# ANNUAL PRESENCE OF CHILDREN ESTIMATES UPDATE

Nielsen Audio will update presence of children universe estimates for the October 2016 PPM Survey. Presence of children is defined as a percentage of P6+ persons living in households with children aged between 0-17 years. These estimates utilize Census 2010 data applied to the current population estimates. Presence of Children estimates are generally applied with annually updated population estimates for the October PPM survey. The next update is scheduled for the October 2017 survey. Presence of children estimates are used in weighting the In-Tab sample in PPM markets only.

**The presence of children estimates reflected in the October 2016 update will have no effective difference across all Metros since the October 2015 update.**

The final impact of the presence of children estimates refresh on ratings is not possible to reliably predict since other factors may also impact listening levels. Other factors to consider when analyzing audience estimate changes include:

- Programming changes in the market.
- Events such as weather or major news stories which can influence radio listening behavior.
- Typical survey to survey variance in estimates that is characteristic of survey samples.
- Panel changes that may occur from month-to-month
- Other changes and improvements in the PPM service.
