This Report Not Accredited by the MRC

This report is derived from data contained in Arbitron's accredited MaximiSer® service. This service is not part of a regular syndicated rating service accredited by the Media Rating Council (MRC). Arbitron has not applied for MRC accreditation for this service. Arbitron does provide syndicated services which are accredited by the MRC.

Preface

The First Preference report contains a compilation of audience estimates derived from the Arbitron MaximiSer service. It provides a comparison of Cume Persons and First Preference (P1) Cume Persons for all Metro-qualifying stations in each of the radio market Metro areas surveyed during the current survey period. Effective with Fall 1995, information for condensed markets is now included in this report. The estimates are based on listening information recorded in seven-day diaries by persons 12 years of age and older. All audience estimates are approximations subject to statistical variations and other limitations. The reliability of audience estimates cannot be determined to any precise mathematical value or definition.

This report is intended to aid radio station, advertiser and agency clients of Arbitron in evaluating station audience sizes among persons who listen to that particular station more than to any other single station in a given week. Arbitron attempts to provide herein a summary description of methodology that may be understood by all who use this report. A more detailed description of Arbitron methodology can be found in a separate publication, available to all Radio Market Report subscribers, titled *Arbitron Radio Description of Methodology*. An abbreviated version of Arbitron's standard methodology is also included in every Radio Market Report. A description of MaximiSer methodology can be found in the *MaximiSer User's Guide*.

Warning

All Arbitron estimates are copyrighted. The unauthorized use of any Arbitron audience estimate constitutes copyright infringement which could subject the infringer to statutory damages of up to \$100,000 and criminal penalties of up to one year imprisonment and a \$25,000 fine pursuant to Chapter 5, Sections 504 and 506 of Title 17 of the U.S. Code. All users of this service are referred to "Restrictions on Use of Report" (Paragraph 15).

DMA® is a registered service mark of Nielsen Media Research, Inc., and is used pursuant to a license from Nielsen Media Research, Inc.

This information is based on the 267 Radio Metros that were measured in the Spring 1998 survey. The analysis is based on a straight average of AQH and Cume P1 Audience Composition percents across Arbitron like-formatted stations. Only commercial MaximiSer[®] Metro-qualifying stations with at least 100 P1 AQH persons in the selected demo and daypart are used for these national averages.

MaximiSer[®] is a registered mark of The Arbitron Company.

Notations

Description of Methodology

The Market

1. The Market/An Arbitron Radio Market can be composed of up to four geographic areas: the Metro Survey Area (Metro), the Total Survey Area (TSA), the Designated Market Area (DMA®) and the Full Survey Area (FSA). These areas are composed of sampling units. A sampling unit generally consists of a single county, but may also consist of a split county (defined as one or more zip codes within a county), an independent city, or the combination of one or more independent city (ies) and an adjacent county. **In this report, audience estimates are based solely upon Metro geography.**

a. Metro Survey Area (Metro)

Arbitron radio Metros generally correspond to the federal government's Office of Management and Budget's (OMB's) Metropolitan Areas. A radio Metro may deviate from its respective OMB definition due to topographical, sampling or other considerations.

For areas that do not have an OMB-defined metropolitan area, Arbitron usually defines the Metro Survey Area to include the county (ies) of the majority of the local area stations' city (ies) of license.

The OMB updates its Metropolitan Areas every ten years, based on the new decennial census data. At that time, Arbitron reviews all radio Metro definitions for possible adoption of the applicable OMB definitions. In the review process, Arbitron considers such factors as: the historical market definition(s), local trade and commuting patterns, local radio listening patterns, and the views of its subscribers.

Between decennial censuses, Arbitron will consider changes to existing radio Metro definitions on a case-by-case basis if a written proposal, outlining the rationale and benefits of the proposed Metro, is submitted to Arbitron within established deadlines.

b. Total Survey Area (TSA)

The Total Survey Area (TSA) of an Arbitron Radio Market is designed to provide a comprehensive measure of listening to Metro-licensed radio stations. The TSA is composed of the Metro and any additional counties (or geographically split counties) which meet certain criteria for inclusion.

TSA definitions are based on historical radio listening patterns and are updated biennially based on the diary data used for the most recent County Coverage study. The specific criteria for adding, retaining or deleting non-Metro TSA counties are outlined in a separate publication titled *Arbitron Radio Description of Methodology*.

c. Designated Market Area (DMA®)

The DMA is composed of sampling units (counties or geographically split counties) and is defined and updated annually by Nielsen Media Research, Inc., based on historical television viewing patterns. A county or split county is assigned exclusively to one DMA.

Arbitron reports radio listening estimates for the Top 50 DMAs (ranked on TV households) in the Radio Market Reports of all Standard radio markets whose Metros are located within the DMA and whose names are contained in the DMA name.

d. Full Survey Area (FSA)

The FSA is composed of all the counties in the Metro, TSA and, if applicable, the DMA.

Sampling & Measurement Techniques

2. Sampling Methodology/Surveys for Arbitron Radio Market Reports are conducted by using geographic units called sampling units. A sampling unit consists of a county or a split county. The latter are defined by zip code information based on 1990 Census data, as updated annually by Market Statistics.

Sample targets are established for the Metro and, if applicable, the non-Metro TSA and/or the DMA. Sample targets are then established for each sampling unit proportional to its Persons 12+ population in the respective survey area subject to minimum sample requirements for Radio County Coverage. The amount of sample ordered is determined by dividing the sampling unit target by the expected rate of response based on previous survey (s) sample performance and other factors.

For each 12-week survey period, a complete new sample of telephone numbers is computer-selected for each sampling unit through the use of a systematic interval random selection technique. These telephone numbers are drawn from a sample frame provided by Metromail Corporation containing listed residential telephone numbers and possible unlisted telephone numbers from 100-blocks with at least 10 listed residential telephone numbers. The sample frame is updated by Metromail using current available telephone directories. Known business and group quarters telephone numbers are excluded from the sample frame. The total sample is randomly divided into approximately equal weekly groups for placement.

If a need for additional sample arises after the original samples have been selected by the computer, then such additional sample is generally selected in the same manner and from the same sample frame as the original sample.

3. Arbitron Radio Listening Diary/Arbitron uses seven-day individual diaries to gather listening information from persons 12 years of age and older (Persons 12+). Bilingual (Spanish-English) diaries are provided to all survey participants in the Metro of a Hispanic-controlled market who have identified themselves as Hispanic in response to an ethnicity question or from whom ethnic information was not obtained, and to any others indicating a preference for a bilingual diary. Premiums of varying monetary amounts are provided to encourage respondent cooperation. Arbitron sends a diary for each person 12+ reported in the sample household up to a maximum of nine.

4. Diary Placement and Retrieval/Initial contact with listed sample households is by a letter informing them of their selection by the computer and stating that an interviewer will be calling to request their cooperation in the survey. Initial contact with unlisted sample households is made by the interviewer at the time cooperation is requested.

Arbitron interviewers call all selected telephone numbers to ascertain the possibility of a media affiliation, to gain consent for participation in the survey, to determine the number of Persons 12+ living in the household at the time of the placement call and, where applicable, to determine the race/ethnicity and demographics of the household. Households with more than nine persons 12 years of age and older and media-affiliated households are ineligible for survey participation.

Interviewers are instructed to make a number of attempts to reach every telephone number in the sample. These attempts are made at different hours of the day and evening. Diaries are then mailed directly to the consenting sample households from Arbitron.

After the initial contact, the interviewer is directed to make additional contact(s) with the sample households to make sure the diaries have been received; to assist members of the household in understanding the diaries' purpose; to answer any questions; to remind the diarykeepers to return their diaries after the survey week; and to thank them for their participation in the survey.

Explicit instructions are provided to each interviewer, and validation checks are regularly conducted to help ensure that instructions are being properly followed.

Processing Techniques

5. Processing of Diaries/Arbitron makes reasonable efforts to utilize all returned diaries. However, some returned diaries are determined by Arbitron to be unusable. Among those which are unusable are diaries which Arbitron determines: are incomplete; are postmarked and/or arrive on or before established dates; or which otherwise lack essential information. The total number of in-tab diaries may differ from the sample target.

Usable diaries are prepared for computer processing in accordance with procedures listed in the Arbitron *Radio Edit Procedures Manual*. The listening information in the diaries is then computer-entered so that certain computer verifications and edits can be made. These include ascription procedures, the allocation of credit for aberrated call letters and other analyses and pretabulation preparations.

Computing Techniques

6. Computation of Estimates/

a. Sample Balancing

The weighting system used by Arbitron, sample balancing, is an iterative marginal weighting technique designed to compensate for disproportionate in-tab from specified marginal classes. Marginal weighting means that in-tab diaries are weighted to represent the population for each specified marginal class. The number of geographic marginal classes (i.e., counties, split counties or county clusters) will vary. The number of age/sex marginal classes is generally 16. In addition, markets that are race and/or ethnically controlled are sample balanced so that in-tab diaries from the race/ethnic group are weighted to represent the population of that race/ethnic group. As a result of this cumulative weighting, a Persons-Per-Diary Value (PPDV) is computed for each diary. The PPDV is the number of persons that diary is estimated to represent.

b. Computing Cume Persons Estimates

Station Cume Persons estimates are derived by summing the PPDVs for each diary in which a station received listening credit for the time the station is on the air within a daypart. PPDVs are summed for all diaries within each demographic group with listening to the station, and then rounded to hundreds.

c. Computing First Preference (P1) Cume Persons Estimates

Station First Preference (P1) Cume Persons estimates are derived by summing the PPDVs for each diary in which a station is identified as the first preference station. PPDVs are summed within each demographic group for all diaries with first preference listening to that station, and then rounded to hundreds. The P1 station is the MaxiMiSer-qualifying station with the highest credited total quarter-hours of listening in a diary, based on an entire survey week's worth of listening. In the event of a tie for most quarter-hours of listening, all tied stations are assigned as P1.

d. Computing Average Quarter-Hour (AQH) Persons Estimates

Station AQH Persons estimates are computed by multiplying the number of quarter-hours of listening to a station within a daypart for the time the station is on the air in each diary by the diary's respective PPDV. The result of this multiplication is summed for all diaries within each demographic group, then divided by the number of quarter-hours the station is on the air during the applicable daypart and then rounded to hundreds.

e. Rounding of Calculations

Rounding occurs at various stages in the computation of audience estimates at demographic and daypart summation levels. (See "Limitations," Paragraph 10.)

f. Broadcast Hours

(i) Local time differences within a market that overlaps time zones are accounted for by adjusting to the time observed by the majority of counties in the Metro of the market being measured. (ii) Only one set of sign-on/sign-off times for a station is used in computing audience estimates. Arbitron uses the sign-on/sign-off times reported for the month closest to December and the shortest broadcast day within that month as provided by the affected radio station. (iii) Audience estimates are adjusted for the station's actual broadcast schedule. However, when a station changes sign-on/sign-off times during an Arbitron survey period, the times used in calculating audience estimates are taken from those days of operation comprising the majority of consecutive days of the survey period. (iv) Stations broadcasting for less than an entire reported daypart are indicated by a footnote symbol next to the station's call letters or audience estimates. (v) Stations must notify Arbitron in writing of any changes in the station's sign-on/sign-off time as soon as they occur but no later than the day after the last day of the survey.

g. Technical Difficulties

No adjustments are made to either diary entries or reported audience estimates for periods of technical difficulty. The notation of technical difficulties on Page 13 of the applicable Radio Market Report is only to assist the users in making their own evaluation of the reported audience estimates. Arbitron will accept information on technical difficulties only up to the day after the last day of the survey.

Criteria for Reporting Stations

7. Criteria for Reporting Stations/The stations included in this report are the Metro-qualifying stations from each corresponding Radio Market Report. To be included in the Radio Market Report, a station must pass certain Minimum Reporting Standards (MRS). For a detailed understanding of these criteria, please reference "Criteria for Reporting Stations" in the Radio Market Report.

8. MaxiMiSer Minimum Reporting Standards (MRS)/While the following MaxiMiSer MRS are not used to qualify stations for this report, they do come into play in the assignment of First Preference (P1) stations (see Paragraph 6c).

a. Nonsimulcast Stations

A station which does not simulcast with another station is reported in MaxiMiSer if it has met the following MRS for the FSA among Persons 12+ during the Monday-Sunday 6AM-Midnight daypart during the current survey of the market: The station must have received five or more minutes of listening in a quarter-hour in at least ten in-tab diaries in the FSA.

b. Simulcast Stations

MRS for simulcast stations are generally based on the percent of quarter-hours in the Monday-Sunday, 6AM-Midnight daypart (when both stations are on the air simultaneously) that the two stations simulcast for every week of the survey: (i) 90.49 percent or less — The two stations are considered to be nonsimulcast stations and each must independently meet the criteria used for nonsimulcast stations (see Par. 8(a)); (ii) 90.5 percent or greater — The two stations are regarded as simulcast stations for MRS purposes and therefore will be treated as a single station. If the combined diary mention counts of the two stations are sufficient to meet the criteria of Par. 8(a), then both stations will be reported in MaxiMiSer even though when considered individually one (or both) stations might not meet the MRS criteria, so long as each station received a mention in at least one in-tab diary anytime during the 24-hour day/7-day survey week.

Statistical Reliability

9. Sampling Error/Arbitron estimates are subject to the statistical variances associated with all surveys using a sample of the universe and, additionally, to all of the factors described in Special Notices and Paragraph 10. Users of this service should keep in mind that, due to the factors discussed in Paragraph 10, the accuracy of Arbitron estimates, data and reports and their statistical evaluators cannot be determined to any precise mathematical value or definition.

Limitations

10. Limitations/In addition to the sources of possible error which are described elsewhere in this text, the user should be aware of the limitations described below.

a. The sample is drawn from telephone households only. Persons in nontelephone households are thereby excluded from the sample frame. Commercial establishments listed in directories are specifically excluded from the sample. Steps are taken to exclude residents of group quarters from Arbitron's sample frame (except in instances where a private phone is installed in the individual living quarters). Further, all possible telephone directories and all possible unlisted telephone numbers may not be available in the lists prepared by Metromail Corporation and used as Arbitron's sample frame.

b. Effort is made to exclude households with a media affiliation. The inclusion or exclusion of such households from the sample is dependent upon information revealed by the sample household in response to Arbitron's media affiliation questions at the time of the diary placement call.

c. There may be instances where Arbitron instructions are not followed by the interviewer. The interviewer may not always be under the direct control of Arbitron. In certain instances, independent telephone survey organizations are utilized by Arbitron.

d. Nonresponding persons may have listening habits which differ from those of respondents. Persons residing in nontelephone households may have listening habits which differ from those of persons residing in households with telephones.

e. Nonresponding persons in the original designed sample prevent the in-tab sample from being a perfect probability sample.

f. The sample design and/or response patterns may preclude proportional representation of certain groups within the population such as ethnic groups, racial groups, persons in certain income or education groups, or persons whose primary language is other than English. Such persons may have listening habits which differ from other persons.

g. The population estimates from Market Statistics used in designing the sample are based upon the decennial U.S. Census and are subject to all the limitations inherent therein. In addition, population estimates are subject to limitations such as sampling errors, errors in locating undocumented populations, and processing and recording errors. Furthermore, the sources used by Market Statistics to update populations between decennial Census dates may not include adjustments for known or unknown over- or undercounts of various segments of the population, including undocumented population groups. In addition, annual population updates may be based on the results of sample surveys and are subject to their respective limitations. These limitations in data from Market Statistics are inherent in the Arbitron estimates based thereon.

h. Zip code information used in MaxiMiSer is subject to defects and limitations.

i. Diaries, or portions thereof, may be completed improperly if the diary instructions are not followed by diarykeepers. Some diary entries may have been made on the basis of hearsay, recall, diarykeeper approximations or could have been influenced by comments made by the interviewer or others to diarykeepers.

j. Human and computer processing errors may occur before or after the diaries are received by Arbitron. Consequently, the degree of variance in the data may be greater than that expected from sampling variance alone.

k. The data upon which Arbitron has based its in-tab sample weighting, including racial or ethnic identification, may not be precise.

l. Defects and limitations found in data supplied by others are inherent in Arbitron estimates based thereon.

m. Logical analysis, preprocessing preparation, ascription of the data, or postsurvey week telephone validation calls may affect some of the diary listening entries before the data are projected. Diaries, or portions thereof, may thereby be modified or excluded from the survey. These procedures may affect the audience estimates or a station's ability to meet MRS.

n. Arbitron conducts research involving new methods of improving cooperation of diarykeepers and/or securing additional information from such persons. Occasionally, a portion of this research may be integrated with actual surveys and, if and when so done, may cause the degree of variance in the data to be greater than that expected from sampling variance alone.

o. Certain data, such as when the station was on and off the air, facilities, call letters in effect, station name claimed, format, programming, Sales Representative, network affiliation(s) and time periods when two stations were simulcast or separately programmed, are based on data supplied by the stations, the FCC and/or recent industry publications or notices. These data may not be accurate or timely and may affect the way certain audience estimates are reported.

p. Situations in which stations have or have had the same call letters or frequency or have changed call letters or frequency may result in diarykeeper confusion in correctly identifying the station to which the listening occurred.

q. Due to rounding, mathematical manipulation by the user of estimates for narrow dayparts and demographics, custom geographies, and weekly analyses reported in MaximiSer may produce results which may be incongruent with estimates for broader dayparts and demographics, standard geographies and 12-week analyses also reported in MaximiSer.

r. Due to different rounding procedures, MaximiSer audience estimates may differ from those in the applicable Radio Market Report(s).

s. Arbitron places sample at the county level, not the zip code level. Therefore, from survey to survey, there may be greater variation in the number of in-tab diaries at the zip code level than at the county level.

t. Arbitron does not use weighting to adjust for disproportionate in-tab by zip code. The PPDVs assigned to individual in-tab diaries may, when aggregated by zip code or zip code group, reflect a population not equal to the estimated population in the zip code-defined area or zip code group or socio-economic category.

u. In-tab diaries may be excluded from certain analyses due to human or computer error.

v. In-tab diaries may be available in MaximiSer that were not used in the processing of a Radio Market Report(s).

w. Audience estimates based on in-tab diaries of persons 21 to 24 years of age are determined using PPDVs for persons 18 to 24 years of age. Estimates for the discrete 21-to-24 age group and weekly analyses for any 21+ demographic are not available.

Retention of Survey Materials

11. Retention Schedule/In-tab Arbitron listening diaries used for the compilation of the most current audience estimates reported in MaximiSer, along with all unusable diaries and other survey materials, will be stored for one year from the date on which the respective MaximiSer data were first mailed and/or delivered electronically to subscribers; after such time, all diaries and other survey materials are destroyed. Subscribers to this service are advised that if special tabulations requiring the physical in-tab diaries are desired, they should be ordered before the retention period has expired. Upon proper appointment, subscribers to this service may examine, but not copy, the in-tab Arbitron listening diaries used in this service at Arbitron's Columbia, MD, office.

Special Notices Page

12. Special Notices/To the extent that any provisions contained in this description of methodology are inconsistent or conflict with any provision contained in the Special Notices on Page 13 of the applicable Radio Market Report(s), such Special Notices are deemed to supersede and/or amend this description of methodology.

Reservation of Rights

13. Reservation of Rights/Arbitron reserves the right to exercise its professional research judgment in modifying, waiving or suspending any policy, procedure or element of methodology that would appear to Arbitron to be unreasonable, illogical or impractical in light of known conditions.

Disclaimer of Warranties

14. Disclaimer of Warranties/Arbitron makes no warranties, express or implied, concerning: data gathered or obtained by Arbitron from any source; the present or future methodology employed by Arbitron in producing Arbitron ratings; or the Arbitron data, estimates or ratings contained herein. All Arbitron data and estimates represent only the opinion of Arbitron and reliance thereon and use thereof shall be at subscriber's own risk.

Restrictions on Use of Report

15. Restrictions on Use of Report/All Arbitron radio audience estimates are proprietary to and copyrighted by Arbitron. They are provided to Arbitron clients pursuant to the terms of both written license agreements between Arbitron and such clients and the restrictions and limitations on use printed herein. All Arbitron audience data and estimates are for the exclusive use of Arbitron clients and their authorized representatives and may be disclosed only to advertisers, prospective advertisers and their agencies for the purpose of obtaining and retaining advertising accounts and through advertising or promotional literature. Any commercial use of Arbitron audience estimates or data for the purpose of selling advertising time or space by or on behalf of broadcast, cable or print media must be under the terms of a written license agreement between that medium and Arbitron specifying permitted uses. For an Arbitron client to divulge any data or estimates to a nonsubscribing station, or to lend and/or give a copy and/or a reproduction of any part of any report to any nonsubscriber, including print media, advertisers and/or their agencies, constitutes a breach of the license agreement between Arbitron and client. Quotations by clients of the estimates as allowed by this section for purposes of advertising or promotion must identify Arbitron as the source and that Arbitron's data and estimates are copyrighted. It also should be mentioned that the audience estimates are subject to all qualifications and limitations stated in the Arbitron report. Arbitron recommends that the appropriate market, survey period and kind of audience estimate (e.g., Boston, Fall 1997, Metro Survey Area, Monday-Friday 3PM-7PM, Average Quarter-Hour Estimates, Men 18-24) be stated.

Neither this report nor any audience estimate contained herein may be used in any manner by nonclients of Arbitron without written permission from Arbitron.

Users of audience estimates are referred to the current policies of the Federal Trade Commission relating to the use of audience estimates.
