wave signal that is transmitted via a 75Ω BNC connector. A square wave, of course, alternates between high and low states, which makes it ideal as a timing reference. Because many devices can

Reality, Pentium® 166, Cakewalk,

Roland® MC-505, Boss® SE50,

Novation™ BassStation

Works with most soundcards!

“Most of my shows...

...are pretty heavily dance oriented. I do the break beats with Reality™ and also throw in a lot of samples, like different vocal samples and weird, B-movie, sci-fi samples. I can do break beats on top of slow beats on top of weird, sort of eerie, background ambience on top of vocal samples. I've done gallery openings and fashion shows where I have done more ambient-type stuff.

“I have a rather portable computer with an LCD screen and stripped-down Windows 95. I run Cakewalk™ with Reality. Cakewalk can loop, so when I do live shows, I have it loop and I mix live by muting and un-muting parts of the song, using Reality as the synthesizer.

“Reality is very straightforward. Having had even minor experience with other synthesizers, you pretty much know what everything is. The filters are really responsive—that's another good thing. You can get the resonance up real high. I use Reality primarily as a sampler, just because it works so well that way. I use a set of MIDI sliders with it.

“Recently I have been getting into making a lot of weird atonal sounds, pushing the FM stuff as far as it will go. You can get some really insane sounds out of that. The frequency response with [Reality] allows you to do stuff that is pretty complicated and textured, but still sounds good.

“With a lot of the digital synths, when you try and do a hefty bass, you don't get it. I have never run into that with Reality—I've been able to get really enormous bass sounds.

“At shows, I let people see what's going on. A lot of people are into break beats and they sound a lot more complex than they really are, so they want to see how I'm doing it. Having it on the computer screen, you can see everything. You get to see where everything is. It also makes it much easier to manipulate it, set the different sliders to different things. When you're dealing with Reality, it's all sitting right there.”

THE WORD ON CLOCKS

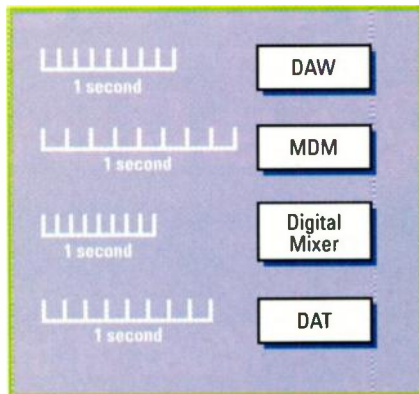

FIG. 1: Number of clock pulses in one second with and without a common word-clock source

use word-clock signals as their master timing reference, it has become a standard type of digital audio system clock.

As you add more digital devices to your studio, you're also adding more digital clocks, which is where most of the problems begin. You record your audio using one device that's using its crystal as a master clock, and then you try to send that signal into another device that's using its own crystal as the master. If you've ever heard a click or a pop in your audio, this is most likely the culprit. Even if both devices are running at 44.1 kHz, you're still going to get clicks because two crystals, no matter how accurate, will never be exactly the same. The clicks are audio samples being lost or skipped because there are two different clocks in the system (see Fig. 1).

Most professional digital audio devices have a word-clock input so they can work in sync with other devices in the studio. Some DATs and other gear lack word-clock inputs, though, which makes it a whole lot harder to rid your studio of clocking problems. For now, let's assume that all of your digital audio devices that require synchronization have word-clock inputs.

Next, you need to invest in a quality master-clock generator to be the master clock for all your digital devices. The ideal way to sync a digital studio is with a low-jitter master-clock generator that connects a discrete clock output to each digital audio device. This helps tremendously in reducing the jitter in your studio, as well. (For an explanation of jitter and how to deal with it, see "Immaculate Audio" in the November 1997 issue of

Electronic Musician.) If each device is getting its own clock from the same low jitter source, then only audio data is being transferred between the two devices, and relocking jitter does not occur. This completely eliminates any chance for sync problems and also does away with any jitter that might be picked up along the audio cable.

To set up the sync system, simply connect a separate word-clock output to the word-clock input on each of your devices so all devices are referencing the same clock (see Fig. 2). Make sure to set each device to slave off of the external word clock; if they're smart, the devices will lock to it automatically.

Video facilities use a *house sync* generator that generates video black-burst sync signals and connects to every room and every video device in the facility.

**Studios with a lot
of digital audio gear
are especially
susceptible to sync
problems.**

(For more on SMPTE, black burst, and other types of sync, see "That Syncing Feeling" in the October 1996 *EM*.) If you already have a video house-sync generator, then you need to get a digital audio master-clock generator that will reference video black burst. This guar-

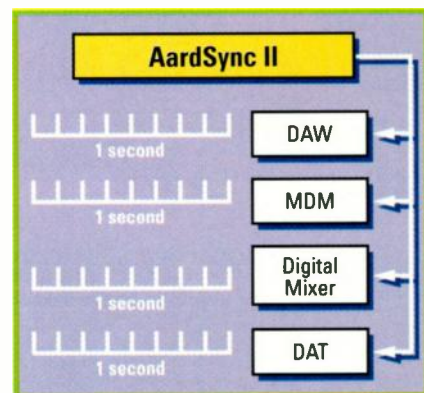

FIG. 2: A typical word-clock distribution arrangement

SKIMP ON EVERYTHING BUT THE MUSIC. Even if your clothes say "I live in a van" your demo can say "gold record." Just be sure to use the tape more gold records are recorded on, so your music has every opportunity to sound its best. Ask for the Quantegy Professional Studio Series.

THE WORD ON CLOCKS

antees that all your digital audio and video will be locked to one common clock, the most ideal solution.

There are a few rules regarding using word clock that most engineers do not know. The most important is to watch

As you add more digital devices to your studio, you're also adding more digital clocks.

the cable length of the clock signal. The word-clock signal was originally designed to be transferred through a circuit board, not over a long coaxial cable. You shouldn't have a problem as long as you keep your word-clock cable

length under fifteen feet, but anything longer will lead to reflections in the cable, which may cause loss of sync, dropouts, and increased jitter in the digital audio. This jitter can result in cloudiness, a loss of stereo imaging, and lost detail and clarity in the high audio frequencies. You must also use a good-quality, 75Ω coax cable; usually a thick video cable works the best.

SPREADING THE WORD

Another important consideration with word clock is the way it's distributed around the studio. It's not good to "tee-off" a word clock from one device to the next, because of voltage considerations at the input of the word clock. Each word-clock input contains a 75Ω resistor that is needed to properly terminate the cable impedance. If one word-clock source is connected to several inputs, the word-clock signal will be loaded down too much and will not have enough juice to go around.

A good word-clock distribution amp

(DA) solves that problem. But be aware that you cannot use a video distribution amp to distribute word clock. Many people think that because the video signal and the word-clock signal have the same BNC connector and cable type, word clock can be distributed by a video distribution amp. Video DAs are made to work with video signal levels, which are typically 1 Vpp, whereas a typical word-clock signal runs into the 3.5 Vpp range. Because of word clock's higher voltage and current requirements, a video DA cannot properly distribute word clock. In addition, the DC restoration circuits used in a video DA can change the word-clock polarity from positive to negative. The word-clock input circuits are not designed to work with negative voltage levels, and the DC restoration can actually damage your digital audio equipment.

CARVIN

DCM2000
PROFESSIONAL COMBINATION AMPLIFIER

Call 800-854-2235 for immediate delivery from our factory and save!

YOU CAN'T BUY BETTER SOUND
Face it. The two most important things to consider when buying pro-sound gear is how good it sounds and how long it will last. Otherwise, it's just not worth it. At Carvin, we put great sound and bulletproof reliability first.
Carvin power amps deliver the finest sound reproduction from high speed output stages with slew rates exceeding 50v/μs (roughly twice that of our competitors). Crystal clear output from models up to 2000 watts deliver rock-solid bass and shimmering highs with no distortion.
Our new C1600 and C2400 mixing consoles will enhance your sound dynamics with ultra low noise, high headroom, audio taper faders, silky smooth controls, active equalizing & 24 bit digital effects. Try a custom system on our 10 day trial and find out why Carvin is the value leader for quality & price! Call 800-854-2235 for prices & a free catalog.

"A best buy"... "The Carvin DCM1500 - with its detailed top end, punchy low end... sounds great."

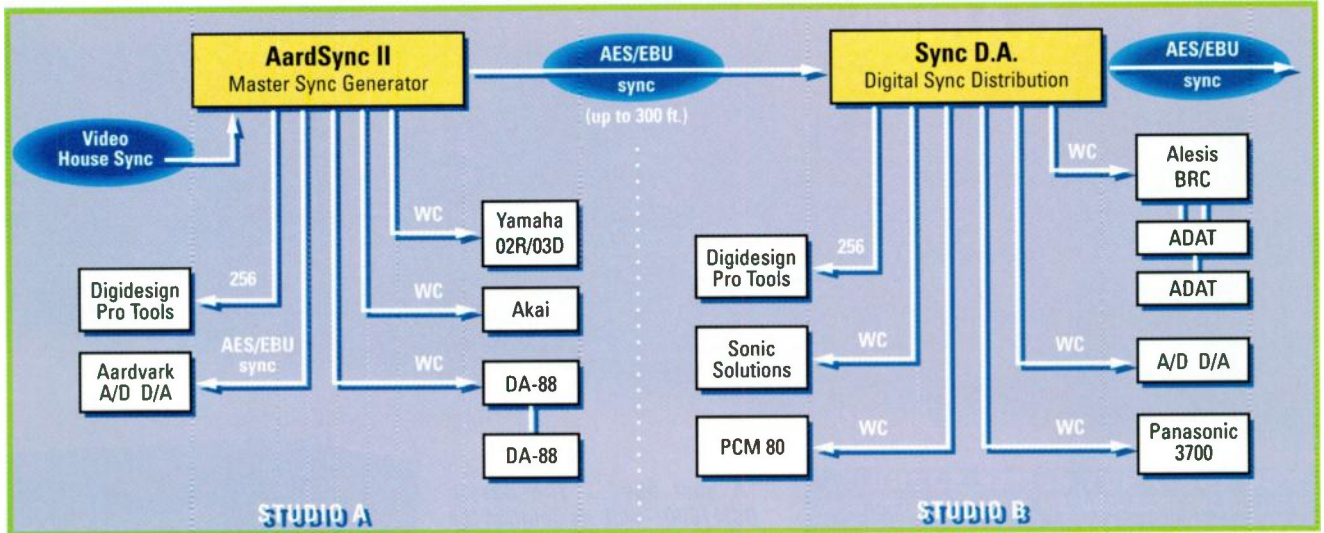

FIG. 3: A typical master sync distribution setup

clocking equation. They are synchronized by a Superclock input, which accomplishes the same thing as word clock but in a different format. The Superclock is a 256x oversampling of the normal word clock. The only difference is that you need a generator that specifically generates Superclock. One aspect

Another important consideration with word clock is the way it's distributed around the studio.

of using Superclock is that cable length must be a lot shorter: Digidesign recommends you use cable runs of less than two feet from the generator to the digital audio workstation. This usually mandates that the master-clock generator be placed in the same rack as the Pro Tools I/O boxes.

As I mentioned earlier, the standard AES/EBU digital audio signal inherently carries its clock along with the audio data. So why not just use it as a way to get clocks around the studio?

The most obvious reason is that many devices do not have more than one AES/EBU input. More important, when the clock is carried along with actual audio data, the clock is a bit more jittery than when all the audio bits are 0, which is called *digital silence* or *AES/EBU black*. The one big advantage of AES/EBU digital audio buses is that they're terminated at both the transmitting and the receiving end. This double termination allows the signal to be transmitted over several hundred feet with minimal jitter problems.

BRING IT TOGETHER

Let's take a typical setup (Fig. 3) with Pro Tools and an 888 I/O, two ADATs with a BRC, Apogee AD-1000 digital-to-analog converters, a Yamaha 02R digital mixer, and Aardvark's AardSync II low-jitter master clock generator. (I admit that's a shameless plug; I work at Aardvark.) Connect an word-clock output from the AardSync to the 02R, another to the Apogee AD-1000, and one to the BRC (which will sync the ADATs). Make sure your cable lengths are under fifteen feet, and set each device to lock to external word clock.

You'll have to place the master-clock generator right next to the 888 because you can only take the Superclock a few feet. So connect the Superclock out to the Slave In port on the 888 I/O. Pick a sample rate (commonly 44.1 kHz or 48 kHz) on the master generator, and you should be up and running with a very

low-jitter, problem-free studio. If you need to use SMPTE time code, just make sure that the SMPTE source is locked either to video or to word clock. If you're using a Mark of the Unicorn MIDI Timepiece, then just take the video black out of the AardSync II and connect it to the video in of the MIDI Timepiece. Everything will be in sample-accurate sync.

What if you need to get the same word clock into the next room, so that you have to go farther than fifteen feet? As mentioned earlier, an AES/EBU signal is an excellent source of clock if there's no audio data in it, and it can go several hundred feet. You can run the AES/EBU signal into the next room and connect it to a device such as Aardvark's Sync D.A., which will reference the signal's clock and then distribute it to five low-jitter word-clock outputs and one Superclock output for another Pro Tools system.

There are many other problems with keeping the audio and the video locked together, but those are usually much easier to figure out. Digital audio can be a complicated issue if you don't know what to look out for. But once you really understand digital audio and know a few common rules about the different kinds of clocks and their idiosyncrasies, many of the common digital audio problems are easily avoided.

Erik Lovell is VP of Marketing and Product Development at Aardvark. Special thanks to Igor Levin for clarifying many technical issues.

A Different Slant on Reverb

As a new sports car beckons you to the open road, the Wedge's totally unique desktop design makes creating great reverb a breeze. It's the first reverb that's fun to drive.

Just push the Wedge's edit button and start adjusting your reverb with the four edit sliders. It's easy to get creative with the Wedge's powerful parameters like decay, frequency damping, swirl, early reflection room shape, width, density and diffusion.

For as long as effects processors have been bolted into racks, customizing your reverb sound has been about as much fun as setting the time on a digital watch. But the Alesis Wedge™ offers an ingenious new angle to the way you approach reverb and ambient effects.

Unlike racked effects, the Wedge is a dedicated Desktop Master Reverb, cleverly designed to be used on or near a mixing console where you do your most critical listening... in the sweet spot of your mix. And with four edit sliders to access several effects parameters at once, you'll find yourself tweaking aspects of your sound you would never dream of editing in a rackmount box. Result: more inspiration for recording and mixing, and less limitation on your creativity.

There's more to the Wedge than its great design, like all-new algorithms that represent the finest, most detailed, best-sounding reverb you've ever heard, especially in an affordable processor. Don't limit yourself to the rack; instead, think differently and try out a new slant on reverb.

The Wedge. At your Alesis Dealer now.

Instead of using a snare drum to set up your reverb, the Wedge offers the innovative Impulse Audition™ feature, which sends a full bandwidth audio signal to help you get flawless reverb for every application.

WEDGE™
DESKTOP MASTER REVERB W/IMPULSE AUDITION

Power Hitters

How to choose and use an AC power conditioner.

Powering your studio gear directly from an unprotected AC outlet is like running a fine car without fuel and air filters: it's courting disaster. So many things can go wrong—especially with sensitive digital circuits—that we can only discuss them superficially here, but the bottom line is that you can and should protect your equipment with power conditioners. But not all power conditioners are created equal; let's take a look at the key problems and solutions.

HASH IS TRASH

Radio-frequency interference (RFI) and electromagnetic interference (EMI) can be caused by electrical appliances, radio transmitters (including cell phones), flu-

orescent lights, DC switching power supplies, AC cables, computer monitors, televisions, and a host of other sources. Basically, this is high-frequency interference (say, above 10 kHz) that can travel through power lines, through the air, or through various cables in the studio. To put it mildly, this electronic hash can really trash your studio.

Digital circuits, in particular, suffer badly from these various forms of hash. So do audio signals, even when traveling through well-insulated cables. Eliminating this entire mess is a complex art that is beyond the scope of this article. But using a power conditioner to reduce RFI and EMI in the AC power system is relatively simple and a good place to start.

Most power conditioners use one of

POWER HITTERS

FIG. 1: This simple lowpass filter uses capacitors to shunt frequencies above 60 Hz to ground, filtering out high-frequency RFI and EMI.

two approaches to filtering out RFI and EMI. The simplest filter uses one or more capacitors between the power buses and ground (see Fig. 1). A more effective approach is to use a multistage lowpass filter. In either case, the cutoff frequency is set above 60 Hz. These filters shunt the high-frequency interference to ground, providing a clean sine-wave power signal.

The down side is that this method can generate extraneous currents in the system ground. Engineers disagree about the seriousness of this problem, but thanks to a new approach to AC power systems, it can be dealt with fairly simply.

BALANCED THINKING

Balanced power is a relatively new solution to AC hash problems. With this approach, the hot and neutral wires from a balanced power supply each carry a power signal of 60 VAC instead of 120 and 0 VAC. The total is still 120 VAC, but the signals are 180 degrees out of phase with respect to each other, so any current in the ground (such as that caused by a line filter) is canceled out.

To top it off, the EMI radiated from the two conductors gets canceled out. This is especially great in the studio because it eliminates noise that might otherwise get into the audio signal when power cords are adjacent to audio cables.

SURGES, SPIKES, AND SAGS

Power grids are complex beasts, and the demands placed on them vary constantly. Such problems as a nearby lightning strike, unusual levels of demand (say,

when everyone in the area turns on their air conditioning due to a heat wave), or a problem at a power station can cause the system's power to fluctuate. You are more likely to experience these fluctuations the further you live from a power substation or plant.

If the demand on your local power utility suddenly drops, a temporary overvoltage condition, or power surge, can result. Conversely, a sudden increase in demand can cause an undervoltage condition, or sag. In addition, power companies in high-demand areas often avert larger problems by intentionally creating brown-outs (voltage reductions of 5 to 15 percent) within a specified area. The power utility eventually compensates for the change, but in the meantime, your gear's performance can be affected, and some equipment could be permanently damaged.

A spike is a sudden, extreme increase in voltage that immediately subsides. Whereas a surge can last for a few hundred milliseconds or more, a spike hits quickly, lasts approximately 100 microseconds or less, and then is gone. But it can hit very hard. A lightning strike somewhere in the utility network (not necessarily a direct hit) could easily cause a 5,000-volt spike. Even if your gear is not immediately fried, components could be damaged to the point that they will fail soon thereafter.

Sometimes a voltage fluctuation can

be caused within your building or neighborhood. For instance, motors require extra current to get started, and when a refrigerator or air conditioner switches on it can cause a brief sag of as much as 20 percent. The sag might only last a few hundred milliseconds, but that's enough to cause damage. When a transformer or large motor—say, a vacuum cleaner—is turned off, a significant spike can result. If you want your precious studio electronics to last, you need to protect them against these electrical horrors.

COST-EFFECTIVE SOLUTIONS

Many power strips and all of the power conditioners listed in the *Personal Studio Buyer's Guide* contain some form of surge and spike protection. Probably the most common and inexpensive way to accomplish this is a metal-oxide varistor (MOV), which is a voltage-clamping device. If you know what you're doing, you can even buy these devices at electrical parts houses and catalogs and install them into your existing power strips. Some inexpensive units use one MOV but the better units use as many as three (see Fig. 2).

Below the threshold voltage, the MOV is an open circuit. But if the voltage exceeds the threshold, the device conducts and absorbs the transient, releasing the energy as heat. Typically, an MOV can respond quickly—say, within a few nanoseconds. That's enough to handle most surges and spikes.

The problem is that one good, stiff spike can demolish an MOV; if that happens, you are protected from that one spike, but thereafter your power strip or conditioner is unprotected, even

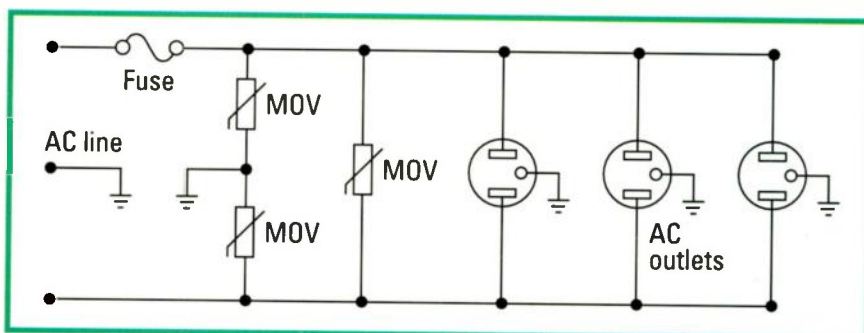

FIG. 2: Many line conditioners use three MOV voltage-clamping circuits, as shown in this AC outlet-box schematic. However, the lowest-end power strips and line conditioners often use only one MOV.

POWER HITTERS

though it still supplies power. Some power strips have indicator lights that go out if the MOV blows, but in many cases you won't have a clue that you are vulnerable. Furthermore, MOVs don't do anything to protect you from sags and are insufficient for handling extended overvoltages.

Therefore, I recommend using MOV-based power protection as a second line of defense. Install one of these relatively inexpensive units in each rack,

but instead of plugging them directly into the wall outlet, plug them into a higher-end power conditioner that uses an isolation transformer and offers complete line regulation, rather than just surge and spike protection. We'll discuss these higher-end devices next.

FIRST LINE OF DEFENSE

Line regulators provide a professional solution to surges, spikes, and sags.

These devices use constant-voltage isolation transformers that deliver a steady 117 or 120 VAC as long as the input voltage doesn't sag below a minimum tolerance (commonly 90V) or surge above the maximum (generally 130 to 140 VAC, but sometimes as high as 300V). With a well-designed unit, if the voltage drops or surges outside the tolerance range, an internal circuit breaker is tripped to shut everything down rather than expose your gear to damage. This kind of device should be your first line of defense.

With this type of protection, surges, sags, and spikes are virtually eliminated, regardless of the source. The usual tolerance range of 90V to 130V should be enough to handle the vast majority of problems; if a fluctuation is outside of this range, it's time to shut down the studio and wait for the power system to stabilize.

UPS DELIVERS THE GOODS

Line regulation works fine for most studio gear, but some equipment—especially computers—suffers if the power is suddenly cut off, whether due to a vigilant line regulator or a power-system blackout. As a result, I highly recommend that you protect your computer system with an uninterruptable power supply (UPS).

A UPS has a battery that takes over if the power drops too low or fails entirely. That gives you time to save your files and properly shut down your computer. (It's handy when you are editing on a RAM-based sampler or synth, too.) The amount of battery time depends on the UPS and the load you place on it, but most such units give you at least ten minutes.

Most uninterruptable power supplies have some form of surge and spike protection, but not all have line regulation. I strongly recommend you use a UPS that includes line regulation so that you are completely protected. (By the way, power spikes can be transferred through the telephone lines, frying your modem, so consider looking for a UPS that has phone-line protection, too.)

An important consideration is how quickly the UPS can detect a power failure and switch to the battery. The entire process should occur in less than 10 ms. Some systems also come with computer

software that monitors the UPS and allows you to schedule power-saving computer shutdowns.

OTHER CONSIDERATIONS

A few other factors should be considered when buying a power conditioner/regulator. The most obvious is that the number of outlets varies. These outlets are rated for a given amount of power, so be sure to match the power requirements of your devices with the appropriate outlets.

In addition, most power conditioners are designed for 15A, 120 VAC circuits, but some heavy-duty units are designed for 30A, 220V systems. Always use the appropriate power conditioner for your AC circuit, and don't overload the system. (To ensure a proper load, add up the current ratings of all connected units and allow some headroom. Power amps and devices with motors, tubes, and fans tend to draw the most current.)

Many power conditioners offer input-voltage meters, which can be analog (LEDs) or digital (LCDs or neon displays). These are useful because they show you approximately what the power conditions are at any given time.

Another extra is onboard lights. Many units offer slide-out light tubes (which may be metal or plastic); some have BNC connectors that accept Littlelite gooseneck lamps. These can be very handy, especially for live performance situations.

Two other factors merit mention. First, the mechanical assembly of the unit should feel solid, not flimsy, and the paint and screened markings should last. Remember, you want this unit to last for years, and it might have to withstand the rigors of live performance.

Finally, as with anything else you buy, check the warranty. Obviously, the length of the warranty is a factor, as is the completeness of what is covered. It's also nice if the warranty is transferrable, so that a second-hand unit is still covered.

As you'll see from the charts on pp. 132-137, you have plenty of choices. As with everything else in your studio, it pays to carefully evaluate your needs and plan an entire, integrated AC power-distribution system that can protect your gear now and can expand to meet your future needs. ■

PATCHLINK® SP

LINKING YOUR AUDIO GEAR JUST GOT AS EASY AS...

1, 2, 3. PatchLink SP is the newest 1/4" jack modular patching system from Neutrik®. Designed to be versatile and easy to use, PatchLink SP eliminates much of the labor associated with changing the PC cards while completely protecting them from abuse or dust.

1. PatchLink SP encloses the PC cards within a cage like panel. To rotate a PC card, you simply remove the two bottom screws and pull the front panel forward.

2. There are no nuts on the back holding the PC cards in place. Just pull the PC card out of its position, rotate and replace. It's that easy. Identification strips are on the front and back so you know the exact purpose for each position.

3. With each vertical front-to-back pair half-normalled to the other, multiple combinations (normalled, paralleled, etc...) for linking your audio gear are a snap. Jacks are color coded in black and grey eliminating any guessing after changes are made.

Try PatchLink SP for yourself, it's the most cost-effective patching solution on the market today. Contact Neutrik USA or your local distributor for additional information.

1/4" TRS	ADAT optical (2)	Optional 18-bit, 128x oversampling	Optional 18-bit, 128x oversampling	32, 44.1, 48	Windows backup software and IR for automatic DAT backup	MTC, MIDI Clock, word clock	MTC-24, 25, 29.97, 30	MIDI Clock controls	Yes	Handled by Windows (FAT 8 GB)	8-band real-time parametric EQ, FFT analyzer, stereo chorus, stereo flanger, auto-pan modulation, signal generator, resizable VU meter, dynamic transposing, denoising, declicking, exciting, subbass enhancement, 18- or 16-channel external rack-mount analog converters	\$2,198
RCA (2)	S/PDIF (2), Toslink optical (2)	18-bit, 128x oversampling	18-bit, 128x oversampling	32, 44.1, 48	Windows backup	MTC, MIDI Clock, word clock	MTC-24, 25, 29.97, 30	MIDI Clock controls	Yes	Handled by Windows (FAT 8 GB)	8-band parametric EQ, FFT analyzer, stereo chorus, stereo flanger, auto-pan modulation, signal generator, resizable VU meter, dynamic transposing, denoising, declicking, exciting, subbass enhancement, AES/EBU XLR transformer, balanced digital I/O, RIO 19" rack featuring all input/output options on front and rear allowing for mixing of inputs and adding TRS balanced input/output, LED meters and volume control, eliminating need to run audio cabling to your PC	\$1,198
XLR or TRS (up to 64)	S/PDIF (2), AES/EBU (up to 64)	18-bit	18-bit	44.1, 48	Asisted	LTC, VTC, biphasic pilot with USD	All rates, including pull-up/pull-down and variable	Variety (Mackie, JLC Cooper, P&G, Peavey, Yamaha)	Yes	4 GB	Over 100 TDM plug-ins from Digidesign and development partners; AudioSuite plug-ins, Digidesign ADAT interface; SampleCell II, Universal Slave Driver, MasterList CD	\$4,995
Same as inputs	AES/EBU, Toslink and Coaxial S/PDIF	Dual 16-bit delta-sigma, 64x oversampling	Dual 20-bit delta-sigma, 8x oversampling	44.1, 48	N/A	LTC, VTC, MTC (incl), word clock (all require Timing Gear V8 I/O)	All rates, including pull-up/pull-down and variable	N/A	N/A	N/A	I/O devices: Big Block, Deuce Coupe, ADAT, DAB8, Timing Gear and CardD Plus, DSP Supercharger, RAM induction module	\$2,500 plus options
Varies w/options	S/PDIF standard, (442 and Interface (AEC), optional ADAT MEC modules	20-bit, 128x oversampling or 24-bit, 128x oversampling	20-bit, 128x oversampling or 24-bit, 128x oversampling	44.1, 48	All standard computer backup mechanisms	MTC standard, SMPTE/VTC MEC module coming Summer 1998	24, 25, 29.97, 29.97d, 30, 30d	N/A	Yes	Unlimited		\$2,895 plus options

DIGITAL AUDIO WORKSTATIONS

Manufacturer	Model	Computer Platform	# of Tracks	# of Virtual Tracks	Levels of Undo	Audio Effects	Dynamics Processing	Pitch-Shift Type	Crossfade Types	Sample-Rate Conversion	DSP Plug-in Formats	Internal Mixer Channels	Bus Type	Analog Inputs
Mark of the Unicorn	Audio 2408	Win, Mac	24 simultaneous, up to 40	Unlimited (Mac)	Editing is non-destructive	Chorus, limiting, delay, phase shifter, auto-pan, more (Mac)	Compression, expansion, gate, limiting	Mac: Pure DSP format connected pitch shifting for monophonic material, and conventional pitch shifting for polyphonic; Windows: determined by host application	Mac: pre-late, post-late, equal gain, equal power, independent, linear; Windows: determined by host application	Mac: unique SRC filter produces no harmonic distortion in audible range; Windows: determined by host application	Mac: MAS, Adobe Premiere, Windows: determined by host application	Mac: unlimited virtual mixer channels; Win: determined by host application	Mac: unlimited internal buses; Windows: determined by host application	Eight gold-plated -10 unbalanced
Merging Technology	Pyramix Virtual Studio	Win 95, NT	16	Unlimited	32	EQ, delay, comb filter, echo, matrix delay, pitch shift, reverse	Noise gate, limiter, 2 compressors, expander, de-esser w/ side-band EQ	Traditional	Equal power, linear, equal dB	Yes, word length	Proprietary	16	ISA or PCI	8 modular
Metallic Systems	Digital Wings for Audio Elite	Win 95	128	N/A	Unlimited	30-band graphic/5-band parametric EQ, reverb, delay, flanging, echo, echo chamber, normalize, fade in/out, multitap delay, FFT filters, scientific filters, noise reduction, distortion, time distortion, stretch, pitch shift	Compression, expansion, limiting, noise gate	Formant-preserving and traditional	Any arbitrary crossfade shape	Yes	DirectX Media	8	32-bit PCI	1/4" TRS (8) balanced/unbalanced
Micro Technology	Krystal 1200 DSP Engine with MicroEditor Software	Win 95, NT	512 tracks multiplex simultaneously, each individually adjustable	Unlimited	Unlimited	On individual segments or group-bussed tracks or segments: EQ, echo, phasing, delay, invert phase, plus effects send (analog or digital)	Normalize (segment, track, or project, independent or together), compressor, limiter, change gain from recorded level (+48 dB to -100 dB), optional noise removal	Formant-preserving and traditional	Compute live on each sample (no steps), adjustable instantly with zero delay; linear, exp, log, full sine, equipower-sine, sine-cosine, exp-log, log-exp	Optional, any rate to any rate	DirectX Media	512 active, unlimited muted, group bussing	PCI	1/4"
Otari	PD-80	Stand-alone	8	999	16	Fade in/out, reverse cut, pitch shift	Gating	Formant-preserving and traditional	Linear, logarithmic, user-specified	N/A	N/A	N/A	N/A	25-pin D-sub
Roland	VS-1680	Stand-alone with 320 x 240 LCD	16	256	999	4 independent stereo multi-effects processors or up to 8 mono channels of effects; 34 multi-effects algorithms including reverb, delay, chorus, RSS parametric EQ, hum cancel, vocal eliminator, vocal transformer, lo-fi effects, COSM-based microphone and guitar amp simulation; Supports (2) optional VSBF-2 effects cards	Limiting, compression, de-essing, enhancer, noise suppression	Effect PS, Edit-style PS, variable pitch	Selectable	N/A	Roland VSBF-2 24-bit effects processor	26 channels w/digital EQ and automation	Internal digital routing (8 Recording, 8 Effect, 4 Internal)	2 balanced XLR, 6 balanced TRS, 1 high-impedance for e. guitar

Analog Outputs	Digital I/O	ADC	DAC	Sample Rates	Backup Options	Synchronization	Time-Code Rates	MIDI control	SCSI	Maximum Addressable HD Size	Options	Price
Eight gold-plated -10 dB unbalanced	Alesis ADAT lightpipe (24 channels), Tascam TDIF (24 channels), S/PDIF (two independent S/PDIF outs)	20-bit, 64x oversampling	20-bit, 128x oversampling	44.1, 48	Any system available for Windows or Mac	SMPT, MTC, word clock, ADAT sync, Digital Timepiece control track for sample accurate sync with DA88	24, 25, 29.97 (drop & non-drop), 30 (drop & non- drop)	Yes	Handled by host computer	Maximum allowed by host computer	Two additional I/O boxes can be connected for a total of 144 simultaneous input & output connections	\$995 (\$695 for each additional I/O)
8 modular	AES	24-bit	24-bit	Up to 96 kHz	All	LTC, VITC, MTC, RS422 machine control	24, 25, 29.97, 29.97d, 30, 30d	Mixer Control	Yes, non- proprietary	Unlimited	Cedar NR-1, Time Zone time scaling, Network support	\$7,595 (brand, software, ADAT and S/PDIF interface)
1/4 TRS (8) balanced/ unbalanced	S/PDIF	20-bit	20-bit	11.025, 22.050, 29.4, 44.1, 48	Any computer backup method	MIDI	N/A	Master and slave	Yes	Unlimited	ADAT interface	\$1,248
1/4"	AES/EBU, S/PDIF	18-bit	18-bit	8, 11.025, 16, 22.05, 24, 32, 44.1, 48 (optional 10, 12, 18.9, 20, 37.8, 40)	All Windows- format host devices, studio audio, DAT, CD-ROM	SMPTe, MTC	24, 25, 29.97, 29.97d, 30	Note/ (channel)	SCSI or IDE non- proprietary format drives	64 GB	MicroSound external I/O module, MicroSync for SMPTe/Video, MicroCD, DNoise	\$2,395
25-pin D-sub	AES/EBU (ADAT/TDIF optional)	20-bit, 64x oversampling	20-bit, 8x oversampling	32, 44.056, 44.1, 47.952, 48	Any SCSI device	Biphase, LTC, VITC	All rates and all types	No	Yes	Unlimited	CB164 remote, video monitor, TDIF interface	\$9,950
8	S/PDIF and optical stereo in/out	20-bit, 64x oversampling	20-bit, 128x oversampling	32, 44.056, 44.1, 48	DAT, SCSI Copy, CD Archive with CDR option	MTC, MMC, SPP + MIDI Clock (sync track, tempo map)	24, 25, 29.97, 29.97d, 30, 30d	MMC, MTC, MIDI clock, Mixer Control, SysEx	Yes	128 GB = 2GB x 8 partitions x 8	VS8F-2 effects card, CD Recorder, hardshell case	\$3,195

Inputs	Outputs	Ground Lift	Special Features	Price
1/4" (1)	1/4" (1); XLR (1)	Yes	ECC83 tube, Jensen JT-DB-E transformer	\$595
1/4" (1)	1/4" (2); XLR (2)	Yes	Gain	\$899
Unbalanced 1/4"	Balanced XLR	Yes	Can mix all 6 channels to a single output, can also be a 1-to-6 splitter	\$395
Unbalanced 1/4"	Balanced XLR	Yes	Can mix all 4 channels to a stereo pair, aux send and returns; ground-lift switch	\$369
Unbalanced 1/4"	Balanced XLR	Yes	Easy battery change; ground-lift switch	\$155
Unbalanced 1/4"	Balanced XLR	Yes	Easy battery change; ground-lift switch	\$110
1/4" (1)	1/4" (1); 1/4" speaker (1); XLR (2)	Yes	3 MΩ input; vari gain to +30 dB; lowpass filter; 6-position tone switch; 1/2 rackspace; rack kit available	\$679
1/4" (1); 1/4" speaker (1)	1/4" (1); 1/4" speaker (1); XLR (1)	No	Speaker-simulating filter	\$129
1/4" (1); 1/4" speaker (1)	1/4" (1); 1/4" speaker (1); XLR (1)	No	Speaker-simulating filter	\$129
1/4" (1)	1/4" (1); XLR (1)	Yes	Built-in BBE Sonic Maximizer with independent process and contour controls	\$159
1/4" (1)	1/4" (1); XLR (1)	Yes	Auto power-off; phase-inverse switch	\$149.50
1/4" (1); XLR (1)	1/4" (1); XLR (1)	Yes	Pad switch (0 dB, -20 dB, -40 dB)	\$185
1/4" (4)	1/4" (4); XLR (4)	Yes	Pad switch (0 dB, -20 dB, -40 dB); lowpass filter; phase reverse; reversible rack ears (XLR front or rear)	\$899
1/4" (1)	1/4" (1); XLR (1)	Yes	Isolates ground even when on phantom power; RF filtering and static-discharge protection	\$231.70
1/4" (1)	1/4" (1); XLR (1)	Yes	27 MΩ input impedance	\$600
1/4" (1)	1/4" (1); XLR (1)	Yes	27 MΩ input impedance	\$1,100
1/4" (2); XLR (1)	1/4" (2); XLR (1)	Yes	Speaker/instrument switch for input-level selection	\$89.95
1/4" (2); XLR (1)	1/4" (2); XLR (1)	Yes	3-position pads	\$79.95
1/4" (2); XLR (1)	1/4" (2); XLR (1)	No	Can act as mic/instrument splitter	\$59.95
+4 dBm XLR	-10 dBm 1/4" jack	Yes	The Reamp is a reverse Direct Box that allows output from any recorder to be reinserted into amplifier input; adjustable output level	\$299
1/4" line (1); 1/4" instrument (2); 1/4" speaker (2)	XLR (1)	Yes	20 Hz-40 kHz frequency response	\$124
1/4" line (2); 1/4" instrument (4); 1/4" speaker (4)	XLR (2)	Yes	20 Hz-40 kHz frequency response	\$359.50
1/4" line (1); 1/4" instrument (2); 1/4" speaker (2)	XLR (1)	Yes	20 Hz-40 kHz frequency response	\$129.50
1/4" line (6); 1/4" instrument (12); 1/4" speaker (12)	XLR (6)	Yes	20 Hz-40 kHz frequency response; can be shortloaded; uses E535 modules	\$744.50
1/4" (8)	1/4" (1); XLR (1)	Yes	Single rackspace; parallel unbalanced outputs for local monitoring	\$1,225
1/4" line (1); 1/4" instrument (2); 1/4" speaker (2)	XLR (1)	Yes	High isolation	\$189.95
1/4" (8)	1/4" (8)	No	Converts between -10 dBV and +4 dBu equipment; hum eliminator; converts automatically between balanced and unbalanced lines	\$344.95
1/4" (8)	1/4" (8)	No	Breaks ground loops; converts automatically between balanced and unbalanced lines	\$284.95
1/4" (2)	1/4" (2)	No	Converts between -10 dBV and +4 dBu equipment; comes with 4 RCA adapters plus Velcro and rubber feet for mounting options; hum eliminator; converts automatically between balanced and unbalanced lines	\$89.95
1/4" (2)	1/4" (2)	No	Comes with 4 RCA adapters plus Velcro and rubber feet for mounting options; breaks ground loops; converts automatically between balanced and unbalanced lines	\$74.95
1/4" (2)	XLR (1)	No	Real speaker-to-mic recording silently; input and output electronically isolated	\$395
1/4" (2)	XLR (1)	Yes	20 dB pad	\$34
1/4" (2)	XLR (2)	Yes	Jensen JT-DB-EPC Transformer	\$199.95
1/4" (2); XLR (1)	XLR (1)	Yes	Switchable input and output attenuators	\$196
XLR (4)	XLR (4)	Yes	Provides phantom power to four electret condenser microphones; includes power supply	\$129.99
1/4" (1)	1/4" (1); XLR (1)	No		\$59.99

Mark of the Unicorn	Fast Lane	Mac	1/3 (16 channels)	No	No	No	No	N/A	N/A	N/A	No power supply needed (powers off computer); bypass button allows users to play MIDI gear from controller even when computer is off	\$59
Mark of the Unicorn	Micro Express	Mac and PC	4/6 (96 channels)	Yes	Yes	Yes	No	N/A	16 (8 presets/ 8 user)	SMPTe, MTC	1/2-rackspace unit; internal power supply; operates without a computer; supports MMC; freewheels over SMPTe drop-outs (0-32 frames); converts click to MIDI; 2 footpedal inputs	\$295
Mark of the Unicorn	MIDI Express XT	Mac and PC	8/9 (128 channels)	Yes	Yes	Yes	No	N/A	16 (8 presets/ 8 user)	SMPTe, MTC	Operates without a computer; supports MMC (can be controlled from a sequencer); freewheels over SMPTe drop-outs (0-32 frames); converts click to MIDI; 2 footpedal inputs	\$395
Mark of the Unicorn	MIDI Timepiece AV	Mac and PC	8x8 (16x16 networked); 128 channels (256 networked)	Yes	Yes	Yes	No	N/A	8 base setups; 128 patches	SMPTe, MTC, video & word clock, Digidesign Superclock	Operates w/o computer via front-panel programming w/ knobs & LCD; supports all SMPTe frame rates, including 29.97 drop & nondrop; 4x MIDI data rate on Mac; does MIDI Thru when computer is turned off; 2 footpedal inputs; see Synchronizer chart for additional information	\$595
Mark of the Unicorn	PC-MIDI Flyer	PC	2/2 (32 channels)	No	No	No	No	N/A	N/A	N/A	No power supply needed (powers off computer); bypass button allows users to play MIDI gear from controller even when computer is off	\$89
Mark of the Unicorn	Pocket Express	Mac and PC	2/4 (32 channels)	No	No	No	No	N/A	N/A	SMPTe, MTC	Bypass button allows users to play MIDI gear from a controller even when computer is turned off; SMPTe free-wheeling over drop-outs; front-panel SMPTe controls; reshapes time code	\$165

What makes the EX-series synthesizers a breed unto themselves?

It's a lot more than attitude, baby. In fact, it's even more than 128-note polyphony for \$2195* (EX5R tone generator) or \$2695 (EX5 76-note keyboard)**.

The EX5 with SCSI and analog expansion boards installed.

Ponder the FIVE tone generation technologies: sampling, AWM2, AN (Analog Physical Modeling), VL (Virtual acoustic Physical Modeling, EX5 and EX5R) and our new FDSP (Formulated Digital Sound Processing) which models characteristics of instruments and synthesis processes. Now you can use virtually any

method known to man to create and express your sound without leaving your EX synthesizer.

As workstations, they simply have no peer. Consider the 16-track linear song sequencer, the 8-track pattern loop sequencer and the 4-track arpeggiator with 50 presets, 50 user types and 17 modes (any of which can use the 100 preset groove quantize templates). And with the new MIDI keymap, tracks from the pattern sequencer, 8-track patterns or sample loops can be assigned to any individual key.

For real-time control editing and performance there's six programmable knobs, a ribbon, a breath controller input, a pitch bend wheel, two mod wheels,

**EX5R
Tone
Generator
\$2195*

four assignable foot controllers and two-scene memories. The EX systems are also expandable to 65MB sample RAM, 8MB flash ROM, SCSI, and individual or digital outputs.

There has never been a synthesizer, at any price, that gives you all the EX series gives you. Now there's three. See them at your Yamaha Digital Musical Instrument dealer or call (800) 932-0001 ext. 689 for more information or visit us at www.yamaha.com.

YAMAHA®

CREATIVITY: THE PROCESS OF TAKING THE SOUND STRAIGHT FROM YOUR MIND'S EAR TO THE STUDIO MONITORS. THAT'S OUR DREAM AT SYNTRILLIUM, AND THAT'S WHAT COOL EDIT PRO LETS YOU DO. IT'S GOT POWER: 64-TRACK MIXING, MORE THAN 30 DSP EFFECTS (MOST WITH REAL-TIME PREVIEW), DIRECTX PLUG-IN SUPPORT, AND AMAZING WAVEFORM EDITING CONTROL. IT'S ALSO A BREEZE TO LEARN AND USE, AND IT WORKS WITH JUST ABOUT ANY SOUND CARD ON ANY WINDOWS™ 95 OR NT COMPUTER. CONTACT SYNTRILLIUM OR YOUR FAVORITE SOFTWARE DEALER TO FIND OUT MORE.

PROFESSIONAL AUDIO GROUP

Our staff of experts have been serving New York audio professionals for decades - now that same famous service and selection is available to you! Sam Ash Professional features the world's largest inventory of MIDI instruments - signal processors, digital recording systems, software, studio monitors, microphones, amplifiers and mixing consoles - all at the guaranteed lowest prices! One call and you will find out what New York has known for over 70 years - the name to remember for all of your audio needs is Sam Ash!

YOUR ONE-STOP PRO PARTS SOURCE!
OUR PRO PARTS DEPARTMENT OFFERS THE LARGEST SELECTION OF PRO AUDIO PARTS, CABLES, CONNECTORS, PATCHBAYS, CUSTOM WIRE AND MORE!

Most Informed Staff In The Industry!

Authorized Dealer For All Major Brands!

State-of-the-Art, Discrete, Low Z Mic Preamp

Only \$41.67*

*when purchased in this convenient 12-Pack.

Unity™ 2002-12 RQ

The RQ™ Series proves that high performance, state-of-the-art, microphone preamps can exist in groups larger than two! We use the same large geometry, Ultra low Rbb, discrete transistors as in our large format consoles. You could easily spend a lot more money for mic preamps, but since the RQ delivers a Noise Figure within 1.5 dB of perfect, you are not likely to find one for any price that is audibly quieter. Quiet is good.

Only
\$49.99
per Mic Pre
for the 8-pack

Unity™ 1002-8 RQ

Only
\$43.75
per Mic Pre
for the 16-pack

Unity™ 2002-16 RQ

Only
\$37.50
per Mic Pre
when purchased
by the full case

Unity™ 2002-24 RQ

Yet another benefit from our **32** years of designing mixers for professional users.

MICROPHONE PREAMPS

Manufacturer	Model	Type	Channels	EQ	Output Level Control	Instrument/Line Input
PreSonus	M80 and MP20	Class A, discrete	2 (MP20) or 8 (M80)	Low-cut filter	Yes	Yes
PreSonus	VXP Dynamic Voice Processor	Class A, discrete	1	4-band semiparametric	Yes	No
Radio Design Labs	RU-MP2	Solid state	2	None	Yes	No
Radio Design Labs	RU-MX5	Solid state	5	None	Yes	No
Radio Design Labs	ST-MLX3	Solid state	3	None	Yes	No
Radio Design Labs	ST-MMX3	Solid state	3	None	Yes	No
Radio Design Labs	ST-VCA1	Solid state	1	None	Yes	No
Radio Design Labs	STM-1	Solid state	1	None	No	No
Radio Design Labs	STM-2	Solid state	1	None	Yes	No
Radio Design Labs	STM-2X	Solid state	1	None	Yes	No
Radio Design Labs	STM-3	Solid state	1	None	Yes	No
Rane	DMS22	Solid state	2	3-band with sweepable parametric mid	Yes	No
Rane	MS1	Solid state	1	None	Yes	No
Rane	VP12	Solid state	2	2-band parametric	Yes	Yes
Studio Technologies	Mic-PreEminence	Solid state	2	None	Yes	No
Summit Audio	MPC-100A	Tube/solid-state hybrid	1 (stereo linkable with another MPC)	None	Yes	Yes
Summit Audio	TPA-200B	Tube	2	None	Yes	Yes
Symetrix	SX202	Solid state	2	None	Yes	No
Sytek	EQ4X-1M	Solid state	1	4-band parametric	Yes	Yes
Sytek	MPX-4A	Solid state	4	None	Yes	No
Sytek	MPX-4A 2	Solid state	4	None	Yes	No
Sytek	MPX-4D	Solid state	4	None	Yes	No
TC Electronic	1140 Parametric Equalizer (Mic Preamp)	Solid state	1	2-band parametric	Yes	1/4", XLR
TC Electronic	MP-1A	Solid state	N/A	+20 dB to +70 dB in 5 dB steps	No	2 independent channels for mics or instruments
The John Hardy Co.	Jensen Twin Servo	Solid state	1-4 (expandable)	None	No	No
The John Hardy Co.	M-1	Solid state	1-4 (expandable)	None	No	No
The John Hardy Co.	M-2	Solid state	1-4 (expandable)	None	No	No
TL Audio	PA5001	Tube	4	90 Hz low-cut filter	Yes	No
TL Audio	VP5050	Tube	1	Low-cut filter	Yes	Yes
TL Audio	VP5051	Tube	1	4-band	Yes	Yes
Whirlwind	MD-1	Solid state	1	None	Yes	Yes
Yamaha	HA8	Solid state	8	None	No	Yes
Yamaha	MLA7	Solid state	8	None	No	Yes

Fry Warning	Frequency Response	Noise	Total Harmonic Distortion	Special Features	Price
Clip LED	10 Hz-30 kHz	< -127.5 dB	0.001%-0.5%	Jensen input transformers; twin servo gain stage; mix bus assign for multiple mic/instrument stereo imaging; unique IDSS control for adjusting harmonic distortion; high-output headphone amplifier	M80 - \$1,899.95 MP20 - \$599.95
Clip LED	20 Hz - 40 kHz	< -127.5 dB	0.001%	Jensen twin servo input transformer; 8 smart compression preset curves specifically designed for voice, downward expander; de-esser; EQ frequency tailored for voice applications	\$199.95
None	25 Hz-20 kHz	75 dB S/N	0.050%	Compatible with RDL rack-mounting accessories; switchable phantom power	\$269
3-segment LED	70 Hz-30 kHz	70 dB S/N	0.030%	5-channel active line mixer/mic pre with switchable phantom power	\$223
None	10 Hz-18 kHz	70 dB S/N	0.2%	Small size (about 0.5"x1.5"x3"); individual gain adjust; mic/line mix	\$108
None	10 Hz-18 kHz	70 dB S/N	0.2%	Small size (about 0.5"x1.5"x3"); individual gain adjust	\$113
None	20 Hz-22 kHz	80 dB S/N	0.05%	Voltage-variable attenuator/mic preamp; line or mic input/output; small size (about 0.5"x1.5"x3"); control via external potentiometer or 0-10 VDC	\$102
None	50 Hz-30 kHz	70 dB S/N	0.05%	Small size (about 0.5"x1.5"x3"); switchable phantom power; fixed gain of 50 dB	\$86
None	50 Hz-25 kHz	75 dB S/N	0.05%	Switchable phantom power; small size (about 0.5"x1.5"x3"); adjustable gain	\$119
None	50 Hz-25 kHz	75 dB S/N	0.05%	Gating preamp via external control; switchable phantom power; small size (about 0.5"x1.5"x3")	\$134
None	50 Hz-25 kHz	70 dB S/N	0.05%	Switchable phantom power; small size (about 0.5"x1.5"x3"); adjustable gain	\$136
Clip LED	20 Hz-200 kHz	97 dB S/N	0.009%	Stereo with pan; phantom power	\$549
Clip LED	20 Hz-20 kHz	102 dB S/N	0.007%	Phantom power; very clean	\$199
6-segment LED, clip LED	20 Hz-20 kHz	97 dB S/N	0.01%	Mic pre with high-cut/low-cut filters; adjustable de-esser; adjustable compressor; phantom power; mic/line mix; line-level input	\$599
5-segment LED	20 Hz-60 kHz	69.5 dB S/N; -129.5 dB EIN	0.002%	2 independent preamp channels; transformerless; electronically balanced input; phantom power; switchable on/off; balanced and unbalanced output connectors; output phase-reverse switch; single rackspace	\$799
Clip LED, VU meter	5 Hz-65 kHz	-84 dBu 108dB B S/N	0.05%	"Clean" to "saturated" valve sounds; stereo linkable with a second MPC-100A; Jensen mic transformer; +4 dBu and -10 dBV outputs	\$2,400
Clip LEDs (input and output)	10 Hz-20 kHz	-84 dBu 108dB B S/N	0.02%	Controllable sound (continuously variable from "clean" to "overdrive"); balanced output stage	\$2,300
Clip LED	20 Hz-20 kHz	95 dB S/N; -128 dBm EIN	0.007%	Left and right mix output	\$349
Peak LED	10 Hz-85 kHz	96 dBm S/N; -129 dBu EIN	0.0015%	Class A hybrid	\$1,460
Peak LED	10 Hz-85 kHz	96 dBm S/N; -129 dBu EIN	0.0015%	Class A hybrid	\$1,280
Peak LED	10 Hz-85 kHz	96 dBm S/N; -134 dBu EIN	0.0015%	Class A hybrid	\$1,480
Peak LED	10 Hz-85 kHz	96 dBm S/N; -129 dBu EIN	0.0015%	Class A hybrid	\$1,870
Overload LED	N/A	N/A	N/A		\$760
N/A	N/A	N/A	N/A	48V Phantom Power 1/4", XLR mic inputs	\$2,395
20-segment LED, clip LED	N/A	N/A	N/A	Two discrete op amps per channel; best Jensen input transformer (JT-16-B); no capacitors in signal path	\$1,550- \$4,250
20-segment LED, clip LED	N/A	N/A	N/A	990 discrete op amp; best Jensen input transformer (JT-16-B); no capacitors in signal path	\$875-\$2,905
20-segment LED, clip LED	N/A	N/A	N/A	990 discrete op amp; best Jensen input transformer (JT-16-B); no capacitors in signal path	\$920-\$3,085
Peak LED	20 Hz-40 kHz	-127 dBu EIN	0.05%	4 12AX7 tubes; 2 tube stages per channel	\$699
Clip LED	20 Hz-40 kHz	-127 dBu EIN	0.05%	Mono tube mic pre and compressor	\$449
Peak LED	20 Hz-40 kHz	-127 dBu EIN	0.05%	3 12AX7 tubes, voice processor	\$699
None	6 Hz-25 kHz	-123 dB EIN	0.05%	Built-in headphone amp with volume control and minimixer to mix in a separate line input; battery operated with belt clip; selectable phantom power	\$349
Peak LED	20 Hz-40 kHz	-128 dB EIN	0.05%	Phantom power; signal present LED; remote-control capable	\$1,779
Peak LED	20 Hz-20 kHz	-128 dB EIN	0.1%	Phantom power	\$599

2-band shelving	MTC	N/A	1	18-bit, 64x oversampling	20-bit, 128x oversampling	44.1 kHz	Optional	2.55 GB	8051 Front SWS-Cop-1 digital converter; easy expansion	\$1,395
High/Low Shelving (10kHz, 100 Hz)	MIDI Clock, MTC, MMC	30	0	18-bit	18-bit	44.1 kHz	Yes	4 GB max	N/A	\$1,250
N/A	LTC, VITC, word clock	All frame rates	N/A	24-bit, 64x oversampling	24-bit, 64x oversampling	32, 44,056, 44.1, 47,952, 48 kHz	Yes	9 GB	UFC-24 24-channel Digital Format Converter	\$24,950
3-band with high-shelf, low-shelf, parametric midband	MIDI Clock, MTC, SMPTE (option)	24, 25, 29.97, 30, 30d	3	18-bit, 128x oversampling	20-bit, 128x oversampling	44.1 kHz	No	4 GB (x2)	Automated mixing software (PC & Mac)	\$2,495

HOUR DAY

DOUBLE YOUR OUTPUT FOR LESS THAN THE COST OF TWO SINGLE DAT RECORDERS

If you've been asking for more hours in the day, TASCAM's DA-302 Dual DAT Recorder makes your time count double. Finally, you can dub at twice normal speed with ABS time, subcode and PCM data intact. Make two masters at a time, even dub from any location on the source tape — no more rewinding! And the DA-302 costs hundreds of dollars less than you'll pay for two single units — only \$1999 (MSRP). See your TASCAM dealer or call TASCAM FaxBack at 800•827•2268 and request document #2330. The DA-302 Dual DAT Recorder. Put it to work in your studio 48 hours a day, 7 days a week.

RECORDING/EDITING SOFTWARE

Manufacturer	Product	Platform	# of Audio Tracks	Waveform Editing	Audio Effects	Fade Types	Dynamics Processing	Time Compression	Pitch-Shift Type
AnTares Systems	Infinity 2.08	Mac	1 or 2	Yes	Mix, invert, reverse, silence, normalize, change gain, create, loop point, loop selection	Linear, exponential, crossfade	Gain change	No	N/A
BIAS	Peak 1.6	Mac	2 (stereo) or 1 (mono)	Yes	Convolve, ring modulate, mix, rang, Rappily, invert phase vocoder	Linear, equal power, user-definable curve	Normalize, amplitude gain envelope	Yes	Phase vocoder
Digidesign	Pro Tools Powermix 4.1	Mac	16 playback/2 record	Yes	Reverse, normalize, gain, invert, pitch shift, time compression/expansion	All fade types (customizable)	N/A	Yes	Traditional
Digidesign	Session 2.0	Win 95	8	No	Parametric EQ	Customizable fade in/out, crossfade	N/A	No	N/A
Innovative Quality Software	SAW 32 / SAW Plus 32	Win 95, NT	24 stereo or mono (8 tracks for SAW 32) (48-track equivalent), 16 simultaneous record	Yes	Varipitch, reverse phase and audio, paragraphic EQ, echo/delay (all real-time)	Manual and auto crossfade, linear, log, antilog, user-designable real-time mixing	Gate, compressor, limiter, normalizer	No	N/A
Innovative Quality Software	SAW Plus	Win 3.1, 95, NT	16 stereo or mono (32-track equivalent)/8 simultaneous record	Yes	Varipitch, reverse phase and audio, paragraphic EQ, echo/delay (all real-time)	Manual and auto crossfade, linear, log, antilog, user-designable real-time mixing	Gate, compressor, limiter, normalizer	No	N/A
Macromedia	Deck II 2.6.1	Mac (68k and PPC)	999 total - playback track count is scalable.	No	68k & Power Mac: Invert, reverse, normalize, group normalize. Power Mac: parametric EQ, delay, multitap delay; chorus; high-shelf, low-shelf, graphic EQ; gain (all real-time)	7 shapes for fade/crossfade & custom	None	No	N/A
Macromedia	SoundEdit 16	Mac (68k and PPC)	Unlimited work tracks	Yes	Amplify, mix, reverse, bender (pitch envelope), delay, echo, emphasize, amplitude envelope, EQ (7 band graphic), flanger, noise gate, normalize, reverb, pitch shift, smooth, tempo (all destructive)	3 fade shapes & custom	Gain change	Yes	Sample Rate
Minnetonka Software	FastEDiT	Win 3.1, 95, NT	4	Yes	Normalize, gain change, reverse EQ, Gearshift	Linear, exponential, crossfade	N/A	No	Traditional
Minnetonka Software	MxTrax 1.4	Win 95, NT	Hardware-dependent	Yes	None in software. DSP available via V8 Gearhead plug-in	fade-in/fade-out linear crossfades	DSP-based only	No	Traditional
SADiE	Disk Editor	Win 3.1, 95	10	Yes	Delay, chorus, flange, reverb, EQ, noise abate, stereo width, varispeed	Linear, logarithmic, hypercosine, four third, exponential, equal power, cubic, cosine, fade, crossfade	Compression, expansion, gating, dither	Yes	Traditional
SEK'D	Samplitude 24/96	PC	999	Yes	Yes	Yes	Expander, multiband dynamics	Yes	Pitch shift to intervals
SEK'D	Samplitude 4.0	Win 95, NT	Unlimited (hardware-dependent)	Yes	Delay, parametric EQ, normalizer, varispeed, room simulation, distortion	Linear, exponential, logarithmic, freehand, draw crossfade	Gate, compressor, expander, limiter, distortion	Yes	Traditional and formant preserving
SEK'D	Samplitude Studio 4.5	PC	999	Yes	Mix, invert, reverse, silence, normalize, pitch shift, room simulator	Linear, logarithmic, crossfade	Expander, compression	Yes	Yes
Sonic Foundry	Sound Forge 4.0	Win 3.1, 95, NT	2 (stereo)	Yes	Amplitude modulation, chorus, delay echo (simple and multitap), envelope, EQ (paragraphic, parametric, graphic), flange, gapper/snipper, noise gate, phaser, reverb, reverse, vibrato, wah-wah	Logarithmic, linear, crossfade, graphic in/out, exponential	Graphic dynamics, multiband dynamics	Yes	Traditional and Tempo preserving
Steinberg	ReBirth	Power Macintosh, Win 95	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Steinberg	ReCycle 1.6	Mac; Win 3.1, 95	1	No	N/A	N/A	N/A	No	N/A

Trim Silence	Sample-Rate Conversion	DSP Plug-In Formats	DC Offset	Audio-to-MIDI Conversion	Extract Timing from Audio	Special Features	Price
No	No	None	No	No	No	Real-time loop adjust; synthesis looper; rotated sums looper; freeze looper; crossfade looper; spectral phase randomization; loop auto scan	\$325
No	Yes	Premiere	No	No	Threshold function	Unlimited undo/redo; nondestructive disk-based editing; import CD audio; sampler support; find/repair clicks; encode RealAudio (Internet-ready) files; batch file processing; playlists; adjust and capture loops during playback; dynamic and tape-style scrubbing	\$499
Yes	Yes	AudioSuite	Yes	No	No	AudioSuite; PPC native code; edit during playback; professional digital video; loop recording; multimedia authoring tools; automation of volume, pan, mute, send; multiple edit playlists per track	\$795
Yes	Yes	Digidesign	No	No	No	Automated gain and pan with graphic breakout editing; digital/analog send and returns; infinite playlists; frame-accurate sync to AVI video	\$795 (AM III) \$195 (Session)
Yes	Yes (real-time)	IQS	Yes	No	No	Nonlinear, nondestructive; drag-and-drop multitrack recording/editing with real-time mixing/effects processing; direct CD-burn plug-in	\$700
Yes	Yes (real-time)	IQS	Yes	No	No	Nonlinear; nondestructive; drag-and-drop multitrack recording and editing with real-time mixing and effects processing	\$500
Yes	Yes	Premiere	No	No	No	Quick Time chase positioning	\$399
Yes	No	Waves NPP is supported	No	No	No	Shekwave Audio (SWA) authoring	\$399
No	No	None	No	No	No	Ultra fast cut-and-paste editing, non-destructive editing with edit history; bundled with playlist editor and a catalog program	\$199
No	No	V8 Gearhead	No	No	No	Build custom mixer with drag-and-drop mixer components; all controls and effects are real time; up to 32-channel mixer; dozens of real-time plug-ins; aux sends to external effects gear; written to run on native Digital Audio Labs V8 hardware platform; allows DSP plug-ins with V8API	\$599
Yes	Yes	SAVL (Studio Audio Video Limited)	Yes (automatic)	No	No	24-bit recording and editing; 96 kHz-capable; real-time crossfades; PQ editing; price includes computer and drive	\$10,995
Yes	Yes (real-time)	DirectX	Yes	No	Yes	High resolution (24-bit 96kHz) multitracking, mastering software; multiband dynamics; punch in/out real-time mixer; DirectX, CD burning "on the fly"; 32-bit floating point, dither; noise shape; draw volume/pan; fader/pan automation; real-time noise reduction; room simulator; 3-band parametric EQ	\$325
Yes	Yes	None	Yes	No	Yes	Real-time DSP on all tracks with delay, pan; comp/lim/exp/gate/distortion; room simulation module; reverb; CD mastering (PQ edits)	\$599
Yes	Real-time sample rate conversion/resampling	DirectX	Yes	No	Yes	Surround; FFT Draw filter; declipping noise removal; distortion; 3 and 5-band parametric EQ; 100 levels of undo; automatic real-time loop optimizer; chase lock/SMPT/MIDI/MTC sync	\$599
Yes	Yes	DirectX Media and Proprietary	Yes	No	No	Active-streaming format-file support; auto region; AVI file support; channel converter; convert to 8-bit; crossfade loop tool; DTMF/MF synthesis; insert silence; invert/flip; mute; noise gate; normalize to peak or RMS power; DirectX Audio support; sampler tool; simple synthesis; smooth/enhance; statistics tool; volume	\$495
N/A	N/A	N/A	N/A	N/A	N/A	Export audio files of songs; sync to MIDI sequencers; modifications available for downloading with new drum sounds	\$199
No	No	None	No	Yes	Yes	Automatically slices audio into rhythmic components and sends to MIDI sampler; saved MIDI file plays back loop; supports Roland S-764, Akai (S1000, 2000, 3000 Series), E-mu (ES132, E64, E1V), Kurzweil (K2000, 2500), Ensoniq (ASR10, EPS, EPS16+)	\$199

Upgrade

**to BASF ADAT MASTER TAPE
No Matter which ADAT
system you use.**

Why? It's because **BASF** is introducing a new adat tape specifically designed to give you the ultimate performance from any adat system. **ADAT MASTER** delivers consistently lower error rates than other brands of tapes on the market — translating into fewer errors on your critical master recordings. And a specially constructed ABS shell provides precision tracking and reduces risk of dropouts caused by static or dirt. A convenient sliding erase-lock tab provides a simple means to safeguard important masters. Available in 40 and 60 minute lengths.

EMTEC Magnetics

Distributed in North America by JR Pro Sales Inc. ☎ Call 1-888-295-5551 for your nearest dealer, or visit our web site at www.jrpro.com

SOFTWARE PLUG-INS

Manufacturer	Model	Type	Platform	Formats	Special Features	Price
AnTares Systems	Auto-Tune	Automatic and graphic pitch-correction system	Mac	TDM, VST	Automatic detection and correction from A0 to C6, 30 different microtonal and ethnic scales, optional vibrato, desired pitch drawing, pitch correction, speed control	\$599 (TDM), \$399 (VST)
AnTares Systems	JVP Voice Processor	Compressor, delay effects, parametric EQ, de-esser	Mac	TDM, SDII	24-bit processing, all four processors, two channels on one DSP chip	\$499 (TDM), \$199 (SDII)
AnTares Systems	Multiband Dynamic Tools	5-band dynamic EQ, compressor, limiter, expander	Mac	TDM, SD I	Graphic interface for gain-curve editing, output limiter (clip sentry), soft clipping, look-ahead processing, gain-reduction meter and clip indicator	\$599 (TDM), \$249 (SDII)
AnTares Systems	Spectral Shaping Tool	Spectral shaping tool	Mac	TDM	Transforms speaker/room into any desired environment	\$499
APB Tools	Sigma 1	Surround-sound production	Mac	TDM, stand alone	Stand-alone DAE-aware application; reads Pro Tools sessions for distributing up to 32 individual tracks or inputs over as many as 16 outputs (2 I/Os) via mouse, joystick, tablet, etc.; converts Pro Tools system into a configurable surround-sound production system. Version 1.6 includes Sample Sync, video capabilities	\$2,300
Apogee Electronics	MasterTools	Mastering tools	Mac	TDM	Exclusive UV-22 process to retain 24-bit quality in 16-bit domain, 3-D historical metering, channel phase reverse, DC-offset removal, NOVA digital "over" removal, peak and average metering	\$795
Arboretum Systems	Hyperprism 2.0	Lowpass, highpass, bandpass, band-reject, phaser, flanger, chorus, ring modulator, dropper, tremolo, pan, auto pan, vibrato, stereo dynamics, quasi-stereo, pitch-time changer, compressor, reverb, delay, echo, EchoTranz, Sonic Decimator, HyperVerb, frequency-shifter, distortion, Cross-Convolve, Z-Morph, More Stereo	Mac	Imports/exports SDII and AIFF files	Real-time effects processing w/automation; supports all sound cards w/Sound Manager; has direct drivers for AMII, AMIII, and Korg 1212 I/O	\$249
Arboretum Systems	Hyperprism Plug-In Pack	Lowpass, highpass, bandpass, band-reject, phaser, flanger, chorus, ring modulator, dropper, tremolo, pan, auto pan, vibrato, stereo dynamics, quasi-stereo, pitch changer, compressor, reverb, delay, echo, EchoTranz, Sonic Decimator	Mac, Win 95	Premiere, AudioSuite, VST, DirectX	Real-time 32-bit audio effects algorithms; supports 11, 22, 44, and 48 kHz sample rates and 8 and 16-bit sample resolutions; automation (VST only)	\$299
Arboretum Systems	Hyperprism-TDM	Lowpass, highpass, bandpass, band-reject, phaser, flanger, chorus, ring modulator, dropper, tremolo, simultaneous stereo tremolo, alternating stereo tremolo, simultaneous crossing pan, alternating crossing pan, vibrato, stereo dynamics, quasi-stereo, more stereo, hyperstereo, M-S matrix	Mac (NuBus and PCI)	TDM	Real-time audio effects processing; built-in MIDI-based and time code-based automation of effect parameter changes; multi-effects can be applied on any number of tracks; done with mouse, with MIDI (OMS), and/or with time code based automation	\$499
Arboretum Systems	Ionizer 1.0	Noise reduction, compressor, expander, up to 512-band EQ	Mac	Premiere, stand alone	512-band EQ with 32-bit internal processing; restoration and audio sculpting; live processing; unlimited file-length processing; several instances of the same plug-in can be active simultaneously and independently (requires approximately 50 MHz of processing speed per active window); direct support of Audiomeia III, PCI24, and 1212 I/O	\$399
Arboretum Systems	MetaSynth	Sampling, wavetable, additive, subtractive, granular and FM sound generating with resynthesis, vocoding, morphing, and convolution technologies	Mac	Imports AIFF and SDII files	Tools for sample editing, advanced sound-morphing tools, frequency-domain graphic filtering, sound spatialization, extensive effects w/real-time preview	\$249
Arboretum Systems	Ray Gun	Noise reduction: Static, hiss, pops, clicks, hum, rumble	Mac, Win 95	Premiere, DirectX	Real-time point and shoot interface	\$99
Aureal Semiconductor		3-D audio rendering	Mac	TDM	True positional 3-D audio including Audio Wave Tracing	\$499
BIAS	SFX Machine	Modular synthesis and multi-effects	Mac	Premiere	Vintage effects and new sonic tools, modular-synth edit screen, expand with downloadable preset files	\$299

SOFTWARE PLUG-INS

Manufacturer	Model	Type	Platform	Formats	Special Features	Price
Digidesign	D-Fi	Audio destruction	Mac	TDM, AudioSuite	"Down processing" and analog-synth effects for music and sound design, family of plug-ins: LoFi (noise generation, bit-rate reduction), SciFi (ring and frequency modulation), RectiFi (waveform rectification), VarFi (speed-up and slow-down effects)	\$395
Digidesign	D-Verb	Reverb	Mac	TDM	Seven algorithms, presets and adjustable parameters	\$495
Digidesign	D NR	Noise reduction	Mac	TDM, SDII	Operates in real time: up to 1,024 bands	\$995
Digidesign	DPP-1	Pitch shifting	Mac	TDM	Up to 4-octave range, dynamic automation	\$495
Digidesign	ToelBelt	Processing accessories for Pro Tools	Mac	Stand alone, AudioSuite	Provides many non-real-time processes, including TimeMod, looping, reversing, inverting, etc.	\$425
Digidesign	VocAlign	Automatic audio-synchronization software	Mac	Stand alone, AudioSuite	Provides offline, automatic alignment and editing for lip-synching foreign dialog replacement and tightening up of double tracking, background vocals, and instruments	\$1,595
Dolby	Dolby Surround Tools	Dolby Surround encoder and decoder	Mac	TDM		\$1,495
Drawmer	Drawmer Dynamics	Noise gate, expander, compressor, limiter	Mac	TDM	Based on Drawmer's DS201 noise gate and DL241/251 compressor/limiter hardware	\$595
DUY	DAD Tape	Analog-tape simulator	Mac	TDM	Models four tape machines, at various speeds, noise reduction	\$599
DUY	DAC Valve	Tube simulation	Mac	TDM, SDII VST, Premiere, AudioSuite	Uses physical models to simulate tube warmth	\$799 (TDM), \$469 (SDII), \$469 (VST), \$199 (Premiere), \$469 (AudioSuite)
DUY	Max	Sound-level maximizer	Mac	TDM, SDII VST, Premiere, AudioSuite	Intelligent Level Optimization algorithm provides seamless level maximizing and zero harmonic distortion	\$399 (TDM), \$299 (SDII), \$299 (VST), \$129 (Premiere), \$299 (AudioSuite)
DUY	Shape	Frequency-dependent wave-shaping device	Mac	TDM, SDII VST, Premiere, AudioSuite	Three independent, user-defined sound shapers with infinite resolution and accuracy	\$699 (SDII), \$439 (TDM), \$439 (VST), \$149 (Premiere), \$439 (AudioSuite)
DUY	Wide	Stereo multichannel spatial enhancer	Mac	TDM, SDII VST, Premiere, AudioSuite	Stereo and multi-channel spatial enhancer	\$399 (TDM), \$299 (SDII), \$299 (VST), \$129 (Premiere), \$299 (AudioSuite)
Event Electronics	DSP•FX Virtual Pack	EQ and effects	PC	DirectX	32-bit floating point architecture, MIDI controllable parameters, stand-alone mode	\$299
Focusrite	d2	EQ	Mac	TDM	Modeled after Red Range 2 Dual EQ designed by Rupert Neve	\$995
Gadget Labs	WaveWARM(tm)	Analog-tape and vacuum-tube simulation	Win	DirectX/ActiveMovie, stand alone	Adds warmth and richness to digital audio with special DSP algorithms that simulate vacuum tube overdrive and analog tape saturation	\$99.95
Gadget Labs	WaveZIP 1.02	Digital audio file compression	Mac, Win 3.1, 95, NT	MCP	Archiving utility that uses loss-free compression to reduce the size of digital audio files, Explorer-like interface for easy navigation, exclusive MusicCompress algorithm for lightning-fast operation	\$49.95
Gadget Labs	WaveZIP(tm)	Completely lossless compression of audio files for storage and archival	Win 95, NT	WAV	Supports standard WAV files (mono or stereo), raw PCM files, and Cakewalk BUN	\$49.95
GRM	GRM Tools, volume 1	Shuffle, EQ, comb filter, Doppler simulator	Mac	TDM	Only Doppler device available	\$499
GRM	GRM Tools, volume 2	Bandpass, delay, time freezing, pitch shifting	Mac	TDM	Features 24-tap delay, sharp bandpass filters, time freezing	\$499
Independent Audio	CEDAR for Protocols	Audio Restoration: real-time declick, de-crackle and de-hiss	Mac (NuBus)	TDM	Real time	Declick \$2,500 De-crackle \$2,500 De-hiss \$2,500 Hardware card \$2,500

SOFTWARE PLUG-INS

Manufacturer	Model	Type	Platform	Formats	Special Features	Price
Intelligent Devices	AD-1 Pro Audio Analyzer	Spectrum analyzer, supermeter, phase scope, waveform monitor	Mac	TDM, stand alone	Peak meters will show a single-sample clip, waveform display keeps a graphic history of every clip	\$449 (TDM); \$349 (stand alone)
Intelligent Devices	IQ Intelligent Equalizer	Adaptive learning EQ	Mac	TDM	Learns and automatically alters the spectrum of any audio signal to match that of any other signal	\$749
InVision Interactive	Cybersound FX	Multi-effects	Mac	Premiere, SoundEdit 16	15 assorted plug-ins	\$129
JLCooper	V/Desk 02R	Automation software for the Yamaha 02R	Mac	Yamaha 02R	Provides time code-synchronized dynamic recording and playback of all 02R functions	\$599.95
Lexicon	LexiVerb	Lexicon reverb	Mac	TDM	Four algorithms (plate, chamber, inverse, gate); customizable control of all parameters via macro controls; Pro Tools 4.0 automation support, 100 presets	\$795
Liquid Audio	Liquifier Plug-in for ProTools	Internet audio mastering software	Mac	AudioSuite	Uses Dolby Digital, used in conjunction with free Liquid Music Player	\$295
Opcode	Fusion Filter	Variable pole filter	Mac, Win 95	Premiere, AudioSuite, DirectX, (TDM, VST soon)	Three filters in a single patch, "pulse sequencer"	\$199.95 (TDM TBA)
Opcode	Fusion Vinyl	Emulated record surface characteristics	Mac, Win 95	Premiere, AudioSuite, DirectX, VST soon	Add scratches, dirt, hiss, surface wear, warp, rumble	\$99.95
Opcode	Fusion Vocode	Classic vocoder	Mac, Win 95	Premiere, AudioSuite, DirectX, (TDM, VST soon)	5-band tone control	\$199.95 (Premiere, AudioSuite, DirectX) (TDM TBA) \$495 (TDM)
QSound Labs	QSYS/TDM 2.0	Mono-to-3-D audio localizer	Mac	Pro Tools 3.x, 4.0/TDM	Completely automated under Pro Tools 4.0, unlimited inserts (restriction based only on amount of DSP Farms available)	\$495
QSound Labs	QTools/AX 1.0	3-D audio	Win 95, NT	DirectX	Three separate 3-D audio processing tools; mono-to-3-D localizer and simulated stereo processor; 3-D stereo sound-field expander	\$219
QSound Labs	QTools/SF 1.2	3-D audio	Win 95, NT	Sound Forge 3.0d and above	Three 3-D sound enhancement plug-ins for Sound Forge (mono-to-3-D localizer, 3-D stereo soundfield expander, and high-definition sample-rate converter)	\$195
QSound Labs	QX/SDII 2.0	3-D stereo sound-field expander	Mac	SDII	Compatible with NuBus SDII	\$195
QSound Labs	QX/TDM 2.0	3-D stereo sound-field expander	Mac	Pro Tools 3.x, 4.0/TDM	Completely automated under Pro Tools 4.0, AudioSuite compatible	\$195
SEKD	Sampltools D-EQ	Dynamics processor, EQ	Win 95, NT	DirectX		\$99
Sonic Foundry	Batch Converter	Batch file processing and file conversion	Win 3.1, 95, NT	Sonic Foundry proprietary	Extract regions to independent sound files, modify or chain existing functions to create limitless new effects; convert files to and from many sound-file formats	\$199
Sonic Foundry	Noise Reduction	Customized dynamic frequency filtering	Win 3.1, 95, NT	Sonic Foundry proprietary, DirectX	Accentuate or attenuate individual frequency points; specify attack and release speeds, FFT size, high-shelf gain, and overlap setting; click-removal tool; vinyl-restoration tool	\$249
Sonic Foundry	Spectrum Analysis	Frequency analysis	Win 3.1, 95, NT	Sonic Foundry proprietary	Monitors playback in real time; six windowing functions include Blackman-Harris, Hamming, and Hanning; Show Notes function displays musical notes and harmonics of selection; Sonogram format displays in black and white or color, with color intensity related to amplitude; Spectrum Graph format allows linear and logarithmic displays with line graphs, bar graphs, or filled graphs	\$149
Spatializer	PT3D	3-D audio mixing tool	Mac	TDM	"Set & forget" performance; can spatialize an unlimited number of tracks, mono compatible	\$399
Steinberg	Ambisone	3-D stereo field audio placement	Mac	VST	Modulation sources are included to automate 3-D placement	\$199
Steinberg	Audio Track VST	Equalization/compression/expansion/gate	Mac VST, Win 95	Mac VST, Wavelab (included only with producer pack)	Keyboard entry and graphic control	Mac \$249 Win bundled with producer pack

SOFTWARE PLUG-INS

Manufacturer	Model	Type	Platform	Formats	Special Features	Price
Steinberg	DeClicker	Real-time removal of pops and clicks from recordings	Mac, Win 95, NT	Mac: TDM, VST; Win: WaveLab 2.0, DirectX	Audio restoration of vinyl records or digital static	\$399
Steinberg	DeNoiser	Real-time removal of broadband noise from any audio material	Mac, Win 95, NT	Mac: VST; Win: WaveLab 2.0, DirectX		\$399
Steinberg	Free Filter	Linear phase 1/3-band equalizer	Mac, Win 95	Mac VST, Win: WaveLab, VST, DirectX		\$399
Steinberg	Free-D	Realtime 3-D simulation	Mac	VST	Uses Apple Quickdraw 3-D technology	\$199
Steinberg	Grungelizer	Adds pops, clicks, noise, and hum to audio material for dating and emulating vinyl records	Win 95, NT	WaveLab		Free with WaveLab 1.5
Steinberg	Loudness Maximer	Adaptive dynamics optimizer	Mac, Win 95, NT	Mac: VST, TDM; Win: WaveLab, DirectX	Increases volume without changing characteristics of original source material	\$399
Steinberg	Magneto	Analog tape-saturation emulation	Mac, Win 95	Mac: VST; Win: WaveLab, VST, DirectX	Analog warmth with digital audio	\$399
Steinberg	Red Valve-it	Tube-amp and speaker emulator with 3-band EQ and gate	Mac	TDM, VST		\$199
Steinberg	Roomulator	Reverb set for Cubase VST	Mac	VST	Intuitive 2-D manipulation capabilities let you easily adjust the overall room timbre while listening to the results in real time	\$399
Steinberg	Spectralizer	Sonic optimizer	Mac, Win 95, NT	Mac: TDM, Win: WaveLab 1.5, VST, DirectX	Boosts second- and third-order harmonics, increasing presence and clarity	\$399
Steinberg	Time Guard	Timing analyzer for detecting and correcting delays between audio tracks	Mac	TDM	Detects and displays rushing and dragging	\$399
Steinberg	Tun-A	Chromatic and guitar tuners for checking pitch of recorded material or tuning instruments	Mac	TDM		\$149
Steinberg	Voxciter	Vocal recording finalizing/refreshing/restoring	Mac	Mac VST	Flexible noise gate, dual vocal parametric equalizer, vocal compressor/expander with attack/release, independently equalizable sidechain feed for compressor/expander, real-time neural automatic de-esser	\$399
Steinberg	Waldorf D-Pole VST	Multimode filter	Mac, Win 95	VST	LFO modulation to different destinations, tempo and time based rates, low-, band- and high pass, notch and resonator w/resonance, either 12 dB or 24 dB per octave	\$199
TC Electronic	TC Native EQ	EQ	PC	DirectX	Graphic and parametric user interfaces for equalization	\$449
TC Electronic	TC Native Reverb	Reverb	PC	DirectX	Graphic and parametric user interfaces for reverb design	\$549
TC Electronic	TC Reverb/Soundscape	Reverb	PC	SoundScape	Provides TC-Quality reverb for all Soundscape DAW users	\$699
TC Electronic	TC Tools	Reverb and chorus/delay	Mac	TDM	Based on TC Electronic M5000 digital audio mainframe reverb	\$995
Wave Mechanics	Pure Pitch/with Pitch Doctor	Pitch shifter/automatic tuning algorithm	Mac	TDM	Alters pitch of vocal and instrument sounds without distorting original character, can adjust inflections of dialog to enhance expressiveness; automatically corrects intonation problems; includes comprehensive preset library	\$695
Waves	DeEsser	DeEsser	Mac, Win (NuBus only)	TDM, SDII MultiRack, AudioSuite, Premiere, VST, ActiveMovie	Simple interface for DeEssing with lower CPU requirements, requires WaveKey (\$100)	\$200
Waves	DSP for Windows Bundle	Bundle	Win	V8 and ActiveMovie	Contains L1, UltraMaximizer, C1, compressor/gate/expander/sidechain, Q10 ParaGraphic EQ, S1 Stereo Imager, TrueVerb; includes WaveKey dongle	\$1,000
Waves	EasyWaves Bundle	Entry level plug-in bundle	Mac, Win	Premiere, AudioSuite, VST, ActiveMovie	Contains AudioTrack 4-band EQ/compression/gate and EZVerb	\$150

SOFTWARE PLUG-INS

Manufacturer	Model	Type	Platform	Formats	Special Features	Price
Waves	Gold Bundle	Bundle: L1, C1, O10, S1, TrueVerb, PAZ, MaxxBass, RenComp, PS22, AudioTrack, DeEsser, WaveConvert Pro, MultiRack	Mac	TDM, SDII (NuBus only), MultiRack, AudioSuite, Premiere	Includes all current Waves plug-ins/applications; users receive all new plug-ins released in 1998, includes WaveKey dongle	\$2,300
Waves	MaxxBass	PsychoAcoustic Bass Enhancement	Mac, Win	TDM, SDII (NuBus only), MultiRack, Premiere, AudioSuite, VST, ActiveMovie	Virtual subwoofer, requires WaveKey dongle	\$300
Waves	Native Power Rack	Bundle	Mac, Win	AudioSuite, Premiere, VST, ActiveMovie	Contains L1, UltraMaximizer, C1, includes WaveKey dongle	\$495
Waves	PS-22 StereoMaker	Pseudo stereo processor	Mac	TDM, SDII (NuBus), MultiRack	Creates stereo images from mono sources based on user defined curves. Also enhances stereo files. Requires WaveKey dongle \$100	\$300
Waves	Renaissance Compressor	Analog compression emulation	Mac	TDM, SDII (NuBus), MultiRack	Recreates the warm sound qualities and simple operation of classic analog compression. ARC automatic release control. Requires WaveKey dongle \$100	\$300
Waves	TDM Bundle	Bundle	Mac	TDM, SDII (NuBus only), MultiRack, AudioSuite, Premiere	Contains L1, UltraMaximizer, C1, includes WaveKey dongle	\$1,000

Change the course of music history.

Hearing loss has altered many careers in the music industry. H.E.A.R. can help you save your hearing. A non-profit organization founded by musicians and physicians for musicians, music fans and other music professionals. H.E.A.R. offers information about hearing loss, tinnitus, testing, and hearing protection. For an information packet, send \$10.00 to: **H.E.A.R. P.O. Box 460847 San Francisco, CA 94146** or call the **H.E.A.R. 24-hr hotline at (415) 773-9590.**

 HEARING EDUCATION AND AWARENESS FOR ROCKERS

SONIC TREATMENT

Manufacturer	Model	Type	Fire Rating	Dimensions	Special Features	Price
ASC	Attack Wall system	Acoustic SubSpace (gobos) for tracking, mixing, and mastering	N/A	Varies	Consists of Studio Traps and Monitor Stands; isolates the listening position from the room	\$4,000–\$10,000
ASC	Monitor Stand	Monitor stand and bass trap	N/A	13", 16", 20" diameter; up to 4' tall	Eliminates the midbass hump for increased punch and bass extension, concentrating on the vertical energy between floor and ceiling; 200 lb. load capacity	\$698–\$1,356
ASC	Quick Sound Field (QSF) system	Acoustic SubSpace (gobos) for recording	N/A	Varies	Consists of 8 or more Studio Traps to isolate signal from room; increase or decrease room ambience by adjusting placement; can be adjusted for a bright or dead recording	Starts at \$2,550
ASC	Studio Trap	Bass trap and main building block of Attack Wall and QSF systems	N/A	9" diameter x 4' tall; can be raised to 6.5' (includes stand)	Consists of diffusive side and absorptive side; adjustable for different applications; absorbs 110 Hz and 400 Hz	\$315
ASC	Tube Trap	Bass trap	N/A	9", 11", 16", 20" diameter; 4' tall	Bass absorption down to 35 Hz with built-in diffusion above 400 Hz	\$248–\$678
Acoustic Systems		Acoustic enclosures	N/A	Varies	Modular steel isolation enclosures	\$4,700–\$10,500
Acoustical Solutions	AAP AlphaPyramid foam	Sound-absorbing foam	ASTM E-84 Class 2	2'x2' sheets; 2", 3", and 4" thick	Matching pattern; variety of colors; NRC 0.70–1.00	\$160–\$178/box
Acoustical Solutions	AB10-NR Audio-Seal Sound Barrier	Sound-transmission blocker, high temperature-fused vinyl	N/A	Roll: 54"x60"x1/8"	STC 27; stops noise from transmitting through walls, floors and ceilings	\$1.75–\$2.25 per square foot
Acoustical Solutions	AS1, AS2 AlphaSorb Panels	Rigid, sound-absorbing wall panels and hanging baffles	Class 1	Any size up to 4'x10'; 1" or 2" thick	NRC 0.80–1.00; 60 colors; custom shapes and cut-outs available	\$39–\$280
Acoustical Solutions	Soundtex, SD2BT, SD2YD	Fabric wall covering	Class 1	Bolt: 54"x35 yards; linear yard: 54"x36"	18 colors; NRC 0.25; easy to install	Bolt: \$850; yard: \$32
Auralex Acoustics	LENRD (Low End Noise Reduction Device)	Bass trap	Class B	24" tall x 16" wide	12 different colors; 8 pieces per box; triangular to fill corners; price includes shipping	\$239.92 per box
Auralex Acoustics	SheetBlok	Sound barrier	Class B	1/8" thick; 4'x10' and 4'x30' roll sizes	STC 27; impervious to solvents; UPS shippable; price includes shipping	\$140 (4'x10'); \$360 (4'x30')
Auralex Acoustics	Studiofoam	Absorptive foam	Class B	2'x4' panels; 1", 2", 3", and 4" thicknesses	12 colors; wedge cut and pyramid designs; 6–20 pieces per box (depending on thickness); price includes shipping	\$187.64–\$259.94 per box
Auralex Acoustics	T-Fusor	Diffusor	N/A	2'x2'	Wall mountable; fits drop ceilings; easily painted; 4 pieces; price includes shipping	\$219.96
Folded Space	Acoustic Space	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Modular system; each panel 2'x4'	128 square feet of surface area (64 reflective and 64 absorbent); eight acoustic panels, four sets stilts and linking hardware; shippable via UPS	\$549
Folded Space	Big Travel Kit	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	64 square feet of surface area (32 reflective, 32 absorptive); four acoustic panels, two sets stilts, stacking and linking hardware; kit produces two bifolds on stilts, four freestands or one stacked bifold; shippable via UPS	\$279
Folded Space	Folded Wall	Modular system: bass trap, diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	Over 128 square feet of surface area; eight acoustic panels, four sets linking hardware, two stacking kits; may also be set up in subspace arrays; shippable via UPS	\$549
Folded Space	Medium Room Kit	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Modular system; each panel 2'x4'	Over 128 square feet of surface area; eight acoustic panels, two swivel stands, two sets stilts, six standoffs, linking hardware, and two extra 2'x4' slices of Auralex Studiofoam; shippable via UPS	\$649

PORTADAT

ALWAYS IN THE ACTION

PORTADAT is the recorder of choice for the TV documentary 'Astronauts'.

More than 4000 PORTADATs now in use and not a single one returned with a worn head drum.

Skywalker's Chris Boyes gathers sound effects for 'Titanic' with his PORTADAT in tight and dangerous locations.

The PORTADAT performed faultlessly despite extreme humidity on location for 'The Lost World: Jurassic Park' with Skywalker sound recordist Chris Boyes.

Egyptian national broadcaster EATV buys 300 PDR1000s, standardising on the PORTADAT for all OB and ENG work.

Film, radio, TV, music recording – whatever the application, PORTADAT delivers.

From the deserts of Egypt to the jungles of Costa Rica, PORTADAT consistently proves itself to be the most compact, reliable and best sounding professional DAT portable on the market.

No wonder PORTADAT users are amongst the busiest sound recordists in the business.

And now, PORTADAT is more affordable than ever before. So talk to HHB today about PORTADAT. And put yourself in the action.

PDR1000 4 head, 4 motor portable professional DAT recorder with 44.1/48/32kHz recording, balanced XLR analogue I/O and AES/EBU + SPDIF digital I/Os.

PDR1000TC 4 head, 4 motor professional portable DAT recorder equipped to record, generate and reference to timecode in all existing international standards.

SONIC TREATMENT

Manufacturer	Model	Type	Fire Rating	Dimensions	Special Features	Price
Folded Space	Small Room Kit	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	64 square feet surface area (32 reflective, 32 absorptive); four acoustic panels, two swivel stands, linking hardware, wall standoffs, and two extra 2'x4' of 2" Auralex Studiofoam	\$329
Folded Space	Small Travel Kit	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	Two acoustic panels (32 square feet of surface area); one set stilts and linking hardware; makes a bifold on stilts or two freestanding floor panels; light enough to be carried in one hand, shippable via UPS	\$144
Folded Space	Space Doc	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	96 square feet of surface area (48 reflective and 48 absorptive); six acoustic panels, two swivel stands, two sets stilts and linking hardware, shippable via UPS	\$439
Folded Space	Space Doc Plus	Modular system: bass trap, diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	164 square feet of surface area, six cloaking device acoustic panels plus LENRD bass traps, and six 2'x4' slices of 2" Auralex Studiofoam	\$599
Folded Space	VOX BOX	Modular system: diffusor, absorptive foam, acoustic panels, gobos	Class B foam and wood	Each panel 2'x4'	128 square feet of surface area (64 reflective and 64 absorptive), designed for vocals; eight acoustic panels mounted on four double-height swivel stands; shippable via UPS	\$699
Illbruck	SONEX	Absorptive foam	Class 1 or Class 2	2'x4' or 4'x4', 2", 3" and 4" thickness	Many colors and patterns available	\$2.50-\$6 per square foot
Industrial Acoustics	Quad Series Rooms	Noise reduction, bass trap, diffusion, absorption	Available on request	Custom	Offers complete studio treatment	Starts at \$7,000
Markertek Video	Blade Tiles: BT-2, BT-3, BT-4	Acoustic foam	UL94-HF-01	BT-2: 2"x16"x16"; BT-3: 3"x16"x16"; BT-4: 4"x16"x16"	Available in charcoal gray or medium blue (BT-2, BT-3 only); delivers superior sound absorption for studios and control rooms	\$3.49 (BT-2); \$4.49 (BT-3); \$5.49 (BT-4)
Markertek Video	Markerfoam MF-3 and MF-4	Acoustic foam sheets	UL94-HF-01	MF-3: 54"x54"x2"; MF-4: 54"x54"x3"	Available in charcoal gray or medium blue; delivers superior sound absorption for studios and control rooms	\$19.99 (MF-3); \$29.99 (MF-4)
Netwell Noise Control	Pyramids	Acoustic foam	Class 1 or 2	2"x2"x3" thick	Absorbs 90% reflected sound	\$2-\$4 per square foot
RPG Diffusor	BASS Trap	Bass Trap	Class A	23 5/8"x23 5/8"x12 1/4"	Designed to handle modal problems in rooms with 8' to 9' ceilings; maximum efficiency between 70-80 Hz	\$538 (for two)
RPG Diffusor	ProFoam	Absorbing Foam Panel	Class A Metallflex or Class B/C Polyflex	2'x2'x2", 4'x2'x2"	Employing VDAC Technology	Polyflex \$2.31 per square foot. MetaFlex - \$5.07 per square foot
RPG Diffusor	RFZ Abflector	Absorbing panel	Class A	19"x47 1/4"x6"	Provides exceptional broadband reflection control, improves imaging	\$541.80 (for four)
RPG Diffusor	Skyline	Diffusor	Class A	23 5/8"x23 5/8"x7"	Omnidirectional, primitive root diffusor, ideal for small rooms	\$270.90 (for two)
RPG Diffusor	SoundCorner	Bass Trap	Class A	48"x24"x2"	Absorbs lower frequencies from 150 Hz to 300 Hz	\$248.64 (for four)
Silent Source	SoundSucker	Corner bass traps	Class A, Class C	12"x48"	Available in charcoal, beige, brown, blue, red, purple, and yellow; 8 units per box, delivery included	\$200
Silent Source	Whisper Wedge	Absorptive foam	Class A, Class C	24"x48"; 2", 3", 4", and 6" thick	Many colors to choose from, 2-12 sheets per box (16-96 square feet), depending on size; Class 1 also available	\$160-\$250 per box

SONIC TREATMENT

Manufacturer	Model	Type	Fire Rating	Dimensions	Special Features	Price
Systems Development Group	Cutting Wedge	Absorptive foam	Southwest Laboratory fire and smoke analysis available on request	Various	Sawtooth pattern designed to provide the greatest absorption per square foot; excellent tear resistance and shape memory	Starts at \$2.63 per square foot
Systems Development Group	Model C	Diffusor	Full Class A	23"x23"x4.5"	Easy installation on wall or drop into a 24"x24" opening of a T-Bar grid; a version is available with a center cutout for recessed lighting fixtures	\$130
Systems Development Group	Model E	Diffusor	UL723 flame and smoke	15"x15"x9"	Small footprint; light weight; simple installation	\$55
Systems Development Group	Sonora Panel	Absorptive fiberglass	Class A	Up to 48"x120"x4"	Molded fiberglass board with nonresin chemically hardened edges, wrapped in Guilford fabrics; panel edges	Varies
Taytrix	Absorptive Panels	Absorptive panels	Class 1	2'x2', 2'x4', 2'x6'	Fiberglass absorption panels trimmed with decorator fabrics	Starts at \$129
Taytrix	Bass Trap	Bass trap		Varies	Custom orders for specific frequency trapping	Starts at \$18 per square foot
Taytrix	Portable Gobo System	Gobo	Class 1	16"x8"x48"; 32"x8"x48"	Stackable, lightweight, modular, interlocking acoustical control panels can be used independently, joined at any angle, or assembled into full booths	\$300-\$445
Wenger	Ceiling Diffusor	Acoustical panels	Class A	2'x2'; 4'x4'	Convex shape, impact-resistant PVC/acrylic plastic	\$81 (2'x2'); \$173 (4'x4')
Wenger	Pyramidal Diffusor	Acoustical panels	Class A	2'x2'; 4'x4'	Offset pyramid shape, impact-resistant PVC/acrylic plastic	\$49 (2'x2') \$206 (4'x4')
Wenger	Quadratic Diffusor	Acoustical panels	Class A	4'x4' (wells per sequence: 7; largest sequence: 4; sequences per panel: 3)	Design based on quadratic theory, effective over frequency range of 750 Hz to 3.3 kHz, impact-resistant PVC/acrylic plastic	\$406
Wenger	Trapezoidal Diffusor	Acoustical panels	Class A	2'x2'; 4'x4'	Offset trapezoid shape, fiberglass resin with white gel-coat finish	\$88 (2'x2') \$141 (4'x4')
Wenger	V-Room	Sound-isolating, modular studio with active acoustics (LARES-based)	Class A	From 5'8"x5'8" to 10'8"x13'2"	Variable acoustics provide acoustical simulations of 10 different environments	Starts at \$14,487
Wenger	Wall Diffusor	Acoustical panels	Class A	4'x4'; 4'x8'; other sizes available	Convex shape, PVC/acrylic plastic with reinforced corners and durable fabric covering	\$238 (4'x4'); \$492 (4'x8')
Whisper Room	4244PV and 4260PV	Practice/vocal booths	N/A	42" x42" x82.5"; 42" x60" x82.5"	Portable; modular; cable passage; ventilation system; door window	\$2,499- \$2,999
Whisper Room	PX Series enclosures	Sound-isolation	N/A	4'x4' and up ventilation system; door	Portable; modular; cable passage; window; expandable	Starts at \$4,975
Whisper Room	SE Series	Sound-isolation enclosures	N/A	Various standard sizes available	Portable; modular; easy assembly/disassembly; cable passage; ventilation system; door window; optional wall windows and caster plates	Starts at \$2,195

STUDIO FURNITURE

Manufacturer	Model	Type	Dimensions	Special Features	Price
Argosy Console	90 Series Console Housing	For Mackie 8•Bus mixers	89.5"–178"Wx45"Dx30"H	Expandable housing with rack inserts for patch bay, outboard gear, and/or computers	\$1,520 and up
Argosy Console	90 Series Console Housing	For Soundcraft Ghost mixers	89.5"–149"W x45"Dx30"H	Expandable housing with rack inserts for patch bay, outboard gear, and/or computer	\$1,538 and up
Argosy Console	90 Series Console Housing	For Yamaha 02R mixers	89.5"–149"Wx45"Dx39"H	Expandable housing with rack inserts for outboard gear and/or computers	\$1,729 and up
Argosy Console	90 Series Console Housing	For Digidesign ProControl	89.5"–149"Wx45"Dx30"H	Expandable housing with rack inserts for patch bay, outboard gear, and/or computers	\$1,529 and up
Argosy Console	90 Series Console Housing	For TASCAM DM8000 Digital Mixer	89.5"–149"Wx45"Dx30"H	Expandable housing with rack inserts for patch bay, outboard gear, and/or computers	\$1,529 and up
Argosy Console	DUAL 15	Workstation for digital based recording, mixing, and post systems	94"Wx50"Dx43"H	Holds (2) 21" computer monitors; 38 rackspaces	\$1,199
Argosy Console	Nevis Console Housing	For Mackie 8•Bus mixers	68.2"Wx44"Dx30"H	Console housing with eight 19" integrated rackspaces	\$699 and up
Argosy Console	Nevis Console Housing	For Yamaha 02R	68.2"Wx44"Dx30"H	Console housing with eight 19" integrated rackspaces	\$819.95 and up
Argosy Console	Nevis Console Housing	For Soundcraft Ghost	68.2"Wx44"Dx30"H	Console housing with eight 19" integrated rackspaces	\$819.95 and up
Argosy Console	Spire Rack Enclosures	Single, double, and quad 14 rack bays	22.7–82.25"Wx33"Hx24"D	Sturdy frame panel construction w/removable access doors	\$289.95 and up
Argosy Console	Spire Speaker Stands	42" speaker stand	Base: 16"Wx16"D, Top: 12"Wx12"D	For close-field monitoring	Single \$54.95; Pair \$99.95; Three \$139.95
Bryco Products	CD60, CDB60	Solid oak CD racks	21.5"x11"x4.75" (natural & black)	Table/wall-mount holds 60 CDs	\$59.95
Bryco Products	DP8, DP16, DP40	DAT-tape carrying case	8: 7.5"x4"x3" 16: 7.6"x7.6"x3" 40: 17.75"x8"x3"	Three models (8, 16, 40 capacity); nylon with plastic inserts	\$13.95 (8); \$19.95 (16); \$39.95 (40)
Bryco Products	DR-60 DATRAX	DAT-tape holder—solid oak (natural & black)	21.25Wx9.5"Dx2"H	Wall- or table-mount, holds 60 DAT tapes	\$59.95
Bryco Products	DRP-40	DAT-tape holder	17.4"Wx7.4"Dx2"H	Wall- or table-mount, holds 40 DAT tapes	\$21.95
Bryco Products	DSD-320	DAT-tape storage cabinet	19.5"Wx21.75"Dx15.5"H	Stores 320 DAT tapes	\$349
Littlite		Task lamps	6", 12", or 18" goosenecks	Flexible task lamp available in 5W or 2.5W	\$25–\$160
Omnirax	C2	Keyboard composing/audio-video workstation	45.8"Hx43.4"Dx107.25"W	Expanded workstation will fit any keyboard or double as an A/V editing station; room for two computer monitors, close-field monitors, and computer keyboard; 58 total rack spaces	\$1,599.95
Omnirax	Coda	Digital editing/mixing workstation	38.8"Hx38.5"Dx67.9"W	Compact ergonomic environment for computer and peripherals, inspired by Mackie's HUI, will also fit Yamaha 03D and other compact mixers and controllers; 8 rackspaces	\$749.95
Omnirax	Commander	Keyboard, composing, mixing workstation	48"Hx44.5"Dx87.3"W	Ultimate keyboard workstation for up to 88-note keyboards; room for computer and close-field monitors; 60 total rackspaces	\$1,299.95
Omnirax	CW-22	Rolling studio rack	50.5"Hx23.75"Dx20.6"W	22 rackspaces: 8 vertical below, 14 slanted above	\$274.95
Omnirax	CW-30	Rolling studio rack	36.5"Hx36.5"Dx20.6"W	14 rackspaces on sloping top, 10 rackspaces below, 6 more in lower rear	\$299.95
Omnirax	E-146	Rolling studio rack	30"Hx26"Dx20.6"W	Versatile slant rolling rack. 14 spaces front, 6 spaces in lower rear	\$209.95
Omnirax	M8	Mixing workstation	45.5"Hx36"Dx40.5"W	Sized to fit Mackie 24•8 mixer; 8 total rackspaces above	\$399.95
Omnirax	MiniStation	Compact keyboard/computer workstation	39.75"Hx30"Dx48"W	Perfect for keyboards up to 46.5" wide; space for computer; complete computer keyboard and writing shelf; 6 rackspaces	\$669.95
Omnirax	MixStation MAK24•8	Console workstation for Mackie 24•8 bus mixer	43"Hx38"Dx81.5"W	Ergonomic, multilevel working environment for Mackie 24•8 mixer, computer, and associated peripherals; total 42 rackspaces	\$1,199.95
Omnirax	MixStation MAK32•8	Console workstation for Mackie 32•8 bus mixer	43"Hx38"Dx90.5"W	Ergonomic, multilevel working environment for Mackie 32•8 mixer, computer, and associated peripherals; total 42 rackspaces	\$1,249.95

STUDIO FURNITURE

Manufacturer	Model	Type	Dimensions	Special Features	Price
Omnirax	MixStation O2R	Console workstation for Yamaha O2R	43"Hx38"Dx70.5"W	Ergonomic, multilevel working environment for Yamaha O2R mixer, computer, and associated peripherals; total 42 rackspaces	\$1,199.95
Omnirax	Mobi	Mobile computer workstation	55.5"Hx28.75"Dx20.6"W	Room for 14" monitor, CPU, and computer keyboard; 10 rackspaces	\$399.95
Omnirax	Pro-20	Rolling studio rack	45"Hx18"Dx20.6"W	Versatile slant front, 20-space rolling rack	\$239.95
Omnirax	Pro-316	3-bay producer's studio rack	34.25"Hx27.75"Dx62"W	Versatile slant rolling rack. 48 total rackspaces in 3 slanted bays of 16 spaces; large top surface area	\$599.95
Omnirax	Producer's Corner	5-piece audio/video suite	36.2"Hx37"Dx120.6"W	Workstation suite for audio/video editing; room for multiple video monitors and close fields; 28 total rack spaces; space for CPU in enclosed cabinet	\$1,299.95
Omnirax	ProStation	Digital audio workstation	44"Hx36"Dx2.25"W	Ergonomically designed; room for computer and close-field monitors; 30 total rackspaces	\$899.95
Omnirax	ProStation Jr.	Digital audio workstation	42.5"Hx29.5"Dx60.5"W	Ergonomically designed; room for computer and close-field monitors; 14 total rackspaces	\$699.95
Omnirax	ProStation Junior M/C	Keyboard, composing workstation	43"Hx29.5"Dx60.5"W	Compact workstation for keyboard composing; room for computer and close-field monitors; 12 total rackspaces	\$659.95
Omnirax	ProStation M/C	Keyboard, composing, mixing workstation	45.5"Hx36"Dx72.25"W	Perfect for either mixing boards or keyboard composing; room for computer and close-field monitors; 26 total rackspaces	\$849.95
Omnirax	Sidekick	Rolling Workstation	44"Hx24.9"Dx20.6"W	Versatile studio companion piece has 13 rack spaces and space for controllers and peripherals	\$324.95
Omnirax	Synergy Series Consoles	Synergy 600, Synergy 800, Synergy 1000 console workstation for multiple mixers	41.625"Hx42"Dx101.6"-124"W	Designed to fit Mackie, Yamaha, Soundcraft, Ramsa, and other mixing boards in single and multiple configurations; all include padded wrist rest, and a minimum of 12 rackspaces in a sleek, expansive station	\$900-\$1,800
Omnirax	Synthrax 88	Multiple keyboard housing and 30 rackspace	49"Hx24"Dx60.5"W	Perfect for three 88-note synthesizers on sliding, locking shelves; 30 rackspaces below	\$824.95
Omnirax	Tyro	Ultracompact keyboard/computer workstation	34"Hx23.75"Dx45.25"W	For keyboards up to 43" wide; piano shelf slides out and locks in place; computer keyboard also slides out and locks in place; 12 rackspaces	\$624.95
Per Madsen Design	The RACKIT System 19	Equipment and media storage units	Variable heights x20.75"Wx16"D	Modular, stackable oak units hold all recording formats and A/V components	\$35-\$295 per unit
Quik-Lok	Z-200	Workstation for computer and music equipment	Main shelf: 43.5"Wx21.75"D; top shelf: 37.8"Wx17"D; main shelf height from floor: 27"; top shelf height from floor: 36"	Computer welded-steel frame; laminate tops; expandable, sleek modern design	\$299.95
Quik-Lok	Z-500C	Workstation for computer and music equipment	Main shelf: 42"Wx24"D; top shelf: 13"Wx13"D; monitor shelves: 11.75"Wx11.75"D; main shelf height from floor: adjustable to 27", 28", 29"; top shelf height from floor: adjustable to 35", 36", 37"	Computer welded-steel frame; mica laminate tops; expandable, sleek modern design	\$379.95
Quik-Lok	Z-500M	Workstation for computer and music equipment	Main shelf: 53"Wx24"D; monitor shelves: 11.75"Wx11.75"D main shelf height from floor: adjustable to 27", 28", 29";	Computer welded-steel frame; mica laminate tops; expandable, sleek modern design	\$349.95
Quik-Lok	Z-544	Project station for computer and music equipment	Main shelf: 40"Wx27"D; monitor shelves: 11.7"Wx11.75"D; main shelf height from floor: adjustable to 27", 28", 29"	Computer welded-steel frame; laminate top; expandable, sleek modern design; wide range of options	\$279.95
Quik-Lok	Z-555	Project station for computer and music equipment	Main shelf: 51"Wx27"D; monitor shelves: 11.75"Wx11.75"D; main shelf height from floor: adjustable to 27", 28", 29"	Computer welded-steel frame; laminate top; expandable, sleek modern design; wide range of options	\$299.95
Quik-Lok	Z-700	Workstation for computer and music equipment	Left or right angle lower shelf: 52.25"Wx21.75"D; top shelf: 37.8"Wx17"D; main shelf height from floor: 27"; top shelf height from floor: 36"	Computer welded-steel frame; laminate tops; expandable, sleek modern design; optional pull-out shelf available	\$349.95

STUDIO FURNITURE

Manufacturer	Model	Type	Dimensions	Special Features	Price
Rackcraft	The Desktop Studio Rack	Black laminated melamine board/T-mold edging	25.5"Hx29"Dx48.16"	Desktop design; 20 rackspace; ideal for Mackie ADAT studio with effects and monitors	\$299
Shedworks		Electronic music modular workstations	22"Wx28"Hx24"D rolling racks; 60" or 72" tabletops	All systems are custom configured	\$500-\$2,500
Taytrix		12-, 14- and 16-rackspace units	29.5"-32"Hx16.5"-23"D; fits 19" standard gear	Available in square-front design or unique front-angle design; maple or cherry furniture-grade plywood	Starts at \$300; countertop racks start at \$117
Taytrix		Counter tops	Vary	Straight, angle wing, corner units	Starts at \$30 per sq. ft.
Ultimate Support	HS26BP	Studio-organizer stand	Floor space: 19"x38"; surface: 16"x35.5"	Large work surface; center tier and side arms to support gear; many accessories available	\$268
Ultimate Support	HS36BP	Studio-organizer stand	Floor space: 17"x45"; Surface: 16"x18"	Versatile design; acrylic work surface; side extension (HE48B, \$135.50); accessories available	\$322
Ultimate Support	MS36	Studio-monitor stand	height: 36"; top plate 9"x9"; triangle base diameter: 14"	Sleek design, cable management, triangle cast zinc base; available in silver, black, and pewter	\$210 pair
Ultimate Support	MS45	Studio-monitor stand	height: 45"; top plate 9"x9"; triangle base diameter: 14"	Sleek design, cable management, triangle cast zinc base; available in silver, black, and pewter	\$230 pair
Wenger		Computer/synthesizer workstation	48"x37"x32"	Flexible, ergonomic, cockpit-like design; durable steel and wood frame; unique cord-management system organizes and conceals cables and power cords; 15-outlet power strip	\$1,056

SYNCHRONIZERS

Manufacturer	Model	SMPTÉ	Jam Sync	Freewheeling	MTC/MMC	Special Features	Price
Aardvark	AardSync II	No	N/A	N/A	No/no	Low-jitter word-clock sync generator; eliminates clicks & pops; locks to video sync; generates PAL & NTSC black burst; supports all sample rates	\$1,695
Aardvark	Sync DA/Word Clock Distribution Amp	No	N/A	N/A	No/no	Generates word clock from AES/EBU digital audio; 5 WC outputs; supports Digidesign 256 Superclock	\$795
Alesis	BRC Master	24, 25, 29.97, Remote Control	No 29.97d, 30, 30d	Yes	Yes/Yes	Connects directly to ADAT, video in, word-clock I/O	\$1,499
Audio Engineering Associates	CB Electronics MC-1	All	Yes	Yes	No/No	Serial 9-pin and parallel control for simultaneous control of 35 mm film dubbers (biphase) and time-code driver DAWs, etc.	\$7,945
Digidesign	SMPTÉ Slave Driver (SSD)	LTC, all rates	No	No	Yes/No	Resolves sample clock to free-running LTC; generates SMPTÉ (LTC) 44.1 kHz or 48 kHz sample rates, with pull-up/down; high-fidelity, low-jitter Apogee clock	\$1,295
Digidesign	Universal Slave Driver (USD)	LTC, VITC, biphase, pilot tone	Yes	Yes	Yes/No	Near sample-accurate lock; high fidelity, pull-up/down; window burn	\$1,995
Digidesign	Video Slave Driver (VSD)	VITC	No	No	No/No	NTSC or PAL; resolves sample clock to video black	\$995
Independent Audio	Motionworks R2P2	Remote Control	All frame rates	Yes	Yes/Yes	Controls over 200 machines with Sony 9-pin serial controls	\$1,399
JLCooper	dataMASTER	All	Yes (adjustable)	Yes (adjustable)	Yes/Yes	Allows ADAT to sync to other tape machines or computer-based editing systems via SMPTÉ or MIDI Time Code; ADAT can be either master or slave to SMPTÉ or MTC; with the inclusion of MIDI Machine Control, can integrate ADAT's digital audio into virtually any professional audio/video application	\$649.95
JLCooper	dataSYNC	All	No	No	Yes/Yes	Connects to ADAT; provides time code to drive sequencers and workstations without wasting track; can send MTC, SMPTÉ, or MIDI Clock with Song Position Pointer; complete variable tempo and meter data sent without restrictions of other products; bidirectional MIDI communication	\$299.95
JLCooper	MMC/9 Pin	All	Yes	Yes	Yes/Yes	An innovative device capable of controlling 9-pin compatible video tape recorders from MMC compatible computer based sequencers and digital editing systems	\$499.95
JLCooper	PPS-100	All	No	No	Yes/No	Locks MIDI sequencers and drum machines to SMPTÉ using MIDI Clock with Song Position Pointer, MTC, or DTL; Event Generator can be programmed to send any type of MIDI and can trigger MIDI devices; software for Macintosh, Windows, and Atari also available	\$449.95
JLCooper	PPS-2	All	Yes	Yes	Yes/No	Reads and generates SMPTÉ time code and converts SMPTÉ into MTC or Direct Time Lock; PPS-2 plus option allows MTC to LTC conversion (\$49.95 extra); software for Macintosh, Windows, and Atari also available	\$169.95
Mark of the Unicorn	Digital Timepiece	LTC, VITC, MTC, 24, 25, 29.97, 29.97d, 30, 30d	Yes	Yes (adjustable)	Yes/Yes	Reads/generates all standard forms of word clock and time code; reads/generates ADAT sync, DA-88 sync, and Sony 9-pin machine control; reads/generates video; supports Digidesign Superclock for ProTools; 0.1% pull-up/down sample rates at 44.1 and 48 kHz; reads/generates S/PDIF sync	\$995
Mark of the Unicorn	MIDI Timepiece AV	LTC and MTC, all rates	Yes	Yes	Yes/Yes	Complete networkable MIDI interface; syncs ADAT to SMPTÉ, MTC, and video without BRC; word-clock output for synchronizing digital audio to SMPTÉ, MTC, and video; slaves Pro Tools to SMPTÉ, MTC, and video; supports MMC; please see MIDI Interface chart for additional information	\$595
Midiman	Smartsync	None	No	No	Yes/No	Converts Song Pointer sync (Smart FSK) to MIDI Clock	\$134.95
Midiman	Syncman	24, 25, 30, 30d	Yes	No	Yes/No	Syncs sequencers, drum machines, and MIDI lighting controllers to tape or video decks	\$199.95
Midiman	Syncman Plus	24, 25, 30, 30d	Yes	No	Yes/No	SMPTÉ to Song Pointer conversion; allows any non-SMPTÉ-capable sequencer to be synced to SMPTÉ	\$249.95
Midiman	Syncman Pro	24, 25, 29.97, 29.97d, 30, 30d	Yes	Yes	Yes/Yes	Rack-mount version with digital LED readout; spottlocks video; handles all forms of SMPTÉ, MTC, and direct lock	\$399.95
Opcode	Studio 64XTC	All	Yes	Yes	Yes/Yes	ADAT sync, simultaneous word-clock and Superclock out, video/black burst reference in, reads/writes SMPTÉ, converts SMPTÉ to MTC, routes MMC and MTC, optional Sony 9-pin sync expansion; full OMS support; please see MIDI Interface chart for additional information	\$495
Steinberg	ACI ADAT	None	No	No	Yes/Yes	Sync computer to ADAT without sacrificing audio track	\$399
TASCAM	ES-60	All	Yes	Yes	No/No		\$1,499
TimeLine	Lynx-2	24, 25, 29.97, 29.97d, 30, 30d	Yes	Yes	Yes/No	Cross-frame synchronization; film-card option available	\$2,995
TimeLine	MICROLYNX	24, 25, 29.97, 29.97d, 30, 30d	Yes	Yes	Yes/No	Audio clock-generator option card generates Superclock for synchronizing to Pro Tools workstations; VITC-reader card available; price includes two-machine synchronizer plus keyboard controller	\$2,995

Take charge with Layla™ from tracking to CD master.

LAYLA

by ECHO

20-BIT MULTITRACK RECORDING SYSTEM

Take eight balanced 20-bit 128x oversampling analog inputs • Take 10 balanced 20-bit 128x oversampling analog outputs • Take stereo 24-bit S/PDIF digital input and output • Take all the inputs and outputs and make them simultaneously active, for true 10 x 12 operation • Take word clock input and output and lock multiple Laylas together with single-sample accuracy • Take MIDI in, out, and thru, and make Layla the heart of your integrated MIDI/digital audio production system • Take full multichannel compatibility with all of the best Windows® 95 digital audio recording/editing programs—and never again be locked into a proprietary, closed-end system •

Now take your precious tracks and add DSP effects with Sonic Foundry's graphic waveform editor Sound Forge XP 4.0 • Master them to CD using CD Architect, Sonic Foundry's powerful Redbook audio authoring software • Both applications—a combined retail value of \$395—are included with Layla absolutely free. (These are the real thing, too, not "lite" versions.) • And that's not all: You also get full-featured multitrack recording/editing software • With Layla, you're all ready to roll when inspiration hits •

Take control of your recordings. Take Layla.

Layla requires a Pentium PC 2.1 system or better with minimum 16MB RAM.

Layla is designed and manufactured in the U.S. by Echo Digital Audio, an Event Strategic Partner.

P.O. Box 4189
Santa Barbara, CA 93140-4189

Is your PC ready for Layla? Download The Echo Reporter™ system analysis software from www.event1.com

Introducing the 2408.

The next breakthrough in hard disk recording.

- The 2408 is a computer-based hard disk recording system that gives you 24 independent inputs and outputs • 8 analog inputs (with 20-bit 64x oversampling converters) • 8 analog outputs (with 20-bit 128x oversampling converters) • 24 channels of Alesis ADAT optical in and out • 24 channels of Tascam DA-88 in and out • 2 channels of S/PDIF in and out • 16-bit and 24-bit recording at 44.1 or 48 KHz •
- digital dubbing between ADAT and DA-88 • digital dubbing between S/PDIF and ADAT or DA-88 • ADAT sync input • Word clock in and out • MOTU Control track input for sample-accurate Digital Timepiece synchronization • includes the cross-platform PCI-324 card to connect the 2408 to your Mac or Windows computer • the PCI-324 will let you add additional 2408's for up to 72 input/output connections and as many channels as your computer allows • includes full-featured sample-accurate workstation software for Macintosh with recording, editing, mixing, and real-time 32-bit effects processing •
 - Includes standard Windows audio (Wave) driver •
