

# ANTIQUE RADIO CLASSIFIED

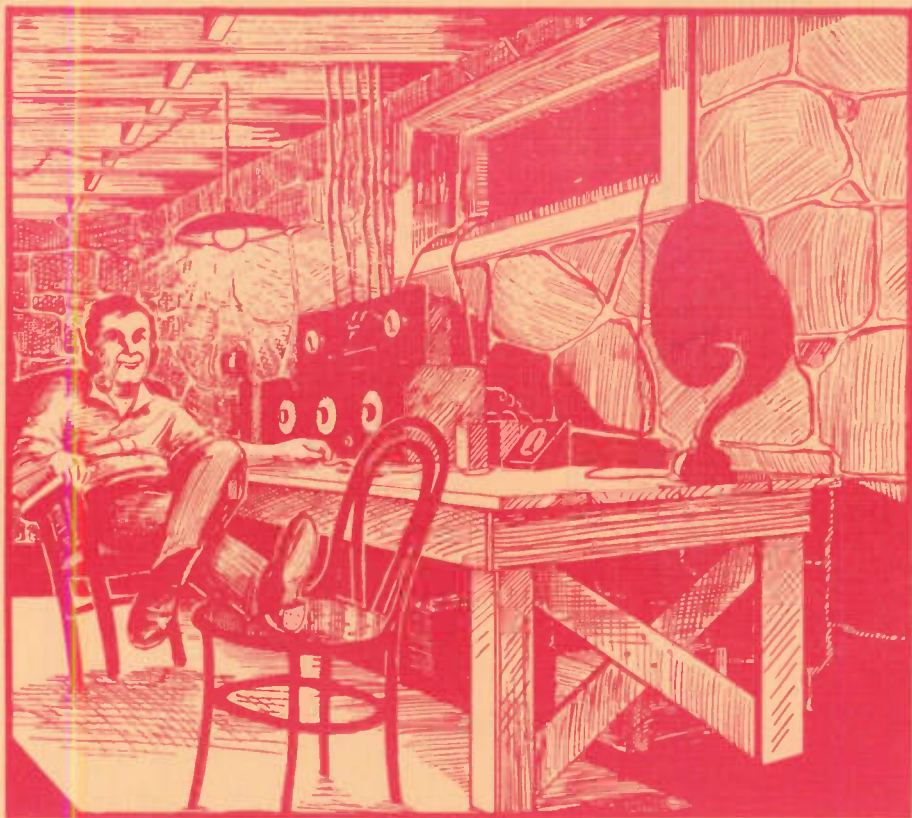

VOLUME 3

SEPTEMBER 1986

NUMBER 9

## A.W.A. ANNUAL CONFERENCE CANANDAIGUA, N.Y. SEPTEMBER 24-28

THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS  
OF OLD RADIOS AND RELATED ITEMS - PUBLISHED MONTHLY

# ANTIQUE RADIO CLASSIFIED

## Publishing Details

Antique Radio Classified (USPS 735-090) is published monthly, 12 times yearly, at a subscription rate of \$18.00 per year Second Class and \$24.00 First Class mailing rates, by G.B.S. Enterprises, 9511 Sunrise Blvd., #J-23, Cleveland, Ohio 44133, (216) 582-3094.

Second-class postage paid at Cleveland, OH.

Publisher and Editor - Gary B. Schneider.

POSTMASTER: Send address changes to address above. Copyright 1986... Antique Radio Classified

## Purpose

Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby thru the buying, selling and trading of radios and related items. In addition, there will be coverage of upcoming radio conventions, meets, flea markets, etc. Other items of interest to collectors will be included in issues as material or suggestions are received.

## Display Ad Rates

Antique Radio Classified accepts display advertising from companies that provide a product or service to the radio collecting hobby. As artwork is reduced 35% when printed, original should be 1.54 times the desired finished size and must be camera ready artwork. Original size areas are available as follows:

Full Page	10-1/2" H x 7-1/2" W	\$45.00
Half Page	5-1/4" H x 7-1/2" W	22.50
1/4 Page	5-1/4" H x 3-3/4" W	11.25
1/8 Page	2-5/8" H x 3-3/4" W	5.75
Business Card	1-5/8" H x 3-1/4" W	3.90

Full page ads may be vertical or horizontal format. Multiple insertions for 3 months qualify for a 10% discount.

All artwork must be received by the 1st of the month to be included in the following month's issue.

## Classified Ads

Each subscriber is entitled to one 20 word classified ad free of charge per issue. Additional words over the limit are 10¢ per word. Multiple insertions of same ad are discouraged. This is to allow for a varied ad content in each issue. Multiple insertion ads for more than 2 issues must be run as a display ad. All ads must be printed neatly and be received by the 8th of the month before next issue. See classified ad details elsewhere in this issue.

## Payment

All ads must be paid for in advance. Make checks payable to Antique Radio Classified.

## Subscription Rate

Subscriptions are available on a yearly basis, \$18.00 per year Second Class and \$24.00 First Class mailing rates. Sample issues: \$2.00.

## Submission of Material

Antique Radio Classified welcomes and solicits any information that pertains to the radio collecting hobby. This may include material such as upcoming radio events, meetings, radio books and publication reviews, new radio clubs and organizations, radio auctions and price reports, sources of old radio material and restoration supplies, and any other material that would be of interest to the hobby. All material submitted should be typewritten and verified for accuracy.

## Change of Address

Notification of change of address should be made well in advance to receive uninterrupted copies of Antique Radio Classified. Do not depend on the Post Office to let us know.

## Fine Print

The publisher is not responsible for any buying and selling transactions incurred by readers thru the content of this publication.

Antique Radio Classified subscription and ad rates subject to change, as well as frequency of publication, content, and size.

## EDITOR'S COMMENTS

Throughout the past two years Antique Radio Classified has grown from an unknown publication, with just a small gathering of loyal collectors who felt the hobby needed a monthly publication to serve their needs, to its present state as a more-or-less household word in the collector circles. This growth was the result of much hard work on my part as well as the faith and support of collectors all over the country.

However, as A.R.C. has grown so has the amount of work and financial stress of keeping A.R.C. a quality publication. It is with sad regret that I must say to my fellow subscribers that the resources needed to keep A.R.C. at its present level of excellence are no longer available to me.

Effective with the next issue, October 1986, A.R.C. will have a new publisher & editor. I would like everyone to welcome Mr. John Terrey of Carlisle, Massachusetts. Although most of you probably do not know much about him, I can say with confidence that he will do a splendid job of continuing A.R.C.'s commitment of providing a quality publication, with the aim to serve the needs of fellow collectors in all aspects of the hobby. Yes, there will be a few problems during the transition period, but given the support you have given me, I believe A.R.C. will continue to grow even more in the coming months and years.

I urge everyone to continue to support your new publisher in every way possible. A.R.C. is your publication and is here to serve your needs. With strength in unity, A.R.C.'s high number of subscribers can only lead to the day when every collector will be a part of A.R.C. - my number one goal upon my creation of A.R.C. 2½ years ago!

Although I will not be the owner of A.R.C. I am happy to announce that John has selected me to be the assistant editor and to be still active in the continuing process of publishing A.R.C. I hope each and every one of you have enjoyed A.R.C. since its introduction just two years ago - I just wish I had the resources to carry out my goal - A UNIFIED HOBBY! Thank you all - Gary B. Schneider

## COMMENTS FROM THE NEW EDITOR

I am honored to be the new publisher and editor of ANTIQUE RADIO CLASSIFIED and am excited about its future. Since Gary Schneider began A.R.C. in 1984, it has grown from a 16 page sample issue to a 28 page monthly publication. By August, 1986, the number of subscribers had grown to over 1800. A.R.C. is now the leading monthly publication in the radio collecting hobby.

My goal is to build upon the hard work that Gary has put into A.R.C. With your support as subscribers, contributors and advertisers, A.R.C. will continue to be a leading contributor to the radio collecting hobby.

A few words about who I am... My interest in radio goes back to 1954 when I received my ham license at the age of 13. W5DTQ has been my call ever since. My radio collecting began in 1962 with a Westinghouse RC set. After acquiring a few more sets, job and family prevailed until the late 1970's when I began collecting again. I now have a collection of over 200 old radios.

My work experience had been in electronics, computers, documentation and business. With this background plus my enthusiasm for old radios, I plan to establish a solid future for A.R.C.

I foresee no changes in A.R.C.'s policies. Subscription and advertising rates will remain the same as will the one free 20 word classified ad per issue. Gary will be working with me as an assistant editor so we expect the transition will be smooth.

Please write with your suggestions and comments on any aspect of ARC. I will be at the 1986 AWA Annual Conference in Canandaigua and hope to meet many of you there and talk with you about A.R.C. This is your magazine and its purpose is to be of maximum service to its subscribers.

The goal of A.R.C. will be to meet, or exceed, the high standard that Gary has set with A.R.C. over these past two-plus years. So, spread the word that A.R.C. is on a positive course, help find new subscribers, send in classified ads, advertise in the display ad pages, write articles, send pictures and I will do my part to put it all together and send the result to over 1800 enthusiastic radio collectors. Yours truly - John V. Terrey

**Has your subscription EXPIRED? If your mailing label reads "8609" or "8610" then this is your last issue! Renewal rates are: \$18.00 for Second Class or \$24.00 for First Class mail service. Send renewals to: A.R.C., P.O. Box 2, Carlisle, MA 01741**

# AMATEUR RECEIVERS

CONTRIBUTED BY: JEROME MUNDEL, WA7OHS, 7738 N. 40TH DR., PHOENIX, AZ 85051

## RESTORATION OF A CLASSIC

### The Hammarlund HQ-120-X

My new, old classic receiver is a Hammarlund HQ-120-X. I found this radio by scanning the Sunday classifieds as I usually do to see what old radios are for sale. A family was moving and the radio was part of a collection of old equipment being sold. The receiver was not working, and was covered with dirt, rust, and corrosion. However, it looked complete with all tubes and components. The chassis and cabinet were not dented or damaged and were complete with handles, dials, and all knobs.

Besides the radio, the speaker and speaker cabinet were part of the deal. The speaker was a ten inch permanent magnet type in a metal enclosure, the same style as the receiver. I bought them both and happily drove home.

There was no manual with the radio, but about two months later the family mailed me the original operating manual that had come with the set, new. It was in perfect condition and not even turning yellow as some manuals will do.

The radio was an HQ-120-X originally sold for the first time in December, 1938. My model was probably built in 1939 or 1940, judging from the serial number. I had always heard about Hammarlund receivers but did not know much about them, and had never even seen many of them. It is not as popular a "collector radio" as are Hallicrafters or Nationals.

The first thing I did when I got the receiver home was to take off the cabinet and remove the front panel. All knobs, handles, feet, and hardware were stored in Ziplock bags. Everything was taken in a box to a local gas station where I used the air hose to blow dust and dirt out of the chassis, the cabinet, and speaker enclosure. From the cloud of dust it appeared to be 20 years of dirt accumulation.

Back home I removed all 12 tubes and checked them on a tube tester. My tube tester is a Hickok model from the early 1950's. Only three of the tubes were bad and were replaced with new ones. The speaker was badly damaged and beyond anything that I could re-

pair. It was taken to a speaker repair shop because this is something many collectors can't do themselves.

The first step to restore the HQ-120-X was to obtain a schematic of the original circuit. Next, all of the capacitors and resistors were checked with a volt-ohmmeter. The resistors were all good and very close to the values in the schematic. The electrolytics in the power supply were shorted. Many of the tubular paper and wax capacitors checked out OK but looked charred and had a burned smell to them.

Rather than have trouble from bad capacitors one by one, I decided to replace the electrolytics and all of the tubular capacitors. Most of the tubular capacitors were .02mfd and .05mfd paper type. It was time consuming to replace all of these capacitors with new ones, but would save time in the future from old capacitors shorting. The mica capacitors were not replaced as they seemed to test OK, and they seldom go bad.

Now that all capacitors were replaced and all the tubes were good I plugged in the radio and turned it on. All of the tubes lit up, and no smoke came from the receiver, but there was no sound in the speaker, not even a hiss. At first glance it appeared to be out of alignment and some wiring was disconnected from where it should be. This turned out to be quite a job. All of the wiring had to be traced and the radio needed a complete realignment. This procedure took me about 4 months to complete, off and on during my spare time.

For signal tracing and realignment I used a Heath signal generator and a RCA VTVM. Both items of test equipment are from the early 1960's. During this step of radio restoration I learned more about servicing receivers because of the hands on testing and the reading that had to be done to follow proper procedures. Three books that were most helpful and necessary during restoration were:

Continue next page...

1. Operating Manual, Hammarlund HQ-120-X Communications Receiver
2. The Radio Amateur's Handbook, ARRL, 1940 edition
3. Elements of Radio Servicing, Marcus and Levy, 1947 edition

In past years I have restored old radios and have aligned them, but I had never restored a multi-band superheterodyne of this type. My background is not electronics, but with practical experience and following the above three books. The restoration of a communications receiver is not that difficult if you have the patience to take the restoration step by step.

Tracing the wiring was done to get the set to work so that it could be aligned. The schematic was followed in the usual way, from power supply backward to the RF section. I used a VOM to test voltage at various points and to test continuity in coils, resistors and transformers. The most troublesome area was around the 2nd AF tube, 6V6. This could be due to the high voltages and heat generated in this area. Figure 1. shows the 2nd AF and the 1st AF-Detector stages of the HQ-120-X. On testing it was found that C-103, the self-bias bypass capacitor, was shorted. This is a 47mfd, 450vdc electrolytic capacitor. This was replaced with a new one of like value. The volume control, R-113, was OK, as was R-114, 25K ohms. Capacitors C-115 and C-137 proved to be problems as they both were intermittent shorts. C-115 was a .01mfd mica, not the original paper type capacitor. C-137 was a 1,000mmf mica and may have been original. It is not true that mica's rarely go bad. They should be checked as carefully as paper ones.

C-115 was replaced with a .01mfd tubular and C-137 with a 1000mmf tubular. The 2nd AF stage then worked and a loud hiss could now be heard in the speaker. The wiring tracing continued in the usual procedure back to the 1st AF-Detector, 3rd AF, 2nd Af, 1st AF, converter and finally the RF section.

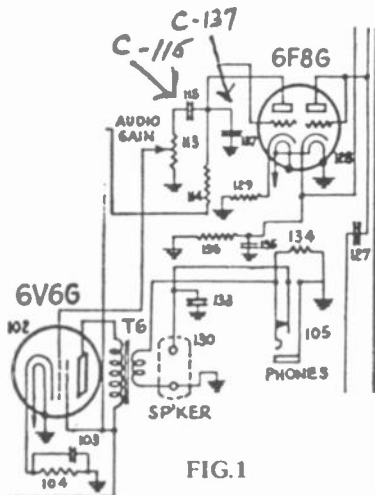

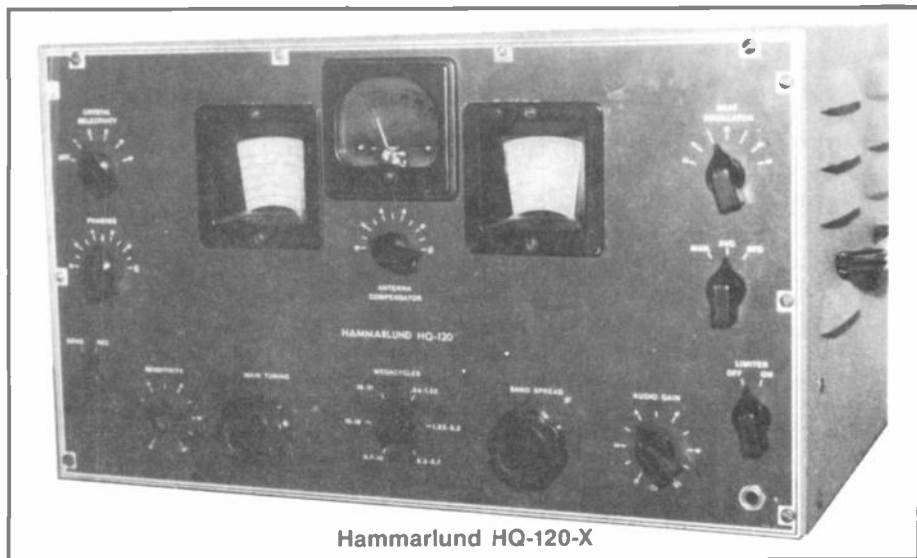

FIG.1

The RF tube had no high voltage on the plate. Plate voltage was zero. I traced back from the RF plate to the RF coil sections. There was no voltage on the RF coils. The RF coils receive high voltage through the send-receive switch directly from the output of the power supply. This is shown in Figure 2. A lead wire from the RF coil unit had broken off where it connected to the send-receive switch

Continued...

Hammarlund HQ-120-X

assembly and had been resoldered to the wrong lug on a terminal block. This took only a few minutes to correct. With the VOM I found which lug had high voltage when the send-receive switch was in the receive position. The wire was then resoldered to the correct lug on the terminal block. The receiver now came to life and loud static, hisses and squeals could be heard from the speaker.

The alignment of the IF section must be done first. The signal generator was connected to the converter input grid and set on high output at 455 KHz. **Figure 3.** shows a typical set up of connecting the signal generator and VTVM to the radio through .1mfd tubular capacitors. When a superhet like this is badly out of alignment there may be two frequencies where the output meter will peak. The correct setting of the IF is usually the stronger signal. Another way of checking the correct peak is to turn the slugs in the IF transformers in towards their center as far as possible. Then with an insulated tool back the slugs out slowly. The first peak that shows on the VTVM should be the correct IF setting. Do this on all the IF transformers and then go over the complete alignment again to fine tune all the IF transformers. A third way of tuning the IF is to precede after this step and go ahead and align the rest of the receiver. Then tune in a strong broadcast station, and using just the speaker as output carefully adjust the slugs of the IF transformers until the voice or music is as clear and sharp as possible. This should put the IF section on the correct 455 KHz peak.

The next step in the alignment is in the usual way of connecting the signal generator to the antenna input of the radio. The RF coils are adjusted first, the oscillator coils next, and the antenna coils last. For the HQ-120-X the low end of each band required inductance adjustments of the slug tuned coils. For the high end of the bands the trimmers were adjusted for proper capacitance. These adjustments are interacting and require going back over coil and trimmer several times until both high and low end of the bands are at their correct setting. I used the same method as was done in the IF section of turning the coils the way in and turning the trimmers until tight. Then turning coils and trimmers back out until the first peak, as shown on the VTVM, is reached. The first peak on the way back out is the proper setting.

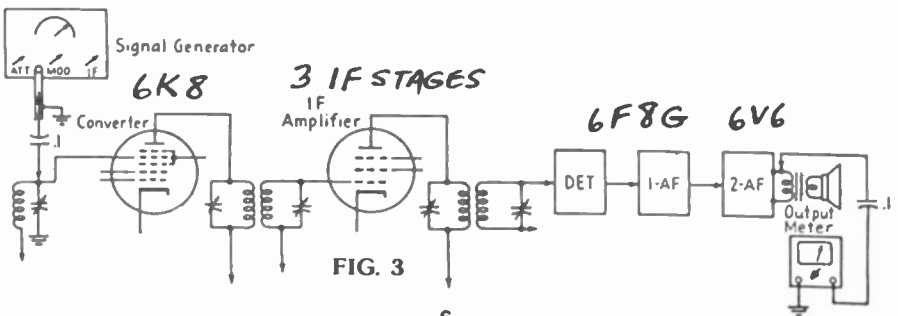

FIG. 3

# NEW "HQ-120-X" AMATEUR RECEIVER

THE NEW HAMMARLUND "HQ-120-X" meets the most critical demands of amateur and professional operators. Hammarlund engineers have gone beyond ordinary practice in designing this new and outstanding receiver. This ultra-modern 12-tube super-heterodyne covers a continuous range of from 31 to .54 mc. (97 to 555 meters) in six bands, taking in all important amateur, communication, and broadcast channels. The "HQ-120-X" is not to be confused with modified broadcast sets. Two years were required to develop it. This is a special receiver with special parts throughout. Every wave range is individual—that is, each range has its own individual coil and a tuning condenser of proper value for maximum efficiency; thus, including the broadcast band does not decrease efficiency at high frequencies. Besides having all the necessary features for perfect short wave reception, such as A.V.C., beat oscillator, send receive switch, phone jack and relay terminals, the "HQ-120-X" also includes a new and outstanding crystal filter circuit which is variable in 6 steps from full

band-width to razor edge selectivity. This permits the use of the crystal filter for the reception of both voice and music. It is no longer necessary to contend with serious heterodyne interference. These annoying disturbances can be phased out with the phasing control on the panel. Other features include a new and accurate "S" meter circuit for measuring incoming signal strength; antenna compensator to compensate for various antennas; and 310 degrees band-spread for each amateur band from 80 to 10 meters. The band spread dial is calibrated in megacycles for each of these amateur bands. The main tuning dial is calibrated in megacycles throughout the entire range of the receiver. Rack adapter \$6.00 extra.

#### Prices Include Speaker and Tubes

Code	Type	Tuning Range	Speaker	Net Price
HQ-120-X	Crystal	31 — .54 mc.	10" P.M. Dyn.	\$138.00
Speaker cabinet (metal) 12 1/4" x 12 1/4" x 7 inches				3.90

Special model finished in gray.....\$141.00 Net  
Speaker Cabinet, gray to match.....4.50 Net

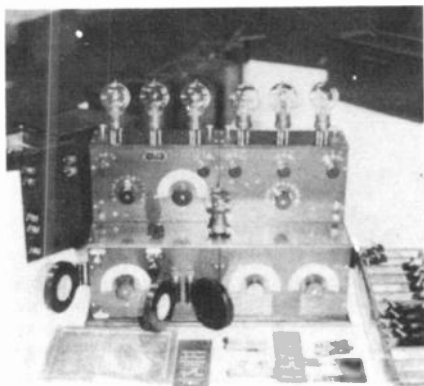

#### Hammarlund HQ-120-X advertisement

Obtaining a copy of the original manual for the HQ-120-X was a big help. The alignment instructions were fairly good and did save quite a bit of time. Sensitivity is better than in many solid-state receivers. The selectivity is very good with the crystal filter and can be as narrow as single signal CW reception. Single sideband can be copied very clearly using the crystal filter on a narrow setting and using the BFO to fine tune the SSB signal. The AVC is excellent, the noise limiter does keep out ignition noise almost completely. The phasing control cuts out heterodynes and will separate two closely spaced stations. I now use the radio as my regular ham-shortwave-broadcast receiver and am very pleased with it.

The last step of restoration to an as-nearly-new appearance was refinishing the radio and speaker cabinets. Both were washed with a strong detergent solution to remove dirt, grime and grease. They were then given two coats of grey spray wrinkle paint. The grey wrinkle finish was as close to the original as possible.

The Hammarlund HQ-120-X now sits on my desk at home and is a very presentable old radio in my collection. It took a long time to restore, but when I turn it on and the dials and meter light up and all the tubes are glowing, I know that it was well worth it. (Jerry Mundel - Phoenix, AZ)

## SELDOM SEEN RADIOS...

S.E. DUCRETET - a seven valve receiver manufactured in Paris around 1919 or 1920. The unit consist of four "standard" panels arranged to provide two stages of tuned RF, two stages of untuned RF, a regenerative detector and three switchable stages of AF. This receiver was discovered, along with the complete set of 14 plug-in coils (200 - 4000 meters), a handmade coil box and the original operators blueprint. Said to once belong to E.H. Armstrong, this receiver was found under a pile of junk in one of Harry Houck's storage barns. This receiver was in very poor condition and was completely restored by: Mike Katzdorn - Gaithersburg, MD

# PHOTO REVIEW

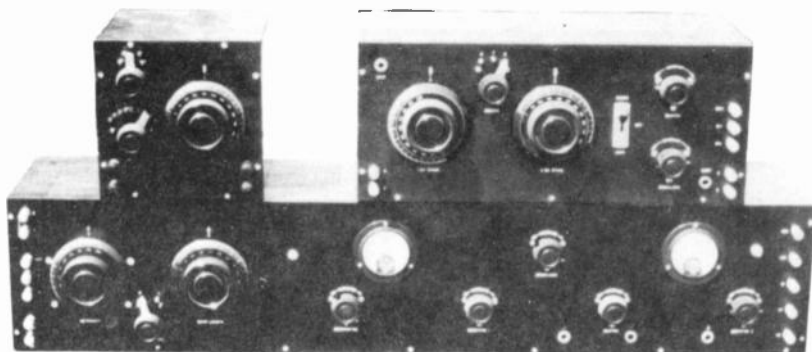

The "Photo Review" column is intended to present in pictorial form many of the radios, speakers, tubes, advertising, and other radio related items in the collections of other collectors. These photos are meant to help increase awareness of what's available in the radio collecting hobby. Photos are solicited from other collectors for use in future issues of A.R.C. Items desired are the more unusual radios and other items related to the hobby (covering the years 1900 to 1940's). Photos must be B&W (any size) and be sharp in detail, preferably with a light colored background. Please include a short description of each item submitted.

**WILCOX-GAY** - Made in Charlotte, Michigan, this cathedral is called the "Cardinal". It is a five tube superhet with airplane dial, standard broadcast and short wave. Made in 1935 it sold for \$28.50. It is built in a Mahogany cabinet and measures 12 x 14½ x 7 inches. (Karl Rommel - Lansing, MI)

**SPARTON** - Sparks-Withington Co., Jackson, Michigan. This neon sign is sitting atop the original wooden crate in which it was recently found. It was found in the attic of a man who had worked for Sparks-Withington for 37 years. The sign was to be sent (as the tag on crate reads) to the Sparton Radio display at the American Furniture Mart in Chicago, Illinois. But it was broken at the bottom of the "p" and discarded. The employee, rather than toss it out, took it home and it resided in his attic until this year (1985). The bottom portion, "Radios Richest Voice - 1926" works fine. (Karl Rommel - Lansing, MI)

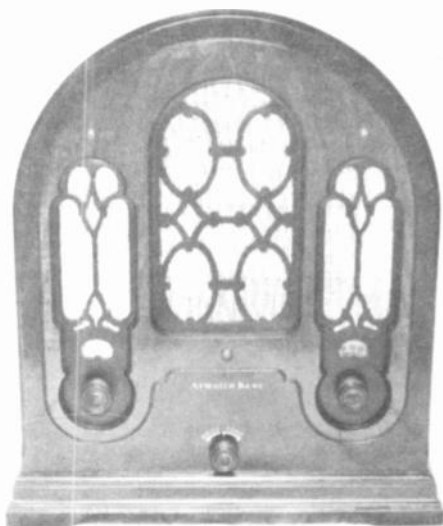

**LEUTZ** - On bottom is a Leutz model "C" Superhetrodyne receiver, top left is the Leutz model "K" antenna adapter and top right a Leutz model "J" R.F. Amplifier. The model "C" is an eight tube superhet designed to operate with a loop antenna. The model "K" antenna adapter enables the "C" to be operated with a long wire antenna. The model "J" is a two tube R.F. amplifier that enables the model "C" receiver to be operated with either a long wire antenna or loop. (Larry Wright - Lake In The Hills, IL)

---

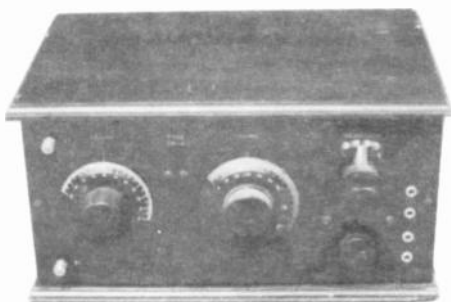

## PHOTO REVIEW

---

**ATWATER KENT** - Model 165, this five tube set came out around 1933 and sold for \$29.90. The same chassis is used in the Model 185, also a table radio but with a flat top and a "modern" design, similar to, but taller than the AK 275 pictured in *Flick of the Switch*. The intricate grill work is made of very thin wood and is easily damaged. Although a small and inexpensive set, it has a large speaker for a set this size and is a remarkably good performer. (John Miller - Lexington, KY)

---

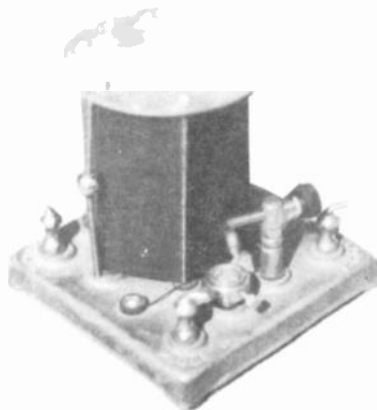

**CHELSEA RADIO CORP.** - Type ZR-4 Transcontinental, a 3 tube set, one stage regen. and two audio stages. It is 13" wide, 7" high and 8 1/2" deep. Rear of cabinet has 5 binding post for battery connections. Looks like 1923/24 vintage. (Bob Burick - Parma, OH)

---

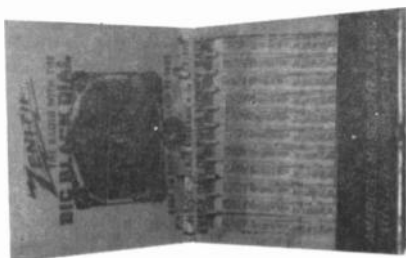

**ARVIN** - Model 417, made in 1936, it is a 4 tube "Rhythm Baby". Covers two bands, 550 kc to 1.6 mc and 1.6 mc to 3.6 mc. It has been completely restored. (Ed Turner, Youngstown, OH)

---

**MARTIAN SPECIAL** - A very nice crystal set manufactured in Newark, NJ. It sits on a 3 7/8 square metal base. Uses a "ball slider" for tuning and has 4 binding post for connections. Very similar to the Martian "Big 4" that is well known to collectors for its 3 tripod legs. (Bob Burick - Parma, OH)

---

**ZENITH** - A pack of matches advertising the "Big Black Dial" Zenith radios (photo a little too dark). To collectors this type of item can be classified as a radio novelty item or promotional advertising item. (John Miller - Lexington, KY)

---

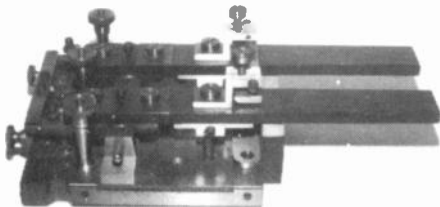

# TELEGRAPH KEY REVIEW

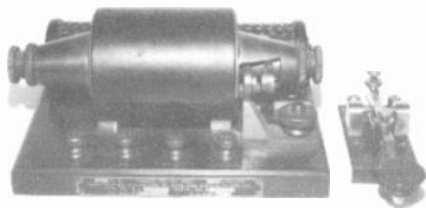

During the course of collecting and searching for radios, many collectors will have the opportunity to acquire telegraph keys and related items. In order to acquaint you to this collecting speciality and broaden your knowledge in this field, the accompanying photos of the Gil Schlehman, K9WDY, collection are presented to show the many types and variations you may encounter. Any questions regarding telegraph keys, please write in care of Antique Radio Classified.

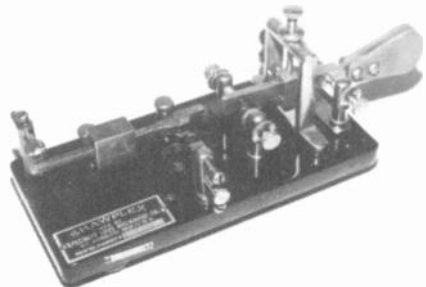

**PUMP HANDLE KEY** - This key was made by the Foote-Pierson Co. from the design of the Shirley and Skirrow Co. It was made specifically for those long time telegraphers that developed "telegraphers paralysis", an occupational ailment that remained on the books until very recently. Made in about 1900, it is exquisitely made and decorated with hand painted flowers, reflecting the pride of workmanship that once was a part of our nation. The handle could be adjusted for up and down or sideways motion, or anywhere in between, at the discretion of the owner. This saved many a "burned out" telegrapher with a "glass arm". A truly fine instrument.

**CABLE KEY** - This is a Walters Electrical Mfg. Co. model 8K double pedal key used with the undersea cables around 1900. It is on a polished teak base, and rivals the best of American makers for quality of materials and workmanship. It measures a full ten inches long and works as well as it looks. *Courtesy T. Shedd, K4IWD.*

**KEYING RELAY** - This SE 137B relay was made for keying 5KW, and was used in conjunction with a smaller key to enable the operator to send CW on a high power spark station without a giant "rock-crusher" key of the era. It also isolated the operator from dangerous voltages present around early transmitters. It was made by Wireless Specialty Apparatus Co., and could be described as being of "solid" construction. It is typical of the monster keying mechanisms prevalent during this period. *Courtesy Ed Raser, W2ZI.*

**THE SHAWPLEX** - This unusual bug (speed key) was made by the Specialty Shoe Machinery Co. of St. Joseph, Mo. about 1916. It was patented, but must have been in violation of the existing patents held by the Vibroplex Co. Notice the unusually looped dot contact springs that were used. This is certainly a unique piece, as not much is known about it. *Courtesy R.W. Reinke.*

# MANUFACTURER'S REVIEW

A friend of mine recently presented me with a radio trade magazine that I never heard of before. He had found it at an antique auto swap meet. It is *Radio-Television Retailer & Jobber* magazine, January 1932 issue, Vol. X, #9, published monthly in Brooklyn, New York, and was in its tenth year of publication.

Much information was given on the latest in radio happenings. Among the headlines were: Grigsby-Grunow and Columbia Phonograph Merge; Radio Inventories at Low Ebb as New Years Dawns; Perryman (Tube) Company Assets to be Sold at Public Auction, and RCA Settling Tube Litigations (having been sued by CeCo, DeForest, and other tube companies). There are a few ads for sets, though not as many as in *Radio Retailing* or *Radio-Music Merchant* magazines. There were small ads for DeWald-Pierce Airo, Crosley, and Freed-Eisemann and a big ad for RCA. Most interesting, however, was a full page, back cover, ad for Perry Radio Products Inc. of 152 West 22nd St., New York, N.Y.

I had passed up a Perry radio at the auction during the IHRS meet at Auburn a number of years ago. It was a 110 volt direct current mantel set using a half dozen or so 01A's. Being something odd it caught my interest but for some reason, most likely lack of money, I didn't make a bid on it, which I always regretted. I had never heard of one before or since till this advertisement. I am curious as to whether Perry was a manufacturer or if it is a private brand name set made elsewhere? It seems rather odd that a private brand set would take out a full page ad, but I have never seen the company listed anywhere. Does anyone have any additional information about this company or their products? (*Frank Heathcote, 1235 N. 3rd St., Logansport, IN 46947*)

**T**HE radio receivers illustrated are available in AC and DC models, in console sets as well as midget cabinets. 5 and 6 tube chassis employing Pentode, Variable Mu and all latest type tubes. Ultra-Sensitive Dynamic Speakers. Tone Control. Hum Control. Full-Vision Dial. Ball-Bearing Condensers. Chassis Cadmium Plated. Art-Grained American Walnut Cabinets. Compactness. All Latest Developments.

In addition the PERRY LINE includes an all-wave receiver, that has proved a revelation; a short-wave adapter that WORKS; and a complete TELEVISION model, now in the course of completion.

## PERRY PRODUCTS, INC.

*"First with the Latest"*

# HINTS & TIPS

**HINTS & TIPS** - Readers are encouraged to submit any "Hints & Tips" they have concerning restorations, repair & trouble-shooting, and other topics of interest to collectors.

---

**HINTS & TIPS** - *Hard Rubber* - When rubber is vulcanized at high temperature, with great pressure and with the use of comparatively large quantities of sulphur, it becomes very hard and strong, being called "Hard Rubber". Hard Rubber is jet black and takes a high gloss easily. The surface of rubber for use in decorative panels may be colored to represent natural woods or other ornamental designs.

From the standpoint of electrical properties Hard Rubber is one of the best of all available materials for use in insulators, brackets, supports, bases and panels of radio receivers. Hard Rubber has the disadvantage of changing its form under pressure or bending strain. Bolts and other fastenings which pass through hard rubber should be secured with lock washers because in time the rubber will give under the nuts or bolt heads and looseness will result.

Hard Rubber may be quite easily formed and bent into any desired shape by immersing it for a minute or two in boiling hot water. The rubber softens sufficiently to bend without cracking or breaking and if held in position until it cools the new shape will be retained. This is a very handy method for making special brackets and supports for receiver parts.

Good grades of hard rubber have a dielectric constant of 2.0 to 2.5. The dielectric strength is high, being from 1000 to over 2000 volts per thousandth of an inch thickness. It has very low dielectric losses when used in and near coils and condensers which are carrying radio frequency currents.

Hard Rubber deteriorates slowly with age, but if properly vulcanized in the first place and if protected from light it is not affected. This material softens to a noticeable extent at 150 degrees Fahrenheit. At the temperature of boiling water it bends easily, at 240 degrees it becomes leathery and may be cut easily with a knife, at 390 degrees it melts. (*Phil Weingarten - New York, NY*)

**HINTS & TIPS** - Handy source for radio tuning belts... Need a drive belt for the tuning capacitor or dial of the radio you are restoring? New old stock is difficult to obtain and can often be disappointing, especially if dry rot has set in. An easy alternative is to call *Projector-Recorder Belt Company* in Whitewater, Wisconsin. Have your credit card number handy before you dial their toll-free number (1-800-558-9572). They can often determine exactly which belt your radio needs just from the make and model number of the set, so have that information available when you call, too. The company will also make up special order belts for those it does not have in stock. (*Sorry - lost name of contributor of this Hint - GBS*)

---

**HINTS & TIPS** - Speaking of hints, how many of you collectors have yet to discover that the windings removed from a new Stancor A-53 & A-53C interstage audio, can be reassembled very neatly on the original core, case and contact header of those old Radiola open audios? It works equally well on other makes having the same 1/2" core dimensions, such as some of the Crosleys. The A-53's have a 3:1 turn ratio which may fall short of the original, but my experience has been that with few exceptions the set's performance seemed acceptable. Perhaps a little less audio gain. (*William Stuber - Woodward, IA*)

---

**HINTS & TIPS** - To clean an overly dirty, gummed-up variable condenser to like new condition, use a spray type carburetor cleaner with extension tube. Slope chassis into a metal pan to catch residue and to obtain a fast runoff. Do not get cleaner on varnished or lacquer surfaces. This cleaner will also restore sluggish mechanical typewriter keys to normal operation. (*Gene Johnson - Ovid, ID*)

---

**HINTS & TIPS** - A source for the rubber shock mounts in Radiola III, Federal and other receivers is the vacuum cleaner belts available in most appliance and super market stores. They come in varying sizes and thickness, one package does several sets. Also, a good substitute for condenser drive belts is the "O" rings available in auto supply stores. (*Jim Barrows - Bothell, WA*)

## COLLECTING ABROAD

### Collectors tune in to the sound waves.

A small but growing band of collectors are hunting through junk shops and in provincial salesrooms in search of vintage wireless sets. Specialist dealers are appearing although, as yet, there is only one specialist shop in London that is open every weekday.

Collectors are neatly divided between nostalgic buffs and the technical expert. The former remember the time barely 20 years ago when every British front room had as a focal point a large and cumbersome wireless. They and their younger companions who cannot remember this period go for the look of a vintage wireless set. For them Bakelite or the bizarre novelty sets of the 1920's hold a special appeal. The integrated or all-in-one box set that came in in the 1930's with its extremely ornate carved fretwork in front of the speaker is collected for similar reasons. Sets of this period were designed to appeal to the eye. People sat in front of them to listen as today we would a television.

The second group of collectors are the technicians. They are interested in the history of radio engineering and often confine themselves to a particular field of interest. Collectors from the technical category go for top-of-the-range models which means prices running into thousands of dollars.

The first generation of hand-made receivers are very expensive if in good condition, ranging from \$650-\$1500. The earliest of the integrated sets of the 1930's are much prized and

range from \$150-\$200. Early transistor sets of the 1960's are also now appealing to technically minded collectors, but again value is enhanced by first generation status.

Prices for vintage sets can vary over a wide range depending on technical details and on value added or possibly subtracted by restoration. In a provincial junk shop in Britain one might pick up a 1930's wireless for \$10 while a fully restored collectors' piece of the same model might cost \$450. Prices are still relatively modest when one considers the dizzy prices that good horn gramophones now command, but this is an expanding market and prices are expected to continue rising.

One of the sure signs of an expanding market is growing international interest. The Japanese have begun recently to collect avidly, fascinated as they are by the pre-history of communications. Dutch museums are also contenders in the market place. The Dutch nostalgia for old wireless sets is said to be triggered by memories of German Nazi occupation during World War II.

The British possess no national collection despite having been one of the early pioneers of radio engineering. The largest collection is in a private museum, the creation of Gerald Wells, a lifelong enthusiast and collector. The Vintage Wireless Museum, at 23 Rosendale Road, London SE21, can be visited by appointment only, as it is here where Mr. Wells lives and works surrounded by early television sets, gramophones and wirelesses. (Reprinted from *The Antique Trader Weekly*, Dubuque, Iowa.)

## MORE CLASSIFIED ADS

**WANTED:** G.E. "K" series of AC sets like K-60, K-63, K-52, K-80 and similar RCA sets. John Kern, RD#2 - Box 457, Quakertown, PA 18951 (215) 538-2128

**WANTED:** Klitzen Radio Mfg. Co. Model 500 Regenerative Amplifying Receiver made in Racine, Wisc. W.W. Runcorn, 216 Jefferson, Clayton, NM 88415

**FOR SALE:** Tubes - some oldies; books and magazines. Send wants and SASE. Glen Blizzard, 614 Hollywood Ave., Suffolk, VA 23434

**WANTED:** Mutual Conductance tube tester. T. Walker, 154 Intervale Rd., Mountain Lakes, NJ 07046

**WANTED:** Speaker for Philco 90 (good field coil); also Carborundum detector (cartridge). Jack Behrns, 4846 Lorraine Dr., San Diego, CA 92115

**WANTED:** Dual Victoreen Audio #112, at least one good section. Lou Lindauer, 43 Meadowrue Lane, East Northport, NY 11731

### SEND ALL ADS FOR OCTOBER ISSUE TO:

**Antique Radio Classified  
P.O. Box 2  
Carlisle, MA 01741**

### NOTICE

### NOW AVAILABLE FOR RADIO RESTORERS - A HALF-WATT RESISTOR KIT

This kit of 5% tolerance, carbon film resistors, a total of 500, has been selected specifically for radio restoration. Both values and quantities have been chosen to follow as closely as possible those found in radios made from about 1926-1940, but are also useful for restoring newer radios.

#### CONTENTS OF THIS KIT

100---5	1.0K--15	10K--20	100K--20	1.0M--15
150---5	1.5K--10	15K--10	150K--10	2.0M---5
200--10	2.0K--15	20K--15	200K--15	
240--10	2.4K--15	24K--15	240K--20	
300--10	3.0K--10	30K--15	300K--10	
360---5	3.6K---5	36K---5	360K---5	
390---5	3.9K--10	39K--10	390K--10	
510--10	5.1K--15	51K--20	510K--20	
620---5	6.2K--10	62K--15	620K---5	
680---5	6.8K---5	68K---5	680K---5	
750---5	7.5K---5	75K--10	750K--10	
820---5	8.2K---5	82K---5	820K---5	

Kits are shipped U.P.S. for \$20.00 plus \$2.50 shipping and handling per kit. For orders of 5 or more kits sent to one address, we pay shipping. For 10 or more kits to one address, the cost is reduced to \$17.50 per kit. For 25 or more kits sent to one address, the price is \$15.00 per kit. Get a club order together! Make checks payable to Michael D. Lewis. Personal checks take two weeks to clear. Shipping will follow check clearance. Send orders to:
