Cable Celebrates Its Emancipation

GORE, HUNDT MAKE IT MOST FAVORED MEDIUM
PUT UP OR SHUT UP TIME ON ADVANCED SERVICES
Nothing like it had ever been done before. In just fourteen months, Sony created an entire 200-channel direct-to-home satellite broadcast center for DIRECTV, America's largest direct broadcasting service. One of our toughest problems was the automation and transmission of commercials, promos and programs over all those channels. Highly complex interactions of constantly changing schedules, resource and material availability complicated our job. But we solved the problem, and we put everything we learned into our new 8100 Multichannel Transmission System, especially designed for today's—and tomorrow's—multichannel and multiple storage environment.

You can start by buying only the size you need now because expansion is simple and incremental. The 8100 system facilitates the integration of new and existing technologies, allowing you to mix tape (your Library Management System™ multicassette system, for example) and HDD storage for a more cost-effective solution. Dynamic allocation of resources provides automated, cost-effective redundancy. Spares automatically switch into any failed channel. You can program predetermined fallback plans for automated replacement of missing material. You even have the option of telling the system to protect your...

‘Can Do’ Cable Says It Can

With skepticism growing, industry renews promise to deliver digital TV, modems, telephony

By Rich Brown

The cable industry has allies in Washington who are eager to see the business prosper under deregulation. The question now is whether cable system operators are up to the task.

Confronted with growing skepticism over its ability to follow through on promises, the cable industry kicked off the annual National Cable Television Association convention in Los Angeles last Monday by accentuating the positive.

Gone from the opening session was the usual healthy debate of previous conventions. In its place was a series of speeches trumpeting cable’s progress in areas ranging from the introduction of new technology to on-time service guarantees.

There is a “major perception gap” between what the cable industry is accomplishing and the public’s perception of its accomplishments, said Brian Roberts, NCTA chairman and Comcast Corp. president.

That gap is particularly apparent on Wall Street, where cable stocks continue to underperform in the market.

Despite ringing endorsements of the cable industry by convention attendees FCC Chairman Reed Hundt and Vice President Al Gore (see page 7), cable stock prices remained flat or dipped slightly by the close of last week.

The cable industry’s failure to quickly exploit new technologies such as digital compression technology and high-speed cable modems is fueling some of the concern on Wall Street (see page 34). Even some of the nation’s top cable programers say they don’t expect the long-delayed rollout of digital cable boxes to reach critical mass until 2000 and still are not sure exactly what operators want to do with the added channel capacity (see page 33).

Four factors—technology, renegotiation, competition and cable system consolidation—are creating a business environment that Ron Cooper, Continental Cablevision executive vice president, says “is not for the faint of heart.” He says the cable industry can no longer afford to sidestep the competition with upstarts like DBS, which is poised to collect a 10% share of the market by 2000.

As usual, convention exhibitors sought to strengthen the industry’s competitive stance with various technological announcements. Four major system operators—TCI, Cox, Comcast and Charter Communications—announced on Tuesday their plans to buy a combined 2 million digital set-top boxes from General Instrument Corp. In another deal, Time Warner and Comcast announced Internet software contracts with Microsoft.

“It’s time to tell our story,” said Comcast’s Roberts, rattling off a list of statistics to fellow convention-goers: by the end of the decade, $14 billion will have been invested by the industry in new technology; about half of cable customers are already served by some form of a fiber-enhanced line; “hundreds of thousands” of digital set-top boxes will be deployed by the end of the year and millions will be shipped out next year, and the first “several thousand” high-speed modems will be shipped later this year.

TCI Communications President Brendan Clouston outlined cable’s “strategic assets” for fellow convention-goers and said that modem technology would be one such important asset for the cable industry going into the future. “We are going to deliver on that promise,” Clouston said.

Absent from the proceedings was Clouston’s boss, John Malone, whose predictions for high-speed modems and digital set-top boxes at earlier conventions have yet to materialize (Malone had the flu, according to company officials).

Also absent were any outrageous comments by “the mouth of the south,” TBS President Ted Turner, whose comment last December that he would “squish” competitor Rupert Murdoch like a bug received as much attention as the many far-reaching modem announcements made at the Western Show in Los Angeles.

“We’ve done pretty well competing over the last 20 years,” said Turner, joining cable’s rooting section last week. “We can do it.”
THE REAL CABLE GUY

Buoyed by record attendance of 30,200 at its 45th annual convention in Los Angeles last week, the National Cable Television Association officially declared Decker Anstrom "The Real Cable Guy." The NCTA president is cable's good-natured answer to the obnoxiously funny Jim Carrey, who lampoons installers in the soon-to-open-movie "The Cable Guy." Anstrom and other attendees picked up "Cable Guy" paraphernalia at the Game Show Network booth. Meanwhile, the NCTA board elected Ted Turner its new chairman. He succeeds Comcast's Brian Roberts, who was rewarded with three days of golf lessons at Miami's Doral Golf Resort and Spa.

GORE AND HUNT COME TO LOS ANGELES...

Not to bury cable but to praise it

Both Vice President and FCC chairman have kind words for industry

By Harry A. Jessell

To compete with telephone companies, cable will need friends in high Washington places. Last week, it discovered it may have two it hadn't been counting on.

Vice President Al Gore and FCC Chairman Reed Hundt, speaking on successive days at the NCTA's Los Angeles convention, praised cable for its commitment to the public interest and its promise to compete with telephone companies.

Gore even patted cable on the back for its efforts to improve customer service. "You have improved more than you have been given credit for," he said. "If all goes well, the star of 'The Cable Guy II' won't be Jim Carrey, but Harrison Ford."

Before the show, both had been better known for their antagonism toward cable. As a U.S. senator, Gore helped engineer passage of the 1992 Cable Act, which regulated rates and made cable programing available to its competitors. As Vice President, he helped win the appointment of his friend Hundt to the FCC. And there, Hundt made sure the 1992 law was strictly enforced.

Cable officials took the kind words as marking a turnaround in the industry's relationship with Washington: "There is no question the regulatory clouds have lifted," said NCTA President Decker Anstrom. "It's a tone entirely different than what we've seen in the past," added Jim Robbins, Cox Communications president and an NCTA board member.

The 1996 Telecommunications Act deregulates cable rates and lifts barriers to competition with incumbent telephone companies. Cable is counting on Hundt and the rest of the FCC to implement the new law in ways that make it economical for cable operators to compete.

Hundt made no promises in his speech, saying only that the commission will try to meet the statutory deadlines for issuing the critical interconnection and universal service rules. The former are due in August; the latter, in...
dards." But, he added, telephone companies "would rather have big, broad national rules and fight it out in the 50 states, where they have, of course, 100 years of experience working with the public utility commissions."

The Gore and Hundt speeches sounded as though they came from the same word processor. Both lauded cable for airing plenty of children's educational programming, providing free airtime to political candidates, informing viewers about TV violence and heeding the administration's call for a TV ratings system.

And both urged cable to continue its good works by bringing broadband Internet access to every classroom and library in the country. "It would be a shame to see the telcos take sole advantage of the opportunity to bring our kids into the information age," Hundt said.

Gore tagged a warning onto the end of his talk. The Telecommunications Act also will bring competition to cable, he said, and cable must respond "vigorously. Behaving like an invincible giant in this day and time in this industry is practically an invitation for some scrappy upstart to knock you off your feet."

**Levin sees 'manifest destiny'**

*Says Turner buy is on track for fall closing*

**By Cynthia Littleton**

The union of Time Warner and Turner Broadcasting System is "manifest destiny," Time Warner Chairman Gerald Levin said last week, sounding an expansionist theme at the closing session of the NCTA's Cable '96 convention.

In a one-on-one interview Wednesday with CNN's Larry King, Levin discounted speculation that the $7.5 billion stock-swap deal may be scotched or radically altered from the original agreement. Levin predicted that the complex transaction will pass the scrutiny of FCC and FTC antitrust regulators and close by the end of September.

"As long as Ted Turner, John Malone and Gerald Levin want it to happen—it'll happen," he said, referring to the president and CEO of the nation's largest cable operator, Tele-Communications Inc. TCI's 23% stake in TBS is expected to be converted into an 8% stake in the combined companies.

Levin vowed that there will be no post-merger layoffs at TBS or Time Warner because the two companies have mostly complementary operations. Levin also reiterated a pledge he made last year to House Speaker Newt Gingrich (R-Ga.) to keep TBS and CNN headquartered in Atlanta.

After jokingly asking if the new corporate behemoth would be named "Turner Warner Time," King pressed Levin on the who-reports-to-whom question.

"If we were using the standard Harvard Business School table of organization, then I am Ted's boss," Levin replied after casting a glance at Turner, seated in the audience with his wife, actress Jane Fonda. "But that's like saying Jane is Ted's boss."

---

**Gore challenges Dole, Gingrich over kids TV**

Vice President Gore last week elevated to the plane of presidential politics broadcasters' battle with FCC Chairman Reed Hundt over kids TV.

Addressing the National Cable Television Association convention, Gore challenged Republican presidential candidate Bob Dole (and House Speaker Newt Gingrich) to back Hundt's proposal that would require every TV station to air at least three hours of children's educational programming each week. Broadcasters vigorously oppose the measure and, with the help of two sympathetic FCC commissioners, have been able block its adoption.

More than 100 senators and representatives wrote Hundt in support of the requirement, Gore said. But some signatures were "conspicuous by their absence," he added. "Where's Newt? What about Bob?" he asked.

"How can you lament murder and mayhem in the streets and fight to block an opportunity to bring broadband into the country? It would be a shame to see the telcos take sole advantage of the opportunity to bring our kids into the information age."

On the campaign trail last spring, Dole blasted TV for "bombarding our children with destructive messages of casual violence and even more sexual," yet he opposed the law encouraging broadcasters to implement V-chip technology that would permit parents to automatically block shows rated high on violence or sex. And he reportedly is opposed to the three-hour standard.

Gore praised cable for its commitment to kids educational TV. Three hours a week from broadcasting is "not too much to ask," he said. "Cable has shown we can do better."

Leased-access plan draws fire
Cable programers tell FCC officials that proposal will make channels even more scarce

By Michael Katz

able programers lobbied FCC officials at last week’s NCTA convention to reconsider a proposed change to leased-access rates. The programers claim that the proposal is unfair and could force some of them off cable systems.

“The leased-access proposal was one of the more significant issues raised at NCTA,” says Bruce Collins, C-SPAN vice president/general counsel. “C-SPAN is not alone among programers who have it as their top priority.”

Meredith Jones, chief of the FCC’s cable service bureau, says the FCC “spent years” working on the proposal and asked for input on alternatives, but never received any. “We’re looking forward to hearing what other proposals they have.”

Leased-access was mandated by Congress to insure diversity in cable channels. It requires a cable operator to set aside a certain amount of channel capacity to be leased by independent programers.

“There is a lot of diversity in cable now,” Collins says. “The irony is that [the proposal] would defeat the intent to create diversity.”

Last March, the FCC proposed a new formula for calculating the rates that operators can charge for leasing the channels. According to cable programers, the proposal will make leased-access channels much less expensive and will increase the demand for capacity, forcing cable operators to make room for leased-access programers and eliminating lesser-watched niche networks.

Jones is somewhat surprised by the concern because she is not certain how the new proposal would hurt programers. “We were aware that the highest implicit fee was difficult to meet, so we tried to craft a fee that had a rational economic basis.”

“It was an extremely useful three days in L.A., and I think that the commission now understands what a significant threat commercial leased access is to programers, operators and subscribers,” says Collins. “The climate is very positive that the FCC is going to treat us fairly, and that was not always the feeling in years past.

GTE close to Florida cable deals
GTE’s video dialtone services unit is in the final stage of negotiations to gain cable TV franchises in both Clearwater and St. Petersburg, Fla.

GTE has been negotiating with both cities for some time, according to Jim Miles, the company’s vice president of video dialtone services. He says the franchises could be approved this month. “We are progressing,” Miles says. “We are hoping to get this resolved in a timely fashion.”

Officials in Clearwater expect to have an agreement ready for city commission approval on May 16, according to Pamela Aiken, Clearwater city attorney. The proposed system would have 79 analog channels and 200 mhz reserved for digital channels. “We have just about finished,” Aiken says.

The St. Petersburg city council had been seeking an overbuilder for the past several years, according to Herbert Polson, director of intergovernmental relations for the city of 110,000 households. A franchise agreement was expected to go before the city council in May, but “new information” might delay the process, Polson says.

HBO moving to MPEG-2 satellite transmission

Will begin delivering digital feeds in September

By Glen Dickson

HBO plans to convert its HBO and Cinemax feeds to MPEG-2 compressed digital transmission by fourth quarter 1996.

The premium cable network will upgrade the General Instrument DigiCipher I systems at its HBO and Cinemax multiplex affiliates (HBO2 East, HBO3, HBO2 West, MAX2 East) to GI’s MPEG-2 equipment; HBO also will start offering its primary feeds (HBO East and West, Cinemax East and West) in MPEG-2 format via the Galaxy IR satellite while continuing its analog transmissions off Galaxy V and IR. The first MPEG-2 digital feeds should be operational in September.

“Our affiliates are beginning to install the digital set-top decoders that everybody’s been waiting for,” says Bob Zitter, HBO senior vice president of technology. “This will allow them to get their digital content directly from a program supplier,” saving the cost of installing encoders at the headends.

The move to MPEG-2 also will free up enough bandwidth in HBO’s existing transponder capacity to launch four more multiplex feeds (HBO4, MAX2 West, MAX3, MAX4) in 1996 and 1997.

Headend gear at HBO digital multiplex affiliates will be upgraded by HBO at no cost; other affiliates can purchase new gear, either GI integrated receiver decoder (IRD) or integrated receiver transcoder (IRT) products to support baseband MPEG-2 digital output of a single channel, statistically multiplexed MPEG-2 channels, or analog NTSC outputs to subscribers. Zitter estimates that HBO’s investment in encoders and headend upgrades will cost $5 million—$10 million.

Zitter emphasizes that although HBO will be using GI’s proprietary DigiCipher II encryption standard for transmission, the outputs will be basic MPEG-2 streams that will allow affiliates to make their own choices on the encryption standard and set-top box they use for their terrestrial networks.

“We are not doing anything with set-top decoder authorization,” he says. “That’s our affiliates’ side of the equation. We’re just giving them the programing in the form they want.”

FAM boosts original fare

By Jim McConville

The Family Channel continues to reshape its daytime schedule with original programing aimed at building a network brand signature and attracting a higher female demographic.

In October, FAM will add two hours of original programming to its weekday schedule as part of a plan begun last year to create “FAM-TV,” a six-hour weekday afternoon block from 1 to 7 p.m.

The block fits the channel’s strategy of offering “positive value” programing that is “acceptable to the safe TV environment that we want to create,” says Family Channel CEO Tony Thomopoulos.

In the 3-4 p.m. slot, the network will take on America’s most popular hobby—shopping—with new game shows New Shop Till You Drop (3-3:30) and Shopping Spree (3:30-4).

For its 4-5 p.m. hour, FAM will add Small Talk (4-4:30) and Watch Until You Have Kids. A cross between Hollywood Squares and Kids Say the Darndest Things, game show Small Talk features contestants guessing how kids will answer questions on daily life. Watch Until You Have Kids matches the 60s The Newlywed Game format with Generation X newlyweds. Couples score by answering parenting questions. The show leads into Family Challenge (5-6 p.m.), a game show added last season.

Thomopoulos says that adding more original programming is designed to draw a higher female demographic to its afternoon schedule.
Broadcasting among adults numbers, NBC mirror ABC’s first days, the Beast, By audio radio satellite service, ing, making the network second in adults 18-49. Fox is averaging a 6.8/12 in households and 4.7 18-49.

NBC’s heavily promoted The Beast— overpromoted according to some observers inside and outside NBC— exceeded network expectations with its two-night average 19.1 rating/30 share in Nielsen households.

There was good news across the board as all four networks combined for a 74 share—about a 10-share-point jump from the season average.

When comparing the first week of this May with the same week last year, NBC and Fox are showing significant increases; ABC and CBS are experiencing double-digit declines. In households for the first week of this May versus the first week of the May 1995 sweeps, NBC is up 9% and Fox is up 8%, with ABC down a whopping 21% and CBS 12%. Among adults 18-49, NBC and Fox are up 18% and 12%, respectively, while ABC is down 18% and CBS 13%.

Although NBC can claim the early edge, each of the networks has seen some positive performances in May.

Up against perhaps the toughest competition this month, ABC’s made-for She Woke Up Pregnant, airing against part one of The Beast, averaged a 13.4/21, which was ABC’s best Sunday movie performance since last fall. Also on Sunday, April 28, Fox got strong numbers from its onetime special When Animals Attack, which pulled in a 7.7/14 at 7-8 p.m. CBS saw its best Thursday night performance since January when it averaged a 9.3/15 on April 25, the first night of the sweeps. CBS’s night was powered by the latest Rockford Files made-for, which pulled in a 9.5/16.

FCC poised to OK satellite radio plan

CD Radio’s 50-channel service should get go-ahead at May 9 meeting

By Chris McConnell

At least one company may soon win FCC approval to deliver the satellite radio services feared by local broadcasters.

FCC commissioners last week appeared ready to OK Washington-based CD Radio’s plans to beam a satellite-delivered slate of 30 music and 20 news and informational channels to silver dollar-size mobile antennas. The commissioners hope to award the company spectrum at its May 9 open meeting, although disagreements on other issues last week threatened to stall FCC action on the service rules for digital audio radio satellite service (DARS).

Once it secures a license, CD Radio hopes to launch its subscription service within three or four years. “We’re looking to expedite that process,” says CD Radio attorney Peter Pitsch.

Broadcasters fear that the service will siphon listeners and advertising revenue and impede local programing. “Communities will inevitably suffer degradation in the local community services they receive,” The NAB said in a study on DARS and local broadcasting.

But the FCC has elected to give CD Radio a shot at the market by awarding the company a “pioneer’s preference” for its work in developing the satellite service. The award will carry a license for 12.5 mhz of DARS spectrum, although CD Radio will have to pay a percentage of the spectrum’s market value.

The FCC is reserving another 12.5 mhz slice for three more DARS applicants that have proposed a mix of advertiser- and subscription-supported services. Commission plans call for conducting an auction among the three applicants—American Mobile Radio Corp., Digital Satellite Broadcasting Corp. and Primosphere.

The three applicants oppose the plan to give CD Radio a pioneer’s preference, although they say they will not decide whether to challenge the award until the commission issues its decision. FCC and industry sources also are not ruling out the possibility that the applicants might merge or devise non-competing plans for the 12.5 mhz spectrum slice.
NAB offers digital TV compromise

By Christopher Stern

In a counteroffer to key Senate Republicans last week, broadcasters proposed a plan for the transition to digital TV that would allow every station in the country to use two channels for as long as 21 years, according to a source familiar with the ongoing negotiations.

Under the broadcasters’ plan, TV stations would be given six years to complete construction of a digital facility. Once the digital plant was finished, broadcasters could use both their analog and digital channels free for 10 years. During a final five-year phase-out period, they would pay hefty spectrum fees for use of the analog channel.

Broadcasters also proposed that the 10-year transition period could be lengthened if less than 85% of viewers in a market did not have the ability to receive a digital TV signal.

Representatives of the four major broadcast networks and the National Association of Broadcasters made the proposal at a meeting last Thursday with senators John McCain (R-Ariz.), Phil Gramm (R-Tex.) and Dan Coats (R-Ind.). The plan adopts elements of proposals made by all three senators. McCain had been one of the most vociferous opponents of a proposal to give broadcasters a second channel in order to make a transition to digital TV, but he now has a leading role in developing a compromise with broadcasters.

Also last week, Gramm proposed funding a 4 cent cut in the nation’s gas tax with the sale of spectrum now used by broadcasters for electronic newsgathering, sources say. A chunk of spectrum that includes the ENG spectrum was targeted by legislation approved by Congress but vetoed by President Clinton late last year.

---

Closed Circuit

NEW YORK

UPN buy recommendation

Paramount Television Group has recommended to parent Viacom that it exercise its option to buy 50% of UPN from BHC Communications. Sources say the decision is based on ratings improvements at UPN and the belief that the network identity will boost the value of the owned TV stations significantly over time. Viacom has until Jan. 15, 1997, to exercise that option.

WASHINGTON

ATV standards on docket

Technical standards for advanced TV have made the FCC’s open-meeting agenda this week (May 9), although commissioners late last week were still waiting to see a rewrite of the FCC’s proposal. The original proposed adopting the Grand Alliance system included questions that some commissioners felt left too much doubt about the FCC’s endorsement of the system. They had the document sent back to the Mass Media Bureau and late last week were awaiting a revised version they say will carry stronger support for the Grand Alliance.

Digital digs

Raleigh, N.C.-based WRAL-TV last Friday asked the FCC for an experimental license to transmit high-definition programming using the Grand Alliance system. The experimental station, WRAL-HD, would operate on channel 32 in the market and would be used to study various transmission characteristics.

HOLLYWOOD

No ‘Justice’ for MCA

Justice may be served up by ABC as a midseason replacement next year. The courtroom reality show initially was set to launch as a syndicated half-hour strip this fall from MCA, but the studio pulled out after failing to secure enough access and early fringe clearances. Sources say the show will be expanded to an hour if picked up by ABC for prime time.

PHOENIX/DENVER

Shopping for a home

Phoenix and Denver are apparently the two front-runners to be the base of operation for MCI/News Corp.’s DBS venture. Arizona Governor Fife Symington is scheduled to meet with top executives at Fox to discuss the location of the venture’s headquarters and possible film shootings in the state.

Carriage closure

Well-placed Time Warner and NBC sources say they expect the two sides to come to terms soon on a carriage deal for the MSNBC all-news cable channel, which debuts in July. NBC is converting America’s Talking into the new channel with Microsoft as its partner. Time Warner has argued that the language in the carriage agreement is unclear on how much latitude NBC has to switch formats. Sources say the MSO is angling for a sweeter carriage deal, not an exit.

McTCI

Top MSO Tele-Communications Inc. is in talks with McDonald’s about a possible joint marketing deal involving video, telephony and the Internet. The deal would be along the lines of TCI’s marketing partnership with Sprint, which began testing in April 1995 and started rolling out nationally in January.

AP ponders repackaging

Associated Press Broadcast Services is considering repackaging its news and information programming, offering it on a barter rather than cash basis to radio stations. Since September, AP has been conducting research to determine how best to serve stations. said AP Broadcast Services’s VP and director, Jim Williams. “We’re looking at how stations’ information needs are changing and how they want to pay for the service,” he said. AP is studying whether its 4,000 clients want news in raw form, preproduced or customized.
Behind everything we do is a great studio where it all happens—the lights, the cameras, the action of making great entertainment.

Congress calls on networks to create ‘family hour’

Group of congressmen send letter to top programing executives asking for voluntary scheduling of family-friendly programing

By Christopher Stern

U SA Networks Chairman Kay Koplovitz said last week she has concerns that some members of Congress are seeking to do more than simply implement a ratings system. Appearing to buttress that assertion was the news that Congress was turning up the heat on content regulation in Washington, although it was directed at broadcasters.

Koplovitz said that any attempts by Washington lawmakers to change programing “pushes into infringement on First Amendment rights. There’s a difference between rating the program and changing the program.” She also said that programers are going to have to make it clear to viewers that implementation of the ratings system, as currently planned, does not mean a change in programing content. Viewers will be disappointed if they expect to see a change in programing, she said, adding, “I think we have a challenge ahead of us to communicate that well.”

Congress clearly is looking for a change in programing from broadcasters.

A bipartisan group of 74 senators and representatives sent a letter Tuesday to all six broadcast networks, urging them to voluntarily “return to the spirit of the family hour.”

“By creating a safe haven for the family viewing audience and resolving to dedicate one hour of prime time programing to the promotion of positive values, the entertainment industry would not only endear itself to parents but also immeasurably benefit American society,” the letter stated.

Addressed to the top programing executives at ABC, CBS, NBC, Fox, UPN and WB, the letter was published in a full-page advertisement in the April 30 issue of Daily Variety. The ad was paid for by the Media Research Center, a Washington-based watchdog group that since February has been urging the networks to create a family viewing hour.

Broadcasters had hoped that their commitment to implement by next January a content ratings system for use with the V-chip would discourage efforts by Congress and the Clinton administration to influence programing decisions. But the television industry’s embrace of the V-chip has failed to divert groups pushing for increased educational programing for kids or for limits on programing that depicts violence.

“Ratings and [the] V-chip...will not restore family-friendly programing. Only a voluntary return to the spirit of the family hour by the networks can insure wholesome programing for our families,” said R. Brent Bozell III, Media Research Center chairman.

Bozell wants broadcasters to voluntarily adopt a family viewing hour, and he opposes the enactment of legislation that would require broadcasters to air family-friendly viewing.

“Until recently, the major networks set aside the first hour of prime time for family programing,” the letter stated. But communications lawyers noted last week that the family hour has never really existed.

It was proposed by CBS in the mid-1970s in response to concerns raised by Dick Wiley, then FCC chairman, about violence on television. The proposal was endorsed by the National Association of Broadcasters and the other networks. But the Writers Guild of America, citing Wiley’s involvement, claimed in a lawsuit that the family hour was an attempt by government to infringe on its members’ right to free speech. After several years in the court system, the case was remanded to the FCC, but by that time the networks had given up on the concept.

One network lawyer said that the current attempt by Congress to resurrect the family hour on a voluntary basis is reminiscent of the first attempt at creating a family hour. “If I were filing a lawsuit, I would tear out [Tuesday’s Daily Variety advertisement] and make it Exhibit A,” the lawyer said.

Cities likely to appeal FCC ruling on franchise fees

By Chris McConnell

C ities are threatening to take the FCC to court over last week’s ruling that franchise fees paid by cable subscribers to an operator do not count as part of a cable operator’s gross revenue.

“I would be shocked if this were not appealed,” says William Cook, a lawyer representing the city of Baltimore in the dispute. Cook says his client is still reviewing the decision and has not decided whether to file an appeal.

If Baltimore does not appeal, someone else will. Predicts Eileen Huggard of the National Association of Telecommunications Officers and Advisors (NATOA). Huggard, NATOA’s executive director, says the commission’s decision could cost cities up to $75 million.

“Believe someone will appeal,” she says. “That’s probably where it should be decided.”

Huggard and the cities maintain that fees collected by cable operators to pay franchise fees should count toward the operators’ gross revenue. Franchise fees are limited by law to 5% of an operator’s gross revenue.

“It’s just like any other cost of doing
business,” says Cook. “This is the way franchise authorities have been doing this for years.”

Portland (Oregon) Cable Communications Director David Olson says his city crafted a franchise agreement with TCI prohibiting the cable operator from excluding the collected fees from its gross revenue. The exclusion of the fees from gross revenue will cost Portland $130,000 next year, Olson says, adding that the city likely will join in any litigation challenging the FCC ruling.

“I think the judicial system is where this is going to have to be addressed,” Olson says.

Cable operators disagree with the city arguments, maintaining that the law limits the fees to 5% of the revenue derived from the operation of cable systems.

“You have a specific statute here,” says Wesley Heppler, a Washington cable lawyer. “Franchise fees are additional revenue that are not derived from the operation of the cable system.”

The FCC agreed with the logic, saying that including a collected franchise fee as part of an operator’s gross revenue would result in the cable operator’s paying more than the amount allowed under the 1992 Cable Act.

“Congress has exhibited a strong desire to prevent attempts by local franchising authorities to evade the statutory five percent cap on franchise fees,” the commission said in its order.

“To allow for a ‘franchise fee on franchise fee’ effect... would be contrary to this congressional intent.”

---

**U.S., Mexico sign satellite agreement**

Deal will allow U.S. satellites to deliver service to Mexico and vice versa

By Chris McConnell

U.S. and Mexican negotiators have begun clearing the way for Hughes Communications and PanAmSat to beam direct-to-home services to subscribers in Mexico.

Officials of the two countries last week signed an agreement allowing their satellites to beam signals into each other’s territory. The pact states that Mexican satellites will be allowed to provide service to the U.S. “to the extent that these services enhance rather than distort competition in the U.S. market.”

The agreement also states, conversely, that U.S. satellites will be allowed to provide service to Mexico.

Although the new agreement does not cover direct-to-home service, FCC officials say it provides the framework for additions, or “Protocols,” covering such services. One official says that although last week’s agreement required ratification by Mexico’s senate, future protocols will not.

“The first protocol will address direct-to-home satellite services and direct broadcast satellite services,” FCC Chairman Reed Hundt said in a statement on the satellite pact. “Consumers will have more choices as a result of new satellite services entering the U.S. market. Programmers will have more opportunities to distribute their programming to consumers.”

Hughes Communications plans initially to deliver a direct-to-home service to viewers in Mexico and other Latin American countries from its Galaxy 3R satellite. PanAmSat has plans to deliver a competing service to Mexico from its PAS-5 satellite.

Onlookers say that the pact could pave the way for Mexican satellites to beam services into the U.S. as well. “I would expect to see a [North American Free Trade Agreement]-like free exchange of satellite video,” says satellite industry analyst Timothy Logue.

The satellite agreement, signed by U.S. and Mexican officials April 28 and ratified by the Mexican senate April 29, comes as U.S. companies are feuding over TCI’s plans to deliver DBS service from a Canadian satellite slot.

Although a petition by MCI and News Corp. to block the TCI plans is still pending at the FCC, a commission official says that resolving the issue might not require a treaty like the one signed with Mexico. The official cited a new Mexican law that requires satellite broadcast to deliver service into the country.

**Public broadcasters come to terms with trust fund**

Public broadcasters apparently decided that House Telecommunications Chairman Jack Fields (R-Tex.) wasn’t kidding when he threatened to sell some of their spectrum and let the government keep the proceeds.

The threat was made in late March, and negotiations between Fields and the public broadcasters began last week in earnest. A tentative agreement was reached that would support Fields’s plan to create a $1 billion trust fund to support noncommercial broadcasting. Public broadcasters had been pushing for a much larger fund of $4 billion. Fields refused to comment last week on the status of the negotiations, but public broadcasters said talks were in the final stages.

Fields’s bill, offered two months ago, would allow the federal government to sell vacant spectrum allocated for noncommercial broadcasting. The proceeds, estimated at $202 million-$2.3 billion, would be used to set up the fund (Broadcasting & Cable, April 1). Public broadcasters could add to the fund, but not through the sale of additional spectrum, one source says.

In March, Fields had threatened to offer the unused spectrum to House Budget Committee Chairman John Kasich (R-Ohio) to be used to reduce the federal deficit instead of to support public broadcasting. Fields gave public broadcasters until early May to support his plan.

His bill also would allow public broadcasters to trade their VHF channels for UHF channels and to sell public TV stations in markets with two or more overlapping noncommercial signals.

The proposal also calls for a two-year transition period, during which the Corporation for Public Broadcasting would be funded at $250 million annually. In recent years, public broadcasters received a $285.6 million subsidy from the federal government. A nine-member commission of public broadcasters and members of Congress would oversee the transition period.

---

Broadcasting & Cable  May 6 1996
Broadcasters rely on print
The nation may depend on broadcasters for news, but broad-
casters get most of their information from newspapers and
wire services, according to a survey released by the News-
paper Association of America. The NAA survey claims that
57% of TV reporters rely more on newspaper and wire sto-
ries than on personal sources for information. Radio and
Television News Directors Association President David
Bartlett disputed the survey’s claim. “TV reporters, like
newspaper reporters, develop their own sources,” he said.
Bartlett added that broadcasters are not alone in their depen-
dence on wire copy: “If you travel the country a lot, as I do,
and you look at a lot of local newspapers—most of which
are dreadful, by the way—you see that most of them depend
on wire copy.”

Advertisers still with talk shows
Morality in Media, a New
York–based public interest
group, claims that com-
panies including Procter & Gamble and Kellogg
continue to advertise on the sometimes contro-
versial talk shows, despite promising last year to
withdraw or reduce support for the daytime pro-
grams. P&G made the promise last year after
Empower America, another media watchdog
group, publicly chastised the companies for supporting pro-
grams that it said were exploitive and harmful to the social
fabric of the nation. A spokesperson for Procter & Gamble
said last week that the company has decreased spending on
daytime talk by “millions and millions of dollars,” and that
the company has withdrawn completely from seven shows
and is working with other shows on an “episode by episode”
basis. A Kellogg spokesperson said that company also
reviews programs on an episode-by-episode basis but that it
has completely withdrawn from programs such as Jerry
Springer: Montel Williams and Gordon Elliot.

More time to evaluate EEO proposal
The FCC has put its EEO streamlining proceeding on hold
for two months. Comments on the proposal were to arrive at
the FCC last week, but the commission has moved the com-
ment deadline to July 1 at the request of the Minority Media
and Telecommunications Council and other organizations.
The groups said they need more time to prepare comments
because their resources have been strained by participation in
the commission’s many rulemakings concerning the 1996 Telecommunications Act.
While granting the time extension, the commission denied a
request by the groups to reconsider the EEO proposal,
which suggests several plans aimed at reducing the paper-
work burden on broadcasters while maintaining an effective
program. The petitioning groups said the commission effec-
tively rejected some of their suggestions by not including
them in the proposal. The FCC disagreed, maintaining that
its proposal does not reject any ideas and that the groups can
submit alternative plans with their comments.

Cable speaks on must carry to high court
The “central vice” of the must-carry law is that it guarantees
local broadcasters access to TV audiences at the expense of
cable programs, Turner Broadcasting System and other
cable companies are arguing to Supreme Court justices in
their brief on the case. “Must-carry is not necessary to pro-
tect free, over-the-air television broadcasting,” the cable
companies say, adding that “the majority of broadcasters
were so sure that they could secure [cable] carriage that they
elected to extract ransom for consent to retransmit their sig-
nals.” Government officials expect to file their reply brief in
June; the Supreme Court is expected to hear arguments in
the case this fall.

Make room for PCS
The FCC is looking to help PCS auction winners get
quick access to the spectrum they have procured. Com-
misioners late last month adopted a cost-sharing
plan aimed at encouraging speedy relocation of
current users in the spectrum band that PCS
licenseholders will be taking over.
The commission also changed its
rules on microwave relocation to
clarify the rights of PCS license-
holders and microwave users in
the event that a PCS licenseholder and incumbent user do not reach a relocation
agreement.
In another action, commissioners pro-
posed rules for speeding the entry of
public utility holding companies into the
telecommunications business.

FCC slaps EEO fines
The FCC has ordered Hilton Head Television to pay
$27,500 for EEO violations. The commission last year
issued the “notice of apparent liability” as part of a deci-
sion to renew the license of WTGS(TV) Hardeeville, S.C.
Hilton Head has since asked the FCC to rescind or reduce
the fine, but the commission has denied the request. In
other EEO action, the commission fined The Kravis Co.
$12,000 as part of a decision to renew the licenses of
KGTQ(AM)-KRAV(FM) Tulsa, Okla. Additionally, the FCC
denied a petition by the NAACP and the League of United
Latin American Citizens to deny the license renewal of
KOC(TV) Huntington Beach, Calif. The commission grant-
ed the license renewal subject to reporting conditions.

Senate to look at free airtime issue
The Senate Rules Committee has scheduled for May 15 a
hearing on free airtime for federal candidates. The com-
mittee has not released a list of witnesses for the hearing.
And Fox has formally requested that the FCC issue a
declaratory ruling on the network’s proposal to provide
free airtime to major presidential candidates. News Corp.
Chairman Rupert Murdoch first volunteered to give can-
didates free airtime in February. Under his proposal, Fox
would make available to the Republican and Democratic
nominees 10 one-minute segments to address the Ameri-
can public during the closing weeks of the campaign. In
addition, Fox says it will provide an hour of prime time
coverage on the eve of the election for “longer, back-to-
back statements by each major candidate.” Fox is asking
the FCC to issue a ruling that insures it does not have to
provide equal time to fringe candidates.

‘Friends’ teams signs with WB

Multiyear, multi-million dollar deal makes trio among highest-paid TV producers

By Steve Coe

In a deal that will take them into the new century with Warner Bros., producers Kevin Bright, Marta Kauffman and David Crane have signed multiyear pact with the studio. The deal allows the producers of Friends and their production company, Bright/Kauffman/Crane Productions, to expand beyond producing their own shows into building an independent production company within the studio and overseeing other writers and producers.

According to published reports, the five-year deal has a floor value of $35 million, making the trio among the best-paid television producers in history.

“Bright/Kauffman/Crane have clearly raised the bar on television comedy,” said Tony Jonas, president, Warner Bros. Television. “Their unique voice speaks to all age groups, and their overall intelligence has established them as trendsetters.”

The trio currently produces the hit Friends, which leads off NBC’s powerful Thursday night lineup. The show is averaging an 18.9 rating/30 share in Nielsen numbers and is viewed by an estimated 32 million viewers each week, making it the third-most-watched series in television. In its 8 p.m. time slot, the show is undefeated in 29 consecutive airings and is the highest-rated 8 p.m. comedy on any network since 1992.

Bright/Kauffman/Crane’s next project will be a comedy for NBC, which gave the producers a 13-episode commitment earlier in the season. That project is expected to debut on the network during the 1997-98 season. At that time the network also gave Friends a two-year renewal, securing that show’s future.

In addition to the television component of the deal, Warner Bros. has a first-look agreement with the producers for any feature projects.

Bright, Kauffman and Crane began their relationship on the HBO series Dream On, which was created by Kauffman and Crane. Before joining Warner Bros. in 1992, the producers established a partnership that yielded the half-hour comedy Family Album, which lasted one season on NBC.

Hagman returns in MTM/CBS project

Expanded production slate for studio includes ‘Orleans’ pilot featuring former ‘Dallas’ star

By Steve Coe

Larry Hagman is back as head of a powerful TV family.

The star of Dallas and, before that, of the ’60s classic I Dream of Jeannie, has been cast to star in Orleans, an hour pilot under consideration at CBS. The MTM project was co-created and is executive-produced by John Sacret Young, former executive producer of the award-winning drama China Beach.

The project is part of an expanded production slate at MTM that also includes the 22 hours committed to the syndicated project The Cape, which is already cleared nationally.

The two-hour pilot of Orleans features Hagman as the head of a powerful New Orleans family. Other cast members include Brett Cullen, Michael Reilly Burke, Colleen Flynn, Meredith Salenger, Vanessa Bell Calloway and Lynette Walden. The Waltons alum Ralph Waite also will appear as a guest star.

Other network projects under consideration for fall are The Pretender for NBC and Sparks, Sparks & Sparks for UPN. Pretender is an action hour starring Michael T. Weiss as an “intellectual equalizer” on the run from the
Winfrey blamed for cattle-futures plunge

Iowa senate calls for clarification in show on Mad Cow disease; Oprah says show speaks for itself

By Cynthia Littleton

T he Iowa state senate has a beef with a recent edition of Oprah Winfrey that focused on the “Mad Cow disease” scare in Britain last month.

Some Iowa lawmakers blame Winfrey for the recent plunge in U.S. cattle futures that began deepening on April 16, the same day the top-rated talk show devoted an hour to the deadly plague in Britain’s beef industry. Late last month the Iowa senate unanimously passed a resolution calling for Winfrey to explain to viewers that no cases of Mad Cow disease have ever been reported in the U.S.

“Her show was a little misleading,” said state Senator Berl Priebe, referring to the initial episode and a follow-up report that aired April 23. “I don’t think she intended to hurt anyone, but she has a very large group that follows her, and that drop in cattle prices could have a $10 million impact on Iowa’s economy.”

Through a spokesperson, Winfrey said she has resolved to “let the shows speak for themselves.” Analysts said the show did have a major impact on cattle futures in mid-April, although prices already were heading south at the time.

A Merrill Lynch livestock-futures analyst added that the reaction was “excessive and immediate” because Oprah Winfrey’s 9 a.m. time slot in Chicago coincides with the start of trading on the Chicago Mercantile Exchange.

Die-hard fans of Fox's *The X-Files* may find themselves inexplicably drawn to a half-mile stretch of Hollywood's famed Sunset Strip during the next two months.

Last Wednesday, Fox unveiled an *X-Files* billboard equipped with a radio transmitter to reach out to the show's true believers via low-power radio. Next to close-ups of series stars Gillian Anderson and David Duchovny, the billboard instructs motorists to "Turn to 1610 AM on Your Radio...Now."

The curious will tune to a short loop of soundbites, music and "hidden messages" culled from the hit sci-fi series. The 100-milliwatt transmission can be picked up within a half-mile radius of the billboard, which will tower over a busy intersection along Sunset Boulevard through the end of June.

Music companies have been using low-power radio billboards to break new acts for the past few years, but Fox officials say their latest promotional stunt marks another TV first for the cutting-edge *X-Files*, now wrapping up its third season.

"We thought there was something very 'X-Filian' about taking over underground airwaves not regulated by the FCC to spread the show's messages of 'the truth is out there' and 'trust no one,'" says Cindy Hauser, Fox's senior vice president of print, special projects and online entertainment.

Fox has no immediate plans to erect broadcast-ready *X-Files* billboards in other cities.

**'Dr. Quinn' moves in five markets**

Exits CBS O&Os after securing better time periods

By Cynthia Littleton

Dr. Quinn, Medicine Woman is blazing a trail in the post-fin-syn era of the off-network syndication business.

Now that the Big Three can take part in the backend of a successful series, recent station switches by *Dr. Quinn* in five major markets provide further evidence that a network's prime time hits may not always be the best daytime/early fringe programming options for the network's O&Os.

In fact, under the new laissez-faire rules of the syndication game, the ABC, CBS and NBC station groups may wind up serving as the clearance last resort for their networks' off-network product. The sales effort behind *Dr. Quinn*, cleared for its off-network debut this fall in more than 90% of the country, is a case in point.

*Dr. Quinn* has moved from the CBS O&Os in Los Angeles, Chicago, Detroit, Minneapolis and Green Bay, Wis., after distributor MTM Television sealed commitments with rival stations for better time periods. CBS hired MTM last year to distribute the hit CBS Productions series, offered on a straighter barter basis of seven minutes national, seven local.

The CBS station group cleared *Dr. Quinn* early on to give a boost to MTM's sales efforts, but the agreement included a proviso that the station would give up the show if MTM

"Simpsons' times two
A double dose of The Simpsons provided a double-digit boost for broadcasters who jumped on Twentieth Television’s newly extended offer of double runs for the Fox animated hit, now in its second year of syndication. During the week of April 15, The Simpsons averaged a 33% increase in Nielsen household share over February 1996 time period averages on the five stations that chose the second run in the first week it was offered. For KBBK-TV San Francisco, a second run of The Simpsons at 7:30 p.m. improved household ratings for the time slot by 44% over Roseanne’s performance in February. KCOP(TV) Seattle saw its 6 p.m. household ratings climb 37% by replacing Full House with more of the Simpson clan.

We’re baaaack
MGW Worldwide Television’s new series Poltergeist: The Legacy will launch in syndication during the week of Sept. 23 with a special two-hour premiere episode. The "supernatural" drama, based on the two 1980s Poltergeist feature films, has been cleared in 131 markets covering 84% of the country. The big-budget series focuses on a secret society, known as the Legacy, dedicated to "protecting the world from the darkside of the supernatural." Like MGM’s freshman hit The Outer Limits, MGM has carved a dual cable/syndication distribution platform for Poltergeist that calls for Showtime to air the series in the spring and summer before it bows in syndication in the fall. Poltergeist premiered April 21 on Showtime.

Two ‘Blue’
Twentieth Television’s NYPD Blue has been cleared for weekend double runs with broadcasters in 65 markets covering 62% of the country. Twentieth officials say the Steven Bochco police drama, known for its gritty language and graphic scenes, is being picked up for late night. New stations on board for the show include KTXA(TV) Dallas, WJW-TV Cleveland, KIRO-TV Seattle and KTVK(TV) Phoenix. Twentieth is offering two-year deals for weekend runs of NYPD Blue beginning in fall 1997 on a barter basis of 7 1/2 minutes national, 6 1/2 minutes local. Runes of the ABC drama also will premiere as a weekday strip next year on Fox’s basic cable network, FX.

‘Animated’ discussion
The NATPE Educational Foundation delves into the world of animation next week with “The Art and Business of Animation,” the latest program in its Insights series. Panelists set to appear May 15 at the half-day conference in Los Angeles include Fox Children’s Network’s Margaret Loesch, Warner Bros. Television Animation’s Jean MacCurdy, Walt Disney Television Animation’s Tom Ruzicka and Saban Entertainment’s Eric Rollman.

‘ET’ moves
Paramount Domestic Television’s Entertainment Tonight will send weekend anchor/correspondent Julie Moran back to her home state of Georgia in July to anchor the magazine’s nightly coverage of the summer Olympic games in Atlanta.

got a better offer in those markets.
Coupled with the network’s daytime lineup, the station group’s commitment to the CBS-produced first-run strips Day & Date and Gordon Elliott left open few

went periods outside of late fringe for reruns of Dr. Quinn. And with the high casualty rate of new first-run strips, MTM found a number of stations in CBS markets willing to take a second

look at Dr. Quinn in the past few weeks.
So far, however, there have been no new takers in New York or Miami. Conventional wisdom dictates that post-1 a.m. clearances in those key markets will hurt Dr. Quinn’s national barter take, but veteran observers predict that the show will perform best in the South and Midwest, as it does on the network.

The addition of Dr. Quinn to Chris Craft-owned KFOX(TV) Los Angeles’s daytime lineup will be something of a departure from the talk-heavy schedule the station has programmed during the past few years.

“We wanted to be more diversified,” says Carol Myers Martz, program director for KFOX. “It’s probably going to be older-skewing, but it’ll be good counterprograming for people who won’t watch talk shows and advertisers who won’t buy them.”
Want to review every radio station purchase made by Infinity Broadcasting or cable system acquisitions made by TCI since 1990? Or perhaps you’d forgotten how much Century Communications offered in its April 1993 offering of senior discount notes ($444 million) or how much Ackerley Communications raised in its October 1993 private placement ($76.6 million).

If so, New York-based media investment banker Veronis, Suhler & Associates has a publication for you: Communications Industry Transactions Report.

The first edition of the report will be available in early June for $1,395. Transactions Report is similar in style and format to two annual publications that VS&A now issues: Communications Industry Report and Communications Industry Forecast. Industry Report focuses on earnings, revenue and other financial data for various industry segments, including broadcasting, cable, filmed entertainment, recorded music, newspapers, magazines, advertising agencies, book publishing and interactive digital media. Forecast predicts spending for those segments.

Like VSA’s other industry reports, Transactions Report tracks figures for publicly traded companies only. It details eight types of transactions: mergers, acquisitions, initial and other public equity offerings, public debt, private placements, redemptions and joint ventures.

The report slices and dices its information in various ways, listing each transaction alphabetically, chronologically and by size. It even includes percentage deals. The report includes completed transactions from 1990 through 1994 and announced transactions (such as the Time Warner/Turner Broadcasting System merger) for 1995.

The cable section separates cable operator transactions from cable network deals. The MSO section, for example, cites the Time Warner acquisition of Cablevision Industries as the largest single MSO transaction ($2.7 billion) for the period covered. The smallest sale in the same period was for a wireless cable system in Pennsylvania for $100,000.

The report also offers commentary on why certain trends emerged, noting, for example, that sales of broadcasting properties started to pick up in 1992 after several years of a depressed broadcast advertising climate. Improved earnings for broadcasters in 1993, coupled with declining interest rates, opened up debt-and equity-raising opportunities that were “virtually nonexistent” in the 1990-91 period, the report notes.

On the cable side, the report notes that with cable rate freezes adopted by Congress in late 1992, operators shifted focus from expanding cable holdings to developing new unregulated revenue sources. In 1994 the market shifted again as operators aggressively sought clustering opportunities to concentrate reach in individual markets and regions.

VS&A Director of Research Chris Russell says the report is targeted to investment bankers, brokers, strategic planners, consultants and other media executives interested in buy-sell opportunities and capital markets.

**Paxson hits top 10 list**

Paxson Communications Corp. plants itself on the list of top 10 station owners with a $41.3 million purchase of 10 more radio stations in Florida.

Paxson coasted onto the list, which is compiled by number of stations owned, in ninth place. That forces Chancellor Broadcasting Co. to number 10 and Salem Communications Corp. off the list (Broadcasting & Cable, April 22).

The purchases of the stations—in

**FORCE Communications & Consultants LLC**

Announces the Sale of
WCEE CHANNEL 13
Mt. Vernon (St. Louis), Illinois

**Seller:**

McEntee Broadcasting, Inc.

**Buyer:**

Channel 13 of St. Louis, Inc.

*Force Communications represented both the buyer and seller in this transaction.*

John L. Pierce  (606) 647-0101
John E. Lauer  (404) 350-9401  Hal W. Gore  (706) 746-7400
Tallahassee, Pensacola and Orlando—give Paxson a total 32 owned or to-be-owned stations: 20 AMs and 12 FMs (subject to FCC approval). Almost all are in Florida.

The latest buys are WDIZ-FM Orlando; WSNI-FM, WTNT-FM, WTPS-FM, WXSR-FM and WNLS-AM Tallahassee; WTKX-FM and WOWW-FM Pensacola, and WPAP-FM and WPBH-FM Panama City. They give Paxson five FMs in Orlando and four FMs in Tallahassee. Paxson also gains duopolies in Panama City and Pensacola.

Most of the stations were sold by Southern Broadcasting Cos. Inc. for $21.3 million. WDIZ-FM came from Shamrock Communications Inc. for at least $20 million, a source says (see "Changing Hands").

Also last week, Paxson expanded its Infomall Television Network to Greensboro/High Point/Winston Salem, N.C., with the purchase of WAAP-TV Burlington. Paxson also formalized a time brokerage agreement with Whitehead Media Inc.'s WNGM-TV Athens/Atlanta.

Paxson Chairman Lowell W. "Bud" Paxson says he plans to bring in TV into every top 50 market. WAAP is in the 47th-largest market; Atlanta is 10th.

**Cox's team expands**

Cox Broadcasting Inc. adds the Dallas Cowboys to its team with the purchase last week of KFOX(TV) El Paso (subject to FCC approval). Ch. 14 has been home to the football team for the past two years, and as a Fox affiliate is the new home to Major League Baseball. The price was not disclosed.

The company also has entered into an LMA with UPN affiliate WUPL(TV) New Orleans. Company officials are looking at possible synergies between the stations and Cox's metro cable system there.

**Belo settles on millions**

Expect a TV station shopping spree by A.H. Belo Corp. With an eye on possible future acquisitions, Belo tomorrow (Tuesday) will settle its offering of 5 million shares of Series A common stock. Shares were sold at $36.35 each; estimated net proceeds are $172.6 million. The money will be used to repay bank debt, providing liquidity for possible purchases.

Belo already owns seven network affiliates in markets including Dallas/Fort Worth, Seattle and New Orleans.

Investment firm offers Capstar Partners $1 billion acquisitions war chest

New broadcast group will target midsize radio markets

Radio
By Donna Petrozzello

With plans to back new radio ownership ventures with up to $1 billion in capital commitments, the investment firm Hicks Muse Tate & Furst stands to become radio’s largest financial backer.

Last week, Hicks Muse announced that it will dedicate $100 million in capital toward radio acquisitions by R. Steven Hicks and his nascent Capstar Broadcasting Partners. Hicks plans to operate Capstar Broadcasting with partner and brother Thomas Hicks, who leads Hicks Muse as its chairman and chief executive officer.

In a separate announcement, Thomas Hicks was elected chairman of Chancellor Broadcasting Co.’s board of directors. Hicks Muse controls nearly 60% of voting stock in Chancellor’s 30-station group.

In a release, Tom Hicks said Hicks Muse’s financial backing of Capstar Broadcasting will enable the group “to acquire, in leveraged transactions, up to $1 billion in radio station properties.” In addition, Hicks Muse intends to dedicate $100 million to Capstar in capital from an equity fund, Tom Hicks noted.

Steven Hicks is expected to channel that capital toward acquisitions in midsize radio markets ranked 25 and below. Balanced against Chancellor’s focus on acquisitions in the top 25 markets, Hicks Muse could emerge shortly as radio’s staunchest investor.

“We expect that Steve’s [Hicks] firm will achieve an investment track record comparable to the outstanding results [Chancellor president and chief executive] Steven Dinetz has achieved,” Tom Hicks said. “With Steve Dinetz focusing on top 25 markets and Steven Hicks focusing on markets ranked 25 and below, Hicks Muse will be among the most active participants in the new radio broadcasting environment,” Tom Hicks said.

“Our principal strategy will be to acquire or merge with several successful middle-market radio groups, which will continue to be operated by their existing management, who will become our partners,” Steve Hicks said. “I am looking forward to taking maximum advantage of the new Telecommunications Act by investing in attractive middle markets up to the limits the act now makes possible.”

Indeed, relaxed radio station ownership rules in place since the Telecommunications Act was enacted free broadcasters of national ownership caps and expand ownership limits in large, medium and small markets.

Capstar Broadcasting marks the second joint venture of Steven and Tom Hicks in radio ownership. In 1987 the brothers purchased WSIX-FM Nashville under Capstar Communications with Steven Hicks as president and station operator. After adding more stations to Capstar, Sillerman purchased the group in 1989 and merged it into SFX, leaving Steven Hicks as a partner in SFX.

Now independent of Sillerman, Capstar Broadcasting stands to become a dominant force among burgeoning mega-radio station groups. Steven Hicks is expected to complete his management role at SFX by Sept. 1.

New CapCities/ABC Radio president restructures

Two weeks after being named president of CapCities/ABC Radio, Robert Callahan announced a sweeping reorganization of radio division personnel that will take place during May.

At the most senior levels, Bart Catalane, executive vice president of ABC Radio Networks, is promoted to executive vice president of the CapCities/ABC Radio Division. John McConnell, currently vice president of news for ABC Radio Networks, is named vice president of programing for WABC(AM) New York and vice president of news/talk for the radio division.

In New York, WPLU(FM) President and General Manager Mitch Dolan expands his role to become president and general manager of WABC(AM) New York, replacing Don Bouloukos, who announced his resignation last week.

Bouloukos had served as president of CapCities/ABC’s owned radio stations since 1986. In a release, Callahan said that Bouloukos is leaving CapCities/ABC after 22 years “to consider some other options in radio that have presented themselves.”

In Los Angeles, Maureen Lesourd is promoted to president of KABC(AM), KMPC(AM) and KLOS(FM). Lesourd most recently served as senior vice president of affiliate relations for the ABC TV network group. She succeeds KABC/KMPC President and General Manager George Green, who will become vice president of sales training for the radio division, and KLOS President and General Manager Bill Sommers, who is retiring.

Norm Schrutt will continue to oversee the group’s owned-and-operated WKHX-AM-FM Atlanta; WYAY(FM) Gainesville, Ga., and WLS(AM) and WXXS(AM), both Chicago, but also will help to develop CapCities/ABC’s international radio ventures.

The changes, Callahan said, “reflect my desire to be closer to the operations.” Dolan, Lesourd, Catalane, Schrutt and newly named ABC Radio Networks President David Kantor are expected to report to Callahan.

“This will enable me to develop a closer relationship with our individual radio markets,” Callahan said.

—DP
On Thursday, Feb. 15, the New York Times, Washington Post, Atlanta Constitution and scores of other major (and lesser) news outlets announced what readers of Broadcasting & Cable TV Fax already knew: The networks were considering adopting a ratings system similar to that used by the Motion Picture Association of America. By the time the networks' own newscasts were carrying the story, TV Fax readers had already had a full business day to contemplate the implications of what could be one of the biggest changes in the history of TV programming.

Don't spend your day playing catch-up. For the price of a cup of coffee (or one-tenth the price of a grande latte), you can get the industry's most authoritative daily news source.

It's TV Fax. Or it's old news.

Grant, Eisner, Dershowitz share honors
Tapping a nerve in talk radio, the National Association of Radio Talk Show Hosts will bestow its 1996 "Freedom of Speech" award jointly on Disney chief executive Michael Eisner, WOR(AM) New York talk show host Bob Grant and SW Networks talk show host Alan Dershowitz at a ceremony June 22 in Washington.

Eisner, Grant and Dershowitz form an eclectic trio in talk radio. Former Grant affiliate WABC(AM) New York canceled its contract to air Dershowitz after the host called Grant "racist" on the air. Soon after, Disney/CapCities/ABC executives fired Grant for his off-color remarks about late commerce secretary Ron Brown. Many New York fans cite Eisner as the culprit behind Grant's dismissal. The association last year caused an uproar by honoring controversial host G. Gordon Liddy with the same award. Liddy had been widely condemned for advocating the shooting of federal agents in self-defense. The awards ceremony will coincide with the group's annual convention from June 20-23.

Hispanic ad agency in sight? Media buyers and Hispanic radio broadcasters are scheduled to meet May 14-15 in Dallas to discuss creating a specialized Hispanic ad agency dedicated to drawing more revenue to Hispanic broadcast formats.

"It is critical for all those in Hispanic advertising to speak in a unified voice as to its value to marketers," says Eduardo Caballero, chief executive, Caballero Spanish Media. "We need to further the image and growth of Hispanic advertising and to bring greater awareness of the Hispanic market to advertisers."

Widmann joins CBS/Group W/Maxam
Former CBS Radio president Nancy Widmann has been named senior vice president, marketing division, for the jointly operated CBS/Group W/Maxam, the Los Angeles--based TV syndication and distribution arm of Westinghouse Broadcasting. Widmann will develop business and marketing opportunities for the division's worldwide programing, syndication and advertising clients. She will maintain a New York base and will report to Robert Cook, executive vice president of the division.

Premiere to syndicate AccuWeather
In a new syndication partnership with Premiere Radio Networks of Los Angeles, AccuWeather's local market weather reports will be available on a barter basis and will be customized for specific radio formats.

Previously, AccuWeather offered its local forecast coverage on a cash basis exclusively to single stations in about 125 markets. Premiere officials say AccuWeather officials expect to sign multiple stations in markets the company already serves through its alliance with Premiere.

Grant gets airtime, syndication
Controversial radio talker Bob Grant was back on the air at WOR(AM) New York last week after WABC(AM) New York had fired the ratings leader for comments on the death of Commerce Secretary Ron Brown.

Days before adding Grant, WOR vice president/general manager Bob Bruno described the host as "at the top of the talk show pyramid."

Served up weekdays 4-7 p.m. EST, Grant replaces fellow talker Jay Severin. WOR plans to introduce Grant's show for national syndication over the WOR Radio Network in a month, according to network executive Mark LoPonte.

In customary style, Grant's return to radio after his April 17 firing sparked a wave of protest and media attention. Grant nemesis Rev. Al Sharpton staged a brief protest outside WOR studios on April 29, Grant's first day back on the air. And Dime Savings Bank reportedly pulled its ads from WOR afternoon drive time.

Cable

MCA, Viacom battle over TV Land

USA Networks partners in dispute over agreement limiting new programing services

By Steve McClellan

A simmering feud between MCA and Viacom over cable programing rights erupted last week.

MCA filed suit against Viacom contending that it is in violation of the terms of their joint venture, which owns and operates the USA Network and Sci-Fi Channel. The company asked a Delaware court to force Viacom to sell either MTV Networks Inc., the Viacom unit that operates competing basic cable networks, or its 50% stake in USA Networks.

Viacom countersued, denying the allegations and charging that MCA had acted in a way that harmed the financial performance of USA Networks. Viacom also claimed that MCA reneged on an agreement that both parties would waive certain contractual rights, enabling Viacom to launch a new cable network and allowing Seagram Co. to hire former Viacom president Frank Biondi to run its MCA subsidiary. When Biondi was fired by Viacom Chairman Sumner Redstone in January, his separation agreement contained a one-year non-compete clause.

According to MCA, Viacom's cable holdings apart from the USA venture have been an issue since Viacom acquired Paramount in 1994, when Matsushita still controlled MCA. The Seagram Co. bought an 80% stake in MCA about a year ago and has continued talks with Viacom on the issue since then.

The brouhaha came to a head over Viacom's launch last week of TV Land, a basic cable network relying on vintage television series reruns. Viacom characterizes TV Land as a "spin-off" of its existing service Nick at Nite. But MCA charges that TV Land, as well as the other MTVN networks, competes directly with USA and Sci-Fi for advertising, channel space and programing in violation of the USA joint-venture agreement.

MCA claims that the 1981 agreement forming the USA Networks joint venture (which Paramount and MCA now own equally) prohibits either company from operating or launching new networks outside of that venture.

MCA cites a clause in the original agreement, executed between Paramount, MCA and then-partner Time Inc., that says the partners "shall not directly or indirectly, except through the venture, engage in the business" of advertiser-supported or pay-per-view programing services. Specifically omitted is any reference to premium services such as HBO, then owned by Time Inc.

MCA also cites a clause that it calls the "Paramount guarantee," which in effect says the agreement is binding on all Paramount affiliates, including co-owned MTV Networks, which operates MTV, VH1, Nickelodeon. Nick at Nite, Showtime and the Event Television.

To avoid breaching the agreement, MCA charges. Paramount should have invoked divestiture procedures spelled out in the venture to sell its stake in USA when Viacom acquired the studio in 1994. Alternatively, MCA says, Viacom could have sold its basic cable and pay-per-view holdings to remain in compliance.

But Viacom argues that the clause barring the partners from the basic cable and pay-per-view businesses "does not

address in specific terms what was supposed to happen" in the event that one of the partners was bought by a third party with existing cable interests.

Viacom argues that if MCA was concerned with Viacom's competitive cable holdings, MCA should have initiated divestiture procedures itself. Those procedures call for the triggering of a buy-sell agreement, through which one partner offers to sell its share at a stated price to the other partner. An independent investment banker is called upon to appraise the proposed seller's interest. The seller then must either sell at the lower of those two prices or, if the buyer declines, buy the partner's interest at the higher price.

Viacom says MCA's claim that its MTVN holdings harmed USA Networks was made in "bad faith." MCA never raised that concern, says Viacom, "when it was seeking Viacom's support to use the USA Network as a vehicle to jointly acquire CBS" when the network was in play last year. The plan ultimately was scotched and Westinghouse ended up with CBS.

Viacom also says that Seagram Chief Executive Officer Edgar Bronfman Jr. orally agreed in a Feb. 12, 1996, meeting with Viacom's Redstone and others to waive the noncompete clause in the USA venture agreement—at least as it applied to existing MTVN basic cable services and TV Land—if Viacom would waive the non-compete clause in Biondi's separation agreement.

Subsequently, Viacom says, Bronfman "reneged" on that oral agreement and similar proposed agreements. Viacom quoted Bronfman as saying that his thinking had "evolved" on the issue.

Viacom also charges MCA with bad-faith conduct in other matters not related directly to the cable issue. The company says MCA tried to lure Aaron Spelling away from Aaron Spelling Productions at a time when Viacom was trying to sell that subsidiary. If Spelling were to leave the company that bears his name, the value of that company would be severely diminished, Viacom says, also noting that Spelling had "honorably" declined MCA overtures.

USA is not the only venture of MCA and Viacom. The companies also own United International Pictures, which distributes their feature films overseas, and United International Cinemas, an international theater chain.

Analysts estimate the value of USA Networks at $3 billion--$4 billion.

Looking at programer's future are (l-r) Chase Carey, Fox; Tom Freston, MTV; Robert Johnson, BET; Kay Koplovitz, USA, and Scott Sassa, Turner Entertainment.

Programers see delayed digital future

Target 2000 for critical mass of boxes, but ask 'Then what?'

By Rich Brown

Cable programers say they don't expect the long-delayed rollout of digital cable boxes to reach critical mass until 2000 and are not sure exactly what operators want to do with the added channel capacity.

Cable system operators say digital boxes will begin shipping by late this year, but at the NCTA convention in Los Angeles a panel of top programers—including MTV Networks Chairman Tom Freston, Turner Entertainment Group President Scott Sassa and USA Networks Chairman Kay Koplovitz—said it will be at least another four to five years before the boxes are available on a "significant" number of systems.

Meanwhile, programers are trying to figure out what operators are looking for to fill the added channel capacity. Koplovitz said programers most likely will have to look at developing new services modeled on subscription-based magazines. But none of the panelists was able to give a clear picture of program development plans for the digital platform.

"I think the cable industry has to decide what the digital platform is," said Robert Johnson, chairman, Black Entertainment Television. "Until the industry itself comes up with a model, it's going to be very difficult to blue-skies what the 500 channels mean to you as a programer."

Cable subscribers equipped with digital set-top boxes early on in the rollout process likely will find channels featuring re-packaged existing programing, said Chase Carey, chairman, Fox Televison. Carey cited as an example the out-of-market college football games that are now available on pay per view. "Universal distribution of the digital box will take a long time," he said.

As the industry continues to wait for the arrival of the digital platform and the 1999 deregulation of cable, Koplovitz said it will be "a very tough environment" for programers. Johnson said any network launched in that tough environment during the next five years will have almost no advertising.

On a separate note, there was some debate among the programers over the growing trend of studios supplying product directly to their own cable networks. Fox Corp., for example, has been feeding hit off-net series to its FX network and has created a full-time movie network, FXM, featuring titles from its vast library.

"I'm not sure, from a viewer's point of view, that it makes the most sense," said Koplovitz, whose USA Networks features programing from outside suppliers as well as parent companies MCA and Paramount. "I prefer an open marketplace."
‘Reinvented’ cable to be market driven

Now that regulatory shackles are removed, NCTA’s Anstrom says, operators must not repeat past mistakes

By Cynthia Littleton

The hard-won passage of the Telecommunications Act of 1996 has given the cable industry the opportunity to “reinvent” itself, NCTA President Decker Anstrom told industry leaders at the NCTA convention in Los Angeles.

This year “marks another revolutionary year in cable’s history,” Anstrom said, adding that the act “has unleashed powerful new competitive forces that will bring significant changes to the way we live, the way we work and the way we learn.”

Anstrom urged the crowd of 5,000 industry leaders to seize the historic opportunity provided by convergence of regulatory reform and technological innovation to move into new markets, ranging from local telephone service to high-speed Internet access.

Anstrom also reflected on the broad changes and rapid growth the industry has experienced in the 20 years since HBO’s program schedule included a live polka festival from Allentown, Pa. Between February 1995 and February 1996, cable programers’ share of the U.S. television audience rose 5%, Anstrom said.

The contest between broadcasters and cable operators will become even more competitive, thanks again to regulatory reform, when cable price regulations end in three years, he said. “Simply put, the new telcom law has enabled cable’s future to be determined in the marketplace—the marketplace, not Washington, D.C.,” he emphasized.

But now that the industry has been freed from the “crazy, patchwork quilt of laws and regulations that limited investment and stifled innovation,” Anstrom warned the crowd against repeating past mistakes. In the wake of the broad freedoms granted in the 1984 Cable Act, re-regulation emerged in 1992 as a result of the industry’s failure to maintain relationships with key lawmakers, failure to show restraint in pricing and lack of commitment to improving customer service.

“We paid a terrible penalty for those failures in 1992...but we’ve made great progress in our extraordinarily brief time of rehabilitation,” he said.

To stay on course, Anstrom urged conference attendees to display their commitment to the public interest by supporting C-SPAN and C-SPAN2 and NCTA’s Cable in the Classroom educational program. He called on cable’s key players to push for the adoption of a TV content ratings system by early 1997 and for unflagging efforts to meet the standards set by the NCTA’s on-time service pledge.

In closing, Anstrom paid tribute
to 600 “key cable contacts” that aided the NCTA’s push for passage of the telecom bill and reminded his audience that cable is in a better position than broadcasters or the baby Bells to take advantage of the coming digital TV revolution. “To paraphrase Ted Turner,” Anstrom said, “we’ll squish ’em like a bug.”

Analysts give cable the edge

Executives cite settop delays, cable regs for soft stocks; Wall Street analysts see cable with edge on DBS, telcos

By Jim McConville

Cable stock values will continue sluggish, but with MSO cash flows showing double-digit increases, the stocks will rebound over the long haul.

That was the word from cable industry executives, who say that Wall Street’s current skepticism about cable values, while well founded, is not the product of faulty MSO management but, rather, fallout from the 1992 Cable Reform Act, which forced operators to slash their rates.

Another pitfall, they said, is cable operators’ inability to deliver the settop boxes that manufacturers have been promising for the past three years.

Cable industry analysts on the NCTA panel “What Really Drives Cable Value on Wall Street,” say there’s a silver lining to the lack of high-speed modems and digital boxes: At least MMDS operators won’t be getting digital boxes any sooner.

Long term, the analysts were saying, cable companies will win out over competing technologies DBS, MMDS and the regional Bell operating companies.

Julian A. Brodsky, vice chairman of Comcast Cable and panel moderator, says the fault for the softness in cable stocks lies not with cable operators but with cable modem and digital settop manufacturers who have failed to deliver the goods as ordered.

Marc D. Nathanson, chairman and CEO, Falcon Cable, says MSOs are still recovering from the trauma of cable regulation in 1992.

Denis H. Leibowitz, senior vice president, Donaldson, Lufkin & Jenrette, says Wall Street still holds a “show me” attitude toward MSOs. In the short term, Leibowitz says, cable operators will face stiff competition from DBS, which now offers a technically superior service. Over the long haul, Leibowitz says, DBS won’t be competitive offering data services.

“If cable upgrades in the next two years with 200 channels and competitive pay-per-view service, then there’s

Back to Nature for Discovery

Discovery Communications will expand its retail operations by purchasing specialty retail chain The Nature Company for $40 million. The deal calls for Discovery to acquire all 114 Nature Company stores, mostly in the U.S., three Scientific Revolution stores and the company's distribution center and mail-order catalog. Transfer is to be done within a month.

John Hendricks, Discovery Communications chairman, in announcing the deal, says the purchase is the start of Discovery's long-term plans to open much larger (25,000 square feet) Nature Company stores called "Exploratoriums" in the country's top 20 markets. Each store will cost $10 million.

The purchase comes out of Discovery's one-year-old partnership with The Nature Company under which the chain sold Discovery branded merchandise in Discovery Media Centers within Nature Company stores.

Discovery is looking at revenues approaching $700 million, says Hendricks, combining The Nature Company's projected $130 million in revenue for 1996 with Discovery's anticipated $550 million.

The first new store is slated to open in the Washington area in 1997 with eventual plans to open five-six stores per year. Store revenue will come from merchandise sales and interactive entertainment, such as space simulator rides.

Discovery will keep open its 15 Discovery Channel stores. —JM

Cable faces seismic revenue shift

By Michael Katz

That's not an earthquake you're feeling, it's a fundamental shift in the cable business. That shift, over the next five years, was the main message from CTAM executives to an NCTA convention audience last week.

Basic cable revenue will plunge by almost 20% in the next five years, and premium service revenue by 8%, according to Paul Kagan Associates statistics cited by CTAM vice president of research, Grace Ascolese.

That's the bad news. The good news is that CTAM foresees $8 billion-plus in new revenue from services driven by new technologies. The more than $8 billion in new revenue is expected to come from cable telephony, Internet access, video games and home shopping. Pay-per-view revenue is expected to skyrocket from $590 million in 1995 to more than $2.35 billion in 2000 and to more than $4.76 billion in 2005 due to video-on-demand services.

"Basic cable subscriptions are projected to fall below 50%...and these new revenue sources are going to take a giant leap," said CTAM President Char Beales. "That represents a really fundamental shift that you are going to see in the marketplace that's going to change this business."

Much of the CTAM session was devoted to providing a marketing 101 course for cable operators on how to best pitch their services. Using projections, statistics and success stories, CTAM executives were looking to help new (particularly international) cable operators learn from the experiences of U.S. cable operations, focusing on how to get and keep customers and how to create a positive image for cable.

Corrine Beller, CTAM's vice president for marketing, said that 70% of the industry's marketing dollars in 1995 were spent on acquiring new cus-
The work behind the hits

After a great concept, it takes aggressive selling and targeting to bring a show to life

By Jim McConville

Producing the next Seinfeld or ER takes more than coming up with a sure-fire, blockbuster concept.

In addition to solid programming, getting the green light to produce the next hit TV show means jumping over several hurdles, from putting together an eye-catching sales pitch to making sure you’re talking to the right network buyer.

“The only thing between the great idea and success is the barrier called ‘the buyer.’ How do we make the buyer believe that our great idea is the next hit show?” asked Pat Mitchell, president of Turner Original Productions and moderator of the “Creating A Hit Show” NCTA panel.

TV program producers say creating a hit means going through three stages: pitching the idea; producing the program, and marketing and promoting it to cultivate an audience.

An effective pitch, say industry executives, is short and sweet. “You’ve got to get the attention of executives and buyers who have notoriously short attention spans and notoriously full agenda books,” says Mitchell.

But persuading network TV buyers takes more than a good opening pitch. “Good characters and good stories is the first rule,” says Albie Hecht, senior vice president, Nickelodeon Productions. “Anybody who can come in and really talk to me about good characters has a great shot at getting the show.”

In addition to a great idea, Hecht says landing a TV show means persuading TV executives that you have the creative guns to pull it off: “They want to know who the writers are, who the producers are, who the people are who can make it happen.” Hecht says.

Along with solid material and pitch, program producers say pitching it to the right people is key to getting the production go-ahead.

Allan McKeown, chairman of Takes On Production, producer of HBO comedy series “Tracey Takes On...,” says he follows the rule of only pitching an idea when he’s sure a network would want to buy.

“People that buy have a really good understanding of their station and their network; they know what they want on,” says McKeown. “To go in there with something that they don’t really want and to try to convince them never really works.”

Bram Roos, president/executive producer, FilmRoos Inc., agrees that producers should match up a show concept with a network before walking through the front door: “You wouldn’t pitch a football halftime show to the Lifetime network.”

Roos says giving network executives a feel for what TV viewers will see can help get an idea past the pitch stage: “Engaging the executive in the experience is going to help the buyers see the dream.”

Scott Carter, executive producer, HBO Downtown Productions, says show producers must convince a network they have a clear idea of what the program wants to be. One way to do that: be visible. When first pitching his show Politically Incorrect With Bill Maher, Carter says he brought clips of Bill Maher’s standup act: “A lot of the topics that we covered on Politically Incorrect the first season were taken from stuff that he had already done.”

Even with a dynamite show concept, program producers say many deals don’t get closed with one pitch and one meeting. “The sale doesn’t always happen,” says Roos. “Deals sometimes can take 12-15 months to close.”
Sci-Fi adds 1.8 million TCI subs

By Rich Brown

The Sci-Fi Channel will roll out to 1.8 million Tele-Communications Inc. basic subscribers on June 1 (Closed Circuit, April 29), representing the single largest launch by any cable operator since the network debuted in fall 1992.

The announcement also represents the first big cable network rollout in close to a year for TCI, which has gotten past some of the regulatory uncertainty about adding channels and which has upgraded its plant to accommodate more channels, says Doug Holloway, executive vice president, network distribution and affiliate relations. USA Networks, Sci-Fi’s parent.

The distribution gain is prompting the network to accelerate its plans to roll out new programing, says Holloway. He says Sci-Fi will add several original and acquired sci-fi series and movies by late summer or early fall.

“We’re reaching a critical mass where we’re expediting our expenditures in programing,” says Holloway. “Our affiliate fees are beginning to kick in in a substantial way.”

The additional subscribers push Sci-Fi Channel past the 30 million mark that is generally considered the break-even point for start-up networks. However, Holloway would not say whether Sci-Fi has reached break-even.

TCI and Sci-Fi reached their deal in December 1995 but to date the network has been offered to only a few of the 14 million subscribers served by the cable operator. Holloway says that he does not yet have a TCI rollout schedule beyond the 80 or 90 systems adding Sci-Fi on June 1.

Sci-Fi has added four million subs since the start of the year, according to Holloway. He says about 90% of the network’s subscriber base is offered on expanded basic. MSOs are paying as much as 10 cents per subscriber to carry the network. Any free carriage offers made to MSOs at launch have since expired.

Sci-Fi’s added distribution expands the network’s lead over The Cartoon Network, which also launched in fall 1992 and which now has about 25 million subscribers.

Encore will ‘plex’ on half million TCI systems

Encore’s “plex” channel this summer will launch to 500,000-plus subscribers served by Tele-Communications Inc., the cable system giant that is a part-owner in the movie channel.

About 20 TCI systems will add “plex,” a 24-hour movie channel offering uncut titles from seven different genres each week: WAMI America’s Kidz Network on Sunday; Love Stories on Monday; Encore hit movies on Tuesday; Westerns on Wednesday; Action on Thursday; Mystery on Friday, and True Stories & Drama on Saturday.

The addition of the plex channel to the expanded basic tier of some TCI systems is designed to create added value as the operator hits subscribers with 9% inflationary rate hikes, says TCI spokesman Bob Thomson.

In other Encore developments, research sponsored by the company shows that subscribers to its fledgling Starz! 2 channel are responding to the “hit-movies-on-demand” channel and are watching more movies than typical pay-TV subscribers. A poll of the charter 350,000 TVRO subscribers receiving the network shows they are watching five movies more each month than the average four movies watched each month by subscribers receiving only Starz! The spinoff channel runs the same double-feature all week long so subscribers can better fit the viewing into their schedules. —RB

Cablevision looks local with MetroPack

Package to offer weather, traffic, sports, shopping among other services

By Rich Brown

Cablevision Systems Corp. subsidiary Rainbow Programming Holdings is developing a new local programming concept, “MetroPack,” designed to give cable operators an edge over fast-growing competitors such as DBS.

Rainbow President Josh Sapan predicts that 10 of the next 50 channels added to cable systems will be local and his company is developing MetroPack to meet the demand. Taking its lead from Sunday newspaper and radio stations, MetroPack would offer distinct channels focusing on area weather, traffic, sports, shopping, music, etc. He says the package would also include local extensions of nationally branded networks—Rainbow airs network Bravo, for example, could offer a local spinoff channel called “Bravo New York.”

“Everybody thinks that competition means that cable operators, telcos and DBS will have the same programing,” says
Myths are deceiving. Especially myths espoused by “experts.” For example, many marketing gurus say there’s little perceived value in religious programming. Viewers, however, say something different. The truth of the 1995 Beta Survey's shatters cable's myths. Viewers' perceived value of TBN is $1.69! That's higher than numerous leading cable networks.

Since the Beta Survey results are carved in stone when it comes to adding new channels, it's important that cable operators discard myths about religious programming.

Americans are still a religious people. They care deeply about America's moral decline. It's no surprise that a recent Barna Research study reveals that 51% of Americans believe there's more sex and violence on TV than five years ago. And 50% believe a Christian channel would raise the standards of TV.

Clinging to myths is also expensive. Cable's competitors see a vast Christian market that's underserved. So, don't take for granted America's Christians. And don't put your faith in marketing myths. Take a new look at TBN. You'll see why adding TBN is a programming decision that's rock solid.
Sapan. “They won’t, and can’t, if they are to survive in the marketplace. What made cable TV a big deal in the early days was that it carried programming that consumers couldn’t get anywhere else.”

Sapan says there are no specific roll-out plans for MetroPack, but says the concept is “where we’d like to be in the year 2000.” He says Cablevision’s flagship cable operation in Long Island, N.Y., already is getting its feet wet with a local channel. Extra Help, which offers advice on topics ranging from auto repair to pet care. Cablevision also pioneered the local news concept and currently operates several regional news and sports channels.

Rainbow also has been experimenting with the idea of local spinoff channels based on national networks. The company ran a test in Santa Monica, Calif., allowing local independent filmmakers to cut into the Bravo feed and also has worked with community groups to televise local arts projects on the network.

“As much as consumers are interested in international stories like the assassination of Yitzak Rabin or the war in Bosnia, they also want to know what happened in their backyard,” says Sapan. “They won’t, and can’t, if their team won, who made the high school honor roll and where to go on Friday night.”

Sapan says there are no specific roll-out plans for MetroPack, but says the concept is “where we’d like to be in the year 2000.” He says Cablevision’s flagship cable operation in Long Island, N.Y., already is getting its feet wet with a local channel. “As much as consumers are interested in international stories like the assassination of Yitzak Rabin or the war in Bosnia, they also want to know what happened in their backyard,” says Sapan. “They won’t, and can’t, if their team won, who made the high school honor roll and where to go on Friday night.”

Sapan would not say whether Rainbow hopes to play a role in developing MetroPack channels for system operators other than Cablevision: “The question of who produces what remains a question to be answered.”

### Out with the old, in with the new

Executives from start-up services advise operators to dump nonperformers

By Rich Brown

Cable system operators should dump nonperforming networks to make room for newcomers with potential, according to a panel of executives representing several start-up services.

“It’s time to start weeding them out and make room for the next wave,” says Roger Williams, executive vice president and COO, Speedvision Network and Outdoor Life Channel. He says operators are wasting channel capacity with a growing number of multiplex networks and “secondary” movie channels that essentially offer more of the same.

Many new networks are starting their pitches to cable operators by suggesting they dump non-performers, says Susan Packard, executive vice president, Home & Garden TV.

Nielsen ratings data shows that some of the emerging networks are already proven in the limited universe—HGTV’s best ratings show the network behind only ESPN and cable networks appealing to kids.

Despite the strong performance of some emerging networks, Packard says replacing existing networks with new services can be a difficult public relations task for cable system operators.

Dumpling networks from systems can also be difficult because some of the underperforming channels are locked into channel positions through the FCC-ordered retransmission consent rules, says Dan Davids, senior vice president and general manager, The History Channel. He says some under-performing networks are also able to stay on systems because cable operators have equity stakes in the services.

There could be hope for emerging services as cable operators reexamine their program lineups in the face of competitive threats from the telco, wireless and direct broadcast satellite businesses.

“The weeding out process will come a lot faster,” says Nora Ryan, president, Sundance Channel.
System swap
MSOs Cox Communications and Continental Cablevision agreed to swap cable systems representing 97,000 subscribers. The deal, to be closed by the fourth quarter, gives Continental Cox systems in western Massachusetts and Weymouth, Mass., contiguous to Continental systems in Quincy and Springfield. The acquisition, along with another previous trade gives Continental 800,000 subs in Massachusetts. In return, Cox gets Continental systems in James City and York County, both Va., and Pawtucket, R.I. The deal, along with another letter of intent to acquire cable systems in Hampton, Williamsburg and Chesapeake, all Va., will give Cox 380,000 subs in the state. Cox also announced a separate deal with Tele-Communications Inc. to acquire a TCI Rhode Island system with 50,000 subscribers, which will give Cox 385,000 subs in New England.

Leased access lawsuit
All but four affiliates of leased access programer Children’s Cable Network have filed a lawsuit in federal court in Denver charging the company with failure to acquire or pay for programing. The mutinous affiliates have been collectively cutting their own programing agreements and are planning to launch a spinoff service called Kidztime TV next week, according to Denver CCN affiliate Scott Severson of Capital Funding and Financial Group. CCN President Paul Cameron says he has not yet seen the complaint but says the company has operated within the terms of its contracts with affiliates.

Animal lineup
Approximately 60%-80% of Animal Planet programing will be original, says Greg Moyer, president of Discovery Communications Inc., of his company's new network that is slated to launch on June 1. One-third of the network's programing will be commissioned or co-produced says Moyer. Animal Planet, a 24-hour channel devoted to animals, will not earn subscriber fees in the first year, says Moyer. Programing will consist of nine different programing genres. Moyer says Discovery will try to launch Animal Planet as part of MSO’s expanded basic service, but will be flexible with operators wishing to launch the net-work as part of a new programing tier.

Echostar launches its DISH
DBS company EchoStar Communications Corp. has formally rolled out its Digital Sky Highway (DISH) network, which will offer five DBS programing packages priced at $19.99-$59.99. The packages include basic for $19.99 per month; the step-up "premium plus" for $29.99; "deluxe plus" for $39.99; "ultimate plus" for $49.99 and “ultimate extra" for $59.99.

Zenith shows digital box
Zenith Electronics Corp. has demonstrated a digital set-top box using compression technology licensed from DiviCom Inc. The box is designed to support a variety of network interface modules (NIMs), including hybrid fiber/coax, switched digital and ATM fiber-to-the-curb. Zenith will incorporate DiviCom's MPEG-2,DVB-compliant chip set. The box also will include QAM (quadrature amplitude modulation) technology.

Pay-per-day fans
According to a study by Request Television, 61% of those who ordered "Mortal Combat" on a pay-per-day basis would order more PPV movies if they had the All Day Movie Ticket (ADMT) feature, which gives subscribers a day in which to watch the movie whenever and as many times as they like. The study also found that 86% of those who ordered the movie watched it more than once.

Weather enhancer
The Weather Channel will use advanced technology from Silicon Graphics to enhance its on-air graphics in a content upgrade slated for January 1997. New programing elements will include photo-realistic backgrounds and a broader range of color, along with motion video. The SGI technology will also permit a zoom-in effect to enhance local radar and provide 3D cross-section animation of local storms. Addressable Weather Star XL units will replace Weather Star 4000 units now in most headends, according to Mike Eckert, Weather Channel CEO. The new enabling technology also will be introduced to Weather Channel’s international affiliates. The service launches in England this summer, with launches in Spain, South America, The Netherlands and Scandinavia to follow.

Monaco moves to Access
Roger T. Monaco, VP, Times Mirror Co.‘s consumer media group, has been tapped as VP/CFO of Access Television Network, which is developing locally targeted paid programing for cable systems.

Healthy agreements
America’s Health Network has signed carriage agreements with Adelphia Cable Communications, Atlantic Metrovision, American Telecasting, Greentree Cable, The Lenfest Group, National Cable TV Co-op and World Satellite Network.
VH1 goes West

VH1 is launching digitally compressed West Coast feed Aug. 1 via Satcom C3, transponder 19. Its Eastern and central time analog feed can still be found on Satcom C4, transponder 23.

Latin American launch

Latin America Pay Television (LAPTV) says it will expand its Latin American-based cable TV channel CineCanel later this year by launching a premium multichannel service that will include a new movie channel. Along with its multiplex package, LAPTV will unveil new on-air graphics. LAPTV, which operates CineCanel, is a partnership among three Hollywood studios and Latin America cable operators SACSA (Argentina) and Cablecinema (Venezuela). LAPTV managing director and CEO Mauricio Mendez says the decision to launch a multiplex is based on strong subscriber demand for Cinecanel in Latin America.

CAB forms MAB

The Cabletelevision Advertising Bureau has created a new trade association to "promote the placement of advertising on member companies' networks and cable systems." The Multichannel Advertising Bureau International (MAB International) comprises cable networks and MSOs with international operations. It will be funded and staffed independently of CAB. Robert Alter, CAB vice chairman, will oversee the hiring of staff and the development of a marketing plan. MAB International will be governed by an advisory board made up of representatives of member companies and some CAB board members. The association will be headquartered in CAB's New York office.

Done digital deal

CAI Wireless Systems has finished construction of its first digital wireless cable TV system (in the Hampton Roads area of Virginia) and has completed construction of the main transmitter and booster for a digital wireless cable TV transmission facility in Boston. The Hampton Roads system and Boston facilities are being tested by Bell Atlantic Corp. and Nynex Corp., respectively, in connection with their strategic relationship with CAI. The two RBOCs have announced plans to market digital programming in their respective operating territories. Once tested, CAI digital wireless networks will be available to carry Bell Atlantic and Nynex's programming in Hampton Roads and Boston.

Internet session stirs operator concerns

Cable executives ask where money is in new modems

By Richard Tedesco

In the best of circumstances, the Internet defies easy definition. At his presentation of The Internet For Dummies session at NCTA, Peter Bates, director of systems technology for Time Warner's Excalibur multimedia group, demonstrated that point in his first stab at it as he said, "It's kind of an amorphous thing. It's just sort of out there. And that's part of its charm."

That was about 15 minutes into what was a thorough tour of the technology supporting the Internet.

It was obvious near the end of the session that cable operators are anything but charmed by the Internet and its purported draw for subscribers when one audience member told Bates that operators wanted more than a technical orientation: "You have to explain to cable operators why people are willing to pay money for these services."

Bates's short answer was that people wanted faster access to information than telephones afford, along with access to graphics. But he added, "As to why people want these services at home, I'm the wrong guy to ask. I have a rotary phone."

But he adroitly offered some perspective, adding: "Computers are cheap. For $2,000 to $3,000, you can get more information than is available in most third-world countries."

Bates did have practical advice for operators, explaining that they should always deal in standards-based components, not proprietary technologies, for the sake of interoperability.

Addressing the cost of enabling technologies, he explained that T1 phone lines that transmit at 1.54 Mbps (megabits per second) typically cost $10,000 to set up and $2,000-$3,000 per month to maintain; T3 lines that move at 45 Mbps cost $50,000 to $100,000 to set up and $25,000 a month to maintain. "Speed is expensive," he said.

That was a point not lost on operators, who face the prospect of upgrading plant to hybrid fiber/coaxial technology to facilitate modem technologies that, Bates said, are "like magic." How many cable systems need to be changed?, he was asked. "I don't know. Probably a lot of them," he replied. The current estimate is that 80% of cable systems face such upgrades.

Bates's definitions of the underlying Internet technologies were both concise and witty, including a packet—as in packet-switching—as "an envelope with some stuff in it," SONET nets as entities in which "you move these big pieces of information around" and Domain Name Services, which title locations of information and move them through gateways, "just like that," as my mother would say.

He did explain that the Internet originated primarily for military and educational purposes and that the World Wide Web was "a consequence of the Internet," and is not the Internet itself. The advent of powerful graphics workstations, PCs and hypermedia enabled the creation of Web pages, he explained.

Bates's opening comment on the Internet suggested the attitude resonating in operators' questions: "It's almost like the hype exceeds what's really there." For those who wanted to see what was there, Bates invited them to the Time Warner booth, where it was demonstrating high-speed modem access, one of several demonstrations on the floor.
Teamwork key to international success

Programers/distributors talk of need for local partner in overseas ventures

By Cynthia Littleton

U.S. programers and distributors heading into emerging overseas markets generally need a local partner to help navigate the cultural and political landscape, industry leaders said at NCTA last week.

Not surprisingly, much of the discussion among programers and distributors taking part in a panel session on the international marketplace at Cable '96 focused on the boom markets of Latin America, Asia and the Middle East.

"We're not egocentric enough to think we know how to market to every country in the world," said Lloyd Werner, executive vice president of Group W Satellite Communications, which distributes Country Music Television to 45 million households in 49 countries.

International adaptations of popular cable brands such as CMT and MTV "are not merely line extensions of the [U.S.] networks," Werner said. "Each one of our five feeds has the economies of a separate network. We need local partners to customize the feeds."

Local partners can also help U.S. companies do business within the confines of foreign ownership laws and serve as protection against programing and marketing strategies that might offend regional values and customs. Turner Broadcasting System channels, for example, do not run Porky Pig cartoons in Muslim countries, said Susan Schoenhofeld, president of the consulting firm Advisors for International Media, Asia.

But at the same time, panelists said U.S. programers should avoid exclusive alliances with regional distributors in emerging markets.

"We don't know who the winners and losers are in Latin America yet," Werner said, "We prefer to let our partners—the platform providers—fight it out in the marketplace...Some of these markets look like the U.S. [cable industry] in 1978 or 1980. We just have to hunker down and wait for the infrastructure to grow."

With 60,000-70,000 cable operators spanning 3,000 cities, distribution is a "nightmare" for India's nascent cable industry, said Lalit Modi, president of Modi Enterprises. The newly formed Modi Entertainment Network aims to bring some order to the chaos by serving as the sole distributor, beginning this month, for the one foreign channel that every Indian cable operator wants—ESPN.

MSOs searching for marketing opportunities

Cash flow rises with pay-TV packages, alliances

By Rich Brown

Joint marketing efforts and new ways of packaging channel lineups are adding up to increased cash flow for cable system operators, according to a panel at last week's NCTA convention.

Multiplex movie channels are one strength of cable competitor direct broadcast satellite, says Gerald McKenna of Post-Newsweek. Some of his company's cable operations are enjoying similar success by following the model. Where Post-Newsweek has begun multiplexing, the number of pay-TV subscribers has grown 79%, representing an 87% cash-flow boost, he says.

"Pay services can play an important role in your competitive strategy," McKenna says. "Don't be afraid to take a [contrary] approach."

Cablevision Systems Corp. is building revenue on its Yonkers, N.Y., sys-

An MSNBC in news's future

The future of TV news is full-motion, live interactive, said Thomas Rodgers, president, NBC Cable, during an NCTA panel session. "The future of TV news is personalized—it's giving users the ability to draw on a huge source of information that will cater and be customized to personal interests," he said. To that end, NBC is developing a "circle of cross promotion" for MSNBC. "MSNBC is very much a marketing vehicle. It's a conscious way to use the brand power of a TV network [NBC] to drive people to become online users and the online service to become a regular part of the way people use television." Rodgers added that local cable operators need to become more aggressive in getting local news content into the startup all-news cable channels being proposed by the networks, saying regional cable news services are simply "bad business in their current form."
HGSTV growing good numbers

After just signing a deal to be measured by Nielsen, (April 26), Scripps-Howard-owned Home & Garden Television is already boasting about its ratings.

Between 8 a.m. and 1 p.m. on Sunday, April 28, the channel's peak viewing hours, HGTV ranked seventh among all rated cable channels with a 0.9 rating, after Nickelodeon, TBS, TNT, ESPN, Cartoon Network and USA Network, all of which, except ESPN, carry children's programming during that time. "This is all kids and men watching sports and we are the alternative," said Susan Packard, H&G executive vice president.

Packard cited a recent survey conducted by Myers Marketing (asking 542 cable operators what new channels they wanted to add within the next 12 months) in which HGTV was ranked third among 45 networks. ESPN2 was second and History Channel was first.

"I think a few will be surprised about some of our early results," said HGTV President Ken Lowe. "With all the new high technology coming out, all of a sudden we're seeing people wanting to get their hands back in the dirt. But ratings fluctuate and we don't hang our hat on this," he said. "I think this is more of a barometer showing that people are watching this network."

HGTV will use the ratings to give punch to its planned national ad campaign, in which it will utilize Scripps-Howard-owned TV stations and magazines.

In light of the success of HGTV, Lowe, who has been with Scripps-Howard for 16 years, says the company "will be looking to expand our position in the cable network business." Lowe also said that the company is interested in the Travel Channel.

Packard says HGTV is also looking to expand abroad. The network is currently distributed to 5 million homes in Canada and is working on distribution alliances in the UK, New Zealand, Australia and Asia.

HGTV launched at the beginning of 1995 and has 15 million subscribers. —MK

Cable

Brand wagon rolls on

Channels look for winning formulas for boosting awareness through other ventures

By Cynthia Littleton

Reaching out to core audiences through online ventures and other non-TV formats is an increasingly important marketing tool for cable networks, leading programmers said last week.

Whether the target audience is kids or comedy buffs, networks are investing in all manner of media—publishing, radio, movies, music, home video and the Internet—in an effort to keep viewers bumping into network logos even when they're not watching TV.

"Our simple goal is to become known as a universal provider of great comedy content," said Sarah Miller, executive vice president of Comedy Central, during an NCTA panel session on new markets for cable.

Comedy Central is building a presence in radio and the Internet because both are a good fit with the network's demographic profile, Miller said. Other panelists representing ESPN, NBC Cable, BET Entertainment and Nickelodeon agreed that the goal in putting a network's stamp on a magazine or even a restaurant chain is to reinforce its identity with loyal fans while reaching out to new customers at the same time.

"We've always thought of ourselves added-value benefit," Sperry says. "In time, it can be a helpful reinforcement for our premium packages."

Top cable operator Tele-Communications Inc. so far has signed 150,000 customers for the Sprint offer and expects that number to grow to 300,000-450,000 by year's end, says Colleen Abdoulah of TCI. TCI systems also are boosting cash flow by adding Encore and Starz!, two movie services in which the operator owns a stake, she says. Both services are packaged with a traditional movie channel, such as HBO, for $14.95 per month. Abdoulah says 2.3 million customers have signed for Starz! in two years and that the effect of Starz! on TCI has included a boost in pay and basic homes from 32% to 36%. Basic-only homes have declined from 68% to 64%, she adds.

Most networks still are searching for the golden combination of a money-making side venture that also enhances the core business.

as more than a television network," said Tom Harbeck, Nickelodeon's senior vice president of marketing. "Nickelodeon is really a philosophy about how kids should be talked to and entertained. That philosophy is embodied in a brand that comes to life in many ways...We want it to show up wherever kids turn for entertainment."

Promotional value aside, however, few networks have realized significant returns from investments in non-TV ventures. Panelists agreed that most networks still are searching for the golden combination of a money-making side venture that also enhances the core business.

BET has moved into the world of feature film production in an effort to feed its pay-per-view operation. ESPN has hit paydirt in music retail with its "Jock Jams" compilations of music frequently played at sporting events. NBC is bet-
Cable

Broadcasting & Cable May 6 1996

Latin American pay-TV owners of pan-regional Latin American premium movie channel Cinecanal plan to launch a channel to compete with HBO Ole's movie/entertainment package. LAPTV will launch an as-yet-unnamed channel featuring movies, miniseries and sports events in third quarter 1996. The channel will be packaged with Cinecanal, which focuses on first-run movies from its Hollywood shareholders.

*Cable households* in the UK are heavier viewers of television and are heavier users of new technology, according to a survey of 1,312 individuals by RSMB Television Research. Viewing is 20% higher with all individuals, 29% greater with men and 28% higher with kids ages 10-15. Roughly 34% of cable homes have a games console and 29% have a personal computer, compared with national averages of 21% and 24%, respectively. The survey shows that cable and satellite channels gain an increased share of viewing in cable households at the expense of terrestrial channels. Also, some 55% of cable households obtain telcom services from their cable operator, compared with 38% who still use British Telecom and 2% who favor BT rival Mercury.

French pay service Canal+ is buying a less-than-1% stake in TCI International for $10 million. Canal+ already is a partner with French media group Generale d'Images in Multithematiques, which is developing and distributing thematic cable and satellite channels.

**Holland Media Group**, which owns and operates channels RTL-4, RTL-5 and Veronica in the Netherlands, may turn RTL-5 into an all-news service, according to Huib Boermans, chairman of the HMG group. The European Commission ordered HMG to either sell or fold the service because it feared that the three channels would monopolize the Dutch ad market. HMG thinks a news service would be acceptable to the commission.

Indian satellite programer Zee TV has signed an agreement with U.S. programer Encore Media for a daily Zee programming feed, which will be carried on Encore's service International Channel Networks. Encore has a similar arrangement with China's state broadcaster, CCTV. Reciprocal Encore programming services are planned in India and China. Encore will unveil a 10-hour programming block on CCTV-2, July 1.

**Paramount Television** is the latest U.S. major to step into the big-budget European co-production ring, closing a $90 million deal with Bertelsmann subsidiary Ufa Film and Television in Germany and consumer products concern Procter & Gamble. The deal will see the rollout of 37 TV movies over three years. The English-language films will be made in Europe and marketed globally by the three; Procter & Gamble will have some exclusive advertising airtime. The TV movies will premiere in Germany and other EU countries before U.S. distribution.

**NBC Asia** plans to launch its Asian NBC 24-hour entertainment channel in India, Malaysia, Indonesia and the Middle East by year's end. The channel also is negotiating with Singapore CableVision for carriage there. The service already is available in the Philippines, Taiwan and Thailand.

Sources at MIP-TV in Cannes, France, confirmed that Discovery Channel was negotiating to buy Landmark Communications' Travel Channel.

---

**People's Choice: Top Cable Shows**

Following are the top 15 basic cable programs for the week of April 22-28, ranked by households tuning in. The cable-network ratings are percentages of the total households each network reaches. The U.S. ratings are percentages of the 95.9 million households with TV sets.

Cable Modems

GI trumpets big orders for its modems

Pioneer says it will not produce boxes because market is not big enough for two major vendors

By Richard Tedesco

General Instrument is bullish on cable modems, and Hewlett-Packard apparently isn’t.

GI last week announced major pacts with Tele-Communications Inc., Cox Communications and Comcast Cable Communications for its DCT 1000 digital set-tops. But simultaneously, Hewlett-Packard revealed that it is not proceeding with plans to produce the boxes under its Pioneer brand name.

GI executives claim that they have orders for 2 million digital set-tops under contract, with overall commitments for 3 million units from TCI, Cox, Comcast, Rogers Cablesystems and others.

“We believe the market is there. It’s strong. It’s here today,” says Rick Friedland, General Instrument CEO.

Hewlett-Packard doesn’t think that the market is big enough for two major producers at the moment.

“We’ve taken a look at the volumes the industry needs right now, and we feel one vendor can handle it,” says Casey Sheldon, brand manager for HP’s home products division.

Edward Breen, GI president, says he was “disappointed” about HP’s decision not to produce its “Kayak” model of DCT 1000 yet. “I think their opinion might change when they see the intense interest out there,” he added, projecting GI’s production of the hybrid digital/analog DCT units at 300,000 through the end of this year and up to 2 million units next year.

Sheldon says her company is “trying to be more realistic about setting expectations” of cable modem demand before it jumps in, at least six months from now.

Cox’s GI commitment is a $150 million deal for 300,000 units over three years, Comcast expects to have 25,000 boxes in place in both upgraded and non-upgraded systems, according to Bradley Dusto, Comcast senior vice president of engineering. “We’re here to say it’s alive and real and we’ll be rolling it out in the next few months,” Duston says.

TCI has the most aggressive strategy, with plans to deploy 350,000 digital boxes tied to its headend-in-the-sky fall launch, according to Camille Jayne, TCI senior vice president of digital TV.

Navigation Systems

FSN launching Omnio navigator

New system to offer expanded links, merchandising options

By Richard Tedesco

Within the next month, Time Warner Cable’s Full Service Network is introducing a second navigator format to run concurrently with the carousel it created at the outset of its Orlando, Fla., test.

With the Omnio navigator, Time Warner plans to start introducing its Omnio navigator to half of the 4,000 households in the Orlando testbed. Omnio will present a more static opening page, but also will provide a more intricate set of links for users to surf through FSN selections, along with new merchandising options for content providers, according to Daniel Levy, FSN director of consumer interface. “The secret of these interactive services is to keep adding options so consumers come back,” says Levy.

The Omnio format features links within each content category that bring the user into menus of related areas of content, most of them centered on merchandising within that category. Clicking on a link while watching a movie would offer the user a menu of options that could include a particular studio’s merchandising products. Time Warner will sell sponsorships for the respective menus.
tied to each category.

Omni employs an animated onscreen agent, a triangular-headed character named Promptu, designed by Time Warner animation.

Omni also provides users the choice of viewing particular clips from the near video-on-demand selections instead of passively watching a stock cycle of trailers. "Omni takes the approach that the user will take a more active role," Levy says.

The introduction of a second navigator is not an indication of dissatisfaction with the existing carousel navigator, according to Levy, who says that Omni has been in development over the past two years. But he says consumer response was considered in designing the new navigator. And Levy doesn't rule out the possibility of further FSN navigator evolution. FSN will assign the respective navigators to customers along demographic lines, to have two relatively similar test groups, according to Levy. FSN will add on-demand video entertainment content by year's end, apart from movie content, similar to the time-shifting model created by Your Choice TV. Levy says a Smart Living category offering on-demand selections on health and educational topics also will be added.

The most recent content addition was an NBA On Demand area similar to an NFL site introduced late last year.

### Computers/TVs

## Microsoft views future of PCTV

**Easy access seen as key to combined computers/TVs**

By Richard Tedesco

Microsoft Corp. has conceived a model for the future of PCTV—the combination of personal computers and television—that it will pitch to cable MSOs.

Originally part of an interactive TV trial with Tele-Communications Inc. in Seattle, Microsoft wants to take its PCTV service further.

"The project's basically being redefined to focus on PC connectivity problems," says Craig Mundie, senior vice president, consumer platforms division, Microsoft. The software giant is trying to resolve "operational issues" with TCI.

Microsoft last week also announced a collaboration with software and hardware companies to develop a public networks platform. These companies include Cisco Systems, Digital Equipment Corp., General Instrument, Hewlett-Packard Co., Motorola, Scientific-Atlanta, UUNET Technologies, Westell Technologies and Zenith Network Systems. The Window NT Server would be employed, along with Microsoft's Explorer browser. The objective: to be able to offer "a smorgasbord of options for network operators," as Mundie puts it.

A series of demonstrations in Microsoft's booth at last week's National Cable Television Association convention demonstrated what PCTV may look like. At one station, a homepage menu with large type offered previews of video-on-demand selections.

Another station showed a children's area where video clips could be used for educational. Another demo, of a fictional retailer dubbed AdventureWorks, permitted users to manipulate and examine products such as skis in a virtual shopping environment.

Also last week, Microsoft announced commitments from Time Warner and Comcast Cable Communications to use Microsoft-based solutions for their high-speed Internet access services. MSOs committing to the Microsoft-based open platform could opt to take content from the evolving Microsoft Network (MSN) as well.

Microsoft has said it will move all MSN content to the World Wide Web. Dial-up users can access MSN via the Internet for $6.95 per month or $39.95 annually.

### Jones I-Net gets content

The Jones Internet Channel has struck deals with national, international and local content providers for its high-speed access service.

Online merchandising and advertising will constitute much of the content provided by a diverse group including The Weather Channel, Laser Video Network (with Music Source a 3-D online music store); Washingtonian magazine; New Century Productions (providing TV1, customizable TV listings); Internet Communications Corp. (with a Supermodel site about life in front of a lens), and Vancouver, B.C.-based Whoof Multimedia Entertainment (a daily comic strip, Cyber-Chicken).

Jones expects to sign agreements with more than 50 providers in the next several months.—RT

---

### H-P unveiling l-net software

Hewlett-Packard is providing an end-to-end software system that will allow high-speed Internet access in the modern service rollouts planned by Comcast Cable Communications and Time Warner Cable.

The Comcast rollout is in Baltimore County, Md., slated to start in either June or July and intended to include 10,000 customers. Baltimore will be one of five cities where Comcast will introduce cable modem service by the end of the year.

The Time Warner rollout, in Akron, Ohio, also is one of several deployments in which it will use H-P's technology.

Hewlett-Packard isn't far away from going into production on its QuickBurst cable modem, demonstrated at its booth, but Motorola's CyberSurf modem is the model to be deployed by both Comcast and Time Warner. H-P announced a deal with Motorola to incorporate the CyberCurf into its system configuration for high-speed Internet access.

In a separate announcement, Hewlett-Packard introduced the HP MediaStream Integrator, a scaled-down, fully functional version of its Medistream Server. The $250,000 Integrator provides both software and hardware for interactive TV applications and supports up to 25 data streams. —RT
Online Services

Discovery eyes online tier

By Richard Tedesco

Discovery Channel Online is pitching a subscription online service to cable operators that it would look to package as a service tier to subscribers.

Discovery has been developing four special online services it wants to market to create a “flow” from the Web to Discovery on-air and help operators differentiate modem services from telco competition.

The concept would permit subs to use each of the services, all virtual experiences, for nominal fees. “Going forward, virtual transactions are the working model,” says Thomas Hicks, publisher of Discovery Online. “I think we’ve got to look at other new revenue streams. Advertisers can’t carry all of it.”

The four online services would be: a virtual expedition to different locales, such as Jerusalem, with point and click exploration features; “Cyfara,” a virtual expeditions designed for young online users; “Knapsack,” a personalized content area that individual subs could program to collect online information according to their own interests, and “Virtual Auditorium,” a live chat area that would also include video and audio in the context of lectures on various subjects.

Discovery is discussing the concept with operators. And it has already issued a schedule of online events to potential advertisers, including “Olympics: Live in Atlanta,” slated for July, a “Magic Bus Tour” of America in September” and “Wreckage of the South Seas,” a virtual scuba expedition of wrecked warships from World War II lying on the Pacific Ocean floor.

Discovery feels ESPN has set a precedent in charging for access to areas of its site per month, which is a prelude to some kind of incremental online deals with the advent of high-speed modem access. Hicks envisions a package of online cable services with exclusive content that might be offered for $30-$50 per month.

Set-Top Boxes

S-A strikes set-top deals

By Richard Tedesco

Scientific-Atlanta is making an option play with three major consumer electronics manufacturers, bidding to capture a piece of the action for Time Warner Cable’s digital set-top.

S-A announced last week that it had deals in place with Pioneer Electronic Corp., Toshiba Corp. and Thomson Consumer Electronics for each of those vendors to incorporate S-A’s PowerTV technology in responses they filed last week to an RFP issued by Time Warner. Winning the bid could mean a pact to produce as many as one million digital set-tops.

In the letters of understanding with Pioneer and Toshiba, S-A is licensing its PowerKey conditional access system and digital set-top microprocessor chips supporting MPEG-2 and DAVIC industry standards. The cooperation with Thomson combines OpenTV software developed by Thomson and Sun Microsystems.

The S-A strategy anticipates Time Warner’s desire to employ more than one manufacturer for its digital set-top product. “Time Warner has made it clear that it would prefer to deal with more than one manufacturer,” said an S-A spokesman who said his company also had submitted its own response to the TW RFP separate from the potential collaborators.

“By proliferating our leading-edge technologies to a wide range of suppliers, we hope to remove a major barrier to widespread deployment of interoperable set-tops,” said James McDonald, S-A president.

S-A hopes that aligning with three major consumer electronics powers will improve its odds of getting a Time Warner deal. A successful bid could also give its scaleable open-platform PowerTV architecture a leg up toward becoming a de facto standard.

Zenith shows digital box

Zenith Electronics Corp. demonstrated a digital set-top box using compression technology licensed from DivCom Inc. The box is designed to support a variety of network interface modules (NIMs), including hybrid fiber/coax, switched digital and ATM fiber-to-the-curb. Zenith will incorporate DivCom’s MPEG-2, DVB-compliant chip set. The box also will include QAM (quadrature amplitude modulation) technology.

Automation suppliers tackle digital future

Companies are juggling disk and tape playback

By Glen Dickson

With more broadcasters adopting disk-based systems in their spot playback operations, station automation suppliers are working both to connect new disk devices with traditional cart machines and to integrate full-blown server operations with existing automation software. No matter how well designed a disk recorder or video server may be, it relies on automation software for its ultimate success in the broadcast plant.

At NAB, Louth and Alamar showed software systems that link the Tektronix Profile digital disk recorder with cart machines like the Sony Flexicart and automate the loading of spots from tape to disk cache for spot playback. Louth and Alamar also are embracing the move to mainframe servers for spot playback as units like the Hewlett-Packard broadcast server and BTS Media Pool gain acceptance in broadcast plants.

Frank Alioto, Alamar chief operating officer, sees two big trends in station automation: “First, there is the continuing video server automation interface market. How many video servers are out there now—40? Most servers are using the VDCP [Louth’s Video Disk Control Protocol], which makes the server look like a cart machine. Most manufacturers realize how limiting this protocol is, and that’s why people like Tektronix and Philips are introducing Ethernet protocols to get more flexibility out of the server.”

The second automation focus is the ability to control multiple channels of output from the server, which is important both for LMAs and cable origination operations as well as traditional single-channel broadcasters, says Alioto. “If you’ve got a video server capable of putting out large numbers of streams, will you really need routers in the end?” he wonders.

Louth, of course, has had considerable success with its VDCP disk protocol, which was born out of Louth’s experience with the Sony cart machine protocol. VDCP has been adopted by server leaders like Hewlett-Packard, BTS Philips, Silicon Graphics, ASC Audio Video, DEC, Seachange and Tektronix, as well as by automation competitor Alamar.

George Fullerton, Louth vice president of sales and marketing, agrees that the future for automation software suppliers is to move away from VTR emu-

Nashville TV station buys DVCPRO Smart-Cart

WZTV is first buyer of Panasonic automated playback unit

By Glen Dickson

WZTV, the Fox affiliate in Nashville, has become the first purchaser of Panasonic’s new DVCPRO Smart-Cart automated/recorder playback system. The Sullivan Broadcast station will use the digital cart machine to handle both program and spot playback, linking it to a complement of DVCPRO VTRs and a Tektronix Profile digital disk recorder in a $450,000 system configuration.

The DVCPRO Smart-Cart will replace WZTV’s Panasonic MII M.A.R.C. 100 cart machine system, which will be transferred to Sullivan sister station WTAT-TV, the Fox affiliate in Charleston, S.C. Initially, the Smart-Cart will operate with one output channel, but the station plans eventually to use two channels to consolidate WZTV’s time brokerage arrangement with WXMT(TV), the local UPN affiliate, says WZTV Chief Engineer Ed Murlatt. WXMT now uses an Otectics TCS-90 cart machine.

Murlatt says the Smart-Cart’s automation software is similar to dual-channel automation with the old M.A.R.C. system and will be able to import WZTV’s programming database. “We have a tremendous database of programing built into M.A.R.C., with shows like Star Trek: The Next Generation and Deep Space Nine,” says Murlatt. “We’ll be able to transfer that database and dub the shows over to DVCPRO. That database WZTV is the first purchaser of the DVCPRO Smart-Cart.
Automation suppliers
continued from page 51

In order to provide a solution to the problem of storage and delivery of video content, several companies have developed software and hardware solutions. However, the choice of solution often depends on the specific needs and requirements of the user. For example, Spectrum Master Control Software is a solution that allows for easy interface with specific applications, while Tektronix bundles their random-access profile with Panasonic's tape and disk players.

While Odetics is addressing the need for multichannel playout with their new MVP (Managed Video Playback) system, Sony also offers a solution with their new BZA-8100 transmission software. This software allows for digital cache transfer to Sony's LMS cart machine system. However, it has been noted that the software grew out of Sony's scheduling and resource allocation experience with DIRECTV. Sony also offers other software packages to control Flexicarts and multichannel playback servers.

The Sony software is part of the company's "Total Solutions" philosophy of providing turnkey broadcast technology and software. Understandably, this has drawn criticism from automation suppliers who are using software to control Sony cart machines, who question the wisdom of launching a closed, proprietary software system in an age of open architecture.

Ultimately, the market will decide. "Three years ago, we still used to get questions about hardware," says Alan Mar's Alice. "Now it's the depth and quality of software that decides the buy. Whether it's a router or master control switcher or a server, the iron is irrelevant. The delineating factor is software."

Channelmatic, Sony win Chicago Interconnect bid
First big sale for software/hardware team

By Glen Dickson

Channelmatic and Sony have won a $1.5 million contract from National Cable Communications to provide the Chicago Interconnect with an 80-channel, five-zone MPEG-2 digital ad insertion system. Installation is targeted for completion by Aug. 1.

The Chicago Interconnect represents the first successful bid of the Channelmatic MVP (Managed Video Playback)/Sony VideoStore system, a package that bundles Channelmatic's automation software and signal-switching hardware with Sony's MPEG-2 VideoStore server system. In winning the Chicago Interconnect contract, the Channelmatic/

called NetMate. NetMate is a “smart switching” product that performs remote switching between interconnect and local spots by cue-tone decoding.

The core of the MVP system is the Network Server Manager (NSM) software, which provides central database management, a real-time traffic and billing interface, playlist scheduling, material parsing and distribution, verification and insertion status monitoring.

The NSM software works in conjunction with the Insertion Control Unit (ICU), a schedule processor for remote Sony VideoStores at the headends. The ICU stores traffic schedules, logs, actual cuezones received and switching status and directly communicates to the VideoStore units for spot playback.

“...The system we are purchasing will enable us to efficiently sell advertising across the whole market or specifically to five separate, targeted zones.” says Ken Little, general manager of National Cable Communications. “We selected Channelmatic because of [its] depth of experience designing and manufacturing remote-controlled audio/video switching systems.”

**Gabriel takes aim at cable networks**

Business automation system adopted by Discovery, A&E and Lifetime

By Glen Dickson

Gabriel is a comprehensive new business automation system aimed specifically at cable networks. The product, released by Management Science Associates (MSA) at the Cable Advertising Bureau Bureau show in March, incorporates sales management, deal management, programing, research, traffic, EDI (electronic data interchange) and accounting. Lifetime, A&E and Discovery Channel have all purchased the system.

Gabriel’s modular architecture is based on a central database that gives users throughout an enterprise network real-time access to information. The system can be configured in its entirety or as two separate suites: Asset Management and Traffic and Billing.

The new MSA system captures and stores deal information at the unit level, a process called unit serialization. Each item in inventory is assigned its own serial number, which is entered into the system only once, eliminating redundant data entry. And by using EDI, Gabriel transmits changes throughout the duration of a deal to give managers the most up-to-date information.

Dave Roth, Discovery’s vice president of information systems and services, says that Discovery has been in discussions with MSA for two years and has tested several versions of Gabriel. Discovery now uses Marktron as its core traffic system and a variety of in-house systems for contract maintenance.

“We’ve been looking for five years for a new traffic system that can support our long-term needs,” he says. “A

**Columbine JDS debuts integrated management software**

Leading traffic automation supplier Columbine JDS is looking to connect traffic, master control and purchasing functions with Program Control, its new program management software.

The Windows-based system, which is being released as an integrated module of the Paradigm traffic automation system, combines analysis tools to handle program purchasing and scheduling; system tools to provide integration between different station systems; reporting tools to ensure that internal or external organizations receive information in the correct format, and amortization and posting tools to compute current financial information.

As opposed to Columbine’s older DOS-based Program Scheduler system, which simply passed files to traffic systems, Program Control relies on a common database with the Paradigm system. Other optional “modules” of Paradigm include a master control module, the MCAS station automation system, and a sales and packaging program called Proposer.

“We’re trying to achieve total station integration through interaced modules,” says Columbine JDS Senior Product Manager Peter Wickwire. “The effective way is to hit the same database for different modules—if programing makes a change, traffic sees it. If traffic makes a change, master control sees it. A tape is a tape; it doesn’t matter whether it’s a program tape or spot tape.”

Wickwire says another change in Columbine’s philosophy with Program Control is that the system is designed to handle multichannel or multilowner environments, making it suitable for broadcast and cable operations. In that vein, Columbine has developed DVB, another Paradigm module. DVB is a set-top subscriber management system designed for cable operators sending pay per view and other selective services to addressable converters.

“We’ve tried to rethink the business, and the thing that fell out that isn’t important is ‘station,’” he says. “It’s multichannel, so you can do cable or you can go to a station group and let all the stations use it over a wide-area network.”

The first customer for Program Control is Star Broadcasting of Hong Kong, which will receive the system in July. Columbine also is talking with Turner and such station groups as Chris Craft about the product, says Wickwire. Although Program Control is now sold only in conjunction with Paradigm, Columbine plans to begin selling a stand-alone version in first quarter 1997.

THE SHOCK WAVE ARRIVES IN 30 SECONDS.
YOU DON'T HAVE TIME TO DIGITIZE.

Events wait for no one. And when that hot tape comes screaming in during a broadcast, wouldn’t it be nice to be able to pop it right on the air before your competitor even gets wind of it? The amazing Newsworks™ non-linear editing system from Lightworks lets you do just that. You can mix and match material from tape footage of late breaking news with material already on disk. So you don’t waste vital minutes digitizing. And the editor-friendly design of Newsworks user interface makes putting together a newscast a thing of ease. To find out more about this revolutionary new editing system, call 1-800-395-9478, ext. 801.

The more things change,
The more you'll want DVCPRO.
Digital video is changing our world, and DVCPRO is already changing news, production and professional video operations across the country. Lightweight, low cost ENG cameras and full-featured studio decks integrated in today’s news systems are just the beginning.

Products that are uniquely DVCPRO, like the laptop portable edit system, a four-times player, integrated video workstations, and affordable news server systems will change the way we work.

Component digital video and CD-quality audio on pocket-sized digital cassettes; lower equipment costs, lower media costs, and lower operating and maintenance costs are revolutionizing broadcasting and newsgathering by creating products that otherwise wouldn’t be possible.

DVCPRO is the promise of the digital era realized.

Official Broadcast Equipment Supplier of the 1996 Olympic Games

Panasonic
lot of the old systems are built on old technology [such as AS400 computers with text interfaces] and are not really suited for cable."

Gabriel uses a client/server architecture with an Oracle database running on a Digital Equipment Corp. Alpha 2100 Unix server. The client PCs run through Windows 3.1, which Roth hopes will migrate to Windows 95 next year. Roth emphasizes that Gabriel is more than just a core traffic system.

“We hope to use Gabriel to manage our entire ad sales process and ultimately replace our in-house proposal, contract maintenance, trafficking and scheduling modules, as well as maintaining a database of our commercial tape library.”

Since Discovery outsources its program origination to Group W Network Services in Stamford, Conn., its traffic department will use Gabriel to create logs for spot playback that can be fed into Group W’s proprietary traffic automation software.

“We’ll send them the log, then they [will] run it into their interface software,” says Roth. “Initially we’ll send it up as an e-mail attachment. They’re on our wide-area network, so we can send files anytime we want.”

Discovery will be beta-testing Gabriel throughout the third quarter and plans to use it in the launch of its new network. Animal Planet, Roth says.

**Cutting Edge**

By Glen Dickson

TCI Technology Ventures plans to adopt Imedias’s statistical multiplexing technology, Imedias StatMux, for its Head-end in the Sky (HITS) compressed program delivery service due to launch later this year. The Imedias StatMux system is a real-time statistical multiplexing compression technology that supports the transmission of 24 programming channels over a single analog transponder. “With channel capacity a scarcity and market demands increasing, the HITS/Imedia combination provides a strong solution for cable operators,” says David Beddow, senior vice president of TCI Technology Ventures.

CableRep Advertising, the cable advertising arm of Cox Communications, is purchasing fiber-optic equipment and MPEG-2 digital codecs from Northern Telecom (Nortel) to provide terrestrial video transmission to and from its master control site in Phoenix. CableRep will use the video transport system to deliver commercials for television insertion, to carry headline news inserts and to handle backhauls for All Sports Network programming, either from satellite feeds or from live venues in the Phoenix area. The new Nortel codecs, first shown at NAB ’96, are being manufactured for Nortel by NUKO Information Systems.

Sony is the latest member of the Advanced Television Technology Center, formed last month by a consortium of television broadcast and manufacturing companies to solve the technical problems facing broadcasters in implementing the Grand Alliance HDTV standard. Sony joins CBS/Westinghouse, PBS, CapCities/ABC, Pioneer Electronic Corp. and Mitsubishi Electric in the not-for-profit Technology Center. The new organization stems from the former Advanced Television Test Center, formed eight years ago to conduct the official lab tests of HDTV systems.

Toko is shipping its new VAST-p Digital system, a transportable video-audio transmission and conferencing terminal that provides both live and store-and-forward video transmission with dial-up access to the INMARSAT satellite system. The system also can support two-way video and audio transmission for video conferencing from local or remote sites. VAST-p Digital can transmit and receive digital data at rates from 2.4 kbps to 2.048 mbps over INMARSAT or any other data channel. It uses MPEG-1, H.261 and JPEG compression algorithms for efficient bit-rate reduction of video signals, and maximizes picture quality in store-and-forward applications with variable bit-rate encoding. Total hard disk storage is 2 gigabytes.

Tape House Digital, New York, handled the compositing and FLAME effects for “NOC Man,” a new 30-second AT&T commercial for McCann-Erickson. To demonstrate how effectively AT&T routes long-distance calls, the spot features the Network Operation Center chief, who walks into the side of a bank of 54 monitors and appears to be walking through the screens to review explanatory charts and diagrams. “The creative challenge was to track all 54 monitors using four-point tracking,” says Tape House Digital Flame artist Cari Chadwick. “Sometimes the monitors went off screen as the camera moved, so each moniters matte had to be adjusted to match each camera move. Then highlights and shadows were added to the composited images to heighten the sense of realism.”
HELP WANTED MANAGEMENT

GRAPHIC ARTIST

If Comcast just means cable to you, you're missing the real picture.

Today Comcast has its hands in almost every sector of communications: telephone business, cable television, computers and wireless communications. Strategic alliances with companies like Sprint strengthen our position in the global marketplace. If you're looking for an employment opportunity with a future, the picture doesn't get any clearer than with Comcast.

Working out of our Philadelphia headquarters, you will be responsible for the design and mechanical production of proprietary material. Additional responsibilities include creating concepts for direct mail and other print campaigns, preparing art for internal presentations and assisting other departments with creative material as needed. To qualify you must possess thorough knowledge of Power Mac with system administration skills as well as Polaroid Sprintscan 35, black & white Laserwriter, Tektronix Phaser 2200, Quark 3.3+, and Photoshop 2.5+. A BA degree is preferred.

Comcast offers the salary and benefits you would expect from a leader in its industry. For immediate consideration, send your resume no later than Friday, May 17, 1996, to Susan Cordes, Marketing Department, Comcast Cable Communications, Inc., 1500 Market Street, Philadelphia, PA 19102. EOE.

Compiled by Kenneth Ray (ken.ray@b&c.cahners.com)

May 6 1996 Broadcasting & Cable
As an aspiring disk jockey working in college radio, Jeffrey Pollack day-dreamed about turning on friends to new bands and playing unusual segues. But he likely never envisioned turning on listeners worldwide.

Six years after leaving the University of Denver, Pollack set out to establish a music consulting company from his family’s Los Angeles home. Beginning with a small client list, his reputation for recognizing hit songs by instinct and crafting successful radio formats spread quickly.

During the past 16 years, his business has expanded from a one-man shop to a worldwide multimedia consulting firm. He credits his success largely to his ability to target mass-appeal music.

“I’ve always been able to listen to the radio or watch television as an average listener or viewer would and understand why people are responding to it,” Pollack says. “I think it’s the discipline of being able to remove my personal tastes that has been important.”

Pollack sprang from a typical background as a disk jockey and music director at FM stations from Albuquerque, N.M., to Fresno, Calif., before landing a consulting position working on pop formats with Drake-Chenault, the former syndication and music consulting firm. From Drake, Pollack was recruited in 1978 to program WMMR(FM) Philadelphia, which ranked at the bottom of its market with a progressive rock format.

In less than two years, Pollack grew WMMR’s audience share from a 1.0 to a 7.0 with an album-oriented rock format that has become its staple. Soon after, fellow radio broadcasters started calling for his help in refashioning their sound. “It sounded like it could be a job.” Pollack says of their offers.

Riding his success at WMMR, Pollack in January 1980 launched the Pollack Media Group. His interests quickly turned to foreign markets, and in 1982 he began serving as a consultant to pop stations in Australia. With the fall of communism in Eastern Europe in 1989, Pollack began forging rock formats for emerging commercial FM stations in Prague, Moscow and, later, Istanbul. Meanwhile, his domestic client list expanded.

With a growing reputation in the radio and music industries, Pollack was tapped to assist various charity fundraisers. The self-described “Mister Benefit” has donated his expertise to such events as Live Aid, where he helped produce the concert’s radio broadcast, and Pavarotti’s benefit concert in Sarajevo last year, where he served as executive music consultant.

In addition, Pollack has helped to raise money—with musician Paul McCartney—to provide medical treatment for homeless children, created a Boston-area radio station campaign to coincide with Don Henley’s tour in support of saving Walden Woods, and coordinated a “Friends of the Earth” campaign in conjunction with Paul McCartney’s 1990 tour to ban ozone-depleting chemicals.

Pollack says his “strong social conscience” has guided much of his involvement in benefit efforts, and he advises radio stations to support various social causes to “help develop character.”

“I think that anybody who cares about being in contemporary music or in the entertainment business has to remain open-minded and fresh and care about things that are happening,” Pollack says.

About the time Pollack launched his firm, MTV was created. Like his radio and music consulting peers, he thought that the concept of airing music videos was “amazing,” but did not know “it would transform the business as much as it has.” Several years after MTV had earned an established audience, Pollack was hired as a consultant and “idea person” for MTV U.S.A. and MTV Europe.

The “creative restlessness” among staffers at MTV has kept the music channel top of its game. “Your biggest challenge, whether you are a radio station or a music channel, is to continue to surprise your audience.” Pollack says. “You’ve got to remain interesting.”

To keep his personal interest in music consulting fresh, Pollack signed to consult on music scores for films released by Columbia Tri Star and Paramount Pictures. He claims credit for working on such films as “Robin Hood: Prince of Thieves,” which earned an Oscar nomination for the hit “Everything I Do, I Do It For You,” by Michael Kamen and Bryan Adams.

Despite a diverse schedule, Pollack and his 10-person staff devote a great deal of time to consulting at radio stations. With relaxed station-ownership limits, Pollack says, “the best news” for radio listeners is that broadcasters with multiple stations will have outlets for experimental and mainstream formats.

Jeffrey Miles Pollack

"Your biggest challenge, whether you are a radio station or a music channel, is to continue to surprise your audience.”

**Broadcasting & Cable** May 6 1995
**BROADCAST TV**

Rick Henry, assistant sports director, wts(tv) Columbia, S.C., named sports anchor.

Christine Ortiz, assignment editor, wpvi-tv Philadelphia, joins wcbx-tv New York in same capacity.

Bill Burke, assistant news director, wts(tv) Columbia, S.C., joins wpbf-tv West Palm Beach, Fla., as news director.

Suzy Waldman, sports announcer, joins wpix-tv New York as a commentator for 13 road games of New York Yankees baseball.

Dennis Sublett, director/editor, wset-tv Lynchburg, Va., named manager, creative services.

Appointments at Advantage Television Software, Chicago: Matthew Kreiner, president/GM, wluk-tv Green Bay, Wis., joins as president/CEO; Andrew Welch, president AWA-tv, Los Angeles, joins as executive VP/COO; David Janney named VP/director, operations.

Gretchen Carlson, reporter/weekend anchor, wqio(tv) Shaker Heights and wuab(tv) Lorain, Ohio, named weekend co-anchor, 19 News CBS, wioo.

Appointments at Extra, Burbank, Calif.: Gloria McDonough-Taub, supervising producer, special projects, and Eugene Young, supervising producer, shows, named senior supervising producer, news and features, and senior supervising producer, broadcasts, respectively; Jerry Schmetterer, deputy metropolitan editor, New York Daily News, joins as New York bureau chief.

Al Blink, news director, wpix(tv) Pittsburgh, joins wsbt-tv Atlanta in same capacity.

Appointments at Benedek Broadcasting, Rockford, Ill.: Douglas Geary, president/GM, wcmh(tv) Columbus, Ohio, joins as executive VP; Terry Hurley, VP/GM, kdlh(tv) Duluth, Minn., named senior VP, Benedek Broadcasting: Keith Bland, VP/GM, wtap-tv Parkersburg, W.Va., named senior VP, planning and technology; Clyde Payne, division VP/GM, wsko(tv) Bowling Green, Ky., accepts expanded responsibilities for various corporate projects.

**PROGRAMING**

Jon Hookstratten, partner, Hookstratten & Hookstratten law firm, Los Angeles, joins CBS/GroupW/Maxam there as senior VP, business affairs.

Hookstratten Appointments at Semaphore Entertainment Group, New York: David Isacs, VP, named COO; Campbell McLaren, GM/VP, programing, named president, SEG Productions; Michael Abramson, executive VP, marketing and distribution, named president, SEG Pay-Per-View.

Karen Stein, senior supervising producer, Our Home, Lifetime Television, joins Hearst Broadcasting Productions, Needham, Mass., as executive producer, program development.

Appointments at ABC Television Network, New York: Alex Wallau, VP, operations, named executive VP; John Wolters, senior VP, finance, and controller, named executive VP; Barry Goodman, VP, network marketing, NBC, New York, joins as VP/executive producer, marketing.

Appointments at Matinee Entertainment, Los Angeles: Jennifer Levine, independent producer/publishing consultant, joins as director, creative affairs; Celia Bonaduce, animation coordinator, Nickelodeon, joins as manager, development.

Nancy Widmann, president, CBS Radio Division, joins CBS/GroupW/Maxam, New York, as senior VP, market development.

**RADIO**

Randy Meyer, operations manager, Westwood One Radio Networks, Arlington, Va., joins whp(AM) Harrisburg, Pa., as operations manager.

Sam Milkmann, assistant program director, whtz(fm) Newark, N.J., joins wxrr(fm) New York as operations director.

Ron Williams, on-air host, Club FLY and The Vibe, wfly(fm) Troy, N.Y., named music director.

Appointments at kaja(fm) San Antonio, Tex.: Randy Carroll, program direc-
tor/morning show host, named creative manager: **Keith Montgomery**, music director/afternoon air personality, named operations manager.

Appointments at wqsr(FM) Catonsville, Md.: **Buz Hiken**, GSM, named director, sales and special projects; **Robert Phillips**, NSM, named GSM; **Jon Blum**, local account executive, named NSM; **Tracy Brandy**, retail marketing manager, wxyy(FM) Baltimore, joins as director, new business development.

Broadcasting & Cable May 6 1996

75
In Brief

The FBI advised the NAB last Friday (May 3) that it had received a letter threatening to bomb "any radio or TV station broadcasting commercials [for] alcoholic beverages." The NAB sent out a station advisory that, although the FBI has no way of verifying the seriousness of the threat, "NAB wants you to know so you can make your own determination of what, if any, special measures you may wish to make at your station." The threat directed at "commercials only," and specified that transmission equipment, towers and network microwave relays would be targeted, as well as breweries that advertise on TV or radio.

More post-merger changes at Capital Cities/ABC: The Walt Disney Co.'s new subsidiary will shorten its name to ABC by early next year. Sources say president Bob Iger wants to simplify the broadcast group's moniker and emphasize the brand name best known to consumers.

Members of Washington's V-chip implementation committee were set to meet with Hollywood leaders in Beverly Hills today (May 6) to update TV's creative community on plans for a TV content ratings system to work in conjunction with the federally mandated program-blocking device. Expected to attend the session with MPAA President Jack Valenti, NCTA President Decker Anstrom, NAB President Eddie Fritts and others are Leslie Moonves, president of CBS Entertainment; producer Steven Bochco; NATPE President Bruce Johansen, and Walt Disney President Dean Valentine. ABC, NBC, Fox and UPN also planned to send representatives, as did the major studios and talent guilds.

Fox veteran Adam Ware, senior VP, network distribution, will leave the network later this month to join Barry Diller's Silver King Communications as executive VP, broadcasting. Ware will oversee Silver King's plans to gradually replace the Home Shopping Network on its 12 UHF stations with original and syndicated programming. He also will manage Silver King's acquisition strategy. Another longtime Fox executive, Doug Binzak, senior VP, scheduling and marketing strategy, is set to join Silver King this month as executive VP, focusing on programming and production.

Ameritech New Media won its largest cable TV franchise last week when it was granted approval by the city council of Columbus, Ohio, to offer competitive cable service. Ameritech plans to offer alternative cable service to the 290,000 households in Columbus now served by Time Warner Cable and Coaxial Communications. The service will be offered under the Americast programing brand name.

Viacom reported a 61% drop in net earnings for the first quarter, to $27.8 million, on a 3% revenue gain, to $2.8 billion. The company's cable networks and broadcasting segment posted a 19% revenue gain, to $542 million, and an 18% gain in operating income before depreciation and amortization, to $126 million. Revenue at the MTV Networks rose 28%, to $264 million, while operating income there rose 20%, to $93 million.

Burbank, Calif.-based SI Communications has filed a $10 million lawsuit against Nielsen Media Research that claims the ratings service does not have enough black households in its audience sample to generate reliable ratings for programs targeted to black viewers. SI, producer of quarterly magazine 24/7 and other syndicated shows, claims that the margin of error in Nielsen's survey of black households typically exceeds 25%. A Nielsen spokesperson said that the suit, transferred last month from state to federal court in New York, is without merit. Nielsen has filed a $50,000 counterclaim against SI for non-payment of fees.

Viacom is in no hurry to sell its 77% stake in Spelling Entertainment Group, Viacom Chairman Sumner Redstone said last week. Redstone's reported $1.5 billion asking price for the production/distribution company is said to have kept potential buyers at bay ever since Viacom put its majority interest on the block last August. Speculation has mounted in recent weeks that Viacom would reverse its course and buy the remaining 23% of publicly held Spelling, which Viacom acquired in its 1994 merger with Blockbuster Entertainment.

"Our agenda with Spelling has not changed," Redstone said following his speech last Thursday to the Hollywood Radio & Television Society on the globalization of the television industry. "If we get what we're looking for, we'll sell it," Redstone said. "If not, we'll keep it. It's a great asset."

And Spelling Entertainment is no longer in danger of losing one of its key assets, producer Aaron Spelling, whose contract expired last month. Spelling confirmed last week that he is negotiating a new contract with Redstone.

On hand for Redstone's remarks to HRBS were (l-r) Jonathan Dolgen, Viacom; Kay Koplovitz, USA Networks; Redstone, and Rod Perth, USA Networks and HRBS president.

Redstone standing firm on Spelling price

Viacom is in no hurry to sell its 77% stake in Spelling Entertainment Group, Viacom Chairman Sumner Redstone said last week. Redstone's reported $1.5 billion asking price for the production/distribution company is said to have kept potential buyers at bay ever since Viacom put its majority interest on the block last August. Speculation has mounted in recent weeks that Viacom would reverse its course and buy the remaining 23% of publicly held Spelling, which Viacom acquired in its 1994 merger with Blockbuster Entertainment.

"Our agenda with Spelling has not changed," Redstone said following his speech last Thursday to the Hollywood Radio & Television Society on the globalization of the television industry. "If we get what we're looking for, we'll sell it," Redstone said. "If not, we'll keep it. It's a great asset."

And Spelling Entertainment is no longer in danger of losing one of its key assets, producer Aaron Spelling, whose contract expired last month. Spelling confirmed last week that he is negotiating a new contract with Redstone.

On hand for Redstone's remarks to HRBS were (l-r) Jonathan Dolgen, Viacom; Kay Koplovitz, USA Networks; Redstone, and Rod Perth, USA Networks and HRBS president.

—CL
Network earnings were down, due to lower ratings.

**Bonneville International Corp.** is entering the nation's capital, buying oldies-formatted WXTR-FM in suburban Waldorf, Md., from Robert F.X. Sillerman's SFX Broadcasting Inc. It also bought WDSI(AM) Frederick-WXVR(FM) Brad- dock Heights, Md. All three sold for $25 million, broker Paul T. Leonard of Star Media Group said last Friday. SFX has not yet closed on its purchase of the stations from Liberty Broadcasting Inc. When it does, it will simultaneously turn over the three stations to Bonneville, which declined comment on possible format changes. SFX, however, apparently is not completely bowing out of the D.C. market; it's holding on to Liberty's WPRS(FM) Annapolis, Md. The alternative rocker is said to turn a healthy profit.

**Senate Commerce Committee Chairman Larry Pressler (R-S.D.)** has scheduled a hearing on spectrum policy for May 23. Broadcasters are expected to testify at what may be the first hearing on Pressler's self-described "grand spectrum bill." Pressler, who is up for re-election, has said it is unlikely that there is enough time in the current legislative term to pass a spectrum bill.

**NAB warned** its members last week that Representative Joseph Kennedy (D-Mass.) is working on a proposal to require warnings on all beer and wine advertisements.

**Former MTV personality Karen Duffy** has been tapped as one of several co-hosts for King World Productions' upcoming first-run strip *Off the Hook*, which has been revamped with a new team of hosts since the project was unveiled late last year. King World officials declined comment, but Duffy's agent says he's just waiting to hear from King World if the show is a firm "go" for fall. Actress Kathy Wagner, daughter of Robert Wagner and the late Natalie Wood, also appears as a co-host in the pilot for the music-oriented magazine.

**Combined local and national radio ad revenue climbed an average 4% in March 1996 compared with March 1995,** according to the Radio Advertising Bureau. For the first three months of 1996, the RAB reported combined revenue pacing an average 6% during the same period last year.

**Sports Illustrated Television (SITV) and the National Basketball Association will offer *NBA on Demand* for Time Warner's Full Service Network interactive test trial in Orlando, Fla. The on-demand program package, comprising a collection of vintage NBA videos called *NBA Entertainment Theater*, will function like a VCR, letting FSN subscribers fast-forward, rewind or pause the programming. NBA is SITV's second professional on-demand sports package; last fall FSN introduced *NFL on Demand*, comprising *NFL Double Header*, *Highlights on Demand* and *NFL Films Theater*.

**TCI and Microsoft have partnered with Brooklyn Union Gas Co. and Pacific Gas & Electric Co. in an energy information services trial in Walnut Creek, Calif.** The test will allow consumers to monitor and manage household energy consumption by personal computer. Pacific Gas software is connected to a wireless remote and a TCI set-top box. A Microsoft multimedia operating system connects the interactive services to a television interface. The trial eventually will reach 1,000 homes in the San Francisco Bay area. Brooklyn Union will run the same test in approximately 100 New York–market homes later this year.

"I thought maybe I might be helpful during the sweeps...I impersonate members of the clergy."
**Odoius comparisons**

At last week’s NCTA convention, two of the industry’s erstwhile adversaries, Vice President Gore and FCC Chairman Hundt, had nothing but nice things to say. “You are helping the country meet the goal of delivering the benefits of the communications revolution to all our children,” said Hundt. Gore praised the industry for its “good corporate citizenship,” and both cited cable for its children’s programming, free airtime to candidates, information campaigns about TV violence, and embracing the V-chip.

For an industry that has been cast as the villain in Washington—as much for its runaway success as for any transgression—it was a welcome respite. And an earned one.

The Vice President and Mr. Hundt were off course, of course, when they sought to use cable’s public service to diminish broadcasting’s. You cannot compare a medium using hundreds of channels to a medium confined to one. You cannot contrast what happens in a niche to what happens in the mainstream. You cannot put side by side a system for which all in the audience pay something and one for which the audience pays nothing at all.

We’re all for broadcasting and cable duking it out in the marketplace and in the court of public opinion. They shouldn’t be set against each other by the U.S. government.

**First things first**

Now that the digital spectrum is secured, broadcasters and policymakers are worrying about the return spectrum—the analog spectrum that is to be returned for auction once the digital beachhead is established.

The administration’s plan calls for a 2005 return, with the auction three years previous (and anticipated to produce $17 billion). The catch-22: If the auction failed to produce that sum, broadcasters would have to make up the difference.

Senators John McCain (R-Ariz.) and Phil Gramm (R-Tex.) would give broadcasters 10 years to return the analog spectrum without penalty, with an escalating scale of payments up to a certain return at year 15.

Senator Dan Coats (R-Ind.) would allow broadcasters to keep the analog spectrum until digital penetration hit 80%.

If ever carts were ahead of the horse, these are. There’s no analyst in America who can project with certainty the growth of digital. And the notion of penalizing broadcasters because the transition moves more slowly than Washington would like, or because someone else puts a lower value on the spectrum than the current guess, is pure looking glass.

What Washington can do, if it will, is accelerate the process of converting to digital. The FCC has been sitting on the standard-setting process since November. Senators Dole and Pressler both have a hold on the FCC’s spectrum allocations; there would be more than symbolic value in their releasing the commission from a promise to go slow. The faster the first adapters get on the air with digital, and the showrooms fill with sets, the sooner analog can be consigned to memory and the spectrum turned to cash.

**A tale of two quotations**

“Freedom of the press is guaranteed only to those who own one.”

A.J. Liebling said that, and he was dead right. Disney owns the press (in this case WABC(AM) New York) and was completely within its rights—as well as its responsibilities—in firing Bob Grant for airing opinions offensive to anyone you would want to know. Those who find Grant’s First Amendment rights violated don’t know the Constitution.

WOR(AM) New York is now completely within its First Amendment orbit in offering house room to the Grant dias tribes. It was of that station’s actions that Voltai re said: “I disagree with what you say, but I will defend to the death your right to say it.”
Thanks to you...

Broadcasting & Cable's paid circulation is at an all time high!

Our readers have voted with their dollars to declare Broadcasting & Cable the newsiest, most valuable and most welcome publication serving the television industry.

Thanks to you, we ended 1995 with 29,075 in paid circulation — an all time high and twice the paid headcount of any other television trade publication.

Our editors continue their commitment to give you the most timely industry news along with the most professional analysis. As we strive to make Broadcasting & Cable better and better, it's nice to see you have noticed our dedication.

Our thanks for your continued support.
A strong concentration of affluent, highly educated, performance oriented consumers has arrived.

And they want jazz.

The instrument to attract, reach, and keep this audience is **BET on Jazz: The Cable Jazz Channel.**
