Clinton: V-chip is not enough
Hundt and Hollings also push plans to limit TV violence for sake of children

By Christopher Stern

When broadcast and cable executives meet at the White House later this month, President Clinton will ask them to consider eliminating violent TV programing when children are most likely to be in the audience.

The V-chip was signed into law last week as part of the Telecommunications Act of 1996. But the President thinks that the industry must do more to protect children from the harmful effects of televised mayhem, according to White House aide Greg Simon.

“The idea of a safe harbor [for children’s viewing] has been around for a long time, and it’s going to be part of the discussion,” said Simon.

The Clinton administration is backing the safe harbor because it may take several years for the V-chip to become effective, said Simon. The telecommunications act requires every TV set sold in America to come equipped with a V-chip that can block programing based on an electronically encoded rating.

Although the bill gives TV makers two years before they must begin selling sets with V-chips, it could take longer for program-blocking technology to become available because of possible court challenges.

As the V-chip was signed into law, support for restrictions on violent programing began to spring up all over Washington.

FCC Chairman Reed Hundt told a Duke University audience last Friday that violent programs should be banned during times when kids are most likely to be in the audience—unless the program carries a V-chip-compatible rating.

If broadcasters do not take appropriate steps to label their material, Congress ought to consider channeling violent shows that do not have an electronic tag into hours when the children’s audience is smallest, Hundt said.

Citing a survey released last week on the harmful effects of television violence (see page 22), Senator Ernest Hollings (D-S.C.) asked for a vote on his bill, which would ban violent programing during much of the day. The Hollings bill is modeled on the FCC’s rules for indecent programing, which ban indecent programing between 6 a.m. and 10 p.m. Also last week, eight members of Congress sent a letter to ABC, CBS, Fox, NBC, UPN and WB urging the broadcast networks to set aside the 8-9 p.m. hour for “family-oriented” programing.

The White House is not endorsing any particular plan for restricting violent programing, according to Simon.

The National Association of Broadcasters opposes any law or regulation that would limit violent programing.

Simon also said last week that the television industry executives will be asked to increase the amount of information they provide about their programing. The Clinton administration

See You This Fall!
At bill signing last Thursday, President Clinton showed off V-chip prototype. It is the same chip pictured on the cover of this magazine. On Friday, the President traveled to a suburban Washington home to tout V-chip benefits: "It gives parents a new ability to make choices about what their children see."

...and wants the industry to increase its efforts to warn parents about excessively violent or sexually explicit programming. In addition to on-air advisories, those warnings could come through other media, including newspapers and magazines.

...and the administration also will ask the industry to increase the amount of children's educational programming on television. However, it will not ask the industry to embrace Hundt's proposal to require broadcasters to air at least three hours of children's television each week.

"We are not putting a series of proposals on the table for them to adopt. We are waiting to hear from them," said Simon of the planned meeting with entertainment industry executives. Simon also said that Hundt will not be invited to the White House conference. "This meeting is not to discuss the FCC rulemaking," he said.

The White House expects to put the proposal on the table during the meeting with industry executives scheduled for Feb 29.

The invitees include ABC, CBS, NBC, Fox, Time Warner, Turner, Viacom, BET, Comcast, TCI, Sony, MCA, DreamWorks, Silver King Broadcasting and the MPAA.

---

V-chip battle gets N.Y. preview

Markey says used to "Big Father and Mother; Abrams says prepare for bland fare"

By Jim McConville

Foreshadowing the coming legal battle over newly enacted V-chip law, champions and critics of the TV blocking technology squared off at the International Radio and Television Society conference in New York last Friday.

"[The V-chip] is First Amendment-friendly the way Henry VIII was wife-friendly," said First Amendment lawyer Floyd Abrams.

And the technology will negatively affect programing, Abrams said. "It will make it bland, dull, more mediocre fare. And we will know who to blame."

But Representative Ed Markey (D-Mass.), the V-chip's chief congressional proponent, said the V-chip is not "Big Brother"—government controlling programing. It's "Big Mother and Father sitting down in front of the TV set making informed viewer decisions."

Markey doesn't think that news programming should be rated, although the law explicitly exempts only ratings based on a program's "political and religious content."

"This is not the '50s with Leave It to Beaver, but the '90s with Beavis and Butthead. There are now 18 million latchkey children in the U.S. and more than one TV set in the home," said Markey.

The law requires manufacturers to equip sets with a V-chip that will allow parents to automatically block programs rated for violent or sexual content. It encourages—critics say pressures—broadcasters and cable operators to create a ratings system to work with the chip. It's expected to be challenged by broadcasters on First Amendment grounds.

"TV broadcasters aren't opposed to viewer discretion technology: it's just that we oppose this particular one," said Martin Franks, senior VP, CBS.

Tim Collings, an instructor at Simon Fraser University, Vancouver, B.C., and inventor of the V-chip says he invented the V-chip five years ago as a way to shield children from violent programming without any legislation and is surprised by the controversy it has triggered. "We don't have the First Amendment, thank God, in Canada."
Disney/ABC: $19 billion done deal

FCC approval paves way for world’s largest media company

By Steve McClellan

When it became official last Friday, one day after the merger was approved by the FCC, Capital Cities/ABC is now a wholly owned subsidiary of the Walt Disney Co., which, with combined revenue of about $19 billion, becomes the largest media company in the world.

According to analysts and other media watchers, Disney’s priorities in the coming months will include keeping pressure on the television network to remain competitive with NBC, the current leader. Another priority: building the cable side of the business, which at ABC has had double-digit growth for the past few years. The latest initiative there is the company’s 24-hour news network.

Sources say Disney still is mulling what, if any, businesses to spin off. Two divisions in particular have been the focus of speculation: radio, where ABC is a major player but Disney is not, and publishing.

As for radio, analysts and brokers say it would make more sense to retain the division (21 stations and a network unit), one of the strongest in the industry, because of the tax consequences of an outright sale. Although a venture with a pure radio company has been rumored, Disney CEO Michael Eisner (in the just released 1995 Disney annual report) says he is “wary” of such partnerships.

“Disney/ABC has a very low tax basis, so to sell the [radio] stations would mean [that] they would be paying capital gains taxes on a huge amount of money,” says media broker Charles Giddens of Media Venture Partners. “They would have to buy something else to immediately regenerate that cash and, in the case of a company that large, they would have to have another specific target that could generate the same revenue. And that is not an overnight thing,” Giddens says.

Mega-merger gets FCC nod

FCC may relax newspaper-broadcast crossownership ban

By Chris McConnell

FCC commissioners last week approved Disney’s $18.5 billion acquisition of CapCities/ABC and kept the door open for the company to retain newspaper and radio holdings in two markets by pleading to review the newspaper-broadcast crossownership ban.

The FCC denied the company’s request for permanent waivers of the crossownership restriction that would have allowed it to keep newspapers and radio stations in Detroit and Fort Worth.

But the commissioners gave Disney a 12-month waiver of the rule and said the agency would review it within the year. The commissioners took the action while approving the transfer of 10 TV and 21 radio licenses from CapCities/ABC to Disney.

“Our current strict prohibition on newspaper-broadcast crossownership...needs review and probably needs significant revision,” FCC Chairman Reed Hundt said, adding that the commission should review its policies in a formal rulemaking. “We can and should complete the rulemaking in time for Disney.”

Hundt also said that a children’s TV programming pledge by Disney “would have greatly strengthened” the company’s waiver requests (see page 10).

Although Disney’s application concerned radio-newspaper combinations, the commission’s review could cover the restrictions against TV-newspaper combinations as well. Current appropriations law forbids the commission from reassessing the rule entirely, but that law will expire this year. And the Telecommunications Act of 1996 requires the FCC to review all of its ownership rules every two years.

The other commissioners also supported plans to review the crossownership policies, although they differed on whether the commission first should grant Disney its permanent waiver requests. Commissioners Susan Ness and Andrew Barrett joined Hundt in favoring a rulemaking proceeding first.

“It would be neither fair nor prudent to change those rules on an ad hoc basis without opportunity for all parties who care about these issues to have their say,” Ness said.

Disney plans to keep the newspapers and radio stations in Detroit and Fort Worth while the FCC conducts its...
Commission conflict

Disney's acquisition of CapCities/ABC didn't travel through the FCC without sparking another children's TV dispute among the commissioners.

Reviewing Disney's various waiver requests, FCC Chairman Reed Hundt last week said that a commitment by the company to provide a guaranteed minimum of children's educational programming "would have greatly strengthened Disney's waiver requests."

Hundt made the comment before the FCC voted to approve the company's acquisition of CapCities/ABC but deny its request for two permanent cross-ownership waivers (see page 9).

A collection of groups including the Center for Media Education had asked the FCC to require such a commitment as a condition of granting the waivers sought by Disney. Although the commission said that Hundt maintained that a rule "explicitly permitting broadcasters who pledge to provide concrete amounts of public interest programming" to receive ownership waivers would be consistent with the ownership rules.

The remarks irked other commissioners. Commissioner James Quello objected to the idea of exchanging the waivers for programming commitments. Commissioner Andrew Barrett wondered whether Disney's attorneys should call the FCC to offer a deal on children's programming. And Commissioner Rachelle Chong said Hundt's proposal on programming commitments took her "completely by surprise." —CM

FCC spells out telcom-bill game plan

By Chris McConnell

The FCC today (Feb. 12) plans to issue its schedule for implementing the approximately 80 rulemakings called for in the Telecommunications Act of 1996.

The schedule may not carry 80 separate proceedings, because the FCC likely will lump some issues together into single rulemakings. One commission report on the bill lists 38 categories of issues and rulemakings—including broadcast ownership, broadcast spectrum flexibility, terms of broadcast licenses, cable reform and parental choice in TV programing—that the FCC will need to address.

"It will paint a pretty thorough picture of what we need to do," one commission official says of the planned schedule.

Some features of the legislation may see FCC action as early as this week. One commission source says the FCC hopes to issue notices implementing specific directions from Congress that do not require rulemakings. An example of such "self-executing" provisions is the bill's language eliminating national radio ownership limits.

FCC officials add that while some of the bill's ownership provisions will not require rulemakings by the FCC, other clauses will, including language instructing the commission to consider relaxing its TV duopoly rule.

As part of their effort to implement the new rules, FCC Chairman Reed Hundt and other commission officials last week met with industry representatives to discuss strategies for speeding the rulemakings process. Trade association heads were told not to expect deadline extensions and were advised against bombarding the commission with thick comment filings.

A commission source says that the FCC is considering placing a page limit on the comments it solicits for the rulemakings.

"We are going to be very diligent about the timetables," the source adds.

The commission also plans to continue holding "open forums" with industry representatives as part of its effort to implement the bill. Also under consideration is inviting the industry to submit draft orders as part of the rulemaking proceeding. —CM

FCC wants to ease EEO rules

The FCC last week issued a series of proposals for easing EEO reporting requirements and imposing fines for EEO violations.

The FCC invited comment on whether it should ease or eliminate its requirements for some stations and how it should qualify stations for any reduced requirements. Options include basing a reduced requirement on a station's market size or local minority labor force.

Additional proposals include:
- Exempting stations that certify that their staff size is below a certain level;
- Maintaining the reporting requirements, but allowing broadcasters a choice of recruitment options, such as job fairs;
- Allowing broadcasters not to retain detailed records if their employment profiles meet certain benchmarks, and
- Giving broadcasters credit for using a central recruiting source under certain conditions.

The forfeiture guidelines are similar to ones issued in 1994 but struck down by a court because the FCC did not subject them to a notice and comment period. —CM

review, a spokesperson said. Disney owns WJR(AM)-WHYT(FM) Detroit and the Pontiac, Mich.-based Oakland Press & Reminder. In Fort Worth, the company will own WBAF(AM)-KCS(FM) and the Fort Worth Star-Telegram.

If the commission has not completed its rulemaking by the time Disney's 12-month waivers in the two markets expire, the company will be able to request a waiver extension, Mass Media Bureau Chief Roy Stewart said.

The temporary crossownership waiver was one of several the FCC granted in approving the deal. The commission also granted six permanent waivers to allow for radio-TV combinations in Chicago, New York, Detroit-Flint, Mich., Detroit-Toledo, Ohio, Los Angeles and San Francisco. The commission also granted a permanent duopoly waiver to allow Disney to own WPVI-TV Philadelphia and WABC-TV New York.

Cable on a roll in kids upfront

Nickelodeon is largest children's advertiser in market topping $700 million

By Steve McClellan

In last week's children's upfront advertising market, Nickelodeon appeared to be the prime beneficiary of ratings erosion on the broadcast side. Sources say the cable network did close to $200 million in business—topping Fox as the largest kids ad biller—a 30% gain over a year ago.

John Popkowski, senior vice president, ad sales, MTV Networks, would not comment on specific numbers. The company negotiated two-year deals last year, but Popkowski did confirm that almost all of Nick's kids clients opted to expand their positions for the 1996-97 season: "The concept was to expand at [last year]'s base cost-per-thousand deal and extend at a price increase through third quarter 1998."

Despite significant ratings erosion this season for Fox, CBS, ABC and Disney, strong advertiser demand enabled all the broadcast networks to extract double-digit price gains (on a cost-per-thousand basis) in the market.

The sharp price gains protected the overall revenue pool, which key participants estimated was up about 5%, to $725 million-$740 million. But about 20% of the pie shifted from broadcast to cable.

Kids' WB realized the sharpest CPM gains—in the 25% range—which enabled the network to double its kids billings to about $43 million, from $22 million a year ago. Those increases put the first-year network within a few million of both ABC and CBS, which were each estimated to have done $45 million-$50 million last week, down almost 10% from the previous year. ABC was said to have realized price gains in the 15% range; CBS's gains were pegged at 10%-12%. Both had ratings drops of 20% or more this season.

Fox Children's Network was the market leader on the broadcast side, doing about $170 million in business, a decline of 7%-8% from last year. FCN suffered a 20%-plus drop in ratings this year, but was able to preserve most of its revenue pool with price increases said to be around 18%. In addition, the network repped shows produced by Saban in syndication, billing close to another $20 million.

Disney got 23% price gains to offset steep drops in ratings. Estimates had the company's share of the pie dropping 5%-10%, to $80 million-$85 million.

The fledgling UPN Kids network did $5 million-$6 million in business and turned away a lot more that it didn't have room for, sources say. The market was more competitive for syndicators, who managed to squeeze 5% price gains out of buyers, according to sources.

---

NBC's Thursday night lineup seems to be getting stronger, with last Thursday's numbers reflecting record performances for some of its series. The ratings helped to swell the already sizable lead that NBC holds over the other networks in the February sweeps.

The night saw NBC average a 23.0 rating and 35 share, dwarfing second-place CBS's 8.9/14, Fox's 7.1/11 and ABC's 6.7/10. A special one-hour Seinfeld at 9-10 p.m. averaged a 23.9/36.

After eight days of the sweeps, NBC is averaging a 14.9/23, nearly 5 ratings points ahead of ABC and CBS, which are tied for second with a 10.0/16. Fox is fourth, with an 8.2/13. Among adults 18-49, NBC also is significantly ahead with a 9.8 rating, followed by Fox with a 6.0, ABC with 5.8 and CBS with a 4.8.

NBC got a major push during the first week of the sweeps from the four-hour miniseries Gulliver's Travels, starring Ted Danson and Mary Steenburgen. The program, which aired Sunday, Feb. 4, and Monday, Feb. 5, averaged a 21.2/31 and was seen by an estimated 57 million. The two-parter was NBC's highest-rated miniseries in almost five years and the highest-rated Sunday miniseries since The Case of the Hillside Strangler in April 1989.

The network also got help last week from Wednesday's Law & Order, which drew a 14.3/25—4 share points higher than its season average. The episode was the first part of a sweeps crossover theme that concluded on Friday's Homicide.

Fox also had notable performances during the first half of the sweeps, finishing second among adults 18-49 for the first week and beating ABC and CBS. Fox was also number two among adults 18-34. A two-hour episode of Melrose Place on Monday, Feb. 5, averaged an 11.2/16 in households and a 9.3/21 among adults 18-49. Fox won the night among the key demographic group in both common time (8-10 p.m.) and versus the other networks' 8-11 p.m. average. —SC

Jacor hits new limit with eight radios in Denver

Owners hustling to buy maximum stations in single market

By Elizabeth Rathbun

The clustering has begun.

Even before President Clinton signed legislation last Thursday easing the limits on the number of radio stations a company may own, group owners were taking advantage of the liberalized rules.

Jacor Communications Inc. claims to be the first company to hit the new limit of eight holdings in a market with 45 or more commercial radio stations. With its purchase last week of Noble Broadcast Group Inc., Jacor will own four AMs and four FMs in Denver (see "Changing Hands," page 36). The deal "gives us a real head start in one of our core markets," Jacor President Randy Michaels says. The $152 million deal is subject to FCC approval.

And last Tuesday, Robert F.X. Sillerman-backed Triathlon Broadcasting Co. said it would buy three stations in Spokane, Wash., for $8.75 million. Triathlon already is in the process of buying four other stations in Spokane and says the deals fall into the category of the new telecommunications law that allows it to own up to seven stations in markets with 30-44 stations.

Last Thursday, Triathlon also announced its purchase of an AM-FM combo in Wichita, Kan., where it had already met the former local ownership cap of two FMs and two AMs. The $28.5 million deals include three FMs in Little Rock, Ark.

Pushing to the new limits by bulkling up in markets where it already has a presence "is not only logical, it's compelling," says broker Richard Blackburn of Blackburn & Co. Inc., Alexandria, Va. "You'll see a busy period of time here for a while, while people reconfigure themselves."

Blackburn expects clustering to affect virtually every market. "I don't think there [will be] one city that doesn't substantially change," he says.

Besides buying and selling, clustering will mean an increase in the number of swaps, where owners trade stations, predict some brokers and owners.

There's a flip side to clustering: Somebody has to be selling. The nation's largest owner of radio stations, Infinity Broadcasting, did just that last Wednesday, selling its only Seattle station to EZ Communications, which already owns three stations there. The station, KYCW-FM, went for $26 million.

Regent Communications Inc. took the same tack. Last Wednesday, it sold its two FMs in Dayton, Ohio, to Palm Beach Radio Broadcasting Inc. for an undisclosed price. "Under the new telecommunications act, we believe that Regent is best served by owning at least four FM stations in each of its markets," said president Terry S. Jacobs in a release. "We regret that we were unable to increase our presence [in Dayton] in order to keep our interests there."

Radio's cold December

National radio ad revenue plunged in many markets during December 1995.

Year-end revenue totals for 1995 show mostly single-digit growth in local and national revenue over 1994.

Below is a look at revenue levels for various regions, as compiled by the Radio Advertising Bureau.

Ad agency buys piece of 'J&I'

In yet another sign of changing times for the talk show business, the parent company of advertising agency Foote, Cone & Belding has taken an equity stake in the new CBS/Group W/Maxam talk strip, J&I.

The unusual move was prompted by the lack of advertiser-friendly options for the agency's clients in daytime TV, says Howard Nass, senior vice president of broadcast development for TN Entertainment, the programming arm of FC&B parent True North Communications.

"Advertisers [think] they are reflected by the programs they endorse," says Nass. "J&I provides the positive, entertaining and informative environment they want."

Major national advertisers such as Procter & Gamble, Kellogg Co. and Sears, Roebuck & Co. have pulled millions of dollars out of talk shows during the past year out of concern over the risqué tone of many shows.

Like most of the new talkers in the works for fall, J&I is being pitched as a wholesome departure from shows that led prominent political leaders to launch a campaign last fall to "clean up" talk TV. The show, hosted by TV producer Leah Hanes and her 19-year-old daughter, Jami, also promises to bridge the generation gap between talk TV fans.

TN Entertainment will have a say in all aspects of the show, says Bob Cook, executive vice president of the newly merged CBS/Group W/Maxam. Cook described the company's stake in J&I as "significant," but he declined to elaborate.

Some TN Entertainment clients, said to include RJR Nabisco and Campbell's Soup, have made upfront advertising commitments to the show for one year. Group W Media Sales will handle the remaining national barter time.

Ownership spotlight moves to FCC

New telcom act directs commission to re-examine station duopoly restrictions

By Chris McConnell

Proponents of relaxed local ownership rules last week were shifting their attention from Capitol Hill to the FCC.

While lifting the national cap on TV ownership, the Telecommunications Act of 1996 leaves it to the FCC to decide whether the “duopoly rule” should be relaxed. Current rules bar one entity from owning more than one station in the same market, but the act instructs the commission to at least consider easing the rule.

Broadcasters have differed on how they want the commission to respond. Some have favored relaxing the duopoly provisions to allow companies to hold UHF-UHF and UHF-VHF combinations, while others have cited concerns about competing with a company that owns multiple stations in their market. The NAB and the Network Affiliated Stations Alliance have taken no position on the duopoly rule because of such conflicts among members. Others, including the Association of Local Television Stations (ALTV), have pushed for duopoly relaxation.

“Multichannel competitors are going to explode,” says David Donovan, ALTV’s vice president of legal and legislative affairs. Donovan maintains that broadcasters will need more than one channel to compete with cable and other video providers. “We’re hopeful the commissioners will see the validity of that argument.”

“I can think of no UHF and VHF [combinations] that would inhibit competition,” says LIN Television Corp. President Gary Chapman. Chapman heads a coalition of 16 TV station owners pushing for a relaxation of the rule to allow for local combinations in which one of the stations is a UHF. The coalition also favors allowing for review of proposed VHF-VHF combinations on a case-by-case basis. “Local TV owners have to have relief,” says Chapman.

The commission already has said it will consider the issue. In its December 1994 proposal to revise ownership rules, the FCC invited comments on whether it should allow UHF-UHF or UHF-VHF combinations.

FCC commissioners say they are considering the possibility. Commissioner James Quello, for instance, is said to be open to allowing UHF-UHF combinations and possibly UHF-VHF combinations, but has reached no conclusion on the issue. Sources say Commissioner Rachelle Chong also is inclined to review the rule, but has not decided how the commission ultimately should decide.

Sources say Commissioner Susan Ness also is willing to re-examine the rule. But Ness has raised concerns about potential effects on competition and diversity. In a speech last year to the NAB’s State Leadership Conference, Ness said the burden of proof rests with broadcasters to show duopoly’s benefits.

Sources say Ness also is considering the potential impact of advanced television on markets with relaxed duopoly rules. Current plans call for most, if not all, of the industry to migrate to the UHF band, as almost all the spectrum designated for advanced TV is on UHF channels. And digital technology could allow each broadcaster to deliver four or more standard-definition signals over a 6 mhz channel.

ALTV’s Donovan counters that the UHF stations still will be competing with cable, DBS and wireless cable systems and all will be able to boost their own channel supplies in the digital age. “The competitive calculus doesn’t change,” Donovan says.

LIN’s Chapman says that a relaxation of the duopoly rule would settle the FCC’s pending questions concerning how it defines broadcast ownership. Current attribution rules establish a variety of conditions under which a company is considered to own a station even if it does not hold a majority of the station’s stock. The commission in 1994 raised a series of questions about the rules, proposing they be tightened in some areas and relaxed in others.

Although Chapman says relaxing the duopoly rule may resolve such issues, others say the proceeding still will affect what broadcasters are able to acquire under the new caps.

“Attribution really defines ownership,” says one industry source. Attribution should not be the gaping hole it is today,” adds Gerard Waldron, NASA counsel. Although the group remained neutral on the duopoly issue, it has pushed for the FCC to tighten its attribution rules.

In its notice, the commission proposed lifting the limit on the amount of stock a company could hold in a station without having the station count toward the ownership cap.

The attribution benchmark for voting shares would go from 5% to 10% and from 10% to 20% in the case of passive investors such as bank trust departments and mutual funds. The commission’s proposal also asks whether the FCC should tighten an exemption to attribution rules that exists in cases where another company holds more than half of a station’s voting stock.

Battle lines drawn over market definitions

Broadcasters, cablecasters on opposite sides

By Chris McConnell

Cable and broadcast groups are battling over how the FCC should define TV markets for the purpose of administering its must-carry/retransmission consent rules.

The commission in December proposed continuing to use Arbitron’s ADI market definitions, even though Arbitron has stopped publishing them. The FCC cited the possibility of...
cleared in 45% of the country!
switching to Nielsen DMA designations, but tentatively concluded that keeping the ADI definitions would provide more stability to the broadcast signal carriage process.

Cable groups agree, but broadcasters do not. In comments filed last week, a collection of broadcasters maintained that keeping the ADI designations would mean that must-carry rights bear a less than optimal relationship to actual market conditions.

"By contrast, adopting the DMA now as the relevant market standard would insure that mandatory carriage rights apply in the areas currently served by television stations," said the group, which included Hubbard Broadcasting, Paxson Communications Corp., Evening Post Publishing Co. and Wabash Valley Broadcasting Corp. The National Association of Broadcasters also argued that stations' must-carry zones should reflect "as much as is practicable" the current local programing and advertising markets in which they operate.

The Association of Local Television Stations (ALTV) said that it is "be-mused and incredulous in the face of the commission's proposal. After all, the substitution of Nielsen DMAs for Arbitron ADIs has been the obvious and logically inevitable response to Arbitron's departure from the market."

But the National Cable Television Association said that such a switch "would create widespread dislocations in certain market areas for both broadcasters and cable operators." The cable group maintained that switching to the DMA definitions would mean the gain or loss of up to four counties in some markets.

"The disruption that would occur from reshuffling and revamping station lineups to comply with the new standard will only confuse and alienate the viewing public."

—NCTA

Despite the mega-media-merger trend, bigger is not necessarily better, FCC Commissioner Andrew Barrett says. Addressing the Radio y Musica convention in Los Angeles on Feb. 3, Barrett said smaller operations often can focus more on a target market than can their "larger, less community-oriented competitors." Barrett also voiced concerns that the commission not change its rules while acting on merger applications. "While the commission should not necessarily impede a broadcaster's ability to expand its ownership, I believe that the commission is under an obligation to uphold its current rules until such time as the appropriate regulations have been implemented," he said.

Barrett's speech included an exhortation to Hispanic broadcasters to grow beyond niche markets and to become less reliant on the "traditional" media to address concerns of their communities. Barrett cited "insensitive, and at times racist remarks made by key network executives and on-air personalities" in advising the group against relying on the networks' input on issues in their communities.

Spectrum auction revenue continues to climb at the FCC. Last week the grand total for past and ongoing auctions passed the $15 billion mark. One heavy contributor is the ongoing PCS "C-block" auction, which passed the $5 billion mark last week. The $15.2 billion midweek total also included about $131 million the FCC has raised from its auction of wireless cable spectrum.

FCC International Bureau Chief Scott Harris will be leaving the commission at the end of May. Harris says he already has exceeded the two-year stay he had planned for his public service tenure. Harris has headed the International Bureau since its creation in October 1994. He says he has not yet made any plans for his post-government career. FCC sources speculate that Office of Plans and Policy Deputy Chief Donald Gips will take over Harris's post.

The FCC last week ordered one broadcaster to pay an $8,000 fine for violations of its Equal Employment Opportunity policies and told another broadcaster it is liable for an $18,500 fine for EEO violations. In one case, the commission told Sun Mountain Broadcasting to pay $8,000 as part of a settlement between the broadcaster and the NAACP, which early had petitioned the FCC to deny the license renewal of Sun Mountain's KISM(AM)-KISN(FM) Salt Lake City. In the other case, the commission granted the license renewal of Texas Coast Broadcasters' KNIZ(AM)-KQUE (FM) Houston, but also fined the broadcaster $18,500 after ruling that it had not done enough to attract Hispanics. But the commission rejected an NAACP petition to reconsider a decision to renew the license of KDYL (AM)-KSFH(FM) Salt Lake City. The NAACP had charged the station with failing to implement an effective EEO program, but the commission said the association did not show a material error or omission by the broadcaster.

The V-chip
First Amendment Infringement vs. Empowerment Tool

By Christopher Stern

When President Clinton signed the V-chip into law last Thursday, he put the final touch on a stunning defeat for the television industry.

Congress approved the V-chip by an overwhelming margin despite protests from broadcasters, the cable industry, Hollywood producers and Madison Avenue.

The Telecommunications Act of 1996 requires every TV set sold in America to come equipped with an electronic chip that allows parents to block programing based on an encoded rating. The new law also urges, but does not mandate, the television industry to implement a program ratings system to indicate violent or sexual content.

The V-chip provision likely will face a legal challenge (see story page 23), but Congress already has shown its willingness to hold the entire industry responsible for the level of sex and violence on television.

The V-chip won broad bipartisan support, and President Clinton endorsed it during his State of the Union address last month. FCC Chairman Reed Hundt also supports the V-chip.

While broadcasters attempt to fend off the V-chip, they also are trying to avoid spectrum auctions for their transition to digital television. And some in Congress, including the so-called father of the V-chip, Representative Ed Markey (D-Mass.), have suggested that it will be difficult for broadcasters to claim they are serving the public interest while refusing to implement a ratings system aimed at protecting children.

Although broadcasters see the V-chip as an infringement of their First Amendment right to free speech, Markey sees it as an "empowerment tool" that will give parents some control over what their children are exposed to (see page 23). The case against violent programing was bolstered in the public arena last week by a study sponsored by the cable industry, which found that 57% of all TV shows contain at least some violence. The study also said that violence on television is "psychologically harmful."

But some in Congress are not satisfied, even with the V-chip. Senator Ernest Hollings (D-S.C.) last week called for a vote on his proposal to bar broadcasters from airing violent programing at times when children are likely to be in the audience. There are at least 10 other proposals floating
V-chip: A matter of law

The FCC is developing a notice of inquiry on TV violence. Sources say the commission might launch its inquiry in March, although last week not all of the commissioners were convinced the proposed notice is necessary.

FCC official sources say the notice would be aimed at helping the commission prepare for any action it may need to take to implement the V-chip provisions of the Telecommunications Act of 1996. The bill grants the industry one year to develop a ratings system for programming and directs the FCC to develop a ratings system based on an advisory board's recommendations if the industry fails to act.

Commission sources say they do not want to wait a year to begin work on the ratings system. —CM
Pay cable tops violence ranking

NCTA-funded study says even more important than amount is how material is portrayed

By Michael Katz

Pay cable contains more violent programs than any other channel on TV, according to a cable-funded report surveying television violence.

Fifty-seven percent of all TV shows contained violence, according to the study. Despite receiving the brunt of criticism from politicians for showing too much violence, broadcast networks had a below-average 44%. Premium cable channels topped the list with 85%; basic cable channels contained 59%; independent broadcasting had 55%, and public broadcasting showed the least amount of violence at 18%.

“Violence in the mass media can lead to aggressive behavior,” said the report. “Correlations between viewing televised violence and aggressive behavior have been shown to be fairly stable over time, place and demographics.”

“We’re not attempting to set up a blame game where some sources are better than others,” explains Joel Federman, director of research at Mediascope Inc. and research coordinator for the study. “What is more important—or at least equally important—is not the percentage of the programs with violence but the way violence is portrayed.”

The study also found that:

- Perpetrators go unpunished in 73% of all violent scenes.
- The negative consequences of violence often are not portrayed in violent programming.
- 58% of violent interactions show no pain.
- Only 4% of violent programs emphasize an antiviolence theme.
- 39% of scenes that contain violence are depicted with humor.

“Violence was defined in the study as "any overt description of the use of physical force—or the credible threat of such force—intended to physically harm an animate being or group of beings.... There are three primary types of violent depictions: credible threats, behavioral acts and depictions of harmful consequences.”

The survey sampled programs from ABC, NBC, CBS and Fox; premium cable’s Cinemax, HBO, Showtime; basic cable’s A&E, AMC, BET, Cartoon Network, Disney, Family Channel, Lifetime, Nickelodeon, TNT, USA, VH1, MTV; Los Angeles independents KCAL, KCOP and KTLA, and public broadcasting’s KCET Los Angeles.

Broadcasters plotting V-chip legal strategy

Telcom bill provision challenge would be based on First Amendment grounds

By Christopher Stern

Even before President Clinton signed the Telecommunications Act of 1996 into law last week, broadcast lawyers were caucusing in Washington, working on their game plan to defeat the V-chip.

The options range from an immediate court filing against the new law to doing nothing for at least a year.

First Amendment lawyers agree that any legal challenge, filed this week or a year from now, would argue that the V-chip is a clear violation of the television industry’s right to free speech.

“Anytime the government passes a law that burdens speech because of its content, it very likely violates the First Amendment and that is what this legislation does,” says Floyd Abrams, who is considered a likely candidate to handle the case for the networks.

Abrams says the V-chip inevitably will chill free speech. He already has heard from West Coast programmers who say the V-chip will lead to “blander” and “less dramatic” television shows. Abrams is serving as a legal consultant on the issue to ABC, CBS and Fox.

Although NBC believes the V-chip is unconstitutional, it does not oppose electronic blocking devices, says NBC Executive Vice President and General Counsel Rick Cotton. The problem with the V-chip legislation is its reliance on a ratings system.

“NBC supports blocking technology for those viewers who want to block programming. The problem with the V-chip is that it puts the government into the ratings system up to its eyeballs,” says Cotton.

Defenders of the V-chip, including Representative Ed Markey (D-Mass.), say there is nothing in the legislation that limits broadcasters’ speech. Markey and other V-chip supporters emphasize that the new law only sets the wheels in motion to create a ratings system, but does nothing to force the industry to put a programming code into practice.

“If they don’t implement the ratings system, there is no enforcement mechanism,” says Markey. Broadcasters may just call Markey’s bluff. Among the options considered last week, sources say, is to do nothing and wait for the government to make the next move.

The bill gives the television industry one year to create a ratings system. If at the end of that time the industry has failed to do so, the Telecommunications Act requires the FCC to appoint an advisory board to do the job. But in either case, the law does not require the industry to implement it.

Others, including the National Association of Broadcasters, say they are not even certain they will challenge the case. “We are keeping all options open,” says the NAB’s Jeff Baumann, executive vice president/general counsel.

When Congress adopted the controversial V-chip measure, it was well aware that it could be challenged in court and provided for an expedited judicial review. The bill calls for the creation of a special three-judge panel to hear a V-chip case. And this decision may be appealed directly to the Supreme Court.

Although broadcasters already have voiced loud opposition to the V-chip, cable is not as adamant. The National Cable Television Association has even come out in favor of the V-chip, as long as it is implemented on a voluntary basis. Like broadcasters, the NCTA sees nothing voluntary about the V-chip described in the Telecommunications Act of 1996. However, the NCTA has not decided whether it will join a legal challenge if there is one.

V-chip’s constitutional question

Broadcasters claim that the V-chip is blatantly unconstitutional, but FCC Chairman Reed Hundt disagrees and he cites two recent court victories to back up his argument.

In both cases (Act III and Act IV), the court upheld the FCC’s rules on indecent programming, which it argued are necessary in order to protect children who may be in the broadcast audience.

In the Act III case, the FCC successfully defended its rules banning indecent programs between 6 a.m. and 10 p.m. Hundt argues that a V-chip, which requires parents to program their televisions to block programming, is less restrictive than an outright ban on violent shows.

Broadcast lawyers say Hundt is wrong when he claims that indecent and violent programming can be held to the same legal standard.

Although there is substantial case law on the issue of indecent programming, there are few precedents in the area of violence, says First Amendment lawyer Timothy Dyk.

“There is no Supreme Court case in the area of violent programming that suggests that government can regulate. There is a Supreme Court case that suggests you can regulate in the area of indecency,” Dyk says.

With disagreement over the constitutionality of the V-chip, the Supreme Court may be the final arbiter.
How's it work?

The V-chip is based on closed-captioning technology

By Glen Dickson

There is no V-chip—it doesn’t exist,” declares Kelly Williams, director of engineering for the National Association of Broadcasters. “It’s just a buzzword we use to describe a technology to offer parental control.”

But the technology is very real. It is simply an information packet sent along with closed-captioning and XDS (extended data service) data to an embedded microprocessor in TV sets 13 inches and larger.

According to experts from the NAB and the Electronic Industries Association, the necessary technology already exists in the form of closed-captioning chips, made mandatory by Congress in 1993. The embedded chips will have only to be redesigned (or reprogrammed) to allow them to decode parental access information, says Joe Peck, staff director of the EIA’s Congressional Affairs office. (But there is no way to retrofit existing TVs.)

Along with the chip redesign, additional memory and circuitry will be required for parental access control, says Peck, who is part of an EIA committee that will develop technical standards for the V-chip for TV set manufacturers.

All this will drive up manufacturing costs for new television sets. “We’ve asked some of our manufacturers how much it’s going to cost them to make the changes to their televisions,” says Peck. “We got a range of numbers from $5 to $40 per television, depending on the model.” Those costs will be passed on to the consumer, says Peck.

But Thomson Consumer Electronics spokesman James Harper doesn’t think charging TV buyers extra for the V-chip will be so easy: “Typically, the industry has absorbed the cost of mandated features like closed-captioning with other premium features like XDS that help minimize the cost. This is not a selling point for consumers. Any cost incurred is not going to be the kind of cost that you’ll be able to recoup.”

The tentative V-chip plan is to send the closed-captioning waveform signal, XDS information (such as scheduling information) and the blocking codes for parental access control all on line 21 of the Vertical Blanking Interval found in NTSC signals. But cramming all that information into the two fields of line 21 could be tricky.

The challenge of programming the embedded chip to offer the parental access control will depend on the complexity of the ratings system that the broadcast and cable industries (or an FCC-advised Federal TV Ratings Commission) come up with.

“We don’t know exactly what it’s going to look like or what it’s going to entail,” Peck says. “We have to have a ratings system first.”

EIA engineer Tom Mock says that existing embedded chips can support three content categories, such as sex, violence and mature content, with four levels of blockage. Mock adds that the chips probably can offer some segmented blocking for programs such as news magazines.

But if the ratings system requires too much information—five content categories and 20 levels of blockage, for example—the chip might not have the memory capacity to perform the V-chip function along with its closed-captioning and XDS tasks, says Peck. Likewise, line 21 of the VBI might not have the bandwidth to carry all the parental-access-control-data.

“Technically, if the ratings system is reasonable, it’s feasible,” says Peck of the V-chip. “But we still chafe at the idea that it’s going to be in every television set. That’s two-thirds of American households that don’t have minors, and we wonder where’s the wisdom here.”

On the transmitting end, U.S. broadcasters probably will have to install new encoding equipment (or possibly upgrade their closed-captioning encoder) to generate the V-chip signals and insert them in the VBI, says Williams. But the real cost will be in establishing an infrastructure for doing that, both in personnel and in software.

He points out that most closed-captioned programs are encoded by the program producer, not the broadcaster, and the station simply passes the information through; originating captioning for a news program requires an encoder.

The producer/broadcaster scenario might be different for blocking information, says Williams. If a producer doesn’t encode a program in post-production, the broadcast station will still be accountable for transmitting a ratings signal. That means stations probably will have to purchase encoders for live insertion of the blocking information.

Phil McLaughlin, director of business development for EEG Enterprises, a manufacturer of VBI insertion equipment, says that the proposed “smart encoder” probably will cost around $5,000, with an extra $1,000-$2,000 spent on a data-management computer.

McLaughlin says that the cost rapidly escalates, however, when a station faces the task of interfacing its scheduling software and traffic management systems with the V-chip encoder. And encoding a library of programming will be inordinately expensive.

“The real practical problem with this legislation is [that] you’re talking about rating an amount of content that’s hundreds of times greater than what was rated before,” McLaughlin says.
"I've subscribed for over 15 years. Broadcasting & Cable is timely in presenting the news of our industry. I particularly like the overviews presented on the FCC's thinking towards cable."

Robert M. Rosencrans President / CEO Columbia International Inc.
Fager takes ‘CBS Evening News’ helm
New executive producer promises changes to broadcast, but ‘no radical surgery’

By Steve McClellan

In the past month, The CBS Evening News with Dan Rather has added a new set and graphics. Last week the show got a new executive producer—Jeffrey Fager, who had been the number-two producer at the newscast under executive producer Andrew Heyward, named president, CBS News, four weeks ago.

Now all the program needs is new viewers to boost it out of third place in its ratings battle with evening news leader ABC World News Tonight and NBC Nightly News.

Easier said than done, according to Fager, who says he’ll do some fine-tuning to the broadcast in the coming months, but no radical surgery.

“In the months to come, you’ll see us do some things to try to make the entire broadcast more topical,” says Fager. He cites the program’s “Eye on America” segment as an example of how the show lends perspective and analysis three or four times a week to issues that viewers are concerned about. “I’d like to do more of that,” he says. “We can do more topical analysis, and we can do it more often.”

Fager says the newscast may also capitalize more on anchor Rather’s reporting strengths—doing more live studio interviews and field reporting.

Among the stories for which Rather will take to the road are key primary races: He’ll anchor the newscast from Iowa tonight covering its caucuses, and from New Hampshire the day of its primary.

But Fager does not anticipate making any key assignment changes within the program’s pool of correspondents. At least “not right away. It may seem like a big change of direction with a new executive producer, but you’ve got to remember that I’ve been the number two, so Andrew and I worked as a team making decisions about who should cover what. We feel we have a very good team in place.”

Fager says the focus of the broadcast has been and will continue to be covering the day’s events and adding perspective, and not getting “caught in the trap,” as he puts it, of trying to figure out what kinds of stories viewers want,

Networks set kids lineups
All take different tack toward lucrative viewing segment

By Steve McClellan

During the past two weeks, the five broadcast networks in the children’s programing business have unveiled their 1996-97 lineups, and all are sending different messages.

CBS is stressing its commitment to educational shows; ABC, its tie to Disney, which is producing most of its new Saturday fare. Fox says that despite ratings erosion, it will do everything it can to hold on to its first place in kids ratings.

The WB says its first-year performance equaled Fox’s first year, with a weaker station lineup.

UPN Kids Network is expanding its Sunday block to two hours next season, and both Kid’s WB and UPN say they will launch two-hour weekday afternoon blocks in fall 1997. The two networks are touting the crosspromotion opportunities of what they say are their increasingly family-friendly prime time schedules.

While Disney and ABC were stressing their closer production ties on Saturday morning, feisty WB executives last week told advertisers that they think they can deliver a knockout punch to the Disney Afternoon syndication strip when WB expands to afternoons in 1997.

WB sales chief Jed Petrick told advertisers and ad agency executives at an upfront presentation that WB’s expansion there would “effectively push the Disney block to the morning” and out of the more lucrative afternoon time periods.

That remains to be seen. Disney calls such comments “premature.” But Disney’s new kids-programing alliance

WSOC
FCN on fast track

The strategic alliance in children's programing formed by Fox and Saban several months ago is beginning to bear fruit. With exclusive access to Saban's library of 3,500 half-hours, Fox will launch or expand four children's networks around the world in the next few months. In addition, Fox Children's Network President Margaret Loesch says, the company is mulling a possible children's network in the U.S. New Fox kids networks include two 16-hour daily networks (one cable and one satellite) with Latin American Partners Globo and Telesisa, which probably will launch in midsummer. Fox is finalizing plans in the UK for the April launch of a daily 12-hour kids cable network. The company also is expanding a kids network venture in Australia with Telstra to 12 hours a day, starting March 1. A U.S. kids network is in the talking stage, says Loesch. Separately, Fox has agreed to sell barter time in Saban's children's programing for the U.S. syndication market, replacing One World, MTV Networks' ad sales unit.

with Kellogg, which takes effect at the start of the 1997-98 season, leaves open the possibility of a shift to mornings. The Disney/Kellogg alliance, which replaces Disney Afternoon, will offer 90 minutes of programing in syndication, compared with the current two hours of Disney Afternoon fare.

The D-K alliance is cleared by stations covering 70% of the country, and most of the station agreements allow stations to air the programing in either morning or afternoon dayparts.

A Disney spokesperson says the decision to pare the syndication programing to 90 minutes has to do with the studio's increased network animation output, including three series for ABC next fall and one for CBS: the renewed Timon & Pumbaa.

Meanwhile, advertisers and their agencies hope the expansion that WB and UPN are talking about will materialize. "It will be great for the buyers if these additional sources of ratings points become available," says New York–based media buyer Paul Schuman. "That will mean more alternatives to place our ad dollars and an easier negotiation."

But are there enough ad dollars to support the expansion plans? "The marketplace has a little bit of growth in it," Schuman says. "I don't know if it's enough growth. But what's going to happen is that certain people are just going to be shut out in buys. If you're a major player, you have to be just about everywhere." So while the market is booming, more shows and ad inventory will make it tougher for the networks to raise prices, Schuman says.

Meanwhile, FCN announced its kids lineup for fall, which includes the shift of two Saturday shows to weekday afternoons—Where on Earth Is Carmen Sandiego? and Eek!stravaganza. FCN also said that top-rated kids show Goosebumps will move from weekdays to Saturdays. In addition, Fox Sports will produce a show for the 90 minutes on Saturdays starting in June to segue into sports. Initially, the show will focus on baseball. Other new Saturday shows include Casper and C-Bear and Jamal. New to weekdays is Big Bad Beetleborgs.

Fox, still the dominant kids network, was down 22% in ratings across its Saturday morning slate; ABC and CBS showed similar declines. Fox's effort to reach preschoolers this season—a group of shows that air under the Fox Cub House banner—won't return for a second season. Fox Children's Network President Margaret Loesch says part of the problem was the lack of promotion opportunity in a kids schedule that appeals primarily to children ages 6-11.

CBS unveiled its Saturday morning kids schedule for fall 1996, saying that two of the new shows, Bailey Kipper's P.O.V. (Victoria/MTM) and Secret of the Cryptkeeper's Haunted House (Eytan Keller Productions et al.) qualify as educational programs by FCC standards, giving the network two hours of such fare next fall. The goal is to expand to three hours a year later, says CBS Network Television President Jim Warner. Other new show: Project G.e.e.k.er.

UPN will add one hour to its Sunday children's programing block in fall 1996 and, like The WB, is planning a two-hour daily afternoon kids block starting in fall 1997. New for next fall on Sunday: The Mouse & The Monster and B.A.D. (Bureau of Alien Destroyers), both from Saban; Jumanji, an animated version of the live movie, from Columbia TriStar Television; and The Incredible Hulk, from Marvel Films. Getting the ax are Space Strikers and Teknomaniac.

'M Limits,' 'LAPD' good to go

MGM would consider ad agency alliance to help boost 'Bradshaw'

By Steve Coe

MGM has declared fall 1996 firm goes for two of its returning shows and one new first-run project. Cleared to return this fall for second seasons are The Outer Limits and LAPD, and set to make its syndication debut in September is Poltergeist: The Legacy.

Uncertain, however, is the future for the company's new talk show project, The Bradshaw Difference, hosted by best-selling author and self-help guru John Bradshaw.

The show, which is being pitched as a talk show alternative to confrontational and sometimes sensational shows, has thus far been cleared in 41% of the country. According to John Symes, president, MGM Worldwide

Green light for 'Outer Limits.'
Television, the company remains confident that the project will reach the needed clearances for a fall debut. "We don’t plan a slow rollout for Bradshaw," Symes says, echoing the assertion made previously by MGM Domestic Television Distribution President Sid Cohen. "We’re in conversations now with station groups, and we think 70% clearance is attainable. The key is obviously [clearing] New York and Los Angeles." Thus far, the show has been cleared in five of the top 10 markets. Symes suggests that many stations will be making fall programming decisions based on results from the February ratings book, which could improve Bradshaw’s fortunes.

Symes also says that the company may look to alliances with advertising agencies to get the show cleared in key markets.

Just last week, CBS/Maxam/Group W’s talk show J&I reportedly cleared the top two markets after arranging an alliance with advertiser Foote, Cone & Belding. "We haven’t started those conversations yet," he says. "But given the fact [that] the marketplace is changing and some shows have gotten on the

---

CBS Taylors Monday night

Taking the series-crossover concept to the next level, CBS has confirmed plans to use Elizabeth Taylor in all four of its Monday night comedies on Feb. 26, the final Monday of the sweeps month.

The actress will appear in episodes of The Nanny at 8, Can't Hurry Love at 8:30, Murphy Brown at 9 and High Society at 9:30, with a central theme for her appearance on each show. As part of the story lines, Taylor will be searching for a priceless necklace that has been lost.

The sweeps stunt, designed to give the network a much-needed boost on its final Monday sweeps night, came through cooperation between TriStar Television, which produces the first two series, and Warner Bros. Television, which produces the latter.

---

SYNDICATION MARKETPLACE

Midsummer night’s test

Paramount Domestic Television is said to be considering a midsummer test of a late-night variety strip hosted by MTV personality Bill Bellamy, possibly on stations in the Chris Craft and Paramount groups. Although the show was not among Paramount’s new offerings at last month’s NATPE convention, sources say the studio has been encouraged by signs that Tribune Entertainment is reconsidering plans to launch a slow rollout of a late-night hour with comedian Teddy Carpenter in August. Another show that may be headed for a slow rollout in the fall is the Partner Stations Network’s Life Guard. The reality strip, distributed by Warner Bros. Telepictures Distribution, was cleared in 39% of the country as of last week.

‘Sinbad’ sailing

All American Television’s new first-run action series Sinbad will go forward for its fall debut with total clearances of more than 77% of the country, according to George Back, president, All American Television Distribution.

Overall clearances for the show include the previously announced Tribune stations in New York, Los Angeles, Chicago, Philadelphia, Boston, Washington, Houston and San Diego.

In addition, the company’s Baywatch will return in the fall for its sixth season after receiving renewals in 80% of the country. Companion series Baywatch Nights also will return for its second season after being renewed in 74% of the country.

‘Rosie’ future for Kellison

Daniel Kellison has been named executive producer of The Rosie O’Donnell Show. Kellison, a segment producer for CBS’s Late Show with David Letterman, will co-executive produce Warner Bros. Domestic Television Distribution’s upcoming talk/variety strip with O’Donnell. Kellison began his TV career in 1988 as an intern with NBC’s Late Night with David Letterman. On The Late Show, Kellison primarily focuses on segments involving celebrities, comedians and politicians. As of last week, The Rosie O’Donnell Show was cleared for a June 10 launch on 107 stations covering 81% of the country.

Two-year hitches for ‘Hercules’

MCA Television has sealed two-year renewals for its campy fantasy/action hours Hercules: The Legendary Journeys and Xena: Warrior Princess in more than 80% of the country. As if to celebrate its good fortune, Hercules hit an all-time ratings high the week of Jan. 22, beating the traditional weekly first-run hour champs Star Trek: Deep Space Nine and Baywatch with an 8.1 national Nielsen household rating. MCA officials say Hercules and Xena run in prime access or prime time in most of the top 30 markets.

Elizondo fills in

Chicago Hope star Hector Elizondo has replaced NYPD Blue star Jimmy Smits as host for the second season of Hispanic Americans: The New Frontier, a quarterly series of specials distributed by MG/Perin. The first of four one-hour English-language specials, Latinos and African-Americans: Friends or Foes?, will begin airing the week of Feb. 25 on stations reaching more than 85% of U.S. Hispanic households, including ABC O&Os in New York and Chicago and NBC’s O&O in Los Angeles. MG/Perin is offering the four specials on an even seven-minute local/national barter split.

air with help from key advertising agencies, we'd be interested."

Reality strip LAPD has been renewed in 71% of the country, and Symes says the company has beaten the odds to return it to air for a second season. "For MGM to get a second year for this series, a five-night-a-week strip, without the advantage of a distributor or production parties, is a testament to our sales and production teams."

The Outer Limits has been renewed in 74% of the country for its sophomore outing, and companion show Pol-

tergeist: The Legacy has been cleared in 72% of the country for its first go-around. In addition to the station clearances for The Outer Limits, the series also picked up a two-year renewal from Showtime, where it also airs, which will bring the total episodes to 88.

THIS IS BIG.

90MHz The Satellite Pro® features the incredibly fast 2.9v, 90MHz Pentium® processor, specifically designed for notebooks. It's all the speed you need for tasks such as database retrieval and multimedia presentations.

11.3" It's not just the size of this display that's awe-inspiring, it's its resolution. At 800x600, you see up to 56% more of your document than a standard screen. So you see more columns in your spreadsheet or words in your document. In fact, you see more of everything.

CD-ROM The 410CDT comes with a modular Quad-Speed CD-ROM drive, that can be easily swapped out with a floppy drive. Or hot-plug in the floppy drive externally and use both. You get the power of multimedia to go.

THIS ISN'T.

$3499†

11.3" display provides a stunning show of realistic images and color. And the sound is exceptional, with its crisp, clear stereo capabilities. The Satellite Pro offers the best of multimedia in living color. But when you check the price, you won't believe your eyes. Call 1-800-457-7777 for more information or a dealer near you.

Buyer: Caribou Communications Co., Denver (J. Kent Nichols, president/CEO); owns KATT-FM and KVIS-FM Oklahoma City. Caribou is owned by CAT Communications Inc., Denver (58%) and Desert Communications III Inc., Chicago (42%)
Seller: Life Broadcasting Inc., Oklahoma City (Porter Davis, president/owner); no other broadcast interests
Facilities: 97.9 mhz, 6 kw, ant. 399 ft.
Format: Contemporary jazz, new age
Broker: Kailik & Co.

KMB-FM Orem/Salt Lake City, Utah
Price: $1.438 million
Buyer: Monarch Broadcasting Inc., Salt Lake City (Richard D. Rees, president/33.4% owner)
Seller: Wolf Communications LLC, Salt Lake City (Steve Marriot, partner); no other broadcast interests
Facilities: 107.5 mhz, 45 kw, ant. 2,850 ft.
Format: Adult contemporary

WHLY-FM Bethlehem/Wheeling, W.Va.
Price: $800,000
Buyer: Osborn Communications Corp., Greenwich, Conn. (Frank D. Osborn, president/CEO); also owns WWVA(AM)-WVOK(FM) Wheeling; WOLZ-FM Fort Myers, Fla.; is half-owner of WRWX-FM San Carlos Park, Fla.; is selling KNAX-FM and KRBT-FM Fresno, Calif., and WKJ-AM Solana and WEEJ (FM) Port Charlotte, Fla., and is selling WJSU-TV Anniston, Ala.; WWRD-FM Jacksonville, Fla./Brunswick, Ga.; WKFS-FM Palatka, Fla., and WNDR(AM)-WNTQ(FM) Syracuse, N.Y.
Seller: Bethlehem Radio Inc., Wheeling (Neil B. Fondas, principal); no other broadcast interests
Facilities: 105.5 mhz, 2.7 kw, ant. 313 ft.
Format: Easy listening

WKB(FM) Warrensburg, N.Y.
Price: $625,000
Buyer: Bentad Communications and Broadcasting Inc., Schenectady, N.Y. (co-owners/brother and sister Paul N. Bentad, president; Laura Ann Machlin, secretary); owns WABY(AM)-WKLI(FM) Albany and WUTO(AM)-WOUR(FM) Utica, N.Y. Bentad will be 50% owner of DOT Communications Inc., which is buying WABY(AM) and WEMX(AM) Ravena, N.Y.
Seller: Karamatt Broadcasting Inc., Queensbury, N.Y. (Katherine W. DeSantis, president); no other broadcast interests
Facilities: 100.5 mhz, 185 w, ant. 1,312 ft.
Format: Adult contemporary, '80s and '90s

WON(FM) Walterboro, S.C.
Price: $285,000
Buyer: Hess Communications LLC, Columbia, S.C. (co-owners Karl Hess, president; Jane F. Hess, VP); no other broadcast interests
Seller: Greene Communication Co. of S.C. Inc., Walterboro (Daniel Greene Jr., president/CEO); no other broadcast interests
Facilities: 93.7 mhz, 6 kw, ant. 345 ft.
Format: Country, sports
Broker: Gordon Rice Associates

KYKC(FM) Byng, Okla.
Price: $215,000 ($30,000 to Steve O'Neal, $185,000 in debt assumption)
Buyer: Ron Ricord (father of seller Rhonda Ricord; before sale owns 200 shares; after sale owns 340), Exter Pruitt, Ada, Okla., and Jack Eldridge, Stratford, Okla. (before sale owns 0 shares, after sale owns 330)
Seller: Rhonda Ricord, Tulsa, Okla. (before sale owns 600 shares; after sale owns 0) and Steve O'Neal, Ada (before sale owns 200 shares; after sale owns 0)
Facilities: 100.1 mhz, 50 kw, ant. 492 ft.
Format: Country

Construction permit for KWQI(FM) Anchorage
Price: $35,000
Buyer: Chester P. Coleman, San Francisco; owns KABN(AM) Long Island, KADX(AM) and KEEN(AM) Houston/Palmer, all Alaska; and 50% of KKIS(AM) Concord, Calif.
Seller: A.A. Radio Partners LP, Anchorage (Jimmy Taylor, principal); no other broadcast interests
Facilities: Not available

KMQX(FM) Springtown and KYQX(FM) Weatherford, Tex.
Price: $33,000
Buyer: Sister Sherry Lynn Foundation Inc., Marlow, Okla. (Sherry Lynn Austin, president/33.3% owner); has applied to build FM's in Sulphur and Norman, Okla.
Facilities: Not available
Format: Not available

CP for KXPX(FM) Stillwater, Okla.
Price: $25,000
Buyer: Frank Anderson Gentry Jr., Tulsa, Okla.; owns KGFY-FM Stillwater
Seller: Patrick G. Walters, Tulsa; owns
Call for authors

BROADCASTING & CABLE and Focal Press are seeking authors for a new series of books to be written by and for broadcast and cable professionals, addressing topics essential to their needs.

The books will be sponsored by BROADCASTING & CABLE and will be published internationally by Focal Press, a leading publisher of books and videos about media topics.

Areas of interest include, but are not limited to: telco entry, new distribution technologies, high-definition television, ratings, interactive programming and management issues. Books that cover innovative ideas and practical solutions are encouraged.

For more information or to submit a proposal please contact Marie Lee, Acquisitions Editor, Focal Press, 313 Washington St., Newton, MA 02158-1626.
When it comes to international, what in the world would you do without us?

What's up with the syndication market Down Under? Who's satellite is on top in the Far East? Where are investors heading, South of the Border? When you need to know what's going on around the globe, you need the information family from Broadcasting & Cable.

Widely accepted as the U.S. industry bible, key executives have counted on Broadcasting & Cable for over sixty years.

With the dynamic growth of the worldwide TV market, you told us you wanted expanded international coverage. That's why we offer three publications dedicated to serving the rapidly growing audience of executives in international broadcasting and related industries. We have fully staffed editorial bureaus in Hollywood, London, New York and Washington with twenty-nine correspondents in the Americas, Europe, Asia and Africa.

Every week, you'll find news of domestic and international interest in Broadcasting & Cable, the most respected source of information in the business. Four times a year there's international news, features and special reports from Broadcasting & Cable International. Finally, twice each month you'll get the latest breaking stories plus analysis in our newsletter, Broadcasting & Cable's TV International.

For global coverage of the industry, no one speaks your language like the information family from Broadcasting & Cable.

To subscribe: 1-310-978-6915, Fax: 1-310-978-6901.

International Advertising: Phone +1-212-337-6944, Fax +1-212-337-6948.

Broadcasting & Cable International

A World of Difference.

Four times a year, we bring you analysis, features and special reports. Broadcasting & Cable International takes you behind the headlines emphasizing global programming and business.

Over 60 years old. And more attractive than ever.

This weekly publication has changed a lot over the years, but one thing remains the same: Broadcasting & Cable is still the most respected, most authoritative, most credible source of news and information available.

The art of making radio spots sing

Copywriters describe creative process of writing for the ear

Radio

By Donna Petrozzello

While radio station managers typically have regarded on-air commercials as crucial to their station, their importance was usually valued in dollars and cents. The content of the ads for many was almost an afterthought.

That attitude was slow to change, but in 1991 a group of broadcasting veterans and industry executives formed the Radio Creative Fund to honor excellence in radio advertising with an annual Radio Mercury Awards contest. In the past four years the Creative Fund has awarded more than $500,000 to agencies and writers for winning radio campaigns.

In addition to crediting creative copywriters and producers, the awards have encouraged agencies to devote more attention to radio campaigns and writers to develop innovative, attention-grabbing ads. Most copywriters agree that writing for radio can be the most challenging, but also the most rewarding, of assignments.

"It's knowing how to write for the ear," says writer Paul Fey of Paul & Walt Worldwide. Fey and his partner Walt Jaschek won a Mercury last year for an ad campaign they developed for Twentieth Television used actor Robert Gossett's voice to promote The Simpsons television series.

"Radio is the hardest medium to write for. It is about knowing how to grab listeners' attention early and hold them without pictures to rely on," Fey says. "It is writing that sets up a situation properly and explains its message without overexplaining.

"I find radio to be the toughest to write," says copywriter Baxter Taylor of Hill, Holliday, Connors and Cosmopolis in Boston. "You have to replace with words what pictures can tell, and you only have sound to work with." Taylor's agency took home two Mercury awards in 1994 for its Boston Globe campaign series.

"It is almost like poetry in a sense because each word is creating a meaning or a feeling in people. Each word is important," says writer Kevin O'Donoghue of Young & Rubicam in New York.

O'Donoghue's radio campaign for AT&T Communications, in which key words were replaced with sound effects, won a Mercury in 1993. His other radio work includes writing spots for Molson Ice and Molson Golden Beers and the U.S. Army Reserves.

After 15 years of copywriting for a variety of mediums, O'Donoghue says he is "on a personal crusade" for radio. "It really is your chance to shine," he says. "You are the one creating the mood, the environment, and you are reaching the person one-on-one in ways that no other medium can."

"The best radio is nothing more than a well-written 60 seconds," says creative director Mike Renfro of The Richards Group in Dallas. The Richards Group is credited with developing the successful radio campaign for the Motel 6 chain that has won several Mercury awards.

Thomas Hripko, formerly of the Richards Group, beginning in 1986 helped to develop the original Motel 6 ads using the folksy voice of announcer Tom Bodett. "The reason those ads worked is because they can connect with the audience," Hripko says. He has since moved on to launch his own firm, The Radio Spot, in Dallas.

Renfro, who won a Mercury last year for an American Spirit Insurance advertisement, says the best radio campaigns create a visual scenario for the listener. "Radio is probably the most visual medium of all," he said. "You can paint the most extravagant sets with just words. We see radio as something that can go a lot further than television with a small amount of money."

Many copywriters experienced in

Clear Channel gets dedicated rep

The Interrep Radio Store and Clear Channel Communications have formed Clear Channel Radio Sales, a rep firm dedicated exclusively to handling advertising sales for Clear Channel's 36 radio stations.

Bob Turner, formerly president of the defunct rep firm Shamrock Radio Sales, was named president of Clear Channel Radio Sales. Shamrock formed a rep firm with Interrep last year, but that venture folded when Chancellor Broadcasting announced its purchase of the Shamrock group last fall.

Clear Channel's group of 36 stations in 12 markets will add an estimated $35 million in gross annual billings to Interrep's stable of independent rep firms. Representation of the Clear Channel stations now is divided among several Interrep-managed firms and two firms under the Katz Radio Group, Christal and Katz Radio.

Clear Channel's switch to Clear Channel Radio Sales is expected as soon as buyouts are completed with the group's existing reps. Clear Channel Senior Vice President Mark Mays says the dedicated firm will give the company "a competitive advantage," as the group plans to expand.

Interrep Chairman Ralph Guild says Clear Channel will become one of a dozen broadcasting groups (including Infinity Broadcasting, HefTel Broadcasting and Gannett Broadcasting) that have formed a dedicated rep under Interrep management. The staff hired for Shamrock Radio Sales will now serve Clear Channel Radio Sales. —DP
Jack Trout pushes the ‘power of sound’

In his latest book with partner Steve Rivkin, “The New Positioning: The Latest on the World’s #1 Business Strategy,” marketing strategist and author Jack Trout explains how successful advertising campaigns effectively use sound rather than pictures. Trout is scheduled to deliver the keynote speech at the Radio Advertising Bureau’s annual marketing leadership conference in Dallas Feb. 15-18. In the following interview, Trout applies his insights to the radio industry.

In your book, you suggest being ruthless about editing the story you want to tell. How does that apply to selling radio inventory?

You wrote that consumers spend 85% of their time with “ear-driven media,” which you define as radio and television, and 15% of their time with “eye-driven media,” which you define as newspapers and magazines, but that advertisers spend more advertising for the eye, not the ear. How can radio sales staffs use that information?

The key mention is that, with the exception of television, people spend more time with radio than with any other medium, far more than with newspapers and magazines. And if people spend that kind of time with radio and television, they should be considered the primary media.

Radio and television are both mediums of sound. That should be the starting point. Radio, historically, has been called mother’s little helper. It should be thought of as the opposite: it should be thought of as a primary medium.

How do you convince the advertisers of that?

You have to, number one, sell the concept of the power of sound. If indeed that is how the mind works, and if indeed that is where people spend their time, sound is a critical issue. I think you have the numbers to support that, in time spent with the medium. From there, you go with the fact that brands don’t need pictures to be built. You have to sell against the picture concept.

In radio’s golden years, all the brands were built without any pictures—Coca-Cola, Chevrolet, Pepsi—these were all brands that were put on the map without any pictures.

One of the problems is that radio salespeople don’t have the courage to sell the power of sound, and sound alone, as a way to build a brand name. I don’t think a lot of them believe in the medium as much as they should. I don’t think they see radio as a primary medium. I don’t think they are willing to challenge some of the misconceptions, that a picture is worth a thousand words. I think they buy into that.

How can radio advertising campaigns stand out in a society deluged with information?

As I said in the book, minds work by ear; and essentially, sounds and concepts are the essence of marketing. One of the earlier chapters talks about minds hating complexity and our need to simplify the message. Owning a word in the mind is really what good marketing comes down to. So there are no real confines in terms of using radio as a medium. Essentially, you want to

Infinity marks solid 4Q

The latest financial reports from Infinity Broadcasting Corp. show an 11% increase in both operating cash flow and net revenue, each on a pro forma basis, for fourth quarter 1995 over the same period in 1994.

According to Infinity documents, net revenue for the last quarter totaled $94,717,000; operating cash flow, $44,575,000, and net free cash flow, $32,990,000, the last representing a 27% increase over last year.

Infinity also reported net income at $20,882,000, or $.29 in earnings per share, for the quarter. These totals include the $1,715,000 charge to the company to settle FCC fines. Excluding that charge, Infinity officials say net income for the last quarter would have been $22,597,000, or $.31 per share.

For the year ended Dec. 31, 1995, Infinity reported a 19% increase in net revenue, to $325,706,000; a 22% increase in operating cash flow, to $152,286,000; and a 29% increase in operating income, to $101,804, over 1994.

Infinity President/CEO Mel Karmazin described fiscal results for the quarter and 1995 overall as “the best operating results in the company’s history.”

SW severs tie with Media America

After less than eight weeks, SW Networks has canceled its contract with rep firm Media America and has announced that it will employ Global Media Inc. to represent national advertising sales for its syndicated talk and music programming.

SW Networks official John McKay says Media America is prohibited from representing SW’s talk shows, particularly separate shows hosted by Mario Cuomo and Alan Dershowitz, because of Media America’s exclusive contract to represent national sales for The Rush Limbaugh Show, syndicated by EFM Media Management.

MultiVerse to rep morning show, production library

MultiVerse Network has been chosen to represent national ad sales for Evergreen Media’s upcoming syndicated radio show for urban formats. The Wake-Up Show with Sway & King Tech marks Evergreen’s entry into syndicated radio programming on a barter basis, company officials say.

Rapper Sway and DJ King Tech already host their weekend three-hour evening radio show on Evergreen’s KMIR(FM) Los Angeles, KMIR(AM) San Francisco and WHIT(AM) Chicago. The agreement with MultiVerse makes the show available to the rest of the country beginning in early April.

In addition, MultiVerse will handle national ad sales for “Audio Clip Art,” an audio production library for contemporary hit stations distributed by Radio Today Entertainment.

USA rolls out new shows

USA Radio Network has introduced two new shows for national syndication. The first, Road to the White House, will profile candidates in this year’s presidential election race, highlighting their background and their position on issues.

The second show, USA Health News Feed, will provide daily short segments outlining news related to personal health care. Officials with Johns Hopkins Medical Institutions will create and produce the health news segment for the network, USA officials said.—DP

make sure you are driving home that simple word or idea.

You also talk about the power of name recognition and the problems with using initials in place of a name. But in radio, we are tied to call letters. How can a radio sales team work with those call letters and use them most effectively?

You should try to construct as best you can a word with the letters, or coin a word and give the station a nickname that you can get into people’s heads instead of just a meaningless set of letters. You can make the call letters, the initials, come to life with a concept.

In radio we’re seeing increasing fragmentation. How can sales staffs contend with identity changes brought on by their competitors and by their own stations?

You have to hang on to your identity. One of the problems is that stations get going in one direction, and then they change. When you seize a format first, you have to maintain your leadership. If you are the number-one country station in a market, that is your leadership position and you have to stay there.

You have to do what Coca-Cola did: there is the “real thing” and there is the fake stuff.

You have to drive home the heritage. Building on your heritage reinforces for listeners that they are listening to the best station, and you tell them they are listening to the real thing.

And if you are the new station on the block, how do you compete with heritage stations?

Then you are playing an attack game and you have to find the other stations’ weakness. Good leaders tend not to let themselves get attacked very well. They are very aggressive and knock people off.

How can radio stations position themselves for the long term?

Long term, the key to radio is essentially getting a bigger piece of the advertising pie. That is what the industry’s long-term goal should be: not to fight over the 7% radio already gets. Industry sales teams should spend their time trying to build the medium and trying to get a larger share of the advertising pie for the medium. That is the number-one marketing issue facing radio—how to go from 7% of the advertising pie to 10%.

Premiere Radio Networks will introduce an oldies program, ‘Big Daddy’s Rock ‘n’ Roll Oldies Club,’ a six-hour show to air five days a week. It was created by Bill Drake and Kent Burkhart, shown in this photo with Premiere executives: (l-r) Drake; Steve Lehman, CEO, Premiere; Burkhart, and Tim Kelly, executive VP/director of programming, Premiere.
"I've been reading the magazine since I was a 15-year-old DJ. Later, as a radio station owner, I read it for news of ownership changes. Now that I run a cable network I rely on Broadcasting & Cable for its in-depth coverage of the entire communications industry. It's a must read."

Lifetime buys ‘Hope’ for $450,000
Twentieth drama ‘Chicago Hope’ is latest big-ticket cable buy

By Cynthia Littleton

The lucrative migration of network dramas to cable continued last week with Twentieth Television’s sale of off-network rights to the CBS series Chicago Hope to Lifetime for more than $450,000 per episode, sources say.

The deal gives Lifetime rerun rights to at least 88 episodes of the medical drama, now in its second season, starting in fall 1998. Last month, Lifetime picked up off-network rights to the NBC Productions crime drama Homicide: Life on the Street for more than $400,000 per episode.

Warner Bros. set a new cable industry record last month with the sale of off-network rights to NBC’s powerhouse ER to Turner Entertainment Group for $1.2 million per episode. That deal broke the standard held briefly by Twentieth Television’s The X-Files, which went to FX, the cable network owned by Twentieth parent Fox Broadcasting, for $600,000 per episode late last year.

Lifetime’s other off-network holdings include L.A. Law, thirtysomething, The Commissar and Scarecrow & Mrs. King. Sources say the cable network opened up its wallet for Chicago Hope and Homicide—outbidding USA Networks and other contenders—out of concern that the supply of high-profile network hours will dry up in the next few years.

Headed for the off-network market soon are Columbia TriStar Television’s Walker, Texas Ranger and presumably Universal Television’s New York Undercover.

Like other basic cable networks, Lifetime is making an effort to reduce its need for off-network product by developing more original programming. Lifetime, which reaches more than 64 million households, has four hour dramas set to debut this year. The series include Critical Incident, a crime drama focusing on the work of street-smart special agent Diana Fisher, and The Glass House, a Stephen J. Cannell legal drama set at the Justice Department.

Suit claims Comcast overcharges
MSO calls charges offensive and ridiculous

By Rich Brown

Comcast Cable says a lawsuit charging the multiple system operator with bilking its customers of millions of dollars is “offensive, ridiculous and totally without merit.”

The suit, filed Feb. 5 in federal court in Tallahassee, Fla., alleges that the nation’s third-largest cable system operator is charging its customers more than the 5% franchise fee allowed by law. Hundreds of thousands or even millions of Comcast customers nationwide have been billed for and have paid franchise fees exceeding the limit, the suit charges.

“The court papers allege that Comcast is collecting franchise fees that it should not be collecting and converting these fees to its own use, and that is just not true,” says Tom Baxter, president of Comcast Cable Communications. “The fact is, every penny we collect in franchise fees is passed on to the local franchising authority. In this decade, Comcast has turned over $250 million to local governments. We believe that all of our actions in this regard are totally consistent with our franchise requirements and federal law.”

The suit seeks class-action status to represent the operator’s 3.5 million customers and was filed on behalf of Florida residents Russell Owens and Robert Johns. Representing the plaintiffs is Bryant, Miller and Olive, a Tallahassee-based law firm whose team includes former Florida attorney general Jim Smith.

This is not the first time that Florida has proved to be a thorn in the side of Comcast. Florida Attorney General Bob Butterworth last year teamed with seven other states to file a lawsuit over the cable operator’s rates. The suit eventually was dropped following a ruling by the FCC that called for Comcast to pay $6.6 million in subscriber refunds and forgo inflation and external cost adjustments of more than $3 million.
Simpson calls on CNN

A surprise phone-in to CNN by O.J. Simpson on Monday afternoon scored a 1.3 rating/4 share representing 900,000 households, according to A.C. Nielsen data supplied by the network. The rating was 63% higher than January’s average rating of 0.8 in the 12:30-2 p.m. CNN time slot. CNN hosts Roger Cossack and Greta Van Susteren had solicited the interview but had not arranged a date when Simpson called in. Simpson, who is busy hawking a videotape telling his side of the murder trial, conducted an interview with kkbt-fm Los Angeles on Tuesday in what appeared to be a widening media campaign to rehabilitate his image.

TCI reorganizes satellite group

One analyst suggests move could herald break with Primestar

By Jim McConville

In the wake of frenzied bidding on the last U.S. DBS slot, Tele-Communications Inc. (which lost out to MCI in that bidding) has quietly formed a new satellite business group. The unit will collect most of its satellite interests—including part ownership of DBS maker Primestar Partners—under one roof.

TCI spokeswoman LaRae Marsik says the group will concentrate TCI’s satellite efforts in one area. “It’s just a consolidation under one team and one leadership of our satellite assets.”

The yet-to-be-named unit will be headed by Gary Howard, TCI senior vice president of mergers and acquisitions. Howard will report to Brendan Clouston, president and CEO of TCI Communications.

Marsik says the unit will concentrate on the consumer services side of TCI’s satellite business and won’t affect its Tempo group, which continues to be overseen by TCI Senior Vice President David Betto under TCI’s Technology Ventures. “Betto remains in his position as head of TCI’s television center and the Head In The Sky [HTS] and National Digital Television Center [NDTC], which remain under TCI Technology Ventures.”

Washington-based DBS analyst Mickey Alpert suggests that TCI’s new business unit may be a change of another kind, possibly signaling TCI’s intentions to break its satellite ties with Primestar co-partners Cox, Continental, Comcast and Time Warner.

“Clearly [TCI] disagreed with Time Warner and some of the other partners regarding Primestar and the importance of high-power satellites,” says Alpert. “It sounds like they’re making a decision to go it themselves, I’d suggest either in conjunction with News Corp./MCI or EchoStar. There’s a lot more synergy in terms of what each party needs with a News Corp./MCI/TCI joint venture.”

That partnership beat out TCI for the last DBS satellite slot with full continental U.S. coverage, paying $582.5 million in an FCC auction last month.

PEOPLE’S CHOICE: TOP CABLE SHOWS

Following are the top 15 basic cable programs for the week of Jan. 29-Feb. 4, ranked by households tuning in. The cable-network ratings are percentages of the total households each network reaches. The U.S. ratings are percentages of the 95.9 million households with TV sets. Source: Nielsen Media Research.

Turner earnings drop
Ad, subscription boosts offset by CNN, CNNfn, other costs
By Rich Brown

despite healthy boosts in advertising and subscription revenue for Turner Broadcasting System’s cable networks, the company’s overall fourth-quarter net income dropped from $26 million to $19 million compared with the same period last year.

Among the Turner divisions taking a hit during the quarter was the news segment, which experienced a 10% boost in revenue, to $208 million over the same period last year, but wound up showing essentially flat operating profit.

A new advertising rate card helped boost domestic news revenue by about $7 million. Increased fees from the home satellite market brought in an extra $3 million, and CNN International’s fourth-quarter revenue rose $6 million during the quarter.

Any gains in revenue for the news division were offset by newsgathering costs tied to the conflict in Bosnia; start-up costs of roughly $2 million for the CNNfn financial news network and increased general and administrative costs.

Entertainment segment revenue increased $72 million but operating profit dropped 14%, from $53 million to $46 million.

The company attributed much of the decline to the weakened performance of its motion picture operations. The company’s 1995 home video and syndication releases did not fare well in relation to the 1994 crop. Likewise, the company cited “disappointing” overall results from its 1995 domestic theatrical releases and decreased profitability of international theatrical and home video releases. Turner’s production and distribution overall showed a net loss of $25 million versus a net profit of $2 million during the same quarter 1994.

Helping boost revenue in the entertainment segment was the continued strong performance of Turner’s cable networks. TBS and TNT were primarily responsible for the 15% boost in advertising revenue for the entertainment segment. Subscription revenue for the networks increased $23 million, or 20%, from an increase in both cable and home satellite viewers as well as higher rates.

The remaining Turner operations—including the Atlanta Braves and World Championship Wrestling—saw a 9 million, or 35%, decrease in operating losses, from $24 million to $15 million. Revenue for the segment grew by $17 million, or 52%, from $33 million to $50 million.

Helping boost revenue in the segment was increased Braves revenue of $1 million from TV rights and participation in postseason play and increased revenue of $5 million from WCW syndication and pay-per-view events.

NBC, cable to share Olympic spirit
NBC Sports President Dick Ebersol says the network will have at least two cable partners for the 2000 Olympic summer games in Sydney and the 2002 winter games in Salt Lake City. Coverage of the summer games probably will total 500-600 hours and 400-450 hours for the winter games, Ebersol said in a speech to the Sporting Goods Manufacturers Association in Atlanta. NBC, which owns TV rights to the Olympics through 2008, plans to air up to 172 hours of this summer’s games, exclusively on NBC.

TNT ratings magic
Cable network TNT set a regular-season ratings record of 7.1 rating, 13.1 share (representing roughly 4.7 million households) with its Feb. 2 live broadcast of the Chicago Bulls vs. Los Angeles Lakers NBA game featuring the return of Magic Johnson. The telecast beat TNT’s previous record 5.1 rating set with its March 28, 1995, telecast of the N.Y. Knicks vs. Chicago Bulls game, which featured Michael Jordan’s first appearance at New York’s Madison Square Garden since returning to the NBA.

AMC mystery trunk
American movie classics and celebrity-owned restaurant chain Planet Hollywood will sponsor a Hollywood sweepstakes featuring a trunk of Marilyn Monroe memorabilia. The winner of the “Unlock the Memories of Marilyn Sweepstakes,” created to promote AMC’s Saturday Classics series, will get the chance to unlock the trunk and reveal its contents on April 11 at the Beverly Hills Planet Hollywood.

GWSC gets Minnesota contingent
Minneapolis-based Midwest Sports Channel, a business unit of CBS, and Teleport Minnesota have become part of Group W Satellite Communications, a division of Westinghouse/CBS. Home Team Sports Vice President and General Manager Jody Shapiro will oversee regional sports channel MSC, while GWSC Vice President and General Manager Alan Stalker will be in charge of Teleport Minnesota, which provides telecommunications services, including the Minneapolis/St. Paul Interconnect.

Sports Channel joins Armstrong Cable
Sports Channel of Ohio has been added to Armstrong Cable Service’s basic package, starting Feb. 6, with its telecast of the Cleveland Cavaliers NBA game against the Boston Celtics at Gund Arena in Cleveland. When Armstrong’s fiber-optic system installation is completed this year, all 40,400 Armstrong subscribers will be able to watch Sports Channel on channel 44. Besides 50 Cavaliers games, Sports Channel Ohio televises the Cleveland Indians, Cincinnati Cyclones and Cleveland Lumberjacks games in the International Hockey League, and college basketball and football.
When It Comes To Television...

Cable Executives Know Where To Get The Whole Picture.

Total coverage of broadcasting and television news is why cable executives rate Broadcasting & Cable the "#1 Television Industry Information Authority."

That's important considering nearly 8 out of 10 say they need news on government regulations, technology, and general issues that also affect the broadcast industry. With Broadcasting & Cable, they get all that, plus the weekly editorial "Cable" section devoted to timely cable news and in-depth special features.

So if you want to reach cable executives in their magazine of choice, advertise in Broadcasting & Cable. The industry authority. For more information on advertising please call 212-337-6943.
TCI unveils in-school service

New ETC w/TCI subsidiary will deliver educational service combining cable, satellite and computer programing

By Elizabeth Rathbun

John Malone thinks there's money to be made in educational television.

Malone, president/CEO of Tele-Communications Inc., last Tuesday unveiled TCI's newest subsidiary, aimed at bringing technology and educational programing to teachers and students in grades K-12.

The company, “ETC w/TCI” (for Education Training & Communications with TCI), will tap the products and resources of TCI-owned companies and companies in which TCI has investments.

The venture also allows TCI to answer Congress's call for universal access to telephone service and the information superhighway. In a Feb. 5 letter, FCC Chairman Reed Hundt lauded ETC for helping meet the “critical challenge” of connecting “our children's classrooms to the information highway.”

The venture involves everything from delivery via TCI cable systems and Primestar, TCI's direct satellite venture, to seven hours a day of commercial-free programing provided by Discovery Communications Inc. over its Learning Channel, in which TCI is the largest shareholder. ETC's launch in classrooms is scheduled for this fall.

As part of ETC, teachers will be trained at TCI's National Digital Television Center in Denver. Two more training centers will be built: one to open in June in Washington, where ETC will be headquartered, and another on the West Coast.

Participating classrooms will be supplied with software from TCI companies including Compton's NewMedia and Ingenius, CD-ROMs and printed instructional materials also will be provided.

Student curriculum—initially, environmental science and Spanish—will come from Northern Arizona University, which already serves more than 7,000 students in 17 states via its distance-learning satellite network.

ETC's cost to schools already passed by cable is $265 per student per year. That includes wiring, hardware, software and telephones. Subscribing to just the Spanish-language classes and environmental sciences program Geonaut over The Learning Channel will cost $500 per building per year. Three days of teacher training will cost $2,400.

If "redirected" from other budget areas, "the total outlay by a school district won't be that much at all," says former representative Tony Coelho, who was named chairman/CEO of ETC.

Where schools are not passed by cable but are in a TCI franchise area, Primestar dishes will be supplied free. Some 10,000 dishes eventually will be provided, TCI says.

Although serving a civic, educational purpose, ETC's bottom line is eventually to make money for the nation's largest MSO, Malone said at a news conference in Washington. The challenge: "Can we build a commercial enterprise here...but also can we do good," Malone said.

"We do hope to make some money," he said, "but the educational effort will be a loss leader for a while." Although Malone didn't say how much TCI has invested in ETC, he called it "a tremendous financial commitment."

Malone is confident of public support for ETC. "This is going to be a global phenomenon. There [are] going to be a lot of people involved in it and a lot of focus on it." To insure that support, TCI will help communities appeal for tax funding to help pay for the upgrades required by the venture. The message is that "without this, all the kids are going to be disadvantaged" in an increasingly technological world, he said.

Plans call for expanding ETC into homes and workplaces, and going international later this year.
Broadcasting & Cable February 12, 1996

Graff looks to halt stock slide

Despite record revenue for adult service, company cuts costs in streamlining move

By Rich Brown

Adult programer Graff Pay-Per-View is preparing a company streamlining designed to reduce $6 million in costs and stem its steadily declining stock price.

Graff’s troubles, ironically, come at a time when adult PPV programming is booming. The company says its Spice Networks—Spice and Adam & Eve Channel—are expected to end the year with record revenue and a 50% growth in their addressable subscriber base. But growing competition from Playboy TV and Graff’s expansion into other businesses have taken their toll on the company, whose stock price has dropped to $4 a share from a high of $12 last April.

Playboy TV has been pursuing Graff since last July with a second PPV channel called AdultVision. The adult movie network made a splashy debut by stealing away Graff contracts with Time Warner New York City Cable systems representing more than 1.1 million subscribers.

Playboy also cut a deal with Prime Cable that has resulted in the cable operator’s disaffiliation with Graff. Despite the losses, Spice’s addressable subscriber base has grown from 9.4 million to 11.6 million between year-end 1994 and year-end 1995, says Steve Saril, executive VP, affiliate sales and marketing. He says Spice 2, which was folded into the Adam & Eve Channel, grew from 400,000 to 3.2 million subscribers during the same period. The Spice Networks will net in excess of 400,000 additional subscribers in first quarter 1996, he says. Graff maintains the same 85-15 split with operators that is offered by AdultVision, according to Saril.

Playboy’s domestic pay-TV revenue rose $3 million, to $9.8 million, during the second quarter of fiscal 1996. Playboy is attributing gains to the growth of direct broadcast satellite carriers DIRECTV and Primestar, a 5% increase in Playboy TV’s average pay-per-view buy rate and additional revenue from AdultVision. Playboy TV was available in 11.3 million cable addressable households as of Dec. 31, 1995, up 9% from the end of the second quarter last year and 4% from the end of the first quarter of fiscal 1996.

Graff has hired investment banking firm Jeffries & Company to assist in the consolidation and financial restructuring of the company, which already has cut its staff by 35 people, or about 20%. The company also has announced the consolidation of its European and domestic adult networks into one operating unit and has removed Mark Graff and Leland Nolan as vice chairman of the company. Both executives will continue as directors and major stockholders.

Among other changes, Graff is shutting down production of adult programming at its CPV subsidiary and is consolidating that office into Graff’s Santa Monica facility. The company also is also moving its online interactive unit from L.A. to corporate headquarters in N.Y. for further operating efficiencies and continues to evaluate the viability of producing CD-ROMs.

Graff will record a one-time, post-tax charge of $10 million-$12 million in fourth-quarter 1995 covering a write-down of the costs of its library of movies, TV programs, CD-ROMs and various charges tied to the staff reductions. The company will report an operating loss for the year of about $4 million before the charge.

The 1995 operating loss is $2 million higher than originally expected by the company. Graff executives say losses are tied in part to lower than expected revenue from the C-band backscatter-dish market and the failure to find a large distributor for its adult-oriented CD-ROM product.

Losses also are tied to the inability to sign new deals for CPV, a West Coast-based TV production subsidiary that has created erotic programming for HBO and other cable networks. The company says the increase in the estimated operating loss is also tied to some $1 million for the establishment of receivable reserves and increased overhead involving acquisition expenses.

“We are strongly committed to regaining profitability,” says Chairman/CEO J. Roger Faherty. Nevertheless, Graff executives say their plans involve “a number of risks and uncertainties.” They say factors that could affect results include the continued delay in the launch of new networks that nonetheless continue to incur associated costs: competitive factors that could reduce network revenue or cause the loss of major cable affiliates; future laws or regulations that could restrict or prohibit distribution of Graff’s adult programming and unavailability of necessary capital and changes in current banking relationships.

Looking ahead, Graff hopes to debut a variety of delayed networks, including a full-time infomercial network, DRAGnet; a European adult service, Eurotica, and an online adult subscription service.

Errata

New channel 8’s coverage of the blizzard in Washington on the night of Jan. 7 resulted in a 7.5 rating in the cable universe, according to A.C. Nielsen Co. data supplied by the regional news channel.

OVS: Other door to cable entry

Open video system route is free of franchise hassles, but requires opening system to competitors

By Michael Katz

Telephone companies determined to enter the video business have a new way to go, thanks to the Telecommunications Act of 1996 signed into law last week by President Clinton.

The law outlines rules for an open video system (OVS), under which the video-minded telcos may choose to operate instead of conventional cable or common carrier regulation.

Under OVS rules, telcos would be free of most state and local regulations, but they would have to lease capacity on their video networks to unaffiliated programmers on a nondiscriminatory basis, and they would be limited to programing just a third of the capacity themselves if demand exceeded supply.

OVS is a descendent of video dialtone, the FCC’s regulatory regime that proved too unwieldy for the telcos. "Video dialtone started out with bare bones regulation, and there was concern that there were too many open issues to get bogged down in," says Donna Lampert, a Washington communications lawyer.

"The open video system rules are more flexible and give the telcos greater opportunity than [do] any of the rules on video dialtone," says Jeffrey Ward, vice president of federal policy for Nynex. "The key advantage of open video system over a traditional cable system is that you are not required to get local franchise approval and follow all the cable rules. The con is that you have to set aside up to two-thirds of your capacity for folks offering competing services."

The specifics of an open video system are as yet undetermined. The FCC is hammering out the final details, which may take up to six months.

"We’ll have to wait and see what the open video system looks like," says Curtis Wall, director of marketing, BellSouth. "It’s an incomplete picture for us now."

The telcos are not waiting for the OVS.

Bell Atlantic already has a video dialtone service available to 38,000 homes in Dover Township, N.J., and an investment in CAI Wireless, a joint venture with Nynex that will give Bell Atlantic access to as many as 7 million homes.

Ameritech will provide cable TV service to Naperville, Ill.; suburban Detroit; Greendale, Wis., and Glendale Heights, Ill., and also will build a two-way video network in Columbus, Ohio, but has no plans to install telephone service on the cable lines.

PacTel will deliver wireless cable to 5 million customers in Southern California by the end of this year.

SBC Communications has cable systems in suburban Washington and an interactive TV trial in Richardson, Tex.

BellSouth will go ahead with a trial video dialtone system available to 12,000 homes in the Atlanta area in April. While the Telecommunications Act supersedes video dialtone, it grandfathers VDT systems that were arranged before the act was passed.

Although the telcos are not making a beeline for the new system, they may warm up to the idea as technological advances such as switched digital video and digitally compressed signals greatly increase channel capacity.

"In the long term, I think it is inevitable that there will be an explosion of capacity, and as you see this happen the open video system becomes more attractive," says Nynex’s Ward. "With switched digital video, which permits effectively unlimited capacity, you don’t have to worry about setting aside two-thirds of the capacity, and it makes sense to make some money off it."

But for now, with various engineering and manufacturing disappointments and the uncertain actions of the FCC, the telcos don’t see OVS as their best option. Ward sums it up with an analogy: "Is it more desirable to build a three-bedroom house for your spouse and children or a nine-bedroom house for your spouse and children as well as friends, relatives and strangers?"

Cartoon Network adds three series

‘Quest,’ ‘Dexter’ and ‘Big Bag’ are newest entries

By Jim McConville

Turner Entertainment Networks—the Cartoon Network, TBS and TNT—will be adding three new shows to its weekly kids programing schedule this year.

The new shows are Dexter’s Laboratory, The Real Adventures Of Jonny Quest and Big Bag. Scheduled to launch April 29 on Cartoon Network, TNT and TBS, Dexter’s Laboratory is the first breakout cartoon series from Turner’s “World Premiere Toons” project of shorts and the first Turner short to be expanded into a half-hour episode.

The Cartoon Network and Turner-
owned animation studio Hanna-Barbera initially will produce six half-hour episodes of the series and are eying it as a possible Monday-Friday strip for 1997. Episodes of Dexter’s Laboratory will be paired with a Dexter spin-off: Dial M for Monkey. Turner’s Jonny Quest, a second-generation version of the Hanna-Barbera ‘60s prime time series, will debut weekdays on the Cartoon Network, TBS and TNT starting in late August.

Big Bag, a joint venture with the Children’s Television Workshop, will launch June 2 on the Cartoon Network. The show, a weekly, commercial-free hour educational series, is the Children’s Television Workshop's first preschool series since Sesame Street. The show will combine five live studio hosts, new Jim Hensen-created Muppets, six animated shorts and music.

The Cartoon Network will be in more than 32 million homes for the new season, up from 8 million homes when it launched four years ago, says TBS’s Karl Kuechenmeister.

Kuechenmeister says the kids upfront market for cable has so far not been a “runaway freight train.” “I’m not sure it will be as big this year because so many network suppliers are down in their ratings delivery versus last year. It’s going to be tough for some of them.” But Kuechenmeister predicts “huge” upfront share migrations from networks down in the ratings to those that are up. “Nickelodeon and Turner stand to do the best this year at the expense of Fox, Disney, ABC, CBS, USA and Family Channel,” he says.

Nickelodeon this year was again the center of attention, breaking the kids upfront advertising market a week earlier than anyone else (Broadcasting & Cable, Feb. 5) and selling nearly 50% of its inventory of commercial time within the first week, including four prime time deals running through 1998, according to John Popkowski, senior vice president, ad sales, for Nickelodeon parent MTV Networks.

Since Nickelodeon last year cut upfront deals that run through third quarter 1997, Nickelodeon executives were taken a bit by surprise by the flurry of interest this year. “We didn’t think that we would be this active, but a lot of people approached us wanting to extend our base deals from last year through third quarter 1998,” says Popkowski.
Microsoft sets up server platform

Internet Information Server will compete with Netscape, Unix- and Windows NT systems

By Richard Tedesco

Taking another software shot at Netscape Communications, Microsoft Corp. this week begins distribution of free software for businesses to use in creating World Wide Web sites.

The Microsoft Internet Information Server, for use with the Windows NT Server network operating system, already has takers—50 companies are planning to use it for a variety of applications. The IIS permits companies to create information sites on the Internet or on internal intranet networks. It's billed as being faster than other Unix- and Windows NT-based servers and four times faster than the Netscape Netsite server, which carries a price tag of $495. A

Creation of the server was a direct response to requests from Microsoft customers, says David Malcolm, Microsoft product manager for the IIS. Most important from Microsoft's perspective, the server will present a platform for third parties to devise a range of different applications. "We see this product as an excellent entry into the Web server arena. It will compete with all the Web servers that are available, on the Unix platform as well as the NT platform."

Microsoft claims that its IIS graphical setup can be installed and run all Internet services in less than 10 minutes.

With its introduction on the Internet this week (http://www.microsoft.com/infoserv), the platform will demonstrate its graphic presence with an Oscars Web site (http://www.oscars.com), which will run through the Academy Awards presentation in March. NBC News also plans to use the platform for an elections Web site that it will put up on Decision '96, an online supplement to the broadcast network's election news coverage.

This is the latest move in Microsoft's campaign to be king of the Internet and follows its announced alliance with MCI that will see MCI offering Microsoft's Explorer Internet browser to its Internet customers.

Online Services

**MSN/BET deal: Content's the thing**

By Richard Tedesco

Microsoft Corp.'s deal with BET Holdings is one model for development deals that the software giant hopes to make with other programmers to supply it with content for the Microsoft Network.

Microsoft will look for other opportunities where the same sort of "unique factors" are present, according to Peter Neupert, vice president of strategic relations. The company is seeking situations that promise "long-term viability" with "well-defined" market opportunities, Neupert says.

"Getting into real content is where the action will be," says Jim Hall, vice president of SRI Consulting in Menlo Park, Calif.

An earlier deal that Microsoft forged with Paramount TV to license online content from its four Star Trek series and Entertainment Tonight is the other side of the formula: limited deals for content from specific shows.

Both deals deliver material Microsoft can quickly place on MSN as it attempts to develop the online service this year. The company expects to see content from BET and Paramount in 60-90 days, according to Neupert, and he expects that Microsoft will do a mix of deals along those lines. Online content resulting from its relationship with NBC isn't expected to be available for approximately six months, he says.

Microsoft will wait to gauge the response to the content it has lined up before it does any other deals. "At this stage, we've put our wood behind a number of arrows. We'd like to get..."
some trials and tests first,"
Neupert says. "Rather than
trying to get a shotgun out,
we're more likely to get a
number of limited partners-
ships in limited areas."

In the case of the BET
deal, the cable network
actively sought the develop-
ment partnership, according
to Deborah Lee, BET execu-
tive vice president and gen-
eral counsel. Initial content
will be based on BET pro-
graming, including BET
Shop, its on-air shopping
show. BET also hopes to
develop content from
African-American communi-
groups. "We feel there's a
lot of need," says Lee.
"There's not a lot of material
out there targeted for the
Afro-American community."

BET's initial online site is
"Songs and Stories: MSN
Celebrates Black History
Month" (go word: BET).

Video Services

Disney invites Jones
to Celebration

MSO will offer 80-channel service at planned community

By Richard Tellesco

The Walt Disney Co. last week selected
Jones Intercable as the video provider for
Celebration, Disney's planned community
now under construction in central Florida.
Jones initially will program 80 channels of
video service on a two-way 750 mhz network
now being built by AT&T. Jones Intercable
President Jim O'Brien says the Disney pro-
ject is consistent with Jones's "vision" of
broadband as an information conduit.

Charles Adams, director of community
development for Celebration, says that Jones
initiatives such as Mind Extension University
are very much in tune with the philosophy
behind Disney's planned community. "We
have a strong commitment to education and

lifelong learning," says Adams, who cited
Jones's long relationship with The Disney
Channel as another factor.

State-of-the-art telecommunications is part
of the small-town/high-tech concept Disney
wants to establish in Celebration. The commu-
nity's telecommunications network is intended
to connect each home, apartment, business and
school in Celebration.

Jones will lease channel space from Vista
United, a joint venture of Disney and Sprint.
AT&T eventually will build a switched digital
video platform in Celebration with Broadband
Telemetry, based in Research Triangle
Park, N.C.

Residents are expected to move into the first
of the 8,000 households in Celebration in mid-
summer.

IT'S A TRAGEDY
BEYOND DESCRIPTION.

96,000 acres of irreplaceable rain
forest are being burned every day.
These once lush forests are being
clered for grazing and farming. But
the tragedy is without the forest
this delicate land quickly turns
barren.

In the smoldering ashes
are the remains of what
had taken thousands of
years to create. The life-
sustaining nutrients of
the plants and living matter
have been destroyed and the

exposed soil quickly loses its fertili-
ity. Wind and rain reap further dam-
age and in as few as five years a land
that was teeming with life is turned
into a wasteland.

The National Arbor Day Foundation,
the world's largest tree-planting
environmental organization, has
launched Rain Forest Rescue. By
joining the Foundation, you will
help stop further burning. For the
future of our planet, for hungry
people everywhere, support Rain
Forest Rescue. Call now:

Call Rain Forest Rescue.

**NBC spots concept for Web/network series**

By Richard Tedesco

Inspired by a popular online soap opera, NBC has commissioned its creators to do a similar series for NBC online and a pilot for an on-air series as well.

NBC hopes to debut the unnamed series in cyberspace within the next two months. Scott Zakarin and Troy Bolotnik, originators of The Spot (http://www.thespot.com), will produce the series with the same format as their hit online soap and then do a pilot for the broadcast network. The new series will appear on NBC SuperNet on the Microsoft Network (the go word is NBC) and on NBC’s World Wide Web site (http://www.nbc.com).

The series represents the leading edge of NBC’s multimedia strategy, according to Edmund Sanctis, senior vice president and executive producer of NBC Interactive Media: “It’s an important strategic move for us. Using online as a platform that exists in its own right and as a development platform for bigger and better things, for play on the network level.”

NBC has other similar initiatives in development, Sanctis says, with the objective of leveraging NBC-owned content in the form of series or characters across online, broadcast and/or cable platforms: “It’s a serious go at the whole notion of convergence.”

Sports and entertainment will be prime areas for developing online content, with NBC also recently announcing a joint venture between its interactive unit, NBC Sports and GollData Corp to create “golf.com,” a comprehensive information center about the sport on MSN and the World Wide Web.

**Vitt lets clients buy in cyberspace**

Vitt Media International unveiled an interactive system last week that will enable advertisers and agencies to access media information and make buys online. The Vitt Online service (http://www.vitt.com) also enables its clients to place media buys online and track immediate results on a particular buy by providing ratings or readership numbers from A.C. Nielsen, Arbitron, Simmons, MRI, Scarborough and the Audit Bureau of Circulation. Clients also get 24-hour access to proprietary Vitt research, including color-coded demographic maps for specific markets.

After entering an account number and password, clients can place a buy or read account status reports. An icon display enables them to select whatever media outlets they wish to use.

“What we want to do is to create an environment for our clients,” says Bernard Goldstein, Vitt research director. “It basically makes everything convenient for the client.”

**AOL subs top 5 million**

America Online Inc. claimed last week that it has more than 5 million subscribers, representing a 10-fold jump in the past two years. At the same time, AOL reported net income of $10.6 million on revenue of nearly $250 million for the second quarter of fiscal 1996, ended Dec. 31. AOL recorded a loss of $38.7 million in the corresponding quarter a year earlier, when the company took a one-time charge of $42.8 million in research and development costs. It had revenue of $76.4 million during that quarter. According to AOL, the online service added 877,000 subscribers during the third quarter of fiscal ’96, more than doubling the number added during the same quarter a year earlier. It added 710,000 subscribers during the quarter ended Sept. 30, 1995.

**CompuServe joining I-Net only access field**

CompuServe last week became the latest online service to begin offering Internet-only access to its customers worldwide. The new service, Sprynet, is being marketed at $19.95 per month for unlimited Internet access. Alternate pricing plans cost $4.95 per month for three hours or $9.95 per month for seven hours with $1.95 per additional hour.

AT&T WorldNet Services also announced plans to introduce in the next two months i-Net access to AT&T’s 90 million customers for an undetermined price.

Prodigy recently announced plans for a $1-per-hour Internet-only access market trial in the New York metropolitan area starting March 19. National availability and pricing for a regular Internet-only service from Prodigy will be announced later.

Meanwhile, America Online has signed 100,000 subscribers for its Global Network Navigator I-Net only service, launched on Oct. 30, 1995. It offers one month free, then a $14.95 fee for 20 hours each month and $1.95 per hour for additional time.

**Microwave orders Java, Hotjava**

Microwave Systems Corp. has licensed the Java programming environment and the Hotjava Web browser from Sun Microsystems Inc. Microwave plans to port Java and Hotjava to its OS-9 real-time operating system and its Maui graphics API. The combination of Java, OS-9 and Maui will afford Internet access via a number of consumer electronics devices, including TV set-top boxes and wireless handheld devices. Microwave soon will announce plans to participate in interactive TV trials using the new configuration.
Broadcasting & Cable does a superb job of covering the important breaking news in Washington. Its coverage of the broadcasting business is so important I have it delivered at home over the weekend."

National Association of Broadcasters (NAB)
TCI undergoes a SeaChange

MSO makes $6 million deal for ad servers in five markets

By Glen Dickson

Cable giant TCI Communications has made a big commitment to SeaChange Technology's server-based digital ad insertion systems.

As part of a deal worth more than $6 million, TCI will replace current analog equipment with SeaChange's SPOT Systems, featuring the new Video Server 100, in Dallas, Miami, South Bend, Ind., and Oakland, N.J., bringing targeted commercials to geographic zones in those markets. The first installation will start in Dallas later this month.

"That's just for starters," says Greg Hall, TCI's director, advertising sales/technical operations, of the latest SeaChange contract. "We'll have another wave of installations in the back half of the year.

Hall says that Hartford, Conn., probably will be the next system to move to SeaChange, with 10-15 markets making the switch by the end of 1996. He estimates that the final bill for the digital equipment will approach $15 million.

Ironically, replacing all the analog equipment would cost $11 million, says Hall. "If you're starting from scratch today, once you add up the cost of dub racks and ancillary equipment to support analog operation, it's a wash [compared with going digital]," he says.

TCI also may expand the SeaChange "single-channel integrity" system it installed in Pittsburgh last year, which serves 13 zones and 171 channels through SONET fiber rings. That system uses distributed server modules at the headends as opposed to the Video Server 100 blueprint, which relies on a central server architecture.

Hall says that the Pittsburgh installation was "SeaChange's beachhead into TCI" and that the way the digital transition was handled will be a model for other TCI system upgrades. TCI's main goal in choosing an ad server product was versatility, such as being able to handle longer-form material like infomercials, he says.

"For each niche business that comes along, we don't want to have to buy a different box," Hall says, adding that the SPOT product from SeaChange "is a system, not just an insertion box," as it includes encoding and scheduling stations, network interfaces and remote diagnostics along the fiber rings.

"After all," Hall says, "the whole zoning concept isn't as much a product of the digital headend equipment as it is the connectivity in your system through your fiber rings."

Fiber penetration will be the main arbiter of success for the new insertion systems, says Hall. Unlike the Pittsburgh application, which has the luxury of a superheadend where the ads ride the same DS-3 lines as the programming, markets such as Dallas, South Bend and Oakland will need significant fiber upgrades to serve multiple zones.

Although TCI is happy to have settled on the SeaChange server, the MSO's top priority in 1996 is to revamp its traffic and billing systems, Hall says. "Our focus is 90% on trafficking and 10% on our digital server installations. It's great we have a digital product; that allows us to shift our focus to the software issue. We can't take full advantage of the servers without resolving the trafficking issue."

Hall was busy meeting with 20 operations managers in Denver last week to address the traffic and billing problems. "The best I can tell, we have 13 variations of trafficking [and billing] across TCI," he says. "We want to get that down to one."

TCI even wants to jettison the terms "traffic and billing," Hall says: "We want it to do a lot more than that—to report our revenue, analyze our business and allow us to make decisions more intelligently."

To that end, TCI will conduct parallel tests of new traffic systems in major markets this spring.

The Box upgrades to digital

Cable network installs servers for playback of music videos

By Glen Dickson

The Box, the interactive music network that features dial-in requests, will be going to digital playback from modular server systems in 1996 as part of a $3 million upgrade plan. The first server unit is already up and running in the TCI Miami cable system.

Video Jukebox Network, which operates The Box, will replace its current analog tape and laserdisc playback systems at 75 cable headends and three New York broadcast stations with server units of its own design. The new playback module, The Digital Box, consists of a Pentium-based PC running on the Windows NT platform, proprietary automation software, and four 9-gigabyte Seagate drives for storage. The drives can store 275-350 videos of an average length...
of 4.3 minutes.

Now, instead of making countless dubs of individual videos for distribution, The Box will create digital files using a Vela Research MPEG-2 encoder. Content will be compressed at 6 megabits per second, then distributed to the headend server.

The Box is testing VSAT delivery on the Hughes Galaxy IV satellite; the network plans to switch to Galaxy VII for full-time service by the end of March. Hughes PES (personal earth station) units will receive the VSAT signals.

Because The Box doesn’t play live feeds, the limited bandwidth of VSAT transmission won’t be a problem, says Paul Sartain, Video Jukebox Network’s vice president of operations. The incoming feeds simply will be decoded and downloaded into the headend server, and playback will be controlled with a Pentium computer. The playlist can be updated remotely from Box headquarters in Miami when it’s not prompted locally by viewer requests.

Although The Box always has used computers at the headends to handle incoming 900-number calls and prompt the playback of requested videos, the network still relied on FedEx to deliver its content and used on-site technicians to load it.

“We’re looking at operational savings of $1 million per year, and that doesn’t take into account the maintenance of equipment,” says Sartain, referring to the wear and tear that repetitive playback causes in analog systems.

Sartain says the on-air quality also is greatly improved, as the digital files don’t degrade with successive playbacks as does analog tape. The Box plans to change to a new compression algorithm, adaptive field frame (AFF), which will allow it to increase the encoding rate to 4.5 megabits per second.

The server systems also allow for dynamic program distribution, says Sartain. “Now we can put them out at will, instead of on a weekly cycle. We’ll also have instant random access, which we don’t have today.

That random access will have a big impact on promos and commercials, which used to be played back from pre-programmed pods. Combined with the addressability of the Hughes receivers at the headends, the server system will allow The Box to make quick copy changes or target advertising to different markets. “As we target particular videos for a market, we can do so with commercials,” says Sartain.

**Ready for the road**

E-N-G Mobile Systems has introduced a line of turnkey mobile edit vans designed for immediate news duty. The new K-Edit News Vans, built on the Ford E-350 Super Cargo Van platform, are fully equipped with separate work consoles for editing and transmitting, three electronics racks, electrical generators, complete electrical wiring, commercial power input and power control panel, pneumatic mast with air system and pan-and-tilt control, heavy-duty roof platform and stainless-steel ladder. Two gullying doors provide access to the rear of the electronics racks. The fully integrated and tested electronics can be configured with any combination of microwave, rack electronics and communications equipment. —CD
System Layer Demultiplexers. The AT & T MPEG single-chip MPEG has customer pher instead of compression. GI’s DigiCipher because it is provide for the German market.

Global Access Telecommunications has signed a long-term transponder brokerage agreement to offer full-time Ku-band capacity on the Eutelsat II Flight 4 satellite, located at 7 degrees east. Global will broker both ad hoc and long-term leases on the Eutelsat bird, whose footprint covers Europe, the Middle East and North Africa.

PanAmSat’s revenue surged to $116.2 million in 1995, an 82% increase over 1994 revenue of $63.7 million, the satellite operator says. PanAmSat’s 1995 EBITDA (earnings before net interest expense, income taxes, depreciation and amortization) were $66.2 million. The company says that broadcast services revenue increased in 1995 by 116%, to $84.1 million, due mainly to the start of video services on the PAS-2 and PAS-4 satellites.

Chyron Corp. has signed a letter of intent to acquire Pro-Bel Ltd., the British manufacturer of video signal switching equipment and systems. Under the agreement, Chyron would pay $21.1 million in cash and stock for 100% of Pro-Bel’s issued and outstanding shares. Pro-Bel had revenue of $27.2 million and operating profit of $2.1 million for the fiscal year ended Oct. 31, 1995. In December, Chyron signed a letter of intent for a $6 million stake in Israeli virtual set manufacturer RT-SET.

Tiernan Communications is introducing a line of DVB- and MPEG-2-compliant digital video encoders and decoders aimed at the SNG industry (as well as video backhaul and program distribution applications), with the base price for a digital encoder starting at $48,000. The TE3 MPEG-2 Encoder and TD2 MPEG-2 Decoder are both only two rack-units high and digitize and compress a single video channel and up to four audio channels into a single stream for transmission at variable rates from 1 to 15 megabits per second. An optional TD2-1000 modular card adds a built-in decoder to the TE3 unit, while the TTM-2000 option adds up to two synchronous or asynchronous user data ports and DVB compatibility.

Taiwan broadcaster TVBS has picked up three Safari digital video flyaway earth stations, complete with voice and data links, from LNR Communications. TVBS will use the portable Ku-band units for news and special events coverage in the Pacific Rim area, uplinking to the PanAmSat-2 satellite. LNR also has provided TVBS with a fixed 7.2 meter Ku-band uplink for program distribution from its Taipei studios; the new antenna serves as the receive point for the digitally compressed news feeds from the Safari flyaways.

Nortel has signed a five-year deal with Intermedia Communications to supply the competitive access provider with public network switching and broadband transmission products for the upgrade of its communications networks. The contract is potentially worth $60 million. Under the terms of the agreement, Intermedia initially will deploy Nortel DMS-500 switching systems, TransportNode systems and AccessNode systems to Miami, Tampa and Orlando, Fla., to serve its southeast regional network; future installations are slated for regional networks in Cincinnati, St. Louis, Raleigh, N.C., and Jacksonville, Fla.

HELP WANTED TECHNICAL

Engineering Crew Chief

Group W Network Services, a business unit of Westinghouse/CBS, is a full-service video production and distribution company which serves the cable and broadcast industry.

Group W currently has a unique opportunity for an experienced Maintenance Engineer to assume a leadership position in the Technical Department in Stamford, Connecticut. This position has substantial growth opportunity for the right person.

Formal electronics schooling, a minimum of five years experience repairing broadcast video equipment, and knowledge of both analog and digital video machines, switchers and distribution equipment is required. Additionally, the position demands experience in maintaining post-production, graphics and automation systems. Excellent communication and organizational skills, and a proven ability to lead projects and oversee staff is essential.

If you meet the above requirements, are dedicated, highly-motivated, and a creative problem solver, we would like to hear from you.

Please forward your resume with salary requirements to: Jonathan Perkes, Engineering Supervisor, Group W Satellite Communications, 250 Harbor Drive, Stamford, CT 06904. FAX:(203) 965-6312. E-Mail: perkes@gwns.groupw.wec.com. Group W Network Services is an equal opportunity employer.

USSB Operations Manager. United States Satellite Broadcasting is looking for someone to manage the technical operations of the USSB Broadcast Center which has a staff of 35 in maintenance, traffic and operations and provide the communications link between technical operations and all other divisions of USSB. 7-10 years experience in broadcast production management, broadcast technical operations management or cable multi-channel operations management is required. Submit resumes to: Amy J. Siedman, USSB Job #19-96, 3415 University Avenue, St. Paul, MN 55114. No telephone calls please. An Equal Opportunity Employer.

Transmitter Maintenance Engineer. On-site Transmitter Engineer with experience to maintain two VHF RCA transmitters and all related equipment including microwave. FCC general class license is required. Excellent opportunity that includes housing in rural North Dakota setting for energetic, self starter. Send resumes with references to: Chief Engineer, WDAZ-TV, PO Box 12639, Grand Forks, ND 58208-2639. Or may be faxed to: 701-746-4507. WDAZ supports a drug-free work environment. EOE.

Broadcast Center which has 100 employees and covers the West Coast, plus. Requires FCC General Class and valid driver's license. For either position, send current resume to Dept. XE, KDVR/FOX-31, 501 Wazee, Denver, CO 80204. Fax 303-595-8312. No phone calls please. EOE.

Engineer: Atlanta teleproduction facility needs Video Engineer. Systems integration, installation, preventive maintenance, troubleshooting of digital and analog video and audio, plus computer networking experience needed. Heavy maintenance and vtr repairs outsourced. Minimum 5 years technical experience. Send resume to Jeff Blauvelt, Peachtree Post 1781 Peachtree Street, Atlanta, GA 30309.

Audio/Font Operator: Canal de Noticias is a division of NBC, one of the world's best known news and entertainment companies. We are seeking a technical professional to join our expanding news service, which broadcasts in Spanish to affiliates in major Latin American and select U.S. markets. This 24-hour operation, based in Charlotte, North Carolina, offers you the chance to be part of a dynamic team which is experiencing tremendous growth and success. Your duties will range from running an audio console to creating and recalls electronic titles/graphics during live and taped programs. You'll also perform other production related duties in support of supervisors and management. Fluency in Spanish is a must, as is experience with all aspects of TV production, including live programming. Basic knowledge of audio for TV and experience with the Infinitil font system are essential.

HELP WANTED ADMINISTRATION

Richard Eaton Chair in Broadcast Journalism: The University of Maryland College of Journalism seeks a distinguished broadcast journalist as our newly endowed Richard Eaton Chair in Broad-cast Journalism. The chairholder will have a na-tional leadership role in advancing broadcast journalism through teaching, lectures, publications, presentations and other research and activities. The Richard Eaton chairholder will add to our premier Public Affairs Journalism Program, whose component includes student news bureaus in Annapolis and Washington and daily cable and radio broadcasts. A candidate should have a strong interest in development of new in-for-mation technology based on strong journalistic values. Key duties will lie in assessing prevailing practices, proposing innovations and helping shape the future of electronic journalism. We are looking for a broadcast journalist with exceptional professional qualifications, a flair for guiding stu-dents and professionals, and a vision that will add to the intellectual life of our college and the broadcasting community. The Richard Eaton Chair in Broadcast Journalism includes a com-petitive academic salary, secretarial support, graduate assistance and travel funds. The College of Journalism at Maryland, located nine miles from the White House, is one of the na-tion’s leading journalism schools. Send nomi-nations and applications to: Richard Eaton Chair Search, Dean’s Office, College of Journalism, University of Maryland, College Park, MD 20742-7111. For best consideration, apply by March 15, 1996. The University of Maryland is an Equal Oppor-tunity, Affirmative Action Employer. Applications from women and minority persons are en-couraged.

BROADCASTING & CABLE'S CLASSIFIED RATES
All orders to place classified ads & all correspondence pertaining to this section should be sent to BROADCASTING & CABLE Classified Department, 245 West 17th Street, New York, NY 10011. For information call (212) 337-7073 and ask for Antoineo Fasulo.
Payable in advance. Check, money order or credit card (Visa, Mastercard or American Express). Full and complete payment must be in writing by either letter or Fax (212) 206-8327. If payment is made by credit card, indicate card number, expiration date, and daytime phone number.
Deadline is Monday at 5:00pm Eastern Time for the following Monday's issue. Earlier deadlines apply for issues published during a week containing a legal holiday. A special notice announcing the earlier deadline will be published. Orders, changes, and/or cancellations must be submitted in writing. NO TELEPHONE ORDERS, CHANGES, AND/OR CANCELLATIONS WILL BE ACCEPTED.

When placing an ad, indicate the EXACT category desired: Television, Radio, Cable or Allied Fields; Help Wanted (Situations Wanted); Management, Sales, etc. If this information is omitted, we will determine the appropriate category according to the copy. NO make goods will run if all information is not included. No personal ads.

The publisher is not responsible for errors in print, due to illegible copy—all copy must be clearly typed or printed. Any and all errors must be reported to the Classified Advertising Department within 7 days of publication date. No credits or make goods will be made on errors which do not materially affect the advertisement. Publisher reserves the right to alter classified copy to conform with the provisions of Title VII of the Civil Rights Act of 1964, as amended. Publisher reserves the right to abbreviate, alter or reject any copy.

Rates: Classified listings (non-display). Per issue:
Help Wanted: $1.95 per word, $39 weekly minimum.
Situations: $1.05 per word, $21 weekly minimum.
Optional formats: Bold Type: $2.25 per word, Screened Background: $2.40, Expanded Type: $2.95
Terms: Display (minimum $1 word, $39 weekly minimum)
Word count: Count each abbreviation, initial, single figure or group of figures or letters as one word. Each additional word within a word group is counted as one word each.

Rates: Classified display (minimum 1 inch, upward in half inch increments). Per issue:
Help Wanted: $173 per inch. Situations Wanted: $87 per inch. Public Notice & Business Opportunities advertising require display space. Agency commission only on display space (when camera-ready art is provided). Frequency rates available.

Blind Box Service: (in addition to basic advertising costs) Situations Wanted: No charge. All other classifications: $25 per issue. The charge for the blind box service applies to advertisers running listings and displaying ads. Each advertisement must have a separate box number. BROADCASTING & CABLE will not forward tapes, but will not forward transcripts, portfolios, writing samples, or other oversized materials; such are returned to sender. Do not use folders, binders or the like. Replies to ads with blind Box numbers should be addressed to: Box (number), c/o Broadcasting & Cable, 245 W. 17th Street, New York, NY 10011.

Confidential Service. To protect your identity seal your reply in an envelope addressed to the box number. In a separate note list the companies and subsidiaries you do not want your reply to reach. Then, enclose both within a second envelope addressed to CONFIDENTIAL SERVICE, Broadcasting & Cable Magazine, at the address above.

Greenwood, Miss. (BP-950807IC)-Clay Ewing, W for wgrm-FM 93.9 mhz: to change ant. to 100 m., ERP to 25 kw and class from A to C3. Jan. 26

V for vigilance

EDITOR: Since I am quick to criticize, let me also quickly praise you for your Jan. 29 "The V for voluntary editorial." I totally agree that significant industrial violence activity is far, far beyond mandatory regulation or legal requirements. I also agree that it is possible to come to an agreement with a package of efforts that can pass the test of thought in this concern in this area (if not of die-hard do-gooders). I don't find the V-chip as menacing as you do, but I certainly agree that eternal, explicit and energetic vigilance against the imposition of censorship is in order. I also doubt the effectiveness of the V-chip. I do think that the industry should acknowledge the harm of media violence and its responsibility for it, and undertake some voluntary action on that front as well. For me, as you know, the best resolution of this intractable problem is to assure the availability of quality, age-appropriate constructive alternatives to the entertainment fare the market will produce left totally to itself. Again, congratulations on Broadcasting & Cable's editorial position.

David V. Brit, president/CEO, Children's Television Workshop, New York

MGM’s Symes making the lion roar again

When John Symes started his job as president of MGM Worldwide Television in early 1994, most of the ailing studio’s limited resources were directed toward re-establishing MGM as a major player in the movie business.

Now, however, MGM’s good fortune at the box office—with such recent hits as “Get Shorty” and “Goldeneye”—has been matched by the dramatic turnaround of its TV unit.

Most impressive, Symes has laid a solid foundation for future growth with a big-budget drama series, The Outer Limits, that began paying for itself in its first year. MGM also has fared well with the new first-run reality strip LAPD.

With the studio’s emergence from more than a decade of financial uncertainty, MGM’s new leaders have been given a mandate by chairman/CEO Frank G. Mancuso to develop long-term franchises, driven by everything from theme park rides to direct-to-video animated spin-offs.

“Our challenge is to continue to grow in the ever-changing climate of the television business,” says Symes. “There’s a certain interest out there in seeing MGM turn around after so many years of trouble. That lion logo has always had an intrinsic value. We’ve gotten over the industry’s initial reservations and proved that this company can produce.”

On the TV side, Symes says, the challenge is made easier by the wealth of titles in the MGM and United Artists archives. A sitcom based on the Oscar-winning 1976 movie “Network” is “in the works for CBS, and MGM also plans to develop TV series based on the theatricals “Fame” and “It’s a Mad, Mad, Mad, Mad World.”

Right from the start, The Outer Limits fulfilled its promise as “the prize jewel” in the United Artists TV library by attracting “dynamite demographics,” Symes says.

In an innovative marketing plan, the revival of the 1960s sci-fi anthology series bowed on Showtime last March and moved into first-run syndication in September. Showtime has ordered 88 episodes of The Outer Limits, also renewed for a second year in syndication. MGM’s upcoming series Poltergeist: The Legacy, which already has a 44-episode order from Showtime, will have the same staggered cable/syndication window.

“We’re spending a lot of time trying to figure out different ways to approach the business,” says Symes. “We have to look at different models because we don’t have the resources other companies do. We need to find the ways—through deals with pay cable, basic cable, international sales, syndication—to put the best possible production values on screen.”

Symes got training in the nuts and bolts of TV production during his 15 years with Paramount, starting in the technical operations department and culminating with a four-year stint as executive vice president of creative affair's for Paramount Network Television. As director of programming for the start-up Paramount Video division in the early 1980s, Symes’s duties ranged from launching the ground-breaking Showtime sitcom Brothers to overseeing production on live worldwide broadcasts of concerts by Frank Sinatra and Diana Ross.

Although Symes helped launch such network hits as MacGyver, Wings and Frasier during his tenure with Paramount, MGM has not set its development sights on the Big Three: “Financially, the process of going for six- and seven-episode orders from the networks has become a little problematic for many people. Our cable/syndication windows with The Outer Limits and Poltergeist have allowed us to get back into the TV business in a big way in a much shorter period of time than it traditionally takes to deliver network TV product.”

MGM also has taken a pragmatic approach to animation. MGM Animation, which Symes oversees, is producing a sequel to its 1989 theatrical hit “All Dogs Go to Heaven” for release this spring, to be followed by the launch of a first-run children’s TV series in September.

The one MGM/UA franchise that won’t be headed for TV screens anytime soon is the James Bond gold mine. With the success of Pierce Brosnan’s first outing as Agent 007 in “Goldeneye,” MGM isn’t willing to risk diluting interest in the movies by launching a TV counterpart.

With a new era of prosperity on the horizon for MGM, acquisition talks are likely to heat up. Credit Lyonnais, the French bank that took control of the studio in 1992, has to sell MGM by May of 1997 to comply with U.S. banking law.

But that deadline is a “back-burner” issue for MGM TV’s crew. “We’ve spent the past two years working very hard to prove to the creative community that we can produce,” Symes says. “Now it’s time to really focus on making the most of our new franchises, and we’re definitely getting there.” —CL
**BROADCAST TV**

Christopher Webb, sales manager, wgtu (TV) Traverse City and wgtq(TV) Sault Ste. Marie, both Michigan, named GSM.

Steve Lattimore, Peninsula bureau chief, WAVY-TV Portsmouth, Va., joins kmov(TV) St. Louis as news reporter.

February 12 1996  Broadcasting & Cable
Audrey Meadows, 1924-1996

Long before President Kennedy vowed to send an American to the moon, Ralph Kramden was making the same pledge to his wife. While Alice never made that trip, the part sent Audrey Meadows to the stars, placing her among the elite of TV comedians.

Meadows, 71, who died of lung cancer at Cedars-Sinai Medical Center in Los Angeles Feb. 3, played the perfect foil to Jackie Gleason’s blustering Ralph. Her sarcastic retorts, delivered with a roll of the eyes and arms folded resolutely, were more than a match for her TV husband’s histrionic threats. We watched weekly as Ralph filled himself with more and more hot air only to have Alice stick a pin in his plans with a perfectly timed put-down. But if she was the pin, she was also the cushion when he took that inevitable fall. Meadows won an Emmy in 1954 for her role.

After her five-year stint on the show, Meadows continued to make guest appearances on TV and had continuing roles in Too Close for Comfort (ABC, 1982-83) and Uncle Buck (CBS, 1990).

—JE

Bill Keeshan, SeaChange Technology Inc., Concord, Mass., named manager, field service activities.

DEATHS

Gary Banzer, 49, weathercaster, WKBD (TV) Detroit, died Feb. 2 of a heart attack. Banzer joined WKBD in 1990 and before that worked at WOOD(AM) Grand Rapids, Mich., KDFW-TV Dallas and WASH-TV Indianapolis. He is survived by a daughter, a son, and two grandchildren.

Darral Lee “Dee” Schelling, 57, executive director, New Mexico Broadcasters Association, died Feb. 5 at Anna Kaseman Hospital, Albuquerque, of a heart attack. Schelling had been with NMBA since 1978 and was well known among state legislators for her participation in legislative issues regarding broadcast interests. Prior to her position at NMBA, she was president of 4-M Advertising, an agency she co-founded. Schelling is survived by two brothers, Pat and Jim; and an aunt, Val.

Publisher Dove Audio has struck a deal to acquire leading independent production companies Four Point Entertainment and The Producers Entertainment Group. Dove, publisher of several best-sellers tied to the O.J. Simpson saga, will acquire TPEG, producer of TV movies and the CBS sitcoms Dave's World and Can't Hurry Love, in a stock-swap deal worth $8 million. Privately held Four Point, producer of such first-run shows as American Gladiators and Mark Walberg, will be purchased for $5 million in Dove stock and $4 million in cash. Dove, which launched a theatrical division last year, will be renamed Dove Entertainment.

CBS has re-signed four Freedom Communications stations to long-term affiliation agreements. The stations: WPBC (ch. 12) West Palm Beach, Fla. (a market with only two VHFs); KFDW-TV Beaumont, Tex.; WRBS Schenectady, N.Y., and KTVL Medford, Ore. Alain Bell, Freedom's broadcast division president, says that he would not have re-upped with CBS if former owner Larry Tisch hadn't sold and if Westinghouse hadn't picked Peter Lund to run the network: "Westinghouse has an urgent need to make things work, and they showed they're smart enough to pick someone who knows the business."

Universal Television has signed writer/producer Michael Chernuchin to a multiyear development deal. Chernuchin, who is executive producer of NBC's Law & Order, also is writing and producing Feds, a new drama for Universal, with Law & Order creator Dick Wolf. The series has been given a multi-episode order from CBS.

Boston University’s UHF stations may be up for grabs. The university has spent less than $10 million since 1993 to acquire WBUU/Boston (ch. 68), WZBU Vineyard Haven, Mass./Providence, R.I. (ch. 58) and WNBU Concord, N.H./Boston (ch. 21), says WBUU President Robert Gordon. Several recent offers have convinced the university to explore how much those assets are worth. Lehman Bros. is due to report on the matter within 30 days, Gordon says. Although there's no intent to sell the stations, "I'm absolutely convinced [that] if the right offer comes along, we will," he says, adding that he expects "many multiples over what we paid for the three stations." The stations, Gordon says, provide the greatest over-the-air coverage of the Boston market, the nation's sixth-largest DMA.

UPN will debut its third night of programing on Wednesday, March 6, with the Blockbuster Entertainment Awards at 8-10. The show will be hosted by Frasier's Kelsey Grammer. On Wednesday, March 13, the new drama Swift Justice debuts at 9-10 p.m.; the network is undecided what will precede it at 8-9. On March 20, UPN debuts The Sentinel at 8-9, followed by the second episode of Swift Justice.

CBS has ordered two more episodes of Almost Perfect, bringing the first-year comedy's episode total to 24. The series, which airs on Sunday at 8:30-9 p.m., has been one of the few bright spots in CBS's freshman class of shows this season. Almost Perfect is produced by Paramount Network Television.

The regular time period debut of The WB's Savannah on Feb. 4 at 9 p.m. scored the highest overnight Nielsen numbers of any regularly scheduled WB show, a 6.3 rating/9 share in Nielsen metered markets.

DIC Entertainment has reteamed with Broderbund Software to produce a TV series based on the children's educational computer game Alien Tales. DIC's last co-venture with Broderbund produced the popular Fox Children's Network series Where on Earth Is Carmen Sandiego?, also based on a software title.

MTM Television says its new action hour The Cape is set for a September launch in the top 30 markets. New stations signing on for the series about astronauts include KTXH Houston, KUTP Phoenix and WHAS-TV Louisville, Ky.
HOLLYWOOD

MGM sales report
Acquisition talks for MGM should start heating up once Credit Lyonnais, the French bank that took control of the studio in 1992, receives a report this week from investment house Lazard Freres on the best way to go about selling the studio. Credit Lyonnais has to sell MGM by May 1997 to comply with federal laws that restrict banks from owning non-banking businesses. The timing has worked in MGM’s favor, with the long-troubled studio suddenly flush with the success of “Species,” “Get Shorty,” “Leaving Las Vegas” and “Goldeneye” on the theatrical side and The Outer Limits’ triumphal return to cable and syndication. Likely suitors for MGM are said to include G.E., Bertelsmann and the man who has led the studio’s turnaround as its chairman since 1993—Frank G. Mancuso, former chairman and CEO of Paramount.

Poking fun at presidential politics
Producer Ed Griles is readying an HBO special that will take an irreverent look at the history of presidential election TV ads over the past 50 years. The special, tentatively titled 30 Seconds over Washington, to be hosted by comedians Dennis Miller and Bill Maher, may be produced in Washington, possibly as a live event. Griles, Rick Newman and Doug Warner have secured the rights to more than 55,000 political commercials on all levels of elected office, and Griles says the library of spots may yield a series of specials. Among the presidential pitches are one spot for Eisenhower that was produced by the Walt Disney Co. More immediate, Griles is preparing for the taping of Catch a Rising Star’s 50th Anniversary—Give or Take 26 Years, a special for CBS celebrating the New York City comedy club. The special, hosted by Rosie O’Donnell, will be taped Feb. 28, the first night of the 1996 U.S. Comedy Arts Festival in Aspen, Colo. CBS will air the special during the May sweep.

Party time
Nickelodeon plans to hold a big bash at Viacom-owned Paramount Studios to launch its new TV Land nostalgia network during the National Cable Television Association convention in Los Angeles April 29. At the party, Rich Cronin, vice president of Nickelodeon, will throw a switch officially launching the channel, which features shows from the ’60s, ’70s and ’80s. Nickelodeon is expecting 1,100 guests at the party, whose theme will revolve around celebrities in attendance from some TV Land shows.

NEW YORK

Leading contenders
According to sources, it looks as though Frankie Blue, formerly music director of WHZ(FM) and currently at the music video cable network The Box, will be named program director for Evergreen Media Corp.’s newly launched pop rhythm WKTU(FM) New York. At a press conference Friday, Evergreen Vice President/COO Jim DeCastro introduced the pop rhythm format slated to launch Feb. 9 on WKTV (103.5 FM), formerly country WSYN(FM). In addition, DeCastro said, “We have identified who we want as program director [for WKTV], and he is resigning from his post today.”

WASHINGTON

Digital charge
The White House has a new variation on the analog spectrum auction. If an auction does not raise as much money as planned, broadcasters will be charged a one-time license fee for their digital channel to make up the difference. Under the White House plan, broadcasters would be loaned a second channel.

Incorporating The Fifth Estate TELEVISION Broadcasting

Broadcasting & Cable (ISSN 0007-2028) (GST #1320794757) is published weekly, except at year-end when two issues are combined, by the Cahners Publishing Co., Cahners Publishing Co., at 245 West 17th St., New York, NY 10011, is a division of Reed Elsevier Inc., 275 Washington St., Newton, MA 02158-1630; Robert L. The V accompli

As this issue’s cover story makes evident, television has entered the age of the V-chip. Viewed as a worst-case scenario, it is potentially a new age in free speech and free press. Viewed from the best-case side, it could enable television to be freer than ever while empowering the viewer with a discretion hitherto unknown.

This page chooses to look on the dark side. We think that the V-chip’s danger cannot be overestimated or its reality overemphasized. The V-chip is here and may never go away.

The President signed the V-chip into law last Thursday. By the end of that day the strongest of court challenges should have failed. We consider it almost ominous that it was not. It tells us that the broadcasting industry—which is the only line of defense against the V-chip—doesn’t know what to do. That kind of vacillation will cost us all.

The problem is, those who support the V-chip occupy what appears to be the high ground. They are trying to save the country from violence and sexual ruin. As portrayed by the reformers, the media want only to profit from programs that parents fear will lead their children into sin and damnation.

And the V-chip is so rampantly seductive. No prior restraint. Air anything you want, and let the viewer select as he or she will. The catch, of course, is in the ratings system to which the chip responds. Who is to say how a program is to be rated? The industry, initially. And if it can’t mount a satisfactory system? Then a body created by the FCC—politically correct, of course. That’s only by year two. By year three politicians and interest groups of all stripes will have risen to protest this rating or that, this category or another, or simply that certain programming is allowed on the air at all. It will be found that the choice of television programming is too important to be left to the private sector. Washington will take over.

Everything we know about the relationship between the federal government and federally licensed radio and TV tells us this is true. If the road to hell is paved with good intentions, the road to Big Brother will be paved with V-chips.

We will print all the good news and the bad about this phenomenon as it develops. But that chill on the back of our editorial necks tells us this Lorelei must be resisted at all cost. The industry is already a week late.

FYI—The National Television Violence Study released last week does not appear to break any new ground. Once one wades through the studypeak, the basic message is that television should turn the volume down on violence and up on its consequences. As a government dictate, that would be censorship. As advice freely given and just as freely accepted or rejected, it’s worth considering. In the search for answers to the problem of violence—and TV’s role in its causes and cures—no help should be dismissed out of hand.

Cut out the middleman

Lest we be thought resistant to change, here’s an idea that can only make a positive difference. Suspend all FCC judgment/approval of radio station transfers. Depend on a certification by counsel that the deal meets all relevant government regulations (there are only about three). Hang over the heads of all parties the threat of license forfeiture for cheating.

We liken it to the negative option in book clubs. Unless you send the book back, it’s yours. In this case, unless the FCC sends it back, it’s yours—saving millions in meaningless administrative expense and months of FCC/industry time. Let the buying begin.

What about television? We’ll get to that.
