TELEVISION & CABLE

# Factbook Online

Continuously Updated • Easy Internet Access • Fully Searchable

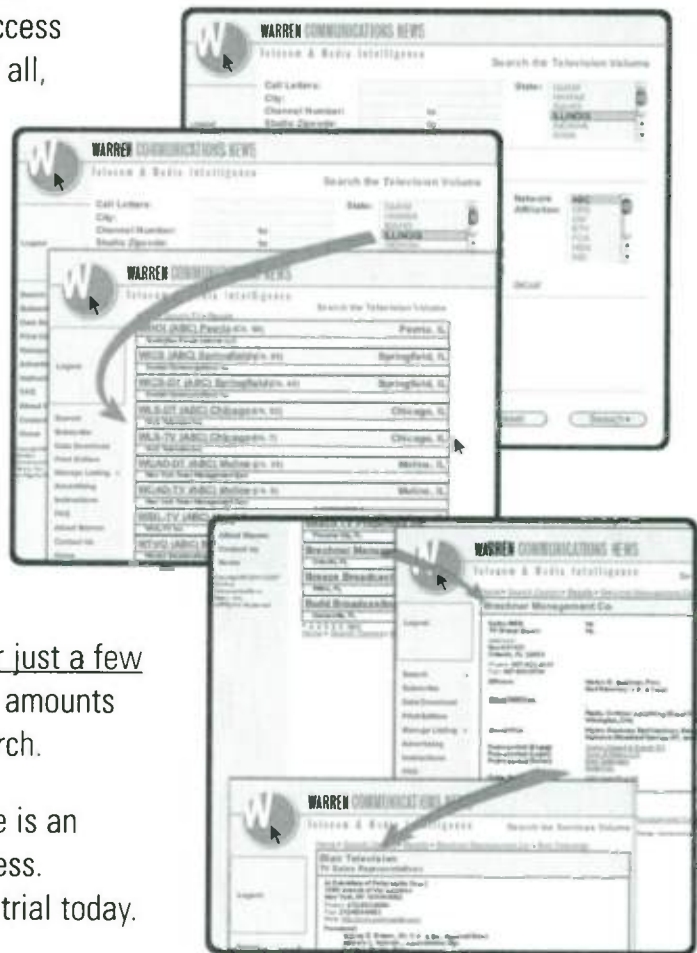

Now you can access the entire contents of the *Television & Cable Factbook* database instantly on your desktop or any Internet connection.

Your subscription to the *Television & Cable Factbook: Online* will provide you with access to over 930,000 detailed records. Best of all, the database is continuously updated to ensure you always have the most current industry intelligence.

The user-friendly query interface allows you to perform fully customized data searches—so you can retrieve data in a number of ways, tailored to your precise needs. The search options are extensive and flexible, and will save you hours and hours of cumbersome research time.

You'll recover your subscription cost after just a few searches and continue to save enormous amounts of time, money and effort with every search.

See for yourself why the Factbook: Online is an indispensable tool for you and your business. Sign up for your **no-risk, no obligation** trial today.

**Take a FREE 7-day trial at**  
**[www.warren-news.com/factbook.htm](http://www.warren-news.com/factbook.htm)**

You have **nothing to lose** and **lots of time and money to save.**

# Description of Station Directory Section

## THE STATION MAPS

The only official and uniform rough guide to a station's physical coverage is found in the files of the Federal Communications Commission. Each TV station grantee is required to submit to the Commission its coverage contours predicted on the basis of engineering formulas designated by the Commission. The FCC specifies the grade of service as a general indication of the probable quality of reception.

The FCC does not intend or expect the predicted coverage contour, submitted by each station, to reflect whether a signal is received or not received at any specific location. Rather, the Commission regards the contours as a general guide to probable reception. The basic use made by the Commission of the contours is as a tool to determine where to allocate channels to minimize interference among stations.

Though all stations and applicants are required to submit predicted contours to the FCC, stations may also file contours based on actual measurements of transmitted signals. Under FCC rules, such filings are not mandatory, and only a relatively few stations have offered such measurements voluntarily. The Commission has no official or uniform rules for measuring service contours; such submissions are associated with stations' files but are not given official status by the Commission.

The maps are intended to serve as guides. It should be emphasized that the use of maps for legal proceedings, such as those before the FCC, may require precision greater than that reasonably obtainable in maps of the size employed in the *Factbook*.

The standards for predicted contours as required by the FCC are as follows:

Noise Limited Contour: The area where the predicted field strength of the station's signal exceeds the following levels (these are the levels at which reception of DTV service is limited by noise):

	dBu
Channels 2-6.....	28
Channels 7-13.....	36
Channels 14-69.....	41

We obtained the predicted contour maps from the FCC files or from the stations.

(The television station coverage maps and all other contents of this book are copyrighted by Warren Communications News, publishers of **Television & Cable Factbook**. Reproduction in whole or part is prohibited without written permission.)

## NIELSEN TV STATION CIRCULATION

The *Average Weekly Circulation* estimates are based on NSI (Nielsen Station Index) diary households from the most recent February, May, July and November survey periods. These Sunday-Saturday 7 a.m.-1 a.m. average quarter-hour tuning shares are based on commercial television stations only.

All viewing numbers include only those estimates which surpass 5%. The *Station DMA Total* estimates are for viewing within the station's Designated

Market Area, as defined by Nielsen. The *Other DMA Total* estimates are for viewing in a Designated Market Area other than the station's. The *Grand Total* estimates are a sum of the Station and Other DMA totals. Some stations have no viewing over 5% outside the station DMA, and therefore do not show all three categories.

## DEFINITIONS OF NIELSEN TERMS

**Designated Market Area**—An area comprised of all counties wherein the combined share of audience for the home market commercial station(s) is larger than the combined share of audience for any station(s) assigned to another home market. In a few instances, a county has a marked division in household viewing patterns, so that the county is split by Nielsen, and each portion assigned to a DMA.

**Television Households**—A television household is an occupied dwelling unit having one or more television sets. Updated estimates of TV households in each county, rounded and expressed in tens, are prepared annually by the Nielsen Research Department. Those estimates are derived by applying percent television set ownership estimates, county by county, to the estimates of total households made by Market Statistics.

**Cable Television Households**—A cable television household is an occupied dwelling unit which subscribes to some level of delivery service for television signals, rounded and expressed in tens.

**Non-Cable Television Households**—A television household which receives broadcast television signals, rounded and expressed in tens.

**TV Penetration**—The percent of total homes having one or more television sets at the time of the surveys. TV penetration uses current regional penetration estimates derived by the Advertising Research Foundation from U.S. Bureau of the Census surveys conducted in accordance with ARF specifications.

**Average Weekly Circulation**—The estimated average number of different television households viewing a particular station at least once per week, Monday-Sunday, Sign-on to Sign-off.

**Average Daily Circulation**—The estimated average number of different television households reached by a particular station on each day of the week, Sign-on to Sign-off.

## NIELSEN SURVEY METHODS

Nielsen measures viewing in over 200 television markets across the United States 4 times each year. Nielsen's national TV sample, composed of a cross-section of representative homes throughout the United States, is measured by a combination of set meters and People Meters as well as diaries.

Electronic metering is the heart of the Nielsen rating process and Nielsen uses two types. Set meters capture what channel is being tuned and People Meters go a step further to gather information about who is watching in addition to the channel tuned. Raw data from the electronic meters is transmitted from the home to Nielsen where it is analyzed and validated. In some mid-size markets, dairies provide viewer information for up to three additional "sweeps" months (October, January and March).

Diaries are used to collect viewing information from sample homes in many television markets and smaller markets are measured by paper diaries only. Each year, Nielsen processes approximately 2 million paper diaries for the months of November, February, May and July. Seven-day diaries (or eight-day diaries in homes with DVRs) are mailed to homes to keep a tally of what is watched on each television set and by whom. Over the course of a sweeps period, diaries are mailed to a new panel of homes each week. At the end of the month, all of the viewing data from the individual weeks is aggregated.

### EXPLANATION OF FCC SYMBOLS

FCC Filing Symbols:

1. DOC: Docket (designation applied by FCC to hearing cases).
2. BPCDT: Broadcast Permit Commercial Digital Television.
3. BMPCDT: Broadcast Modification of Permit Commercial Digital Television.
4. GRANTED: Date of authorization by FCC.

**Note:** "BPCDT" and "BMPCDT" designations, accompanied by numbers, are affixed by the FCC to applications for new or changed station facilities to

identify each when it is accepted for filing. They therefore constitute file numbers. Each map in the Factbook is accompanied with its file number to help reference the Commission's official files. In each case, the file number used is the one affixed to the application for facilities which were subsequently authorized by the FCC and in use at the time this Factbook was published. "Docket" numbers are used in those few cases where the application was in a hearing status and a file number had not been assigned. The "granted" date indicates when the FCC approved construction of facilities involved.

After a station is completed according to the terms of its construction permit, it receives a license; this is identified by a number with a "BLCDT" (Broadcast License Commercial Digital Television) prefix. When a license is renewed, a number with a "BRCDT" (Broadcast Renewal Commercial Digital Television) prefix is employed. Applications for licenses or license renewals do not include requests for changes in facilities, thus do not affect predicted contours. Therefore, they are not employed as references in the Factbook.

The service contours on the maps are predicted by station engineers according to the formulas designated by the FCC, as previously explained. They are based on facilities authorized or in use by stations at the time of Factbook publication.
