Television Marketplace

The ADI Market Atlas

The Area of Dominant Influence is a geographic market design that defines each television market exclusive of the others, based on measurable viewing patterns. Each market's ADI consists of all counties in which the home market stations receive a preponderance of viewing, and every county in the continental U.S. is allocated exclusively to one ADI—there is no overlap. The total of all ADI's represents the total television households in the U.S.

The ADI is a standard market definition. As a television buying tool it is a geographic and demographic means for maximum efficiency. As a station tool it has applications for sales, programing, and promotion planning.

Following, in alphabetical order, are Arbitron Television's 213 ADI markets for 1986-

87, with coverage maps for each; and county by county breakouts of TV households. Other data include the market's stations, their cities of license, channel numbers and network affiliations.

Coverage maps show total survey areas in white, the ADI's themselves in light crosshatching, and Arbitron Metro Rating Areas in heavier crosshatching. The survey areas consist of all counties in which the home market stations are viewed to any significant extent, including via cable. The Metro Areas usually conform to U.S. Census Standard Metropolitan Statistical Areas.

Non-ADI markets do not meet Arbitron's criteria for having an ADI of their own; they are listed with the ADI of which they are a part.

A complete listing of the non-ADI markets and a cross-reference list for cities in multi-city ADI's appear on page C-149.

Non-ADI Markets

The following single-county markets did not achieve ADI status because the preponderance of viewing is not to the home-market station. Neither did they meet the criteria of the 10% Rule to become an ADI. The home counties in non-ADI markets are assigned to the ADIs that do receive the preponderance of viewing.

TV Markets by Nielsen Marketing Research Territory

Nielsen Marketing Research territory groupings are another standard way of reporting sales data. The following table ranks TV markets within each Nielsen Territory. This provides a yardstick for determining the number of spot markets needed to achieve a given coverage of a territory. For example, if the national media are not delivering sufficient advertising weight in

New England, the planner will find that three TV markets (Boston, Hartford and Providence) contain almost 80% of the New England territory households. Or, he can use the table to get a better idea of how and what TV markets are needed to cover all of New England. Data is from special Nielsen Station Index tabulation based on a January 1987 estimate.

How Network Delivery Varies by Market

National advertisers use spot television to increase network advertising weight in specific markets to achieve a predetermined level. These market goals are derived from the advertising budget and the market's share of the brand's projected sales. Thus, a spot schedule is usually indicated where a market has an unusually high brand-sales potential, or where the network weight delivered for the brand is below the national average used in planning, or both.

The first factor, market brand potential, varies by product and is difficult to generalize. The second factor, local-market network audiences, must be generalized because planning is based upon next season's *anticipated* network performance. The prevalence of network package buys, which tend to deliver average audience levels, supports

the use of average data.

The following tabulation, chosen especially for the BROADCASTING/CABLECASTING YEARBOOK, shows Arbitron Television's Areas of Dominant Influence (ADI) in terms of percent of the total number of U.S. TV households. Also given, in like percentage terms, are the network audiences in each ADI market during prime-time hours. It is this market audience figure, when compared to the market's share of the population, that indicate whether the network commitment will perform above or below the national plan average in that market.

The figures are based on Arbitron Television's May 1986 Network Program Group Analysis.

HOW THE SK-110D PUTS AN END TO THE REIGN OF ERROR.

With the SK-110D, Hitachi has created a studio broadcast camera with microprocessor technology so accurate that registration errors and time-consuming setup are things of the past.

Using a single button, now you can automatically set up RGB, color balance, and analog and digital registration—along with complete fault diagnosis—for up to 42 cameras simultaneously in just two minutes. And while you're shooting, the SK-110D keeps correcting realtime zoom and focusing errors, as well as registration changes caused by fluctuating prism temperatures.

The SK-110D performs magnificently.

Here's why: The 30-mm LOC diode gun Plumbicons and electronics yield 750 lines horizontal resolution, and greater than -56dB S/N. Dynamic focus provides for superb corner resolution. And detail signals are generated from both red and green.

The SK-110D is also today's most technologically advanced and versatile camera system. It offers iris and auto-setup by external chart. It has a high-resolution viewfinder with electronic markers.

The battery-backed head and CCU store up to four full-function files, eight lens files and 64 scene files. And add a smart RCU that controls those files, and you've got a camera that can precisely remember the "look" of every production shot you'll take.

Put an end to the reign of error in your studio today. And usher in a new era of image quality with the Hitachi SK-110D. For a demonstration in your studio contact Hitachi Denshi America Ltd., Broadcast and Professional

Programing on Radio Stations in the United States

Formats

Following, in alphabetical order, by state, city and call letter within each classification, is a listing of program formats and the radio stations that use them.

For convenience, the editors have combined the format types indicated by the stations into logical groupings. A station using a combination of formats may appear under several classifications. Blocks of programming averaging less than some 20 hours per week are considered "special programming." A list of stations by special programs is presented in a supplementary directory. In the case where a format listing is extensive, the listing has been separated by state with a blank line.

In many cases more specific information on format or special programming is given in individual listings in the B section station directory, including addresses for each station.

CONTROL EVERYTHING BUT THE NEWS ITSELF

News ExpressSM gives you the edge every day

Satellite news gathering (SNG) is setting the world of TV news on fire. Because stations are capturing the action live—from almost anywhere it happens.

With News Express from GTE Spacenet, SNG can be an even greater competitive advantage. Spacenet has combined its years of experience as a communications leader with the very latest in satellite technology. The result? News Express provides you a level of control never before possible.

More control over voice communications with dialtone on demand

Whether you're covering a factory fire, a hot political story, or a sizzling series of events such as a playoff, you don't want to worry about telephone connections. News Express gives you *dialtone on demand*, as soon as your transportable unit's antenna has made satellite contact, with or without video transmission. News Express includes up to four voice

channels for fast voice communication from your unit, via satellite, to the publicly dialed phone system.

Quality control from a communications leader

Spacenet provides reliable, high-quality transmission and operations expertise from the most advanced satellite monitoring and control facility in the industry. You can schedule time cost-effectively in increments as brief as five minutes. News Express also gives you complete editorial control, without a vendor-arranged priority system. Contact GTE Spacenet to learn how News Express puts *you* in control of your SNG program.

NEWS IN YOUR OWN IMAGE.

We will send you the news. Clean. Uncluttered by our logo, without any TV Direct by-line. Because the news you broadcast should be your news—in your station's own image.

In fact, the only image we won't send you is the one at the bottom of this ad.

TV Direct™ video news service is your hotline to the nation's capital. With AP reporters working for you, leaving no event uncovered. With Conus SNG® pros sending that coverage. Live or on tape. Unedited or rough-cut. Whichever way works best for you.

Likewise, our Beat Checks—unique, on-camera reports by AP journalists—are your resource for insightful coverage of Washington's complex issues and events.

And when a story breaks—anywhere in the world—our AP Videograph service becomes your resource for the computer-enhanced photos and graphics you need. All sent clean. For you to make your own.

Call us at 1-800-821-4747. Or write: TV Direct, 1825 K St., N.W., Suite 615, Washington, D.C. 20006. Because the news images you broadcast should be in your own image.

Industry Standard Coding Identification System

A computer format system for identifying television commercials, adopted by the American Association of Advertising Agencies, the Association of National Advertisers, the National Association of Broadcasters, the Station Representatives Association, the Television Bureau of Advertising and the television networks effective July 1, 1970.

In 1986, the ISCI System was expanded in two ways: 1. the TV commercial coding is offered for extension to cover advertisers worldwide under the one standard. 2. a portion of the ISCI System is used to cover all television programs... program material of all types, lengths and media which are intended for syndicated or other repeat usage.

The eight-character (four letters and four numbers) coding is to be used on commercials themselves and on their schedules, leaders, boxes, etc. ... with all commercials of a single advertiser "parent" company (if there are subsidiaries, divisions or affiliates) are identified by the advertiser's prefix which is assigned by the ISCI system. For programs, the ISCI System assigns a specific eight-character permanent code to each piece of programming.

The ISCI System, Attn: David W. Dole. 110 Stratford Rd., Des Plaines, Ill. 60016.

Copies of the "ISCI Register," a 288-page book listing 3,000 national and regional advertisers and 900 advertising agencies with their assigned ISCI prefixes, are obtainable from Dole, to whom all questions regarding the system should be addressed.

NAB Television and Radio Codes

Both codes of broadcast standards promulgated by the National Association of Broadcasters have been suspended. The NAB and U.S. Justice Department agreed to a consent decree abolishing commercial time standards in the television code, in settlement of an antitrust suit brought by Justice (see BROADCASTING Magazine, July 19, 1982). Programing standards

in the television and radio codes were suspended in 1976 after a U.S. federal judge in Los Angeles ruled that family-viewing provisions of the television code violated the First Amendment. For texts of the suspended codes see BROADCASTING/CABLECASTING YEARBOOK 1982.

Radio and Television Audiences

Radio and Television were in more U.S. homes than ever before as 1987 approached.

Radio. The Radio Advertising Bureau estimated that 87.1 million U.S. homes, 99.0%, were radio-equipped as of Jan. 1, 1986.

Radio Sets. The number of working-order radio sets in the U.S. totaled 507 million in January 1985, according to estimates by the Radio Advertising Bureau. RAB estimated that 370 million of these were home and personal radio sets and 137 million were out-of-home receivers.

Television. A total of 87.4 million homes, or 98% of all U.S. homes (excluding Alaska and Hawaii) were TV equipped as of January 1, 1987, according to A.C. Nielsen Company.

Color TV. Homes equipped with color TV sets totaled 82.86 million, or 95% of all TV homes, as of Jan. 1, 1987, according to A.C. Nielsen Company estimates.

Viewing and Listening. The extent to which radio and television sets were used as indicated in the tables that follow. The television figures were furnished by the Nielsen company and its Nielsen Television Index (NTI). The radio data came from RAB and other sources as noted.

Sharp XC-A1 ENG/EFP Color Video Camera

Leave it to Camera Mart to bring you quality and reliability at a reasonable price. Witness: the new Sharp XC-A1 color video camera.

The Sharp XC-A1 quality starts with an advanced $\frac{2}{3}$ " compact tube. Three diode gun/mixed field saticons and prism optics combine to give you 750 lines of enhanced resolution.

A high 57 dB signal-to-noise ratio gives you quiet pictures even when you go to 9 dB or 18 dB gain.

The XC-A1 is automatic so all you do is compose and shoot. It has computer-controlled auto-centering, auto-white, auto-black, plus an intelligent auto-iris that can handle intense color fields.

The 1.5" electronic viewfinder keeps you fully informed, and a "user-friendly" character display coaches you for set-up in plain English—then moves out of your view.

All this in a solid, die-cast body that can balance its light weight perfectly on your shoulder...even without being held.

Now at Camera Mart—the Sharp XC-A1 high performance camera...at a price you can carry.

***The more you know about video, the more you can
rely on Camera Mart.***

DELTA BROADCAST PRODUCTS

ASE-1/ASM-1

AM Stereo without compromise. The AM Stereo Exciter and Modulation Monitor provides a C-QUAM™ quadrature modulated stereo signal featuring low distortion and channel separation greater than 35 dB throughout the audio spectrum. The ASE-1 generates a signal to produce a phase modulated transmitter carrier. An L + R audio signal AM's this carrier to produce the C-QUAM signal, the only signal completely compatible with all C-QUAM, multimode and envelope detector receivers.

C-QUAM is a registered trademark of Motorola, Inc.

RCS-1V

This Remote Control System calls you when it needs help! The RCS-1 combines microprocessor technology with easy operation. Features include direct interface boards for antenna monitors, patented remote modulation bargraphs, automatic logging, and synthesized speech telephone interface. Additional input and control boards to expand remote control capabilities can be added at any time.

AAM-1

The Analog Antenna Monitor measures the parameters of directional antenna systems. Readings are: relative current; and current ratio and current phase to a reference antenna. The AAM-1 can monitor up to 8 antennas with ratio and phase measurements displayed on front panel meters.

AMC-1/FMC-1

The only modulation control systems which provide a completely closed loop around the transmitter. The Amplitude and Digital Modulation Controllers sample actual modulation levels after the PA output network assures precise adjustment for optimum modulation levels. Both the AMC-1 and FMC-1 keep count of over-modulation bursts for signal control through a linear attenuator.

RG-4

High output Receiver/Generator. The Receiver/Generator combines a two-watt RF output and a correlation detector circuit that virtually eliminates interference problems. The RG-4 operates in the 100 kHz to 30 MHz range. It is designed as the ideal companion instrument for Delta's OIB-1, OIB-2, and OIB-3 impedance bridges.

APC-1

Your insurance against over- and under-power operation. The Automatic Power Controller continuously monitors the transmitter output power, making automatic power adjustments via the transmitter loading control. The APC assures proper power levels at all times.

OIB-1/OIB-3/CPB-1

Full power impedance measuring. The Operating Impedance Bridges measure the impedance of radiators, networks and the like while operating under normal power. The OIB-1 measures VSWR and impedance up to $400 \pm j300$ ohms. The OIB-3 extends the range to $1000 \pm j900$ ohms, and has an RF amplifier for improved nulling. The Common Point Impedance Bridge is permanently installed for continuous monitoring of the common point during network adjustment. An optional TCA ammeter can be installed in its front panel.

6730E/6740B

Fast, efficient coaxial transfer switches. The coaxial transfer switches are designed to switch transmitters, transmission lines, antennas, dummy loads and auxiliary equipment quickly and easily. Either manually or remotely controlled, the switches are fully interlocked to prevent switching with RF power applied. The 6730E switch uses 1-5/8 inch connectors, the 6740B switch uses 3-1/8 inch connectors.

TCA/TCT

Simplifies antenna current and phase sampling. TCA Ammeter Systems provide accurate, modulation-free current readings on a variety of meter types. Torodial Current Transformers provide current and phase samples, and are available with three output voltage ranges, as well as high voltage models.

***Panasonic® brings you M-II.
The broadcast recording system our
competition can't seem to duplicate.***

Now you can shoot, edit and broadcast with 1" quality—on 1/2" cassettes.

When it comes to broadcast systems, it appears our competition has been erased. Because no other format can match the spectacular performance of M-II from Panasonic.

With M-II's metal particle tape system, you can use the same compact 90- or pocket-size 20-minute cassette from ENG/EFP right through editing to on-air broadcast. With 4.5MHz bandwidth (-3dB), 50dB S/N and burst signal insertion for phase alignment and jitter correction, M-II is the single solution to all your broadcast needs.

In fact, each unit in the M-II line offers some pretty uncommon common features like four audio tracks (two linear and two FM), an integral longitudinal and vertical interval time code/time date generator with presettable user bits and Dolby*-C noise reduction. And M-II products utilize a standard edit control interface, so you can upgrade gradually if you like.

AU-650 Studio VCR. This compact, rack-mountable VCR has all the advantages and functions of conventional recorders with

the benefit of the M-II format. The AU-650 provides video and audio performance as good as—if not better than—that of 1" VTRs. In a 1/2" cassette format that lends itself to station automation. It records and plays either 90- or 20-minute cassettes, and provides smooth action, variable slow motion as well as freeze frame. And the AU-650 can perform frame-accurate automatic editing with multi-generation transparency. There's also an internal TBC to assure on-air-quality playback.

AU-500 Field Recorder. The AU-500 offers the portability and functions demanded by ENG/EFP users, while providing picture quality comparable to 1"—all on either a 90- or 20-minute cassette. This small, ruggedly designed unit is equipped with confidence field color playback, automatic backspace editing, TBC/DOC connection, search function and warning indicators that alert the operator should recording problems arise and the AU-500 accommodates NTSC composite or various component input signals.

The AU-400 Camera Recorder. This lightweight, compact camera recorder provides ENG users with more than 20 minutes of recording, and a picture quality that rivals that of 1" VTRs. The AU-400 also features B/W video confidence playback through the camera's viewfinder, a chroma confidence indicator and audio confidence output through a speaker.

There's even an automatic backspace editing function and warning indicators. And the AU-400's rugged construction provides excellent resistance to dust and moisture.

M-II, it's the only broadcast system of its type in the industry. And it's available now. Two of the best reasons to go with M-II from Panasonic.

With our Automatic Remote Control System your transmitter – and your personnel – will operate with increased efficiency

Have you ever wondered if your night operator will remember ... to switch patterns at sunrise? ... to periodically check critical levels? ... the correct transmitter restart sequence? You'll never have to worry if Potomac Instruments' RC16+ is on the job. Because it'll do all these tasks for you. Plus a lot more. Automatically.

With its microprocessor based control logic, the basic RC16+ provides 16 telemetry channels with automatic out-of-tolerance alarms and remote raise/lower controls;

plus 16 status channels. The automatic functions — pattern shift, transmitter restart, power control — are pre-programmed in accordance with station license requirements and controlled with an accurate master clock.

The RC16+ is also expandable. In 16 channel increments, up to a total of 64 channels. With the remote video display option your chief engineer can get a detailed readout of all measured parameters. It's updated every 30 seconds and connects to any standard telephone. The optional plug-in automatic logger provides a permanent record of all transmitter activity. Log intervals, sequence, and alarm flags are user-selectable.

And, best of all, the RC16+ is cost effective. No other unit on the market offers these features and capabilities at this low price.

Basic System	\$4,995.00
Additional 16 Channels	1,865.00
Plug-In Automatic Logger	2,499.00

WE WORRY, SO THAT YOU WON'T HAVE TO.

We have strong opinions about the way communications towers should be built.

Some people think that quality standards can be somewhat flexible.

We don't agree.

Some people think that "off-the-shelf" designs, with minor adjustments, are sufficient to meet most requirements.

We don't agree.

Some people think that short cuts in fabrication are justified when the end product seems "good enough".

We don't agree.

For TV, CATV, "Class C" FM, AM and microwave towers, call STAINLESS. We worry about quality . . . so you won't have to.

Attention: Sales Managers Account Executives Sellers of Broadcast Time

Improve your ad sales with the help of
Pam Lontos' 24-lesson seminar,
Tune In to Success in Broadcast Sales.

As vice president of sales at KMGC-FM in Dallas, **Pam Lontos** increased billing over 500%—from \$42,000 to \$272,000 monthly—in a single year. You've probably heard her speak at NAB conventions or on tour for the Radio Advertising Bureau. Through her consulting services and seminars, she has helped countless salespeople increase their radio and TV stations' advertising revenue. Her nationally acclaimed, time-tested approach *works*.

The twelve cassettes in **Tune In** are perfect for training new salespeople and motivating veterans. And cassettes offer convenience—play them at sales workshops *you* schedule, or listen during otherwise wasted commuting time.

Tune In features solid practical advice as well as instructive, amusing anecdotes. The lessons cover the field of broadcast sales comprehensively, discussing in detail topics such as:

- Telephone Technique
- Organization and Steps in the Sale
- Elements of Persuasion
- Types of Buyers
- Eliminating Objections
- Setting Goals
- Closing Sales
- Power of the Mind

Bruce Johnson, former president of RKO Radio and Shamrock Communications, says this about Pam Lontos: "At Shamrock, what we discovered about Pam was that she was able to teach her broadcast sales system to *all* of our people." The result: more effective salespeople...and more advertising dollars.

Broadcasting's Book Division is pleased to offer this invaluable educational opportunity for only \$250.00, a fraction of the cost of sending your sales staff to a sales clinic—with no per-person fees, no travel expenses, no extended time away from work. With *repeated* exposure to her instruction and advice, salespeople are better able to retain and apply Pam Lontos' selling principles. **Tune In to Success in Broadcast Sales** will continue to help improve your ad sales for years to come.

Order your twelve cassette seminar today by using the order form to the right. Or order toll-free using MasterCard, VISA or Choice by dialing 800-638-7827.

Note: The dollar volume figures represent total considerations reported for all transactions with the exception of minority interest transfers in which control of the stations did not change hands and stations sold as part of larger company transactions, such as the Capcities buy of ABC. All sales have been approved by the FCC. Also, prior to 1978, a combined AM-FM facility (replaced last year by Groups, see below) was counted as one station in computing the total number of stations traded. Now, AM-FM combinations as well as groups, are counted by their individual stations.

*Prior to 1971, figures represent total number of deals involving both radio and television stations. Beginning in 1971, when the FCC's or.e-to-a-customer rule, prohibiting the sale of co-located TV and and radio stations, became effective, figures represent the total number of separately located TV and radio stations that were sold in packages. In 1985, the mergers of large groups with interests other than broadcast stations could not be evaluated, since individual station values were not broken out of the larger sales. Group sales totals are now limited to compilations of "pure" stations sale—those only concerning TV and radio stations.

The inside story on *Flexwell* is performance

Flexwell Transmission lines offer low RF loss, smooth impedance coefficient, and conservatively rated power handling capability.

Flexwell utilizes a copper corrugated outer conductor, solid or corrugated inner conductor (depending on size), and a tough, durable, corrosion resistant polyethylene jacket suitable for burial and prolonged life. A low loss foam version called Cellflex is also available in 1/2", 7/8", 1 1/4" and 1 5/8" sizes.

Air dielectric Flexwell in smaller diameters (1/2" and 7/8") offer a field proven, fixed helix design called Spirafil II, a single, continuous extrusion which locks the center conductor coaxially within the outer conductor, resulting in a linear impedance coefficient throughout the entire length of line.

Larger diameter air dielectric Flexwell Cables, (1 5/8", 3", 3 1/2" and 4 1/2") feature a unique vertebra helix design to achieve optimum crush and tensile strength. Its "pillar

effect", using less volume of dielectric, provides lower loss and higher average power handling capability due to the more rapid dissipation of heat from the center conductor.

Flexwell has it all: low loss, low VSWR, high power handling, smooth impedance coefficient, and rugged, long dependable life. Cablewave System's Flexwell is type accepted for sampling systems in accordance with FCC Part 73.68.

Why do people selling radio stations now call Americom first?

Because Americom offers them a choice of marketing strategies and the ability to help arrange financing for potential buyers.

Confidential Marketing

Minimizes your station's exposure by personally pre-qualifying 15 buyers and selecting the five hottest buyers to review with you before re-contacting them with your station's details.

Americom Auction

Involves wide exposure of your property's availability, financial performance, and operating information to maximize the pool of buyers and achieve the highest offer.

Negotiated Bid

Your station's sensitive information is handled discreetly but public exposure of its availability is used to increase the pool of buyers and to produce the highest possible offer.

Americom's Financing Services

Because we work with leading lenders on a daily basis, we can provide you with financing by structuring a loan package that may include senior debt, mezzanine layers and pure equity.
