**Cover Story**

**Top 25 TV station groups** The merger of last year’s fifth- and ninth-largest TV station groups has produced a clear leader in coverage: Westinghouse/CBS. But that giant combo won’t be lonely at the top. Last year’s number four, Tribune, rose to number two through the acquisition of Renaissance, and a deal with New World helped NBC keep its third-place status. Despite ABC’s merger with Disney, the network fell from first to fourth place on the list. / 12 Cover by David R. Boruck!
Tribune Co.'s $1.13 billion cash purchase of Renaissance Communications will extend Tribune's reach into arguably more households than any other TV group owner.

Under the deal, which is subject to FCC and federal antitrust review, Tribune will acquire four Fox and two WB Network affiliates. Tribune's holdings will grow to 16 TVs that cover 33.374% of the nation's TV households. Including WBDC(Washington, which Tribune has an option to acquire, that coverage would be 35.4%.

Whether Tribune is the top group depends on who's counting. The FCC lowers a group's reach by discounting the reach of UHFs by half. By the FCC's count—and by Broadcasting & Cable's exclusive ranking of the top 25 TV groups—Tribune actually reaches 24.963% of U.S. households. Westinghouse/CBS wins in that category with 30.95% (see list, page 12).

By any measure, the advantage of wide household reach should pay off handsomely for Tribune's programing unit, Tribune Entertainment (see page 9). The deal, the biggest in company history, is "a great opportunity for us," says Jim Dowdle, Tribune's executive vice president/media operations. "It greatly enhances our distribution system and...we have much room to grow."

Likewise, there's plenty of room for programing on Tribune/Renaissance stations. All 17 are WB or Fox affiliates, except WGNX(TV) Atlanta,

Reflections of the Renaissance man

Renaissance Communications Chairman Michael Finkelstein can afford to sit back and calculate the rate of return on the original $35 million investment in his company: 43% annually. Finkelstein has that luxury now that he has sold Renaissance's six TV stations to Tribune Co. for $1.13 billion.

"I don't think I'm looking for a job," he said with a laugh last Tuesday, the day after the announcement of the deal.

Renaissance actually had been looking to grow. Given the heated TV activity of the past year, "we weren't going to stand still," Finkelstein says. "We were quite prepared to be a consolidator." However, that wasn't happening, he says.

"There aren't many strategic assets left."

Renaissance last year lost a major public battle for several strategic assets: WCMH-TV Columbus, Ohio; WJAR-TV Providence, R.I.; and WCN-TV Raleigh-Durham, N.C. NBC Inc. outbid Renaissance for the stations, offering $396 million. "That was very frustrating for us," Finkelstein says. Renaissance also was reported as a merger candidate for Sinclair Broadcast Group Inc., which in April bought River City Broadcasting LP for $1.2 billion.

As Renaissance was searching for other stations to buy, it kept meeting up with Tribune, Finkelstein says. He feels comfortable that his stations are going to Tribune: "Tribune is basically a broadcast company, like we are."

Finkelstein founded Renaissance in 1989 with 60% investor Warburg, Pincus Capital Co. The company went public in 1994. —EAR

which is CBS, and WGNO(TV) New Orleans, which is ABC. Tribune has a 12.5% equity interest in the WB that could grow to 25%.

"Programming needs for WB and Fox stations are very similar," says Dennis FitzSimons, executive VP, Tribune Broadcasting. Syndication savings are expected to begin taking effect during the fall 1998 season. "Our main emphasis will be on programming," he says.

Despite Tribune's holdings in WB, Tribune President John Madigan says the company will maintain the Renaissance stations' Fox affiliations. In fact, Tribune will seek long-term contracts with Fox once the stations' affiliations expire in 1998, Madigan says. "There are WB affiliates in each of those markets," he notes.

"I don't think that's inconsistent" for WB investor Tribune to own Fox stations, says Steve Pruett, senior vice president, Communications Equity Associates. "I don't think that's as important as it is to own the assets."

And Renaissance provides a "collection of the best assets that are out there," Pruett says.

Renaissance's stations are Fox affiliates KTXL(TV) Sacramento, Calif.; WTIC-TV Hartford, Conn.; WXIN(TV) Indianapolis; WPMT(TV) York/Harrisburg, Pa., and WB affiliates WDDL(TV) Miami and KDF(TV) Dallas. As part of the deal, Tribune gets 100% of the voting power over WTIC-TV. Renaissance had held a 98% nonvoting interest in the station.

No station swaps with other companies are anticipated, but "we are positioned to do that if necessary," Madigan says. Observers question whether Tribune will hang on to WPMT York, in particular.

Tribune is paying 13 times Renaissance's projected 1996 cash flow of $85 million, according to Bloomberg Business News (BBN). Tribune projects that to 12 times estimated cash flow of $90 million in 1997, says Senior VP Don Grevesko, Tribune's chief financial officer. He calls that "a reasonable multiple based on recent acquisitions," citing Young Broadcasting Inc.'s purchase of KCAL-TV Los Angeles for 16 times cash flow and NBC Inc.'s payment of 12 1/2 times cash flow for KNSD(TV) San Diego and WVTM-TV Birmingham, Ala.

With the acquisitions, Tribune's debt will double, from $900 million to $2 billion, Grevesko says, but adds that "we're still comfortable with this amount of debt."

Moody's Investors Service isn't quite as comfortable with it, however, lowering the company's long-term senior debt ratings to "A2" from "A1." Moody's says it may cut Tribune's ratings further once the purchase is completed early next year, BBN says.

Although the deal requires Tribune to take on more debt, the diversity offered by Renaissance's stations is a plus, Moody's adds.

The deal "puts us clearly on the top tier of television businesses," FitzSimons says. Tribune's goal has been to acquire stations in the top 30 markets. Renaissance's stations give it five more, for a total 15 stations in the top 30 markets (including Washington).

The deal gives Tribune just one more station in a top 10 market: Dallas, the nation's eighth-largest market. A combined Tribune/Renaissance would have stations in eight of the top 10 markets and 11 of the top 20 (including Washington).

A permanent waiver of the FCC's crossownership rule will be sought to allow Tribune to own Renaissance's WDDL Miami and Tribune's nearby newspaper, the Fort Lauderdale Sun-Sentinel. "We expect to retain the Miami station," says Crane Kenney, Tribune's chief legal officer.

Tribune also will seek permanent waivers for "slight overlaps" between Renaissance's Hartford station and Tribune's WPIX(TV) New York and WLIW-TV Cambridge/Boston, Mass., and for Renaissance's Harrisburg station and Tribune's Philadelphia station, WPHT(TV).

This deal labels Tribune as an "aggressive, growth-oriented company," Madigan says. Publishing, which
had accounted for two-thirds of the company’s revenue, now will be superseded by broadcast revenue. “Our largest segment,” broadcasting, will account for 48% of Tribune’s cash flow, Grenesko says.

With the announcement of the deal last Monday, Renaissance stock hit a 52-week high of 34 1/8. It closed last Wednesday at 34. Tribune stock, meanwhile, rose to 73 5/8 last Monday from the previous Friday’s closing of 72 5/8. It closed last Wednesday at 73 7/8.

Renaissance is largely owned by Warburg, Pincus, Capital Co. LP. “We have a firm commitment” that Warburg Pincus will sell, Madigan says. Renaissance Chairman Michael Finkelstein says he will strike out on his own rather than go to work for Tribune (see box at left).

Of Renaissance management, FitzSimons says, “Their margins are good. It’s been a very well run group.” However, Tribune expects to shave $3 million-$4 million a year in corporate overhead, Grenesko says.

Renaissance buy should boost Tribune Entertainment

Programing division gains six new customers with company’s acquisition of stations

By Cynthia Littleton

Tribune Entertainment may gain the most from its parent company’s move to become the largest TV station group in the country.

Tribune Broadcasting’s programing unit already had an ambitious development slate for 1997 before it added six new in-house customers last week. Tribune’s purchase of Renaissance Communications provides a shot in the arm for the entertainment division, capping a transition that began when former president Rick Jacobson departed for Fox’s Twentieth Television last year.

“We have been much more aggressive in terms of our development slate,” says Dick Askin, the former head of Samuel Goldwyn Television, who succeeded Jacobson late last year. “We have programing for a variety of dayparts in various stages of development.”

Corporate synergy helped at least one of those projects get off the ground. Tribune Entertainment is developing a weekly action hour based on Tribune Co.’s long-running comic strip Terry and the Pirates. Tribune Media, moreover, handles all print advertising for the entertainment wing, whose existing slate includes two series Askin brought from Goldwyn: Flipper and Gladiators 2000. Tribune also is launching a dating game show, Bzzz!, this fall.

At the same time, the stations make Tribune Entertainment an attractive partner for first-run co-ventures. Tribune is teaming with All American Television for the spring launch of two game show revivals, Match Game and Tattletales. Tribune is expected to begin selling the block in August.

Tribune also may team again with King World Productions on a new first-run project. The two companies joined forces last January when King World took over station sales for The Geraldio Rivera Show, prompting speculation that Tribune was getting out of the distribution business.

But with or without partners, Askin’s goal is to bring three or four new shows to next year’s NATPE convention, including a daytime strip companion to the game shows. The needs of Tribune’s stations drive the development slate, but programing decisions are still made by general managers on a market-by-market basis.

“Tribune has seen the highs and lows of having its own syndication operation,” Askin says. “My job is to give them as many top-tier projects and development deals to choose from as possible.”

That process has been helped by the entertainment unit’s recent move from Tribune’s home base in Chicago to the KTLA(TV) lot in Hollywood. Insiders say it marks a significant strategy shift for Tribune. High-level micromanagement has been blamed by some for Tribune Entertainment’s spotty performance during the past few years.

“With the creative community based [in Los Angeles], it makes sense to have Tribune Entertainment’s headquarters there,” says Dennis FitzSimons, executive vice president of Tribune Broadcasting. “We’re not going to try to run everything from Chicago.”
**FCC postpones plan to ration UHF spectrum**

Quello, Chong want more time to review proposal

By Chris McConnell
and Christopher Stern

FCC officials have placed their spectrum “mini-auction” proposal on hold.

Commissioner James Quello last week pulled the item from the FCC’s July 11 open-meeting agenda, citing concerns over the plan’s potential impact on digital TV service, sources say. The mini-auction plan, which is part of the FCC proposal to match each TV broadcaster with a new channel for digital television, calls for assigning fewer than 30 new digital licenses between channels 60 and 69.

The rest of the spectrum could then be reallocated and auctioned for other services such as mobile communications. New operators in the band would have to avoid interfering with TV stations using the spectrum. In addition to the planned digital stations, 100 analog stations are now using the spectrum.

Quello’s office last week said that it wanted more time to review the proposal. Also requesting a delay was the office of Commissioner Rachelle Chong.

Sources say that neither commissioner has decided whether to support the proposal for channels 60-69. Officials also say that the proposal could still make the commission’s July 25 meeting.

The plan to clear the upper UHF band for an up-front auction has drawn strong protests from broadcasters who fear the loss of spectrum will hinder their ability to reach audiences in the digital age.

“They’re making it harder for us,” says Victor Tawil, vice president of the Association for Maximum Service Television. “You’re taking 15% of the spectrum off the table.”

“We’re not interested in talking about auctions,” says the National Association of Broadcasters’ Lynn Claudy, who cites potential problems of interference and reduced service areas.

Others would like to see the spectrum go on the auction block. The Association of Public Safety Communications Officials this month wrote FCC Chairman Reed Hundt to push for reallocating the spectrum to public safety radio communications. Sources also say that PBS President Ervin Duggan has visited FCC officials to support the mini-auction, which could raise money to support public television.

Also eying the channels as a potential revenue source for public broadcasting is House Telecommunications Subcommittee Chairman Jack Fields (R-Texas). He already has introduced a bill that would auction vacant noncommercial spectrum to finance noncommercial broadcasting.

In a letter to the FCC, also signed by Representative Ed Markey (D-Mass.), Field asked 15 questions about the impact of an auction of channels 60-69.

In response to the letter last week, FCC officials said their studies indicate it will be possible to locate most new digital channels below channel 60. “This will allow us to make unassigned spectrum on these channels available for other uses very soon.”

The commission also said that under its proposed table of digital TV allotments, 63% of all TV stations would receive a digital channel replicating 99% or more of their existing service area. The FCC said 93% of all stations would receive a digital channel replicating at least 90% of their existing service area.

Senator John McCain (R-Ariz.) favors an auction of the 60-69 channels and made his views known last week in a Senate-floor speech. “I can see no reason whatsoever for an auction of channels 60-69 not to occur. Any effort to thwart an auction of these channels is being done in direct contradiction of the best interest of the American people.”

McCain’s statement came after leading members of the Senate and the House wrote a letter to the FCC which, among other recommendations, “strongly discouraged” the commission from auctioning 60-69. Auction proponents, however, cite Senate Commerce Committee Chairman Larry Pressler’s (R-S.D.) refusal to sign the letter.

---

**TCI, TelQuest Canadian satellite plans on regulatory rocks**

TCI and TelQuest’s efforts to beam DBS signals to the U.S. from Canadian satellites got a thumbs-down from the Clinton administration last week.

In a July 1 letter to the FCC, administration officials cited several concerns, including potential “anti-competitive behavior” by TCI. The letter was signed by the departments of Commerce, State and Justice, and the Office of the U.S. Trade Representative.

“There is some concern that TCI, given its market position, may have an incentive to engage in anticompetitive behavior in parts of the U.S. market,” the letter stated. TCI is the largest cable operator in the U.S.

Federal officials also cited Canada’s refusal to allow U.S. companies to provide service in Canada as a key reason for refusing the requests. Other concerns cited by the letter are Canadian restrictions on U.S. programing and potential conflicts with international trade agreements.

The letter is not binding on the FCC.

Scott Harris, a former FCC official in charge of satellite policy, said last week that the administration’s letter effectively has killed TCI’s efforts to procure a Canadian satellite for U.S. service. “The TCI/Canada deal is for now dead and buried.” Harris said that a change in Canada’s own trade policy is the only thing that could resurrect the transaction.

TelQuest called the letter “disappointing,” but also said that it was not the final word, adding, “TelQuest’s applications are being held hostage to the larger trade issues between the U.S. and Canada.”

---

**News**

July 8 1996 Broadcasting & Cable
Evans’s move may signal Fox reshuffling

Hill may be asked to re-energize network

By Cynthia Littleton

David Evans, former president of Fox Television, was named head of News Corp.’s worldwide satellite ventures last week in a move that may signal further reshuffling of executive duties at Fox.

Evans’s appointment as News Corp.’s executive vice president, office of the chairman, was old news to Fox insiders, who say that he has been focusing on the international expansion of Fox and News Corp. programming services. In his new post Evans will coordinate activities of News Corp.’s satellite broadcasting systems and continue to serve as president of Sky Latin America.

Evans, who was named president of Fox in August 1994, reports to Rupert Murdoch, chairman of News Corp. Evans’s exit from Fox renewed speculation that David Hill, president of Fox Sports, will be promoted to a newly created post in an effort to reduce the number of division heads reporting to Chase Carey, CEO of Fox Television.

Oversight for the Fox Children’s Network, entertainment and other areas was added to Carey’s watch after Fox Broadcasting Chairman Lucie Salhany left the network in July 1994. Sources say Carey wants to spend more time on strategic planning. He is credited with brokering Fox’s ground-breaking affiliation pact with New World Communications Group, its pact with the NFL and other critical deals.

Hill, meanwhile, is being considered for a larger role with the network in part because of his skill at motivating and energizing his staff. Although the network had a strong May sweeps, morale is said to be flagging in some areas. On screen, Fox hasn’t fielded a new hit series since The X-Files in 1993-94.

LOS ANGELES

Diller looks local

Barry Diller’s vision for his Silver King Communications station group may best be described at the moment as “localcasting,” insiders say. Ever the contrarian, Diller’s goal is to fill the local programming void, for viewers and advertisers, that is widening as broadcast and cable networks intensify efforts to build global platforms. Diller and his new executive team of former Fox senior VPs Adam Ware and Doug Binzak are tight-lipped about what that local alternative will look like, but advertiser-sponsored local events surely will be part of the mix when the 12 stations drop the Diller-owned Home Shopping Network by the end of next year.

One thing Silver King isn’t trying to be is a national network—yet. Speculation that Diller wants to bring other HSN broadcast affiliates into the Silver King fold next year after HSN converts to purely cable distribution is flat-out wrong. “The old definitions of networks and affiliates don’t apply to the business we’re trying to build,” says Ware.

DENVER

Rethinking WSN

Liberty Media—owned Women’s Sports & Entertainment Network (WSN) may not have much of a cable future now that Liberty, News Corp. and Tele-Communications Inc. (TCI) are in the midst of merging their sports properties into Fox Sports Net. The future of WSN, which gained sheltered launch on Liberty’s regional sports networks in 1995, is “being re-evaluated” in the wake of the Liberty/Fox sports alliance, says Liberty spokesman Renaldo Leonard. In addition, this month WSN was pulled from TCI’s sampler network IntroTV! to make room for other proposed cable networks.

LOS ANGELES

In the works at Rysher

Rysher Entertainment’s syndicated program development slate for 1997 includes at least one talk show and one game show. The company is said to be developing a talk show with Naomi Judd. And former Fox programming wunderkind Steve Chao reportedly is developing a game show called Icon for Rysher. Reached last week, Chao referred questions about the project to Rysher officials, who weren’t available at deadline.

Open mouth, insert foot

Creative Artists Agency has been shopping pop singer Donny Osmond as a possible talk show host, but Osmond didn’t help his cause during a recent appearance on The Rosie O’Donnell Show. Osmond was telling O’Donnell, a longtime fan, of an upcoming concert during which he’ll parachute from a plane into the audience. O’Donnell offered to come along, “and be your body guard.” Osmond’s response: “I don’t think the plane will hold that much weight.” Reaction from television programmers and station types was that Osmond may have killed any future talk show career. “He thought he was being funny, but it sounded nasty,” said one. Osmond is said to be “extremely remorseful,” over the incident, apologizing and showering O’Donnell with flowers. According to a source at Warner, which distributes Rosie, “she feels bad for the guy. He really stuck his foot in his mouth.”

NEW YORK

What’s next for CBS?

Now that it has Telenoticias under its belt (Broadcasting & Cable, July 1), what’s next for Westinghouse/CBS in the cable department? That’s the question du jour, what with all the other networks—NBC, Fox and ABC—having either outlined or implemented strategies. It’s a question made even more timely with CBS executives telling affiliates a retransmission consent plan will be ready by early July. So far, CBS is mum on its cable plans beyond calling the Telenoticias buy “the first in a series of steps we plan to expand CBS into cable and satellite markets.” And cable MSOs are either in the dark or taking the “no comment” tack.
A year of mergers and station trading, spurred by government deregulation, has shuffled Broadcasting & Cable’s exclusive annual ranking of the top 25 TV groups.

Westinghouse/CBS, the product of a merger between 1995’s fifth- and ninth-ranked groups, popped to the top of the 1996 chart, replacing Capital Cities/ABC as the number-one station group.

And by virtue of its $1.13 billion purchase of Renaissance Broadcasting last week, Tribune Co. moved up from fourth to second place.

NBC managed to hold on to the third slot by purchasing two stations from 11th-ranked New World, while Capital Cities/ABC, now merged into the Disney entertainment conglomerate, settled for fourth. Fox dropped from second to fifth.

The groups are ranked on the percentage their stations collectively reach of the nation’s 95.3 million TV homes. Consistent with the FCC ownership rules, UHF stations are credited only for half the homes in their markets. Also in line with the rules, stations controlled through local marketing agreements and time brokerage agreements are not counted.

By this measure, top-ranked Westinghouse/CBS boasted 31% coverage, nearly six points ahead of number-two Tribune. Number-25 Allbritton’s coverage stops just short of 4%.

Other ranking methods produce different results. If UHF stations are credited with full coverage and LMA and TBA stations are counted, Paxson Communications is the top group, with 39.2% coverage. Tribune is second, at 35.34%, followed by Westinghouse/CBS, 31.9%; Silver King, 31.1%; and Fox, 27.6%.

Paxson’s and Silver King’s lofty rankings may be overstated. They rely on crediting their fringe market UHF stations with full coverage of their markets. For practical purpos-

es, Tribune is number one.

By sheer number of stations, Sinclair is the largest group, with 29, including seven LMAs. Paxson is second, with 27, including 11 LMAs or TBAs.

Many of the changes in the 1996 rankings can be traced to Washington, where the FCC and Congress loosened ownership restrictions. Through the 1996 Telecommunications Act, Congress eliminated the numerical cap of 12 on station ownership and raised the coverage cap from 25% to 35%. That action (or the anticipation of it) permitted Westinghouse to absorb CBS, Tribune to buy Renaissance and Sinclair to acquire River City.

The FCC’s repeal of rules that barred the common ownership of one of the Big Three broadcast networks and major studios cleared the way for Disney’s purchase of Capital Cities/ABC.

Consolidation has not nearly affected TV to the extent that it has radio (see the Top 25 Radio Groups, Broadcasting & Cable, July 1). That may be due in large part to Congress’s decision to keep in place the FCC duopoly rule, which limits each TV broadcaster to just one station per market.

How to read the Top 25

In the facing list that runs through page 20, each station is followed by affiliation and channel, market (DMA) rank and the percentage of U.S. households in that market, according to Nielsen’s January 1996 estimates. The right-hand column shows the coverage upon which the rankings are based. Consistent with FCC rules, UHF stations are credited for only half the market homes, and stations controlled through local marketing or similar agreements are not counted. Groups controlling more than one station in a market are credited only once for that market’s homes. Numbers in italics do not count toward the group’s total.

### The week of mega-deals

It took everyone by surprise. Viewers of ABC's Good Morning America on July 31, 1995, were the first to hear the news: Walt Disney Co. had agreed to purchase Capital Cities/ABC for $18.5 billion, completely overshadowing the week's other media mega-merger—Westinghouse Electric's anticipated $5.4 billion bid for CBS.

With the acquisition of the ABC network and stations, Disney created what may become the model for vertically integrated media companies, able not only to produce shows but to deliver them all the way to America's living rooms. Disney also was enticed by the endless promotional and marketing opportunities. Clearing the way for the deal was the demise of FCC rules barring common ownership of major studios and broadcast networks.

The Westinghouse/CBS deal involved considerably fewer dollars, but it produced the largest TV group—15 stations covering 33% of the nation's TV homes. Both figures exceeded the ownership cap in place, but the deal correctly anticipated the loosening of the federal ownership caps.

After eight years in control of CBS, Larry Tisch wanted to cash out. When Westinghouse met his asking price, he quickly cut the deal. Westinghouse CEO Michael Jordan had reviewed the many businesses in his conglomerate and concluded that broadcasting had the most attractive upside. He underscored the company's commitment to broadcasting last month, purchasing Infinity Broadcasting to create a radio behemoth of 83 stations in 15 top markets.

Once upon a time, the television business was simple. Advertisers knew what they wanted. Government knew what the rules should be. The decision process was less frantic. Profits, it seemed, were easily obtainable if you just did your job well.

Today, watch out! Everything is changing at once. Cable faces onerous regulation. Two networks have changed hands. Affiliations are changing too easily. FIN SYN is repealed. The prime-time access rule is gone. Production costs are going through the roof. Advertisers are eyeing the internet.

What next? To do business you need to understand new advertiser expectations. You need to understand new media choices and how to reposition television for tomorrow. You need to understand what’s going on in all media...
You need information. And MEDIAWEEK has lots of it, cutting through the complexity to redefine the essence of your business: audience size, quality, and deliverability; advertising expenditures, objectives and efficiencies.

All media. MEDIAWEEK analyzes the content of all media. The audiences. The efficiencies. The sales opportunities. Plus the trends, the data and the business insights you need to be a media expert in today’s market.

Join the club. Many of your colleagues across the country – programmers, broadcasters, reps and competitors – already subscribe... in Boston, New York, Washington, Miami, Chicago, Los Angeles and everywhere else. To stay informed and sell effectively you need to read MEDIAWEEK every week. Why not try a low-cost trial subscription? Just $39 for six months. We’re sure you’ll soon come to depend on it. Because television isn’t what it was...once upon a time.

To subscribe, call 1-800-722-6658.

Supreme Court raises questions, offers few answers

Lawyers debate impact of cable indecency decision

By Chris McConnell

In its muddled set of holdings on cable indecency late last month the Supreme Court offered some hints, but few clear answers, on the future of scrambling requirements, must carry and other rules.

A series of majority opinions in Denver Area Educational Telecommunications Consortium et al. v. FCC held that cable operators could refuse to carry on leased-access channels programs that they deem indecent. But the court also said operators could not be forced to scramble indecent leased-access programs that they do not refuse.

Additionally, the court struck down a federal provision that allowed cable operators to refuse carriage to indecent programs on public, educational and governemnt (PEG) channels.

"I don't think that anyone on any side of these cases was doing high-fives on Friday night," says the Media Access Project's Andrew Schwartzman. "It shows the Supreme Court at war over a case-by-case-by-case analysis," says NCTA's Dan Brenner. Brenner and others think that Justice Stephen Breyer's 39-page opinion demonstrated his reluctance to set precedents for other cases.

But lawyers interviewed were not reluctant to speculate on the impact of this decision on at least five other cases:

Cable scrambling rules
The 1996 Telecommunications Act requires cable operators to scramble the audio and video of "sexually explicit" programming channels so that nonsubscribers cannot receive them. Operators not scrambling the audio and video are barred from delivering the channels between 6 a.m. and 10 p.m., under the FCC rule implementing the clause. Playboy Entertainment and Spice Networks have challenged the rule and so far have obtained a temporary injunction from a U.S. district court in Delaware barring the rule from taking effect. The case will go directly to the Supreme Court if the lower court finds the provisions unconstitutional.

Justice Breyer said in his Denver opinion that the scrambling rule and V-chip provisions "are significantly less restrictive" than the leased-access scrambling rule struck down in the court's decision.

Several lawyers are reluctant, however, to take that comment as a strong indication that the court will uphold the scrambling requirement.

"I wouldn't read too much into that," says Robert Corn-Revere, a lawyer representing Playboy in that company's challenge to the scrambling rule, noting the decision's limitations on government restrictions.

"The narrow tailoring [of government restrictions] is going to be a big issue in all these cases," says First Amendment lawyer Timothy Dyk. Schwartzman says that Playboy's challenge may show the scrambling requirement to be more restrictive than the V-chip.

Must carry
Justices are expected to hear this fall a challenge to the requirement that cable systems carry local broadcasters opting for mandatory carriage.

Lawyers suggest that Breyer, the only justice who has not previously reviewed the law, could be a swing vote in the court's next must-carry decision. Some lawyers representing cable clients say they are encouraged by his support for the least restrictive means possible to protect children.

Others point to another footnote from another opinion in the case in which Chief Justice William Rehnquist and Justices Antonin Scalia and Clarence Thomas pointed to DBS and other cable competitors to suggest that local cable operators no longer merit different treatment from other "First Amendment speakers."

The NAB's Jack Goodman counters that the must-carry case raises economic issues regarding protection for broadcasters that are not present in the indecency case. "These are very different cases," Goodman says. Dyk says he does not see "any tea leaves there to be read" on the potential must-carry outcome.

Leased/PEG access channels
In addition to challenging must-carry provisions, cable operators are challenging the constitutionality of requiring leased- and PEG access channels in a case pending before the U.S. Court of Appeals in Washington.

Cable lawyer Frank Lloyd cites another footnote from the Rehnquist/Scalia/Thomas opinion in which the justices cited arguments against the constitutionality of requiring the channels. "That's a good sign," says another cable industry lawyer.

But others voice doubts that a majority of the court will find the requirement unconstitutional. One lawyer points to positive statements about leased-access channels found in the majority opinion.

Antiabortion advertising
The FCC has said that broadcasters can
schedule potentially indecent antiabortion ads for times when children are less likely to be in the audience. A challenge to that ruling from a political candidate who sought to air graphic antiabortion ads is pending in the U.S. Court of Appeals in Washington.

Some lawyers draw a comparison between the FCC's ruling on that issue and the provision, upheld by the Supreme Court, that cable operators be permitted to reject indecent programming on leased-access channels.

Although not specifically discussing the antiabortion issue, Dyk notes that the court recognized a substantial government interest in protecting children from indecency.

But Schwartzman, who is representing challengers to the FCC's antiabortion ad ruling, maintains that the case does not involve a constitutional question, but rather the commission's interpretation of a law.

Internet indecency
A federal appeals court in Philadelphia last month barred enforcement of a law prohibiting distribution of indecent material over the Internet. The case goes next to the Supreme Court.

Discussing the Supreme Court's reluctance to issue a broad decision, several lawyers point to Justice David Souter's comment that the court "should be shy about saying the final word today about what will be acceptable tomorrow."

Souter quoted from a Yale law review article on "cyberlaw," saying, "If we had to decide today...just what the First Amendment should mean in cyberspace...we would get it fundamentally wrong."

Others say that the cable ruling could still affect a review of the Internet case. Although the lower court criticized the indecency standard's "vagueness," the Supreme Court found that the definition met constitutional standards. Dyk says a key issue will be whether the decision to uphold the indecency definition will carry over from cable indecency to Internet indecency.

Pro-Democrat media in violation
Republican presidential candidate Bob Dole said last week that the media is so pro-Democrat that it may be in violation of FCC rules. "My view is—as I've said time and time again—the liberal media...goes right back to the Democratic line. I mean, you may be violating FCC regulations by always sticking up for the Democrats, advertising their line on your show," Dole said during an appearance on the Today show. Dole is upset over reports about his alleged close ties to the tobacco industry. "As far as I know, they're in a legal business, and I assume that maybe NBC may be sponsored in some part by tobacco companies," he said.

Cable Services reorganizing
The FCC announced a major reorganization of the Cable Services Bureau last week with eight people getting new jobs. The changes come in the wake of Mary Ellen Burns's departure from the bureau to become deputy chief of the Mass Media Bureau. It also comes after Brian Foucart, special assistant to Bureau Chief Meredith Jones, left the commission for a position with the Clinton/Gore re-election campaign. Foucart handled negotiations with cable companies over the so-called social compact settlements over rate regulation. In his place, the settlements will be handled by associate bureau chiefs Barbara Esbin and Marjorie Greene. Other appointments include: Elizabeth Beaty, chief of the financial analysis division; Gary Laden, chief of the consumer protection and competition division; JoAnn Lucanik, chief of the policy and rules division; Margo Domon, assistant bureau chief, office of government and public outreach; Michele Perko, director, government outreach, office of government and public outreach, and Morgan Broman, director, media relations.

Justice appeals indecency ruling
Justice Department lawyers appealed the recent Internet indecency ruling to the Supreme Court last week. Citing First Amendment concerns, a lower court threw out the Communications Decency Act last month. The CDA, enacted as part of the Telecommunications Act of 1996, effectively banned pornography on the Internet. When Congress passed the CDA last January, it also included a provision that put it on the fast track for Supreme Court review.

Minority ownership flat
Minority broadcast ownership totals 330 stations, or 2.9% of the market, according to the latest National Telecommunications and Information Administration study. Minority ownership, which covers properties owned by African Americans, Hispanics, Asians and Native Americans, has remained stable during the past three years, says the NTIA. According to the report, 175 of 4,906 AM stations are owned by minorities, 118 of 5,385 FM stations, and 37 of 1,221 commercial TV stations.

'Dateline,' Larry King criticized
Also last week, the conservative Media Research Center criticized Dateline NBC and CNN's Larry King Live for canceling interviews with author and former FBI agent Gary Aldrich. Among the claims in Aldrich's book, "Unlimited Access," is that President Clinton evaded Secret Service agents in order to make late-night forays to a Washington hotel. The White House says the book is not credible and that Aldrich should not be given a platform in the mass media. Pointing to the networks' willingness to air Anita Hill's "unproven allegations" of sexual harassment by Supreme Court nominee Clarence Thomas and author Kitty Kelley's book detailing former first lady Nancy Reagan's alleged use of astrology to plan President Reagan's schedule, the Media Research Center says there is a double standard at work.
NBC and affiliates 'agree to disagree'

Two sides are far apart on using TV network to cross-promote MSNBC

By Steve McClellan

With one week before launch, NBC and its affiliates are still at odds over the issue of how the network will cross-promote MSNBC, its new cable-online venture with Microsoft.

Last week, NBC Network Television President Neil Braun responded to a letter from the affiliate board a week earlier that outlined affiliate concerns with cross-promoting MSNBC (particularly day-and-date or tune-in promotions) on NBC. Some affiliates fear that such promotions will drive viewership away from their stations.

The bottom line, says one network insider, is that the network and the affiliates will have to "agree to disagree" on the issue for the time being. The network intends to do tune-in promotion, but Braun told affiliates that NBC will commission a research project to try to ascertain the net impact of such promotion on local station audience flow.

"Affiliates are upset by this issue of cross-promotion," says Ken Elkins, president of Pulitzer Broadcasting and chairman of the NBC affiliates advisory board. "It's a mistake," he said, as were trade magazine advertisements several weeks ago that said network news stars "Tom, Katie, Bryant, Jane and Brian will start a revolution" with their participation in MSNBC.

"The affiliates and I will have a lot of objections if they try to use those folks interchangeably with MSNBC and the network," says Elkins. Others agreed, citing tune-in promotion as the line in the sand. "I support the MSNBC concept, but the devil is in the details," says Edward L. Munson, general manager of WAVY-TV in Norfolk, Va. "I would have a big problem with day-and-date promotion and would need to have a long discussion with [network executives] before agreeing to do it."

Braun declined to comment, and a network spokesperson said Braun preferred to continue the discussion directly with affiliates. But in his letter, a copy of which was obtained by Broadcasting & Cable, Braun said: "We understand that many affiliates strongly believe tune-in advertising may divert viewership away from their stations. However, there are other affiliates, especially those with LMA's and local cable channels, that believe that careful, clever [two-way] cross-promotions will enhance the station's news image and build its audience."
Gore seeks 3-hour kids programing

Vice President compares TV violence to smoking

By Cynthia Littleton

Vice President Gore compared excessive television violence to cigarette advertising campaigns that subtly encourage kids to smoke, as he again pushed for the three-hour children's educational standard at the ShowBiz Expo in Los Angeles last week.

"Study after study has shown that the link between viewing lots of violent imagery and being violent is becoming as well established as the linkage between smoking and lung cancer," said Gore, who called on the industry to practice good corporate citizenship. "Three hours of educational programing per week really isn't too much to ask." FCC commissioners are on the verge of establishing a three-hour standard on children's educational programing. Stations applying for license renewal would have to demonstrate that they had provided three hours per week or had made other efforts toward education—such as financing children's programing—of approximately equal value.

"Shows like the [Fox Children's Network's] Mighty Morphin Power Rangers are just not good for children," Gore said. "Anybody who's ever seen a young child after they've watched the show understands why.... Shows like the Power Rangers project an image of violence that is simultaneously sugary and sociopathic."

The Vice President was the second White House voice to attack the Power Rangers in recent days. First Lady Hillary Clinton late last month said that the show had no place on any lineup purporting to be children's programing (BROADCASTING & CABLE, July 1).

At the same time, Gore praised the industry for taking a responsible stand on the issue of TV violence. Following a White House meeting with President Clinton last February, industry leaders voluntarily, if begrudgingly, agreed to implement a ratings system to work in conjunction with the V-chip program-blocking device.

Asked if the administration will push to have the V-chip ratings system offer a special designation to children's TV shows that satisfy the three-hour educational standard, Gore told BROADCASTING & CABLE: "I just assumed they would work together in some way."

Gore added that President Clinton will address the V-chip ratings and the children's educational standard in his follow-up meeting with industry leaders by the end of July.

All American goes in-house with licensing, merchandising

All American Communications Inc. has created an in-house licensing and merchandising division. It will develop and oversee those functions for all of AACI's television properties, including those of recently acquired Mark Goodson Productions. Robert Stone, previously with licensing and merchandising agency Meridian Worldwide, will head the new division, which also will seek outside clients.
Valenti calls V-chip 'quick fix'

MPAA head expects TV ratings system by early '97

By Cynthia Littleton

The gatekeeper for television's planned ratings system calls the V-chip a quick-fix political remedy and a poor substitute for parental supervision.

"The V-chip is a charade—[program] labeling is a charade—if parents are now allowing seven-year-olds to watch Friends," said Jack Valenti, president of the Motion Picture Association of America, addressing the ShowBiz Expo's panel on the V-chip late last month. "The V-chip is a quick-fix political remedy. Politicians have learned that their numbers go up if they trash TV."

Valenti, who heads the group that will be implementing the ratings code, expects to be "pilloried and assaulted from all sides" when ratings plans are released next February.

He said the Washington-based implementation group expects to begin focus-group testing in October with a range of approaches. The goal is to present a detailed proposal to industry leaders by December or January.

But, he added, if Congress tries to interfere, "we'll be in court in a minute" to challenge the legislation on constitutional grounds.

"The most interesting act of this play has yet to play out," said Marty Franks, CBS senior vice president, Washington. "When our plan is out there, will Congress refrain from intervening? If the government tries to improve on our system, we will be in court."

Judging by Congress's track record on this hot-button issue, the government may yet have more to say about the design of the ratings system.

Yet, said Jeffrey Cole, director of the University of California-Los Angeles Center for Communication Policy, the networks already were demonstrating a commitment to toning down the violence on television even before use of the V-chip became law.

"The process was moving along pretty smoothly until the V-chip came along," said Cole, who leads a network-sponsored project that monitors TV violence. A year ago, he said, it was unimaginable that the networks could be pushed into a ratings code.

Ownership question in Panama City?

By Elizabeth A. Rathbun

There may be one Paxson too many in Panama City, Fla. According to recently released FCC documents, WMTO-FM Port St. Joe/Panama City is being bought by DP Media Inc., led by president/owner Roslyck C. Paxson and vice president Devon W. Paxson, according to FCC documents. Devon Paxson is the son of Paxson Communications Corp. chairman/owner Lowell W. “Bud” Paxson; Roslyck Paxson is Devon’s wife.

However, Paxson Communications Corp.’s list of radio properties, faxed to Broadcasting & Cable, lists WMTO-FM under “Paxson Communications Corp. radio properties.”

Paxson Communications recently bought WNGE(AM)-WFSY(FM) Panama City and WEBZ(FM) Mexico Beach-Panama City from Timothy O’Brien, who also is selling WMTO-FM (“Changing Hands,” June 3). Including Paxson Communications’ purchases of WCAP-FM Panama City and WPBH(FM) Port St. Joe/Panama City (“Changing Hands,” May 6), the company would own a total six radio stations in Panama City: five FMs and one AM.

Federal law allows broadcasters to own up to five FMs (or five AMs) only in major markets, defined as those with 45 or more stations. Panama City is the nation’s 159th-largest market. Even if Panama City fell into the law’s second-largest category—markets with 30-44 stations—Paxson could own only up to four of a kind there.

Contacted about these numbers, Paxson CFO Arthur D. Tek said WMTO-FM mistakenly was included on the list of company holdings. “That really shouldn’t be on there,” he said. “That is not part of Paxson Communications, and there is no ownership interest.”

Without WMTO-FM, “we’re OK with the four FMs and one AM,” Tek said.

Tek said Bud Paxson may have turned his son on to the station: “Sometimes we find stations that look attractive but they’re more than we can own in a market.... His son will take advantage of it.”

Devon Paxson and his brother Todd in May sold WFSY-FM St. Augustine, Fla., to Paxson Communications Corp. (“Changing Hands,” May 13). They had no other broadcast interests.

Chancellor moves in on Long Island

Shoring up its holdings in New York, Dallas-based Chancellor Broadcasting Co. last week agreed to swap its WFNY-FM Atlantic Beach/Jacksonville and WAFE-FM Jacksonville, Fla., to SFX Broadcasting. By kicking in another $11 million, Chancellor gets SFX’s WBAB-FM Babylon/Long Island and WBLI-FM Patchogue/Long Island, N.Y.

“We always want to cluster in different markets,” says Chancellor CFO Jacques Kerrest. The deal, valued at $108 million, boosts Chancellor from two to six stations on Long Island and more than 40% of radio ad revenue there, he says.

Jacksonville, meanwhile, was “not a market that we were in before.” Chancellor acquired those stations in May from OmniAmerica Group.

Chancellor, recently named a possible merger candidate with Walt Disney, continues on page 52.

Former governor to appear on CNN show to espouse Democratic views and aid party cause by delivering speeches, debating Republican advocates

By Donna Petrozzello

After one year in national syndication, former New York governor Mario Cuomo has exited his regular talk radio show to aid in President Clinton's re-election campaign. To do so, Cuomo will join CNN's Sunday midday Late Edition with Frank Sesno to provide a Democratic view on campaign issues. Cuomo's Republican foil on Late Edition will be former Education secretary William Bennett. Cuomo expects to appear on at least eight Late Edition shows on alternate weekends starting Aug. 11.

In addition, Cuomo will deliver speeches for the Democratic National Committee throughout the campaign, and he has agreed to television and radio debates with Republican advocates. Meanwhile, the former governor continues to practice law full-time with Willkie Farr & Gallagher in New York. These commitments will leave little time to prepare and host his three-hour weekend talk show, Cuomo says.

Although he insists he prefers radio to television for its "intimacy, privacy and casualness," Cuomo says that appearing on CNN will make him "more visible" than does hosting a weekend radio show.

The Mario Cuomo Show served as a linchpin for talk programming unveiled last year by Cuomo's syndicator, SW Networks. The company also launched a talk show hosted by lawyer Alan Dershowitz on the same weekend that it debuted Cuomo in June 1995.

Cuomo scored 50 affiliates with SW, including a Saturday morning slot on WABC(AM) New York. His last live show for the network was scheduled to be broadcast July 6. WABC's vice president of programming, John McConnell, says he will not air Cuomo in reruns after July 6. Other affiliates are expected to follow suit. McConnell expects to announce a replacement for Cuomo's time slot after July 8.

Although SW has not yet announced a replacement for Cuomo, SW President Susan Solomon touted the former governor for encouraging "intelligent, informed discussion on political and social issues."

Liberal-slanted radio talk show hosts, who welcomed Cuomo's Democratic voice to the medium, were surprised by news of his exit. "I've come to like his show," says fellow WABC talker Lynn Samuels. "He's so rational and reasonable." Liberal radio talker Alan Colmes says Cuomo's departure will be "radio's loss."

Yet Cuomo has not abandoned the idea of returning to talk radio, although he agrees that a weekend show is not "the best way to reach the public." He contends, however, that he will "look at all the options after the election."

"When I began, I thought it was possible to have intelligent, interesting, civil discourse between people of different points of view" on radio, Cuomo says. "Now I'm absolutely certain of it."

WAXQ(FM) New York goes classic rock

Although Viacom Broadcasting has not officially sealed its deal to acquire WAXQ(FM) New York from GAF Corp., Viacom flipped the station's format from hard rock to classic rock on July 1. The switch will put pressure on Westinghouse's rock WNEW(FM), whose format includes classic rock and adult alternative hits.

Viacom Radio's senior vice president of operations, George Wolfson, will serve as acting station manager, and Kurt Johnson, former program director of adult contemporary WLTW(FM) New York, will oversee WAXQ's new format. The FCC is expected to approve transfer of the station to Viacom next month.

SportsFan 'round the clock

Beginning today, the SportsFan Radio Network expands its programming to 24 hours, seven days a week. To do so, the network will add programming between 8 a.m. and 3 p.m. ET on weekdays to its existing afternoon, evening and overnight schedule. SportsFan launched in early 1994 by providing 15 hours weekly of overnight sports talk shows.

SportsFan Executive Vice President Jonathan Goldman says the network has 225 sports and talk station affiliates in 47 of the top 50 markets. SportsFan CEO Kyle Heinrich says the network's growth "has been spurred by demands from sports/talk stations" for syndicated programming.
Playing renewal hardball in King County

More than three years of negotiating in Washington state results in precedent-setting agreement

By Price Colman

Cable franchise negotiations can be as nasty as a back-alley brawl, but few have left opponents as bruised as those between Tele-Communications Inc. and King County in Washington state.

Although there were 20 pages of issues, the two focal points were King County's desire for an institutional network, or INET, and a franchise renewal agreement Viacom had cut with the county.

TCI and King County in January reached a tentative agreement—contingent on TCI closing its purchase of Viacom's cable operations—after more than three years of maneuvering.

Although both sides say the agreement, which includes an INET, is an acceptable compromise, they acknowledge that the impact of the hard-fought contract will be felt for years to come.

"We didn't want to set precedent, but more important, we wanted to do what was right for our customers," says Madie Gustafson, TCI senior counsel in charge of franchising. "Has it set precedent? Absolutely. The lawyer for King County has said the King County model is something everybody should ask for. A lot of cities are saying, 'We want the King County deal.'"

For King County cable officer Martin Blizinsky, who fought hard for the INET and other points, the concerns are much the same, although the perspective differs.

"The thing I think is important about what happened here is not who won or lost," he says. "It's not fair to say TCI or the county won or lost. The thing that troubles me most when colleagues call me is they don't have a clear idea of what they want out of negotiations and why... It's important to know what your community wants and what it can benefit from and what it's fair to ask the cable company for in terms of dollars. Too often, when people call me, they don't have answers to those questions."

From Gustafson's perspective, it wasn't the INET—a dedicated network connecting county offices, schools and libraries—or the Viacom renewal alone that were obstacles.

Instead, it was the competition. According to estimates, the INET that King County wanted would have cost $45 million and added $4-$5 a month to subscribers' cable bills. Given the winds of competition starting to blow, TCI figured that kind of increase, although legal, would dull its competitive edge.

"There's a competitive differential here," Gustafson says. "At what point are customers going to say, 'That differential has gotten too high; what the cable company is supplying to me is not worth it'?"

Acrimonious franchise negotiations are nothing new, nor is the debate over INETs and who should pay for them. The wild card in the TCI/King County talks was Viacom.

TCI and Viacom both hold franchises in the county encompassing some 100,000 subscribers. TCI has the larger share, about 60,000 customers.

Although the county began talks with TCI first, it reached agreement with Viacom in February 1995, months before TCI announced plans to buy Viacom in August 1995. Viacom had agreed to a franchise that included not only the 5% franchise fee but another 5% on top of that.

According to Gustafson, King County wanted that additional 5% because it had taken a look at Seattle's 10% business and occupation tax and wanted to make up the 5% it wasn't getting.

In a typical King County sub-

A King County Chronology

1987—TCI purchases most of its King County cable franchises.
January 1993—Negotiations between King County and TCI begin.
December 1993—King County issues community needs report and formal request for renewal proposals.
March 1994—TCI files renewal proposal.
July 1994—King County executive issues preliminary denial of TCI franchise renewal.
February 1995—King County grants Viacom franchise renewal.
August 1995—TCI announces plans to purchase Viacom cable operations.
October 1995—TCI and King County return to negotiations, work out agreement in principle for franchise renewal.
January 1996—King County grants TCI franchise renewal contingent on TCI purchase of Viacom Cable closing by May. (Deadline later extended to July 24.)
June 1996—Internal Revenue Service approves Viacom's proposed handling of gains from sale of cable systems; stock swap offer issued.

Source: King County Office of Cable Communications
scriber's cable bill, that additional 5% translates into about 80 more cents. Sensitive to how customers might react, "TCI was not willing to do that," Gustafson says. 

The county issued a formal request for renewal proposal in December 1993, and TCI filed its response in March 1994. Gustafson says that the package TCI proposed was worth about $6 million and included public education and governmental (PEG) requirements, new or upgraded facilities, additional channels and an INET.

The package failed to meet King County officials' criteria, however, and in July 1994 County Executive Gary Locke issued a preliminary denial of TCI's proposal.

Blizinsky acknowledged that the INET was a key stumbling block. But he also emphasized that there were other issues: "We gave TCI a 20-page list of things we thought were wrong," he says. "It included a whole variety of things... Some were procedural things, like insurance and proof of insurance. It was not simply one matter."

Nonetheless, by fall 1994, King County and TCI had reached an impasse and the case appeared headed for an administrative hearing. TCI was convinced it would win the hearing; King County was equally convinced it would win. Either way, a protracted legal battle appeared likely.

With the granting of the Viacom franchise renewal in February 1995, King County appeared to have gained leverage. But when TCI announced plans to purchase Viacom's cable operations six months later, the waters were muddied once more.

Recognizing that they each had more to lose than to gain from a continued conflict, the two sides returned to the table in October 1995 and, in a marathon eight-day session, reached an agreement in principle.

What King County got was TCI's commitment to the INET, although in scaled-down form, and other considerations. What TCI got was a renegotiation of the Viacom franchise that would put it in line with TCI's own franchise agreement.

"It was the acquisition of Viacom that made both sides realize that whoever won or lost, there would be two franchises that were very different, which didn't work for anybody," Gustafson says.

"What we evaluated as options were a win down road where we would get everything—but that wasn't going to happen for several years," says Blizinsky. "Or we could take the lesser deal now.

"The decisionmakers evaluated the situation and said, 'We'll take the lesser deal, get the benefits sooner and go on with our lives.'"

What TCI eventually agreed to represents about a 22% increase over what it originally offered, or $7.32 million vs. $6 million.

With scores of other franchise renewals ahead during the next four years, TCI undoubtedly will be forced to confront the King County deal repeatedly at the negotiation table.

But for now, at least, Gustafson figures the hard part is behind her: "This is the toughest renewal I've been through—and the most expensive."
EchoStar to add Liberty Satellite Sports

Regional sports service growing beyond C-band

By Jim McConville

DBS program provider EchoStar Communications plans to add Liberty Satellite Sports (LSS) regional sports service to its DISH Network programing this fall.

LSS currently distributes its 15 regional sports networks to the C-band market as well as to DBS operators DIRECTV and PrimeStar Partners.

EchoStar officials say they will consider launching the LSS regional networks over two stages. A first launch in early fall would include MSG, HTS, Sunshine, SportsSouth, PS–Southwest, PS–West, PS–KBL and PS–Rocky Mountain. The remaining seven networks would be added with the launch of EchoStar II, slated for late fall.

“It’s all predicated on the launch of our second satellite, to do all 15 network services we need the additional capacity of EchoStar II.”

Carl Vogel
President, EchoStar

Prime Sports West (PS–West), SportsSouth and the Sunshine Network.

EchoStar is still working out details on LSS network packaging. Vogel says, but the company likely will add in-market regional networks to its existing service packages. It also will offer the regional networks as a separate out-of-market sports tier.
Nickelodeon goes to the movies

New division has 13 titles in the works, including films based on ‘Rugrats’

By Rich Brown

Feature films based on three popular Nickelodeon shows are among 13 titles in development at the network's fledgling movie production division.

Nickelodeon series Rugrats, Are You Afraid of the Dark? and All That each will be spun-off into theatrical titles under the Nickelodeon Movies banner. The company this week will release its first title, Harriet the Spy, and plans to produce three movies a year by 1998.

Cross-promotion efforts between the cable network and the movie releases will include production of Nickelodeon shorts that will accompany each theatrical release. Theatrical screenings of Harriet the Spy, for example, will be preceded by an eight-minute short designed to generate interest in the upcoming Nickelodeon cartoon series Hey Arnold.

Feature-length animated titles in development include Rugrats, a crime-solving dog named Kogny and movies based on the best-selling children's book The Stinky Cheese Man. Family-oriented, live-action titles in development include two adventure/science fiction titles—Interstellar Pig and The Outsider—and a thriller called The Duplicade.

Rounding out the Nickelodeon Pictures slate are five live-action comedies: Fearsome's Hero, adapted from a Dona Schenker novel by screenwriter Paul Zindel ("Runaway Train"); Ghost of Satin Sinclair, about a ghost who enters the body of a 16-year-old; Obnoxious Jerks, about a girl who tries to join a boys' club; Southern Fried Fugitives, mixing live action and computer animation, and Mirror Mirror, about a boy and his magic mirror.

Jones gets telco OK in Virginia

Will offer package of services, including local phone service

By Price Colman

Jones Intercable subsidiary Jones Communications has received the go-ahead from Virginia regulators to offer local telephone service to residents in the northern part of the state.

The approval for local exchange carrier (LEC) status by the State Corporation Commission of Virginia is the first such approval Jones has received.

Jones officials characterize the approval, which was expected, as the final regulatory step in the cable company's efforts to offer full-service telecommunications services in Virginia.

Jones intends to begin marketing packaged telecommunications—video, telephone and Internet access—by the end of the summer, a Jones spokesperson says.

The Denver-based cable company has an advanced hybrid fiber/coaxial cable network in place in Alexandria, Va., and earlier this year became the first cable operator to commercially deploy cable modems enabling access to the Internet.

Because of an interconnection agreement with Bell Atlantic, which permits Jones to lease space on Bell Atlantic lines, Jones will be able to offer phone service to Bell customers as well as its own subscribers.

Jones has not filed for LEC authorizations elsewhere, but plans to, Carlson says, declining to specify where Jones would seek such approvals. Likely candidates include Washington, D.C.; Maryland; Savannah and Augusta, both Georgia, and Chicago—all areas where Jones has heavy subscriber concentrations.

Errata

USA was tied for the second-highest prime time cable ratings, not the third, in the second quarter, rather than the third, as reported in the July 1 issue, page 52. Numbers supplied by Comedy Central and E! differed from Nielsen figures supplied by Turner. Comedy Central and E! both scored a 0.3 full-day rating.
Dishing up a DBS warning

While acknowledging obstacles, satellite executives say cable is looking at real competition

By Price Colman

The direct broadcast satellite business is coming of age—and the cable television industry and other competitors had better take notice. That was the underlying message from the third annual Global DBS Summit in Denver June 26-28.

DBS executives missed no opportunity to tout the advantages they think their technology holds over cable, specifically citing cost, reliability and the digital compression that yields high channel capacity.

“We’ve spent these long years creeping along, creeping across the plains, developing a business plan, envisioning the way the world would look,” said Eddy Hartenstein, president of DIRECTV, the Hughes Electronics venture in which AT&T holds a 5% stake. “Five years ago, people said: ‘DBS? Don’t be stupid.’ At least some of us were willing to put everything on the line. Now, nearly three million American homes get digital television through a dish.” DBS experts and financial analysts said those numbers are likely to grow rapidly.

According to Jimmy Shaefller of the Carmel, Calif.-based Carmel Group, 33.6 million U.S. homes will have satellite service by 2005.

Near-term projections are somewhat more modest, although still impressive. Chuck Hewitt, president of the Satellite Broadcasting and Communications Association, estimated that all direct-to-home satellite services—encompassing C-band and medium- and high-power DBS—will have about 8 million subscribers by the end of this year and 15 million–17 million by the end of the decade.

DIRECTV and EchoStar’s DISH Network clearly are the fastest growing. DIRECTV, which celebrated its second birthday in June, has 1.6 million subs and is projecting 2.5 million by year’s end. EchoStar’s DISH, which launched in March and is adding about 1,500 subscribers a day, projects 350,000–400,000 subs by year’s end.

But if the picture of DBS that emerged at the conference is one of an industry rapidly moving out of adolescence, industry leaders acknowledged that they face significant obstacles, although they didn’t necessarily agree on the degree of significance.

Some cited DBS’s prohibition against broadcasting local television signals—a point on which the cable industry has focused in playing down the impact of DBS on its business. Others touched on DBS’s lack of interaction and Internet access and initial start-up costs as high as $700 for hardware—a dish and a digital set-top box—and a year of programing that may be a barrier for some customers.

But for every point there was a counterpoint. “We [think] we’re going to have strong answers” for all of those issues, said Hewitt.

Securities analysts like DBS, but...

Although bullish on industry, they urge caution, since valuations are lacking

By Price Colman

When it comes to investing in direct broadcast satellite companies, the word from investment experts is caveat emptor.

Make that a double caveat.

At the third annual Global DBS Summit in Denver, it was tough to find an investment expert who wasn’t high on the DBS industry. But those same securities analysts tempered their overall enthusiasm with strong cautionary notes.

“Even though these companies are still near and dear to our heart, they’re still relatively small,” said Rick Beaty of Communications Capital Partners. “The smallest regional Bell company is still bigger, by a factor of two, than the entire satellite industry... The industry needs to attract a greater level of attention.”

It has attracted the attention of UBS Securities, where Rick Westerman recently initiated coverage of the DBS sector. His early recommendations: U.S. Satellite Broadcasting (Nasdaq:USSB) is a hold, as is EchoStar (Nasdaq:DISH). His one buy recommendation is Tee-Comm Electronics (Nasdaq:TENXF), parent of recently launched AlphaStar Digital Television.

The DBS investment challenge, Westerman said, is to figure out how to value the companies. Using the typical cable model, they’d be valued on cash flow. But DBS is so new that cash flow, so far, is negative. “Investors really do need to take a look at valuations because some of these stocks are ahead of themselves,” Westerman said.

The rationale behind his buy rating for Tee-Comm is that its stock is now below his target price, and the launch of AlphaStar could spur some run-up in the stock price.

One problem with the DBS sector is that it’s small—only three companies...
are publicly traded—although that will change with Tele-Communications Inc.’s spin-off of PrimeStar.

A purist might argue that an investor could buy into Sony and get a piece of the Digital Satellite System action, or invest in GM Hughes Electronics as the primary backer of DIRECTV.

The problem with that approach is buying into highly diversified companies for which DBS, at least for now, is only a small play. “There are a ton of companies throwing money at space real estate,” said Curt Alexander of Media Group Investors. “None of these companies have proved themselves to be successful in these smaller undertakings.”

Conversely, the DBS business is so new that nobody has much of a track record yet. Bigger players are so well bankrolled that they could decide to cut their losses and run, writing off millions in investment, hurting themselves minimally in the process but eroding the perceived value of DBS stocks.

DBS’s success “is conditioned upon stealing market share from cable operators,” Alexander said. “That’s going to be a tough task. The cable guys have the ability to engage in some price competition. It’s very important that companies like EchoStar and ASkyB partner with a company with good marketing strategy.”

Alexander is hardly alone in that perspective. Wall Street maintains a constant vigil on mergers and acquisitions and other forms of alliances with the thought that the right marriage will boost stock values. Given the youth of DBS, such marriages aren’t just likely, they’re inevitable. EchoStar, for instance, has made no secret that it is talking to anyone and everyone in search of the right partnership.

Although the U.S. picture for DBS may be muddy, the international marketplace offers a clearer vision of DBS’s potential, analysts said. “The DBS opportunity is more attractive internationally than it is domestically,” said Mickey Alpert, president of Alpert & Associates. “In the U.S., everybody has basically the same package. I like the international market opportunities...particularly in emerging markets because of the limitations of national terrestrial services in those markets.”

---

**DIRECTV kicks off in Latin America**

DIRECTV President Kevin McGrath is confident that 35 million Latin American TV homes out of a potential 75 million can afford to subscribe to its digital package, Galaxy Latin America, which debuted in Brazil on June 14 and in Venezuela on June 28. In Venezuela, the decoder and dish are expected to retail for $530, with monthly subscriptions costing $30-$60. GLA will also be available in Mexico in mid-July. DIRECTV, a unit of Hughes Telecommunications, also is setting its sights on Japan and Europe, according to Steve Dorfman, president of Hughes Telecommunications. An announcement on Europe can be “expected in the next few months,” Dorfman says.

**High hopes for home shopping**

The UK’s National Heritage minister, Iain Sproat, is confident that UK Television regulator the Independent Television Commission will agree to amend rules on ad breaks to allow extended home shopping segments during late-night slots on terrestrial TV. The new ruling, expected in July, would bring terrestrial broadcasters into line with satellite services, which already carry home shopping.

**German and Swiss World Cup rights go to Kirch, Swiss Sports**

Germany’s Leo Kirch and Swiss holding company Swiss Sports have gotten together to offer a record-breaking SFr2.8 billion ($2.25 billion) for global TV rights to the 2002 and 2006 soccer World Cups. The offer topped the SFr600 million offered by current rightholder the European Broadcasting Union. Other bidders include Swiss sports rights agency CWL Telesport, Disney-owned CapCities/ABC and U.S. promoter Mark McCormack’s IMG agency. The International Football Federation, Fifa, holds the rights.
WCA on the fast track

New president to push for new members and industry growth

By Michael Katz

As this week’s Wireless Cable Association conference gets underway in Denver, the organization’s new president, Richard Alston, will answer the question: Why is a guy who has spent his entire career in the telephone industry heading the WCA?

“This industry is very exciting, and this is related to what I did in my career,” explains Alston, who, at 49—and after nine months of retirement—put aside a dream to sail around the world to join the WCA in April. “There is a convergence of technologies that has been going on for years, and that makes this a natural extension of working at Bell Atlantic.”

Given the money and attention that telcos are dedicating to wireless cable, it may be appropriate that the new WCA president worked for Bell Atlantic for 24 years. But Alston insists that wireless cable can stand on its own, with or without telcos.

“I don’t think we’re dwelling that much on what the telcos do,” Alston says. “They have deep pockets and [they] can help, but our major focus is to speak, not just to the telcos, but to everyone—the consumers, the employees, the regulators, the legislators and the financial community.”

 Barely two months on the job, Alston has planned a busy and ambitious agenda for the upcoming year, and expanding the association is high on the list. “We have a real opportunity to grow the membership of the WCA,” Alston says. “It give us greater credibility, and there are many companies in the industry that are small start-ups that are not members of the association, and we intend to recruit them.

The wireless cable industry is growing rapidly domestically and internationally. According to WCA spokesman Andrew Krieg, there are 900,000 subscribers and 200 systems in the U.S., compared with 750,000 subscribers and 190 systems last year. The growth worldwide is more significant. Krieg says the worldwide number of subscribers has increased to 4.5 million from 3.9 million a year ago. “I think there will be a boom in wireless,” says Alston. “As soon as the conversion to digital is made, I think you will see much more rapid growth.”

To accommodate the push for new members and industry growth, the WCA, for the first time, will hold a second major wireless convention next February in New Orleans. The “winter show,” Alston says, will run concurrently with the WCA’s technology symposium. As soon as the Denver convention is over, Alston says, he and the WCA will be “exploring intensely” the possibility of another WCA show to be held next year in Europe or the Middle East.

“We’re going to be more aggressive this year in our meetings and conferences program,” Alston says. “It’s important because every time we have a major show or meeting or conference, we create a real growth opportunity for the industry.”

Alston also will concentrate on lobbying the FCC and Congress to make sure there are no regulatory or legislative barriers in the way. “My major goal for the Wireless Cable Association is to make sure the wireless cable industry has every opportunity to grow to its full potential,” he says.

One of Alston’s important focuses is to encourage the FCC to quickly issue the digital declaratory rulings that will lay the ground rules for wireless cable operators to convert their systems to digital. “This is very important,” he says. “In the absence of the digital declaratory rulings, many of the wireless operators have stopped investing because they don’t want to invest in analog technology when they know they are converting to digital.”

On the legislative side, Alston wants to make sure that wireless cable doesn’t fall between the cracks, since it was not mentioned in the 1996 Telecommunications Act. His main concern is to convince Congress that wireless cable operators are exempt from paying franchise taxes to municipalities, like DBS operators do, because public rights-of-way are not being used.

“Some of the municipalities now see an opportunity to levy franchise taxes against wireless operators,” says Alston. “We need to make sure that our operators don’t have to pay these franchise taxes that would financially burden them in a way their chief competitors are not [burdened].”

Also on his agenda is to use the wireless cable infrastructure, “as it becomes more ubiquitous, to do some interesting things with distance learning.” Alston wants to return to the roots of wireless, which are in education. “That is the seed that grew wireless,” he says, referring to the fact that wireless was first used to link campuses. “We can use wireless to take the classroom to people’s homes.”
PacTel sees video’s future as wireless

Telco and its partners in Tele-TV are betting big on the digital service

By Brad Smith, special correspondent

On a clear day from the summit of Mount Wilson in the San Bernardino Mountains you can see the Los Angeles metropolitan area roll away toward the Pacific Ocean. It’s an area that is about to become one of the crucibles in the future of wireless video service.

There are about 6 million homes within a 35-mile radius of Mount Wilson, homes that Pacific Bell Video Services (PVBS) would like to serve with its new digital wireless cable system. The system is in the final stages of testing; commercial service into some of those homes is anticipated early next year.

“This clearly is one of the main proving grounds that will show how advanced wireless cable systems can create a much bigger market share than observers have traditionally thought,” says Andrew Kreig, vice president of the Wireless Cable Association International.

PVBS, a subsidiary of Pacific Telesis, will be ramping up the new service in a geographic area that already is served by 14 MSOs—companies like Continental Cablevision, Cox, Jones Intercable, Time Warner and Telecommunications Inc.

Los Angeles is one of the most fragmented video markets in the country and one of the most competitive. What PacTel brings to the struggle, in addition to the product, is its history as a major telecommunications company, access to financial resources, and reputation for service.

PacTel and its RBOC partners in the Tele-TV programing consortium—Nynex and Bell Atlantic—have made digital wireless their principal gamble on video. The Los Angeles area is the first step for PacTel, which also plans to move into the San Diego and San Francisco markets next year and potentially into Washington state, Florida and South Carolina.

“Wherever we go with this technology, we are going with digital because that’s where the future lies,” says PacTel spokesman Craig Watts.

PacTel started moving into digital MMDS in April 1995, when it spent $175 million in a stock swap to acquire Cross Country Wireless, which provides traditional cable programing via an analog service to about 45,000 customers in Riverside, Calif.

More important, CCW’s lease rights and licenses cover an area of 6 million homes. Five million are within the line of sight of a transmission tower on Mount Wilson and a second tower that will be built on Mount Madjeska to serve Orange County.

PacTel solidified its entry to Los Angeles last month by striking a deal to purchase Heartland Communications, which had authorization for channel rights in the Los Angeles area that PBVS can use to increase its capacity.

Last March, PacTel also successfully bid a total $20.8 million for 11 regional licenses in the FCC’s spectrum auction. Each authorization allows PacTel to provide commercial video on the previously unlicensed multipoint distribution service channels in a basic trading area.

PacTel also has agreed to buy the wireless spectrum assets of V*TV in a $160 million–$175 million stock swap that would allow it to launch digital wireless services to 4.7 million homes in the San Francisco Bay area; Victorville, Calif.; Greenville, S.C.; Seattle and Spokane, Wash., and Tampa, Fla. Bay Area transmitter sites are being eyed for San Bruno Mountain south of San Francisco and Monument Peak south of San Jose.

“We’re pretty jazzed up about getting into the market,” says Steve Harris, PacTel’s vice president for broadband services. “It’s going to be quite interesting because there is so much diversity in Los Angeles. We’ll be changing the nature of the game because we’ll have a single product that will go out.”

PacTel’s market research indicates that as many as one-third of the current cable customers “would be willing to switch” to another technology, Harris says. “We can have a very significant impact.”

Other key figures for PacTel are Jeff Carlson, a former Comcast executive who is president and general manager of Pacific Bell Video Services—Southern California, and Lee Camp, president of Pacific Telesis Enhanced Services.

PBVS is not divulging its per-subscriber costs, but the 1 million set-top terminals that Thomson Consumer Electronics is building for Tele-TV will cost about $350 each, nearly half what some observers originally
Broadcasting & Cable  July 8 1996  37

Special Report: Wireless Cable

thought. That cost may decline even more toward the end of the three-year contract with Thomson.

Besides the $175 million PacTel spent to acquire Cross Country Wireless the company is spending another $20 million to develop its 2,800-square-foot headend facility in El Monte, on its transmitter site 11 miles west and on its digital encoding technology. The El Monte site, a former warehouse where the digital technology was demonstrated recently, has six 18-foot satellite dishes and an off-air antenna for local programming.

Banks of encoders inside the headend facility will compress the signals into a stream of digital data through multiplexers, with each programming channel retaining its identity. Each multiplexer will have its own backup. Analog wireless cable was limited to 33 channels, which is expanded by digital compression to the equivalent of at least 120 channels.

The compressed data, transmitted to Mount Wilson at a world-class 2,488 megabits per second, is then retransmitted via microwave to a subscriber’s 12-30-inch rooftop antenna. The data is then fed through the set-top box, which determines what channels the subscriber is authorized to receive.

What this means for the consumer will be some 120 channels of programming, about three dozen of which will provide popular movies via near-video-on-demand and about the same number of channels for digital audio.

The wide variety of programming and the video and audio quality are expected to take wireless cable out of the Volkswagen stage of 33 channels to compete against the perceived Cadillac offerings of 150-channel DBS while adding local programming.

Tele-TV Media will develop national channel lineups and a program guide that will serve all the RBOC wireless systems. The three RBOCs involved in Tele-TV regard the program guide as the final element that will tie it all together.

PBVS expects to have an installation cost of about $125 per house, which would include putting up the antenna, the down-converter and other hardware, according to Watts.

PacTel and its partners think that the digital format will rejuvenate wireless cable. It has built a customer base of 850,000 in 200 systems since going commercial in 1983, but has been taking a backseat in recent years to direct broadcast satellite service as a wireless alternative to traditional cable TV.

Besides the settop boxes being developed by Thomson Consumer Electronics, other vendors that PacTel has been dealing with include Divicom for encoders and multiplexers, Fore Systems for ATM switching components, ITS for the transmitter, Nagra for encryption and conditional-access systems, Seachange for ad insertion equipment, Silicon Graphics for near-video-on-demand server, Standard for satellite servers, and Videotek for off-air demodulators.

In addition to the channel limits imposed by analog technology, MMDS has been confined to line-of-sight transmission. Digital compression will help improve signal access in most locations in a 35-mile radius from the transmitter (some think the signal might extend much farther).

In the Los Angeles area, PBVS has the advantage of the mountaintop transmission tower. It also is doing research with Tele-TV on several other solutions, including finding ways of “bending” the signal much like radio waves, Watts says.

Among the beneficiaries of PacTel’s incursion into Los Angeles will be the area’s educational, ecumenical and nonprofit organizations, including various California State University facilities. Those institutions originally were granted Instructional Fixed Television Service licenses and were granted the ability to lease excess capacity to commercial providers.

PBVS will be converting the IFTS licenseholders’ data to digital, which gives the institutions the possibility of having even more excess capacity to lease. PacTel also will broadcast the content of the IFTS holders from its transmission tower, giving them a potentially broader audience.

PacTel’s competitors in Los Angeles and elsewhere are well aware of how the playing field is changing.

“We see PacTel as a formidable competitor no matter what the technology,” says Jim Carlson, a vice president for Jones Intercable. “They have deep pockets, are a well-run company and have years of experience in voice services. But it remains to be seen how effective the technology will be.”

Joe Bonica, a division vice president for TCI’s Southern California area, realizes it would be “naive not to say that [PacTel’s entry] isn’t going to shake things up a little bit, but it will be the basics that make our future.”

For TCI, which already has been competing against Cross Country Wireless in the Redlands area, the “basics” include customer service, low rates and a wide variety of programming.

“We know what the competition is,” Bonica says.

In the Los Angeles area, TCI expects to compete with Pacific Bell Video in Van Nuys, where TCI serves 90,000 customers; Redlands, where it has 85,000, and the Inland Valley complex near Hemet, where it has 50,000 subscribers.

Jimmy Schaeffer, a DBS analyst with The Carmel Group in Carmel, Calif., expects digital MMDS to use its local programing content to compete against DBS, but says that advantage will disappear.

“In a few short years,” Schaeffer says, “the two lines are going to start merging in terms of what they are going to provide. Even DBS now is looking at the possibility...of delivering local programing.” The DBS leader there is EchoStar Communications, based in Denver.

For the time being, DBS companies will try to convince customers that they can get everything they want with satellite’s wide array of channels.
and, with an A/B switch on the remote control, the ability to have local programming.

Pacific Bell Video Services, as a separate subsidiary of Pacific Telesis, is not regulated by the California Public Utilities Commission or by any local entity in the Los Angeles area, although it is subject to state and local laws dealing with video service providers. This relative lack of regulation ranks some of its more heavily regulated competitors.

"Certainly, we would look to have a more level playing field," says Jones’s Carlson. "I think that is a concern for us."

The alpha testing of PBVS’s digital MMDS, completed in June, demonstrated that all the elements worked together. Soon the company will begin beta-tests using the equipment to send the digital signal into a few dozen “friendly” homes, probably those of employees, for any final adjustments.

Then, sometime early next year, PBVS will begin installing digital wireless cable into some of those 5 million homes beneath Mount Wilson.

BA, Nynex moving to digital wireless

Tele-TV joint venture plans to provide programing to 12 metropolitan markets

By Michael Katz

PacTel is not the only telco planning wireless digital video programming. Bell Atlantic and Nynex plan to offer 120 channels beginning late this fall in Boston and Norfolk, Va.

Tele-TV, a video programing service from Bell Atlantic, Nynex and PacTel, eventually will serve 11 other metropolitan areas: Baltimore; Albany, Buffalo, Syracuse and Long Island, all New York; New York City; northern New Jersey; Philadelphia; Pittsburgh; Providence, R.I., and Washington. The operations will be run by each market’s respective regional telco.

Eighty channels will be dedicated to popular programing, and the remaining 40 will supply near-video-on-demand, says Tom Tyrer, vice president of communications for TeleTV, which has in place programing deals with Turner Broadcasting and Tribune.

"MMDS [wireless cable] is a technology that we think has a long future," says Ed Grebow, Tele-TV president. "MMDS gets you into the market quickly, gets you customers quickly, is relatively inexpensive to do and is a terrific product."

Tele-TV will handle programing, billing, marketing and consumer equipment, while Albany-based CAI Wireless will provide and maintain the facilities.

Bell Atlantic and Nynex provided $100 million in senior secured debt to CAI Wireless Systems, which will lease its capacity to the telcos for video and information services. The deal is expected to generate at least $28 million a year for CAI, based on the number of line-of-sight homes, says CAI President John Prisco.

The telcos also have the right to acquire 45% of the wireless operator through the exercise of warrants, which could cost as much as $300 million.

US West, ATI butting heads

Less than a month ago, US West and wireless cable leader American Telecasting Inc. (ATI) were within inches of an alliance that would have given ATI a cash infusion and US West a cost-effective platform for in-region video services.

Sources say US West and American Telecasting had worked out many of the details of the alliance and had hoped to make an announcement at the Wireless Cable Association International’s annual convention in Denver July 10-12.

But after repeated offers and counteroffers, the two hit the wall over how much ATI’s wireless systems are worth. The current impasse could be resolved in time for a convention announcement (US West Communications Group President Solomon D. Trujillo remains scheduled as the featured speaker on Thursday, July 11).

One side is going to have to blink first, however, and with US West holding the financial trump card, it’s not likely to be the Baby Bell.

Some kind of deal makes sense for both companies, but ATI may have more to gain, suggests Chuck Kersch of Denver-based Neidiger Tucker Bruner: “Without an alliance with a major regional Bell operating company, their access to capital won’t allow them to become the competitor they originally intended.”

Scott Chandler, general manager of US West Video Communications Services, declines to comment on whether any announcements are imminent. But he makes it clear that US West finds the wireless cable medium attractive: “One of the things we’ve said is that it takes lots of time to construct a brand-new network. All of the regional Bell operating companies are figuring that out. I think the success DBS has had shows that cable companies may not be able to get new networks in fast enough. Wireless changes the rules of the game.”

American Telecasting executives confirm that they have talked with US West, but they’re quick to add that they’re talking with most of the region Bell companies as well as long-distance carriers and peer companies in wireless.

—PC
Spider-Man gets new spin

By Richard Tedesco

Spider-Man will add interactivity to his super-powers when the Marvel Comics character appears on America Online later this month.

Readers following his exploits on AOL will be able to click on certain frames of the on-screen comic to learn his inner thoughts. They'll also find histories of characters in the serial, which will be updated weekly.

Spider-Man eventually will be animated online as part of an effort "to take characters that have lived in print and bring them into the electronic age," says Scott Marsden, president of Marvel Interactive. For now, Spider-Man will be rendered in 3-D on AOL.

He's already gone electronic by way of Fox TV. Re-creating Spider-Man online, Marvel and AOL also hope to create lucrative revenue opportunities with merchandise available in the area (keyword: AOL Live, when it goes up).

Chat sessions among fans will be possible, along with live events with Marvel editors, writers and artists. Marvel eventually will create a new character exclusive to AOL as part of what is intended to be a long-term relationship.

Marvel also is about to license rights for some of its characters to an outside developer for CD-ROM or videogame rendering.

Palace rebuilt as joint venture

Warner Music, Intel and Softbank form partnership

By Richard Tedesco

Time Warner Interactive's The Palace software project was recast last week as The Palace Inc., a joint venture of Warner Music Group, Intel Corp. and Softbank.

The move is a measure of the success of The Palace's virtual chat software. Since the software's release last November, more than 100,000 versions of it have been downloaded, with approximately 1,000 commercial and individual sites created.

In The Palace's real-time chat environments, people create representative alter-egos, or avatars, using photos and graphics from the software.

The three-way partnership will fuel development of new features, including expanded audio, video and 3-D capabilities. According to Mike Maerz, Palace president: "You're going to see us evolve from the framework you see today."

Maerz, who formerly was with Intel, says that Intel's network multimedia technology will contribute to development, while Softbank, a leading PC distributor in Japan, will handle distribution.

"We think it's really going to be a catalyst to create a large number of virtual worlds," he says.

The Palace, whose software package costs $25, will offer different types of scalable packages, Maerz says.

Companies that have created Palace servers for their online audiences include Capitol Records, 20th Century Fox and Fox Television, Sony Pictures and MTV.

ClNet goes public (quietly)

ClNet, the Web site TV producer, went public last week at $16 per share on the Nasdaq stock market.

It made the move with no announcement, and a ClNet spokesperson declined to comment even after the company reported its new public status on its own online news service last Tuesday.

Closely watched as an indicator of prospects for other Internet issues, the stock quickly moved from $16 to $20 per share in the first few hours. The company issued 2 million shares.

ClNet operates three Web sites and produces programming aired on USA Network and the Sci-Fi Channel. — RT
Big mistake: Microsoft gets bumped

Microsoft Corp., king of the online hill, had its MSNBC site abruptly dumped offline as a deadbeat account.

It turned out to be a mistake. Network Solutions, the Herndon, Va., company that holds rights for handling the site, started dropping the domain names for 9,272 clients for nonpayment of a $100 fee to maintain each name. But MSNBC was among some accounts that shouldn't have been dropped, according to Leslie Hunter, Network Solutions spokeswoman. "There were a handful of folks, like Microsoft, who were [mistakenly] disconnected."

The $100 fee maintains a domain name for two years, according to Hunter, who says that many companies buy in order to resell them.

MSNBC was quickly restored to the Internet. —RT

AOL upgrades software, price

America Online introduced its latest-generation software, version 3.0, along with a new pricing structure last week.

AOL members now can get 20 hours of access on the online service for $19.95 per month, with additional hours at $2.95 apiece. Previously, 20 hours of access would have cost $54.20. $9.95 for the five hours included in that monthly fee and 15 hours at $2.95 per hour.

AOL is gambling that members with low usage who wouldn't have racked up large hourly fees will spring for the higher monthly charge that gives them more hours.—RT

Surfing the 'Net

'Post' puts up Web site

The Washington Post last week became the latest major U.S. newspaper to go online with an interactive Web site (www.washingtonpost.com). In addition to having access to content from the daily editions of the paper, users can search interactive areas organized by neighborhoods and topics of interest. The Post also features opportunities for users to participate in polls and Q&A sessions with congressional leaders and other prominent figures and to offer feedback on current issues. Visitors to the site can click on pages devoted to specific communities in the Washington area and access information on different subjects. Another page features full texts of the first chapters of books recently reviewed in the paper.

Continental to buy LANcity modems

Continental Cablevision has committed to purchasing 50,000 cable modems from Cambridge, Mass.-based LANcity over the next two years. Delivery of the units is expected to begin immediately, with Continental planning deployments in systems in New England, Florida and Illinois. Continental has used LANcity modems in a number of trial sites during the past several years. The modems, with access speeds of 10 mbps, are among the most widely deployed. They carry a price tag of less than $500 per unit.

Radio Data offers Web development

EZ Communications' Radio Data Group is offering the Internet development services for radio and TV stations. American Radio Systems Corp., Clear Channel Communications and Cotifax Communications recently became investment partners with EZ in Radio Data, enabling expansion of its Web development operations. The company offers a proprietary software product, AdNext, which permits radio and TV stations to rotate banner ads on Web sites while controlling billing, invoicing and management functions. Radio Data can be found online at www.rdg.com or through e-mail: sales@rdg.com.

A&E writes 'Biography' page

A&E Television launched a Web site last week as a counterpart to its Biography series (www.biography.com). The site serves as a reference source, with 15,000 information entries on notable people. Program notes about the nightly prime time series also are available. The site will carry reviews of the 10 top-selling biographies of the month, selected by

New York's Biography Bookshop. Users also can play trivia and anagram games.

Weather Channel redesigns

The Weather Channel has launched a redesigned Web site (www.weather.com) that features national U.S. Doppler Radar maps and worldwide satellite maps. The site also adds hourly weather condition updates for 1,000 U.S. and 190 foreign cities. Five-day forecasts for U.S. locations are updated three times daily. Three-day forecasts now are carried for 238 international cities.

UPI puts news pictures online

UPI NewsPictures has begun making its daily worldwide news photos available online at Knight-Ridder's PressLink Web site (PressLink.com). PressLink is a real-time distribution network with text, photo and graphics services for publishers. User names and passwords are needed to download photos, payment can be made by credit card. For further information, contact UPI Newspictures at 1-800-796-4UPI or, by e-mail, at upipix@pressroom.com.

Red Sox' latest MLB team online

The Boston Red Sox have become the 17th Major League Baseball team to launch a Web site (www.redsox.com). Fans will find Red Sox game updates and stats in real time, along with ticket and merchandise information and historical background, including vintage photos. Behind-the-scenes information about Fenway Park also is available on the site created with New England Sports Network and T3, a Westborough, Mass., Web designer. Video and audio of game highlights and postgame interviews will be added.

Lifetime, Women's Wire covering campaigns

Lifetime Television and Women's Wire will provide online coverage of the Republican and Democratic national conventions as part of an effort to get out the vote for November's national election. On Aug. 5, Lifetime and Women's Wire will begin posting campaign information on their respective Web sites (www.lifetime.com and www.women.com), including exclusive interviews with political figures and daily campaign updates. The co-produced effort, titled Go Vote '96, will include audio and video clips. Special programming on Lifetime related to the Internet content will feature Linda Ellerbee and Dana King.

Showtime offers movie picks

Showtime Networks offers 'Internet users a chance to choose features for viewing via the Internet during its free preview, Sept. 6-8. Showtime Pick-a-Flick will permit users to select from one of three titles to be aired at 8 p.m. ET/PT on Sept. 8. Users can register their choice by clicking on a Pick-a-Flick icon at Showtime's Web site (showtimeonline.com).—RT
Comark transmitter first in at Model Station

HDTV signals to go on air July 31

By Glen Dickson

Comark will supply the first UHF transmitter to pump out HDTV signals for the MSTV/EIA Model Station project, located at NBC O&O WRC-TV in Washington. The Colmar, Pa.-based transmitter manufacturer is delivering one of its IOX Series "dual-use" tube units to WRC-TV on July 11; the Model Station will use it to start transmitting Grand Alliance-compliant data signals on July 31.

"We'll have audio and video going out within a week or two thereafter," says Model Station Project Director James McKinney, who adds that an HDTV antenna from LDL Communications will be added to WRC-TV's existing tower on July 27.

McKinney emphasizes that the Comark transmitter being installed is not the company's commercial HDTV model with a built-in 8-VSB exciter.

That product, the ATV Advantage, won't be ready until the end of the year, he says.

For the tests this summer, the Model Station will use the dual-use transmitter along with the Zenith 8-VSB exciter owned by the Grand Alliance; the project also will use the Grand Alliance's HDTV encoder. (Commercial models of the exciter and the encoder should be available in the fall.) The HDTV signals will be received by the Grand Alliance's receiving truck used in the ACATS (Advisory Committee for Advanced Television Service) field tests in Charlotte, N.C.

"We simply want to get on the air as soon as possible so manufacturers can start testing equipment with our signals," McKinney says.

In addition to the transmitter and antenna, the Model Station has received $3 million worth of equipment from Sony, Panasonic, Tektronix and Leitch, says McKinney. Sony has donated an HDC-500 camera (worth roughly $500,000), an HDD-1000 tape deck (worth about $350,000), two 28-inch HD monitors, an HDS-1000 switcher and a format converter. The Sony equipment uses the Japanese HD standard. "It's the same equipment used in Charlotte," he says.

Panasonic has donated three D-3 VTRs and three D-5 VTRs. Leitch has given a GPS-based master clock, and Tektronix has donated a range of digital test equipment. "Sarnoff made up the wish list of the testing equipment," says McKinney, referring to the David Sarnoff Research Center, systems integrator for the $6 million project.

The Model Station also will test HDTV transmitters from Harris, Itelco and Northrop Grumman. Northrop Grumman, formerly Westinghouse, will develop transmitters using the silicon carbide transistor technology that Westinghouse showed at this year's NAB convention.

"All of the transmitter manufacturers tell me they'll have the 8-VSB exciter ready in the fall," says McKinney. "We'll start testing whichever one is delivered first."
ABC News to offer browsable feeds

By Glen Dickson

As part of a significant expansion of NewsOne, its affiliate news service, ABC News plans to install a digital video file server in the network’s New York headquarters to distribute browsable news feeds to its affiliates.

ABC News plans to make the NewsOne browsing service available to affiliates by early 1997. The network also will add two full-time NewsOne regional reporters—one in Chicago and one in Atlanta—by the beginning of 1997 and is hiring additional staff to increase the number of medical, consumer, entertainment and environmental reports that it produces. NewsOne now has full-time correspondents in Washington, Los Angeles and London.

“The affiliates always are asking for more news,” says ABC’s Don Dunphy, vice president of affiliate news services. “We have to continue growing to be competitive.”

ABC will continue to distribute its NewsOne feeds via a C-band transponder on the AT&T Telstar 401 satellite. The new service simply will pump out thumbnail video clips over ISDN lines from the server in New York, allowing affiliates to dial into the server and browse through video in real time.

“We transmit roughly 16 national and regional news feeds each day,” says Dunphy. “Rather than having to send it back and look through all the tapes, this will let producers get an idea of the quality of the video rather than [having to screen] all these analog tapes.”

According to Mike Hurt, director of ABSAT, ABC’s satellite newsgathering program, all of the NewsOne material will be digitized and fed into the server. The plan is that affiliates will be able to access the material through a Windows-based newsroom computer without requiring the purchase of a dedicated terminal to receive the thumbnail clips. Only a software add-on and an ISDN connection will be necessary, he says.

“The NewsOne feed is probably 300 pieces of news each day,” Hurt says. “This will allow producers to sit at their newsroom computer and pull up clips as quickly as they look up scripts. Since we have the browser here, it’s not going to require a major investment from the station.”

ABC News is evaluating several servers in New York. “We’re looking to adapt stuff that hasn’t normally been used in TV,” Hurt says.

Dunphy says that NewsOne’s browsing service should be less expensive than CNN NewsSource on Demand, the satellite-distributed browsable feed launched by CNN last fall. The CNN model uses an in-station Apple server to record the compressed digital feed material and related text, which then can be accessed by newsroom PCs via an Ethernet LAN (Broadcasting & Cable, Sept. 4, 1995). A typical installation costs a station $1,000-$1,500 per month, depending on the number of terminals the station requires.

NBC, of course, has embarked on a much more ambitious digital news feed plan using MCI’s Hypermedia Service. NBC on Demand, which now is being tested by 20 NBC affiliates, uses T-1 and DS-3 fiber lines, Sun and Silicon Graphics servers and workstations, and MPEG-2 encoders for a sophisticated (and expensive) system that can deliver broadcast-quality clips and promos in real time. But the service is simply a technological trial for now, and NBC has given no definite plans for national implementation.

Cutting Edge

By Glen Dickson

Mitsubishi Electric Corp. and Lucent Technologies (the spin-off of AT&T’s systems and technologies businesses) have agreed to jointly develop semiconductor chips for HDTV television sets and plan to release the first samples in early 1998. The chip set will be used by Mitsubishi in its own HDTV receiver for the U.S. market, and will be sold by both companies to other TV set manufacturers. It will consist of five application-specific integrated circuits (ASICs) that will facilitate viewing of the proposed Grand Alliance high-definition TV standard: a demodulator, demultiplexer, video and audio decoders, and a display processor. Bell Labs, the R&D arm of Lucent, is developing the demodulator and demultiplexer; the video decoder is being created by Mitsubishi with help from Bell Labs, while the audio decoder and display processor are being developed by Mitsubishi. “By collaborating with Lucent, we can shorten the time it would take any one company to develop all five chips, and share the development costs,” says Yoshiyuki Nakal, chief engineer, microcomputer and ASIC division of Mitsubishi.

Cosmos Broadcasting Corp., Greenville, S.C., has installed Chyron Max and Maxine graphics systems, Liberty 2.5D graphic design software, and Chyron’s Imagestor real-time still store management systems in three of its television stations: WTOL-TV, the CBS affiliate in Toledo, Ohio; WJIE-TV, the NBC affiliate in Evansville, Ind., and KPLC-TV, the NBC affiliate in Lake Charles, La. The systems, which cost roughly $175,000 for each station, will be used for news, commercial production and station promotion production. “We were attracted to the Chyron products because of the ability to easily network the equipment together for a rapid interchange of images,” says Steve Smith, Cosmos vice president of engineering and operations. “It’s all on one network; you can send images back and forth, and you have a common database library.”

Using the Chyron graphics system at WTOL-TV Toledo.

HELP WANTED MANAGEMENT

Emerson College, a private four-year college devoted exclusively to the interdisciplinary study of communication and the performing arts, invites applicants for a newly created executive position of General Manager of Broadcasting.

The General Manager will report to Emerson's Vice President for Administration and Finance and will be responsible for television and radio broadcasting at the institution. The College currently holds ITFS and FM broadcast licenses. The General Manager will develop objectives, policies, and procedures for all aspects of the ECB operation within the framework of the Emerson College strategic plan.

Principle areas of operational focus will be business planning, programming, facilities design and construction, fund raising, and organization-building.

The General Manager will:

* provide students the opportunity to develop hands-on production and broadcasting skills to achieve aesthetic and technical proficiency as producers, directors, writers, editors, performers, and reporters in a professional atmosphere.
* work in close collaboration with the faculty to meet curricular needs.
* spearhead the fund raising efforts of ECB to allow for organizational growth. Fund raising includes corporate and foundation grants as well as business partnering and individual giving.

Candidates should have substantial knowledge of 1) programming for TV and radio, 2) engineering and equipment, and 3) marketing and fundraising. Interested and qualified candidates should forward their resumes and cover letters to the search firm retained: Peter N. French, President, P. N. French Associates, Inc., 120-24 Newhall Farme Road, Carlisle, MA 01741-9260.

Emerson College is an Equal Opportunity/Affirmative Action Employer and values diversity in the work place.

Chancellor
Continued from page 27

ney Co./Capital Cities/ABC Inc., has registered its plans to transfer approximately 90% of its stock from President/CEO Steven Dinetz to Hicks, Muse, Tate & Furst Inc. That’s the same private investment group that has paid about $200 million for Com- modore Media Inc. (BROADCASTING & CABLE, July 1).

Merely a routine conversion of stock allowed by the Telecommunications Act of 1996, Hicks Muse limited partner Eric C. Neuman says of the transfer of control of Chancellor. “Absolutely nothing’s happening... Steve [Dinetz] continues to be the CEO [and president],” Hicks Muse limited partner Thomas O. Hicks already is chairman of Chancellor’s board of directors.

Sinclair LMA partner buys San Antonio TV

Sinclair Broadcast Group Inc. is keeping its eye on KRR(TV) Kerrville/San Antonio, Tex. The UHF station, with which Sinclair has an LMA, is being bought by Sinclair’s LMA partner, Glencairn Ltd. The price is $2 million plus assumption of liabilities.

In city after city, all of Glencaim’s holdings are tied to Sinclair with LMAs. But Glencaim has close ties with Sinclair beyond LMAs. It is principally owned (directly or through trusts established for her grandchildren) by Carolyn Smith, the mother of Sinclair President David Smith.

Sinclair’s LMA with the UHF station dates to the company’s $1.2 billion merger with River City Broadcasting LP in April. KRR was River City’s only LMA. Sinclair also acquired KABB-TV San Antonio through River City.

Neither Sinclair nor Glencaim officials were available for comment.

Evergreen forks it over for FM

Evergreen Media Corp. is paying the second-highest price of the year for a stand-alone FM: $65 million cash for WEDR(FM) Miami, Fla. The highest price for a stand-alone FM so far this year was $91.2 million for WAXQ(FM) New York. Entertainment Communications Inc. bought the station but immediately turned it over to Viacom International Inc.

Evergreen also has paid the third-highest price this year: $44 million for KYLD-FM San Mateo/San Francisco.

Evergreen’s only other holding in Miami is WYCC(AM). Buying WEDR is part of a plan to buy “successful, growing major-market stations at attractive prices,” says Evergreen Chairman Scott K. Ginsburg. The FM ranks first among listeners 12-plus and in the 18-34 and 25-54 categories, Evergreen says.

December

Dec. 11-13 - The Western Show, presented by the California Cable Television Association, Anaheim Convention Center, Anaheim, Calif. Contact: (510) 428-2225.
Common Carrier’s uncommon chief

New telecommunications policies, reams of law firm filings, frantic, "round-the-clock rulemaking efforts. Regina Keeney has been there, done that.

The FCC’s Common Carrier Bureau chief was at the commission back in the early 1980s, when the government was forcing AT&T to spin off its local phone business into seven regional companies.

“It was extremely hectic, and people were working all night,” says Keeney, who remembers stealing naps in her office during the long weeks. “It was almost like going through boot camp.”

And now she and the rest of her bureau are going through boot camp again. The bureau is overseeing the bulk of the commission's effort to implement the Telecommunications Act of 1996. The job includes implementing rules on universal service, access charges, number portability, telemessaging and other issues.

This month, the bureau is racing toward an Aug. 8 deadline for wrapping up rules in telephone interconnection, a proceeding that FCC officials say has drawn some 200 comments from interested parties. But Keeney is no stranger to paper tidal waves. Washington lawyer Walter McCormick, who worked with Keeney on the Senate Commerce Committee, recalls a committee “paper hearing” on one legislative proposal that drew hundreds of pages in law firm submissions. “It was like a roomful of comments,” says McCormick. “Regina read every word.”

Bureau staffers are now facing similar reading requirements as they implement the new telecommunications law. “There are people here seven days a week,” says Keeney. “Every Monday morning you come in and you can tell it’s been a hectic weekend again because the bathroom’s completely out of paper.” Keeney also relates one tale of Common Carrier Bureau attorneys sharing fond memories of the lighter working hours they enjoyed in private practice.

But the work is still fun, she says. Keeney describes a feeling of esprit de corps among the bureau’s employees: “We have people here who are really the national experts in various things. People obviously aren’t com-

“I keep getting interesting jobs at interesting times.”

Regina Markey Keeney

ing for the money or short hours.”

Keeney came to the FCC in 1994 from Capitol Hill, where she put in nine years as the Republican communications counsel on the Senate Commerce Committee. After shifting to the FCC, she served as the commission’s first Wireless Telecommunications Bureau chief—overseeing the first spectrum auctions—before moving to the Common Carrier Bureau last November.

“She’s held the two most active bureau chief positions,” says Washington communications lawyer Richard Wiley. “She’s been a real success story here in Washington.”

“Regina rules my thinking on common carrier issues,” says FCC Chairman Reed Hundt. Hundt says he differs from Keeney in that “she is a Republican from Harvard with a mastery of congressional politics, network economics and common carrier acronyms. These are all daunting topics for me—but I respect and admire her deeply as a person, leader and thinker,” Hundt says.

“If you were to design a resume that would end up being the perfect bureau chief for this time in history, it would be her resume,” adds another FCC official.

It’s a resume that began in tax law when Keeney launched her legal career with a Washington law firm. A lull in tax work resulted in some communications issues coming Keeney’s way, and when she heard the FCC was hiring lawyers she decided to sign up.

“The issues have always been interesting,” Keeney says of communications law. “It is intellectually challenging and there also are the social policy goals.”

Keeney also cites an interest in communications dating back to the second grade, when her father taught her Morse code. “I was never very good at it, to his dismay.” She also recalls her father, an Air Force navigator, constructing the family’s first color TV.

Keeney now hopes her bureau will construct rules allowing new telecommunications competitors to enter each other’s businesses. Beyond implementing the telecommunications law, however, she is less certain what the future holds for her career. While some plot out life plans from kindergarten on, Keeney does not count herself among them.

“I’ve been really lucky in that I keep getting interesting jobs at interesting times.”

BROADCAST TV

Appointments at KING-TV Seattle, Wash.: Susannah Frame, reporter, named weekend morning news anchor; Kris Breton, payroll accountant, named accounting manager; Lance Enger, teleprompter operator, named overnight assignment editor; Toni Campbell, payroll lead, Host Marriott Corp., joins as payroll accountant.

Mike Hegedus, executive producer/host, Prime Suspect, NBC Television Station Division, Burbank, Calif., joins WNBC(TV) New York as reporter.

Chuck Gordon, GSM, WHAS-TV Louisville, Ky., named chairman, ABC Television Network Sales Advisory Board.

Roland Steadham, lead weather anchor, WSVN(TV) Miami, joins WTVJ(TV) there as weekday weather anchor.

Eugene Staples, director/cameraman, WNDU-TV and Golden Dome Productions, South Bend, Ind., named creative services director.

Appointments at WKRC-TV Cincinnati, Ohio, Brad Johansen, weekend news anchor and reporter, named sports director; Stephen Daniloff, director, local sales, WSTR-TV Cincinnati, joins as local sales manager.

Carolyn Kane, assistant news director, WCMB(TV) Columbus, Ohio, joins KOLD-TV Tucson, Ariz., as news director.

Louise Henry Bryson, senior VP, affiliate sales and marketing, FX Networks, named chair, board of directors, KCET(TV) Los Angeles.

Appointments at Chambers Communications Corp. stations, Eugene, Ore.: Rick Jacobs, supervising producer, KOIN(TV) Portland, Ore., joins KEZI(TV) Eugene as news manager; Mark Hatfield, executive producer, KDRV(TV) Medford, Ore., named news manager; Geoffrey Riley, senior reporter/special projects producer, KDRV(TV), named executive producer.

Clem Taylor, producer, Eye to Eye, Washington, named senior producer, hard news, This Morning, New York.

Gregg Lagan, assignment editor, KCCI(TV) Des Moines, Iowa, joins WOTV-Ames/Des Moines as news director.

James Grimes, GM, KDBC-TV El Paso, joins WDEF-TV Chattanooga in same capacity.

Dennis Swanson, president, ABC Sports, joins WNBC(TV) New York as president/GM.

PROGRAMING

Andrew Plotkin, story editor, Rysher Entertainment, Los Angeles, named director, development.

Audrey Gelb, manager, production, Columbia TriStar Television, Culver City, Calif., named director.

Tony Ball, GM, broadcasting, British Sky Broadcasting (BSkyB), joins International Sports Programming Partners—a worldwide sports programming alliance formed by News Corp., Liberty Media Corp. and Tele-Communications Inc.—New York, as COO/executive VP.

Henry Urick, senior VP, marketing, Rysher Entertainment, joins Tribune Entertainment Co., Los Angeles, as VP, marketing.

Appointments at NBC Asia, Hong Kong: Dick Reingold, VP, news, WRC-TV Washington, named VP/station manager; Ruth Kan, manager, marketing services, TVB International, joins as marketing director.

Melissa Martin, financial analyst, Massachusetts Water Pollution Abatement Trust for the State Treasury, joins Hearst Broadcasting Productions, Needham, Mass., as business administrator.

Rebecca Prentice, partner, Shearman & Sterling law firm, Los Angeles, joins Paramount Pictures, Hollywood, as senior VP/general counsel.

David Peckinpah, executive producer, Silk Stalkings, USA Network, joins Universal Television, Universal City, Calif., to executive-produce Sliders series. He also has signed a drama development deal with the company.

RADIO

Liz Barber, senior marketing consultant, KPLX(FM) Dallas/Fort Worth, joins Infinity-owned radio stations there as director of new sales venture, Infinity Sales and Promotions.

Al Crosby, GM, EBE Communications, joins KZSA(FM) Placerville/Sacramento, Calif., as station manager.

Michael Wittman, controller, acquisitions and accounting services, Westinghouse Broadcasting, joins CBS Radio Networks, New York, as controller.

Stan Dunn, on-air host, San Francisco, joins KNOB(AM) San Rafael, Calif., in same capacity.

Chuck Roberts, program director/morning host, WXCR(FM) Essexville, Mich., joins KLQO(FM) St. Louis as production director/midday host.

Freedom Forum honors educator

Douglas Anderson, director, Walter Cronkite School of Journalism and Telecommunications at Arizona State University in Tempe, has been named the 1996 Freedom Forum Journalism Administrator of the Year. The award recognizes outstanding administrative leadership in the advancement of journalism education. Anderson will receive a medal and $10,000 cash. In addition, a $10,000 grant will be given to the Cronkite school. The award will be presented on Aug. 10 during the Association for Education in Journalism and Mass Communications convention in Anaheim, Calif.
Bob May, GM, KZMZ(FM) Alexandria, La., joins KRRV-FM/KICR-FM/KDBS(AM) there in same capacity.

J. Peter Bardwick, CFO/executive VP, The Beasley Broadcast Group Inc., joins Star Media Group, Dallas, as managing director, Star Media Capital.

**CABLE**

Katherine Lewis, GM, Express Games, Sega Channel, New York, named VP, marketing.

Appointments at Discovery Communications, Bethesda, Md.: Sandy Wax, director, research, Discovery Networks, named VP, research and planning; Discovery Communications Inc.: Steve McGowan, director, programming and market research, Discovery Networks U.S., named VP, research; Leigh Jenkins, senior manager, international marketing, named director.

Appointments at 21st Century Cable TV Inc., Chicago: Richard Wiegand-Moss named COO; Roxanne Jackson named VP, human resources; Patrick Lekawa named president, Internet and data services division; Stephen Lee named VP, Internet and data services division; Leslie Logsdon named director, sales; John Gronke named director, purchasing and contracts.

Rolando Santos, director, Noticiero CNN Internacional (CNNI), Atlanta, named VP, CNN Spanish, and head, CNN’s 24-hour Spanish-language news network to launch in first quarter 1997.

Maryline Lewett, national sales manager, International Media Group Inc., and Eric Scott join International Channel Networks, Englewood, Colo., as national advertising sales manager and director, creative services, respectively.

George Jamison, manager, international communications, General Electric, joins CNBC, Fort Lee, N.J., as VP, media relations and corporate communications.

Hall Simon, senior account supervisor, entertainment and corporate communications, Lippin Group, New York, joins USA Network there as publicist.

Appointments at The Weather Channel, Atlanta: Patrick Scott, chief executive/managing director, Satellite Information Services Ltd., joins as managing director for expansion in Europe, the Middle East and Africa; Neil Stron, national account executive, Cable Advertising, Atlanta, joins as account manager, national ad sales; Steve Goulas, affiliate sales representative, named regional manager, affiliate sales.

**MULTIMEDIA**

Paul Perrello, news director, WWDB(FM) Philadelphia, joins Metro Networks and Metro Traffic Control there as news bureau chief.

Robert Matheson, television division chief, Armed Forces Radio and Television Service, Riverside, Calif., named director, programming.

Ellen Robinson, GM, Pepsi-Cola Bottling Co., Denver, joins Ascent Entertainment Group Inc. there as president, Ascent Sports.

Maureen O’Connell, legal adviser, office of FCC Commissioner James Quello, Washington, joins The News Corporation Limited, New York, as VP, regulatory affairs.

William Burleigh, president/COO, E. W. Scripps Co., Cincinnati, named president/CEO.

George Nunes, VP, sales/consumer marketing, Capitol Records, Los Angeles, joins KidStar Interactive Media, Seattle, as integrated media specialist.

Appointments at MCA/Universal Consumer Products Group, Universal City, Calif.: Cindy Chang, editor, Interactive Books, joins as director, publishing; Chuck Valdez, director, finance, named VP.

**TELEMEDIA**

Appointments at International Family Entertainment Inc., Virginia Beach, Va.: Mike Quintana, manager, special projects, corporate marketing, named manager, Internet ventures; Clint Bailey, coordinator, events and conventions, named manager, Internet operations.

Bruce Bond, managing director, national business communications, British Telecom, joins ANS (data networking subsidiary of America Online Inc.), Vienna, Va., as president/CEO; Heinz Wermeling, VP, marketing, AOL Europe, Gutersloh, Germany, named president/CEO.

Broadcasting & Cable  July 8 1996  59
The American Women in Radio and Television presented its annual industry awards June 27-30 at its convention in Naples, Fla. Betty Hudson, senior VP, corporate communications, Reader's Digest Association, and longtime NBC executive, received the association's first President's Award for her “consistent support for AWRT” and for strengthening “the position of women by mentoring, networking and counseling.”

The organization’s highest honor, the Silver Satellite Award, was presented to talk show host Montel Williams. The award is given for “outstanding accomplishments in, or contributions to, the field of electronic communications.”

Star Award winners were WTPS-TV St. Petersburg, Fla. (for television company); Pat Mitchell, Turner Original Productions (individual in cable); Marcie Ersoft, Citicasters Inc. (individual in television); Radio One Inc. (company in radio), and Viacom Inc. (cable company).

The AWRT Achievement Award was given to Patricia Mahoney of Iridium Inc., Washington, for being a member “who has strengthened the role of women in the industry and has contributed to the improvement of the community.”
it bought Brissett Broadcasting and Stauffer Communications. Benedek’s nine other stations are already TVB members.

There are new GMs at two Providence Journal stations: Doug Armstrong moves to NBC affiliate KVIB-TV Boise, Idaho, from the GM post at co-owned KXML-TV Honolulu. Replacing Armstrong in Honolulu is John Fink, the station’s general sales manager.

Metromedia International Group has closed its merger agreements with Samuel Goldwyn Co. and the Motion Picture Corp. of America. The company also says that another subsidiary, Orion Pictures, secured $300 million in credit from lenders led by Chemical Bank.

NBC has named William Katsafanas president/General Manager of WCMH-TV, the network’s O&O in Columbus, Ohio. He was VP/General Manager of KFOR-TV, the NBC affiliate in Oklahoma City.

Former Star Trek: The Next Generation star LeVar Burton has signed a wide-ranging movie and TV development deal with Paramount. Burton’s Eagle Nation Films is at work on Daddy’s Little Girl, a comedy pilot for UPN. Burton is also in the middle of his 13th season as host of acclaimed PBS children’s series Reading Rainbow.

NBC Enterprises has formed a production partnership with Paul Simms, creator and executive producer of the network’s hit sitcom NewsRadio. The new company will place special emphasis on bringing rising comedy writers to NBC.

Similar to a deal made in May with TCI, Canadian satellite company Telesat Canada last week signed an agreement with TelQuest Ventures LLC to launch two direct broadcast satellites that will transmit TV broadcast signals to the U.S. and Canadian markets. The first of four proposed Telesat satellites to be placed into Canadian orbital slots will launch this fall. The deal still requires FCC approval.

Encore Media Corp.’s International Channel and China Central Television (CCTV) will kick off their programming exchange agreement with the airing of Romance of the Three Kingdoms. The 80-episode series will run in sequence Monday-Friday, 8:30 a.m.-9:30 p.m., on the International Channel. The airing of the series is a precursor to the 1997 launch of a 24-hour Chinese channel, a separate, previously announced venture of the International Channel and CCTV. Encore Media’s Encore International in August will begin exporting family-oriented programming, including music and variety shows, to CCTV’s general entertainment cable and satellite channel, CCTV-8.

Bruce Davis has been named president of TV Guide Prevue Networks, the newly formed joint venture of News Corp. and the United Video Satellite Group. Davis had been president of TV Guide on Screen, a joint venture of News Corp. and TCI. The venture will be based at Prevue’s headquarters in Tulsa, Okla.

Digital Equipment Corp. announced plans last week to cut 7,000 jobs—representing 10% of its work force—during the next year. Digital did not indicate what operational areas would be affected by the cost-cutting strategy. Digital also said that it would take a charge of approximately $475 million in the fourth quarter to cover costs of restructuring.

Cox California PCS will purchase $500 million in PCS network equipment and services from Lucent Technologies. Cox California, a subsidiary of Cox Communications, plans to build a state-of-the-art communications service for the southwestern U.S., including San Diego, Orange County, Los Angeles and Las Vegas.

Errata—The listings for Tribune Broadcasting, Viacom and Cox in last week’s rundown of the top 25 radio groups contained errors. Tribune executives should have been Dennis FitzSimons, executive VP, and Wayne Vriesman, VP, radio group. KXDF (FM) Denver is now KKXK (FM). For complete media holdings and correct address, see this week’s Top 25 TV groups (page 12). Viacom’s total average-quarter-hour listeners should have been 376,700/10 stations. The listing included three Seattle stations that the company is swapping. (For details on this deal, which includes Viacom’s acquisition of WAXO (FM) New York, which the company operates under an LMA pending FCC approval, see “Changing Hands,” April 8.) The Cox TV stations should have been assembled under the company name Cox Broadcasting (a privately held subsidiary of Cox Enterprises) and executives should have been Nicholas Trigony, president, and Bob Neil, head of Cox Radio.

"Somebody videotaped the station picnic. You guys had better hope there's a V-chip in the boss's TV!"

Incorporating The Fifth Estate TELEVISION Broadcasting

Broadcasting & Cable (ISSN 0007-2028) (CST 1252031457) is published weekly, except at year’s end when two issues are combined, by the Cahners Publishing Co., Cahners Publishing Co., at 245 West 17th St., New York, NY 10011, a division of Reed Elsevier Inc., 275 Washington St., Newton, MA 02158-1800. The Hundtification of TV

Reed Hundt is on a roll. The chairman of the FCC is about to bring about a revolutionary change in children’s TV policy, having worked uphill against the wishes of half or more of his colleagues and the combined opposition of the broadcasting industry. His is truly a telecommunications tour de force that will be written about long after he’s gone.

We’re left with mixed emotions. From the beginning we opposed the Children’s Television Act of 1990, fearing it would lead to just the kind of First Amendment infringement that is about to be the broadcaster’s lot. It was that law—with its provision that performance in the children’s area be subject to review at license renewal—that gave Hundt the mandate to come up with new children’s rules.

This page has opposed quantification of children’s programming as violative of the First Amendment and, almost worse, as a bad idea. Programing by the pound is hardly the way to get the best from the broadcasting system, or the best for the nation’s children.

Both sides in this debate have been too rigid in pursuing their goals—Hundt for never yielding an inch on quantification and broadcasters for seeming not to yield on anything. Early on in the contest they enjoyed a three-to-two majority at the FCC and used it to be uncompromising, in the process jeopardizing the industry’s standing in the Congress, with the administration and with the chairman with whom they eventually had to deal.

It is worth revisiting these wounds because, as is so often the case, the past is about to be prologue. Chairman Hundt’s victory in children’s television is about to be replicated in other areas of the broadcast day: political broadcasting, specifically, and public service in general. This time the magic number is not three hours a week but more than eight hours a week—5% of all broadcast time. If the first trial balloons are accurate, that will be the quid pro quo for broadcaster use of the digital spectrum.

Our concern is over the passage of control over a significant amount of broadcasting airtime from the private sector to the public, in potential violation of the First Amendment. At the same time, we must acknowledge the public trustee concept, built on a system of trust and confidence that broadcasters would do the right thing.

Broadcasters are caught between Hundtification’s two main premises: an aggressive freeing up of the marketplace and an aggressive expansion of public service obligations. But this time around, broadcasters dealing with the FCC dare not violate a basic rule: You can’t beat something with nothing. If they don’t want 5% as they didn’t want three hours— they’d better have a plan.

We’re entering a dangerous period. It will call for the highest statesmanship on the part of the government and the highest leadership on the part of the industry. Both will have to contribute to a new vision for the American system of broadcasting. It shouldn’t be done by counting votes on the FCC. It should be done in concert with what’s best for the country, the First Amendment and the Fifth Estate.

Channels at risk

There’s another sticky wicket on the Hundt agenda: preempting channels 60-69 for auction now, not waiting for the analog spectrum’s return at a date now uncertain. The idea is that if broadcasters voluntarily relinquish this “down payment” on the analog return, they will win extra time for return of the rest of the spectrum.

The basic issue is whether unused spectrum should be withheld from the auction marketplace in order to protect against an as yet undetermined amount of interference to incumbent broadcasters. That’s a question that will take some answering. Hundt’s ante is $10 billion to $25 billion. You can’t beat something with nothing.
