Graybar's Creed

AS A DISTRIBUTOR

•

The Graybar Electric Company Believes:

1. That it performs an economic service for the wholesale buyer of electrical goods by maintaining adequate, well-selected, and convenient stocks of quality materials, thus relieving him of the burdens of handling, storage, investment, and obsolescence.
2. That likewise it performs an economic service for the maker of electrical goods by providing immediate nation-wide distribution without duplication of warehousing, selling, and credit operations; and,
3. That in performing these services, it lowers the cost of distribution to the benefit of the entire Industry; and,
4. That, consequently, it has a recognized place in the economic structure of the Industry and that it need not and should not engage in any activity detrimental to the Industry;
5. That finally, since its own success will follow the success of the Industry, it should endeavor in its publicity to bring about a greater public appreciation of Electricity; and that it should pursue and encourage sound merchandising and credit practices and in every way possible contribute to the advancement of the Electrical Industry.

GRAYBAR ELECTRIC COMPANY—DISTRIBUTORS OF 60,000
ELECTRICAL ITEMS THROUGH 73 DISTRIBUTING HOUSES

FROM TOP

to

This photograph shows the entire factory and sales force of Gray and Barton in front of the original factory.

The Story of 65 Years

WAY back in 1869 two energetic and ambitious young men started a modest workshop to make electrical bells, buzzers and pushbuttons.

These men were Elisha Gray and Enos M. Barton and they called their little business Gray and Barton. This business, started before the telephone or electric light had taken their place in the scheme of things, later grew to be the company now known as Graybar.

Elisha Gray and Enos Barton were men of vision but even in their most ambitious moments, they could not have visualized the tremendous growth of the industry in which they were pioneers or of the company they founded. Gray and Barton in 1872 became the Western

Electric Manufacturing Company and on January 1, 1926, Graybar Electric Company. It is highly appropriate that the names of these two electrical pioneers should be perpetuated in the name of the largest distributor of things electrical.

Matching the growth of the electrical industry and keeping pace with its development Graybar Electric Company has had an active part in this industry during all these sixty-five years. Today, Graybar stands ready to intelligently serve those who need things electrical.

Graybar offers electrical buyers a wide selection of quality electrical items from warehouse stocks in 73 cities, strategically located in relation to trading centers from coast

and Barton Graybar

coast. Graybar offers an assurance of satisfaction to all its customers, backed by a sixty-five year reputation for fair dealing. Graybar offers the experience of all these years in help-

ing you to select the proper electrical equipment for your needs and in getting this equipment where you want it, when you want and as you want it.

8 YEARS OLD
65 YEARS IN BUSINESS

In 1869, Gray and Barton; in 1872, Western Electric Manufacturing Company; in 1881, Western Electric Company; in 1926, Graybar Electric Company.

PRICES

PRICES found in this catalogue are revised to agree with the latest lists at the time of issue. It is understood that they are subject to change without notice and are, therefore, not offered by us as a quotation. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified, except such goods as are shipped regularly direct from factories, in which cases prices are for factory delivery unless otherwise specifically agreed upon.

ORDERS

WHEN possible, we have placed opposite each article a list number. When ordering material, kindly order by the list number and give a description of the article required.

You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra drayage expenses at destination.

TERMS

OUR terms are 30 days net from date of invoice.

Payments may be made by check, bank draft, postal or express money order, drawn to the order of or endorsed to the order of the Graybar Electric Company, Inc.

Payments in currency through the mails even if registered are not recommended and are at sender's risk. We are not responsible for loss or miscarriage of the mails.

Receipts are not issued for remittances

unless requested. Our endorsement on remittance is acknowledgment of the receipt of the funds.

We solicit new accounts on a credit basis, and in order to give prompt service, request that where you are not rated by the Commercial Agencies, references or other information of a credit character be forwarded with the order. These will be immediately acted upon, and the results held in strict confidence for our sole use and, when reasonably satisfactory, shipment will follow with all possible dispatch.

To avoid the delay incidental to communicating with references, etc., it would be mutually convenient, when immediate shipment is desired, to instruct us to ship C. O. D. by express, or parcel post (insured if so instructed) or by freight subject to sight draft through a local bank against bill of lading.

We shall advise the terms on future orders promptly after communications from references are received.

RETURNED GOODS

TO save transportation charges, and to facilitate the handling of goods upon receipt, you are requested not to return goods without having obtained shipping instructions from us.

SHIPMENTS

AS experienced packers are employed, and as reasonable care is used in packing, we cannot be held responsible for breakage in packages which are delivered in "good order" by the carrier.

Shipments of glassware are made at your risk.

Goods ordered to be shipped by parcel post will be sent only at the purchaser's risk of loss or damage.

Wood Pole Specifications

Values for the ultimate fibre stresses of wood poles were approved by the American Standards Association November, 1930. These values are as follows:

- Southern Yellow Pine Creosoted... 7,400 lbs. per sq. in.
Western Red Cedar... 5,600 lbs. per sq. in.
Northern White Cedar... 3,600 lbs. per sq. in.
Chestnut... 6,000 lbs. per sq. in.

This Association adopted the principles given below as a working plan for the development of the specification circumference table in which table Classes 1 to 7 are defined primarily by their circumferences at 6 ft. from the butt and designed to meet the following breaking loads under the conditions imposed in Principle 4. Classes 8, 9 and 10, having no butt requirement, were defined by minimum permitted top circumferences only.

Table with 8 columns: Class (1-7), Lb. Sq. In. (4500, 3700, 3000, 2400, 1900, 1500, 1200)

These principles are:

- 1.—All tables shall be based on standard fibre strengths, for the respective species.
2.—The tables shall specify dimensions in terms of circumference in inches at six feet from the butt, except for classes of "No Butt Requirement," and circumference in inches at the top for poles of the respective lengths and classes.
3.—All poles of the same length and class shall have when new approximately equal strength, or in more precise terms, equal moments of resistance at the ground line.
4.—All poles of different lengths within the same class shall be of suitable size to withstand approximately the same breaking load, assuming that the load is applied two feet from the top and that the break would occur at the ground line.
5.—The smallest class for which butt measurements shall be specified shall have a breaking load under the conditions stated in Principle 4 of approximately 1200 pounds.

6.—The largest class for which butt measurements shall be specified shall have a breaking load under the conditions stated in Principle 4 of approximately 4500 pounds.

7.—The classes from the lowest to the highest shall be arranged in geometric progression, the increments between classes, measured in terms of breaking load, to be approximately 25 per cent.

ASA Specification dimension tables will be found in this catalogue under each species of timber we discuss.

The breaking loads of the various classes previously mentioned are translated into terms of moments of resistance at the ground line and the required ground line circumferences were calculated by using beam formula Mr-.000264-c^3.

Mr is moment of resistance
f is the standard fibre stress
c is circumference in inches

In all classes and lengths the 6-foot circumference is usually larger than the minimums given in the table. Stating this in another way, the average 6-foot circumference for all lengths in any class is greater than one-half the difference between the class and the minimum of the next higher class. In general, too, the average pole of a given class will be considerably stronger than the rating for the class.

The basic principles upon which ASA Specification tables have been worked out conform to and are consistent with the accepted engineering practice of the larger transmission and communication utilities.

While these simplifications and standardizations on a national scale are of great interest to our customers, we still retain a belief that they cannot replace our individual specialization of method, developed over twenty-five and more years in this particular field.

A.S.A. Circumference Tables

Western Red Cedar Poles

Minimum Circumference at 6 Feet from Butt, Inches

Table with 11 classes (1-11) and 10 lengths (3 1/2 to 11). Columns include Ground Line Length Dist. from Butt Ft. and Class Circumference Inches.

Creosoted Southern Yellow Pine Poles

Minimum Circumference at 6 Feet from Butt, Inches

Table with 11 classes (1-11) and 10 lengths (3 1/2 to 11). Columns include Ground Line Length Dist. from Butt Ft. and Class Circumference Inches.

*No butt requirement.

Western Red and Northern White Cedar Poles

The National Pole & Treating Company supplier of Graybar Northern and Western Cedar Poles for more than 25 years has a well earned reputation for furnishing a quality product.

It maintains at the treating plants both a graduate chemist and a graduate timber pathologist who are charged with treating operations, oil analyses, yard sanitation and research, all important essentials in the manufacture of quality poles.

Pole Quality

Poles sold by the Graybar Electric Company conform to nationally accepted standards. Inspections are thorough.

Cedar presents the following qualities:

- | | |
|------------------|------------------|
| 1.—Strength. | 6.—Appearance. |
| 2.—Durability. | 7.—Cleanliness. |
| 3.—Stability. | 8.—Availability. |
| 4.—Light weight. | 9.—Safety. |
| 5.—Adaptability. | |

Processed Cedar Poles

The National Pole & Treating Company maintains at its concentrating yards trained workmen who, for a small extra charge, roof, gaen and stain poles to specifications.

Cedar Pole Service

At Minneapolis, and Everett, Washington, cedar poles are concentrated, handled by steam equipment, etc. The stock runs 100,000 poles and more.

Emergency service is always available.

Preservative Treatment for Cedar Poles

One of the Butt Treating Vats Showing View of 130,000 Gallon Reserve Creosote Tank at Minneapolis Plant

Description

Years of scientific observation by engineers of the largest pole users in the United States has demonstrated that the life of cedar poles can be increased by proper open tank butt-treatment. If a satisfactory permeation is obtained in the ground line area, the life of a pole, butt-treated in creosote, will depend upon the mechanical wear of the pole above.

Unless there is a thorough and even permeation, decay will occur in small pockets and in checks through the treated wood.

Proper treatment more than doubles cedar pole value, as the original factor of safety is maintained far beyond the replacement date of the untreated pole.

Incised Treatment

Permeth Method Worth More Money

The incised treatment of cedar poles is the logical development of the open-tank process.

The preservative value of creosote has been recognized for many years and, as a treatment for cedar poles, was first applied with a brush. However, it was found that the painting did not get the creosote into the smaller and deeper season checks and cracks, so the poles were dipped into the creosote. This treatment was named AA and was specified as a continuous immersion for fifteen minutes in creosote heated to not less than 212° F., and not more than 230° F. We are still prepared to furnish AA treatment, at some initial price saving if that is in special cases what our customers wish to buy.

The penetration secured by the AA treatment was so shallow and unreliable that the time of treatment was lengthened to a period of from four to six hours in creosote ranging from 212° F. to 230° F. and an immediately succeeding bath in cold creosote for two hours at not more than 110° F. This treatment was called B. (We will on special request quote and furnish B treatment.) By this process a deeper penetration was secured and better results in service were obtained, but it was found that the absorption was irregular. In fact, in seasoned timber of apparently the same condition, some poles absorbed the creosote readily and showed a good penetration while others gave evidence of one surface treatment. Likewise, in the same pole there might be a full sapwood penetration at one point, whereas, in an area but a few inches away there might be little penetration. This uneven absorption naturally led to very uncertain results in service because, after the poles were set in line and were subjected to the various conditions of the seasons with the resultant checking and parting of the fibres, the cracks descending from the upper untreated portion of the pole entered the treated area and where they ran through the shallow treatment they opened up and exposed untreated timber. This permitted the fungi to come in direct contact with the untreated fibres with the resultant infection and rotting of the wood within the pole behind the layer of treated timber. This action proved that any treatment was only as effective as the protection given by the shallowest penetration at any point in the ground line area.

This conclusion necessitated the development of a uniformly deep permeation. Much research and experimental work was done to develop a treating process which would give this result.

Permeth Machine with Pole in Position Ready for Puncturing. The Oil Lift that Raises the Lower Carriage into the Head of the Machine and Acts as a Cushion while the Machine is in Operation

A microscopic study of cedar shows the wood to be very porous. It is made up of long, hollow longitudinal fibres which are spindle shaped cells, arranged in rings from the pith to the bark. These rings of cells form the annular rings. These fibres, besides furnishing support for the tree, provide means for the movement of the sap. Other than the longitudinal fibres are the medullary rays or cells which extend radially from the pith into the bark. There are no passages in the timber other than the cells within these longitudinal fibres and medullary rays and the sap moves from cell to cell through minute pits or pores which connect adjoining cells at their points of contact.

Western Red and Northern White Cedar Poles

Continued

Although cedar fibre will absorb from 12 per cent to 15 per cent of its oven dry weight in water it will not absorb creosote. Examination under the microscope, of treated cedar discloses creosote within the cells but shows no absorption in the fibre. Consequently, in order to obtain penetration in cedar the movement of creosote must be by means of the openings in the cells and not through the cell fibre.

If the conditions within the timber remained unchanged after being cut, not so much difficulty would be experienced in treating it, but such is not the case. The sap is a watery solution of sugars, starches, resins, etc., and, while the tree is alive, it is constantly in solution and circulating, but, when the timber is cut, peeled and begins to season, some of the water from the sap evaporated and concentrates the sugars and resins which seal up most, if not all, of the minute pits or pores between the adjoining cells.

Average Penetration of Punctured Section, $2\frac{1}{32}$ -Inch,
by our Permex Method

Average Penetration, $1\frac{9}{32}$ -Inch, Unscientific Hand Punctured
Treatment

Incised Method of Treatment for Cedar Poles Permex for Permanency

In our Permex treatment no external pressure is applied. The movement of creosote in the cells is entirely dependent on the action of capillary attraction. This is created by first applying heated creosote ranging from 212° to 223° F. for a continuous period of eight hours, thereby vaporizing the moisture in the sapwood, causing it to expand 1/273 times its volume for every degree of heat through which it passes and partially expelling it from the timber, and then applying an immediately succeeding bath in cold creosote from 110° to 150° F. The cold treatment contracts the vapors, forms a partial vacuum within the cells and draws the surrounding creosote into the timber. This action creates an appreciable longitudinal creep or movement but does not produce much penetration radially or tangentially.

The loss in strength to a pole through incising has been determined to be in direct proportion to the percentage of the circumference cut away in a horizontal plane and to the depth of the incision.

A scientific machine for incising, therefore, must meet the existing structural conditions in cedar. Ours was designed to cut radial passages through the fibre just to the depth of the required penetration. The incisions cut the fibres and open the ends of the longitudinal cells, providing passage for the movement of creosote so that with the least amount of timber cut in a horizontal plane and with perforations only to the depth of the required penetration, a complete saturation of the fibre is obtained between all incisions.

There are many other incising machines in operation, but they have been designed with no consideration of the structure of cedar with the result that their perforations are made deeper than necessary and may be spaced so closely that the timber is weakened to a great extent, or the sapwood may be so mutilated that it is made no more than a loosely adhering shell. Even though such perforating may produce the required penetration, it is detrimental to the pole, inasmuch as the strength of the pole may be reduced and the sapwood may become a weakened shell which will not withstand the abuses of service.

Some apply incising by means of a studded belt or plate. These belts or plates are about eighteen inches long by six inches wide and contain from seventy-five to one hundred and twenty-five teeth. A mallet is used to pound the teeth into the timber. When the plate is removed, the teeth, which are binding the timber between them, tear the fibres and in some cases loosen the outer sapwood from the heartwood. It is practically impossible to obtain uniform depth of perforation and impregnation by using belts or plates because the body holding the teeth is not flexible and cannot follow the crevices and irregularities of the timber. On the other hand, the teeth of our machine are operated by automatic adjusting cams and inserted into the timber in such a way as to insure a uniform depth of perforation regardless of the uneven surface over which it has to work.

Incised Method Prevents Season Checking at Ground Line

It was thought at first that if the same penetration could be obtained in a cedar pole without perforating as with perforating, that better service results could be obtained. Experience has proven the contrary to be true. If creosote were not volatile, and if its preservative value were of indefinite existence, and if the layer or treated timber around the outside of the pole were never broken, then a creosoted area on the surface, regardless of depth of penetration, would be sufficient to preserve the pole indefinitely. It has been found, however, in green and even in seasoned poles that season checking occurs after the poles are set in line. But in perforated poles, these checks descending from the upper untreated section run out when they reach the treated perforated area. Thus the perforating protects the poles, not only in securing a deeper, more uniform impregnation, but also in providing means of relieving the stresses which cause checking in treated ground line section thereby insuring constant and complete protection against infection of the timber.

Incising Machines at Minnesota Transfer, Minn. and Everett, Washington

Two of these proper incising Permex machines are at the Minneapolis Transfer yard where the National Pole & Treating Company maintains an adequate stock of poles. A third machine is operated by the National Pole & Treating Company at Everett, Washington. These machines handle this work for us.

It is felt that studies by means of an increment borer could well be made by pole users. One large Central Station, whose engineers make such studies independent of the operating department, report informally that our Permex treatment was 30 per cent more efficient than some others.

Specification for Preservative Treatment Cedar Poles

Incised Process—A Guaranteed Penetration

A.—Seasoning

Poles shall be satisfactorily air seasoned under proper sanitary conditions.

B.—Shaving

All inner bark shall be removed from the groundline area of the pole; i.e., that portion of the pole surface terminating one foot above and two feet below the standard groundline indicated in Paragraph F. The amount of wood shaved off in the removal of the inner bark shall be limited to a minimum.

C.—Incising

All poles shall be incised throughout that portion of the pole surface terminating one foot above and two feet below the standard groundline indicated in Paragraph F. The depth of incisions shall be 1/2 inch. A variation of 1/2 of an inch in the depth of the incisions shall be allowed. The sapwood shall not be splintered nor loosened by the incising operation. The pattern and spacing of the incisions shall be such as to insure a uniform depth of penetration of the preservative throughout the incised area.

D.—Preservative

The preservative used shall be a distillate of coal-tar or coke-oven tar. It shall comply with the following requirements:

- 1.—It shall not contain more than 3% water.
- 2.—It shall not contain more than .5% of matter insoluble in benzol.
- 3.—The specific gravity of the oil at 38 degrees C. compared with water at 15.5 degrees C. shall not be less than 1.03.
- 4.—The distillate, based on water free oil, shall be within the following limits:
Up to 210 degrees C.—Not more than 5%.
Up to 235 degrees C.—Not more than 25%.
- 5.—The residue above 355 degrees C., if it exceeds 5%, shall have a float test of not more than fifty seconds at 70 degrees C.
- 6.—The oil shall yield not more than 2% of coke residue.
- 7.—The foregoing test shall be made in accordance with the standard methods of the American Wood Preservers' Association.

**Treating Operations
E.—Plant Equipment**

Treating plants shall be equipped with thermometers to indicate and record accurately the temperature of the preservative during all stages of treatment. The apparatus and chemicals for making necessary analyses and tests shall be available for use by the purchaser or purchaser's representative. All equipment shall be maintained in good working order.

F.—Length of Treated Sections

Poles shall be immersed in the preservative so as to completely cover the groundline area. The depth of immersion shall not exceed by more than two feet the height of treatment given in the table below. The following table shows the relationship between the height of groundline and the height of treatment from the butt end of the pole:

Length Pole Ft.	Height Groundline Ft.	Height Treatment Ft.	Length Pole Ft.	Height Groundline Ft.	Height Treatment Ft.
16	3 1/2	4 1/2	45	6 1/2	7 1/2
18	3 1/2	4 1/2	50	7	8
20	4	5	55	7 1/2	8 1/2
22	4	5	60	8	9
25	5	6	65	8 1/2	9 1/2
30	5 1/2	6 1/2	70	9	10
35	6	7	75	9 1/2	10 1/2
40	6	7	80	10	11

G.—Manner of Treatment

The treatment shall consist of two immersions; first, the hot immersion; second, the cold or cooling immersion.

Temperature and Duration of Hot Immersion

Poles shall be continuously immersed in the preservative at a temperature of 230 degrees F. plus or minus five degrees for not less than eight (8) hours and such period in addition thereto as will insure impregnation of the sapwood of the incised area with preservative to a depth of 1/2 inch. In case the sapwood of the incised area is less than 1/2 inch thick, the impregnation shall be to the full depth of the sapwood.

Temperature and Duration of Cold or Cooling Immersion

The preservative of the hot immersion may be allowed to cool in the treating tank or it may be replaced with cold preservative. When the preservative of the hot immersion is replaced with cold preservative, the exchange must be complete within ten minutes.

When the preservative of the hot immersion is replaced with cold preservative, the poles shall be continuously immersed in the cold preservative for a period of not less than two hours, and the temperature of the preservative for the entire period shall be between 150 degrees F. and the temperature at which solids form in the preservative.

When the preservative of the hot immersion is allowed to cool in the treating tank, the poles shall be continuously immersed in the cooling preservative at least two hours and until the temperature of the preservative has been reduced to a point between 150 degrees F. and the temperature at which solids form in the preservative. The poles shall remain immersed at this temperature for a period of not less than ten minutes.

The height of the preservative in the hot, cold, or cooling immersion shall be maintained at the same levels required in paragraph F.

H.—Impregnation

The results obtained under this specification shall be a uniform impregnation of the incised area with preservative to a depth of 1/2 inch, except where the thickness of the sapwood is less than 1/2 inch, in which case the impregnation shall be to the full depth of the sapwood. The depth of the impregnation shall be determined by testing with an increment borer at any point within the incised area. All such holes shall be filled with tight-fitting, thoroughly creosoted plugs.

Adherence to this specification results in not only the stipulated depth of impregnation, but also in a very large volume of preservative in the sapwood of the incised area, thus affording maximum protection against decay. No specific preservative content is mentioned owing to the difficulty of accurately making volume tests in the field. The presence of a large volume of preservative can be determined by observing the borings taken for penetration tests.

I.—Handling

The use of any tools which might puncture the treated wood shall not be applied within one foot above or one foot below the groundline area. See Paragraph B.

J.—Storing

Treated poles held in storage shall be piled upon treated or other non-decaying skids in a clean, well ventilated location free from vegetation and decaying wood. Skids shall be of such strength as to support the poles without producing injurious distortion of any of them, and of such height that no part of any pole shall be less than one foot above the surface of the soil.

American Standard Specifications for Western Red Cedar Poles

O—Introduction

These specifications cover western red cedar poles. The poles are to be classified in accordance with the American Standard Dimensions of Western Red Cedar Poles (05c2—1931), which is part of these specifications.

The length and class of the poles wanted shall be stated in the orders.

Poles furnished under these specifications may be either seasoned or unseasoned. If seasoned poles are specifically called for in an order, the purchaser shall specify the seasoning requirements to be met.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

1.—Material Requirements

1.1—Species

All poles shall be of western red cedar (*Thuja plicata*) cut from live timber.

1.2—Prohibited Defects

All poles shall be free from sap rot, cracks, bird holes, plugged holes and injurious checks; from splits, shakes, hollow and decay in the tops; and from damage by marine borers. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

1.3—Limited Defects

1.31 DEAD STREAKS.—All poles shall be free from dead streaks that are wider than one-fourth ($\frac{1}{4}$) of the circumference of the pole at the point of measurement.

1.32 DECAY.—Poles shall be free from decay and from visible evidence of the presence of wood-rotting fungi except as permitted under Defective Butts.

1.33 DEFECTIVE BUTTS.—No poles shall have in the butt surface splits or checks extending from one point on the periphery to another point on the periphery and thence upward more than two (2) feet.

No pole shall have hollow heart, the diameter of which exceeds one-third ($\frac{1}{3}$) the butt diameter or the depth of which exceeds two (2) feet. The depth of hollow heart shall be measured from the butt surface.

Rot is permitted in the butt surface provided the aggregate area of rot and hollow heart does not exceed ten (10) per cent of the entire butt surface.

Complete circular shakes may be present on the butt surface provided the diameter of the ring which they follow is not more than one-third ($\frac{1}{3}$) of the diameter of the butt.

1.34 GRAIN.—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

1.35 INSECT DAMAGE.—All poles shall be free from insect damage, except that pin holes circular in outline, not more than one-sixteenth ($\frac{1}{16}$) of an inch in diameter, and not greater in number than fifteen (15) in an area of four (4) square inches, are permitted.

1.36 KNOTS.—All poles shall be free from unsound knots.

The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section, between the top and two (2) feet below the ground line, shall not exceed the limits set up in the following table. Knots and knot cavities one-half ($\frac{1}{2}$) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

Limitations of Knot Size

MAXIMUM SIZES PERMITTED, INCHES

Length of Pole	Diameter of any Single Knot or Knot Cavity	Sum of Diameters of All Knots and Knot Cavities in any One (1) Foot Section
All lengths	3	10

1.37—SCARS.—No part of a scar shall appear on the upper one-fourth ($\frac{1}{4}$) of the length of a pole or within two (2) feet of the ground line.

Sound scars and cat faces are permitted elsewhere provided the width of the scar or cat face at its widest point is not more than one-fifth ($\frac{1}{5}$) of the circumference of the pole at that point, nor in any case more than five (5) inches.

1.38 SHAPE.—Poles shall be free from short crooks.

A pole may have sweep in the section above the ground line subject to the following limitations:

(a) Where sweep is in one (1) plane and (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

A pole may have offset in the section below ground line, provided that the projection of a straight line joining the mid-point at the top and the mid-point at the ground line does not fall outside the butt surface.

2.—Dimensions

2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Western Red Cedar Poles. This standard gives the minimum allowable circumference at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top for each length and class of pole listed, but does not preclude the acceptance of poles having greater circumference at these points of measurement than those shown. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

3.—Manufacturing Requirements

3.1—Bark Removal

Outer bark shall be completely removed from all poles.

3.2—Sawing

All poles shall be neatly sawed at the butt and top along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth ($\frac{1}{12}$) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

3.3—Shaving

Shaved poles shall not be furnished under these specifications unless specifically called for by the purchaser.

3.4—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

4.—Definitions of Terms

The following definitions shall apply in these specifications:

4.1—Fungous Defects

4.11 DECAY.—Decay¹ is disintegration of wood substance due to the action of wood destroying fungi. *Rot* and *Dote* mean the same as *Decay*.

4.12 HOLLOW HEART.—Hollow heart is a cavity in the heart of the pole resulting from decay.

¹NOTE: The terms "sound" and "unsound" are used in these specifications to imply that "sound" fiber is unaffected by decay and that "unsound" fiber is or has been affected by decay.

American Standard Specifications for Western Red Cedar Poles

Continued

4.—Definitions of Terms—Continued

4.34 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

4.35 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

4.36 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

4.2—Insect Defects

4.21 INSECT DAMAGE.—Insect damage is the result of boring in the poles by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

4.3—Timber Defects

4.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

4.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

4.33 DEAD STREAK.²—A dead streak is any portion of the sapwood in which the life process had ended prior to the cutting of the tree.

²NOTE: A dead streak starts from the butt and differs therein from a wound, such as a cat face or scar, where the growth of new wood shows that life processes are still acting to repair the injured part.

4.4—Shape

4.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half ($\frac{1}{2}$) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

4.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See Diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

4.5—Miscellaneous

4.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

4.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

5.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

6.—Subsidiary Standard

The following standard is subsidiary to the text of these specifications:

American Standard Dimensions of Western Red Cedar Poles (05c2—1931).

Official Manufacturing Specifications for Northern White Cedar Poles

16 Feet and Longer

1.—Live Timber

All poles must be manufactured from live, growing cedar timber in territory adjacent to the Great Lakes.

NOTE: The test of live timber is to cut into the sapwood. If the sapwood is white, the timber was alive when cut.

2.—Manufacture

All poles shall be peeled their entire length, knots trimmed close and butt and top sawed square. No poles with chopped or beveled butts will be accepted.

3.—Lengths

The length shall be measured between the extreme ends of the pole. No pole shall be over 3 inches shorter or 6 inches longer than its specified length.

4.—Top Measurements

Designated Size	CIRCUMFERENCE	
	Green & Watersoaked	Seasoned
4-inch top	12½ inches	12 inches
5-inch top	16 inches	15 inches
6-inch top	19½ inches	18½ inches
7-inch top	23 inches	22 inches
8-inch top	25 inches	24 inches

5.—Defects

A—Rot

Decay in the butt within three inches of the surface of the pole shall not exceed one (1) square inch in area.

Butt rot shall not exceed 5% of the area of the butt, which approximates $\frac{1}{2}$ the diameter, in all poles 5-inch top 25 foot long and smaller and shall not exceed 8% of the area of the butt, which approximates $\frac{1}{4}$ the diameter, in all poles six inch top 25 foot long and larger.

Complete circular shakes in the butt may be present provided the area encircled by the shake does not exceed ten (10) per cent of the total butt area.

B—Top

Tops must be sound.

C—Crook

No pole shall have a short crook or bend, a crook or bend in two planes or a reverse curve. The maximum amount of sweep measured between the ground line and the top shall not be in excess of one (1) inch for each five feet of the length of the pole.

Limitations of Knot Sizes

Length of Pole	Max. sizes permitted, inches	
	Diameter of any single knot or knot cavity	Sum of diameters of all knots and knot cavities in any one-foot section
35 feet and under	2.5 inches	9 inches
40 feet and over	4.5 inches	11 inches

E—Miscellaneous Defects

All poles shall be free from sap rot, bird holes, plugged holes, injurious checks and splits. No poles showing evidence of having been eaten by ants, worms or other insects shall be accepted, except that poles containing surface worm or insect marks below the ground line may be accepted.

F—Cat Faces and Scars

No part of a scar or cat face shall appear on the upper one-fourth ($\frac{1}{4}$) of the length of a pole or within two (2) feet of the ground line. Sound scars and cat faces are permitted elsewhere provided the width of the scar or cat face at its widest point is not more than one-fifth of the circumference of the pole at that point nor in any case more than five (5) inches.

G—Twist

Winding twist permitted unless unsightly and exaggerated except that there shall not be more than one complete twist of grain in any 20 feet of length.

H—Maximum Defects

No poles shall contain both the maximum crook and maximum butt rot.

International Creosoted Pine Poles

Old Lines of International Creosoted Pine Poles—25 Years in Service
In Above Lines—6712 Poles— $\frac{1}{2}$ of 1 Per Cent Replaced to Date (1933)

General

Graybar Electric Company brings to the utility trade the highest quality in creosoted pine poles and offers for support of this statement the fact that its supplier has more long-time service records of poles without failures than any creosoting concern. Low annual cost, reliability, the fact that in times of financial stress or weather hazard the utility company *needs lines that will stand without failure*, all of these have dominated us in our creosoted pine pole policy.

International As A Supplier

Our supplier, International Creosoting and Construction Company, organized in 1875 and one of the largest commercial creosoting concerns in the business, has an outstanding record and a dominant place in the treating industry. We call special attention to the records of old and new lines cited in this concern's photographs here shown. They are typical, and a few of the many available.

Operating in one of the finest timber-producing areas in the South-West, International has added to its advantages of location and natural resources the skill of graduate chemical engineers and treating operators whose work is conducted in modern plants and well equipped laboratories. Pioneered and trained by a background of 58 years experience, International timbermen select the cream of the timber area (surpassing even the quality of the lumber logging operations) for the manufacture of Graybar-International poles. This production moves to conditioning yards at the treating plants by means of a highly developed and well organized concentrating system. The yards themselves have been built in conformity with Government seasoning recommendations.

Always using only one grade, and that the best grade of creosote in the treatment of its poles, and standing against every tendency towards departures in quality or reduction in quantity of the preservative that would make of the user's line an experimental laboratory, Graybar-International creosoted pine poles have gone to almost every state of the Union and without exception have given outstanding service.

Reasons For The Standing Of The International Pine Pole

- | | |
|--------------------|---------------------|
| 1—Long Life | 5—Cleanliness |
| 2—Low Annual Cost | 6—Fire Resistant |
| 3—Great Strength | 7—Bird Resistant |
| 4—Lasting Strength | 8—Termite Resistant |

The utilities of the United States use more creosoted pine than all other treated poles put together. Only briefly need their qualifications be given to account for this preference. The tall straight pine trees of the South are natural poles. They grow with a gradually tapering stem, practically without branches, and when sheared of their bark and browned as the result of treatment, they present a stately appearance in the line. Their wood is the strongest of the poles commonly used in line construction. Fortunately pine is a wood into which creosote goes very deeply during the course of scientifically controlled and proper treating operation, and the depth of this protection is the reason for the exceedingly long life of the pine pole. It is the explanation also of pine's resistance to termite attacks, for the checks which open in

every wood and expose it to the ravages of these insects do not go past the deep creosote penetration in the pine pole. Modern methods and advances in the science of wood preservation now makes available the creosoted pine pole so well manufactured in appearance, and with surface so clean that they are in use on the streets of New York, Detroit, Los Angeles, St. Louis, Baltimore, Boston, San Francisco, and thousands of other cities.

American Standards Association
Specifications for Southern Pine Poles

Approved June 20, 1931

Introduction

These specifications cover southern pine poles which are to be given a preservative treatment. The poles are to be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931), which is a part of these specifications.

The length and class of poles wanted and full details of the framing desired shall be stated in the orders.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

1.—Material Requirements

1.1—Species

All poles shall be cut from live southern pine timber: Longleaf Pine (*Pinus palustris*), Shortleaf pine (*Pinus echinata*), Loblolly Pine (*Pinus taeda*), Slash Pine (*Pinus caribaea*), and Pond Pine (*Pinus rigida serotina*).

1.2—Prohibited Defects

All poles shall be free from decay, red heart, cracks, plugged holes, and bird holes. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

1.3—Permitted Defects

1.31 BLUE SAP STAIN.—Blue sap stain that is not accompanied by softening or other disintegration of the wood (decay) is permitted under these specifications.

1.32 HOLLOW PITH CENTERS.—Hollow pith centers in the tops or butts of poles and in knots are permitted.

1.4—Limited Defects

1.41 CHECKS.—The top and side surfaces of poles shall be free from injurious checks.

1.42 SHAKES.—Shakes in the butt surface extending over not more than one-quarter ($\frac{1}{4}$) of the circumference are permitted provided they are at least one (1) inch distant from the edge of the butt. Shakes extending over more than one-quarter ($\frac{1}{4}$) of the circumference are permitted when they are inside of a circle whose center corresponds to the center of the butt surface and whose diameter equals one-half ($\frac{1}{2}$) of the average butt diameter.

International Creosoted Pine Poles

New Lines of International Creosoted Pine Poles—10 Years in Service
In Above Lines—4026 Poles—No Replacements to Date (1933)

Specifications for Southern Pine Poles

Continued

Shakes in the top surface whose width does not exceed one-sixteenth ($\frac{1}{16}$) of an inch are permitted provided they do not extend over more than one-half ($\frac{1}{2}$) of the top circumference.

1.43 SPLITS.—Splits are prohibited in the top surfaces of poles. Splits in butt surfaces are permitted provided that their height from the butt along the side surfaces does not exceed two (2) feet.

1.44 GRAIN.—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

1.45 INSECT DAMAGE.—Insect damage consisting of holes less than one sixteenth ($\frac{1}{16}$) of an inch in diameter is permitted.

1.46 KNOTS.—The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section shall not exceed the limits set up in the following table. Knots and knot cavities one-half ($\frac{1}{2}$) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

Limitations of Knot Size

Length of Pole	MAXIMUM SIZES PERMITTED, INCHES		
	DIAMETER OF ANY SINGLE KNOT OR KNOT CAVITY		Sum of Diameters of All Knots and Knot Cavities in Any 1 Foot Section
	Classes 1-3	Classes 4-10	All Classes
45 Ft. and Under	4	3	8
50 Ft. and Over	5	5	10

Knots one (1) inch or over in diameter, showing discoloration or softness of fibre, indicating possible decay, shall be neatly gouged to a depth of not more than one-fifth ($\frac{1}{5}$) of the diameter of the pole at the point where the knot is located, to permit determination of the character and extent of decay. The gouging shall be done without unnecessary removal of sound wood, and in such a manner as to insure drainage of water from the hole when the pole is set. Where such gouging does not completely remove the decay (heart rot), the pole shall be rejected.

Knots under one (1) inch in diameter need not be gouged unless after trimming the presence of decay is revealed and upon further examination the decay is found to extend to a depth of more than two (2) inches.

When more than one (1) cavity is present in a pole, the sum of the depths of all cavities in the same six (6) inch longitudinal section of the pole shall not exceed one-third ($\frac{1}{3}$) of the mean diameter of that section.

1.47 SCARS.—No pole shall have a turpentine face or other scar located within two (2) feet of the ground line.

In other sections of the pole, scars which have been smoothly trimmed so as to remove all bark and all surrounding or overhanging wood that is not completely intergrown with the wood of the body of the pole are permitted, provided

(a) that such trimming does not result in abrupt changes in the contour of the pole surface and that trimmed scar does not have a depth of more than one (1) inch, except that where the diameter of the pole at the location of the scar is more than ten (10) inches the depth may be one-tenth ($\frac{1}{10}$) of the diameter; and

(b) that the circumference of the pole at any point on trimmed surfaces located between the butt and a point two (2) feet below the ground line is not less than the circumference of the pole at the ground line.

1.48 SHAPE.—Poles shall be free from short crooks.

A pole may have sweep subject to the following limitations:

(a) Where sweep is in one (1) plane and one (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

2.—Dimensions

2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles. Minimum allowable circumferences at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top, for each length and class of pole listed, are shown in this standard. Poles having circumferences which are greater, at the same points of measurement, than those shown for the length and class desired, shall be acceptable, provided that the six (6) foot from butt circumference is less than the minimum given for the second larger class pole of the same length. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

*No butt requirement on Classes 8, 9 and 10.

3.—Manufacturing Requirements

3.1—Bark Removal

Outer bark shall be completely removed from all poles. No patch of inner bark left on the pole surface shall be more than one quarter (1/4) of an inch in width or more than four (4) inches long.

3.2—Sawing

All poles shall be neatly sawed at the butt along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth (1/12) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

3.3—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

3.4—Framing

All poles shall be framed in accordance with the terms of the order before they are subjected to the preservative treatment.

Gains on poles showing sweep or curvature shall be located on the concave side in the plane of the greatest curvature.

All gains on the same pole shall be cut so that their flat surfaces are approximately parallel. Conformance to this requirement may be tested by placing straight edges thirty (30) inches long on the faces of the finished gains so that the ends of the straight edges extend fifteen (15) inches on either side of the center line of the pole. The straight edges in any two (2) gains, when sighted in the direction of the longitudinal axis of the pole, shall not be out of parallel at their ends by more than one-sixteenth (1/16) of an inch. Bolt holes shall be bored perpendicular to the faces of the gains.

4.—Storage and Handling

4.1—Storage

When it is necessary for any reason to hold in storage poles offered under these specifications, they shall be stacked on creosoted or non-decaying skids of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. Poles shall be piled in such a manner as to permit free circulation of air and they shall be supported at all points at least one (1) foot above the general ground level, or any vegetation growing thereon. No decayed or decaying wood shall be permitted to remain underneath stored poles.

4.2—Handling

Pole tongs, cant hooks, and other pointed tools capable of producing indentations of more than one (1) inch in depth shall not be used on poles furnished under these specifications.

5.—Definitions of Terms

The following definitions shall apply in these specifications:

5.1—Fungous Defects

5.11 BLUE SAP STAIN.—Blue sap stain is a bluish coloration in the sapwood, caused by the action of certain molds and fungi, that is not accompanied by softening or other disintegration of the wood.

5.12 DECAY.—Decay is disintegration of wood substance due to the action of wood-destroying fungi. Rot and Deterioration mean the same as Decay.

5.13 RED HEART.—Red heart is the incipient stage of a destructive heart rot caused by *Trametes pini* that occurs in the living tree. It is characterized by a reddish or brownish color in the heartwood.

5.2—Insect Defects

5.21 INSECT DAMAGE.—Insect damage is the result of boring in the pole by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

5.3—Timber Defects

5.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

Heart checks are checks which extend from the pith center of the pole toward but not to the periphery of the pole.

5.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

5.33 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

5.34 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

5.35 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

5.4—Shape

5.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half (1/2) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

5.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in poles.")

5.5—Miscellaneous

5.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

5.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

6.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

7.—Subsidiary Standard

The foregoing dimension table is subsidiary to the text of these specifications: It is designated as: American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931).

International Creosoted Pine Poles

Measurement of Sweep and Short Crook in Poles

Diagram 1—Measurement of Sweep in One Plane and One Direction

Diagram 2—Measurement of Sweep in 2 Planes (Double Sweep) or in 2 Directions in One Plane (Reverse Sweep)

NOTE: Diagram No. 2 applies to the measurement of double sweep in Western Red Cedar and Southern Pine

Poles. For measurement of double sweep in Northern White Cedar and Chestnut Poles, see text.

Diagram 3—Measurement of Short Crook (Three Cases Shown)

NOTE: The three cases shown under Diagram 3 are typical and are intended to establish the principle of meas-

uring short crooks. There may be other cases not exactly like those illustrated.

Stacks Such as Here Shown on One of International's Conditioning Yards Make Possible Our Quick Shipment of Quality Creosoted Pine Poles

***Specification for the Preservative Treatment of Southern Yellow Pine Poles**

Rueping Empty Cell Process

*Note: A descriptive specification only. It must be recognized that specifications do not guarantee quality, and should not be regarded as adequate protection to the buyer. In any treated wood, the all important factor is the source of supply.

General

The following specification is intended to obtain an empty cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum; there shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed regularly. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

Seasoning

Air-Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least six inches above the ground on a well drained storage yard free from vegetation and decaying wood, so located that prevailing winds strike it freely, and each layer shall be separated by creosoted strips. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

Seasoning By Steam

When time for air-seasoning is not available, steam seasoning shall be used. Live, saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259° F., not more than 270° F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible, which must be at least twenty-four inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least one hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

Top Dimension Poles

Top dimension poles conform in all respects to American Standards Association Specification poles, with the sole difference that top diameter poles specify minimum top diameter only; whereas A. S. A. Specification poles specify both minimum top circumference and circumference six feet from the butt.

Length Feet	TOP DIAMETER IN INCHES*					
	4-5	5-6	6-7	7-8	8-9	9-10

8	...	5-6	6-7	7-8	8-9	9-10	...
9	...	5-6	6-7	7-8	8-9	9-10	...

*Note: Top diameter is determined by placing a tape around the circumference of the pole at the base of the roof.

What an Order Should Show

To avoid delays and prevent the possibility of error, an inquiry or an order for International poles should contain the following information:

- 1.—Name of consignee.
- 2.—Destination of shipment.
- 3.—Date shipment is desired.
- 4.—Number of poles required.
- 5.—Length and minimum top diameter.
- 6.—Number of pounds of creosote required per cubic foot of wood.
- 7.—Type of framing desired. A blue print or sketch is preferable. Poles can be framed more economically at a treating plant than in the field at point of installation. Insofar as possible therefore complete framing instructions are desirable.

International Creosoted Pine Poles

Specification for the Preservative Treatment of Southern Yellow Pine Poles

Seasoning—Continued

Initial Air Pressure

In the case of air-seasoned poles, Initial Air Pressure is the first step in the treating process. With steam-seasoned poles this step immediately follows the Initial Vacuum.

The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 lbs. to 70 lbs.) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

Treatment

The creosote shall be introduced between 170° F. and 210° F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 lbs. per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention, calculation being based on readings of the working tank gauges and the weight of the creosote at 100° F. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by overage in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

Preservative

For preservative see Creosote Specification.

NOTE: A final retention of 8, 10 or 12 pounds of creosote per cubic foot are most frequently used. Of these, the 8-pound treatment is specified in the great majority of cases.

Standard Specifications for Creosote Oil American Wood Preservers Association

Grade 1

- 1.—The oil shall be a distillate of coal-gas tar or coke-oven tar.¹ It shall comply with the following requirements:
- 2.—It shall not contain more than three per cent of water.
- 3.—It shall not contain more than 0.5 per cent of matter insoluble in benzol.²
- 4.—The specific gravity of the oil at 38° C., compared with water at 15.5° C., shall be not less than 1.03.
- 5.—The distillate, based on water-free oil, shall be within the following limits:
Up to 210° C., not more than 5 per cent.
Up to 235° C., not more than 25 per cent.
- 6.—The residue above 355° C., if it exceeds 5 per cent shall have a float test of not more than 50 seconds at 70° C.
- 7.—The oil shall yield not more than 2 per cent of coke residue.
- 8.—The foregoing tests shall be made in accordance with the standard methods of the American Wood-Preservers' Association. (See Manual—Creosote, Analysis.)

¹Owing to the complexity of the chemical composition and physical properties of coal-tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal-tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote oil is difficult. When there is not certain assurance that the oil is a pure product, the following tests will aid in arriving at an opinion as to its coal-tar origin:

A.—Fraction distilling between 210° and 235° C. is usually solid or contains some solids when cooled to 25° C.

B.—All of the fractions up to 315° C. contain tar acids in varying amounts, usually at least 1 per cent calculated on the amount of the fraction tested. (See Manual—Creosote, Analysis, Tar Acids.)

C.—The specific gravity of the fraction between 235° and 315° C. is usually not lower than 1.025 and specific gravity of the fraction between 315° and 355° C. is usually not lower than 1.085 at 38° C. compared with water at 15.5° C. However, some pure coal-tar distillates fall slightly below these limits.

If the oil does not comply with at least one of the foregoing tests it is undoubtedly not a pure coal-tar creosote.

²Samples of oil taken from working tanks may show an increase in matter insoluble in benzol due to treating operations. Such increases provided they do not exceed by 1 per cent the specification limits should not serve to cause rejection of the oil for non-conformity with specifications if it can be shown that the original fresh oil was of specified quality.

Depth of Creosote Penetration

Increment Borer

The increment borer shown here is used for extracting sections of wood from poles to determine how deeply the preservative has penetrated into the wood.

The use of this instrument is recommended as one means by which the buyer can gauge the quality of the product he receives. It does not damage the pole and the only precaution is that a creosoted wood plug be driven into the hole after the boring has been extracted.

For adequate protection it is essential that creosote penetrates wood deeply (see discussion on penetration later in this section).

Prices for increment borers, on request.

Characteristics of Quality Pine Poles

Status of Pine Poles

During a period covering the last several years, more treated pine poles have been used than all other treated poles put together. The utility that uses this commodity therefore is using the most generally accepted pole of the utility field. Important lines that must stand up under greatest stress and for the longest period of time are well built when built with quality-creosoted pine poles. Every sleet storm brings a further degree of proof of this fact. Bearing in mind the salvage value even of an abandoned line of creosoted pine poles, the costliness of individual pole failures, and creosoted pine's comparatively low annual cost, it seems difficult to think of any line not sufficiently important to justify their use.

Life of Creosoted Pine Poles

Whole lines of creosoted pine poles furnished by our supplier 25 and 30 years ago are still in use with practically no replacements, and are obviously good for many years to come. Many estimates have been made of the life to expect, and the Pennsylvania Electric Association, as the result of a study, estimated 35 years. This figure seems conservative with so many International creosoted pine lines now approaching that age and still in good condition. The

oldest lines still standing, and differences in climatic conditions, make it impossible to forecast definitely just what life to expect from the creosoted pine pole.

International Creosoted Pine Poles Characteristics of Quality Pine Poles

Continued

Value of Penetration

**Uniform Penetration
Is a Criterion of Good
Treatment**

**Deep Penetration
Means Long Life
For the Poles**

While several factors are important, and particularly the grade of preservative is important, no single factor has such bearing on the life and the quality of creosoted pine poles as the depth of creosote penetration and the uniformity of creosote penetration. Untreated wood of any kind commonly used for poles will decay eventually, and the only preventive is to have the penetration of the preservative deep and uniform and of proper grade. This is accomplished only when skilled technicians analyze the creosote and apply the treating process.

Strength

The standard for ultimate fiber stresses for the commonly used pole woods has been developed by the Sectional Committee on Wood Poles under the sponsorship of the Telephone Group, American Standards Association. These ultimate fiber stresses quoted verbatim are tabulated below.

Northern White Cedar.....	3600 lbs. per sq. in.
Western Red Cedar.....	5600 lbs. per sq. in.
Chestnut.....	6000 lbs. per sq. in.
Southern Yellow Pine (Creosoted)...	7400 lbs. per sq. in.

Fire Resistance

Fires that rage across the dry cane fields of Cuba crack insulators, melt steel, and burn untreated wood to ashes, but creosoted pine poles stand the flames. Such is the actual experience. Along almost every railroad right-of-way fire gangs burn the weeds each fall and it is a matter of common record that while untreated posts burn completely, creosoted pine poles are undamaged. Under these severe conditions the creosoted pine pole may take fire and smolder and smoke for a while, but finally the fire smothers itself out, leaving a practically undamaged pole. The action is analogous to a burning oil lamp wherein the wick though it forms the support for the flame is itself consumed very slowly.

The International Creosoted Pine Pole is a clean pole and is widely used in such service as is here shown.

Appearance and Cleanliness

Early in the history of the development of creosoted pine poles some question was raised as to their use on city streets. It was feared that the bleeding of some of the poles might cause trouble if the clothing of pedestrians rubbed against them. No longer are these objections heard either in protest or propaganda. International's care in timber selection, the skill of its production and manufacturing forces, and advances in the science of timber treatment all have contributed to relegate these objections to the background, and to give to the business district and the residential street the security and economy of the creosoted pine pole. Graybar-International poles are in use in the business and residential districts of the largest cities of the United States, and in thousands of the smaller ones. The present-day pole is a clean pole. It is smooth and snappy and stands with the appearance of tapered wrought-iron pipe, rather than that of processed trees.

Termites

Termites are attracting more and more attention because of their attacks on poles. Formerly termites lived in the forests, but as the forests become depleted they seek shelter elsewhere and find their way into untreated structural wood. Untreated pole lines have been accused of acting as termite highways by means of which they could fly from pole to pole and then to residence; infesting new areas. It is a fact that termites have now been found in all but three states of the United States.

Creosoted pine poles are practically immune to termite attack. Even though checks in the wood may form, they do not go deep enough to expose untreated interior wood that would afford shelter for these insects.

Improved Roof

The illustration shows a new type of pole roof that many of the utility companies are standardizing upon. It is a one-way roof, cut at an angle of 15°. It is to be recommended.

The advantages of this roof are:

1. Reduces Checking

A roof cut in this  manner leaves a minimum of wood along the center line, the natural cleavage point of the pole. This invites checking. The one-way roof eliminates this disadvantage.

2. Provides Better Drainage

As the roof of a pole weathers, the springwood rings of any species being softer than the summerwood, weather faster, causing the summerwood to stand out in ridges. On the two-way roof these ridges form retaining cups for rain water while on the one-way roof they drain.

3. Conserves the Preservative

Evaporation is a surface phenomenon. There is less surface on a one-way than on a two-way roof.

Marked Poles

Below is the mark by which Graybar-International poles are identified wherever found. This appears as a date-brand on the side ten feet from the butt of the pole; and is supplemented by an identifying brand on the top and the butt of each pole. These marks are conclusive evidence of our confidence in the quality of the product and the desire to be permanently identified with it.

Beware of unmarked poles. If in a few years they begin to fail, the experience is that it is impossible to tie them definitely to the source of supply. On the other hand when a company consistently uses high grade materials and good preservative treatment which result in long-time dependable service, the company willingly and permanently attaches its name to the product.

Union Metal Monotube Poles

Monotube Poles are used for the support of trolley strain wires, distribution and transmission lines, traffic signals or any combination of these. For any use wherever a general service pole is required.

Made of high grade open hearth steel, the structure of which is improved by the steel mill operation and still further by the Union Metal Cold-Rolling process. Will not corrode with a heavy loose scale. If oxidation should occur it will develop a fine, dense powder which tends to retard further corrosion.

Monotube Poles have no horizontal joints. Shafts are one continuous tapered tube, with one electric welded vertical seam. One piece construction insures uniform quality, longer life and better appearance.

Before Monotube Poles are painted they are thoroughly cleaned both inside and out to remove scale and other foreign matter. Cleaning the steel prior to painting allows the paint to bond with the steel, materially lengthening the life of the pole. As an added protection, they are painted inside and out.

Either of two methods of anchorage can be employed. The pole may be embedded directly in the ground or concrete or the Union Metal anchor rod construction can be used. Both types of anchorage have their places and with the engineering features of the installation in mind, the customer will choose the proper type.

Embedded poles can be furnished with or without the heavy steel ground sleeve. Where ground sleeves are required, location of sleeve with reference to pole butt must be specified. The ground sleeve is two feet in length and is made from open hearth steel. With this material embodied in the protective collar, maximum safety against corrosion is obtained.

Anchor rod construction follows the methods used in setting heavy machinery and steel frame work for large buildings or towers. No forms are required for the concrete foundation. Customary practice requires a hole of diameter and depth in accordance with the load to be carried.

For the purpose of ornamentation, four ornamental leaves are attached to the base to conceal the projecting foundation bolts and nuts. Removal of the screw holding the leaf in position gives immediate access to the foundation bolt.

Lighter and smaller types of Monotube Poles are manufactured as well as poles of different strengths and height up to and including 75 feet. Complete information on these poles may be obtained by giving strength and height pole required.

Semi-Ornamental Steel Base

With, Ground Collar

Sozol for Wood Preservation

Brush Treatment

Brush treatment of poles consists in applying hot preservative to the ground line surface of a pole with a brush. This method is not in general use among pole dealers, but is used by operating companies for local treatment.

For effective brush treatment the highest boiling point

coal tar distillate obtainable is recommended. High boiling creosote oils penetrate more readily and are free from black and sticky tars that do not penetrate but concentrate on the outer wood cells. Graybar Electric Sozol has been developed for this work.

Sozol

Sozol is for brush application for poles and all construction wood. It is a pure high boiling distillate of coal tar, that is, it is a product obtained in a distillation process through the elimination of volatile products of coal tar and this pure coal tar distillate is not adulterated by adding any other substances. It is not a byproduct, that is, the distillation process is primarily for the purpose of securing this particular oil—not for some other distillate of coal tar in which this oil or a modification of it would come off in the distilling process. All creosote wood preserving oils have two faults in a greater or less degree. Either they are so thin and volatile that when applied with a brush or by open tank method, they partially evaporate or leach out and their pre-

servative qualities are thus impaired; or they are adulterated with heavier coal tar oils and these heavier constituents clog up outer cells of the wood and prevent the penetration required for effective treatment.

Sozol is of high specific gravity and greater body and in consequence, is more stable than ordinary pure creosote oils sold for wood preserving. It is not as volatile as these oils; at the same time, it has absolutely no viscous properties which interfere with effective penetration as in the case of mixed oils. In short, it has permanency and so affords the greatest possible continued protection. It is more than a creosote oil, it is a special wood preservative of stability.

Sozol is supplied in drums, barrels and cans.

Rainier Wood Pin Specifications

MATERIAL.—Pins shall be sound, reasonably straight grained, yellow or black locust (or Oak, as called for), free from knots, checks, sap wood, brush-wood, cracks, etc., except as hereinafter specified.

SAP WOOD.—Sap wood is permitted on the shoulder of the pin provided it does not extend into the tenon.

CHECKS.—Season checks not over 1/8 inch deep are permitted provided they do not appear elsewhere than in the shoulder and lower half of the tenon.

KNOTS.—Pins shall be free from loose or unsound knots. Sound knots not exceeding 1/4 inch in diameter are permitted on the shoulder and lower half of the tenon.

GRAIN.—The grain of the wood shall be reasonably parallel to the axis of the pin. Irregularities in grain which are wholly confined to the section within one inch of the bottom of the tenon shall be permitted.

WORM HOLES.—Worm holes and channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread or the placing of the nail in the pin, and provided that they shall not appear in over 10 per cent of pins in any shipment.

DIMENSIONS.—Pins are usually made from unseasoned wood due to difficulty of securing and manufacturing seasoned timber. Pins after seasoning shall be of the dimensions shown in drawing, or as ordered (with allowable variations as shown).

FLAT SHOULDERS.—One flat surface is permitted, provided the wood is not cut away to the depth of the shoulder at any point of the circumference; in the bottom one-fourth of the tenon irregularities in shape which do not involve the removal of more than one-quarter of the cross-section called for in the drawing are permitted; provided these defects do not occur in more than 10 per cent of the pins furnished.

THREADS.—All pins shall have four threads per inch. The thread shall be smooth and of uniform pitch and shall taper 1/16 inch in diameter to 1 inch in length.

Duplex Pin

Rainier Bracket and Pole Step Specifications

MATERIAL.—Sound, reasonably straight grained, Oak, free from knots, checks, sap wood, etc., except as hereinafter specified.

SAP WOOD.—Permitted up to 25 per cent of volume of bracket.

CHECKS.—Season checks not over 1/8 inch deep are permitted provided they do not appear within two inches of the thread.

KNOTS.—Brackets shall be free from loose or unsound knots. Sound knots not exceeding 1/2 inch in diameter permitted below the shoulder but not in lower 3-inch section of bracket.

GRAIN.—Grain of the wood shall be reasonably parallel to the axis of the bracket.

WORM HOLES.—And channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread, or the nail holes; and provided that they shall not appear in over 10 per cent of the brackets furnished in any shipment.

DIMENSIONS.—After seasoning, dimensions with allowable variations shall be as shown; Wane allowed in body of bracket not exceeding 1/4 inch; irregularities in body of bracket not to exceed 10 per cent of volume.

THREADS.—All brackets shall have four threads per inch. The thread shall be smooth and of uniform pitch, and shall taper 1/16 inch in diameter to 1 inch in length.

MANUFACTURE.—All workmanship shall be of best commercial grade.

STANDARD PACKAGE.—Nos. 1, 3, 4 and 5, 25 per bundle. Nos. 2 and 6, 20 per bundle.

CREOSOTE OIL DIP TREATMENT.—It is the practice to furnish oak pins and brackets "dipped in red paint," without extra charge. This treatment is of little or no protective value, and we recommend instead a dipping in hot Creosote Oil, at a slight additional charge. Not only does this make a clean bracket, but gives a preservative value and a lasting effect.

Rainier Wood Crossarms

The prime requisites in a crossarm are lightness, strength and durability. Some engineers stress one quality and some another, but Rainier Fir is the best answer for all sorts of uses and conditions. However, we are equally able to furnish long leaf yellow pine crossarms, and creosoted arms, in either fir or yellow pine.

Rainier fir crossarms do not require painting or the use of any preservative; are more than double the necessary strength with a large "factor of safety"; they live in actual service for many years.

Treatment of Rainier Arms

In some localities it is occasionally found necessary to color crossarms so as to distinguish them from arms used for other purposes. If a color is necessary the arms should be dipped in the proper stain, which our mills are prepared to do.

We recommend, however, that a Rainier arm be dipped in a hot solution of pure distillate creosote oil, if that will answer the purpose of color. This treatment tends to prevent an arm from checking and to protect it from wood-peckers, and from the inroads of termites, etc. Unless color is demanded, this expense is usually not warranted.

Short-leaf yellow pine (and long-leaf sapwood) crossarms, should be creosoted (pressure treatment) before being put into service; this treatment prolongs the life of the arms for many years, but great care should be exercised that only pure distillate oil is used and the treatment given by a reliable creosoting company.

Arms of Special Size and Manufacture

A good many public utilities require from time to time small lots of arms of special size and manufacture, that is, other than those hereinafter listed as standard. We will be glad at any time to stock any special arm for a customer under a special contract arrangement, and any of our representatives will be glad to go into this matter fully on request. We have also at Chicago, Minneapolis, Kansas City, Mo., Texarkana, Tex., Wilmington, N. C., New Orleans, La., Centralia, Wash., and Newark, N. J., large stocks of blank arms, which can be cut to length and bored according to your special requirements. This is merely another link in the chain of Graybar Electric service on crossarms.

All arms bored for one $\frac{5}{8}$ -inch center bolt and $\frac{3}{8}$ -inch brace bolts unless otherwise specified, except as shown in "Standard" table.

Minimum Carload Weight

Fir from Pacific Coast Mills, 38,000 pounds. Small cars are scarce and weight of at least 50,000 pounds should be figured on. Cars to contain as high as 90,000 pounds can be had. Smaller cars are available in the Southern Yellow Pine Regions—minimum weight, 34,000 pounds.

All dimensions are subject to the usual manufacturing variations; crossarms long in stock show some shrinkage from original dimensions.

Rainier Crossarm and Conduit Specifications

Rainier Fir Crossarms

Material shall be sound, live, yellow Douglas fir; close-grained (at least eight rings per inch); straight grained (not out of parallel to edge of arm in central section more than five degrees).

Free from rot, dote, loose heart, loose or rotten knots, shakes and splits.

Warp up to $\frac{1}{8}$ -inch off-set per lineal foot is allowed; also sound knots up to 1-inch diameter, but not at pin holes or in clusters. Pitch pockets up to 8 inches in length, season checks up to 1 inch in depth, and sap wood up to 25 per cent of volume of arm is also allowed.

Manufacture of best commercial practice. Kiln dried in sizes up to 4x5 inches finished; planed on all four sides; pin holes accurately centered, smooth, and not badly broken out by bits in boring; dimensions as shown, with commercial variations.

Western Standard Grade Fir

This grade covers all crossarms up to 4x5 inches, inclusive, finished size either way.

The arms shall be: reasonably straight grained, well manufactured from sound, live seasoned lumber (green lumber prohibited) 75 per cent heart, by volume; free from rot, dote, loose-heart, loose or unsound knots, shakes, splits boxed heart, warp in excess of $\frac{1}{8}$ -inch off-set per foot, sound knots in clusters or larger than $1\frac{1}{4}$ inches in diameter, pitch-pockets more than 8 inches long, season checks more than 1 inch deep and any other defect that seriously impairs strength.

Standard Transmission Grade Fir

For arms larger than 4x5 inches, either way: reasonably straight grained and well manufactured from sound, live lumber, of medium rate of growth, boxed heart excluded.

Free from shakes and wormholes; and sap wood in excess of 30 per cent in volume of arm.

Sound knots admitted, not clustered, up to $1\frac{1}{2}$ inches in diameter, and pitch pockets not over 8 inches long.

Long Leaf Yellow Pine

Genuine Long-Leaf Yellow Pine, guaranteed every arm at least $\frac{1}{2}$ heart in volume, and free from knots (except small, sound knots, not over one inch in diameter), or other defects that would impair the strength of the arm.

Creosoted Crossarms and Conduit

Free from large, unsound or loose knots, or other defects which would impair strength; creosoted steam and vacuum treatment—dead oil of coal tar under pressure—either 12 lbs. per cu. ft. (full cell) or 8 lbs. per cu. ft. (empty cell) as ordered.

How to Describe a Crossarm (In Placing Your Order)

NOTE.—C, S, E—center spacing of pin holes.

STATE— 1—Quantity wanted.

2—Material and quality (or grade).

3—Treatment (if any).

4—Width, in inches (and fraction).

5—Height, in inches (and fraction).

6—Length, in feet and inches.

7—Number of pin holes.

8—Size of pin holes.

9—Spacing between pin holes (center-side-end).

10—Size center bolt hole.

11—Size brace bolt holes.

12—Space between brace bolt holes.

For example, the Standard N.E.L.A. 6-pin crossarm is described— "Rainier Fir, unpainted, $3\frac{1}{2}$ "x $4\frac{1}{2}$ "x8", bored for six $1\frac{1}{2}$ " pin holes, spaced 30" center, $14\frac{1}{2}$ " sides, 4" end, one $1\frac{1}{16}$ " center bolt hole, two $\frac{3}{8}$ " brace bolt holes 38" apart."

Important

In ordering crossarms, be very careful to specify just what is wanted, and, if other than standard boring, send sketch or blue print with order. Arms specially made are of no use for general stock, and cannot be taken back if mistake is made in ordering.

Orders for special arms are not subject to cancellation.

Rainier Spacer Blocks

The Rainier Spacer Block insures a more rigid and stronger structure where double-arming is necessary.

Has a bearing surface of its entire cross-section as compared with the width of washer used in other methods.

Stops the use of make-shifts, and the insertion of part-life material in a full-life structure.

Only two bolts to tighten, not four.

In two sizes to accommodate large or small pole tops— $3\frac{1}{4} \times 4\frac{1}{4} \times 10$ inches and $3\frac{1}{4} \times 4\frac{1}{4} \times 16$ inches.

Rainier Kicker Arms

Stops sawing up new crossarms. No gains to cut; no holes to bore in the pole. Just drive two lag screws to install.

Distance between front and back of bracket, $3\frac{1}{4}$ inches.

Size, $3\frac{1}{4} \times 4\frac{1}{4} \times 15$ inches.

Weight, 3.6 pounds each.

Rainier Reversible Tree Moulding

Rainier Reversible Tree Moulding is made from kiln dried fir and then impregnated in high pressure retorts with a moisture resisting preservative.

Comes in 2 to 10-foot lengths.

No.	DIMENSIONS, INCHES		No.	DIMENSIONS, INCHES	
	A	B		A	B
1	2	1 $\frac{1}{4}$	5	2 $\frac{5}{8}$	3 $\frac{1}{8}$

3	2 $\frac{1}{8}$	1 $\frac{3}{8}$	7	2 $\frac{3}{4}$	1
4	2 $\frac{1}{4}$	1 $\frac{1}{2}$	

Rainier Fir Moulding For Ground Wires

Furnished unpainted, painted green, or dipped in hot creosote oil as ordered. Furnished without fittings.

In 8-foot lengths; 200 feet to a bundle.

No. 1, weight per 1000 feet, 120 pounds.

No. 2, weight per 1000 feet, 180 pounds.

No. 3, weight per 1000 feet, 310 pounds.

Rainier Pass-Over Blocks

Prevents electrical contact between wrapped guy strand and ground wire, and gives a full inch separation at all points. No metal strap is needed as it is nailed in place.

Dimensions, $2\frac{1}{2} \times 3 \times 8$ inches. Packed 10 in a bundle.

Shipping weight per 100, 100 pounds.

Prices Upon Application

Hubbard U-Cable Guards and Straps

Hot Galvanized

When telephone or power cables enter the ground at the base of a pole or side of a building they should be protected by U-cable guards.

The U-cable guards are made from No. 14 gauge sheet steel and are formed into a U shape. This shape provides the additional strength necessary against collision and the rounded surface protects the pedestrian.

The straps are made from flat steel and are shaped to fit the U-cable guards.

U-Cable Guards

Spaulding Universal Tree Wire Guards

Guard Ready to Wrap Around Wire

Guard Installed on Wire

These guards are made of 2 materials. For the inside of the tube a flexible bakelized fabric is provided, of high dielectric strength, affording perfect electrical protection. This is an inert material which will not oxidize nor deteriorate after long-time exposure.

Several turns of the flexible insulating material enclose the wire. Overlying this inner protection is a tough outside shell of glass-hard finish. This shell is built up of strong, tough fabric, bonded with phenolic varnish for density and resistance to abrasion. Will not abrade or wear through.

Economical in that it is not necessary to cover the wire from one pole to another in order to protect a section of it. Also has the constant gripping action which maintains the tightness of the convolutions and prevents any longitudinal displacement.

For Insulation and Abrasion For 2600 Volts

Type	Per 100	Size Wire	DIMENSIONS, INCHES		
			Outside Flex. Shell	Sec.	Lgth.

Tr	26.00	32.00	150.00	3/4
Ts	29.00	36.00	170.00	1

In ordering, specify type and length required. Intermediate length guards will be charged at the price for the next higher standard lengths.

Accessories

Double faced adhesive tape is furnished with each order of tree wire guards to secure guard to wire for easiest installation. A set of installation directions is wrapped with each guard.

Fibre Installation Tool

A special tool of insulating fibre for installation of Spaulding Tree Wire Guards (Types A to K inclusive). The installation of these guards should not be attempted without the use of this tool.

With the use of this tool, these guards can be completely installed in 5 minutes or less, even in extremely cold weather.

Each..... \$.60

For installing abrasion guards in 10-foot lengths, a special tool is made for opening the guard and applying it to the wire.

Hubbard Guy Wire Protectors

Hot Galvanized

The protector illustrated is practically full-round and provides maximum visibility, safety and protection to the guy wire and the public. Complete drainage and ventilation give long life.

Simply and permanently installed with 2 bolts. Easy access to all guy fastenings at all times.

Nos. 7597-7598 protectors have many advantages over former styles 7557, 7558, 7559, included in the listing and which can still be furnished.

Cat. No.	Per 100	Lgth. Ft.	Ship. Wt. Lbs. per 100

7598	135.00	8	1100

Rainier Jiffy Guy Wire Guards

Lineman Opens Guard and Slips It Over the Guy Strand. Fastening Wires Act as Hinges

Correct Method to Wrap Fastening Wires. The Twist Will Be at the Safety Groove

These guards assembled are hollow wooden cylinders, reinforced mechanically by the strand itself. The built-up construction adds to natural resilience of the wood. Held firm and compact by double wrapped, copperweld tie wires.

Made from clear, straight grained Douglas Fir.

Covered with aluminum paint which catches the eye and makes them highly visible at night.

Hollow wooden cylinder forms a chimney around the strand. At practically all times there is a natural draft of air which will dry both the strand and the inner wall of the guard.

These guards insulate the strand. There is no metallic contact even with the tie wires. This is of importance where line accidents cross the strand with conductor.

Guards can be included in carloads with crossarms; tie wires will not be affixed but will be sent parcel post.

Packed in standard bundles of 6.

7-Foot Length, Weight, 6½ Pounds..... each
8-Foot Length, Weight, 7½ Pounds..... each

Hubbard Copperweld Ground Rods

Briefly, the advantages derived from the use of Copperweld Ground Rods are:

Smaller diameter, less earth displaced, easier to drive—a 4-pound hammer, with light blows, will drive the rod.

Long life, protection from rusting, welded copper.

Little time and field labor are required for installing Copperweld Rods and attaching the grounding wire.

These ground rods are listed as standard by the Underwriter's Laboratories.

Hubbard Ground Rod Moulds

Hubbard Ground Rod Moulds are used for making cast solder connections on ground rods. Both solid and stranded grounding wires can be attached to the ground rod by this method.

The moulds are drawn from sheet brass and are tinned for easy soldering. The collar fits snugly to the ground rod and prevents solder leakage.

Cat. No.	Per 100	DIAMETER, INCHES		Std. Pkg.	Wt., Lbs. per 100

Hubbard Guy Shims

Hot Galvanized

Keeps guy wire strand from cutting into pole.

Six or more are required per pole.

Cat. No.	Per 100	Dimensions Inches	Std. Pkg.	Wt., Lbs. per 100
7570	\$9.50	1 7/8 x 1 1/2 x 8	500	53

No. 7575 Hubbard Strain Plates

Hot Galvanized

Serves the same purpose as the guy shim but gives better protection and is cheaper to install. From 2 to 4 are required per pole.

Cat. No.	Per 100	Dimen. In.	Std. Pkg.	Wt. Lbs. per 100
7575	\$17.10	4x8x14-Ga.	250	84

Hubbard Guy Hooks

Hot Galvanized

The No. 7584 guy hook is the N. E. L. A. and A. T. & T. Company's standard and is in general use, although the 2-bolt type is preferred by some construction men. For lighter work, the 3 1/2-inch hook gives satisfactory results. Made of half oval steel, bent with the flat side to the pole, except No. 7583 1/2 which is formed from flat steel.

Cat. No.	Size Steel Inches	Length Inches	Diameter Holes, In.	Std. Pkg.	Wt., Lbs. per 100	Price per 100

Hubbard Pole Reinforcing Material

Hot Galvanized

Band

The Hubbard Reinforcement Band makes a strong and reliable method for attaching a stub when the butt of a pole is rotted. This arrangement saves the expense of installing a new pole and provides a reinforcement which adds years of life to the pole.

Bolts and lag screws to complete this construction should be ordered separately.

Cat. No.	Per 100	Description	Size	Std. Pkg.	Wt., Lbs. per 100
7850	\$44.70	Reinforcement Band	12-Ga. x 2" x 68 1/2"	10	410

7856	96.20	Reinforcement Band	10-Ga. x 2" x 120"	10	1010

Hubbard Guy Clamps

Hot Galvanized

No. 7461

Nos. 7447, 7448, 7449 and 7450 for strands 3/16 to 3/8 inch; made of hot rolled steel sections 1 1/16 inches wide by 3/8 inch thick; 1/2 inch bolts.

No. 7450, W. U. Std.

Nos. 7461, 7462 and 7464, heavier types, for strands 5/16 to 7/16 inch, clamp section 1 1/2 inches wide by 3/8 inch thick, have 5/8 inch bolts. No. 7461 is A. T. & T. Co. standard.

No. 7460 for strands 5/8 to 7/8 inch; is a drop-forged steel section 2 1/2 inches wide by 1/2 inch thick; with 5/8 inch bolts. Clamp sections are so punched that all bolts are reversible in assembly.

Cat. No.	Per 100	No. Bolts	Type	Size Strand Inches	Std. Pkg.	Wt. Lbs. per 100

Hubbard Drop-Forged Wire Rope Clips

Hot Galvanized

Designed so that the lay of the strand fits the body of the clip perfectly.

Drop-forged from best quality open hearth steel. With hot galvanized U-bolts and nuts. Legs of U-bolts are so spaced as to give greatest allowable clearance when tightening the nuts with a wrench.

Cat. No.	Per 100	Size Strand Inches	Wt. Lbs. per 100

7488	85.00	1	260

Hubbard ServiSleeves

For Guy Strand

Hot Galvanized

For effectively and uniformly serving strand.

ServiSleeves overcome objections of cutting, clipping and crimping and prevent finger pinching. Easily and quickly installed, retain original shape and maintain rigid grip at all times. Just slips on and stays put. No special tools are needed.

Cat. No.	Per 100	Size Strand Inches	Length Inches	Std. Pkg.	Wt., Lbs. per 100	Ship. per 100

Hubbard Detachable Pole Steps

Hot Galvanized

Lag Screw Type

Lag screw type is installed by slipping the plate over the lag and screwing lag in pole until plate bites into wood.

Step slides down in a groove on each side of head of lag. When step is removed nothing but the head of the lag extends from pole. Prevents mischievous ascents of pole and accidents.

Cat. No.	Per 100	Description	Ext. from Pole, In.	Std. Pkg.	Wt., Lbs. Per 100
7235	\$12.50	Lag and Plate	...	225	65
7236	26.70	Step	5 1/8	400	50

Hubbard Drop Forged Guyeye Nuts

Hot Galvanized

Used extensively on the threaded end of machine bolts passed vertically through the cross arm for attaching suspension type insulators. Also useful for dead ending lines. By their use an eye may be added to either end of a double arming bolt or a second eye to an eye bolt.

The guyeye nut is designed exclusively for use with guy strand and eliminates the guy thimble. It is well rounded with a generous radius, so that the strand will not be sharply kinked.

Cat. No.	Diam. Bolt Inches	INSIDE DIMENSIONS EYE, INCHES		Std. Pkg.	Shp. Wt., Lbs. per 100	Price per 100

Hubbard Drop-Forged Eye Nuts

Hot Galvanized

No. 7502

Drop-forged eye nuts were designed for use on the threaded ends of machine bolts passed vertically through cross arms for attaching suspension type insulators. They are also useful for dead ending lines. By their use a second eye may be added to the eye bolts, which permits the attachment of a back guy to the same bolt that supports the insulators to dead ended wire.

Cat. No.	Diam. Bolt Inches	EYE DIMENSIONS, IN.		Std. Pkg.	Wt., Lbs. per 100	Price per 100

7825	...	3 1/4 x 3 1/8 x 1/4	5/8	3/4	75

Peirce Presteel Pole Gains

Hot Galvanized

For attaching cross arms to poles without the need for gaining the pole. The design provides a saddle for the cross arm, a springy saddle for the pole and four points for holding the gain in a fixed position.

Its construction allows for easy installation and ready adjustment for alignment of the cross arm. It spaces the cross arm away from the pole so drainage and ventilation overcome decay.

Cat. No.	Size Arm Inches	Diam. Hole Inches	Size Steel Gauge	Std. Pkg.	Shp. Wt., Lbs. per 100	Price per 100
5091	3 1/4 x 4 1/4	1 3/16	9	25	268	\$48.30

5094	4 x 5	1 3/16	9	10	285	48.30

Peirce Cross Arm Reinforcing Plates

Hot Galvanized

Designed to give greater effectiveness than the standard square washer and provide a means for preventing checking and splitting of the cross arm at the point of attachment to the pole.

Made from flat steel 3 7/8 inches wide. A 1 1/16-inch rib is pressed vertically on the plate to give greater strength.

Cat. No.	Size Arm Inches	Diam. Hole Inches	Size Steel Gauge	Std. Pkg.	Shp. Wt., Lbs. per 100	Price per 100

Hubbard Lag Screws

Hot Galvanized

Fetter Drive

Gimlet Point

Fetter drive lag screws have become practically standard for construction work because of their greater holding power. Threads do not tear the wood. Gimlet point screws will be furnished for 1/4-inch and 5/8-inch, fetter drive screws for 3/8, 1/2 and 5/8-inch.

Hubbard Double Arming Bolts

Hot Galvanized

The double arming bolt, used with four square washers, represents a much more economical means of tying cross arms together than the old method of a wooden block with a hole through it and a long machine bolt.

The points are finished and prices include four square nuts but no washers.

Hubbard Alley Arm Braces

Hot Galvanized

Where it is necessary for lines to be run adjacent to buildings or trees the Hubbard Alley Arm Brace furnishes an exceptionally rigid and economical construction. Angle is bent at each end to 45 degrees. Brace is pierced at each end with 3/16-inch holes in both legs of the angle, permitting installation as desired, underneath or on the side of the crossarm. Each brace is furnished with a sturdy step which is firmly riveted in place at the mid-point.

Rainier Crossarm Braces

Made Entirely of Wood
Patent Pending

Provides all advantages of all-wood construction without reducing strength or life of pole structure or increasing its cost. Withstands greater stresses than balance of the pole structure; adequately survives shock and abuse.

Treated with 10 pounds of coal tar creosote per cubic foot of timber. Especially suitable near salt water or under corrosive atmospheric conditions.

The right and left-hand members are identical. The bolt holes fit and only three bolts are required to install a pair. They are interchangeable with double span steel braces.

This brace complies with crossarm freight classifications. Rainier Braces and Crossarms can be shipped in mixed carloads without sacrificing the carload freight rate.

No.	Each	Size Inches	Span Inches	Drop Inches	Wt., Lbs. per Pair

Hubbard Pole Seats Hot Galvanized

The frames and braces of all styles are of 1x½-inch channel steel. The wood seats are 1½-inch cypress, boiled in creosote. The bars of the all steel seats are ¾-inch square steel, let

into the frame in such manner as to leave no projecting ends. There is no strain on the riveted joints. The bars are placed with corners up to prevent slipping.

They are shipped completely assembled in bundles of five.

Hubbard Cable Suspension Clamps Hot Galvanized

These are the standard A. T. & T. Company's Cable suspension clamps, the one-bolt type being used for light cables and on cable arms, and the three-bolt clamp for heavy cables and long spans. The one-bolt clamp is furnished without a bolt, as the 5/8-inch through bolt is used both for attaching the clamp to the pole and tightening the clamp on the stand. The three-bolt clamp is furnished with two ½-inch high carbon steel guy clamp bolts.

Peirce Telephone Wireholders

All-Porcelain Type

Combines a wall bracket, insulator and screw all in one. Used as a corner bracket where the lead from the pole comes to the building at an angle and as a standard house bracket for carrying the pairs on a straight run along the building or for dead-ending.

The double groove on the top makes an ideal arrangement for tying in twisted telephone pairs.

No metal is exposed after installation. The wireholder is not affected by atmospheric conditions and will not make rust stains on the house.

Equipped with
 No. 20x2-In. Galv. Screw $\frac{9}{16} \times \frac{3}{4}$ 50 60 **\$15.80**
 No. 20x2-In. Brass Screw $\frac{9}{16} \times \frac{3}{4}$ 50 60 **18.80**

No. 8918 Hubbard Span Clamps

Hot Galvanized

Used when service connections are made at points between poles. Equipped with No. 8901 suspension

clamp and bolt. Insulator spacing, $5\frac{3}{4}$ inches. Standard package, 125. Weight per 100, 138 pounds.

Price, No. 8918.....per 100 **\$77.50**

No. 9214 Peirce Porcelain Knobs for Telephone Racks

Made of brown glazed dry process porcelain.

The wire groove is divided by a fin which keeps the two wires of the twisted pair separated.

Cat. No.	DIMENSIONS, IN.			Bolt Hole	Ship. Wt., Lbs. per 100	Price per 100
	Height	Diameter	Wire Groove			
9214	$1\frac{1}{2}$	$1\frac{3}{4}$	$\frac{3}{4}$	$2\frac{5}{16}$	22.7	\$9.00

Peirce Distributing Knob Racks

Hot Galvanized

For Telephone Wires

These racks furnish a secure but inexpensive means for distributing twisted pair telephone wires from cable poles. Nos. 2900, 2901 and 2902 are made with $1\frac{3}{4}$ -inch channel steel back. The holes take a $\frac{1}{2}$ -inch lag screw.

Cat. No.	Length Inches	No. of Knobs	Wt., Lbs. per 100	Price per 100
2900	$10\frac{5}{8}$	4	328	\$83.40
2901	$13\frac{3}{4}$	6	440	110.40
2902	$16\frac{7}{8}$	8	805	137.50

The above prices are for racks complete with knobs.

Hubbard Dead-Ending Shackles

Hot Galvanized

Used for dead-ending or breaking bare signal wires. Shackle clamps around cross arm, which gives it greater holding power than pin construction. A $\frac{5}{8}$ -inch lag screw is used to prevent displacement by creeping.

A lead washer and sleeve prevent glass insulator from coming into contact with the steel cotter bolt, eliminating breakage of insulator due to expansion and contraction.

Size, $\frac{3}{16} \times 1\frac{1}{8}$ inches. Shackle is for $3\frac{1}{4} \times 4\frac{1}{4}$ -inch cross arm.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. per 100	Price per 100

No. 561 Hubbard Insulated Forks

Hot Galvanized

Made of $1\frac{1}{4} \times \frac{1}{2}$ -inch channel. Equipped with insulator No. 355. Oval hole $\frac{1}{16} \times \frac{3}{4}$ -inch in back permits through bolt to be assembled to clevis without removing insulator. Standard package, 50. Weight per 100, 182 pounds.

Price, No. 561.....per 100 **\$42.10**

Hubbard Insulated Forks

Hot Galvanized

No. 8820

No. 641

By the addition of a standard $\frac{5}{8}$ -inch through bolt, lag screw or carriage bolt, the insulated forks illustrated may be converted into fork bolts, which simplifies considerably the keeping of stocks.

Fork No. 8820 is made of $1\frac{1}{2} \times \frac{1}{4}$ -inch flat steel, formed so that the head of the through bolt keeps it from turning. It is equipped with insulator No. 357, which is attached by a $\frac{3}{8}$ -inch bolt.

No. 641 is made of $1\frac{1}{4} \times \frac{1}{2}$ -inch channel steel and is provided with a square bolt hole, into which the square shoulders of a carriage bolt fits, preventing the fork from turning around on the bolt. Insulator No. 357 is also furnished with this fork.

Cat. No.	Type	Kind of Bolt	Std. Pkg.	Wt., Lbs. per 100	Price per 100
8820	Flat Steel	$\frac{5}{8}$ -Inch Through Bolt	100	119	\$31.70
641	Channel Steel	$\frac{5}{8}$ -Inch Carriage Bolt	100	115	26.40

Hubbard Standard Western Union Pins

Made in accordance with the specifications of the Western Union Telegraph Co., and the Railway Signal Association. The cobs are of the best grade of air dried oak, turned to fit a gauge and boiled in paraffine to exclude all moisture. The pins are made of stiff, high carbon steel with clean threads, square nuts and clipped, round washers, and are for use with standard insulators having 1-inch pin holes.

Hubbard Wood Top Pins

Hot Galvanized

With Steel Bolts

Wood top pins are composed of seasoned locust tops, thoroughly impregnated with paraffine and stiff steel fin bolts. They are made in a variety of heights with short and long shanks for wood, angle or channel steel arms, and for two sizes of insulator pin holes, 1 and 1 3/8 inches in diameter. Furnished with nut and washer.

Packed in barrels and kegs in quantity desired.

Peirce Short Shank Forged Steel Pins with 1-Inch Spring Thread

For Steel Cross Arms and Brackets

Hot Galvanized

For electric light, telephone and telegraph lines, on which insulators with 1-inch pin holes are used, this pin possesses all the advantages of the well known Western Union type of pin.

The method of fastening the spring thread to the pin allows for expansion and contraction of the insulator but does not lock the insulator to the pin.

Hubbard-OB Crossarm Pins

Hot Galvanized

Pins have bases designed to give 100 per cent contact area with the top of the arm, developing the full strength of the wood area involved, and extra strength in the shanks which pass through the cross-arm.

The body portion is made of high grade cold drawn steel. A conical section fits into a corresponding socket in the forged steel base, as illustrated by the cut-away view, the two parts acting as a unit under load. Obtainable with permanent bond lead threads and separable cut steel thimbles.

Complete tabulations covering pins for roofed and flat top arms and flat steel arms sent upon request.

Peirce Broad Base Forged Steel Pins

Hot Galvanized

Designed for supporting heavy primary and secondary lines on wood cross arms. Base is 2 1/2 inches wide and made in two styles, for flat top arms and for roofed arms.

Shank, 5/8 inch in diameter, is provided with 2 1/2-inch cut thread.

Spring Thread for 1-In. Pin Hole

Peirce Drop Forged Clamp Pins and Corner Plates

Hot Galvanized

This pin has all the advantages of the Presteel and channel type clamp pins and in addition an assembly for angles and corners in the line. The reinforcing plate for corner construction holds the pin rigid against strains of 1200 pounds in any direction. Onstraight lines the pin is used without the plate and is prevented from shifting by two 1/4-inch lugs.

Made for flat and roofed top arms from 3 1/4 x 4 1/4 to 4 x 5 inches.

Peirce Clamp Pins

Hot Galvanized

Designed for angle and corner construction and will withstand strains of 2500 pounds without deflection. Each pin is forged from a single piece of new hot rolled open hearth steel and is so constructed that the greatest amount of metal is at the point where the strain is the hardest. Broad base rests evenly on arm, 4 lugs hold pin from turning on the cross arm.

No. 5008 Peirce Malleable Crossarm Saddles

Hot Galvanized

Solid malleable iron with 13/16-inch pin hole and 4 5/8-inch radius, adaptable to all sizes of crowned crossarms and provides 100 per cent surface contact.

Grooved for drainage. Holds pin shanks in firm alignment. Fills the void between flat base pins and crossarm crown. Gives pins 35 to 45 per cent more holding strength, proven by actual tests.

Standard package, 100. Weight per 100, 82 pounds. No. 5008.....per 100 \$13.80

Hubbard Spring Lock Washers

Hot Galvanized

Coiled flat from bars of special alloy steel. For use with short shank forged steel pins on steel arms.

No. 5018 Peirce Lead Thread Thimbles

Malleable Thimble Type

This thimble is made by casting lead threads on the No. 5019 thimble adapter and is used with pins having a standard 3/4-inch center bolt or with Peirce No. 4100 series pin.

The lead thread is made to screw directly into an insulator having a 1 3/8-inch pin hole.

Peirce Lead Thread Separable Thimbles

Drawn Thimble Type

While the cementing of thimbles into the insulators is recommended as being the most dependable method, there are cases, for instance, where wood pins are being replaced with forged steel pins, in which the cost and trouble of cementing the thimbles are too great.

For such conditions standard Peirce drawn zinc thimbles are furnished with lead threads cast on them, so that insulators can be screwed on the thimbles mounted on the pins instead of having the thimbles cemented into the insulators and then screwed on the pins. These thimbles may be used on No. 5600 series forged steel pins, high voltage clamp pins, and pole top pins.

Cat. No.	For Insulator Pin Hole, In.	Size of Thimble, In.	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100

Hubbard High Tension Crossarm Hardware Fittings

High Tension Crossarm Hardware Fittings for double-plank H-frame and wishbone crossarm construction are obtainable to meet various specifications.

Inquiries and designs for estimates are invited.

Hubbard Angle Steel Cross Arms

Hot Galvanized

Steel arms of a given cross section are uniform in strength, and when protected by hot-dip galvanizing, their strength remains uniform throughout the life of the zinc coating, probably thirty years.

Unless otherwise specified, holes will be of the following sizes: for through bolts, $\frac{1}{16}$ inch; for brace bolts, $\frac{1}{16}$ inch for flat braces and $\frac{3}{16}$ inch for angle braces; and for pins, $\frac{1}{16}$ inch. Quotations on special arms will be given promptly.

Hubbard-OB Wood Strain Insulators

Metal Parts Hot Galvanized

Wood strain insulators with special yokes, straps, wedge plates, friction plates and arcing horns, provide permanently tight mechanical guys and electrically correct insulators for the structure. Qualifications of Hubbard-OB Wood Strain Insulators are:

The wood fibres are in compression, not in shear with the grain of the wood.

The self-tightening wedge grip automatically maintains the original ultimate strength of the assembly even though the wood shrinks.

The constantly tight connection between end casting and wood surface reduces electrical resistance at point of contact and prevents burning.

Arcing horns provide a discharge gap for passing of excess voltages without shattering the wood.

Pole band attachments are obtainable for mounting insulators close to the pole and save the use of two clamps and a length of strand.

Peirce Strain Insulators

Standard Type—Dry Process

No. 502

No. 504

No. 506

The Peirce Standard Type Strain Insulators are made in accordance with the specifications of the National Electric Light Association.

They are produced from the highest grade of dry process porcelain and are designed so that all sharp corners and edges have been eliminated.

An exclusive feature of the Peirce Strain Insulator is the radius of the wire groove, which is so designed that it gives a maximum bearing surface on the clevis bolt and may be used equally as well with guy strand or insulated wire.

Peirce Dry Process Insulators are ordinarily used for dead-ending secondary circuits and for guying.

No. 502 is used with clevis No. 805, light type, No. 825, heavy type or No. 845, eye type. No. 504 is used with clevis No. 807, light type, No. 827, heavy type or No. 847, eye type. No. 506 is used with No. 811, light type, No. 831, heavy type or No. 851, eye type.

Peirce Strain Insulators

Multi-Fin Type—Wet Process

No. 512

No. 514

No. 516

For dead-ending primary circuits and guying of high tension lines Peirce Multi-Fin Strain Insulators possess every feature required for dependable, continuous service.

They are made from thoroughly vitrified wet process porcelain and are designed with rugged fins and well rounded edges, which eliminate the possibility of chipping due to rough handling or abuse after installation.

The radius of the wire groove is so designed that it gives a maximum bearing surface on the clevis bolt and may be used equally as well with guy strand or insulated wire.

No. 512 is used with clevis No. 805, light type, No. 825, heavy type or No. 845, eye type. No. 514 is used with clevis No. 807, light type, No. 827, heavy type or No. 847, eye type. No. 516 is used with clevis No. 811, light type, No. 831, heavy type or No. 851 eye type.

Eye Type

No. 843

The eye type clevis is similar to the heavy type, except that it has a drop-forged eye in the crotch of the clevis which is provided with an 1/16-inch hole. This hole permits the clevis to be attached to the head end of a through bolt, nut end of a through bolt, double arming bolt, eye bolt, or double arming eye bolt.

Hubbard Strain Insulator Clevises

Drop-Forged Double Type

Hot Galvanized

With this type of clevis two strain insulators can be assembled in a series.

The light type is made from 1/16-inch round steel and equipped with 3/8-inch curved bolts.

The heavy type is drop-forged from 1/2-inch diameter open hearth steel. It is equipped with 1/2-inch bolt.

Hubbard Strain Insulator Clevises

Copper Bale Single Type

Hot Galvanized

Has a bale made of soft metal (copper) to equalize the strains over the entire bearing surface of the insulator.

The drop-forged yoke may be used through the eye of a standard 5/8-inch eye bolt, No. 7502 eye nut or No. 7515 Bolt Eye. The head of the copper bale is 3/4-inch diameter. Ultimate strength, 8000 pounds.

Cat. No.	Inside Length Inches	Inside Width Inches	Std. Pkg.	Weight Pounds per 100	Price per 100
1535	5 3/8	2 3/4	150	97	\$80.80

Hubbard Flexible Bail Strain Insulator Clevises

This clevis develops the maximum strength of porcelain strain insulators by means of the form-fitting bail which eliminates concentrated stresses. Can be used with eyebolts, machine and double-arming bolts and also interlocked for series combination.

Clevis has galvanized drop-forged universal mounting yoke and 1/16-inch flexible strand bail with 1/2-inch diameter threaded steel studs. Bail is galvanized steel strand or copperweld strand and can be set at 2 1/4 and 3-inch spacing. Inside width of bail loops, 1 3/4 to 2 1/2 inches. Hexagon nuts are trapped in the yoke.

Klauber Universal Dead Ending Clevises

Hot Galvanized

No. 555 Clevis

Eye Connection

This clevis is the only one made that will anchor a metal cap strain insulator with any one of the three types of connections—eye, clevis and hook—on the end of a bolt through the side of a cross arm or building. Where a variety of insulators are used, the universal clevis is a necessity. Forged from flat steel 3/16x1 1/2 in., and fits both 1/2 and 5/8-inch bolts. Weight, 87 pounds per hundred. Price, No. 555 Clevises.....per 100 \$25.00

Peirce Cross Arm Clevises

Hot Galvanized

For dead ending wires on wood arms.

Cat. No.	Size Arm Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100

Peirce Corner and Dead End Clevises

Hot Galvanized

No. 1330, Open Type

No. 1344, Closed Type

Strong, durable and efficient fixtures for corner attachment and dead-end services on medium voltage lines. Also adaptable to series street lighting circuits. For pole and crossarm installation. The insulator is wet process, having a high flashover rating.

Open type is equipped with 5/8-inch insulator and fastening bolts; closed type has 5/8-inch insulator, bolt and 1/16-inch hole for fastening bolt.

Cat. No.	Per 100	Material Size Steel Inches	Clevis Wet Flashover Volts	Mechanical Strength Lbs.	Std. Pkg.	Wt. Lbs. per 100

Peirce Secondary Racks

Chicago Type

Hot Galvanized

Chicago type racks consist of presteel U-shaped points made of No. 12 gauge steel securely riveted to a 1/4x1 1/4-inch flat steel back. The insulators are attached to the rack with a 5/8-inch button head bolt. Pole mounting holes are 1/16x1-inch for use with either 5/8-inch through bolts or lag screws. No. 355 insulators are standard equipment. Nos. 356, 455, 456 and 465 insulators can be used.

Cat. No.	No. of Line Wires	Wire Spacing	DIMEN., IN. Over All Length	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100

544	5	4	20 1/2	5	1110	194.80

Peirce Heavy Presteel Secondary Racks

Hot Galvanized

Of sufficient weight and strength for general secondary work; however, for long spans and cable construction Standard Pierce Racks are recommended.

Made of a presteel channel back; presteel channel U-shaped points inserted through and riveted to the back, and a $\frac{1}{8}$ -inch through rod for attaching No. 355 insulators to points.

The Nos. 278, 374, 378 and 478 are furnished with straps so that they may be used on buildings for making heavy service connections. When used on poles, the straps should be hammered flat against the pole, increasing the bearing surface. The Nos. 1278, 1374, 1378 and 1478 may be used in connection with Peirce Rack Bands for attaching the racks to tubular steel poles.

No. 278

Peirce Light Presteel Secondary Racks

Hot Galvanized

These racks were designed for light secondary work. They are especially adaptable, on account of their strength and low cost, for running extensions from secondary mains; for lines where future development is limited; and for house service connections.

The light presteel racks have a presteel channel back $1\frac{1}{2} \times 3\frac{1}{16}$ -inch; No. 12 range channel U-shaped points, which are inserted through and riveted to the back, and a $\frac{1}{2}$ -inch insulator bolt for attaching the No. 1606 insulators to the points.

When 4-inch spacing racks are specified, a shield for attaching over the upper edges of the points, is furnished to prevent injury to the insulation when stringing the wire.

No. 276

Peirce Light Presteel House Racks

Hot Galvanized

For use as house brackets. Sometimes used for carrying secondary wires vertically on the poles where the wire is lighter than No. 3 wire. Made with $\frac{3}{4}$ -inch channel back and presteel points. Mounting slots are $\frac{1}{16} \times \frac{1}{2}$ -inch, both in the back and straps. Insulator through bolt is $\frac{3}{8}$ -inch diameter. Racks assembled with No. 1603 insulator.

Cat. No.	No. of Line Wires	Wire Spacing Inches	Length Over All Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100

Peirce Secondary Racks

Hot Galvanized
Standard Type

Strong enough for the heaviest work, with an ample factor of safety. Equipped with No. 355 insulators, although Nos. 356, 455 and 456 insulators can be furnished if desired. The insulators are packed in corrugated paper boxes and the racks are wired in bundles of ten.

The width of the back of the rack is $2\frac{3}{4}$ inches with a slot $\frac{3}{4}$ inch wide between the two angles, which allows the use of $\frac{1}{2}$ -inch through or lag bolts for fastening the rack to the pole.

No. 358

Cat. No.	No. of Line Wires	DIMEN., IN.		Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100

Insulators for Peirce Secondary Racks

Standard Type

No. 355 brown glazed insulator is the most popular secondary rack insulator and is furnished on all heavy type racks unless otherwise specified. For marking the neutral wire of a secondary circuit, some construction men use the No. 355 white glazed insulator.

No. 355

Where high mechanical strength is required, such as for dead-ending heavy lines, the No. 455 is used by many companies.

Cat. No.	Color of Glaze	Kind of Porcelain	Ship. Wt., Lbs. per 100	Price per 100
355	Brown or White	Dry Process	100	\$12.60
455	Brown	Wet Process	100	17.40

Double Groove Type

Has 2 grooves, one for tying in the main circuit and the other for the service wires.

356	Brown	Dry Process	102	\$18.30
456	Brown	Wet Process	102	20.90

No. 1606 Light Rack Type

Insulators for the light racks are furnished with either brown or white glaze, both of which are made of dry process porcelain. The brown glazed insulator is also used on the No. 1341 clevris, on spreader racks, light racks, and on sister hook and tree fixtures.

No. 1606

1606	Brown	Dry Process	40	\$8.60
1606	White	Dry Process	40	8.60

No. 1603 House Rack Type

Used with house racks. Also used on the No. 2925 swinging knob fixture.

No. 1603

1603	Brown	Dry Process	45	\$7.40

Back**

**No. 3838
Non-Extended
Back**

Hot Galvanized

Heavy Service Type

The heavy service type rack has uniform strength to resist all strains—dead-end, side pull and dead load.

No sharp edges, rivets, no pockets nor lapping joints to hold moisture.

Wide extended or non-extended backs for pole and building.

Equipped with No. 355 insulator.

The back bearing surface is 3 1/8 inches.

Hot Galvanized

Suspension Insulator Type

No. 1504 is a metal cap suspension insulator and has a safety hook for an arc lamp. The No. 1514 is similar to No. 1504, except that it has a metal cap tapped for 3/4-inch pipe thread for screwing to the mast arm stud and a pig tail hook for supporting the arc lamp. The No. 1524 is similar to the No. 1514 except that it has a 3/4-inch pipe thread stud instead of a pig tail hook for fastening the arc lamp.

Cat. No.	Overall Length Inches	Working Voltage	Std. Pkg.	Weight Pounds per 100	Price per 100
1504	6 3/4	6600	50	330	\$520.00

1534	12	6600	25	525	\$720.00

Insulated Lamp Hanger Type

No. 1591

The No. 1591 consists of a special 6600 volt pin type insulator, a cap for attaching to the mast arm and a stud for attaching the lamp. Both stud and cap are threaded with standard 3/4-inch pipe threads. No. 1592 is similar to No. 1591 except that the pig tail hook is cemented into insulator instead of stud.

Peirce Wireholders Standard Type Hot Galvanized

No. 190

No. 191-A

No. 1190

No. 191

No. 296

No. 396

Peirce Wireholders All-Porcelain Type

No. 1625

No. 1607

No. 1621

The standard type of wireholders have been designed on scientific principles, namely, metal parts in tension and porcelain in compression each developing its greatest strength. The No. 1602 insulator used on these wireholders is designed with well rounded edges almost entirely eliminating chipping or breakage and it is secured to the bracket by a complete band of metal.

This wireholder is not affected by temperature changes or by the difference in the coefficient of expansion of its various parts.

The No. 190 wireholder is in use for making house service connections and when in use the brass cotter pin interlocks the insulator with the metal portion of the wireholder eliminating falling wire hazard should the insulator become broken.

Peirce wireholders are also made in multi-point types. They are provided with ample mounting holes spaced away from the insulator eliminating the possibility of breaking the insulator when driving the screw.

The corner iron No. 501 is used for attaching multi-point wireholders to the corner of a building when occasion demands this type of construction.

Cat. No.	No. of Wires	Wire Spacing Inches	Std. Pkg.	Weight Pounds per 100	Price per 100

*Insulator with 1/2x1 1/16-inch wire hole. **With 3/4x7/8-inch hole.

The screw type All-Porcelain Wireholder combines a wall bracket, insulator and screw all in one. A jab and a few turns is all that is necessary to install it. This type of wireholder has been designed so that no metal is exposed after installation.

The insulator is small and fits the hand. The wire hole grooves are well rounded so that they will not injure the insulation of the line wire. The insulators have an ample factor of safety for all secondary voltages.

The special wood screw which is a part of this wireholder has a special cut thread and a point which starts into the wood under very little pressure. The cement used in attaching the screws is non-porous; weather does not affect it.

No. 31 expansion shields are used for mounting the screw type wireholders into brick, stone or concrete buildings.

Nos. 1607, 1614, 1621 and 1625 are equipped with galvanized screw; Nos. 1617, 1624, 1631 and 1635 with brass screw; Nos. 1627, 1634, 1641 and 1645 with toggle bolt; Nos. 1637, 1644, 1651 and 1655 with carriage bolt.

Peirce Wireholders All-Porcelain Multi-Point Type Hot Galvanized

Equipped with No. 1654 All Porcelain Insulators which have a 3/8-inch bolt and cork washer. Insulators can be installed after back has been mounted to building and can be easily removed or installed to make various spacing wireholders. Base is No. 12 gauge presteel channel 2 3/8 inches wide with 1/2-inch flanges. Mounting slots are 5/16 x 1 1/2-inch with 1/16-inch center punch. Cork washer prevents breakage of insulators when assembling.

Peirce Dead-End Brackets For Railway Signal Circuits Hot Galvanized

Equipped with a 3/8 x 4 1/2-inch carriage bolt with sufficient thread to make it suitable for use on cross arms 3 1/4 x 1 1/4 to 4 x 5 inches.

An important feature of this type bracket is the method of attaching insulator, which places the porcelain in compression, developing its full strength. In the case of a broken insulator it holds the wire in its original position eliminating possibility of a false signal due to a short.

Hubbard Pole Plates for Pipe Attachments
One-Piece Presteel and Malleable Types

No. 3901

No. 4752

For mounting pipe mast arms, but may be put to a variety of uses for attaching pipe fixtures to poles. Top mounting holes are 1 1/8 inch diameter, side holes are 3/8 inch diameter.

No. 3701 is used with 3/4-inch pipe and goose-neck brackets.

No. 3900 Series are one-piece presteel, used with 1 1/4-inch pipe and mast arms; furnished either plain or insulated for internal wiring and with pulleys for internal or external chain operation.

Nos. 4752 and 4755 certified malleable plates with special gripping arrangement for 1 1/4 and 2-inch pipe, respectively, are insulated for internal wiring when used with mast arms. Pipe used with them must be swaged with an indentation deep enough and properly placed to assure free passage of clamp bolts to fasten pipe.

Hubbard Lamp Lead Brackets
Closed and Split Types

Hot Galvanized

No. 173

No. 164

No. 1660

Used for supporting vertical leads of duplex cable or twisted single wires between the cross-arm and the lighting fixture.

Split type facilitates installation, repair and replacement of lamp lead cables. All split type parts secured against accidental dropping.

Metal brackets provide 5-inch extensions

and are furnished with base plates having 1/8-inch mounting holes or with lag screw threads and machine threads for use with Peirce Adjustable Pole Bands and as mast arm attachments. No. 1660, with pin cemented into insulator, has a 1-inch wire hole and provides 5 1/8-inch extension.

Hubbard Street Hood Brackets

Hot Galvanized

These brackets are made of 1 1/4-inch pipe and are obtainable in straight and bent styles for either internal or external wiring. Standard lamp attachment threads are 1 1/4-inch, but lamps tapped for 3/4-inch fittings can be attached by using Hubbard reducing bushing No. 3381, specified separately.

No. 3714

No. 3700 Series, with one-piece presteel pole plate, is mounted with one 3/8-inch machine bolt and two 1/2-inch lag screws.

No. 4934

Nos. 4924 and 4934 have a malleable pole plate, with two 1/2-inch lag screws.

Lamps are not included in prices.

Hubbard Presteel Trolley Mast Arms

Rod Type
Hot Galvanized

A safe, simple trolley arm. Long swinging loops of wire are eliminated. Lamp is out of reach of children, and cannot fall to street. Lamp trimmer climbs pole, pulls lamp in by rod attached to lamp hanger and pushes it back to place by the same rod.

Has 1/2-inch round eye rod, channel steel back brace, channel spreader arm, and operating rod with a trolley which has 3/4-inch pipe-threaded connection for lamps.

Size of section, 1 1/16 x 2 5/16 inches. Standard package, 2.

Hubbard Presteel Trolley Mast Arms

Chain Type
Hot Galvanized

The latest development for street lighting. Carriage is operated by a continuous chain which is completely protected. All movable parts are equipped with brass bushings, permitting free, easy movement. Idler and sprocket are non-rusting alloy. Chain mechanism cannot jam.

The arm is safe and simple; long swinging loops of wire are eliminated. Lamp trimmer climbs pole, unlocks handle and by revolving it pulls lamp toward him. Handle locking device will not freeze nor hinder quick operation.

Size of section, 1 1/16 x 2 5/16 inches. Standard package, 2.

Double Bend Type
Hot Galvanized

Standard 1 1/4-inch pipe is formed to a double curve supported by an attractive scroll. Attached to pole by certified malleable iron pole plate No. 4759, threaded to receive pipe. Mounting holes are for a 5/8-inch through bolt at top and 1/2-inch lag screws at sides. A porcelain insulator bushing is provided for internal wiring. The scroll support is attached to pole by means of a 1/2-inch lag screw and to pipe by positive clamping arrangement.

Extension, 48 inches. Vertical pole space, 34 inches.
 No. 3790, Weight Each, 32 Pounds.....each \$11.65

Hubbard Adjustable Pole Bands
Hot Galvanized

The Hubbard Cup, a feature of this new band, is pressed to a shape which provides maximum strength to resist strains applied from any direction. Shoulders are formed for absolute rigidity and provide a maximum gripping surface on the pole. Tightening of bolts to the utmost cannot deform the band. Standard $\frac{3}{8}$ -inch bolt heads fit inside the cup and cannot turn. Special $\frac{1}{2}$ -inch bolt No. 8390 fitted with an oversize head can be had for $\frac{1}{2}$ -inch fittings. Hole is $\frac{1}{16}$ -inch diameter. Band is 12-gauge by 2-inch pressed steel.

Extra Double Galvanized Telephone and Telegraph Wire

Extra Best Best (E. B. B.) is highest in electrical conductivity, having a range of electrical resistance of 4700 to 5000 mile ohms.

Best Best (B.B.). Slightly higher in resistance than E.B.B. but combines conductivity with tensile strength to make a popular grade, having a maximum electrical resistance of 5600 mile ohms.

Steel is designed for short-line service, where electrical conductivity can be sacrificed for tensile strength. Maximum resistance 6500 mile ohms.

All grades galvanized under the same improved process.

Oshkosh Diggers

The blades are made of special alloy steel. Welding is used for attaching the blades instead of riveting, making a durable joint. The fulcrum members are of heavily constructed, channel-shaped, steel forgings.

There are two pivot points for the blades, one on each side. This gives much stronger leverage and greater durability.

Made in two types, with split handles or with two solid handles. The handles are made of straight grained hard wood, 8 feet long.

Measurement marks are placed on the handles so that the workman can easily determine the exact depth of the hole.

The diameter of the circle circumscribed by the digger blades is 6 inches.

No. 2050, Split Handle Type, Wt., 13 Lbs.each \$7.66
No. 2051, Two Solid Handle Type, Wt., 14 1/2 Lbs. each 7.66

Never-Creep Anchors

The Never-Creep Anchor consists of a 1-piece rod and 1-piece malleable iron plate that pulls against the solid undisturbed earth.

It possesses all the merits of the dead-man but eliminates the necessity of digging a pit and cutting a channel.

To install, simply bore the hole, drive the rod and hang on the plate.

Chance Screw Anchors

This socket type screw anchor is made of semi-steel. Improvements include a wide spiral correctly pitched for ease of installation, a wide helix and sharp blades.

May be installed with a standard screw anchor wrench with adapter attachment which will be sent on request.

Wej-Lock Expanding Anchors

The Wej-Lock Balanced Anchor may be used as an expanding anchor, a cone anchor or as a dead man. When spread or partially spread, it is cone shaped, developing equalized strain which is responsible for its exceptional holding power. It is the only malleable iron expanding anchor with a nut retainer.

To obtain anchor with thimbleye, drop A from catalog number.

Everstick Expanding Anchors

Ease of installation, ease of expansion, maximum power and long life are the result of years of experience and improvements in these anchors.

The exclusive Everstick guides hold the plates in perfect alignment during expansion of the anchor.

Anchors are made of certified malleable iron.

2-Way Anchors

This anchor can be depended upon to give outstanding service in comparison to any anchor of like size and capacity.

For many uses in pole line construction.

Hubbard Steelwing Swamp Anchors
Hot Galvanized

These anchors have enormous holding power when embedded the proper depth in swampy soil.

Anchor unit consists of solid steelwing, short solid steel shaft threaded to take 1 1/4-inch pipe coupling and 1 1/4-inch pipe cap with forged eye to screw onto pipe extension shaft. Pipe is cut to meet anchor requirements but is not furnished as part of anchor.

Over all length, length of pipe used plus 10 inches. Size strand, 1/2 inch or under.

*Not including pipe and coupling.

3-Way Anchors

An ideal guy anchor for all around use. Built to hold strains 100 per cent greater than rated holding power for ordinary soils.

A 6 and 10-inch anchor can be furnished proportionately designed for minimum and maximum strain requirements.

No. 7546 Hubbard Rock Guy Bolts

Hot Galvanized

Used where solid rock extends to surface or in stone or concrete walls. Of 1" round steel, 18" long, with drop forged eye (1 1/2 x 2" inside). Std. pkg., 20. Ship. wt., 600 lbs. per 100.

Price, No. 7546.....per 100 \$95.00

No. 7547 Hubbard Rock Guy Bolts

With Wedge—Hot Galvanized

Has wedge and split end which spreads bolt as wedge is driven against bottom of hole. Of 1-inch round steel, 18" long. Std. pkg., 20. Ship. wt., 600 pounds per 100.

Price, No. 7547.....per 100 \$104.00

4-Way Anchors

Recommended for heavy duty anchorage and long service under the most severe conditions.

Ease of expansion and great holding power are features of this anchor.

Thomas Standard Porcelain Guy Strain Insulators

Dry or wet process porcelain; brown glaze.

All these insulators are packed in convenient wire-bound wood boxes.

No. 500-6

500 Series (Dry Process)

Cat. No.	500	502	504	506
Height	2 ¹ / ₈ inches	3 ¹ / ₄ inches	3 ⁵ / ₈ inches	5 ¹ / ₄ inches

No. in Box	72	30	25	25	25
Gross Wt. per 100	114 lbs.	360	360	1085	470

Thomas Porcelain Assembled Strain Insulators

Wet process porcelain; bronze glaze.

A high grade type of assembled strain insulator. Used for dead-ending.

The insulator units used in these assemblies are taken from the 510 Series. The connecting links are similar in design to those used in the Thomas Link-Type Hewlett Insulator, and are made of soft copper, a material which readily shapes itself to the exact contour of the cableway under tension. Terminal fittings are steel forgings, hot dip galvanized.

While this type of insulator is most commonly used in single unit assemblies (Type 1) there are occasions when higher potentials or severe service make multi-unit assemblies desirable. Type 2 (2 unit strings) and 3 unit assemblies (Type 3) can also be furnished.

Special assemblies using strain hooks, strain eyes or standard cable-thimble can be made up promptly.

Insulators are shipped completely assembled.

The mechanical strength of any assembly is 8000 pounds.

Kiley Truck Bodies

Type GU General Utility Bodies

For Mounting on Any 1/2-Ton Commercial Chassis

A new design in light duty line, meter installation, trouble shooter or general utility body. Made of special pressed steel construction, which insures strength and light weight, this unit has replaced, in some instances, 1 1/2-ton units with satisfactory operation.

The body complete weighs less than 500 pounds.

The unit consists of:

Two side cabinets, 9x28x60 inches, with full size metal doors opening to outside of body.

The right cabinet is regularly equipped with two adjustable partition trays and eight permanent compartments, while the rear section contains complete set of tool holders for all standard line tools.

Left side cabinet contains no standard equipment; may be arranged for electric meter trays, test meters, etc.

The center loading space, 28x60 inches, can be readily used in emergency work for carrying reels, transformers, or in general use for carrying electric refrigerators, etc.

The floor of this body is about 26 inches above ground.

Tailgate—all steel construction—slam type.

Tarpaulin—heavy waterproof cover with spring steel tarpaulin bows securely fastened in same.

Ladder irons conform to latest approved method for carrying ladders. The ladder rests on the lower rail and is steadied by bracket under top rail. A spring clamp is provided to hold ladder securely yet it is readily dismantled.

Standard Line Construction Bodies

A special line construction body which is light and durable. The cabinets, compartments, and equipment have been modified for power company use. The bodies can be supplied of all metal construction if desired.

Standard body consists of:

Oak floor platform, protected by steel plates bolted securely to pressed steel bearers.

The lower section of ladder brackets provides space for sectional tree trimmers, lamp pickers, or ground rods. Write for details.

Rear-I-Beam so arranged that winch and derrick equipment could be added in future if necessity demanded it. Information regarding equipment necessary for use with winch and derrick furnished upon application.

Heavy rear fenders.

Rear steps.

Upper side boxes on right and left with full set of tool holders and material compartments. The material bins for small goods are made adjustable to meet variable requirements. Covers have continuous steel hinges with 1/4-inch steel pin.

Lower side boxes on right and left.

Thru cant hook box with doors on each side of body.

Weatherproof rubber goods cabinet with doors on each side of body.

Digging bar box.

Overhead structure complete with racks for ladder, pike poles, material chains, snatch block rail, straps, etc.

Top bows and bow carrier.

Formed 3-piece tarpaulin with stationary bellows type section between cab and body.

Tarpaulin carrier.

Standard body sizes, 8'6", 10 and 12 feet.

Type LI Standard Installation Bodies

For maintenance and troubleman's service.

Body, size 60x46x28 inches, consists of:

Front compartment, size 46x25 1/2 x 28 inches, has large door opening on right side and one horizontal and one vertical partition.

Rear compartment, size 46x34 1/2 x 28 inches, has double rear door opening.

Right section rear has two stationary shelves and five sliding trays.

Left section rear has one horizontal and one vertical partition.

Rear doors contain racks for tools and insulator tubes.

This unit has an all steel under body.

A complete set of ladder irons, including ladder clamp and rack, is mounted on left side.

Can be mounted on any 1/2-ton commercial chassis.

It can be modified and equipped for almost any special service.

Graybar Earth Boring Equipment International Earth Boring Machines Mounted on FWD Trucks

The truck used to haul the International Earth Boring Machine is a 3½-4-ton FWD. This truck is powered on all four wheels. Superior traction enables it to reach places which would otherwise be inaccessible.

Under favorable conditions, the boring machine will bore a 24-inch hole 7 feet in 2 minutes. Under average conditions holes can be bored and poles set in them at an average of 60 per 8-hour day. Machine is mounted on a turntable.

The Central Station Type Machine is equipped with one 24-inch and one 30-inch auger and a 9-foot tower. It bores holes 10 feet deep on absolutely level ground. Sets poles up to 65 feet in length. Total weight, 15,000 pounds.

Telephone Type Machine is equipped with 6-foot tower and will bore 7-foot holes on absolutely level ground. Sets poles up to 35 feet in length. Augers furnished are one 20-inch and one 24-inch. Total weight, 14,800 pounds.

Graybar Equipped Line Construction Trucks

The Enclosed Gear Boring Machine is mounted on the FWD Line Construction Truck, which has a wide range of speeds, 7 forward and 2 in reverse. The boring machine is readily detachable from the truck body.

This machine will bore any pole hole and set the pole in any location where hand digging is possible and where it is at all practicable to place a truck. Power is delivered to the boring machine by a special transmission counter shaft which permits full engine torque and the use of any desired

speed of the truck transmission for every phase of boring machine operation.

The earth auger with its standard 13-foot rack will dig a 6-foot hole anywhere and on strictly level ground a 7-foot hole. One 20-inch and one 24-inch auger are supplied as standard equipment.

There are two models of Enclosed Gear Boring Machines: the Model C for the usual light work, and the Model HC, which is used for heavy work.

Ask for Bulletin Giving Complete Information

No. 1233 Graybar Single Drum Winches

10,000-Pound Capacity

This standard Graybar Single Drum Winch is an exceptionally flexible unit. It is equipped with a positive 3-jaw type clutch. When the clutch is disengaged, the winch drum rotates freely. For certain kinds of work this feature is very valuable.

A heavy manually operated brake is provided as an added safety. However, inasmuch as the winch is irreversible, the brake is seldom used.

This winch is furnished with a 23-inch drum which has a capacity of 1400 feet of 7/16-inch rope. The pulling capacity is 10,000 pounds.

The arrangement of the driving sprockets is provided to suit the user's needs. They are furnished on right or left hand sides, front or rear.

Nos. 1292 and 1355 Graybar Double Drum Winches

10,000-Pound Capacity

No. 1292 (Type WD-300) is similar to No. 1233 Winch but it is equipped with an independently operated smaller winch drum. The 23-inch drum, which has a rope capacity of 1400 feet of 7/16-inch cable, is equipped with a clutch and brake. This drum will rotate as a free spool by disengaging the clutch.

The small independent drum is 4 inches wide and has a capacity of 240 feet of 1/8-inch cable. This smaller drum has no clutch or brake. A 6-inch drum with capacity of 360 feet of 1/8-inch cable is furnished at a slight additional cost.

Drive sprockets are furnished on front or rear side of winch, as desired.

The No. 1355 Winch (Type WD-235) is identical in construction to No. 1292, except the smaller drum is 6 inches wide and has a rope capacity of 360 feet of 1/8-inch cable. Also the worm housing and drive sprocket of the 23-inch drum is located on the left hand side rather than on the right hand side of the winch. Drive sprockets are furnished on front or rear side of winch, as desired.

The shaft extending beyond the bearing supports on the right usually carries a nigger-head or collapsible wire reel. Additional nigger-heads are not usually furnished with double-drum winches, but can be so equipped if desired.

No. 1227 Graybar Double Drum Winches

10,000-Pound Capacity

The No. 1227 Double Drum Winch (Type FD) offers the use of two independent winch drums. One drum can be used for raising the derrick and the other used for raising the pole. Neither brake nor clutch is used in this winch.

It is furnished with one 12-inch drum with a rope capacity of 720 feet of 7/16-inch cable, and one 6-inch drum with a capacity of 360 feet of cable. Other available drum combinations are one 12-inch and one 9-inch drum, and a combination of two 12-inch drums.

Worm Wheel

This is the heavy phosphor bronze worm wheel and special alloy hardened steel worm used in all Graybar Winches. The heavy-duty roller bearings carry the radial load, and the steel and bronze plain bearings carry the end thrust.

Graybar Utility Automobile Pole Derricks

Middle Type Derricks which are used for general derrick work, center over the middle of the rear of the trucks. Only two men are required to operate this type of derrick; one man operates the winch and the other guides the pole. The middle type derrick is raised and adjusted with the winch. When used as a stiff leg assembly an old pole may be removed from the ground without preliminary digging unless it is firmly embedded or has an abnormal flare. When not in use, the derrick may be disassembled and carried on the side of the truck body, where it is out of the way.

The Corner Type Derrick which works at the right rear corner of the truck body facilitates derrick work in alleys and other restricted places where it is not possible to use the middle type to good advantage. Operating characteristics are practically the same as the middle type.

A complete derrick assembly includes:

- | | |
|---------------------------------|---|
| Derrick Proper | 2 Connecting Pins, Key, Snap and Chain |
| 1 Right Hand Side Leg | 1 Rear Spindle and Sheave |
| 1 Left-Hand Side Leg | (Length to Suit Truck Body) |
| 1 Middle Leg, Upper Section | *1 Tail Bolt Assembly |
| 1 Middle Leg, Middle Section | *2 Front Supports for Spindle Chain |
| 1 Middle Leg, Lower Section | *1 Floor Pocket |
| 1 Apex, Pin Key, Snap and Chain | 1 Winch Line Hook for End of Winch Line |
| 1 Floor Pocket Bolt | |
| 1 Foot Plate | |

*Designated as metal parts for attaching to truck body.

T	21	45	595

†Length of poles handled depends on the balance point of each pole.

‡Weight does not include the weight of boxing nor body parts such as tail bolt assembly, spindle and sheave.

Adjustable Type

The standard types are provided with a foot piece for lower end of middle leg, which fixes the position of the derrick head and overhang at rear of truck.

Many times a bank on which a pole is placed or to be placed, or a hedge or deep gutter has prevented the truck being so placed as to be of service.

The Adjustable Type Derrick can be changed from one extreme position to the other without the telescoping center leg becoming disengaged. All positions are fixed by the use of pins.

Adjustable Type.....each

Type CR Graybar Collapsible Power Reels

The Type CR Collapsible Power Reel is designed to pick up loose wire in a neat coil. It is light in weight, but sturdy in construction, and is attached to the winch in a short time. The reel arms and the spiders supporting them are made of aluminum alloy castings which insure light weight as well as strength. The spindle to which the spider is attached is made of seamless steel tubing fitted with a bayonet socket lock for attaching to the winch shaft.

The CR Collapsible Power Reel is simple in operation. All Graybar Winches have a hole drilled through the extended end of the shaft into which a pin is driven, leaving one end protruding from the shaft over which the reel spindle is pushed in place and locked by a quarter turn of the reel. The lever on the outside of the reel is turned to the right expanding reel to working position. When the wire is ready for removal, the lever is turned to the left, contracting the reel arms and allowing the wire to be taken off in a neat compact roll.

Graybar 3 to 7-Ton 2-Wheel Trailers

These trailers are equipped with extension tongues, which enable them to handle poles of any length. The tongue is fitted with a pintle eye, which fits into the pintle hook at the rear of the truck. It telescopes within itself to accommodate either long or short poles, and can be adjusted to balance the trailer for easy hand moving when the trailer is empty.

All trailers of this series are equipped with two stationary bolsters on which are sliding up-rights. These up-rights, which facilitate the proper placing of large or small loads on the trailer, are positively locked into position by quick acting cams. At the rear of the trailer is the small hand winch which is used for tightening the cable which binds the load.

This unit has electric steel spoke wheels of integral hub type, Timken roller bearings, and special heat treated chrome vanadium steel springs. All castings are electric steel cast. Axle material is 40-45 carbon steel, especially heat treated. The main frame and cross member is a 4-inch, 9½-pound I-beam.

No. 1227 Graybar Double Drum Winches

10,000-Pound Capacity

The No. 1227 Double Drum Winch (Type FD) offers the use of two independent winch drums. One drum can be used for raising the derrick and the other used for raising the pole. Neither brake nor clutch is used in this winch.

It is furnished with one 12-inch drum with a rope capacity of 720 feet of 3/16-inch cable, and one 6-inch drum with a capacity of 360 feet of cable. Other available drum combinations are one 12-inch and one 9-inch drum, and a combination of two 12-inch drums.

Worm Wheel

This is the heavy phosphor bronze worm wheel and special alloy hardened steel worm used in all Graybar Winches. The heavy-duty roller bearings carry the radial load, and the steel and bronze plain bearings carry the end thrust.

Graybar Utility Automobile Pole Derricks

Middle Type Derricks which are used for general derrick work, center over the middle of the rear of the trucks. Only two men are required to operate this type of derrick; one man operates the winch and the other guides the pole. The middle type derrick is raised and adjusted with the winch. When used as a stiff leg assembly an old pole may be removed from the ground without preliminary digging unless it is firmly embedded or has an abnormal flare. When not in use, the derrick may be disassembled and carried on the side of the truck body, where it is out of the way.

The Corner Type Derrick which works at the right rear corner of the truck body facilitates derrick work in alleys and other restricted places where it is not possible to use the middle type to good advantage. Operating characteristics are practically the same as the middle type.

A complete derrick assembly includes:

- | | |
|---------------------------------|---|
| Derrick Proper | 2 Connecting Pins, Key, Snap and Chain |
| 1 Right Hand Side Leg | 1 Rear Spindle and Sheave |
| 1 Left-Hand Side Leg | (Length to Suit Truck Body) |
| 1 Middle Leg, Upper Section | *1 Tail Bolt Assembly |
| 1 Middle Leg, Middle Section | *2 Front Supports for Spindle Chain |
| 1 Middle Leg, Lower Section | *1 Floor Pocket |
| 1 Apex, Pin Key, Snap and Chain | 1 Winch Line Hook for End of Winch Line |
| 1 Floor Pocket Bolt | |
| 1 Foot Plate | |

*Designated as metal parts for attaching to truck body.

Type	Each	Lift Feet	†Handles Poles Length Feet	‡Weight Pound
XLM	17 1/2	35	285
LM	20	45	385
HM	22 1/2	55	570
LC	20	45	380
HC	22 1/2	55	570
2870	28	70	750
T	21	45	595

†Length of poles handled depends on the balance point of each pole.

‡Weight does not include the weight of boxing nor body parts such as tail bolt assembly, spindle and sheave.

Adjustable Type

The standard types are provided with a foot piece for lower end of middle leg, which fixes the position of the derrick head and overhang at rear of truck.

Many times a bank on which a pole is placed or to be placed, or a hedge or deep gutter has prevented the truck being so placed as to be of service.

The Adjustable Type Derrick can be changed from one extreme position to the other without the telescoping center leg becoming disengaged. All positions are fixed by the use of pins.

No. 1354 Graybar Single Drum Winches 10,000-Pound Capacity

Type P Graybar Propeller Shaft Power Take-Off

The No. 1354 (Type I-12) Graybar Winch is a modification of the regular standard single drum winch and is used for every purpose which requires pulling rope on a drum, operating cranes, pole setting derricks and for hoisting and hauling. This type winch is particularly popular for use on light model trucks where the use of a large winch-drum is not required and not much space is available for mounting.

No brake nor clutch is required on this winch, for the winch cannot run free; the winch is driven when pulling and also when lowering.

This winch embodies all of the best features of the more expensive Graybar Winches. It is flexible, light in weight, and built for hard service. To keep the weight to a minimum and assure a greater factor of safety, only high grade heat treated alloy steels and electric steel castings are used in its construction.

Niggerheads

Graybar Winches can be furnished with niggerheads on one or both sides. Simply by the use of a longer shaft and auxiliary supporting bearings, Graybar Winches can be equipped with niggerheads to meet practically every demand.

Standard niggerheads furnished are 8-inch; 12-inch niggerheads can also be furnished if desired.

Niggerheads are especially popular on the single drum models and are furnished at a slight additional cost. Ordinarily, when one niggerhead is wanted the standard winch is supplied with the niggerhead mounted on shaft extension, on right hand side. If desired, shafts long enough to place niggerheads beyond cab-line are furnished. In that case, out-board bearings are provided.

This power take-off is installed back of the truck transmission and the power to the wheels passes through it, making it a part of the truck drive.

By means of a single shifting gear and a progressive shift shaft, the engine power may be delivered direct to the rear wheels or to the winch, or both at the same time.

Placing the power take-off back of the truck transmission permits the use of all the truck transmission speeds for operating the winch.

A reverse is provided in the power take-off, which has a slightly higher speed than the forward or pulling position. This feature adds to the cost of the power take-off, but in the long run is a good investment.

When the reverse in the truck transmission is depended on to lower the load, the operator usually races the engine, as the standard truck reverse is slower than any forward speed. Most reputable truck manufacturers list this practice under the Don't column, because of its destructive effects on the motor.

With the Graybar Propeller Shaft Power Take-Off, the operator selects the speed best adapted to the job, and then uses the power take-off reverse, which is always slightly faster.

If this reverse were omitted, the operator would have to go through the selective gate of the transmission shaft lever and on some trucks release a reverse lock. With the Graybar Propeller Shaft Power Take-Off, the shift from forward to reverse is with one lever straight forward or back.

This feature is appreciated on a cable removing job where it is necessary to take a new grip every four to six feet, requiring a reversal of the winch each time.

This unit comprises a high quality of material and workmanship.

The gears are of chrome nickel steel carefully heat treated, and all shafts and gears are mounted on anti-friction bearings.

Type CR Graybar Collapsible Power Reels

The Type CR Collapsible Power Reel is designed to pick up loose wire in a neat coil. It is light in weight, but sturdy in construction, and is attached to the winch in a short time. The reel arms and the spiders supporting them are made of aluminum alloy castings which insure light weight as well as strength. The spindle to which the spider is attached is made of seamless steel tubing fitted with a bayonet socket lock for attaching to the winch shaft.

The CR Collapsible Power Reel is simple in operation. All Graybar Winches have a hole drilled through the extended end of the shaft into which a pin is driven, leaving one end protruding from the shaft over which the reel spindle is pushed in place and locked by a quarter turn of the reel. The lever on the outside of the reel is turned to the right expanding reel to working position. When the wire is ready for removal, the lever is turned to the left, contracting the reel arms and allowing the wire to be taken off in a neat compact roll.

Graybar 3 to 7-Ton 2-Wheel Trailers

These trailers are equipped with extension tongues, which enable them to handle poles of any length. The tongue is fitted with a pintle eye, which fits into the pintle hook at the rear of the truck. It telescopes within itself to accommodate either long or short poles, and can be adjusted to balance the trailer for easy hand moving when the trailer is empty.

All trailers of this series are equipped with two stationary bolsters on which are sliding up-rights. These up-rights, which facilitate the proper placing of large or small loads on the trailer, are positively locked into position by quick acting cams. At the rear of the trailer is the small hand winch which is used for tightening the cable which binds the load.

Models C-1 and C-3 have Timken taper roller bearings; Model 1369 has New Departure bearings.

Graybar Cable Reel Trailers

The Model D Cable Reel Trailer affords a means of quickly transporting reels of cable. It has the low center of gravity which is essential to safe transportation of heavy objects at high speed. When the trailer is uncoupled from the truck, the cable can be paid out from the reel without unloading from the trailer.

This unit has electric steel spoke wheels of integral hub type, Timken roller bearings, and special heat treated chrome vanadium steel springs. All castings are electric steel cast. Axle material is 40-45 carbon steel, especially heat treated. The main frame and cross member is a 4-inch, 9½-pound I-beam.

Graybar Combination Cable Reel and Pole Trailers

This trailer, as the name indicates, is one which can be used for hauling poles at one time and by making a change-over, it can be used for hauling cable reels. Through this combination there are really two trailers purchased at 50 per cent less than would have to be paid for separate cable reel and pole trailers.

Graybar Cable Splicer's Carts

This is an all steel, compact, movable workshop. While parked, the cart is kept in a rigid, horizontal position by a support which folds up beneath the body of the cart while traveling. The underslung spring construction eliminates sluing and tipping at high speeds. Other features are the drop forged pintle hook, a 7-foot length of safety chain and convenient hand grips for use in moving the trailer about by hand.

- Contents consist of:
1. Solder, paraffin dipper, test set, condenser, wooden cable dresser.
 2. First aid kit.
 3. Lashing wire and paster box.

4. Shave hook, furnace wrench, sleeve punches, drill holder, iron cable dresser 216-B tool, steel figures, chipping knife, furnace cleaner, pliers, test pick, test point.
5. Small materials.
6. Cotton sleeving, cotton tape, stearine, rubber bandages, hand test set, test cords, splicer's mirror and muslin.
7. Furnace shield.
8. Splicer's personal effects and specifications.
9. Cable saw.
10. Manhole shovel, solder ladle.
11. Kerosene can.
12. Kerosene furnace.
13. File, rasp, drills, soldering coppers, screw driver, wrench, hammers, paraffin thermometer.
14. All other tools and materials.
15. Tarpaulins and paraffin.

Specifications

Capacity, 1000 pounds.
 Length overall, 74 inches; height overall, 41 inches.
 Size of axle, 1¼ inches square; clearance, 11¼ inches.
 Springs, 7 leaves, 32x1½ inches.
 Tires, 24x3 inches, solid. Tread, 34 inches.
 Electric steel spoke wheels with Timken roller bearings.
 Length of safety chain, 84 inches.
 Size of tool box, 42¼ inches long, 22 inches high, and 27 inches wide. Lower compartment is 14½ inches long, 7 inches high, and 20 inches wide.
 Weight, 480 pounds.

Graybar Sure-Binders

A winch and ratchet arrangement with a 1-piece cast steel base which carries the pawl, lever and ratchet winch drum. The base fits over a pole and has two heavy spurs which cut into the pole when tension is put on, thus holding the binder firmly in place.

The binder is equipped with 18½ feet of ⅝-inch trulay plow steel wire rope breaking strength, 5,000 pounds.
 Weight complete, 18½ pounds.

Graybar Low-Bed Trailers

The heavily constructed frame of the Low-Bed Trailer is made of angle and channel steel, electrically welded and riveted. The cross members are steel. The trailing eye can be adjusted from 17 to 34 inches from the ground, making the trailer usable with trucks, tractors, or pleasure cars.

Wheel spindle is 2 1/2 inches round heat treated. Lower axle is 3 inches square, hollow. Dayton steel hollow spoke wheels, with Timken taper roller bearings.

A 4-inch double channel tongue, with trailer eye of chrome nickel steel casting. Stake pockets are standard equipment.

Optional Equipment

Stake racks of hardwood construction, securely bolted, furnished in heights of 3 or 5 feet.

Stakes only, of select straight grain hardwood, furnished in heights of 3 or 5 feet (10 stakes required per set).

All steel hand winch; two speeds, 4 to 1 and 24 to 1. Capacity, 5-ton straight line pull. Drum capacity, 160 feet, 5/8-inch cable; 250 feet, 1/2-inch cable; 325 feet, 3/8-inch cable. Size, 16x17x13 inches. Positive internal brakes. Installed on front of trailer. Easily detached.

Pintle Hooks

The Model B Pintle Hook has positive locking arrangement, preventing the eye of the hook from opening when trailing. The hook is always kept in perpendicular position. Complete assembly weighs approximately 65 pounds.

The Model 1417 is used on trucks up to 3 1/2-ton capacity. Long braces are attached to frame side members. The latch is of the positive lock type.

Salisbury Line Hose

A convenient device for protecting linemen from accidental contact with energized lines. By completely surrounding the wire with a substantial wall of voltage resisting rubber more than ample insulation is provided.

Made of high grade, clean, fresh crude rubber, combined with the proper non-metallic materials which give high dielectric strength, toughness, durability and long age.

The self-locking lip prevents the hose from being accidentally detached. Short bends can be made without exposing the conductor it covers.

Its flexibility makes its use adaptable to various conditions of service. Readily follows the bends of taps, jumpers or leads.

Simple to place, slides on wire from either above or below. Can be removed easily. Being relatively small in diameter, light and complete, it is conveniently transported, raised and handled aloft.

Most companies have adopted the 1-inch diameter size as standard as it will cover practically all lines in distribution service. The 1/4 and 3/8-inch sizes are used by telephone and telegraph companies where lines run parallel to high tension power lines and are in danger of becoming energized to a high voltage by induction.

Furnished in 1/4, 3/8, 1/2, 1, 1 1/4 and 1 1/2-inch sizes, inside diameter; in standard lengths of 3, 4 1/2 and 6-foot pieces.

Salisbury Line Hose Connectors

For use where two or more pieces of line hose are employed on one wire. Prevents the hose from slipping apart and thereby eliminates the possibility of the conductor being exposed between the adjoining ends.

Shaped to snugly fit the outside contour of the hose. Walls are of extra thickness to provide the necessary grip. A series of ribs, designed to grip the hose are placed on the inside surface to give connector a tight hold.

Made in 2 sizes to fit over 3/8 or 1-inch line hose.

In ordering specify hose size.

Salisbury Linemen's Glove Bags

Used to protect linemen's rubber gloves when not in use. Made of heavy, tightly woven, waterproof 42-ounce white duck with non-raveling edges.

Special features: Snap back and D ring for attaching to belt; double head reinforcing rivets; sewed with linen thread, lock stitched; gusset sides and bottom, carrier flat when empty; flat lying cover; strong snap fastener; waterproof; ventilating eyelets in bottom gusset.

No.	35	25
Length inches	15	9
Width inches	8	8

Salisbury Rubber Insulator Hoods

Used in conjunction with line hose to cover tie-wires and conductors as they pass the insulators. Completely covers this point of hazard in a close fitting and positive manner. Can be used on double arm as well as single arm construction. The extending arms of the hood over-lap the ends of the line hose.

Compounded to secure high insulating qualities over a long period of time. Vulcanized in steel molds while under great pressure, in heavy duty presses; retains its shape and flexibility. Thick walls of solid rubber give it ability to stand up under severe conditions of use.

Requires no attachments to hold it in place. Securely locks itself to the under side of the insulator and cannot open, turn, slide or become accidentally dislodged.

Solid rubber flanges extending inwardly from under sides of the body portion serve to grip the under side of the insulators. Exterior ribs are placed to reinforce the side walls and to increase the grip.

Inside dimensions arranged so hood properly fits all popular types of pin insulators in distribution service.

Length, 14¾ inches. Height, 6¼ inches.

Weight, 4 pounds. Packed one to a carton.

Telephone and telegraph companies use a special hood shaped to fit telephone style insulators. As it is used on single arm poles only both extending arms of hood are of the same diameter and will snugly grip the ¼-inch size line hose. In ordering, specify Telephone Type.

Salisbury Protective Rubber Sleeves

Formed and Vulcanized in Chromium Plated Molds

Full Length

Used to protect the arms and shoulders from accidental contact with energized equipment. The lower ends fit under the gauntlets of rubber gloves.

Amply reinforced around the eyelet hole and the openings are protected with a substantial bead.

Fastened across the shoulders by an adjustable rubber strap and rubber buttons. A fastener is furnished with each pair of sleeves.

Guaranteed on initial tests to resist 10000 volts for 3 minutes with water electrodes.

Outside arm length, 25 inches. Inside arm length, 17½ inches. Wrist opening, 5½ inches. Arm opening, 11 inches.

Packed one pair to a carton.

Elbow Length

Fit fairly close around the forearm but permit free arm movement as they are very flexible. Molded in one seamless piece.

The combination of short sleeves with standard length gloves is economical for if either are damaged it is only necessary to replace the unserviceable glove or sleeve.

Guaranteed on acceptance tests to resist application of 10000 volts for 3 minutes between water electrodes.

Outside arm length, 16¼ inches. Inside arm length, 13½ inches. Wrist opening, 4¼ inches. Arm opening, 6¾ inches.

Packed one pair to a carton.

Salisbury Rubber Protective Blankets

Particularly useful in covering secondary racks, dead ends, cut-outs, pot heads, arresters, and similar equipment. Also useful in station and underground work.

Will fold, wrap or hang suspended in any position to provide an insulating barrier between electrical workers and hazards adjacent to their working position.

Bead molded on all four sides to prevent tearing.

Duck Inserted—Black

Recommended for hardest service conditions. Has ample flexibility. Guaranteed on acceptance tests to resist 20000 volts for 3 minutes.

No.	Plain	Size, Inches	No.	With Eyelets	Size, Inches
100		36x36x½	100-E		36x36x½
200		27x36x½	200-E		27x36x½

All Rubber—Black

More pliable than the duck inserted type. Guaranteed on acceptance tests to resist 20000 volts for 3 minutes.

No.	Plain	Size, Inches	No.	With Eyelets	Size, Inches
300		36x36x¼	300-E		36x36x¼
400		27x36x¼	400-E		27x36x¼

Pure Gum Center—Maroon

For classes of work requiring extreme flexibility and lightness in weight. Desirable for close wrap around work. Guaranteed on acceptance tests to resist 30000 volts for 3 minutes.

No.	Plain	Size, Inches	No.	With Eyelets	Size, Inches
500		36x36x½	500-E		36x36x½
600		27x36x½	600-E		27x36x½

Salisbury Static-Resisting Line Coats

The special construction of this coat retards static tingling at the neck or wrists when the garment is used during wet weather on work that is adjacent to energized conductors.

Special features: Inside double back; special rubber fasteners; reinforced at belt; all seams sewed and cemented; insulating skirt collar; roomy raglan shoulders; insulating storm cuffs; storm fly front.

Guaranteed to be free from all defects in material or workmanship.

The all rubber collar is standard. Corduroy faced collar can be furnished if desired.

Furnished in sizes 36 to 46 inclusive. Length, 47 inches.

Packed one to a carton.

Salisbury Electric All-Rubber Coats

For the class of service that does not require the additional features and protection offered by a static-resisting line coat.

Made of strong durable material, coated on the outside surface with high grade rubber and a frictioned coating on the inside. No metal is used in its construction.

The inner cuff of the double-storm cuff is made of pure gum rubber. The collar is of standard lay-down type. Reinforced at hips to protect coat from tool belt abrasion. Has raglan shoulders, all rubber fasteners and storm fly front.

Furnished in sizes 36 to 46.

Length, 46 inches.

Salisbury Steam Cured Linemen's Rubber Gloves

No. 90
Straight Finger Style

No. 100
Curved Finger Style

With the realization that rubber gloves are the most important article in a linemen's equipment and that strength and durability are imperative for safety, Salisbury's Gloves are most conscientiously made.

Only the best materials are used and all operations from mixing to final inspection are carefully conducted. Investigation and experiment in laboratory, factory and field are constantly made to discover possible improvements in either material or manufacturing operations.

Qualities of high insulation, low leakage, strength, flexibility and long life are evenly balanced. Each of these essentials is raised to the highest possible value without lowering the standard of some other property.

To satisfy all demands, Salisbury's Gloves are furnished in either the No. 90 standard straight finger or the No. 100 curved finger styles. Both types are furnished in 10000, 15000 and 20000-volt ratings. There is also a choice of gloves that are vulcanized by either the steam or acid process.

All gloves are seamless, form fitting, accurate to size, with finger lengths and widths adjusted to best meet average conditions.

Salisbury Rubber Gloves are guaranteed to pass the most thorough inspection and to meet the A.S.T.M. and N.E.L.A. specifications.

Replacement will be made, or return accepted, of all gloves which fail under initial tests at their rated voltage or otherwise prove unsatisfactory at the time of delivery.

- Class B—10000-volt, 14-inch gloves are standard.
- Class A—10000-volt, heavier weight gloves are available.
- Furnished in sizes 9, 9½, 10, 10½, 11 and 12.
- Packed one pair to a box.

Salisbury Linemen's Protector Gloves Full Gauntlet 4-Inch Style

Designed to wear over Linemen's Rubber Gloves to protect them from snagging, tearing or abrasive wear. Made expressly for this work and should not be confused with the ordinary work gloves.

Made of specially tanned grade A buffed horsehide, maroon color, and from selected weights.

Remains soft and pliable under all conditions and will not become slippery when wet. Resists

wire puncture to a great degree.

All outside seams are lock stitched. Finger seams sewed at back away from wearing surface. Extra wide reinforcement at thumb seam, making double leather thickness at this point of hardest wear. Finger tips are semi-moccasin style. Equipped with leather pull straps and self engaging buckle to tighten at wrist. Gauntlet does not flare; has a firm back and soft leather front.

Available with either closed or open backs, and also with long thumb crotches for straight finger rubber gloves or short thumb crotches for curved finger gloves.

Order by number.

Salisbury Insulating Stools

A low platform on which workmen can stand while performing hazardous tasks in sub-stations, power plants, underground vaults, etc. Has corrugated rubber top and double petticoat rubber insulators for legs. The stool is non-tipping and non-slipping. Dry test flashover, 82,000 volts. Wet test flashover, 19,000 volts.

Size, 18x12 inches, 8 inches high. Weight, 15 pounds.

Salisbury Switchboard Rubber Matting

A non-slip corrugated surface matting of high dielectric strength and long aging qualities.

Meets requirements of all standard specifications.

Guaranteed to resist 50000 volts for 3 minutes on acceptance tests.

Furnished in ¼-inch thickness; 24, 30 and 36-inch widths; lengths up to 75 feet. Other

widths and thicknesses can be furnished.

No. 30 Salisbury Non-Metallic Tool Bags

The tool bag is an essential part of line crew equipment as it is an efficient method of raising tools, supplies and material to the pole top.

This bag is of sturdy construction, amply reinforced and designed throughout for heavy duty service.

Made of duck with a single side seam together with top and bottom fastenings strongly sewed. The heavy leather bottom extends 3 inches up the sides. The top is held open, in round form, by a stout non-metallic ring. A 3/8-inch rope handle is firmly spliced to the bag through leather reinforcements. Equipped with a utility pocket on the inside to accommodate small tools, bolts, washers, etc. Bag is collapsible.

Diameter, 12 inches. Height, 15 inches.

Salisbury Non-Spillable P.B. Paint Pots

This is a rubber container for insulating compound, soldering flux and brushes.

The pot is made of semi-hard, durable rubber and has high insulating qualities. Compound or paste will not affect the container.

A flange extending inward at the junction of the neck prevents the contents from splashing or spilling during rough handling. Compound and paste receptacles are equipped with tapered corks through which rubber-set brushes are securely inserted. When the brushes are in use these stoppers serve as guards to prevent the paint from flowing back to soil the gloves or hands of the operator.

Salisbury Separators and Test Caps

Cable end test caps and separators are used as a protective covering for cable ends when cable is cut for tests or during temporary repairs. They serve a double purpose by eliminating the possibility of man touching the exposed ends and protecting the cable from moisture. In covering single conductor cable ends, test caps alone are used.

Guaranteed to resist 10000 volts under the wet method of testing.

Simplex Cable Reel Jacks

Automatic Lowering

No. 321

No. 322

Nos. 320 and 321 are recommended for warehouse service in handling cable, wire rope and belting reels. No. 320 is single acting for reels from 20 to 60 inches in diameter. No. 321 is single acting for reels from 20 to 96 inches in diameter.

No. 322 is generally used for heavy outdoor service. It is double acting for cable reels ranging from 36 to 84 inches in diameter. The T-shaped base provides a firm foundation. Furnished in pairs, one right and one left hand, for uniform operation on each side of the reel.

These jacks are furnished with steel lever bars.

Simplex Portable Cable Reel Jacks

No. 41

No. 81

Jack held on oak base by taper wedged brackets—can be quickly removed and packed in tool box. Made single acting, raising the load on the downward stroke only, and double acting, raising the load on both the downward and upward strokes.

Designed to lift small, but heavy cable reels from 24 inches to 48 inches diameter, and can readily be used for any work, where 1 to 2-ton loads are to be handled.

No. 310 Simplex Emergency Single Acting Jacks

A single acting, 15-ton jack of extraordinary utility and efficiency. Its pivoting base enables jack to be operated at full capacity, at any angle from horizontal to vertical, as well as vertically.

An all-around jack for use anywhere and everywhere heavy objects are to be pushed or lifted.

The steel detachable shoe and 5-foot special chain attachment permit grappling and engaging loads in awkward or difficult positions, and where the ordinary lifting jack could not operate at all. Heavy calks on base prevent slipping.

Provided with four lifting and pushing points—rotating cap, lower lift, steel adjustable shoe and steel chain, enabling jack to meet every emergency condition.

Simplex Track and Ballast Jacks Single Acting—Tripping Type

No. 217

No. 217 is recommended for track work only. Operates on downward stroke of lever. Its manpower and strength have been approved by the Underwriter's Laboratories.

The rack bar and retaining pawl are of alloy steel, heat-treated; the lifting pawl is high carbon steel, heat-treated; the socket is a steel casting; the base is arched to prevent bending or slipping.

Piano wire coil spring and plunger back of retaining pawl forces it into holding position with a sharp click.

Nos. 216 and 218 are identical with No. 217 except for the heights of the standards and rack bars.

Joyce Air-Motor-Driven Jack Hoists Ball-Bearing Geared Screw Type For Locomotives, Coaches and Cars

With this hoist compressed air replaces man power for jacking. One man controls the speed of operation of a pair of hoists from a Y valve in the air line, or each hoist may be operated by means of its control lever. This lever opens and closes the throttle valve to the reversible Ingersoll-Rand motor which is a part of the hoist. The control lever governs the direction of operation (up or down) as well as the speed which ranges from 0 to 8 inches per minute for coach model. Changes in gearing make possible special hoists with ½ the capacity and 3 times the speed.

The hoist lowers by reversing the motor. It is not self-lowering. There is no chance of running down or dropping for any reason whatever, such as a broken air hose, etc.

There is an automatic shut-off at both upper and lower limits of the ram. The hoist is so powerful that a reduction of air pressure does not affect the operation any more than a slight slowing down of the motor.

The large wheels which are 10 inches in diameter, facilitate movement. Hoist is equipped for alemite lubrication.

A hand operated 12-inch adjustable ram feature is provided in Nos. 17713 and 17413. This eliminates blocking and permits full raise under load. No. 17718 has telescoping screws and rams which provide a high rise.

No. 10 Oshkosh Pike Pole Guards

For guarding the hazardous point on pike poles.

The guard works easily and fastens securely in either the guarded or open position. When in the unguarded position, the guard is completely out of the way, snugly fitted around the pole. When in the guarded position, it automatically locks in place and provides complete protection from the pike point.

This guard will fit either the 2-inch or 2 1/2-inch pike poles. It is light in weight, adding only 7 ounces to the pike pole.

Shipping weight, 7 ounces.

No. 10.....each \$1.34

No. 920 Oshkosh Brush Hooks

For clearing right of ways for power lines or for clearing land of brush. It takes the place of an axe and scythe. It cuts small seedlings, bushes, and small trees easily.

Made of a crucible steel particularly suitable for this tool. The eye or socket is securely welded to blade. The back strap eliminates the necessity of wedging the handle in the eye and holds the handle to the blade tightly. The handle is a high quality axe handle.

Weight, 4½ pounds.

No. 920each

No. 897 Oshkosh Folding Take-Up Reels

The reel part collapses and automatically throws off the coil at the same time and in an instant is ready for another coil. The frame, made of heavy hardwood, is strong and heavily reinforced throughout and folds up like a hinge.

It can be taken down in a moment merely pulling the pin out of the shaft, throwing off the coil and folding up the frame.

Take-up, 21 inches. Weight, 41 pounds.

Price, No. 897.....each \$42.30

Oshkosh Barrow Reels

Made of hard rock maple strongly reinforced with angle iron braces. Rests on strong steel legs. Has a large diameter pivot and is made for heavy work.

Cat. No.	Description	Wt., Lbs. Each	Price Each
900	Barrow Reel Only	80	\$46.40
901	Extra Pins, per Set of 4	4	5.60

Oshkosh Pay-out Reels

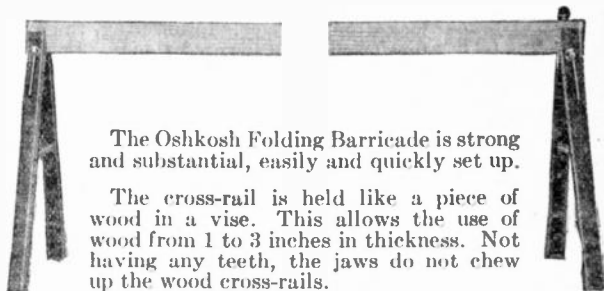

Made of hard maple, well constructed and re-enforced throughout.

Cat. No.	Wt., Lbs. Each	Price Each
902	40	\$27.80

Oshkosh Folding Barricades

Folded

The Oshkosh Folding Barricade is strong and substantial, easily and quickly set up.

The cross-rail is held like a piece of wood in a vise. This allows the use of wood from 1 to 3 inches in thickness. Not having any teeth, the jaws do not chew up the wood cross-rails.

It is easily and quickly taken down and folded into a small, compact bundle which stacks easily and safely.

The screw handle is made of pipe and forms a socket for holding a danger flag. The socket is 4 inches deep.

A lantern lock is welded to the screw handle of each barricade. The lock itself is a set screw which is screwed outward to release the lantern and screwed to lock the lantern.

Orange finish.

Size.....inches	32	42
Per Pair.....	\$6.00	\$6.34
Height.....inches	32	42

Oshkosh Warning Signs

This warning sign is light in weight, yet durable. Legs are of ½-inch high carbon steel. Has 1¼-inch flange around edge of lettered side.

Has two hollow handles for adjusting angle of the legs. These handles also serve as flag sockets, and each is equipped with a lantern lock.

Black letters, 5½ inches high, on traffic yellow background.

Height, 43 inches.

Width, 28 inches.

Thickness, 1½ inches.

Size folded, 28x28x1¼ inches.

Weight, 23 pounds.

Warning Sign.....each \$6.00

Oshkosh Metal Flags

This metal flag is light and strong. It is made of 16-gauge steel welded to a 5/8-inch hollow iron staff. The flag is painted bright red and the staff black. The little peg hole near the top is for conveniently hanging it up in the truck.

The Oshkosh Warning Sign and the Oshkosh Folding Barricade have handy sockets to accommodate this flag.

Staff, 20 inches high.

Size of flag, 12x10 inches.
Metal Flageach \$.67

Oshkosh Safety Extension Ladders

A light weight, safety extension ladder designed expressly for public utilities.

Equipped with an automatic safety lock or latch. This lock is so arranged that when pulling on the raising rope, the lock is lifted out of position. The instant the strain on the rope is slackened, the lock drops in place. In lowering, the extension must be lowered slowly. It cannot accidentally drop.

The side rails are made from straight grained, properly seasoned aeroplane spruce.

The rungs are made from tough mountain hickory, straight grained. Each rung has a shouldered tenon joint which is pressed tightly into the side rails, assuring a safe, tight fit. The side rails of each section are connected at top, middle, and bottom with steel tie-rods. This combination makes a rugged, durable construction. Either section can be used separately as an individual ladder, both being equipped with safety tips and pikes.

Other safety features include rubber faced tips, transparent safety finish, safety pole-grippers, and rubber guarded safety pikes. All metal parts are par-zened.

Furnished in full range of lengths.

Weight, 2 pounds per foot, average.

Safety Extension Ladder...per ft. \$1.14

No. 915 Oshkosh Tree Trimmers

The Oshkosh Tree Trimmer is light and strong.

The head is made of two pieces of light forged steel reinforced and riveted together. These sides act as a guide for the thin saw steel cutting blade.

The blade is pivoted and starts cutting with a slicing motion the moment the rope is pulled. It cuts limbs up to 1½ inches in diameter.

The handle is made in three sections of 1½-inch straight grained, clear Washington Fir. One 6-foot section is attached to head, and two 7-foot lengths equipped with positive couplings of rigid construction, yet easily dismantled.

Furnished complete with handle and short section of rope.

- No. 915, Trimmer Complete, wt., 13 pounds...each \$10.68
- No. 915B, Blade, wt., 10 ounces...each 2.67
- No. 915S, Spring, wt., 2 ounces...each .47

- No. 915R, 20 Feet of Rope, wt., ¼ pound...each 1.54

No. 916 Oshkosh Tree Saws

The saw blade is a strong, thin, fine tooth blade. It cuts fast and clean and leaves a good smooth cut.

The steel frame has a hook for hanging saw in tree or pulling cut branches out that have caught. The 6-foot handle has a ferrule on bottom to which can be connected the regular extensions of the Oshkosh Tree Trimmer.

- No. 916, Tree Saw, weight, 5 pounds...each \$8.38
- No. 916B, Saw Blade, weight, ¼ pound...each .67
- No. 916T, Saw Tightener, weight, ¼ pound...each 1.54

No. 3600 Klein's Favorite Tree Trimmer

Will sever a one inch branch.

Knife is held open by a flat steel spring and is operated by a rope attached to the end of the lever.

Head is one piece and comprises the hook portion with which the knife engages and the socket into which the handle is inserted. This socket is straight, eliminating the necessity of tapering the end of the handle.

Knife forged from tool steel and is integral with lever.

No.	Each	Size Over All, In.	Wt.
3600-20	\$8.50	17, without saw	3½
3600-21	11.00	23, with saw	4

Tree Trimmer Handles

Length, 18 feet, brass ferrules.

No. 3601-9, Wt., 9¾ Lbs., 2 Sections	each 7.50

No. 3628 Klein Tree Trimmers

The entire head of this tool, comprising hook and socket into which handle fits, is sturdily constructed of pressed steel. The knife, made of tempered tool steel, is round in shape and arranged to rotate slightly with each cut, thus providing the entire circumference of the blade for cutting and giving an edge more than 3 times the length of that on the ordinary blade.

The leverage makes this trimmer cut the heavier branches quite easily. Knife may be readily removed for sharpening or renewal. Two threaded holes are provided for attaching saw.

Size over all, 12½ inches. Weight, 3½ pounds.
Price, No. 3628, Trimmer...each \$8.50

B & L Star Brand Public Utility Star Metal Blocks for Manila Rope

Malleable Iron Shells—Loose Side Hooks and Becket

No. 2325-A Single

No. 2326-A Double

No. 2327-A Triple

Hooks are drop-forged of special steel and of extra large size and strength. The shell is certified malleable iron—carefully rounded and without sharp projection and constructed to prevent rope jamming between the shell and sheaves.

Double blocks of all sizes have full center straps, and all straps extend through the entire length of the block so all becket strain is borne by the straps not the shell.

Pin ends are entirely covered by recess in sides of the shell, allowing the block to be used on the ground or to pass any protruding object, when raising or lowering without interference.

Sheaves are of standard tackle block dimensions, and can be supplied japanned or galvanized, with any style bushing.

Blocks can be supplied promptly in all sizes. Supplied with any connection, including safety link.

Sheaves in 8-inch blocks and smaller are same sizes as in regular mortise wood blocks. Sheaves in 9-inch blocks and larger are same sizes as in wide mortise wood blocks.

B & L Star Brand Public Utility Snatch Blocks

Wrought Iron Shell—For Manila Rope, Boston Pattern

No. 2356

Has malleable iron shell, extra heavy drop-forged flattened stiff swivel hooks, wrought iron straps, safety-locking link and smooth rounded edges to prevent chafing rope.

Blocks furnished with sheaves for wire rope if desired.

B & L Star Brand Stringing Snatch Blocks
 With Drop Link or Boston Self-Locking Links
 Aluminum Conductor

Made almost entirely of aluminum. Used in stringing aluminum conductors, as a harder metal might result in abrasion of the expensive conductor.

The main strain is taken through the drop-forged swivel hook attached to the drop-forged steel strap with the self-locking latch, but these parts are far enough from the conductors so they never come in contact.

Made in several sizes and fitted with special Lynite 6-roller bearing sheaves.

- 7-Inch Sheave Blocks for Nos. 2/0 to 300,000 C.M. Aluminum Cable, Weight 13½ Lbs... each \$8.50
- 10-Inch Sheave Blocks for 336,400 to 500,000 C.M. Aluminum Cable, Wt. 18 Lbs... each 12.50
- 14-Inch Sheave Blocks for 500,000 C.M. Aluminum Cable, and larger. Wt. 37 Lbs... each 21.25

Other sizes made to specification; prices upon application.

B & L Star Brand Stringing Snatch Blocks
 Wood Shell

Equipped with specially designed 6-roller bearing sheaves to insure freedom of action, as any failure would create a dangerous abrasion of the conductors.

This method may be carried out with standard commercial snatch blocks, but one block jamming would cause damage to the conductor, even though the remaining blocks were functioning properly.

These blocks are made with special wide throats when so desired, so as to accommodate any large splicing that may run over the sheave.

PU-38

- 7-Inch Sheave Blocks for Nos. 2/0 to 300,000 C.M. Aluminum Cable.
- 7-Inch Sheave Blocks for 1 to 188,700 Copper Cable
- 10-Inch Sheave Blocks for 336,400 to 500,000 C.M. Aluminum Cable.
- 10-Inch Sheave Blocks for 4/0 to 314,500 Copper Cable.

Other sizes to specification; prices on application.

B & L Star Brand Public Utility Snatch Blocks for Wire Rope

Drop Forged Flatted Stiff

Swivel Hooks, Heads and Links

This block is designed especially for truck winch work. Built rugged to stand hard service and heavy loads, and light enough to be easily handled by the screw.

It is all galvanized.

Larger and smaller sizes of this block can be furnished if desired.

Improved B & L Star Chain Hoists

The principle of the B & L Hoist operation is extremely simple and the points of contact of the scroll on hand wheel and load gear teeth are machined to an accurate fit.

Improved construction methods eliminate the possibility of spreading the load gear teeth being engaged at exact depth by scroll, even after long wear, and with overload.

It is fully equipped with radial and thrust ball bearings. It has only 2 moving parts. It holds its load securely at any point without a brake. All parts are interchangeable, being built and assembled by precision methods. It is light, safe and portable. It is compact with low head room. The drop-forged steel hooks are proof-tested. It is automatically lubricated and operates with perfect smoothness. Chains are the finest obtainable and fit the wheels correctly.

Hoist is tested to twice its rated capacity before shipment. In efficiency of operation the B & L Improved Star Chain Hoist compares favorably with the most expensive geared hoists.

Capacity Hoist Pounds	Power Required to Lift Full Load Pounds	Regular Lift Feet	Weight Pounds Hoist Complete	Price Each

Steel forging for connecting load to winch line.
Each, Weight 2 1/2 Pounds..... \$2.00

No. 102-1 Klein's Splicing Clamps

This clamp is arranged with five round holes for bare wire. For copper wire Nos. 8, 10, 12, 14, 16, A.W.G. For iron wire Nos. 10, 12, 14, 16, 18, B. W. G. Length 8 inches. Price, No. 102-1.....each \$5.20

No. 102-3 Klein's Splicing Clamps

Large hole can be used for guy wire or messenger strand. Copper wire Nos. 2, 4, 6, 8, 10 and 12 A. W. G. Iron wire Nos. 4, 6, 8, 10 and 12 B. W. G. No. 102-3, 10 3/4-Inch. Wt. per Doz., 15 lbs....each \$6.70

No. 102-30 Klein's Splicing Clamps

Holes reversed for those who prefer this arrangement. Copper wire Nos. 2, 4, 6, 8, 10, 12 A. W. G. Iron wire Nos. 4, 6, 8, 10, 12, 14 B. W. G. No. 102-30, 10 3/4-Inch. Wt., per Doz., 15 lbs....each \$6.70

No. 102-48 Klein's Splicing Clamps

Largest hole convenient to bring together guy strand before applying a three bolt clamp. Copper wire Nos. 0, 2, 4, 6, 8 A. W. G. No. 102-48, 10 3/4-Inch. Wt., per Doz., 15 lbs....each \$6.70

No. 105-15 Klein's Splicing Clamps For Twisting Double Tube Sleeves

For copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. Price, No. 105-15, Size 8-inch.....each \$5.50

No. 105-17 Klein's Splicing Clamps

Has five sets of chamber for twisting double tube sleeves. For copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. Price, No. 105-17, Size 10 3/4-inch.....each \$6.70

No. 105-31 Klein's Splicing Clamps

Three double chambers for twisting Nos. 10 and 12 A. W. G. sleeves, Nos. 12, 14, and 17 N. B. S. sleeves. No. 105-31, 8 3/4-Inch. Wt. per Doz., 10 lbs.....each \$5.50

No. 107-34 Klein's Di-Stock Sleeve Twister

A hand operated cam lever closes the head securely on the sleeve—no thumb screws to bother with. Tubular handles are furnished. No. 107-34, weight each, 9 Lbs.....each \$40.00

No. 132-12 Klein's Combination Wire and Sleeve Clamps

For telephone and telegraph general line and trouble work. This clamp has four round holes for twisting bare wire. Copper wire Nos. 6, 8, 10, 12, A.W.G. Iron wire Nos. 8, 10, 12, 14, B. W. G. The reverse side has four double chambers for twisting sleeves.

Copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle. Weight per dozen, 10 pounds. Price, No. 132-12, Size, 9 inches.....each \$7.00

No. 132-47 Klein's Wire and Sleeve Clamps

For single tube or oval copper sleeves. Nos. 2, 4, 6, 8, and .104. Hinge has stop to prevent handles from opening beyond convenient for clamping on sleeve. No. 132-47, Weight per Doz., 17 Lbs.....each \$11.00

No. 132-15 Klein's Combination Wire and Sleeve Clamps

The unusual range of wire and sleeve sizes covered by this clamp makes it practically a universal tool for telegraph, telephone and power line work. Has 5 round holes for twisting bare wire and an oval opening for guy wire or messenger strand. Copper wire Nos. 4, 6, 8, 10, 12, A.W.G. Iron wire Nos. 6, 8, 10, 12, 14, B. W. G. Strand opening .437x.624.

Reverse side has 5 chambers for twisting double tube sleeves. Copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles. Weight, per dozen, 16 pounds. Price No. 132-15, Size 11 1/4 inches.....each \$9.50

No. 132-46 Klein's Wire and Sleeve Clamps

One side for double tube copper sleeves Nos. 4, 6, 8, 10, and 12 A. W. G. Other side for copper wire Nos. 4, 6, 8, 10, and 12 A. W. G. No. 132-46, Weight per Doz., 15 1/2 Lbs.....each \$9.50

No. 107 Klein's Di-Stock Sleeve Twisters

This tool has ample leverage for use on heavy wires beyond the capacity of standard splicing clamps or connectors. The illustration above shows the Di-Stock fitted for making double tube joints.

Forged from high grade crucible steel. Has swing latch provided with thumb nut to fit over reverse jaw to hold both jaws securely in place.

Open to Receive Wire

Special prices on any combination upon application. Spec- ify sizes of sleeve tool is intended for. Tools are made to order only. Weight, 4 pounds. Price, No. 107-2, for Sleeves.....each \$26.00

Klein's Chicago Grips

Main body piece and lever are forged steel. Draw parts are wrought steel. Gripping jaws are machined.

Klein's Chicago Grips

With Bronze Lined Jaws

Construction engineers are demanding grips that will not slip under heavy loads and which will not damage the conductor or strand. These requirements are met by welding a lining of bronze into the jaws of standard Chicago Grips, indicated by "B" following catalog number.

In order to make standard grips available for conductors of larger diameters they can be further modified by plating the lower jaws to required additional width and fitting an upper jaw of corresponding width, but in one piece, indicated by "BP" following catalog number.

Whether for copper, copper-weld, aluminum or aluminum cable steel reinforced (ACSR) or steel strand these grips will answer the problem.

Ascertain the maximum tension anticipated and the overall diameter of the conductor or strand to be used and consult the table below. All orders must state maximum tension load and overall diameter of conductor or strand.

These tools are made to order only. Parts are held in blank at factory and shipment can usually be made in from 14 to 21 days.

No.	Each	Max. Diam. Conductor	Max. Safe Load, Lbs.	Wt. Lbs. Each
1613-30B	\$6.00	.1975	1,500	1½

*1628-30B	123.00	1.50	20,000	23½

*Forged from tough alloy steel, all parts heat treated so as to get maximum strength without excess weight.

†These grips are also plated to accommodate the larger diameter cables.

No. 1700-30 Klein's Chicago Linemen's Tools

Set is combination of Chicago Grip No. 1613-30 with Howes Wire Tool No. 1702-20.

For No. 6 wire and smaller down to No. 13.
No. 1700-30, Weight, 4 lbs.each \$14.10

Haven's Steel Grips

Almost automatic in action. Handle and eccentric allow instantaneous hold. A shake of the rope on the tackle disengages the grip.

Price, No. 1604-10, for No. 8 Wire and Finer... each \$4.00
 Price, No. 1604-20, for 1/2-inch Wire and Finer... each 6.00

Improved Haven's Grips

For plain or stranded wire No. 6 to 3/4-inch diameter. Made with swing latch which engages stud on lower jaw.

No. 1625-20... each \$14.00

No. 1802-30 Klein's Self-locking Troublemens' Blocks

Especially for use with Klein's Wire Grips. No. 1802-30 is furnished with 25 feet 3/8-inch Manila rope, 2 1/2 pounds. Consists of light steel shell blocks galvanized, fitted with snubbing hook to lock load in any position. To lock load, pull luff rope under hook. To release, simply pull rope. Blocks are arranged with spring guard snap hooks. When pulling up wire to make a splice, it may be used with two grips attached to snaps or with hook to anchor to an insulator-pin or other convenient anchorage.

Cat. No.	Description	Wt. Lbs.	Price per Set
1802-30	Galv., with 25 Ft. 3/8-inch Rope.....	2 1/2	\$7.20

No. 1702-20 Klein's Howes Wire Tools

The strap is harness leather 1 1/4 inches wide and 7 feet long. At one end a forged steel swivel hook is provided with opening to permit anchoring round insulator pin. The forward end has a locking device to hold the load at any distance and is so arranged that a wire grip can be readily attached.

The metal parts are galvanized.

Weight per set, 2 pounds.

Price, No. 1702-20, Single Purchase... per set \$10.00

Klein's Snap for Hand Lines

Is used on hand lines, 1803 series.

No. 443A, Forged Snap, Eye 1 1/8 In. I. D.....	each \$2.50
--	-------------

Matthews Quick Release Slack Pullers

No. 730

No. 732

Enables one man to do the work of four when taking the slack out of guy strand, messenger wire or changing strain insulators, or for splicing trolley wire, telephone or power cable under tension; also used for pulling back underground cable. Takes the place of block and tackle. One man can easily pull 3000 pounds with the No. 730, 6000 pounds with the Nos. 731 or 732, and 10000 pounds with the Nos. 7100 or 7110. No slack is lost in dead ending as strain is held to the exact point pulled.

With the new quick release feature, when the entire take-up has been used, the wire is temporarily dead ended and the lock released. This permits the slack puller to be immediately extended to its maximum or any intervening length.

No.	Description	Ship. Wt. Lbs.	Price Each
730	Maximum Take-Up, 19 Inches.....	17	\$50.00
731	Same as No. 730, Except That Clevis is Substituted for Hook.....	17	54.00
732	Same as No. 731, Except That it Also Has Quick Take-Up Feature.....	17	58.00
7100	Maximum Take-Up, 27 Inches.....	45	95.00
7110	Same as No. 7100, Except That it Also Has Quick Take-Up Feature.....	45	112.00

The 730, 731 and 7100 do not have the quick take-up feature.

Klein's Linemen's Pole Climbers

Also Called Spurs or Hooks

Safety is the first and vital point in considering linemen's pole climbers. The lineman going up a pole depends entirely upon his spurs.

To assure utmost dependability Klein Climbers are forged from special steels and are individually tempered. Shanks and gaffs are tested to insure perfect riveting and temper.

Klein's Eastern Climbers

When ordering specify length of shank desired. Measure from instep to extreme end. Other than stock sizes to order. Tested before leaving factory.

No. 1901

Stock sizes, 15, 15 $\frac{1}{2}$, 16, 16 $\frac{1}{2}$, 17, 17 $\frac{1}{2}$ and 18 inches. Has punched strap loops. Packed 1 pair in a carton. No. 1901, Wt. 3 $\frac{5}{8}$ Lbs.....per pair \$8.20

No. 1900

Same and same sizes as No. 1901 but has riveted strap loops. Packed 1 pair in a carton. No. 1900, Wt. 3 $\frac{5}{8}$ Lbs.....per pair \$8.20

No. 1903

Light weight pattern with riveted strap loops. Packed 1 pair in a carton. No. 1903, Wt. 2 $\frac{7}{8}$ Lbs.....per pair \$8.20

No. 1907

This is the standard tree climber used by forest rangers, top loggers, fire wardens, surveyors, etc. Made in all standard sizes.

Has punched strap loop. Gaffs, or spurs, are 5 $\frac{1}{2}$ inches long measured on the outside and 3 inches long measured on the underside. They are set high in the leg iron so that points clear the ground.

Packed 1 pair in a carton. No. 1907.....per pair \$9.00

Klein's Climber Straps and Pads

Set consists of 2 calf straps 1 $\frac{1}{4}$ x22 in. with 4x4 in. pads and 2 ankle straps 1 $\frac{1}{4}$ x22 in. Leather is first quality harness leather. Buckles drop forged, fitted with roller.

Electricians' Knives

A handy combination for the electrician, combining an emergency screwdriver, a knife blade for cutting or stripping wire; safely locked so that it cannot close during use. The commendable features are a well-tempered blade, a strong joint, a solid well-proportioned hand fitting handle and a lock to keep the blade safely open, yet promptly releasable when it is desired to close the blades.

Screwdriver blade is locked when open; to unlock, press down on large blade.

Price, No. 1550-2, Double Blade.....each \$2.70

Ideal E-Z Wire Strippers

Requires no cocking or setting.

Triplicate action of clamping wire, cutting insulation and stripping is automatically timed and performed with one squeeze of the handles. When pressure

is released, handles open, resetting stripper for next snip. Cutting edges are shielded and blind centers of blades prevent cutting or scarring of the wire.

5108-20	20x8	5 1/2	17.50

Linemen's Canvas Tool Bags, Leather Bottoms

Made of one piece white duck reinforced all around bottom with heavy bag leather, 3 3/4 inches up on 5102 series, 8 inches up on 5105 series.

Bottom is made of heavy leather outside and duck inside, lock stitched all around. Bottom is protected with strong steel studs.

Bottoms and sides joined together with lock stitched leather welt seams.

Mouth of bag is formed by a 12-gauge steel frame.

Canvas is clinched between this frame and an inside secondary steel frame.

Has harness leather handles and two retaining straps with buckles.

No. 5212 Klein's Derrick Belts

For oil derrickmen or structural workers.

Made to stand load of 250 pounds with a dead fall of five feet.

One three inch Forged Dee Ring at back for life line.

Double tongue buckle.

No. 5212, Weight, 42 Lbs. each \$11.00

Klein Safety Straps

Klein Safety Straps are made in various patterns in a choice of two materials.

First quality back stock vegetable tanned harness leather. The new Klein-Kord fabric especially made for this purpose.

In all cases sewing is with genuine linen thread, hot waxed and lock stitched. Riveted by hand with solid copper rivets.

All buckles, including tongues, are drop forged, tested to 1500 pounds. There are three patterns of drop forged, tested snaps available as illustrated below.

Standard Snaps

Have wide nose covering spring latch protecting it from accidentally twisting out of Dee Ring, and can be used with any Dee.

Straps listed with plain catalog numbers have Standard Snaps.

Hank's Snaps

Are of special construction and must be used in conjunction with Hank's Dee Rings on belt.

Straps listed with "H" prefixing catalog numbers have Hank's Snaps.

Klein-Lok Snaps

Have a twin latch arrangement. Both latches must be pressed simultaneously to release. Full factor of safety. Can be used with any Dee.

Straps listed with "KL" prefixing catalog numbers have Klein-Lok Snaps.

Any of above furnished with 15 inch Long Wear Pad to order at no extra cost.

No. 5215 Klein's Extension Straps

This strap is 1 3/4 inches wide, made of first quality harness leather and fitted with special forged D ring and buckle. It is worn attached to D ring on main body belt and used when large diameter poles necessitate a longer safety strap than the regular. By engaging snap of the regulation safety strap to the special D ring on the extension strap the lineman can immediately adapt his outfit so that he has no difficulty in working conveniently. No matter how large the pole—can be lengthened or shortened.

Size, 1 3/4x15 inches.

Weight per dozen, 14 pounds.

Price, No. 5215.....each \$4.00

No. 5209 Klein's Safety Harnesses

Back

Front

Meets requirements of various safety commissions for use where danger from gassing is present. Working in gasey manholes, gas tanks, oil tanks and even boilers, men are frequently overcome and an emergency arises instantly. This harness provides a sure means by which patient can be brought to safety and danger overcome. Design is such that it slings wearer in a perpendicular position so that he can be readily hauled through an ordinary manhole opening. A solid harness leather back plate 2 1/4x10 inches is stitched and riveted around the 1 1/4-inch adjustable belt strap. Back plate also carries a tested drop forged D ring to which the 3/4-inch manila life line, 25 feet in length is permanently attached. Shoulder straps are 3/4 inch and made adjustable and riveted to belt at single ends. These straps hold belt in position around chest so as not to encumber wearer while working. Weight per dozen, 30 pounds.

Price, No. 5209, with Life Line.....each \$13.40

No. 13 Graybar Lineman's Double Faced Hammers

Bell System Type

Drop forged oil tempered head with special short neck designed to strike a heavy accurate blow in a confined space. Length over all, 15 inches. Weight of head, 2 1/4 pounds. Weight of hammer complete, per dozen, 35 pounds. Price, No. 13.....each \$5.80

No. 4638 Graybar Lineman's Chipping Hammers

Bell System Type

Drop forged oil tempered, specially made for line construction work. The face is suitable for general use and the pein is suitable for chipping brick work, concrete, stone, etc., or for riveting. Length over all, 16 inches. Weight of head, 3 1/2 pounds. Weight of hammer complete, per dozen, 48 pounds. Price, No. 4638.....each \$4.50

No. 1 Diamond Toggle Bolts

The No. 1 Diamond Toggle Bolt has the threaded bolt riveted to the toggle head.

Keystone Interlocking Expansion Shields

Prevents the nut being drawn out of the shield when heavy loads are applied. Guides the mechanic in determining when to stop tightening up the bolt. Prevents the nut being drawn past the point of maximum expansion. Locks the two sides and the nut into a unit of resistance against the load. Made of malleable iron for durability and strength.

Diamond Multi-Size Screw Anchors

Diamond Multi-Size Screw Anchors are designed to accommodate in one anchor several diameters of wood screws. The purpose is to reduce the number of anchors required to accommodate all sizes of screws. They are made in several lengths covering the majority of uses. For instance, the No. 10 to 14x1-inch anchor will work successfully with all sizes of wood screws ranging from No. 10 to No. 14 inclusive.

The high projecting interior ribs support and centrally locate a small No. 10 wood screw causing the shield to expand and giving ample holding capacity for that size of screw.

In this same size of anchor larger screws up to and including No. 14 may be used equally well. This is accomplished by the flexible interior ribbing.

Where the larger screw is used, the ribs are pressed down and the valleys at the exterior are forced outward to permit the greater diameter of the screw to enter the shield. The improved Multi-Size Screw Anchor has two advantages over the original Multi-Size; the screw enters the shield more easily without danger of marring the head of the screw and relieves the strain applied to the screw when inserted. It will also sustain a greater load.

Packed 100 to a box.

Diamond Tenax Expansion Shields For Machine Bolts

Tenax is cast in one piece of malleable iron. It has break-age connections between the nut and expansion shell. When the bolt is tightened the connections between the nut and shell break down and the nut telescopes into the shell and is guided by the slides in perfect alignment into the shell. A 4 way expansion with 4 ways to use. Smallest diameter of hole of any Malleable Iron expansion of equal bolt diameter. Has extremely high holding capacity. Prices do not include bolts.

Diamond N Drill Holders and Points

Drill holder and loose points is a combination which is convenient for electricians and in other lines of industry where numerous small holes must be drilled for fastening up small fixtures.

Holder will take drill points from 1/4 to 1 inch.

Weight, 8 1/2 pounds.

Per Dozen..... \$24.00

Drill Points

The drills are carefully tempered to insure sufficient hardness at the point to withstand the wear of cutting and the temper is drawn away toward the shank so as to produce a softer steel where it enters the handle to prevent breaking off at that point.

Diamond Di-Forge Twist Drills and Drill Holders

Style B Holder

Style C Holder

The drill is forged from a solid bar of vanadium tool steel. This process produces a tougher and more durable drill than can be had by the machine process. It is intended to be used with a hand or electric hammer and not as a rotating drill.

Drill holders are made of vanadium steel. Type C drill holder is made with a soft rubber grip with flange to protect the hand of the operator.

Nos. 50 and 53 Peirce Hammer Drills

The Peirce Hammer Drill is a double-ended tool designed for drilling holes easily in brick, stone and concrete. It drills the hole and swages the lead sleeve of the bolt. Holds all sizes of drill points.

The drill cannot become wedged in the hole while drilling as a backward stroke of the hammer instantly releases it.

Injury to the hands of the operator is impossible.

The chuck has a quick release whereby a drill-point may be instantly removed and a sharp one inserted.

Price, No. 50 for Tamping 1/4-Inch Bolts.....each \$11.12
 Price, No. 53 for Tamping 3/8-Inch Bolts.....each 11.84

Peirce Drill Points

Made of fine tool steel and machined to exact size. The length of drill point depends on the length of bolt used. Two inches of the drill point are held inside the chuck. All drill points are measured overall. Special drill points of any diameter up to 1 inch, and any length, can be furnished to fit the hammer drill chuck. For 1/4-inch expansion bolt use 1/8-inch drill; for 3/8-inch bolt, 5/8-inch drill; for 1/2-inch bolt, 7/8-inch drill.

Peirce Expansion Shields

For attaching multi-point brackets to brick or stone buildings. Size of screw, Nos. 20 and 22; diameter of shield, 1/2 inch; length of shield, 2 inches. Standard package, 100. Weight per 100 pieces, 9.5 pounds.
 Price, No. 31.....per 100 \$9.90

No. 3428 Klein's Torches
 1-Quart Capacity
 For Gasoline

U.S. PAT. NO. 1676,352

Double length generating channels which quickly vaporize the fuel are a patented feature. Produces an intensely hot flame which can be regulated from minimum to full blast. Will not back generate. Cleaning plugs at all angles. Needle has positive shoulder stop preventing damage to burner by enlarging orifice.

Pump is well made and sturdy. Tank is heavy gauge copper, capacity, 1 quart.

Weight, 4 1/2 pounds.
 Price, No. 3428.....each \$25.30

Klein's 1-Quart Copper Tank Gasoline Torch

Has a generator coil. Intense heat around this coil completely vaporizes the fuel so that it burns as a dry gas, giving a hot, but easily controlled flame. Generator coil can be replaced in a few minutes at small expense by backing off two nuts. Burner tip is replaceable.

No. 3428C.....each \$25.30

If torch head assembly to attach to present tank is wanted, order No. 808C.

No. 808C.....each \$8.00

No. 3420 Klein's Staysalite Linemen's Torches

This torch burns alcohol without odor or noise and stays lit in a wind.

Light and small and is lit or extinguished in a moment, as wanted. Has no adjusting parts.

The Staysalite is carried in the lineman's belt and eliminates the ground man; can be hung directly on the wire under joint to be soldered.

Provided with a cup for holding soldering paste. Can be used as a small heater or for soldering iron.

Weight, 1 1/4 pounds.

Price, No. 3420.....each \$10.00

Soldering Coppers

Furnished without handle but having an iron rod fastened to the head, ready to be driven into a wooden handle. Supplied in all sizes. Prices upon application.

Bar Solder

An alloy of tin and lead, made up in the form of bars for convenience in handling, for making soldered joints in metals, such as lead piping systems, for cable splices and other heavy work.

Price, Solder in Regular Bars.....per pound \$1.00

**Nos. 1 and 11 India Micanite Plate
For Molding**

No. 1 India Micanite Plate has a smooth surface which does not show any detrimental amount of loose laminations. It softens sufficiently at 140 degrees C. or 284 degrees F. to be readily molded to ordinary shapes without chipping, cracking or breaking.

It is carefully milled to specified thickness, allowing a variation of .002-inch in isolated spots on the thin sizes below .060-inch, and from .003-inch to .005-inch on sizes .060-inch and up.

Average puncture voltage per .001-inch runs from 900 volts on the thinner sizes to 800 volts on the thicker sizes. It must not be used for insulation between copper bars of commutators.

No. 11 India Micanite Plate is made of the same quality of mica films and cement that are used in our No. 1 Plate, but it is not as exact to thickness, and is not made in as many thicknesses. It varies in thickness from plus or minus .003-inch in the case of the .010-inch thick; .005-inch in the case of the 1/32-inch; to plus or minus .010-inch in the case of the 1/8-inch thick.

It becomes flexible when heated, is readily formed into shapes, and is suitable for all general purposes where a variation in thickness is permissible, except for commutator segments, for which it is not intended.

Average puncture voltage, 800 to 900 volts per .001-inch.

Nos. 1 and 11 Micanite Plate furnished in special thicknesses, sizes and patterns. Prices quoted upon application.

**No. 2 India Micanite Plate
For Commutator Segment Insulation**

No. 2 Micanite Plate is made of India Mica, as this variety is recognized as standard for electrical insulation where muscovite mica is used.

It is closely milled and the average thickness will not vary more than .0005-inch from specified thickness. Individual plates will not vary more than .001-inch above or .0015-inch below thickness specified in isolated spots. It cannot be molded.

Its average puncture voltage per .001-inch runs from 900 volts on the thinner sizes, to 800 volts on the thicker sizes.

No. 2 Micanite Plate can be furnished in special thicknesses, sizes, or patterns. Prices quoted upon application.

**No. 3 Amber Micanite Plate
For Commutator Segment Insulation**

No. 3 Amber Micanite Plate is made of phlogopite or amber mica, which is softer than the muscovite and presents less liability of failure to wear down evenly with the copper bars.

It is closely milled and the average thickness will not vary more than .0005-inch from the specified thickness. Individual plates will not vary in isolated spots more than .001-inch above or .0015-in. below thickness specified. It cannot be molded.

Its average puncture voltage per .001-inch runs from 850 volts on the thinner sizes to 700 volts on the thicker sizes.

No. 3 Micanite Plate can be furnished in special thicknesses, sizes and patterns.

Prices quoted on application.

**No. 4 Micanite Plate
For Flat Work**

This plate is made for flat work and for purposes where accuracy of thickness is not important. It is not milled or surfaced and therefore has a considerable variation in thickness.

It is suitable for all kinds of bases, round or square washers, and for all kinds of apparatus not subject to high heat.

Its non-liability to fracture under extreme vibration is a valuable feature for marine work. It does not take a screw thread, but can be drilled and turned.

Average puncture voltage, approximately 800 volts per .001-inch.

No. 4 plate is not furnished thinner than 1/16-inch.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.		
1296	1/16	1.58	3.25	\$1.25
1297	3/32	2.38	4.87	1.25
1298	1/8	3.17	6.5	1.25
1300	1/4	6.34	13.	1.25
1301	3/8	9.52	19.5	1.25
1302	1/2	12.69	26.	1.25

Prices on sheets of No. 4 Micanite Plate, of special size and pattern quoted upon application.

**No. 5 Flexible Micanite Plate
For Cold Forming**

No. 5 Flexible Micanite is made of very thin films of muscovite mica cemented together with a special insulating cement of great flexibility and adhesiveness. This article in many ways presents mica in its most convenient and economical form for electrical insulation. It can be formed or bent to shape without application of heat.

It is an excellent insulator for armature slots, armature, magnet and commutator cores, transformers, field coils, etc.

No. 5 Flexible Micanite Plate cannot be surfaced like No. 1 No. 2, or No. 3 plate. It is therefore subject to some variation in thickness, running from .002-inch to .003-inch on the thinner sizes; from .005-inch to .007-inch on the 1/32-inch thickness, and from .010-inch to .015-inch on the 1/8-inch thickness.

Its average puncture is approximately 600 volts per .001-inch.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.

1313	1/16	1.58	6.	1.55
1314	1/8	3.17	12.	1.55

Prices on No. 5 Micanite plate of special thickness, size, or pattern, quoted upon application.

Uncut Sheet Mica

Uncut mica is carefully selected as to quality and sizes it will cut. The different grades will cut assorted sizes as shown in table. All grades are closely trimmed.

Grade No.	India		Price per Pound	
	Will Cut Assorted Sizes			
A1	4 to 6	Inches Wide, 7 to 9	Inches Long	\$9.00
1	3 to 5	Inches Wide, 5 to 7	Inches Long	7.00
2	1½ to 3½	Inches Wide, 4½ to 6	Inches Long	5.50
3	1½ to 3	Inches Wide, 3 to 4½	Inches Long	4.25
4	1½ to 2½	Inches Wide, 2½ to 3	Inches Long	3.25
5	1 to 2	Inches Wide, 2 to 2½	Inches Long	1.90

Amber				
Grade No.	Inches Wide		Price per Pound	
A1	4 to 5	Inches Wide, 7 to 9	Inches Long	\$5.00
1	3 to 6	Inches Wide, 5 to 7	Inches Long	3.25
2	1½ to 3½	Inches Wide, 4½ to 6	Inches Long	2.50
3	1½ to 3	Inches Wide, 3 to 4	Inches Long	1.80
4	1½ to 2½	Inches Wide, 2½ to 3	Inches Long	1.25
5	1 to 2	Inches Wide, 2 to 2½	Inches Long	.65

No. 20 Micanite Cloth

No. 20 Micanite Cloth is made with 1, 2 or 3 layers of high-grade India Mica films, cemented together with overlapping edges into sheet form, the sheet being faced on one side with cotton cloth and the other side with Japanese paper.

It is an excellent composite insulation, the cloth adding mechanical strength, and is often used in conjunction with Empire Cloth and Paper, fish paper, etc., for transformers, field magnets and armature cores. In strip or tape form No. 20 Micanite Cloth is an efficient insulation for wrapping all sorts of conductors, and can be furnished any width from ½ to 36 inches, in rolls approximately 3¾ inches in diameter.

Cat. No.	Thickness		Layers of Mica	Approx. Lbs. per Roll	Price per Lb.
	Inches	MM.			
1315	.008	0.203	1	3.3	\$3.50
1316	.011	0.279	2	5.2	3.00
1317	.014	0.356	3	7	2.40

No. 24 Micanite Paper

No. 24 Micanite paper is of the same nature as No. 20 Micanite Cloth except that the material is faced on both sides with Japanese tissue paper instead of cotton cloth, the object being to supply an insulation thinner than Micanite Cloth, but retaining the same thickness of mica film.

Cat. No.	Thickness		Layers of Mica	Approx. Lbs. per Roll	Price per Lb.
	Inches	MM.

Super-Micanite Plate

Super-Micanite is made with a synthetic cement or binding material, whereas Micanite, and in fact all other similar mica installations, are made with a cement of shellac.

The use of this synthetic cement as a binder has resulted in a superior mica insulation. Super-Micanite means less trouble in the manufacture of commutators, longer life for electrical apparatus, added dependability, fewer break-downs, reduced maintenance. Its specific advantages will be furnished on request.

Super-Micanite is particularly recommended for commutator insulation work, armatures, field magnets, electric heating units and for high tension work in general.

Prices are approximately 10 per cent higher than prices of Standard Micanite.

Empire Seamless Bias Varnished Tape

Price per Gross (144) Yards

Empire Varnished Tape (Seamless Bias) is the trade name under which is sold Empire Insulating Cloths in tape form. It provides in convenient form for such uses as coils, cables and bus bar insulations.

This tape insures a smooth, uniformly protected insulated tape. Can be hand or machine applied, and special length coils are supplied for coil winding machines. Saves both time and money in application, as every inch is usable, and in service gives a better job, doing away with plain woven tapes, thus eliminating need of impregnation.

Standard rolls are 36 and 72 yards long.

Size Inches	No. 72 Yellow No. 763 Black .007 in. Thick		No. 71 Yellow No. 74 Black .007 in. Thick		No. 10 Yellow No. 99 Black .010 in. Thick

1 1/2	5.64	4.76	5.92	5.02	6.34	5.44

Additional charges are to be added to gross yard price for rolls other than standard rolls.

Can be supplied packed in oil; prices on application.

Orangeburg Fibre Conduit

Harrington (Sleeve) Joint Type

Orangeburg Fibre Conduit is manufactured by The Fibre Conduit Company at Orangeburg, New York and Richmond, Indiana. These two plants are equipped with the most modern machinery for the manufacture of fibre conduit and are devoted to the manufacture of this product.

Orangeburg Fibre Conduit is made from wood fibre. The conduits are dried in automatic driers and then thoroughly impregnated with a preserving compound. The ends of the conduits are accurately machined to insure tight joints.

During the entire process of manufacture many inspections are made to insure that the finished product meets the most exacting specifications.

During the past 41 years many millions of feet of Orangeburg Fibre Conduit have been installed in underground systems under all conditions of soil and climate.

Recent improvements in manufacturing processes have resulted in an even better Orangeburg Conduit. This improved conduit has the following outstanding advantages:

1. Extremely high resistance to water absorption.
2. Higher crushing strength.
3. Higher bending strength.
4. Higher impact resistance.
5. Greater resistance to flattening.

Standard conduit length in all sizes from 1 to 6 inches inclusive is 5 feet; 8-foot lengths are also standard in sizes 2½ to 4½ inches inclusive.

One coupling is supplied with each length.

Inside Diameter Inches	Wt., Lbs. per Foot	Approx. No. Feet *Minimum Carload
1	.60	50000
1½	.85	35300
2	1.05	28575

Socket joint type bends and elbows will be supplied upon special request.

Orangeburg Fittings

Fittings such as manhole bells, plugs, fibre conduit to metal conduit adapters and reducers, fibre to fibre adapters and reducers, etc., are available. Information regarding such fittings and specialties gladly furnished on request.

Orangeburg Fibre Conduit Field Tooling Machines

A light weight, readily portable field tooling machine selling at a nominal price is available for use in milling joints on the job. This machine permits of satisfactory joints being in the field with a minimum expenditure of time and labor. Price information and further details of this machine furnished on request.

Natco Standard Single Duct Conduit

Adapted for high tension power lines, single cable terminals or for low tension laterals, as in telephone or signal lines.

In building up duct banks, this conduit provides two heavy insulating walls between adjacent cables, and permits breaking or staggering of all joints throughout the duct bank.

Permits the splaying or separation of individual duct lines in approaches to manholes.

Conduit is scarified lengthwise on the four outer sides, to provide anchorage for bedding mortar.

The inner edges of the duct entrances are properly bevelled and smoothed to eliminate projections and to make safe the pulling of cables.

Certain square single duct shapes are provided with through holes in the corners, permitting the use of steel dowel pins for assembling, centering and aligning such duct lines.

Standard length, 18 inches, except in the 5 1/4-inch round bore shape which is 24 inches long. Short lengths as shown in table, are available for staggering joints.

Nominal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.
3 1/4 Rd.	1	18	1 1/2	3 3/8	4 1/2 x 4 1/2	3, 4, 6, 9, 12	7800
3 1/2 Rd.	1	18	1 1/2	3 5/8	4 7/8 x 4 7/8	3, 4, 6, 9, 12	6900

Radius.....inches	36, 60, 72 or 96		36, 60, 72 or 96	

Bends also supplied that are scored for splitting apart.

Natco Socket Joint Single Duct Conduit

Natco Single Duct Conduit is also manufactured in a new socket joint type, which is supplied in 3 1/2, 4 and 4 1/2-inch round bore and in either 18 or 24-inch standard lengths. This new type of duct is self-centering, provides positive alignment, lays up fast and can be installed by ordinary labor. If desired, the joints may be readily troweled or sealed with cement mortar. This new type of conduit is especially adapted for single duct lateral lines, also equally suitable for duct bank construction where this type of joint is preferred.

Nominal Bore.....inches	3 1/2 Rd.	4 Rd.	4 1/2 Rd.
Length.....inches	18 and 24	24	24
Actual Size of Duct Holes.....inches	3 5/8	4 1/8	4 5/8

Also furnished in bends and mitred sections.

Natco Standard Multiple Duct Conduit

Particularly adapted for telephone, telegraph, railway signal, fire alarm and low tension light and power service. The large units are economical and quick to install, due to their longer lengths and multiplicity of duct holes.

At the extreme ends of each piece of conduit, a smooth surface is left to permit wrapping each joint with tape or fabric to exclude joint mortar from the ducts.

Supplied in either 3 1/4, 3 1/2 or 4 1/4-inch square bore shapes and in 2, 3, 4, 6 and 9-way multiple shapes.

The 3 1/4 inch is the standard bore, while 4 1/4 inch is the over-size bore, for most telephone service and for certain low tension power and lighting systems, while the 3 1/2 inch bore is frequently specified for certain municipal installation.

Nominal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.

Natco Split Conduit

Natco Conduit in both single and multiple duct shapes and in all standard bores is supplied, scored or knifed, for splitting apart on the job, for repairing or replacing duct lines, without the necessity of removing cables.

These split sections may be also used to enclose cable joints or splices in place of building manholes.

'Bore Inches	No. of Duct Holes	Standard Length Inches	Short Lengths Inches
3 1/4, 3 1/2 or 4 1/4 Rd.	Sgl. Duct	18	6, 9, 12
3 1/4, 3 1/2 or 4 1/4 Sq.	Sgl. Duct	18	6, 9, 12
3 1/4 Sq.	2 or 3-Way	18 and 24	6, 9, 12

3 1/2 Sq.	4 or 6-Way	18 and 36	6, 9, 12
4 1/4 Sq.	2 or 3-Way	18	6
4 1/4 Sq.	4 or 6-Way	18	6
4 1/4 Sq.	9-Way	18	6

Natco Mitred Conduit

For Curve Construction

Natco Conduit, both single and multiple duct, in all standard bores, is supplied in mitred shapes, for building either simple or intricate curves in lines of clay conduit, for transposing narrow duct banks into wide ones or vice versa, or for splaying duct lines to enter manholes or service points.

Natco Mitred Conduit is made in one standard cut—3 degree and 10-foot radius. The radius of curves built of these sections, is varied simply by interposing straight short pieces between the mitred sections, and the arc of such curves is governed simply by the total number of pieces used.

True and easy curves from 10 to 30 foot radius, and ranging from 3 to 90 degrees, can thus be built.

In the 2, 3 and 6-way multiple conduit, the mitred sections are supplied in either a flat or edge position.

Mitred conduit also supplied scored for splitting apart.

Approximate length, 6x6 5/8 inches. Number of pieces in 90° curve, 30.

Bore Inches	No. of Duct Holes	Position
3 1/4, 3 1/2, or 4 1/4	Round
3 1/4, 3 1/2, or 4 1/4	Single Duct
3 1/4, 3 1/2, or 4 1/4	Single Duct
3 1/4, 3 1/2, or 4 1/4	2, 3, or 6-Way	Flat or Edge
3 1/4, 3 1/2, or 4 1/4	4-Way
3 1/4 or 4 1/4	9-Way

Natco Branch Conduit

For Dividing Multiple Duct Main Lines

Natco Multiple Duct Conduit is supplied in branch shapes in all standard bores.

Natco Branch Conduit is a new shape, one end of which is the same shape and size as standard conduit, while at the opposite end, certain ducts are more widely separated by means of double webs, so as to permit alignment with abutting branch lines.

Branch conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line. Such a division is highly advantageous in splaying main duct lines into central office buildings, manholes or cable vaults, or for turning laterals or service connections. It frequently saves the necessity of manholes.

Also supplied scored for splitting apart.

Length, 24 inches.

Bore Inches	No. of Duct Holes	Type	For Branching Into
3 1/4, 3 1/2 or 4 1/4	2-Way	1-1	2 Single Duct
3 1/4, 3 1/2 or 4 1/4	3-Way	1-2	1 Single and 1 Two-Way
3 1/4, 3 1/2 or 4 1/4	3-Way	1-1-1	3 Single Duct

Natco Transposition Conduit

For Transposing or Twisting 2, 3 and 6-Way Conduit Lines

Natco Multiple Duct Conduit is also supplied in transposition shapes in 2, 3 and 6-way multiples, with right or left-hand twist. The degree or angle of twist is 22 1/2° for 3 1/4-inch bore shapes, 18° for 3 1/2-inch bore shapes and 15° for 4 1/4-inch bore shapes, and the standard length is 24 inches.

The number of pieces required to effect a quarter turn of 90° from a flat to an edge position, or vice versa, is four pieces in the 3 1/4-inch bore, five pieces in 3 1/2-inch bore or six pieces in the 4 1/4-inch bore sizes.

These transposition shapes are of considerable advantage in changing the position or height of conduit lines, in order to avoid certain street obstructions, or to cross viaducts or bridges, or to change the position of cables on their approach to manholes or cable vaults, all of which frequently eliminates the need of manholes.

Bore	inches	3 1/4	3 1/2	4 1/4
Twist		22 1/2°	18°	15°
No. of Pieces in 1/4 Turn		4	5	6

Direction of twist, right or left hand.

Natco Pipe Connectors

Single Duct Connector

2-Way Connector

3-Way Connector

Rear View of Connector Ready to Receive Conduit

For the purpose of connecting clay conduit lines to iron pipe lines as in pole risers or to enter buildings, Natco Pipe Connectors are available in the sizes shown below.

These connectors are made of cast iron, one end is shaped to receive the end of the clay conduit line, while the opposite end of the connector is tapped and threaded to receive the iron pipe lines.

For connecting to smaller sizes of pipe, ordinary pipe bushings can be screwed into these connectors to accommodate any standard size pipe.

Single Duct Connector

For 3 1/4-inch bore conduit 3-inch pipe or 4 1/4-inch bore conduit 4-inch pipe.

2-Way Connector

For 3 1/4-inch bore conduit 3-inch pipe or 4 1/4-inch bore conduit 4-inch pipe.

3-Way Connector

For 3 1/4-inch bore conduit 3-inch pipe or 4 1/4-inch bore conduit 4-inch pipe.

No. 106 Natco Conduit

Illustrating the conversion of a 4-way multiple duct line into two 2-way multiple duct lines in an edge position, one of which is flexed or curved to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted 90° from an edge to a flat position in a distance of 8 feet and then continued straight on in the form of standard 2-way multiple duct conduit—in a flat position.

Specifications

B—One-piece 4-way type 2-2 branch conduit, 2 feet long (for dividing the 4-way line into two 2-way lines).

E—Six pieces 2-way mitred conduit—edge position—3° 10-inch radius—6¼ inches long, (for flexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is 18° but any angle of flexure divisible by 3, may be attained by varying the number of mitred pieces).

H—One-piece 2-way standard conduit, 2 feet long (laid in edge position—to extend the flexed 2-way line on towards pole).

P—One cast iron 2-way connector for 3-inch wrought iron pipe.

R—Four pieces 2-way left-hand transposition conduit, 22½°, 2 feet long (for transposing the other 2-way line 90° from an edge to a flat position).

Dowel Pins

Pressed steel pins, 5/16x3 inches, with an integral central flange or collar, are generally used for joining or aligning individual sections of multiple duct, also certain sizes of square bore single duct conduit together.

Two pins are used at each joint or for each piece of conduit.

Joint Tape

An especially prepared tape is frequently used for wrapping the joints of multiple duct conduit prior to the application of the joint mortar, also occasionally used for wrapping joints of single duct conduit in trench, subway or masonry structures, prior to the pouring of the concrete encasement.

This tape has an adhesive waterproof coating on one side, and is supplied in 4 and 6-inch widths, and put up in rolls of 25 linear yards.

Tape adheres closely and firmly to the glazed surface of the conduit and aids in sealing the joints.

In ordering, specify total number of linear yards required.

Rainier Wood Conduit

This conduit is manufactured from yellow pine at the plant at Wilmington, North Carolina, and from Douglas fir at our plant at Centralia, Washington. An economical and satisfactory conduit for the carrying of all forms of lead cable and wires.

Comes in random lengths.

Outside Measurement . . . inches 5½x5½ 5x5 4½x4½ 3½x3½
Diameter Bore inches 4 3½ 3 2

Each piece has a mortise at one end and a tenon on the other end.

It is in general use by the large telegraph companies and telephone companies all over the country and by many railroads.

Uses for which it is adapted:

RAILROADS.—Trunking, underground signal wires, high tension transmission lines, yard drainage where clay conduit is easily broken through, and system is usually placed on the surface of the ground.

TELEPHONE COMPANIES.—All underground work.

TELEGRAPH COMPANIES.—All underground work.

POLICE AND FIRE ALARM SYSTEMS.—For carrying wires, either high or low tension under ground.

CENTRAL STATIONS.—For distribution mains and services.

SPECIFICATION CREOSOTED CONDUIT.—Free from large, unsound or loose knots, or other defects which would impair strength. Creosoted steam and vacuum treatment, dead oil of coal tar under pressure either 12 pounds per cubic foot (full cell) or 8 pounds per cubic foot (empty cell) as ordered.

Any additional information regarding the practicability of installing this conduit will be furnished upon request.

Prices on application.

General Cable Terminals

Herewith are illustrated a few of the typical models of cable terminals made by the General Cable Corporation.

In addition to the types illustrated we offer a complete line of terminals for every type of cable installation. All

cable terminals are furnished in single conductor style. Multi-conductor terminals can be furnished in all styles except bolted gasket style. Various styles of cable entrances can be furnished, as illustrated.

We welcome inquiries regarding cable problems.

Indoor and Outdoor Hoodnut Single Conductor (Outdoor Shown)

Bolted Gasket Indoor and Outdoor Hoodnut Single Conductor (Outdoor Shown)

Flat Straightaway Disconnecting 2-Conductor

Flat Straightaway, Open End Insulator 2-Conductor (For Indoor Use)

Flat Straightaway Outdoor Closed Hoodnut 3-Conductor

Flat Straightaway Indoor Closed Hoodnut 3-Conductor

Flat Straightaway Disconnecting 4-Conductor

Flat Straightaway, Open End Insulator 4-Conductor (For Indoor Use)

Flat Edgewise 3-Conductor

Right or Left Elbow 3-Conductor

45° Angular 3-Conductor

Round 3-Conductor

The Above Shapes Available In 2, 3 and 4 Conductors

Molded Cap with Taping Cones—Type A Bell (Wiping) 600-Volt Control Terminal

Flat Cap—Type B Bell (Stuffing Box) 600-Volt Control Terminal

Flat Cap—Type C Bell (Pipe Connected) 600-Volt Control Terminal

Bell Fitted with Pipe Connection on Both Ends 600-Volt Control Terminal

Cable Entrances

These terminals are furnished in 3 types of cable entrances as shown above. In the case of the single conductor terminals, the entrances are integral with and really form the bell. In the multi-conductor terminals, they are separate and are bolted to the bell. They are interchangeable. As all types of entrances are drilled for the cable size, at the factory, it is necessary to fully specify the cable data when ordering.

Type A cable connection consists of plumber's wiped joint between cable sheath and terminal bell or wiping nipple.

Complete information gladly furnished on request.

Type B cable connection consists of a stuffing joint between cable and terminal. This joint is made tight by compressing suitable packing material around cable, between a gland and a gland nut. It can be used with either leaded or non-leaded cable, lead wool being used as the packing in the first case and jute in the second.

Type C connection consists of the Type B stuffing box joint, plus a conduit fitting which clamps around the conduit. This conduit fitting requires no thread on the conduit but can also be used on a conduit which has already been threaded.

G & W Potheads

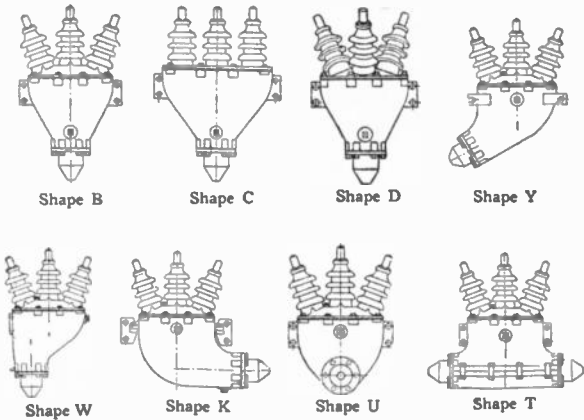

Designs of these potheads are the result of the co-operative effort of experienced distribution engineers.

The wide machined flanges on body and lid are firmly clamped together with oil seal gasket between, using cap-screws evenly spaced all around. Suitable for upright or inverted installation. The interior of the potheads has been studied with the idea of proper balance of design, yet to provide generous creepage distances and spacings, and a large bending radius for multiple conductors. Holes for compounding are extra large and are closed with flanged and gasketed pipe plugs.

General use of porcelain of the counterbore design with gasketed flanges has proved successful in providing oil tightness. Porcelains are made by the vacuum process and are glazed inside and outside. Larger petticoats and relatively high percentage of wet to dry flashover are distinctive features.

Pothead Shapes

Typical Applications of G & W Potheads in Overhead Distribution Systems

G & W Type T Capnut Terminals

Definitely Oil-Tight Construction

Modern cables are more highly impregnated with oil. The G & W Type T Outdoor, and Type NT Indoor Potheads are the ideal terminator for these cables as they provide a definitely oil tight seal.

Capnut terminals are extremely simple and effective. There are only 3 main parts. Non-rusting screws are used. Hoodnuts are locked and no threads are exposed. Several styles of interchangeable aerial lugs are available.

Type N Indoor Potheads

Without Connections

Type N Potheads are suitable for indoor use only. Standardized parts are used. Cable conductors are usually brought through the pothead without cutting and connected to devices beyond, which obviates the use of connectors.

There are several types of indoor potheads to fit various indoor installation requirements.

G & W Disconnecting Potheads

With Porcelain Caps Enclosing Connectors

These disconnecting potheads are a simple means of giving a layout flexibility.

Disconnects and changes are made without cable cutting. Easy isolation is possible by simply lifting off the porcelain cap. No live parts exposed.

Cable Entrance Fittings

Completely Interchangeable Wiping Sleeve

The wiping sleeve is of cast brass, suitable for making an ordinary wiped joint to lead sheathed cable.

The bottom part is conical shaped and is sawed off on the cone to fit the cable used.

Combination Clamping Ring and Stuffing Box

The combination clamping ring and stuffing box gives the protective features of a wiped joint without requiring the time and skilled labor involved in wiping a joint.

It also provides a simpler installation when conduit couplings or armor clamps are used.

Conduit Coupling

G & W conduit couplings are usually threaded to screw into standard steel or brass pipe.

They can be supplied reamed out to slip over fiber duct with set screws to hold in place.

Armor Clamp

The armor clamp is bolted to the pothead beneath the cable entrance.

The two halves are bolted together to firmly clamp the armored cable. Cannot be used with wiping sleeve unless specially arranged.

Stuffing Box

The plain stuffing box is cast with conical box and gland nut.

These parts are drilled for the cable.

This entrance is ordinarily supplied when cable diameter is not known and when couplings are used.

Also applicable to braided cable. Easily drilled out on the job.

Plain Bushing

The plain bushing essentially consists of a flanged plate and washer.

It can be used with multiple conductor cables or drilled with two or more separate holes for single conductor cables installed in a multiple conductor pothead.

For lead covered cables, the sheath is belled over and clamped on the plate with the washer.

For braid covered cables the holes are countersunk and provided with individual stuffing boxes for the single conductor cables.

Three E Cable End Bells

Three E Cable End Bells, both indoor and outdoor, non-disconnecting and disconnecting, can be furnished in practically any shape and size to meet any installation condition.

When ordering, always specify the voltage of circuit, number of conductors, gauge of cable, exact overall diameter of cable, and type of joint required.

Ask for Bulletin Giving Complete Information

General Cable Unit Package Splicing and Jointing Materials

For convenience of customers, the complete materials required for splices and joints on all types of cable are put up in handy unit package form. By purchasing splicing and jointing materials in this manner, an accumulation of dead stock in the store room is prevented and the time and expense of buying the various items required for the work from more than one source is saved.

When ordering, specify number and size of conductors, thickness of insulation and lead sheath and voltage rating.

Ozite B Filling Compounds

Ozite B is a black asphaltic compound recommended for filling joints, terminals and junction boxes operated at normal temperatures, and up to and including 25000 volts.

This compound is manufactured under an improved process which results in a product with a low carbon content. Formulated by expert cable engineers with many years of experience, this compound combines all of the desirable characteristics that a jointing or filling compound should have.

Prices and complete information upon application.

No. 9145 Hubbard Dowel Pins

In laying multiple duct clay conduit, these dowel pins are inserted in holes provided in the ends of the lengths and thus keep adjacent lengths in proper alignment and insure the smoothness of the ducts. Made of $\frac{3}{8}$ -inch round steel, 3 inches long.

Cat. No.	Size Inches	Ship. Wt., Lbs. per 100	Price per 100
9145	$\frac{3}{8} \times 3$	8	\$1.30

Diamond Screw Duct Rods

Couplings are made of government bronze. The hickory used in the shaft is selected stock, well seasoned. Threads are accurately cut to $\frac{3}{4}$ -inch U.S.S., 10 threads per inch. Rivets are countersunk. Hickory shafts are $\frac{3}{8}$ inch in diameter.

3-Foot Length	each	\$1.65
4-Foot Length	each	1.80

National Split Tinned Copper Connectors

For Splicing Underground Power Transmission Cables

N.E.L.A. Specification

These sleeves are split their entire length to enable the hot solder to flow evenly around the cable and are covered with a coating of tin to permit easy soldering. The ends are beveled so that there will not be the possibility of the building up of a high potential occasioned by sharp corners.

Empire Duct Rods

Furnished in 2 styles, tapered and straight. Tapered sticks are furnished when not otherwise specified. They measure $1\frac{1}{4}$ inches at the middle of the rod and taper to 1 inch at coupling. Straight sticks are furnished of uniform diameter 1 inch throughout.

Couplings are malleable iron. Ends are interchangeable. Axles are machined from brass rod, solid head and shouldered on coupling. Wheels are machined at hub to fit axle and shaped to conform to curve of duct. The rod is made of best selected straight grain well seasoned hickory, tapering to 1 inch at coupling.

Lengthfeet 3 4
 Price, with Wheelseach \$1.45 \$1.60
 Price, without Wheelseach 1.25 1.40

Simplex Pipe Pushing Jacks

Designed for pushing pipe through the most unfavorable soil conditions without crushing or distorting it. Can be operated by 2 or 4 men, depending upon soil conditions. When solid cribbing or blocking is difficult to obtain, it is then possible to hold the jack against the back pressure with one lever, while the other lever is being operated.

The duplex levers or sockets can be operated singly, alternately or together, depending on size of pipe, soil conditions and cribbing.

Each size of pipe requires a set of tapered jaws, as perfect gripping is necessary to avoid crushing the pipe.

Furnished complete with one set of tapered jaws, two 1 1/4 x 42-inch steel lever bars and two 2-inch steel pipes for extending lever bars (5 feet long for No. 332 and 7 feet long for No. 334). Specify size tapered jaws required.

No. 790 Greenlee Hydraulic Pipe Pushers

Eight operating speeds are available by changing location of rear pin in each lever. This gives various pressures, ranging from 6500 to 40000 pounds. One man can exert maximum pressure by pumping left-hand lever slow speed position. The other pressures and speeds are obtained by various combinations, using right or left-hand lever or both together.

Pipe can be pushed faster with this machine because it is only necessary to change pipe clamps every 4 to 7 feet, depending on length of rail used. Once

rail has been set in position, after being bolted to cross skids or long plank and supported by wood cross member to prevent creeping, setting is complete. Pusher can be run up and down rail as many times as necessary without changing setting.

Can be converted from a pipe pusher into a pipe puller by reversing it on the rail.

Capacity, 3 inch and smaller pipe. Equipment, in addition to rail, consists of a clamp for 1 1/4, 1 1/2, 2, 2 1/2 and 3-inch pipe, backing plate and pipe support casting.

Weight, exclusive of rail, 150 pounds.

No. 790, with 5 1/2-Foot Rail for 4-Foot Push...	each	\$275.00
No. 790, with 6 1/2-Foot Rail for 5-Foot Push...	each	280.00
No. 790, with 7 1/2-Foot Rail for 6-Foot Push...	each	285.00
No. 790, with 8 1/2-Foot Rail for 7-Foot Push...	each	290.00

For shorter or longer rails than standard deduct or add \$5.00 per foot.

Simplex Steel Trench Braces

Simplex Trench Braces provide a safe, practical and economical bracing on all trench jobs. Ball and socket joints at each end permit quick adjustment and tight gripping at all angles. Once placed, a few turns of the screw handle fasten the brace tightly against the sheeting. In trenches that contain sandy soil or water, there is a tendency for sheeting to become loose and a few additional turns of the screw handle secure again a firm bracing.

Screws are steel and fittings malleable iron.

Can be unscrewed and used over and over. Adapted to any width of trench by substituting a different size tubing or pipe for that furnished and drilling a hole at one end for the insertion of a cotter pin.

14	2	18	60	70	50	10	604	110.00

Simplex Trench Brace Fittings

Simplex Trench Brace Fittings are furnished to contractors who wish to put on pipe to suit conditions. The addition of a piece of standard gas pipe, cut to the required length, with a small hole drilled in one end to receive a cotter pin, completes the brace.

The cotter pin may be removed and shorter or longer pipe substituted, to make the brace suit any width of trench desired.

In close quarters, where the regular lever nut cannot be used to advantage, a special lever nut with 3 holes to fit a 1-inch rod can be furnished at no extra charge.

Screw is steel and fittings malleable iron.

No pipe is furnished.

Reliable Double Eye Split Cable Grips

Used for pulling slack in working cables. Can be attached and removed without cutting cables. Strong hooks which are easily fastened and unfastened eliminate trouble of lacing grip with rawhide. Designed so that less than half as many hooking operations are necessary to connect the two sides of the grips as if a conventional hooking scheme were used.

Klein's Furnaces

1-Gallon Capacity

Burns Gasoline or Kerosene

Sturdy construction made especially for field use.

Quick starting is ensured by multi-coil burner which is economical and vaporizes the fuel thoroughly, producing an intensely hot fire. Simple cleaning device to remove carbon deposit without taking burner apart.

Weight, 12 1/2 pounds.

No. 3010 Windshield, extra, is shipped with furnace unless otherwise ordered.

No. 3529, Pump Built in.....each \$33.50

Shields for Klein Furnaces

Made of heavy gauge sheet steel. Top edge is rolled and bottom is reinforced with a heavy ring.

All joints welded.

Weight, 3 pounds.

For furnace No. 3529.

No. 3010.....each \$4.00

No. 3000 Pumps for Klein Furnaces and Torches

Has brass barrel and plunger.

Weight, 1/2 pounds.

No. 3000.....each \$2.50

Klein's Folding Windshields

Made of heavy galvanized sheet steel in four leaves each 24 inches high and 18 inches wide hinged together. Hinges are securely riveted. Grate made of 3/16x3/4 inch steel, welded and swings on one leaf of the shield.

Grate designed so that it can be used with melting pot or the larger sizes of wax kettles.

Weight each, 40 pounds.

No. 3020, With Welded Grate.....each \$25.00

B & L Star Brand Pulling-In Frames

The pulling-in frame is constructed to help install cable in underground ducts.

The sheave support consists of two 13-foot sections of 6-inch steel channels, fastened together at each end by two sections of 4-inch steel channels. Each 13-foot section is provided with 21 holes on 6-inch centers in order to allow the two sheaves to be adjusted to the proper position on the sheave support for any cable installation.

Two sheaves are used with each sheave support, one large aluminum sheave and a small steel sheave which have diameters of 20 inches and 5 3/4 inches respectively. The diameter and groove of the large sheave are of sufficient size to allow a cable to be pulled over it, without harming the cable sheath, when this procedure is necessary to obtain sufficient cable in the manhole for splicing. An important feature is that each sheave is provided with a Metaline bushing which makes the use of a lubricant unnecessary.

Approximate weight, 260 pounds.

Prices and further information upon application.

B & L Star Brand Cable Feeders

Designed to protect and guide underground cables into ducts particularly in congested manholes.

Feeder consists of a 7-foot and a 3-foot length of 4-inch galvanized flexible metal hose which may be joined to make an uninterrupted length. Standard feeder will fit 3 1/4-inch ducts.

A nozzle extension is provided to reduce the opening sufficiently to enter the end of smaller ducts. Special nozzles can be furnished for various size ducts. Extra 3-foot lengths of hose may be obtained for increasing the length of the cable feeder for use in large or deep manholes.

Approximate weight, 100 pounds.

Cable Sheave and Shackle

The cable sheave and shackle may be used in place of the pulling-in frame when it is possible or advisable to locate the rear of the truck directly over the manhole. The device is attached to the manhole pulling iron and the winch line goes over a roller or sheave at the rear of the truck then down and under the cable sheave and shackle and thus into the duct. The sheave is made of special aluminum alloy for light weight, 20 inches in diameter, with a groove large enough to take a 3 1/2-inch cable. The hook is drop-forged.

Approximate weight, 51 pounds.

Prices and further information upon application.

Manhole Guards

Open, 50x50x42 in.; closed, 3 1/2x50x42 in.

Ship. wt., 43 lbs.

Price, Manhole Guards...each \$25.00

Manhole Skids and Sheaves

Price, 9-foot... per set \$60.00

Extra lengths, \$3.00 per foot.

Diamond Manhole Cover Hooks

This is a useful tool for the subway construction force. It is designed to easily raise a heavy manhole cover by prying the wedged point end of the hook under the groove provided in the cover for the purpose.

The hook is made of an excellent quality of electric tool steel suitably hardened at and adjacent to the hook to prevent its bending, and at the same time sufficiently tough to prevent breaking off.

Price...each \$1.50

Hubbard Cable Duct Shields

Zinc and Hot Galvanized Steel

Used to protect cable sheaths at entrance of ducts. As cable expands and contracts the wear comes on the shield rather than on the lead sheath. May be installed, if desired, after the cable is pulled in.

Cat. No.	Per 100	Material	SIZE, INCHES		Std. Pkg.	Wt., Lbs. per 100

Hubbard Manhole Ladders

Hot Galvanized

The 6½, 8, 10 and 12-foot lengths have sides of 1½x¾x¾-inch channel and rungs of ½-inch round open hearth steel. The 14-foot ladder is made of channel 2½x½x¾-inch sides. The rungs pass through the sides and are riveted over on the outside. They are 12 inches apart spaced from the bottom rung which is placed 12 inches from the bottom of the ladder.

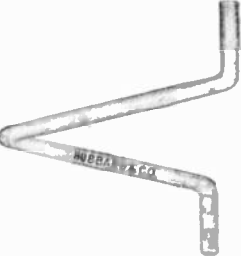

Standard package, 5.

Hubbard Pulling-In Irons for Manholes

Hot Galvanized

Pulling-in irons are set into the concrete or brick walls of street vaults opposite all duct entrances to provide a convenient and strong attachment for the pulling-in blocks for installing or removing cables. They are made of ¾-inch steel in accordance with the A. T. & T. Company's specifications, and are so designed as to straddle the brick.

Cat. No.	Size Steel Inches	Extension from Wall Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100

Hubbard Locktype Cable Racks

Hot Galvanized

Racks are made of 1¾x¾-inch flat steel, with ½x¾-inch mounting holes, in lengths to accommodate 1 to 4 of the hooks listed.

The certified malleable iron hooks have rack attachment lugs and overlaps which prevent wobbly fits and insure minimum movement. High grade dry process grooved porcelain insulators with smooth glazed surfaces lock to the hooks.

Hubbard Presteel Cable Racks

Hot Galvanized

For manhole and interior cable work.

The rack sections are made in three lengths which can be combined into almost any desired length.

These sections are made from 1½x¾x¾-inch open hearth steel channel, with ample strength to support the heaviest cables. They should be fastened to manhole walls with ½x4-inch Peirce Expansion Bolts.

No. 2120 Hubbard Cable Rack Insulators

Standard Type

These insulators, used on Hubbard cable rack hooks, provide a smooth, well rounded surface which permits cable creepage without injury to lead sheaths. Also provide insulation between cable and rack. Width, 2¾ inches. Std. pkg., 50. Weight per 100, 100 pounds. Price, No. 2120, for 1½-Inch Cable.....per 100 \$19.80

Hubbard Underground Cable Racks, Hooks and Insulators

For Heavy Cable Work

Hot Galvanized

Rack section is 2¼x2¼x¼-inch steel T section, offset at lower end for overlapping when combining two racks. Any desired length of cable racks can be made in this manner. Racks have ¼-inch mounting hole at top and bottom and are fastened to new manhole walls with No. 2246 anchor bolt which is cemented into the wall. ½x4-inch Peirce expansion bolts are used for attaching to manholes not provided with anchor bolts.

Hooks are one-piece ¾-inch steel pressed to a channel shape, insuring uniform strength throughout. All edges are rounded and there is a smooth flat surface for the cable to rest upon. Hooks can be used with or without an insulator.

Insulators fit snugly on the cable hooks and the weight of the cable holds them in place.

THERMOSTATS

VALVES: Electrically Operated

WIRE: Deltabeston

American Concrete Lighting Standards

American Concrete Lighting Standards are manufactured by the centrifugally-spun process.

Curing

Spun-crete standards are cured for 28 days by a steam process.

During curing the most favorable conditions are obtained by maintaining the correct temperature in the curing room and regulating the amounts of water taken up by the product.

Careful curing insures the ultimate in strength, wear-resistance, bond-strength, and water-tightness.

When emergency shipment of less than 30 days is required, Spun-crete standards of equal strength may be obtained in 7 days by the use of a high early strength cement at an increased cost.

Core

When desired, a 2-inch galvanized pipe core may be

obtained in the finished standard at a nominal increase in cost.

Finish and Aggregate

Flat surfaced standards are water-polished giving a glossy smooth surface showing the beauty of the granite aggregate.

Standards having round, fluted or irregular surfaces can not be water-polished but are acid-etched.

Flat surfaced standards may also be acid-etched at no increased cost.

Spun-crete standards are furnished in black and white aggregate as standard.

Red and white aggregate can be furnished at no increase cost upon request.

Green and white aggregate can be furnished at a slightly increased cost.

Complete Information and Prices Furnished on Receipt of Specifications

Union Metal Steel Lighting Standards

Sectional View of Union Metal Fluted Steel Pole Showing Method of Anchorage for Heavy Gauge Shaft Construction

Light Weight Shaft Construction

Union Metal lamp standards are built like a modern skyscraper. Three sturdy anchor rods extend from the top of the ornamental base into the concrete sub-base and securely anchor the lower section of the standard to the ground.

Likewise every standard is provided with three steel tie rods, passing from the base through the shaft and into the topmost part of the capital or head.

The scientific tripod or steel truss construction coupled with the pressed metal shaft provides the important engineering requirements of great strength, light weight, and low center gravity. In case of severe impact they will bend but will not break and fall heavily to the ground.

Standards are made with shafts of two or three thicknesses of No. 22 U. S. gauge copper bearing steel. Double lock-seams. Plies pressed firmly together with no solder or

rivets. Seams rolled on the inside so that both inside and outside of pole are smooth. Galvanized with lead and zinc spelter both inside and out. Painted inside and out with best grade of metallastic paint.

Shafts available with outer lamination of 16 ounce cold rolled sheet copper, fluted and pressed into place at an increased cost.

Available in natural copper, verd-antique, oxidized copper or statuary bronze finish. Standards available with bronze castings at an increased cost.

Anchor rods, galvanized steel, vary from 5/8 inch to 1 1/4 inches depending upon size of standard. Tie rods vary from 1/2 to 3/4 inch depending upon size of standard. Lock washers are used to prevent loosening of nuts due to service vibration.

Heavy Gauge Shaft Construction

Union Metal steel standards are also furnished employing heavy gauge steel shafts, fabricated from highest grade open hearth steel.

The thickness depends upon the strength requirements. A heavy cast steel base of special analysis is attached to the lower end of the shaft with a double electric weld.

King Ferronite Cast Iron Lighting Standards

Section of King standard

Designs available in groups of similar designs to meet all requirements in one locality.

Construction

Made from aluminum patterns in iron flasks.

Ferronite is a special composition of greater strength than ordinary cast iron.

Ferronite insures all delicate details of design to be smooth, clean cut, deep and perfect. The inside of standards is as smooth as the outside which prevents damage to cable insulation.

Wall thickness of standards is uniform and weight is distributed uniformly which increases strength of standards.

Standards are given a shop priming coat of special hard skin paint. Final finish is to be put on by customer after installation.

Door in base of standard permits ready access for anchoring, making electrical connections, installing transformers, testing and inspecting.

Safety Spiders

Used to prevent and limit the fall of standard on violent impact.

Recommended on heavily traveled thoroughfares.

Provided at increased cost on special order only, where not listed.

Pipe reinforcement furnished on some designs.

Safety spider available to permit use of transformers in base of standard.

G-E Holophane Refractors

These refractors conserve the light in the upper hemisphere, which for some classes of lighting is not required, and redirects it to the street where it will be useful.

Band Refractors

For use where a totally enclosed unit is not desired.

Sym-etric Dome Refractors

Dome Refractor with Light Shield on House Side

For use within an enclosing globe. Light shields for attaching to all types of dome refractors are available. These shields reduce the light on the house side.

A-Sym-etric Dome Refractors

Designed for units mounted at the side of the street. An A-Sym-etric Dome Refractor reduces the light on the house side which is an advantage in residential districts.

G-E B-Sym-etric Holophane Dome Refractors

Conserves the light in the upper hemisphere, which for some classes of lighting is not required, and redirects it to the street where it will be useful.

For units mounted at the side of the street. Reduces the light on the house side, which is an advantage in residential districts.

the house side, which is an advantage in residential districts.

Street-Lighting Ball Globes

With Plain Collar

With Spun Aluminum Protector

Snow-white is a pure white diffusing glass. It does not show any lamp filament nor bright spot on the globe surface. Inlite is a fine semi-translucent glass and very white for this character of glass.

Inland C. R. I. (crystal roughed inside) is a clear glass sand-blasted inside. Inland ruby and green are solid and true colored.

Furnished in snow-white, G. R. I., Inlite and with plain collar spun aluminum protector as illustrated.

G-E Form 8 Novalux Ornamental Luminaires

G-E Form 9 Novalux Ornamental Luminaires

Recommended for whiteway lighting for towns and villages and ornamental lighting on boulevards, parkways, residential streets and less important business streets of larger cities.

This luminaire has been designed particularly for use with 1000 to 6000-lumen, 6.6-ampere series or 200 to 500-watt multiple Mazda C lamps. Since the Form 8 casing will not contain an auto-transformer, high-current series lamps in 4000, 6000 and 10000-lumen sizes operated at currents of 15 or 20 amperes can be used in this unit only in connection with a Type II transformer in the base of the standard.

Casing is of cast iron and has two cast lugs to support a porcelain receptacle or supports for a multiple socket. Globe seat is embodied in casing and drip holes are drilled in globe seat to drain off rain water.

Two types of casings can be furnished having the same external appearance and differing only in method of attachment to pole. Type F and 3 casings rest upon top of pole and are bolted in place; K and 2-K casings slip over shaft and are fastened by set screws.

Internal canopy holder for glass canopy is fastened to upper lip of globe by set screws. Canopy holder has a swinging arm which projects through hole in glass canopy and is threaded on end for combined pinnacle and weather shield.

Design of casing is architecturally constructed for use with fluted poles. Internal canopy holder with swinging arm holds canopy securely to globe and acts as a support for canopy during cleaning.

Alabaster rippled glassware diffuses light and has high transmission characteristics.

Cross-Section of Complete Luminaire Showing Auto-Transformer and Internal Parts

Recommended for whiteway lighting, main boulevards and secondary business streets.

Straight series, straight multiple, or high-current series lamps can be used with this fixture. The high-current lamps can be operated from Type II transformers or auto-transformers. The 6000, 10000 or 15000-lumen lamps are recommended for best results.

The standard dome or A-Symetric dome refractors can also be used with rippled glassware.

The luminaire consists of a cast iron casing, a porcelain receptacle which acts as a support for the series socket, a globe, and canopy. The casing is designed to accommodate an auto-transformer which, when used, is mounted on the under side of porcelain insulating plate. The globe seats in a groove on the top of the casing

and is held firmly in place by three clips. The casing is fastened to the pole by three screws.

The architectural design of the casing enables it to be used on fluted poles.

On account of the short casing, this makes a good luminaire for bracket mounting.

The internal canopy holders with swinging arms hold the canopy securely to the globe and act as a support for the canopy during cleaning.

With No. 127 Globe, No. 1127 Glassware

With No. 123 Alabaster Rippled Globe, No. 1123 Alabaster Rippled Canopy and External Straps

Form 13—With No. 109 Alabaster Rippled Globe and No. 1109 Alabaster Rippled Canopy

Made for use on octagonal poles with 4-inch top. The 2500, 4000, 6000 or 10000-lumen series and 300 or 500-watt multiple Mazda C lamps can be used in this fixture.

With No. 123 Alabaster Rippled Globe, No. 1123 Alabaster Rippled Glass Canopy, Form O Casing

Designed for use with 4000 and 6000-lumen, 6.6-ampere series; 4000, 6000, 10000, 15000 and 25000-lumen high-current lamps or 300 to 2000-watt multiple Mazda C lamps. High-current series lamps, except 25000-lumen size, can be operated from self-contained auto-transformers or Type IL transformers.

The 1500 or 2000-watt and 25000-lumen sizes can be only used with 126 globe and 1126 canopy.

Cast iron casing, standard with green paint finish, has been designed for a slender pole having a 5-inch top diameter. For the No. 103 and 123 globe, a 7" adapter is used, forming the O casing. For No. 104 and 124 globe, an 8" adapter is used, forming the M casing. For No. 118 globe, a 10" adapter is used forming the N casing. For 126 globe an 11" adapter is used.

Canopies for Nos. 103, 104, 123, 124 and 126 globes are held by an internal support which fastens to casing.

Form 16—With No. 118 Alabaster Rippled Globe and No. 1118 Alabaster Rippled Glass Canopy

A replica of the Form 13 luminaire on a larger scale. For use with 6000 to 10000-lumen, 6.6-ampere series; 6000 to 15000-lumen, 20-ampere series; 300 to 1000-watt multiple Mazda C lamps.

G-E Form 18 Novalux Ornamental Lantern Luminaires

The Form 18 Novalux lanterns are available in two sizes which meet every requirement of ornamental street lighting besides being useful for the ornamental lighting of certain types of buildings.

The Form 18A small size is for use with 300 and 500-watt, 2500, 4000 and 6000-lumen, 6.6-ampere series or 4000, 6000 and 10000-lumen high-current series lamps.

The Form 18B large size is made for use with 300, 500, 750 and 1000-watt, 4000 or 6000-lumen, 6.6-ampere series or 4000, 6000, 10000 and

15000-lumen high-current series lamps. These high-current series lamps can be operated from Type II transformers in the small lantern and auto-transformers or Type II transformers in the larger lantern.

G-E Form 19 Novalux Ornamental Lantern Luminaires

Designed for suspension from ornamental bracket arms. Useful for parkways, boulevards and residential streets.

Form 19A small size is used with a 300 or 500-watt Mazda C lamp.

Form 19B large size is used with a 750 or 1000-watt Mazda C lamp.

Made of grey cast iron. The different members are held together with brass screws, nuts and lock washers, thus eliminating any chance of corrosion of tapped holes and screws.

Bottom is a grid casting which carries a flat octagonal glass panel

to provide light directly underneath unit.

G-E Form 27 Novalux Ornamental Luminaires

Cross-Section of Globe and Canopy Showing Internal Canopy and Refractor Holder

Form 27 luminaire is ideal for whiteway lighting in small towns or villages or for the minor business streets of larger cities.

For use with 1000 to 6000-lumen 6.6-ampere series, or 200 to 1000-watt multiple Mazda C lamp and, since the slender design of the casing does not permit the use of an auto-transformer, a Type II series transformer is mounted in the base of the standard.

Holophane Sym-etric dome, A-Sym-etric and B-Sym-etric dome refractors redirect a portion of the upward light to the street surface. They can be used with Form 27 luminaires and are often desirable along boulevards and parkways where the amount of upward light is of less importance.

Consists of a cast iron casing, a porcelain receptacle which acts as a support for the series socket, a globe and canopy. Casing slips over shaft of pole and is held by three set screws. Globe seats in a groove on top of casing and is held firmly in place by four clamps. Canopy is held to globe by an internal canopy holder with three lugs which set over lip of globe and which is held fast by three screws that go under inside of upper globe fitter.

G-E Form 33 Novalux Luminaires

Suitable for Use with Concrete Standards

With No. 109 Globe and No. 1109 Canopy

With No. 124 Globe and No. 1124 Canopy with Ornamental Side Arms

For ornamental lighting on boulevards, parkways, residential streets and less important business streets of the larger cities.

Small Lantern Luminaire

For use with Mazda C lamps, 1000 to 6000-lumen, 6.6-ampere series lamps, or 200 to 500-watt multiple lamps. Casing will not contain an auto-transformer, therefore, high-current series Mazda lamps in 4000, 6000, 10000 and 15000-lumen sizes, operated at currents of 15 or 20 amperes, can be used in this unit only in connection with a Type II transformer in the base of the metal standard, or in concrete vaults for use with concrete standards.

The Sym-etric, A-Sym-etric or B-Sym-etric dome refractors can be used with rippled glass-ware.

Casing consists of a globe fitter and a pole adapter.

For all but the Nos. 1123 and 1124 canopies, the internal canopy holder for the glass canopy is fastened to the upper lip of the globe by set screws. Canopy holder has a swinging arm which projects through hole in glass canopy and is threaded on end for combined pinnacle and weather shield.

G-E Form 25 Novalux Suspension Luminaires

Form 25

Form 25 with Globe Open

Designed for residential districts where surroundings justify ornamental treatment, where wide streets require curb mounting rather than center suspension, where long spacing and high mounting are needed to economize in the number of units.

The construction of these units involves only a one-piece rippled glass globe supported by a basket formed of copper bands.

Top of luminaire is a single iron casting, painted green, which supports socket and porcelain enameled reflector and to which the copper basket is hinged. Reflector also serves as a holder for holophane dome refractor.

Top casting of luminaire is tapped to screw on end of a $1\frac{1}{4}$ -inch pipe. Bracket consists of standard pole plates, pipes and scrolls used with street-system brackets.

Form 25-A

No. 116 light alabaster rippled globe, Sym-etric or A-Sym-etric dome refractor. Mounting height, 16 feet approximately. Spacing, 250 to 300 feet. Lamps—100, 150 or 200-watt multiple or 1000-lumen straight series.

Form 25-B

No. 108 light alabaster rippled globe, dome or A-Sym-etric dome refractor. Mounting height, 20 feet approximately. Spacing, 300 to 400 feet. Lamps—300 or 500-watt multiple or 4000, 5000 and 10000-lumen straight series or Type IL transformer types.

Form 25-C

An ornamental suspension fixture in which lamps up to 500-watt multiple and 15000-lumen series may be used. Applicable on boulevards, highways and any other place requiring a pendant unit with excellent appearance and high efficiency.

No. 193 alabaster rippled globe, Sym-etric, A-Sym-etric or B-Sym-etric dome refractor.

May be installed on 6.6-ampere series systems using lamps from 2500 to 15000 lumens. Since the 4000 to 15000-lumen lamps operate more efficiently on 15 and 20-ampere circuits, the use of Type

IL transformers to provide higher current is recommended.

The efficiency of the luminaire is increased by the use of a steel internal reflector with reflecting surface of white porcelain enamel.

G-E Form 32 Novalux Suspension Luminaires

Bracket Suspension—Green Finish

With No. 146 Alabaster Rippled Globe

The Form 32 Novalux suspension luminaire is recommended for ornamental lighting, with lighting standards and with ornamental brackets for installation with underground wiring.

With different shapes of rippled globes, with and without dome refractors and with the various types of bowl refractors, this luminaire may be recommended for main thoroughfares, secondary business streets, residential streets and park roadways where high intensity illumination is required.

This luminaire is designed for use with Mazda C incandescent lamp. The straight series lamp of 2500, 4000 or 6000-lumen, 6.6-ampere rating and the multiple lamp of 300 or 500 watts are most commonly used with the glass-ware listed, except the No. 146 globe. The 6000, 10000 or 15000-lumen series and 750 or 1000-watt multiple lamps are best suited for use with the large No. 146 globe. The 15000-lumen, 15 or 20-ampere series or 750 and 1000-watt multiple lamps may be used with the No. 162 globe without refractors, or for 10000-lumen series, 300 or 500-watt multiple lamps with refractors. This globe is rectangular in shape and has been designed for use with a light shield to keep light on the house side from being objectionable to residential owners.

Since the 4000, 6000 and 10000-lumen lamps operate more efficiently on 15 or 20 amperes than on 6.6-ampere circuits, the use of an auto-transformer or Type IL transformer, for the purpose of stepping up the current, is recommended in these instances. Provision is made for mounting an auto-transformer within the casing of the luminaire. The IL transformer type of installation is particularly desirable because of its protection, which allows low-voltage wiring to the luminaire. When the Type IL transformer is used, it is usually mounted on the wood pole, in the base of the ornamental standard, or buried in the ground.

G-E Novalux Suspension Luminaires

For Use on All Series Circuits

Sectional View of Form 45-H with Sheet Metal Reflector

Suitable for installation in residential sections and on secondary business streets.

All parts are interchangeable. Changes in lamps and glassware accommodations are readily accomplished to meet all requirements that may develop in the community served.

A flexible and serviceable arrangement is provided for supporting sheet metal or cast iron reflectors with glassware to insulator without the use of adapters. Three heavy brass supporting and positioning screws, mounted in a bronze ring, impinge against a concentrically grooved copper collar on sheet metal reflector, or against conical depressions in lugs of cast iron reflector. This clamping arrangement forms a firm support for the reflector and acts as a protection for the insulator, as the possibility of radial stress on insulator is eliminated.

Reflector is made of high grade enameling steel and is finished in white fired vitreous enamel on the reflecting surface and green fired vitreous enamel on the outside surfaces. A concentrically grooved copper collar is provided, against which supporting screws impinge, relieving the enameled surface from undue strain.

An ornate cast iron reflector is available which can be furnished either with green paint, hot-dip galvanized, or green fire-enameled finish. The vitreous fire-enameled finish provides a lustrous surface of high efficiency, long life, low maintenance, and excellent appearance. This reflector also serves as a support for glassware by the addition of non-ferrous hinge and latch fittings.

Cast iron hood is tapped for a 1 1/4-inch pipe.

Overhanging skirt on wet-process porcelain insulator increases creepage distance and provides additional dry surface.

Binding post passes through the lug, insulator and receptacle clip supports. Light centers are adjusted by changing supports on binding posts. Copper collar relieves enamel surface from undue strain.

Water dripping from overhang on cast iron hood strikes insulator just above skirt. This feature greatly increases wet flashover voltage.

Clamping ring with three set screws holds reflector without radial pressure on porcelain. Contour of sheet metal reflector greatly increases strength and prevents flexing and consequent chipping of enamel.

Form 45-H

Consists of a cast iron hood, wet-process porcelain insulator, series socket, sheet metal fire-enameled, radial-wave reflector, or a cast iron reflector with refractor holder and refractor, a globe holder and globe as required.

Main insulator is made of wet-process porcelain, finished in green glaze, provides high mechanical and di-electric strength, is non-hygroscopic and is equipped with non-ferrous contact parts and supporting elements.

Form 45-M

Form 45-M1 is similar to Form 45-H4 fixture with all the combinations of reflectors and glassware except that the insulator is of dry-process porcelain.

With 20-Inch Concentrating Asy-Radial-Wave Reflector, with Long Collar

G-E Form 45-L Novalux Suspension Luminares

Sectional View

Recommended for installation in residential sections, on main thoroughfares and on secondary business streets or highways. Suitable for use on any overhead lighting circuit of less than 5000 volts; readily adapted for series, multiple or Type IL transformer distribution.

Consists of a cast iron hood, reflector, series or multiple socket, and refractor or enclosing globe.

Four cast iron hoods are provided, one with a straight 1¼-inch pipe tap, one with a right angle 1¼-inch pipe tap, and two similar hoods with bushings for external wiring. Hoods finished in green fire enamel, hot-dip galvanized or green paint.

The sheet metal, radial-wave reflectors are made of high grade enameling steel finished in white and green, fired, vitreous enamel.

Cast iron reflectors, both shallow and deep, can be furnished with fire enamel, hot-dip galvanized or painted finish.

On series circuits up to 5000 volts, a receptacle is furnished for necessary insulation and to receive series socket. When used with a hood and sheet metal or shallow, cast iron reflector, the receptacle is mounted in the hood on a small non-adjustable support and when used in the deep cast iron reflector, an adjustable support provides adjustment for 5¾, 7 or 9½-inch light center lamps.

On multiple circuits, a medium screw base socket on an adjustable support is mounted in hood and used with sheet metal or shallow cast iron reflector, permitting operation of multiple lamps up to and including 200 watts. For 300 to 500-watt lamps a Mogul screw base socket is mounted on an adjustable support in deep cast iron reflector.

Bowl and band refractor holders consist of a cast aluminum ring, with rigid hinge and latch fittings. Nos. 166 and 176 globes have a holder similar to refractor holder and with all the advantages of a refractor holder. It is of sufficient diameter to allow the globe to swing by the dome refractor.

If a dome refractor is required, a holder is provided and may be attached to cast iron reflector by screws that hold hinge and latch fitting. With the new design of rigid hinge and snap-latch fittings, it is possible to relamp luminaire from ground with a lamp picker.

G-E Form 52 Novalux Suspension Luminaires

For Operation on Multiple and Series Circuits Up to 5000 Volts

Luminaire with 11-Inch Refractor

Designed particularly to utilize the increased efficiency obtained by using the new 11-inch refractor. This unit may be applied to good advantage on boulevards, main thoroughfares, highways and any other place where a pendent unit with excellent appearance and high efficiency is required.

May be installed on series systems using 2500, 4000 or 6000-lumen lamps for operation on 6.6-ampere circuit; since the 4000, 6000 and 10000-lumen lamps operate more efficiently on 15 and 20 amperes than on 6.6-ampere circuits, the use of IL type transformers for the purpose of stepping up the current is recommended in these instances. Lamps rated as high as 15000 lumens may be used in this unit on series circuits. On multiple-circuits, lamps rated as high as 500 watts may be used. The fact that these large size lamps are applicable in this unit puts it in step with the present trend of good lighting practice.

The hood or casing is a casting which may be furnished in cast iron, painted green or in galvanized or cast aluminum in natural finish or painted.

Hood is also equipped with an external adjusting mechanism which permits the adjustment of the lamp to the proper light center with respect to the refractor—a consideration that is essential for correct distribution. The new rigid hinge and latch refractor holder is incorporated in the design of this fixture. This holder insures an insect-tight fit for the refractor against the casing. It is also notched, which prevents the refractor from slipping out of position because of vibration or relamping. The new hinge and latch permits relamping from the ground with the assistance of a lamp replacer. The 11-inch refractor with peephole is an essential feature of this fixture. It is highly efficient and the peephole makes possible positive adjustment.

**G-E Form F-100-B Novalux Pothead Cutouts
For Ornamental Street-Lighting Units**

Cat. No. 3732073G1

For use with ornamental series street-lighting circuits for mounting in the base of the smaller lighting standards.

Consists of two sections, the box and plug, both made of special process porcelain. Plug is equipped with flat contact strips, insulated from each other. Provision is made at top part of plug so that insulating compound can be poured in round the leads. Box contains four flat phosphor-bronze springs. Contacts are assembled within an air expulsion chamber.

If it is desired to use cutout for disconnecting several lamps, this chamber may be filled with G-E No. 21 Oil.

At the top of box, a hole is provided through which insulating compound can be poured. Two holes are provided in bottom of contact of cutout for parkway cable.

**G-E Non-Automatic Station Type
RV-2 Novalux
Constant-Current Transformers
For Operating A.C. 6.6-Ampere Series Lighting
Loads**

2300 Volts (with 80 Per Cent Load Tap)—60 Cycles

A non-automatic, station type, constant-current transformer designed for use in central stations or substations where an operator is in attendance.

Because of the general adoption of the series system for street lighting installations, it is necessary to have a transformer that will convert constant potential energy to a constant-current energy. This requires a regulating device with a floating coil.

In many instances it is desirable to install a constant-current transformer in a station that is always attended. The Type RV-2 transformer is non-automatic and admirably serves this purpose.

Transformers are built in standard sizes ranging from 5 to 70 kw. output, or in special sizes for any commercial secondary current or frequency, or for any primary potential up to and including 13200 volts. The standard rating is 60 cycles, 2300 volts on the primary, and 6.6 amperes on the secondary.

The exceptionally fine regulation of the constant-current transformers insures rated lumen output, and full life of lamp. The transformer will maintain the secondary current within 1 per cent above or below normal from full load to short circuit, provided the primary potential and frequency remain at rated values.

G-E Plug Switch Panels

For Non-Automatic Station Type RV-2 Novalux
Constant-Current Transformers
6.6 or 7.5 Secondary Amperes, 2300 Volts

For 1 Transformer and 1 Lamp Circuit

For 1 Transformer and 2 Lamp Circuits

The panels and subbase are asbestos-ebony, 1½ inches thick with ¼-inch bevel, and are mounted on a self-supporting framework of 1¼-inch pipe 64 inches high. Blue Vermont marble may be substituted for asbestos-ebony at a slight increase in price.

Instruments and meters have the G-E Company's standard dull-black finish, while the supporting framework is black japanned.

Lightning arresters are recommended for each lamp circuit. They are not included with these panels and must be ordered separately.

Each panel Cat. No. includes one panel with framework, a 5-ampere Type AD ammeter with 10-ampere scale, current transformer, fused primary plug switches, secondary plug switches, necessary plugs, plug racks, card holders and nameplate.

Each watt-hour meter Cat. No. includes one subbase with pipe fittings, 110-volt, 5-ampere Type IS-8 single-phase watt-hour meter, current transformer, and potential transformer with fuses and supports.

*Two-circuit panels up to and including 30 kw. are for transformers with single-circuit secondaries. Above 30 kw. panels are arranged for multi-circuit secondary transformers.

G-E FK-41 Oil Circuit Breaker Panels

For Non-Automatic Station Type RV-2 Novalux
Constant Current Transformers
6.6 or 7.5 Secondary Amperes, 2300 Volts

For 1 Transformer and 1 Lamp Circuit

For 1 Transformer and 2 Lamp Circuits

For 2 Transformers with 1 Lamp Circuit per Transformer

Designed for the control of one single-circuit secondary or multi-circuit secondary constant current transformer and either one or two lamp circuits per transformer. Lamp circuits may be either arc or incandescent. Panels are for separate installation near the transformers they are to control and are not suitable for assembly in a switchboard.

Each panel Cat. No. includes panel with framework, 5-amp. Type AD ammeter with 10-amp. scale, current transformer, necessary oil circuit breakers mounted on back of panel, enclosed primary fuses, card holders and name plate.

Each watt-hour meter Cat. No. includes 110-volt, 5-amp. Type IS-4 single-phase watt-hour meter, current transformer and potential transformer with fuses and supports. Watt-hour meter is mounted on front of main panel and instrument transformers and fuses on the back.

G-E Automatic Station Type RF Novalux Constant-Current Transformers

For Operating A.C. 6.6-Ampere Series Lighting Loads

‡2300 Volts (No Taps)—60 Cycles

Type RF with Cage

Designed for use in an unattended substation. Can be used for any indoor installation.

Built in practically any capacity and for any commercial voltage, frequency and secondary current; but it is recommended that, on account of the high secondary voltage, capacities not exceeding 20 kw. be operated with single-circuit secondary. Sizes from 25 to 70 kw. are furnished with multi-circuit secondary.

Can be started up automatically with coil together and with only one lamp on circuit, regardless of capacity of transformer. Current surge not sufficient to destroy lamp.

Transformers are not provided with any taps, either for voltage or for partial load operation. Because constant voltage is maintained in the stations, no primary voltage tap is necessary. Because of high inherent reactance of transformers, if a partial load tap is furnished, operating characteristic will be impaired.

Equipped with protective screening of expanded metal. Balancing mechanism supported on ball bearings.

*Built with multi-circuit secondary. Can be operated either single or multi-circuit.

†All of these transformers will operate from 2200 to 2400 volts. No primary voltage tap or partial load tap provided. If 80 per cent load tap is desired, add 10 per cent.

G-E Pole Type RO Novalux Constant-Current Transformers

For Operating 6.6-Amp. Series Lighting Loads

‡2300 Volts (with 2000-Volt Tap)—60 Cycles

The Type RO is a constant current transformer which operates automatically. It can be mounted on poles in remote districts or where subdivided downtown lighting circuits are desired. It can be controlled by Novalux controllers, time switch, or main oil switch at the station.

Built in sizes ranging from 1 to 30 kw., to operate at any commercial primary voltage and frequency or secondary current, but the standard transformer is for 60 cycles, 2300 volts on the primary and 6.6 amperes on the secondary. The 2300-volt transformer will operate satisfactorily on from 2200

to 2400 volts and a tap is provided on the primary for operation at 2000 volts without reduction of output.

The RO Transformer is positive and automatic in action requiring no attendant or substation for starting or shutting down. A Novalux controller or similar remote control device can be used for operating the transformer. These features are combined with the same current regulation through as wide a range as offered by the best station-type constant-current transformer. This feature alone practically guarantees the normal life of the Mazda lamps operating on a circuit controlled by such a transformer. The efficiency is almost the same as for the station-type transformer and the power-factor is 80 per cent at maximum load.

The high internal reactance of the transformer serves to protect the lamps at starting and acts instantaneously to check surges on the line which would otherwise tend to shorten the life of the lamps.

The moving secondary coil with its high repulsion gives almost perfect regulation from full load to dead short circuit. This feature not only protects the lamps from changes in current, because of changes in secondary load, but also protects the lamps from fluctuations in primary voltage.

Prices include oil.

Lightning arresters must be used on transformers on both primary and secondary for protection.

G-E Subway Type RO Novalux Constant-Current Transformers

For A.C. 6.6-Ampere Series Lighting Circuits
Single-Circuit Secondaries

A constant-current transformer designed to operate automatically and be mounted in subways or manholes. It can be controlled by Novalux controllers or by any of the present methods of remote control.

Since poles carrying circuits overhead are being removed from many of the city streets, it was found desirable to use some type of transformer which could be mounted underground and thereby connected directly to the underground feeder circuits and to the underground street lighting circuits. This requirement resulted in the development of a subway type RO transformer.

This transformer is almost identical with the pole type, except that it is enclosed in a specially designed cast iron water-proof tank. It is necessary on the 25

and 30-kw. size subway transformer to construct it in a double-deck type, because of the necessity for the transformers to be narrow enough to be lowered and installed in a manhole, the cover of which is only 32 inches in diameter, maximum. The four leads are each brought out at a separate terminal.

Subway transformers are equipped with oil indicating plugs installed in the tanks to indicate the oil level without requiring the removal of the cover. The tanks should be filled with the top oil plug open until the oil runs out and then the plug should be closed. To test for oil level at any time the lower indicating plug should be opened. In case the oil does not flow out, this plug should be closed again and the top plug opened, additional oil being poured in until it flows therefrom. The plug should then be closed again.

If the primary circuit leads into the subway from overhead, pole-type cutouts can be used. If, however, the primary circuit is entirely underground, the D and W subway fuse cutouts must be used.

Prices include oil and hanger hooks.

(A) single deck. (B) double deck.

G-E Type RO Pellet Lightning Arresters Pole and Subway Type—Outdoor Service Only

Recommended for protection of both the primary and secondary sides of constant-current transformers.

Pellet arresters are single-pole, for outdoor use on both the constant potential side and the load side of constant-current transformers. Each design has a minimum and maximum voltage rating and under no circumstances should it be applied to a circuit the voltage of which can exceed the arrester's maximum rating as shown in the table. Where selection of arresters for the protection of the load side of the transformer is to be made, the arresters should never be applied to a transformer of a larger kilowatt rating than shown in the table.

†Compression chamber type.

‡where transformer is connected between an outside wire and neutral, use one pellet arrester on outside wire. Use also on neutral wire a compression arrester, Cat. No. 146187 (\$3.50 each, shipping weight 1.3 pounds; standard package 24) if voltage to ground is not over 300 volts; if, because of unbalancing, voltage is between 300 and 750 volts, use Cat. No. 2906822G3 (\$6.00 each, shipping weight 4 pounds; standard package 24). Use two arresters at an installation made between outside wires.

G-E Novalux Protectors

For Use with Type RO Transformers and Novalux Controller

Open circuits in series street lighting systems are unavoidable, especially on aerial circuits, and it is desirable from the standpoint of "safety first", that when an open circuit does occur, the primary of the main transformer be de-energized. This Novalux protector has been developed to operate in conjunction with a CR7841 Novalux controller, and its function is to open up the switch in the controller as soon as an open circuit takes place.

The mechanism of the Novalux protector consists of two relay contactors with armatures connected together through a horizontal dashpot. One of the relays is energized by the controlling circuit, the other by the load circuit to be protected. Under operating conditions, the contacts of the series control type are open and the contacts on the multiple control type are closed. When an "open" occurs in the load circuit, the relay in the load circuit becomes de-energized and the control relay contacts are closed on the series type (opened on the multiple type) thus de-energizing the operating coil of the controller. This allows the controller contacts to open, de-energizing the primary of the constant-current transformer.

After the "open" in the load circuit has been repaired, the protector can be reset (reconnecting the transformer to the main system) by means of a push rod conveniently located at the top of the protector.

The protector is housed in a cast iron casing. The working parts are submersed in oil for insulating and dampening purposes.

G-E Type CR7841-C Novalux Remote-Control Apparatus

Pole Type Without Top

Designed to control Type RO pole or subway transformers by means of an adjacent series circuit or a multiple pilot-wire control circuit. With either series operating coil rated from 2.5 to 20 amperes at any frequency or with shunt operating coil at 110, 220, 440 volts, 50 or 60 cycles or 110, 220 volts, 25 cycles; in three types—normally operated, normally closed, latched-in. Also furnished for subway mounting when necessary. Switch is for use on any voltage up to and including 7500 volts and the most popular voltages with current ratings are as follows: At 7500 volts switch will break 15 amperes; 6600 volts, 25 amperes; 4500 volts, 35 amperes; 2900 volts, 50 amperes or 220 volts, 100 amperes. Operates at any frequency.

Subway Type

The wattage of operation coil is such that enough heat is generated to overcome any congealing effect and switch may be used in almost any weather condition which will be encountered in the northern hemisphere, without sluggish operation. The high-potential test on this controller is 25000 volts from power to control from power to ground, or from control to ground.

Pole type switch is mounted in pressed metal casing with cast iron cover which is not connected to switch mechanism.

Three moving parts—two readily replaceable contact tips and solenoid, together with necessary levers.

Subway design switch is same as pole type in respect to electrical characteristics. Tank and cover are cast iron. All connectors are arranged for wiped joints.

All-Night Latch Type

Identical with the CR7841-C rated 7500 volts, 15 amperes, except that it is equipped with a special latch with following operation: When control circuit, either series or multiple, is first turned on, controller will engage and lock in. If control circuit fails or is disconnected, controller still remains engaged. If control circuit is again energized, controller still remains engaged but will be unlatched. When control circuit is again de-energized, controller will drop out. This is designated as the all-night latch type, CR7841-C5-11 (with series operating coil) and CR7841-C6-12 (with shunt operating coil).

The hand lever may be used to close the controller manually, and the controller may be disconnected by operating the control coil by means of the hand lever.

G-E Type CR7505-H5 Novalux Photoelectric Controllers

For controlling sign lights, floodlights, street lighting circuits, airway and airport lighting. An efficient master of the lighting circuits which it controls by responding to changes in daylight intensity.

Cover has a window of clear glass which allows light to fall on phototube.

The device consists of phototube, Plotron amplifying tube with associated apparatus, sensitive relay, thermal timer, CR2820-1713 relay and CR2810-1265 contactor. Controlling element is the phototube. With a voltage of proper magnitude and polarity applied between the two elements, the device passes a current proportional to the amount of light falling on it. The current (a few micro-amperes) which is set up in the phototube is amplified by a tube of the G-E Plotron type. A sensitive relay is connected in plate current circuit of Plotron, and is energized or de-energized in accordance with amount of light on phototube. Contactor is picked up and dropped out only when sensitive relay is in extreme "in" or "out" position, and then only after a few seconds time delay caused by thermal timer. With two adjustments, one of which controls intensity at which unit picks up in evening; the other controls intensity at which unit drops out in morning.

Contact ratings of 1265 relay: 15 amperes rating at 110 volts a.c.; 15 amperes, 220 volts a.c.; 10 amperes, 125 volts, d.c.; 5 amperes, 250 volts d.c.; 2.4 amperes, inductive load, 125 volts d.c.; 1.2 amperes, inductive load, 250 volts d.c. Rating of 1265 contactor would be 4 amperes at 110 volts a.c. with a lamp load.

Complete information and prices on application.

G-E Type SL Novalux Series Transformers Subway and Aerial Types Protective Device and Film Cutouts

For 60-Cycle, 6.6-Ampere Constant-Current Circuits

Pole Type

The Type SL Transformer is an insulating transformer, the primary winding of which is energized from a long series circuit and the secondary of which is used for supplying current to a small number of lamps connected in series and located where the high potential of the ordinary current series circuit would be objectionable.

Certain classes of lighting require a lower potential than is found on long series lighting circuits, and yet as they function similarly, it is desirable to control them simultaneously with the street lights.

The Type SL Transformer affords an ideal method for this control as the low-voltage series circuit is turned on and off with the closing or opening of the main constant current transformer circuit.

Fixtures with series sockets and film cutouts must be used on these transformers.

The 0.04 to 1-kw. sizes contain no compound; 1 to 5-kw. sizes are compound filled; both are air-cooled. The 5, 7.5 and 10-kw. sizes are oil-filled.

Suspension hooks are furnished with all Type SL Transformers which have a capacity of over 4 kw. If cross arm suspension is required, specify hanger brackets.

Protective devices are included with the transformers except as noted. On subway-type transformers of 0.25 to 4-kw. capacity, the protective device is assembled in the cap of the transformer.

G-E Novalux Cutouts

For Type SL Transformers and Loop Sectionalizing Application

Cutout with Thyrite By-Pass

Disconnecting switch for Type SL transformers rated up to 10 kw., 6.6 to 20 amperes primary; 7.5 kw., 5 amperes primary.

For loops not exceeding 1500 volts (load voltage) 4 to 20 amperes.

Surge voltage by-pass when new Thyrite by-pass is included.

Open circuit shunt, short circuiting transformer or loop in case of sustained open circuit (as from broken line or burnt-out transformer) when Thyrite by-pass or film cutout is used.

Use on any series constant-current circuit up to 10000 volts (operating voltage) to ground, up to 20 amperes normal current.

Thyrite by-pass (or film cutout) must be used in all cases except where connected load consists of Type SL transformer with secondary protective device. If Novalux cutout with Thyrite by-pass or film cutout is used, secondary protective device can be omitted.

Standard package, 2; shipping weight, 27 pounds.

Cat. No. and price do not include Thyrite by-pass or film cutout.

Cat. No. 2991604G1,

Cutout with Cross-Arm Hangereach \$23.00

Cat. No. 2991604G2,

Cutout with Channel Hangereach 23.00

Thyrite By-Pass

Consists of small Thyrite cylinder, two metal end-caps with electrodes forming enclosed spark gap, and one fusible washer pressed on gap electrode.

Thyrite has a negative resistance characteristic, the resistance decreasing as applied voltage is increased.

The Thyrite cylinder is designed so that the rated maximum normal operating voltage produces negligible loss—in the order of 1 watt. A high voltage surge traveling on the line finds in it a low resistance path across the transformer or loop, however, and is therefore by-passed.

Extra heavy surges arc over the spark gaps without damage to cutout or connected apparatus. Power current flows only until end of first half cycle.

Sustained overvoltage due to open circuit in load greatly increases heating in Thyrite cylinder, melting fusible washer, mechanically completing circuit between end caps, short circuiting load. Time: approximately 1½ minutes, depending on voltage applied.

G-E Type IL Novalux Series Transformers

For Use on 60-Cycle, 6.6-Ampere Constant-Current Circuits

Pole-Base Type

Allow the use of high efficiency series lamps where high potential is impracticable and unsafe. No film cutout is required; each lamp is independent of the others in circuit. In case of an accident to one or more, remainder of lamps on circuit burn without interruption.

For use with pendent units, transformers can be mounted on the cross arms of poles.

When lamp wattage varies between 8% above and 20% below normal, secondary current will not vary more than 1.0% with normal primary current and frequency.

Single Light

For operating one 6.6, 15, or 20-ampere series lamps from 6.6-ampere constant-current circuit.

Two Light—In Series

For operating two 6.6, 15, or 20-ampere Mazda series lamps (in series) from 6.6-ampere constant-current circuit.

Transformers operate two lamps (in series) on the secondary. To avoid interruption of service fixtures with series sockets and film cutouts must be used. If both lamps on secondary burn out transformers operate with secondary short circuited.

Special transformers can be furnished for any commercial current, frequency, or lumen lamps. *Can be furnished in vault type †1000/2500-lumen transformers are 1:1 ratio and secondary leads supply 6.6 amperes for both 1000 and 2500-lumen lamps 2500/4000-lumen transformers have secondary leads supplying 6.6 amperes for 2500-lumen lamps and 15 amperes for 4000-lumen lamps. 4000/6000-lumen sizes also have leads which furnish 15 amperes for 4000-lumen lamps and 20 amperes for 6000-lumen lamps. 6000/10000, 10000/15000 and 15000/25000-lumen sizes have one set of secondary leads only supplying 20 amperes since the current required on all the leads is the same.

†Maximum voltage which can be obtained by means of a voltmeter.

§Series sockets with film cutouts must be used with these transformers.

G-E Type H Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled

G-E Single-Phase Distribution Transformers are built on the distributed core, which has been found best adapted both electrically and mechanically to this type of transformer.

Various coil constructions have been developed to meet the particular requirements of designs depending upon unit size and voltage rating. In the larger sizes, circular coils of either disk or cylindrical form are used on account of their greatly superior mechanical qualities, and the facilities they give for rigid mechanical support.

The windings of these G-E Distribution Transformers are carefully dried and filled under

pressure with an insulating compound. This process not only removes all moisture from the insulation and seals the windings against the entrance of moisture, but also makes the winding a solid mass, thus giving it greater mechanical strength and heat conductivity. In the core-wound transformers this treatment is applied to the complete unit, consisting of core and coils. In the form-wound transformers the complete winding is treated as a unit before assembly on the core.

For Nominal 440 or 550-Volt Circuits

APPLICATION.—By connection of the low voltage leads outside the tank, transformers are arranged for series, multiple or three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Hooks are provided with, and included in the weight of all sizes up to 100 kv-a., inclusive.

G-E Type H Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled

For Nominal 2200 and 3810Y-Volt Circuits

APPLICATION.—By connection of the low-voltage leads outside the tank, transformers are arranged for series, multiple or 3-wire service, with the exception of sizes 150 and 200 kv-a., which are suitable for series and 3-wire service only.

SERVICE.—For outdoor and indoor installation.

SUSPENSION HOOKS.—Hooks are provided with, and included in weight of all sizes up to 100 kv-a., inclusive.

For Nominal 4000-Volt Circuits

These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on 2300-4000-volt Y circuits. The use of these transformers give the same service voltages as 10:1 ratio transformers connected between line and neutral.

APPLICATION.—Transformers listed below are also suitable for operation as follows:

High Voltage Rating—4330/4114/3898

Low Voltage Rating—125/250

By connection of low-voltage leads outside the tank, transformers are arranged for series, multiple or 3-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Hooks are provided with, and included in weight of all sizes up to 100 kv-a., inclusive.

G-E Type H Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled
For Nominal 6600 and 11000Y-Volt Circuits

APPLICATION.—For operation on 6600-volt circuits and for supplying 2300 or 4000-volt distribution and motors.

Transformers having voltage rating of 6600/11430Y to 2300 are, when operated in bank, suitable for transforming from 6600 to 2300; from 6600 to 4000Y or from 11430Y to 2300. They should not be used connected in Y on both high- and low-voltage sides simultaneously to transform from 11430Y to 4000Y as this connection may result in the presence of excessive stresses in the windings due to harmonic voltages.

SERVICE.—All sizes are suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Suspension hooks are provided with and included in the weight of all sizes up to 50 kv-a., inclusive.

Name Plate Voltage Rating:

G-E Air-Cooled Transformers

Type M—For Indoor and Outdoor Service

Type D—For Indoor Service Only

G-E Air-Cooled Transformers have a wide range of applications on circuits 600 volts and below. Such applications include supplying the proper voltage for special lamps, tools, bells, buzzers, airport lights, brazing, welding, testing and industrial heating equipment. They are also used for insulating circuits to promote safety, operating lights and portable tools from power circuits, boosting voltage, phase changing and many other unusual applications.

Type M Transformer

in transformers rated 10 kv-a. and below, as well as auto-transformers of equivalent physical size, the Type M construction is used. It forms a solid, compact unit which dissipates heat from its external surfaces by radiation. In the larger sizes, the Type D, natural-draft construction is used. The transformer is effectively cooled by air currents which enter ventilating holes in the housing and circulate around the core and coils.

These transformers are built in standard ratings up to 50 kv-a. and 600 volts, 60 cycles. Special transformers, up to 200 kv-a. for 60-cycle circuits, are built from an extensive line of standardized parts, economically and for quick delivery. They are applicable to circuits of 600 volts and below.

Type D Transformer

Type M transformers, with the exception of the larger sign-lighting and boosting transformers, may be adapted to enclosed wiring installations through the addition of a junction box directly over the leads and bushing. The junction box can readily be attached to units already installed as well as to new transformers.

The 90-degree junction boxes can be provided for Type D transformers. These facilitate conduit connections, as they can be mounted on the cover plate in four different positions. The use of this box is optional with standard Type D single-phase units, as conduit may be run directly into the side plates. However in phase-changing and special units, the leads of which are brought through the cover, these junction boxes must be used for conduit connection. In all Type D transformers, separate boxes are required for primary and secondary leads.

Small Type M Transformer with Junction Box

G-E Transformers Used as Auto-Transformers for Boosting Voltage

Air Cooled, Single or 3-Phase, 60 Cycles

Transformers for sign lighting are extensively used for boosting single or 3-phase circuits by connecting them as auto-transformers. They are particularly adapted for boosting the 3-phase voltage of a secondary network system.

As they can be connected in series or in multiple, a 5, 10 or 20 per cent boost is possible as shown in the tabulation below. Because of the small voltage change required in such applications, the output of these small transformers is exceedingly large in comparison with their physical size.

The kv-a. output of one single-phase unit, connected as an auto-transformer, is one-third of the bank output.

Unit Kv-a. of Transformer	KV-A. BANK OUTPUT—3 UNITS Y CONNECTED AS AUTO-TRANSFORMERS—WHEN CONNECTED FOR THESE RATIOS			
	199Y to 220Y	199Y to 239Y	398Y to 420Y	398Y to 440Y
.100	3.3	1.8	6.3	3.3

1	33	18	63	33
1.5	49.5	27	94.5	49.5
2	66	36	126	66
3	99	54	189	99
5	165	90	315	165

3-Phase Y-Connected Auto-Transformers Type M—For Indoor or Outdoor Service

The Y-connected auto-transformers listed below are designed primarily to boost the voltage of a 3-phase secondary network system. They give the desired voltage at the minimum cost. Because of the small physical size as compared to the kv-a. output of the bank, an installation very compact and neat in appearance is obtained.

Auto-transformers of the ratings listed consist of three units with three leads brought out of each unit. In banks with a rated output of 50 kv-a. and below, the three units are mounted side by side on a metal plate. The larger banks consist of three separate units to be individually mounted.

Although the 208 to 230-volt transformation is most common, a great many special ratios are required such as 199 to 230 volts, or 208 to 230 and 240 volts. Auto-transformers of all these special ratios can be furnished quickly and economically as the same parts and construction are used as on the listed ratings.

Care should be exercised in ordering auto-transformers that the installation will meet local electrical inspector's requirements.

Because of the heavy secondary leads and complications in connections, standard junction boxes are not recommended. When enclosed wiring is desired, a modified design can be furnished.

G-E Transformers and Auto-Transformers for Phase Changing

Air-Cooled, 3 to 2, or 2 to 3-Phase, 50 or 60 Cycles

Type M—For Indoor or Outdoor Service

Type D—For Indoor Service Only

Phase-changing transformers and auto-transformers are primarily of use when a phase change is made on a distribution system. They permit the economical use of motors and other polyphase equipment which would otherwise become obsolete.

The two lines of auto-transformers are not interchangeable and it is necessary to determine whether the 2-phase circuit is 3-wire or 4-wire in order to select the proper unit. These auto-transformers cannot be used on a 4-wire circuit having the mid-points of the two phases connected together. For this application, the 2-winding transformer is recommended, although especially designed auto-transformers can be furnished.

G-E Type M Service Transformers

To Supply or Insulate 115 or 230-Volt Circuits

Air-Cooled, Single-Phase, 60 Cycles

For Indoor or Outdoor Service

For Oil Well, Mine and Pump-House Service

These transformers are designed especially to be used at the end of long lines such as are generally used to supply oil well, mine and pump-house service. Because of the wide voltage variation likely to be encountered at such locations, these transformers are designed to operate satisfactorily from 440 to 525 volts and may be used on either a 50 or 60-cycle circuit. The secondary voltages will vary accordingly. They are arranged to be connected directly into a conduit system and are supplied with 3/4-inch pipe nipples and 12-inch leads as shown in illustration.

Primary 440 Volts—Secondary 110 Volts
525 131

Cat. No.	Each	Kv-a. Output Cont. 55° C. Rise	Depth In.	Wall Space Inches	*Junction Box Cat. No.	Approx. Ship. Wt. Lbs.
9TM852A	\$27.00	.100	3 7/8	4 7/8 x11	Conduit	17
9TM853A	31.00	.250	3 7/8	4 7/8 x12 1/4	Connection	23
9TM854A	42.00	.500	4 1/2	5 1/2 x10 7/8	Only	35

*Supplied with 3/4-inch pipe nipple.

These transformers are also suitable for 50-cycle operation.

For General Light and Power Service

These transformers are designed to reduce the voltage of 230, 460 or 575-volt power circuits to either 115 or 230 volts for supplying lights and other equipment. Some of the ratings are also suitable for insulating one circuit from another without change in voltage. In addition to the many single-phase applications, they can be used in banks on poly-phase circuits.

The classification "service" is applied to transformers used to supply a standard utilization voltage from another standard utilization voltage.

G-E Type M Service Auto-Transformers

To Supply 115 and 230-Volt Circuits
For Indoor or Outdoor Service
For General Light and Power Service

Primary	230 Volts—Secondary	110, 115, 120		Volts
		2-Wire or	220/110	
220		230/115		
230		240/120		
		3-Wire		

Air-Cooled, Single-Phase, 60 Cycles

Auto-transformers are more economical and smaller than transformers designed to carry the same load. Within their voltage limitations, they will perform the same function as service transformers with the exception of insulating two circuits. They may be used to obtain 115 volts from a 230-volt circuit, to derive a neutral on a 230-volt 2-wire circuit, or to balance a 115/230-volt 3-wire circuit. They also may be used in banks on polyphase circuits.

Care should be exercised in ordering auto-transformers that the installation will meet local electrical inspector's requirements.

G-E Type M Air-Cooled Transformers

For 32-Volt Applications
For Indoor or Outdoor Service

Primary	110/220		30.6	
	115/230 Volts—Secondary	120/240	32	33.4
Single-Phase, 60 Cycles				

These transformers derive 32-volt circuits from 115 or 230-volt lighting or power circuits; 32-volt portable lamps and portable tools are frequently used in mines, steel plants, neat packing plants and in damp locations to prevent injury in case of accidental grounding of the circuit through the operator's body. The 32-volt lamps are often more economical and have longer life than those rated at higher voltages.

These transformers can also be used as auto-transformers to boost the voltage of circuits. When so connected, the kv-a. output of each transformer will equal the kv-a. output listed below, multiplied by $\left(\frac{H.V.}{H.V.-L.V.}\right)$ and the kv-a. output of a 3-phase bank will be three times that of each unit.

G-E Type M Sign-Lighting Transformers

For 11 1/2 or 23-Volt Applications
For Indoor or Outdoor Service

Primary	110/220		Secondary	11 1/2/23 Volts	
	115/230 Volts—Secondary	120/240		12/24	
Air-Cooled, Single Phase, 60 Cycles					

Designed primarily for sign lighting. As these transformers are compact, light in weight, and weatherproof, they can be mounted in any convenient location such as the back of the sign.

These transformers have a wide range of application, as both the primary and secondary windings are arranged for series-multiple connections. They may be connected as a transformer with the secondary supplying 11 1/2 or 23 volts, 2-wire or a 23/11 1/2 volts, 3-wire; also as an auto-transformer to deliver 126 1/2 or 138 volts from a 115-volt supply, or 241 1/2 or 253 volts from a 230-volt supply. Two or more units may be used in various combinations to obtain many other special voltages.

One of the many special applications is pipe thawing. Two transformers are used, the primaries being connected in multiple and the secondaries in series to give 46 volts. This gives sufficient capacity for thawing pipes up to 1-inch diameter. The current can be controlled to some extent by looping the secondary cables.

G-E D & W Type Oil Fuse Cutouts

**Subway Type
100-200 Amperes**

Should not be installed to give overload protection.

Used on distribution systems at tap-offs, sectionalizing points and outdoor installations of distribution transformers, constant current transformers, capacitors and industrial equipment such as hoists, etc. Used either indoor or outdoor; because of inverse-time blowing characteristics, afford best protection against short circuits for motors and control. These characteristics will assure the blowing of fuse link before destructive burning occurs in the copper of the motor or control.

These cutouts are particularly advantageous for the following applications: where short-circuit currents are extremely heavy; where very high-speed operation is essential; all subway installations; where protection and switching are required for replacement of potheads; where quiet operation is desirable; where cutouts are exposed to smoke, corrosive fumes, salt air, explosive gases or inflammable dust; all indoor installations; where it is desired to have no exposed live parts, whether cutout is in the open or the closed position.

**Pole Type
100-300 Amperes**

Cutouts have the following operating advantages:
SAFETY IN FUSE LINK RENEWAL.—Fuse link is surrounded by a Textolite sleeve, which prevents mechanical damage or accidental electric contact, while carrier is being inserted in cutout. All live parts are enclosed. Fuse carrier is locked in place before circuit is closed.
SAFETY IN OPERATION.—Flame from arc is confined within housing, thus preventing ignition of explosive gases and external damage.

RELIABILITY.—Fuse link is under oil, which prevents deterioration from oxidation or electrolysis. Gases are released, but oil is confined. Subway fuse cutouts have operated for years while submerged in water.

SIMPLICITY.—Fuse links are quickly and easily replaced. Oil level can be maintained without removing cutouts from service.

OPENING UNDER LOAD.—Heavy, self-aligning contacts make possible repeated opening under load.

WIDE RANGE OF PROTECTION AFFORDED.—Cutouts may be fused closely to load, providing simultaneously, protection against overload and heavy short circuits.

*9F2A9	250.00	7500	10 to 100	3000	3750	200	26

*The bushings on Cat. No. 9F2A9 and 9F2A15 cutouts are not the separable-sleeve type but are designed for connection to the cables using standard splicing material.
 The 2500-volt cutouts are suitable for operation on 4000-volt Y-connected circuits with dead grounded neutral. In all cases two cutouts are required between lines.

†The plain type links for 100 amperes and below listed for these cutouts will operate satisfactorily on 5000 volts.
 ‡When these cutouts are used on 5000-volt circuits where reactive type fuse links are required, use links Cat. Nos. 295601 to 295605. Links Cat. Nos. 295591 to 295600 are only good for 2500-volt circuits.

G-E Expulsion Type Distribution Fuse Cutouts

The design of these cutouts embodies the following features:

SAFETY.—Fuse holder is removed from circuit when door is opened—door closes upward, protecting lineman should cutout be closed on a short circuit—door can be opened or closed by a switch hook; cutout hangs low on the cross-arm.

RELIABILITY.—Expulsion principle of operation—gases are expelled outside housing—interlocking barriers prevent conducting gas

from short-circuiting terminals—high interrupting capacity. Heavy clips insure good contact and prevent overheating.

SIMPLICITY.—Cutouts are suitable for right or left-hand entrance leads. Link holder can be removed and replaced with one hand; cannot be replaced upside down. Hanger adjustable for 2 3/4 to 4-inch crossarm.

DURABILITY.—Glazed porcelain housing with molded compound door and galvanized hanger.

Cat. No. 6X2433

G-E Transformer Fuse Cutouts

Tables for Selecting Proper Fuse Cutouts

Cutouts are so chosen that full-load current of transformer will never exceed 65% of fuse link rating for expulsion cutouts, and 75% of rating for oil-filled cutouts. It is imperative that the maximum short-circuit current at the point of installation shall not exceed the interrupting rating of the cutout. When two or more cutouts of the same type are shown, they all meet the voltage and current requirements but have different interrupting-capacity ratings. See cutout listing for these ratings.

Table I—Distribution Fuse Cutouts for Single-Phase Transformer Installations (Except Subway)

The cutouts given for Y ratings can be used only when the neutral is grounded.

**No. 9LA7A11 G-E Aluminum Lightning
Arresters
D.C.**

Arresters should be installed on each car and at the stations and substations; on each feeder and each generator or synchronous converter.

Suitable for either indoor or outdoor installations. Mounted in a wooden box.

Circuit volts, 500-750. Standard package, 4.

Shipping weight, 45 pounds.

No. 9LA7A11.....each \$50.00

Prices on arresters for voltages higher than 500-750, quoted on request.

**G-E Open Type Fuse Cutouts with
Drop-Out Fuse Holders**

Cutout gives a positive indication that circuit is open whenever a fuse link is blown, by causing the fuse holder to drop to a horizontal position.

Fuse holder tube is weather resistant and mechanical strong; will not warp or split. Can be easily replaced without renewing metal parts of fuse holder.

A cone on fuse holder cap maintains contact for sufficient time after fuse link melts to assure complete interruption of short

circuit current within holder tube.

An automatic latch, incorporated in toggle mechanism prevents fuse holder from falling out of support, curing the recoil resulting from expulsion action. A switch hook socket permits the use of any standard switch hook.

1-100 Amperes, 5000 Volts

Interrupting Capacity, 2000 Amperes at 60 Cycles

G-E Thyrite Lightning Arresters

Station Type—For Indoor or Outdoor Service

Single-Pole Units

Thyrite, the active element of the Thyrite arrester, has no time lag, has definite characteristics that remain unchanged in use, acting as a virtual insulator at low voltage, but a good conductor at high voltages. For the first time, accurate predictions can be made of arrester performance under various operating conditions.

Thyrite arresters can be installed indoors or outdoors on any voltage. They are built of self-contained units, each having the necessary gap structure and Thyrite elements enclosed in a wet process porcelain container, sealed at each end by heat-treated aluminum castings. Small size, economical, simple and easy assembly, result from the interchangeable unit system used.

The following information applies to single-pole arresters; for 3-phase circuits, use three single-pole arresters.

Cat. No. 9LA1D8

Arresters rated 73 kv. and below are suitable for application up to 6000 feet altitude.

*Altitude: Arresters except Cat. Nos. 2981437G5 and 2981437G7 can be used at these ratings up to 6000 feet altitude, but when arrester Cat. No. 2981437G4 is to be used between 4000 and 6000 feet, the purchaser should state the approximate altitude at which it is to be installed so that it can be furnished with the correct gap setting. For altitudes above 6000 feet, the purchaser should obtain special recommendations for all arresters. Cat. Nos. 2981437G5 and 2981437G7 can be used only up to 4000 feet.

Pellet Type

9LA10A1. Use two arresters at a single-phase installation between outside wires. A system is considered solidly grounded when no resistance or reactance is used in grounding the neutral. †Cat. No. of arrester does not include any form of mounting. Refer to Table 4.

‡Compression-chamber type, others are pellet type except those marked †, which are Thyrite type.

§These compression-chamber arresters are also suitable for grounded-neutral circuits of ratings up to 750 volts. The following table shows how they differ.

Cat. No.	Poles	LENGTH LEAD, INCHES	Ground
2906822G1	Single	36	18

Crystal Valve A.C. Lightning Arresters

Crystal Valve A.C. Lightning Arresters

Typical Crystal Valve Arresters

Crystal Valve Lightning Arresters represent the latest development in the design of highly efficient lightning protective apparatus and are the result of some highly successful researches in the rectifying properties and value characteristics of refractory conducting crystals. They are characterized by the following important advantages:

- Low initial or relief voltage for lightning disturbances.
- High discharge rate due to low internal impedance.
- They are of the true valve with all its attendant advantages.
- Cathode Ray Oscillograph tests show that their speed of operation is exceedingly high.
- Cathode Ray tests show time or speed characteristics are little affected by the steepness of the wave fronts.
- Does not cause radio interference.
- Bodies and caps are made from high grade wet process porcelain.
- They suffer no measurable deterioration in service.
- Their operating characteristics permit of their handling rapidly recurring discharges over long periods of time without danger of self destruction.
- Their impedance decreases as the severity of the discharge increases.
- They require no inspection other than a visual inspection.
- They are small in size and a low first cost, permitting them to be installed directly on the transformer pole and used to protect small transformers as well as large.
- Due to their operating characteristics they have an unusually long life.
- Crystal Valve Arresters are regularly provided with line and ground leads of No. 6 B. & S. gauge stranded cable, 18 inches long and with hot galvanized strap hangers.

Voltage Ratings

No.	Type CV Form	Table One For Delta or Ungrounded Y 3-Phase Sys- tems, Volts	Table Two For 3-Phase Y Systems with Solidly Grounded Neutral, Volts

Mounting
Bracket

Fig. 2
Nos. 50932, 50933
and 50934
With Type DA
Mounting
Bracket

All voltages specified are maximum phase-phase voltages.

For straight single-phase circuits use arresters recommended in Table 1.

Treat single-phase circuits split from 2-phase, and single and 2-phase circuits split from 3-phase circuits in accordance with the recommendations covering the particular type of circuit from which they are split.

For 2-phase 4-wire ungrounded circuits use arresters recommended in Table 1. For 2-phase 3-wire circuits with ungrounded neutral use arresters recommended in Table 1 for the phase wires; for the neutral wire use arresters rated at 71 per cent of the phase-phase voltage.

For the neutral wire of 3-phase 4-wire ungrounded Y circuits use arresters rated at 58 per cent of the phase-phase voltage.

For neutral protection on either 2 or 3-phase circuits where the neutral is solidly grounded, use Types T-300, N or NS arresters. If, due to unbalancing, the voltage between neutral and ground is between 350 and 750 volts, use type CV form D arrester, listed below.

Form 11 arrester is designed for application to systems having phase to phase voltages of from 15,000 to 25,000; these include Delta systems, Y systems with solidly grounded neutral, and Y systems with ungrounded neutral. On a 4-wire ungrounded Y system form 11 arrester should be used on the phase wires while the form 10 arrester should be used on the neutral. On 4-wire Y systems with solidly grounded neutral, for neutral protection use Type T-300, N or NS arresters. If, due to unbalancing, the voltage between neutral and ground is above 350, use any of the listed Crystal Valve Arresters rated for the maximum voltage existing between neutral and ground.

Three E Outdoor Expulsion Fuse Disconnects

Type F.V.H.

Type F.V.F.

These fuse disconnects are equipped with hinges which enable operators to remove the fuse tube for re-filling. The use links are enclosed in live rubber tubing. On low capacities this tube confines the gases until sufficient pressure is reached to expel the entire blown link and rubber tube. It also absorbs some of the mechanical shock caused by blowing on heavy short circuit. Obtainable from 7500 to 69,000-volt. Maximum rating, 100 amperes.

Three-E 6600 and 8600 Type Air Break Switches

These switches are easily installed under almost any mounting conditions. Contacts are full floating, self-aligning, and generous in design. Several types of operating mechanisms available. In voltages from 5000 to 69,000-volt, and from 200 to 4000 amperes.

8600 Type

6600 Type

Three-E Indoor Type Gang Operated Disconnecting Switches

The construction is the same as the single pole switches. Any combination of front and back connection can be obtained. Operating handles are available for any operating mounting conditions. A complete line of accessories, such as insulating barriers, etc. can be furnished.

Three-E Metal Enclosed Switching and Fuse Cabinets

Metal enclosed cabinets can be installed economically and operated safely on industrial power supply installations. The space required is much less than open type bus work.

All cabinets are designed so that the equipment is readily accessible for alteration or inspection.

Three-E Outdoor Bus Supports are of interchangeable construction. The illustrations are for flat mounting and are designated as Type FU. For pipe mounting, the letter P should be substituted for the letter F.

These bus supports can be used on either a.c. or d.c. service. They are available for voltages from 7500 to 69,000.

A complete line of accessories, such as mounting and adjustable top adapters, is available.

Ask for Bulletin Giving Complete Information

Three-E Indoor Type Disconnecting Switches

The double blade type of construction is used throughout, giving the advantages of low temperature rise, self-aligning contacts, etc. The clips are cast copper.

Built for voltages from 110 to 34,500 and ampere capacity from 100 to 5,000.

Switches can be supplied in all combinations of front and back connection, of the single throw, double throw, and transfer types with or without blade locks, for flat or pipe mounting on steel, slate, marble, ebony asbestos and alberene stone.

Insulating barriers, blade stops, and terminals can be supplied for all switches.

Three-E Form A-1 Indoor Bus Supports For Flat Vertical Bus Bar

Type HF

Type AF

Type HP

Type AP

Type KF

Type KP

Type GF

Type GP

All bus supports illustrated are the Form A-1. Heavy pressed steel mounting bases are used on this form of bus support.

These supports are available for voltages from 5000 to 34,500 and the cantilever strength at insulator cap. of 6000 inch pounds.

Indoor bus supports are also furnished in what is known as Form A. This form uses heavy cast malleable bases.

For Flat Horizontal Bus Bar

Three-E Gang Operated Telescoping Isolators

This device is known as porcelain clad and was designed principally for economy and safety. The isolator uses less space than any other disconnecting device of the same capacity.

All live parts are completely enclosed in porcelain, both in the open and closed positions. This feature minimizes electrical accidents to operators and workmen.

The isolator can be mounted vertically or horizontally.

Available in voltages of 7500, 15,000, and 23,000 volts and for 600, 1200, and 2000 amperes.

Three-E Clamp Insulator Supports

Type CIL Pipe Mounting
Type CIL Flat Mounting
Type MIL Flat Mounting
 Consists of porcelain spools held by metal clamps. The lower half is made of heavy pressed steel and the top half of heavy pressed non-ferrous metal. Also available with a heavy cast malleable base instead of pressed steel. Can be used on either a.c. or d.c. service. Available for conductor sizes ranging from 5/16 to 3 1/2 inches.

Three-E Bus Clamps

The Three-E line of bus clamps is complete in every respect. Clamps can be supplied for all commercial size bars.

The illustrations show a medium duty Type H and Type A, and a heavy duty Type H and Type A Clamp.

Three-E Electrical Copper Fittings For Wire, Cable, Rod, Tubing and Bar

The above illustrations show but a small portion of the Three-E line of conductor fittings. Fittings can be supplied for any size or kind of conductor.

Three-E Iron Pipe Fittings

The above illustrations show but a small portion of the Three-E line of pipe fittings. Fittings can be supplied for the commercial pipe sizes in all manner of shapes to meet most any condition.

G-E Type I-16 Watthour Meters

Single-Phase, 60 Cycles

Designed for residential or commercial service. For high torque large overload capacity; excellent overload accuracy, no tendency to creep.

A single iron casing forms the base, the housing for motor element and the support for damping magnets, bearings and register.

Furnished with glass cover and special sealing arrangement. All parts readily accessible when back plate is removed.

Meters for Use with Instrument Transformers

For Use with Current and Potential Transformers
Secondary Rating, 5 Amperes, 115 Volts

Cat. No. 10X208.....each \$21.00

For Use with Current Transformers
Secondary Rating, 5 Amperes

†Cat. No.	Each	Circuit Rating	Meter
31X436	\$21.00	115-120 Volts, 2-Wire	2-Wire
†10X209	23.00	230-240 Volts, 2-Wire	2-Wire
10X210	23.00	230-240 Volts, 3-Wire	*3-Wire

Meters can be supplied with top bearing detent to prevent negative registration for \$1.00 net extra.

*This is a 6-terminal meter with a 3-wire winding intended for use with 2 separate current transformers on a 3-wire circuit.

†3-wire, single-phase circuits can be metered with the 2-wire meter Cat. No. 10X209 when connected with double-primary, single-secondary, 3-wire type of current transformer.

†Cat. Nos. of meters do not include transformers and the order should state the ratio of the transformers with which they will be used that they may be calibrated and furnished with suitable register to read directly the primary energy. When meters are to be suitable for use with instrument transformers but not rated nor equipped with direct-reading registers for any particular transformer combination, order should so state.

Meters may be used on circuits the voltage of which may be 10% above or below the minimum rated voltage of the meter. When ordering meters for voltages outside of these limits, specify the normal operating voltage.

G-E Type D-14 Polyphase Watthour Meters

2-Element, 60 Cycles

A single iron casting constitutes the base and frame and provides a rigid mounting for the parts as well as a housing for the elements. Parts are readily accessible. The one-piece terminal block is removable by removing two screws, and includes 8 current terminals and 7 potential and demand terminals.

Glass cover fits against cork gasket.

If wanted for circuits having voltage more than 10% above or below the minimum rated voltages below, specify the normal operating voltage; otherwise order by catalog number.

G-E D.C. Watthour Commutating Meters

For House Service

Type C-6—Side Connected—Metal Cover

In this meter the resistor for the potential circuit is combined with the light load compensating coil, no other external resistance being used. The entire meter element is supported on a frame of aluminum alloy. The back is also cast of aluminum alloy. Cover is of zinc with domed front, which adds greatly to its strength, and provided with a single window to observe the dial.

The external finish is dull black, presenting a neat appearance. The frame and various parts inside the meter retain their natural finish of aluminum and brass.

Meters can be equipped with ratchet device to prevent negative registration for \$2.00 net extra.

*When ordering meters for voltages outside of these limits the normal operating voltage should be specified.

Type C-15—Bottom Connected—Metal Cover

This meter is identical in principle with the Type C-6 meter and retains those essential features which insure successful operation.

Meter differs largely in mechanical details, which are possible by limiting its ratings to 5, 10 and 15 amperes, 2 and 3-wire, and a maximum of 250 volts.

These differences are reduction in size and weight and the use of Type 1-16 meter parts, such as register, terminals, and magnets, including micrometer full-load adjustment device.

Has removable terminals and separately sealed terminal chamber.

**G-E Watthour Meters
For Switchboard Service
60 Cycles**

Type IS-8

This line combines the improved elements of G-E front-connected meters with the narrow switchboard case. May be mounted on 5 1/2-inch centers permitting maximum number on panel of given width.

Finished in aluminum interior and black exterior. Steel parts galvanized before finish is applied.

Self-contained sizes have good accuracy on loads up to 300%; ample margin of safety on greater loads. Polyphase types have potential indicating lamps. In case of an open circuit, lamp on that phase shows "out." If wanted for circuits having voltage more than 10% above or below minimum rated voltages, specify normal operating voltage.

*Meter only. Transformers should be ordered by Cat. No. and rating. If meters are to be used with instrument transformers in customer's possession, ratio of transformers must be given on order. Unless otherwise specified, meters ordered with transformers or for use with transformers in customer's possession will be calibrated and furnished with suitable register to read directly the primary energy. When ordering meters for voltages outside these limits, specify normal voltage.

Meters can be supplied with top bearing detent to prevent registration for \$1.00 net extra.

Prices on meters for other frequencies on request.

G-E Type KT Electric Time Meters

Consists of a little synchronous motor, geared to a registering counter, the whole mounted in a case about 4 1/2 inches in diameter and 2 3/4 inches deep.

Meter will measure actual operating time of any electric equipment depending on a.c. For example, meter may be used to indicate machine hours by showing motor running hours, the "on" time of street lighting circuits, etc.

Supplied to register hours, tenths of hours or minutes. In ordering, specify register desired, voltage and cycles of circuit; whether portable, conduit or switchboard type.

†150/15/3	15/1.5/.15	100.00	150

†Conforms with A.R.A. specifications. ‡Designed for railway use; all ranges protected by replaceable fuses.

Model 155 Weston Portable A.C. Instruments

Movable iron type. Scale length, 5 1/4 inches. Black walnut case without cover, leather carrying handle.

Power consumption: Voltmeters at 115 volts, 6.5 watts; at 115 volts, 25 or 60 cycles, 6.5 volt-amperes. Ammeters at 5 amperes, 1.1 watts; at 5 amperes, 25 cycles, 1.1 volt-amperes; at 5 amperes, 60 cycles, 1.4 volt-amperes.

*Voltmeters

Self-contained up to and including 750 volts. Higher ranges may be obtained by using Models 311 or 457 portable potential transformers in conjunction with 150-volt instrument. Dimen.: to 300 v., 7x7 1/8x3 1/4"; above 300 v., 7 3/4x8 3/4x1". Wt.: to 300 v., 4 lbs.; above 300 v., 5 lbs.

Double range milliammeters, prices on application.

Leather cases: For voltmeters up to and including 300 volts, ammeters up to and including 300 amperes, and all milliammeters, \$11.00; for voltmeters above 300 volts, \$14.00; for ammeters above 300 amperes, \$12.00.

Model 433 Weston Portable A.C. Instruments

Electromagnetic or moving iron type instruments contained in bakelite cases with leather carrying handles. Shielded from external magnetic fields.

Instruments can be left in circuit continuously without overheating, therefore no contact key is used.

Dimensions, 5 $\frac{1}{16}$ x6 $\frac{1}{2}$ x3 $\frac{1}{2}$ inches; scale length, 3 $\frac{1}{16}$ inches. Weight, 2 $\frac{1}{2}$ pounds.

Voltmeters

Self-contained for ranges shown. Higher ranges obtained by using multipliers or Model 311 or 457 potential transformer in conjunction with a 150-volt instrument; for use on frequencies up to 133 cycles per second.

Voltmeters to be used on 500 cycles, add \$4.00 to prices.

Single Range		Double Range	
Ranges	Each	Ranges	Each
10	\$41.00	100	\$41.00

250	39.00	50	39.00

†Also available in double range combinations.

Model 432 Weston Portable D.C. and Single-Phase A.C. Wattmeters

This wattmeter is of the electro-dynamometer type, accurate within 1/2 of 1%. Shielded from external magnetic fields.

Made with double voltage and single and double current ranges, self-contained up to 300 volts and 50 amperes. Potential ranges up to 750 volts are available by using external multipliers, higher ranges require the use of potential transformers such as the Model 311 or 457. Current ranges can be extended beyond 50 amperes by using a 5-ampere instrument in conjunction with either the Model 312, 313 or 461 current transformers.

Potential ranges have maximum voltage capacities as shown in the range listing. The maximum capacity of the current ranges is 50% greater than the normal rated current capacity.

These instruments are accurate on all commercial frequencies up to 133 cycles per second. The phase angle is negligible on such frequencies. They may be used on d.c. and checked in comparison with d.c. standards. The temperature error is less than 1% for 25° C. change in temperature.

As the working error is negligible, they may be left in circuit continuously without appreciable effect on the accuracy.

Power consumption: Potential side, at 115 volts, 1.2 watts; at 115 volts, 25 or 60 cycles, 1.2 volt-amperes. Current side, at 5 amperes, .67 watt; at 5 amperes, 25 cycles, .73 volt-ampere and at 5 amperes, 60 cycles, .98 volt-ampere.

Dimensions: 6 $\frac{1}{2}$ x5 $\frac{1}{4}$ x3 $\frac{1}{2}$ inches; scale length, 3 $\frac{1}{16}$ inches. Weight, 3 $\frac{1}{4}$ pounds.

Model 430 Weston Portable D.C. Instruments

Accurate within 1/2 of 1%. Permanent magnet moving coil type. Unshielded from external magnetic fields.

Voltmeters are made with single and triple ranges at a standard sensitivity of 1000 ohms per volt, with 5000 ohms per volt also available at an increase in price.

Ammeters and milliammeters regularly made with single and triple ranges, self-contained up to 50 amperes inclusive. Double ranges available on special order. Microammeters are made only in single range form.

Voltmeters with triple ranges only; sensitivity, 1000 ohms per volt. Available with self-contained ranges of 300 volts and 50 amperes. Prices on application.

Dimensions, 5 1/4 x 6 1/4 x 3 1/2 inches; scale length, 4 inches. Approximate weight, 3 1/2 pounds.

Leather Case for Model 280 Instruments.....each \$3.00

Model 540 Weston Portable Fused 6-Range Volt-Ammeters For D.C. Only

Accurate within 1%. Permanent magnet moving coil type. Contained in bakelite case with hinged cover and leather carrying strap.

All ranges fused for protection from overloads. Voltage ranges protected by single fuse located in a cap. Each of current ranges protected by individual fuse mounted in special compartment covered by hinged back. Ranges are brought out through selector switch to 3 binding posts, a common +, a current and a potential post. By this arrangement instrument can be so connected to circuit that both current and voltage readings can be taken by turning switch without changing connections. Line is closed at all times when connecting to ammeter binding post.

Dimensions, 3 5/16 x 4 7/8 x 2 1/2 inches; scale length, 2 1/16 inches. Approximate weight, 2 pounds.

Extra replacement fuses in assorted lots of one dozen, \$1.00. When ordering, give range of instrument and quantity of fuses desired for each range.

Model 330 Weston Portable A.C.

Accurate within 1% at 60 cycles, 2% at 25 to 100 cycles. Iron core dynamometer type. Contained in a mottled red and black bakelite case with hinged cover and leather carrying handle.

In this type of voltmeter, low ranges combined with an unusually high sensitivity are possible. For use wherever current drain caused by instrument must be limited to a low value. Although the high sensitivities of the copper oxide type of voltmeter are not possible with this meter, nevertheless its accuracy is unaffected by wave form and variations in frequencies over relatively wide limits.

A range-changing switch is incorporated for selection of ranges. To eliminate parallax errors and facilitate accurate readings, a knife-edged pointer and mirror scale are used.

Dimensions, 3 1/16 x 4 7/8 x 1 13/16 inches; scale length, 2 1/16 inches. Approximate weight, 1 3/4 pounds.

For measurement of a.c. voltages below .2 volt, the use of Model 482 thermocouple instruments is recommended.

Ranges	Ohms per Volt	Scale Divisions	Each

Model 539 Weston Portable Current Transformers

For use with Model 528 ammeters. Primary ranges: 2, 5, 10 and 20 amperes, self-contained primary; maximum of 200 amperes inserted primary. Weight, 2 3/8 pounds. Model 539, Size 5 1/2 x 4 1/8 x 1 1/8 Incheseach \$28.00

Model 461 Weston Portable Multi-Range Current Transformers

Has 4 self-contained primary ranges of 10, 20, 50 and 100 amperes to which connections are made by means of binding posts; with one turn of wire through core opening a primary range of 800 amperes results; with 2 turns, 400 amperes; with 1 turn, 200 amperes, etc. Secondary current rating at normal primary current is 5 amperes. A short-circuiting switch is provided for secondary winding to prevent damage to transformer if secondary circuit should be opened while current is on primary.

Maximum secondary burden is 5 volt-amperes. Transformer is contained in a black, moulded bakelite case.

Has a ratio accuracy sufficiently high for use with Models 155 and 433 ammeters or Models 329 and 432 wattmeters without the use of correction curves when used on frequencies of from 25 to 133 cycles per second, and with secondary burdens within limit of 5 volt-amperes. Line potentials up to 2500 volts are permissible. When ordering correction curves state model, type and serial number of instruments to be used and frequency or frequencies at which curves are to be made. If more than one curve is required with different combinations of instruments, list those combinations. State length and size of leads to be used, otherwise 10-foot leads of No. 14 B. & S. gauge (resistance .05 ohms) will be assumed.

Dimensions, $6\frac{5}{8} \times 7\frac{7}{8} \times 2\frac{3}{4}$ inches. Weight, $7\frac{1}{4}$ pounds.
 Model 461.....each \$73.50
 Leather Case.....each 9.00

Model 457 Weston Portable Potential Transformers

Designed to meet the demand for a compact, light weight portable transformer which can be conveniently transported with other measuring instruments, and yet will perform with a high degree of accuracy.

Contained in a black walnut case with hinged cover, lock and leather carrying strap.

Primary range is changed by means of a range-changing switch which enables the ratio of primary

ranges of 4 to 1 to be easily selected.

Designed for a maximum secondary burden of 25 volt-amperes at 115 volts and frequencies of from 50 to 150 cycles per second. Ratio accuracy is within one-half per cent from 0 to 25 volt-amperes secondary burden which is sufficient for use with Models 155, 433, 329 or 432 without the use of correction curves. If correction curves are desired, state model and serial numbers of instruments to be used, and frequency or frequencies at which curves are to be made. If more than one curve is required with different combinations of instruments, list combinations.

Primary to secondary tested for breakdown at 10000 volts for one minute.

Frequency per second, 50 to 150 cycles.
 Dimensions, $8\frac{5}{8} \times 5\frac{3}{4} \times 5\frac{3}{8}$ inches. Weight $11\frac{1}{2}$ pounds.

Normal	Volts		Each
		Maximum	
2300/575 to 115	$\left\{ \begin{array}{l} 3000/750 \text{ to } 150 \text{ at } 60 \text{ Cy.} \\ 2500/625 \text{ to } 125 \text{ at } 50 \text{ Cy.} \end{array} \right\}$		\$145.00
3000/750 to 100		3750/937.5 to 125	145.00

Model 564 Weston Volt-Ohmmeters

The equipment consists of a Model 301 with four 1000 ohms per volt voltage ranges of 600/300/30/3 and resistance ranges of either 0-100000 and 0-1000 ohms or 0-1000000, 0-100000 and 0-1000 ohms. A self-contained $4\frac{1}{2}$ -volt C battery is provided for potential. A pair of 50-inch test leads is shipped with each Model 564.

Any change in potential of the self-contained battery can be readily compensated for by short circuiting the pin-jacks X-X and adjusting the pointer to the zero ohm position by turning the voltage adjuster located at the top of the nameplate.

All voltage ranges are brought out to pin-jacks. A toggle switch connects the meter in circuit as a voltmeter or ohmmeter. The instrument sensitivity, when used as an ohmmeter, may be changed by a toggle switch from 1 to 100 milliamperes when using the 100000 or 1000-ohm scale; when using the 1000000-100000-1000-ohm instrument the sensitivity may be changed from .1, or 1 to 100 milliamperes. This simplifies checking up trouble in high or low resistance circuits.

Shipping weight, 6 pounds.

Model 564, 0-1000000-Ohm Instrument.....each \$35.50

Model 564, 0-100000-Ohm Instrument.....each 30.00

Model 663 Weston Volt-Ohmmeters

Supplies the demand for an ohmmeter capable of measuring very low and very high resistances.

This volt-ohmmeter is made possible by the use of a super-sensitive instrument requiring only 50 microamperes for full scale deflection. This instrument is connected into circuit network by means of a control switch which selects desired range of 6 available ohmmeter ranges, or as a milliammeter or voltmeter for d.c. and voltage measurements. Resistance measurements from .1 ohm to 10 meg-ohms; voltage measurements to 1000 volts and current measurements to 100 milliamperes are available.

The scale of the indicating instrument is marked 0-1000 ohms, 0-2.5-5-10 volts and milliamperes. The following ranges are available: 0-5-25-250-2500-25000-250000 ohms center scale; 0-200-1000-10000-100000-1000000-10000000 ohms full scale; 0-2.5-10-100-250-500-1000 volts full scale, 1000 ohms per volt; 0-1-5-25-100 milliamperes full scale at 500 millivolts.

Model 663, Less Carrying Case.....each \$60.00
 Model 663 Carrying Case.....each 5.00

Model 614 Weston Foot-Candle Meters

A direct reading foot-candle meter calibrated directly in terms of tungsten filament standard lamps. Responds quickly to even slight variations of light.

With this meter any user of light can analyze lighting conditions and determine the correct illumination for each particular and individual purpose.

Does not require the use of batteries, voltage or lamps; has indefinite life with permanent calibration.

The operating equipment consists of an indicating instrument, a 3-way toggle switch and a Photronic photo-electric cell all mounted on a bakelite panel. The instrument reads directly in foot-candles and has 3 ranges, 0-50, 0-250 and 0-500 which are controlled by the 3-way toggle switch. The Photronic photo-electric cell or light target is hinged so that it can be lifted from the horizontal to the vertical position.

This meter is always ready for instant use. To measure illumination on a horizontal plane it is only necessary to open cover, hold instrument in a horizontal position with the cell or light target lying in its socket and then take the readings. The toggle switch simplifies switching to any of the 3 meter ranges so as to give a good scale deflection for any value of light intensity within maximum range of instrument.

Assembled in a moulded black bakelite carrying case equipped with hinged cover and strap handle. Length of case, 7 inches; height, 3½ inches; width, 2¼ inches.

Weight, 1.8 pounds.

Model 614.....each \$50.00

Model 603 Weston Portable Direct Reading Illumination Meters

To measure light intensities with this foot-candle meter it is only necessary to turn the searching unit to the light to be measured and then read its value in foot-candles directly on the 50-division uniformly divided scale.

The Photronic cell is instantaneous in its response to light variations; color response closely approximates that of the human eye.

Calibration of the scale is permanent.

Dimensions, 8¼x8¾x4½ inches. Weight, 7 pounds.

3-Range Type

Consists of an accurate indicating instrument mounted in a carrying case and a searching unit or light target with a 6-foot cable permanently attached to instrument.

Three ranges, 0 to 10, 0 to 50 and 0 to 250 foot-candles are selected by means of a 3-position switch.

Model 603, 3-Range Type..... each \$95.00

6-Range Type—For Street Lighting Work

Similar to the 3-range type. Six ranges: 0-1, 0-2.5, 0-5 0-25, 0-100 and 0-500 foot-candles. Readings are possible to as low as .02 foot-candle on 1 foot-candle range.

A bank of 16 Photronic photo-electric cells are permanently mounted in hinged cover and act as a light target for the 3 low ranges. For these ranges it is simply necessary to slip off cover and plug the 10-foot flexible cord into socket connecting the instrument. The 3 high ranges utilize a standard 2-cell light target which plugs into the instrument in a similar manner. All ranges selected through a 6-position switch on instrument panel.

Model 603, 6-Range Type.....each \$300.00

Weston Switchboard D.C. Instruments

Models 24, 57 and 251

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded.

Model 251 harmonizes with Models 167, 214, 215, 216, 226 and 261 instruments.

Prices cover instruments finished in dull black. Models 24 and 57 have cast iron cases; Model 251, pressed steel. Regularly supplied in surface type, back connected cases. Flush type in Models 24 and 57 can be supplied at no extra cost.

Wattmeters, Power Factor Meters, Frequency Meters and Synchroscopes

These instruments, representing a complete line for the conventional switchboard, are available in designs matching the voltmeters and ammeters listed above.

Prices and complete bulletins furnished on application.

Weston Switchboard A.C. Instruments Models 151, 156 and 261

Accurate within 1%. Movable iron type; magnetically shielded. Model 261 forms a part of a complete matched line including voltmeters, ammeters, wattmeters, power factor meters, frequency meters and synchrosopes, details of which will be furnished on request.

Prices cover instruments finished in dull black. Models 151 and 156 have cast iron cases; Model 261, pressed

steel. Regularly supplied in surface type back connected cases. Flush type voltmeters in Models 151 and 156, at no extra cost. Flush type ammeters with ranges of 5 amperes or less supplied without extra charge, but for ranges above 5 amperes an extra charge of \$5.75 each will be made.

Power consumption: Voltmeters on 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Ammeters

Ammeters are for use on frequencies up to 500 cycles per second.

Model 151 or 156 ammeter can be furnished with self-contained capacities up to and including 500 amperes for use on potentials to 2300 volts. Model 261 ammeter is listed in one range only. This model is employed generally with current transformers, and the price shown covers instruments for currents up to 10 amperes, with scales figured to correspond to the transformers with which employed.

500	50	50		75.00	64.00

*Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than the rated primary capacity of the current transformer, can be supplied at no extra charge.

Voltmeters

For use on frequencies up to 133 cycles per second. Available for 500-cycle service at an extra cost of \$4.00.

With external resistors for ranges above 300 volts.

A special percentage ground indicator may be supplied for indicating grounds and their intensities on 3-phase ungrounded systems; information on application.

75	75	75	\$48.00	\$37.00	\$48.00

Model 252 Weston Switchboard D.C. Instruments

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded. Forms part of a complete matched line including voltmeters, ammeters, wattmeters, power factor meters, frequency meters and synchrosopes, details of which will be furnished upon request.

With pressed steel case, dull black finish. Surface type, back connected.

This instrument, with suitable exploring coils, can be used as an electric resistance thermometer; information on application.

Ammeters provided with external shunts. Voltmeters self-contained up to 300 volts; sensitivity, approximately 80 ohms per volt. Voltmeters may be provided with a second but lower range at \$5.50 extra.

Diameter at base, 7²¹/₃₂ inches; projection from panel, 4 inches; length of scale, 5⁵/₃₂ inches. Approx. wt., 9 lbs.

Model 260 Weston Switchboard A.C. Instruments

Accurate within 1%. Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish.

This instrument forms a part of a complete matched line, details of which will be furnished on request.

Power consumption: Voltmeters on 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes.

Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Size at base, 7²¹/₃₂ inches; projection from panel, 1¹/₃₂ inches; length of scale, 5⁵/₃₂ inches. Weight, 8 pounds.

Ammeters

Ammeters are for use on frequencies up to 500 cycles per second. Model 260 ammeter listed in one range only; employed generally with current transformers; price shown covers instruments for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than the rated primary capacity of the current transformer, can be supplied at no extra charge.

Model 260..... each \$35.00

Voltmeters

Voltmeters are for use on frequencies up to 133 cycles per second. For 500-cycle service, \$4.00 extra.

With external resistors for ranges above 300 volts.

Volts	Scale Divs.	Each	Volts	Scale Divs.	Each	Volts	Scale Divs.	Each

130	65	37.00	300	30	41.00	750	75	53.00

Model 610 Weston Switchboard D.C. Instruments

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded. Harmonizes with all Model 610 instruments.

With pressed steel case, dull black finish. Flush type, back connected.

Model 610 instrument has 2 Mazda 6-volt (No. 40 T-3) lamps that provide indirect full scale illumination free from shadows. Lamps are operated from an independent circuit and may be conveniently replaced by removing 4 screws which hold the bakelite front.

Ammeters provided with external shunts.

Voltmeters have a sensitivity of 100 ohms and are self-contained at this sensitivity up to 300 volts; from 300 to 500 volts self-contained the sensitivity is 200 ohms per volt. Ranges from 500 to 1000 volts employ a Type 12 No. 1 resistance box at 100 ohms per volt. Voltmeters provided with a second but lower range at \$5.50 extra.

Size at base, 4x1½ inches; projection from panel, ¾ inch; length scale, 3½ inches. Weight, 2 pounds.

Model 502 Weston Switchboard D.C. Instruments

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded. Harmonizes with Models 496, 497, 498, 499, 500 and 501 instruments.

With pressed steel case, dull black finish. Surface type, back connected cases. Flush type model can be supplied at \$4.00 extra.

This instrument, with suitable exploring coils, can be used as an electric resistance thermometer; information on application.

Ammeters are provided with external shunts.

Voltmeters have a sensitivity of approximately 100 ohms per volt and are self-contained up to 750 volts. Voltmeters may be provided with a second but lower range at an additional cost of \$5.50.

Size at base, 5¾x6 inches; projection from panel, 1½ inches; length scale, 5½ inches. Weight, 8 pounds.

Range	Scale Divs.	Am-meters Each	Volt-meters Each	Range	Scale Divs.	Am-meters Each	Volt-meters Each

Model 496 Weston Switchboard A.C. Instruments

Accurate within 1%. Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish. For flush type instrument, add \$4.00.

Power consumption: Voltmeters on 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Size at base, 5¾x6 inches; projection from panel, 1¼ inches; length of scale, 5½ inches. Weight, 6 pounds.

Ammeters

Ammeters are for use on frequencies up to 500 cycles per second. Listed in one range only; employed generally with current transformers; price shown covers instrument for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than the rated primary capacity of the current transformer, can be supplied at no extra charge.

Model 496.....each \$35.00

Voltmeters

Voltmeters are for use on frequencies up to 133 cycles per second. For 500-cycle service, \$4.00 extra. Model 496 requires an external resistor for all ranges. For ranges up to 300 volts, resistor is mounted on studs at rear of instrument; for ranges between 300 and 750 volts a Type 3 No. 2 box is employed; for ranges above 750 volts, the use of a potential transformer is recommended.

Volts	Scale Divs.	Each	Volts	Scale Divs.	Each	Volts	Scale Divs.	Each
75	75	\$37.00	150	30	\$37.00	500	50	\$46.00

Model 501 Weston Switchboard A.C. Ammeters

For use on frequencies up to 500 cycles per second. Listed in one range only; employed generally with current transformers, and price shown covers instrument for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Triplex instruments supplied in any combination of 3 rectangular a.c. or d.c. switchboard instruments; prices on application.

Accurate within 1%. Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish.

Power consumption: Voltmeters at 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than rated

primary capacity of current transformer, can be supplied at no extra charge.

Size at base, 5 3/4 x 15 1/2 inches; projection from panel, 4 1/4 inches; length of scale, 5 1/2 inches. Weight, 17 pounds.

Model 501.....each \$100.00

Model 600 Weston Small Panel Microammeters

Permanent magnet moving coil type. Regularly furnished in flush type bakelite case; also available with flush type metal case.

Scales are hand calibrated and basically have an accuracy of 2% except in rectifier type where percentage accuracy is about 5% due to inherent properties of rectifier.

Rectifier instruments can be made with a high sensitivity, and for many laboratory and field measurements,

voltmeters with a resistance of as high as 10000 ohms per volt can be had. Such instruments can be used for power level measurements across high resistance loads and for any other position where extremely small energy drain is required. Similarly, d.c. instruments may be supplied in this model with sensitivities as high as 30000 ohms per volt.

Case Material	Bakelite	Metal
Flange Diameter	inches 3 1/2	3 1/4
Body Diameter	inches 2 3/16	2 9/16
Body Depth	inches 1 3/4	1 3/4

*Despite its low range, this instrument is subject to a temperature error of but 1% per degree Centigrade.

Weston Switchboard D.C. Instruments

Models 267, 269, 271 and 273 Fan-Shaped Ammeters, Milliammeters and Voltmeters

Permanent magnet moving coil type; magnetically shielded.

In surface type pressed steel cases with back connections, dull black finish, at prices shown. Model 269, with bakelite case at a surcharge of \$3.50 above regular price. When a bakelite case is used, instrument is not shielded.

Approximate resistance in ohms per volt: Model 267, 60; Model 269, 75; Model 271, 100; Model 273, 100.

*Supplied with external resistor. Millivoltmeters are also available in the fan-shaped instruments. Prices upon application.

Model 375 Weston Student Galvanometers

For student use in school laboratories and wherever a d.c. galvanometer of extreme sensitivity is not essential. Permanent magnet moving coil type.

Has a sensitivity of approximately 22 microamperes per division; resistance, about 23 ohms. Scale is zero-center with 60 divisions; calibrated 30-0-30 in millimeter divisions. As a galvanometer for portable use, instrument is mounted in 45° angle base; also without base for mounting in apparatus or on panels.

Dimensions: With mounting base, 3 3/4 x 3 3/4 x 3 17/32 inches; without mounting base—case, 3 1/4 inches; body, 2 5/16 inches. Scale length, 2 3/8 inches.

Model 375, with Mounting Base, Weight 12 Oz. . . each \$13.00
 Model 375, without Mounting Base, Wt. 8 Oz. . . each 10.00

No. 24 Sterling Pocket Ammeters

This pocket ammeter is universally used for testing dry cells. It has 0-35 ampere scale, 1-ampere divisions.

This is a durable instrument, having correct scale calibration and a clearly marked dial.

Full nickel finish.

Packed in individual boxes and supplied in a standard package containing 10 boxes. Shipping weight, 3 pounds.

No. 24. each \$1.00

Sterling Pocket Voltammeters

Packed 1 in a box, 10 boxes in standard package. Shipping weight, 3 pounds.

No. 44

Tests amperage of dry cell A batteries and voltage of both dry cell and storage A batteries; 0-35 amp. scale, 1-amp. divisions; 0-10 volt scale, 1/2-volt divisions.

No. 44. each \$1.50

No. 45

Tests amperage of dry cell A batteries and voltage of either dry or storage B batteries up to 50 volts; 0-35 ampere scale, 1-ampere divisions; 0-50 volt scale, 1-volt divisions.

No. 45. each \$3.00

Square D Voltage Testers

This voltage tester does not require lamps and operates on a.c. or d.c., indicating the voltage of either type. There is no danger of breaking and it will withstand hard usage.

Simple to operate. Place one wire in each side of the circuit and the indicator shows what the voltage is. Sharp metal points on end of long rubber-covered leads permits piercing insulation without damaging it. Fibre handles insulate the lead wires.

Can be carried in pocket.

Cat. No. 5000, Maximum Voltage, 600 D.C. . . . each \$10.20
 Cat. No. 5002, Voltage Tester Case. each 1.00

Test-O-Lites

The Test-O-Lite contains two electrodes in a Neon gas filled bulb, each of which is connected in series with a suitable protecting resistor.

It will indicate voltage—a dim glow is shown when testing 110 volts, and on higher voltages up to 550 volts the glow is brighter in proportion.

Indicates whether a.c. or d.c. If a.c. both electrodes will glow, and if d.c. only one will glow and at the same time indicate the negative pole of the circuit.

Detects the live and ground wires. One can test whether a conductor has tension against ground or not by touching one of the leads with the hand.

Tests resistance leaks. Can be used as a pilot light if connected permanently to any circuit.

Furnished in a bakelite casing. Is no bigger than a fountain pen.

Test-O-Lite. each \$1.50

Brach Fixed Neon High Voltage Indicators

TYPE "R"

TYPE "RC"

TYPE "RS"

Consists of a sensitive Neon tube enclosed in a glass protecting case with metal ferrules on each end connected to electrodes of the tube.

Designed for permanent installation. With sufficiently high voltage indicator will give an indication if only one end is attached to line.

Greater brilliance is obtained if a plate or other metal is attached to free end giving greater capacity to electrodes.

Wherever practical the indicator may be placed directly across a high voltage line, provided sufficient resistance is placed in series with tube to limit current to only a few milliamps. Another type of indicator has been developed recently for use across a line (or from line to ground) with a suitable resistance in series.

Also furnished when specified, at \$1.00 extra, with metal strap arranged to act as condenser plate and support one end of tube.

Type R.—Neon tube is a straight tube with electrodes about 3/4-inch apart. Will give an indication on 500 volts.
 Type R. each \$2.50

Type RC.—Neon tube is straight but has a constriction between electrodes. Will give an indication on 500 volts.
 Type RC. each \$2.80

Type RS.—Neon tube is of small bore tubing wound into a spiral. This type gives more illumination than Types R and RC when voltage is sufficiently high to operate same. Requires about 3000 volts for an indication.

Type RS. each \$3.70

Brach Safe-T-Glow High Tension Detectors

Safe-T-Glow consists of a sensitive Neon tube mounted on cushion supports, the light of this tube being amplified by a mirror reflector. It is sensitive to the presence of high tension current and will start to glow at 2000 volts when exposed terminal is held in contact with high tension wire. With increased voltage the tube will glow at varying distances away from the wire, depending on the voltage.

Model A, with 3-Foot Handle for Circuits 2000 to 35000 Volts. each

Model B, Same as Model A except with 6-Foot Added Extension to 3-Foot Handle for Circuits from 45000 to 220000 Volts. each

SWITCHBOARDS

FOR GENERAL POWER AND LIGHTING SERVICE

2300-VOLT 3-PHASE GENERATING STATION SWITCHBOARD

Whenever you are interested in the purchase of any type of switchboard, either for light or power, or both, let us submit figures on our product.

We feel that this catalogue will be in the hands of persons familiar with the electrical line generally and therefore that you are competent to make up a layout of practically any board you may wish a figure on.

With this in mind, we are soliciting your inquiries, asking that you give us detailed information when you submit your drawing.

G-E Type CP-108 Trip-Free Air Circuit Breakers Manually-Operated

Triple-Pole, 250-Volt, 400-Amp. A.C. Breaker with 2 Over-Current Inverse-Time Devices

Particularly applicable to installations where reliable circuit protection and service with minimum maintenance are of importance.

A complete line of breakers up to and including 1600 amperes and 650 volts a.c. or d.c. These breakers have high interrupting ratings, are simple, compact and sturdy in construction, attractive in appearance, and all parts are fully accessible.

Accessories, including undervoltage device, shunt trip, and auxiliary switch, can be attached to breaker without affecting its calibration or interfering with normal operation.

1600	1600-3200	275	735	345	845	355	920	365	1000

The above prices include time delay breakers mounted on a permanent base of the size given in dimension table.

Breakers listed above are rated 650 volts a.c. or d.c., in single and double-pole units, and 250 volts a.c. or d.c., in triple or 4-pole units. For 251 to 650 volts a.c. or d.c., see additions below.

Permanent Base Dimensions

Description	Amperes	Height Inches	Width Inches	Thickness Inches
Single-Pole.....	15-800	24	8	1 1/2
Double and Triple-Pole.....	15-800	24	16	1 1/2
Double and Triple-Pole.....	1200	24	20	1 1/2
Double and Triple-Pole.....	1600	24	20	1 1/2
4-Pole.....	15-400	24	24	1 1/2
4-Pole.....	600-1600	24	28	1 1/2

Additions

For triple or 4-pole breakers at 251 to 650 volts a.c. or d.c., add barriers at \$6.90 per breaker.

If bases larger than standard shown in dimension table are required add for extra ebonite compound only \$2.00 per square foot for 1 1/2 or 2 inches thick and \$2.60 per square foot for 2 1/2 inches thick.

For dead-front operation of double or triple-pole breakers, add for steel cover plate, position indicator, extended handle, trip button and barriers, 15-1600 amperes, \$76.00.

Deductions

To make breakers instantaneous trip omit time delay device at \$33.00 per coil for 15-1200 amperes and \$40.00 per coil for 1600 amperes. To make breakers non-automatic omit overload trip at \$69.00 per coil for 15-1200 amperes and \$76.00 per coil for 1600 amperes.

G-E Type AF-1 Air Circuit Breakers

Single-Pole

Triple-Pole

The Type AF-1 breakers are for switchboard or panel-board service in the following ratings: 125 volts a.c. or d.c., 15-50 amperes; 250 volts a.c. or 250/125 volts d.c., 15-50 amperes; 250 volts a.c. or d.c., 51-100 amperes; 600 volts a.c. or 250 volts d.c., 100-225 amperes; 600 volts a.c. or 250 volts d.c., 226-400 amperes; 600 volts a.c. or 250 volts d.c., 401-600 amperes. Breakers of the 50-ampere frame capacity have an interrupting rating of 5000 amperes. All breakers above the 50-ampere frame capacity have an interrupting rating of 10000 amperes.

They are made single, double and triple pole for the 50-ampere frame size and double and triple pole for all other sizes. The breakers are quick-make, quick-break and trip-free. Breakers having an interrupting rating of 5000 amperes are equipped with time delay thermal trips only. Breakers having an interrupting rating of 10000 amperes are equipped with both instantaneous magnetic trip (for short circuits) and thermal time delay trip (for overload).

Silver alloy, self-aligning, non-welding pressure contacts, which produce a firm positive contact operating at low temperature, are standard on these breakers.

The above breakers can be made back connected for switchboard application by adding studs as follows:

Amperes.....	50	100	225	400	600	
Studs.....	each	\$.35	.50	1.20	4.50	5.35

Price covers one stud only and must be multiplied by number required for each breaker.

G-E Type FK-33 Oil Circuit Breakers

*5000 Volts

These breakers are of the single-tank type, i.e., all poles in one tank, of cast and punched steel construction and operated by the universal Type HA-2 lever.

Furnished for manual and solenoid operation.

Breakers are furnished with stud and cable terminals. For bar connections, the cable terminals are omitted and connection bars are bolted to the stud terminals.

Cable terminals have cable holes as follows: 200 amperes, .625 inch in diameter; 400 amperes, .881 inch in diameter.

Illustration shows front view of Type P-5 self-supporting steel panel for isolated installations with Type FK-33 oil circuit breaker assembled for shipment.

Manually Operated, Non-Automatic

Operated by the Type HA-2 lever. This lever is equipped with provisions for a 1, 2 or 3-coil trip mechanism. Changeovers from non-automatic to automatic features can be made with a minimum amount of labor and cost. Automatic attachments with calibrating tubes are easily installed in the field. A complete line of transformer, relay, reactor and d.c. trip coils is available. Manually operated breakers have provision for mounting auxiliary switches. Breakers operated remotely may be equipped with magnetic locks.

*The installation of apparatus on panel or switchboard is not recommended when that apparatus is subjected to pressure in excess of 2500 volts between phases for ungrounded systems or between lines and neutral for grounded systems. For such installations remote control apparatus is recommended.

Solenoid-Operated, Non-Automatic—Single-Throw

Furnished for mounting breaker and solenoid back to back on pipe framework. Breakers are made automatic by the addition of suitable tripping transformers and circuit-closing overcurrent relays.

Prices and complete information on solenoid-operated breakers on application.

G-E Types FK-35 and FK-35Y2 Oil Circuit Breakers

*2500 and 7500 Volts, Single-Throw

Triple-Pole, Single-Throw, 7500-volt, 600-Ampere Breaker

Types FK-35 and FK-35Y2 breakers follow the standard unit design, i.e., each pole is integral with its own cover, tank, contacts and operating rod. Frame carries breaker mechanism and cross head. Double or triple-pole breakers are assembled on same frame, the former omitting the middle pole. Four-pole have a longer frame and cross head.

Furnished with stud and cable terminals. For bar connection cable terminals are omitted and connection bars bolted to stud terminal. Cable terminals have cable hole as follows: 600 amperes, 1.209 inch diameter; 800 amperes, 1.461 inch diameter.

Features

- Breakers adapted to either vertical or horizontal operation by making one member of breaker mechanism a bell crank.
- Interchangeability of breaker units of like rating.
- Each phase in separate tank.
- Heavy oval tanks suspended by hook bolts.
- Flared wedge contacts under heavy pressure.
- Arcing tips on FK-35Y2.
- Breaker opens by gravity accelerated by compression springs on operating rods with buffers to absorb shock.
- Full complement of stud and cable terminals.
- Bell alarm auxiliary switch with all operating levers.

Manually Operated, Non-Automatic

With HA-2 operating lever. Non-automatic breakers listed can be made automatic by the addition of suitable current transformers and automatic trip attachments.

*Installation of apparatus on panel or switchboard is not recommended when apparatus is subjected to pressure in excess of 2500 volts between phases for ungrounded system or between lines and neutral for grounded systems. For such installations, remote control apparatus is recommended.

†Breaker frame support included.

Double-Throw

Double-throw FK-35 and FK-35Y2 breakers consist of two single-throw breakers, mechanical interlock and cross-trip for two operating levers. Order two breakers by Cat. No. and specify that they are to be operated as a double-throw equipment. Specify desired distance between operating levers 8, 9, 10, 11, 12 or 13 inches for remote operation and 15¼ inches minimum for direct on panel or 5 inches back of panel. Price the complete double-throw breakers at exactly twice the price per Cat. No. selected from above table.

Solenoid-Operated, Non-Automatic

Breakers are made automatic by the addition of suitable current transformers and circuit-closing relays. Prices and complete information on application.

Calibration from 75 to 150 per cent of normal capacity.

D.C.—*Plain Shunt Trip

Shunt trip coils are intended for momentary operation only and must not be left in circuit continuously after being energized. Connections should be so arranged that the opening of the circuit breaker will disconnect the shunt trip circuit. If for any reason, however, the shunt trip has to be connected to the line side, a circuit-opening auxiliary switch should be mounted on the breaker to open the trip circuit.

*The coil used with the shunt type breaker will operate on any d.c. voltage of 550 volts or less.

These breakers have no overcurrent coils. The shunt coil on these breakers replaces the overcurrent coil, and is on an attachment as in the case of overcurrent and shunt trip.

D.C.—Undercurrent

Undercurrent breakers are calibrated in the factory to trip on 20 per cent of the carrying capacity. They can be set to trip at any point as low as 10 per cent if so specified on requisition.

Calibration is from 75 to 150 per cent of normal capacity.

A.C.—Plain Shunt Trip

Shunt trip coils are intended for momentary operation only and must not be left in circuit continuously after being energized. Connections should be so arranged that opening of circuit breaker will disconnect shunt trip circuit. If for any reason, however, shunt trip has to be connected to the line side a circuit-opening auxiliary switch should be mounted on breakers to open trip circuit.

Front Connected on Base—600 Volts or Less

†Coil used with shunt trip breaker will operate on any a.c. voltage, 600 volts or less.

Capacities below 100 ampere, same price. These breakers have no overcurrent coils. Shunt coil on these breakers replaces the overcurrent coil, and is not an attachment as in the case of overcurrent and shunt trip.

G-E Undervoltage Attachments

For Type CG Air Circuit Breakers

For Use with Single and Double-Pole Breakers 125, 250 and 550 Volts A.C. or D.C.

By the use of undervoltage release attachment, circuit breakers may be arranged to operate on a drop in or cessation of voltage, two or more circuit breakers may be electrically interlocked and by use of a switch to short-circuit undervoltage release, circuit breakers may be tripped from one or more remote points.

Releases at approximately one-half rated voltage.

Voltage of Circuit	Approx. Releasing Voltage	*For Use with 3 to 100-Amp. Breakers			*For Use with 200 and 300-Amp. Breakers

*For use with single and double-pole breakers only. Information covering undervoltage attachment for use with triple-pole breakers on application.

G-E Shunt Trip Attachments

For Type CG Air Circuit Breakers

For Use with Single and Double-Pole Breakers, 125, 250 and 550 Volts D.C.—110, 220 and 440 Volts A.C.

This attachment should be allowed to remain in circuit only momentarily.

Same attachment is used with either single or double-pole breakers. Only one pole (the right-hand from front) is tripped out by these attachments.

G-E Type AB-2 Air Circuit Breakers

Trip-Free—Enclosed for Individual Mounting

600 Volts A.C. or 250 Volts D.C.

A back-connected trip-free air circuit breaker mounted on an insulating base. Can be manually or electrically operated and is double or triple pole.

Available in the following arrangements: Open construction—on front of panel; metal-enclosed; metal-enclosed with pull box. Mounted in dead-front or metal-enclosed switchboards.

Breaker has high interrupting rating—12000 amperes for all voltages. It is rated at 250 volts d.c. and 600 volts a.c., 15 to 600 amperes.

The above illustration shows a 3-pole breaker having 3 overcurrent trips in steel cabinet with pull box for wall mounting, disconnecting contacts for studs and shunt-trip connections.

Amperes	Double-Pole	Triple-Pole	Triple-Pole

G-E Induction Time Relays

For A.C. Circuits

Type IAC Single-Unit Current Relay

Type IAV Single-Unit Voltage Relay

For protection of a.c. circuits and apparatus. These relays are particularly applicable where either consistency or selectivity in time of operation is desired.

Rectangular case is 5½ inches wide; permits mounting of 4 relays side by side in space 2¼ inches wide.

The stationary contact members are individually adjustable.

Target indicator is clearly visible on Type IAC when relay has operated. Disc on Type IAC is reset by weight, producing constant return force.

Type IAC relays can be furnished for time overcurrent tripping at current settings and instantaneous overcurrent tripping at higher current settings by adding instantaneous attachments.

Standard Ratings

Type IAC Overcurrent or Undercurrent Relays

Current taps: 4 to 15, 4 to 16, 1.5 to 6 and .5 to 2.5 amperes. Taps: 4-15 amperes—taps at 4, 5, 6, 8, 10, 12 and 15 amperes; 4-16 amperes—taps at 4, 5, 6, 8, 10, 12 and 16 amperes; 1.5-6 amperes—taps at 1.5, 2.0, 2.5, 3.0, 4.0, 5.0 and 6.0 amperes; 0.5-2.5 amperes—taps at 0.5, 0.6, 0.8, 1.0, 1.5, 2.0 and 2.5 amperes.

Frequency: 25, 50 and 60 cycles.

Target ratings: 1 and 0.2 ampere.

Type IAV Overvoltage and Undervoltage Relays

Voltage: 115, 230, 460 and 575 volts.

Frequency: 25, 50 and 60 cycles.

Features

Type IAC

Units: Single or 3.

Contacts: 2-contact, single-circuit closing; 3-contact, double-circuit closing; double-throw, single-circuit closing each way.

Attachments: Current indicator, instantaneous element, and auxiliary trip.

Type IAV

Contacts: 2-contact, single-circuit closing; 3-contact, double-circuit closing; double-throw, 1-circuit closing each way.

Attachments: Instantaneous element.

The standard undervoltage adjustment of Type IAV relays is 70% of rated voltage to close the contacts. This may be adjusted to any value between 50% and 95% of rated voltage by turning adjusting screw on front of relay.

The burden of the 115-volt, 60-cycle coil is 13 volt-amperes and of the 115-volt 25-cycle coil, 7.5 volt-amperes at rated voltage. All coils are suitable for continuous operation at rated voltage.

Time Overcurrent

Type	Each	Service	Function	Circuits	Ship. Wt. Lbs.
IAC	\$41.00	Sgl.-Ph.	Cir.-Closing	1-Circuit	19

IAV	57.00	Sgl.-Ph.	Cir.-Closing	2-Circuit	19
Overvoltage					
IAV	\$53.00	Sgl.-Ph.	Cir.-Closing	1-Circuit	19

The above are typical listings with 1 ampere 0.25 ohm, or 0.2 ampere 7 ohms target coil; specify which target coil or the device with which relay is to be used when ordering.

G-E Plunger Type Relays

For Mounting on Panels

A.C., Single-Pole

Time Relay

Instantaneous Relay

The plunger type includes a complete line of relays to protect against overcurrent and undervoltage, and for use as auxiliary relays. The same principle of operation is common to all of them and depends upon the action of a magnet coil in attracting or releasing the plunger when predetermined values of voltage or current are present in the coil circuit.

The mechanical design is unique, as all relays are single-pole, made of interchangeable parts, and the contacts can be arranged for circuit opening or circuit closing. This design, with its variety of adjustments, large variety of coils, and arrangement of contacts, makes it possible to adapt these relays to an unusually large number of applications.

For convenience of selection the following typical varieties are listed:

Type	Each	Circuits	Operation	Function	Normal Position	Ship. Wt. Lbs.
Overcurrent						
PAC*	\$28.00	2	Instantaneous	{ 1—Closing 1—Opening	Open	6
PAC*	\$32.00	2	Time		Closed	6
A.C. Undervoltage						
PCV	\$36.00	2	Instantaneous	{ 1—Closing 1—Opening	Open	6
PCV	\$40.00	2	Time		Closed	6
Auxiliary Voltage						
PAA*	\$30.00	2	Instantaneous	{ 1—Closing 1—Opening	Open	6
PAA*	\$34.00	2	Time		Closed	6
Overcurrent						
PQ	\$22.00	1	Instantaneous	Closing	Open	10
PQ	\$26.00	1	Time	Closing	Open	12

*These relays are self-reset and are also available with either electrical or hand-reset features.

In ordering specify by description and for time relay state whether inverse time or definite time is desired. Current transformers are not included.

Principal Features

Covers are made of a molded compound.

Removable studs are provided for back connection.

Only one valve is provided for time relays. This valve serves a dual purpose and can readily be adjusted to make the time interval effective on either the up or down stroke of the plunger, or both in the PAC and PAA types.

Contacts are of the universal design and can be readily changed from circuit-opening to circuit-closing or vice versa.

Toggle can be changed from self-reset to hand-reset or vice versa, by a simple means provided for this purpose.

The movable contact bar is held securely but not permanently, thereby easily permitting change from parallel to separate circuits or vice versa, by replacing contact bar.

Material of bellows is not affected by seasonable changes in temperature.

All relays are provided with an orange-colored mechanical target indicator, hand-reset by means of a push button in cover.

G-E Type PJ-4 (Standard Unit) Current and Potential Transfer Jacks and Plugs

For Mounting on 5/32, 1, 1½ or 2-Inch Panels

10 Amperes, 600 Volts

Cat. No. 3663608G2 Jack with Plug Cat. No. 2874991G1 Inserted Part Way

The Type PJ-4 line includes jacks and plugs other than those for connecting an ammeter to any phase of a 2 or 3-phase circuit for use with current transformers having a 5-ampere secondary.

*Plugs not included in Cat. No. or prices of jacks except in Cat. Nos. 3663608G6 and 3663608G10.

†When old style plug Cat. No. 2649822G5 for 5/32-inch panel is used omit all spacers when mounting receptacle on panel.

‡Do not use on any board where a common instrument is connected to plug receptacle of same size opening.

§Formerly used also for temperature meter outfits. Complete information furnished on jacks and plugs for temperature meter equipment.

Plug holder—if desired, use Cat. No. 129965.

G-E Combined Receptacle and Resistor Indicating Lamps and Color Caps

Receptacle body and escutcheon are made of insulating compound which permits using the device on metal panels. The escutcheon, which mounts in panel hole from front and receptacle body which mounts from rear are threaded, making a

compact unit when assembled.

Resilient metal contact clips hold lamp and provide rear connections.

A complete indicating lamp outfit with Cat. No. 59X243 G-E Mazda telephone type T2 bulb, No. 902 slide base, 24 volts, .032-.038 amperes, a resistor except on 24 volt where none is required, a set of binding screws and a push-type compound color cap. Specify color of cap wanted in ordering.

Resistor element slides over receptacle body from rear and complete device has provision for soldered connections. Binding screws are included for use where soldered connections are not desired.

Device is for mounting on 1, 1½ or 2-inch panel. For mounting on ⅞-inch panel order one spacer Cat. No. 6009135-P1, 10 cents net extra. For mounting on ½-inch metal panel, order one spacer Cat. No. 6009135P2, 10 cents net extra. Panels more than 1 inch thick must be counterbored on the back with a diameter of 1¼ inches to a depth of 1 inch from the front of panel.

*This applies to the telltale system of connections as used with Type CL-1, special twin pull-button and Type SB-1 control switches.

†For rated voltages higher than listed, use Cat. No. 6005406G1 and a cage-type resistor mounted separate from receptacle.

G-E Type SB-1 Control and Instrument Switches

The Type SB-1 switches are multi-contact switches for the control of circuit breakers and electrically operated governors and rheostats, for the transfer of current and potential coils of instruments, and for many other similar applications.

The features of these switches are:

Positive quick-acting contacts.

Silver-to-silver contacts.

Barriers between adjacent contacts to prevent arcing.

All connections easily fastened with a screwdriver.

Ample room for connecting leads.

Escutcheon plates of black Textolite, permanent finish.

Switches are compact and require small panel space.

Mechanical target (red or green) shows last operation of the circuit-breaker control switch.

Distinctive handles of different styles.

G-E Type JY-285 Tripping Current Transformers

For Oil Circuit Breakers
25-125 Cycles, 5000 Volts or Less

May be used with any standard 4 and 5-ampere trip coils. In general its use is limited to tripping duty only, either directly or in connection with relays, but where high accuracy is not essential a secondary ammeter may also be used.

Tested at 15000 volts between primary and all other parts, and at 2500 volts between secondary and ground.

Primary terminals are not included.

Shipping weights: 5 to 100 amperes, 16 pounds; 120 to 200 amperes, 18 pounds; 250 to 800 amperes, 20 pounds.

G-E Type Y-298A Tripping Current Transformers

For Oil Circuit Breakers

25-125 Cycles, 15000 Volts or Less

400 Amperes and Below

These transformers are for tripping oil circuit breakers. They may be used with any of the standard 4- and 5-ampere trip coils. They are listed in capacities from 5 to 800 amperes at 15000 volts or less.

In general their use is limited to tripping duty only, either directly or in connection with relays, but where high accuracy is not essential a secondary ammeter may be used.

As these transformers are small and inexpensive they may be used very conveniently in installations where series trip has heretofore been recommended.

500 to 800 Amperes

The smaller capacities from 5 to 400 amperes inclusive are equipped with cast metal bases with two-bolt holes, allowing them to be bolted to flat surfaces or pipe supports.

The larger capacities from 500 to 800 amperes inclusive are of the bus type and are supported by the buses or the stud of the oil circuit breaker, no bases being required due to the light weight of these transformers.

Cat. No.	Primary Capacity in Amperes	Ratio	Shipping Weight Pounds	Price Each

246266	600	120-1	44	56.00
246267	800	160-1	44	56.00

All transformers are provided with an additional turn on secondary for ammeters only.

These transformers are tested at 5000 volts between primary and all other parts, and at 2500 volts between secondary and ground.

G-E Type B Direct Current Motors
Ball or Sleeve Bearings, 115 or 230 Volts

Constant Speed

These motors are particularly suitable for a wide range of industrial applications, such as driving pumps, fans, blowers, line shafting and similar equipment requiring continuous operation and fairly close speed regulation. The h.p. ratings are based on continuous duty at 40° C.

Constant Speed—Shunt or Compound-Wound

On all constant speed motors, speed may be increased 25% by field control and reduced 50% by armature control.

284	3	700	2	750	2 to 3	700	271.00	258.00

*Constant h.p.: from basic speed upward to 150%, temperature will not exceed 50° C. rise; above 150% of basic speed the temperature will not exceed 40° C. rise.

**For ball bearings add 5% to sleeve bearing price, minimum addition \$4.00.

†Tapered h.p.: from basic speed upward to 106%, motor delivers minimum rated h.p., temperature not to exceed 50° C. rise; 40° C. rise is not exceeded at speeds above 150% of basic speed.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

G-E Single-Phase Motors

1/4 to 10 H.P., 60 Cycles, 220 Volts

Type SCR

The Type SCR motor is a constant-speed repulsion-induction single-phase motor intended for use in general purpose applications. This motor combines the high starting torque of the repulsion motor with the excellent speed characteristics of an induction motor, and is consequently a successful motor for use in a wide range of industrial applications.

Type KC

Type KC Motor, Capacitor, Starter and Push-Button Station

For three different classes of duties, as follows:

1.—General purpose constant speed capacitor motors. These motors are suitable for application where quiet operation, freedom from radio interference or high power factor is desired and where regulations require enclosure of commutator type motors. In order to secure quiet operation the motors should be loaded to at least 50% of full load.

Suitable applications include centrifugal pumps, refrigeration compressors, conveyors, garage equipment, etc. Motors for such applications as elevators, washing machines, etc., are special and information will be furnished upon application.

2.—High torque constant speed capacitor motor for fan duty. Suitable for belt-driven fans—quiet operation is the most important characteristic and in order to secure quiet operation the motor should be loaded to at least 50% of full load.

The two types above are designed to use a definite type and size of capacitor as indicated in the motor nameplate. Capacitor unit consists of a running capacitor, a starting capacitor and a relay, all mounted in a metal enclosing case. The running capacitor is continuously rated and is permanently connected in the motor circuit. The starting capacitor is intermittently rated and is disconnected from motor circuit during period of starting by a relay.

3.—Low torque constant speed capacitor motors for fan duty. Suitable for direct connected fans only. Here too, quiet operation is the most important consideration.

Motor is designed to use a definite type and size of capacitor which is permanently connected in the motor circuit and is suitable for continuous duty.

G-E Single-Phase Motors

Types SCR and KC

1/4 to 10 H.P., 60 Cycles, 220 Volts

The following list of ratings of types SCR and KC single phase motors cover sizes and designs which meet the majority of application requirements usually found in industry.

For additional information and for single phase motors with mechanical or electrical variations not provided for by the motors listed here refer to our nearest house.

	868	1200	276	290
	867	3600	...	291
10	866	1800	271	285

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

Frame Nos. 204 to 225 inclusive, all speeds 1800 r.p.m. and lower, have wool-yarn-packed bearings. Speeds higher than 1800 r.p.m., also frame Nos. 254 and 255, all speeds, have oil-ring-lubricated sleeve bearings.

Where quiet operation is essential, sleeve-bearing motors should be quoted in preference to ball-bearing motors.

Voltage and frequencies other than listed, on application.

G-E General Purpose Squirrel-Cage Induction Motors

1/4 to 75 H.P., Constant-Speed, 2 and 3-Phase, 60 Cycles, Continuous Duty, 40° C. Rise

Type K—Normal Torque, Normal Starting Current

1/2 to 15 H.P., 1800 R.P.M. Motor

15 to 75 H.P., 1800 R.P.M. Motor

This motor is usually applied to the large majority of constant-speed drives. It is the squirrel-cage motor best fitted for driving pumps, fans, blowers, line shafting and similar equipment requiring continuous operation with a fairly constant load.

Type KF—Normal Torque, Low Starting Current

The essential difference between the Type KF and the Type K motors is in the design of the rotor slot. The rotor in the Type KF motor is so designed as to give a low starting current, permitting the motor to be thrown directly across the line in sizes 30 h.p. and smaller. Obviously, this permits the use of a small, light, and compact magnetic starter. The Type KF motor may be applied to any drive for which the Type K motor is suitable. It should be chosen where it is desirable to keep the first cost of apparatus as low as possible or where limitations as to weight or space make it desirable to use as small and compact control as is possible.

Type KG—High Torque, Low Starting Current

Intended to supply the needs for motors having a higher per cent torque at starting than can be supplied by either Types K or KF motors with full voltage applied, yet having the per cent of starting current equal to or lower than the Type KF motor.

The Type KG motor is recommended for such drives as compressors without unloading valves, conveyors which must be started loaded, and other applications requiring high starting torque. The Type KG motor should be used only where the driven mechanism will not be injured by the sudden application of the starting torque of this motor. This caution applies especially to drives or driven machines utilizing belts (either flat belts or V-belts), chains or other flexible or slack elements.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

These standard 60-cycle open motors can in general be operated on 50-cycle circuits although they will not necessarily meet the standards established for 60-cycle operation and will have a slightly greater temperature rise than at 60 cycles. Synchronous speeds at 50 cycles will be 5/6 of those at 60 cycle. Control may be different.

*Recommended only for direct connection and prices cover motors with standard straight short shafts.

G-E Type K Squirrel-Cage Splash-Proof Motors

Ball-Bearing—1/4 to 25 H.P., Constant Speed, 2 and 3-Phase, 60 Cycles

Typical of Frame Nos. 202-236

These motors are constructed to operate under conditions subject to dripping and splashing liquids, particularly in certain industries, such as dairies, meat packing plants, etc. where, for obvious reasons, it is necessary to "hose-down" the equipment regularly, at least once a day. Since in order to meet these conditions, these motors are constructed to exclude falling water or other materials coming directly at the motor, at an angle not exceeding 100° from the vertical, they can and have been used successfully out of doors without pump-house or other protection, in those localities where the hazards of climate are not greater than those encountered in the conditions for which they are designed.

110, 220, 440 and 550 Volts.

G-E Totally-Enclosed Squirrel-Cage Induction Motors

Fan-Cooled, Ball-Bearing, Constant Speed

½ to 5 H.P., 2 and 3-Phase, 60 Cycles

Type K

Types K or KF, Fan-Cooled
Frame Nos. 224-326

Types K or KF, Fan-Cooled
Frame Nos. 365-506

For those applications requiring totally-enclosed motors, the General Electric Company offers a standard (for sizes 1½ h.p., 900 r.p.m. and smaller) totally-enclosed, non-ventilated motor. These motors have ample radiating surface to assure proper cooling without the use of external fans.

Type K, Non-Ventilated

For larger motors the standard is the totally-enclosed fan-cooled construction. The construction involves essentially a totally-enclosed motor surrounded by an external housing. A single fan, mounted between motor endshield and the external protecting endshield at the end opposite the shaft extension, draws air through the protecting screen,

forces it across the surface of the stator punchings and out the drive end, providing positive and direct ventilation. This design provides a strong and rigid construction and permits a greater output per pound of material than is possible with ordinary methods of total enclosure, with the result that the mounting dimensions of totally-enclosed fan-cooled motors are identical with those of open motors of the same rating in all except the largest sizes.

These motors are of special design to operate successfully under adverse conditions of abrasive dust, lint and moisture. When specified on order, motors will be furnished with Underwriters' label, indicating their suitability for Class II Group G hazardous dust locations.

G-E Totally-Enclosed Squirrel-Cage Induction Motors

**Fan-Cooled, Ball-Bearing, Explosion-Proof
For Class I, Group D, Hazardous Gas Conditions
Constant Speed, 2 and 3-Phase, 60 Cycles**

Types K and KF

The General Electric Company has a complete line of explosion-proof motors for Class I Group D hazardous gas conditions as defined by the National Electric Code. In sizes 1½ h.p., 900 r.p.m. and smaller these motors are built in totally-enclosed, non-ventilated frames. In larger sizes they are built in totally-enclosed, fan-cooled frames. These motors have been tested and listed by Underwriters' Laboratories and are furnished with a label indicating their suitability for those locations where gas involved is no more hazardous than high-test gasoline vapor.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

*Totally-enclosed non-ventilated.

All motors listed above may be started with full-voltage, but the Type K, 7½ and 10-h.p. motors have starting current values slightly exceeding N.E.L.A. recommendations. Reduced-voltage starting is a requirement of many operating companies; therefore, before quoting, be sure that full-voltage starting will be acceptable to those supplying the power.

All motors listed above may be started with full-voltage, but the Type K at all speeds, and the Type KF 20 and 30-h.p. at 3600 r.p.m. as well as 40-h.p. and larger sizes at all speeds, have starting current values slightly exceeding N.E.L.A. recommendations. Reduced-voltage starting is a requirement of many operating companies; therefore, before quoting, be sure that full-voltage starting will be acceptable to those supplying the power.

G-E General Purpose Gear Motors

40° C., Continuous Rated

Types K, KG and M—2 and 3-Phase, 60 Cycles, 220, 440 and 550 Volts

Type B—D.C., Shunt-Wound, 115 or 230 Volts

Type SCR—Single-Phase, 60 Cycles, 110-220 Volts

G-E General Purpose Gear Motors

40° C., Continuous Rated

Types K, KG and M—2 and 3-Phase, 60 Cycles, 220, 440 and 550 Volts

Type B—D.C., Shunt-Wound, 115 or 230 Volts

Type SCR—Single-Phase, 60 Cycles, 110-220 Volts

Typical of Riveted-Frame, Squirrel-Cage Induction Designs, Single-Reduction

The G-E Gear Motor consists of a highly efficient straight-line helical gear reduction unit built into the end frame of a standard ball-bearing, normal speed motor. Connection to the driven machine may be either direct, or through a belt, chain or gear. The listed low speed r.p.m. are based on 1800 r.p.m. synchronous speed and full load r.p.m. will be slightly lower depending on the variation of full load motor speed from synchronous speed. Access to entire gear mechanism is obtained by removing front cover plate. Gears run in oil. Oil is kept in and dust kept out by felt shields on shaft apertures. Pinions are of G-E Textolite and with helical gears eliminate the noises associated with geared speed reduction.

Gear motors may be furnished for vertical or flange mounting and with all mechanical and electrical modifications available with standard general purpose motors.

Typical of Skeleton-Frame, Squirrel-Cage Induction Designs, Single-Reduction

In applying gear motors the following information should be obtained and sent with order:

Torque—starting (high) (low); accelerating (high) (low); running: constant torque, constant speed, adjustable speed; variable torque, periodic; intermittent, varies with speed, give duty cycle, including time and magnitude.

Speed—constant, variable, adjustable.

Load—continuous (8 to 10 hours daily) (24 hours daily); intermittent, frequent starts and sudden stops, reversing.

Method of drive—directly mounted, coupled, belt or chain (give type of belting and relative position of shafts), pinion. Space limitations.

Ambient conditions—hazards, temperature, protection, atmosphere (abrasive) (corrosive) (explosive) (excessive moisture).

Attention—regular (skilled), uncertain.

The normal control for the type of motor involved should be selected from the standard G-E control shown on other pages of this catalogue.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

*For Type SCR motors, frame is A-225.

All types of gear motors are suitable for operation with standard listed controllers. Where full-voltage starting is used to obtain maximum starting torque of motor, the number of starts should be limited to 4 to 6 per day.

Sleeve Bearings

7600 Series—Form AL, Cast Frame, Sleeve Bearings

Form BL—25 to 600 H.P., at 1200 R.P.M.

Developed to fill the need for a synchronous motor which could be recommended for most general purpose applications, in the same way that a squirrel-cage induction motor is recommended—that is, without a detailed study of the requirements of this application. For this reason, in the line of general purpose synchronous motors, there were incorporated high starting torque, overload capacity, mechanical simplicity, and reliability of G-E squirrel-cage motors.

Form EL—75 to 450 H.P. at 1800 R.P.M.

Since the exciter is direct connected and overhung on the motor end shield, the general purpose synchronous motors form complete and compact units which like the squirrel-cage induction motors, merely require connection to the a.c. power supply.

G-E Synchronous Motor Controllers

2 or 3-Phase, 3-Wire 50 or 60 Cycles

Undervoltage Protection on Low-Voltage Panels
 (600 Volts Maximum)

Time-Delay Undervoltage Protection on High-Voltage Panels
 (Above 600 Volts)

Typical Reduced-Voltage Semi-Magnetic Controller CR7062 for High-Voltage Application (Above 600 Volts)

Available in 4 types: Full-voltage, magnetic; full-voltage, semi-magnetic; reduced-voltage, magnetic; reduced voltage, semi-magnetic. Magnetic controllers are controlled by push buttons, whereas semi-magnetic controllers are equipped with manual starting devices. Both types have automatic field application and removal equipment.

The following equipment is common to all types: A.C. line ammeter; d.c. field-ammeter; field applying contactor and field discharge contactor with discharge resistor; sequencing relays for maintaining the proper sequence in application and removal of field

excitation; power-factor field-removal relay which operates on lagging power-factors to remove field excitation during the first slip-cycle out of synchronism; stator temperature overload relay and temperature squirrel-cage protective relay; drilling for exciter field rheostat.

The full-voltage magnetic controllers employ a magnetically operated contactor for connecting the motor to the line, and the semi-magnetic type is equipped with a manually-operated circuit breaker.

Reduced-voltage magnetic controllers are furnished with starting and running contactors and an auto-transformer for supplying reduced voltage to the motor in starting. The accelerating time is automatically determined by a telechron-motor-operated transfer relay, which is adjustable.

The reduced-voltage semi-magnetic controllers are similar to the magnetic type except that the starting and running devices are manually-operated.

G-E Type RSA Single-Phase Constant Speed Motors

Wound Stator and Rotor, Repulsion Start, Induction Run
 *110-220 Volts, 60 Cycles, Short Hour Service

A constant speed motor having high starting torque, good accelerating torque and large reserve power. Suitable for driving hard starting devices which operate only part of the time such as domestic water pumps, garage equipment, air compressors, etc. All motors are rated for continuous duty. The base has slots for belt tightening.

Drip-proof end shields, built in terminal box and large capacity wool-packed long-life sleeve bearings are incorporated. Reconnectable for 110 or 220 volts, direction of rotation easily changed.

Cat. No. Motor with Rigid Base	Motor with Solid Base Each	Frame No.	H.P. at 40° C.	Rated Full Load Speed R.P.M.	Ship. Wt., Lbs.

5RSA45C50	25.65	45	1/3	1725	34

*Prices of motors for other frequencies on application.

Type K polyphase and Type BC direct current motors are available with interchangeable mounting dimensions.

For larger h.p. ratings use Type SCR motors.

G-E Type SCR Single-Phase Constant Speed Motors

Repulsion-Induction, Wound Stator, Wound Rotor with Buried Squirrel Cage
 *110-220 Volts, 60 Cycles, Short Hour Service

Cat. No. 5SCR75AA2

A constant speed motor having high starting torque and accelerating torque and large reserve capacity. Suitable for driving hard starting devices which operate only part of the time such as floor surfacing machines, compressors, garage and dairy equipment, hoists, etc. All motors are rated for continuous duty.

Drip-proof end shields protect the motor, large wool-packed bearing provides adequate lubrication, reconnectable for either 110 or 220 volts; rotation easily changed. Provision is made for conduit connection. A solid welded-on base is provided.

Cat. No. Motor with Rigid Base	Each	Frame No.	H.P. at 40° C.	Rated Full Load Speed R.P.M.	Ship. Wt., Lbs.

5SCR75AA2	43.15	75	3/4	1780	80

*Prices on motors for other frequencies on application.

Type K polyphase and Type BC direct current motors are available with interchangeable mounting dimensions.

G-E Type KH Single-Phase Constant Speed Motors

Wound Stator, Squirrel Cage Rotor-Resistance, Split-Phase Starting
 110-220 Volts, 60 Cycles*

Type KH-B with 45A Frame

Type KH motors have moderate starting and accelerating torque and large reserve power. Suitable for driving any easily started device requiring constant speed, such as oil burners, blowers and ironing machines. All motors are rated for continuous duty.

Base is equipped with slots for belt tightening. Drip-proof end shields, built-in terminal box, and a device to eliminate end bump are included in the 40 series frames. While these motors are considered quiet, a resilient base can be furnished on long hour service motors at slightly additional cost where more quiet operation is desired. The 1/2 and 1/4-h.p. short service motors are for devices requiring high maximum output but which operate only a small part of the time.

All motors are reconnectable for either rotation.

†Starting current is in excess to 20 amperes.

Type K polyphase and Type BC direct current motors are available with interchangeable mounting dimensions. All sizes are equipped with large oil capacity wool yarn packed sleeve bearings. Ball-bearing motors are available; prices on request.

G-E Type KC Single-Phase Constant Speed Motors

Wound Stator, Squirrel Cage Rotor

110-220 Volts, 60 Cycles, Long Hour Service

With 45A Frame, on End-Flange Cushion Base

Type KC motors have high starting and accelerating torque and exceptionally large overload capacity.

Suitable for driving hard starting devices where service is severe such as refrigerator compressors, stokers, etc.

All motors are rated for continuous service and will give long care-free dependable service.

Bases of all motors up to the 60 and 70 series frames have slots for belt tightening. The 40, 60 and 70 series frame motors have drip-proof end shields and a device in each end shield to eliminate end bump.

The 40 series frames have a built-in terminal box for easy lead connection; either cord and plug or conduit may be used.

All motors are equipped with large oil capacity wool-yarn-packed sleeve bearings. Rotation of 40, 60 and 70 series frame motors is easily changed.

G-E Type K 2 and 3-Phase Constant Speed Motors

Wound Stator, Squirrel Cage Rotor

110, 220, 440, 550 Volts, 60 Cycles

Type K, with 45A Frame, with Solid Base

Type K polyphase motors have excellent starting and accelerating torque and large reserve power. They will start and drive any device operated by any of the single-phase motors of corresponding rating. As far as possible the single-phase and polyphase motors are built from interchangeable mechanical parts and have similar external appearance. Mounting interchangeability between single-phase and polyphase motors is maintained. Motors are equipped with rigid base.

**These prices apply to 110-volt motors; 220-volt motors can be furnished at same prices. For 440 and 550-volt motors, add \$3.00 each to above prices.

***These motors are included to provide mounting interchangeability with Type KH short hour service motors.

†These motors are included to provide interchangeability with Type KH long hour service motors.

‡These motors are included to provide interchangeability with Type KC motors.

§These motors are included to provide interchangeability with Type RSA motors.

G-E Type BC Direct Current Constant Speed Motors

32, 115 and 230 Volts

These motors have excellent starting and accelerating torque and large reserve power. They will start and drive any device operated by any of the single-phase motors of corresponding rating. As far as possible the design of the d.c. motors follows the general design of the single-phase motors. They have a similar external appearance and in general, the same mechanical features. Mounting interchangeability between single-phase and d.c. motors is maintained. Motors are equipped with rigid base.

*Cat. No. covers motors having counter clockwise rotation (when viewing end opposite shaft extension). Rotation may be changed internally. Clockwise rotation will be furnished from the factory if specified on order at no additional charge.

**These prices apply to 115-volt motors; for 32 and 230-volt motors, add \$1.00 each to above prices.

***These motors are included to provide mounting interchangeability with Type KH short hour motors.

†These motors are included to provide mounting interchangeability with Type KH long hour motors.

‡These motors are included to provide interchangeability with Type KC motors.

§These motors are included to provide interchangeability with Type RSA motors.

G-E Series Wound Motors

1/100 H.P. at 5000 R.P.M. to 1/2 H.P. at 1000 R.P.M.
110 and 220 Volts, Varying Speed

Type BA with 45A Frame

A complete line of series wound motors are available for portable machines, domestic devices, etc. requiring high outputs with small size and weight. Self-aligning bearings and large oil capacity housings with oil returns provide lubrication. Only occasional oiling is required. Ventilating

system cools motor even when operating under heavy loads.

Series type motors offer high starting and accelerating torque and operate at high speeds. They have varying speed characteristics, that is the speed varies with the load, but with constant load they offer constant speed. A motor must be chosen whose output closely matches the requirements of the device. The requirements of the device to be motorized are usually determined by test.

Motor parts, consisting of rotor, stator and brush mechanism are also available for built-in applications.

G-E Motors for Unusual Requirements

In addition to general purpose motors, G-E Fractional H.P. Motors are designed for special requirements.

The following is intended to indicate the wide scope of special service motors available: gear motors, for low speeds; explosion-proof motors, for explosive atmospheres; synchronous motors, for close speed regulation; fan duty motors, for fans and blowers; totally enclosed motors, for dusty locations; dynamotors, for converting d.c. to a.c.; motor generators, for converting power; vertical and flange-mounted motors, where special mounting arrangements are required.

Further information will be furnished on application.

G-E Induction Motor-Generator Sets Types B or CD, D.C. Generator—Shunt or Compound Wound

3-Bearing, 40° C. Continuous Rated, 2 or 3-Phase, 60 Cycles

Made up of standard G-E motors and generators connected by solid steel couplings and mounted on welded structural steel bases. Bearings are of the self-aligning, self-feeding, oil-ring sleeve type.

G-E Type CR1061 Motor Starting Switches For Fractional—H.P. Motors—Manually Operated

Maximum Ratings { A.C. { Sgl.-Pole, 3/4 H.P., 110 or 220 V.
Dbl.-Pole, 1/2 H.P., 110 or 220 V.
D.C. { Sgl.-Pole, 1/2 H.P., 115 or 230 V.

For Wall Mounting

Complete protection against stalled rotor current and injurious overload conditions is provided. It is impossible to hold switch closed under injurious overload conditions. After overload device has permitted the switch to trip, motor cannot be restarted until it has cooled to a safe operating temperature.

All molded parts, except the are chute of the d.c. switches, are of G-E Textolite, and all metal parts are corrosion-resisting.

Order by CR and Cat. No. and specify one heater for overload device.

G-E Type CR1062 Motor Starting Switches

Manually Operated—For Small A.C. Motors

25, 40, 50 and 60 Cycles

Two CR1062-C5 Switches Mounted on Pedestal Cat. No. 4923350G1

These switches are single throw with double-break contacts. Provide overload protection by means of hand-reset thermal overload device and are used for throwing small a.c. single or 3-phase, 60, 50, 40 or 25-cycle motors directly across the line. Operating mechanism trips free from handle. Contacts are of silver.

Cases have conduit knockouts and sufficient wiring space for 8 line wires with soldered terminals. Protects against single-phase operation of polyphase motors.

Order by CR and Cat. and Form No. and give rating of motor with which to be used. Specify if heaters are required for overload protection. Order pedestals by Cat. No.

G-E CR1026 A.C. Enclosed Starting Rheostats For Type SCR Repulsion-Induction Motors 40, 50 and 60 Cycles, Single-Phase

These starters may be used with motors that do not require more than 150 per cent torque to start or longer than 30 seconds to attain full speed. They comply with American Standard Resistor Classification No. 35. They are primarily for use with the single-phase repulsion-induction motors (Type SCR) where the inrush of current resulting from throwing the motor directly upon the line is objectionable. When these motors are started by being thrown directly upon the line they require from 250 to 300 per cent full-load current. While in many cases this starting current may not be objectionable, it is recommended that a starter be installed in every case with the 7½ and 10 h.p. motors and with the smaller motors when it is desired to reduce the starting current.

Starters for use with motors up to and including 5 h.p. 110 volts and 7½ h.p. 220 volts are provided with button contacts. Larger sizes have renewable segments.

H.P. of Motor	110 Volts Each	220 Volts Each	H.P. of Motor	110 Volts Each	220 Volts Each	440 Volts Each

When ordering state CR No. of rheostat and h.p., voltage and frequency of motor.

G-E Type CR1034 A.C. Hand-Starting Compensators

Manually Operated—For Squirrel-Cage Induction Motors

3-Phase, 3-Wire,—60 Cycles

Type CR1034-K1 Compensator with Ammeter Attachment

Type CR1034-K1 Compensator Cover Removed Showing Type CR2824-TC-121 Relay Mounted

Suitable for starting squirrel-cage induction motors on applications requiring not more than 15 seconds to attain full speed, once every 4 minutes for an hour.

Compensators consist of an auto-transformer with suitable taps, a switching device, an instantaneous undervoltage protective device and a hand-reset overload relay, all self-contained within a sheet metal case.

Arranged for wall mounting; has conduit wiring box. The 2200-volt size is floor mounted. Switch is oil immersed. Compensators can be furnished with attachments such as ammeters, jack type disconnecting switches or motor-circuit switches.

When ordering, specify a CR1034 compensator with temperature overload relay giving the complete motor rating and naming attachments wanted.

G-E Type CR7006 A.C. Magnetic Switches

For Throwing Single, 2 or 3-Phase Motors

Directly on the Line

25, 50 and 60 Cycles

Type CR7006-D30B with Cover Removed

These switches consist of a 2 or 3-pole magnetically-operated contactor with overload relays mounted on a base and enclosed in a suitable case.

Provides undervoltage protection or release. May be operated by means of a push button station, float or pressure switch, etc.

Prices will be quoted on request on these switches designed specially for installation in dusty or corrosive atmospheres or in Class 1 Group D hazardous gas locations.

Order by CR No. and specify rating of motor with which to be used and heater units required for overload protection.

G-E Type CR7008 Combination Magnetic Switches

For Throwing Single, 2 and 3-Phase Motors Directly on the Line
25, 50 and 60 Cycles

Size 2, Fusible, with Cover Removed

This switch consists of a magnetic switch (CR7006) with a quick-break manually-operated motor circuit switch. Fuses can be added and provision is made to supply a test jack if desired.

Order by CR number and specify relay heaters for overload protection; with or without fuses or test jack.

Furnished in sheet steel or dust-tight cases.

*Price includes push-button and heaters. The relay heaters or the push-button station may be omitted or additional ones furnished at the following prices: relay heaters, 50 cents each; push-button stations, \$2.00 each.

†Price is for combination switch in cast iron case without push-button station but with relay heaters. Cast iron case cannot be furnished for combination switch with test jack. Relay heaters may be omitted at 50 cents each. If dust-tight push-button station is required, the CR2940-BS207CJ is recommended.

G-E Type CR7051 Automatic Starting Compensators

Manually Operated—For Squirrel-Cage Induction Motors

60 Cycles

Size 1 Compensator

Provides remote control for constant-speed squirrel-cage induction motors on compressors, blowers and any application that does not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour. Consists chiefly of an autotransformer for supplying reduced voltage to motor during acceleration, accelerating contactor which connects autotransformer to line and motor to low-voltage taps, line contactor, temperature overload relay, a definite time relay which causes accelerating contactor to open and line contactor to close after a predetermined time.

†Cat. No. does not include relay heater units.

G-E Type CR1003 D.C. Enclosed Heavy Duty Starting Rheostats

Undervoltage Protection

For Series, Shunt or Compound-Wound Motors
 Amer. Std. Resistor Class. (Up to 25 H.P., No. 35)
 (Above 25 H.P., No. 34)

This heavy duty starting rheostat affords a convenient, simple means of providing starting and smooth acceleration for all kinds of d.c. motors.

Provides undervoltage protection.

Order by CR and Cat. No. and state rating of motor with which to be used.

G-E Type CR4065 Definite-Time Limit Automatic Starters

For Shunt or Compound-Wound, D.C. Motors

Type CR4065-A8, 3-Point Starter

These starters provide definite time limit acceleration, provide thermal overload protection as well as undervoltage release or protection. The mechanism consists of a solenoid operated, multi-fingered contactor which, with the overload relay, is mounted on a compound base. The starting resistor is mounted on the back of the base and the whole is assembled in a ventilated sheetsteel case.

Order by CR No., give complete rating of motor and specify heater units required for overload protection.

G-E Type CR2927 Pressure and Vacuum Switches

Diaphragm Type—For Starting Small Motors or for Pilot-Circuit Control

Maximum H.P. Ratings:

2 H.P. 110 Volts, 5 H.P. 220 Volts, 3 H.P. 440 and 550 Volts A.C. Polyphase

1½ H.P. 110 Volts and 3 H.P. 220 Volts A.C. Single-Phase

1 H.P. 110 Volts, 2 H.P. 220 Volts and ¾ H.P. 440 and 550 Volts D.C.

Pressure Switch (Cover Removed) with Unloader Valve and Differential-Adjusting Attachment Mounted in Place

These switches are designed to open or close contacts upon changes of pressure or vacuum of any gas or liquid which will not affect rubber or steel parts.

Used for starting motors not larger than 2 h.p. 110 volts, 5 h.p. 220 volts and 3 h.p. 440 and 550 volts polyphase; 1½ h.p. 110 volts and 3 h.p. 220 volts single-phase or 1 h.p. 110 volts, 2 h.p. 220 volts and ¾ h.p. 440 and 550 volts d.c. When larger motors are used, these switches can be used in connection with automatic starters which will also provide overload protection. This protection can also be secured by ordering one CR1920 which consists of 2 thermal cutouts mounted in a sheet steel enclosing case at \$5.00 each.

Order by CR No. and specify adjustment if other than factory adjustment is required.

G-E Type CR2931 Enclosed Float Switches

For A.C. or D.C. Motors

Form D

Form P

Suitable for use in the control circuit of a.c. or d.c. automatic starters, and, except for the Form P, can directly handle the circuits of small motors.

These switches, as furnished, are arranged for tank operation, that is, the switch closes as the lower liquid level is reached, and opens as the top level is reached. This action may be easily changed for sump operation by interchanging the float and counterweight. Standard floats should not be subjected to pressure. Quotation on special floats will be furnished on request.

All switches are drip and splash-proof and suitable for outdoor installation where they are not subjected to snow or sleet. Where the liquid whose level is to be controlled is subject to freezing, a float switch should not be used.

All switches are quick acting when closing and opening, and this insures a minimum of arcing and burning of the contacts.

Form	No. of Poles	Description	Each
A	Dbl.	For Clamping to Inside Top Edge of Tank; Operated by Rod and Float; Range, 10 Inches to 2 Feet.....	\$39
A	4	Same as Form A Double-Pole.....	44
B	Dbl.	For Bolting to Tank Cover; Requires Guide in Cover for Operating Rod; Range, 10 Inches to 3½ Feet.....	44
B	4	Same as Form B Double-Pole.....	48
C	Dbl.	For Bolting to Tank Cover; Range, 10 Inches to 3½ Feet.....	41
C	4	Same as Form C Double-Pole.....	46
D	Dbl.	†For Bolting to Tank Cover; Operated by Chain and Float; Suitable for Any Depth of Tank or Any Variation in Water Level Not Less Than 10 Inches.....	*44
D	4	†Same as Form D Double-Pole.....	*48
L	Dbl.	†Operated by Chain and Float; For Any Variation in Water Level Not Less Than 5".....	*25
M	Dbl.	Rod-Operated; Range, 2½ In. to 4½ Ft..	25
P	Sgl.	§Operated by Chain and Float; For Any Variation in Water Level Not Less Than 2".....	†13
U	Sgl.	Same as Form P, Except with Mercury-Tube, Heavy Duty Connectors.....	†15

Order by CR and Form numbers. Specify number poles of switch.

*Price includes 15 feet of bronze chain. If more is required add 15 cents for each additional foot.

†Price includes 15 feet of brass chain. If more is required add 5 cents for each additional foot.

To obtain maximum operating range: ‡Deduct 3½ feet from length of chain; §deduct 1½ feet from length of chain.

G-E Type CR7505 Photoelectric Relays

Type CR7505-K1,
with Cover Removed

These devices consist generally of a phototube, a relay, an amplifying tube and associated apparatus mounted on a base and within an enclosing case. Their purpose is to control an electric circuit in response to an increase or decrease in the amount of light falling on the phototube.

Form K1 is applicable to installations where at least 50% changes of light variation are obtainable and will control only small currents (1 ampere at 110 volts, non-inductive load).

Form A5 operates on 10% change in light and includes a contactor which will make or break a circuit of 15 amperes at 110 or 220 volts a.c., 10 amperes at 125 volts d.c. and 5 amperes at 250 volts d.c. (non-inductive load). Its features are in general similar to the K1.

Features

Responds to the interception or application of light.

Operates without offering resistance to the actuating object and without impairing the accuracy of delicate mechanisms.

Will operate from light flashes or interruptions of not less than $\frac{1}{15}$ -second duration, with not less than $\frac{1}{15}$ -second between impulses. With these conditions, a maximum speed of 450 operations per minute can be obtained. For such high speeds of operation in counting applications, it is recommended that a .5-mfd. capacitor be used across the counter-coil.

Easily mounted by means of two screws through holes in back of enclosing case or directly on vertical rigid conduit.

Unit can be taken from case by removing two screws.

Sensitivity can be adjusted with a screwdriver through opening in front cover.

All terminals easily accessible from front of unit by removing cover.

The relay may be mounted in any position, provided vibration will not loosen the tubes in the sockets. Where excessive vibration is present, relay should not be mounted at more than 45 degrees from the vertical.

A domestic Mazda lamp, with or without reflecting shield, may be used for a light source. For applications where a higher light intensity is required or where it is necessary to mount the unit a considerable distance from the light source, standard light sources are available.

The phototube window should be shielded from extraneous light when the unit is to operate at a considerable distance from the light source.

Order by Cat. No.

Cat. No.	Including Tubes Each	Type	Volts	Cycles	Approx. Shp. Wt. Lbs.
4389209G2	\$35.00	CR7505-K1	110-120	60, 50	5

4981669G4	87.00	CR7505-A5	110-120	25	35
4981669G3	87.00	CR7505-A5	220	60, 50	35
4981669G5	87.00	CR7505-A5	220	25	35

G-E Type CR7500 Light Sources

No. CR7500-A3

By referring to the chart shown below, the illumination obtained from various light sources at definite distances can be readily determined. For example: the CR7505-K1 relay with a standard cover requires a minimum illumination of 5 foot-candles. The curves (see illustration below) show that 5 foot-candles can be obtained at a distance of 30 feet from the CR7500-A3 light source. Therefore, CR7500-A3 light source with a 21-candlepower lamp will operate the CR7505-K1 photoelectric relay over a distance of 30 feet, assuring a clear atmosphere between the two units.

Order by CR number with or without transformer. Unless a 6-volt supply is available transformer must be included.

Illumination Intensities of Various Types of Light Sources

When light beam must pass through a dusty atmosphere or through material which absorbs some light (such as glass or water), the value of illumination taken from the curves, should be decreased by a factor which is a conservative estimate of the per cent absorption of the atmosphere or material. When light beam must be reflected by some surface to reach the phototube, the value of illumination taken from the curves, must be multiplied by the reflection coefficient of the surface to obtain a proper estimate of the illumination available at the phototube.

It is sometimes desirable to have the light beam reach the phototube through an aperture smaller than the opening provided in the phototube housing. In such cases, the illumination necessary is increased in the same proportion that the area of the aperture is decreased.

Cat. No.	†Each	Installation	Form	Volts	Cycles	Shp. Wt. Lbs.
4981750	*\$11.00	Indoor	A4	110-220	50-60	6
4980621	* 19.00	Indoor	G1A	110-220	50-60	6
4980654G2	25.00	Outdoor	B2	110-220	50-60	12

*The transformer, which mounts in a box, may be omitted at a price of \$6.00. †Price includes transformer but no lamp.

If a 110-220-volt, 25-cycle transformer is required for indoor type of light source, add \$8.00 to price of light source alone. A 25-cycle transformer cannot be mounted in outdoor type of light source because the physical dimensions of transformer are too great.

An infra-red filter may be provided with CR7500-G1A light source at a price of \$4.00.

G-E Type CR9006 Enameled Resistor Units

Form QD

FORM QL.—Has stranded copper leads for making external connections.

FORM QD.—Has stranded copper leads and porcelain bushings to facilitate mounting.

FORM QC.—Designed for fuse clip mounting. Leads are connected to metal ferrules.

FORM QS.—Provided with screw base for mounting in lamp sockets. The 3/4-inch size has a candelabra base and the 1 1/8-inch size has a standard Edison base.

FORM QF.—Provided with metal feet to which leads are connected and through which external connections are made.

Cat. No. 2X931, Fuse Clips for 85, 122 and 180-Watt, Form QC Units. each .12

Two fuse clips are required for each unit.

G-E Type CR9504 Thrustors

To Provide Smooth Straight-Line Thrust From Electric Motor Drive

This is a self-contained hydraulic device which exerts a smooth, straight-line thrust (50 to 3200 pound maximum thrust) in one direction throughout a definite distance (2 and 16-inch maximum stroke). The return stroke is effected by gravity or a spring.

The device can repeat this cycle of operation indefinitely at a rate of 10 to 30 times per minute depending on the size of unit. It is driven by a built-in fractional h.p. motor and therefore the power consumption is small.

The CR9504 Thrustor performs services similar to those accomplished by air cylinders and large a.c. and d.c. magnets and solenoids.

Order by CR and Form No. giving voltage, frequency and phase.

CR9504-L—50 Pounds Maximum—2-Inch Stroke

110	1	60	265.00	5.0
220	1	60	265.00	2.5

*Inrush current for a.c. motors is approximately 5 times running current.

†Use these thrustors for 50-pound d.c. application also.

G-E Type CR9507 Solenoid-Operated Valves

Cover Open to Show Operating Mechanism

Features

- Operating coils are designed for continuous duty.
- Valves are of the unbalanced type and require little power for operation.
- Valve seats can be ground without removing valve from the line.
- Rotary-gland design results in much less wear and friction than are usual with the reciprocating type.
- Solenoids have more power than required to operate valves. The operating mechanism is so designed that the solenoid plunger accelerates without load for a fraction of the stroke, thus effecting quick and reliable operation.
- Minimum number of wearing parts.
- Valve seats are wide and designed to provide long life and dependable operation.
- Solenoids and operating mechanisms are supported from the main sections of the valve-body castings. This strong construction removes all strains from the valve seat and operating members.
- Solenoids and operating mechanisms are enclosed in sheet-metal cases with knockouts suitable for conduit connection.

A Few Suggested Uses of CR9507 Solenoid-Operated Valves

- For operating steam or air whistles.
- For controlling the flow of brine through cooling pipes in cold storage rooms.
- For remotely or automatically controlling the supply of oil or gas to furnaces.
- For automatically controlling the flow of liquids in connection with weighing machines.
- For controlling the flow of water in cooling jackets on compressors.
- Type CR9507 solenoid-operated valves can be supplied for a wide variety of general-purpose applications. Some of their more common uses may be classified as follows:
 - A—Steam, water, natural gas, air, oil, formaldehyde.
 - B—Ammonia gas, artificial gas, air, oil, sodium-chloride brine.
 - C—Chlorine gas.
 - D—Steam, natural gas, air.

Construction According to Classification

Class-ification	Body	Trimming	Max. Press. per Sq. In.	Max. Temp. per Deg. F.
A	Bronze	Bronze Valve Seat and Poppet	125	385
B	Cast Iron	Cast Iron Valve Seat and Poppet	200	385
C	Monel Metal	Monel Metal Valve Seat and Poppet	200	385
D	Cast Steel	Stainless Steel Seat and Poppet	250	700

G-E Type CR2940 Push Button Stations

Typical 3 Button Station for Front-of-Panel or Wall Mounting

The CR2940 push button stations are primarily intended for use in the control circuits of various magnetic controllers. The large contacts and substantial construction of these heavy-duty stations make them well able to withstand the frequent operation and ordinary rough usage of machine-tool and similar applications.

The stations listed are divided into three general classes: momentary contact, maintaining contact and a combination of momentary and maintaining contacts. With a momentary contact the circuit is completed or interrupted only as long as the operator's finger depresses the button. This feature is required when the station is used with a controller that must provide under-voltage protection. A maintaining contact holds the circuit open or closed as does an ordinary knife switch.

Paul Green Knight Water Systems

250 Gallons per Hour
Self-Priming

A Complete Automatic System with Storage Tank

The Paul Green Knight Water System is especially designed for supplying the water requirements of the average home, either for soft water or for complete water service, where the water level of the source of supply is not more than 22 feet below the pump.

It is a completely automatic water system, consisting of a Paul Type K Pump, 10-gallon galvanized pressure tank, Paul Type G Automatic Pressure Controller, and all fittings including relief valve and automatic air volume control, all assembled into a sturdy compact unit.

The pump uses only two valves, a bronze poppet type suction valve and a live soft rubber discharge valve. This permits a greatly simplified construction and fewer moving parts—yet a more positive and efficient action.

Standard Equipment

Paul Type K Self-Priming Suction Pump, belt-driven.

Standard constant duty a.c. or d.c. motor, mounted on pump base. The a.c. motors are of the repulsion induction type.

Electric welded tank, heavily galvanized inside and out, guaranteed for a working pressure of 75 pounds.

V-belt drive, operating on V-motor pulley and flat face belt wheel.

Fixtures include automatic air volume control, which automatically maintains proper water level and volume of air; Paul Relief Valve for protection against excessive pressure; and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double-pole, diaphragm operated, starts pump at 20 pounds; stops at 40 pounds.

Pump, tank and pipe are finished in jade green lacquer. The motor is black enamel. Fittings are gold and nickel trimmed.

Model No.	*Each	Tank Cap. Gal.	PIPE SIZE		Ht. In.	Wdth. In.	Lgth. In.	Ship. Wt. Lbs.

*With a.c. 1-phase, 60-cycle, 110 or 220-volt motor or d.c. 32, 110, or 220-volt motor.

†Model 193 is not equipped with tank or air volume control. It is mounted on cast base with floor legs.

Model GK Paul Shallow Well Water Systems

Fully Automatic—Self-Priming

A Complete Automatic System with 10-Gallon Storage Tank

Standard Equipment

Paul Type K Self-Priming Suction Pump, belt-driven. Constant duty a.c. or d.c. motor, mounted on pump base. The a.c. motors are of the repulsion induction type.

Electric welded tank, heavily galvanized inside and out, guaranteed for a working pressure of 75 pounds.

V-belt drive, operating on V-motor pulley and flat face belt wheel.

Fixtures include automatic air volume control, which automatically maintains proper water level and volume of air; Paul Relief Valve for protection against excessive pressure; and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds.

Pump, tank, and pipe are finished in jade green lacquer. The motor is black enamel. Fittings are gold and nickel trimmed.

Type GK Paul Shallow Well Pumps Fully Automatic—Self-Priming—Motor Driven

This suction pump covers a large range of domestic or farm requirements, lifting water from any source of supply not more than 22 feet below its level. It may be operated automatically in connection with any style or size of pressure tank; this pump may be installed to operate on an open tank service by using an automatic float.

Standard equipment includes Paul Type GK Self-Priming Suction Pump, V-belt driven; constant duty a.c. or d.c. motor, mounted on base plate with pump; and Type G Improved Pressure Controller, double pole, diaphragm operated, which starts pump at 20 pounds and stops at 40 pounds.

Model No.	191-GK

Model SP Paul Shallow Well Water Systems

Fully Automatic—Self-Priming

A Complete Automatic System with Storage Tank

Especially designed for the requirements of the average home, either for soft water or complete water service, where the water level of the source of supply is not more than 22 feet below the pump.

Has standard constant duty a.c. or d.c. motor. The a.c. motors are of the repulsion induction type.

Fitted with automatic air volume control which automatically maintains proper water level and volume of air, and Paul Relief Valve for protection against excessive pressure, and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds.

Pump, tank, and pipe are nickel bronze. Motor is black enamel. Fittings are gold and nickel trimmed.

The Model No. 250-SP System has Paul Type K Self-Priming Suction Pump, belt-driven; electric welded tank, heavily galvanized, and guaranteed for a working pressure of 75 pounds; and V-belt drive, operating on V-motor pulley and flat face belt wheel.

Model Nos. 300-SP and 400-SP have Paul Type L Self-Priming Suction Pump, belt-driven; electric welded tank, heavily galvanized, and guaranteed for a working pressure of 85 pounds; and are fitted with a pressure gauge showing pressure in the pressure tank.

Type L Paul Shallow Well Pumps

Double Acting—Fully Automatic
Self-Priming—Motor Driven

This suction pump covers a large range of domestic or farm requirements, lifting water from any source of supply not more than 22 feet below its level. It may be operated automatically in connection with any style or size of pressure tank; this pump may be installed to operate on an open tank service by using an automatic float switch.

Standard equipment includes Paul Type L Self-Priming Suction Pump, V-belt driven; constant duty a.c. or d.c. motor, mounted on base plate with pump; and Type G Improved Pressure Controller double pole, diaphragm operated, which starts pump at 20 pounds and stops at 40 pounds.

Type US Paul Shallow Well Water Systems

Fully Automatic—Self-Priming

A Complete Automatic System with Storage Tank

Especially designed for the requirements of the average home, either for soft water or complete water service, where the water level of the source of supply is not more than 22 feet below the pump.

Its compact arrangement requires the minimum of floor space. There is no muss from oil or water leaks, and no stuffing boxes to require adjustment.

The Paul Direct-from-Well Attachment may be used in connection with this system to furnish water fresh from the source, for drinking purposes.

Standard Equipment

Paul Type K Self-Priming Suction Pump, belt driven.

Standard constant duty a.c. or d.c. motor, mounted directly above the pump. The a.c. motors are of the repulsion induction type.

Electric welded tank, heavily galvanized inside and out, and guaranteed for a working pressure of 85 pounds.

Fixtures include water gauge showing the water level in the pressure tank, pressure gauge showing pressure in the pressure tank, Paul Relief Valve for protection against excessive pressure, and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds. Controller may be adjusted for other pressures.

Pump, tank, and pipe are royal blue lacquer. Motor is black enamel. Fittings are brass and nickel trimmed.

 Fully Automatic—Self-Priming
 A Complete Water Service for the Home

Type L Paul Shallow Well Water Systems
 Double Acting—Fully Automatic—Self-Priming
 A Complete Water Service with 50 to 120-Gallon Tank

This type of system is especially adapted for complete water service in the average home, or soft water service if a large reserve supply is desired. It will pump from cistern, well, lake, or stream, wherever the water is not more than 22 feet below the level of the pump.

If the system is used for supplying water for drinking purposes, it is recommended that the pump be equipped with a Paul Direct-from-Well Attachment.

Standard Equipment

Standard equipment includes Paul Type K Self-Priming Suction Pump, belt driven; standard constant duty a.c. or d.c. motor, mounted on pump base; electric welded tank, galvanized and tested for 85 pounds working pressure; water gauge, pressure gauge, and relief valve.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds. Range may be adjusted at other pressures if desired. Controller is mounted in connection with non-pulsating device, producing quiet operation.

This type of system is especially adapted for complete water service in the average home, or soft water service if a large reserve supply is desired. It will pump from cistern, well, lake or stream, wherever the water is not more than 22 feet below the level of the pump.

If the system is used for supplying water for drinking purposes, it is recommended that, because of the large size of the tank, the pump be equipped with a Paul Direct-from-Well Attachment.

The pump and tank, being mounted separately, permit that the installation be arranged to suit the location.

Standard Equipment

Paul Type L Self-Priming, Suction Pump, belt driven. Standard constant duty a.c. or d.c. motor, mounted on pump base. The a.c. motors are of the repulsion induction type.

Electric welded tank, galvanized inside and out by the hot dip process. Tested for 85 pounds working pressure.

Type G Improved Pressure Controller, double pole, diaphragm operated. Starts pump at 20 pounds and stops at 40 pounds. Range may be adjusted at other pressures if desired.

Fitted with water gauge, pressure gauge, and relief valve.

Pump, controller and base are finished in royal blue laquer. Tank is natural galvanized.

Type US Paul Deep Well Cushion Stroke Systems

Type J Paul Deep Well Cushion Stroke Systems

A completely automatic water system, delivering the water from the well to point of use under pressure. Assembled into a sturdy, compact unit especially designed for the requirements of the average home.

Standard Equipment

Equipment includes Paul Type J Cushion Stroke Deep Well Pump, belt driven; standard a.c. or d.c. motor, mounted on pump base; electric welded tank, galvanized, and guaranteed for a working pressure of 85 pounds.

Has Paul Deep Well Cylinder of either the spring or ball valve type, and either octagon ash wood or round steel pump rod, depending upon type of cylinder used.

Type G Improved Pressure Controller is double pole, diaphragm operated. Starts pump at 20 pounds and stops at 40 pounds. May be adjusted for other pressures as desired.

Water gauge, relief valve, and all pipe and fittings connecting pump and tank.

This system is equipped with a Paul Type J Cushion Stroke Deep Well Pump, belt-driven. This pump is designed to pump water from any deep well where the water level is beyond the lift of the suction pump. Its wide range of capacities and sizes offers complete water service for home, farm, factory, or institution where water is needed.

The motor is standard a.c. or d.c., mounted on pump base. The a.c. motor is of repulsion induction type. Has Paul Deep Well Cylinder of either spring or ball valve type, and either octagon ash wood or round steel pump rod, depending upon type of cylinder used. Electric welded tank, galvanized and tested for 85 pounds working pressure. Fittings include water gauge, pressure gauge, and relief valve.

If the system is used for supplying water for drinking purposes, it is recommended that the pump be equipped with a Paul Direct-from-Well Attachment.

Model 930-K Saylor-Beall Automatic Electric Beer Pressure Air Pumps

Designed for the average service bar having 1 to 4 taps. Draws air through a felt filter located on top of compressor. Pipe fittings are of bronze, cadmium-plated. Storage tank is automatically controlled at a pressure of 30 to 55 pounds.

Compressor running continually will cost about three-quarters of a cent per hour.

Complete unit, with 2½-gallon storage tank, galvanized, occupies only 1.58 square feet floor space. Height, 19½ inches; width, 9½ inches; length, 24 inches over all.

With automatic pressure switch, tank pressure gauge, safety valve and regulator and gauge for pressure at taps. Standard equipment includes a ¼-h.p., 110-volt, 60-cycle G-E motor with V-belt drive. Operates compressors at 450 r.p.m., and at this speed has a piston displacement of 1.43 cubic feet of air per minute. Relief valve set at 70 pounds pressure.

Model 930-K, Complete each \$69.50
Extra for D.C. ¼-H.P., 115 Volts. each 7.00

Model 950-K Saylor-Beall Automatic Electric Beer Pressure Air Pumps

Recommended for dispensers having 6 to 12 taps where volume and constant air pressure is required. Storage tank automatically controlled at a pressure of 30 to 55 pounds. Completely equipped with air regulator with gauge, also storage tank pressure gauge.

To assure quietness, moving parts are cushioned with rubber. Pipe fittings are of bronze, cadmium-plated.

Complete unit, with 11-gallon galvanized storage tank, occupies 2.07 square feet floor space. Height, 26 inches; width, 13 inches; length, 25 inches over all.

Standard equipment includes a ¼-h.p., 110-volt, 60-cycle G-E motor for a.c. with V-belt drive. It operates compressor at 450 r.p.m., and at this speed has a piston displacement of 1.43 cubic feet of air per minute. Relief valve set at 70 pounds pressure.

Model 950-K, Complete each \$79.50
Extra for D. C. ¼-H.P., 115 Volts. each 7.00

Model 116-KC Saylor-Beall Portable Air Compressors

This compressor furnishes compressed air for spraying paints or lacquers, tire inflation, operating small tools and many other purposes. Ideal for use in homes, hotels, apartments, hospitals, schools, office buildings, etc.

Simple in design and sturdy in construction.

Adjustable rubber belt drive. With bronze bearings; positive lubrication. Fittings are cadmium-plated. Rubber hose, 14 feet of 3-ply cloth inserted with connections.

Finished in red and black enamel.

Motor, ¼ h.p., 110 volts, 60 cycles, a.c.

Shipping Weight	76 pounds

Model 590-K Saylor-Beall Portable Air Compressors

This twin cylinder unit is designed especially to meet all requirements for compressed air up to a volume of 6 cubic feet of free air per minute.

Develops a sufficient volume and pressure of air to operate mostly all of the larger paint spray guns and small pneumatic tools. Used by painters, stone-cutters and for garages, factories, hotels, apartment houses, etc.

Where high pressure and lower volume are required, a change is made in the motor pulley at slight additional cost, and the relief valve set to operate at 90, 120 or 150 pounds pressure.

Adjustable rubber belt drive. Special dipper type lubrication. Fittings are cadmium-plated. Bearings are of bronze. Finished in red and black enamel.

Motors, ¾ h.p., 110/220 volts, 60 cycles, a.c.

Model 317-K Saylor-Beall Spray Guns For Use with Model 116-KC Air Compressors

Can be used as a syphon or pressure type and also with a pressure feed material tank.

The adjustments on the material and air nozzles are so constructed that any width of spray can be obtained from 1/2 inch to 10 inches. All grades of paints, lacquers, enamels, varnishes, oils, insecticides and other liquids can be sprayed successfully.

The material cup is of heavy copper and will stand 75 pounds pressure without bulging the bottom. The threads are machined on a brass ring soldered on cup and then ground to give an even, flat surface for gasket, to prevent leaks. Threads machined in this manner will wear indefinitely. Capacity of cup, 1 full quart.

The internal spray nozzles are machined from brass and chromium-plated to increase durability. External nozzles are made from same material and nickel-plated.

In order to do all kinds of spraying it is advisable to have a complete set of air and material nozzles which includes flat and round nozzles of both internal and external atomizing types. Internal nozzles are specially adapted to spray slow drying materials and the external for fast drying materials, such as lacquers and enamels. Complete instructions are packed with every spray gun.

Model	Description	Each
317-KA	With Internal Atomizing Fan Spray Nozzle	\$10.00
317-KB	With External Atomizing Fan Spray Nozzle	11.00
317-KC	With External and Internal Atomizing Fan Spray Nozzle	12.75
317-KD	With Complete Set of Nozzles	16.00
317-KE	With 6-Inch Oiling and Cleaning Nozzles	11.00
317-KF	With 10-Inch Oiling and Cleaning Nozzles	11.50

Type 403 Speedway Portable Blowers

A powerful 5-pound tool that delivers a blast of clean, dry air at high velocity for cleaning and drying purposes. Indispensable wherever dust and dirt collect on motors, etc.

Universal motor operates a centrifugal fan at 12,000 r.p.m. Made of pressed steel throughout. Soft rubber nozzle covering prevents shorting when cleaning electrical apparatus. Toggle switch is located at operator's thumb.

Equipped with 8-foot cord, unbreakable rubber plug and soft rubber nozzle covering. Universal motor, 110 volts.

Operates from any light socket and is easily handled.

Type 403.....each \$19.50

Sturtevant Big Midget Portable Blowers

Delivers dry air for removing dust from machinery. Compressed air ordinarily contains moisture; this blower shoots dry air. Does away with air lines and lugging a

hose around, and work is reached from all sides. Has 1/2 h.p. universal motor, 110 or 220 volts; speed, open outlet, 9895 r.p.m., closed outlet, 11100 r.p.m.; volume delivered, 43.2 cubic feet per minute; air velocity, 14820 feet per minute; static pressure, outlet closed, 16.62 ins. water; inside diameter nozzle, 3/4 inch.

Furnished with 20 feet cord and plug; switch in handle. Weight, 7 Pounds.

Price.....each \$50.00

1lg Self-Cooled Propeller Fans

The construction of the 1lg Fan combines strength and simplicity. The round-bodied motor fits into a cast iron ring supported by forged arms fastened to the outer ring. This makes it possible to interchange or replace motor without disturbing the alignment. Frame and motor can be installed separately, thus dividing weight.

The vacuum that is created at the axis of the motor draws a current of cool air from the outside over the motor, after which it is carried away with the general exhaust.

The 1lg Lubricating System is used on all fans larger than the 20-inch size. This system permits the lubrication of the motor, while the fan is in operation, by providing grease cups at the front of the ball bearing motors.

Enclosed speed controllers furnished with all d.c. fans except the Type 12 size.

Ilgair Portable Floor Fans

With the Ilgair Portable Floor Fan, the cooling vitalizing blasts of air overcome the heat in operations of all kinds.

Used for recirculation of air in drying rooms and prevention of stratification in refrigeration rooms.

The 12-inch size is furnished with cord and plug; the 30 and 36-inch sizes furnished with standard enclosed switch.

Ilg Automatic Shutters

Fan Running

Fan Not Running

These shutters are used on the outside of propeller fans to protect the fan when not running and also to keep out the wind, rain, snow and cold.

Ilg Automatic Shutters are built of special hard rolled aluminum leaves, pressed on Whiting Alloy copper coated rods supported in cast frame.

When fan is running, the shutter is held open by the force of the air current. When fan is shut off, the shutter closes automatically by gravity.

Shutters are moisture proof and need no attention after they are installed.

Size of shutter corresponds to size of fan.

Sizes 48-inch and larger are built in two sections.

Type P Ilg Volume Blowers

The Ilg Type P Volume Blower is designed to handle small quantities of air over a pressure range of 1/2 to 3 inches. The housing is of heavy cast-iron; the wheel is of cast aluminum.

This blower can be hung from ceiling or suspended from side wall and fitted into any one of four different discharges quickly and easily.

It is particularly useful for exhausting fumes from chemical laboratories. It can also be used for handling light dust from polishing wheels and grinders and is suitable for any small exhaust purpose where a considerable amount of resistance is caused by a long run of small duct. The 7 1/2 Type P Blower at 3400 r.p.m. can be satisfactorily used on single-fire blacksmith forges.

Ilg Power Roof Ventilators

FRONT VIEW Pent-House with Automatic Shutter

The Ilg Power Roof Ventilator is for buildings where roof ventilation provides the only practical means of exhausting foul air.

With this ventilator there is a constant suction created by the Ilg Self-Cooled Motor Propeller Fan which is enclosed in the penthouse. The foul, dead air and excess heat are positively and uniformly drawn off by the action of the fan. Wind and weather can have no effect.

Placed above machines in special processes and connected by duct work, the unit serves as a fume or smoke and heat exhauster. Since heat's natural direction of travel is upward, the Ilg Power Roof Ventilator has found wide use in every industry confronted with excessive heat.

The Ilg Self-Cooled Motor Propeller Fan is mounted within a sheet steel penthouse. Solidly constructed over a heavy angle iron frame, the house is weathertight in every respect. Furnished complete with shutter. Prices do not include fan.

Ilgair 12-Inch Adjustable Portable Ventilators
With Adjustable Steel Panel

Two panel widths, 26 to 36 inches and 36 to 46 inches.

Finished in ivory. Supplied with 10 feet of rubber covered cord with switch and plug. Exhausts 750 cubic feet of air per minute. Shipping weight, 40 pounds.

50-60-Cycle 110 Volts A.C. each \$41.00
110 Volts D.C., 25-Cycle A.C. each 45.00

With Adjustable Glass Panel

Furnished with two-piece clear vision plate glass panel supported in stainless steel frame. Adjustable panel widths, 30 to 36 inches, 36 to 42 inches, and 42 to 48 inches.

50-60-Cycle 110 Volts A.C. each \$54.50
110 Volts D.C., 25-Cycle A.C. each 67.00

Ilgair Kitchen Ventilators
12-Inch Built-In Cabinet Type

This built-in-the-wall type ventilator can be installed in old or new kitchens.

The quiet Ilgair ventilator is inconspicuous behind the clean-cut white grille front.

A nickel silver pull chain operates the Ilgair and opens the outer weather-tight door. No adjustment need be made for different wall thicknesses.

Exhausts 750 cubic feet of air per minute.

Operates at 1140 r.p.m.

Consumes only 70 watts.

Depth, 8 $\frac{5}{8}$ inches; height, 12 $\frac{3}{4}$ inches; width, 13 $\frac{5}{8}$ inches.

Finished in white.

Shipping weight, approximately 42 pounds.

Rear View of Cabinet Showing Weathertight Door

No. 55 National Pyramid Brush Assortment

For Fractional Horsepower Motors

Brushes for vacuum cleaners, fans, vibrators, electric ironers, washing machines, sewing machines, food and drink mixers, heat regulators, pumps, electric tools, cash registers and office appliances.

Designed for effective counter or store display. Resale prices for each brush and spring shown on the label in each compartment. Contains 198 brushes of 17 different sizes (3 sizes complete with shunts, springs and terminals) and 100 springs in 3 sizes.

Sizes range between $\frac{5}{8}$ in. square and $\frac{5}{16}$ in. square with 10 intermediate sizes of round and rectangular brushes including 3 types of brushes with shunts, springs and terminals. Springs are made of the best grade phosphor bronze wire.

No. 55 Assortment Complete \$10.00

Type 53-C Speedway Electric Drills

1/4 Inch Capacity in Steel

Steel body is finished in chromium. With oilless, self-aligning bearings, open grip handle, 1/4-inch keyless chuck and universal motor. Furnished with 8-foot rubber-covered cable and separable plug. Over all length, 13 inches. No load speed, 2000 r.p.m. Normal load speed, 1200 r.p.m. Weight, 5 1/2 pounds.

Type 53-C.....each \$19.50

Type 56-C Speedway Electric Drills

5/16 Inch Capacity in Steel

Steel body is finished in chromium. With oilless, self-aligning bearings, closed grip handle, 5/16-inch keyless chuck and universal motor. Double gear reduction. With 8-foot rubber-covered cable and plug. Over all length, 13 inches. No load speed, 1500 r.p.m. Normal load speed, 900 r.p.m. Weight, 6 1/2 pounds.

Type 56-C.....each \$21.50

Type 57-C Speedway Electric Drills

3/8 Inch Capacity in Steel

Made of steel, chromium finish. With oilless, self-aligning bearings, keyless chuck, ball-bearing thrust, quick-make-and-break trigger switch, large cooling fan and universal motor. With 8-foot rubber-covered cable and plug. Over all length, 14 inches. Breast plate, 3/8-inch. Weight, 8 pounds.

Type 57-C.....each \$30.00

No load speed, 1300 r.p.m. Normal load speed, 800 r.p.m.

Type 60-C Speedway Electric Drills

1/2 Inch Capacity in Steel

Made of steel, chromium finish. With oilless, self-aligning bearings, 1/2-inch keyless chuck, ball-bearing thrust, quick-make-and-break trigger switch, large cooling fan, breast plate and universal motor. With 8-foot rubber-covered cable and plug. Over all length, 15 inches. No load speed, 500 r.p.m. Normal load speed, 300 r.p.m. Weight, 12 1/2 pounds.

Type 60-C.....each \$45.00

Speedway Portable Drills Heavy Duty

Of ball bearing construction.

Operates on both a.c. and d.c. Heavy duty switch, toggle type.

Jacobs 3-jaw key type chuck and chuck key; 8-foot heavy rubber lead cord with indestructible soft rubber split plug connection. Specify voltage when ordering.

 Type 223 Drill Stand..... each 35.00

Type 6 Speedway Portable Hammers

110 Volts

Primarily built for drilling into concrete, stone, brick, etc., light chipping, channeling, scaling and other uses where a great number of blows is required.

Operates at about 15 per cent of the power cost of operating air tools and without the expense and inconvenience of compressor, air piping hose, etc., Over handwork, the economy is from 80 to 90 per cent. Every tool is controlled by a switch mounted in the handle and equipped with flexible cord and plug. They may be attached to any lamp socket.

A man drilling by hand strikes from 40 to 65 blows per minute, this hammer, 1800 blows per minute. Power cost is negligible, about 15 cents a day for ordinary work. The hammer, element is at all times free from the motor and the strength of the blow is constant. Cannot overload the machine, no burning out of armatures.

Drills 1 1/4-inch diameter hole in concrete or softstone, and drills 2 inches deep per minute.

Operated on both a.c. and d.c. Watts, 275.

Weight, No. 6, 26 pounds; No. 10, 16 pounds.

Type 6.....each \$165.00

Type 10.....each 110.00

Add \$3.00 for 220 or 32 volts.

For drilling speed in brick multiply by 2. For drilling speed in granite divide by 2 and use diamond drills.

Type 175 Speedway Portable Electric Saws

For general maintenance, carpentry and construction.

Motor operates from any light socket, a.c. or d.c.

Equipped with 8 feet heavy rubber covered lead cord with soft rubber indestructible split plug connection. Choice of either rip or cross cut blade. A 6-inch blade provides cutting capacity up to 1 3/4 inches. A 7-inch blade with cutting capacity of 2 1/4 inches at extra cost.

Length over all, 15 inches.

Weight, 15 pounds. Speed, 3800 r.p.m.

Type 175, 110-Volt.....each \$48.00

Type 175, 220-Volt.....each 51.00

Type 175, 32-Volt.....each 51.00

Speedway Portable Electric Saws

Slipper plate can be raised or lowered for adjustment of depth of cut. A ripping guide is mounted on the front of the slipper plate to facilitate long cuts.

Base plate tilts 45° to cut bevels.

Each machine is furnished with a light frame which permits the saw to be turned up side down and used as a table saw.

Swinging saw guard automatically pushes out of the way when cutting pressure is applied and returns to position when pressure is released.

The machine is fitted with ball bearings. All gears and shafts are made from heat treated chrome nickel steel.

Equipped with an adjustable D type handle. Motor cases, handles, and slipper plates are of cast aluminum.

Furnished complete with necessary wrenches and a carrying case. Runs on either a.c. or d.c.

223	35.00	A	94, 95, 96, 97	60

Speedway Oilers

Types A and B Constant Level Oilers

Showing Type A Oil Bearing Installed

For ring-oiled and waste-packed bearings.

The oil level in the bearing is held at the same height as the opening of the short tube in inverted bottle cap. As soon as the oil gets below this level air enters the jar through this tube, and oil flows out through long tube until level is raised enough to again seal the air opening in the short tube. The oil level cannot vary more than a slight fraction of an inch.

This oiler doubles the capacity of the oil reservoir, so bearings need inspection only half as often. Inspection is simplified and speeded up.

No oil is wasted by this oiler. Every drop goes to the bearing when it is needed.

A glance at the glass tells if oil level is correct. If not, the bottle can be refilled and replaced in an instant. Keep oil in the bottle and the level cannot vary.

For Ring-Oiled Bearings Bottom Opening

Type A oilers are quickly and easily installed on most ring-oiled bearings by connecting directly to the side oil opening.

Type B oilers are used on ring-oiled bearings not having a side opening. They are connected as shown in illustration at left.

Types A or B, 1-Oz. Oil Cap..ea.	\$1.25
Types A or B, 3-Oz. Oil Cap..ea.	1.30

Type T Thermal Oiler

For plain sleeve bearings. When Speedway Thermal Oilers are used on machine bearings it means fewer repairs, longer life and less depreciation.

Oilers are entirely automatic and are so sensitive to the varying needs of a bearing that they operate on a temperature change of 2 degrees.

Main oil supply is held in the glass bottle A from which it flows as needed to the thermal chamber B. Any slight rise in temperature of bearing is communicated to air imprisoned in B, which expands, forcing oil out of small opening C. Ratio of air and oil in chamber B is always the same, thus insuring uniform operation.

Vulcan Electric Soldering Irons

Display Board

These electric soldering irons are approved by Underwriters' Laboratories. Can be connected to any lighting socket and will operate with identical results on either a.c. or d.c.

They are wound for standard voltages as follows: 32, 110, 115, 120, 125, 200, 220, 230, 240 and 250 volts. An extra charge of \$1.00 is made for special voltages. Specify voltage when ordering.

Each iron is equipped with a patented, ventilated, adjustable handle, by which it can be lengthened or shortened, and a 6-foot approved heater cord and attachment plug cap.

No. 10 and No. 20

For finest instruments, smallest fuses, light telephone repairs, radio, and all very light soldering.

No. 20 is recommended for industrial use.

American Beauty Electric Soldering Irons

No. 3138

All irons except No. 3138 have special baffle-plate construction at shank to prevent free conduction of heat to handles. No. 3138 iron does not need baffle plate.

Copper tips are coated with pure nickel to prevent oxidation and corrosion.

Standard tips regularly supplied. Pointed tips can be supplied in place of chisel tips and vice versa; for No. 3138 iron a special long drawn semi-chisel shaped tip can be furnished in place of standard tip.

No. 3158

Stands are supplied with all irons.

Heating element core is machined from solid steel rod; outer surfaces are impregnated with zinc.

In standard voltage ranges: 100-109, 110-120, 121-130, 190-209, 210-240, 241-260. Will operate on a.c. or d.c. circuits. Can also be supplied for 32 volts.

No. 3138.—Primarily adapted for light work; radio, telephone, telegraph, ignition work, etc.

No. 3158.—For the same purposes as No. 3138 iron and for work of a somewhat heavier nature; for electric starter and ignition manufacturers, repair work, etc.

No. 3178.—For use on heavier work; connections, light commutators and for service and production work.

No. 3198.—For shop, service, production work, etc. Supplies a large volume of heat at high temperature.

G-E Soldering Irons

Cat. Nos. 43X700 and 43X701

These irons are simple in design and construction. There are only 8 different parts. Copper tip surrounds the cartridge type heating unit and all heat generated must pass through the tip. Copper has high heat conductivity, this means quick heating and low watts input.

For Light Duty

Socket Plug and Heater Cord.....each \$9.90

*Price includes radiating stand.

†Chisel type tips are employed on all sizes.

‡Excluding stand.

G-E Strip Heaters

Serves the double purpose of air heater and clamp-on heater. A few of the common applications are for: process machinery, drying ovens, matrix scorchers, warming tables, glue tables, water baths, drying cabinets, valve and pump houses, pipe lines, etc. Made of steel-sheath, enclosing nickel-chromium resistance wire insulated by magnesium-oxide powder. Heater is $\frac{3}{8}$ inch thick and $1\frac{1}{2}$ inches wide. Sheath temperatures, 750° F. or 1200° F. Can be connected in series for use on 440 or 550-volt circuits. For these higher voltages, secondary insulation is recommended, especially at sheath temperatures above 600° F.

Maximum Sheath Temperature, 750° F.

G-E Horizontal Industrial Air Heaters

For heating garages, ticket booths, pump houses, etc. Temperature may be controlled within 1 or 2 degrees F. if used in conjunction with G-E Automatic Temperature Control. Consists of a number of strip heaters mounted in black japanned, perforated pressed steel case, $25\frac{5}{8}$ inches long, with proper mounting, 3-foot armored cable and 3-heat snap switch.

G-E Immersion Heaters

Single Heat, .75 and 1 Kw.

3 Heats, 1.2 to 10 Kw.

Single Heat, .6 Kw.

3 Heats, 2 Kw.

These heaters offer an economical method of heating liquids in kettles, tanks, metal barrels, etc. They are substantially constructed, utilizing G-E Calrod Sheath Wire.

For heating water, a tinned copper-sheathed unit of high heat density and having a threaded brass header is used. For heating heavier liquids, such as oil and paraffin, a heater having a much lower watts density is used because of possible damage to such liquids and to the heaters caused by carbonization, etc. Steel is used as the sheath and header material in oil-immersion heaters.

For Water Immersion

SE-4301	5.75	43	40	40	1500

*Standard type has fastening tabs at each end with slotted mounting holes 5/16 inch wide by 1/2 inch long for bolting to supports.

†Type 5 (blunt end) has fastening tabs cut off about 3/4 or 1 1/4 inches depending on over all length from each end for clamp-on applications.

When ordering specify if Type 5 is desired, also Cat. No. and voltage.

Chromalox Immersion Heaters

Types M, MO, CM and CMO

Type M or MO

Type CM or CMO with Switch and Outlet Box

USES.—Because of their efficiency, Chromalox Immersion Heaters supply the most economical method for heating fluids in tanks, vats, kettles, boilers, stills and other containers where direct heat energy is desirable. Hundreds of companies are using these durable heaters for heating cleaning solutions, volatile solutions, tempering baths, pickling baths, water, oils, acids, glues, paraffin, syrups, gasoline, caustics and other fluids.

CONSTRUCTION.—All Chromalox Immersion Heater blades or heating units proper are similar in construction to Chromalox Strip Heaters having the resistor embedded in refractory material. The heating units are encased in seamless metal tubing or sheath pressed tightly over them, the seamless sheath being welded or brazed to the pipe threaded screw plug making entire unit waterproof and insuring efficient heat transfer.

OPERATION.—Single heat heaters have one blade or heating unit while 3-heat immersion heaters have two blades or heating units that can be operated in parallel or series giving full or 1/4 total wattage; operating only one blade or unit of a heater gives 1/2 total wattage. A 440-volt operation, single heat, can be obtained by connecting the two blades or heating units of a 3-heat, 230-volt immersion heater in series. A 3-heat, 115-volt immersion will operate with the two blades in series on 230 volts.

INSTALLATION.—Chromalox Immersion Heaters are easily installed. Where tank wall is 3/8 inch thick or more,

simply drill a hole and thread it with either 1 1/4 or 2-inch standard pipe thread, depending upon what immersion heater is used. If tank wall is less than 3/8-inch thick, solder or weld a standard 1 1/4 or 2-inch pipe threaded flange or metal disc to tank wall and install immersion heater.

Types of Heaters

TYPE M.—For water heating and solutions that readily absorb generated heat. Regularly supplied with copper sheath and bronze screw plug. For alkali solutions where copper is attacked, steel sheath, iron screw plug and welded seam construction is supplied—when specified.

TYPE CM.—Same as Type M except furnished with 3-heat switch mounted on outlet box which covers heater terminals, providing for conduit or BX wiring if desired.

TYPE MO.—For heating mineral oils, paraffin and other fluids that absorb heat slowly. Supplied with steel sheath, iron screw plug, and brazed seams. Can be furnished with copper sheath and bronze screw plug where steel would be attacked.

TYPE CMO.—Same as Type MO except furnished with 3-heat switch mounted on outlet box, which covers heater terminals, providing for conduit or BX wiring if desired.

NOTE.—If solution to be heated will attack the standard immersion heater construction, special seamless metal sheathed heaters can be furnished. Write for prices specifying type of solution.

Type H Chromalox Electric Air Heaters

Underwriters' Laboratories Approval No. 7601
For 115, 230, 250, 440 and 550 Volts

Exterior View of Heater Equipped with 2 Chromalox Units

Designed for those many hard-to-heat places where heat must be concentrated near the floor. Ideal for mounting underneath low windows—the most effective location for electric air heaters. This heater is ideal for use in offices and shops.

Interior View of Heater Equipped with 4 Chromalox Units Showing 3-Heat Switch and Conduit Box Mounted on End of Heater

Heater discharges heated air horizontally into the room where it is needed (not up to the ceiling), thereby providing even heat distribution and eliminating the usual "hot spots" and "cold corners". Mounting side (back part) is always cool, therefore this heater can be fastened to wall or wooden partition without fire hazard.

Showing Over All Dimensions of Heater

Fully Assembled with 3 Feet of Flexible Cable and 3-Heat Switch Mounted on Standard Conduit Box Ready to Connect to Power Line

†EH-2040	45.00	39.00	6	27	4500

*Can be supplied for 3-heat operation on 440 or 550 volts. All other heaters listed can be supplied for single-heat operation on 440 or 550 volts. For 3-heat switch (440-550 volts) add \$4.00 to above prices.

†The 4500-watt (4.5 kw.) heater can be supplied on order for 3-phase, 2-phase or single-phase operation and the load will be evenly balanced on each phase. If greater heating capacity is required than is supplied by a 4.5 kw. heater, mount two or more heaters side by side and thus secure the necessary total kw. of heater capacity.

Type P—For 115, 230 and 250 Volts

This heater is doubly useful because it meets the frequent requirements calling for a heater that can be quickly moved from one place to another.

Type HV Chromalox Electric Air Heaters

Underwriters' Laboratories Approval No. 7601

For 115, 230 and 250 Volts

Showing Heater Mounted Vertically on Wall Near Floor

This inexpensive Chromalox auxiliary type heater is being widely adopted by chain stores, telephone companies, etc., for heating small places requiring equipment having the Underwriters' approval. Also being installed in ticket booths, valve houses, fire extinguisher houses, etc., where safe, fumeless, clean heat is a necessity and economy is a factor.

Can be mounted in any position —on walls, floors or ceilings of the space to be heated. Because of the low wattage rating, heater is not equipped with switch, but is shipped from stock ready for direct connection to the power line. If a switch is required, it can be supplied at a nominal additional charge. The low wattage also eliminates the necessity of the patented flue-back, making it possible to supply these heaters at a low price.

Heater is furnished complete with 6 feet of heater cord and attachment plug.

American Beauty Electric Glue Pots
Automatic Temperature Control

Nos. 1041, 1042, 1044

Pails are equipped with reversible wiping bails.

Complete with cord, separable connector and attachment plug.

Constructed of aluminum alloy castings with heavy spun seamless copper, nicked, glue containers.

Outer enclosing casings of heavy sheet steel.

Made in the following standard voltage ranges: 95-104, 105-114, 115-125, 190-209, 210-229, 230-250.

Can be used on either d.c. or a.c. circuits.

Water-Jacketed Type With Water Bath

In this type the glue pail is immersed in a water bath and the contents thus heated.

Cat. No.	Each	Cap. Qts.	OVER ALL DIMEN. INCHES			INSIDE DIMEN. INCHES			Approx. Wattage	Ship. Lbs.

G-E Electric Glue Pots

Furnished in two types.

The jacketless type has no water jacket and is used for continuous operation; single heat, 145° F. maximum temperature, using aluminum pot for quick heat distribution and prevention of glue sticking to side walls.

The water-jacketed type has 3 heats and is used for quick intermittent service. Water jacket is of cast iron and pot of

copper to which glue will not stick.

The 115-volt pot operates satisfactorily on voltages from 110 to 120; the 230-volt pot on from 220 to 240 volts.

Order by Cat. No. and voltage.

Average time required to heat from 70° F. to 145° F. on high heat: *45 minutes; †40 minutes; †60 minutes.

Average constant temperature in pot at low heat, 145° F.

Bare and Insulated Wires

General Information

Stocks

We carry at our various distributing houses large stocks of wire and cables, which, in addition to the large reserve stock carried by the manufacturers from whom we buy, gives this company a unique and comprehensive assortment. We handle thousands of types of wires, bare and insulated, suitable for general purposes, and, of course, in addition, special wires and cables for aerial, underground, submarine, mine, signal, telephone, and telegraph service.

Factory Facilities

Factory facilities for the manufacture of rubber covered wires and cables have been continually improved, so that to-day the Graybar Electric Company is in a position to offer its customers unsurpassed facilities for the production of rubber insulated wires, and we are as well able to have produced promptly special wires and cables such as are used by the railroads, the mines and the United States Government.

Price and Quality

The Graybar Electric Company sells its wires and cables at prices consistent with the quality of material used, and our customers will find that we are in line with other manufacturers producing high grade wire.

Special Wires

Although the foregoing refers principally to the standard types of rubber covered wire, the same holds good to other classes of insulated wire handled by the Graybar Electric Company. We are in a position to furnish not only material from a large stock of wires and cables, which meet these ordinary specifications, and from which shipment can usually be made as soon as order is received, but we also have exceptional facilities for executing promptly all orders for emergency or special cables even of the most complicated construction.

Service

Our distributing houses are so well located and our stocks are so large that we are able to give customers service of a quality that cannot be exceeded by any of our competitors in any part of the country, and salesmen can unhesitatingly assure their customers that all stock of Graybar Electric wire receives the most careful scrutiny and inspection by men experienced in that line of work.

Habirshaw Wire and Cable

Insulation

Habirshaw wires and cables, distributed by the Graybar Electric Co. are insulated with rubber or varnished cambric. The various types of insulation are briefly described below.

Black Core Code Grade Compound

Habirshaw Code Compound is a standard compound and, although designed primarily to meet the minimum requirements of the National Electrical Code, it possesses superior electrical, mechanical and chemical properties. Its quality and uniformity are carefully controlled by rigid inspection.

Engineers Intermediate Grade Compound

Habirshaw Engineers' Grade Compound is an intermediate type, that is, it contains not less than 25 per cent rubber and comes between the Code and Thirty Per Cent grades of insulation. It conforms to the N.E.M.A. Building Wire Specification for Intermediate Insulation. This compound has remarkable natural aging properties and is a satisfactory insulation for use in high-grade building construction where an inexpensive insulation of better than Code grade is required.

Thirty-Per-Cent Hevea Compounds

Habirshaw 30 per cent Hevea compounds contain not less than 30 per cent of the best grade of new Hevea rubber, carefully compounded. Thirty Per Cent insulation is made in two grades.

1. ASTM-D-27-32-T, Grade A (N.E.M.A. Standard).
2. ASTM-D-27-32-T, Grade AO.

Grade A compound is one not permitting the use of an Anti-oxident, and has no aging performance requirement.

Grade AO compound is one requiring the use of Anti-oxident to meet specified aging performance tests.

Performance Test Compound

Habirshaw Performance type of rubber insulation is a high grade insulation having long life, good electrical and physical properties as well as low water absorption. This insulation conforms to the N.E.M.A. Building Wire Specification for Performance Test Insulation and also to A.S.T.M. Specification D-353-33T for Performance Rubber Compound.

The suitability of this type of compound as insulation is determined solely by physical and electrical tests. No limitations as to the kind or amount of rubber or other ingredients are specified, so as to permit the use of new materials and modern developments in the art, provided rigid tests are complied with. The use of Performance compound will ensure the obtaining of an insulation comparable with the best type of Thirty Per Cent, and one which represents the most advanced progress in compounding unrestricted by chemical analysis.

The above compounds, Black Core, Engineers', Thirty-Per-Cent Hevea and Performance Grade, represent the standard types of insulation used for building wire and cables and low voltage power cables.

Habirshaw Wire and Cable

Continued

Some of the special compounds regularly furnished by the Habirshaw Cable and Wire Corporation are briefly described below. Complete specifications and information on these types of insulation will be furnished on request.

Habirite

Habirshaw Habirite is a high voltage compound having low water absorption, high dielectric strength, is corona-resistant and has remarkable aging qualities, as indicated by natural life and long time Geer Oven aging tests.

Performite

Habirshaw Performite compound represents the most modern development in so-called super-aging compounds. It shows remarkable results in both Oxygen Bomb and Geer Oven aging tests and is the best rubber compound for high temperature and long service life. This compound is standard for I.A.M.E. Fire and Police Signal Cables.

Forty Per-Cent and Sixty Per-Cent Jacket Compounds

These compounds are used for abrasion-proof coverings on portable cords, arc-welding cable, mine cable, etc.

Other Compounds

In addition to the above, rubber compounds can be furnished which are resistant to oil, acids and alkali.

The Habirshaw Cable and Wire Corporation is in a position, with its well-equipped research laboratories and technical staff, to give expert advice on all special problems.

Habirshaw

Flame-Stop Finish

The new Code requires that all 600 volt braided building wire must have a flame retarding, moisture-resisting finish. This is one of the most constructive rulings ever introduced, tending to improve the quality of wire along with the improvement of quality in other wiring materials and devices.

Several years ago, Habirshaw, looking to the future, developed Habirshaw Flame-Stop Wire with the required flame retarding finish.

There has been over 200,000,000 feet of Habirshaw Flame-Stop Wire installed in the outstanding buildings of the United States due to the foresight of the leading architects, engineers and electrical contractors.

Habirshaw Flame-Stop Wire is backed up by Habirshaw's policy slogan "Proven by the test of time."

Habirshaw Wires and Cables are also supplied with metallic protective coverings. Lead sheathed cables are carried in stock; steel strip and wire armored and other special coverings are manufactured to order.

Varnished Cloth Insulation

Habirshaw varnished cambric insulated cables are manufactured and guaranteed in accordance with I.P.C.E.A. Specifications. Wires and cables of this type may be used at higher operating temperatures than rubber insulated cable and are used for switchboard wiring, feeders and power wiring. They are also used for voltages higher than ordinarily recommended for rubber cables.

Habirshaw Rubber Covered Braided Stranded Circular Mill Cables

Single Conductors
600 Volts N. E. C. S.

Habirshaw Rubber Covered Braided Wire 3-Conductor—Solid 600 Volts

Each conductor of the 3-Conductor Rubber Covered House Wire is insulated by Black Core rubber compound. The covering over insulation is a 2 to 6 A.W.G., one rubber filled tape, and an 8 to 14 A.W.G., one saturated braid.

The conductors are grouped by twisting. They are filled with jute, covered by one rubber filled tape. The whole is covered by a saturated cotton braid.

Habirshaw Rubber Covered Braided Cable 3-Conductor—Stranded 600 Volts

The 3-conductor stranded code house cable is used under the same conditions as solid 3-conductor code house cable unless greater flexibility is required, especially in larger sizes.

Number of conductors, 3.

Range of sizes, 500,000 cm to 14 A. W. G., stranded.

Insulation on each conductor, "Black Core" rubber compound.

Covering over insulation, 500,000 cm to 6 A.W.G., one rubber filled tape, 8 to 14 A. W. G., one saturated braid.

Grouping of conductors, twisted.

Fillers, jute.

Covering over jute, one rubber filled tape.

Covering over all, one saturated braid.

Reels

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, if returned to mill within six months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

Habirshaw Lead Covered Cable
600 Volts, N.E.C.S.

Used for 3-phase circuits. Stranded are used where extra flexibility is required in smaller sizes and always in larger sizes where solid conductors would make cable too stiff to handle.

Contains 3 conductors. Sizes range from 500,000 cm. to 14 A. W. G. Each conductor insulated with Black Core rubber compound. Insulation covered by rubber filled tape. Conductors twisted, filled with jute. Rubber-filled tape covering over jute. Lead sheath covering over all.

Habirshaw Steel Tape Parkway Cables

Habirshaw Steel Tape Parkway Cables

Single Conductor

2-Conductor, Flat

Parkway cables are used for transmission and distribution where it is preferable to bury the cables directly in the ground rather than to put them in ducts. Any kind of cable will be furnished with park cable covering, but the following types are in general use for distribution purposes.

Standard parkway cables (0-600 volts). Number of conductors, one to three.

Insulation on each conductor, "Black Core" rubber compound for 5000 volts or less. For higher voltage, special high voltage rubber.

Covering over insulation, rubber filled tape. Covering over tape, lead sheath.

Covering over lead sheath, asphalted jute.

Protective armor, two ungalvanized steel tapes, wound in the same direction, the outer tape covering the spaces between turns of the inner tape.

Outside covering, asphalted jute.

Parkway cables with galvanized steel tapes will be furnished when so specified.

Habirshaw Parkway Cables are made to conform to I.P.C.E.A. standards for rubber insulation and metallic coverings.

Habirshaw Armored Submarine Cable

Armored cable, or submarine cable, as it is sometimes called, is used under water for crossing rivers, bays and lakes.

Armored cable may be insulated with paper, varnished cambric or rubber compound. If insulated with paper or varnished cambric, a lead sheath is required. If insulated with rubber compound, a lead sheath is preferable, but may be omitted where the water, in which the cable is to be laid, does not contain injurious impurities and does not attain an unusually high temperature. If the cable is rubber insulated and not lead covered, it has a rubber filled cotton tape.

The leaded or taped core is served with jute yarn, run through hot asphalt compound, then armored with galvanized steel wires, *run through hot asphalt compound, served with two layers of yarn and finally run through asphalt compound.

The asphalt and jute over the armor may be omitted, if desired.

Upon receipt of inquiry stating the conditions of service, our Engineering Department will furnish additional data.

*Hot asphalt compound is also applied during armoring at the points where the armor wires come into contact, insuring complete sealing of the armor.

Habirshaw Mast-arm Cable

Mast-arm cable is used where a flexible cable, capable of passing over a pulley, is required to connect arc-lamps suspended from a mast-arm or bracket to the feeder line where the lamps must be lowered for maintenance purposes.

Number of conductors, 2. Range of sizes, 6 and 8 A. W. G. Stranding, flexible. Insulation on each conductor, "Black Core" rubber compound. Thickness of insulation, code standard. Covering over insulation, one saturated cotton braid.

Grouping of conductors, parallel. Covering over all, 2 saturated cotton braids.

Habirshaw Corona-Proof Cable

This cable is used where rubber insulation is desirable, yet must be proof against the deteriorating effects of the elements and the oxidizing action of Corona discharges. It is a cable insulated with a special rubber compound, especially developed for this service, covered with a layer of tape, enclosed in one or more saturated cotton braids.

This cable is used for aerial distribution circuits at voltages of 2200 and over. Also for special purposes where extra high voltages are used.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Fire Alarm Cable

Habirshaw Fire Alarm and Police Signalling Cable is used to connect fire alarm and police signal boxes, on the street and in buildings, with department headquarters.

Such cables are usually made to customers' specifications or to the Specifications of the International Association of Municipal Engineers. This latter specification calls for Perfomite insulation and is recommended as the most satisfactory insulation for this class of cable.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish recommendations and additional data.

Habirshaw Signal Wire and Cable**American Railroad Association Signal Division Standard**

Railway signal wire is made to conform with the exacting specifications of the American Railroad Association Signal Division Standard and represents the standard engineering practice in this line. Standard practice means a great deal more to the railway signal engineer than to most others, as upon the reliability of signals depends the safety of millions of passengers.

The present American Railroad Association Signal Division Standard specification for rubber insulation is a development resulting from a study of the manufacture, inspection and use of rubber insulated wire extending over a period of many years, by a strong and representative committee of signal engineers who have given considerable time and attention to this subject. The specification has undergone changes in this time and every change has improved the product and confirmed the opinion of signal engineers as to the excellent quality of the insulation which it exacts. Habirshaw also makes a higher grade signal wire known as Habirite signal wire which is recommended for locations where operating conditions are exceptionally severe.

Habirshaw has specialized on A. R. A. Signal wire and makes all standard types including the following:

Rubber Insulated Signal Wire for 660 Volts or Less

Number of conductors, one or two.

Range of sizes, 0 to 18 A. W. G., solid.

Insulation on each conductor, A. R. A. Signal Division compound.

Covering over insulation, one cotton braid, weatherproof to A. R. A. specification.

Thickness of insulation, No. 0-2 A. W. G., inclusive, $\frac{3}{4}$ inch; 4-8 A. W. G., inclusive, $\frac{5}{8}$ inch; 9-14 A. W. G., inclusive, $\frac{3}{4}$ inch; 16-18 A. W. G., inclusive, $\frac{7}{8}$ inch.

Shipped on reels or in coils as ordered. If in coils the following lengths are standard: No. 6 A. W. G., 1000 ft.; 8-12 A. W. G., inclusive, 1500 ft.; 14 A. W. G., 2000 ft.

Aerial Braided Cable for 660 Volts or Less

Number of conductors, as specified.

Range of sizes, 4 to 16 A. W. G. (not necessarily all the same size in a given cable).

Insulation on each conductor, A. R. A. Signal Division compound. Can be furnished lead covered if required.

Fillers, dry jute.

Covering over each layer, rubber filled tape.

Covering over all, one saturated cotton braid, $\frac{3}{4}$ in. thick.

Thickness of insulation, No. 4 A. W. G., $\frac{3}{4}$ inch; 6-9 A. W. G., inclusive, $\frac{5}{8}$ inch, 10-14 A. W. G., inclusive, $\frac{3}{4}$ inch; 16 A. W. G., $\frac{7}{8}$ inch.

Cables of more than three and less than seven conductors are made with jute or sisal center. One wire in each layer is taped for a tracer.

Cables will be shipped on reels.

Habirshaw Varnished Cambric Insulated Cable

Varnished cambric insulated cable is used:

- In power stations and sub-stations for connecting machinery and apparatus of all voltages (see Apparatus Cable and Station Cable).
- In buildings in place of rubber insulated cable, especially for the larger sizes.
- For low voltage underground distribution, where special reliability is desired.
- On vibrating structures where paper insulation cannot be used due to the crystallization of the lead sheath.

Varnished cambric insulation consists of varnished cambric tapes applied helically to the conductor with intervening layers of mineral base grease. The turns of tape overlap and the joints in successive layers are staggered. They are also reversed at least every three layers.

Varnished cambric insulated cable is usually covered as follows:

Apparatus cable, saturated cotton braid.

Station cable, a rubber filled cotton tape and a flameproof braid.

Building mains, a rubber filled cotton tape and two saturated cotton braids.

Underground cable, lead sheath.

Cable for outdoor structures, a rubber filled cotton tape, two galvanized steel tapes, and a layer of asphalted jute under and over the armor.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Tree Wire

Habirshaw Tree Wire is a single rubber insulated, medium hard-drawn tinned copper conductor, enclosed in protective coverings of rubber-filled tapes, pre-asphalt-saturated jute, fibre tape armor, asphalt and a cotton braid thoroughly saturated and finished with Habirshaw Flame-Stop Finish.

Tree Wire is designed for use on aerial distribution lines consisting nominally of weatherproof wire, but where the lines pass through trees. The insulation for tree wire is not designed to carry the full voltage to ground continuously, as the line insulators carry it under normal conditions. It is only when wet and in contact with a wet tree that the full voltage is carried by the rubber insulation.

Habirshaw Service Drop Cable

Service Drop Cable is used for bringing power aerially from the main lines on poles to buildings.

Habirshaw Service Drop Cable is a two or three conductor cable, both conductors of the duplex and two conductors of the triplex being insulated with Type AO 30% Hevea Rubber Compound, covered with two substantial cotton braids, thoroughly saturated with asphaltic compound and finished with Habirshaw Flame-Stop Finish. The neutral conductor of the three conductor cable is without rubber insulation, but covered with three substantial weatherproof braids. Conductors in both types are laid together helically to form a twisted cable, without overall covering.

Size A.W.G. Stranded.....	8	6	4	2
Max. Diameter 2-Conductor.....in.	.78	.86	.95	1.07
Max. Diameter 3-Conductor.....in.	.84	.92	1.03	1.16

Habirlite Habirshaw Headlight Wire Single Conductor

Habirshaw wire is used where resistance to oil heat, sulphur fumes and steam is essential. Standard sizes, 10 to 14 A. W. G., solid. Wrapping, soft cotton wind, saturated. Insulation, heat proof compound insoluble in mineral oils, non-hygroscopic, chemically inert to reagents and flexible to breaking point of wire. Covering, three cotton braids saturated with heat resisting compound.

Size A.W.G.	Diameter Overall Inches	Weight Lbs. per 1000 Ft.	Type of Package	Feet in Package	Shipping Weight of Package

12	.200	37	10 coils in box	10000	390
14	.190	29	10 coils in box	10000	310

Habirshaw Battery Charging Cable 2-Conductor

Battery charging cable is used for connecting storage batteries of automobiles to the stationary charging outfit. Also used largely by railroads for charging train lighting batteries on electric baggage trucks both in the charging rooms and for boosting while in position under railroad cars and on the baggage trucks. Range of sizes, 0000 to 8 A. W. G., stranded. Insulation on each conductor, "Black Core" rubber compound. Covering over insulation, one saturated braid. Grouping of conductors, twin (flat), except No. 0 and larger, which are round. Fillers, jute (for No. 0 and larger, only). Covering over both conductors, two saturated braids.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths inch	Outside Diameter Inches	Weight per 1000 Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.

8	61	4	.395x .720	210	Reel	1000	310

Habirshaw Control Cable

Station control cables are used for the remote control of outdoor or automotive substations and are installed in conduit being either braid or lead covered.

Number of conductors, 1 to 7.

Usual size, 19 No. 22 A. W. G. or 37 No. 22 A. W. G.

Separator, soft cotton wind.

Insulation on each conductor, rubber compound of quality specified.

Thickness of insulation each conductor, $\frac{3}{64}$ or $\frac{1}{16}$ inch.

Covering over insulation, colored dry cotton braid.

Grouping of conductors, twisted.

Fillers, dry jute.

Covering over filler, one rubber filled tape.

Covering over all, two saturated cotton braids or lead as specified.

It is usual to have a different colored braid on each conductor in order to facilitate the identification of circuits.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Mine Cable, Single Conductor

Locomotive or Gathering Reel Cable

Single conductor mine cable is used for operating gathering reel locomotive run on steel tracks which can be used for the return current.

Number of conductors, one.

Range of sizes, 2 to 6 A. W. G., flexible.

Insulation, "Black Core" rubber compound.

Covering over insulation, rubber filled tape.

Covering overall, one extra heavy or seine-twine (as specified), extra tight weatherproof braid.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.

Habirshaw Triplex Mine Cable

Triplex mine cables are used with three-phase motor equipments, and are usually made for pressures up to 600 volts.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor "Black Core" rubber compound.

Covering over insulation, one saturated cotton braid or rubber-filled tape.

Grouping of conductors, twisted.

Fillers, jute.

Covering over filler, rubber filled tape.

Covering over all, one or two saturated extra tight braids.

Habirshaw Twin Mine Cable Flat

Twin (flat) mine cable is used for gathering reel locomotives, cutting machines, hoists, drills, and other electrical machines in mines.

Number of conductors, two.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor, "Black Core" rubber compound.

Covering over each conductor, one saturated braid.

Grouping of conductors, parallel.

Marker, raised thread in the braid of one conductor.

Covering over all, two or three saturated extra tight braids as specified.

General Cable Varnished Cambric Wire and Cable

Aerial — Underground — Submarine

Made in accordance with I. P. C. E. A. specifications. Varnished cambric forms an insulation which is mechanically strong and rugged and will withstand severe strains during installation and service. Not affected by oils and greases and resists corona and ozone attack.

Cables are easily installed; they have high dielectric strength, high permissible operating temperatures, long life and excellent current-carrying capacity. Varnished cambric cables with suitable protective braids are recommended for general interior wiring in stations, substations and industrial plants. For power distribution and transmission a lead sheath is added and for vertical risers in buildings and mine shafts, a steel wire armor is applied. Also available with steel tape armor for park and street illumination and in still other constructions for unusual services and operating conditions.

Braided

Lead Sheath

Annular Conductors

Steel Wire Armor

Interlocking Steel Tape

General Cable Parkway Cable

Parkway cables are used for boulevards, park systems, and street lighting circuits, or wherever an installation is required to be made directly in the earth, without the use of ducts or conduits. Parkway cable is protected from mechanical injury by two dependable plain flat steel tapes, as well as full weight presaturated jute covering thoroughly treated with hot asphaltic compounds.

General Cable Single Strip Steel Armored Cable

Designed to meet requirements for street and boulevard lighting; used in all classes of underground installations requiring insulated copper conductors with a protective covering against mechanical injury. May be used on any type or size conductors, for any standard voltage or under any condition of service ordinarily met with where park cable is used. Used in train control and other service where it is essential to have conductors protected.

This cable is of single strip construction; arch is designed to give maximum mechanical protection against crushing load and at the same time afford flexibility. Joints operate on a ball and socket plan.

Prices upon application.

General Cable Trenchlay Cable Power Type 0-600 Volts

General Cable Trenchlay cable, is the original non-metallic armored cable.

The fundamental principles of Trenchlay are to provide a cable for direct earth installation primarily offering mechanical protection during and after installation.

Trenchlay features in all four types consist of an asbestos braid, a series of Asbestos Base Caulk seals and an improved non-metallic armor.

General Cable Trenchlay Cable Power Type Grounded or Ungrounded 2001-3000 Volts

When selecting insulation thicknesses, these cables are rated at operating voltages between phases.

For three phase systems with grounded or ungrounded neutral, use thickness values in accordance with the following table.

For single or two phase systems up to and including 3000 volts, use thickness values in accordance with the following table.

General Cable Trenchlay Cable Control Type

General Cable Control Type Trenchlay embodies all the advantageous structural features of power type Trenchlay. It is intended for direct earth installation for control circuits requiring several conductors. Each conductor is easily identified by the use of colored braids or colored markers in the braids.

Standard sizes are Nos. 14, 12 and 9 A.W.G. in stranded construction.

For structural details, tests, etc. ask for Specification No. 3104.

General Cable Trenchlay Cable Railway Signal Type

General Cable Railway Signal Type Trenchlay offers a variety of uses on multiple conductor or single conductor circuits because it is constructed for direct earth installation use in ducts or as an aerial cable. Unlike the other types of Trenchlay, this cable employs a tough weatherproof Sisal braid as an outer covering and can be flame-proofed if desired.

For structural details, tests, etc. ask for Specification No. 3204.

General Cable Super Service Cable

Super Service Cable has unusual tensile strength, durability and capacity to stand severe abrasion; the smooth, dense, sturdy hide will give long service on any job.

Cannot be kinked. This cable is tough, flexible, waterproof and highly resistant to oil or acid.

The name is embossed every 20 feet in the rubber jacket. Two lateral fins or ridges along opposite sides of cord mark the places where vulcanizing molds come together.

Single Conductor—600-Volt Insulation

Used on mine locomotives, cutting machines, electric shovels, draglines, dredges, power leads, emergency cables, grounding leads, loading machines, conveyors, lifting magnets, cranes and welding equipment where safety and hard usage are important factors.

Twisted Conductor—600-Volt Insulation

In the twisted conductor cable the construction is similar to the cord with the exception that the copper conductors are tinned and have the same stranding as other cables. Polarity is indicated by rubber filled tapes of distinctive colors applied over the individual conductors. For instance, the 3-conductor cable is colored with black, white and red rubber tapes. However, on 4 and more conductor cables Size No. 6 and heavier, polarity is indicated by covering one conductor with red tape and all others with black tape. Polarity can then be readily recognized by counting from the red conductor.

3	133/#24	80	1.109x.675				

General Cable Super Service Welding Cable
Single Conductor—600-Volt Insulation

Recommended wherever a flexible portable cable is required.

Extreme flexibility is obtained by the large number of fine bare copper wires, rope stranded. This obviates the necessity of splicing additional lengths for electrode holders and assures freedom of wrist movement in the welding operation. This cable is waterproof; it coils easily, lies flat and does not kink or tangle.

*Bare copper, cotton separator.

General Cable Super Service Grounding Cable
5000-Volt Rating

Used in the field for temporary grounding of lines while undergoing repairs. The ground clamp with cable attached is hooked on the line by means of a grounding stick, the other end having previously been connected to ground either by clamping to transmission tower or when working on a pole, to any temporary ground connection available. Also used in generating stations and substations for grounding apparatus during repairs.

Tests indicate that cable can be safely used to ground lines up to 132000 volts (system phase to ground potential).

Cable is flexible and easy to handle. Outer rubber jacket is tough and durable, waterproof and highly resistant to oils and acids. Withstands hard service.

*Tinned copper.

General Cable Super Service High Voltage Cable
3 Conductors

This cable offers remarkable wearing qualities under the most adverse conditions and also possesses exceptional resistance to the corona action, set up by the high tension currents, which has been the source of so much trouble with cables in the past.

Corona action is caused by current leakage through the insulation. The current leakage changes the oxygen in the air to two parts oxygen or ozone. Ozone is one of the most active agents in deteriorating rubber and its presence on the surface of the cable will quickly break down the rubber jacket. This danger has been practically eliminated in Super Service High Voltage Cable by the corona-resisting compound used on the individual conductors and the combination of ground strands which carry off the leakage.

General Cable Super Service Portable Cords

Type S-2 Conductors

For portable electric tools such as drills, hammers, grinders, buffers, chucks, reamers, riveters and saws; also trouble lamps, solder irons, sand cutters (foundry), conveyors, portable loaders, compressors, microphone and movie-tone installations, electric heating devices, floor scrubbers, train control devices, portable blowers, blasting devices, hoists, concrete mixers, pumps, refrigerators, stage lights and any other type of portable tools or machinery where the cord is subjected to hard usage.

Nos. 16 and 18 with 1/2-inch insulations are rated for 300-volt service. Any number of conductors can be used up to an outside cable diameter of 2 1/2 inches.

General Cable Supertex Rubber Lamp Cords

Supertex is a new type of lamp cord insulated with a thin covering of high grade colored rubber in place of the usual cotton or rayon braids. Furnished in 4 standard colors, sizes Nos. 16 and 18 only. The unique construction of the rubber sheath protects and at the same time separates the 2 conductors.

This is the ideal cord for hotels, dormitories, clubs, asylums and hospitals. Recommended for use on all types of household extension lamps, electric clocks, instrument cords, dental and hospital equipment, electric fans and toys. Greatly reduces cord difficulties and practically eliminates costly labor charges for repair and replacement.

To strip ends twist cord, to loosen sheath from conductors pull sheath beyond conductors as far as desired, cut off sheath while stretched, allow sheath to slip back to its original position exposing ends of conductors and strip conductors in usual way.

General Cable Unit Package Splicing
and Jointing Materials

For convenience of customers, the complete materials required for splices and joints on all types of cable are put up in handy unit package form. By purchasing splicing and jointing materials in this manner, an accumulation of dead stock in the store room is prevented and the time and expense of buying the various items required for the work from more than one source is saved.

When ordering, specify number and size of conductors, thickness of insulation and lead sheath and voltage rating.

General Cable Slow-Burning Triple Braided Wire

Solid

All 3 braids of cotton are thoroughly saturated with white fireproof compound. The compound used on the outer braid becomes very hard, but still the wire retains its flexibility. As this insulation does not deteriorate in a continued high temperature, it is especially suitable for engine and boiler rooms, furnaces and foundries.

Tirex Rubber Armored Cable

The flexible copper conductors are insulated with a rubber compound of high dielectric strength containing a minimum of 30 per cent of new Para rubber.

The inner jacket is a 40 per cent Para rubber compound and fills the interstices between the conductors.

The outer jacket or rubber armor contains a high percentage of new Para rubber and is securely locked to the cable.

A double reinforcement of hard twisted seine twine between the jackets adds greatly to the wearing qualities of Tirex Cables.

The outer covering or rubber armor effectively protects the cable and safeguards the user.

Tirex Cables, being all rubber, do not absorb moisture and are not appreciably affected by oils or acids under ordinary industrial conditions.

Tirex Single Cable—600 Volts

For use wherever a single conductor portable cable is needed. Specially suitable for electric mine locomotives of the gathering reel type when it is necessary to leave the trolley wire in the main entry and enter rooms to pick up or place cars.

To insure adequate tensile strength the conductors of Tirex Single Conductor Cable are reinforced with steel strands.

Tirex Rubber Armored Cable

Maximum flexibility is obtained by proper stranding of the copper conductors and the omission of stiff, fibrous braids and fillings. Tirex Cables never kink.

The smooth, clean, outer surface of Tirex Cables does not collect and hold dirt and grease. It may easily be wiped clean when soiled.

Rigid electrical tests are made during the manufacture of Tirex Cables. These tests insure the integrity of every length.

The rubber armor has remarkable wear-resisting properties and protects the cable from outside injury.

Type S Tirex All Rubber Portable Cord For Electrical Tools and Appliances

Tirex fits standing bushings. It is most satisfactory for portable lamps, tools or other appliances. Oils and acids have no appreciable effect upon it and the clean, smooth outer surface does not collect dirt or grease. The conductors are copper wire, stranded and cotton wound. Insulation is 30 per cent. The insulated conductors are twisted and covered with a high-grade rubber jacket which entirely fills the interstices between the conductors. Electrical tests are applied to each length of cord after 12 hours' submersion in water.

Two and three-conductor Nos. 14, 16 and 18 and 2-conductor No. 12 are packed in special cartons containing approximately 250 feet each (from 200 to 270 feet), so constructed that the cord may be drawn out as needed without disturbing the remainder of the coil.

*There are no N. E. C. standards for 1-conductor rubber sheathed flexible cord.

Prices upon application.

Type SJ Tirex Portable Cord

2-conductor

Recommended for pendent drop lights, floor or table lamps, vacuum cleaners and small electrical tools and apparatus.

It is suitable for portable use in offices, dwellings and reasonably dry places where conditions are not so severe, and for pendent use in manufacturing plants and garages.

The cord is practically wearproof, never frays or kinks and is so flexible that its full length is always available without delay or annoyance.

The outer covering or rubber armor is smooth and attractive in appearance and is furnished in black or green as desired.

The colors are permanent and the wear and tear of ordinary service has no appreciable effect on them.

The insulation of each conductor is of a distinctive color for identification and polarity marking.

Tirex is packed in convenient cartons containing approximately 250 feet each, (from 200 to 270 feet) so constructed that any desired length may be removed without disturbing the remainder of the coil.

Other lengths may be obtained in coils or on reels.

Tirex Shot Fire Cable

Two-conductor

Suitable for rough work in damp or wet places. Not affected by acid, gas or oil.

The particular features which will appeal to the shot firer, are the small diameter of about 1/4 inch and the light weight of 4 1/2 pounds to 100 feet.

Cable is flexible and has adequate tensile strength for the work for which it was designed. Does not kink or snarl.

Whitney Blake Flexible Cords

N. E. C. Standard

Type C Twisted Pair Lamp Cord

For pendant or portable use in dry places and where not subject to hard usage.

Each insulated conductor is covered with a glazed cotton or rayon braid and twisted together.

Size.....	A. W. G.	10	12	14	16	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{32}$
Weight per 1000 Feet....	lbs.	110	81	60	37	27

Type PO Parallel Flexible Cord

Type PO-32 is for portable lamps and appliances where extra factor of safety and good appearance is desired. Type PO-64 is for portables not subject to severe usage.

Each insulated conductor is covered with a soft cotton braid laid parallel and then covered with an outer braid of glazed cotton or rayon.

Type No.....		PO-32		PO-64	
Size.....	A. W. G.	14	16	18	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{32}$	$\frac{1}{64}$
Weight per 1000 Feet....	lbs.	60	37	28	20

Type PD Twisted Portable Cord

For household equipment subject to more or less flexing. Construction is same as Type PO except that conductors are twisted together before outer braid is applied.

Size.....	A. W. G.	16	18
Insulation.....	in.	$\frac{1}{32}$	$\frac{1}{32}$
Weight per 1000 Feet....	lbs.	38	28

Types P-32 and P-64 Reinforced Portable Cord

For pendants or portable use in dry places and where subject to hard usage.

Each insulated conductor is covered with a soft cotton braid twisted together and covered with a rubber jacket not less than $\frac{1}{64}$ inch thick around twisted conductors, then covered with an outer braid of glazed cotton or rayon.

Type No.....		P-32			P-64
Size.....	A. W. G.	12	14	16	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{64}$
Weight per 1000 Feet....	lbs.	169	121	72	64

Type PWP Weatherproofed Reinforced Portable Cord

For use in damp places subject to hard usage. Construction is same as Type P except outer braid is soft cotton weatherproofed.

Type No.....		PWP-32			PWP-64
Size.....	A. W. G.	12	14	16	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{64}$
Weight per 1000 Feet....	lbs.	175	128	79	71

Type K Braided Heavy Duty Cord

For pendant and portable use in damp places and where subject to hard usage.

Each insulated conductor is covered with a soft cotton braid and twisted with jute filler to provide added protection. This is protected with a covering of two braids of weatherproofed cotton.

Size.....	A. W. G.	10	12	14	16	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{32}$
Weight per 1000 Feet....	lbs.	175	130	105	71	56

Whitney Blake Flexible Cords

Types FF-32 and FF-64 Flexible Rubber Covered Fixture Cord

Type FF-32 is for wiring fixtures where temperatures do not exceed 120°F. Type FF-64 is for radios, etc.

The insulated conductor is covered with a braid of cotton, rayon, or weatherproofed cotton.

Type No.....		FF-32				FF-64
Size.....	A. W. G.	10	12	14	16	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{32}$
Weight per 1000 Feet....	lbs.	54	40	29	17	13

Type CF Flexible Heat Resisting Fixture Cord

For wiring fixtures where temperatures do not exceed 194°F.

Stranded conductor of bare copper, several coverings of cotton thoroughly saturated with a flameproof and moistureproof compound.

Can be furnished in Types C, PO and PD Lamp Cord constructions in glazed cotton or rayon.

Size.....	A. W. G.	14	16	18
Weight per 1000 Feet....	lbs.	22	16	12

Type AF Flexible Heat Resisting Fixture Cord

For wiring fixtures where temperatures are over 194°F.

Stranded conductor of bare copper, several coverings of asbestos thoroughly saturated with a flameproof and moistureproof compound.

Can be furnished in Types C, PO and PD Lamp Cord constructions in glazed cotton or rayon.

Size.....	A. W. G.	14	16	18
Weight per 1000 Feet....	lbs.	22	16	12

Type HPD Flat Iron Heater Cord
3000 or 10,000-Cycle

For flat irons and other heating appliances where subject to severe usage and flexing.

Stranded conductor of bare copper with separator. Rubber insulated $\frac{1}{64}$ inch minimum, and asbestos covered. The two conductors are then twisted together and covered with an overall braid of glazed cotton or rayon.

Type HC is the same except that each conductor is individually braided and then twisted.

Size.....	A. W. G.	10	12	14	16	18
Weight per 1000 Feet....	lbs.	100	72	53	41	30

Type POSJ Rubber Sheathed Parallel Cord

For portable lamps and appliances. Is of lasting quality and capable of withstanding severe abuse.

Flexible stranded conductors with high grade insulation and an oval jacket of tough rubber over all.

Standard colors, brown or black.

Size.....	A. W. G.	18
Insulation.....	in.	$\frac{1}{64}$
Weight per 1000 Feet....	lbs.	28

Types S and SJ Rubber Sheathed Cord

Type S is a heavy duty cord for portable use where normally exposed to hard usage. Adapted for outdoor use, in machine shops, factories, garages, etc.

Type SJ, constant service cord, is very flexible. For portable use where not normally exposed to hard usage.

Flexible strand of No. 34 bare copper with separator. Insulation 30 per cent rubber. Twisted with fillers and covered with cotton braid and 40 per cent rubber sheath.

Both types are also furnished with 60 per cent rubber sheath to meet extremely severe conditions.

Size.....	A. W. G.	10	12	14	16	18
Insulation.....	in.	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{3}{64}$	$\frac{1}{32}$	$\frac{1}{32}$

Furnished in 250-foot coils.

Whitney Blake Automotive Wires and Cables

Braided Ignition Cables

A Corona-Proof compound is used on all ignition cables. The lacquered cables are covered with a closely woven braid of cotton and treated with a flexible lacquer built to withstand oil, gasoline, and extremes of heat and cold.

For the severe conditions encountered on bus and truck work Type No. 715 is specially recommended. It has an insulation of rubber and layers of varnished cambric tape wound in reverse direction, natural cotton braid weather-proofed and over all a high quality glazed cotton braid treated with the same flexible lacquer as the S.A.E. grade. "Com" indicates commercial grade.

Tinned wire furnished on application at \$.02 1/2 per pound extra.

Damp-Proof Office Wire

This wire is double braided, the inner braid saturated with black weatherproof compound. The outer braid is specially treated with wax, highly polished and will not collect dust. Damp-proof office wire is carried regularly in the following colors: red, red and white, blue, blue and white.

Sizes 16 and 18 wire, in red, red and white, blue, blue and white, are also carried in duplex wire, being two separately insulated conductors under one braid.

Size A.W.G.	Wt., Lbs. per 1000 Ft.	Single Conductor		Duplex Double Conductor	
		NET ADDITIONS TO BASE		per 1000 Ft.	Net Additions to Base
		10-lb. Coils	5-lb. Spools		10-lb. Coils

16	14.5	.12	.17	27	.13
18	10	.14	.18	18	.15

Tinned wire furnished on application.

Annunciator Cables

This cable is designed for connecting the annunciator in an elevator car with the push buttons on the different floors.

Each conductor is composed of 16 strands of No. 30 A.W.G. gauge soft untinned copper wire and insulated with two reverse wrappings of cotton and one cotton braid. The insulated conductors are then cabled (using a steel supporting strand if desired, in order to give extra tensile strength, but ordinarily supplied without same) then covered with two cotton braids, the inner one being white and the outer one black. This is a dry cable, and the outer braids are not flameproof.

Prices on application.

Deltabeston Fixture Wire—Plain Single Conductor—Stranded Type AF

The flexible conductor is insulated with a $\frac{1}{16}$ -inch wall of asbestos fiber, purified by a special process. Felted asbestos fixture wire is recommended for all classes of fixture wiring, etc., and is especially adapted for fixtures in which the temperature liable to be attained by some parts are such as to render the use of rubber covered wires or cords either undesirable or impracticable. It can be "fished" through fixtures with the utmost ease. Standard length, 250 feet. Furnished on spools.

Size B. & S.	Diam. Over All In.	Stranding B. & S.	Wt., Lbs. per 1000 Ft.
10	200	65/28	42
12	177	66/30	29
14	141	41/30	20
16	123	26/30	14
18	111	16/30	10

Colored Finish, Plain

Single conductor fixture wire, plain, similar to that described above, can be finished with gray, cream, old brass or bronze colored filling compound at an increase in price.

Single Conductor—Solid

Either the black finish or colored finish fixture wire described above can be furnished with solid conductor where extreme flexibility is not necessary.

Deltabeston Fixture Wire Cotton and Art Silk

This is the plain, black finish fixture wire with a braided outer covering of art silk or cotton. It is especially adapted for fixtures on which the wiring is exposed to view. It has a small diameter and is neat and attractive in appearance. This wire is furnished in single and two conductors. Standard length of spools, 250 feet.

Deltabeston HPD Heater Cords

No. 60

Deltabeston HPD Heater Cord should not be confused with ordinary rubber and asbestos insulated heater cords. It is a product of fine materials, close precision, workmanship and careful inspection, both as to raw materials and the finished product.

The outer braid, which is of fine quality glazed cotton yarn, is woven over the two conductors in a manner similar to that of woven fire hose. The asbestos is applied in a uniform adhesive mass which forms a solid tube of asbestos fibres completely around the rubber insulated conductor.

Meets with a wide margin of safety, all requirements of the National Electric Code and an Underwriters' label is applied every 5 feet throughout the entire length.

Made in 4 standard styles of braiding Pattern Nos. 30, 40, 50 and 60.

Shipped in 250-ft. coils or in long lengths on 24-in. wooden reels.

Order by pattern number for all sizes and classes. Special patterns supplied on orders for 5000 ft. or more.

Deltabeston Heater Cord 2-Conductor, Stranded Style A, Asbestos Braid Overall

For service where rubber is not necessary, felted asbestos heater cord is satisfactory. Each conductor is composed of 30 B.&S. gauge copper wires stranded together and insulated with a $\frac{1}{16}$ inch wall of pure asbestos fiber. This is filled with a compound which gives it high dielectric strength and provides a tough, pliable insulation.

Style A is a fire-proof cord. The twisted conductors are covered with an asbestos braid.

The felted asbestos insulation does not deteriorate with age. The insulation so cements the wires that, even should some of them break, the fine strands will not penetrate the outer covering and cause short circuits.

Deltabeston Coarse Strand Cable

For 600-Volt Service

Insulated with a Heavy Wall of Pure Long-Fibre, Felted Asbestos—Finished with Asbestos Braid or Lead—Flame and Moisture-Proof

For open wiring in boiler rooms of central stations and industrial plants, kiln rooms; also for wiring resistance grids, rheostats and any other installations where fire hazards prevail.

Insulation will not deteriorate in constant temperature of 400° F. Resists oil, heat, moisture and corrosive vapors.

Deltabeston Flexible Strand Apparatus Cable

For 750-Volt Service

Insulated with Pure Long-Fibre, Felted Asbestos, Varnished Cloth Insert—Finished with Black Asbestos Braid—Flame and Moisture-Proof

Recommended for wiring all low-voltage apparatus in power plants, steel mills and any other installations where severe conditions exist.

Insulation will not deteriorate under constant temperature of 250° F. Resists oil, acids and corrosive vapors.

Can be bent to a radius equal to 6 times its own diameter without reducing thickness of insulating wall.

Size C.M.	Stranding	Allowable Carry. Amps.	Diam. Bare Wire In.	*Max. O.D. In.	Factory Voltage Test 5 Min. Kv.	Std. Lgth. Ft.	Wt.Lbs. per 1000 Ft.

Deltabeston Switchboard and Rheostat Wire

Black Asbestos Braid, Solid Conductor

For wiring rheostats, control panels, switchboards and all other installations where heat is a factor. The insulation will not dry out with age, is unaffected by moisture, steam or severe heat (400° F.), is flexible at all times and remains concentric when the wire is bent.

For 600-Volt Service

Insulated with a Heavy Wall of Pure Long-Fibre, Felted Asbestos—Finished with a Heavy Asbestos Braid

Insulation consists of a heavy wall of compressed felted asbestos applied directly to the conductor in a smooth mass of uniform thickness. It is then thoroughly dried and completely saturated with a compound by means of a process which completely excludes moisture, toughens the insulation and moulds it into a compact body.

Over this is closely braided an asbestos covering, which is impregnated with a flame and weatherproof compound, cementing braid to inner layer of insulation and resulting in a close, tight wall of moulded asbestos.

Finish, black or white.

For 750-Volt Service

Insulated with Varnished Cloth, Felted Asbestos, Asbestos Braid

Insulation consists of a wall of black varnished cloth, free from all imperfections and applied in the form of helically-wound tapes with the joints in successive layers being staggered. A non-hardening plastic compound is applied between the layers of varnished cloth.

Over this a wall of felted asbestos thoroughly impregnated with a flame and moisture-proof compound is applied by a special process which actually seals the varnished cambric beneath it.

Outer finish is a heavy asbestos braid, also flame and moisture-proof, which protects the insulation from abrasion. After impregnation the braid becomes a part of the insulation, all spaces being completely filled.

Standard color, black; other colors supplied if desired.

Deltabeston Round, Square and Rectangular Magnet Wire

Round

Rectangular

This wire is insulated with pure long fibre asbestos applied by a unique process which dispenses the fibres in a completely aired atmosphere while being spun around the copper. The result is a firmly compressed insulating wall of inter-tangled asbestos fibres, which, after being thoroughly impregnated with various varnishes and waxes, is much greater than the thickness of double cotton magnet wire insulation. It is rated as Grade B insulation and its heat resisting qualities make it practically indestructible by any temperature it may be subjected to in commercial service.

Standard Finishes

Standard brown finish has a smooth waxy surface which will not harden with age. It resists abrasion exceptionally well and the copper can be formed into intricate coils with the utmost ease.

Standard white finish has a covering of pure white asbestos and is a soluble insulation. This finish is recommended for those who desire to impregnate their own coils.

White enamel (WE finish) consists of standard white finish with a baked enamel finish over the outside, the result being an asbestos insulation with a coating of high grade enamel over all.

Enameled asbestos (EA finish) is enameled magnet wire insulated with a very thin coating of asbestos. This wire can be furnished in any of the above finishes.

Square and Rectangular Magnet Wire

Increasing attention is being given to the economies to be secured by the substitution of Square or Rectangular for round magnet wire. When round wire is used, considerable space is wasted, even when turns are fitted together as closely as possible, whereas the waste spaces are filled when square or rectangular wire is used, and a greater current carrying capacity secured.

Square Magnet Wire

Square magnet wire can be furnished in all sizes from number 14 to 0000 B. & S. gauge. (In computing the gauge the diameter of round wire is comparable to the thickness of square wire.) Sizes smaller than No. 14 cannot be regularly procured owing to the difficulty of winding.

Rectangular Magnet Wire

Rectangular magnet wire sizes have not, as yet, been standardized but can be supplied in sizes from .410 to .020 in thickness and from .460 to .064 in width and the regular insulation is double cotton wound. Rectangular wire is not carried in stock, but made specially on order, and in view of this, orders should not be for less than 200 pounds of any size.

Prices on square and rectangular magnet wire will be quoted upon application.

Gleason Hand-Wound Reels

Fire Department Reels

Designed to operate searchlights, etc. Capacity 60 amperes. All steel, ball-bearing with locking device. Painted gray; extra for fine coloring.

Dimensions: J, 24 inches; E, 12 1/2 inches.

Capacity: 250 ft. No. 14 cable; 175 ft. No. 10; 175 ft. No. 8. Reel Only.....each \$60.00
Double capacity adds \$20.00.

Type C Reels

Designed for stacking machines. Capacity: 50 ft. No. 10-3 cable; 70 ft. No. 14-3 cable. Reel Only.....each \$30.00

Outdoor Reels

For coal loading machines. Made of wood to prevent rust.

No.	Each	Ft.	CAPACITY CABLE	Size
A1	\$48.00	125		10-4
A2	60.00	250		10-4
A3	125.00	300		4-3

Gleason Spring-Wound Reels

For Hoists, Cranes, Lifting Magneto, Etc.

No. S-15

furnished with 18 ft. No. 14-3 cable. 30 amps. No. S-15.....each \$45.00

No. S-25

30 amps. Capacity: 25 ft. No. 10-3; 30 ft. No. 14-3. No. S-25 Reel Only.....each \$75.00

No. S-60

60 amps. Capacity cable: 50 ft. No. 10-3; 40 ft. No. 6-2; 60 ft. No. 14-30. No. S-60 Reel Only.....each \$90.00

No. S-61

Special reel for monorail hoists designed to serve 100-ft. rail and not pull the hoist. No. S-61 Reel Only.....each \$95.00

No. S-75

60 amps. Capacity cable: 100 ft. No. 14-3; 75 ft. No. 10-3; 60 ft. No. 6-3; 75 ft. No. 6-2. No. S-75 Reel Only.....each \$150.00

No. S-100

60 amps. Capacity cable: 150 ft. No. 14-3; 100 ft. No. 10-3; 100 ft. No. 8-3; 100 ft. No. 6-2. No. S-100 Reel Only.....each \$200.00

No. S-200

120 amps. For various larger and longer cables. No. S-200 Reel Only.....each \$400.00

Motor-Driven Reels

For long heavy cables. Must be made to fit the application. Complete information upon request.

Friction Tape

Sticka Black Friction Tape

A popular-priced tape for general use.

Used to protect the splicing compound on a wire joint from abrasion.

Roll contains 1/2 pound gross of 3/4-inch tape, length 60 feet to a roll.

Per Pound..... \$.90

Victor Black Friction Tape

Protects the splicing compound on wire joints from abrasion.

A high grade tape for outside or inside work.

Roll contains 1/2 pound gross of 3/4-inch tape, 67 1/2 feet to a roll.

Per Pound..... \$ 1.00

Amazon ASTM Black Friction Tape

Highest quality friction tape to meet the most strict specifications.

Standard rolls contain 1/2 pound net of 3/4-inch tape, which is 82 1/2 feet to a roll.

Per Pound..... \$ 1.25

**Splicing Tape
Victor Black Rubber Splicing Tape**

A good grade, unvulcanized compound.

Will fuse into a homogeneous mass at average air temperature under heat of the fingers.

Half-pound roll gross, .030 inch thick, 21 feet to a roll.

Per Pound..... \$ 1.00

Amazon ASTM Gray Rubber Splicing Tape

A compound of the best quality, partially unvulcanized, high in dielectric and tensile strength.

The adjacent layers adhere readily on a joint and become a solid, homogeneous mass.

Roll weight 1/2 pound net, 3/4-inch tape, .030-inch thick, 26 feet to roll.

Per Pound..... \$ 1.25

Manson Friction Tape

Has a closely woven cotton fabric of highest quality into which has been frictioned (on both sides) a rubber compound containing new Heavea rubber with chemically pure admixture.

Rolls, 3/4 in. wide, containing 78 feet, black, per lb..... \$ 1.10

Okonite Rubber Tape

Made from fine Up-River Para rubber. Ingredients are selected, prepared and mixed with care.

Impervious to moisture.

Rolls, 3/4 in. wide, containing 30 feet, black, per lb..... \$ 1.70

Hydro-Proof Tape

A waterproof tape with an average dielectric strength per layer of 1850 volts.

Width, 3/4 inch.

Packed 24 yards per 8-ounce roll.

Per Pound..... \$ 1.00

Crescent Chatterton Compound

This is an insulating material used chiefly in submarine cable construction to fill the interstices between the strands of the cable conductors.

No. 1 Domestic..... per lb. \$ 2.00

Allen Sodering Salts

These salts are dry and in concentrated form. To make up a perfect flux of sufficient strength to use on old metal add 3 parts water to 1 part salts; on new metal, use even greater dilution.

1/2-Pound Bottles..... each \$.40
1-Pound Bottles..... each .59
5-Pound Bottles..... each 2.70

Crescent Soldering Salts

A combination of several of the most efficient soldering agents in a convenient soluble form. Gives off no obnoxious gases. Much superior to old time acids for the designed purpose.

Price, No. 2779, 1-pound..... each \$.90
" " 2780, 1/2 " " .68

Burnley Soldering Paste

Requires no preparation, always ready for instant use.

Size Can	Price Each	Size Can	Price Each
2-Oz.	\$.30	5-Pound	\$6.50
4-Oz.	.50	10-Pound
1/2-Pound	.90	50-Pound
1-Pound	1.40

Nokorode Soldering Paste

This paste will flux all metals except aluminum. It takes the place of acid in all soldering jobs. Non-corrosive, safe as resin and rapid as acid. Not affected by heat and does not spatter. The solder will not turn dark after using.

Size Can	Standard Package	Price Each	Price per Carton
2 Oz.	12 to Carton	\$.15	\$1.20

Sherman Set Screw Connectors

Number Plainly Stamped on Each Connector. A great help in re-ordering and saves much time and possible mistakes in sorting small mixed stocks.

Screws Heavily Galvanized, Hence Rust-proof. This prevents rusting in dealer's stock, and enables consumer to use connectors over again when removed from temporary work.

Neatly Boxed and Plainly Labeled. Insuring neat shelf stock.

These connectors are made from solid brass rod; all dimensions and proportions are carefully held to accurate size.

Four-screw connectors are made also with hole clear through, and two-screw connectors can be furnished in divided wall style.

Sherman Soldering Lugs

U. S. Pat. Reissue 14401

Lugs are seamless all around. The solder cannot leak out at the closed end. Also better conductivity is secured. Round end lugs in small sizes are recommended.

These soldering lugs or drawn copper terminals are now approved and listed by the Underwriters' Laboratories. The requirements are exacting, and the designs and dimensions have been carefully worked out.

*Circular mils. Sizes 1/4 to 1 1/8-inch furnished round end, unless otherwise specified. Sizes 1 1/8-inch and larger furnished square end unless otherwise specified.

STUD HOLE.—Lugs furnished with special size or location of stud holes at same prices as for regular lugs, with extra charge for each size.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification, as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

To select Terminals According to the N.E.C. Ratings Governing Knife Switches, Use the Following Equivalents

Capacity..amperes	30	60	100	200	400	600	800	1000
Size Lug...inches	1/4	3/8	1/2	1 1/16	1 1/8	1 1/4	1 1/2	1 3/4

Sherman Soldering Lugs 2-Hole

Two-hole lugs are made from seamless tubing and furnished square end, unless otherwise specified.

Flat portion (E) may be made to order either longer or shorter but tubular portion (D) cannot be changed.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

2-Hole, Center Formed and Angle Lugs

These types are standard but not regularly carried in stock. Will be made up promptly to order at percentage listed below, added to price of regular lugs plus net charges listed.

3/16 to 1/8 Inch Inclusive	add 75%	plus \$3.00 net
5/8 to 1 1/8 Inch Inclusive	add 75%	plus 4.25 net
1 1/8 to 1 1/2 Inches Inclusive	add 75%	plus 5.50 net
1 1/2 to 1 7/8 Inches Inclusive	add 50%	plus 7.50 net
1 3/4 Inches	add 50%	plus 9.00 net
2 1/16 Inches	add 50%	plus 11.00 net

Above net charges must be added for each different size of lugs ordered. These net charges cover special machine set-up expense regardless of quantity of lugs ordered.

Sherman Heavy Duty Soldering Lugs

N.E.L.A. Standard

2-Bolt Tongue

These lugs are made of best quality seamless copper tubing.

Lugs Nos. 8, 8-A, 9-A, 10 and 11 have a sufficient socket diameter to take rope core

cables of sizes listed without removing core. Core can be drilled out and space filled with copper plug or solder.

Blank lugs furnished when specified; otherwise regular bolt holes as listed. Special drilling may be had if specified. Straight lugs regularly furnished. Angle lugs 45 and 90-degree when specified at extra price. Plain finish unless otherwise specified. Special finishes as follows at added prices: Rosin dipped, cadmium plated, tinned inside only and tinned all over. Special dimensions may be made to order with dimension E other than regular or special drilling of stud holes, at added cost.

Sherman Drawn Copper Connectors

The connector consists of two seamless terminals, so constructed that when bolted together both halves are in perfect alignment, and no part projects beyond the circumference of the tubular portion, so that a piece of flexible conduit or fibre sleeve may be slipped over the entire connection for insulation.

While two pieces are required to make one complete connector, they are described and listed by single pieces. Connectors are not shipped assembled, as they cannot be applied in that way.

On account of its small size, only the 1/4-inch connector is made wider than tubular part.

Size (A) In.	Wire B & S Gauge	APPROXIMATE DIMENSIONS, INCHES							Approx. Wt., Lbs. per 1000
		B	C	D	E	F	G	H	
1/4	8	.186	1 1/4	3/8	1 3/8	1 3/8	3/8	3/8	9

These sizes have two stud holes. Two bolts and nuts are required for each complete connector, consisting of two pieces.

T & B Tite-Bind Solderless Connectors

T & B Tite-Bind Connectors and Lugs are designed to give the best electrical contact and mechanical connection, utilizing a principle unique in this field.

The bore of the body has a slight (3°) taper into which the tapered

sleeve is forced by the bushed nut. Corrugations in the sleeve form numerous line contacts, increase the area of contact and strengthen the mechanical grip. The sleeve exerts a uniform pressure on the cable throughout its length.

If the insulation is cut the length of the sleeve and nut, when the nut is made up, the cable travels with the sleeve into the connector body and the insulation will remain tight against the nut.

As the sleeve travels into the body the slight tapers exert a great pressure on the cable. This maximum pressure produces the minimum electrical resistance and the maximum mechanical grip.

The open end of the lug offers visual evidence that the cable is of proper size and in place.

Once made up tight, the sleeve stays wedged in place and exerts the same pressure on cable even with nut removed.

Solderless Lugs

Tite-Bind Solderless Lugs are for connecting wire, cable, or tubing to terminals on equipment, to bus bars, etc.

Front-connected lug as illustrated, with either one or two bolt holes is standard, with standard tongue dimensions and drillings. For special tongue dimensions and drillings, add 20 per cent to list price.

Center-formed lugs, angle lugs, round-tongue lugs, and other varieties will be furnished at an increase in price.

2-Way Connectors

Used for splicing the ends of conductors of the same size.

Reducers for splicing the ends of two conductors of different sizes can also be furnished.

Elbow Connectors

Elbow connectors are used for splicing two conductors at right angles and are useful where short bends must be made in heavy conductors.

Reducing elbows and elbows of other angles are also furnished.

3-Way Connectors

The 3-way connectors are used to splice three conductors of the same size or of different sizes.

The T or right angle type is illustrated. The Y type is also regularly furnished.

Cable Taps

Tee Taps

Tite-Bind Cable Taps utilize the same connection principle as Tite-Bind Lugs for the branch conductor. The connection to the main conductor is made with a U-bolt and seat shaped to fit the conductor and clamped to it without splicing.

They are used to tap a main conductor at right angles, and are regularly furnished for all combinations of main and branch conductor sizes.

T & B Tite-Bind Solderless Connectors

Parallel Gutter Taps

Tite-Bind Parallel Taps are similar in design to the cable taps, except that the main and branch conductor connections are parallel.

Used to tap a main conductor where space is limited, as in panel board gutters, etc. Regularly furnished for all combinations of main and branch conductor sizes.

Connecting Blocks

The 3-way connecting block is illustrated, but connecting blocks are furnished for any number of conductors and any combination of sizes.

Additional Designs

Only a few of the more popular types of connectors are illustrated. Other types are designed for all types of transmission line, high tension and special installations. There are connectors designed to hold in excess of the cable strength. For example, a T & B 2-Way Connector of special construction has been approved for use with Type HH cable, the connector developing the full cable strength.

T & B Solderless Connectors or related material will be specially designed to meet any special requirements.

All T & B Solderless Connectors can be furnished with parts rounded for high tension installation, as illustrated.

When ordering, give size and type of conductor being used. Connectors will be furnished for stranded cable unless otherwise specified.

Reducers, reducing elbows, and 3-way connectors, cable taps, and parallel taps to take different sizes of cables are regularly furnished. Prices on these items, listings of other items, and dimensional data furnished on request.

Reliable Solderless Lugs

Solderless Lug

Showing Clamp Reversed So That Screw Is Accessible From the Opposite Side

Used for connecting electrical conductors to terminals of electrical equipment.

Only one piece to handle, conveniently and quickly installed with only a screwdriver or wrench. Will not vibrate loose.

Clamp of high strength bronze, lug of electrolytic copper, 98 per cent conductivity.

High pressure contact makes permanent low resistance connection. Cross section of lug at any point has full conductivity of cable. Runs cooler than well soldered joint, cooler even than the cable itself.

Eliminates hazard, uncertainty, inconvenience and lost time of soldered connections.

Frankel Solderless Connectors

No. 2560 2-Way Connector

No. 2562 Elbow

No. 2561 3-Way Connector

No. 2559 Y Connector

No. 2587 Cable Anchor

No. 2589 Cable Anchor

No. 2588 Cable Anchor

No. 2563 Plug Stud Connector

No. 2564 Stud Connector

No. 2560 2-Way Connector

To connect two wires of the same size.

No. 2562 Elbow

To splice two cables, wires, rods, or tubes that meet at right angles. Conductors may be same or different size.

No. 2561 3-Way Connector

To splice a main cable or two different size cables and make tap at point of splice. Any combination of sizes.

No. 2559 Y Connector

A 3-way splice to connect any combination of 3 wires.

No. 2587 Cable Anchor

To connect and anchor end of cable to strain insulator.

No. 2589 Cable Anchor

To splice and anchor two cables at right angles.

No. 2588 Cable Anchor

To anchor one cable and to take a branch wire off the anchored cable.

No. 2563 Plug Stud Connector

To connect wire or cable to a threaded stud or rod.

No. 2564 Stud Connector

To connect wire or cable to block terminals by screwing stud end of connector into a threaded hole, or to strap terminals by inserting stud end through a hole in strap and clamping by a nut on end of stud.

To connect wire or cable to block terminals by screwing stud end of connector into a threaded hole, or to strap terminals by inserting stud end through a hole in strap and clamping by a nut on end of stud.

Size Wire or Cable	No. 2560 2566, 2562 and 2587 Each	No. 2561 2559, 2589 and 2588 Each

2,000,000CM	9.00	13.50

*Specify solid or stranded.

Where the wires joined are of different sizes, use list price of largest size.

If plug or stud connector is no larger in diam. than diam. of wire, use 2-way price less 20%. If larger, refer to 2-way prices, take 1/2 wire price plus 1/2 wire price next larger than plug or stud, less 20%.

Frankel Solderless Lugs

No. 2568 Front Lug

Connects cable to bus bars or plate.

No. 2569 Back Lug

Connects cable to stud.

No. 2570 Angle Lug

No. 2572 Right Angle Lug

Connects cable to stud. Made with rectangular plates for cable to bus.

No. 2574 Swivel Lug

An adjustable angle connector to splice two or three cables of the same or different sizes.

Dossert Solderless Connectors

Type A, 2-Way

Dossert Connectors eliminate the use of solder in making electrical connections. They are approved for use without solder on all classes of wiring on both solid and stranded conductors.

The Dossert joint has greater mechanical strength than a soldered joint and an electrical conductance in excess of the cable.

Type C, 2-Way

3-Way Joint

Elbow

Y-Joint

*Specify if for solid or stranded on sizes 14 to 0000.

Reducers take the maximum 2-way list.

The 3-ways and Y's add 50 per cent to 2-way list.

The 3-ways, Y's reducers take maximum cable size price.

Elbows take same price as 2-ways. See list above.

List prices of Styles F and M Stud Connectors are the same as a 2-way of corresponding size less 20 per cent, except when special large diameter or length of stud end is specified.

List prices of Style S Cable Anchor are the same as for 2-way connectors of corresponding sizes.

List prices of Styles R and E Cable Anchors are the same as for regular 3-way connectors of corresponding size.

Dossert Insulated Parallel Gutter Taps

Consists of two parts only. Is insulated with fabric bakelite. It has two countersunk hardened screws of the wrench type. The screws are held in place by washers to prevent falling out.

This molded insulated unit saves time required for taping or putting on loose covers with screws in the narrow gutter of a panel. It is especially adapted for making taps on live cables.

Dossert Cable Taps

Hook Type

Bolt Type

The cable tap is used to connect a branch wire, rod, or bleeder to a main wire, rod, or feeder. It does not splice the main but simply clamps onto it.

The Hook Type consists of hook, cover, jam nut, compression nut, and compression sleeve. The upper parts of cover and hook are machined to fit the main wire, while the lower end or shank is threaded, drilled, and tapered to form a nipple of a regular 2-way connector.

The Bolt Type is in the form of a split tee clamp tightened by four strong bolts. The branch connection is held by a Dossert compression sleeve and nut. The tap is made without cutting the main conductor.

Frankel Solderless Connectors

Frankel Solderless Lugs

No. 2560 2-Way Connector

No. 2560 2-Way Connector
To connect two wires of the same size.

No. 2562 Elbow

No. 2586 2-Way Reducer
To connect wires of different sizes.

No. 2562 Elbow
To splice two cables, wires, rods, or tubes that meet at right angles. Conductors may be same or different size.

No. 2561 3-Way Connector

No. 2561 3-Way Connector
To splice a main cable or two different size cables and make tap at point of splice. Any combination of sizes.

No. 2559 Y Connector

No. 2559 Y Connector
A 3-way splice to connect any combination of 3 wires.

No. 2587 Cable Anchor
To connect and anchor end of cable to strain insulator.

No. 2589 Cable Anchor
To splice and anchor two cables at right angles.

No. 2588 Cable Anchor
To anchor one cable and to take a branch wire off the anchored cable.

No. 2563 Plug Stud Connector
To connect wire or cable to a threaded stud or rod.

No. 2564 Stud Connector
To connect wire or cable to block terminals by screwing stud end of connector into a threaded hole, or to strap terminals by inserting stud end through a hole in strap and clamping by a nut on end of stud.

Size Wire or Cable	No. 2560 2586, 2562 and 2587 Each	No. 2561 2559, 2589 and 2588 Each

1,750,000CM	8.00	12.00
2,000,000CM	9.00	13.50

*Specify solid or stranded.

Where the wires joined are of different sizes, use list price of largest size.

If plug or stud connector is no larger in diam. than diam. of wire, use 2-way price less 20%. If larger, refer to 2-way prices, take 1/2 wire price plus 1/2 wire price next larger than plug or stud, less 20%.

No. 2568 Front Lug

Connects cable to bus bars or plate.

No. 2569 Back Lug

Connects cable to stud.

No. 2570 Angle Lug

No. 2572 Right Angle Lug

Connects cable to stud. Made with rectangular plates for cable to bus.

No. 2574 Swivel Lug

An adjustable angle connector to splice two or three cables of the same or different sizes.

No. 2558 Cable Anchor

No. 2563 Plug Stud Connector

No. 2564 Stud Connector

Frankel Solderless Cable Taps

No. 2575 Hook Cable Tap

To tap current from a continuous run of feeder cable.

Main and branch may be any combination of sizes. Also rod to rod, tube to tube, and rod or tube to cable.

No. 2602 Bolted Cable Tap

A heavy duty tap with Everdur Bolts.

To tap a current from a continuous run of feeder cable.

May be any combination of wire, cables, rod, or tube.

No. 2601 Parallel Panel Gutter Tap

A simple parallel tap to branch from a continuous feeder to a tap.

Small enough to easily fit in the gutter of a distribution panel.

May easily be taped or covered with a bakelite cover.

No. 2603 Insulating Cover for Panel Gutter Tap

Two heavy bakelite halves which closely fit over panel gutter tap and the insulation of the wires. Is held in place with a heavy cadmium-plated steel spring.

Ideal Universal Wire Connectors

Solderless—Tapeless

Ideal Connectors replace, at a big saving, solder and tape, plug connections, terminal blocks, binding posts, etc. They are intended for all roughing-in joints, fixture hanging, connections in appliances, fixtures, tools, signs, radios, etc.

Approved by Underwriters' and Factory Mutual Laboratories. Recommended by National Electrical Code.

Making a joint with an Ideal Connector is just like screwing a nut on a bolt. The connector simply screws on giving a positive and permanent contact. Spiral metal insert (copper coated), which acts as a current carrying sleeve, presses threads into the wires and binds them together in a vise-like grip—assuring a doubly secure joint.

No. 72 Fixture-Appliance Universal Type

A small connector for fixture wiring, joints in shallow canopies and appliances. Particularly adapted for Nos. 18 or 20 wires, either solid or stranded.

No.	Description	Per 100	Per 1000
72	For 2 No. 20 to 3 No. 18 Solid or Stranded Wire	\$2.45	\$20.00

No. 74 Standard Universal Type

Fits all common wiring joints.

No.	Description	Per 100	Per 1000
74	For 1 No. 14 Solid and 1 No. 18 Stranded to 4 No. 14 or 2 No. 12 Wires, Solid or Stranded	\$3.85	\$35.00

No. 76 Large Universal Type

For use in the industrial field and where larger gauge wires are used, or where a large number of small wires are to be joined in a junction box.

No.	Description	Per 100	Per 1000
76	For 4 No. 14 to 3 No. 10 Solid or Stranded Wire	\$4.35	\$39.35

Bryant Solderless Wire Connectors

Moulded composition with spiral coiled wire insert.

No. 767 is for making connections to fixtures. No. 768 is for combinations of Nos. 12, 14, 16 and 18 wires to a maximum of two No. 12, or four No. 14. No. 769 is large size, for connecting wires up to three No. 10.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
767	\$2.50	Up to 3 No. 18 Wires	100	1000	5

Universal Test Clips and Insulators

No. 24 Clip Only

No. 45 Clip with No. 47 Insulator

Test clips save time in electrical work requiring quick temporary connections. May be used over and over again.

Rubber insulators are a convenient protection against electric shock and prevent clips from shorting on each other. Furnished half red and half black to indicate polarity.

Packed 10 to a box and 10 boxes to a carton.

Screw Connection

No.	Description	Spread of Jaws In.	Wt., Lbs. per 100	Each

Reliable Testing Clips

For temporary connections to insulated wires. Made of heavy nickel silver with hard sharp insulation puncturing points and perfectly registering teeth.

No. 1

Fitted with screw, nut and washer for attaching to instrument cord.

No. 1.....each \$3.30

No. 2

Same as No. 1 but with screw, nut and washer omitted. Preferred where connection to cord is to be soldered.

No. 2.....each \$3.30

No. 3

Same as No. 1 but without the spike.

No. 3.....each \$3.30

No. 5

A light, sturdy clip with a strong spring. Convenient for temporary connections in radio, telephone and signal work.

Particularly good for congested telephone equipment.

Plenty of room for soldering flat cord terminals.

No. 5.....each \$2.24

Fahnestock Binding Posts

No. 3

Will take No. 10 B. & S. Wire. Length over all, $1\frac{1}{16}$ inches. Width, $\frac{3}{8}$ inch. Screw hole for No. 8 screw.

Fahnestock Test Connectors

No. 30

Made of special copper bronze spring metal. Two large clips riveted together. Both snap over the line. Made for different size wire. Used for test poles or for party line work. Length over all, $1\frac{1}{16}$ inches. Width, $\frac{5}{8}$ inch. In ordering, state kind and size of wires to be connected.

Price, No. 30, Bronze.....each \$.15

No. 31

One large and one small clip riveted together. Large clip snaps over the line wire. The small clip does not snap over, and will take up to and including No. 10 B. & S. Used for attaching drop or jumper wires to line on junction poles or party lines. Length over all, $1\frac{1}{16}$ inches. Width, $\frac{5}{8}$ inch.

In ordering, state kind and size of wires to be connected.
 Price, No. 31, Bronze.....each \$.10

No. 33

Temporary connector for emergency work and test sets.

Will snap over a No. 8 B. W. G. Wire.
 Price, No. 33, Bronze.....each \$.15

No. 34

THIS END SNAPS OVER THE WIRE

One end snaps over the line. Made in only one size. Snaps over a No. 12 B. W. G. Wire.

Other end does not snap over wire but will take any size wire up to No. 9 B. W. G.

Length over all, $2\frac{3}{4}$ inches. Width, $\frac{5}{8}$ inch.

Price, No. 34, Bronze.....each \$.10

National Double Tube Connectors

These sleeves are manufactured accurately to size from the best grade of pure copper. Each detail of operation has been carefully planned, and a rigid factory inspection weeds out any possible defective material.

When twisted, National Sleeves are drawn so tightly around the conductors as to form practically a welded joint.

Thus the danger of corrosion, due to air and moisture, is entirely eliminated; and instead of building up a high resistance, as is true of the average hand splice, a joint of this type has a ratio of conductivity with the conductor of better than two to one.

*Price does not include insulators.

Diamond Bridle Wire Insulators

For insuring a dry connection between a bare wire and an insulated wire tapped therefrom. Where a dry connection is necessary to prevent leakage over and around the insulation the wire insulator is used. The braid and rubber portion is stripped from the bare wire which is passed through the messenger-proof cup and soldered to prevent messenger following the bare wire into the protected glass petticoat.

It is used on loading coils in telephone construction and for lead-in wires on telegraph strands.

Price.....per 100 \$100.00

National Cable Rings

National Rings are easily and quickly placed on the strand and once in position are rigidly immovable. The ease with which these rings can be installed is an important factor. Another feature is the ample space for reclipping.

Cable can be pulled in from either direction, and neither the strain of this operation, nor the swaying of the cable by the wind, can move the ring from its original position, for the greater the strain, the tighter the grip.

Hot dip galvanized; made in all strand sizes. No. 511 is light; No. 512 heavy.

Brach Thermal Bi-Pass-Ors

Every Neon sign should have a Brach Thermal Bi-Pass-Or across each section of glass. It keeps the balance of the sign operating when a glass section breaks.

Avoids outside jumpers, costly servicing and radio interference from broken section. Reduces fire hazard due to high open circuit voltage.

Overall length, 7 inches; diameter, 2 inches.

Packed 25 to a standard package; weight, 11 pounds.

Each..... \$50

Federal Porcelain Clamp Bushings

No. A-1

No. B-1

No. K-1

Made of vitrified porcelain in one piece. Clamping rings are made of metal, threaded to fit threads on the porcelain. By reversing the clamp ring bushings can be used on thicker material. Bushings furnished in all colors.

Nos. K-1 and K-2 elbow bushings are of a special shape for outdoor work, preventing water from entering around wire; also prevents damage to wire or insulation by sudden bending at the bushing.

Rigid Steel Conduit

Installation of Rigid Steel Conduit in buildings is recognized as the most practicable method of protecting electric wires, and making provision for their replacement when judged advisable. The first requirement of such conduit is that it shall be permanent.

Sherarduct

Sherarduct Rigid Steel Conduit manufactured from spellerized steel is the impregnable wiring raceway.

Zinc-alloy and pure zinc protection obtained over the inside and outside surfaces in the sherardizing process, and elastic acid-proof enamel baked on, assure permanence under all conditions of moisture and acid corrosion.

Sherarduct elbows, nipples and couplings are manufactured

of the same high grade spellerized steel as Sherarduct conduit, and are given the same zinc and enamel protection against corrosion.

The threads on Sherarduct conduit are cut clean and sharp. The annealed steel bends, cuts, and threads easily because of annealing. Wires slide quickly on glass-like inside enamel of sherarduct.

Economy

Economy Rigid Steel Conduit is thoroughly coated inside and outside with elastic and acid-proof enamel, for installation under less rigorous corrosive conditions.

It is manufactured of the same high grade spellerized steel as Sherarduct Conduit, and bends easily for offsets and angles. The enamel used on Economy Conduit will not crack or chip off under the roughest handling and remains

intact when Economy is bent. Economy Elbows, nipples and couplings are given the same thorough enamel protection as Economy Conduit.

On sizes of Economy Conduit up to 2 inches inclusive, thread protectors are furnished; on all larger sizes excess enamel is carefully removed from the threads before shipment.

X Duct

Xduct is electro-galvanized conduit manufactured from spellerized and scale-free tubing, the inner surface raceway is coated with a highly glazed, hard, conduit enamel,

unaffected by acids and alkali, this enamel is elastic and is not affected when the conduit is bent.

Electroduct

Electroduct is enameled both inside and outside, manufactured from spellerized, scale-free tubing. The enamel will

bend with the conduit without cracking or flaking. Electroduct is full standard weight, threads are cut sharp and clean.

Rigid Steel Conduit Enamelled Conduit

Enamelled conduit is manufactured from mild drawn steel tubing. Before enameling, the tubing is thoroughly cleaned and freed from dirt, grease, scale, silicates and burrs. This process leaves clean surface for the application of the compound.

Sherarduct

Sherarduct rigid conduit is made of full weight mild spellerized steel tube and finished under the famous sherardizing process. In this process pure zinc is alloyed with the steel tube both inside and outside to form a rustproof finish which is so entirely a part of the pipe that it cannot be knocked or chipped off.

000	1	2	2	2 1/2	2 1/2	3	3	3 1/2	3 1/2
0000	1 1/4	2	2 1/2	2 1/2	3	3	3 1/2	3 1/2	4

Permissible Exceptions to Above Table

Stage pocket and border circuits, sign flashers, Classes 1, 2 and 3 signal circuits, elevator control wires, and wires between controllers and motors, and otherwise as permitted by the authority enforcing this code (see table below). In addition the following exceptions are permitted where the run of rigid conduit or electrical metallic tubing does not exceed 50 feet in length and does not contain more than the equivalent of 2 quarter-bends from end to end; 3 No. 6 stranded or 6 No. 8 solid conductors in a 1-inch conduit; and for services only, 2 No. 6 Type R, and 1 No. 6 bare, wires, 2 No. 4, Type R, and 1 No. 4, bare, wires, in 1-inch conduit and 2 No. 2, Type R, and 1 No. 2, bare, wires in 1 1/4-inch conduit.

A smaller bare wire may be used in each of the above combinations if of suitable current carrying capacity.

3-Conductor Convertible System

6	14	22

Steeltubes Electrical Metallic Tubing

No threads to out, ductile, bends easily, is light, tough and strong; resists corrosion.

Steeltubes takes up less space and consequently can be used in narrower quarters.

Hangers for 3/8-inch heavy conduit are the right size for 1/2-inch Steel-tubes, hangers for 3/4-inch Steeltubes are the same as for 1/2 inch heavy conduit, etc.

Electrunite Steeltubes Conduit with the knurled inside finish showed by actual test a saving of 20 to 30 per cent in the effort required to pull cable through. The cable rides the tops of the tiny knobs instead of making contact the entire length.

The 1933 Code approves Steeltubes for open and concealed work and buried in concrete (except cinder fill) in all sizes up to 2 inches inclusive, 600 V. No. 4 wires.

Furnished in 10-foot lengths; galvanized finish only—inside finish is black enamel.

4	3/8 to 4	..	250	50	.60

T & B Erickson Conduit Couplings

Conduit Union does away with running threads, saving dies and labor. Permits opening of conduit at any desired point. Enables the start of circuit from 2 outlets and makes a good, strong connection at any

point in the run. The pipe ends abut so that no space is left between the lengths of conduit, therefore, it is not necessary to draw the 2 ends of the conduit together. Vibration will not loosen a connection made with an Erickson coupling. The hexagon shoulder and ridges on the outside of the coupling make an easy grip for a pipe wrench.

Cat. No.	Per 100	Size Inches	Unit Pkg.	Std. Pkg.	Weight Pounds per 100

No. 90 T & B 3/8-Inch Cable Clips

Straddles the cable so that the top rests across the spirals of the cable and the clip faces at right angles to the spirals of the cable. Will not harm cables.

Will take Nos. 14W2, 14W3, 12W2, 12W3, 10W2, 10W3, 8-1, and also 3/8-inch S.S. and D.S. flexible conduit. Standard package 10,000.

No. 90.....per 1000 \$4.00

T & B Adjustable Conduit Hangers

Type A

Hanger will fit any flange from 2 3/4 to 12 inches. It is adjustable for varying plaster lines and will support any number of conduits from 1 to 8, which may run at any angle with the beams and close against the beam, or far enough below to permit a second line of conduit to be run above.

Additional runs of conduit can be added without interfering with lines already in position. It is not necessary to loosen clamp to meet any condition which may arise. No other conduit hanger will accomplish half as much at twice the cost. Clamps of stamped steel.

Cat. No.	Description	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100	Lbs. per 100	Price per 100
700	Type A Clamp (Incl. Bolts) Fits Flange from 2 3/4 to 7 3/8 In.	25	100	33	\$30.00

No. 1629 Klein's Fish Tape Pullers

This tape puller is light in weight, strong and can be carried in the vest pocket.

Weight, each, 3 1/2 ounces.

For Fish Tape
No. 1629.....each \$2.50
No. 12 Iron Wire
No. 1629A.....each \$2.50

R & S Cable Supports Standard Conduit Type

A compact, strong and easily installed device for supporting cables in conduit risers.

Support consists of a threaded collar, not much larger in diameter than the outlet bushing which it replaces at the end of the conduit inside of the pull box. It has a set of inserts for one or more cables as required and individual tapered cable grips. They are suitable alike for lead, paper or braided-covered cables.

In installing, the collar is screwed on to end of riser, in lieu of a bushing, the cables are then pulled, the inserts dropped into socket of collar and the split, tapered grip bushings placed over the individual cables, which are now allowed to pull the grips into place by their own weight. A perceptible slack of cable should be provided between supports to allow for expansion and contraction.

Made of galvanized iron, with hard fibre cable grips.

When ordering, specify o.d. of cable to be supported.

*Over insulation.

Special Tile Duct Type

Made on special order only. Used to support risers run through tile duct; can be furnished in any number of gangs. Prices and full information upon application.

Split Type

Where installations are already in use, and the necessity of a support for the cables occurs, it is possible to utilize this type of support without the necessity of disconnecting and pulling out the cable risers. This split type can be installed around cable and the necessary inserts and bushings as used on the conduit type inserted. The range of sizes are the same as on the conduit type.

Prices and full information upon application.

Tempered Steel Fish Tapes

Regularly furnished a n y assortment of lengths, from 100 to 500 feet, put up in coils. If wire is desired in continuous lengths of 2000 feet or over it will be furnished on reels when specified.

Wedgtite Pipe Hangers

Schedule CR
Furnished with Wedge

Type CHP Installed

Type CHU Installed

Wedgtite Pipe Hangers are quickly and easily installed as only a few blows of a hammer are necessary. They can be used with any I beam, channel, or other structural shape having a lower flange $\frac{1}{8}$ to $\frac{3}{8}$ inch thick. They consist of two pieces, a hook and a wedge, which is provided with saw teeth so that vibration will not loosen it. The wedge is interchangeable with all types and sizes of hooks.

Type CHA Installed

Types CHP and CHR are made so that one end hooks under the pipe and the other over the flange of the structural shape. The end that hooks over the flange has a groove into which the wedge is driven, tightly drawing the pipe against the flange and securely holding it in position.

Type CHU is wedged to the flange independently of the pipe or group of pipes it is to support. A bolt is used for suspending the pipe, its head resting securely in a pocket in body of hanger. This pocket takes a $\frac{1}{2}$ -inch bolt. Bolt can be inserted after the hanger has been secured to the flange.

Type CHA consists of a Type CHU Hanger and a bracket to carry 2 or 3 porcelain knobs for wires. Bracket is attached to CHU Hanger with a bolt and nut. Bolt can be loosened and bracket turned to accommodate wires running either parallel with or at right angles to the structural shape.

The thickness of flange as measured about $\frac{3}{4}$ to 1 inch from the edge may be $\frac{1}{8}$ to $\frac{1}{2}$ inch if the pipe is clamped directly against the under side of the flange. If a coupling is so placed as to hold the pipe away from the flange, the thickness of the coupling should be subtracted from the above maximum dimension ($\frac{1}{2}$ inch).

Cadmium-galvanized is the standard finish.

Type CHP Hangers

Type CHR Hangers

For pipe running parallel with a structural shape.

For pipe running at right angles to a structural shape.

T & B Lakin Conduit Hickeys

The shank has a bushed hole into which the end of the conduit enters when a short bend is made at its end or a bend is to be worked down.

The bushed opening in the shank fits snugly over the end of the conduit and protects the threads.

This hickey will not slip on the conduit while a bend is being made. It enables a workman to make bends having different curvatures. It will not kink the pipe when making the shortest practical bends.

Made of malleable iron. Japanned finish.

Cat. No.	Size Pipe Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. per 100	Price Each
335	$\frac{1}{2}$	1	10	190	\$1.75

Allen Improved Pipe Benders

This bender is made of high test steel. Has tempered case hardened teeth which grip in all positions. Has solid jaws, no adjustments; 2-in-1 design with V receiving groove to prevent any contact on inner part of curve, thus preventing mashing, crushing or deforming the pipe. It will bend anything tubular or solid that can be bent cold.

In 2 sizes: Combination of $\frac{1}{4}$ to $\frac{3}{4}$ inch inclusive, combination of $\frac{3}{4}$ to $1\frac{1}{4}$ inclusive. Side opening. Individually boxed.

No. 1 packed 10 boxes in standard package, No. 2 packed 5 in a standard package.

Price, No. 1, Sizes $\frac{1}{4}$ to $\frac{3}{4}$ Inch.....each \$6.20

Price, No. 2, Sizes $\frac{3}{4}$ to $1\frac{1}{4}$ Inches.....each 9.00

Steel City Conduit Benders

Made in 2 forms as listed. Furnished complete with riveted handles. The castings are malleable iron.

National Flexsteel A.B.C. Cable Armored Bushed Cable—Double Armored

National Flexsteel A.B.C. Cable with Anti-Short bushing has a moisture-proofed wrapping of Kraft over conductors, instead of an overall braid. Stripping conductors for terminals, Kraft unwinds quickly without use of sharp tools next to conductors, can be broken off by hand, and allows space inside steel for Anti-Short bushing.

Kraft armor strips with a pull—no possible injury to conductors—reduces labor.

Kraft armor unwinds below steel, providing space for Anti-Short bushing.

Anti-Short bushing lays over conductors from the side—a squeeze inserts it inside steel.

Single Strip—1-Conductor

Flexsteel EZ Hinged Strap Box Connectors

For Armored Cable and Flexible Conduit

EZ Strap is wide, strong and clamps cable more securely and strongly without contortion of cable. This point is particularly advantageous in use with flexible steel conduit.

Peephole is patented.

Sherardized finish.

Furnished with bondnuts.

Holds 6-1 armored cable; 8-1 armored lead cable; 18-3, 16-2, 16-3 plain lamp cord; 3/16-inch flexible conduit.

No. 2163 Flexsteel Tangent Set Screw Box Connectors

For Armored Cable and Flexible Conduit

An important feature of this connector is the position of the screw which brings great pressure upon the cable with a minimum of crushing of cable. Set screw is usually large.

Peephole is patented.
Sherardized finish.
Furnished with bondnuts.

Holds 14-2, 14-3, 12-2, 12-3, 10-2 armored cable; 14-3, 6-1 armored lead cable; 3/8-inch flexible conduit.

Cat. No.	Per 100	I.D., In. Open	I.D., In. Closed	Wire Throat In.	Knock-out In.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.

T & B Panel Connector Extensions

Can be used with any connector or other fitting having male thread. Makes any connector a panel connector.

Protected against corrosion with Tabolite Superior galvanizing.

To make 3/8-inch panel box connectors use Extension No. 1440 with connectors Nos. 300, 300-V, 240, 240-V, 248, 253, 253-V, 265, 266, 280 or 281.

To make 1/2-inch A panel box connectors use Extension No. 1440 with connectors Nos. 301, 260, 271 or 272.

To make 1/2-inch panel box connectors use Extension No. 1440 with connectors Nos. 302, 241, 254, 323, 267 or 268.

To make 3/4-inch panel box connectors use Extension No. 1441 with connectors Nos. 304, 255, 278, 325, 269, 270 or 279.

To make 1-inch panel box connectors use Extension No. 1442 with connectors Nos. 306, 256, 326, 264, 261 or 273.

To make 1 1/4-inch panel box connectors use Extension No. 1443 with connectors Nos. 308, 257, 262 or 274.

To make 1 1/2-inch panel box connectors use Extension No. 1444 with connectors Nos. 310, 258, 263 or 275.

To make 2-inch panel box connectors use Extension No. 1445 with connectors Nos. 312, 259 or 276.

To make 2 1/2-inch panel box connectors use Extension No. 1446 with connectors No. 249 or 330.

Above combinations will hold cables and flexible conduits as shown under description of straight and angle squeeze connectors or straight and angle Tite-Bite connectors.

T & B Slip-In Connectors

For machine and appliance installations as well as house wiring.

The Tite-Bite grip has teeth spaced to just fit the convolutions of the cable. The design of the grip prevents the teeth from entering between or spreading the convolutions, and the screw cannot touch the armor.

With Tite-Bite Grip

*Open-mouth, visible type, for bushed cables.

T & B 2020 Type Connectors

For 14W2, 14W3, 12W2, 12W3, 10W2, and 10W3 non-metallic sheathed cable, also $\frac{1}{2}$, $\frac{1}{4}$, and $\frac{3}{8}$ -inch flexible fibre tubing.

Can be installed outside or inside box. Simply snap connector into knockout, insert cable or tubing and tighten down screw. Has no rough edges or projections to cut into fibre armor. At same time they protect armor from rough edges of knockout opening. Present long rounded bearing surfaces to armor, doing away with possibility of injury to cable. Present nicely rounded shoulders to conductors as they are bent up to the outlet.

Cat. No.	Per 100	Size Inches	Knockout Inches	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100
2020	\$7.50	$\frac{3}{8}$	$\frac{1}{2}$	50	1000	$3\frac{1}{2}$

National Ovalflex A.B.C. Flat Armored Bushed Cable

2-Conductor

A safely bushed and insulated flat armored cable for underplaster installations and alterations.

Its neat appearance recommends it for exposed surface wiring, and easy bending edgewise or flatwise makes it suitable for fitting snugly into corners and around machinery.

Anti-Short dependable bushes cut end of steel armor, preventing damage to wires.

3-Conductor

Regularly made with solid conductors and N. E. Code insulation, but can be furnished with stranded conductors or special insulation.

*These boxes and spacers can be equipped with the usual supporting ears but because of the length of box, 4 inches, an ordinary switch plate will not cover the ears.

Flextube Non-metallic Flexible Conduit

Made from an especially prepared stiff fiber cord interwoven with a tough yarn. The result is a seamless tube with a smooth, hard, canvas-like roller-bearing interior which affords the best obtainable fishing surface. This interwoven insulating tubing is then treated with a superior moisture and flame resisting compound, is further protected by a strong, tough braiding which is also compounded.

Regularly inspected and labeled by the Underwriters' Laboratories.

3-Wire Ovalduct

Ovalduct is a flat raceway made for extension work on walls and ceilings or fireproof buildings. It is a rigid tube formed from sheet steel.

In making wiring alterations with ordinary materials much time is lost channelling deep grooves in tile, concrete, or brick surfaces to receive the raceway; and cutting tile floor arches seriously affects their strength. Ovalduct is installed without grooving or channelling the underlying concrete, tile or brick. In new work it is fastened in place and plastered over; in old work, it is laid in a groove cut only in the plaster, and covered by plaster patching.

The Ovalduct line includes elbows, couplings, boxes and connectors which will take care of any wiring requirement and permit it to be installed in conjunction with any other raceway or wiring system.

Ovalduct is furnished in 10-foot lengths and has an oval cross section 1 3/4-inch high and 3/2-inch wide.

Standard package, 100 feet.
Weight per 100 feet, 35 pounds.
Per 100 Feet. \$9.00

Fittings for 3-Wire Ovalduct

Squeeze Type Couplings

For Ovalduct and elbows. Length, 1 1/4 inches.

Cat. No.	Per 100	Unit Pkg.	Std. Pkg.	Wt. Lbs. Std. Pkg.

No. 12-SB National Interchangeable Sectional Switch Boxes

For Armored Cable and Loom Wire

Made especially for use with A.B.C. armored bushed cable and anti-short bushings, but equally suitable for use with any cable. The special clamps have knockout closing flanges, lookouts which render the anti-shorts visible for inspection, and a baffle plate which holds the anti-short inside A.B.C. cable and eliminates brass ferrules used with other types of cables.

In this box, slots are provided beside each knockout, into which a screwdriver may be inserted to pry out the knockout disc.

The stud brackets and lath supports welded on this box are gauged to fit standard spacing of lath and plaster. This assembly is vibration-proof and will not become loose.

Lath support extends at least 3/4 inch beyond top and bottom of switch box allowing lath to pass through extended portions of lath support, and entirely across studding. This additional support makes section of all around switch box the strongest portion. The box is held by stud bracket, by lath above and below, and by shortened lath which terminate in groove of lath support.

The box is easy to install making it a real time and labor saver.

Depth 2 1/2 inches. Has two 3/4-inch cable knockouts in ends; two in sides; one 1/2-inch knockout in bottom and fixture stud holes. Welded-on stud bracket and lath support.

Two CL-4 flanged clamps.
Sherardized or black enameled finish.
Standard package, 50.
Weight, 80 pounds per 100.

R & S Fixture Hanger Boxes

For supporting and lowering fixtures or chandeliers in theatres, lobbies and auditoriums from the floor above or from hung ceilings, thus providing an easy means for relamping and cleaning. Circuits of chandelier are disconnected by means of single-pole plugs, the safety devices removed and fixture then lowered by means of special portable winch previously connected to eye of chandelier by steel cable.

The use of two 3x3x3/8-inch thick angle iron supports under box to distribute load over a large area or across eye beams in ceiling is recommended. Cast iron box is fitted with brass floor flange and gasketed brass cover. Dimensions over all, 10 1/2 x 10 1/2 x 5 inches deep.

Maximum conduit, 1 1/2 inches in center of all sides. Specify size and location of outlets when ordering.

When ordering specify size of fixture stem to be used.

Approximate weight, 51 pounds. Price includes plugs.

No. 1601 National Economy Bar Lath Supports

Where outlet boxes mounted on steel bars are installed between joists or studding, the Economy Bar Lath Support holds the loose ends of the lath firmly in place. It fits over the bar through a punched hole in the bottom of the support and will slide back and forth to any position. The lath slides between the top and bottom flanges, making a rigid support and preventing the plaster around the box from breaking away.

R & S Floor Outlets

Elbows, Tees and Adjustable Tops

Future requirements for service connections may be anticipated by systematically studding the floor with these outlets, all radiating from one or more pull boxes, from which any changes or additions may subsequently be made by the pulling of wires. The complete outfit consists of a galvanized iron long radius conduit fitting, and brass adjustable top with water-tight cap, which can be raised or lowered to meet the final surfacing of floor.

Typical Square-Duct Installations

Fig. 1

Fig. 1 is a down-view showing how the use of 4 vertical elbows makes it possible to cross over or to bridge another section of wiring trough. The use of 2 of these fittings makes it possible to drop to a lower level whenever desirable. In this view, the wiring trough sections are mounted to the side wall by means of bracket hangers.

Fig. 2 illustrates the use of the telescope fitting, the drop hanger, the junction box and connecting a wiring trough section to the power panel.

By looking carefully at the bottom of the telescope fitting, you will notice a cutaway view showing how the use of the panel fitting collar provides a smooth surface over which wires can be drawn without trouble.

Fig. 2

Fig. 3

Fig. 3 illustrates the use of elbows, telescope fitting and mounting brackets, in coming up out of a panel to a section of wiring trough suspended from the ceiling.

Using one of the many knockouts in the wiring trough to make a connection to a switch.

Fig. 4

Fig. 5

Illustration shows how a bracket hanger is used to mount a section of trough to the sidewall.

Fig. 6 shows the use of the T fitting in a section of trough. The use of this fitting permits the connection to another section of trough running at right angles, to a junction box, or to make a right angle connection when the joints are not conveniently located.

Fig. 6

Fig. 7

Illustration shows the use of two 45° elbows, passing a column located in a corner.

Fig. 8

Fig. 8 shows one method of using Square Duct trough to connect power panels in one common gutter. It also illustrates the use of the junction box as a cross fitting.

Square-Duct and Fittings

No. 20443

This is a steel enclosed wiring trough for distribution wires. The trough is flanged at both ends and provided with screws so that the trough can be fastened to the power panel cabinet or so that 2 or more sections of trough can be clamped together. The cover is hinged to the trough and is provided with spring latches for fastening in closed position. Knockouts are provided in the sides and back for $\frac{1}{2}$, $\frac{3}{4}$, 1 and $1\frac{1}{4}$ -inch conduit. Knockouts $\frac{1}{2}$ -inch diameter are provided in both sides and back of wiring trough so that for surface mounting the small knockout can be knocked out to provide mounting holes for $\frac{1}{4}$ -inch screws or bolts.

Cat. No.	Each	Size Inches	Length Feet
20241	\$1.70	$2\frac{1}{2} \times 2\frac{1}{2}$	1
20242	2.00	$2\frac{1}{2} \times 2\frac{1}{2}$	2
20243	3.20	$2\frac{1}{2} \times 2\frac{1}{2}$	5

Universal Drop Hanger

For suspending wiring trough from overhead. Provided with screws and nuts.

Cat. No.	Each	Size Inches
20217	\$.20	$2\frac{1}{2} \times 2\frac{1}{2}$
20417	.30	4 x 4

Reducing Fitting

For joining 4x4-inch to $2\frac{1}{2} \times 2\frac{1}{2}$ -inch duct.

20422	\$.40
-------	-------	-------

Telescope Fitting

Slide arrangement for making connections to duct fittings at varying distances. The $2\frac{1}{2} \times 2\frac{1}{2}$ -inch size extends from $7\frac{1}{2}$ to 12 inches; 4x4-inch size from 8 to 12 inches.

20244	\$2.00	$2\frac{1}{2} \times 2\frac{1}{2}$
20444	2.80	4 x 4

Closing Plate

To close end of section or any side of junction box. With knockouts.

20216	\$.36	$2\frac{1}{2} \times 2\frac{1}{2}$
20559	.40	4 x 4

Universal Bracket Hanger

For mounting wiring trough on side wall.

Cat. No.	Each	Size Inches
20227	\$.20	$2\frac{1}{2} \times 2\frac{1}{2}$
20427	.30	4 x 4

Panel Fitting Collar

For connecting duct to panels. By cutting hole size of duct in panel box and clamping box wall between panel fitting collar and duct collar, a solid, smooth connection is made.

20221	\$.36	$2\frac{1}{2} \times 2\frac{1}{2}$
20421	.40	4 x 4

Junction Box

To form T, L or cross. Price includes two closing plates. Removable cover.

20248	\$1.70	$2\frac{1}{2} \times 2\frac{1}{2}$
20448	2.00	4 x 4

Trough Collar

Used when necessary to cut standard duct.

20240	\$.30	$2\frac{1}{2} \times 2\frac{1}{2}$
20440	.40	4 x 4

Square-Duct Fittings

Pull Box

For 4x4-inch duct only.

Box price does not include closing plates for unused openings. (See No. 20559.)

Cat. No.	Each	Size Inches
20558	\$12.00

Box Fitting

For connecting duct to panels, pull boxes, etc. One end fits round hole in box, the other end matching duct collar.

Cat. No.	Each	Size Inches
20249	\$1.80	$2\frac{1}{2} \times 2\frac{1}{2}$
20449	2.60	4 x 4
*20467	2.60	4 x 4

*For 4x4-inch square hole in box or panel cabinet.

Elbows

22 1/2° Elbows		
20255	\$2.00	$2\frac{1}{2} \times 2\frac{1}{2}$

Nepcoduct Under Floor Wiring System

Convenience outlets arranged for in circuit wiring systems, under floors, must of necessity be of very definite and rugged design and construction—but the prime importance is adaptability and accessibility at floor surfaces.

The introduction and ready withdrawal of wires and cables must be accomplished without excess labor or interference of any nature. The system must be definitely protective and adequate. Nepcoduct accepts the charge and responsibility for such a perfected system.

Made in two sizes: No. 7002 with cross section $1\frac{3}{8} \times 1\frac{7}{8}$ inches, and No. 7005 with cross section $1\frac{3}{8} \times 2\frac{7}{8}$ inches, both being furnished in ten-foot lengths. Each length has outlets at specified intervals (usually 2

feet), which are complete with plugs adjustable for height. Duct is finished inside and outside with durable hard black enamel.

No. 7002

No. 7005

Rounded Bull Nose or filleted corners of Nepcoduct reduce tendency to cracking of concrete and surface floor materials.

Sweeping curve from inside of Nepcoduct up to rim of outlet makes pulling of wires easy, and safeguards insulation against abrasion.

Floor Junction Boxes

Nepcoduct 4-way floor junction box No. 7542-45 is in reality, two boxes and two sets of cross-overs, in a one-piece casting of gray iron—one box and cross-over to be used for high potential, and the other box and cross-over for low

potential. No communication is to be had between the low and high potential boxes.

Box capacity is unusually large to accommodate splices and terminal blocks, unobstructed by cross-overs. Box is finished inside and out with black enamel.

It is levelled, regardless of uneven surfaces, by adjustment of three long set screws located around edge upon which box rests.

Two outlet assemblies installed in box above are the standard outlet and cover. Unused duct openings in box are to be closed with duct opening plug and unused openings for conduit are to be closed with conduit opening plug and adapter.

Single compartment underfloor junction boxes are available; box No. 7542 has six openings for $1\frac{3}{8}$ inch x $1\frac{7}{8}$ inch Nepcoduct, and two openings for $1\frac{1}{4}$ inch conduit; box No. 7545 has four openings for $1\frac{3}{8}$ inch x $2\frac{7}{8}$ inch Nepcoduct, and two openings for $1\frac{1}{4}$ inch conduit. These boxes are for installation in Single Duct Systems, and take the same size and type floor outlets as the large two compartment box.

**Nepcoduct Under Floor Wiring System
Floor Junction Boxes**

Standard Outlet and Cover for Linoleum, Rubber Tile, Cork Tile, Carpet

This junction box outlet assembly is the standard for all floor junction boxes.

The assembly is installed flush with surface of finished concrete or wood floors. When floor coverings are used, however, the brass ring is forced up, using novel arrangement of screws. Floor covering is then cut to fit around brass ring, and it is replaced in position and drawn down flush with newly in-

stalled floor covering. Rim of brass ring holds floor covering down securely, and renders the box waterproof.

Special Outlet and Cover for Marble and Wood Flooring

When this junction box outlet assembly is installed, only rim of adjusting ring and head of elevating screw are visible, through marble or wood floor.

Adjustment is made for thickness of marble or wood, by turning adjusting ring down into floor junction box, so that top rim is set level with finished surface. Brass cover fastens inside adjusting ring with small screws shown, and there is ample depth above it for filling in with floor material.

A circular section of marble or wood is placed inside adjusting ring and is secured in position by turning down elevating screw. Threaded collar on elevating screw provides means for lifting out circular section of marble or wood to gain access to floor junction box.

Universal Levels

Nepcoduct floor junction box is quickly and accurately levelled by use of Universal Level, No. 7952, which indicates level in every horizontal direction simultaneously.

Universal Level may be applied to any article which is to be brought to a level position on more than one horizontal line.

Wire Pulling Sheeves

Wires and cables can be pulled through Nepcoduct floor junction box at any angle, from any direction with use of the Cable Pulling Sheeve No. 7970, as indicated in the mechanical drawings. Shaft of sheeve engages a tapped boss in bottom of the junction box. A spider fits upper part of box, and a jam nut locks the whole assembly into position to insure rigidity when sheeve is in use.

Wires can be pulled from lower entrance of ducts to upper entrance (in high potential compartment), and around any required bend without adjustment. In low potential compartment, there is no difference of elevation in duct entrances.

Nepcoduct Under Floor Wiring System Adjustable Duct Saddle Supports

Double duct saddle support is a valuable labor saving device, it eliminates errors of position, a costly labor item. Every part of Nepcoduct system is laid out when base members of saddle support are installed, all other parts of system having definite relation to them. Slight projection of base members from floor arch, and their rugged construction make them stand up under abuse of wheelbarrows and mud buggies, and conditions of normal construction operations. Saddle support holds Nepcoduct down as well as up and keeps it from floating in wet concrete fill.

No. 7425, for large and small Nepcoduct.

No. 7422, for two lines of small Nepcoduct.

Adjustment is made for height of Nepcoduct by spinning adjustment nuts up or down on bolts. Both lateral and longitudinal adjustments of duct are easily made.

Saddle slips into place when adjusting nuts are loose. Saddle is rigid with base member when adjusting nuts are locked above and below it.

Base members of saddle support are installed on floor as early as possible, to indicate lines of Nepcoduct, thus avoiding interference of other trades' work.

Seats in saddle for duct are stamped accurately, and hold ducts in proper relation to each other, as well as to the finished floor.

Tie wires, when twisted over top of ducts, hold them firmly in saddle.

Elbows and Offsets

90° Flat Floor Elbows Long Radius

No. 7215 for large Nepcoduct.

No. 7212 for small Nepcoduct.

90° Vertical Wall Elbows Long Radius

Can be used as shipped, or sawed in sections as indicated by 2 illustrations on the right, to meet requirements of situation.

No. 7225, for large.
No. 7222, for small.

90° Vertical Wall Elbows Short Radius

No. 7235, for large Nepcoduct.

No. 7232, for small Nepcoduct.

Duct End Outlets

With Height Adjusting Screw

Fits on end of Nepcoduct and receives standard duct outlet plug.

No. 7725, for large Nepcoduct.
No. 7722, for small Nepcoduct.

Cross-Under Offsets

Designed to offset lines of Nepcoduct so that conduit, pipe, or other lines of duct can cross within floor thickness.

No. 7325, for large.
No. 7322, for small.

Nepcoduct Under Floor Wiring System Miscellaneous Fittings

Couplings

With Height Adjusting Screw

No. 7165 for large Nepcoduct.

No. 7162 for small Nepcoduct.

Duct End Blanks

No. 7712 for small Nepcoduct.

Duct Opening Plugs

No. 7745 for large Nepcoduct.

No. 7742 for small Nepcoduct.

Closes unused duct openings in floor junction box. Easily removed by gripping middle vertical partition with pliers.

Connectors—Duct to Cabinet

No. 7755 for large Nepcoduct.

No. 7752 for small Nepcoduct.

Takes Nepcoduct runs into wall cabinet.

Adapters—Duct to Conduit

No. 7732 and No. 7762

No. 7762-F

No. 7732 with male end to fit coupling for small Nepcoduct, and female opening for 1 1/4-inch conduit.

No. 7762 with male end to fit coupling for small Nepcoduct, and female opening for 1-inch conduit.

No. 7762-F with female end to fit small Nepcoduct, and female opening for 1-inch conduit.

No. 7735 with male end to fit coupling for large Nepcoduct, and 2 female openings for 1 1/4-inch conduit.

No. 7735

Two openings for 1 1/4-inch conduit permit branching from duct to conduit with wiring up to full duct capacity.

Conduit Opening Plugs and Reducers

Closes unused conduit openings in floor junction box. Threaded inside for 1-inch conduit. With tin cap removed, it can be reversed end to end, screwed on end of conduit, serving thus as reducer in 1 1/4-inch opening of floor junction box. (See line drawing above.)

No. 7780 Conduit Opening Plug and 1 1/4 to 1-inch size reducer.

No. 7781 Conduit Opening Plug and 1 1/4 to 3/4-inch size reducer.

**Nepcoduct Under Floor Wiring System
The Evolution of an Outlet**

No. 7950, Plug Removal Wrench End Fits Depressions in Top of Outlet Plug

No. 7140, Floor Covering Escutcheon of Red Bronze
No. 7141, Floor Covering Escutcheon of Monel

No. 7143, Abandoned Outlet Plate

Type A Plug

Lines of Nepcoduct are embedded in concrete fill with plugs screwed down into duct outlets. Plugs may or may not be concealed by floor construction, and marker screw can be elevated to show at floor when required.

Rubber collar locks plug in adjusted position, protects plug threads from concrete, and seals the joint between plug and rim of duct outlet against entrance of moisture. When marker screw is to show through floor coverings of linoleum, rubber, cork tile or carpet, the escutcheon shown above is used to protect such floor coverings from fraying.

When duct outlet is to be used for service, it is necessary to remove small amount of concrete from top depression of plug in order to use the plug removal wrench. Plug can be readily screwed from the duct and concrete with plug removal wrench of which the socket end is shown.

Removal of plug leaves neat pre-formed passage through the concrete to duct outlet. Void in concrete around rim of duct outlet is a catch-all for dirt and small particles.

Service Extension Assembly No. 7910 directly engages the duct outlet without use of any forms of adapters, insuring positive protective grounding, as required in National Electrical Code. Stopping collar is sweated in place in manufacture, and serves as a gauge so that service extension pipe will always be turned into duct outlet to proper depth.

When outlet is abandoned, the plug is screwed again into duct outlet, and an abandoned outlet plate is pulled tight over opening in floor material, by tightening marker screw into plug.

Type B Plug

Type B plug, when adjusted, protrudes very slightly above top rim of duct outlet. This shallow plug is intended for use where duct is installed under wood or marble, as it is impracticable to cut a number of holes in the underside or through these materials to fit over a Type A plug protruding above level of concrete fill; when the Type B plug is used, holes need be cut only where duct outlet is to be used for service. Other outlets are located by marker screws, or by measurement.

**Nepcoduct Under Floor Wiring System
No. 7921 Service Fittings**

This fitting is used for either high or low potential service from the duct. It is entirely brass with the exception of required insulating bushings or terminal block which are completely housed within it. The service assembly presents a neat symmetrical appearance entirely consistent with the most pretentious office furnishings, and is very sturdy in construction.

Since the fittings will frequently occupy positions under desks or in foot space, they are purposely designed to be kick proof. They will stand any reasonable abuse in connection with exposed position. Ribs at two ends of opening prevent desk occupant's feet from injuring connection, attachment plug is sufficiently protected so that the feet will not strike the plug itself, thereby eliminating interruptions to service.

No. 7911 Service Heads

Service Head No. 7911 is a housing for duplex T-slot receptacle No. 7912 for high potential service, such as for lighting, or various electric driven office appliances; or housing for bushings for low potential service to telephones and various office signal systems. Can be assembled with double T-slot receptacle shown, for high potential service, in which standard attachment plugs are used, or with two bushings illustrated below, for low potential service.

Service Head Bushings

Fibre bushings which are clamped securely just inside outlets of service head when it is assembled. Designed to prevent contact and abrasion between edges of head outlets, and low potential wires.

No. 7913, 1/2-inch low potential service bushing.
No. 7914, 1-inch low potential service bushing.

No. 7910 Service Extension Assembly

Delivered fully assembled, as shown, is adjustable to accommodate floor thicknesses approximately 1 to 2 inches above the duct. The stopping collar is sweated in place to insure proper depth engagement with duct outlet. When service pipe is screwed into outlet to shoulder engagement, a very tight joint is effected. The floor flange is screwed down to a bearing on finished floor surface, further stabilizing extension assembly.

It is provided with holes for spanner wrench, so that by use of the wrench considerable pressure can be applied between floor flange and finished floor, giving an extraordinary strength to whole installation. Locking collar is jammed against floor flange by turning it down with other end of spanner wrench. Besides acting as a locknut for floor flange, it hides spanner wrench holes, and the unused threads on service extension pipe.

Service extension pipe itself has an unobstructed cross sectional area of 1 square inch through which to pull service wires. The whole service extension assembly is delivered fully assembled which saves field labor, and is adjusted easily for various floor thicknesses.

No. 7951 Service Extension Wrenches

Lugs on one end fit into holes in floor flange, for tightening it down against finished floor. Half octagon socket on other end fits around locking collar, for tightening it down against floor flange.

T & B Watertight Floor Boxes

Box is furnished with polarized receptacle plug.

Three outlets in sides and 2 in bottom for 1/2-inch rigid conduit or any connector with 1/2-inch threads.

Has 5 tapped holes for 1/2-inch conduit, 4 of these are plugged with watertight steel plugs.

Box is Tabolite finish, bronze cover.

Outside diameter: Box body (under flange), 2 3/4"; overall (face of plate), 3 3/4". Outside height: Box body (under flange), 2 5/8"; overall, including plate but not nozzle, 3". Height of nozzle, 1 1/4"

Standard package, 25. Weight, 70 pounds.

- No. 1700, Box with 2-Wire Recp. each \$4.00

- No. 1703, Phone or Signal Floor Box, No Recp. each 3.00

No. 8000 T & B Utility Outlets

10 Amperes, 250 Volts—15 Amperes, 125 Volts

An ideal convenience outlet for baseboards, plaster walls, mantles, etc.

Screws slip through keyhole slots in bottom of box. When tightened, box body, connector and convenience outlet become a rigid, compact unit.

Total height, 2 1/4 inches. Diameter body, 1 5/8 inches; diameter plate, 2 1/2 inches.

Tabolite finish.

Standard package, 50.

Price, No. 8000 each \$1.00

T & B Adjustable Watertight Floor Boxes

No. 1730, with Bell Nozzle

The bell nozzle is not standard equipment.

Adjustment range is 5/8-inch vertical and 10 degrees angular.

Minimum height of deep series boxes is 3 3/8 inches; of shallow series, 3 inches. Cover plate is 4 inches in diameter.

Unit package, 1; standard package, 10.

PATENTED AND PATENTS PENDING

No. 477

Sectional View of No. 477 Showing Receptacle Mounted on Steel Ring

Design and construction of the No. 477 is simple with few parts, small outside dimensions and plenty of room inside for wiring. Fitted complete with receptacle and bell nozzle. The receptacle is mounted on a flat steel ring which also serves as a seat for the bell nozzle or flush bronze plug. This construction permits use of only one rubber gasket.

Cover plate is 3 1/2 inches in diameter with 2-inch opening for bell nozzle or flush bronze plug. Height is 3 1/8 inches to top of cover plate.

Conduit holes: 1 in each side and 2 in bottom tapped for 1/2-inch conduit. Three of the holes are plugged with bronze plugs.

All bronze parts are brushed bronze finish. All iron and steel parts are sherardized to prevent rust.

Standard package, 25 complete outlets.

Complete outlet as described, consists of No. 481 box body, No. 478 porcelain plug, receptacle and flat steel ring, No. 484 rubber gasket, No. 483 bronze cover plate, No. 480 flush bronze plug and No. 479 bell nozzle.

Weight, 2 1/2 pounds.

PATENTED AND PATENTS PENDING

Cover plates are 4 inches in diameter, 3/4 inch thick sheet bronze. The flange ring is 1/8 inch thick, making the total diameter of the top of box 4 1/4 inches.

The height of standard box is 3 3/4 inches over all. Other heights may be had by the following combinations:

No. 402 body with No. 406 adjusting ring, minimum over all, 4 1/4 inches; with No. 407, 4 5/8 inches; with No. 408, 5 1/2 inches.

No. 404 body with No. 405 adjusting ring, minimum over all, 4 3/8 inches; with No. 406, 4 7/8 inches; with No. 407, 5 1/2 inches; with No. 408, 6 1/8 inches.

An adjustment of 1/2 inch higher may be had on each of these measurements in setting adjusting rings in the No. 476 cement. These boxes can be furnished special with shallow box body making minimum height 3 3/4 inches over all.

Conduit holes: Standard is 4 holes tapped for 1/2-inch conduit, 3 of which are plugged with brass plugs, making them water tight. Can be tapped for larger conduit without extra cost to meet requirements when sketches are furnished showing size and location of conduit holes. Only 1 conduit hole can be tapped in each of 4 sides of box bodies. Plugs larger than 1/2-inch charged for extra.

Receptacles are not furnished unless ordered.

Fullman Gang Floor Outlets

This rectangular gang floor outlet is for supplying a variety of service, such as electric lights, fans, telephones, etc., from one point.

It makes a neater appearance than several single outlets grouped near a desk or table.

Lugs are provided in each section for flush type receptacles.

No. 459 cover plates are furnished standard for use with No. 466 bell nozzle. No. 458 cover plate may be substituted for one or more sections if desired for use with No. 465 or No. 467 nozzles or ½-in. pipe extension. Bronze edge frame extends around all cover plates.

Minimum height to top of cover plate is four inches. Box body only is 3¼ inches high. The cover of No. 441 outlet is 5½ inches by 4 inches over all. The cover of No. 442 outlet is 5½ inches by 7 inches over all. Each additional section adds three inches.

End sections are provided with three holes tapped for ½-inch conduit. Intermediate sections have two ½-inch tapped holes. Can be tapped for ¾-inch and 1-inch conduit with room for bushings or for 1¼-inch conduit without room for bushings. Sketches must be furnished showing size and location of conduit holes if special tapping is required.

All bronze parts furnished brushed bronze finish. All iron and steel parts sherardized to prevent rust.

Complete Outlets

Complete rectangular outlets are regularly furnished with No. 459 cover plates. Can be provided with No. 458 cover plates when specified.

R & S Non-Adjustable Floor Boxes

A high grade floor box intended for use in wood flooring, easy to install and can be firmly secured.

Box is made of galvanized cast iron, floor plate of heavy brass and provided with suitable gaskets to make it watertight.

These fittings are furnished with or without receptacles and plugs, providing for uniformity when used for either high or low tension installations.

Height, 3¼ inches; diameter of floor plate, 3½ inches. Two ½-inch outlets on sides; two ½-inch outlets on bottom; three outlets plugged. Cannot be tapped for larger conduit. Receptacle and plug, 10 amperes 250 volts, furnished with No. 2580. All parts of these floor boxes are interchangeable and various available combinations of boxes and accessories can be furnished. Each box is packed in a strong carton.

No. 2580

Furnished complete with receptacle, cone nozzle and 2½-inch diameter flush cap. Weight, about 2½ pounds.

Price, No. 2580.....each \$4.00

No. 2590

Plain box and cover with ½-inch pipe flush cap. Weight, about 1¾ pounds.

Price, No. 2590.....each \$3.00

No. 2581

Furnished complete with 3-wire receptacle, plug, cone nozzle and 2½-inch diameter flush cap.

Weight, about 2½ pounds.

Price, No. 2581.....each \$5.00

R & S Shallow Type Adjustable Floor Boxes

No. 2504

This floor outlet can be used with a 3-inch floor fill. It is designed and constructed along the same lines as the larger type box. All cast iron parts are galvanized and the adjustable flange and cap are of brass with a machined finish across the top.

The No. 2504 box is furnished complete with a tee slot receptacle, which will accommodate the standard type plug cap and will take the standard No. 2558 cone nozzle same as used in conjunction with the larger type floor boxes. Gaskets are provided to make this box watertight.

ADJUSTMENTS.—Ample angular and ¾-inch vertical.

OUTLETS.—Maximum size, ¾ inch. When ordering specify outlets required.

Height, 2¾ inches minimum. Diameter box, 3¼ inches. Diameter flange ring, 3¾ inches.

Cat. No.	Description	Weight Pounds	Price Each
2504	Complete with Tee Slot Receptacle and 2½-Inch Diameter Flush Cap.....	2¾	\$5.50
2505	Complete with ½-Inch Flush Cap but without Receptacle.....	2¾	5.00
2509	Special Tee Slot Receptacle for Use with No. 2504.....	2 oz.	.50
2558	Cone Nozzle with Composition Bushing..	¼	1.00

R & S Adjustable Floor Boxes

Round Type

This box is of simple design, making it easy to install. Special adjustment and grounding feature eliminate the use of special cement. The box is ruggedly designed and equipped with a flange ring to prevent chipping of the finished floor.

Maximum size of outlets, 1 inch. When ordering, specify outlets required.

No. 2502

For No. 2538, 2½-inch cover plates, add 50 cents each.

R & S Combination Floor Extensions

10 Amperes, 250 Volts and Low Tension

No. 3000 Duplex Receptacle Outlet

These extensions are suitable for floor boxes and all underfloor-duct systems. Used in banks, offices, libraries, etc. for connection of desk lamps, dictaphones, adding machines, desk pads, telephones, etc.

Heavy bakelite interiors mounted in forged brass casing tapped for ½ or ¾-inch extension stem as desired. The stem is inserted in above mentioned systems.

No. 3008 Low Tension Outlet

Height, 6 inches over all. Furnished complete or in part. Standard finish is brush brass.

Cat. No.	Description	Wt. Lbs.	Price Each
3000	Complete 10-Ampere 250-Volt Duplex Combination Set.....	1¼	\$5.00

FS Series 2-Gang Threadless Condulets

Schedule CR

Threadless and Threaded Condulets Take the Same Covers and Wiring Devices

Take covers and flush rectangular wiring devices. Cadmium-galvanized is the standard finish. The FS Series Condulets with their variety of covers permit flush rectangular wiring devices to be mounted either on the surface of or flush with the wall. There is ample room around the wiring device for the passage of extra wires. Two styles of sheet steel covers for these condulets are available: for surface mounting and for flush mounting. Those for flush mounting are extended to cover the rough plaster line. Cast feraloy covers for these condulets are suitable for either surface or flush mounting.

G-H Series Threadless Condulets

Schedule CR

With Adjustable Bar

Threadless and Threaded Condulets Take the Same Covers and Wiring Devices

Take covers or round base wiring devices. Furnished with adjustable bar.

Cadmium-galvanized is the standard finish.

Condulets of the G-H series with adjustable bar are compact, shallow, and the same diameter as the base of the largest wiring device for which each form is designed.

The adjustable bar is removable and should be attached to and centered on the wiring device. The wiring device is then centered on the body. The adjustable bar clamps it to the flange and securely holds it in position.

A gasket can be used between the cover or wiring device and the Condulet. Gaskets are not regularly furnished with these Condulets and, if desired, must be specifically ordered.

Fastening screws are furnished with and so retained in the covers that they cannot fall out.

Limiting Dimensions of Round Base Wiring Devices for Use with Condulets of the G-H Series with Adjustable Bar

	Form 5	Form 10
Diameter of Base.....in.	2 to 2 $\frac{5}{8}$	2 $\frac{3}{8}$ to 3
Fastening Screw Spacing, Center to Center.....in.	$\frac{5}{8}$ to 1 $\frac{1}{16}$	$\frac{5}{8}$ to 1 $\frac{1}{8}$

Forms 5 and 10 indicate sizes of Condulets which take covers and wiring devices correspondingly classified.

J-K Series Condulets
Schedule CR

Rigid conduit installations exposed to the weather require wiring devices that will prevent rain, ice, sleet, and snow from coming in contact with the current carrying parts. Condulets of the J-K Series meet all such requirements.

They take wiring devices or blank cover.

Cadmium-galvanized is the standard finish.

Condulet Wiring Devices and Blank Covers

Schedule CR

For Condulets of the J-K Series

These wiring devices are weatherproof; therefore they can be installed either in or out of doors.

They are made in two parts, base and cap. The base is secured to the condulet by a single center screw. Direct connection to the circuit wires is made by two binding screws (entirely enclosed) on the base, eliminating soldered and taped joints. The cap of the lamp receptacle or rosette is secured to the base by two screws, which also complete the electrical connection. Lamp receptacles and rosettes have a common base. This construction permits changing from lamp receptacles to rosettes, or vice-versa, without disconnecting circuit wires.

The 2-pole attachment plug receptacles with double T slots take standard 15-ampere attachment plugs with parallel or tandem contact blades, or the parallel blade 15-ampere polarity plugs. The 2-pole attachment plug receptacles with IT slots take 15-ampere attachment plugs with tandem contact blades, or Hubbell 15-ampere polarity plug 6918.

The fastening screws are furnished with and so retained in the wiring devices that they cannot fall out.

Made of porcelain and furnished with gasket.

GS Vaporproof Fixtures

Schedule CR

For Form 20 Condulets of the GS Series

Pendant

Form 20 Condulets of the GS series with vaporproof fixtures meet conditions where vapor, gas, or moisture exist, as in marine installations or cold storage plants.

Bodies are of liberal dimensions, providing ample space for making taps, for connections to fixtures, and for the passage

of additional circuits. They are provided with blind screw holes for fastening covers or fixtures. A flat, unusually wide surface inside of the screw hole circle provides a good seat for the fixture gasket, insuring a gas and watertight joint.

Fixtures are furnished with receptacle, gaskets, and with or without globe and guard.

Cadmium-galvanized is the standard finish.

Form 75

Take 50-watt (PS20), 60-watt (A21), 75-watt (PS22), or 100-watt (A23) lamps.

Type BRG Plug Receptacle Housings

Schedule CR

For Condulets of the GS Series

*30 Amperes, 250 Volts A.C.

These housings take Type BP plugs. The 2-pole housings are furnished with 30-ampere, 250-volt receptacles BR1302 or BR302. The 3-pole housings are furnished with 30-ampere, 250-volt receptacles BR1303 or BR303.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

The threaded housings are furnished with round gaskets cemented in grooves. The gaskets are inside the screw circle, and the holes in the Condulets for the fastening screws are blind tapped; therefore when a watertight plug or the brass cap is used, the Condulet is absolutely vapor, gas, and dustproof.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning; the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

GROUNDING.—On the plugs used with these receptacles, provision is made for a grounding wire in the cable to connect the frame of the portable device to the shell of the plug. The grounding or safety circuit is completed through the shell of the plug, the detent spring, the receptacle housing, and the conduit system. The detent spring in the receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N. E. C. standard.

Standard package quantity is 25.

SK Series Condulets

Schedule CR

For Concealed Installations in Concrete

Take ARB vaporproof fixtures, blank covers, or covers with hubs, and are drilled and tapped to take 3/4-inch outlet box round base wiring devices with 2 3/4-inch screw centers.

The blank cover has countersunk fastening screw holes and is furnished with flat head screws. This makes the cover suitable for use in floors or sidewalks.

A gasket is made for use with blank covers, so that when used with condulets of the SK Series, an excellent watertight junction box is provided.

Elxits, Ben-ox fixtures and other wiring devices that have 4 fastening screw holes instead of 2 on 2 3/4-inch centers are given especially rigid support.

Cadmium-galvanized is the standard finish.

Type VS Vaporproof Portable Hand Lamps

Schedule CR

Clamp Guard

With Terminal for Ground Wire

Type VS Portable Hand Lamps are suited for use in garages, refineries, bakeries, flour mills, grain elevators, marine work or wherever inflammable vapor, dust or moisture is present.

The guard and globe holder are made of cast aluminum; the handle of molded rubber; and the gland nut of molded composition.

The rubber handle has sufficient flexibility to prevent breakage when subjected to rough usage, yet is sufficiently rigid to function as a satisfactory grip. Temperatures are not excessive.

Furnished with globe, guard, receptacle, gasket and vaporproof gland in handle.

Standard package quantity is 20.

Complete with Globe V15 and Guard VS95

Takes 60-watt (A21) lamps or any lamp not exceeding 2 3/4 x 5 5/8 inches.

Safety Hand Lamps

Schedule CR

With Grounding Terminal

Take 15 to 60-watt (A17 A19, A21, P19, PS20, S17, S19, or S21) lamps.

Nos. LPG24 and LPH24 Safety Hand Lamps are constructed to withstand the severe service encountered in railroad shops, garages, industrial plants, storehouses, etc.

A terminal is provided for a safety circuit wire in the connecting cord for grounding the guard and other metal parts not connected with the electrical circuit.

Handle is well seasoned maple, black enameled. A metal bracket on which ground terminal is mounted also provides a cord strain relief and support for lamp socket as a unit.

The guard and half shade are made of aluminum alloy.

A compression washer prevents a twisted lamp cord from turning the lamp out of a set position.

Standard package quantity is 20.

Type LPG, with Guard

Cat. No.	Each
LPG24	\$3.00

Type LPH, with Guard and Half Shade

Condulet Vaporproof Industrial Fixtures

Schedule CR
Clamp Guard

Regularly furnished with clear globes.

Colored globes can be substituted at an extra charge. A reflector can be used by omitting the guard regularly furnished and substituting the proper combination of reflector and reflector holder. A reflector and guard can be used by omitting guard regularly furnished and substituting the proper combination of guard with reflector holder and reflector.

Cadmium-galvanized is the standard finish.

Standard package quantity is 10.

Form 75

Furnished with Globe V75 and Guard V97, and takes 50-watt (PS20), 60-watt (A21), 75-watt (PS22), or 100-watt (A23) lamps.

Form 200

Furnished with Globe V200 and Guard VH99, and takes 100 or 150-watt (PS25), or 200-watt (PS30) lamps.

(Has Back Hub J)

The Types GU and GUE Condulets provide explosion-proof utility junction boxes with welded hubs to meet requirements for special hub combinations. The body is blind tapped to take CB connection block.

The catalogue numbers and prices are arrived at in the following manner: Refer to the illustrations above and select the particular type of Condulet desired. Use this

type as the first portion of the catalogue number. The catalogue number is completed by using the symbols* shown below in the schedule of threaded and union hubs, to indicate the size and type of each hub in rotation as lettered on the illustration.

Any hub may be omitted by using a zero (0) in the proper position in the catalogue number.

Example

See illustration at the left. A is to be 3/4-inch threaded hub; B, 1-inch threaded hub; C, 3/4-inch union hub; and J, 3/4-inch union hub in center of back.

The catalogue number will be GU11-23PP.

The price is determined in the following manner:

Type GU Body and Cover without Hubs.....	\$2.00
A Hub, 3/4-Inch Threaded, Symbol 2*	.65
B Hub, 1-Inch Threaded, Symbol 3*	.75
C Hub, 3/4-Inch Union, Symbol P*	1.00
J Hub, 3/4-Inch Union, Symbol P*	1.00
Total Price of Unit.....	\$5.40

*Symbol numbers are given in schedule of threaded and union hubs below.

Type GUE catalogue numbers are made up in the same manner. Hub arrangements and type numbers are same as in Type GU.

Types GU and GUE without Hubs

Furnished with screw cover. Take threaded or union hubs.

Type GU

Dimensions over all: 4 1/2 in. square; 2 7/8 in. deep; 3 5/8 in. diameter of cover opening. Body and Cover without Hubs...each \$2.00

Type GUE

Dimensions over all: 4 5/8 in. square; 3 5/8 in. deep; 3 5/8 in. diameter of cover opening. Body and Cover without Hubs...each \$2.00

Threaded and Union Hubs

For Types GU and GUE Condulets

Type GU takes 1/2 to 1-inch hubs.

Type GUE takes 1/2 to 2-inch hubs †.

†Maximum size of hubs: Rear hub, 1 1/4 inches; 2 hubs on each side, 1 1/2 inches threaded, 1 1/4-inch union.

Threaded			Union		
Size	Symbol	Each	Size	Symbol	Each
1/2	1	\$.60	1/2	N	\$ 1.00

Type EVG Explosion-Proof Lighting Fixture Condulets

For Gasoline Pump and Pump Dial Illumination

Type EVG Condulet is provided with a special Condulet body having a small oscillating switch type SWH; a wiring compartment with sufficient room for making the taps and splices; and a hub arrangement particularly suited to the requirements of gasoline pump wiring.

Intended for mounting within the pump housing where its globe is not subject to breakage.

When used for indirect illumination of the pump dial, the fixture should be installed with the globe in horizontal position or in a vertical position with the base of the lamp down, so the globe may be removed easily.

Dimensions over all, exclusive of hub: Length 8 5/8 in.; width 5 1/2 in. Size 1/2 inch.

Furnished with switch SWH13 and globe EV4. Takes 25 or 40-watt Type A lamps, 50-watt Type P19 mill type lamps, or any medium base lamp not exceeding 2 3/8 x 4 1/4 inches.

No. EVG2 Conduleteach \$10.00

MECHANISM FOR 4-INCH KEY

ATTACHMENT FOR ROD OPERATION

Switch Condulets of the FS Series listed above can be furnished with various special mechanisms. For such arrangements the catalogue number should be followed by a suffix as described below. Example: FS2106-S32.

There is no extra charge for these mechanisms.

Suffix No.	Description	No Extra Charge
S-32	Key Operation, 4-Inch Key*	No Extra Charge
S-33	Attachment for Rod Operation	No Extra Charge

*Furnished with nut for clamping against inner casing and 4-inch key for operation through outer casing of a pump housing. Can be applied to Condulet for key operation only.

Type GUB Explosion-Proof Panelboard Condulets

Schedule CE

Type GUB1

Type GUB14

The Type GUB Condulet is used as a 2-circuit, 3 to 2 or 2 to 2-wire convertible panel, on 125-volt, 2-wire, or 125-250-volt, 3-wire, systems with grounded neutral, each circuit having single-pole protection. The 3-wire or 2-wire feeder may extend through, if wire size is not reduced.

The terminal board has a neutral bar or strip with main lugs at each end and a wire-binding screw for the neutral conductor of each circuit; also 2 terminals with lugs, one terminal for each outside conductor.

If furnished without breakers, circuit breaker ratings must be stamped in name plate when breakers are installed.

Outside dimensions, exclusive of hubs; Length 10 in.; width 8 in.; depth 5 1/2 in.; diameter of cover opening 7 in. Standard finish, cadmium-galvanized.

Furnished with terminal board* and with or without two 125-volt, single-pole Flipon circuit breakers.

Threaded for Rigid Conduit

Type FLP Explosion-Proof Panelboards

Schedule CE

With Circuit Breakers

Type FLP Panelboard consists of a ready-wired assembly of "Flipon" circuit breakers in an explosion-proof housing. A separate compartment is provided for each breaker. Wiring connections are made to main and branch circuit terminal blocks mounted in a separate T-shaped compartment. Main terminals are furnished with main lugs only. The wire terminals are accessible through openings provided with threaded covers. Usually the panelboard is mounted so that the branch circuit hubs are at the top;

it may be mounted with the circuit hubs pointing downward if it is desirable to have the branch circuits coming out of the bottom of board.

Main hubs are arranged for 2-inch conduit and are located at each end of the main terminal compartment. The ¾-inch branch circuit hubs open into the branch terminal compartment. Circuit breaker compartments are numbered from top to bottom with odd numbers on the left and even numbers on the right. Regularly furnished wired for 3 to 2 or 2 to 2-wire systems, convertible.

Dimensions overall including hubs: Length 8 circuits, 27½ in.; 6 circuits 23½ in.; 4 circuits 18¾ in.; width 21¾ in. depth 6¾ in.

Type FLS Explosion-Proof General Use Switch Condulets

Schedule CE

Type FLS are general use enclosed switches, rated in amperes, for use in hazardous locations. If used as motor switches allowance should be made for the locked rotor motor current which may be 5 or 6 times the full load motor current. The single throw, and the double throw with no "off" position, are furnished with switches of the tumbler type, positive quick make and break; therefore they cannot be held in partial contact.

The double throw and motor reversing switches with "off" position are slow make and quick break. The slow make permits proper control of handle for jogging.

These Condulets are listed with 2 hubs, through feed, both hubs for threaded conduit of the same size. Other hub arrangements can be furnished.

Standard finish, cadmium-galvanized.

Furnished with switch, not fusible.

Types FLF and GUB Explosion-Proof Motor Starting Switch Condulets

Schedule CE

Type FLF

Type GUB

Types FLF and GUB Condulets are designed as explosion proof housings with operating handles or push buttons for external operation of certain definite motor starting switch mechanisms as indicated in the listings. Holes are provided for a padlock so that the operating handle can be locked "off" or "on." The switches are trip-free from the handle; therefore, locking the handle "on" does not prevent tripping but the switch cannot then be reset without removing the padlock. Switches are "across-the-line" starting type with thermal overload trip.

Heaters for the thermal overload trip units should be selected in accordance with the name plate current rating of the motor to be protected. If the name plate current rating is not known, it can be approximated from tables published in Article 8 of the N. E. Code. However, for proper protection to the motor, the heater should be selected in accordance with the actual motor name plate rating. If switch is located in a cool place and the motor in a hot place, the heater rating should be smaller than normal.

The heating elements are renewable and can be changed to suit the current rating of the particular motor that is to be protected. Only 2 heaters are used one in each of the outer poles of the switch. Therefore, if used on 2-phase 3-wire circuits, the common wire should be connected to the center pole. All switches are top connected; line at top, load at bottom.

These Condulets are listed for threaded hub arrangements. Other hub arrangements can be furnished.

Standard finish, cadmium-galvanized.

4.6 to 13.6	100	60	
15.4 to 20.0	100	100	

*TESTED FOR GROUP FUSING TWO OR MORE MOTORS ON ONE FEEDER.—Under certain conditions laid down in rule 808b2, exception 1, of the National Electrical Code, individual branch circuit fuses for each motor may be omitted and two or more motors each with its individual running protective device may be grouped on one feeder, in which case the maximum size of the fuses must not exceed the smallest maximum fuse protection specified in connection with any of the motor running protective devices for that group.

Many running protective devices have been subjected to short-circuit tests to determine the maximum rating of feeder fuses which may be used and still prevent the motor protective device from becoming a fire hazard on short circuit. These figures are usually marked on such devices, also published where such devices are listed.

Delayed Action Explosion-Proof Arktite Plugs and Receptacles

Schedule CE

Type CES Receptacle

Designed to provide a greater degree of safety in hazardous locations. The purpose of the delayed action is to permit the arc to be broken and the resulting flame, sparks, and hot metal parts to cool below the ignition temperature before the arcing chambers are opened to the atmosphere. An interference on the rotating sleeve prevents complete withdrawal of the plug but it can be withdrawn far enough to interrupt the circuit; and as is the case in all Arktite plugs and receptacles, the resulting arc

is broken in the arcing chamber. The plug having been withdrawn as far as possible, the sleeve must be rotated to the new position before the plug can be completely withdrawn.

The delayed action Arktite plug and receptacle takes the place of an interlocked plug and explosion-proof switch. The delayed action Arktite however has this advantage. If the cord or cable is broken through undue strain, the plug will have been withdrawn far enough to break the circuit in the receptacle and the cord is dead at the point where the break occurs.

Type CES Receptacle Equipment Complete

Includes Condulet, Receptacle, and Receptacle Housing

Condulets have 3 hubs, 2 of which are furnished with pipe plugs. Standard finish, cadmium-galvanized.

Type EYS Sealing Condulets for Hazardous Locations

Schedule CE

In hazardous locations, Class I, the conduit system should be sectionalized by sealing at frequent intervals.

Type EYS is a small, compact sealing Condulet for use in vertical runs of conduit. Taps or splices within the fitting are not permissible, and it is not recommended where there are more than 3 or 4 wires in the conduit. Condulets of the GUA series with sealing cover are more convenient for use in horizontal runs, or where there are 4 or more wires in the conduit, or where it is thought likely that changes may become necessary in the wiring. The cover makes it less difficult to remove the sealing compound.

Condulets are furnished with pipe plug. Standard finish, cadmium-galvanized.

Type RCDE-8 Explosion-Proof Pit Lights

Recommended for lighting automobile greasing pits and lifts, and for general use in hazardous locations.

When installed in the concrete wall of a pit or in the floor, the unit is practically flush with the concrete, for the door projection is only 3/8 inch when used without a grid, and 1 1/4 inches when used with a grid. For mounting on the surface of a wall, 3 steel Z brackets are supplied.

Type UNL

90° Angle—For Connecting Conduit to a Conduit

Male end is given first.

Size In.	Cat. No.	Each	DIMENS. IN.		
			A	B	C
3/4-1/2	UNL21M2	\$1.40	2 1/8	1 3/4	1 5/8
3/4-3/4	UNL2M2	1.40	2 1/8	1 3/4	1 5/8

Type UNA Couplings

Type UNA is a convenient coupling or union for conduit joints made at angles from 90 to 180 degrees. A single clamping nut provides a union feature as well as easy adjustment to required angles. Not approved as conduit unions for general use.

Male—Box Connectors—Explosion-Proof

For use only if adjacent to a Conduit.

Grounding

The 1928 National Electrical Code requires that in industrial establishments, portable devices having exposed metal parts, such as a metal frame or casing, shall be equipped with a cord containing an additional or safety circuit conductor; shall be equipped with polarized attachment plug; shall have the safety circuit conductor connected to the frame or casing of the appliance and to the safety circuit contact of the plug; and shall have the safety circuit contact of the receptacle adequately grounded.

Arktite plugs and receptacles are made in two styles: Style 1 is for use under ordinary conditions, where the plug sleeve and receptacle housing may serve as part of the safety circuit; Style 2 is for use in hazardous locations, and where conditions exist favorable to corrosion, either at the receptacle or along the conduit between the receptacle and the point of grounding.

Style 1

Arktite Plug with Cable Grip and Receptacle

Mounted on Type QEE Conduit

With Plug Partially Inserted

Style 1 plugs and receptacles are not provided with an extra pole for the grounding or safety circuit conductor, because the plug sleeve and receptacle housing serve as the grounding pole. Provision is made for connecting the safety circuit wire to the handle of the plug. If flexible armor is used for the safety circuit conductor, plugs with cable grip only should be used. The safety circuit is then completed from the frame or casing of the portable device through the safety circuit wire or flexible armor to the plug handle, thence through the natural contact of the plug handle with the plug receptacle housing to the conduit system.

The contact between the plug handle and the plug receptacle housing is made more effective than it otherwise would be by the detent springs.

Style 2

Arktite Plug with Rubber Bushing and Receptacle

Mounted on Type QEE Conduit

With Plug Partially Inserted

Style 2 plugs and receptacles have an extra pole for the grounding or safety circuit conductor. This pole is made extra long so that contact between the plug and receptacle is made first and broken last on this safety circuit contact. By this means any possibility is avoided of the portable device or plug handle being momentarily alive, due to arcing on the live contacts when the circuit is broken. The safety circuit contact in the plug is bonded to the plug handle. That in the receptacle is bonded to the receptacle housing or Conduit.

The safety circuit may be completed from the frame or casing of the portable device, through the extra (safety circuit) wire of the cable, to the safety circuit contact in the plug, to the corresponding safety circuit contact in the receptacle; thence (1) through the conduit system, which must then be considered as a grounding conductor and be made up accordingly; or (2) through a separate copper conductor extending back to an adequate ground connection; or (3) through a separate conductor in parallel with the conduit system. The latter methods (2) or (3) are necessary if conditions exist favorable to corrosion of the conduit.

Style 1 plugs fit only Style 1 receptacles. Style 2 plugs fit only Style 2 receptacles.

Arktite Receptacle Equipment Complete

Includes Condulet, Receptacle and Receptacle Housing

BP396036	9.50	3-Pole	1.188 to 1.234	10

Type BP, for Flexible or Armored Cable 60 Amperes, 600 Volts*

For receptacle BR6036 in housings QE6036, QE66036, QE76036 and QE86036.

Furnished without clamping nut.

BP46036	\$7.75	3-Pole	.813 to 1.063	10
---------	--------	--------	---------------	----

*Underwriters' rules require an approved switch in series with receptacle of this rating.

†Can also be used with housings QE6036 and QE66036.

Type BRM Plug Receptacle Condulets

Schedule CR
30 Amperes, 250 Volts A.C.*

Take Type BP plugs.

The 2-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2302.

The 3-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2303.

Threaded housings are also furnished with gaskets.

These plug receptacle condulets furnish a compact, convenient and rigid receptacle device. They are especially suitable for semi-permanent or temporary installation either for light or power, as in such installations it is desirable to include a device that will permit the conduit and wiring system to be easily broken and at the same time not sacrifice any of the protective features of rigid or flexible conduit.

These Condulets take plugs for rigid or flexible conduit, or armored or other cable.

The threaded Condulets, when used with a watertight plug or the aluminum cap, are vaporproof. They make excellent devices for installation on locomotives, as they provide means whereby the conduit system can be easily removed or replaced in sections, as is necessary when a locomotive is to receive a thorough overhauling.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning, and the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

*Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn.

Type BRME Plug Receptacle Condulets

Schedule CR

30° Angle

30 Amperes, 250 Volts A.C.*

Take Type BP plugs.

The 2-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2302.

The 3-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2303.

Threaded housings are also furnished with gaskets.

Type BRME Plug Receptacle Condulet is for mounting on the wall or on the frame of a portable machine, by means of two heavy lugs. The Condulet is mounted at such an angle with the surface to which it is attached, that there is no danger of the operator injuring his knuckles when inserting or removing the plug.

These receptacles furnish a compact, convenient, and rigid receptacle device. They take plugs for rigid or flexible conduit, or armored or other cable.

The threaded Condulets, when used with a watertight plug or the aluminum cap, are vaporproof. They make excellent devices for installation on locomotives, as they provide means whereby the conduit system can be easily removed or replaced in sections, as is necessary when a locomotive is to receive a thorough overhauling.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning, and the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

Type BP Plugs

Schedule CR

For use with Types BRB, BRD, BRG, BRM, BRME, BRY, and QE plug receptacle housings.

The 30-ampere plugs are arranged for soldered terminals. The 20-ampere plugs are equipped with binding screw terminals. Plugs so equipped with binding screw will not take wires larger than No. 12; consequently, these plugs are rated at 20 amperes. Otherwise, the 20 and 30-ampere plugs are exactly alike.

GROUNDING.—Provision is made for a grounding wire in the cable to connect frame of portable device to shell of plug. Grounding or safety circuit is completed through shell of plug, detent spring, receptacle housing, and conduit system. Detent spring in receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N. E. C. standard.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

Standard package quantity for all plugs is 25.

For Flexible Cable

Furnished with clamp for flexible cable. With composition handles (non-watertight).

Without Clamping Nut

RS Series Condulets

Schedule CR

Cadmium-galvanized finish. Furnished with cast feraloy cover, gasket and screws. The use of these Condulets provides an easy method of tapping a conduit system, where a Condulet body of this series has been installed in the line, by removing the blank plates and substituting plates with the desired sizes of hubs. Cover, hub plates, and blank side plates are gasketed, making the Condulet watertight.

PR Series Junction Condulets

Schedule CR

For use where durable, watertight junction condulets of medium size are required, as in railroad yards and shops. Also suitable for underneath or overhead car wiring installations.

The hubs are so designed as to insure a clearance of at least 3/4 of an inch between the surface wired over and the conduit; therefore, when these condulets are used on car roofs, there is no opportunity for the accumulation of cinders. Hubs are cast solid with the body and have an integral bushing and tapered thread.

The cover overhangs the conduit, and is held in place by 4 heavy brass cap screws. The joint is made watertight by a gasket.

The bottom of the conduit is reinforced at the center to allow drilling and tapping for an extra conduit or for the suspension of a center lamp fixture or car fixture of pedestal design.

Inside diameter, 6 1/8 inches; depth, varies with size.

Cadmium-galvanized is the standard finish.

Furnished with cast fer alloy cover and gasket.

Standard package quantity is 10.

*Sizes of end hubs, given first; side hubs, given last.

Type FJC Condulets

Schedule CR

For Floor Outlets

Type FJC meets conditions in factories, textile mills, technical schools or printing houses, where there are a number of individual motor driven machines and it is difficult to determine the final and permanent location of these machines when the preliminary layout is made or the conduit is installed.

It is general practice, in using a Type FJC Condulet, to drill the cover and attach a connector for flexible conduit; but rigid conduit can be used, if desired.

The over all dimensions of body exclusive of hubs are: Length 6 1/2 inches; width, 4 3/8 inches; depth, 4 3/8 inches.

Cadmium-galvanized is the standard finish for condulets and cast fer alloy covers.

Furnished with cover and gasket.

Standard package quantity is 10.

Size Inches	With Cast Brass Cover		With Cast Fer alloy Cover

YW Series Condulets

Schedule CR

For Cutouts—Without Hub Plates

Fuse cutouts are installed in a fireproof enclosure. These condulets have gasketed cast feraloy doors with adjustable eyebolt hinges. A tubular gasket is cemented in the door which, when closed, is watertight. Removable conduit hub plates, thoroughly gasketed, are secured to the cast feraloy body by 4 screws. These condulets are watertight, therefore, they are suitable for installation where dust, moisture or excessive gases are present.

The removable conduit hub plates make it possible to cut these condulets into an existing installation without disturbing the conduit system.

Designed to take wires which will enter the grooves or terminals of the fuse cutout of the same rating as the condulet. The additional space in the hubs is for the passage of extra wires. These extra wires should not be larger than can be properly accommodated in the body of the condulet with the cutout installed.

Cutout fastening plates are slotted so that almost any standard make of cutouts can be mounted thereon by means of the bolts and nuts furnished with the cutout fastening plates.

Cadmium-galvanized is the standard finish.

Type YW

Takes main line fuse cutouts, and removable conduit hub plates or plug receptacle housings. Furnished with cast feraloy door, gaskets and cutout fastening plates.

*Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits, if circuit is broken before plug is withdrawn.

Z Series Condulets

Schedule CR

For Cutouts and Switches

A condulet combining a switch and cutout is desirable for the control of small motors where a starting box or compensator is not required, and for independent control and protection of certain lighting, heater and other special circuits.

Takes round base wiring devices and main line fuse cutouts. Furnished with sheet steel door, adjustable bar, adapting rings and cutout fastening plate. Round base wiring devices are mounted on the sloping surface. The cutout is mounted on a fastening plate which can be removed for installing the cutout and making the electrical connections. The hubs are cast solid with the body and have an integral bushing and tapered thread.

FA Series Safety Switch Condulets

Schedule CR

2-Pole—30-Ampere, 250-Volt or 5-Ampere, 600-Volt
3-Way—20-Ampere, 125-Volt or 10-Ampere, 250-Volt

These Condulets are furnished with Crouse-Hinds tumbler switch, cover and gasket, and are for use in industrial plants or wherever switches would be subjected to unusually severe conditions. The switches are enclosed in Condulets and are externally operated, affording the switch maximum protection.

Watertight covers are especially adapted for use out-of-doors or wherever dust, moisture, or gases are present. They have a handle for external operation of the switch.

The non-watertight cover has a rim to protect switch handle which projects through a slot in cover. Handle is self-indicating (furnished with luminous finder at 50¢ extra).

Cadmium-galvanized is the standard finish.

Type MKS Interlocking Safety Switches and Plug Receptacle Condulets

Schedule CR

Without Hub Plates

For use with portable electrical appliances such as welding machines, rivet heaters, motor-driven machines, or for similar purposes where switches and plugs are used.

Consists of a safety switch and a plug receptacle. The receptacle and switch are so interlocked that the plug cannot be withdrawn unless the switch is open, nor can the switch be closed unless the plug is fully inserted.

Takes conduit hub plates and Type DP Interlocking Plugs.

Furnished with fusible knife switch and interlocking plug receptacle with spring door housing. These condulets are not weather proof. When installed out-of-doors or where exposed to the weather, a weather-proof housing should be built around the condulet. Cadmium-galvanized is the standard finish.

§Westinghouse plug type thermal cutouts.

°General Electric thermal cutouts.

If specified on the order, Type ZT can be furnished with a key-operated interlock release at \$2.50 extra.

AL Series Fixture Hanger Condulets

Schedule CR

For Pendent Fixtures—Always Hang Plumb

For Fixtures with ½-Inch Stem

These condulets provide a flexible suspension for electrical fixtures. Fixtures are suspended from a universal joint which assures that fixture will hang plumb. It also prevents breaking fixture stem at point of suspension. This universal joint permits fixture to swing through an angle of about 20° in any direction from the perpendicular.

The cushion fixture hanger is provided with a spring which carries the weight of the fixture and absorbs any shocks due to vibration or other causes.

Standard finish is cadmium-galvanized. In this finish, which does not interrupt safety circuit (ground) between body and pendent, flexible fixture hangers are N.E.C. standard.

ARB10	1.00	8 to 16	25
ARB12	1.00	16 to 30	25

Type UCY Threaded Fixture Rings

Schedule CR

For Use with Threadless Condulets

Thick Wall

The Type UCY Threaded Fixture Ring not only provides a secure suspension for fixtures, but also makes possible a combination of threadless and threaded hubs in the same conduit. The fixture ring takes the place of the grip ring in the threadless conduit hub, and is secured by the knurled nut. Cadmium-galvanized is the standard finish.

Cat. No.	Each	Size Inches	Std. Pkg.
UCY1	\$.04	$\frac{1}{2}$	200
UCY2	.06	$\frac{3}{4}$	100
UCY3	.08	1	50
UCY4	.15	$1\frac{1}{4}$	25
UCY5	.30	$1\frac{1}{2}$	10
UCY6	.50	2	5

ET Series Condulets

Schedule CR

Single runs of conduit may be made from these junctions to the desired outlets, where the necessary taps and splices in the wires can be made. The hubs have an integral bushing and tapered thread.

Lugs are provided for anchoring to forms.

Where these condulets are not used, all conduits must be run to an accessible junction box or outlet. Where these condulets are used, junctions in the conduit system may be made at concealed or inaccessible points.

Type ET Short Radius Bend Condulets with lugs are required especially for installing LA Series Condulets in moving picture theatres having very shallow floors. Type ET Short Radius Bend Condulets without lugs are for use with outdoor meters where T connections are required to service conduit.

From the center line of the branch hub of the Type ETE Condulet to the surface wired over is $1\frac{1}{8}$ inches. The purpose of this offset is to bring the branch hub of the Type ETE Condulet in line with the conduit outlet of certain meter boxes.

Cadmium-galvanized is the standard finish.

Type ET—Short Radius Bend

**Size of branch hub is given first.

†ETE54 has a large radius bend, same as ET54.

Groundulets

Schedule CM

Safety Circuit Equipment

Cadmium-galvanized is the standard finish for groundulets.

Types GCA and GCD Groundulets are for making a thoroughly secure mechanical and electrical connection between a grounding conductor enclosed in conduit and a water pipe or other grounding electrode. At the same time the grounding conductor and its connections are fully protected from mechanical injury. The conduit itself, as well as the wire contained within it, are electrically connected to each other and to the water pipe.

Grounding electrode, $\frac{5}{8}$ to 1 inch.

Type GCA

For Threaded Heavy Wall Conduit

Cat. No.	Std. Pkg.	PER 100		Size Conduit Inches	Size Pipe In.	No. Straps	Std. Pkg.	Carton
		Carton	Less Carton					
GCA172	\$37.50	\$46.90	\$60.00	$\frac{1}{2}$	$\frac{1}{2}$ to 2	1	25	5

GCD32	135.00	148.50	216.00	1	$\frac{1}{2}$ to 2	3	10	5

*For use also on lead pipe in sizes $\frac{1}{2}$ and $\frac{3}{4}$ -inch Grades AA and AAA, and 1-inch Grades A, AA and AAA.

Type GCH—With Angle Adjustment

Type GCH Groundulets are attached to a water pipe by rigid clamp jaws, insuring permanent and positive contact. A single substantial bolt holds the assembly in firm contact with both the water pipe and the grounding conductor.

Grounding electrode, $\frac{1}{2}$ to 1 inch.

For Threaded Heavy Wall Conduit

Cat. No.	Std. Pkg.	PER 100		Size Conduit Inches	Size Pipe In.	No. Straps	Std. Pkg.	Carton

For prices without globe and guard, deduct \$2.60 from price of Form 75, and \$3.05 from price of Form 200.

Equipment

Schedule CR

For Mounting on Condulets of the CL and LO Series

Used for railway mail car lighting and fan installations. Cadmium-galvanized is the standard finish.

Fixtures

Standard package quantity is 20.

For Storage Section Lighting

For 50-watt, A21 or PS20 lamps.

No. LOB101, Complete with Holder, Lamp Receptacle GS1621 and Reflector.....each \$4.00

No. LOB104, Holder Only, Complete except Reflector.....each 1.00

No. SH50, 12-Inch RLM Reflector Only.....each 3.00

For Door and Lavatory Lights

Furnished with lamp receptacle GS1621. The half shade is cast as an integral part of the receptacle holder.

No. LOB102, For 25-Watt, S17, A19 or PS16 Lamps.....each \$1.80

No. LOB103, For 50-Watt, A21 or PS20 Lamps.....each 2.00

Fixture Bases

Three standard angle fixture bases are listed to take care of the curvature of car roofs at letter-case mountings. These angles, together with a possible slight shimming of the condulets, should meet nearly every condition.

The complete fixture is made up by assembling a condulet of the CL or LO Series, Type LOB Fixture Base, Type DAH Reflector Holder and a conduit stem of the proper length.

Assorted standard package quantity is 20.

Style Hub	1-Inch Cat. No.	Each	1 1/2-Inch Cat. No.	Each
Straight	LOB88	\$.75	LOB812	\$.85

DAH3	3.90	Without Canopy	1	20
DAH5	4.00	Without Canopy	1 1/2	20

Reflectors

For DAH Reflector Holders

Opal glass; medium density.

Cat. No.	Each	Std. Pkg.
SH40	\$1.50	20

Receptacles

For DAH Reflector Holders

Cat. No.	Each	Watt	Rating Volt	Std. Pkg.
PE55	\$.40	660	600	200

Can be furnished with lamp grip at 10 cents extra.

FS Series Switch Condulets

Schedule CR

Cadmium-galvanized is the standard finish.

Type FS

For controlling the lavatory light, door lights at the opposite end from the lavatory in full mail cars and door lights in baggage compartment of combination mail and baggage cars.

Takes any standard square handle, single-pole, flush tumbler switch.

Has guarded switch cover.

Cat. No.	Each	Size In.	Std. Pkg.
FS132g	\$1.00	1/2	50

Type FSS—Fusible

For controlling the door lights in the clear storage end or lavatory end of full mail cars; for one door light in 15-foot postal apartments; or for use in any location where a fusible switch is required.

Takes one standard square handle, double-pole, flush tumbler switch; and one standard double-pole, plug fuse cut-out No. 62965.

Furnished with guarded switch cover and cover for fuse cutout.

FSS1732	\$2.45	1/2	10
---------	--------	-----	----

Type FSS—2-Gang—Fusible

For controlling door lights and center lights of 15 or 30-foot postal apartments.

Takes 2 standard square handle, double-pole, flush tumbler switches, and 2 standard double-pole, plug fuse cutouts No. 62965.

Furnished with guarded switch covers and covers for fuse cutouts.

FSS2834	\$4.75	3/4	10
---------	--------	-----	----

Type FSF

For Fan Control Switch

The lower double-pole switch is actually the "on" and "off" control of the fan. When this switch is thrown to "on" position, it starts the fan in low speed. If medium or high speed is desired, the switch indicated as medium or high may be thrown in to obtain those speeds, but in order to stop the fan it is only necessary to throw the lower double-pole switch to the "off" position.

Takes one standard square handle, double-pole, flush tumbler switch; one standard square handle, 2-circuit, flush tumbler switch Bryant No. 2892 or similar; and one standard double-pole, plug fuse cutout No. 62965.

Furnished with cover and resistance for 32-volt fan.

Cat. No.	Each	Size In.	Std. Pkg.
FSF251	\$7.50	3/4	5

Type FSF

For Combination Fan and Light Control Switch

A 2-gang switch performing the functions of one No. FS1732 Light Control Switch and one No. FSF251 Fan Control Switch.

Takes 2 standard square handle, double-pole, flush tumbler switches; one standard square handle 2-circuit, flush tumbler switch Bryant No. 2892 or similar; and 2 standard double-pole, plug fuse cutouts No. 62965.

Furnished with cover, resistance for 32-volt fan and one RE21 Reducer.

FSF2281	\$10.00	3/4	5
---------	---------	-----	---

Type FSFR Resistances

For 3-Speed Fan

Used in Type FSF switch condulets.

Cat. No.	Each	Voltage	Resistance Ohms	Std. Pkg.
FSFR10	\$1.50	32	5-10	10
FSFR100	1.50	64	*25-50	10
FSFR100	1.50	110	50-100	10

*One half of 100-ohm resistance for 50 ohms, and 2 halves in multiple for 25 ohms.

JRY-KRY Series Condulets

Schedule CR

For Side Wall or Car Vestibule Fixtures

For mounting back of the car finish. The fixtures can be fastened directly to them instead of the finish of the car; therefore, it is unnecessary to reinforce the car finish where the fastening screws enter. Takes connection blocks and fixtures.

The use of connection block No. CF101 eliminates soldered and taped joints, facilitating the removal of fixtures for refinishing or other purposes.

Fixtures are not furnished for this series, but the fastening screw holes are spaced and tapped to take fixtures.

Cadmium-galvanized is the standard finish.

Type JRY

Cat. No.	Each	Size In.	Std. Pkg.
JRY1	\$0.70	1/2	25
JRY2	.80	3/4	25
JRY3	.90	1	25

TJ Series Telephone Jack Condulets

Schedule CR

Arranged with bracket to take Western Electric Telephone Jack No. 200. When the plug is removed, a lid automatically closes the opening and prevents the entrance of dust, moisture and insects. Cadmium-galvanized, standard finish.

Type TJ

Intended for use under the body of a railroad car. Has a swivel base which allows the plug to pull out easily when the car is moved.

Furnished with insulating bushing and jack support attached to gasketed metal cover.

Cat. No.	Each	Std. Pkg.
TJ200	\$5.00	15

Type TJD

Intended for use on poles or buildings along the right-of-way of a railroad, transmission line or canal. The line wires enter the conduit through a 2-wire porcelain cover. Furnished with 2-wire porcelain cover and jack support attached to gasketed metal cover.

Cat. No.	Each	Std. Pkg.
TJD200	\$5.00	15

Type LG Gauge Lamps

Schedule CR

Bottom tapped for 3/8-in. bolt for attaching to bracket on boiler head or in cab. Cast Aluminum; aluminum standard finish. Takes lamps in A17, S14, or S17 bulb. Lamp receptacle with lamp grip furnished.

A—Size of hub for 1/2-inch rigid conduit.
B—Outside diameter of round cord or cable. Furnished with tapered bushing and gland nut.
C—Outside diameter of flexible conduit or armored cable. Furnished with tapered split lead sleeve and gland nut.

LD Series Tender Lamp Condulets

Schedule CR

Cast ferrous. Cadmium-galvanized is standard finish.

Types LDJ and LD

Used as back up lamps on rear of locomotive tenders. Weatherproof; front and side roundels gasketed. Provided with removable sliding door which is held in position by a cap screw.

The style with 2 round openings in the sides provides ground illumination so that the engineer can see that the lamp is burning. The style with rectangular opening in the bottom not only provides ground illumination, but also throws a light directly downward for coupling.

Takes any medium screw base lamp in A17, A19, A21, S17, S21, G18 1/2 or P19 bulb. Furnished with clear Spredlite Lens, lamp receptacle with lamp grip, and gaskets.

Type LDJ With Rectangular Opening and Plain Glass in Bottom

Can be furnished in aluminum at \$4.50 extra.

LE Series 2-Color Tender Lamp Condulets

Schedule CR

Provided with a red color screen that may be placed between the lamp and the lens when a red light is desired. In Type LEA, the door must be opened to operate color screen; in Types LEBJ and LEBF, it is operated by means of a lever on the outside of the case.

A single rectangular glass-covered opening in Type LEA, and 2 such openings in Types LEBJ and LEBF, throw a light downward for coupling and for ground illumination.

Doors, lenses and openings in the bottom are gasketed, making the condulets weatherproof.

Cast feraloy. Cadmium-galvanized is the standard finish.

Type LEA

With Rectangular Opening and Plain Glass in Bottom

Takes any medium screw base lamp in A17 or S17 bulb. Furnished with 5 3/8-inch clear Spredlite Lens, color screen, C139 Keyless Lamp Receptacle with lamp grip, and gaskets.

Cat. No.	Each	Size In.	Std. Pkg. Astd.
LEA18	\$10.00	1/2	10
LEA28	10.00	3/4	10

Can be furnished with No. C131 Key Receptacle with lamp grip at 20 cents extra; or with the same key receptacle and an operating mechanism similar to that furnished with Type LEBJ Condulet at 70 cents extra. If furnished with key receptacle without the operating mechanism, the door must be opened to operate the key receptacle. Can be tapped for conduit in the back or at either side instead of at bottom. Can be furnished in aluminum at \$3.25 extra.

Types LEBJ and LEBF

Take any medium screw base lamp in A17 or S17 bulb.

Furnished with GSG Removable Conduit Hub Plates, 5 3/8-inch clear Spredlite Lens, and color screen and key receptacle No. C123 with lamp grip. Key receptacle is controlled by a simple durable externally operated knob or button.

Type LEBJ

For Through Feed Horizontal Conduit

LG Series Locomotive Filler Hole and Stack Lamp Condulets

Schedule CR

Each type consists of a cylindrical housing enclosing receptacle for an incandescent lamp in A17 or S17 bulb and tapped for rigid conduit. Furnished with lamp receptacle with lamp grip and 3-inch clear semaphore lens.

Type LGUA is especially intended for oil burning locomotives to furnish light for taking on oil and water. It is provided with lugs for fastening bolts. Made of cast feraloy. Cadmium-galvanized is the standard finish.

Type LGUB is similar to Type LGUA except the hub comes out at an angle of about 30 degrees to the axis. No lugs are provided for fastening, the lamp being supported by the conduit. Made of cast aluminum. Aluminum is the standard finish.

LMK Series Engineer's Reading Light Condulets

Schedule CR

Also suitable for use in railroad shops, roundhouses and railroad yards. Provided with a half shade and with or without a half guard. The shade is cast as part of the conduit, while guard is hinged to conduit.

The body and shade are cast feraloy; the guard is cast aluminum. Cadmium-galvanized is the standard finish.

Takes any lamp in A17 or S17 bulb. With key receptacle with lamp grip, and metal key operating mechanism.

*With lamp grip. Composition base.

LM Series Locomotive Deck Light Condulets

Schedule CR

For locomotive gangways; provides illumination for coal passers. Consists of a conduit and half shade cast in one piece, and a weatherproof composition receptacle with lamp grip. The half shade is the correct length and size so that when used with a 25-watt, A17 or S17 lamp, the filament is not visible from any point over the rear end of the tender. The diameter of the half shade prevents the use of large headlight bulbs.

Cadmium-galvanized is the standard finish.

*If specified on the order, 200-ampere rectangular receptacle BR200 can be substituted for receptacle No. BR100 at \$1.25 extra. When so arranged, the condulet is suitable for low voltage welding machines of 200-ampere capacity.

**Furnished with hub plate and hub cover for 2-inch conduit stem. Conduit stem is not furnished.

BRH Series Battery Charging Condulets

Schedule CR

For Flexible Cable

For storage battery charging outlets, particularly on railroad cars and electric vehicles.

Makes excellent outlets for electric welding systems. If one side of the welding circuit is permanently grounded, both terminals of the plug and receptacle can be connected to the same conductor, thereby making them single-pole and doubling the ampere capacity.

Made for flexible cable. Furnished with 2-pole rectangular or round receptacles which are interchangeable in all the condulets of the BRH Series, except BRHE which takes the round receptacle only.

Receptacles and plugs are polarized.

The receptacle housings are provided with a spring door.

Types BRHA and BRHE are furnished with improved M.C.B. Brackets and are pivoted so as to allow the receptacle to align itself with the direction of the pull on the plug when the latter is withdrawn. Both of these condulets comply with all the A.R.E.E. standards.

The housing of Type BRHE is inclined at an angle and the wires enter the condulet from the bottom. The wire openings can be sealed by wrapping tape around the wires where they enter the housing. The combination of these features prevents the collection of dust, cinders, and moisture within the receptacle. Another advantage of having the housing set at an angle is that there is no downward pull on the receptacle when the plug is jerked out by the car moving away. Receptacle No. BRA100, which is furnished with this condulet, has self-aligning contacts. Furthermore, that part of the housing around the opening of the receptacle is made extra long so that it and the plug handle will take the side strain.

Rectangular receptacle No. BR100 takes plug No. BP100. Round receptacle No. BRA100 takes plugs No. BPA100 or No. BPA105. Rectangular receptacle No. BR200 takes plugs Nos. BPD200, BPD203 or BP100.

Cadmium-galvanized is the standard finish.

Standard package quantity is 5.

The wire terminals of receptacle BR200 are drilled 5/8 of an inch in diameter and will take any size cable up to and including No. 0000, B & S gauge.

**A spanner wrench will be furnished free with every shipment of BPA100 or BPA105 Plugs. If ordered separately or additionally, they can be furnished at 35 cents each.

Type YE Cab Connection Condulets

Schedule CR

Especially intended for use on locomotives. Provides an easy means for connecting the wiring system on the boiler to that in the cab.

A detachable hub plate is furnished which slides into grooves at the bottom of the condulet and may be quickly removed when door is open.

Also furnished with 4 bosses, any of which can be tapped for 1/2, 3/4 or 1-inch rigid conduit, but there are no hubs cast solid with the body.

The connection blocks furnished with these condulets are equipped with 14-24 R.S.A. Binding Nuts; 4-wire condulets are furnished with 2 connection blocks CB9222; 6-wire with two CB9223; 8-wire with

For Rigid Conduit

For Flexible Conduit

two CB9223 and one CB9222. The removable plates are made in 2 styles: One for rigid conduit and one for flexible conduit.

Positions of drilling and tapping in the bosses should be specified according to letters A, B, C, D, shown on cuts. A and C are the bosses on the left and right sides, B at the top and D at the back near the top. To order size by number: 1 is 1/2 inch, 2 is 3/4 inch, 3 is 1 inch. For example: YE1023-1233 (YE1023 is the catalogue number of the condulet with connection block).

Cadmium-galvanized is the standard finish.

Threadless Condulet Reducers

Schedule CR

For Threadless Condulets

To assemble threadless reducer with a threadless condulet, remove grip ring from nut of the condulet, and substitute reducer for it.

Cadmium-galvanized is the standard finish.

Type UCA Threadless Connectors

For Screwing into the Threaded Hub of a Condulet

Type UCA Connector is for connecting a threaded condulet to a piece of threadless conduit. In cases where combinations of threaded and threadless condulets are used, it offers a simple method of branching from a threaded condulet to threadless conduit. In other cases where threadless condulets of a desired type are not available, threaded condulets can be used with Type UCA Connector, in order that threadless conduit may be used.

Cadmium-galvanized is the standard finish.

Type UCT Threadless Adapters

Schedule CR

Thin Wall

Type UCT Adapters make available all types of threaded condulets, covers, and wiring devices for use with electrical metallic tubing.

They may also be used to connect the tubing to condulet elbows, condulet unions, condulet reducers, threaded pipe, couplings, or to any fitting that has a standard female tapered thread of the corresponding size. Thus, for example, a standard conduit coupling and two Type UCT Adapters make a coupling suitable for use with electrical metallic tubing.

Cadmium-galvanized is the standard finish.

Cat. No.	Each	Size Inches	Std. Pkg.

Hubbell Brass Shell Threaded-Catch Sockets

Nos. 1639 and 1636

No. 1637

No. 1638

Threaded ring is included as part of socket body. Standard finish is brush brass.

A heavy threaded ring holds the cap and shell together securely and will not pull apart from strain or vibration. This ring holds with a strong grip and will sustain the weight of the heaviest reflector.

Hubbell Porcelain Sign Receptacles

Special Features and Separate Rings

660 Watts, 250 Volts

All receptacles without leads have 8 notches and are easy to install. A notch in the side of hole punched in metal sign, engages one of the slots in porcelain preventing turning. No. 1197 pliers are used for forming these notches or lugs.

Separate fluted glazed porcelain rings, \$6.00 per 100. Standard package, 100. Separate grooved glazed porcelain rings, \$10.00 per 100. Standard package, 100.

Catalogue numbers 4003 and 4035 can be furnished with longer wire leads, on special order, at \$4.50 additional per 100 feet per conductor.

Sign receptacles with removable rings require a hole 1 1/2 inches in diameter.

Receptacles can be supplied with anti-paint discs assembled, when so ordered without extra charge. Discs sold separately at 20 cents per 100.

P & S-Despard Switches and Receptacles

The P & S-Despard units listed below, when combined or interchanged with one another, enable the contractor to assemble over 59244 different wiring device combinations.

P & S-Despard units are easily assembled in the mounting straps. A small screwdriver is all that is needed to lock each device securely in place. The correct style of mounting strap is furnished with each plate.

P & S-Despard Switches are fully capable of controlling

Type C lamp loads. The mechanism contains only 4 moving parts, including a laminated insulating disc which acts as an arc snuffer.

Receptacles or convenience outlets contain contacts of entirely new design. Contacts grip both sides of plug cap fingers and are formed so that the spring action is at bottom of the receptacle. This insures constant spring tension and prevents loose plug caps.

Flush Tumbler Switches

Made of brown bakelite including lever which is doubly insulated. Strap is insulated from switch. Front and back are enclosed, making a thoroughly dust-proof unit.

Any P & S-Despard tumbler flush switch can be quickly and easily converted into a lock switch by use of lock switch hood No. 1315.

P & S and P & S-Despard Combination Brass Plates

Combination brass plates for P & S wiring devices can be made up in either .040 or .060 metal.

Combination brass plates for P & S-Despard devices can be finished only in .060 metal.

When a combination plate is desired punched with openings for both P & S wiring devices and P & S-Despard devices, such plates can be supplied in .060 metal only.

When combination plates are punched with openings for P & S-Despard devices the correct mounting strap for that particular section of the plate is supplied.

A combination plate must be made up of two or more different symbols.

Standard finishes: .040 metal plates are furnished in either brush brass or Passmour finish; .060 metal plates furnished only in brush brass finish. Can be furnished in a number of special finishes.

The number of gangs, thickness of plate and finish (either brush brass or Passmour) are denoted by the basic catalogue number.

The device openings are designated by symbols following the basic catalogue number. These symbols must be listed after the basic catalogue number in order of arrangement desired reading from left to right when looking at face of plate.

Example: When a 3-gang .060 brush brass plate is specified for 4 P & S-Despard switches and a duplex receptacle, the order should read as follows: 1-1673-BBF.

Bryant 3-Wire Duplex Flush Receptacles

15 Amperes, 125 Volts; 10 Amperes, 250 Volts Each Outlet

The use of 3-wire outlets in place of the usual 2-wire receptacles is becoming more general. Safety considerations usually demand the grounding of home and industrial appliances. This can best be done by using 3-wire cord with suitable caps and receptacles.

No. 4326

Side Wired

For use with standard duplex receptacle plates (V section).
Base, 2¹/₁₆ x 1¹/₂ inches.
Depth, 7/8 inch.
Supporting screw spacing, 3³/₈ inches.

Hubbell Twist-Lock Devices

National Electric Code rules advise installation of polarized and grounded devices to protect the users of portable motor driven tools and equipment.

Many industrial plants, equipping with 3 and 4-wire protective devices, are specifying Twist-Lock to end the work-

interrupting disconnection nuisance which troubles users of portable equipment. Twist-Lock Devices never part in the middle of a job, no matter how hard the cord is yanked about. A lock-fast connection is made by a twist of the cap.

1. Plug in-

2. Twist-

3. They're locked!

Hubbellock Approved Industrial Devices

For High Frequency Portable Tools

20 Amperes, 250 Volts D.C.; 30 Amperes, 600 Volts A.C.

Built unusually strong to withstand the daily strain, severe service and electrical hazards incidental to the use of high frequency, high cycle portable tools.

The positive locking feature prevents accidental breaking of current, with consequent stoppage of production, and guarantees a lock-fast connection, as long as desired.

Standard finish is cadmium.

Hubbell Single Convenience Outlets and Switches

No. 8891

Fitting single gang boxes, these devices afford an opportunity to provide an extra convenience outlet wherever a switch is installed. Operating handles and receptacle faces are made of brown bakelite.

Ratings given below are for switches only. Receptacle rating in all cases is 10 amperes, 250 volts; 15 amperes, 125 volts.

Wiring diagrams above show method of installing to provide variation of control.

(WIRING DIAGRAMS)

RECEPTACLE ALWAYS ON SWITCH CONTROLS LIGHTS ONLY

No. 7436

No. 7437

No. 7438

No. 7438 receptacle is $2\frac{1}{2}$ inches high by $1\frac{1}{32}$ inches wide by $1\frac{1}{8}$ inches deep, permitting its being installed in a single gang box. The face diameter of No. 7438 is larger than standard and requires the special plate No. 7439. The outside diameter of the cap is such that it will not fit when used in a two-gang installation of 7438 receptacles.

These devices are comparable to Cat. Nos. 7070, 7071, 7072, but are not interchangeable with them. Polarization is effected by means of one wide and one narrow blade and corresponding lugs.

7439	21.78	.040-Inch Brush Brass Plate for No. 7438	10	30	6

**Two-Gang Size
30 Amperes, 250 Volts
Polarized**

This receptacle is made throughout of a special black porcelain. Supporting lugs have mounting holes spaced to fit standard 2-gang outlet boxes 2 inches deep or over.

No. 7127 cap is black composition, steel covered with adjustable cord grip. Binding screws are extra large and protected by an insulating disc which

fits over the blades, completely closing in the wiring terminals. Contact blades are of heavy gauge copper.

No. 7072 plate is made of .060-inch brass of standard 2-gang size, $4\frac{1}{2} \times 4\frac{3}{16}$ inches. Standard finish is brush brass.

Top Wired, 4 Screws

7725-B	\$38.38	Duplex, with Plaster Ears	10	100	21
--------	---------	---------------------------	----	-----	----

Side Wired, 4 Screws

The 4 binding screws speed up through wiring because no splices are necessary. Wires can be cut at first binding screw and continued from second screws for additional outlets.

1913	\$29.00	Duplex	10	100	21
1913-G	29.00	Duplex, with Plaster Ears	10	100	23

2-Circuit

One circuit or one outlet is left "Always On," for various electric appliances. The other circuit may be used for floor and table lamps controlled from a switch at the doorway.

1914	\$35.06	2 Feeds, 1 Return	10	100	21
1914-G	35.06	2 Feeds, 1 Return, Plaster Ears	10	100	23
1915	35.06	2 Feeds, 2 Returns	10	100	21
1915-G	35.06	2 Feeds, 2 Returns, Plaster Ears	10	100	23

H & H Warning Lights

When the current is on, a candelabra lamp (mounted in the porcelain base) glows through the ruby, cut-glass bull's-eye and serves as a reminder to turn current off when not needed. It saves current, prevents injury to irons or heaters, and helps to prevent fire.

The lamp socket is hinged to the base, permitting the lamp to be easily inserted and reducing the lamp breakage.

Carton, 10. Standard package, 30.

FA Hanger Outlets

Fixture Stud Type

Designed for use with standardized outlet box and $\frac{3}{8}$ -in. fixture stud. Furnished with beveled edge face plate, bakelite receptacle and special fan supporting bracket which is adjustable for plumbing the outlet if box is out of line. A heavy steel stud ($\frac{1}{4}$ -20) with brass washer for attaching fan, is furnished.

Box is not furnished. Any NEMA 4x4x1 $\frac{1}{2}$ -inch outlet box with $\frac{3}{8}$ -in. fixture stud and NEMA rectangular opening single switch cover, $\frac{1}{2}$ in. deep, can be used.

Cover is 2 $\frac{3}{4}$ x4 $\frac{1}{2}$ -in. (.060-in.) struck-up brass, brush brass or black finish; bakelite receptacle which is included in price.

Prices on finish to match Bakelite, and special finishes upon request, with sample. Special finishes are difficult to match and it is recommended that plates be purchased unfinished, so special finish can be applied locally.

Carton, 1; standard package, 50; weight, std. pkg., 29 pounds.

Each..... \$3.50

FA Security Hanger Outlets

Primarily designed for fan service, this outlet readily lends itself as a utility outlet for heaters, show-window floodlights, and various electrical appliances.

Adaptable to all classes of modern buildings and approved by the Underwriters' Laboratories for supporting oscillating fans up to and including 16-inch.

Furnished with a pressed steel box, 4x4x1 $\frac{1}{2}$ inches; four corners of box fitted with substantial supports to which steel box cover is fastened. Box has $\frac{1}{2}$ and $\frac{3}{4}$ -inch knockouts. Brass cover plate fastens to steel box cover. Adjustable bracket, to which fan is fastened by $\frac{1}{4}$ -inch steel stud, is riveted to back of box. Heavy brass adjusting stud allows for variation in plaster. Furnished with .060-inch struck-up brush brass finish cover plate, 2 $\frac{3}{4}$ x4 $\frac{1}{2}$ inches, and special outlet box with bakelite T-slot receptacle.

Individual cartons; std. pkg., 50; wt. std. pkg., 90 lbs. Complete, Brush Brass or Black Finish.....each \$4.00

Polarized receptacle, 50 cents additional.

No. 7707 Hubbell Bakelite Electric Clock Hanger Outlets

This device allows the clock to hang flush with the wall and to cover neatly the electrical outlet.

The attachment plug is out of the way of the clock.

No unsightly and often dangerous wires need show, yet the clock can be removed and installed in a few seconds.

With .040" Brass Plate

No. 3750 Bryant Fan Hanger Outlets

Yoke Type

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

Designed primarily as a fan hanger outlet, but is adapted for individually illuminated pictures, electric heaters, radio loud speakers, etc. May be hung on supporting screw so as to conceal the receptacle outlet, cord, and hangings.

Rigid vibration-proof assembly.

Uses standard square outlet box and cover with raised rectangular opening.

A heavy gauge sherardized steel plate supports the receptacle.

Brass finishing plate is held independently.

Cat. No.	Per 100	Carton	Std. Pkg.	Wt., Lbs. Std. Pkg.
No. 3750 Complete 3750	\$244.00	10	50	45

R & S Fan Hanger Outlets

Adapted for individually illuminated pictures, electric heaters, radio loud speakers, etc. Pictures can be hung on supporting screw, concealing receptacle outlet, cord and hangings.

Heavy gauge cadmium steel plate supports receptacle. This construction permits installation and wiring less finishing plate prior to final decorating of walls.

Receptacle with supporting straps welded to steel plate prevents loosening due to vibration.

Heavy gauge brass (2 $\frac{3}{4}$ x4 $\frac{1}{2}$ inches) finishing plate held independently, prevents loosening of plate on failure to replace the fan hanger supporting screw when fan is removed.

Yoke Lock Type

The yoke lock fan hanger affords convenience, flexibility and low cost installation.

Has rigid vibration-proof assembly; standard square outlet box and cover with raised rectangular opening. This permits the contractor installing standard material throughout.

With yoke lock clamping device and 2-point support produced by assembly of brass toggle and malleable iron yoke.

Standard package, 50. Approximate net weight each, $\frac{1}{2}$ pound.

No. 661

Stud Lock Type

Complete with specially constructed heavy gauge galvanized steel cover and box with $\frac{1}{2}$ and $\frac{3}{4}$ -inch k.o. in back and four sides.

With secure and rigid assembly of malleable iron stud to box with lock nut and additional cotter safety pin. This prevents loosening from constant vibration.

Standard package, 50. Approximate net weight each, 1 $\frac{1}{2}$ pounds.

No. 649

R & S Ever-Lok Receptacles, Plugs and Cord Connectors

Ever-lok fittings are for use with portable motor-driven tools, hand portable appliances, timestamps, adding machines, etc. They are mistake-proof and connect or disconnect only one way assuring an accident-proof connection.

Ever-lok receptacles, plugs and cord connectors are polarized.

Exteriors are heavy steel, cadmium finish.

Arrows on shells indicate line-up of only position in which connection can be made. Plug cannot be inserted from any other position.

Interiors are molded bakelite, grooved to fit corresponding upset lugs on shells so that improper assembly or alignment of interior is impossible.

Contacts are properly marked to maintain identification of polarity throughout.

Fittings are automatic locking. Outer shell of plug floats on inner shell and turns within limits allowed by two pins in two slots on opposite sides of shell. As plug is inserted in connector or receptacle, lugs on outer shell ride diagonally down into funnel-shaped grooves until they strike the bottom, then outer shell turns on its axis by means of a spring in its base and lugs snap into position, automatically locking plug.

To disconnect plug it is necessary to grasp it firmly and give a short reverse twist to bring lugs back out of position to where they will pull out. Outer shoulders are knurled to facilitate this action, but plug cannot be withdrawn without first giving it this reverse twist.

Standard package, 100 assorted pieces.

Receptacles and Rectangular Covers

Can also be furnished with cast iron conduit box No. 8009 for surface mounting or for mounting to standard switch box cover for flush work.

Bryant Expulsion Type Surface Switches

For Inductive Loads and Electric Railway Circuits With Metal Cover

Designed with barriers between parts of opposite polarity which are effective in limiting the arc formed when the circuit is broken.

The 600-volt rating only is N.E.C.S.

It is not advisable, though possible, to convert 600-volt switches to lock switches by the use of No. 2384 Universal Lock Attachment.

No. 2773

The window in the cover of indicating switches is located so that, when the switch is mounted on a wall above eye level, the indications can be read right side up under the handle.

Standard finish on metal covers is polished nickel which will be supplied when the finish is not specified.

Bryant High Capacity Flush Tumbler Switches

For Industrial Applications

20 Amperes, 250 Volts

Will operate successfully and without failure at full load and voltage for many times beyond accepted standard.

Porcelain Cups

Front Connected

2 H.P.—230 Volts A.C., 250 Volts D.C.

Particularly designed for motor control.
Double-Pole Indicating, Templus Handle

Bryant Enclosed Flush Tumbler Switches

For Type C Lamp Loads
Black Composition Cups

No. 4961

These switches will give uniform performance, high minimum break-down, and exceptionally long life.

Dimensions of cups: Length, 2 1/16 inches; depth, 1 3/8 inches; width, Nos. 4961 and 4961-L, 1 1/2 inches, others, 1 1/16 inches.

Supporting screw spacing, 3 3/32 inches.

When ordering combination plates, specify S section. Single plates OS11, OS61, HS41, and HS31.

On special order, these switches can be furnished with black handles (lock switches with black bosses) without extra charge.

Bryant Flush Plates for Tumbler Switches
Schedule H

1-Gang

2-Gang

The standard finish is brush brass which will be furnished when no finish is specified.

Perma finish is a durable colored lacquer that resembles brush brass.

S plates of the same material may be assorted in various finishes, thicknesses and gangs to make up carton and standard package quantities. No other assortment permitted.

When ordering combination plates, specify S section to accommodate switches with handles operating vertically.

By installing No. 746 jewel, any of these plates can be made into pilot light plates.

Brass mounting screws, finished to match, are packed in the carton with each plate.

Solid Brass Plates, One Horizontal Row
Symbol S

Description	Carton Gangs	Std. Pkg. Gangs	Pkg. Wt. Lbs.	STANDARD FINISH		PERMA FINISH	
				Cat. No.	Per 100	Cat. No.	Per 100

The price of brush brass solid S plates in one vertical row (tandem) above 3 gangs, when dimensions and spacings are standard, is 84 cents list per gang (Perma, 76 cents).

Bryant Flush Plates

Explanation of Catalogue Numbers for Flush Plates

When specifying flush plates there are three things that must be known:

1. The style of plate.
2. The material of which it is made.
3. The number of gangs.

Except for tandem plates (plates arranged vertically) and combination plates, each listed Bryant flush plate has a catalogue number which describes the kind of plate it is.

OP52 is the catalogue number for a 2-button push switch plate, Templus composition, 2-gang.

OV61 is the catalogue number for a duplex flush receptacle plate, .060-inch stamped brass, 1-gang.

OPF42 is the catalogue number for a plate for one 2-button push switch and a single flush receptacle, .040-inch stamped brass, 2-gang.

OV211 is the catalogue number for a plate with doors for a duplex flush receptacle, solid brass, 1-gang.

In each case the left-hand letter O indicates a flush plate. See examples.

I. The symbol letter or letters immediately following describe the style of plate. See examples, letters P, V, PF and V2.

II. The figure next to the right-hand figure indicates the material of which the plate is made.

1. Indicates brass, .100 inch thick (solid).
6. Indicates brass, .060 inch thick, stamped.
5. Indicates Templus moulded composition.
4. Indicates brass, .040 inch thick, stamped.
7. Indicates De Luxe wood inlay plates.
3. Indicates Hemco bakelite plates. In this case H is substituted for the first letter O.

—B used in conjunction with No. 7 indicates the all metal plate of the De Luxe type.

—P after any plate catalogue number indicates that Perma finish is desired.

III. The right-hand figure indicates the number of horizontal gangs wide.

When the simple elements of this number system are learned it will be found easy to specify Bryant plates by catalogue number.

Examples

NOTE.—Plates in combinations exceeding 8 gangs cannot be furnished in .060-inch or .040-inch. Combination plates can only be furnished in the thickness specified with each section.

Bryant Special Finishes

GENERAL.—The standard finish of all brass shell devices and brass flush plates, unless otherwise noted, is brush brass, which will be supplied when the finish is not specified. Standard and special finishes on all devices of one catalogue number may be assorted to make up the standard package quantity, which will be the same as though all were standard finish.

Assortment of catalogue numbers may be made only as indicated in the catalogue pages where the devices are listed. Prices on all special finishes other than those listed, including gold, will be quoted on application.

Sample of finish desired should always be submitted to avoid mistakes and delays.

Socket Type Devices

QUANTITY DISCOUNTS.—When socket type devices or metal covered attachment plug caps in special finishes are ordered in quantities the list prices for finishes only will be reduced as follows: lots of 250-499, one shipment, one finish, 10%;

lots of 500-999, one shipment, one finish, 20%; lots of 1000 or over, one shipment, one finish, 50%. For mogul sockets in special finishes, add double the prices which apply to standard sockets.

CHAINS AND METAL CHAIN PARTS.—Chain guides, per foot or cut in lengths not longer than 1 foot, and chain parts, singly or in combination, can be supplied in any special finish, except silver and gold, at an addition to list price of 4 cents per unit. For silver finishes add 20 cents list per unit. Gold finish prices on application.

Surface Switch Covers

The standard finish on all metal covers of surface switches unless otherwise noted is polished nickel, which will be supplied when the finish is not specified. For covers in any other finish, except silver or gold, add to list 20 cents each. Silver or gold finish prices on application.

*Applies only to multiple gang and combination plates.

Bryant Flush Plate Sections

Schedule H

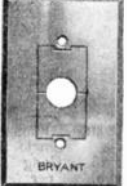

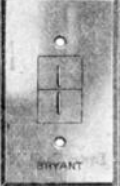

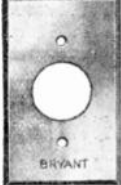

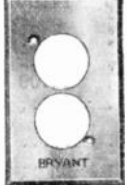

Combination plates should be described by using the letters shown with the illustrations of the respective plates, giving the letters in order from left to right, or from top to bottom, as the devices are to be mounted.

The list price of a horizontal combination plate of two or three sections, in brush brass finish when dimensions and spacings are standard and the devices are arranged in one horizontal row, will be the sum of the lists shown. The list

price of a horizontal combination plate of 4 or more sections in combination is the sum of the list prices shown plus 25% of that sum for the combination feature.

For plates with devices mounted tandem or in more than one horizontal row, add 20% to the sum of the list prices for 2 and 3-gang plates; for 4 or more gangs, add 50%.

Use the prices below when ordering combination plates.

<p>A</p> <p>Type A plate has been superseded by Type B plate.</p> <p>Type B plate consists of the Type F plate with No. 3850 Removable Jewel.</p>	 <p>B List, Solid, \$.98 List, .060 in., .68 List, .040 in., .62 Bull's Eye Consists of "F" Plate with No. 3850 Bull's Eye Jewel For Cat. ★The supporting screw spacing for this section is 3 3/8 inches for .100-inch (solid) combination plates. The supporting screw spacing for this section is 2 3/8 inches for .060-inch and .040-inch stamped combination plates. Yoke No. H-10 is furnished for this section in stamped combination plates without extra charge.

Bryant Flush Plate Sections

The standard package quantity is 10 plates of one description (not 10 gangs). The carton quantity is 2 plates.

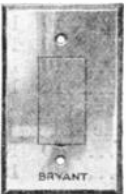

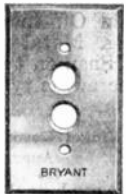

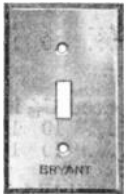

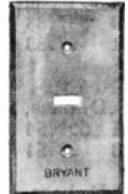

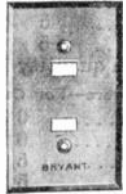

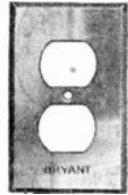

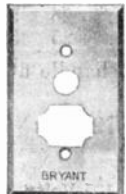

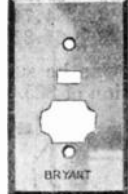

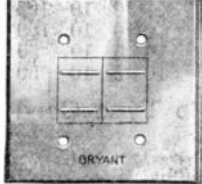

A combination plate cannot be so considered for billing purposes unless it is described by at least two different letters, but letters may be used to describe any desired arrangement of plate sections.

The standard finish of plates is brush brass which will

be supplied if no finish is specified. For special finishes see another page.

Except for those listed as such, Templus and Hemco moulded composition plates cannot be supplied in combinations.

Use the prices below when ordering combination plates.

Electrically Connected Combinations

Each switch section takes same rating as corresponding single switch. Any combination can be supplied in 2 or 3 sections. Order by using single switch numbers in the order of the combination desired. The price is the sum of the lists of the switch sections. Combination switches are regularly supplied with common feed. If separate feed is desired, remove the shunt connection. Any of these switches can be supplied in lock style. When so specified, add L to catalogue number and \$63.00 per 100 for each switch.

Hubbell Combination Brass Plates

Hubbell Combination Plates are made in .100-inch solid brass, struck up .060 and .040 inch brass. The standard finish is brush brass. If desired in Lacco finish specify and deduct 8 cents per gang from list prices. The advance for special finishes should be added to brush brass list

prices. If plates are ordered by letter only and no finish is specified, brush brass will be supplied. A combination plate must be made up of 2 or more different letters. For example: AA is not a combination plate.

*Screw spacing, 2 3/8 inches. Adapter to 3 1/2 inches for box mounting supplied with this section.

**Only supplied in solid brass.

†Combinations embracing two adjacent G, Y, or K sections for Nos. 7250, 7310, 7410, or 7438 receptacles, require an extra blank gang between them to provide space for insertion of caps.

Standard package consists of 10 plates of one combination (not 10 gangs).

Carton consists of 1 plate.

Standard finish is brush brass, and will be so furnished unless otherwise specified.

The price of any combination plate up to and including 3-gangs is the sum of the individual prices of the component plates.

For combination plates of 4 or more horizontal gangs, add 25%. For tandem gangs, add 25% to price of horizontal plates. Tandem plates are supplied in solid brass only.

Socket Material

(A) Pull devices in white finish but with chain eyelet, chain and acorn in any electro plated finish except brush brass add \$2.00 per 100 advance over price shown for key, keyless and push sockets.

(B) Finishes not listed, prices on application.

Pull devices in brush brass finish but chain, tassel and eyelet in other finishes add to list difference between columns 1 and 2.

(C) Standard finish on brass shell devices is brush brass. Furnished on all orders where no finish is specified.

Plated finish on pull chain parts furnished at an addition of \$2.00 per 100. Subject to quantity reduction.

Standard and special finishes of one catalogue number may be assorted to make up standard packages.

The above prices for special finishes apply to small lots. When ordering in quantity lots of one finish, one shipment, single or assorted catalogue numbers, they are reduced as follows:

Lots 250 to 499, finish price reduced 10%.

Lots 500 to 999, finish price reduced 20%.

Lots 1000 and over, finish price reduced 50%.

These quantity deductions should be made from prices of finishes before the trade discounts are figured.

Assembled or unassembled sockets with brush brass but unlacquered shells take same price as brush brass.

Plug Caps and Flush Plates

(D) For genuine bronze plates, prices on application.

(E) These prices should be added to brush brass prices and not Lacco.

(F) Prices applying to finishes on standard flush plates are based on single plates. When ordering gangs, add \$14.00 per 100 gangs for each gang beyond the first, regardless of finish except gold.

The above prices for special finishes apply to small lots. When ordering in quantity lots of one finish, one shipment, single or assorted catalogue numbers, they are reduced as follows:

100 to 499 gangs or caps, finish price reduced 10%.

500 to 999 gangs or caps, finish price reduced 20%.

1000 gangs or caps and over, finish price reduced 50%.

These quantity deductions should be made from prices of finishes before trade discounts are figured.

Unfinished flush plates, that are polished and buffed, will be supplied at same price as polished brass plates or at same price as brush brass if ground but not polished.

Unfinished flush plates, not polished or buffed (in rough state) will be furnished at same price as Lacco plates.

For ivory or white enamel finish on bakelite plates add the same extra as for brass plates.

H & H Pony Size Surface Tumbler Switches

With Nickel Cover (Snap Fastening)

With polished nickel covers and indicating handles.

H & H Type C Flush Tumbler Switches
For Type C Gas Filled Lamps

Specially built to handle the initial current surge of gas filled medium size lamps.

Base is all bakelite, 2 inches deep.

Special phosphor bronze blades and contacts with large surfaces provide for the absorption and dissipation of heat.

Two arc snuffers cut off the arc and greatly increase breaking capacity.

Fit standard tumbler switch plates.

H & H Plates

Symbols for Plates in Combinations

Standard combination plates of at least two different units are made up to order, from the units listed below. If spacings or dimensions differ from the standard units, special plate prices apply.

The price of a combination plate is the sum of the individual prices of the component plates. For a tandem combination, or a combination plate in which the gangs are placed in more than one row, add 25 per cent to the prices shown. For example, if plate PBD were a tandem plate, the price would be \$2.22 plus 25 per cent or \$2.77.

Standard package is 10 separate plates of the same combination.

Standard finish is brush brass.

H & H Bakelite Canopy Pull Switches

These switches can be wired easily and quickly, without removing the mechanism. Just slip off the bakelite disc, attach the wires and replace the disc, bending down the tab. Made of lustrous brown bakelite.

Possibility of shorting is eliminated—current carrying parts are enclosed in a bakelite compartment separated and insulated from all other metal parts.

Regular Style, without Mounting Attachment
6 Amperes, 125 Volts; 3 Amperes, 250 Volts

Furnished with short chain and 6-foot cord.

Cat. No.	Per 100	Length Stem In.	Car-ton	Std. Pkg.	Pkg. Wt. Lbs.
7745	\$70.00	1/4	10	100	12

7716	70.00	5/8	10	100	12

With Adjustable U Bracket

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

For pan type fixtures. Adjustable for any depth of pan. Gives a rigid, straight down easy pull.

Offers greater wiring convenience and economy of installation.

Complete with short chain and 6-foot cord.

7745-B	\$70.00	1/4	10	100	17
7746-B	70.00	3/8	10	100	17

No. 7745-B

With Z Bar

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

A new, rigid canopy switch support. Fastens to fixture stud with lock nut and switch is attached to Z bar with stem. Affords a straight down pull, removing all strain from the canopy.

The short chain and 6-foot cord go out through a small knockout in lower side of canopy.

7745-Z	\$70.00	1/4	10	100	17
7746-Z	70.00	3/8	10	100	17

No. 7745-Z

With Chain Link

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

Used between any two links. Tighten the stem and the switch is locked to the chain. It can't slip out or pull out. Makes a stable permanent installation. Furnished with short chain and 6-foot cord.

Standard finish is statuary bronze, but brass, black, or nickel is optional.

*Angle pull.

Rotary Switches

3 Amperes, 125 Volts; 1 Ampere, 250 Volts

Depth of rotary switch, 3/8 inch.

Diameter of stem, 3/8 inch.

No. 7776

Fitted with 6-inch No. 18 stranded fixture wire. Wires up to and including 8 inches supplied without extra charge. For longer wires, add 9 cents per foot for each conductor.

Standard finish is brass on exposed parts, but wash nickel, bronze, or black is optional.

With Removable Metal Handles

Type A Square D Safety Switches Quick-Make and Quick-Break Interlocked Cover Control Single Throw—Fusible

No. 88251

All switch parts are mounted on individual insulating bases, making it possible to remove and replace any switch part from the front of the switch in a few minutes time.

The cover control makes it impossible to open the cover when the switch is in the "on" position. Prevents operation of switch with box cover open.

Positive quick-make and quick-break action prevents the arc from holding and burning blades and jaws.

230 Volts A.C., 250 Volts D.C.

Type A Square D Safety Switches
Quick-Make and Quick-Break
 Interlocked Cover Control
Single Throw—Not Fusible

No. 84343

All switch parts are mounted on individual insulating bases, making it possible to remove and replace any switch part from the front of the switch in a few minutes' time.

Positive quick-make and quick-break action prevents the arc from holding and burning blades and jaws.

Square D Cover Control makes it impossible to open the box cover when the switch is in the "on" position. It also prevents the operation of the switch with the box cover open. By means of a key authorized persons can open the cover when the switch is "on" and can operate the switch when the cover is open.

Square D Meter Service Switches

Accessible Main Fuses
Meter Test and Not-Meter Test
Sequence: Switch-Fuse-Meter

No. 30331, Flap Open

No. 10373, Open

Designed for use in connection with meter service, with the main line fuses so located at the front of the switch, that the customer may have access to them for replacement, after first throwing the switch lever to the Off position then raising the auxiliary cover or flap. Opening the flap does not afford access to the switch mechanism proper, this mechanism being under the main cover and sealed.

Both switch blades and fuses are ahead of the meter and are dead when switch is off.

The switch cannot be put in "on" position until flap is closed, the switching mechanism interlocking with the flap.

Customer's service is not interrupted while testing meters when these meter testing devices are used.

Single Phase and D.C.

2 and 3-Wire Service—125 and 250 Volts

Bull Dog Type C Safety Switches

Non-Interlocking, Quick-Make, Quick-Break Single Throw, Fusible

No. 50221S

Bull Dog Type C (punched clip) externally operated switches are designed for use where severe service conditions do not exist to warrant investment in the more ruggedly constructed, machine made, Type A Switch.

Quick-make and quick-break is a feature of the Bull Dog Type C line. As a safety factor quick-make is more important than quick-break, as it prevents unintentional operation of the switch, because of the conscious effort required to compress the quick-make spring.

Only one spring is used to perform both the functions of quick-make and quick-break. The operation of the switch is not dependent on this spring, however. The switch could be operated if the spring broke or were removed.

The blade and crossbar construction is unique. There is no chance for a blade to remain in contact after the handle is pulled to the "off" position.

Black enamel finish; luminized finish can be furnished at additional 10 per cent.

2-Pole, 250 Volts D.C.

Table listing specifications for 2-Pole, 250 Volts D.C. switches, including model numbers (e.g., 50221P, 50221S, 50221), price, amperage, H.P. Rating, Std. Pkg., Wt. Lbs. Each, and Box Ref. No.

Table with columns: Cat. No., Each, Amps., Volts, Poles, Fus-Switch, Neutral, Wt. Lbs. Includes rows for models 8221-M through 8151-M.

Colt-Noark "Acco" Meter Service Switches

Standardized—Accessible Service Side Fuse Type

Sequence: Switch-Fuse-Meter

The "Acco" Switch provides a complete meter service unit including main switch and cutout, with meter protective and testing facilities.

When the switch is at "off" position, the slide cover may be opened and fuses removed with assurance that the fuse contacts are dead; the switch cannot again be moved to

"on" until the slide is closed.

For testing purposes separate switches are provided on the load side of the meter.

The "Acco" conforms to standard cabinet dimensions, using all standardized endwalls and accessories.

For Single-Phase and D.C. Service

Colt-Noark New Sequence Meter Service Switches

Sequence: Switch-Meter-Fuse

Accessible Fuse Covers

The S.M.F. System is built upon two general types of devices: One with the switch blade on each side of the fuses, and the other with both switch blades at the left of the fuses. The former is particularly adapted to the use of links, and the latter to the use of flexible jumpers for testing.

Colt-Noark Combination Fuse Cabinets

No. 5RL6

Surface Mounting

These cabinets may be coupled directly to the meter service or entrance switch or mounted in some other convenient location in the building. The 60-ampere cutout is equipped with a fuse puller.

All wiring within the cabinet is covered by a dead front plate. Cat. Nos. 2 and 4 are also supplied already wired for convenience in attaching to meter cabinet.

†Breaks full rated load at 575 volts a.c. only.

Type R.B. Trumbull Safety Switches
Quick Make and Quick Break—Interlocking

No. 68322

All switches will break full rated load except the 800-ampere which will break full load at 230 volts a.c., 250 volts d.c. and loads of not over 200 amperes at 575 volts a.c., 600 volts d.c.

All switch parts are cadmium-plated.

The 3-pole switches can be furnished at regular prices with solid neutral strap replacing one blade and fuse

assembly, or with neutral strap replacing one fuse (switching neutral). Add the letters SWN to regular Cat. No.

Side Operated—Single Throw—No Fuse

Type RM Trumbull Safety Switches

Quick Make and Quick Break—Interlocking

Break Full Rated Load

RM (Rotor Movement) Design

No. 92321-C

A rugged, full safety device for installations where size is a prime factor. Entire switch and fuse block unit is removable from box. Thus, entire box space is available for connecting conduit and running wires.

When switch is pulled off, the blades throw into deep narrow slots in the base and thus effectually snuff out any arc which might have a tendency to follow.

The fuse block mounted over the switch base, brings fuses directly to the front in most accessible position. Dead front construction.

Single Throw—No Fuse

230 Volts A.C.—250 Volts D.C.

†60-ampere construction.

Three and four-pole fusible switches with solid neutral strap replacing fuse can be furnished at regular prices.

Trumbull Safety Switches

In Cast Iron Weatherproof Boxes
Quick Make and Quick Break—Interlocking

No. 34361C

Equipped with gaskets in cover making a weatherproof box.

All switches break full rated load.

The 3 and 4-pole switches with a neutral strap replacing either one blade and fuse assembly or one blade only can be furnished at same price as the regular switches.

Special charge for drilling holes in cast iron boxes.

Type C Trumbull Enclosed Switches
 Single Throw—Quick Make and Quick Break
 Break Full Rated Load

No. 40321, Fusible

Key slots in rear of box at top with which to hang box in position until ready to fasten permanently.
 All switches equipped with outside grounding lug.
 Knockouts in ends, sides and rear.
 The 30-ampere 575-volt switches are made of 60-ampere stock.

This line meets requirements for a high-class punched-clip switch in externally-operated box.

Type C line has no interlocking features.

Switch is of punched-clip construction; there is a difference between punched-clip switches in machine work, alignment, adjustment and in electrical and mechanical strength.

No. AF-1 Trumbull Circuit Breakers

15 to 50-Ampere
Frame Size
250 Volts, 3-Pole

An unusual principle of arc interruption is incorporated in the design of these breakers. On overloads of short circuits a thermal strip deflects, releasing a latch which in turn causes the contacts to open. The contacts themselves open within a heavy cylinder, creating a terrific pressure which extinguishes the arc.

The 50-ampere frame size has an interrupting capacity of 5000 amperes and the larger frame sizes an interrupting capacity of 10,000 amperes.

With one design of breaker as listed for the various frame sizes, assemblies may be made for enclosed breakers, load centers, panelboards of all types including the convertible, as well as switchboards of front or back connected construction.

No. AF-1 Trumbull Circuit Breakers

Illustration shows the enclosed AF-1 breaker in a neat, rounded corner, steel box.

Starting with the 100-ampere frame size, interchangeable trip units are available and all breakers offer inverse time limit protection. In breakers 100-ampere frame size and above, dual overload is provided as a standard feature.

The 50-ampere frame size breakers do not have interchangeable trip units.

Type R.B. Trumbull Tumbler Switches Without Overload Protection

No. 2361

Particularly adapted for use on small motor-driven machines; with automatic apparatus such as oil burners, ice machines, either for control or as a positive disconnect. Also used on lighting circuits.

On the 2-pole, 3-way and 4-pole switches, the R.B. type roller contact provides greater rupturing capacity and longer life.

The 3-pole switch is mounted on moulded composition base which can easily be removed for wiring. Cover is held by two screws.

Circle T Trumbull Radio Switches

Schedule B

No. 917, S. P. S. T.

No. 921, 3 P. S. T.

This line of small switches for radio work, is so designed as to stand up under the severest use to which they will be subjected, and at the same time to take up a minimum amount of space. Unusually strong and compact.

Connections can be made from either front or rear. Contact screws are placed in the switch posts thus making the wiring easy. Four projecting corner points on each post hold the connecting wires in position after they have been fastened under the binding screws.

All metal parts are nickel-plated. Mounted on polished fiber base.

Mercoid-Triplex Time Switches

Type No. 402, Closed

Type No. 402, Open

With self-starting synchronous motor movement of the highest quality with heavy cut brass wheels and pinions turned and milled from tool steel, hardened and polished.

Has snap action switch mechanism with positive make and break of contact and locking in On and Off position. Operated by cams on bottom of On and Off clamps which are easily adjustable around the all-metallic finish, brass, rotating 24-hour or weekly program rim. Clamps can be set closely so the time switch will operate at times desired. Extra On and Off clamps may be used for additional operations. On and Off clamps may be set adjacent to each other, in which position switch will throw On and Off in 30 minutes with the 24-hour rim and in 3½ hours with the weekly program rim. Lever is provided for operating switch mechanism by hand, which also indicates On and Off position of switch.

Mercoid mercury tubes are used. There can be no open arcing, oxidation or corrosion. The contact is permanently clean and instantaneous in operation and will last indefinitely without deterioration.

Clock face has silver finished dial and time is quickly read from distinct hands and legible numerals. Seconds indicator rotates while current is on.

Clock is quickly set on time from center thumb screw without loosening On and Off clamps.

Steel housing is cadmium-plated to prevent rusting; has a gasketed, padlockable and sealable door opener. Mechanism is easily demountable by removing two screws.

Molded terminal block with wiring screws in bottom row for quick connection of line and load wires.

Dimensions of housing: height, 12 inches; width, 6¾ inches; depth, 3¾ inches.

Synchronous motor regularly shipped for connection to 110-volt 60-cycle current. If so specified on order can be furnished for connection to 220 volts 60 cycles or for 110 or 220 volts 50 cycles.

Packed 10 in a standard package.

Approximate shipping weight, 7 pounds.

*May be used to control 1-h.p. a.c. repulsion-induction motor or ¼-h.p. a.c. split phase motor.

†Type No. 402 may be connected to control two separate 20-ampere single-pole circuits or a 20-ampere double-pole circuit.

Mercoid-Triplex Time Switches

Combination Type

Illustration shows Mercoid Type V Transformer Relay installed in Triplex Time Switch housing. This relay meets the severe service conditions encountered with frequently operating automatic equipment such as oil burners, stokers, air conditioners, etc. Also for many other operations requiring thoroughly dependable remote control.

When used in combination with Triplex Time Switch, the switch may be set to connect day or night thermostat to relay or to control (by time) the relay operation when used for other purposes.

Prices on application.

Type T10-V2

Cast Iron Weatherproof Housing

This type is furnished for outdoor installations.

A heavy wing nut compresses soft rubber door gasket against case.

Height, 13½ inches; width, 8¼ inches; depth, 4½ inches.

Approximate shipping weight, 20 pounds.

Type W, without Glass Opening in Coverextra \$8.00
Type WO, with Glass Openingextra 10.00
Padlock with 2 Keysextra 2.00

Special Mounting

Illustration shows Triplex Time Switch mounted on bakelite plate without steel housing. Overall dimensions: 7 inches high, 5½ inches wide, 2¾ inches deep. This type can be mounted in traffic light housings, on panel boards, or with equipment where housing is not required.

Snap action switch mechanism can be furnished with Mercoid tube or tubes to provide: Single pole, double pole, single pole double throw, and with smaller capacity tubes for single, double, triple or 4 pole; single or double throw.

Prices on application.

Triplex Weekly Program Dial

This dial makes one revolution in 7 days. Each day is provided with On and Off clamps, easily adjustable to daily schedule. Clamps may be removed from the rim for any day or days; switch will then remain in last position thrown until the next clamp operates. For example, in heating a school, night thermostat can remain in control from Friday at 4 P.M. until Monday morning at 7 when day thermostat is connected.

Sauter Time Switches

The general purpose of a time switch is to automatically close an electrical circuit for a desired number of hours, usually once or twice a day.

Sauter Time Switches are accurately designed with rugged and precision workmanship throughout. They have been endorsed by many of the foremost electric light and power companies, outdoor advertising companies and are used by the U. S. Government for airways beacon control.

Synchronous Motor Time Switches

Single or Double Circuit—A.C.—110 or 220 Volts

The Type ZY switch consists of a 2 to 3-watt self-starting slow speed 200-r.p.m. subsynchronous motor, a precision-made gear train with highly polished pinions, a quick-make quick-break laminated copper contact with silver arcing tips, a plain 24-hour dial adjustable to any desired schedule and a pressed steel dustproof case with ample room for wiring and convenient knockouts for conduit connections.

Low Capacity Self-Winding Escapement Switches

Single Throw—A.C. and D.C.—110-220 Volts

These switches consist of a large precision-made clock movement having a 4-day running reserve mainspring and a 7-jewelled escapement (ZEE has 13 jewels) compensated for temperature fluctuations. The clockspring is automatically wound each day by a 20-watt 110-220-volt motor which operates satisfactorily on frequencies of from 25 to 80 cycles and at voltages 20 per cent above or below rated voltage. Except for the 10 to 30 seconds required to wind the clockspring, this motor is entirely disconnected from the line.

Provided with a quick-make quick-break laminated copper contact with silver arcing tips, a plain 24-hour dial adjustable to any desired schedule, and a pressed steel dustproof case with ample room for wiring and convenient knockouts for conduit connections.

*Prices include switch with plain 24-hour dial and dustproof case. Add \$10.00 for weatherproof case and \$17.00 for astronomic dial.

**A single-pole double-throw switch with no open position. Used for any 3-wire control system.

†A 2-circuit switch; operates in the following sequence: Circuit 1, On; circuits 1 and 2, On—all Off. Circuit 1 is controlled by 15-ampere 2-pole switch; circuit 2 by a 15-ampere single-pole switch. Total capacity, 4950 watts.

‡A 2-circuit switch; operates in the following sequence: Circuits 1 and 2, On; circuit 1, Off; circuits 1 and 2, Off. Both circuits controlled by a 15-ampere single-pole switch. Total capacity, 3300 watts.

Sauter Time Switches

Heavy Duty Motor-Operated Self-Winding or Synchronous Time Switches

Single and Double Circuit—A.C. and D.C. 110-220 Volts

These switches consist of a self-winding escapement or synchronous clock. Heavy duty switches differ from low capacity switches in that the main switch contacts are operated by a motor rather than by the time dial. The use of this motor permits the design of a high pressure copper-to-copper butt contact with a quick double-make and double-break action. These contacts are good for a constant overload of 25 per cent.

All motor-operated switches are provided with a plain 24-hour dial adjustable to any desired schedule and a pressed steel dustproof case with conduit connection boxes for ease in wiring. An astronomic dial to automatically operate the switch in step with sunset or sunrise, and a cast iron weatherproof or immersion-proof case can be supplied if desired.

Anderson Automatic Time Switches

Double or Triple-pole, High Tension, Oil Break

Type L Eight Day, Hand Wound

This type of switch is constructed for handling alternating current up to and including 6600 volts, and is furnished either two or three-pole. This apparatus is used in connection with small current transforming apparatus where the lamps can safely be connected to the secondary coil of transformer in its position of maximum voltage. Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

For Potentials Not Exceeding 3300 Volts

11085	50	3	22	19	8	129	†\$196.00

For the Sunday or holiday cut-out attachment installed in any of the above, add \$14.00 to price.

For the double daily operation attachment installed in any of the above, add \$14.00 to price.

For the time extension device installed in any of the above, add \$14.00 to price.

Type L Switches may have either the time extension or the double daily operation attachment, but cannot have both.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

Type SL Electrically Wound, Fully Automatic

The Type SL is for controlling circuits up to 6600 volts. The switch is so designed that the current has a quick-make and break and is opened and closed in a tank of oil.

Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

Specify on order full particulars of winding circuit.

For Potentials Not Exceeding 3300 Volts

No.	DIMENSIONS, INCHES						Ship. Wt., Lbs.	Each
	Cap. Amps.	No. of Poles	High with Terminals	Wide	Deep			
11098	25	2	22	11	8	92	*\$200.00

11103	50	2	22	11½	9	102	†\$240.00
11104	25	3	23½	19	9	137	†\$260.00
11105	50	3	23½	19	9	137	†\$276.00

*One gallon of oil, included in list price, shipped with each switch.

†Two gallons of oil included in list price, shipped with each switch.

‡Three gallons of oil included in list price, shipped with each switch.

The Sunday or holiday cut-out attachment, the double daily operation attachment and the time extension device cannot be put in any Type SL Electrically Wound Time switch.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

For season changing device (Astronomical Dial) add \$20.00 to price.

Wooden housings complete for all L and SL Switches: For the 25 and 50-ampere, 2 and 3-pole 3300 volts, and the 2-pole 6600 volts add \$20.00 to list price; for the 3-pole 25 and 50-ampere 6600 volts add \$28.00 to list price.

Dunco Relays

Midget Relays

Used for the control of heaters, signals, small motors, etc.

Wiping contacts are of fine silver.

The shading coil of Dunco design insures quiet a.c. operation.

Base size, 2 3/8 x 1 7/8 inches.

Coils: a.c., 60 cycles, 6 to 150 volts; d.c., 2 to 60 volts.

Contacts: 110 volts a.c., 6 amperes; 220 volts a.c., 3 amperes; 115 volts d.c., 1 ampere. Non-inductive load.

Type ABTX1, S.P., D.B., Front Contact.....	each	\$3.85
Type ADBX1, D.P., S.B., Front Contact.....	each	4.95
Type BSBX1, S.P., S.B., Back Contact.....	each	3.85
Type BDBX1, D.P., S.B., Back Contact.....	each	5.50
Type CSBX1, S.P., S.B., D.T.....	each	4.68
Type CDBX1, D.P., S.B., D.T.....	each	6.60

Power Relays

Used for the control of heaters, signals, small motors, etc.

Wiping contacts are of fine silver; adjustable tension; quiet a.c. operation.

The use of finest materials together with careful, individual attention during manufacture and inspection make these carefully designed relays dependable.

Types ABYS8 and ADBT8 are also approved for 1 h.p.

CONTACT RATING

Type	Each	Contact Arrangement	Base Size In.	AMPERES

Type H3 Hinged Cover, Aluminum Finish K.O. Box each \$1.65

Add \$3.30 to price for 230-volt d. c. coils.

Mechanical Latch-In Electrical Release Relays

Used for push button control or similar applications.

One coil closes contacts, another opens contacts. Latching member is metal, locking against molded bakelite keeper. This latch construction guards against sticking or excessive wear. Moving contacts insulated from armature.

Base size, 4 1/2 x 3 3/4 inches.

Type	A.C. Coils Each	D.C. Coils Each	Contact Breaking Arrangement	MAIN CONTACT RATING, AMPERES			
				110 V. A.C.	220 V. A.C.	115 V. D.C.	230 V. D.C.

Add \$4.40 for 230-volt d.c. coils.

Ordering Information Required

Voltage and frequency of coil line.

Nature of load relay contacts must handle.

If special operating characteristics are desired, explain fully.

Wiring diagrams of special circuits are often helpful.

Dunco Relays

3-Wire Relays

Used for the control of heaters, refrigerator units, pressure, etc. Protective resistor is a part of the relay. Instrument contacts make but never break current.

For use with 3-wire H-L-C instrument or push button.

Used Where Control Circuit and Load are Fed by Same Line

Type	Each	RATING, AMPERES		Base Size Inches
		110 Volts A.C.	110 Volts D.C.	
ABYT8PO	\$8.80	30	6	4 1/4 x 3
ABTX1PO	5.50	6	1	2 3/4 x 1 7/8

Used Where Control Circuit and Load are Fed by Different Lines

ADBT8O	\$9.90	15	2	4 1/4 x 3
ADBX1O	6.05	6	1	2 3/4 x 1 7/8

Type CXB51 Sensitive Relays

Wide application is possible in electronic tube circuits for radio, light sensitive cells and other uses where input to primary circuit of relay is small. Both fixed contacts and tension spring of relay are adjustable. Contacts open and close with a definite snap action.

Contacts: S.P., D.T., S.B. rated at 110 volts a.c., 2 amperes; d.c., 1/4 ampere. Base size, 2 7/8 x 2 1/4 inches. Can be supplied with coils consuming as little as 1/100 watts d.c., or 2/10 watts a.c.

Type CXB51, D.C. Coil.....	each	\$5.50
Type CXB51, A.C. Coil.....	each	7.70
Hinged Cover K.O. Box.....	each	1.65

Mercury Tube Relays

With enclosed contact break. Tilts tube with swinging action; assures smooth positive closure with minimum jar and shock. Mercury to mercury make and break.

Base size, 5x4 inches.

Type CXH1027, S.P., Front Contact..... each \$11.00

Type CXA1028, S.P., Back Contact..... each 11.00

Also with 2 or more tubes; prices upon application.

Relay Sets for Low-Voltage Thermostat Control

Complete with relay and transformer mounted in sheet metal housing with external binding posts for thermostat connections.

Used with 2-Wire Snap Action Thermostat

Type	Each	110 VOLT A.C. RATING	
		H.P.	Amps.
RSA70	\$8.25	1/4	6
RS71	11.00	1	30

Used with 3-Wire H-L-C Thermostat

RSA72B	\$9.35	1/4	6
RS73	13.20	1	15

Type RS73

Telephone Auxiliary Signalling Relays

Type RS2.—Relay and condenser in H3 sheet metal, hinged cover housing. Signal remains on as long as circuit is closed.

Type RS2..... each \$11.00

Type RSA2.—Same as Type RS2 except in W6 cast aluminum housing.

Type RSA2..... each \$17.60

Type RS3A.—Relay, condenser and push button in W6 cast aluminum weatherproof housing. After telephone circuit once energizes relay the signal remains on until relay is released.

Type RS3A..... each \$23.20

Type RS3A

Mercoid Automatic Controls

Mercoid Controls have a wide application in both the domestic and industrial fields. They are generally employed for the control of motor driven automatic heating or refrigeration equipment, electric space or tank heaters, and for numerous industrial applications.

Equipped throughout with Mercoid sealed mercury contact switches.

The following are brief descriptions of several Mercoid Controls which are standard.

Sensatherm

A sensitive air type thermostat for low or high voltage requirements. Used for controlling automatic heating, refrigeration, or air conditioning equipment.

Furnished standard for low voltage to operate with the Mercoid Transformer-Relay. It can directly handle 50 watts or less on 110 or 220 volts without a relay. The standard range is 55° to 85° F. Other ranges are available. Total differential, 1° F. (plus or minus 1/2°).

Sizes, 3 1/16 inches high, 1 1/16 inches wide, and 2 1/4 inches deep.

Gold finish with thermometer.
 Type H, for Heating.....each \$10.00
 Type R, for Cooling.....each 10.50

Type V Transformer-Relay

A reliable low voltage mercury contact relay, which also acts as a transformer inducing low voltage (24 volts) on the pilot circuit. Its construction does away with all hum and chatter.

Equipped with carefully taped and impregnated heavy duty coils.

Has a steel cabinet.
 Rating, 10 amperes, 110 or 220 volts.

Type V, 60-Cycle.....each \$15.00
 Type V, 50-Cycle.....extra 1.00
 Type V, 25-Cycle.....extra 2.00
 Type V, D.C.....extra 2.50

No. 855 Thermostat

Designed for direct control of motor operated automatic heating or refrigeration equipment, unit heaters or electric heaters, and various other industrial applications.

It is actuated by means of a sensitive bellows. The mercury enclosed contact switch is not affected by dust, dirt, or corrosive gases.

Single-pole, single throw. 10 Amps. 4 Amps.

No. 855, for Heating, 56°-80°, 38°-60°...each \$22.50 \$21.00
 No. 855, for Unit Heaters, 45°-72°.....each 22.50 21.00
 No. 855, for Refrigeration.....each 25.00 23.50
 For thermometer on cover, add \$1.50 to above lists.

Dual Sensatherm

Type HH Dual Sensatherm is generally used to lower the temperature at night and restore it to normal in the morning.

A clock is available for this instrument with a 7-day dial for setting daily programs a week in advance.

Also used with air conditioning equipment.

Type HH, Dual Heating.....each \$17.50
 Type HR can be furnished as a summer-winter thermostat. The individual adjust-

ments permit close regulation at any desired temperature on both the heating and cooling units.
 Type HR, Dual Heating and Cooling.....each \$18.00

Mercoid Automatic Controls

No. 71 Pressure and Low Water Control

A combination control which prevents the hazard of firing into dry boilers and also guards against building up excessive steam pressure. Pressure setting can be raised or lowered by turning the adjustment screw.

Available in numerous ranges for pressures up to 300 pounds. Standard range is 1 to 10 pounds, minimum differential, 3 pounds.

Furnished single-pole, 10 amperes, fully automatic to open circuit on a rising pressure or dropping float.

No. 71, Single-Pole, 10 Amperes.....each \$36.00
 No. 71, Single-Pole, 4 Amperes.....each 34.50

Also available in lower or higher pressure ranges and with double-pole or 2-circuit switches.

No. 72 Low Water Control

Used as a safety limiting control to prevent automatic heating equipment from firing into a dry boiler. Also used with electrically operated boiler feed pumps to maintain the water level in the boiler.

When ordering, specify maximum pressure, specific gravity and kind of liquid controlled,

electrical capacity, and whether circuit is to open or close when float rise. Furnished single-pole single throw.

10 Amps. 4 Amps.

No. 72, for Pressures to 30 Pounds.....each \$30.00
 No. 72, for Pressures to 150 Pounds.....each 34.00 \$32.50
 No. 72, for 150 to 300 Pounds Pressure...each 54.00 52.50

For single-pole double throw or double-pole single throw add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

No. 31 Pressure Control

A positive safety limiting device used on steam boilers. It is actuated by a Bourdon tube of great strength and elasticity. Standard range 1 to 10 pounds, differential 3 pounds. Can be furnished with steel Bourdon tube for unusual applications, or for pressures up to 3,000 pounds. Standard controls furnished for fully automatic operation, but can be supplied semi-automatic.

Unless otherwise specified, instrument will be shipped single-pole, 10-ampere rating to cut-out on rising pressure. When ordering special control, specify cut-in and cut-out points required, kind of substance controlled, and the maximum pressure to which the control will be subjected.

No. 31, Single-Pole Single Throw, 10 Amperes...each \$16.00
 No. 31, Single-Pole Single Throw, 4 Amperes...each 14.50

Also available in lower or higher pressure ranges and with double-pole or 2-circuit switches.

No. 858 Pressure and Vacuum Control

Recommended for low pressure, steam, or vapor-vacuum boilers in connection with stokers, gas or oil burners, where close regulation is required. Also used for controlling refrigeration, brine pumps, air compressors, liquid by head pressure, etc.

Has an adjustable operating range from 10 inches vacuum to 15 pounds pressure. Outside adjustments provided for setting both range and differential.

Controls available for higher range on close operating pressure.

Unless otherwise specified, Model A-3 is furnished with 10-ampere Mercoid Switch to open circuit on rising pressure.
 No. 858, Single-Pole Single Throw, 10 Amperes...each \$22.00
 No. 858, Single-Pole Single Throw, 4 Amperes...each 20.50

Available single-pole double throw in 4-ampere type only at \$2.50 addition to list.

Mercoïd Limit Controls No. 848 A & B Controls

Designed to automatically open and close an electric circuit with a change in pressure or vacuum on steam, air, gas, water and other liquids that will not attack brass. Used for boiler control with automatic heating equipment also for pressure control on refrigerants other than ammonia.

Particularly adapted to conditions that require close differential. Model B-6 provides an unusual combination of long range, high pressure and yet close control at any point in the range.

Single-pole, single throw.

	10 Amps.	4 Amps.
Model A-1, for Press. from 1-15 Lbs.	each \$29.00	\$27.50
Model B-1, for Press. from 10-60 Lbs.	each 30.00	28.50
Model B-4, for Press. from 25-100 Lbs.	each 35.00	33.50
Model B-6, for Press. from 0-200 or 50-250 Lbs.	ea. 40.00	38.50

Available in other ranges for either vacuum or pressure.

No. 35 Risertherm

Designed for temperature control by surface contact on risers of hot water systems or on hot water tanks. Widely used with automatic heating equipment. Easily mounted on either vertical or horizontal pipe or tank.

Standard range is from 110° to 220° F. with an approximate operating differential from 6° to 25° F., depending upon the size of pipe and the operating conditions of the installation.

No. 34 is identical with No. 35 except that the Mercoïd Switch is in reverse position and the range is from 140° to 230° F. It is used in connection with a thermostat for dual control of unit heaters to prevent operation of the fan until the coils are heated.

Single-pole, single throw.

	10 Amps.	4 Amps.
No. 35, 110°-200° for Heating.	each \$16.00	\$14.50
No. 34, 140°-230° for Unit Heaters.	each 17.00	15.50

No. 36 Boiler Control

Immersion type controls have proven to be the correct type of limiting device for control of automatic heating equipment on hot water boiler installations.

There is no lag in the operation of these controls. Back angle type is also available.

Range No. 1, 105° to 160°, differential approximately 20°. Range No. 2, 140° to 214°, differential approximately 20°.

Range No. 3, 200° to 226°, differential approximately 13°.

Single-pole, single throw.

	10 Amps.	4 Amps.
No. 36, Ranges Nos. 1 and 2.	each \$18.00	\$16.50
No. 37, Back Angle Type, Ranges 1 and 2.	20.00	18.50
No. 37, Back Angle Type, Range No. 3.	each 22.00	20.50

For single-pole double throw or double-pole single throw add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

Type G-2 Immersion Boiler Control

Designed for close regulation of electric equipment from slight changes of temperature in any liquids such as water, steam, or oil. Not injurious to brass. Recommended for control of domestic hot water storage tanks. Double adjustments provided for setting

both range and differential.

Type G-1 has straight bottom connection.

Unless otherwise specified, instruments furnished single-pole, 10-ampere rating, to cut-out on rising temperature.

Standard range, 110° to 220°. Other ranges, 15° to 110°, 30° to 135°, 70° to 180°, and 155° to 245°.

Single-pole single throw.

	10 Amps.	4 Amps.
No. G-1, All Ranges.	each \$32.00	\$30.50
No. G-2, All Ranges.	each 34.00	32.50

For single-pole double throw or double-pole single throw, add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

Mercoïd Limit Controls

Warm Air Furnace Control

No. M-51 is used to protect warm air furnaces from overheating where automatic heating equipment is used. No. M-53 is to control fans or blowers to prevent operation unless the furnace is warm enough to deliver heat.

These controls are operated by a bi-metal coil projecting within the furnace hood. Adjustable mounting flange and a graduated temperature dial is provided.

Also furnished with long bi-metal stems for bake-ovens and industrial applications where close regulation is desired.

Single-pole single throw.

	10 Amps.	4 Amps.
No. M-51, Limit Control, 50°-650° F.	each \$16.00	\$14.50
No. M-53, Fan Control, 50°-650° F.	each 16.00	14.50
No. M-55, Temperature Control, 40°-280° F.	18.00	16.50

For single-pole double throw or double-pole single throw, add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

Type M-61 Stoker Control

This control is generally used to fire the stoker intermittently during the period the room thermostat is in the off position, but may be used to limit the maximum temperature, or stop the stoker if the fire dies out.

The graduated dial clearly indicates the stack temperature. A simple double adjustment is provided for setting both the cut-in and cut-out temperatures.

Available with stainless steel well to protect the bi-metal operating coil.

Single-pole single throw for 50°-650°. Furnished with mounting flange and steel well, 10-ampere rating unless otherwise specified.

	10 Amps.	4 Amps.
No. M-61, with Plain Flange, no Well.	each \$16.00	\$14.50
No. M-61, Improved Flange, Steel Well.	each 20.00	18.50

No. 46 Lever Arm Control

Has numerous applications where it is desired to mechanically open and close electric circuits.

Standard control has a brass arm extending 4½ inches to right for making mechanical connections. Can be furnished with arm extending to left and with longer or shorter arms when so specified. Furnished also for top or bottom mounting.

A 3-position High-Low indicator lever arm control as well as float operated control is also available.

Single-pole single throw.

	10 Amps.	4 Amps.
No. 46, Snap Action Lever Type.	each \$10.00	\$8.50

For single-pole double throw or double-pole single throw, add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

No. 40 Float Control

Designed for maintaining fluid levels, or automatically controlling the operation of sump pumps or cellar drainers.

Suitable for any liquid that will not deteriorate brass or solder.

Furnished standard with 4-foot rod and 2 floats, requiring 1½-inch travel to operate, however, adjustable stops on rod permit wider operation.

Where longer rod is required the proper number of floats and counterweights necessary for operation can be furnished at extra charge.

Single pole, single throw.

	10 Amps.	4 Amps.
No. 40, Arm and Float Type.	each \$22.00	20.50

Other lever arm and float controls available.

Jefferson Plug Fuses

The Jefferson Plug Fuse is made with a porcelain Safety Insulator Top, porcelain being one of the best insulators. Thus, user may replace the fuse with perfect safety.

The top of the Jefferson Plug Fuse has a cutout which is filled with clear mica and the specially formed fuse element makes it possible to see at a glance whether the fuse is blown.

Buss Clear Window Plug Fuses

Phantom View

Entire strip can be seen through extra large window, against pure white background, indicating when a Buss Fuse has blown.

Solid one-piece body, sealed gas tight. Prevents danger of fire and property damage.

Buss Fuses always make good contact in the cutout. Excessive heating and needless blowing of fuses are avoided.

Standard package 100. Weight, 65 lbs. per 100.

*Except for instrument protection, Fusetrons should be used instead of small size fuses, as they give true and complete protection while their remarkable time-lag prevents useless blows from starting currents, etc.

Buss Fuses are packed five in a handy box that provides extra fuses when needed. Information printed on box tells user what to do when a fuse blows.

Special merchandising stand furnished free with order for 200 fuses.

Complete information on application.

Buss Fusetrons

A Fusetron is a thermal cutout to which a fuse is added. Protects motor as well as circuit wiring.

The Fusetron is a simple, inexpensive device that will give complete electrical protection. It will actually protect small motors against overload and at the same time give protection against short circuits.

Overloads on the motor as low as 25 per cent, if continued, will cause the thermal cutout in the Fusetron to open the circuit.

Will not blow on starting currents because the fuse element used is large enough to carry these currents.

Fusetrons are made to standard fuse dimensions, just pull out the fuses and put in Fusetrons.

Size to Use

See name plate of motor or device for amperes. Under ordinary conditions the ampere rating of the Fusetron should be the same or the nearest higher rating. On electric refrigerators the size must be at least 20 per cent greater than the ampere rating of the motor.

125 Volts

Fits standard plug fuse blocks.

This Fusetron is 1/4 inch higher than Buss plug fuses.

Amp..... 2.5 3.2 4. 5. 6.25 8. 10.

Other sizes can be obtained at the same prices. 125 volts from 1/4 to 30 amperes; 250 volts from 1/4 to 15 amperes; 600 volts from 1/4 to 10 amperes.

Clearsite Non-Renewable Plug Fuses

Clearsite Plug Fuses mount the fuse link under the fuse window thereby giving clear vision of the link. The drop-out type of link is used which lessens the internal operating pressure.

The fuse body is made of heat-resisting molded insulation, black in color.

Tested Fuse Wire

Fuse wire is carefully wound on spools having heavy flanges which effectually protect the soft fusible metal from abrasion or other mechanical injury; these are then placed in small cans that are properly labeled and sealed, so that fuse wire may be stored away for an indefinite time without depreciation in quality or appearance.

Economy Renewable Cartridge Fuses

250 and 600 Volts

Economy Fuses always operate at rated capacities. The drop out renewal link is quickly and easily replaced and the restoration of a blown Economy Fuse to its original efficiency is the work of a few moments only.

These fuses operate successfully under all conditions of service without filling material of any description. Fuses bear the "Und. Inspected" label in all capacities from 0 to 600 amperes in both 250 and 600 volts.

Buss Super-Lag Renewable Fuses

250 and 600 Volts

Buss Super-Lag Fuses have a super-long time-lag. They do not blow as often as old style fuses; will not pop open on every surge or harmless overload.

The fuses give better motor protection, make it possible to fuse nearer to the motor rating, and prevent single phasing.

Few simple parts of the Buss Fuse case make renewal quick and easy, faulty renewal is impossible.

Heating from poor contact is prevented; charring and burning of cases practically eliminated; needless blowing of fuses is avoided; and fuse bills are materially reduced.

*Except for instrument protection, Fusetrans should be used instead of small size fuses, as they give true and complete protection while their remarkable time-lag prevents useless blows from starting currents, etc.

Buss Super-Lag Renewal Links

One-Piece Links on All Sizes

All Buss Super-Lag Renewal links are made in one piece. This insures better contact within the fuse than when several links and washers must be bolted together.

Thus needless blows due to heat from poor contact are eliminated and charring of fuse cases is avoided.

Renewal of large size fuses is made very simple, and time and trouble are saved.

Buss Super-Lag Renewal Links are of standard size, interchangeable with all standard makes of renewable fuses.

Buss One-Time Fuses 250 and 600 Volts

Ferrule Contact Fuse—1 to 60 Amperes

Knife Blade Contact—70 to 1000 Amperes

Buss One-Time Fuses are guaranteed, with good contact, to operate perfectly at any overload without charring or burning the fuse case.

Buss One-Time Cartridge Fuses are listed as standard by the Underwriters' Laboratories in all sizes up to and including 600 amperes. Sizes larger than 600 amperes are not tested or listed by the Underwriters and should not be used. (Use two smaller fuses in parallel.)

Ideal Fuse Pullers

Designed to eliminate danger of pulling and replacing cartridge fuses by hand and bending of fuse clips through improper removal. Also adapted for adjusting loose cutout clips, handling laboratory test tubes, live electrical parts, etc.

Approved as standard by safety departments of thousands of industrial plants. Made in four handy sizes.

Midget Size

For handling small fuses, grid leaks, etc., 1/4 to 1/2 inch in diameter. Has 3 laminations, 5 inches long.

Each..... \$.45

Pocket Size

A popular size for general use. For fuses 0 to 200 amperes, 250 volts and 1 to 100 amperes, 600 volts. Has 5 laminations, 7 1/2 inches long.

Each..... \$1.25

Giant Size

For fuses 100 to 600 amperes, 250 volts and 60 to 400 amperes, 600 volts. Has 7 laminations, 12 inches long.

Each..... \$3.75

Jumbo Size

A large powerful tool for handling fuses 200 to 800 amperes, 250 volts and 200 to 600 amperes, 600 volts. Has 9 laminations, 20 inches long.

Each..... \$11.20

Jefferson Super-Lag Renewable Enclosed Fuses

Care should be taken to insure clean contact surfaces between the copper blades, renewals and washers. The nut should always be drawn up tight.

Union Renewable Fuses

250 and 600 Volts

Ferrule Type

3 to 60 Amperes

Only three simple parts, the absence of loose washers, both ends open for inspection and cleaning, and the link bent at one end which automatically adjusts it to the proper length are features that make the new ferrule type fuse quick and easy to renew.

Knife Blade Type

70-600 Amperes

An exclusive feature of the knife-blade type fuse is the longitudinal vents which are cut in the fibre casing at both ends just inside the brass ends and which lead to the inside of the casing. When the link blows, the pressure of the volatilizing metal is relieved, and because of the low pressure area at the vents, the molten fuse metal is not forced into the cap and the stud threads.

A rugged fibre bar which will not warp holds the knife-blade assembly in perfect alignment and assures correct assembly of the fuse. Brass ends are riveted to fibre case.

Colt-Noark Water-Tight Fuse Boxes

For Potentials Not Exceeding 250 Volts

No. 3670

No. 3190

Each box requires a fitting at each end.

2 Poles—All Fusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3872, 3873, 3670, 3671, 3672, 3673.

3 Poles—All Fusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3874, 3875, 3674, 3675, 3676, 3677.

3 Poles—2 Fusible—Neutral Nonfusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3876, 3877, 3865, 3866, 3867, 3868.

4 Poles—All Fusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3190, 3191, 3192, 3193.

4 Poles—3 Fusible—Neutral Nonfusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3194, 3195, 3196, 3197.

For Potentials Not Exceeding 600 Volts

2 Poles—All Fusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 5889, 5890, 5760, 5761, 5762, 5763.

3 Poles—All Fusible

Table with 8 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 5891, 5892, 5764, 5765, 5766, 5767.

Colt-Noark Water-Tight Service Boxes

For Potentials Not Exceeding 250 Volts

No. 3678

No. 3682

2 Poles—All Fusible

Table with 9 columns: Cat. No., Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3828, 3829, 3678, 3679, 3680, 3681.

3 Poles—All Fusible

Table with 9 columns: Cat. No., Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3830, 3831, 3682, 3683, 3684, 3685.

3 Poles—2 Fusible—Neutral Nonfusible

Table with 9 columns: Cat. No., Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3870, 3871, 3661, 3662, 3663, 3664.

4 Poles—All Fusible

Table with 9 columns: Cat. No., Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3182, 3183, 3184, 3185.

4 Poles—3 Fusible—Neutral Nonfusible

Table with 9 columns: Cat. No., Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 3186, 3187, 3188, 3189.

Colt-Noark Water-Tight Service Boxes

For Potentials Not Exceeding 600 Volts

Nos. 5868, 5869, 5870 and 5871 type B, all others type E.

2 Poles—All Fusible

Table with 9 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 5868, 5869, 5770, 5771, 5772, 5773.

3 Poles—All Fusible

Table with 9 columns: Cat. No., Each, Amps., Type, DIMENSIONS, INCHES (Lgth., Width, Ht.), Std. Pkg., Wt., Lbs., Price Each. Lists items 5870, 5871, 5774, 5775, 5776, 5777.

Columbia Type A Surface Cabinets

For Cut-Outs Service Switches and Panel Boards

CONDUIT DRILLING.—Cabinets are regularly furnished with knockouts for ½-inch conduit spaced evenly on all sides. Specify if boxes are wanted without knockouts. For special conduit drilling, a small extra charge is made. Knock-outs other than ½-inch can be supplied if required.

SIZES AND THICKNESS OF STEEL.—Cabinets are listed in standard sizes and gauges (thickness). Cabinets of any size and thickness of steel up to ⅜ inch thick can be made to order.

GALVANIZED CABINETS.—Type A Cabinets in any size can be furnished in galvanized steel. Add 15 per cent to list prices.

WEATHERPROOF CABINETS.—These cabinets can be made with slant tops, rubber gaskets and solid brass catches, for exposure to the weather. Black japan or galvanized.

HOLES FOR CUT-OUT, SWITCHES, ETC.—Furnished at cost of one cent per hole per box. For tapped holes, add two cents per hole per box.

BOXES WITHOUT COVERS.—If boxes are required without covers, deduct 20 per cent from prices. A flange will be supplied on front edges for mounting a wood trim or other cover if specified on order.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements, and bear the Underwriters' labels.

Columbia Type P Flush Cabinets

For Cut-Outs, Service Switches and Panel Boards

These cabinets are provided with removable steel trim and door Plain type without ornamental beads; body is formed from one piece of steel with corners folded in and securely welded.

Finished in black baked japan. Regularly equipped with knob and turn catch.

Cabinets having surface area of over 360 square inches are furnished with vault handle.

Cabinets can be supplied with any style hinges, catch or lock.

Holes for cut-outs, switches, etc., add one cent per hole per box net. For tapped holes, two cents per hole net. Minimum 50 cents net per order.

CONDUIT DRILLING.—Cabinets are regularly furnished with knockouts for 1/2-inch conduit. For special conduit drilling an extra charge will be made. Knockouts other than 1/2-inch are furnished at a net charge of \$1.00 for each variation from 1/2 inch regardless of quantity. This covers any number of knockouts in any number of boxes.

Panel Board Cabinets

This style cabinet is especially adapted for panel boards. Give size of panel, or specify maker's name and manufacturer's number. Sizes not listed at proportionate prices. This style of cabinet can also be furnished for surface work if so ordered.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements and bear the Underwriters' labels.

All boxes are hinged on right unless otherwise specified. When ordering, specify hinged side first.

Bull Dog Safety Fusenters
2 or 3-Wire Service, 125-250 Volts
30-Ampere Plug Fusible Circuits
Flush Mounting

No. B4F

The luminized fronts fit the finest decorative scheme or make an excellent base coat where other finishes are desired.

Numerous knockouts are provided. Plenty of wiring space makes for easy and economical wiring.

Circuit wire lies directly on screw shell, eliminating two joints per circuit over other types of contacts. Screw shells

are removable and replaceable without removing fronts.

No. BS4F

Equipped with switch plates provided with rectangular knockouts for standard makes of toggle switches as noted below.

Specially adapted for stores and other buildings where the cost factor precludes the use of more expensive panelboards.

For gasoline filling stations the combination including a Saftofuse is much in demand.

The Saftofuse is a fusible switch.

Toggle switches are not included in the price nor furnished with Fusenters.

Square D Fuse Cabinets

No. 37421, Flush Type

Furnished in both black enamel and aluminum (baked on) finish.

Surface types can be attached to any standardized switch by the use of a nipple which will provide a branch circuit cabinet for meter switch use.

Packed 1 in a carton.

Square D Combination Fuse Cabinets
With 60 and 30-Ampere Circuits

3-Wire Mains—2-Wire, 30-Ampere Solid Neutral Branches
3-Wire, 60-Ampere Solid Neutral Branch

The 60-ampere fuses are attached to a bakelite cover so that when the cover or holder is removed, the fuses are disconnected and come out with the holder. Contact jaws are inaccessible as they are reversed below the surface, making them dead front.

Cabinets for flush mounting are aluminum; for surface mounting, black.

Standard package, 1. Cabinets are packed 5 to a carton.

Flush Mounting

Square D Lighting Panels

Galvanized boxes. Green duco trim.

Sections are of bakelite.

All exterior hardware is chromium plated.

All panels supplied either flush or surface mounting. Flush type is fitted with yale locks and latches.

No. NR3G Residence Type
Mains: 125-250 Volts, 3-Wire
Branches: 30-Ampere, Single Pole
Plug or Cartridge Fuses
Solid Neutral

Single door construction.

Residence type panel dimensions: 12 inches wide, 4 inches deep, and 3-inch gutters.

*Prices are based on 15-ampere breakers. The 20 and 25-ampere breakers can be supplied at the same price, except increased main busbar capacity may be supplied, if required, at a small additional cost. The 35 and 30-ampere breakers can be supplied at \$1.00 extra per circuit, plus increased busbar capacity.

Square D Saflex Convertible Panels

For Flush or Surface Mounting

Listed by Underwriters Laboratories, Inc.

Saflex
30, 60, 100, 200, 400, or
600 Amps., 250 or 575 Volts

Saflex, Jr.
Shallow Type—6 Inches Deep,
19 Inches Wide
30, 60 or 100 Amps., 250 Volts

Features of Square D Saflex and Saflex, Jr. Panels:

Complete safety. No live parts can be touched and circuits may be opened safely under maximum loads.

All poles broken simultaneously. No possibility of single phasing.

Underwriters approval on switch for rupturing full load.

Unit switch can be locked in "on" and "off" positions.

Visible indication of "on" and "off" position of switch blades.

Adequate provision for fuse ventilation.

Oversize wiring gutters.

Current is broken by compact and separate switch element mounted between bus and fuse.

Units are of full 2 and 3-pole construction, requiring a minimum number of circuit parts to be mounted.

Light weight switch blade assembly is only part carried on steel unit door; fuses mounted on fixed base.

Saflex units are constructed to take 250-volt and 600-volt N.E.C. fuses in sizes from 30-ampere to 600-ampere. Switches are rated 230-volt and 575-volt a.c. and 250-volt d.c. Saflex, Jr. units are constructed for 30, 60, and 100-ampere, 250 volts only.

All units are readily removable and the various sizes are interchangeable within the same cabinets and upon the same bases.

Fuse jaws and clips are interchangeable within each unit without dismounting the unit.

Switch contacts are of the high pressure type.

Provision is made for testing fuses.

Cabinets may be supplied without interior or with complete interior assembly or with busses only, permitting the installation of interiors as required at a future date.

Interiors complete with busses can be readily mounted upon the mounting studs in the cabinet.

Metal blanks are supplied to cover busses for future circuit requirements.

Unit bases are made of ebony asbestos.

Standard finish is black.

Cabinet doors are equipped with chromium plated vault handles with integral Yale lock.

Units are mounted in individual steel boxes for maximum mechanical protection. No molded parts are exposed.

Unit doors are provided with steel guides independent of hinges to ensure alignment.

Prices and Complete Information upon Application

Square D Nofuze Load Centers

Single and Double Pole Arrangements

15, 20, 25, 35, and 50-Ampere Circuits

125, 125-250 Volts A.C. and D.C.

List prices are based on 15, 20, and 25-ampere circuits. For each 35 or 50-ampere single pole circuit substituted for each 15, 20, or 25-ampere single pole circuit, add 65 cents each list.

For each 35 or 50-ampere double pole circuit substituted for a 15, 20, or 25-ampere double pole circuit, add 75 cents each list.

Be sure to specify capacity of each circuit when ordering.

Nofuze Load Centers are shipped unassembled. Breakers, boxes and cover plates are packed individually.

Bull Dog Lighting Panelboards

Circuit Breaker Type

No. NA1B312L with Main Lugs

These panels have circuit breakers in the branches in lieu of toggle switches and fuses. They are adapted for use in buildings where circuits are subject to overloads which would involve much fuse replacement and where frequent switching is done at the panels.

The breakers are quick-make and quick-break with automatic overload trip and inverse-time-limit feature. They cannot be held closed against overload. The trip is automatic and self-indicating with manual reset.

Cat. Nos. listed cover 15-ampere breakers. No increase in price for 20 and 25-ampere breakers. For 35 and 50 amperes, add \$1.00 for single pole and \$2.00 for double pole.

Prices include panel and cabinet complete.

Benjamin Panelboards and Cabinets

Benjamin Panelboards are easily and economically installed and incorporate features that insure low maintenance and efficiency in operation. A particularly advantageous feature of these panelboards is that all parts are removable from the front. They are compact and well proportioned and thus add to the appearance of any wiring installation.

Features of Benjamin Panelboards

BASES.—Molded composition, strong, fireproof, of high dielectric strength and unaffected by heat, moisture, oil or acids.

PANEL.—Indestructible in that molded base units are mounted on steel back. Barriers and switch plates are of steel.

SWITCHES.—Single pole, 125-volt, and double pole, 250-volt, tumbler type are 30-ampere heavy duty with quick break and make mechanism.

SWITCH PLATES.—Individual for each 4-branch circuit on 1-fuse panels; 2-fuse panels have individual switch plates for each pair of branch circuits.

CAPACITY.—All current carrying parts are based on maximum current density of 1000 amperes per square inch cross section.

MAIN CONNECTIONS.—Furnished in 30, 60, 100 and 200 amperes capacity in 4 standard types: Main Lugs Only, Fusible Only, Fusible Main Knife Switches and Fusible Main Brush Switches.

Types of Panelboards

SAFETY TYPE.—The cabinet for this panel is of the door-in-door construction, the large door giving access to mains and branch fuses, and small door to branch switches only. Large door is equipped with Yale lock and key and small door with latch only.

This type of panel is recommended for installations where branch circuit switches are manipulated by inexperienced persons and where it is desired to keep fuses under lock and key.

PROTECTIVE TYPE.—This type panel has a dead front protective shield covering the face of the panel which prevents accidental contact with any live part while changing fuses or operating switches. The cabinets have a single door

with a combined spring latch and knob and a Yale lock.

Cabinets for panels having Fusible Main Knife switch have 2 doors: 1 door for the knife switch and the other for the branch fuses.

Panels with Fusible Mains have a small door in the protective shield, giving access to the main fuses.

OPEN TYPE.—This type panel is identical to the Safety Type except that it has a single door which gives access to all the fuses and switches on the face of the panel. This panel is recommended for installations where the manipulation of switches and the renewal of fuses are attended to by authorized persons. Equipped with combined Yale lock, latch and knob.

1-Fuse Panels

These Panels are polarity type with a solid neutral bar to which the grounded conductors of the branch circuits are attached.

Panels and cabinets can be furnished in the types listed below:

Safety Type

TYPE NSPT.—Branches, 30-ampere, 125-volt single pole tumbler switches, for plug fuses; mains, 125-250-volt.

Protective Type

TYPE NLPT.—Branches, 30-ampere, 125-volt single pole tumbler switches, for plug fuses; mains, 125-250-volt.

2-Fuse Panels

Safety Type

These panels are arranged for 2 fuses for each 2-wire branch circuit.

Panels and cabinets can be furnished in the types listed below.

TYPE SPT, 2-2-WIRE.—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains 125-volt.

TYPE SPT, 3-2-WIRE.—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains, 125-250-volt.

Protective Type

TYPE LPT, 2-2-WIRE.—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains, 125-volt.

TYPE LPT, 3-2-WIRE.—Branches, 30-ampere, 250-volt double pole switches, for plug fuses; mains, 125-250-volt.

Open Type

TYPE OCT, 2-2-WIRE.—Branches, 30-ampere, 250-volt double pole tumbler switches for cartridge fuses; mains, 125-volt.

TYPE OCT, 3-2-WIRE.—Branches, 30-ampere, 250-volt double pole tumbler switches, for cartridge fuses; mains, 125-250-volt.

TYPE OPK, 2-2-WIRE.—Branches, 30-ampere, knife switch, for plug fuses; mains, 125-volt.

TYPE OPK, 3-2-WIRE.—Branches, 30-ampere, knife switch, for plug fuses; mains, 125-250-volt.

Type NLPT

Type SPT

Benjamin Little Sentry Panel Boards with Cabinets

For Residences, Apartment Buildings, Small Stores, Schools, Small Factories and Similar Places Having from 4 to 12 Branch Circuits

Little Sentry Panels are ready for installations. Require no preliminary labor or adjustment. Trim, panel and fuse receptacles can all be removed from the front. Wiring terminal of fuse receptacle is one piece and is held in place by two small bolts. Contact is made with the entire base of the fuse shell.

Safety is assured the user because a protective shield covers all live metal parts.

The following features make easy installation of Little Sentry Panels:

Panel is easily removed by a quarter turn of 4 screws.

Each neutral branch connection is opposite fuse for that circuit simplifying the tracing of circuits.

Fuse receptacles easily removed from panel without disturbing wiring.

Blown fuse can easily be located. The slot in the receptacle base makes it simple and safe to use a test lamp.

Price includes lugs and portion of bus bars, back plate, box and trim that may be necessary.

Benjamin Panel Boards and Cabinets

Standard Galvanized Steel Boxes

CONSTRUCTION.—One piece of code gauge galvanized steel, over-lapped and riveted at corners with 3/4-inch flange turned inwardly all around outside edges. This flange adds materially to the rigidity of the construction.

GUTTER SPACE.—All boxes for standard panel boards have 4-inch gutter space.

DEPTH.—Standard steel boxes are made deep enough to allow 1/8-inch clear space back of panel boards and not less than 1/2-inch clear space between door and current carrying parts on panel boards.

DRILLING AND KNOCKOUTS.—Boxes will be drilled for conduits without extra charge provided complete drilling information accompanies order. This information must be available before work can be commenced. On application, data sheets for laying out box drilling dimensions will be furnished.

A sufficient number of 1/2 and 3/4-inch knockouts are provided in top of cabinet to accommodate the total number of branch circuits supplied by the panel. One-half this number are provided in bottom of cabinet.

FLUSH OR SURFACE ADAPTATION.—All standard steel boxes are made with flanges turned inwardly and can, therefore, be used for either flush or surface installation.

FA Panelboard and Cabinet Units

Explanation of Descriptive Catalogue Numbers

These catalogue listings were devised for your convenience and to enable us to give you better and faster service. Please note them carefully and use them in ordering.

With this method of descriptive listing your order is fully understood in all details through the various

numerals and letters comprising each catalogue number. Should a clerical error be made when sending us the order the mistake will at once be noticed and inquiry made. This saves expensive shipments and a great deal of valuable time that occasionally is needlessly wasted when numerals and not descriptive listings are used.

FA Panelboard Boxes

Standard Knockout Arrangement

Boxes will always be shipped with standard knockouts unless special drilling template for each box is sent with order.

For quick delivery, order boxes with standard knockouts. These knockouts will fill the majority of

your requirements as satisfactorily as special drillings. Avoid delay in your own office and save the expense of making out special templates by using standard knockouts.

All box dimensions are inside measurements.

Types LNT1P, NA1B, A2B and NA2B Panelboard Boxes made of No. 12 gauge steel or less, 19 in. wide, 60 in. maximum height, 4 3/4 in. deep

FA Safety Type NT1C-4D Panelboards and Cabinets

Switch and Fuse Panelboards, One Fuse Type, Door-in-Door Construction

PANELBOARD— Made of sections of moulded material.

BRANCHES — 30 Amp., S. P. Tumbler Switches with Cartridge Type Fuse Connections for 120 Volt, 2 Wire, Solid Neutral Circuits.

MAINS — 3 Phase, 4 Wire; 120-208 Volt, Solid Neutral.

BOX — Code Thickness Galvanized Steel, 3/4" Deep, 4" Gutters.

FRONT — Code Thickness Furniture Steel. Rust-proof and Black Finish. Flush Mounting unless Surface is ordered.

Main Cable Lugs Only, Solid Neutral

*These lamps are for use 5 in series on 525, 550, 575, 600, 625 and 650 volts.

†These lamps, if burned horizontally, will not give as good service as when burned in a vertical position.

‡Mazda C street railway cut-out lamps. These are for use approximately 20 lamps in series on 600-volt circuits. Where circuit voltage is greater or less than 600 volts, sufficient lamps may be installed or omitted in order to make the total lamp voltage equal to that of the circuit.

G-E Mazda Photo Lamps

Photoflash Lamps

Eliminates smoke, ashes and sparks from flashlight photography. No odor. Easy to operate and noiseless. Subjects do not close their eyes, so instantaneous is the flash.

The clear glass bulb contains a quantity of crumpled aluminum foil in an atmosphere of oxygen. A short filament is mounted within the mass of foil and serves to start the flash. With medium screw base.

No.	Each	Voltage Range for Operation	Bulb	Diam. Bulb In.	Max. Over All Length In.	Std. Pkg.

*20	.25	3 to 125	A-23 Clear	2 ⁷ / ₈	6 ¹ / ₁₆	60

*Flash with two (or more) cells of flashlight or dry battery, or house current.

Photoflood Lamp

This lamp offers a new and economical source of diffused light. In appearance it resembles a regular 60-watt lamp used for house lighting. If operated at 115 volts a.c. or d.c. it draws approximately 250 watts, but in proper reflecting equipment, this new lamp is actinically as effective as a 750-watt lamp.

Rated life, 120 minutes at 115 volts. With medium screw base.

G-E Mazda CX Lamps

110, 115 and 120 Volts

Manufactured with a special glass bulb which transmits most of the ultraviolet radiation emitted by filament. Mazda CX lamps are made available for the purpose of providing a source of infrared radiation combined with mild ultraviolet.

Lamps larger than 60 watts should not be burned in key sockets or those having paper or fibre insulation. Such sockets may not withstand heat generated by lamps.

These lamps will not be consigned and sales or purchases will not apply on agency or purchase contracts for other lamps.

G-E Mazda Lamps

Natural Colored Lamps

The four lamps in natural colored clear glass bulbs listed below cover a large percentage of present demand for natural colored lamps. The prices shown are for the manufacturer's standard colored glass only.

Watts	Volts	Bulb	*Ruby Each	Green, †Blue and *Amber Each
10	110, 115, 120	S-14	\$.50	\$.40
25	110, 115, 120	A-19	.50	.40
40	110, 115, 120	A-21	.50	.40
¶60	110, 115, 120	A-21	.55	.45

*Natural ruby and natural amber lamps are regularly furnished in the light shade. Dark ruby and dark amber lamps used in photographic work will be furnished, only when definitely specified, at the same price.

†Does not include daylight blue or photographic blue.

¶This lamp not to be burned in enclosing globe.

Extra Charges for Special Features

White, All Frosted and White Bowl Lamps

Clear or Inside Frosted Lamps Each	Add. Charge for White, All Frosted or White Bowl Each	Clear or Inside Frosted Lamps Each	Add. Charge for White, All Frosted or White Bowl Each
Less than \$1.00	\$.05	\$4.00 to \$4.99	\$.25
\$1.00 to 1.99	.10	5.00 to 5.99	.30
2.00 to 2.99	.15	6.00 to 6.99	.35
3.00 to 3.99	.20	7.00 to 7.99	.40

The above prices apply only for the manufacturer's standard spray coatings defined below.

WHITE.—All-over coating of heavy density. Standard for all Mazda B lamps and all Mazda C lamps in A-23 and smaller diameter bulbs, except as covered under All Frosted below.

ALL FROSTED.—All-over coating of light density. Standard for all Mazda C lamps in S-24¹/₂ and larger diameter bulbs; for tubular lamps listed under Limited Service; for all lamps in daylight and natural colored bulbs.

WHITE BOWL.—Bowl white coating of light, heavy, or extra heavy density used in accordance with the following:

1. Light density for all lamps in daylight or natural colored bulbs;
2. Heavy density for all Mazda B lamps and all Mazda C lamps in S-24¹/₂ and smaller bulbs, except as in 1;
3. Extra heavy density for all Mazda C lamps in PS-25 and larger bulbs, except as in 1.

ETCHING.—Additional charges for etching letters or designs may be obtained upon application. Style of lettering or design should accompany such application.

Orders for large lamps with customer's etching may be filled either short or in excess, within the limits of 5%; except that on orders for less than 40 lamps the shortage or excess may equal but not exceed two lamps.

Etched lamps are not rejectable by the purchaser under the provisions of the standard specifications.

VOLTAGE.—Lamps of 105, 125 and 130 volts can be supplied at the same prices as lamps of 110, 115 and 120 volts. The prices for voltages other than 105, 110, 115, 120, 125 and 130 volts may be obtained upon application.

Prices of lamps in the 200 to 260 volt range other than 220, 230, 240, 250 and 260 upon application.

SPECIAL BASING.—The prices listed cover only lamps fitted with unskirted bases unless otherwise indicated. The prices of lamps fitted with bases other than listed may be obtained upon application.

SPECIAL LAMPS.—Any lamp requiring a change in construction from the standard, such as shape or color of bulb, tipped bulb, number of loops in filament, number of anchors, wattage, voltage, amperage, etc., will take a special price, which may be obtained upon application.

As it is impossible to always produce an exact quantity of any special lamps ordered, or of any lamps to be made tipped, when listed as tipless, or of any lamps to be furnished with natural colored, coated colored or tinted bulbs, all such orders may be filled either short or in excess, within the limits of 10 per cent, except that in orders for 20 lamps or less, the shortage or excess will not exceed two lamps.

Neon Glow Lamps

105-125 Volt Service

S-14

G-10

T-4 $\frac{1}{2}$

This orange-red lamp is used wherever economy or low level illumination is desirable. Will not burn out; after long use bulb gradually blackens. Useful life, 3000 hours.

Contained in bulb is Neon gas of a definite pressure and a pair of metallic electrodes.

Minimum operating voltage below label, 50 volts a.c., 10 volts d.c., except where noted on $\frac{1}{2}$ -watt G-10 bulb.

Lamps furnished without resistance only when with double contact bayonet base of corresponding size.

On d.c. only one (the negative) electrode glows but gives the same c.p. as do both electrodes on a.c.

Sprayed red or yellow finish, 5 cents extra.

Standard package, 10.

Hamilton Beach Safety Night Lights

Provides a sufficient illumination to fill a room 12x12 feet with a soft moonlight glow making all objects visible. Ideal for nursery, bathroom, hall, basement, sick room, etc. Factories, hospitals, stores and hotels use this light to save turning on high wattage bulb. Uses less than one watt per hour.

Light consists of a transformer that reduces a 110-volt current to 1.9 volts. Transformer is enclosed in ivory Plaskon shell. Bulb is 3.8 volts operating at one-half voltage. Regular flashlight bulbs are used for replacement.

Operates on a.c., 60 cycles. Will not operate on d.c.

Length over all including prongs, about 3 $\frac{1}{2}$ inches.

Packed 6 in a display carton.

Approximate shipping weight of six, 2 pounds.

Each..... \$1.00

Leland Flashers

It is good advertising to flash a sign and real economy, as the current cost for the lamps and tubes is reduced from 30 to 50 per cent and their life nearly doubled.

All Leland Flashers are furnished with mercury-to-mercury switches enclosed in oxygen-free containers.

**Class 131 Unit Type Junior Flashers
On-and-Off, Alternating or Color Changing**

Operated by means of an intermittent induction disc motor. Motor circuit is led through mercury switch so that when flasher, in operation, breaks the sign circuit it also breaks the flasher-motor circuit. The mechanism then returns by gravity action to its starting position from where the cycle is repeated.

The flasher coil draws only 3 or 4 watts and is on only half of the time—a 50 per cent saving in the cost of current.

The flasher parts are corrosion-proof; steel parts are cadmium-plated. Motor bearings are of the ball thrust type. Oiling is virtually unnecessary.

Can be mounted inside of advertising machines, small signs or displays. Mounting plate is 4 3/8 inches wide and 3 3/4 inches high. For a.c. only.

With indoor cabinet 6 inches high, 8 inches wide and 3 inches deep. Cabinet for No. 131-122 flasher is 4 inches deep. Outdoor cabinet, galvanized, \$8.00 extra.

Cat. No.	Each	Circuit Capacity Amperes	No. of Circuits
131-121	\$13.00	12	1
131-12A	15.00	12	2-Alt.
131-122	18.00	12	2-Sim.
131-241	16.00	24	1

Shipping weight, 8 pounds. Price includes indoor cabinet; without cabinet, deduct \$1.50.

Current specifications: 110 volts, a.c. any cycle. For d.c. specify Class 132 and add \$8.00 to price.

Speed is adjustable between 20 and 40 flashes per minute. On time is quickly adjustable between 1/2 and 2/3 of a cycle. High speed with maximum of 60 flashes per minute, \$2.00 extra; low speed with minimum of 10 flashes per minute, \$6.00 extra.

Class 101 Unit Type On-and-Off Flashers

Heavy Duty and Combination Flashers

Heavy duty and combination flashers available to meet any requirement. Prices on application.

Leland Flashers

Economy and dependability of operation insured by design and construction. Induction disc motor gives maximum of power with minimum of input—2 circuit On-and-Off flasher averages 10 watts input—200 per cent reserve power; disc shaft runs in ball bearings of a combined radial and thrust type which are practically frictionless. Eccentric cams are oil-lubricated linen-bakelite to make them noiseless, wear-resisting and self-lubricating. Other bearing surfaces are bronze on steel and run at a low speed—a little oil on the various bearing surfaces, once in 6 months, is all that is required to insure continuous operation. Variation in speed is secured, without turning flasher off, by adjusting thumb screw on front.

Noma Straight-Line Festoon Type Christmas Tree Lighting Outfits

No. 100-F

No. 100-M.—An 8-light series outfit with patented add-on connector attached to lead wire to connect other outfits. Berry beads securely fasten lamps to tree branch. With Mazda 15-volt M-22 bell shape lamps.

For average indoor 8 to 10-foot trees.

No. 100-M.....each \$1.15

No. 100-F.—Same as No. 100-M except lamps. With Mazda 15-volt F-6½ new

detector lamps, assorted colors. Burned out lamp glows; replace it and all lamps light up.

No. 100-F.....each \$1.50

No. 3000 Noma 7-Light Multiple Christmas Tree Lighting Outfits

A straight-line outfit with standard add-on extension connector and adjustable Berry beads (patented).

For indoor and outdoor use; thoroughly weather-proof.

With 120-volt inside-colored Mazda lamps—assorted colors; C-9¼ intermediate base. Sockets and lamps are 18 inches apart, with 4-foot lead.

Being wired in multiple, no burnt-out lamp can affect the other lamps. Sockets are all bakelite.

No. 3000.....each \$2.25

No. 175 Noma Christmas Tree Holders

Completely wired with an 8-light series Mazda lamp set to illuminate the bottom of the tree, which is usually the darkest part.

This holder is exceptionally well made of rustproof metal; inside basin holds 23 pounds of water as ballast, which will keep the tree moist for days.

Equipped with leader and double duty plug. A 2-way add-on extension connector controls all lights on the tree.

No. 175.....each \$4.00

Graybar Direct Lighting Globes

These globes are shaped to give the maximum results which can be obtained with modern diffusing glass. They have a high efficiency, being low in brightness and without shadows or bright spots. They are of uniform quality and weight. The bowls are free of streaks, blisters, checks or other imperfections. Due to the smooth surface of opal glass, dust and dirt do not settle upon them.

are made in the standard sizes to accommodate various size lamps generally used in commercial lighting. They are interchangeable with the many styles and types of Graybar fixtures, all of which insure the correct lighting center to produce the best distribution.

They are available in either homogeneous opal diffusing or in the popular cased glass which consists of a layer of crystal glass over opal.

The Graybar No. 66, No. 88, and No. 99 series of globes

Graybar Semi-Indirect and Indirect Lighting Globes

Where semi-indirect or indirect lighting is desired, Graybar has a variety of glassware to offer. Most of these types follow the style of the enclosed semi-indirect lighting globe.

This type of globe is available in three distinct shapes.

The No. 44 series represents a development which makes it adaptable to fixtures already installed and where a totally indirect system is desired to replace a direct or semi-indirect system. The Silvray Lamp (silver processed bottom) is used with the unit.

This globe is constructed in either of two ways. It may consist of a single layer of opal glass of high translucent character or it may be made of crystal glass, heavily

enamel on the bottom with a slightly diffused top.

The No. 33 series of enclosed semi-indirect lighting globes is made of clear crystal glass with the lower half treated with a silicate enamel and the upper half slightly etched on the inside for better diffusion.

The No. 333 series shape is constructed with the lower part consisting of three layers of glass—opal, crystal, and opal, while the upper part consists of a thin layer of opal under the crystal. The No. 77 series is similarly constructed.

The No. 16 is an open type semi-indirect bowl of opal glass adaptable to the 11-R suspension fixture.

Graybar G-Type Fixtures

The G-Type Fixture was designed for use with the No. 77 or No. 88 series of globes. As the necks on the globes are unnecessary with this fixture, they have been removed.

This combination of globe and fixture offers a highly efficient and pleasing unit. Graceful lines have been attained without hampering the sturdiness of construction.

The G Fixture is made in both the tube suspension and ceiling types. It is constructed of 22-gauge brass and furnished with 4 or 6-inch safety type fitters suitable to suspend all the globes of the No. 77 and 88 series. These globes range from 9 to 16 inches in diameter in the direct and semi-indirect type enclosing globe to accommodate up to 500-watt lamps.

The holder proper consists of three L-shaped lugs attached to the lower flange of the socket cover. They easily slip under the neck opening of the globe and form a neat support without strain of any kind for the globe. Once seated, the globe is locked in place by two locking slides which can be operated simultaneously with one hand by merely sliding them in or out of position. The whole mechanism of this holder is concealed by an accurate fitting, removable cover.

Wired complete with strap, screws, and knurled nuts, ready for installation.

Finish is satin chromium.

Graybar X-Type Fixtures

X6C-3320

Since the introduction of the Graybar X-Type Fixtures, the purchase of inferior fixtures for economy has become unnecessary. The low price of this fixture has been obtained, without the sacrifice of workmanship or material, by quantity production and improved manufacturing.

Plated statuary bronze is the standard finish. When required, finishes such as English bronze, satin chromium or bronze metal can be furnished.

Made to accommodate all lamps up to and including 300 watts, and are wired complete with strap, screws, and knurled nuts, ready for installation.

Graybar Shelcrest Fixtures

M6H-3320

Graybar Shelcrests are a distinct advance in design, material and appearance from competitive commercial fixtures now available. They have many unique features: simple foolproof holder, sectional stem, swivel joint, shallow slip canopy, and maximum insulating qualities.

Shelcrest fixtures are supplied wired with No. 14 stranded asbestos-covered wire, marked for polarity. They are furnished in hanging and ceiling types, accommodating all lamps up to and including 300 watts. When used with Graybar No. 99, 66, 33, or 88 series, plain or decorated globes, Shelcrests are suitable for the finest of commercial interiors.

Made of genuine molded bakelite.

The standard finish of Shelcrest fixtures is Japanese Bronze. The color permeates the entire material and surface scratches, common to fixtures with any other finish, will not show on Shelcrests. The finish will not tarnish or fade.

Graybar Lincrest Fixtures

L6H-9920

Lincrest Fixtures have screwless holder made of three metal segments actuated by single operating pin, protruding through a safety slot. One easy movement contracts segments on camera shutter principle—automatically centers the globe without strain on glass and locks in position.

Canopy is of No. 22 A. W. G. brass. Has rolled edges, knock-out, and solid brass slip collar securely fastened. Two set screws are in slip collar.

Suspension type has a cast brass hickey, ½ and ¾-inch female thread; stem, ¾-inch heavy brass tubing over iron nipple. Cast brass loops, brass chain, porcelain socket rigidly mounted in correct position. Smooth roomy wire channels. Overall length of suspension fixtures, 26 inches.

Supplied with No. 16 asbestos-covered stranded wire (unattached) with tracer in art silk braid.

Finished in heavy plated statuary bronze, buffed to a high polish and uniform color.

Graybar R-Type Fixtures

The R-Type Fixture was designed to offer a pendant which permitted a choice of various reflecting mediums.

The 11R16 consists of the pendant 11R to which is attached the No. 16 opal glass bowl. This bowl is available in the 16-inch diameter only.

The 11R116 consists of the pendant 11R to which is attached the No. 116 porcelain enameled steel reflector. The inside of this reflector is coated with the best grade reflecting white enamel. The outside is finished in a rich cream color porcelain enamel. The combination presents a totally indirect fixture which is not unlike the appearance of the 11R16 when unlighted.

The 11R17 consists of the 11R pendant to which is attached a specially designed, shallow 20-gauge spun metal pan. The outside is finished in the same satin chromium finish as the pendant itself. A cup reflector designed to properly control the light is also supplied.

The 11R pendant as supplied with this fixture will be shipped with 3/4-inch stem unless 1/2-inch stem is specifically ordered.

Graybar Domino System of Decorative Lighting

The Domino unit consists of a pointed oblong box composed of nine pieces of flashed opal glass held in a satin chromium frame, die-cast from the same metal alloy that is used in automobile hardware. A simple modernistic design.

Two special twin sockets accommodate lamps of from 25 to 100-watt sizes, the light being directed downward and sideways by a baffle plate of porcelain enamel.

The individual units are interconnectible at ends and sides. The diagram shows four simple patterns which suggest the decorative possibilities of the Domino System.

Length, 31 inches; width, 11 inches; depth, 6 3/4 inches. Connector, 2 3/8-inch diameter, is listed separately.

Complete instructions are included with each unit.

Domino units can also be furnished square as illustrated below.

Oblong Domino Lighting Unit

Square Domino Lighting Unit

Graybar Silvray Fixtures Commercial Units

Puritan

An attractive metal and glass indirect unit. The luminous louvre and the softly lighted glass disc combine to provide an unusually pleasing effect.

Self-aligning swivel joint concealed in canopy.

Finish, 2-tone aluminum and cadmium pewter.

Silvray Indirect Fixtures are ruggedly constructed of suitable heavy gauge metals of selected quality. They provide many additional advantages over ordinary indirect fixtures.

The Silvray Process marks a radically different method in the design and application of indirect lighting, eliminating the need of auxiliary reflectors. The inherent high efficiency of the Silvray Processed Lamp makes possible indirect illumination on a wattage basis no higher than is required for direct or semi-indirect lighting. Unusually excellent results as to distribution, intensity, and maintained high efficiency, are obtained with cleaning practically eliminated.

Plymouth

A totally indirect luminaire of massive proportions.

Designed principally for use in large areas with relatively high ceilings, such as large retail establishments.

Metalux

A good appearing all-metal unit with modernistic lines. Totally indirect of the opaque bowl type.

Constructed of heavy gauge metals.

Reeded stem suspension. Self-aligning swivel joint.

Finish, cadmium pewter with black relief.

These Silvray Fixtures actually take no part in the delivery of illumination, as they are equipped with the light-directing Silvray Processed Lamp. The sole function of the fixture is to provide the decorative note which the particular need may require.

Relamping is done from below. It should be remembered that after each processed lamp is replaced it restores the unit to its initial efficiency, regardless of the age of the fixture.

A safe bayonet type fitting makes the bowl instantly removable from the suspension by a simple twist—no screws or complicated assemblies.

National

An indirect unit of unusual design, yet conventional.

Similar in construction and finish to the Puritan Unit.

Standish

A new departure in indirect luminaires, possessing a very small cross section.

Similar in construction and finish to the Puritan Unit.

Billite

Totally indirect unit of the luminous bowl type.

The bowl of art glass is softly and evenly illuminated suggesting a light source.

Moderne

An all metal indirect luminaire of simple design.

Totally indirect of the opaque bowl type, possessing many attractive features.

Old Colony

A widely accepted all metal unit of good design.

Totally indirect of the opaque bowl type, possessing many attractive features.

Graybar Silvray Processed Incandescent Lamps

Indirect Covelite Spraylite

The Indirect (bowl-silvered) Process is used with Silvray Commercial Fixtures and in Silvray Industrial Reflectors. The output of this type is uniformly 97 per cent clear lamp output.

The Covelite Process may frequently be used in place of auxiliary reflectors. It has the advantage of requiring extremely little space in cove, wall niche, and similar installations. It is used to advantage in indirect fixtures containing lamps in a horizontal position. Covelites for local lighting of lathes, etc. provides high intensity on the work, and completely shields the workers' eyes.

The Spraylite Process is for use in indirect floor lamps, for candelabra fixtures of ornamental indirect design, for foundries and other dirty industrials where exposed reflecting surfaces are practically useless, and for window lighting in existing reflectors.

Watts	Process Charge Each	Watts	Process Charge Each	Watts	Process Charge Each
40	\$.54	100	\$.59	400	\$1.31
50	.54	150	.62	500	1.80
60	.54	200	.90	750	2.80
75	.57	300	1.31	1000	3.75

Prices quoted cover cost of the process only. Lamps are not included. If lamps are not furnished and are desired complete, the list price of the clear lamp must be added to the above charges.

Graybar Silvray Reflectors Industrial Units

The standard Industrial Reflector is furnished in green porcelain enamel outside and white matte porcelain inside, with detachable husk.

Complete eye-shielding is provided by the silver skin applied to the lamp itself. The design of the special reflector assures evenly distributed and diffused light of proper intensity.

The large area of the reflector creates in effect a modified form of indirect illumination for industrial plants and for locations where ceiling conditions do not permit the use of indirect luminaires.

Graybar Muralier Fixtures

Muralier Fixtures provide decorative painting composed specially for an architectural setting. Muralier presents a fixture which, in its luxurious blending of design and color effects marks a new epoch in this lighting age. A refreshing change in the color scheme may be wrought by the alternate use of red, green, blue, or amber. These colors bring interior illumination in harmony with studied decorative effects.

Standard finish, oxidized aluminum.
Fixtures are completely wired and individually packed.

Graybar Amolier Fixtures

Amolier is an all-purpose unit with the meritable features of direct, indirect, and semi-indirect lighting.

The Galax dual-density enclosing globe of homogeneous structure affords maximum upward reflection of diffused light over a wide area and supports the etched aluminum deflector which screens the light source.

The low intensity direct light through the bowl section also lights the face of the deflector with a soft luminous effect. The combination is both pleasing and efficient.

Finish, oxidized aluminum.

No. 2121

This fixture operates on two circuits. One is for direct lighting ultra-violet radiation and uses one Type S-2 Mazda Sunlight Lamp. The other circuit is for the semi-indirect lighting component and uses three 50 to 150-watt Mazda lamps.

Length, 29 1/2 inches. Diameter, 19 1/2 inches. Reflector for S-2 lamp, 12-inch distributing type.

Finished in dull or green and polished aluminum, or in bronze.

No. 2121.....each \$41.35

No. 11-A

This fixture has ball-joint so that rays can be directed to any angle. Louvres surround the lamp.

Length, 12 1/2 inches. Diameter of concentrating type reflector, 11 1/2 in.

Finished in ivory or bronze.
No. 11-A.....each \$24.75

No. 1742

This unit will find application in factories, basketball and squash courts, gymnasiums, swimming pools, bowling alleys, and similar locations.

Length, 11 1/2 inches. Diameter of wide spread type reflector, 12 inches.

Finished in aluminum.
No. 1742.....each \$25.00

Graybar Miller Ultra-Violet Lamps

Lamps operate on 108-118-volt, 60-cycle a.c. (lamps for other voltages and cycles can be supplied). The udezine tubes make the necessary electrical contact as they go together—no tools or wiring required.

No. 9

Designed with the Udezine principle providing three lamps in one. Has outlet under base for inserting automatic time switch.

Furnished complete with column, one 18 1/2-inch Udezine tube and one 15 1/2-inch tube.

Diameter of reflector, 12 inches.

Finished in ivory with black stripes or in bronze with gold.

No. 9.....each \$33.50

No. 8

Designed with the Udezine principle providing five lamps in one. Includes outlet under base for inserting automatic time switch.

Furnished complete with two 25 1/2-inch Udezine tubes and one 12 1/2-inch tube.

Diameter of reflector, 12 inches.

Finished in ivory or in bronze.

No. 8.....each \$31.50

No. 19

Similar in design to Sunlite No. 9. This lamp uses the Type S-1 Sunlight Lamp. It is more powerful in its ultra-violet application. Comes complete with a table model automatic time switch which operates the lamp up to a 30-minute period.

It is constructed with the Udezine principle providing several lamps in one. Casters are on the base for ease in moving from room to room.

Diameter of reflector, 16 inches.

Finished in bronze.
No. 19.....each \$74.50

No. 29

This Sunlite is designed especially for hospital use for therapeutic purposes. It uses the Type S-1 Mazda Sunlight Lamp which is controlled by an automatic time switch which is part of each lamp. The lamp is of aluminum with rubber tired casters for ease in moving.

Height, 6 1/2 feet extended, 5 feet closed.

Diameter of reflector, 16 inches.

Finished in polished aluminum.

No. 29.....each \$149.50

No. 9

No. 8

Graybar Miller Nu-Mode Fixtures

Nu-Mode Lighting Fixtures are different in both design and lighting effect, yet they are adaptable to all types of lighting requirements.

Their use in commercial interiors, shops, and certain types of houses will add color, a touch of modernity and individuality to the surroundings.

Graybar Special Luminaires

No. K10 Service Receptacle and Switch

The Graybar K-Type Luminaire is constructed of 5-ply, white porcelain enamel fused into a heavy armo iron base. The porcelain will neither crack, blister, nor peel off. It can be wiped with a damp cloth to restore its original whiteness and lustre.

The shells are made in one piece and are seamless, thus eliminating crevices as possible dirt collectors.

The diffusing globe (Cat. No. 2519) is made of fine opal homogeneous glass, shaped to give a pleasing appearance when used with the K-Type Holder.

The unit is made in three types—K10 for use where service receptacle and switch are desired; K20, where switch only is required; and K30 for locations where neither switch nor receptacle is necessary.

Fixture Only—No Glass		
K10.....	each	\$5.00

Arm does not interfere with opening and closing of desk.

Price, No. 8734TW each \$14.00

Thermolite Heat and Light Applicators

No. T0750 Hand Applicator

In the Thermolite, light and heat are generated in a reflector so constructed that these soothing agents when applied to the aching parts penetrate the actual tissue, relaxing the congestion and relieving the pain.

The Thermolite is superior to hot water bags, poultices, and other surface heating appliances on account of its penetrative power and because it is many times more convenient.

No. T0750 Hand Applicator

The inside hand polished reflector, 9½ inches in diameter, is separated from outer shell by dead air space serving to insulate metal parts against heat.

Furnished complete with 120-volt 200-watt bulb, 9 feet of cord and plug.

Finish, crystalized black and nickel.

Buss Lights With Metal Shades

Buss Lights provide useful light to read, sew, study, or work by, because the lights have a neck that bends and a shade that tilts, to throw the light just where it is wanted. Can be quickly clamped anywhere by a screw clamp that holds securely on anything square or round up to 2 1/2 inches thick. In addition, they can be hung by a slot in the base on a hook or screw. The light hugs the wall like a permanent fixture. Each Buss Light is equipped with a 9-foot cord.

Decorated All Metal Models

The tall, slender base and deep shade make this a useful and handsome desk lamp with all the regular Buss clamping, hanging and adjusting features.

Height, 14 inches.

Furnished in two finishes, statuary bronze or pastel green, with gold banding on base and shade.

Diameter 8½ inches; height of reflector only 4¾ inches.

Standard package, 12 reflectors.

Weight of standard package, 19 pounds.

No. 844 each **\$3.50**

Spacing of Reflectors

The number of reflectors to use is influenced by the brightness of neighboring windows, the intensity of the street illumination, goods displayed, and color of the background, as well as the merchant's realization of the advertising and selling value of bright, well lighted windows. The closer reflectors are spaced, the brighter becomes the light in the window and vice-versa. In average installations spacing from center to center of reflectors is from 12 to 24 inches. In general, the following spacing is suggested:

Large cities, business district.....	12 inches
Large cities, suburban district.....	12 inches to 18 inches
Small cities.....	12 inches to 18 inches
Towns.....	15 inches to 24 inches

No. 515 Midget X-Ray Show Window Reflectors

For 25-Watt (T-10) Lamps

(Standard Medium Screw Base Tubular Lamp)

For use where space for mounting or concealing equipment is limited.

Special holder is included. This fits standard brass-shell socket.

Reflector only—width 2 7/8 inches; height 1 3/4 inches, including lip 2 1/8 inches; length 6 1/4 inches.

When installed with Scopette miniature conduit fittings and standard electrolier angle sockets, maximum height or depth is 3 5/8 inches; length of reflector and socket 8 3/4 inches.

Standard package 36 reflectors and holders; weight, standard package, 16 pounds.

No. 515.....each \$2.25

No. 750 Poke Bonnet X-Ray Show Window Reflectors

For Two 60, 40 or 25-Watt Lamps

For low deep windows and display cases.

Special holder and twin socket with 18 inches of wire and plug is included.

Width 14 inches; depth front to back, including holder, 7 inches over all; maximum height from top of bracket to bottom of reflector 6 3/4 inches over all.

Standard package 8 reflectors, holders and twin sockets with cord and plug; weight, standard package, 26 pounds.

No. 750.....each \$13.00

X-Ray Finishing Flanges and Plaster Rings

For Recessing X-Ray Reflectors above Ceiling of Window Finishing Flanges

Recessing the reflectors and wiring above the ceiling gives the window a neat appearance. Light-weight cast flanges finish off the opening, support the reflector in correct position and reinforce plywood ceilings that would otherwise be weakened after openings are cut. Louvers and color-ray can be used the same as when equipment is supported from transom bar or ceiling. On newly plastered ceilings, use plaster rings described below. Flanges are supplied unfinished; may be painted to match window ceiling.

Standard package, 10.

Flange No.	For Reflector	Std. Pkg. Wt. Lbs.	
		Std. Pkg.	Each
10394	No. 11 Hood Jr.	9	\$.50

14110*	No. 1010 Blimp	26	1.25

*Plaster ring available for use with this flange shown below.

Plaster Rings

Plaster rings, made of light-weight cast iron, are used where reflectors are to be recessed above plaster ceilings. They serve as a ground to plaster to, as a base for securely mounting ceiling finishing flanges, and make the ceiling rigid by reinforcing the lathing around the opening.

Plaster rings are installed by the lathing contractor. Plastering contractor places final coat of

plaster flush with the bottom of the Plaster Ring. Finishing flanges support the reflector in the proper position and finish off the opening in the ceiling. Lugs on sides are placed off-center to allow for close spacing between reflectors.

Plaster rings are also available for hinged rims and general lighting reflectors.

Plaster rings should be ordered early, even before reflector equipment, so that they will be on the job ready for use when lathing is being done.

Standard package, 10.

X-Ray Color-Rays

Color-Ray is an accessory for producing color lighting effects with standard X-Ray Window Reflectors. It consists of a simple metal frame with 4 sheets of colored gelatin (red, blue, green and amber); clips securely on the reflector; very easy to install or to change colors.

Standard package, 10.

X-Ray Louvers

For Concealing Light Source from View

Corner or island type windows often require a means of concealing the lamps and light from reflectors along the adjacent side. Louvers can be installed at any time in dimpled X-Ray Reflectors.

Hinged sections of continuous louvers available on order. Each louver is a complete unit; finish, gray. Standard package, 1.

LightStrip

LightStrip is a standardized lighting channel and can be made to any length with outlets spaced as required on the job. It is made with CurtiStrip and LightStrip unit assemblies in 3 sizes from 25 to 150 watts capacity.

Each section of LightStrip requires the same total length of No. 1 CurtiStrip also 2 No. 6 end caps and No. 16 couplings to connect short pieces of CurtiStrip or pieces over 10 feet long. It may be a short 1-light section or a longer section with many lights. It is wired on the bench, is easily installed and quickly connected to the lighting circuit like a fixture. It has ample capacity for carrying wires. The same methods of support used for CurtiStrip are used for mounting LightStrip. All CurtiStrip fittings and plug-in receptacles are standard for LightStrip.

Reflectors are bright aluminum finish; other metal parts are cadmium-plated.

For 25-Watt T-6½ Intermediate Base Tubular Lamps

No. 26 Unit Assembly

No. 26 assembly includes bright aluminum reflector and intermediate base socket unit. Minimum spacing between units 8 inches on centers. Cover spacers are cut 8 inches less than actual center to center spacing between units.

Standard package of 10 sets weighs 4½ pounds.
No. 26 Assembly.....per set \$1.35

For 25 to 150-Watt Medium Screw Base Tubular Lamps

These assemblies include bright aluminum reflector with spring clip to hold lamp and medium screw base tilting socket. Socket tilts out for inserting or removing lamp.

No. 27 Unit Assembly

For 25-watt T-10 medium screw base lamps. Minimum spacing between units 9 inches on centers. Cover spacers are 8⅝ inches less than actual center to center spacing.

Standard package of 10 sets weighs 5¾ pounds.
No. 27 Assembly.....per set \$1.55

No. 28 Unit Assembly

For 40-watt T-8, 75 or 150-watt T-10 medium screw base tubular lamps. Minimum spacing between units 15 inches on centers. Cover spacers are cut 14⅜ inches less than actual center to center spacing.

Standard package of 10 sets weighs 7 pounds.
No. 28 Assembly.....per set \$1.75

Wattage Required with LightStrip

The same total wattage will generally be used with LightStrip as would normally be employed.

PANEL LIGHTING: For even lighting on flashed opal glass panels, the light source must be kept at proper distance from glass.

For narrow panels distance from front of LightStrip to glass must not be less than panel width.

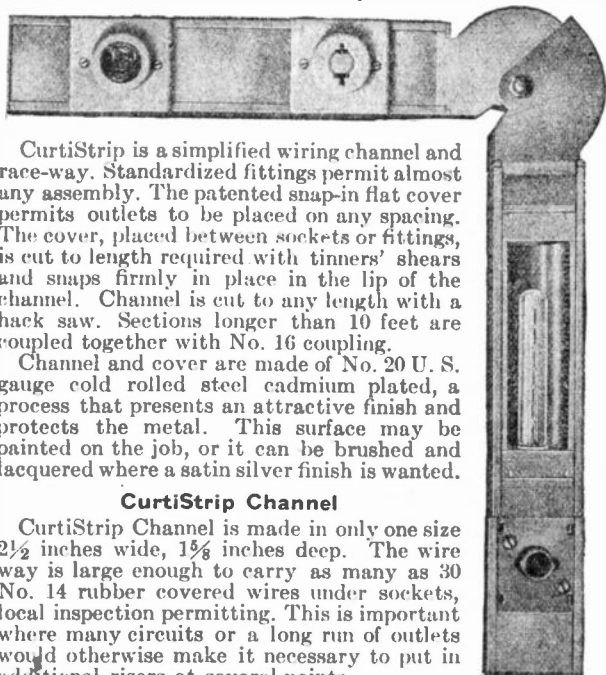

For wide panels where several rows of LightStrip are used, distance between rows must not exceed distance from front of LightStrip to glass.

Where No. 27 or 28 are used behind glass panels, allow ½ inch of space between top of CurtiStrip and underside of glass.

For room illumination from panels 4 watts per square foot of floor area will generally give approximately 6 to 8 foot candles.

COLOR LIGHTING EFFECTS: Wattage and spacing should be the same as for white lighting.

CurtiStrip

CurtiStrip is a simplified wiring channel and race-way. Standardized fittings permit almost any assembly. The patented snap-in flat cover permits outlets to be placed on any spacing. The cover, placed between sockets or fittings, is cut to length required with tinners' shears and snaps firmly in place in the lip of the channel. Channel is cut to any length with a hack saw. Sections longer than 10 feet are coupled together with No. 16 coupling.

Channel and cover are made of No. 20 U. S. gauge cold rolled steel cadmium plated, a process that presents an attractive finish and protects the metal. This surface may be painted on the job, or it can be brushed and lacquered where a satin silver finish is wanted.

CurtiStrip Channel

CurtiStrip Channel is made in only one size 2½ inches wide, 1½ inches deep. The wire way is large enough to carry as many as 30 No. 14 rubber covered wires under sockets, local inspection permitting. This is important where many circuits or a long run of outlets would otherwise make it necessary to put in additional risers at several points.

Illustration below shows one spacer and socket cover removed from a section of CurtiStrip, giving a clear idea of how wires are laid under terminal screws of CurtiStrip sockets and the large wire carrying capacity.

- Standard package is 100 feet of ten 10-foot lengths.
- No. 1 Channel with Cover.....per foot \$.50
Weight, standard package, 130 pounds.
- No. 1-A Channel without Cover.....per foot .45
Weight, standard package, 103 pounds.
- No. 1-B Cover Only for No. 1-A Channel.....per foot .10
Weight, standard package, 40 pounds.

Recessed and Cove Lighting

CurtiStrip Sockets and Receptacles

Sockets and receptacles can be spaced as close as 2¼ inches on centers. Their 2-piece construction saves time and simplifies wiring.

Cover spacers are cut 2¼ inches shorter than the center to center measurements between outlets.

Example: Outlets on 18-inch centers have 15¼-inch spacers.

Wires are not cut but stripped and laid under terminal screws along groove. Porcelain top completely covers bare wire. Not necessary to compound terminals.

No. 4 Plug-In Porcelain Receptacles

Polarized receptacle—15 amperes 125 volts, 10 amperes 250 volts dead front.

Height over all in CurtiStrip 2¼ inches.

Standard package of 10 weighs 7 pounds.

No. 4.....each \$.65

No. 5 Standard Porcelain Sockets

Standard porcelain socket with shade holder groove for use with X-Ray reflectors having Form X Holders and for all other standard shade holders used on porcelain sockets.

Height over all in CurtiStrip 2⅞ inches.

Standard package of 50 weighs 27 pounds.

No. 5.....each \$.55

No. 5-A Special Porcelain Sockets

Special porcelain socket, no shade holder groove, for use with X-Ray holders and cove lighting reflectors.

Height over all in CurtiStrip 2⅞ inches.

Standard package of 50 weighs 27 pounds.

No. 5-A.....each \$.55

No. 8 Porcelain Angle Sockets

Porcelain angle socket for X-Ray cove lighting reflectors.

Height over all in CurtiStrip 5¼ inches. Top of CurtiStrip to center of socket 2¾ inches.

Standard package of 50 weighs 47 pounds.

No. 8.....each \$ 1.30

No. 19 Nipple Attachments

Nipple attachment, ⅜-inch female thread, for supporting reflectors on nipple or for use with X-Ray cove lighting reflectors.

Standard package of 10 weighs 3 pounds.

No. 19.....each \$.45

No. 19-BX Attachments

Attachment designed to connect ½-inch BX to CurtiStrip or for attaching ½-inch socket to CurtiStrip by using chase nipple.

Standard package of 10 weighs 3 pounds.

No. 19-BX.....each \$.35

CurtiStrip Supports

Standard Finish, Cadmium Plated

Five standard X-Raylets (CurtiStrip fittings) offer complete flexibility for mounting CurtiStrip. To bolt against any flat surface use No. 9 strap. To hang down from beam or ceiling use No. 2 hanger. This is adjustable from 4 to 34 inches over all, where a chain or rigid rod hanger is to be used, the No. 13 bracket should be substituted.

No. 2 Universal Hangers

This hanger can be made any length from 4 to 34 inches. Includes 2-piece perforated hanger, one No. 9 strap, 4 angle brackets and 6 bolts.

Standard package of 10 weighs 16 pounds.
No. 2.....each \$1.05

No. 9 Straps

For holding CurtiStrip against any flat surface. Spread over all 3 1/16 inches. Holes on 3/16-inch centers.

Standard package of 10 weighs 2 pounds.
No. 9.....each \$1.10

No. 13 Brackets

Designed to hang CurtiStrip on pipe or chain hanger, pipe or chain not included.

Height top to bottom 3 inches. Standard package of 10 weighs 4 pounds.

No. 13.....each \$0.30

No. 15 Hangers

For mounting CurtiStrip on wall or transom bar. May be used as shown or reversed.

With long leg of bracket at wall the distance from wall to center of CurtiStrip is 5 inches. Height of bracket may be varied from 12 1/4 to 8 1/4 inches or less by drilling new holes. With short leg of bracket at wall, distance from wall to center of CurtiStrip may be varied from 8 1/4 to 10 1/8 inches, height varying from 5 to 7 inches.

Standard package of 10 weighs 11 pounds.
No. 15, Includes No. 9 Strap.....each \$0.65

No. 24 Bracket Assembly

For mounting CurtiStrip out from transom bar or for suspending from ceiling. Includes 1 1/2x3-inch rectangular flange, 3/8-inch nipple 6 1/4 inches long with 2 locknuts and No. 13 brackets.

Standard package of 10 weighs 9 pounds.
No. 24.....each \$0.80

CurtiStrip Fittings

Standard Finish, Cadmium Plated

No. 6 End Caps

Designed to close and finish end of CurtiStrip. Provided with 1/2-inch knockout (can be reamed to 3/4 inch) for lead-in circuits.

Standard package of 10 weighs 3 pounds.

No. 6.....each \$0.35

No. 12 Service Boxes

Designed for use where conduit larger than 3/4 inch is necessary.

Has four 3/4-inch knockouts bottom, end and 2 sides, that may be reamed up to 1 1/2 inches. Size extending outside of CurtiStrip 2 3/4x2 3/4x2 3/4 inches.

Standard package of 10 weighs 12 pounds.

No. 12.....each \$1.70

No. 14 Elbows

Elbow is adjustable from 70 to 180 degrees. Cover is removable and eliminates fishing of wires. Separable body permits using elbow as splice box.

Standard package of one weighs 3 pounds.

No. 14.....each \$1.90

No. 16 Couplings

This coupling is used for connecting 2 pieces of CurtiStrip.

Does not reduce size of wireway or interfere with use of other CurtiStrip sockets and receptacles.

Standard package of 10 weighs 5 pounds.

No. 16.....each \$0.45

No. 18 Box Adapters

For connecting CurtiStrip to 4-inch standard octagonal outlet box. 1, 2, 3 or 4 adapters may be used so that CurtiStrip may be run in as many different ways from one outlet box.

Standard package of 10 weighs 6 pounds.

No. 18.....each \$0.65

X-Ray cove lighting reflectors may be mounted on No. 5-A Socket and entire length of CurtiStrip tilted to secure correct distribution of light.

Reflectors mounted on No. 8 Socket or No. 19 Nipple Attachments are adjusted individually.

CurtiStrip is generally fastened with No. 9 Strap.

**X-Ray Interior Floodlights
Three Types of Light-Control**

Three general types of light-control are provided with X-ray interior floodlights. The illustrations below give an idea of the distribution from each unit. These three types are briefly described as follows:

Center Spot Beam

Distribution of Light from Nos. 44, 33-A or 88 Showing Flood of Light and Center Spot Beam

This combination of a flood and spotlight has a wide range of uses because of its intense concentration and wide general illumination. Small shop windows can be completely lighted with one or two of this type of unit so that the principal portions of the display are highlighted. At the same time there is sufficient light provided for the rest of the display.

On Short Swivel Base

Cat. No.	Std. Lamp Watts
44	150-100
*33-A	200
33-B	200
*88	500-300
88-B	500-300

**On Portable Stand
54" High**

Cat. No.	Std. Lamp Watts
*303-A	200
303-B	200
*808	500-300
808-B	500-300

Spot Beam

Nos. 33-A or 88 with Control Ring to Conceal Lamp Produces Powerful Spot Beam

Where the general flood of light is not wanted but instead more of a spotlight effect is needed the Spot Beam should be used. A control-ring is used with the regular Type 33-A or 88 to confine all of the light into one powerful spot beam. This combination is generally used in store interiors for spotlight sales and wherever the light source should be concealed.

On Short Swivel Base

Cat. No.	Control Ring No.	Std. Lamp Watts
*33-A	13351	200
33-B	13351	200
*88	18860	500-300
88-B	18860	500-300

On 54" Portable Stand

Cat. No.	Control Ring No.	Std. Lamp Watts
*303-A	13351	200
303-B	13351	200
*808	18860	500
808-B	18860	500-300

Flood of Light

Nos. 338 and 888 Type Floodlights provide a Wide Flood of Light

This distribution is readily understood. In X-Ray interior floodlights the overall spread is approximately 100° with the greatest concentration of light in the 40° zone.

The two sizes of this type of unit have a wide variety of uses.

**On Portable Stand
54" High**

Nos. 338, 338-B, 888 and 888-B can be supplied on portable stand 54 inches high by so specifying.

On Short Swivel Base

Cat. No.	Std. Lamp Watts
*338	200
338-B	200
*888	500-300
888-B	500-300

*Regularly supplied with Color-Frame and red, blue, green and amber gelatin for color highlighting. All others have no color equipment and are for white lighting only.

No. 44 X-Ray Interior Floodlights

For 150 or 100-Watt Lamps

Concentrating type for white lighting only; no color equipment available. This is a combination of spot and floodlight. Base has universal adjustment.

Diameter of reflector 8 5/8 inches. Depth from back of socket to front of reflector 7 inches with 100-watt lamp, 7 1/2 inches

with 150-watt lamp using holder extension (included). Diameter of base 3 1/4 inches.

Standard package containing one unit weighs 5 pounds.

No. 44 each \$7.00

No. 33-A X-Ray Interior Floodlights

For 200-Watt Lamps

Concentrating type for white or colored lighting. For smooth soft edge beam use inside frosted lamps. Base has universal adjustment. Color equipment consists of 4 pieces of gelatin (red, blue, green and amber) frame and clips.

Diameter of reflector 10 1/2 inches. Diameter of base 3 1/4 inches.

No. 33-A with Color Equipment, wt., 7 lbs. each \$9.50

No. 33-B without Color Equipment. each 7.75

No. 303-A Portable with Colors, wt., 31 lbs. each 21.00

No. 303-B Portable without Colors. each 19.25

Portables have 54-in. stand and 10-ft. cord with plug.

No. 88 X-Ray Interior Floodlights

For 500 or 300-Watt Lamps

Concentrating type for white or colored lighting. Base has universal adjustment.

Diameter of reflector 13 1/4 in. Depth from back of socket to front of reflector 11 1/8 in. Diameter of base 3 1/4 in. Color equipment consists of 4 pieces of gelatin (red, blue, green and amber) frame and clips.

No. 88 with Color Equipment. each \$16.50

No. 88-B without Color Equipment. each 13.75

No. 808 Portable with Colors. each 28.00

No. 808-B Portable without Colors. each 25.25

Weight, No. 88, 12 lbs., No. 808, 30 lbs.

Portables have 54-in. stand and 10-ft. cord with plug.

X-Ray Control-Rings

For Interior Floodlights

A louver for converting regular interior floodlights into commercial spotlights. Consists of a circular spill shield for eliminating the spill of light common to all floodlights and confining all the light to one straight controlled beam.

Control-ring is used only with concentrating types and is available only for 200 and 500-300 watt sizes listed below. Attached by snapping spring-clips over the lip of the floodlight reflector. Does not interfere with the use of color-ray and can be used with reflectors when recessed.

Standard package, 1; shipping weight, 1 pound.

No. 13351 for Nos. 33-A, B and 303-A, B. each \$3.50

No. 18860 for Nos. 88, 88-B, 808 and 808-B. each 4.50

No. 315 X-Ray Spotlights
For 250-Watt G-30 Lamp

Soft Spot Beam
8° to 30°

Both Horizontal and Vertical Beam
Adjustable from 6° by 30° up to 24° to 50°

Designed for spotlighting where adjustment in the size of spot or a sharply defined beam of light is needed.

Length over all 15 $\frac{1}{8}$ inches; yoke 7 $\frac{5}{8}$ inches; diameter barrel 5 $\frac{1}{4}$ inches; lens 4 $\frac{1}{2}$ inches.

Black enamel finish. Wired with 6 feet of No. 16 wire and separable plug. Slides provide color lighting and special effects shown above.

Each spotlight has 4 color frames, red, blue, green and amber, one metal and 2 glass slides for producing smaller sharp spot beam, soft spot and rectangular vertical or horizontal beam of light. At 10 feet this is adjustable 16 to 60 in.

Standard package containing one unit weighs 8 pounds.
No. 315 Spotlight.....each \$22.50
Lens Only for No. 315.....each 4.50

X-Ray Portable Footlights

150-100*-Watt Lamps on 12-Inch Centers

Designed for show windows, small stages and wherever a standardized or portable footlight is needed.

Footlights used alone or in combination with regular reflector equipment light the display brightly from below, eliminating shadows so often objectionable in overhead lighting.

This type of footlight is also widely used in schools, lodge rooms, clubs, style shows, conventions and expositions, police show-up rooms, museums, art galleries, etc.

Sturdily constructed of heavy gauge steel with inside finished aluminum bronze. X-Ray reflectors on 12-inch centers. Height over all 5 $\frac{5}{8}$ inches. Depth from front to back 5 $\frac{1}{2}$ inches. Provided in 2 standard lengths, 4 and 8 feet, but can be made to any length. Furnished unwired (without wire) and unassembled. Removable wireway cover makes wiring easy.

Standard finish, statuary bronze lacquer enamel.

Standard package is one section. Average shipping weight per foot on sections 4 feet long or more is 4 $\frac{1}{2}$ pounds.

No. 10584 Section 4 Feet Long for 4 Lamps.....each \$38.00
No. 10588 Section 8 Feet Long for 8 Lamps.....each 75.00
No. 10589 (Use this number for other lengths)

On Orders up to 8 Feet.....per foot 11.25
On Orders for More than 8 Feet.....per foot 10.75

Specify length required.

*With 100-watt lamps use short (7 $\frac{1}{8}$ -inch) socket extension.

X-Ray Scoopette and Hoodette Reflectors

For 50-Watt (A-19 or P-19), 25-Watt (A-19) or 15-Watt (A-17) Lamps

Scoopettes and Hoodettes are miniature show window reflectors and are recommended for lighting display cases. Lamps burn in the natural position, base up. Provide a bright light without glare and of uniform intensity. Supplied in complete showcase lighting outfits or as separate reflector units, medium screw base sockets, for mounting on standard 3 $\frac{1}{8}$ -inch brass pipe, 1 $\frac{1}{8}$ -inch iron pipe size with standard thread.

No. S-200 Scoopettes

Designed for lighting show cases with inside height and depth approximately equal.

Width 4 inches. Depth from front to back 3 $\frac{5}{8}$ inches. Height over all 4 $\frac{1}{2}$ inches.

Standard package, 10.

Weight, standard package, 7 pounds.

No. S-200 Unit.....each \$5.00

No. H-199 Hoodettes

Designed for lighting wall cases with height approximately 2 to 3 times depth.

Width 3 $\frac{3}{4}$ inches. Depth from front to back 5 $\frac{1}{8}$ inches. Height over all 4 $\frac{1}{2}$ inches.

Standard package 10.

Weight, standard package, 9 pounds.

No. H-199 Unit.....each \$5.00

Complete Outfits

Scoopette or Hoodette Outfits are supplied complete with all fittings necessary to install in either wood frame or all-glass display cases. No switch box, switch, switch plate or lamps. Prices given in table below are for show cases with square ends. Add \$2.50 for case with one round end, \$3.25 for two round ends. Material regularly supplied unwired and unassembled. Add 20% for wiring and assembling.

Standard package, 1 complete outfit.

Length Case Outside	No. SCOOPETTES OR HOODETTES PER CASE						
	2	3	4	5	6	7	
4' to 6'	\$20.75	\$26.75	\$33.25	
6'1" to 8'	28.00	34.00	\$40.50	\$46.75	
8'1" to 10'	41.00	47.75	\$54.25	

Prices on complete lighting equipment for cases longer than 10 feet supplied on request.

When ordering complete outfits, specify all-glass or wood frame and give the following dimensions:

Inside length from glass to glass or wood frame to wood frame.

Distance from under side of top glass to under side of floor of case.

If cases are not of regular square end type, send a rough sketch giving dimensions and radius of the end curve.

Display Case Lighting with X-Ray Reflectors

Many types of display cases can be lighted with X-Ray Reflector equipment.

Light Strip can be used for lighting stock and display racks in clothing stores increasing their value as display cases and making easier the selection of pattern or style.

Cabinets can be lighted effectively with Scoop Jr. and Hood Jr. reflectors.

Corridors, passages and lobbies correspond in value to street frontage for window displays. Their effectiveness is increased by lighting with the smaller sizes of X-Ray window reflectors.

Display cases of silver and polished metals are attractively lighted with Hood Jr. reflector and recesses. Clear or daylight lamps or a combination of both, may be used.

Footlighting with X-Ray Portable Footlights or Light Strip or X-Ray reflector mounted below panels of diffusing glass is used in display case lighting. This arrangement permits having cases with lower head room and raising the platform to a more interesting height.

Benjamin Duo-Service Floodlights

N. E. C. Standard
For 750, 1000 and 1500-Watt Lamps

For lighting gasoline service stations, used car lots, etc. Combines a wide coverage diffusing reflector with an intensive beam floodlighting projector. Provides uniform illumination of a surrounding area with simultaneous high intensity floodlighting of an upright or flat surface within, close to, or at some distance from area of general illumination. This high intensity floodlighting beam can be concentrated or spread by a simple screw adjustment.

- Installed by slipping bracket arm over 1½-inch pipe.
Porcelain enameled steel reflector, green outside, white inside. Chromium or aluminum oxide metal projector and heavy cast aluminum hood includes a porcelain mogul base socket. All metal fittings not cast aluminum are cadmium-plated.
- No. 5763, with Chromium Concentrating Beam Inner Projector...each **\$34.00**
 - No. 5763A, Same as No. 5763, but Fits 2" I.P.each **34.00**
 - No. 5764, with Ox. Alum. Spread Beam Inner Projector...each **31.00**
 - No. 5764A, Same as No. 5764, but Fits 2" I.P.each **31.00**
 - No. 5765, without Projectoreach **28.00**
 - No. 5765A, Same as No. 5765, but Fits 2" I.P.each **28.00**
 - No. 5766, with Oxidized Aluminum (Wide Spread Beam) Inner Projector (Larger Than No. 5764)...each **32.50**
 - No. 5766A, Same as No. 5766, but Fits 2" I.P.each **32.50**

Benjamin Play-Area Floodlights

For 750, 1000 and 1500-Watt Lamps

An open type, wide angle, diffusing floodlight designed for lighting outdoor recreational areas such as football and athletic fields, race tracks, etc. Provides uniform, strong illumination on the ground area to the front and sides and improves upper area illumination.

A wide range of adjustment, both horizontally and vertically, is provided by the rugged mounting bracket. A positive clamping mechanism locks the fixture at any desired position through this range.

Porcelain enameled reflector, green outside, white inside; inner reflector is non-corrosive aluminum oxide; all metal parts are cast aluminum or cadmium-plated.

- No. 5752, Fits Over 1½-Inch I.P.each **\$31.00**
- No. 5752A, Fits Over 2-Inch I.P.each **31.00**
- No. 5753 (Less Inner Reflector), Fits Over 1½-Inch I.P.each **28.00**
- No. 5753A (Less Inner Reflector), Fits Over 2-Inch I.P.each **28.00**
- No. 5754, with Universal Mounting Bracket and Pipe Clampeach **29.00**
- No. 5755, with Universal Mounting Bracket, Less Inner Projector.....each **26.00**

Benjamin Open-Type Floodlights

A wide angle, open type diffusing floodlight. For floodlighting the smaller type of recreation area, playground, parking lot, gasoline station, etc.

Hoods are made in 3 types: pendent for attaching directly to a threaded pipe, or with universal mounting bracket for fastening to flat surfaces or, by means of the pipe clamp supplied with the bracket, to 1 and 1½-inch pipe or with bracket arm to

slip over 1½-inch pipe.

A wide range of adjustment vertically is provided by the universal mounting bracket hood, while both hoods provide complete adjustability of the reflector horizontally. Floodlight is durably constructed for outdoor service and is entirely weatherproof throughout.

The porcelain enameled steel reflector is finished green outside, white inside. Inner auxiliary reflector has special oxidized aluminum finish.

Pendent hood is malleable iron, tapped ¾-inch standard, supplied tapped 1-inch, when specified. Universal mounting bracket hood is cast aluminum. All metal fittings not aluminum castings are cadmium-plated to resist corrosion.

Packed one in a standard package.

For 300 and 500-Watt Lamps

- No. 5770, with Pendent Hood.....each **\$17.00**
- No. 5771, with Universal Mounting Bracket...each **19.00**
- No. 5772, (No. 5770, Less Inner Reflector).....each **14.00**
- No. 5773, (No. 5771, Less Inner Reflector).....each **16.00**
- No. 5774, (No. 5771 with Concealed Wiring, Mounting Bracket for 1½-Inch I.P.).....each **21.00**
- No. 5775, Same as No. 5774, but Less Inner Reflector.....each **18.00**

For 750, 1000 and 1500-Watt Lamps

- No. 5970, with Pendent Hood.....each **\$18.00**
- No. 5971, with Universal Mounting Bracket...each **20.00**
- No. 5973, (No. 5970, Less Inner Reflector)....each **15.00**
- No. 5974, (No. 5971, Less Inner Reflector)....each **17.00**
- No. 5975, (No. 5971, with Concealed Wiring Mounting Bracket for 1½-Inch I.P.).....each **22.00**
- No. 5976, (No. 5975, Less Inner Reflector)....each **19.00**

Benjamin Big-Ben Floodlights

For 750, 1000, 1500 and 2000-Watt Lamps

A long range, diffusing floodlight for lighting outdoor sport and recreational areas where greater distances are encountered.

Fixture hood is fitted with removable cast aluminum cap which carries socket as a unit. Cap has two porcelain knobs at sides and is fitted with one-piece porcelain insulated wire entrance bushing at bottom.

Mogul base porcelain socket is attached to hood cap. Inner reflector of oxidized aluminum is positioned deep back in fixture and is closely fitted to lamp neck so as to intercept and utilize the greatest quantity of light.

- Porcelain enameled steel reflector, green outside, white inside. All metal parts are aluminum or cadmium-plated.
- No. 5776, with Slip-Fitter Base.....each **\$65.00**
- No. 5778, with Cross Arm Base.....each **67.50**
- No. 5780, with Wall Bracket Support.....each **72.50**

Benjamin Utility Portable Floodlights

Has ample beam strength and sufficient beam control to meet the needs of smaller type flood-lighting jobs where it is necessary to project light to a considerable distance from place where floodlights are mounted.

With polished aluminum alloy reflecting surfaces sealed by heat-resisting stippled glass covers and special gaskets. Two wing nuts control adjustment so fixtures can be tilted up or down and turned in a complete circle.

Furnished completely wired.

Benjamin Mobilites

For automobile repair work the Mobilite can be used like a mechanic's creeper and rolled under car to light any portion being worked on. Clearance of Mobilite is so low that the 100-watt fixture will roll under running board of a car, bus or truck. In unlighted pits and under hydraulic lifts Mobilite makes greasing and service easier.

The Mobilite can be easily pushed or rolled anywhere—yet once set leaves both hands free for work. Cast iron truck has three fibre rollers, two at front and one at rear which is pivoted. Truck is enameled a brilliant red. A handle is provided for carrying the fixture about.

Porcelain enameled steel reflector is green outside, white inside. Can be tilted upward by loosening wing nut.

Reflector interior is sealed against dust and dirt by the cover glass, which is held in place by a removable metal band and retaining gasket. A rust-resisting guard welded to cover band, protects glass. Clear covers: plain on 100-watt units and stippled on 200-watt units.

Fixture is wired; with 25 feet of rubber-covered cable and rubber plug. A strain relief is provided at back of truck. Medium base socket—N.E.C. standard.

For 150-200-Watt Lamps—Reflector Diameter, 10 7/8"

Benjamin Junior Portable Floodlights

A wide-spread, diffusing floodlight for use where light can be mounted relatively close to object or area to be floodlighted.

Porcelain enameled steel reflector is green outside, white inside. Reflecting surfaces are sealed against weather and dust by plain cover glasses and gaskets held by metal retaining bands. Can be tilted up or down and turned in a complete circle by loosening wing nuts.

Furnished completely wired.

Benjamin Pit and Tunnel Lighting Fixtures

For Correct Lighting in All Types of Pits
National Electrical Code Standard

The proper lighting of pit interiors and the vehicles over the pits, lessens the danger of accidents to workers and increases their speed and effectiveness. The Benjamin Pit Lighting Fixture with refracting glass cover offers a most satisfactory means of obtaining this correct illumination.

The efficient trough-shaped porcelain enameled steel reflector assures maximum light output, while the refracting glass cover concentrates the major portion of the light on the underside of the object over the pit.

Suitable for built-in or surface installation in locations like automobile service and greasing pits, railway and traction line repair pits, viaducts, tunnels and similar locations. In some types of locations, such as viaducts, tunnels and subways, where lighting requirements are of a general nature, the pit light with a plain glass cover will be found more satisfactory than the refracting.

Fixture consists of a cover and a cast iron box which are held together by four bolts. Cover includes a cast iron frame, a heat-resisting glass cover, a double rubber gasket, which seals cover frame to box and glass to cover frame, and a brass wire guard.

The cast iron box includes a porcelain enameled steel trough-shaped reflector and a keyless socket. Box is tapped at both ends for either 1/2, 3/4 or 1 1/2-inch conduit.

Packed one in a standard package.

Type 79 Benjamin Glassteel Diffusers

Complete with Hood, Reflector and Globe

National Electrical Code Standard

Provides soft, even light over a wide range of intensities. Direct and reflected glare is eliminated. Openings at the top of the reflector give ample light on the ceiling to relieve contrasts between the fixture and its background.

Composed of two separable elements—a hood with a wiring terminal base and a complete assembly of reflector globe and lamp, which can be taken down as one piece for easy cleaning. A slight upward pressure against the reflector rim, less than a quarter turn to the left and reflector assembly is released from hood; to put up—simply turn right and reflector is secured.

The terminal base in the hood is extremely simple to wire. Both wiring leads are brought in through the single center hole in the hood and terminal base.

A single lever on the side of the reflector controls the clamping or release of the globe in the fixture.

Reflector is porcelain enameled steel, with Benjamin Type 79 bayonet-lock coupling. Reflectors have built-in lamp holders and bayonet plate. Standard reflector has apertures at top for passage of light to ceiling.

Terminal base, N.E.C. standard, simple-to-wire. One type of terminal base is standard in both outlet box and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, outlet box, angle and pendant. Outlet type has one hole slotted for easy attachment.

Angle and pendant hoods are tapped for 1/2 inch conduit, can be supplied in 3/4 inch, when specified.

Reflectors are white porcelain enameled inside and out, with blue-black bead. Spring clamp globe holder, hood and bayonet plate are cadmium-plated.

Pendant Hood Type with Keyless Lamp Holder

Cast iron; tapped 1/2 inch standard; 3/4 inch when specified.

*When using 150-watt lamp, socket extension No. 91 must be used to correctly position lamp in reflector.

Lamp Holders

Shock-absorbing lamp holders furnished in place of regular rigid lamp holder at an advance of 10 cents in price. When ordering, suffix regular reflector number with "SHB."

Type 79 Benjamin RLM Dome Reflectors

Porcelain Enameled Steel

National Electrical Code Standard

Constructed on a unique principle which permits the reflector, together with the lamp, to be taken down with one simple movement for easy cleaning.

Unit consists of two separable elements—hood with wiring terminal base, and reflector to which is assembled the lamp holding element. A slight upward pressure against reflector rim, less than a quarter turn to left, and reflector with lamp comes down as a unit.

The 3-point bayonet plate on top of the reflector is slipped into bottom of hood and both locked together by a quarter turn to right.

Contact is made at any point where reflector heel may be entered in hood. Polarization is automatically provided for by the circular design of the contacts.

Reflector is seamless porcelain enameled steel with bayonet-lock coupling. With porcelain lamp holder. Angle of cut off, 17 1/2°.

Terminal base is N.E.C. standard. One type of terminal base is standard in both ceiling and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders. Three types of hoods are provided, ceiling type outlet box, pendant and angle, side entrance type; outlet type has holes slotted for attachment.

Reflectors are porcelain enameled steel, green outside, white inside. Hood and bayonet plate are cadmium-plated.

Prices do not include wires or lamps.

Pendant Hood and Reflector with Keyless Lamp Holder

Pendant hoods are cast iron, tapped 1/2 inch standard; 3/4 inch if specified.

3645	7.60	750, 1000	20	17 1/16	5	59

Rigid keyless lamp holders are regularly supplied but when specified the following lamp holders can be furnished: Pull chain, medium base only, 80 cents advance list; self-locking, medium base only, 50 cents advance list; shock absorbing, medium or mogul base, 10 cents advance list.

Extra Reflectors

Fixtures, complete except for hoods, are available for easy maintenance of the system. When ordering, specify catalogue number of complete fixture with the explanation "Less Hood," and deduct 80 cents from list price.

Type 79 Benjamin Shallow Bowl Reflectors

Porcelain Enameled Steel
National Electrical Code Standard

Characteristic Distribution Curve

The reflector is seamless porcelain enameled steel with Benjamin Type 79 bayonet-lock coupling. The reflector includes a N. E. C. standard porcelain lamp holder and a 3-point bayonet plate.

One type of terminal base is standard in both ceiling and pendent type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, ceiling type outlet box, pendent, and angle side entrance. Outlet type hood has one hole slotted for easy attachment.

Reflectors are porcelain enameled steel; green outside, white inside. Hood and bayonet plate are cadmium-plated to prevent corrosion.

Prices do not include wires or lamps.

Extra Reflectors

Fixtures, complete, except for hoods, are available for easy maintenance of the system. When ordering, specify catalogue number of complete fixture with the explanation "Less Hood," and deduct 80 cents from list price.

Lamp Holders

Pull chain lamp holders with straight inner pull for medium base only, 80 cents advance list. When ordering suffix regular reflector number with "PUL."

Self-locking lamp holder prevents unauthorized lamp removal, medium base only, 50 cents advance list. When ordering, suffix regular reflector number with "LOK."

Shock-absorbing lamp holders lengthen lamp life, medium or mogul base. 10 cents advance list. When ordering suffix regular reflector number with "SHB."

Type 79 Benjamin Symmetrical Angle Reflectors

Porcelain Enameled Steel

Characteristic Distribution Curve

The reflector is seamless porcelain enameled steel with Benjamin Type 79 bayonet-lock coupling. The reflector includes a N.E.C. standard porcelain lamp holder and a 3-point bayonet plate.

One type of terminal base is standard in both ceiling and pendent type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, ceiling type outlet box, pendent and angle side entrance. Outlet type hood has one hole slotted for easy attachment.

Reflectors are porcelain enameled steel; green outside, white inside. Hood and bayonet plate are cadmium-plated to prevent corrosion.

Pendent Hood and Reflector with Keyless Lamp Holder

Pendent hoods are cast iron, tapped 1/2 inch standard; 3/4 inch if specified.

Type 79 Benjamin Elliptical Angle Reflectors

Porcelain Enameled Steel

National Electrical Code Standard

Exclusive Benjamin principle permits reflector together with lamp, to be taken down with one simple movement, for easy cleaning.

Each unit consists of two separable assemblies—a hood with a wiring terminal base and a reflector with a lamp holder and attaching plate.

Automatic polarization is provided by the circular contact design and contact may be made at any point where bayonet plate can be inserted in hood.

Reflector is porcelain enameled steel, green outside, white inside; with Type 79 bayonet-lock coupling. Reflector includes a porcelain lamp holder and a 3-point bayonet plate. Angle of cut off is 17 1/2°. Hood and bayonet plate are cadmium-plated to prevent corrosion.

One type of terminal base is standard in both ceiling and pendent type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, ceiling type outlet box, pendent and angle side entrance.

Pendent Type Hood and Reflector with Keyless Lamp Holder

Pendent hoods are cast iron. Hoods for medium base reflectors tapped 1/2-inch standard; 3/4-inch, if specified. Hoods for mogul base reflectors tapped 3/4-inch standard.

Benjamin Reflector Sockets Porcelain Enameled Steel

USES.—Each type of reflector performs a definite service. See individual description immediately above each listing.

REFLECTORS.—Seamless Crysteel porcelain enameled steel. They are weather-proof and may be used for indoor and outdoor service.

SOCKETS.—National Electrical Code Standard. Sockets are 2-piece porcelain, keyless, easy-to-wire type with Benjamin Lamp Grip which prevents loosening and falling of lamps under vibration.

Locking Type Socket (LOK) will be supplied with reflectors up to and including 200 watt sizes at an advance of 50 cents each. Key, No. 1399, at \$1.00 each. Pull chain socket (PUL) with lamp grip will be supplied with reflectors up to and including 200 watt sizes at an advance of 80 cents. Shock-absorbing socket (SHB) at 10 cents additional to list price.

FITTINGS.—Reflectors are supported by heavy cast fitting, independent of socket, making the whole fixture uniformly strong.

TAPPING.—Fitting tapped for 1/2-inch iron pipe regularly furnished; 3/4-inch tapping or 1/2-inch insulating bushing, No. 1265 for drop cord use, furnished if specified at no advance in price.

FINISH.—Reflectors are Benjamin green porcelain enamel outside; white inside.

Prices do not include wires or lamps.

Benjamin Threaded Hood Glassteel Diffusers
Complete with Hood, Reflector and Globe

No. 26300, 200-Watt

In addition to the accepted merits of the porcelain enameled steel reflector this combination offers the following advantages:—

1. Light is permitted to reach the ceiling which softens the contrast between the working plane and the space above the reflector. This increases eye comfort.
2. The brightness of the unit is reduced to about 3 or 5 candlepower per square inch which further reduces eye effort resulting from both direct and reflected glare.
3. Protection of the glass from excess breakage because surrounded by the steel reflector.
4. Exceptionally good appearance of the lighted unit.
5. Reflection and diffusion favorable to the needs of the daylight lamp.

The total light output of the Glassteel Diffuser with a clear lamp is equal to that of an R L M reflector and bowl-enameled lamp of corresponding size.

Diffuser directs light on ceiling (about 7 per cent) and also more light on higher angles.

Comparison of corresponding brightness favors the Glassteel equipment, which is 3 or 5 against 15 candlepower per square inch of the R L M reflector and bowl-enameled lamp.

Hood is of porcelain enameled steel with Benjamin R R Thread.

Type X supporting fitting, tapped for 1/2-in. conduit.

Porcelain 2-piece socket, easy-to-wire type.

Reflector is porcelain enameled steel in two sizes with Type R R Threaded Neck permitting easy removal of the reflector. Reflector has six apertures at top for the passage of light to the ceiling. It also embodies a spring globe holder facilitating easy removal of globe for cleaning.

White porcelain enamel with small neat dark blue bead at bottom edge of both hood and reflector.

Pendent Hood Type with Keyless Socket

With X style fitting; tapped 1/2 inch standard; 3/4 inch when specified.

Benjamin Parabolites

Porcelain Enameled Steel

Characteristic Distribution of Curve

No. 1235, 150-Watt

Plane Through Major Axis

Plane Through Minor Axis

The Benjamin Parabolite is a specially designed fixture for the illumination of aisles, platforms, and other long narrow areas indoors or outdoors.

The reflector is porcelain enameled steel, white inside, and green outside. The socket is porcelain, keyless two-piece, easy-to-wire type with lamp grip. The separable X fitting is regularly tapped 1/2-inch and will be tapped 3/4-inch if specified, at no advance in price. The light is projected in a narrow stream with a low cut-off on each side.

Benjamin Threaded Hood Fixtures Sturdox Fixtures

Made to withstand service conditions.

Two-piece socket of heavy porcelain is unusually well constructed and simple to wire.

Reflectors may be interchanged without disturbing wiring as every Sturdox reflector fits every Sturdox hood.

Type RR Equipment

Suitable for use around railroad yards, steel mills and other industrial plants where conditions require the most rugged and sturdy equipment.

The Type RR thread is the basis of railroad equipment. It allows easy removal of reflectors for cleaning and interchangeability among the various types and sizes of reflectors. Hoods are supplied in cast iron or porcelain enameled, in either pendent or outlet box type, and are threaded to accommodate any of the RR threaded neck reflectors shown to the right. Cast hoods are finished in green paint enamel and steel hoods in green porcelain enamel.

To obtain price of complete fixture add price of hood to price of reflector selected.

Pendent Cast Hoods with Sockets

Tapped for 1/2-inch i.p. standard; 3/4-inch, if specified.

No. 26041 Benjamin Combination Outlet Boxes and Type RR Hoods

This fixture combines a heavy duty cast iron outlet box and Type RR threaded hood with medium base keyless socket. For use with all medium base Type RR and Sturdox reflectors. Recommended for use in locations in which distance between ceiling and reflector must be reduced to minimum in order to provide

maximum clearance between reflector and floor. One-piece molded composition socket base; metal parts not of brass, cadmium-plated; Green paint enameled casting. Release of two screws permits removal of baffle plate and socket as a unit, which gives access to socket wiring terminals and provides an opening of 2 5/8 inch diameter.

Section and Face Plan of Outlet Box-Hood Showing Code Nos. to be Used in Specifying Tapping

Not tapped; can be tapped, at no extra charge, for 1/2, 3/4 or 1-inch conduit, 1, 2, 3 or 4 ways. Use code number shown on diagram to specify location of outlets. For example: No. 1, blank; No. 2, 1/2"; No. 3, blank; No. 4, 1/2".

Diameter, 4 3/8 inches; height, 3 3/8 inches. Standard package, 10; shipping weight, 45 pounds. No. 26041, without Wires or Lamps.....each \$1.75

Type X Benjamin Socket Fittings

For Socket-Reflector Equipment

These fittings are made separable for easy wiring.

No. 4653

The fitting consists of two flanges and two washers, one for either side of the reflector. By this method of construction, the socket and lamp are supported directly by the fixture stem, and the reflector is supported independently between the upper and lower flanges. This makes a weatherproof and rigid connection.

3622	20	8	\$.15

Benjamin 1800 Series Separable Hood Reflectors

National Electrical Code Standard

Complete fixtures consist of combinations of the hood and socket units and the reflectors. To obtain price of complete fixture add price of hood and socket to price of reflector selected.

Hoods are designed to take all reflectors interchangeably and to accommodate either medium or mogul base sockets. Hoods are cast iron finished in cadmium plate; reflectors are porcelain enameled, white inside, green outside.

Keyless, one-piece, easy-to-wire, N.E.C. standard porcelain sockets are supplied as standard.

Pull chain socket, medium base only, can be furnished when specified at an advance of 80 cents in list price. When ordering, add suffix "PUL" to Cat. No. of fixture.

Benjamin 1800 Series Separable Hood Fixtures

No. E-18 Pendant Cast Hood

Standard for any Benjamin 1800 Series reflectors and take interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, standard. Cast iron; finished in cadmium plate.

Standard package, 10; shipping weight, 8 pounds.

No. E-18.....each \$5.50

No. L-18 Angle Cast Hood

Standard for any Benjamin 1800 Series reflectors, where it is desired to have the conduit entrance at right angles to the reflector, and take interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit standard. Cast iron; finished in cadmium plated.

Standard package, 10; shipping weight, 9 pounds.

No. L-18.....each \$5.50

No. T-18 Feed Through Cast Hood

Standard for any Benjamin 1800 Series reflectors, where it is desired to have the conduit feed through the hood at right angles to the reflector, and take interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, both sides, standard. Cast iron; finished in cadmium plate.

Standard package, 10; shipping weight, 14 pounds.

No. T-18.....each \$6.65

No. C-18 Ceiling Cast Hood

Standard for any Benjamin 1800 Series reflectors, and take interchangeably any medium or mogul base socket shown above. Fit any standard 4-inch outlet box. One screw hole in hood is slotted for easy attachment.

Cast iron; finished in cadmium plated.

Standard package, 10; shipping weight, 10 pounds.

No. C-18.....each \$5.50

Benjamin Snap-In Attachable Reflector Holders

Attach to Any Benjamin Reflector with 2 1/4-Inch N Neck

These snap-in holders can be quickly and easily attached to any Benjamin Shade Holder Reflector with 2 1/4-inch N neck without using tools. To attach, simply line up the rivet heads and crimpings in the collar of the holder with corresponding slots in the neck of the reflector. Then push down on the holder with the palm of the hand. The 4 bronze spring lugs of the holder will snap into position, fastening the reflector and holder securely together.

Standard package, 10; shipping weight, 1 pound.

Type W Holder

Threads onto various heavy duty, metal-clad sockets with casings threaded for shade holders such as Bryant No. 4107 and similar G-E, Hubbell, H & H and Arrow sockets. Nickel finish.

No. 4382.....each \$.15

Type S Holder

For attachment to Benjamin-Benco sockets and fittings.

Bright metal finish.

No. 4383.....each \$.15

Type B Holder

For attachment to standard brass shell sockets.

Natural brass finish.

No. 4384.....each \$.15

Type P Holder

For attachment to standard porcelain sockets.

Bright metal finish.

No. 4385.....each \$.15

Benjamin Dome Shade Holder Reflectors

Reflector and Lamp Manufacturers' (RLM) Standard

No. 14100N

Type N Shade Holder

Type S Shade Holder

For general illumination when it is desired to avoid reflected glare from the surfaces lighted and to avoid direct glare by having the angle of light cut-off agree with all state lighting codes. Angle of cut-off, 17 1/2 degrees.

Type N Shade Holder Reflector is fitted with a neck so shaped, as to fit any standard 2 1/4 or 3 1/4-inch shade holder.

Type S Shade Holder Reflector has a screw threaded holder to fit Benco Sockets and Type S Outlet Box Fittings.

Shade holders are green porcelain enamel outside; white inside.

Benjamin Heavy Duty Gas and Vapor-Proof Fixtures

Heavy 2-piece cast hood, porcelain enameled steel threaded reflector, socket and heavy screw globe of clear glass, together with necessary gaskets for sealing fixture.

Hood is regularly tapped 1/2 inch but may be ordered 3/4 inch at no advance in price; also furnished with outlet box hoods for attaching to Benjamin Water-Tight Outlet Boxes.

Hood is threaded to take reflector and neck of reflector in turn has an inside thread which receives the enclosing globe. Finish: hood, green enameled; reflector, green acid-resisting porcelain enamel outside, white inside.

Benjamin Aluminum Vapor-Proof Projectolites

For lighting service in locations such as railroad round houses, where atmospheric conditions are severe.

Entire body of fixture and cover retaining band are of corrosion-resisting aluminum alloy; exterior is green lacquer. All other exposed metal parts are cadmium-plated.

Without necessitating re-positioning, complete unit can be taken down for easy cleaning and re-lamping on floor.

Unit is sealed against entrance of gases and moisture. There are no openings in reflector neck; all wiring is enclosed with leads from socket terminals passing through gasketed ball type adjustable fitting into connector body.

Adjustable ball joint permits positioning at practically any point through a 180° angle by loosening of holding bolt. A set screw in tapped end of adjustable ball fitting provides a means of lateral positioning.

Connector is 2-pole, water-tight type, polarized; rated 15 amperes, 125 volts; tapped for attachment to 1/2-inch i.p. Fixture is wired with No. 16 B. & S. gauge asbestos-covered fixture wire from socket terminals to connector plug. Wire leads not supplied.

Benjamin Unit-Package Fixtures

For 75 and 100-Watt Lamps

An efficient, economical means of providing good illumination for outdoor and indoor locations about the home, farm, estate and roadside stand. These fixtures are replacing bare lamps used in such locations, by reducing glare and directing most of light which is wasted by a bare lamp, to floor or ground area which is to be lighted.

Porcelain enameled steel reflector has removable cadmium-plated cast hood and one-piece easy-to-wire medium base N.E.C. standard porcelain socket. Pipe and bracket are galvanized.

Packed complete in an individual shipping carton with a 1 1/2-inch length of 1/2-inch pipe and cast wall bracket.

No. 1941 R L M Dome Reflector with Wall Bracket

Diameter of reflector, 12 inches. Five in standard package; shipping weight, 28 1/2 pounds. No. 1941.....each \$3.95

No. 1943 Flat Cone Reflector with Wall Bracket

For yard and general outdoor lighting. Diameter of reflector, 14 inches. Five in standard package; shipping weight, 37 1/2 pounds. No. 1943.....each \$3.50

No. 1938 Angle Reflector with Wall Bracket

For lighting ground areas from the side and for use with small signs. Diameter of reflector, 8 inches. Five in standard package; shipping weight, 28 1/2 pounds. No. 1938.....each \$2.85

Benjamin Variety-Lites

For 100 and 200-Watt Lamps

For lighting furnace rooms, attics and similar indoor locations; used outdoors for lighting yards, porches, etc.

Porcelain enameled steel reflector, green outside, white inside. Light can be directed exactly where wanted by adjustment of hinged-swivel mounting bracket which is controlled by three wing nuts. Bracket is cadmium-plated and enameled red. Porcelain one-piece N.E.C. standard socket.

Completely wired; with 4-foot rubber-covered cord and attaching plug.

Cat. No.	Each	Size Lamp Watts	Diam. Reflec-tor, In.	Std. Pkg.	Wt., Lbs. Std.
1930	\$3.20	100	8	1	4 3/4
1932	3.60	200	10	1	6 1/2

Benjamin Intensifiers
National Electrical Code Standard

A supplementary lighting unit designed to illuminate small areas to higher intensities than furnished by the general illumination.

Reflector bowl is of heavy gauge metal with steel neck which contains keyless socket and focusing apparatus for positioning two different sizes of lamps. Universal adjusting bracket allows horizontal and vertical positioning and is attached to steel neck. Tapped 1/2-inch i.p. size.

Dust-tight cover consisting of glass disc, felt gasket and steel retaining band seals interior of intensifier.

No. 5603 taking an inside frosted 60, 75 or 100-watt lamp is equipped with clear glass cover. No. 5604 taking a clear 150 or 200-watt lamp furnished with etched glass cover. No. 5632, equipped with daylight glass cover, is recommended for work requiring color discrimination.

Outside finish is green paint lacquered. Inside reflecting surface is chromium-plated.

Cat. No.	Each	Lamp Size Watts	Glass Cover	DIMENS., IN.		Std. Wt., Lbs.

5632	17.25	150-200	Daylight	12	15 3/4	1	9

Benjamin Inspection-Lites

For 15 to 100-Watt Lamps

For local lighting of inspection operations on plate glass, sheet glass, tin plate and many other similar materials where it is necessary to look through the material directly into the light source or at the reflection of the light source from polished or shiny surfaces. The qualifications necessary for inspecting glass and polished surfaces make this fixture ideal for showing up surface imperfections in a wide variety of materials such as leathers, coated papers and rubber stock having a sheen or gloss which ordinarily makes inspection difficult.

A one-piece porcelain enameled steel reflector produces uniform brightness over the entire surface of the opal glass cover. Reflector is green outside and white inside. Equipped with two medium base twin sockets.

Cover glasses are removable for relamping or cleaning the reflector. Glasses are held tightly in guides by flat bronze springs bearing against them.

Provided with two mounting brackets which are adjustable through an angle of more than 180 degrees making it possible to position the unit at the precise angle necessary for best seeing. Brackets are threaded regularly for 1/2-inch conduit. Mounting brackets are cadmium-plated. Sockets are N. E. C. standard.

Cat. No.	Each	No. of Lamps	DIMENS., IN.			Std. Ship.	
			Length	Depth	Height	Pkg. Wt., Lbs.	Pkg.
5607	\$20.00	4	30	6 3/4	9	1	28
5608	26.00	6	48	6 3/4	9	1	39

Benjamin Bulletin Reflectors
For Intensive Lighting of Small Rectangular and Straight Top Signs

Particularly effective for the lighting of small rectangular signs, long, narrow ridge signs, transom signs, etc.

The distribution of this type of unit is unusually efficient, with a broad spread at top. Sign will be uniformly lighted clear to top and all along top edge. Lamp is close in to inside rear surface of reflector, which means a short cut-off behind reflector and high intensity of reflected light on the sign surface.

The body, with reflector, can be screwed to straight horizontal conduit, aluminum threaded cap removed, socket lifted out, wires fished through conduit and attached to terminals. Socket is then shoved down into place, and cap screwed on. Special shape reflector is porcelain enameled steel, green outside, white inside.

Hood is cast iron, cadmium-plated with threaded side outlet. One-piece porcelain socket, N. E. C. standard.

Tapping: 1/2 inch standard; 3/4 inch when specified.

Cat. No.	Each	Size Lamp Watts	DIMENS., IN.			Wt., Lbs.		
			Diam. B	Diam. C	Ht. A	Ht. D	Std. Pkg.	Std. Pkg.

5732	2.50	75, 100	7	6 1/4	8 1/2	3 3/4	10	28

Prices do not include wires or lamps.

Benjamin Emblem Reflectors
For Intensive Lighting of Circular Emblem and Other Small Signs
National Electrical Code Standard

For lighting circular emblem signs of the type popularly used around automobile service and gasoline filling stations and other similar small signs.

Removable threaded aluminum cap gives easy access to wiring terminals on socket and cuts down cost of installation and wiring.

Conduit is led straight into side outlet of reflector hood. Hood, with reflector, is screwed to conduit, aluminum cap removed, socket lifted out, wires brought through and attached to terminals. Socket is then replaced in hood and cap screwed on.

Cast iron hood is cadmium-plated, with side outlet tapped for 1/2-inch standard 3/4-inch when specified.

One-piece porcelain socket, N.E.C. standard, with easily accessible terminal screws.

Symmetrical design reflector, is porcelain enameled steel green outside, white inside.

5702	2.20	75, 100	8	8	7 3/8	3 1/2	10	30

Benjamin Dust-Tight Glass Covers

A light weight, economical device that will give the reflecting surfaces of Benjamin Industrial Lighting Equipment protection against dust and dirt.

It will give satisfactory service in the average industrial locations where fixtures are exposed only to the dust and dirt of

manufacturing operations. It is not recommended for installation where it will be subjected to acid or alkali fumes, excessive heat or continuous exposure to steam, etc.

Designed for Benjamin Reflector Equipment only. No assurance is given that it will fit other reflectors.

The cover consists of a circular felt gasket, clear glass disc and a one-piece steel retaining band, cadmium finished, having a locking lever with a compression spring.

It is easily attached—the locking lever is first released, which expands the band to its greatest diameter. Then the band is hooked over the reflector bead and the cover pushed up until the band engages the entire edge, after which locking lever is snapped into closed position.

The locking lever with compression spring gives positive tension on the band of the cover at all times. It is virtually impossible for the cover to work itself loose.

The cover in most cases weighs less than the reflector and is easily handled.

Cat. No.	Description	Std. Pkg.	Net Wt. Lbs., Each	Price Each

Benjamin Gymnasium Fixtures

With RLM Dome Reflector

A completely guarded RLM fixture of good appearance, for locations where the lighting fixtures are subjected to frequent jars and hard knocks. Suitable for gymnasiums, indoor baseball courts, volley ball courts, indoor sport arenas, etc.

Special features of this fixture are: longer life; good illumination over horizontal and vertical surfaces; easy lamp removal—large opening in bottom of guard permits passage of lamp; easy cleaning; and attractive appearance.

Each unit consists of heavy gauge steel canopy and wire guard, medium or mogul base keyless socket, Reflector and Lamp Manufacturers' standard dome reflector, and four steel straps for attaching to ceiling. Canopy attaches to straps by means of four large machine screws which are furnished.

Steel canopy and wire guard are white paint enameled. Reflector is white porcelain enameled steel.

No. 15061B Benjamin Symmetrical Reflectors Angle

No. 15061B Reflector projects the light to the front as well as to the side and is used for illuminating post-office sorting racks, shelving, rows of books, and storage bins.

It directs the light on the working planes that need illumination, and eliminates the direct glare caused by bare lamps.

Reflector is durably constructed of rust resisting iron into which is fused the Benjamin porcelain enamel. Finish is green outside, white inside. Equipped with a built-in holder for attachment to all standard brass shell sockets.

No. 3380 Benjamin 45-Degree Ball Fixture Aligners

Outlet Box Cover Type

Consists of a cast iron ball which is mounted between 2 riveted steel plates. Ball is tapped for 1/2-inch iron pipe size. Has hexagon neck for gripping and holding ball when iron pipe is screwed in. Aligner tapped 1/2 inch. For standard 3 1/4 and 4-inch boxes.

Permits fixture to hang plumb and protects fixture against mechanical jars and shocks.

Attaches to standard box by means of 2 screws. Slot in cover of aligner eliminates necessity of removing more than one screw. Just remove one screw, back up other, slip aligner in place and replace screw. Tighten both screws to hold aligner in position. Finish, electro galvanized.

Standard package, 10; weight, 6 1/2 pounds.
Price, No. 3380.....each \$.30

Benjamin Weatherproof Cable Suspension Fittings

Designed for quick, easy hanging of reflectors from messenger cables.

The hook and clamp construction of the fittings makes it possible to attach the reflectors to the cable with unusual speed and a minimum of effort. Permanent anchorage is assured without the use of any loops or wire clamps and rigidity of suspension is greatly increased.

With Cross Arm

This type fitting is equipped with a cross arm having porcelain knobs at each end for supporting current carrying wires. Iron parts galvanized finish.

No. 5625 Benjamin Oxidized Aluminum Bowl Shades

This is an oxidized aluminum shade holder unit of concentrated distribution.

It can be attached to any standard brass shell socket, whether of bead type, Uno-thread or combination bead and thread type.

By adjusting the straps which attach the holder to reflector, in the slots provided, and by changing the position of the holder on the socket shell, the unit will accommodate any size lamp from 25 to 60 watts.

The shade is finished in dull green lacquer outside; oxidized aluminum inside. Straps and holder are cadmium-plated.

R & S Vapor, Gas and Dust-Proof Fixtures

Screw Globe Type

These fixtures are designed for use in places where dampness, dust, combustible gases or corrosive vapors exist; such as for marine use, out-door use, oil refineries, grain elevators, mines, gas and chemical plants, etc.

They are so constructed that, should the protecting globe accidentally be broken, the fixture body will remain air-tight preventing vapors from entering the conduit line. Fixtures are made in cast iron (electro galvanized), cast brass and cast aluminum alloy.

Specifications

Brass fixture bodies—standard finish is black oxidized throughout; special finishes upon request.

Iron fixture bodies—standard finish is electro galvanized.

Aluminum fixture bodies and guards—standard finish is natural aluminum color.

Reflectors are made of heavy steel, porcelain enameled green outside, white inside.

Guards are heavy gauge brass round wire, mounted on threaded brass ring; standard finish, black oxidized.

All globes are made of best American flint glass and guaranteed true to size. Only natural colored glass is used. Seating surfaces are ground true and smooth.

High grade cloth inserted rubber gaskets are furnished as standard equipment. Gaskets of other material will be supplied on request.

Receptacles are moulded composition, with shell moulded in base to provide for air-tight condition even though the globe should become broken.

Maximum size of conduit, $\frac{3}{4}$ inch. When ordering, specify outlets required.

R & S Pendent Type Vapor-Proof Fixtures

With RLM Reflectors

Fixtures are complete with RLM reflector. They are furnished with or without guard.

**R & S Swimming Pool and Fountain
Lighting Fixtures**

Russell & Stoll Company, pioneers in the field of watertight and marine lighting, offer a complete line of underwater lighting units, perfect in every detail and suitable for every type of pool construction.

These fixtures are constructed of high grade valve bronze; equipped with polished chromium copper reflectors, clear spreadlight lens producing a wide horizontal beam of light without glare.

By the addition of color filters many attractive tints may be produced.

The illustration depicts a typical swimming pool wall construction with a No. 2362 bronze adjustable underwater floodlight in position in a cast bronze housing No. 2362H and a bronze cable box No. 2363 with cover removed and in which is coiled all surplus cable.

This floodlight pivots in the bronze housing allowing the fixture to be adjusted to the most efficient lighting angle; water cooled, because it is entirely surrounded by water when installed. By lifting floodlight out of pivot bearings in the bronze housing, fixture can be raised to surface and relamped in a few minutes without draining pool or disturbing current carrying line.

This unit will accommodate a Type G-30 floodlight lamp, 250 or 400 watts. Prices and detailed information of this fixture and various other style units covered in Bulletin 65 will be gladly forwarded upon application.

Thompson Lamp-Maintenance Hangers

The Thompson Hanger is a safety lowering switch, adapted for use with any reflector, regardless of the kind or size, in any industrial circuit.

The hangers are made with many modifications to meet a wide range of conditions. There are three types of sheave housing, open front, the semi-enclosed and the seal type.

All line wire connections are located inside the hanger, but the wiring outside of the hanger may be either exposed or enclosed in conduit by means of appropriate fittings. Hangers providing for exposed outside wiring are termed semi-enclosed and others, conduit type.

*No. 93-A

No. 93-A

This model has a medium depth of canopy or enclosure, adapted for either indoor or outdoor use. It has two porcelain bushings in the back of the canopy to provide for the entrance of line wires into the hanger. Lends itself readily to either open wiring or conduit distribution.

Cat. No.	Std. Pkg.	Wt. Net	Lbs. Ship.	Price Each
†93-A	30	8	10	\$9.00

*No. 93-B

This model is for use where it is desired to enclose line wires directly into the hanger. This hanger is exactly like the Model No. 93-A except that instead of having two porcelain bushings, there is one hole in the back of the canopy for attaching the conduit fittings, which may be of any kind desired.

There are no porcelain knobs on this model.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
93-B	30	8	10	\$9.00

No. 94-A

*Nos. 94-A and 94-B

These two models have a deep skirted canopy to provide additional weather protection where it is desired.

Except for the difference in canopy, they are exactly the same as Nos. 93-A and 93-B respectively.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
†94-A	20	9	11	\$10.00
94-B	20	9	11	10.00

*These models have a sheave housing which is semi-enclosed in such a manner that it is necessary for the chain to pass in and out horizontally.

Nos. †96 and 97

These two models correspond to the medium canopy hangers Nos. 93-A and 93-B, respectively, except that they have an open front sheave housing, which will enable the chain to operate at any angle in a vertical plane, below the horizontal, thus adapting them for use in connection with a sloping overhead support.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
†96	30	8	10	\$9.00
97	30	8	10	9.00

Nos. †98 and 99

These models have also the open front sheave housing, but are otherwise exactly the same as the deep skirted models Nos. 94-A and 94-B.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
†98	20	9	11	\$10.00
99	20	9	11	10.00

†Porcelain knobs are provided on the sheave housing of these models only to serve as strain insulators if required.

No. 93-B

No. 96

Thompson Lamp-Maintenance Hangers

Sealtype Series

No. 201-A

The Sealtype Hanger has a sheave housing designed to give the greatest possible protection against deterioration from dirt and corrosion to the wheel which is the only moving part in the upper member of the hanger.

This sheave housing is tapped for 3/4-inch conduit to enclose the chain. When the chain conduit is screwed into place the housing will be completely sealed, except for the opening in the bottom where the chain passes down inside of the hanger canopy. With this type of hanger the wheel is easily accessible for inspection.

The distinctive feature of the Sealtype Hanger series is the change in the sheave housing.

The Sealtype Hangers are offered to correspond with previously described models, as follows:

Cat. No.	Each	Corresponds to Model No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping
201-A	\$10.00	93-A	30	8	10
201-B	10.00	93-B	30	8	10
202-A	11.00	94-A	20	9	11
202-B	11.00	94-B	20	9	11

Duplex Construction

In many plants the wiring distribution conduit will be some distance below the overhead support. To meet this condition, any of the models, except No. 95, can be supplied with the upper member in two parts, that is the sheave housing separated from the body of the hanger, and a special malleable iron flange plate tapped for 3/4-inch conduit attached to top of canopy and another one to bottom of sheave housing, in order that a piece of conduit of the desired length may be inserted between the two members thus formed.

In specifying this construction add the letter D to the model number and 50 cents each to the net price of the device.

Thompson Shock Absorbers

All parts, except spring, are malleable iron castings galvanized; weatherproof.

The lamp or socket wires should be given a loose twist, or meshed spiral form, inside of the stem and canopy, so as to provide flexibility for the vibrating movement.

The canopies of both models come regularly with a 1/2-inch female thread at the top, but when so specified on the order a 3/4-inch male thread can be substituted. Both models have a 1/2-inch male thread at the bottom to be screwed into the lamp fixture.

Cat. No.	Each	For Lamps Weighing	Weight Pounds

Cove Striplights, Aisle Lights, Spotlights, Floodlights and Dimmers

Detailed blueprints and prices upon application.

No. 600 Kliegl Permanent Type Borderlights

For 60 to 100-watt clear or naturally colored lamps. Furnished completely wired, with circuits ending at a special terminal block in a splice box at right or left end as specified.

Furnished in one continuous length, or in sections; with chains and pipe batten for hanging.

State length of border, number of colors and size of lamps required when ordering.

Prices on application.

No. 731 Kliegl Cove Light Strips

Universally and adjustably mounted so that unit can be independently set to suit conditions; has GRC type reflectors with hinged frame for colored glass roundels.

Made in two sizes: No. 731 with short neck reflector for 100-watt lamps; No. 731A with long neck reflector for 150-watt lamps. Specify length of strip, straight or curved, and number of lights for each color per foot required when ordering. Prices on application.

Kliegl Disappearing Type Footlights

No. 830

When not in use footlights may be closed down flush with stage floor, leaving an unobstructed platform. Serviceable in instances where the stage is used sometimes for entertainments and at other times for speakers and lecturers, as in schools, clubs, assembly rooms, etc.

Furnished completely assembled; in straight standard 5-foot lengths, with splice box, automatic cut-off switches and oak flooring. Receptacles wired on three 2-wire circuits for independent control of three colors. Sections have sufficient allowance to permit mitering on ends for curved installations. Special lengths, if needed.

Comply with Underwriters' requirements. Lamps are not included in price.

No. 829

No. 829.....each \$50.00

No. 830

No. 830.....each \$85.00

Single row, open type footlight with receptacles for fifteen 60 to 100-watt lamps; complete 5-foot section.

Weight, 46 1/2 pounds.

Single row enclosed type footlight with colored glass roundels, for twelve 100-watt lamps; complete 5-foot section.

Weight, 56 pounds.

Kliegl Permanent Semi-Flush Type Footlights

No. 621

Double-row enclosed type footlight with colored glass roundels; for 100 or 150-watt clear lamps.

No. 622

Single-row, open trough type footlight for 60 to 100-watt clear or naturally colored lamps. Fitted with single row medium screw base receptacles.

State length, number of colors and size of lamps required when ordering. Prices on application.

Crouse-Hinds Floodlight Projectors
Medium and Long Range
Schedule F

Has adjustable mountings with swivel base. By removing the base casting, a slip-fitter base is obtained which is designed to fit over pipe, the diameters of which are: Type ADA-12, 3/4-inch; Types ADA-14, ADE-14 and ADA-16, 1 1/4-inch.

Types ADA-14 and ADA-16, the standard mounting base is removed and a CGB295 connector is furnished in the top of the slip-fitter for wiring convenience. Several bases and brackets can be furnished.

Type ADA-14 Two U-bolts are furnished with each Type ADA-12 floodlight which will clamp the floodlight to any pipe from 3/4 to 1 1/2 inches.

Type ADA-14, quadrant mounting, cast brass base; Type ADE-14, steel trunnion mounting, cast brass base.

Lamp receptacles for Type ADA-12, porcelain medium screw base (No. HL8509); for Types ADA-14 and ADE-14, Mogul screw base (Cat. No. HL2128); for ADA-16, porcelain Mogul screw base (Cat. Nos. HL2128 for PS lamp, HL7136 for G bulb lamp).

Lamps for Type ADA-12, 150-watt, PS-25 bulb; 200-watt, PS-30 bulb; or 250-watt, G-30 bulb. When using the G-30 bulb lamp, the floodlight must not be tipped more than 45 degrees below the horizontal.

Circular louvers for eliminating spill light can be provided. Clear, pyrex, heat-resisting lens. Clear, spread or diffusing convex lenses can be furnished. Colored lenses can be furnished for ADA-12 color screens for ADA-14, ADE-14 and ADA-16.

Weight of Type ADA-12, 14 1/2 pounds; Type ADA-14, 42 pounds; Type ADE-14, 48 pounds; Type ADA-16, 66 pounds. Aluminum finish.

**HL3252 extension for using 500 or 1000-watt G-40 lamps with this floodlight can be furnished at \$3.00.

†HL3683 slip-fitter base can be furnished separately at \$5.00, when it is desired to change from standard to slip-fitter mounting.

Catalogue numbers do not include incandescent lamps.

Prices upon Application

Type ADR-12 Crouse-Hinds Floodlight Projectors
Schedule F
Portable

Type ADR-12 Floodlight is a small compact unit especially adaptable for portable use either when a narrow beam spotlight or a wide evenly distributed beam of light is required.

Has a 1 1/2-inch crystal mirrored glass reflector with hammered surface when used with PS bulb lamp or smooth surface when used with G bulb lamp. Porcelain medium screw base lamp receptacle (Cat. No. HL8509). An adapter can be furnished for use with

21, 32 or 50 candle power, 6 or 12-volt bayonet base lamps at \$1.85 each.

Cast aluminum alloy housing. Non-ventilated, dust-tight and weatherproof.

Steel trunnion mounting with 12-inch wheel base of cast aluminum alloy.

Ten feet of rubber-covered cable is furnished with a medium screw plug. A watertight stuffing box is provided in the rear of the housing.

Clear Pyrex, or colored, convex, heat resisting lens in plain, spread or diffusing styles.

Lamps, 150-watt, PS-25 bulb; 200-watt, PS-30 bulb when used with a hammered reflector and diffusing lens for wide angle distribution; 250-watt, G-30 bulb when used with a smooth reflector and clear lens for spotlight use. When using the G-30 bulb lamp the floodlight must not be tipped more than 45 degrees below the horizontal.

Natural aluminum finish. Weight, 27 pounds.

Prices upon application.

Type LCE-24 Crouse-Hinds Floodlight Projectors
Medium and Long Range
Schedule F

The increased efficiency of these projectors allows large areas to be lighted with a smaller number of projectors, with a corresponding decrease in installation cost, lighting load and maintenance costs. When projectors are used for lighting railroad or factory yards, the area immediately beneath the projector between the tower and the place where the main beam strikes is often quite dark. These projectors can be supplied with a large hood which reflects part of the stray light above the beam to the ground. Hood also prevents dust and soot from falling on the lens.

Cast aluminum alloy housing; dust-tight and weatherproof.

Crystal glass reflector with smooth or hammered surface, 24-inch diameter.

Porcelain Mogul screw base lamp receptacle. (Cat. No. HL8751.)

Clear, convex, Pyrex heat-resisting lens. Spread or diffusing convex, heat-resisting lens furnished without additional charge, if specified on the order.

Lamps, 750 to 2000-watt, PS-52 bulb; 1000 or 1500-watt, G bulb.

Case, natural aluminum finish; base and trunnion, galvanized.

LCE-24	Hammered	40467	750 to 2000	PS-52	148

Prices upon application.

Type LCE-1120 Crouse-Hinds Floodlight Projectors

Schedule F

Medium and Long Range

For use with 1500-watt lamps. The use of this projector reduces the installation cost, lighting load and maintenance cost for the illumination of large areas. Can be arranged with plain, spread or diffusing lens.

Has a 20-inch, crystal mirrored glass reflector either narrow or wide beam. The wide beam is recommended for everything except very long range projection. Mogul screw base lamp receptacle (Cat. No. HL7012).

Has 3-way focusing mechanism, operated from the outside of the case.

Steel trunnion mountings on cast feraloy base. Both horizontal and vertical adjustable stops are provided. The floodlight can be turned around or tipped over for convenience in relamping and cleaning, and returned to its exact original setting. Special bases for various mounting conditions can be furnished.

A 3-foot lead of 2-conductor, rubber-covered cable is furnished. The cable enters the housing through a water-tight stuffing box. Each wire covered with slow-burning insulation.

Case is natural aluminum finish; base and trunnion, galvanized finish.

LCE-1120	Wide Beam	41550	750	to 1500	PS-52	115

Prices do not include incandescent lamps.

Prices upon application.

Crouse-Hinds Underwater Floodlights

Schedule F

Developed for submersion in water, such as in fountain and swimming pool installations. Provided with 2 tapped holes for connection to 3/4-inch flexible drain hose.

Type FDS-12 is especially adapted to underwater lighting of swimming pools by wet-niche method. Wet-niche bracket mounting allows unit to be lifted from its brackets and raised to surface of pool for relamping. Can also be furnished with angle bracket mounting for fountains.

Types FDE and FDV provide adequate lighting for any size or type of fountain. Type FDE-12 has a trunnion and swivel base. Type FDV-12 has a servicing pedestal which allows floodlight to be raised above water for relamping when mounted just below surface of water in a fountain.

Has porcelain mogul screw base lamp receptacle (Cat. No. HL7136). Has a 12-inch silvered glass reflector.

Lamps are 500-watt, 115-volt, G-40 bulb. Can be arranged for use with 250-watt, G-30 bulb or 400-watt, G-30 bulb.

Crouse-Hinds Floodlights Short and Medium Range

Schedule F

Type RM

Type RME

Type RMU with Hood

Types RM and RMU Floodlights meet lighting requirements in roundhouses, steel mills, on construction work or wherever stationary, strong, gas and moisture-proof illuminating units are desired. When mounted in roundhouses or other buildings where corroding vapors circulate, they offer full protection against the damage to which exposed lights and wiring systems in such locations are subjected.

Type RM floodlights are designed for fastening to a flat surface and projecting light at right angles to the plane of the surface. Fastened by 4 lugs on back.

Type RMU floodlights have a universal wall bracket, which allows the beam of light to be directed where desired.

Type RME is a rugged, cast feraloy floodlight for portable use. Is trunnion mounting. Used where it is desired to transport the light to the job, also when working under cars and locomotives.

Has porcelain enameled steel reflector. Porcelain enameled reflector used for wide spread beam and short range. Hammered glass reflector concentrates light for projection to a greater distance.

Porcelain, medium screw base lamp receptacle (Cat. No. HL674). Mounted on bracket adjustable with screw-driver.

Wiring connections for Types RM and RMU, 3/4-inch threaded hubs at top and bottom. A pipe plug is furnished to close the unused hub. For Types RM and RME, two 3-foot leads of No. 14 gauge stranded wire. For Type RMU, 30 inches steel armored cable with 2 CGB285 connectors.

Cast feraloy housing. Gas and moisture proof.

Cast feraloy door frame, gasketed to exclude gas, moisture and dust from interior. Held in place by 3 swivel bolts with capped wing nuts.

Clear, convex, heat-resisting lens. Spread or diffusing convex, heat-resisting lens can be furnished.

For 10-inch floodlight, 60 or 100-watt A bulb lamps; for 12-inch floodlight, 150 or 200-watt PS bulb lamps.

Baked black enamel finish.

Crouse-Hinds Incandescent Searchlights

Schedule F

Type DCE-16

Designed for long range or spotlight use.

Has 16-inch commercial precision mirrored glass reflector (Cat. No. HL4132).

Type DCE-16 furnished with 2 feet weatherproof cable; Types DCX-16 and DCY-16 with slip rings in the pedestal except for low voltage lamps, in which case flexible leads are furnished.

Clear, plain, convex, heat resisting lens. Diameter 16 1/16 inches.

Length of standard control of stem of Type DCX-16 below base, 5 inches.

Catalogue numbers do not include incandescent lamps. Type lamp to be used must be specified when ordering. Prices upon application.

Type MPA-1 Crouse-Hinds Floodlights

Short Range—Open Type

Schedule F

With Cross-Arm Base

Short range, wide angle floodlight designed for illumination of gasoline service stations, tennis courts, playgrounds, swimming pools, parking lots, football fields and similar places. Has Mogul screw base skeleton lamp receptacle (Cat. No. HL7012).

The cross-arm mounting bracket of cast aluminum terminates in a round plate with a hole for 3/4-inch bolt in the center. The bracket can be bolted to a wood or steel cross-arm.

The slip-fitter mounting consists of a cast aluminum bracket and slip-fitter for 1 1/2-inch pipe.

The steel pole-bracket is drilled for two 5/8-inch bolts or lag screws. Can be fastened to side of a wood pole or building.

Lamps are 1000, 1500 or 2000-watt, PS-52 bulb General Lighting Service. White bowl lamps can be used to reduce glare. Hard glass lamps are recommended as they reduce breakage caused by driving rain or snow.

Two leads, No. 12 asbestos-wrapped wire, attached to the lamp receptacle run through hollow support arm. Adapter cap for overhead wiring can be furnished with slip fitter mounting. Cross-arm and pole bracket mountings furnished with a wire outlet in bottom of bracket arm, which consists of a porcelain 1-wire cover; diameter of hole, 5/8 inch.

Type	Mounting	Without Auxiliary Reflector Cat. No.	With Auxiliary Reflector Cat. No.	Wt. Lbs.

MPA-1	Pole-Bracket	41732	41659	37

No. HL3935, Overhead Feed Cap Only.

Prices do not include incandescent lamps. Prices upon application.

Type MPA-2 Crouse-Hinds Floodlights

Schedule F

2-Lamp—Open Type

Cross-Arm Mounting

Particularly adapted to the lighting of baseball parks, football fields, swimming pools, play grounds, tennis courts and gasoline service stations. Its size, shape and reflecting surface combine to make an efficient unit. Can be mounted on wood or steel poles, cross arms, steel towers or on sides of buildings.

Has 2 Mogul screw base skeleton lamp receptacles (Cat. No. HL7012). The 30-inch reflector is of copper-bearing steel with a 3-layer mat white porcelain enamel finish inside and a blue porcelain enamel finish outside.

Cross-arm mounting bracket of cast feruloy terminates in a round plate with a hole for a 1/2-inch bolt in the center and a cast quadrant slot. Bracket can be bolted to cross-arm.

Slip-fitter mounting is for 2 1/2-inch pipe. Furnished with a wire outlet so that wires can be brought through the steel pole and out at the slip-fitter. Slip-fitter is attached to the standard bracket with two 1/2-inch cap screws which are furnished with it.

Pole-bracket mounting is 1/4-inch pressed steel formed to fit the pole. It is attached to the standard bracket with two 5/8-inch bolts or lag screws.

Three asbestos-wrapped wire leads attached to lamp receptacles, one wire being common; run through hollow bracket arm and are long enough to permit splicing to rubber-covered wire.

Two 750, 1000, 1500 or 2000-watt, PS-52-bulb, General Lighting Service lamps. White bowl lamps reduce glare; hard glass reduces breakage caused by driving rain or snow.

MPA-2	Cross-Arm	41696	47
MPA-2	2 1/2-Inch Slip-Fitter	41697	55
MPA-2	Pole-Bracket	41698	53

Prices do not include incandescent lamps. Prices upon application.

Crouse-Hinds Floodlights

Schedule F

Designed for the illumination of football fields, indoor baseball fields, parking spaces, gasoline service stations, and other areas of similar nature. Can be furnished with heat-resisting clear lenses or without lenses.

Aluminum finish. Has Mogul screw base lamp receptacle (Cat. No. HL7012).

Lamps: 1000-Watt Floodlight—750 or 1000-watt, PS-52 bulb, 110-volt General Lighting Service lamps; 1500-watt, PS-52 bulb lamp can be used in the unit without lens; 500-Watt Floodlight—300 or 500-watt, PS bulb, 110-volt General Lighting Service lamps.

Furnished with 3 feet of 2-conductor duplex cable. This cable has a very heavy weatherproof rubber jacket. The individual wires are insulated with slow-burning insulation of Type AF construction. The cable enters the housing through a stuffing box with tapered rubber bushing. The rubber jacket is cut away where it enters the housing, leaving only the slow-burning insulation inside the unit.

Where a group of floodlights are to be connected to open wiring, these floodlights can be furnished with Type FBB-2 Condulets and short leads of asbestos-covered wire instead of the duplex cable. This can be done without extra charge if specified on the order.

Crouse-Hinds Industrial Lighting Units

Schedule F

Type RLS

Type RLU

Types RLS and RLU Industrial Lighting Units meet lighting requirements in roundhouses, steel mills or wherever a strong, stationary, gas and moistureproof illuminating unit is desired. When mounted in roundhouses or other buildings where corroding vapors circulate, they offer full protection against the damage to which exposed lights and wiring systems in such locations are subjected.

Reflectors are porcelain enameled steel. Size 12 or 16 inches.

Medium screw base lamp receptacles for Types RLS-12 and RLU-12 (Cat. No. HL8079); skeleton mogul screw base for Types RLU-16 and RLS-16 (Cat. No. HL7012).

Type RLS has suspension mounting. Type RLU has universal wall bracket.

Cast feraloy or cast silicon aluminum alloy housing; gas and moisture-proof.

Wiring connection of Type RLS, direct to conduit by 3/4-inch pipe. Type RLU connects to conduit by a flexible, steel armored cable and 2 CGB235 connectors, making a gas and vaporproof connection.

Clear, convex, Pyrex, heat-resisting lens. Diffusing, convex, heat-resisting lens can be furnished.

Cast feraloy or cast silicon aluminum alloy door frame held against an asbestos gasket by 3 swivel bolts and capped wing nuts. Door is hinged on one side.

Cast aluminum door and frame, natural aluminum finish; cast feraloy door and frame, black enamel finish.

Type GCP-14 Crouse-Hinds Lantern Floodlights

Schedule F

With Floodlighting Reflector

With 4-Inch Slip-Fitter

An ornamental type floodlight designed for illumination of buildings, gasoline service stations and other subjects where the appearance of the lighting unit is a factor of importance. Daytime appearance is that of an ornamental street lantern; at night the reflector on the inside transforms it into a powerful floodlight.

This lantern is listed in 2 ways. Form A for use in lighting buildings or other subjects where beam is directed above the horizontal. Sufficient light is reflected below horizontal with this type to illuminate lower portion of buildings. Has a heat-resisting top canopy. A horizontal adjustment of 45° is provided so that the beam can be turned to strike building at an angle, and still have one side of lantern parallel with building. Form B lantern furnished with one side panel of heat-resisting glass. Beam passes through this panel and the horizontal adjustment of reflector is locked. This type is intended for lighting ground areas and low buildings, such as gasoline service stations.

Has 14-inch hammered mirrored glass reflector (Cat. No. HL3362). Main floodlight lamp receptacle is porcelain Mogul screw base (Cat. No. HL2128); auxiliary lamp, porcelain medium screw base (Cat. No. HL6019); unit without reflector, Mogul screw base or series film cutout. Two leads of asbestos-wrapped wire are connected to lamp receptacle and extend one foot through bottom lantern. Frame is of cast aluminum alloy. Metal portions painted green on outside.

Usually mounted at curb line on ornamental posts when used for lighting buildings. Should be mounted from 8 to 14 feet above ground, poles spaced not closer than 20 feet apart. Table below gives maximum distances between poles for different sidewalk widths, for single units.

Sidewalk Width	10	15	20
Maximum Spacing Between Poles	30	45	60

Slip-fitter mountings for 4-inch pipe or 7-inch ornamental pole top. An adapter can be supplied for 4-inch slip-fitter to take 2 1/2-inch pipe. A cast feraloy double bracket can be supplied with slip-fitter for 4-inch pipe at bottom and arranged to take 2 Type GCP-14 lanterns with 4-inch slip-fitter bases. An ornamental cast feraloy base can be furnished with or without a pole. Top of base is tapped for 4-inch pipe. Base is attached to a concrete foundation by four 3/4-inch bolts, spaced 90° apart on a circle of 6 3/8-inch radius.

Main floodlight lamps are 300 to 1500-watt, PS bulb. When used with HL3252 adapter, 500 to 1500-watt, G bulb lamps can be used. Auxiliary lamp, any medium screw base lamp up to 200-watt, PS-30 bulb.

With Wide Beam Reflector

Catalogue numbers do not include incandescent lamps.

Prices upon Application

Type RDC-8 Crouse-Hinds Floodlights
For Lighting Pits, Auto Lifts and Underpasses

Schedule F

Form F

Form W

This floodlight is designed for mounting in concrete. It is made in 2 styles, one for floor mounting and the other for wall mounting.

Form F is designed for mounting in the floor. It is water-tight, with a door that overlaps the case, and yet the projection above the concrete is only about $\frac{1}{16}$ of an inch. The surface of the door has a rough pebbled surface which prevents its becoming slippery. Has a wide, flat gasket between the door and the case. It is provided with a flat lens which is heavy enough to allow it to be stepped on or driven over and offers great resistance to tools or other articles that might be dropped on it. Can also be furnished with a new type of glass lens which has been treated to increase its resistance both to impact and to a static load. It is approximately 4 times as strong as any other heat-resisting glass, and is practically unbreakable under any conditions normally encountered. This special glass is available only in the plain type.

Any unit installed in the floor should be provided with a $\frac{1}{2}$ -inch drain pipe connecting the tapped drain hole in the bottom of the housing with a sewer. This provides a drain for condensation and maintains atmospheric pressure inside the unit. If connection to a sewer is not practical the drain pipe can be run several feet into the ground into a hole filled with crushed stone.

Form W is similar to Form F, except it is provided with a hinged and flush door, so that it can be set absolutely flush with the concrete wall. It can also be mounted on the wall by using the L bracket and mounted on the ceiling by using the Z bracket. This unit provides lighting for pits, underpasses, tunnels, washracks, etc. The refracting lenses can be set to refract the light either up or down.

Has an 8-inch porcelain enameled steel reflector. A silvered glass, narrow beam reflector can be furnished. Porcelain medium screw base lamp receptacle (Cat. No. HL6019).

Two $\frac{3}{4}$ -inch hubs are provided, one on each side of the housing so that wiring can be carried through the unit when several floodlights are mounted in a row. The reflector should be removed from the floodlight when wiring. Wire with slow-burning insulation must be used.

Form W has $8\frac{1}{2}$ -inch flat, heat-resisting glass or flat refracting lens which projects the light in one direction. Form F has $8\frac{1}{2}$ -inch flat, heat-resisting glass, impact-resisting, or flat, refracting lens.

Lamp, 100-watt, A-23 or PS-25 bulb; 150-watt, PS-25; or 200-watt, PS-30 bulb. Lamp receptacle bracket is adjustable and can be set for any of these lamps by loosening 2 screws and sliding the bracket until lamp filament is at the center of reflector. Unless otherwise specified, all units furnished with lamp receptacle set for 200-watt lamps.

Black enamel finish.

Prices do not include incandescent lamps.

Prices upon Application

Crouse-Hinds Type RCDE-8 Floodlights
Explosion Proof—For Use in Hazardous Locations

Schedule F

Portable Unit

Designed to meet the requirements of an explosion-proof lighting unit. Recommended for lighting automobile greasing pits and lifts, and also for general use in hazardous locations. Can be supplied with mountings for fixed installation or portable use.

Can be furnished with trunion mounting and either with or without carrying handle and wheel base. Recommended for use around oil refineries, chemical plants, and for lighting spray booths from the outside. For short range lighting, the 8-inch porcelain enameled steel reflector should be used; for longer range or for spotlight applications, the silvered glass reflector provides a narrower beam.

Has medium screw base receptacle (Cat. No. HL 6019).

The wiring chamber is separated from the floodlight housing by a wall and the point where the wires pass through the wall is sealed with a special compound. Two $\frac{3}{4}$ -inch hubs are provided, one on each side of the wiring chamber. Ample room is provided for splicing. In some cases, particularly when the unit is mounted in the floor it is advisable to fill the wiring chamber with compound after making the splice. A threaded cover is provided for the wiring chamber. Thirty feet of 3-conductor No. 16 cable is furnished.

Plain, impact and heat-resisting $8\frac{1}{2}$ -inch lens (Cat. No. HL 5196). A refracting screen (Cat. No. HL5413), designed to refract the light in one direction, can be furnished. A heavy steel grid is provided over the lens.

Lamps are 100-watt, A-23 or PS-25; 150-watt, PS-25; or 200-watt, PS-30 bulb. For long range, narrow beam, 250-watt, G-30 bulb floodlight service lamp should be used. Unless otherwise specified, all units are furnished with lamp receptacle set for 200-watt lamp; if 250-watt lamp is to be used a special lamp receptacle and adapter are supplied.

Crouse-Hinds Floodlight Projector Lenses

Schedule F

Diffusing Lens

Spread Lens

All floodlight projectors listed are supplied with plain, convex, Pyrex, heat-resisting lenses. Unless another lens is specified, plain lens will be furnished. The plain lens does not alter the beam spread of the floodlight in any way.

It is often desirable to increase the natural spread of a floodlight beam either in all directions or in one direction only. To meet this condition, two different types of lenses as described below can be supplied. There is no additional charge for these lenses.

The convex, heat-resisting diffusing lens spreads the natural beam both horizontally and vertically, giving a larger light spot. This lens is used where the natural spread from the floodlight is not sufficient to cover the area desired. Diffusing lenses should not be ordered with any projector arranged for use with concentrated filament lamps, as these lamps are used to secure a narrow beam spread.

The convex, heat-resisting, spread lens spreads the light at right angles to the direction of the ribs, leaving the spread in the other direction the same. The resulting beam is elliptical in shape. When the ribs are vertical, the beam is spread horizontally and when they are horizontal, the beam is spread vertically. The lens can be set at the factory for either spread, and the order should specify which is desired. This type of lens is useful when lighting rectangular areas. The nominal beam spread produced with the standard spread lens is 45 to 50 degrees. The actual beam spread depends on the characteristics of the floodlight with which the lens is used.

To obtain the Cat. No. and list price of any lens, refer to table No. 1 for the diameter of lens required to fit the floodlight; then under table No. 2 will be found the Cat. No. and price of the style of lens of that diameter.

Type DCB24 Crouse-Hinds Airport Revolving Beacons

Conforms to requirements of the Department of Commerce. Housing, trunnion arms and base are cast aluminum alloy.

Optical system consists of 24-inch diameter, 10-inch focus precision parabolic glass reflector and 1000-watt, 115 or 30-volt, T20-bulb airway beacon lamp. Two incandescent lamps, mounted in an automatic lamp-changer, are used.

The front lens is a 1-piece, convex, heat-resisting roundel which produces a double beam of light. The main beam, consisting of 85% of the reflected light, passes straight through the lens, while the remaining beam is directed upward 25°.

Beacon revolves at 6 r.p.m.

With Automatic Lamp-Changer

Type DCE-24 Crouse-Hinds Airport Floodlights

Schedule F

Type DCE-24 Airport Floodlight is used to light the landing area of an airport with from 3 to 8 floodlights grouped together, and the beams overlapped.

Furnished with a commercial precision mirrored glass reflector, 25 inches in diameter.

The housing is cast aluminum non-corroding alloy, one-piece, non-ventilated, dust-tight and weatherproof.

The door frame is hinged at side and clamped to the housing with 6 rugged C clamps.

Spread convex heat-resisting lens giving horizontal beam spread of approximately 40° or 80° can be furnished.

The focusing mechanism is 3-way, operated from outside of housing.

Louvers or vanes are attached to the door frame and are designed to cut off all direct lamp rays above the horizontal.

Type	Cat. No.	Description	Watts	Volt	LAMP Bulb	Wt. Lbs.
DCE-24	40775	With 40° Spread Lens	3000	32	GT-38	122
DCE-24	40783	With 80° Spread Lens	3000	32	GT-38	122

Prices upon application.

Type APW-3 Crouse-Hinds Airport Wind Cone Fixtures

Every airport should be equipped with one or more wind direction indicators so that a pilot taking off or landing can readily ascertain the wind direction.

The wind direction indicator should be illuminated at night and the Crouse-Hinds Type APW-3 wind cone fixture is correctly designed to illuminate the wind cone. It consists of four weatherproof condulets with suitable deep bowl reflectors for 100-watt lamps, and an obstacle light mounted in the center of the cross.

The obstacle light is tapped on the bottom for a 1-inch supporting pipe, and has four 3/4-inch hubs 90° apart for the arms supporting the condulets with reflectors.

The length of the arms between the center obstacle light and the condulets on the arms should be governed by the length of the wind cone and the distance the cone is below the lighting units. Arms from 2 to 4 feet long are necessary.

Reflectors take 100-watt, 115-volt, A23-bulb lamps. Obstacle lights take 60-watt, 115-volt, A21-bulb lamps.

Cat. No.	Description	Weight Pounds
APW-3	Wind Cone Fixture Complete, Less Conduit	30
VAPX32175	Obstacle Light Only	4 3/4
V2847-S4	Condulet and Reflector Only	6 1/2

Prices upon application.

Crouse-Hinds Ceiling Height Projectors and Indicators

Schedule F

Type DCE-14 Projector with Flange Base

Ceiling Height Indicator

Every airport should be equipped with a ceiling projector and a ceiling height indicator by means of which the ceiling, or height of the clouds above ground, can be measured.

Projector is a powerful searchlight, the beam of which is pointed upward to the clouds, and indicator is a quadrant graduated directly in feet.

Projector has cast aluminum alloy housing, 14-inch diameter parabolic glass reflector, heat-resisting lens.

System of louvers cuts off all spill light.

Type DCE-14 Ceiling Height Projector

Catalogue numbers do not include incandescent lamps.

If specified, Type DCE-14 projector can be equipped with lamp receptacle for use with prefocused base lamps.

Prices upon application.

Crouse-Hinds Airport Boundary, Obstacle and Approach Lights

For Series or Multiple Circuits
Schedule F

No. VAW5440

No. VAP3170

No. VAP6491

It is customary to outline a landing field with boundary lights so that a pilot will know the shape and extent of the field. These boundary lights should either have frosted globes or be used with frosted lamps.

All multiple lamps which are used in boundary light circuits have inside frosted bulbs so that clear enclosing globes are desirable.

Red globes should be used on all obstacle lights. Green globes should be used on approach lights to mark the best approaches to the field.

Housing is cast aluminum. Guards can be furnished for the fixtures equipped with the plain globes. No guards are available for the units with the Holophane globes.

In all of these fixtures the globe seats on a rubber gasket. In the case of the plain globe units another gasket is used between the globe flange and the retaining ring or guard to further protect the glass.

Sufficient space is provided in the base of all units for convenience in making the electrical connections.

Series Circuit

Take 6.6-ampere, 600 or 1000-lumen, S-24½ clear bulb lamp.

The 100-watt multiple fixture with plain globe can be furnished with a 1½-inch hub if stated on the order.

Prices upon Application

Type APB Crouse-Hinds Disconnecting Boundary, Obstacle, and Approach Lights

With Spring Clip Series Receptacle

This light consists of two parts: a ground receptacle which is permanently fixed in the ground, and to which the underground cable is connected; and the boundary light itself. The disconnecting boundary light takes the form of a cone of metal with suitable wings, on top of which the boundary light is mounted and, when struck by a ship, the light is merely pulled from its ground receptacle and falls over on the ground. The ground receptacle is of the series type, and when the disconnecting

boundary light is pulled from the receptacle, the circuit is immediately restored. A ship striking one of these lights cannot be seriously damaged, since only a little force is required to push the boundary light over.

The standard is a cone of metal 12 inches in diameter and 24 inches high, equipped with four wings 12 inches square, thus making it much more visible than the ordinary pipe standard. The light can be equipped with a guard around the enclosing globe and a reflector attached to the guard which collects the light from the lower half of the lamp and throws it downward on the cone and wings, thus materially increasing the visibility at night. The light is thus thrown not only on the wings and cone but also on the ground immediately adjacent to the boundary light. In the bottom of the cone there is a bead which engages three springs having sufficient tension to prevent the wind from blowing over the boundary light.

The ground receptacle which holds the short circuiting spring clip series receptacle also forms a support for the cone. The design of the plug and receptacle is such that surface water on the field cannot get to the contacts, and when the boundary light is knocked over a door comes down over the receptacle and closes the opening. The housing of the ground receptacle is made of heavy cast ferrolloy finished in black enamel. The disconnecting boundary light is made of cast aluminum together with a cast bronze guard and cast aluminum reflector. The cone and wings are made of lead-coated Armco Iron, or Keystone Copper Steel and will resist corrosion for a long time. The cable from the boundary light fixture to the disconnecting plug is extra heavy weatherproof cable, and the plug is equipped with a suitable watertight stuffing box. The cable is securely anchored to the boundary light. There is a hand hole in the side of the boundary light cone through which it is possible to reach the receptacle and insert the plug to complete the circuit.

A field one mile square can be bounded with Type APB disconnecting boundary lights without the use of line insulating transformers, resulting in a much cheaper installation on large fields.

Takes 600 or 1000-lumen, S24½-bulb, 6.6-ampere series lamps.

Case is silver and black striped. Size, 6 $\frac{1}{2}$ x1 $\frac{1}{2}$ inches. Uses 2 No. 950 batteries and No. 1161 Mazda lamp.

No. 2649, Complete with Batteries.....each \$.59

No. 2604 Eveready Tubular Flashlights

Furnished in black only. Bulls-eye lens; octagonal lens ring and safety-lock switch. Equipped with ring hanger. Size, 6 $\frac{3}{4}$ x1 $\frac{1}{2}$ inches.

Use two No. 950 unit cells; No. 1161 Eveready Bulb; No. 14 Mazda Bulb. Unit package, 1.

No. 2604, without Batteries.....each \$.75

No. 2671 Eveready Flashlights

400-Foot Range

A 2-cell focusing flashlight, equipped with octagonal lens ring, lens retaining ring, safety-lock switch and ring

hanger. Finish, black. Size, 7x1 $\frac{1}{2}$ in. Use unit cell No. 590; lamp No. 1611. Unit package, 4.

No. 2671, Without Batteries.....each \$1.05

No. 2619 Eveready Miners' Flashlights

Black metal case; beveled lens; octagonal lens ring and safety-lock switch.

Equipped with ring hanger.

Size 1 $\frac{1}{2}$ x8 $\frac{3}{8}$ inches.

Use 3 No. 950 unit cells; No. 1162 Eveready Bulb; No. 17 Mazda Bulb.

Unit package, 1.

Price does not include batteries.

No. 2619.....each \$1.45

No. 2672 Eveready Focusing Flashlights

500-Foot Range

A 3-cell flashlight with beveled lens; octagonal lens ring with safety lock switch. Equipped with focusing device. Light can be focused to as sharp a point as desired merely by turning the end cap.

Has black metal case.

Size, 1 $\frac{1}{2}$ x9 $\frac{1}{4}$ inches.

Use unit cell No. 950. Use lamp No. 1162.

Unit package, 1.

No. 2672, Without Batteries.....each \$1.45

No. 2642 Eveready Focusing Flashlights

800-Foot Range

A 3-cell flashlight equipped with focusing device and parabolic silvered reflector, non-rolling lens ring.

Black metal case with nickel-plated fittings.

Size, 9 $\frac{1}{2}$ x1 $\frac{1}{2}$ inches.

Use unit cell No. 950. Use lamp No. 1162.

Unit package, 1.

No. 2642, without Batteries.....each \$2.20

No. 2645 Eveready Flashlights

5-Cell, Focusing

Used wherever exceptional power and range must be combined with portability. A few turns of end cap make light suitable for close up work, beam changing from a narrow penetrating shaft of light to a diffused and widespread ray.

Has beveled plate-glass lens, octagonal non-rolling lens ring, safety-lock switch, ribbon-design case and new ring hanger. Made in nickel-plated finish only. Size 14 $\frac{1}{2}$ x1 $\frac{1}{2}$ inches. Use 5 No. 950 unit cells; No. 1163 bulb.

No. 2645, without Batteries.....each \$2.50

No. 2647 Eveready Special Focusing Flashlights

2000-Foot Range

This powerful flashlight is ruggedly constructed and low-priced.

Case is silver and black striped.

Uses 5 No. 950 Eveready batteries and Eveready Mazda lamp No. 1168.

Size, 14 $\frac{1}{4}$ x1 $\frac{1}{2}$ inches. Packed in individual cartons.

No. 2647, without Batteries.....each \$1.00

No. 2695 Eveready Mine Safety Flashlights

A 3-cell safety light, nickel finish. Size, 9 $\frac{1}{4}$ x1 $\frac{1}{2}$ inches.

Classified as permissible by Bureau of Mines, U.S. Department of Commerce, and carries Underwriters Laboratories' approval for use in Methane and air mixtures, and gasoline vapor.

Bulb is spring mounted and is so arranged that if the bulb glass is shattered the electric circuit will be instantly opened before the lamp filament can ignite inflammable or explosive mixtures of gases in the surrounding atmosphere. Fitted with a special lens made of extra heavy glass and a special projecting lens ring.

Unit package, one.

No. 2695, Without Batteries.....each \$3.95

No. 2697 Eveready Boy Scout Flashlights

A 2-cell focusing light finished in khaki and equipped with ring hanger, belt clip and safety-lock switch. It carries the official Boy Scout insignia.

Size $7\frac{3}{8} \times 1\frac{1}{2}$ inches.

Use two No. 950 unit cells; No. 1161 bulb.

No. 2697, without Batteries.....each \$1.30

Eveready Flashlights with Ring Hangers

All Eveready Flashlights, with the exception of pocket and lantern types, are now equipped with the ring hanger.

All Eveready Flashlights, both black and nickel, are furnished with ribbon design cases.

These are exclusive Eveready features.

A press on the button and entire lens slides forward and becomes fully illuminated; depress lens and light goes out.

Polished nickel case decorated with black and red enamel. Size, $2\frac{1}{2} \times 1\frac{1}{8} \times \frac{5}{8}$ inches. Uses 1 No. 706 Eveready battery and No. 1180 Mazda lamp.

No. 3, without Batteries.....each \$.85

No. 10 Eveready Spotlight Lanterns

Case is red enameled; bail, switch and reflector are nickel-plated.

Size, $2\frac{5}{8} \times 2\frac{3}{8} \times 1\frac{3}{8}$ inches.

Uses 2 No. 935 batteries and solid glass spotlight lamp No. 1174.

No. 10, Complete.....each \$.59

No. 1653 Eveready French Colonial Electric Candles

For use on the dinner table, telephone stand, in the nursery or sick room, etc.

Has a rich satin, silverlike finish, known as Butler finish.

Height, .. inches; width at base, .. inches.

Uses 2 No. 935 Eveready batteries and No. 1173 Mazda lamp.

Unit package, 3.

No. 1653, without Batteries.....each \$1.80

No. 1654 Eveready Electric Candles

A switch in the base automatically turns the light on or off each time it is picked up or set down. It can be turned on permanently if a permanent light is desired for use on dinner tables, telephone stands, etc.

Has a rich satin silverlike finish, known as Butler finish. Bulb is housed in a casing of moonstone glass.

It is equipped with a band containing radium spots so that it can be easily located in the dark.

Height, $6\frac{3}{4}$ inches. Width at base, $2\frac{7}{8}$ inches. Use unit cell No. 935. Use lamp No. 1197.

Unit package quantity, 6.

No. 1654, Including Lamp and Batteries.....each \$1.00

Eveready Wallites

For use any place where regular wired outlets are not desired or are impossible.

Finished in ivory. Unit package, 3.

No. 4757

Size, $5\frac{3}{4} \times 3\frac{3}{8} \times 2\frac{1}{4}$ inches. Uses 2 No. 950 Eveready batteries and No. 1166 Mazda lamp.

No. 4757, without Batteries....each \$1.30

No. 4758

Gives twice as much light as No. 4757. Equipped with time-switch which automatically turns off light after a short period, preventing battery waste. Light can also be left on indefinitely if desired.

Size, $6 \times 4\frac{1}{2} \times 2\frac{1}{2}$ inches. Uses 3 No. 950 Eveready batteries and No. 1167 Mazda lamp.

No. 4758, without Batteries...each \$1.65

No. 4758

**No. 6 Eveready Columbia Ignitor Dry Cell
With Screw Connections**

A special high grade cell designed for all heavy service. It is particularly adapted for motor ignition. A set of ignitors will keep the engine running smoothly until every bit of current is exhausted.

Equally satisfactory for motor boats, gas engines, and in fact, any service where a reliable, long life battery is needed.

These batteries are carefully packed from fresh stock, and guaranteed to reach their destination in perfect condition.

Voltage, 1½.
Width, 2½ inches.
Height, 6 inches.

Packed 25 to a standard package.
Weight of standard package, 57 pounds.

No. 6.....each \$37

Columbia Gray Label Dry Cell

This battery is especially designed for telephone work and light-drain service.

Fahnestock spring binding posts are furnished without extra charge when requested.

Voltage, 1½.
Diameter, 2½ inches.
Height, 6 inches.

Quantity in standard package, 50.

Approximate weight of standard package, 120 pounds.

Price.....per cell \$35

No. 6 Hercules Dry Cell Batteries

This battery is reasonably priced and will offer satisfactory service under all conditions.

No. 6.....each \$27

Eveready Columbia Hot Shot Batteries

Cells are connected by soldered copper strips and encased in a single metal container. The advantages of this new type covering are the ability to withstand rough usage, water-proof, thoroughly insulated to prevent internal short circuits and a woven fabric handle for convenience in carrying.

**No. A-600 Eveready Air Cell A Batteries
For Air Cell Receivers**

An air depolarized constant voltage, non-rechargeable primary battery, especially made only for use as the A battery for air cell receivers.

Capacity is sufficient to operate an approved receiver for at least 1000 hours. Uses liquid electrolyte, but is shipped dry, and so undergoes no depreciation until activated. It is activated

for service by filling with water.

Length, 13 1/2 inches; width, 6 3/4 inches; height over all, 11 inches. Capacity, 600 ampere-hours; maximum load to which battery should be submitted, 650 milli-amperes.

Weight: dry, 25 pounds; filled with water, 37 pounds.

No. A-600.....each \$8.50

No. 768 Eveready B Batteries

Horizontal Type, 22 1/2 Volts

Suitable for portable sets where light weight and small size are essential, and for self-contained sets having battery compartments too small to permit the installation of a larger B battery.

It has plus 6, plus 18 and plus 22 1/2-volt taps, which permit of its use as a C battery in connection with power tubes.

Length, 4 1/8 inches; width, 2 9/16 inches; height, 2 3/4 inches.

Weight, 1 pound, 9 ounces.

No. 768.....each \$1.25

No. 485 Eveready Layerbilt Radio B Batteries

Vertical Type, 45 Volts, Medium Size

Made of flat layers of current producing elements compressed one against another, so that every cubic inch inside the battery case is completely filled with electricity-producing material.

Equipped with 3 Fahnestock clips giving voltages of 22 1/2 and 45.

This battery is 8 3/8 inches long, 3 1/4 inches wide and 7 1/8 inches high.

Weight, 9 1/2 pounds.

Price, No. 485.....each \$1.95

No. 486 Eveready Layerbilt Radio B Batteries

Vertical Type, 45 Volts, Heavy Duty

Made of flat layers of current-producing elements compressed one against another, so that every cubic inch inside the battery case is completely filled with electricity-producing material. For sets of 4 tubes or more.

Equipped with 3 Fahnestock Clips giving voltages of 22 1/2 and 45.

Length, 8 3/8 inches; width, 4 3/4 inches; height, 7 3/8 inches.

Weight, 14 1/4 pounds.

Price, No. 486.....each \$2.50

Eveready Round Cell Radio B Batteries

No. 570, Large Size, Vertical Type, 45 Volts

This battery is of cylindrical cell construction.

Length, $8\frac{1}{4}$ inches; width, $4\frac{1}{2}$ inches; height, 8 inches.

Weight, $13\frac{3}{4}$ pounds.

No. 570.....each \$1.80

No. 572, Medium Size, Vertical Type, 45 Volts

Recommended for self-contained sets where lack of space will not permit the use of large size batteries. Cylindrical cell construction.

Length, $8\frac{1}{4}$ inches; width, $3\frac{1}{4}$ inches; height, 8 inches.

Weight, 9 pounds.

No. 572.....each \$1.35

Eveready Round Cell Radio B Batteries

No. 870, Large Size, Vertical Type, 45 Volts

This battery is of cylindrical cell construction.

Length, $8\frac{1}{4}$ inches; width, $4\frac{1}{2}$ inches; height, 8 inches.

Weight, $13\frac{3}{4}$ pounds.

No. 870.....each \$2.15

No. 872, Medium Size, Vertical Type, 45 Volts

Recommended for self-contained sets where lack of space will not permit use of larger size batteries. Cylindrical cell construction.

Length, $8\frac{1}{4}$ inches; width, $3\frac{1}{4}$ inches; height, 8 inches.

Weight, 9 pounds.

No. 872.....each \$1.65

No. 771 Eveready Radio C Batteries

Vertical Type, $4\frac{1}{2}$ Volts

A $4\frac{1}{2}$ -volt unit, containing 3 cells provided with 4 Fahnestock spring clip terminals.

May be used in either the filament or A circuit, the plate or B circuit or the grid or C circuit.

A $4\frac{1}{2}$ -volt C battery is sufficient with most tubes when B battery voltages of not over 80 or 90 volts are used, and the signal is ordinarily loud. For

B battery voltages up to 120 volts, from 6 to 9 volts of C battery gives better results.

Length, 4 inches; width, $1\frac{3}{8}$ inches; height, $3\frac{1}{8}$ inches.

Weight, 14 ounces.

No. 771.....each \$3.50

No. 7111 Eveready Dry Cell Radio A Batteries

Vertical Type, $1\frac{1}{2}$ Volts

A single 6-inch dry cell battery having 2 screw knurls and put up in an attractive round paper jacket.

Connected in various combinations to meet the requirements of WD-11, UV-199 and all other dry cell tubes.

Furnished in round jackets and with screw knurls.

Initial voltage of $1\frac{1}{2}$ volts.

Width, $2\frac{1}{2}$ inches; height, 6 inches.

Standard package, 25.

Weight, standard package, 57 pounds.

No. 7111.....each \$4.40

Edison Primary Cells

Edison Primary Cells are furnished in capacities ranging from 75 to 1000-ampere hours. The sizes best adapted for telephone work are 75, 250 and 500-ampere hour types, for average conditions, and the 1000-ampere hour cells for heavy duty service or when it is desirable to bring the renewal periods far apart.

The characteristics of this battery, which make it particularly well suited for telephone service, are: Uniform voltage under continuous discharge; extremely low and constant internal resistance; freedom from depreciation when the circuit is open; long life, with no attention between renewals; indicator panels in plates, which accurately show the approach of exhaustion in ample time to arrange for renewal and suitability for either open circuit (intermittent discharge) or closed circuit (continuous discharge) work.

The initial open circuit voltage of all Edison Primary Cells is 0.9. The closed circuit voltage averages 0.60 to 0.65 depending on the rate at which the cells are discharged.

Use of Cells

Edison Primary Cells are used extensively for the following purposes: Local battery telephone exchange switchboards; telephone train dispatching (talking circuits); intercommunicating telephone systems; small common battery telephone systems; private branch exchange switchboards; pole changers, supervisory lamps and relays; telegraph work (local sounder and main line circuits); railway signals and crossing bells; railway interlocking plants; gas and gasoline engine ignition; low voltage motors; battery dental engines; fire, police and burglar alarms; auxiliary fire alarm systems (closed circuit); mine signals, bell systems and annunciators; program and self-winding clocks; electroplating; highway beacon lighting; chemical analysis and other school work.

The A. C. Primary System

Edison Primary Cells are regularly used as a standby battery where a.c. power normally energizes low voltage lights or other apparatus. A power off relay throws the load on the battery when the a.c. fails. Uninterrupted operation may be maintained indefinitely because the attendant can always determine, by visual inspection, the available capacity of the standby battery.

Maximum Recommended Discharge

Ampere Hour Cells	Description	MAX. RECOMMENDED DISCHARGE AMPERES	
		Continuous	Intermittent
75	0.65	1.0
200	All Types	1.00	1.5
250	1.00	1.5
500	All S Types	2.00	3.0
500	All M Types	2.50	3.0
1000	M Type	4.00	6.0

Type 75 Edison Primary Cells

Capacity, 75-Ampere Hours

Well suited for telephone work. Adapted to all classes of service where dependable capacity, uniform voltage and reliability are necessary requisites.

With round glass jar. Size overall, $3 \times 7\frac{1}{2}$ inches. At a continuous discharge of 100 milliamperes this cell will deliver 80 ampere hours to a cut-off voltage of .6.

When the battery exhausts it is customary to replace with new cells and discard the entire exhausted battery; expensive jars or heat-resisting glass are not used with this type.

Price, Type 75.....each \$9.00

Type S-202 Edison Primary Batteries
Capacity, 200 Ampere Hours

Furnished with rectangular heat-resisting glass jar. Size over all, 3 3/8 x 6 x 11 inches. Inside dimensions of jar only, 2 1/8 x 5 1/4 x 9 inches.

Adapted for intercommunicating telephone systems, railway train dispatching systems, stationary gas or gasoline motors, electric clock systems, small motors, etc.

Use five cells for stationary gas or gasoline motors having make and break ignition and eight cells for jump spark. Recommended for stationary work only.

Type	Description	Price, Each
S-202	Complete Cell	\$3.40
S-200	Renewal	1.50
Renewal Parts		
S-200	Element Assembled	1.35
200	Can Caustic Soda	.24
200	Bottle Battery Oil	.09

Type S-206 Edison Primary Batteries
Capacity, 200 Ampere Hours

Made with heat-resisting glass jar and rubber gasket ring. Size over all, 5 3/4 x 9 3/4 inches. Inside dimensions of jar only, 5 x 7 1/2 inches. Adapted for motor boat ignition. Use five cells for single cylinder make and break engines; six cells for multiple cylinder, high speed make and break engines; eight cells for jump spark. The cover is fitted with a rubber gasket to prevent splashing. Type S-206 supersedes old Type VP cell.

Type	Description	Price, Each
S-206	Complete Cell	\$3.75
S-200	Renewal	1.50
Renewal Parts		
S-200	Element, Assembled	1.35
200	Can Caustic Soda	.24
200	Bottle Battery Oil	.09

Type S-208 Edison Primary Batteries
Capacity, 200 Ampere Hours

With heat-resisting glass jar. Size over all, 5 3/4 x 9 3/4 in. Inside dimensions of jar only, 5 x 7 1/2 inches.

Adapted for stationary gas or gasoline engines, electric motors, burglar alarms, bell systems, program and self-winding clocks, annunciators, electric time stamps, mine signals, intercommunicating telephone systems, etc. Use five cells for stationary engines having jump spark ignition.

Cells have flat cover, without gasket and are recommended for stationary work only.

Type S-208 supersedes old Type Q cell.

Type	Description	Price, Each
S-208	Complete Cell	\$3.55
S-200	Renewal	1.50
Renewal Parts		
S-200	Element, Assembled	1.35
200	Can Caustic Soda	.24
200	Bottle Battery Oil	.09

Type S-252 Edison Primary Batteries
Capacity, 250 Ampere Hours

With rectangular heat-resisting glass jar. Size over all, 3 3/8 x 6 x 12 1/2 inches. Inside dimensions of jar only, 2 1/8 x 5 1/4 x 10 inches.

Type S-252 cells are the most desirable of the smaller sizes, because of the small space occupied, and on account of the element being suspended high in the solution they are particularly efficient. They are designed for stationary work, but when used in trays are semi-portable.

Particularly adapted for telephone transmitter and fire-alarm service.

Type	Description	Price, Each
S-252	Complete Cell	\$3.60
S-250	Renewal	1.70
Renewal Parts		
S-250	Element, Assembled	1.55
250	Can Caustic Soda	.27
250	Bottle Battery Oil	.09

Type S-305 Edison Primary Batteries
Capacity, 300 Ampere Hours

With round heat-resisting glass jar. Size over all, 6 3/4 x 10 1/4 inches. Inside dimensions of jar only 6 x 8 inches.

Adapted for stationary gas or gasoline engines, burglar alarms, bell systems, program and self-winding clocks, auxiliary and industrial fire alarm systems, etc. Also for telephones, including intercommunicating telephones, private branch exchanges, switchboards, railway telephone train dispatching at busy way stations, and similar service.

Type	Description	Price, Each
S-305	Complete Cell, with Heat-resisting Jar	\$3.80
S-300	Complete Renewal	1.90
Renewal Parts		
S-300	Element, Assembled	1.75
300	Can Caustic Soda	.30
300	Bottle Battery Oil	.09

Types S-502 and M-502 Edison Primary Cells
Capacity, 500-ampere Hours

The 500-ampere hour cells are furnished with either multiple or single plate elements. The letter M before the reference number indicates multiple plate, 2 copper-oxide and 3 zinc plates. The letter S indicates single plate, 1 copper-oxide and 2 zinc plates.

The cells are used for telephone and telegraph service; railway signal, fire and burglar alarm systems, highway beacons, and in many other fields where a high capacity cell is desirable.

For service in which the load frequently goes to 3 amperes, or where the cells are exposed to low temperature, the multiple plate cells are recommended. For service in which the load does not go over 2 1/2 amperes and the cells are protected from the cold, the single plate type will fully meet the requirements. Initial open circuit voltage, 0.9. Average closed circuit voltage 0.6 to 0.65 per cell. Maximum recommended continuous current for single plate types, 2 amperes; for multiple plate types, 2.5 amperes. Maximum recommended intermittent current for either types, 3 amperes.

Type S-502
Single Plate Element

With rectangular heat-resisting glass jar. Size over all, 5 3/4 x 6 3/4 x 12 1/4 inches. Inside dimensions of jar only, 5 x 6 x 10 inches.

M-502

Type	Description	Price, Each
S-502	Complete Cell	\$4.40
S-500	Renewal	2.15

S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09

For Type M-502 cell, renewal and element, add 20 cents. Prices of the other parts are the same.

Types S-504 and M-504 Edison Primary Cells

Capacity, 500-Ampere Hours

For telephone and telegraph service, railway signal, etc. With barrel-shaped heat-resisting glass jar. Size overall, 7x12¼ inches; inside dimensions of jar, 6x10 inches.

Type	Description	Price Each
S-504	Complete Cell	\$4.00
S-500	Complete Renewal	2.15
Separate Parts		
504	Jar	\$2.10
504	Cover	.55
	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09
For Type M-504, cell, renewal and element, add 20 cents.		

Types S-507 and M-507 Edison Primary Cells

Capacity, 500-Ampere Hours

For traffic signals and other classes of work where there is a possibility of rough usage. Has cylindrical enameled-steel jar. Size overall, 7¼x12 inches.

Type	Description	Price, Each
S-507	Complete Cell	\$4.40
S-500	Complete Renewal	2.15
Separate Parts		
S-507	Jar	\$2.00
S-507	Cover	.55
S-507	Rubber Gasket	.20

	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09
For Type M-507 cell, renewal and element, add 20 cents.		

Type M-1002 Edison Primary Cells

Capacity, 1000 Ampere Hours

The 1000 ampere hour cells are furnished with either rectangular or cylindrical jars. Type M-1001 is the specification for the cell with the cylindrical jar and M-1002 for the rectangular. The prices are the same.

This size was developed to meet demand for a battery that would operate efficiently in classes of service where heavy discharges are required for long periods. In railway signaling these cells are used for operating remote controlled switch movements, color light signals and track circuits. In the general trade for any heavy duty work or where it is desirable to bring the renewal periods as far apart as possible.

Initial open circuit voltage, 0.9 per cell; the average closed voltage, 0.6 to 0.65. The cells can be discharged continuously up to 4 amperes and intermittently up to 6 amperes.

Type M-1002

With rectangular heat-resisting glass jar. Size over all, 6½x8¾x14 inches. Inside dimensions of jar only, 5x6x12¾ inches.

Type	Description	Price, Each
M-1002	Cell Complete	\$7.75
M-1000	" Renewal	4.25
Separate Parts		
1002	Jar	\$4.80
1002	Cover	.55
	Wing Nuts and Washers	per set .20
M-1000	Element	3.50
1000	Caustic Soda	per can .85
1000	Oil	per bottle .09

Type M-1001

With cylindrical heat-resisting jar. Prices same as for Type M-1002.

Exide Storage Batteries

BTMH Chloride Type

Exide Storage Batteries are made in a wide variety of sizes and types to meet the requirements of various kinds of power applications where a reliable source of direct current at steady voltage is required either constantly, intermittently or to tide over occasional interruptions in the normal power supply. There are three types of Exide Batteries made for these requirements.

The Chloride Type is built primarily for durability. Where long life and freedom from care and attention, together with dependability, are the deciding factors, this type of battery invariably receives the first call.

The Pasted Plate Type furnishes greater capacity in the given space than the Chloride Type.

The outstanding feature of the Ironclad Type battery is its unique positive plate which is totally different in construction from that of any other positive plate. In performance and longevity this type of Exide is second only to that of the famous Chloride.

Types BTMH, CTMH, PTMH, ETMH, BTE and KZHG are furnished in painted wooden crates, all but the first two types being equipped with carrying handles. Each crate assembly contains one cell equipped with pilot balls which roughly indicate the state of charge.

Cells of greater capacity than listed below are available in sealed glass jar assembly up to 1064 ampere hours at the 8-hour discharge rate.

Batteries are shipped charged and filled with electrolyte.

P-30 Positive	5 3/4	7 1/8	7/32
P-40 Positive	7 3/4	7 3/4	7/32

The intermittent rating in amperes is the current the battery will give discharging 4 hours resting 16 hours, discharging 8 hours resting 16 hours, discharging 8 hours resting 16 hours, and discharging 4 hours to 1.7 volts per cell.

This ampere rate multiplied by 24 gives the intermittent ampere hours.

Square D RectiFilters

RectiFilter furnishes d.c. of the required purity from an a.c. circuit; designed to fill a long felt need for a reliable source of d.c. requiring no attention. It is only necessary to connect the a.c. line and the d.c. load to the proper terminals.

Used wherever a source of d.c. is required. Applications include furnishing power for telephone systems, signal systems, including fire alarm systems, sound on film equipment, broadcasting and public address equipment and magnetic chucks.

RectiFilter is an assembly of rectifiers, impedances, transformers and condensers, all designed to insure uninterrupted service. No moving parts or batteries to demand constant attention and maintenance.

RectiFilter must be chosen by characteristics of d.c. required and by maximum drain and duty cycle necessary to serve application. A.c. component (a.c. wave or ripple remaining in the d.c.) is shown for each unit, and while values are considered to be well within requirements for the service indicated, it is well to check against requirements for particular application before deciding upon unit.

After choosing the proper group, pick a unit that will give necessary voltage, considering the regulation required, necessary amperage and duty cycle demanded by the application.

G-E Tungar Battery Chargers

25 to 60 Cycles, 115 to 230 Volts A.C.

6-Ampere Type

Form B

For charging 6 or 12-volt storage batteries.

Ideal for small garages and filling stations; private car owners also find this battery charger convenient.

The one "on" and "off" switch is the only moving part of this battery charger. Charges one 3-cell battery as quickly as larger capacity outfits charge several. Uses a full 6-ampere rate or can charge two 6-volt batteries connected in series at 3 amperes. Charging rates fixed in accordance with battery load. Will charge a 6-volt battery at 6 amperes, two 6-volt batteries at 3 amperes.

Prices include one Cat. No. 189048 Tungar bulb.

G-E Full Wave Tungar Battery Chargers

(Noiseless Type) For Telephone Service

Under this classification come outfits designed particularly for use with telephone systems operating on a single battery where it is necessary to charge the battery while it is operating on the telephone circuit.

30-Volt .3-.5-Ampere Outfit

Intended primarily for continuous trickle charging in a small P.B.X. The full wave bulb Cat. No. 199698 is used. A reactance, or choke, of suitable capacity to filter the output is incorporated. An adjustable resistance in the secondary circuit permits adjusting the charging rate from .3 to .5 ampere on 11 or 12 cells of battery.

Full load efficiency 28%. Power factor 78%.

Cat. No.	Each	Volts A.C.	Cy.	DIMENSIONS, IN.			Approx. Ship. Wt. Lbs.
				Ht.	Width	Depth	
244708	\$50.00	*115	60	9 $\frac{1}{16}$	6 $\frac{3}{16}$	7 $\frac{3}{16}$	20

Available in other voltages and frequencies.

Prices on application.

Cat. No. 199698, Tungar Bulb. Ship. Wt. $\frac{1}{2}$ Lb. each \$5.00

19-52-Volt 1-3-Ampere Full Wave Outfit

Cat. No. 3049455

Designed primarily to meet the requirements of intercommunicating systems and private branch exchanges. Can be used wherever a full wave filtered output up to 3 amperes is required. Two 2-ampere Tungar bulbs are used, the connections being such that the load is divided equally.

Flexibility is a feature of this Tungar. A terminal board conveniently located just inside the left hand door contains 6 sets of secondary taps and permits adjustment for operation on 9 to 24 cells of battery. A rheostat controlled from the panel gives close adjustment of the charging rate over a range of 1 to 3 amperes. A Type DW scale 0-5 ammeter is provided to indicate the rate.

The 19-52-volt rating is nominal, and was selected as 52 volts is the usual floating voltage of a 24-cell battery. This rectifier actually has sufficient capacity to charge at battery voltages up to 65 but the charging current will taper down to 1.75 amperes at 65 volts.

A suitable filter reactance is incorporated in the unit.

Full load efficiency 45%. Power factor 92%.

Cat. No.	Each	Volts A.C.	Cy.	DIMENSIONS, IN.			Approx. Ship. Wt. Lbs.
				Ht.	Width	Depth	
3049455	\$120.00	*115	60	17 $\frac{1}{2}$	12 $\frac{3}{8}$	14 $\frac{7}{8}$	78

Available in other voltages and frequencies.

Prices on application.

*Will operate between the limits of 105-125.

Cat. No. 12X825, Tungar Bulb, Ship. Wt. $\frac{1}{2}$ Lb. each \$4.00

G-E Low-Voltage Half Wave Tungar Battery Chargers

For Miscellaneous Applications
115 Volts, 60 Cycles

No. 204170—24-30-Volt .5-2.5-Ampere Outfit

Interior View

A simple, compact outfit designed to charge from 9 to 12 cells of lead battery. Two secondary taps on the transformer permit adjusting the rectifier for its maximum output of 2.5 amperes at either 24 or 30 volts. An adjustable resistance of approximately 6 ohms is incorporated in this outfit which permits adjusting the charging rate from a maximum of 2.5 down to a minimum of about .5 ampere. A 2-ampere bulb is used.

Full load efficiency 55%. Power factor 50%.
Will operate between the limits of 105-125 volts.
Height, 9¹/₁₆ inches; width, 6³/₁₆ inches; depth, 7³/₁₆ inches.
Approximate shipping weight, 25 pounds.

Cat. No. 204170.....each \$39.00
Available in other voltages and frequencies. Prices on application.

Cat. No. 195528, Tungar Bulb, Ship. Wt. 1/2 Lb...each \$4.00

No. 199717—40-60-Volt .5-2.5-Ampere Outfit

Similar in general construction to the outfit described above, but has a wider range of d.c. voltage.

There are 3 taps on the transformer secondary which adjust the output to 2.5 amperes at 40, 50 and 60 volts respectively. In addition an adjustable resistance is provided which will regulate the charging rate from 2.5 down to .5 amperes on any one of the taps.

Transformer is so designed that it has considerable inherent reactance regulation, giving rectifier a fairly flat characteristic even when none of the resistance is used. For example, when connected to the 60-volt tap the battery voltage can be increased from 60 to 75 volts and rectifier will continue to charge, the only difference being that charging rate will taper from 2.5 to 1.5 amperes.

A 6-ampere bulb is used providing ample capacity and long life.

Full load efficiency 80%. Power factor 50%.
Will operate between the limits of 105-125 volts.
Height, 9¹/₁₆ inches; width, 6³/₁₆ inches; depth, 8³/₄ inches.
Approximate shipping weight, 29 pounds.

Cat. No. 199717.....each \$55.00
Available in other voltages and frequencies. Prices on application.

Cat. No. 189048, Tungar Bulb, Ship. Wt. 1 Lb...each \$8.00

G-E 2-Ampere Tungar Battery Chargers
For Charging All Radio A and B and Auto Storage Batteries

Form B—25 to 133 Cycles—115 to 230 Volts A.C.

Designed to take care of all radio and auto battery charging requirements at home. The combination trickle charge and full rate feature is desirable for radio battery charging. No auxiliary devices or attachments are required other than an ordinary Mazda lamp which is essential to provide correct charging rate for radio B batteries only. Lamp may be inserted in external socket contained in terminal board which is mounted on back of casing.

Will trickle charge a 6-volt radio A battery or charge at full rate of 2 amperes.

For permanent connections to A and B batteries; charging may be controlled by merely throwing a switch.

Prices include one bulb, Cat. No. 277465.

Will charge 6-volt battery at 2 amperes or trickle rate of 3/4 ampere; 12-volt battery at 1 ampere; 2 or 4-volt battery at 1 ampere; 24 to 96-volt B battery at 1/10 to 1/4 ampere.

G-E Tungar Constant Potential Rectifiers

A full-wave, highly efficient rectifier with high power factor and good regulation. Furnished in strong, neat appearing steel casing.

Applications—magnetic chucks, electromagnets, small solenoids, small d.c. motors and many others.

For use wherever 2 amperes or less, 115 or 220 volts d.c. is required and only a.c. is available.

Two hinged doors provide easy accessibility to bulb and transformer. All joints in casing are welded, including door hinges and latches. Angle irons welded to rear of casing add ruggedness and provide a means for wall mounting.

A tumbler switch breaks both sides of a.c. line.

Equipped with a new type mercury barium Tungar bulb. This is a full-wave bulb rated 2 amperes at 250 volts.

G-E Copper Oxide Rectifiers

For Telephone Service

Designed to deliver a noiseless d.c. of 6 volts, 0.350 amperes. There is a multitude of applications that come within this rating. A few of them are as follows:

New apartment house interphone systems; replace batteries (dry cell or storage batteries) on existing apartment house interphone systems; school interphone systems that come within rated output of this outfit; to supply power for way station telephones on railroad telephone lines; to supply power for local sounders on railroad telegraph lines—the smooth, humless d.c. obtained from this outfit (oscillograph shows no ripple) is praised by Morse code operators—any general application where d.c. not in excess of the rated output is desired.

This rectifier consists of a copper oxide rectifying unit, transformer and necessary specially constructed filter (condenser and choke coil) all mounted on a steel base plate and enclosed in a rugged casing. Casing has an attractive crystallized green finish, which will not chip or mar.

Rating: 115 volts a.c.; 60 cycles; 6 volts d.c., .350 ampere d.c.

Approximate shipping weight, 25 pounds.

Cat. No. 6RC61D2.....each \$30.00

G-E No. 6RC42D7 Copper Oxide Battery Chargers for Fire Alarm Systems

30, 45 or 60 Volts, .150 Amperes

Every municipality with a fire alarm system is a potential customer for a quantity of these battery chargers.

Cycle charging, the method most commonly used at present to supply power to the fire alarm system, requires a "standby" battery for each circuit, and has resulted in overcharging the batteries with a consequent short battery life. Briefly, cycle charging consists of an "A" and "B" battery for each circuit. The "A" battery is charged while the "B" battery is on a circuit. The "A" and "B" batteries are interchanged daily.

Trickle charging the battery with a properly designed dependable rectifier eliminates the necessity of the "standby" battery and inherent troubles of charging.

The usual trickle charge will be approximately 100 mils. Model No. 6RC42D7 charger has a capacity of 150 mils, which is sufficient capacity to take care of even unusual conditions. One outfit will be required for each circuit.

A dry type charger; no moving parts, nothing to wear out. Minimum mounting space is required; can be mounted in any convenient out-of-the-way location. Fuse protection in both a.c. and d.c. circuits.

Approximate shipping weight, 50 pounds.

Also furnished for vertical mounting with or without casing.

Model No. 6RC42D7.....each \$32.00

G-E Tungar Bulbs

Standard Tungar Bulbs for Bulb Type Battery Chargers

Cat. No. 195528

Cat. No. 289881 Trickle Bulb

Cat. No. 277465

Cat. Nos. 189048 and 189049

Cat. No. 195528.—For renewal purposes in the old design 2-ampere Tungars. Also adapted for other chargers which are not equipped to use the Cat. No. 277465 bulb which has the three points of contact in the base. A wire adapter permits making connection to plate (anode) at tip of the bulb.

Cat. No. 289881.—Used in standard Tungar Trickle Chargers and also in special trickle-charge Tungar units supplied to battery manufacturers for their combination. A battery and charger power units.

Cat. No. 277465.—All three contacts are made through base. This bulb has capacity for charging a 6-volt A storage battery at 2 amperes and a 120-volt B storage battery at not over .25 ampere.

Cat. No. 189048.—Should not be used where voltage requirements are over 45 volts except when charging B storage batteries at not over .25 ampere.

Cat. No. 189049.—Used with larger Tungars having a charging capacity of 100 volts at not over 6 amperes.

Special Tungar Bulbs

Cat. No. 217283

Cat. No. 217283.—Used for certain special applications such as rectifiers for motion picture projectors. This bulb is not interchangeable with 6-ampere bulbs used in standard Tungars.

Cat. No. 199698.—A full-wave Tungar bulb used in a Tungar for charging batteries in telephone supply installations and also in certain types of radio power devices. This bulb delivers an output up to 3 amperes, depending on the nature of the load.

Cat. No. 199698 Full-Wave Bulb

Cat. No. 12X825.—Similar in construction to the standard Cat. No. 277465 except that it is designed to meet higher voltage requirements. Used in certain special Tungars for charging high-voltage batteries.

Cat. No. 206501.—A high-voltage bulb. Equipped with wire adapter so that it can be used in old style Tungars.

Jefferson Wizard Bell Ringing Transformers

For residences or small flat buildings. Will operate door bells, buzzers, annunciators, and door openers. For 100-120 volts; 5 watts. Secondary, 10 volts. Size, 2 3/8 x 2 3/8 x 2 3/8 in. Weight, 1 lb. No. 230-101, 50-133 Cycles....each \$1.25 No. 230-102, 25-40 Cycles....each 1.50

Jefferson Nucode Bell Ringing Transformers

With Round or Square Cover

Mounted on an outlet box cover. Round cover fits 3 1/4 and 4-inch octagon boxes; square cover fits 3 3/4 and 4-inch octagon and 4-inch square boxes.

Knockout in cover permits hanging a drop cord from same outlet box. Transformer wires do not interfere with lighting wires. Grounded to prevent shocks or possibility of fires.

No. 230-111

Depth, 2 1/4 inches; width, 2 3/8 inches; height, 2 1/4 inches.

Jefferson Tri-Volt Bell Ringing Transformers

For 100 to 120 volts a. c. Generates 3 secondary voltages: 6, 12 and 18 and will take care of longer leads than Wizard or Nucode.

Capacity, 5 watts; dimensions 2x2 1/2 x 3 3/4 inches. Weight 1 pound. No. 230-121, for 60 Cycles.....each \$1.50 No. 230-122, for 25 Cycles.....each 2.00

Jefferson Heavy Duty Signalling Transformers

When the current demand is greater than the capacity permitted with the small transformers, the heavy duty types should be used. Examples of such uses are large apartment buildings, hotels, factories, schools, etc.

The core and windings are hermetically sealed in a heavy metal case. Standard winding will operate on 100 to 120 volts a.c., 50 to 133 cycles.

50 Watts

This transformer is designed for heavier signal work and installations that require more power than is generated by the Nucode or Tri-volt Type. Six secondary voltages; 4, 8, 12, 16, 20 and 24. Weights 6 pounds.

Cap. Watts	DIMENSIONS, INCHES			No.	60 Cycles Each	25 Cycles Each

Jefferson Universal Toy Transformers

100-120 Volts; 50-133 Cycles A.C.

No. 535-161

Equipped with an extension cord, separable attachment plug and a slide type voltage control, making it possible to transmit the power in small and uniform steps.

All models except No. 3 can be furnished in 25-40 cycles. Prices upon application.

Little Jeff

Recommended for operating all narrow gauge American Flyer, Dofan, Ives and Lionel outfits and Gilbert Toy motors. Delivers 6 secondary voltages ranging from 5 1/2 to 11 1/2 volts in 1.2-volt steps.

Cat. No. 535-161, 50 Watts, Weight 3 1/2 Lbs....each \$3.25

Midget

Operates Ives trains, all narrow and small sized wide gauge outfits; American Flyer, all narrow and wide gauge trains Nos. 1471, 1472, 1463 and 1464; Lionel trains, all O gauge and small sized standard gauge. Also operates the Kokomo electric. Delivers 18 secondary voltages ranging from 5 1/2 to 22 1/2 volts in 1-volt steps, with additional permanent voltages of 6 and 12 volts.

Cat. No. 535-171, 75 Watts, Weight 5 Lbs....each \$5.00

Model 2

Operates all American Flyer, Ives, Lionel and other wide gauge trains. Also Christmas lighting outfits up to sixteen 14-volt lamps. Delivers 24 secondary voltages ranging from 5 1/2 to 23 volts in 3/4-volt steps. Additional permanent voltages of 4 1/4, 9 and 13 1/2 volts.

Cat. No. 535-181, 100 Watts, Weight 6 1/2 lbs....each \$6.50

Model 3

Operates all types of trains. For use with window or counter display and Christmas tree lighting outfits up to thirty-two 14-volt lamps. Delivers 30 secondary voltages ranging from 1 to 30 volts in 1-volt steps. Additional permanent voltages of 6, 12, 18 and 24 volts.

Cat. No. 535-191, 150 Watts, Weight 11 3/4 Lbs...each \$9.00

Edwards Signaling Transformers

Primary 110 Volts, 25-40 or 60 Cycles
Secondary 4-8-12-16-20-24 Volts

Primary 110 Volts, 25-40 or 60 Cycles

Schedule E

Correctly designed for the proper operation of all signaling devices.

This transformer is of the exact wattage, voltage and other characteristics necessary to eliminate guess work on the part of the contractor or jobber.

For 220-volt primary add 15 per cent to price.

Cycles	Watts	Standard Package	Weight Pounds	Price Each
60	25	50	65	\$1.16
25-40	25	50	65	2.32

No. 86ES Edwards Bell Ringing Transformers

Fits On 3 1/4 or 4-Inch Octagon and Square Boxes

Primary 110 Volts, 25-40 or 60 Cycles

Schedule E

Correctly designed for the proper operation of all signaling devices.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	80	\$1.16
25-40	25	50	80	2.32

For 220-volt primary add 15 per cent to price.

No. 86T Edwards Steel Case Bell Ringing Transformers

Primary 6-8-14 Volts, 60 Cycles or 110 Volts, 25-40 Cycles

Schedule E

These transformers are of the exact wattage, voltage and other characteristics necessary to eliminate guesswork on the part of the contractor and jobber.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	56	\$1.55
25-40	25	50	56	3.10

For 220-volt primary add 15 per cent to price.

Jefferson Luminous Tube Sign Transformers

Standard Types

Nos. 721-111, 721-121, 721-411

Designed for use in all types of portable or fixed, indoor or outdoor neon signs. The complete assortment of models provides a transformer to meet the most exacting requirements, both as to electrical and mechanical details.

Mid-point grounded, balanced design patented construction and many other improvements insure perfect secondary current regulation regardless to length of tubing operated; high efficiency permitting long tube lengths; cool operation; quietness; long life; neat appearance and lightness in weight.

The case in which transformer is assembled is made of extra heavy rust-resisting steel, flanged construction and with substantial brackets, insuring rugged construction. Binding posts and nuts are cadmium plated to guard against corrosion, while the case is black enameled, baked thoroughly to present a tough and durable finish.

Jefferson Luminous Tube Sign Transformers

Type 726 with Secondary Leads

Cabinet Type

Equipped with primary pull switch and 7-foot primary cord with standard 2-prong plug and approved connector means for grounding. Where conduit or armored cable installation is required, entry may be made by removing the cord and bushing; if entry at top is more practical, a knock-out is provided. A plate in the end of the case is removable for making connections from the supply circuit to transformer leads.

For conduit or armored cable installations these transformers may be obtained without the primary cord and plug, at a reduction of \$1.00. Likewise, the primary pull switch may be omitted and the price is reduced \$1.00.

Jefferson Oil Burner Ignition Transformers

Nos. 638-171, 638-251, 638-261 and 638-271

No. 638-281

The introduction of various types of burners has required the development of different types of transformers. This is a transformer for every specific application—5000, 10000, 12000 and 15000-volt ratings; for intermittent and continuous service; grounded, mid-point grounded, balanced mid-point grounded, and insulated secondaries; and in core and shell type designs.

The cool operation is accomplished by exacting requirements, liberal design throughout, plus the use of quality materials of adequate size which results in long transformer life.

Equipped with built-in condensers of proper size and design to eliminate the possibility of objectionable radio interference.

Nos. 638-251, 638-261, 638-271 and 638-171 are assembled in the new stream lined case. This case is of heavy drawn steel of exceptional durability, treated to resist rust and finished in a high lustre long-wearing black enamel. All other types are assembled in similarly rugged and attractive cases of standard design. Universal mounting brackets of sturdy design are provided.

A junction box of liberal proportions is built into the top of the case. Knockouts are provided in two sides and in the end of the case for convenient entrance. Quick and easy splicing results and there is ample space for additional wiring which any installation may require. Primary leads 24 inches long are standard on all types.

*Not equipped with radio filter.

The above transformers are designed for operation on 110 volt 60 cycle a.c. They are obtainable in other voltages and frequencies at extra cost. Prices on application.

Jefferson Double Wound (Insulating) Transformers

50-60 Cycles

This type of air cooled transformer has been very commonly used in railway service for lighting and signaling purposes. In addition it is required for signaling systems of schools, factories, mines, etc., for remote control switching, for lighting purposes, to operate low-voltage equipment from power lines, for insulating circuits from power and lighting supply lines, for

emergency lighting systems, etc.

Illustration shows the standard type of double wound transformer which is equipped with wiring compartment for housing primary and secondary splices. Knock-outs are provided for making connections with rigid or flexible steel conduit or for inserting porcelain bushings where open wiring is employed.

The standard line does not comply with the A.R.A. standard, but does comply with the A.I.E.E. specifications. Transformers complying with the A.R.A. specifications can be furnished on special order.

Jefferson Railway Transformers Indoor Type

For Signal, Lighting and Rectifier Service

Designed to conform to the testing and constructional specifications of the American Railway Association. Intended for use in the operation of electrical equipment incidental to railway signal systems such as signal lights, battery rectifiers, relays and associated requirements.

This is an air cooled unit designed for wall or shelf mounting.

Windings developing or carrying 115 volts or less are brought out to standard A.R.A. terminals mounted on an attractive bakelite panel. Windings carrying in excess of 115 volts are brought out

of the housing in the form of flexible leads which are terminated in connecting lugs.

Generally, compensating taps are supplied on the primaries, although for some services, special auto transformer taps are furnished. When compensating taps are furnished, they are full of capacity rating.

Primary windings of 115 volts or less and all secondary windings are insulated to withstand a dielectric strength test of 3000 volts. Primary windings in excess of 115 volts are designed to withstand a dielectric strength test of 10000 volts.

Name plates and winding diagrams are furnished with each transformer which give the complete information required by the A.R.A. standards.

The following table outlines a number of the more popular types of transformers furnished for these services. These transformers fulfill practically all signalling system requirements, although in many cases transformers of special specifications are supplied.

*For 230-200, 460-400 or 575-500 primary volts, add 20%. Can also be furnished in 25-40 cycles. Prices and data upon application.

Edwards Annunciates

No. 672

These annunciates have been greatly reduced in size without sacrificing clearness of indication. There are 85 different indications furnished with each annunciante. Buzz audible signal with connectors for buzz or ring extension. Standard, 8 to 12 volts a.c. Can be furnished for d.c. Larger sizes on application.

No. 672 Flush Manual Reset

Furnished with wall box. Standard finish, white. Special finishes on application.

No. 807 Edwards High Voltage Annunciators

Hand Reset

110 and 220 Volts, A.C. or D.C.

Schedule T

Has metal case with double micarta backboard on which are mounted No. 80 drops.

Care has been given to insulation of all current carrying parts, eliminating all materials affected by heat or moisture.

Prices include a No. 100 3-inch Recti bell which may be installed adjacent to the annunciator or where desired. Annunciator is wired with marked connectors for this purpose. For central stations there are usually conditions requiring special features.

Photographs and descriptions of annunciators for this service will be sent upon request.

Surface type metal case; standard finish is black.

The 110 and 220 volts a.c. or d.c. are standard; other voltages on application.

Special finishes, upon application.

Prices shown are for 110 volts a.c. or d.c.

Edwards Annunciators

Special Annunciator Features

Schedule T

No. 8 Manual Reset Drops

New, efficient drop used in all annunciators.

No. 8.....each \$4.00

No. 80 Hand Reset Drops

Used in all hand reset annunciators.

No. 80.....each \$4.00

No. 4 Electric Reset Drops

Used in all electric reset annunciators. The indication is a white arrow which points directly at the name card. When reset, arrow drops out of sight behind name card. Front is of plain glass and a dull black background, it can be seen from any angle. Cannot shake or jar out of adjustment. Locked in normal position; cannot indicate until current is passed through magnets.

No. 4.....each \$6.00

Extras

Up to 24 volts d.c. or a.c. no charge. For 25 to 40 drops, add per drop, \$1.00.

For special commercial finishes, add per annunciator: 4 to 10 drop, \$6.00; 12 to 24 drop, \$8.00; 26 to 52 drop, \$12.00; over 52 drop, \$16.00. For solid bronze or brass cases, add per annunciator: 4 to 10 drop, \$12.00; 12 to 24 drop, \$20.00; 26 to 52 drop, \$30.00; over 52 drop, \$50.00.

Individual reset, with pushes on case, per push, \$4.00; with terminals only for remote control, per terminal, 60 cents.

Arrangement of drops, same addition as for special finishes. Special markings, other than number, per drop, 30 cents.

Bell instead of buzzer, each \$3.00.

Switch on case, 1 or 2 point, each \$3.50.

Edwards Lamp Annunciators

Schedule T

OPERATION.—If locking pushes, toggle or push button switches are used, the lamps will remain lighted while the switch is on and will be extinguished while the switch is off. If standard momentary contact pushes are used, relays are supplied in a separate case with the reset button on the annunciator. If specified, relays can be mounted in the annunciator case, which, however, adds greatly to its size and does not improve its appearance.

In ordering, specify exact operating voltage, finish, with or without relays; if with relays, whether they are to be in separate case or in annunciator; if opaque glass type, whether 7/8 or 1 1/4-inch numerals.

Bull's Eye Type

No. 421, For Surface Wall Mounting
No. 422, For Flush Wall Mounting
No. 423, For Desk

No. 422

Equipped with 5/8-inch opal signals arranged over card racks. Lamps are easily changed from front by removing opals. All metal case and trim. Standard finish, brush brass or bronze for flush type; black or mahogany for surface types. Illustration shows standard method of construction with all mechanism on back of front plate, which is mounted directly on metal wall box. In larger size annunciators it is advisable for easier installation to have front plate hinged to a trim which fastens directly to metal wall box. This method of construction can be followed if specified.

Opaque Glass Type

No. 424, For Surface Wall Mounting
No. 425, For Flush Wall Mounting

No. 424

For use where it is advisable to have indications readable from a distance. Lamps are in individual shield units; when lighted cause numerals to show plainly through opaque glass.

All metal case and trim. Standard finish, black or mahogany. Made in 2 styles: for 7/8 or 1 1/4-inch numerals. Prices shown are for 7/8-inch numerals.

Standard up to 32 Volts A.C. or D.C.—Schedule D

Prices shown are for 7/8-inch numerals.

No. 10 Edwards Return Call Annunciettes

Hand Reset

Standard Voltage, 8-12 Volts A.C.

Schedule T

Used in hotels, institutions, etc. for the purpose of calling the room and receiving acknowledgment from the room that the call has been heard, or vice versa.

Designed to eliminate the large number of wires necessary if the standard annunciator, bells and pushes are used. Presents reduction in size without affecting clearness of indication.

All metal case, surface type, in black, mahogany or oak.

Edwards Ansercall for Return Call Systems

No. 139

No. 140

This device replaces return call stations except for d.c. operation. Fits any standard single gang switch box 2 3/8 inches deep and takes standard push-button-switch plates.

Buzz audible signal with no contacts, pivots or adjustment. May be varied after installation from loud low tone to a soft high tone through hole in sub-plate.

No. 140 has Annunciette type drop which leaves a visual signal. Operation of push button, when call is answered, automatically resets drop.

Standard, 8 to 12 volts, a.c.

Prices do not include plates.

No. 139, Non-Indicating.....each \$4.80
No. 140, Indicating.....each 9.30

No. 136 Edwards Surface Return Call Stations

Schedule T

Designed for installation in existing buildings. Provides a neat appearing plate mounted on a shallow cast box which provides entrance for conduit or open wires as desired. The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with the special Edwards No. 265 Return Call Push.

The cast box is rubberoid black, the plate is brushed brass or nickel. Special finishes, upon application.

Bakelite plate can be furnished if desired at an additional charge of 25 cents. Weight, 1 1/2 pounds.

Price, No. 136.....each \$6.00

No. 137 Edwards Flush Return Call Stations

Schedule T

A flush plate of pleasing design for mounting on a standard single gang switch box. The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with the special Edwards No. 265 Return Call Push.

Standard finish is brushed brass or nickel plate. Special finishes, upon application.

Bakelite plate can be furnished if desired at an additional charge of 25 cents.

Weight, 1/2 pound.

Price, No. 137.....each \$5.00

No. 138 Edwards Indicating Return Call Station—Schedule T

Price, No. 138, Push and Buzzer, Wt. 1 Lb.....each \$12.00

For use where it is desirable to indicate that a call has been made to the room during the occupant's absence.

It fits a standard 2-gang switch box. The audible signal is a Double Adjustment Lungen Buzzer. The visible signal is a white arrow outlined through a small round glass window. One push button is for the return call, the other to reset the indicating arrow.

Edwards Elevator Annunciates

Hand Reset

Standard Voltage, 8-12 Volts A.C. or D. C.

Schedule T

Presents a reduction in size without affecting clearness of indication.

Buzz audible signal.

Smooth, sturdy, reliable reset.

No. 130D, the up and down type, is equipped with reset push for each column of indications.

Order and price by number of drops not by number of floors.

Standard finish, black. Mahogany or oak, no extra charge.

Special finishes upon request.

Kirkland Bulls-I-Units

A device for effecting visual signals without the usual complex installation and maintenance problems. Unit is a complete annunciator, consisting of a light chamber, terminal block, socket, lens cap (removed from front) and a symbol insert, all in one. Adapted for all kinds of visual signal work,

particularly in the construction of lamp annunciators. For all kinds of control devices, panel boards, etc.

The usual jeweled lens of the beehive type can be supplied in red, green or fiery opal; also in clear white inside frosted type.

Clear type lens employs colored inserts behind lens and until lamp is lighted shows white, regardless of color of insert. When lamp lights, color shows brilliantly and is seen from every angle. Numbers, letters and symbols of the sticker type can be placed between lens and insert and can be seen clearly from a distance when lamp lights, although invisible until then.

To mount it is only necessary to drill a hole for each bulls-eye and slip unit in place, locking nuts on threaded sections in rear of panel or plate.

A variety of lamps can be furnished with No. 600 unit. The G6 or elevator lamp and flashlight lamps can be used for voltages from 3 to 24 volts; S6 lamp for 120 volts.

Style of insert: No. 600, white; No. 601, red; No. 602, green; No. 603, yellow; No. 604, signal blue.

Style of finish: CHR, standard chromium; SRB, statuary bronze; BRA, brass.

When ordering, give number and finish letters.

Made in two standard sizes. No. 600 has a lens 1 1/8 inch in diameter and requires a 1 3/8-inch mounting hole. Overall length, 2 5/8 inches.

No. 500 is for low voltage elevator T lamps only; has a lens 3/4 inch in diameter and requires a 7/8-inch mounting hole. Prices on application.

No. 600 Unit, with Clear Lens and Insert or Jeweled Lens, as Desired.....each \$1.50

Kirkland Bulls-I-Plaques

A practical development for the application of bulls-eye (pilot lights) with lettering or numbering, to panel boards, electrical devices and for all remote control visual indication purposes.

Cast in genuine solid bronze, aluminum or in nickel-silver; size, shape, lettering and numbering to order. Standard lettering or numbering is block type; all letters are raised and polished. Background is stippled and oxidized. Border may be plain, raised single flat-band, raised double flat-band or filed bevel edge. Special shapes or styles of lettering and numbering, trade-marks, monograms, etc., are extra.

Approximate thickness of plaque, 3/16 inch.
Square or Long Type Plaque, Including Raised Letters or Numbers.....per square inch \$1.15
Minimum Charge for Square or Oblong Plaque...each 3.30
Circular Type, 2 1/4 Inch Diameter, Including Raised Letters or Numbers.....each 2.25

Special circular plaques furnished in any diameter. Furnished in brass if desired; add 5% for chromium finish.

When ordering specify: horizontal or vertical type of plaque; number of bulls-eyes to be on plaque; types of lens and color of bulls-eyes; type of border and finish of plaque; lettering or numbering on plaque; type, voltage and capacity of switches; also send rough sketch.

Faraday Separable Connectors

For Flush or Surface Wall, Floor or Desk Mounting
Types SCP, SCC, SCWF, SCDC, SCDP and No. 922,
Schedule D—Types SCA and SCB, Schedule T

Designed to provide means for perfect mechanical and electrical connections between the terminals of two cables where it is desired that they be easily disconnected for alterations, testing, etc. This applies especially to connection between rigid cable installed in conduit and flexible cables for annunciators, telephones, push-buttons, etc., either at the floor, wall, or at an office desk.

One half of the separable connector has contact points which are plugged into contact clips of the other half.

Made of bakelite having embedded therein either 4 or 10 terminal connectors; housed in solid bronze shell.

Standard package, 1.

Type SCP Connectors Only—Without Bronze Shell
No. SCP-4, 4-Terminal Connector.....each \$8.00
No. SCP-10, 10-Terminal Connector.....each 10.00

Connectors with Housings Type SCC—For Floor Connection

Parts Comprising Type SCC

Standard size nipples for Nos. SCC-4 and SCC-10 are 3/4 inch; over 10 number standard size nipple is 1 inch.
Cat. No. SCC-4 SCC-10 SCC-20 SCC-30 SCC-40
No. of Terminals.. 4 10 20 30 40
Each..... \$16.00 20.00 34.00 49.00 64.00

Type SCWF—For Flush Wall Mounting

Cat. No. SCWF-10

Cat. Nos. SCWF-4 and SCWF-10 fit a standard single-gang switch box. Each additional 10 numbers take additional gang switch box.

Cat. No.	Each	No. Terminals
SCWF-4	\$12.00	4
SCWF-10	16.00	10
SCWF-20	30.00	20
SCWF-30	40.00	30
SCWF-40	50.00	40

Type SCDC—With Bushed Hole for Cable

Cat. No.	SCDC-4	SCDC-10	SCDC-20	SCDC-30	SCDC-40
No. Terminals..	4	10	20	30	40
Each.....	\$12.00	16.00	26.00	36.00	46.00

Type SCDP—With Tapped-Conduit Connection

Cat. No.	SCDP-4	SCDP-10	SCDP-20	SCDP-30	SCDP-40
No. Terminals..	4	10	20	30	40
Each.....	\$12.00	16.00	26.00	36.00	46.00

Type SCA—With Duplex Convenience Outlets

Cat. No.	SCA-2	SCA-4	SCA-8
No. of Outlets...	1	2	4
No. Connections.	2	4	8
Each.....	\$10.00	15.00	20.00

Type SCB—With Desk Buzzer

Type SCB, with Desk Buzzer in SCC-10 Shell.....each \$20.00

No. 922 Portable Type Connectors

Designed to meet conditions where it is desired that separable connector be portable. Housings are of cast aluminum.

Made in 10-terminal units (5 pairs) only.
No. 922.....each \$40.00

Faraday Interconnection-Strips

Schedule T

Designed to facilitate cable-terminal-interconnection for annunciators, push buttons, telephones, etc., and to eliminate splices.

No. CS-26

These strips provide time and labor saving means for fanning out and separating the conductors of cables without the costly forming or lacing of old time methods and for attaching them to their respective terminal locknuts in a neat way. By the use of Faraday Interconnection-Strips testing of the wire circuits is greatly facilitated, at any time, and changes in and additions to the wiring may be easily effected.

Height, 7 1/2 inches; depth, 2 3/16 inches.
Metal channel space, 1 1/8 inches.

Standard package, 1.

Cat. No.	Each	Description	Width In.
CS -26	\$3.00	Strip Only with 26 Terminals (13 Pairs).....	1 11/16
CSM-26	7.00	Same as Above, with Metal-Channel Mounting Form and Numbered Forming Strip.....	2 5/8
CSM-52	12.00	Same as No. CSM-26, but has Strip for 52 Terminals (26 Pairs).....	4 3/16

No. CSC-1 Faraday Interconnection-Cabinets

Flush and Surface Types

Schedule T

Cabinets have installed therein a panel upon which is mounted one or more Faraday Interconnection-Strips and the necessary number of 5-point fused battery strips. The black enameled steel cabinet is provided with door and spring lock. May be furnished, at extra cost, with gutters similar to those of lighting panel boxes so that cables may be concealed.

Standard package, 1.

No. CSC-1 Surface Cabinet with One 52-Terminal (26 Pairs) Interconnection-Strip and One 5-Wire Fused Battery Strip.....each \$36.00
Add for Each Add. 52-Ter. Interconnection-Strip... 13.00
Add for Each Add. 26-Ter. Interconnection-Strip... 8.00
Add for Each Add. 5-Wire Fused Battery Strip.... 11.00
Flush cabinets at same prices as surface cabinets.

Faraday Fused Battery Strips

Schedule T

Designed to provide fuse-protection on low voltage circuits.

Height, 1 3/8 inches; width, 3 inches. Standard package, 1.

With Knife Switches

Cat. No.	Each	No. Wires	Lgth. In.
FBS-3	\$8.00	3	3 1/4
FBS-5	10.00	5	4 5/8

With Locknut Connections

Cat. No.	Each	No. Wires	Lgth. In.
FBL-3	\$7.00	3	3 1/4
FBL-5	9.00	5	5 5/8

No. FB-100, Renewal Glass-Tube Fuses.....each \$0.06

No. FBS-5

Faraday Heavy Terminal Strips for Large Size Wires

Schedule T

Base is solid 1/2-inch bakelite with extra heavy non-turning brass studs, numbered, as specified. Each wire can pass through a hole opposite its individual post, thus eliminating the use of forming strips. Terminals are 3/8 locknut pattern.

Standard package, 1.

Cat. No.	915	916	917	918	919
No. Pairs of Terminals.....	5	10	15	20	25
Each.....	\$5.00	8.00	11.00	14.00	17.00

Type P-160 Self-Winding Adjustable Program Clocks

24-Hour Schedule

An automatic clock combined with a program device. Used as a master clock to control a system of clocks as well as to operate programmed signal system.

The only clock of this type that can be checked hourly with official time by connection with local Western Union Time Service.

Oak or birch case finished to match trim. Height, 41 1/4 inches; width, 18 1/2 inches; depth, 7 1/2 inches; 12-inch dial. Movement: 80 beat, spring-driven, pendulum-controlled. One hour's reserve power.

Program device sounds 4 second signals any 5 minute period of day. Time of sounding signals easily adjusted by rearranging pins on program disc. Can operate a number of different schedules concurrently. Can be equipped with contact for silencing bells. Operates any number of signals. One-bell installations can be furnished in compact units

with bell mounted on side of clock case.

Operation: 110 volt a.c. through transformer rectifier, or dry cell batteries direct.

Large installations requiring a number of bells, need additional relay and transformer rectifier to furnish extra power for bells. These are furnished at extra cost.

Complete descriptive bulletins and prices gladly quoted on application.

Portland Anysset Count Controllers

A rugged heavy duty instrument designed to automatically maintain a uniform count of production, tallied in predetermined units.

Can be quickly and easily set to any number within the capacity of the instrument so that when desired quantity has been tallied a warning is given, either by bell or light, and a switch is thrown which may be utilized to stop the machine or to perform certain necessary operations at that point. On this particular type of register, resetting is unnecessary to repeat the cycle.

Adapted for speeds up to 500 counts per minute. The electric switch will carry 110 volts; for higher capacities an additional starter switch is necessary. Brake-stop switches may be used for an instantaneous machine stop. Terminal posts are provided for alarm signals for either bell or light operating from dry cell current.

The controller being automatic in its control features, can be used to operate a battery of machines where a limited counting, timing or measuring operation is necessary.

Size of heavy dustproof case, 10 1/2 x 4 x 3 3/4 inches.

When ordering specify motor ratings. Starting and brake-stop switches are extra. Controller may be obtained for either rotary or reciprocating movements. A right-hand register has actuating shaft on right hand side when facing register as illustrated; left-hand controller has shaft on left. Special fittings to suit individual requirements are designed on request.

- 3-Figure Capacity.....each \$29.25
- 4-Figure Capacity.....each 37.25
- 5-Figure Capacity.....each 45.25

Edwards Non-Code Fire Alarm Stations

6 to 110 Volts

Underwriters Approved

No. 224 Flush Break-Glass Station

No. 224

With hinged front so test operation is same as actual alarm operation. Size, 3 1/4 x 4 3/8 inches, to fit standard single switch box. Test key, hammer and chain with each station. Open circuit type furnished if not specified. Finish, red enamel.

Weight, 1 pound.

- Price, No. 224, Open Circuit.....each \$7.50
- Price, No. 224C, Closed Circuit....each 7.50

No. 225 Surface Break-Glass Station

Same as above but with cast fitting for surface wiring. Fitting can also be mounted on standard switch box for use with concealed wiring but where it is desired to have stations protrude from wall to be visible from a distance.

Weight, 3 1/4 pounds.

- Price, No. 225 Open Circuit.....each \$9.50
- Price, No. 225C Closed Circuit.....each 9.50

**No. 77 Surface Break-Glass Stations
Low Voltage Only**

No test. Open circuit only. Diameter, 3 3/4 inches. Standard finish, polished brass rim, red center.

Weight, 7 ounces.

- Price, No. 77.....each \$2.90
- Price, Glass for Any Station...each .44
- Price, Hammer and Chain for Any Station.....each .60

No. 2077 Faraday Surface Type Fire Alarm Boxes

Open-Circuit, Non-Code-Ringing
Schedule D

- No. 2077.....each \$2.90
- Extra glasses, 44 cents; chain and hammer, 60 cents.

A break-glass box, English vermilion finish; non-conduit installations.

Height, 4 3/4 inches; width, 3 inches; thickness, 3/4 inch.

For systems where it is not required that location of box from which signal originates be indicated by automatic code-ringing of gong and where failure of operative current or derangement of circuits or apparatus is not required to be automatically indicated.

No. 2024 Faraday Flush Type Fire Alarm Boxes

Open or Closed-Circuit
Schedule D

- No. 2024.....each \$7.50
- Extra glasses, 44 cents; chain and hammer, 60 cents.

A break-glass box, finished in glossy English vermilion.

Fits a standard outlet box for conduit. Height, 4 3/8 inches; width 3 3/8 inches.

For fire alarm systems where it is not required that location of box be indicated.

Can be furnished hinged hammer type in place of chained hammer type at same price.

Industrial Fire Alarm Systems

Industrial fire alarm systems are particularly designed and suitable for factories, schools, colleges, public institutions, hotels, theatres, office buildings, department stores, warehouses, apartment houses, etc. in fact for every class of building where life and property should be protected from fire hazard, but with full consideration that such a fire alarm system must be dependable, yet simple and economical, both as to initial cost and maintenance.

Industrial fire alarm systems may be classified in 2 general types:

Electrically-Supervised Closed-Circuit Code and Non-Code Ringing for local drill alarm purpose and for connection to municipal fire alarm systems.

Non-Supervised Open-Circuit Code and Non-Code Ringing Systems.

Closed-Circuit Systems

Under the closed-circuit systems the following may be furnished:

PLAIN CODE SYSTEMS in which the operation of a station lever causes all audible devices such as gongs, horns, etc. to sound a pre-determined code indicating the point of origin of the alarm.

PRE-SIGNAL CODE SYSTEMS in which the first operation of a station lever causes a code to be sounded on certain audible signals, known as pilots. The second operation of the station by means of a special key will cause the code to be sounded on all audible devices, both pilots and general.

POSITIVE NON-INTERFERING CODE SYSTEM features may be included in either the plain or pre-signal code systems mentioned above. These features prevent the jumbling of the code signal in the event of more than one station being operated at or about the same time.

MASTER CODE SYSTEMS in which one standard code is used this code indicating "Fire" but where the exact location of fire is not required.

INSTITUTIONAL AUXILIARY SYSTEMS in which the operation of a station lever by a person, equipped with the proper key, causes a code to be sounded on all audible signals within the building for drill purposes. In the event of an actual fire the operation of the station lever will cause an alarm to be sounded on all audible devices within the building, and at the same time will transmit a signal over the municipal fire alarm circuits indicating the building on fire.

GENERAL ALARM NON-CODE SYSTEMS on which the breaking of glass in the station operates all signals continuously until glass is replaced or circuit switch is opened.

Open-Circuit Systems

Under the open-circuit systems the following may be furnished:

PLAIN CODE SYSTEMS in which the operation of a station lever causes all audible devices to sound a pre-determined code indicating point of origin of the alarm.

MASTER CODE SYSTEMS in which one standard code is used, this code indicating "Fire" but where the exact location of fire is not required.

GENERAL ALARM NON-CODE SYSTEMS in which the breaking of glass in station operates all audible signals continuously until glass is replaced or circuit switch is opened.

ANNUNCIATOR ALARM SYSTEMS in which the breaking of glass in station operates a corresponding drop on an annunciator indicating point of origin of alarm and also operating audible signals.

Fire Alarm Boxes

Fire alarm boxes for industrial fire alarm systems are manufactured in 6 types, to meet all conditions of fire alarm service as follows:

Positive Non-Interfering* Type Code-Ringing Closed-Circuit.

Plain Type Code-Ringing Closed-Circuit

Pre-Signal Type Code-Ringing Closed-Circuit.

Double-Code-Ringing Type Closed-Circuit.

Shunt-Type Non-Interfering Code-Ringing Closed-Circuit.

Open-Circuit Type Non-Code-Ringing.

Code ringing closed-circuit fire alarm boxes are subdivided into the following groups:

Enclosed Pull-Lever Surface and Semi-Flush.

Break-Glass Pull-Lever Surface and Semi-Flush.

Weatherproof Pull-Lever Surface.

Weatherproof Break-Glass Pull-Lever Surface.

Sounding Devices

Sounding devices for fire alarm systems are designed with the utmost care to afford the maximum of protection through dependable operation. Dependability is the more important as fire alarm sounding devices may remain idle for long periods of time and yet must be so constructed that, when the need arises, they function instantly and satisfactorily.

Sounding devices are divided into 2 general classes, viz.:

Electrical Sounding Devices.

Mechanical Sounding Devices.

Electrical sounding devices are predominant for use in fire alarm systems and comprise:

Straight Electric Signal Gongs—Single Stroke and Vibrating.

Electro-Mechanical Signal Gongs.

Small Electric Sirens.

Motor-Driven Horns and

Vibrating Horns.

Mechanical sounding devices consist of compressed air horns.

Fire Alarm Control Cabinets

For regular, pre-signal or dual-operated and double code fire alarm systems.

Fire alarm control cabinets are designed for the control and supervision of Fire Alarm Circuits. They consist of ebony asbestos or slate panels having mounted thereon necessary controller-relays. Trouble-relays, time-limit-cut-outs, meters, terminals, fuses, etc., all being enclosed in heavy pressed steel fireproof cabinets with Yale locked doors. Glass windows are provided in doors to permit ready reading of meters without opening the doors.

Fire Alarm Apparatus

Fire alarm apparatus is steadily being improved in quality and design from year to year and is guaranteed to be electrically and mechanically perfect. Particular attention, however, is called to the necessity of proper installation and maintenance if every day in the year satisfactory service is to be obtained. Installation suggestions are furnished with each system.

Engineering Advice

Our engineering department will promptly advise and cordially co-operate with anyone contemplating the installation or use of fire alarm apparatus.

Hospital Signaling Systems and Equipment

Hospital signaling systems are an absolute necessity in every modern hospital.

Nurses' Calling Systems

Nurses' calling systems may be of either one of the following 4 types:

LOCKING-BUTTON TYPE in which the locking push button, suspended from a flexible, rubber-covered cord contains all the mechanism to actuate the audible and visible signals and to reset these when call has been answered.

LOCKING-MAGNETIC SWITCH TYPE in which the contacts of the non-locking push button at the end of a flexible, rubber-covered cord actuate a magnetic switch, protected by a steel case in the wall, the switch operating both audible and visible signals; this locking-magnetic switch type may be used on 110-volt circuits, either a.c. or d.c., or on low-voltage circuits if preferred.

PULL-CORD-SWITCH TYPE consisting of special toggle-type switch installed in the wall and operated by a pull-cord. This system is used in hospitals where low initial cost is a deciding factor; the operation of the pull-cord switch requires more effort on the part of the patient, and is sometimes not favored because of this.

BEDSIDE-SERVICE-PHONE TYPE permitting direct communication between patient and nurse by means of loudspeaking telephone thus providing greater convenience, and quickest service to patient.

Nurses' and Maids' Location Systems

These systems indicate the location of nurses and maids in private rooms by an illuminated plug inserted in a receptacle at the door when entering. Upon leaving the room this plug is removed.

Ambulance and Entrance Signaling Systems

Consist chiefly of the necessary push button, located at doors leading out of the building and a lamp-annunciator having a lamp signal for each location with buzzer as audible signal. Useful for night service.

Nurses' Home-Calling Systems

These systems provide communication between office and the nurses' and attendants' rooms at their homes. Two types of systems may be used, viz.:

Return-Call Annunciator Type

Intercommunicating Telephone Type

In the return-call annunciator systems, nurses' or attendants' rooms are provided with a combination buzzer and push button-station while at building office, a combination annunciator and push button board is installed. In this way the office may call the nurse and the nurse may answer the call by operating the corresponding push buttons. Room stations may be provided with indicating drops which in nurses' absence remains visible until reset, indicating that a call has been made.

In the telephone call system the combination annunciator and push button board is provided with an operator's telephone and the room stations are replaced by telephones. The room telephone may be provided with indicating drop for the same purpose as stated above.

Hospital signaling equipment is approved by Underwriters' Laboratories as well as by the U. S. Government for Veterans' Hospitals, etc.

Engineering Advice

Our engineering department—specialists in this particular field of signaling—will gladly co-operate with architects, engineers, hospital superintendents, etc., in charge of operation to lay out systems and make recommendations.

There is no charge for this service.

Type A Federal Sirens

This outdoor Type A Siren takes the place of bells, gongs, whistles, etc., wherever electricity is available. There are no gears or vibrating parts. This siren with double horn gives increased efficiency, greater volume, and pleasing tone.

Length over all, 14 inches; diameter of horn, 10 inches; diameter of body, 5 3/4 inches. Weight, packed in carton, 17 pounds. Price, Type A, with Universal Motor, 1/3 H.P., A.C. or D.C., 6 to 250 Voltseach \$40.00 Price, Brass, Copper or Porcelain Enamel Finish, 6 to 250 Voltseach 45.00

Federal Apparatus Type Sirens

6 or 12 Volts D.C.

Type E

For every type of emergency vehicle, fire apparatus, etc.

With G-E motor.

All types finished in chromium plate except No. 8 which is finished in black Duco.

Type E is furnished with either standard, bar or dash bracket, switch and cable.

No. C-5, Coaster Siren.....each \$67.50
 No. C-5, Coaster Siren with Electric Brake.....each 80.00
 Type E, with Flat or Regular Projector.....each 40.00
 No. 10, with Long or Short Projector.....each 30.00
 No. 8, with Short Projector.....each 25.00

Federal Vertical Electric Sirens

Greater tone volume per horsepower is obtained by the improved vertical design.

This design also assures full weather protection at all times.

Furnished in sizes 2 to 7 1/2 horsepower according to the size of town.

Full details on vertical sirens for general alarm as well as fast code will be sent upon request.

Edwards Horns and Howlers

Schedule T

No. 311

No. 311, for Indoor Use

No. 311 is a powerful signal for all indoor uses, in schools, mills, etc. Ideal in noisy locations as dismissal signal or emergency and fire signal.

Its appearance gives it an advantage in schools and fine buildings.

Equipped with a back plate, which mounts directly on wall, 4-inch square box, standard switch box, any outlet box with single gang switch cover, or any single gang conduit or Wiremold Type fitting. Wires are connected to this plate, and the horn easily hung at any later time without inconvenient connections, screws, etc. Approximately 5 1/2 inches high, 5 1/2 inches wide and 3 inches deep.

No. 311
 12-30 Volts A.C.....each \$10.00
 110 Volts A.C.....each 11.24

Nos. 312 and 313

No. 312, with Single Projector

No. 312 has same mechanism as No. 311 but equipped with projector for weather protection.

Drilled top, bottom or both for 1/2-inch conduit.

Approximately 6 inches high, 11 3/4 inches long. No. 311 is the same as No. 312 except it has a double projector.

No. 312 313
 12-30 Volts A.C.....each \$15.00 \$18.00
 110 Volts A.C.....each 15.00 18.00

With two No. 8-32 steel inserts molded in bottom projecting 3/16 inch to provide means for fastening with nuts to panel or housing.

Length, 2 1/2 inches; height, 1 1/8 inches; depth, 1 inch.

Four copper bus connectors fastened to molded block and separated by 1/16-inch high molded barriers—8 brass screws No. 8-32 furnished to bind wires to connectors.

Each \$.75

Federal Remote Control Switches

Permits operation of sirens from distant localities. One push button is included.

Remote Control for Any 2-H.P. Siren.....each \$20.00
 Remote Control with Thermal Cut-Out Relays for Any 3-H.P. Siren.....each 30.00
 Remote Control with Thermal Cut-Out Relays for 5 or 7 1/2-H.P. Sirens.....each 40.00

Benjamin Industrial Signals

For Calls and Warnings in Factories, Yards, Warehouses, Etc.

In Use in a Machine Shop

In the routine of business, getting men when needed at the office or telephone, is frequently difficult.

A well-installed calling system with the right signals in the line, however, makes it possible to reach any executive at once and without disturbance or loss of time to employees.

Benjamin Industrial Howlers have a peculiar pitch and penetrating tone which makes them most effective and satisfactory signals.

They are ruggedly made and perfectly assembled so that daily performance may be expected for years; their maintenance is less than other forms of signals.

Benjamin Howlers are made for either indoor or outdoor use on direct current or alternating current circuits.

These howlers are satisfactory for use as factory superintendent's and foreman's calls; tell-tale or warning, for water tank levels, steam or gas pressures, sprinkler systems, etc.; burglar alarms; traffic warnings for street crossings; draw bridge signals; in mines, municipal fire stations; at railroad crossings; for signaling the opening and closing hours of labor.

Direct Current Industrial Howlers For Multiple Circuits

These howlers may be employed successfully on circuits as high as 250 volts.

When six or eight direct current howlers are to be used on one circuit, not less than 32 volts should be used.

Sounding mechanism, vibrator type, has silver make-and-break contact points. An especially constructed condenser across contact points prevents arcing.

Vibrator springs of the best grade spring material are mounted independently of the armature.

Self-locking adjusting screw, reached through projector, regulates tone volume and pitch of note.

No. 8326-H Heavy Duty Weatherproof Howlers

Has cast iron body, tapped for 1/2-inch pipe connection.

The one-piece, drawn brass, bell type sound projector is rigidly attached to a heavy pressed steel cover.

A gasket between cover and body makes the signal weatherproof.

Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Weight Pounds	Price Each
8326-H	Brass Bell	1/2-in. Conduit	*	5 3/4	\$15.00
8358-A	14-in. Conical	1/2-in. Conduit	*	6 1/2	16.25

*Standard voltage is 110 volts, direct current, but any voltage from 6 to 250 direct current, inclusive, may be specified at an advance of 50 cents.

Specify voltage when ordering.

Benjamin Industrial Signals

No. 8326-A Heavy Duty Non-Weatherproof Howlers

Has pressed steel body with approved insulated side entrance for open wiring. The one-piece, drawn brass, bell type sound projector is rigidly attached to a heavy pressed steel cover which also carries the mounting bracket. Wire connections are easily accessible by loosening two screws and removing back. Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8326-A	Brass Bell	Open Wiring	*	2 1/4	\$12.50

*Standard voltage is 110 volts d.c., but any voltage from 6 to 250 d.c., inclusive, may be specified at an advance of 50 cents. Specify voltage when ordering.

Alternating Current Industrial Howlers For Series or Multiple Operation

These howlers may be operated on either multiple or series circuits and will work well even in connection with vibrator or single stroke gongs, etc.

When used in series with other electrical devices special windings are furnished which allow passage of sufficient current to operate the other devices on same line. A 10 per cent variation in voltage will not affect the satisfactory working of the howler. Weatherproof types are recommended when signals are to be used outdoors. Sounding mechanism is of the vibrator type. The vibrations are the result of the alternating current cycles and no make-and-break contacts are required. No adjustments are needed.

Heavy Duty Weatherproof Howlers

No. 8346-H

Has a.c. mechanism; construction and finish same as for Cat. No. 8326-H.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8346-H	Brass Bell	1/2-In. Conduit	**	4 3/4	\$12.50
8357-A	14-In. Conical	1/2-In. Conduit	**	5 1/4	13.75

**Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

Factory Non-Weatherproof Howlers

No. 8152-L

Has a.c. mechanism; construction and finish same as for Cat. No. 8326-A. Cat. No. 8152-L is exactly like No. 8355-A except that it is equipped with a 9-inch conical sound projector which tends to confine the volume of tone in one direction.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8355-A	Brass Bell	Open Wiring	**	2 1/4	\$10.00
8152-L	9-In. Conical	Open Wiring	**	2	8.75

**Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

No. 8152-S Mine Type Weatherproof Howlers

Has pressed steel body and front cover with mounting bracket attached to front cover and a one-piece, drawn brass bell type sound projector. Electrical connections are made to insulated wire leads entering front cover. Made weatherproof by gasket and by sealing wire entrance. Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8152-S	Brass Bell	Open Wiring	**	2 1/4	\$12.50

**Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

No. 8161 Benjamin Kode-Kalls

Benjamin Motor Driven Signals

For Multiple Circuits

Operated mechanically by a precision-built clock work. For code calling systems of industrial plants, offices, etc. To operate, set dials at code numbers desired and push down on plunger; Kode-Kall then automatically repeats signal 3 times.

Can be used on any kind of signaling system—operated from batteries, lighting circuit or current of any voltage. Any type of signaling device can be used in circuit. Electrical contacts are rated at 100 watts at 110 volts.

Office green crackle lacquer finish, polished metal trim. Has rubber foot pads. Complete with cord and connector.

No. 8161, Wt. 9 Lbs. each \$40.00

Benjamin Single Stroke Bells and Chimes

National Electrical Code Standard

For Series or Multiple Operation

Bells are for code calling in large offices, factories, schools, commercial establishments, etc. Ideal for coded fire alarms or other coded warning signal systems.

Mechanism is of the solenoid type with only one moving part—the plunger—which responds instantly when coil is energized.

Tone volume is adjustable. Soft, medium or loud tones may be obtained by turning set screw at bottom of casing, which regulates plunger stroke.

Bell

Installation is simplified by special mounting plate which provides a means of direct attachment to Gem Type Outlet Boxes or to any switch or outlet box cover having mounting holes space on 3 1/2-inch centers. In installing, mounting plate is first attached to outlet box or cover by 2 screws. Wires are then brought through large center hole in plate, and looped around binding screws. After wiring, device is attached by 2 screws threading into special mounting plate.

Chime

Plunger is of magnetic iron, with a bakelite striker and moves freely in a bakelite tube. Magnet coil is layer wound, impregnated and not affected by moisture. The chimes are identical in construction to the bells except that a metal chime bar with a wood resonating chamber is provided in

place of a gong. All housings are of cast iron; housings, bells and resonating chamber of chimes are finished in black.

Cat. No.	Each	Description	Voltage	Wt. Lbs.
8110	\$9.70	3-In. Diam. Bell	110 Volts, 60 Cy. A.C.	3
8111	9.70	3-In. Diam. Bell	110 Volts, D.C.	3

8120	18.00	Chime.....	110 Volts, 60 Cy. A.C.	5
8121	18.00	Chime.....	110 Volts, D.C.	5

Standard voltages are listed above.

Special voltages from 6 to 48 volts, a.c. or d.c. may be specified at a reduction of \$2.00 in list price. For voltages over 125 volts, a.c. or d.c., add \$2.00 to list price. Special voltages and frequencies must be specified when ordering.

A weatherproof signal of unusual tone and penetration. Used indoors or out where service requirements are exacting. For use in steel mills, railroad shops, foundries and all locations where noise is excessive.

Pitch of signal is correct for cutting through conflicting noise. Suited for coding as there is no lag or coasting of motor to blur the coded signal.

Signal has heavy cast body, weatherproof rubber gaskets, drop-forged, heat-treated alloy steel ratchet and diaphragm anvil, phosphor bronze armature bearings and automatic wick-feed lubrication. Motor is series wound for starting power and has correct r.p.m. to produce penetrating tone. A set screw at rear of housing controls volume and pitch.

Standard voltage: 110 volts, 60 cycles a.c. or 110 volts, d.c. Special voltages up to 250 volts d.c. and 240 volts a.c. and frequencies from 25 to 50 cycles available at advances over prices. Power consumption, 55 watts.

Finished in baked black enamel. Red enamel furnished at an advance of \$1.25.

The double projector type motor-driven signal is used where sound is to be projected in opposing directions from a central location.

Conduit connection, 1/2 inch.

Net weight, 14 3/4 pounds.

Cat. No.	Projector	Voltage	Price Each
8175	Single Cast.....	110 A.C.	\$35.00

8181	Double Bell.....	110 D.C.	38.75

Weatherproof Double Projector Howlers

No. 8788

The Projector Howler offers an effective and economical means of projecting sound from a central point up and down a passageway or platform.

This howler has cast iron body, with 2 mounting lugs and is tapped at side for 1/2-inch pipe connection. Two drawn brass, bell type sound projectors are attached to pressed steel front cover.

The sounding mechanism for the Double Projector Howler is of the vibrator type, furnished for d.c. or a.c. circuits, and is standard Benjamin Industrial Howler construction. All joints in case are gasketed to make mechanism weatherproof. Finish is baked black enamel. Red enamel finish will be furnished at \$1.00 advance in list price.

Cat. No.	Connection Inches	Voltage	Wt., Lbs. Each	Price Each
8788	1/2 Conduit	†D.C.	8	\$18.75
8790	1/2 Conduit	*A.C.	7	16.25

*110 volts, 60 cycles is standard on Benjamin a.c. horns. However, any voltage from 6 to 250, and any frequency from 25 to 60 cycles, may be specified at an advance of 50 cents list. Voltages and frequencies must be specified when ordering.

†110 volts is standard for all Benjamin d.c. horns. However, any voltage from 6 to 250 may be specified at an advance of 50 cents list. Specify voltage when ordering.

Benjamin Weatherproof Fire Alarm Howlers

No. 8360

Specially built for use on fire alarm systems operating under stringent regulations. The Industrial Commission of the State Department of Labor, New York City, has approved them for use with standard fire alarm boards.

In series, without condenser, eight 14-volt or fourteen 8-volt howlers may be used, but where fourteen 14-volt howlers are used a condenser must be supplied on the panel board. The 110-volt howlers may be used for open circuit work where a time limit fuse or switch is inserted in the circuit. The use of 8-volt and 14-volt signals on one circuit is permitted. D.C. howlers are for use on multiple circuits only. The sounding mechanism for Benjamin Fire Alarm Howlers is of the vibrator type. These signals have cast iron body tapped for 1/2-inch pipe connection. A one-piece, drawn brass, bell type sound projector is rigidly attached to a pressed steel front cover. Signal is made weatherproof by gasket. Finished in red enamel.

Cat. No.	Type of Projector	Connection	Std. Voltage	Wt. Lbs.	Price Each
8360	Brass Bell	1/2-In. Conduit	*110 D.C.	5 3/4	\$16.00
8864	Brass Bell	1/2-In. Conduit	8 A.C.	4 3/4	13.50

8866	Brass Bell	1/2-In. Conduit	*110 A.C.	4 3/4	13.50

*Standard voltage is 110 volts, D.C. or A.C., but any voltage from 6 to 250 inclusive, D.C. or A.C., may be specified at an advance of 50 cents. Specify voltage when ordering.

Benjamin A.C. Industrial Buzzers

The sounding mechanism of these buzzers is of the vibrator type. The vibrations are the result of the alternating current cycles and no make-and-break contacts are used. These buzzers will operate indefinitely without adjustment or attention, under all commercial conditions on either multiple or series circuits. Mine buzzer No. 8299-M may be used outdoors as well as indoors.

No. 8299-M

Heavy Duty Mine Buzzers

Open wiring type No. 8299-A has heavy stamped steel enameled case and 8-inch wire leads sealed in for outside connection.

Conduit type No. 8299-M has cast brass cover and is tapped for 1/2-inch pipe connection.

Finish, baked black enamel.

Cat. No.	Type Body	Connection	Std. Voltage	Wt. Lbs.	Price Each
8299-A	Stamped	Open Wiring	†110 A.C.	1 3/4	\$7.50

When ordering, specify size and number of outlets required.

Benjamin Master Relays for Signal Systems

For use with Benjamin Kode-Kall in operating the more extensive type of signaling installations where connected load is in excess of the 100-watt rating of the Kode-Kall, or where it is not desired to have the Kode-Kall wired into the high voltage signal circuit.

Contacts of relay have a non-inductive rating of 110 volts of 30 amperes

a.c. and 6 amperes d.c.; at 200 volts, 20 amperes a.c. and 3 amperes d.c.

Coil is rated at approximately 7 watts and operates at plus or minus 15% of rated voltages.

Relay is available in following voltages: 110 volts a.c. 60 cycles; 18 volts a.c. 60 cycles. However, the 110-volt a.c. relay operates at 15 to 30 volts d.c. and the 18-volt a.c. relay operates at from 4 to 6 volts d.c.

Relay is front connected and is mounted on a base of high insulating molded composition. Relay must be mounted in a vertical position.

Box supplied with No. 8336 is 6x6x4 inches in size and has 1/2-inch knockouts; finished in black japan.

No. 8335, Complete less Box, Wt. 3 1/2 Lbs.each \$12.00
No. 8336, With Steel Knock-Out Box, Wt. 5 Lbs.each 15.50

Telecode Relays

This is a very sensitive, efficient and quick-acting circuit-closing unit standard with open-circuit contacts.

It can be had with back connections for panel mounting, with weatherproof conduit-fitting mounting or with 6x6-inch pressed steel box with knockouts.

No. 8314

No. 8313, with Panel Mountingeach \$12.00
No. 8314, with 1/2-Inch Conduit Mountingeach 14.50
No. 8315, with 6x6-Inch Steel Boxeach 12.00

Klaxon Industrial Horns

Electric motor-driven devices for operation on higher voltages. Effective in sounding time signals, fire or special hazard alarms or as warnings on derricks, etc.

For operation on 5 to 250 volts d.c. and on 10 to 460 volts a.c. Weatherproof housings are fitted with brackets for wall mounting and are tapped for conduit.

Types WS, W and WL with fire red lacquer finish; also available with Navy standard finish (baked black enamel over solid brass and copper plate) at \$3.00 extra.

In ordering give type desired, voltage of current supply and if a.c. or d.c.; advise cycle frequency if a.c.

Type WS

Has a short projector, producing a harsh, piercing note which scatters in all directions. Suited for indoor use under severe noise conditions.

Length, 7½ inches; height, 11¼ inches. Shipping weight, 24 pounds.

Type WS.....each \$30.00

Type W

With a ram's horn projector which directs its deep tone downward. Ideal for overhead or outdoor use.

Length, 12¼ inches; height, 11¾ inches. Shipping weight, 29 pounds.

Type W.....each \$30.00

Type WL

With a long projector. Deep penetrating note of great power recommends this horn where long distances are to be covered or where note is to be directed toward a given point.

Length, 14¼ inches; height, 13 inches. Shipping weight, 29 pounds.

Type WL.....each \$30.00

Type 1278-A

For use only on 110-volt 60-cycle current.

Type 1281-A

For use only on 110 d. c. current.

Nos. 1278-A and 1281-A are small vibrator type horns for inside or protected outdoor use.

Length, 5½ in.; height, 6½ in. including mounting bracket. Ship. weight, 5 pounds.

Red Lacquer Finish.....each \$5.00

Klaxon 20 Horns for Marine Use

A detachable swivel mounting bracket and slip terminals make horn easily removable. Has weather-resisting Navy standard finish (baked black enamel over solid brass and copper plate).

Length, 11¾ inches; height without deck bracket, 10½ inches. Shipping weight, 15 pounds.

Type 530, 6 Volts, each \$28.00

Type 542, 6 Volts, with Attached Side Mounting Bracket.....each 25.00

Klaxon 22 Horns for Marine Use

A high-frequency automotive type horn. Projector, screen and back shell are polished solid brass, collar is rustproofed; black enamel finish.

Length, 14¾ inches. Weight, 6¾ pounds.

Type 1141-A, 6 Volts.....each \$15.00

Type 1142-A, 12 Volts.....each 15.00

Patterson Electric Tank Indicators

For Operation on Low-Voltage Transformer or Battery Circuits

Schedule T

No. A-20

No. B-21

Indicator gives a positive electrical alarm either in connection with a signal-gong or an annunciator, showing when contents of tank have reached a maximum or minimum level, or both.

Has self-cleaning contacts, brass-bushed bearings for vertical movements of rods in pipe. Will not fail when exposed to severe weather conditions; not affected by steam or vapor. All contacts are housed.

Standard package, 1.

No. D-23

Edwards Flushcall Signaling Devices

No. 660
No. 760
No. 1060

Flushcall signaling devices fit standard single gang boxes and take standard toggle switch plates. Can be ganged together with 110-volt receptacles, etc., in standard gang box and finished with standard plate.

For a.c. only. No adjustments needed. The uncertainty as to proper resistance, voltage, etc., for various uses has been eliminated.

For Operation on 8 to 12 Volts, A.C., 60 Cycles

These devices are suitable for operation of not more than two in multiple on Edwards No. 666 Powacall or No. 86 transformer; three in multiple on No. 88, 50-watt transformer; and four on No. 90, 100-watt transformer. Except No. 663 Melocall which is suitable for single use only.

Edwards Dixie and Cadet Bells

Schedule E

Hammer rod, ball and armature are all 1 piece. Rod is swaged to prevent bending in operation. Hammer ball is under the gong to prevent disarrangement. The armature is pivoted at the nearest point to the cover where there is practically no side motion.

Class C bell is non-adjustable; resistance, 2 ohms only.

Class B bell is adjustable; resistance, 2 ohms only.

Finish, black enamel, nickel trimmings.

No. 16 Edwards Flush Buzzers

Battery or Transformer Operation

Schedule T

Used in offices, hospitals, residences, where the appearance of the usual surface type buzzer is objectionable. Buzzer is mounted on a sub-plate which fits any standard switch box. Standard switch plate with perforations to emit sound is furnished to cover buzzer and sub-plate.

Standard finish, brush brass; nickel at no extra charge. Special finishes, upon application.

Weight, metal plate, 3/4 pound; bakelite plate, 9 ounces.

No. 16, Metal Plate...each \$3.00

No. 16, Bakelite Plate...each 3.30

No. 750 Bronx Watchcase Buzzers

Schedule E

A brass case, heavily nickel plated; phosphor-bronze springs, silver-contacts.

Cat. No.	Each	Height Inches	Diam. Inches	Std. Pkg.
750	\$1.80	5/8	1 3/4	10

No. 5006 Graybar Pull Cord Switches

Generally used in parlor car coaches.

Operates bus signal buzzers; also used as a stop light switch.

Overall block dimensions, 1 3/8 x 2 3/16 x 1 1/2 inches deep.

Prices and specifications upon application.

No. 5003 Graybar Bus Signal Buzzers

Graybar Bus Signal Buzzers are of the totally enclosed type. A steel cover mounted over the mechanism, houses the unit and protects it from dirt and the weather.

All buzzers are thoroughly insulated and tested at a high voltage breakdown. The magnets are wound with enameled wire, assuring protection from moisture and short circuited turns.

For battery operation, either 6 or 12 volts. In ordering, state voltage required. The resistance of the buzzers is made high to utilize a minimum amount of current when operating. For other voltages, prices upon application.

Overall dimensions, 3 13/16 x 3 13/16 x 1 5/8 inches

Resistance, 15 ohms; voltage, 12. Dry or storage battery.

Prices and specifications upon application.

No. 5000 Graybar Combination Vibrating and Single Stroke Bells

This bell makes it possible to combine 2 signals in one bell. Adaptable for double deck buses, the vibrating action being used for passenger's signal while single stroke action is for conductor's signal.

Guard extends partially over the gong. Supplied with 4-inch diameter gongs; stainless steel covers finished in black.

Over all dimensions, 8 3/4 x 4 inches.

Resistance, 15 ohms; voltage, 6 or 12. Dry or storage battery.

Weight, 2 3/4 pounds.

Specify voltage when ordering.

Prices and specifications upon application.

No. 5004 Graybar Door Step Light Switches

For operating step lights. Heavy gauge bronze face plate, nickel finish. Plunger head is of stainless steel. Electrical contacts are enclosed in bakelite base.

Can be used to make and break circuits carrying as high as 10 amperes.

Dimensions: 2 1/2 inches high; 1 inch wide; 1 1/16 inches deep.

Packed in individual cartons containing switch, mounting screws and bumper plate.

Prices and specifications upon application.

No. 5005 Graybar Bus Signal Push Buttons

For bus service requirements.

Formed to permit mounting on narrow window posts or installing on moulding. The cover of highly polished nickel finish is fastened to the bakelite base by 2 binding screws.

Mechanism is completely insulated. Contact springs are made of genuine phosphor bronze of the double-break, self-cleaning type, insuring positive action at all times.

Buttons are easily wired as terminal screws have large heads with upset ends to prevent their locking out when connections are looped. Connection permits looping of signalling circuit, eliminating splicing and soldering at each push button station. Overall dimensions, 1 1/2 x 1 inch.

Prices and specifications upon application.

No. 71 Edwards Economy Skeleton Bells

Schedule E

A fully insulated, loud ringing bell for all ordinary purposes.

The outstanding feature of the Economy is the intensified stroke armature.

No. 55 Edwards Bells

Standard Voltage—8-10 Volts A.C., 6-8 Volts D.C.

Schedule E

This single magnet bell is especially designed for low cost burglar alarm and similar work.

It is of the adjustable, non-weatherproof type.

Has black finish with nickel gong.

Standard package, 5. Can be furnished assorted.

Size.....inches	4	6	8
No. 55.....each	\$3.15	3.97	6.67

No. 156 Edwards Monitor Bells

Battery or Transformer Operation

Schedule T

An entirely self-contained bell that presents a neat appearance.

The hammer rod moves on a straight line and strikes the inside of the gong. This allows the bell to be made weather, bug and dust proof.

The springs are phosphor bronze, the contacts pure

hard-drawn silver. Has a 3-inch gong, nickel, base is finished in black.

Weight, 1 1/4 pounds.

Price, No. 156, Vibrating.....each \$1.80
 Price, No. 156, Single Stroke D.C. Only.....each 2.30

Edwards Vibrating or Single Stroke Adaptabels

For All A.C. and D.C. Voltages

Schedule T

This is a compact bell of the Underdome, Turtle or Monitor Type.

Fits a variety of standard conduit boxes and similar fittings, concealed or surface. Mounting is also simple for non-conduit work.

The gong does not have to be removed for installation—first, mount plate on wall or on switch box, outlet box or any standard type fitting desired; second, connect wires to large convenient binding post; third, hang adaptabel on two strong lugs, then push it home. It snaps solidly into place. A few turns of the screw under the bell locks it in place.

As the electrical connections are made to the mounting plate only, the whole electrical installation can be made, tested and completed before painting and finishing.

The maintenance problem in hard service work, like traffic signals, railroads, etc., is simplified with a few spare adaptabels. Adaptabel is easily detached and a new one attached instead of repairing on the job or the complete electrical installation of a new bell.

The movement is completely enclosed in a cast aluminum housing. Protected against dirt, bugs, etc. When weather-proof is specified, it is protected with gaskets.

The a.c. vibrating mechanism is the polarized, no contact type. There are no coil springs or pivots. No adjustment necessary. Gongs are hot pressed steel, Parkerized to prevent rust.

The d.c. vibrating mechanism is also of the straight line plunger type. Gongs are of hot pressed steel, Parkerized to prevent rust.

All 6 to 12-inch adaptabels mount directly on wall, 4-inch square box, standard switch box or any outlet box with single gang conduit or Wiremold type fitting.

All 3 or 4-inch adaptabels have separable plate for mounting same as above and will also fit 3 1/4-inch octagon boxes.

In ordering, specify voltage desired.

Vibrating Type

No. 560 for A.C.—No. 561 for D.C.

No. 551 Edwards Plunger Type Bells

For All A.C. Voltages

Schedule T

No. 551, Single

A no-contact, polarized bell. For traffic signals, mines, warehouses and all standard signaling purposes.

Binding posts and all parts are completely covered; as hammer rod operates in a straight line, the hole in the cover is but little larger than the rod itself, which makes the bell bug and dust proof. Rustproof gongs are standard equipment, and with the addition of a rubber gasket the bell is weatherproof.

There are no contacts to wear, stick or replace. No pivots, coil springs or points of friction.

No adjustment. The only wearing part is where the hammer strikes the gong and the mechanism automatically adjusts itself to this.

Approved by the National Board of Fire Underwriters.

Faraday Residence Call-Panels

The Modern Electric Bell
For Surface Mounting
Schedule A

An attractive installation harmonizing in color with the tone of the room.

Panel has hollow back-plates formed-up with molded edges, completely covering up the unsightly slack wires, the broken and uneven plaster and the grimy outline of the old style bells and buzzers.

Units are completely covered fully insulated and with adjustable contacts.

Standard finish: Panels, ivory; covers, jade green, blue or ivory, as specified.

Special color combinations such as blue, jade green or jet black panels with polished cadmium covers will be furnished on special order.

Panels will be furnished on special order with adapter-plates to mount on any standard outlet box, for new building work.

Standard package, 1.

1-Unit (Small) Panels

*Black with nickel gong; with polished-cadmium covers at no extra cost.

No. 238 PR 3-Inch Monitor Bells

Double Magnets for 6-Volt Transformer or 6-8-Volt Battery Circuits

Schedule T

This bell is designed for special requirements where a self-contained round bell is wanted. Standard resistance is 2 ohms. Furnished to any special resistance up to 200 ohms, inclusive at a standard list addition.

Base is provided with mounting holes. Finish is polished nickel gong with black enamel base.

Size gong, 3 inches. Standard package, 1.

Price, No. 238.....each \$1.80

PR Marlo Adjustable Double-Magnet Transformer Bells and Buzzers

Schedule E

For 6-Volt Transformer Circuits

Outside and inside binding posts, enclosed mechanisms. With laminated magnet cores, carbon contacts, reed type armatures, back tension adjustments, insulated mechanisms.

Black base and cover, nickel gong.

Furnished to operate on 12-18-volt transformer or 6 to 12-volt d.c. circuits, if so specified at prices shown below.

Each.....	\$33.00	35.00	37.50	72.90	89.90	107.90

CONDUIT BELLS.—Adapter-plate allows any bell to be mounted on standard 4-inch square box or extension cover. Also fits single or double-gang conduit. Adapter-plate furnished as standard with 110 or 220-volt bells. On low voltage bells specify "conduit bell" if desired and add \$1.25. Cast wall box can be furnished at \$1.25 list addition to 110 or 220-volt bells; \$2.50 list addition to low voltage bells.

Model KTS Faraday A.C. Signal Gongs
Monitor Pattern
Schedule T

Single-Stroke, Solenoid-Plunger Type,
Non-Weatherproof, Non-Guarded Gongs
For Transformer and A.C. Light and Power Circuits

For general use and for paging systems of the code-calling type. Not suitable for closed-circuit-approved fire alarm systems where Underwriters approved gongs of 5150 or 5120 pattern should be used.

Regularly provided, without extra charge, with separable conduit-box-backs, adaptable to both surface and flush conduit installations. Boxes regularly have 1/2-inch knockouts; with 3/4 inch, when specially ordered.

Standard package, 1.

Cat. No. and Size Gong	12-30 V. Trans. Each	110-125 V. A.C. Each	220-250 V. A.C. Each

Model M TTL Faraday A.C. Traffic-Signal Gongs

Monitor Pattern
Schedule T

Vibrating, Polarized, Weatherproof Enclosed,
Non-Guarded Gongs

For Operation on A.C. Transformer or 100-110 Volt and 220-250 Volt Light and Power Circuits, 60 Cycles

Mechanism is polarized, non-contact non-sparking plunger-pattern with special hardened steel bearings, etc., to guarantee dependable signal operation where the work is practically continuous.

Mechanism is protected from dust, dampness and mechanical injury. Bakelite insulation throughout.

When ordering, specify cycles.

Regularly provided, without extra charge, with separable conduit-box-backs, adaptable to both surface and flush conduit installations. Boxes regularly have 1/2-inch knockouts but will be furnished 3/4 inch when specially ordered.

Standard package, 1.

Cat. No. and Size Gong	18-30 V. Trans. Each	100-110 V. A.C. Each	220-250 V. A.C. Each	Cat. No. and Size Gong	18-30 V. Trans. Each	100-110 V. A.C. Each	220-250 V. A.C. Each

Edwards 4-Contact Push Buttons

Schedule E

No. 260

Will close 3 circuits at once. For use where annunciators, bells and other devices are to be operated at same time but it is not desirable to operate them in multiple. By strapping contacts it is often used on single circuits to obtain additional current carrying capacity of multiple contacts. Fits 3/4-inch hole. Phosphor bronze springs.

Standard finish, nickel; brush brass, no extra charge.
Price, No. 260, Weight 2 Ounces.....each \$1.40

No. 260C

Same as No. 260. Closed circuit; for 3/4-inch hole.
Price, No. 260C, Weight 2 Ounces.....each \$2.05

Edwards Flush Push Escutcheons

Schedule E

For use on plaster or where larger than the midget push is required. The iron plate is first secured to the wall. There being a number of screw holes, it is always possible to engage a lath. The brass plate is then placed over the iron plate and the push button pressed into place.

The spring clips on side of button grip the iron plate securely, holding the button and top plate in place.

Standard finish, nickel; brass at no extra charge.

Standard package, 25. Weight, 12 ounces.

Price, No. 60, For 5/8-Inch Push.....each \$.30
Price, No. 61, For 3/4-Inch Push.....each .30

Faraday Perfection Midget Push Buttons

Made in 5/8 and 3/4-inch sizes, fully insulated. With self-cleaning wiping contacts of phosphor-bronze and terminal lugs. Shells of buttons carry no current, permitting mounting in metal.

Buttons have 4 spring clips, guaranteeing firm locking in proper size holes—either 5/8 or 3/4 inch.

Flat-Top Pattern, 5/8-Inch Standard

This is an all-metal 1-piece type push, of excellent construction, well insulated.

Size, 1 1/8 x 3 1/4 inches.

Standard finish is satin brass. Other finishes at increased prices.

Packed, with screws, in individual boxes for convenient shelf use.

Standard package, 20.

Weight, standard package, 3 3/4 pounds.

Price, No. 605each \$.35

No. 67 Edwards Bakelite Pear Pushes

Schedule E

Keeps its finish indefinitely, will not warp, check or crack. With No. 620 push. Standard package, 10, one color.

No. 67, Black, Oak or Mahogany each \$.60
No. 67, White Enameleach .75

No. 604 Edwards Bronx Plate Type Push Buttons

The dimensions of the No. 604 push are small enough to allow its use in many places where the common plate type of push is too large to be adaptable. It is 3 3/8 inches long and 1 1/2 inches wide.

The mechanism is entirely insulated and is recessed to allow the use of No. 14 wire and still leave plenty of room between the screws and the wall, there being no chance of grounding. The wire is fastened directly to the same screw that holds one side of the contact spring; pushing the button makes a contact on one screw only, thereby assuring a positive contact. Standard finish, satin brass. Standard package, 20.

Price, No. 604, Bronxeach \$.35

No. 609 Edwards Bronx Push Buttons

Schedule E

This push button is of excellent construction and is well insulated. All-metal, one-piece type.

Standard finish is satin brass. Other finishes at increased prices.

No. 9 Edwards Door Openers

Economy, Mortise Type, Solid Nose

Schedule T

Made of heavy pressed steel, heavily brass plated. Used extensively for apartments.

Fits same size mortise as same shape openers of other manufacturers. Width, 3 3/8 inches; depth, 1 3/4 inches; thickness, 1 inch; nosing opening, 1 3/8 inches; face plate, 5 7/8 x 1 1/4 inches.

Price includes No. 89 pushout spring.

May be used on either right or left hand doors. Regular resistance is two ohms.

Special resistance up to 20 ohms, add to price \$1.00; 21 to 50 ohms, \$1.25; 51 to 75 ohms, \$1.50.

Standard package, 50.

No. 9.....each \$3.00

No. 154 Edwards Door Openers

Mortise Type, Roller Nose

This type is suitable for heavy doors. It requires a smaller mortise than the Economy.

Width, 2 inches; depth, 2 7/8 inches; thickness, 1 1/8 inches. Nosing opening, 1 1/4 inches. Face plate, 1 1/4 x 3 3/8 inches. Brass finish.

Price includes No. 79 pushout spring.

Can be supplied with a release check permitting the use of door opener where air checks are employed; add to price, \$2.00.

May be used on either right or left hand doors. Regular resistance is two ohms. Special resistance up to 20 ohms, add to price, \$1.00; 21 to 50 ohms, \$1.25; 51 to 75 ohms, \$1.50. Standard package, 10.

Price, No. 154.....each \$5.65

No. 153 Edwards Door Openers

Plate Type, Roller Nose

Designed for doors too thin to take a mortise. Brass finish.

Width 1 1/4 inches. Depth 3 3/8 inches. Nosing opening 1 1/4 inches. Face plate 1 1/4 x 3 3/8 inches. Side plate 3 3/8 x 2 3/4 inches.

Price includes No. 79 Push-out Spring.

Standard package, 1.

Price, No. 153.....each \$8.50

No. 1541 Edwards Mortise Type Door Openers

Schedule E

Has roller nose. Face plate is extended to provide space for mortise for dead bolt.

When ordering, a sketch or template must be furnished to show exact location of dead bolt and screw holes. There cannot be less than 3/8 inch space between nosing and dead bolt openings. If no sketch is sent, standard door opener, as illustrated, will be furnished.

Height, 2 inches; depth, 2 7/8 inches; thickness, 1 1/8 inches. Nosing opening, 1 1/4 inches; face plate, 1 1/2 x 6 3/8 inches.

Finish, brass.

Standard package, 1. Weight, 1 1/4 pounds.

Price, No. 1541.....each \$10.30

Faraday Control Cabinets for Burglar Alarm Systems

Surface Pattern

Schedule D

Cat. No. BO-373

Faraday Burglar Alarm Systems are in demand for private homes, country homes and estates and business establishments.

Faraday Burglar Alarm Control Cabinets are highly developed, scientific master-control units, performing functions that are invaluable for the protection of person and property.

Master control cabinets have, mounted on instrument panels, all the necessary relays, instruments, etc., to give an alarm by ringing bells, sounding sirens, etc., switching on interior lights (if so specified) floodlighting the outside of building or grounds, either in the entire protected area or any selected section thereof, etc.

At slight additional cost, relay control switches can be mounted on panel, so that by special arrangement with police department and telephone exchange, help may be automatically summoned.

Closed-circuit cabinets are furnished with electric-reset indicators.

Open-circuit cabinets are furnished with hand-reset indicators.

Standard finish: White enamel, golden oak, walnut or mahogany on steel will be furnished at no additional charge if so specified.

With Automatic Clock-Control

Cat. No. BC-25 Closed-Circuit Type with Electric-Reset Drops

For flush cabinets add 20 per cent to above lists.

In addition to the audible alarm which is regularly furnished, all of the above burglar alarm control cabinets can be furnished with relay control switches to close a 110-125-volt electric lighting circuit thereby lighting a number of incandescent lamps.

For 110-125-Volt Relay Maximum Capacity of Contactors 125 Watts, Add to List Price..... \$33.00

For 110-125-Volt Relay Maximum Capacity of Contactors 500 Watts, Add to List Price..... 55.00

For 110-125-Volt Relay Maximum Capacity of Contactors 1000 Watts, Add to List Price..... 80.00

Edwards Burglar Alarm Springs

Schedule E

Window springs should be placed in the frame several inches above the lower end of the upper sash—and the same distance below the upper end of the lower sash. Each sash should be mortised so that the nosing of the spring will be set in the recess when the window is closed. The mortise should be continued (beyond the necessary point) to permit the opening of the window for ventilation. It is advisable (although not necessary) that this system of installation be followed. Without the mortise anyone trying to enter the house and knowing of the window springs can easily open the window gradually, and hold the spring depressed with the finger.

The Edwards Springs when used properly as described are classified as follows:

Open circuit window springs—nosing in normal position contact is broken.

Closed circuit window springs—nosing in normal position contact is established.

Open circuit door springs—plunger in normal position contact is established.

Closed circuit door springs—plunger in normal position contact is broken.

Graybar Inter-Phone Systems

System No. 1

Selective Ringing—Selective Talking

For use in business organizations, industries, stores, institutions, etc., where frequently, more than one conversation will take place at the same time, and where instantaneous connections without loss of time are necessary.

By pressing a button each station can selectively ring and talk with any other station without disturbing the rest of the stations in the system and as many separate conversations can be carried on simultaneously as there are pairs of Inter-Phones. For example, in a system of six Inter-Phones, three conversations can be carried on at the same time.

For each station in the system, one push button key is required in each Inter-Phone.

Available in standard sizes of 6, 12, 16, 20, and 24 buttons; and in Nos. 1324 and 1355 Wall Type Inter-Phones, No. 6016 Desk Sets, and No. 6016HR Hand Sets.

Cable

For connections between the various stations, cable specially designed for Inter-Phones can be supplied. This cable includes the necessary number of wire conductors (two pairs for battery leads and one pair for each station in the system) and is furnished in three different types to suit various locations and conditions:

No. of Stations	6	12	16	20	24
No., Fireproof Braid	134B	141B	157B	158B	136B
No., Brown Cotton Braid	155B	156B			
No., Lead Covered	134B	141B	157B	158B	136B

These cables are listed in detail elsewhere.

Cable Terminals

A cable terminal should be used wherever a junction is to be made between cables. For example: Where an outside lead-covered cable is connected to an interior cable, or wherever a branch is taken off from the main cable. In cases where the cable can be run direct to the Inter-Phone, no cable terminal is necessary. The number of cable terminals required should be determined by the installer. For 6 and 12-button systems use the No. 19A cable terminals. For 16, 20 and 24-button systems use the No. 19B cable terminals.

Batteries

Not more than 12 dry cells will be necessary for operating the system. (Five cells for the talking circuit; 4 to 7 cells for the ringing circuit, depending upon length of line.)

A Recti-Filter may be used for battery supply.

No. 1324 Type Wall Inter-Phones

Surface Mounting

An all metal set having a hinged face plate, movable transmitter and hand receiver. The face being hinged, makes it possible to easily inspect all connections and apparatus without disturbing the installation.

Black with nickel trimmings.

Code No.	No. of Buttons	Height Inches	Width Inches	Depth Inches

1324C-24	24	14 $\frac{3}{16}$	7 $\frac{1}{8}$	3

No. 1355 Type Wall Inter-Phones

Flush Mounting

A flush mounting set having a steel face plate on which is mounted all of the talking and signalling apparatus and a sheet steel outlet box arranged for $\frac{3}{4}$ -inch conduit. The outlet box can be separated from the set and built into the wall during the construction of the building.

The face plate is hinged at the bottom, making all terminals easily accessible for installation or inspection.

Dull black with nickel trimmings.

Graybar Inter-Phone Outfits

Outfit No. 17

This outfit consists of two No. 1003 type hand sets with all material required to install a simple intercommunicating system between two points not over 80 feet apart, and where the wire will be wholly indoors and not exposed to weather conditions or moisture. The material, in addition to the hand sets, consists of two connecting blocks with mounting screws, 80 feet of insulated twisted pair copper wire, 60 insulated nails for fastening wire, two hooks for holding hand sets, two bells, two battery connectors and illustrated installing instructions.

Outfits Nos. 30 and 31

Outfit No. 30 includes two surface wall No. 2527C-1 Inter-Phones and one No. 51H retardation coil in one box, but no installing or wiring material.

Outfit No. 31 includes two hand set Type No. 6043P Inter-Phones and No. 51H retardation coil in one box, but no installing or wiring material.

Outfits Nos. 30A and 31A

These outfits are for use where the wiring is to be run entirely under cover and not exposed to moisture or weather.

They include No. 30 and No. 31 Outfit respectively in one box and installing material in another box.

The installing material consists of 75 feet of insulated 3-conductor copper wire, two battery connectors, insulated nails, and illustrated installing instructions.

Outfits Nos. 30B and 31B

Outfits Nos. 30B and 31B are for use where the wiring is to be run in the open between or outside of buildings, and exposed to weather and moisture.

They include No. 30 and No. 31 Outfits respectively in one box, and installing material in another box.

The wiring material consists of 150 feet of outside 3-conductor copper wire, two brackets with screws, hooks and knobs to attach wires to building, two porcelain tubes to insulate wires when entering building, two battery connectors, 25 insulated nails for fastening wires inside building, and illustrated installing instructions.

Graybar Inter-Phone Systems

System No. 11

Selective Ringing—Common Talking

For use where conversations can be limited to one at a time. Each Inter-Phone is equipped with a number of push buttons for calling each other station in the system.

The wall type Inter-Phones can be furnished in capacities of 2, 3, 4, 6 and 8 buttons, accommodating 3, 4, 5, 7 and 9 stations respectively in a system. The desk and hand set Inter-Phones are furnished in capacities of 4 and 8 buttons, accommodating 5 and 9 stations respectively in a system.

No. of Buttons	WALL TYPE		Cradle Set	Hand Set
	Surface	Flush		
2	2527C-2	2539C-2
3	2527C-3	2539C-3

6	2527C-6	2539C-6
8	2527C-8	2539C-8	6044C-8	6034BB or BH

NOTE.—Sets described in detail on other pages.

Retardation Coil

A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

Cables

Cable especially designed for connection between the various stations can be furnished. This cable includes three common wires and one individual wire for each station.

No. of Stations.....	3 & 4	6 & 8
Code No., with Fireproof Braid.....	161B	162B
Code No., with Brown Cotton Braid.....	142B
Code No., with Lead Covering.....	161B	162B

Connecting Blocks

Where a junction is to be made between cables, or wherever a branch is taken off the main cable, a connecting block should be used. In cases where the cable can be run direct to the Inter-Phone, the connecting block is not required.

Batteries

Five dry cells are required for the operation of this system, when the distance between the two stations farthest apart is 750 feet or less, and Inter-Phone cable, listed above, is used. On lines of greater length it is recommended that instead of increasing the number of battery cells to more than 5, larger wire be used. A Recti-Filter can be furnished for the battery supply in place of dry cells.

Graybar Inter-Phone Systems

System No. 12

Master Station—Common Talking

Consists of one centrally located "Master Station" Inter-Phone to which are connected other "Outlying Station" Inter-Phones.

The Master Station Inter-Phone is equipped with a number of push buttons; one for each outlying station in the system.

Outlying stations are equipped with one button for ringing the master station.

Only one conversation can be carried on at a time.

Capacity, one Master Station and from 2 to 8 outlying stations.

Master Station

No. of Buttons	Metal Wall Surface	Type Inter-Phones Flush	Cradle Set Inter-Phones	Hand Set Inter-Phones
2	2527C-2	2539C-2

Outlying Stations

1	2527C-1	2539C-1	6044C-1	6042K
•	*6042E
•	6043E

*No. 6042E is same as No. 6242K, but without face plate and wall box. For details see listing elsewhere.

Accessories

Retardation Coil

A No. 51H retardation coil must be ordered separately with each master station Inter-Phone and installed near the battery of the system.

Wiring

For connections between the outlying stations and the master station either cable or insulated wires can be used, depending largely upon the layout of the system. Three common wires are required throughout the system, and in addition, one individual wire from the master to each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable, and at all distributing and junction points, to install connecting blocks. From these connecting blocks separate wires can be run to the Inter-Phones.

The sizes of cable and the number of connecting blocks required should be determined in accordance with the installation instructions.

Cables and connecting blocks are described elsewhere.

Batteries

Five dry cells are required for the operation of this system when the distance between the master station and most distant outlying station is 750 feet or less and No. 22 A.W.G. wire (as in the case of Graybar cable) is used.

On lines of greater length it is recommended that instead of increasing the number of battery cells to more than five, larger wire be used. This should be determined in accordance with the installation instructions.

A Recti-Filter may be used in place of batteries.

NOTE.—Detailed information covering wiring diagrams, connection of wires and cables, connecting blocks, etc., can be found in our booklet, "Installing and Maintaining Inter-Phones," which will be furnished upon request.

Graybar Inter-Phone Systems

Master Annunciator System Nos. 12A and 12AC

2-Way Ringing—Common Talking

Especially adapted for schools where the principal may call the teachers individually and the teachers can call the principal. Similar to the No. 12 system except that the master station includes an annunciator for identifying the calls from the outlying stations.

Only one conversation can be carried on at a time.

Capacity, one master station and 3 up to 20 or more outlying stations.

System No. 12A

The master station Inter-Phone includes a push button block having as many buttons as there are outlying stations, also one extra button for electrically resetting the annunciator drops.

Each outlying station Inter-Phone is equipped with a push button which signals the master station. This call will also be registered at the master station by the operation of the annunciator drop.

*The push-button block includes a 6-foot connecting cord.

†No. 403 Type furnished unless otherwise specified.

‡No. 6042E is same as No. 6042K, but without face plate and wall box.

Accessories

Retardation Coil

A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

Wiring and Battery Requirements

Two wires common to all stations in the system and two individual wires for each outlying station.

System No. 12A requires a battery of five dry cells, connected in series, to furnish current for ringing and talking.

System No. 12AC requires a battery of dry cells or storage batteries to total 24 volts may be used for the ringing and talking battery supply.

Graybar Inter-Phone Systems

Master Annunciator Systems Nos. 12B and 12C

1-Way or 2-Way Ringing—Common Talking

Provides for communication between a master station annunciator and a number of outlying stations.

The master annunciator is equipped with a hand set Inter-Phone, and can be obtained with or without push buttons.

System No. 12B—1-Way Ringing

The annunciator is without push buttons, enabling the outlying stations to ring the master station but the master station cannot ring the outlying stations.

System No. 12C—2-Way Ringing

The annunciator is equipped with push buttons, one for each outlying station, enabling the outlying stations to ring the master station and the master station to ring the outlying stations individually.

Master Station Annunciators

CODE Nos.			CODE Nos.

1212B	1212C	12

A No. 1003D Hand Set must be ordered separately with each annunciator. This set is equipped with a 3-foot cord, and can be hung on the hook on the side of the annunciator.

Accessories

Wiring

For System No. 12B one wire, common to all stations in the system, and in addition, one individual wire from the master station to each outlying station.

For System No. 12C one wire, common to all stations in the systems, also two individual wires from the master station to each outlying station.

Batteries

Only one battery is required for the operation of the system. This should consist of three or four dry cells, where the distance between the master station and the farthest outlying station is 250 feet or less, and No. 22 A.W.G. copper wire is used. On lines of greater length it is recommended that instead of increasing the number of dry cells to more than four, larger wires be used.

A Recti-Filter may be used in place of batteries.

System No. 14

2-Station Private Line

For use where only two stations are required and where the sets are distantly located from each other.

Either station can ring the other.

No. of Buttons	METAL WALL TYPE Surface	TYPE Flush	Desk Sets	HAND SETS	
				Surface	Flush
1	2527C-1	2539C-1	6044B-1	6043P	6042AE *6042AF

*No. 6042AF is same as No. 6042AE but without face plate and wall box.

Wiring and Battery Requirements

Only two wires are used for connecting the Inter-Phones.

A battery of three dry cells is required at each station to furnish current for talking and ringing if the length of line is less than 750 feet. If the length of the line is increased, additional dry cells are required at each station to insure satisfactory ringing. The following list indicates the additional dry cells required at each station:

Length of Line Between Stations	ADDITIONAL NUMBER OF CELLS FOR EACH STATION A.W.G. COPPER WIRE			
	No. 12	No. 14	No. 16	No. 18
750 to 1000 ft.	1	1	1	2
1000 to 1500 ft.	1	1	1	3
1500 to 2000 ft.	1	2	3	..
3000 to 4000 ft.	2	3
4000 to 5000 ft.	2
5000 to 6000 ft.	3

Graybar Inter-Phone Systems

System No. 15

Code Ringing—Common Talking

A simple and inexpensive system for small residences, warehouses, or stores where only a few stations are required. Only one conversation can be carried on at a time.

Each station is equipped with one push button which rings the bells at all the other stations.

The various stations are called by signalling each one with a different code ring; for instance, two rings for Station No. 2, three rings for Station No. 3, etc. If more than 6 stations are in service, signalling code mistakes are likely to occur. System No. 11 is recommended where the initial installation comprises more than 4 or 6 stations.

No. of Buttons	METAL WALL TYPE		Desk Sets	HAND SETS	
	Surface	Flush		Surface	Flush
1	2527C-1	2539C-1	6044D-1	6043CD	6042CD

Accessories

A No. 51H retardation coil must be ordered separately and installed near the battery of the system.

Four wires are required for connecting the Inter-Phones.

Five dry cells are required for the operation when the length of the line is 750 feet or less, and not more than four stations are to be used, connected by Nos. 20 or 22 A.W.G. copper wire. If more than four Inter-Phones are required or if the line is longer than 750 feet, larger wires should be used in accordance with installation instructions.

Master Annunciator System No. 18C

Non-Interfering

Provides for communication between a central or master station and a larger number of outlying stations, as follows:

The master station can selectively ring and talk with any of the outlying stations and the outlying stations can call the master station annunciator.

Communication can be arranged between any two outlying stations through the medium of one or two connecting cords at the master station.

No connection can be made between this system and a public telephone system.

An annunciator supervisory feature is provided to indicate the termination of a conversation between the outlying stations. Where a large number of connections are required between outlying stations, the lamp signal, Private Exchange Switchboard for surface or flush mounting, is recommended.

Master Station Annunciators

Annunciators regularly equipped with answering cord only. If inter-communication between outlying stations is desired, one or two pairs of connecting cords may be ordered.

A No. 1003K Hand Set must be ordered separately with each annunciator.

Accessories

One wire, common to all stations in the system is required, and, in addition, two individual wires between the master and each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable and install cable terminals or connecting blocks at all distributing and junction points. From there, the installation can be continued by means of separate wires to the various outlying stations.

Five or more dry cells are required for operating the system. A Recti-Filter may be used in place of batteries.

Graybar Inter-Phones
Description of Metal Wall Type
No. 2527C, Surface Mounting

No. 2527C-4

The No. 2527C Type Inter-Phone has a surface mounting metal housing which contains all of the talking and signalling apparatus, also a metal backboard, which is furnished for mounting the set to the wall.

The housing of the set is of rugged construction, being formed of sheet steel and is equipped with hinge hooks which match up with slots in the base of the metal backboard. This arrangement permits fastening the backboard in place on the wall and then mounting the housing unit to it.

The hinge arrangement of this set enables the installer to swing down the housing unit from the backboard for making connections to the terminals; also to permit interior inspection of the set at any time after its installation.

The metal backboard is designed to permit the entrance of wires or cabling from either the top, bottom or center of the set; also, a metal guide ring is located near the cable entrance at the base of the backboard so that the connecting wires may be looped through this ring to hold them in place and provide a proper bending point when the housing is swung forward.

Durable dull black enamel finish with nickel trimmings.

Code No.	No. of Buttons	For Systems	DIMEN. HOUSING, INCHES

No. 2539C, Flush Mounting

No. 2539C-2

The No. 2539C Type Inter-Phone has a flush steel face plate on which is mounted all of the talking and signalling apparatus, also a metal outlet box which is furnished for mounting the set in the wall.

The outlet box is of unique design in that metal aligning strips are fastened at the top and bottom front of the box so as to properly align the set after the face plate unit is fastened to the outlet box (in case the outlet box is installed out of plumb). It is equipped with adjustable ears for mounting it in the wall, the same as are furnished on standard sectional outlet boxes. Knockouts are provided

at both the top and bottom for the entrance of 1/2-inch conduit or connecting wires.

The face plate support for installer is an added feature of this set, consisting of a wire hook mounted on a small card with printed instructions for its use. This hook is for temporarily supporting the Inter-Phone face plate, of flush type sets, during installation, so that the wires may be readily connected to the terminals by the installer.

Durable dull black enamel finish with nickel trimmings.

Graybar Inter-Phones

Description of Hand Sets

Selective Ringing—Common Talking

No. 6038 Type

This hand set unit was designed for installation at the side of a desk, on the wall, or any vertical surface. The set may be installed at one end, side or in the alcove of the desk; also recommended for residential purposes for mounting at the bedside, either on the bed or on the wall within reach of the bed.

Made of Bakelite, reinforced.

The switch-hook box contains a switch-hook unit for holding the hand set in place. This hook operates on the same principle as the standard telephone hook. A 4-foot cord connects the hand set to the switch-hook box.

Graybar Inter-Phones

Description of Hand Sets

Selective Ringing—Common Talking

The Inter-Phone transmitter and receiver are a part of the hand set. A bar marked Press to Talk mounted in the hand set handle is held down by the natural position of the hand while talking. When not in use, the hand set can be hung on a hook or laid down in any position.

Finished in dull black.

No. 6043, Surface Mounting

Surface Mounting Apparatus Units (No. 383 Type) are equipped with an insulated base, black finished round metal cover and nickel hook.

Approximate size, 3 $\frac{1}{16}$ inches in diameter by 1 $\frac{1}{16}$ inches deep.

No. 6042, Flush Mounting

Flush Mounting Apparatus Boxes (No. 382 Type) are intended to be set in the wall and are equipped with a brush brass finished face plate. These boxes consist of three parts—a Gem A Union sectional switchbox, an apparatus unit, and a face plate. The face plate is 4 $\frac{1}{2}$ x2 $\frac{3}{4}$ inches; the wall box, 2x3x3 inches deep.

An important point to be observed is that wall box and face plate are the same as those used in electric light wiring for push button switches. Sets furnished either complete, including wall box and face plate, or minus these parts.

Graybar Inter-Phones

Description of Annunciators

These annunciators are equipped with electric reset drops. The drop indication is a white arrow which points directly at the name card. When reset, the arrow drops out of view behind the name card.

The front of the annunciator protecting the drops is plain glass and as the arrow is between the glass and the dull black background, it can be easily seen from any angle.

Graybar Apartment House Inter-Phones

System No. 21

Selective Ringing—Common Talking

No. 1524-E Loud Speaking Vestibule Set

Systems No. 21A, D, E, G, H, and J

Eliminates, as far as possible, all projecting and removable parts, such as the transmitter, receiver and switch-hook. Also safeguards theft of receiver and the cords.

The set consists of a flush mounting face plate. A push button is mounted at the bottom of the plate for talking and listening purposes.

Bronze brass finish.

Face plate, 5x16½ inches.

Equipped with a janitor call button.

To call one of the apartments from the vestibule, the push button (under the name of the party wanted) is pressed, which rings the bell of that apartment. The vestibule party next depresses the talking button at the bottom of the telephone set, and keeps it depressed while awaiting reply, and while conversing with the apartment party.

Only one conversation can be carried on at a time.

Battery Requirements

For the operation of each system three sets of dry batteries are required, each set to consist of three dry cells.

System No. 21A

Vestibule can call apartments; apartments can open door.

System No. 21D

Vestibule can call apartments and janitor; apartments can open door and call janitor.

System No. 21E

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry.

System No. 21G

Vestibule can call apartments and janitor; apartments can open door and call janitor; and janitor can call apartments.

System No. 21H

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry; janitor and laundry can call apartments.

System No. 21J

Vestibule can call apartments and janitor; apartments can open door and call janitor; and janitor can call apartments.

No. 1524-F Loud Speaking Vestibule Set

Systems No. 21AR, DR, and GR

These systems operate as described for the No. 1524-E except a relay is furnished in the vestibule set for closing the talking circuit when a receiver is removed from the hook at a suite station. This replaces the talking button described for the No. 1524-E.

System No. 21AR

Vestibule can call apartments; apartments can open door.

System No. 21DR

Vestibule can call apartments and janitor; apartments can open door and call janitor.

System No. 21GR

Vestibule can call apartments and janitor; apartments can open door and call janitor; and janitor can call apartments.

No. 1524-E & F

No. 1524-F

Graybar Apartment House Inter-Phones

System No. 20

Selective Ringing—Common Talking

No. 1520-R

No. 424-A
Push Button Plate

The No. 20 Inter-Phone Systems are designed to provide an inexpensive and reliable means of communication between vestibule, apartments, janitor's quarters, laundry, and tradesmen's entrance.

There are six combinations of the No. 20 System, differing from each other in the number of locations in the apartments which are to be connected for inter-communicating service.

Only one conversation can be carried on at a time.

No. 1520-R Vestibule Inter-Phones

With Armored Receiver Cord

The No. 1520-R Inter-Phone consists of a flush mounting brush brass finish face plate with a push-button for signalling the janitor.

Battery Requirements

For the operation of each system a battery of not more than five dry cells is required. These can be placed in the basement or any other accessible place.

System No. 20A

Vestibule can call apartments; apartments can open the door.

System No. 20D

Vestibule can call apartments and janitor; apartments can open the door and call the janitor.

System No. 20E

Vestibule can call apartments and janitor; apartments can open the door and call janitor and laundry.

System No. 20G

Vestibule can call apartments and janitor; apartments can open the door and call janitor; and janitor can call apartments.

System No. 20H

Vestibule can call apartments and janitor; apartments can open the door and call janitor and laundry; and janitor and laundry can call apartments.

System No. 20J

Vestibule can call apartments and janitor; apartments can open the door and call janitor; and janitor can call apartments.

Graybar Vestibule Push-Button Plates

Designed to mount on either side of the vestibule Inter-Phone. A card holder is provided opposite each button. Push button plates can be obtained in two different sizes.

Graybar Inter-Phone Switchboards Nos. 108 and 109 Flush Wall Type

Construction

The cabinet consists of birch woodwork fitted with either a wood or metal mat framing. The finish of the wood to be oak, mahogany, or walnut; the metal, bronze finished to match sample submitted.

The lamp and jack strips are mounted in face of the switchboard on a panel which is hinged, to give complete access to interior of the switchboard.

The recessed portion, including the front panel door and the plug shelf, is covered with black formica.

Cord Circuit Equipment

The cross-connecting cords are supervised through a single lamp circuit. These lamps are located over the key position. The single

cam type ringing and listening key for each cord position is located on the face of the board.

Lamp and Jack Equipment

The line lamp and jack equipment is mounted 10 per strip with associated designation strips.

Night Alarm

All calls at the switchboard may be received through a buzzer signal by the operation of a push button key.

Battery Switch

A push button control is provided for disconnecting the battery from the switchboard when required.

Operator's Telephone Set

An all metal hand set which hangs at the left-hand side of the board and is suspended by means of a hook support, and connected with a suitable cord length.

Cable Termination

Cable termination at the back of the switchboard will be at the selection of the customer. It is recommended that suitable cable lengths (up to 15 feet) be provided instead of a cable terminal which is usually fastened at the back of the board. These cable lengths consist of 20 pair size lead covered cables, one end terminating to the switchboard line lamp and jack connections and the other end tagged to enable the installer to make proper terminal connections to the cable terminal box. This method eliminates duplicate cable terminating points by omitting the terminal block at the switchboard.

The proper length of cable must be specified. If it is not possible to locate the cable terminal box within suitable distance of the switchboard, terminal strips will be furnished at back of board for terminating the lines.

Extension Telephone

An extension telephone consisting of an all metal hand set will be furnished when specified. This permits visitors or employees to communicate directly with an apartment without interfering with the regular operator's service. For this purpose a jack is provided at the right hand side of the board near the hand set which is supported on a hook, in the same manner as the operator's telephone.

Grilled Doors

The switchboard may be fully concealed from view by means of a fancy grilled door, made of bronze and finished to match the metal trim of any interior.

Lighting Fixtures

Lighting fixtures are not ordinarily provided for illuminating the face of the switchboard, however special fixtures mounted separately from the switchboard can be provided when the board is mounted in a dark location.

Further Information

Detailed information, covering types of switchboards, dimensions, wiring diagrams, accessories, etc., can be found in our Booklet GBT-86 which will be furnished upon request.

Graybar Inter-Phones Elevator Inter-Phone Service

No. D-1640

An elevator Inter-Phone system provides for communication between the elevator starter and each elevator cab, also between the elevator starter, the engineer, the superintendent, the machine room, etc., depending upon the total number of master and outlying stations to be installed.

The elevator cab Inter-Phone D-1640 is designed to mount in back of the Underwriters' building certificate frame, which in a number of cases is required by law. This frame is hinged to a metal outlet box so that the cab operator has access to the Inter-Phone through this door. The set is compact, is concealed, has no projecting parts, and the exterior frame may be designed to match the trim of the cab in which it is installed.

The D-1640 Inter-Phone Set does not include the outlet box and mounting frame as shown in the illustrations. The elevator company usually provides a suitable type of frame and outlet box in which to mount the Inter-Phone Set. In some cases the elevator companies may wish to install a standard surface wall or hand type of instrument, depending upon the local requirements.

The starter's station Inter-Phone is usually installed in the control panel with the other operator's signalling equipment. This Inter-Phone may consist of a wall or hand type, depending upon the space available for mounting the instrument. The regular cab call button on the starter's panel will also be used for signalling the cab Inter-Phone by means of a code ring. Extra buttons will be provided for signalling the other stations in the system.

Assembly drawings of Inter-Phones and wiring diagrams will be furnished upon request.

Graybar Inter-phone Cable

No. 1012 Western Electric Magneto Wall Switchboards

Ringer Type

This switchboard is intended for use in exchanges having 10 lines or less, and where the number of calls does not warrant having a regular telephone operator in attendance.

It has been installed by numerous rural companies who desire a switching station established in the country in which case it is installed in a farmer's home and the calls are answered by members of the family.

Being equipped with ringers, constant attendance at the switchboard is not necessary as the bells can be heard at some distance from the board.

In addition to this ringer, indicators are supplied with each ringer which give a visible signal showing which bell has been ringing.

The cabinet is well constructed of thoroughly seasoned, quarter sawed oak, which is given a durable light finish. The front is hinged and the apparatus and wiring is within easy reach for inspection or maintenance.

Equipment

Each line is provided with a jack and a 1000 ohm ringer, although 1600 or 2500 ohm ringers can be furnished if required. Four-cord circuits, with a listening-in jack bridged across the tip and ring, and a listening cord are provided for handling the calls, no supervisory or ring off signals being provided. A powerful five-bar hand generator is furnished for ringing purposes. The operator's telephone set consists of the regular long distance transmitter and receiver.

Operation

Subscribers are called by ringing with the hand generator over the listening cord with which the operator answers calls and listens in for supervisory purposes. Connections are made with the other cords, without the use of keys.

The conductors are provided with single silk and single cotton insulation. The cable is impregnated with a wax compound and is covered with servings of paper and a heavy braiding, which is given a heavy coat of fireproofing paint.

Three general types of cable are provided.

1. Interior Cable with outside braiding treated with gray fireproofing paint. Use only in dry places.

2. Interior cable with brown glazed cotton outside braiding. Use only in dry places where exposed to view.

3. Outside cable, lead covered. Always use this cable outside, and inside where there is apt to be moisture even in a small degree. In conduit installations lead covered cable should be used.

Lead-covered cables are not listed with separate Code Nos. Any fireproofed type of cable may be ordered with a lead sheath.

All cables are provided with a standard color scheme, so that each pair can be distinguished from any other. The pairs are properly twisted to prevent inductive disturbances.

Western Electric Magneto Non-Multiple Switchboards

No. 1800 Sectional Unit Type

Method of Assembling No. 1800 Switchboard to 35 Line Capacity

The unit or sectional type construction for the small switchboard was introduced by the Western Electric Company a number of years ago, and since that time has been supplying the demand of discriminating buyers for a small switchboard that would meet their traffic requirements and eliminate the necessity of buying an "oversize switchboard."

The capacity of the No. 1800 Unit Type Switchboard is from 10 to 50 lines. While 50 lines has been set as an arbitrary maximum it is safe to assume that with a normally low calling rate as many as 70 or 80 lines can be handled conveniently. While the No. 1800 Unit Type Switchboard is small in size (floor space required only 2 feet x 2½ feet), this does not mean that this board receives less consideration or care in manufacture than a larger switchboard, for the same quality of material, skilled workmanship and rigid inspection are applied to all of the Western Electric products regardless of size. Red oak lumber, which has been kiln-dried, thoroughly seasoned and given a dark rubbed finish, is used in the construction of the units. The inside of the units have been specially treated to preserve wood and prevent warping or cracking.

To meet various requirements, there are different types of base or supporting units, cord units, line units and top units. To assemble a switchboard of 10 lines capacity for example it is only necessary to select units as follows:

- | | |
|-------------------|-------------|
| 1 Supporting Unit | 1 Line Unit |
| 1 Cord Unit | 1 Top Unit |

These units are easily assembled into a complete switchboard which presents a neat, compact and serviceable appearance and can be arranged to meet any service condition. Line units can be added at any time.

All of the apparatus and terminals associated with the operator's cord and telephone circuits are mounted in the cord unit.

The circuits used are very simple. A diagram of each circuit is pasted to the inside of the rear doors for convenient reference. The back of each unit is hinged and, when open, all of the wiring and equipment are easily accessible.

This switchboard is specially recommended for small, rapidly growing telephone exchanges where the ultimate capacity cannot be definitely determined.

No. 1240-D Western Electric Magneto Switchboards

Non-multiple—Automatically Restored Line Signals

Capacity, 165 Lines 15 Cord Circuits

Front View

as to be within easy reach of the operator, reducing that work to a minimum.

The lumber used in the construction of the cabinet is red oak, thoroughly seasoned and kiln dried to prevent warping or cracking.

The exterior of the cabinet is given a dull golden oak finish which is very serviceable. As an added precaution against warping, cracking or decay the interior surfaces are coated with shellac.

The steel framework which supports the face equipment is copper plated as a protection against corrosion or rust, also insuring a positive ground connection for the apparatus.

An apparatus and terminal board is mounted in the rear of the switchboard on which are mounted the repeating coils, night alarm bell, and large screw terminals where all power wiring such as power ringing, transmitter battery, night alarm battery, monitor taps, etc., are terminated.

The No. 1240-D non-multiple magneto switchboard is furnished with either single or double supervision cord circuits. Single supervision boards may, if desired, be equipped with five cord circuits having toroidal repeating coils and switching keys. Double supervision boards may be equipped with either the condenser type non-hang-up cord circuits, or the condenser repeating coil type non-hang-up, non-ring-through cord circuits. The present switchboard, if arranged for single supervision, may be changed to a double supervision board simply by installing the necessary additional apparatus.

Dimensions

No. 1801 Western Electric Private Exchange Switchboards
Central Battery—Sectional Unit Type

Systems B, C or D

The No. 1801 sectional unit type switchboard (like the No. 1800) was originated by the Western Electric Co., and introduced to the telephone trade to supply the demand for a small flexible and economical switchboard. Adaptable to many conditions, this switchboard has been installed by small telephone companies, as private branch exchanges, for hotels, factories, public schools and institutions or any place where telephone service was required and the ultimate capacity could not be definitely determined.

Being of the unit type, with construction somewhat similar to the sectional book case, and so arranged that additional units may be readily added when required, this switchboard is adaptable to many line and traffic conditions which are met on the small exchange. The rear of the units is permanently closed. The front panels of all units are held in place with thumb screw locks and are hinged to permit access to the wiring, terminals and apparatus. All connections are made under screw terminals.

System A

used with the systems are listed under heading: Central Battery Telephones.

SYSTEM A.—This system provides for communication between the switchboard and stations only. There are no facilities for inter-communication between stations or for connections to a central office.

SYSTEM B.—This system embodies all of the features of System "A" and in addition has facilities or intercommunication between stations.

SYSTEM C.—This system embodies all of the features of System "B" and in addition two plug ended trunks are provided which may be equipped for connections to either magneto or central battery central offices.

NOTE.—Direct current is used for ringing the telephone bells in Systems A, B and C.

SYSTEM D.—This system has all of the features of system "C" except that it employs the regular two wire line circuit, and alternating current is used for ringing purposes.

The telephone sets used with this system are the regular central battery sets used with central office systems.

Write our nearest house for particulars. State which system is best suited for your requirements.

No. 551 Type Western Electric Private Branch Exchange Switchboards

This switchboard has the distinction of being a pioneer in the private branch exchange field since the adoption of the modern flat type relays, it being the first private branch exchange switchboard in which the new relays were used. Either the No. 551A or 551B switchboard makes an ideal installation for department stores, factories, hotels, and apartments in cities or towns where the present main central office is a dial exchange or a central battery manual office.

The compact cabinet presents a neat appearance and compares favorably with the furniture in any modern office.

Types and Capacity

Type	551A (40)	551B (80)	551B (320)
Station Lines Total	40	80	320
*Station Lines Wired for			
Relays	10	20	20
Trunk Lines	10	15	15
Cord Circuits	10	15	15

*Certain lines are wired for relays to be used on lines where the telephone is located a considerable distance (800 feet) from the switchboard. Relays are not provided unless specified.

The No. 551D is a multiple P.B.X. for use where the number of station line circuits does not exceed 360 lines. The capacity of the No. 551D multiple P.B.X., based upon a minimum of three 2-panel sections, is as follows:

Station Line Circuit	3-panel basis	360
Trunk Circuit	3-panel basis	30
Cord Circuit	per section	15

Red oak lumber with a dark finish or birch with a mahogany finish is used for all exposed woodwork parts. The lumber is kiln dried and thoroughly seasoned to prevent warping and cracking. Iron reinforcing brackets are placed on the inside of the cabinet at the corners giving added strength. The keyshelves and fronts of the 551-P.B.X.'s have been faced with phenol fibre rubbed a dull black which not only results in a pleasing rich appearance but provides a hard and durable surface.

The stile strips which hold the line jacks and lamp sockets in place as well as the key mounting strips in the keyshelf consist of cold drawn galvanized steel. This insures alignment of the face and keyboard equipment, also prevents damage from moisture.

All apparatus inside the section, except hand generator and ringing resistance lamp, is mounted upon a relay gate which makes equipment immediately available for adjustment while gate is closed and leaves wiring fully exposed when gate is open. Cord-weight protection panel is mounted on the relay gate rather than being fixed in the section so that when gate is open and work is being done on cords or hand generator the gate wiring is still protected from damage.

Gate is equipped with mounting clips and screws. The mounting clips hold the relay mounting plates on the relay gate and permit the use of the one-piece relay gate.

The cabinet is compact and all parts are easily accessible. Switchboards in the 80-line capacity are equipped with removable end panels. This permits lining up of 2 boards and makes an ideal installation where several positions are required.

The line circuits are simple and terminate on terminal strips which are easily accessible.

No. 551 Type Western Electric Private Branch Exchange Switchboards

Continued

Certain lines are arranged for use with relays and intended to be used for the stations located considerable distance (800 feet) from the switchboard. The latest standard flat type relays are used throughout which permits placing the maximum amount of equipment in a small place.

Strip line jacks and associated lamp sockets are used in all boards on the line circuits. The number of jacks and lamps required are equipped and the remaining jack and lamp positions plugged with apparatus blanks. The blanks can be removed and jacks and lamps installed at any time. The panels upon which the individual jack and lamp sockets are mounted consist of one piece of dull finished black faced fibre which does not reflect the light. A designation strip is provided above each row of jacks for convenience in numbering. The black faced fibre panel presents a neat appearance and insures perfect alignment of the face equipment.

Jack ended trunks are used on all No. 551 type boards. The jacks and lamp sockets are individually mounted.

The cord circuits embody all of the features required for the successful operation of the private branch exchange. Connections between stations and from stations to trunks are easily established. Each cord circuit is arranged for dialing by the operator from the board and through dialing from any station on the private branch exchange to the machine switching exchange. This through dialing is accomplished by the operator throwing the night key and through dialing key in the proper position after putting up the night connections. The function of the night key is to cut out all the equipment from the circuit which is not required for night service.

The dial may or may not be used as desired it being easily installed when needed. It is connected to the local cable by means of a flexible cord and the dial itself held in place by a spring clip which is screwed to the keyboard. When the dial is not equipped the hole for the cord is suitably covered with an apparatus blank.

No. 506 Western Electric Central Battery Cordless Type P.B.X. Switchboards

Ideal as a dependable private branch exchange. Switchboard is of the single-operator position, cordless type, with all connections established by the operation of keys.

The entire equipment is enclosed in a cabinet of light oak, or of mahogany with a rich mahogany-walnut finish.

This board is a compact and effective switching unit, and harmonizes with other office furnishings.

The cabinet and steel framework are designed to permit the utmost accessibility of the apparatus.

The circuits are arranged for local manual service and for operation into either central battery manual offices or into panel or step-by-step automatic offices.

Western Electric Magneto Telephones

No. 1317 Type

General Description

2-Cell, Closed View

The No. 1317 type telephone represents the highest development attained in magneto telephone design and construction. It has been standard with the Western Electric Company for more than a decade, and its high efficiency, reliability and long life has been thoroughly proven by the hundreds of thousands in service.

2 and 3-Cell Types

No. 1317 telephones are made in two styles, namely, the "2-cell" and the "3-cell." The talking circuits of these two types are identical, i.e., they employ the same transmitters, receivers and induction coils. The battery compartment of the "3-cell" type is sufficiently large to take three standard dry cells, whereas only two dry cells can be placed in the "2-cell" type. The larger cabinet of the "3-cell" type also permits the mounting of the No. 48 type (5-bar) generator, while the "2-cell" type employs the No. 50 type (large 3-bar) generator.

The 3-cell set is the more powerful and the better set from a transmission standpoint but where a smaller set is desired the 2-cell sets can be used. The 50 type generator is exceptionally powerful for a 3-bar generator. This generator will ring thirty 2500 ohms ringers connected to a No. 12BB iron metallic telephone line 15 miles in length (provided, of course, that the line is properly installed and in good condition). It will operate more telephones on a line than many 4 or 5-bar generators.

2-Cell Dimensions

3-Cell Dimensions

WOODWORK AND FINISH.—The cabinet is made of quarter sawed oak and given three coats of high-grade varnish rubbed down by hand. Unexposed surfaces of the telephone are also given a protective finish so as to prevent warping.

WIRING.—All terminals including those for the transmitter, receiver, cord, line wires, etc., are plainly marked so that

there can be no possible mistake when making connections. The various cords, such as those of the transmitter and receiver and the flexible leads running to the condenser are all furnished with cord tips.

A complete and explanatory circuit label is pasted on the inside of the door of each telephone, in addition to which a booklet is furnished giving complete instructions for installation and maintenance.

METAL FINISH.—The transmitter bracket, gongs, switch hook, generator, crank and lock escutcheon are given an extremely durable and pleasing black finish.

ADJUSTMENT.—These telephones are carefully adjusted in the factory, and should, therefore, be satisfactory for service as received by the customer unless unusual service conditions should be encountered, in which case only the ringer will require readjustment. The adjustment of the ringer is a very simple matter and instructions furnished in the booklet are so clear that no difficulty will be encountered.

Western Electric Magneto Telephones

No. 1317 Type—Continued

No. 1317, 2-Cell, Open View

No. 1317 3-Cell Type

The 3-cell set is the more powerful and the better set from a transmission standpoint but where a smaller set is desired, the 2-cell sets can be used. The 50 type generator is exceptionally powerful for a 3 bar generator.

- No. 143Y Switchhook.

*Equipped with No. 1006A push button, Telephone user can signal central office secretly or not as desired and can signal other parties on same line by code ringing.

Western Electric Magneto Telephones

Nos. 6003 and 6004 Desk Types

Interior View of No. 6004D

The Nos. 6003 and 6004 type desk telephones consist of a No. 1020 AL Desk Stand and a No. 300 or 315 type Desk Set Box. These telephones comprise the combinations of desk stands and desk set boxes that are most used, and therefore for convenience in ordering, are covered by a single code number.

Combinations of apparatus differing from those covered by these code numbers listed may be obtained by ordering the separate items that will make up the desk telephone desired. The following items of apparatus are the electrical equivalent of the No. 1020 AL Desk Stand and may therefore be used in connection with any of the desk set boxes listed below.

- No. 1048AA Telephone Arm
- No. 1048AC Telephone Arm
- No. 1048AB Telephone Arm

NOTE.—In the case of the Nos. 300AA, 301AB, 315H, and 315J Desk Set Boxes provision is made for inserting a one microfarad condenser (see No. 21W condenser) in series with the receiver. However, condensers are not furnished unless so ordered.

Western Electric Central Battery Telephones Nos. 6054 and 6059 Desk Type

**No. 6054 Desk Telephone—No. 1020AL
Desk Stand Partially Dismantled**

The Nos. 6054 and 6059 desk type telephones consist of a No. 1020 type desk stand and a desk set box. These telephones comprise the combinations of desk stand and desk set boxes that are most used and, therefore, for convenience in ordering are covered by a single code number.

Combinations of apparatus differing from those covered by the No. 6054 or 6059 series of code numbers may be obtained by ordering a desk stand and a desk set box as separate items, also a telephone arm or a hand set may be used in place of the desk stand if desired.

For example, any of the desk set boxes that will function with the No. 1020AL desk stand will also function with the following:

- No. 1048AA Telephone Arm
- No. 1048AB Telephone Arm
- No. 1048AC Telephone Arm
- No. 1001C and H Hand Sets (See Hand Set Hangers)
- No. 1002AC Hand Set

Western Electric Central Battery Telephones Nos. 1533, 6054, and 6059 Types

Ringer and gongs are enclosed within the case thereby preventing tampering, reducing maintenance and greatly improving the appearance.

Case is made of heavy sheet steel, copper-plated, and finished with two coats of extremely durable black enamel (baked on) especially developed for this particular purpose.

The case is constructed so that every part of the interior is easily accessible when the cover is opened.

The base is flanged, thereby giving greater rigidity and preventing base from cutting into plastered surfaces.

Unit type of construction and universal terminal block employed. This permits of the telephone being readily converted from one class of service to another. This also permits of a desk set box being converted into a wall telephone or vice versa by a substitution of covers.

*The No. 8AG Ringers were formerly wound to 1000 ohms instead of 1400 ohms. The 1000 and 1400 ohm ringers have the same impedance and may be used interchangeably in service.

All of these telephones are equipped with the No. 7A Transmitter Bracket, two 1A 6-inch transmitter cords, and a 30-inch No. 521 Receiver Cord with the exception of the No. 1533K, which contains one No. 92 Cord (3 feet long) in place of the No. 521 Cord.

See separate listing for "Central Battery Telephones for use with No. 1801 Switchboards," and for protectors.

The No. 323 Transmitters have a black finish.

Western Electric Central Battery Telephones

For Use with No. 1801 Switchboard

No. 6000AE

No. 1539A

Systems A and B

The telephones for No. 1801 Switchboard Systems A and B are of the series talking circuit type and equipped with 140 ohm vibrating bells which operate on direct current.

Code No.	Case and Finish	Mounting	Receiver
2537A	Metal, Black	Surface Wall	Watch Case Type
2539A	Metal, Black	Flush Wall	Watch Case Type
1533N	Metal, Black	Surface Wall	Hand Receiver
6034AU	No. 1020BJ	Stand Desk	Watch Case Type

NOTE.—Information on hand set type telephones and desk telephones equipped with hand receivers will be furnished on application.

System C

The telephones for No. 1801 Switchboard System C may be of the same types as used for Systems A and B, but in case the system is connected to an outside exchange, telephones equipped with standard central battery induction coil talking circuit should be used in order to obtain satisfactory transmission, as follows:

Code No.	Case and Finish	Mounting
1533M	Metal, Black	Surface Wall

System D

Any standard central battery telephone with ringers operated by alternating current either induction coil or series types can be used with System D. The No. 1533A wall type and No. 6059A desk type telephones may be selected for this system.

No. 1320 Type Telephones for Police Service

No. 1320A Outer Door Open

The No. 1320 type is a metal case weatherproof telephone for central battery service. It was designed primarily for the Police Patrol Service but will be found very satisfactory for general central battery service where a weatherproof telephone is required.

The apparatus is mounted on a metal frame which is removable as a unit from the case. An inner door protects the apparatus from the weather when the outer door is open. The overall dimensions are 6¹/₁₆ inches deep by 13¹/₂ inches high by 12³/₄ inches wide.

A loud ringing extension bell may be connected in multiple with the ringer of this telephone thereby providing means of signaling a patrolman from a distance (see extension bells).

A tapped hole is provided in each end of the case for receiving conduit. Four holes are drilled in the back of the case for receiving mounting screws or mounting clamps. The lock on the outer door is designed so that the key cannot be removed until the door is closed.

Outer door is not marked. Standard finish, gray paint.

Special No. 1320A telephones may be obtained with outer doors marked (raised characters cast on door) in accordance with customer's requirements; color of finish, as specified.

*Furnished only when specified in order.

A reliable telephone system in a mine permits instant communication throughout the plant. Routine business can be easily handled with such a system. In cases of power suspension, shut downs, or emergencies involving possible loss of life or of property the telephone is of inestimable value.

GENERAL—There are three classes of location must be considered for mine telephones. 1. Dry locations above ground or in protected parts of the workings such as the Superintendent's office and the engine room. In such locations the standard wall or desk magneto telephones are recommended. 2. Exposed locations above ground or in mines in which methane or other explosive gases or coal dust are not likely to be present in dangerous proportions. In such locations No. 1336 type telephones are recommended. 3. Mines or other locations in which methane or other explosive gases or coal dust are likely to be present in dangerous proportions. The No. 1536 type telephone is recommended for such locations.

No. 1336 Type Telephones

Briefly these are metal case magneto telephones in which the apparatus has been especially treated to provide resistance to moisture, acid fumes, and non-inflammable gas. All parts are enclosed in a cast iron case which provides protection against damage from water and falling objects. The top of the case is rounded so that water will readily drain off and any objects falling on the top will slide off to the ground. An outer door totally encloses all parts including the transmitter receiver and generator crank.

Western Electric Magneto Mine Telephones

Continued

No. 1336 Type Telephones

The sets are primarily designed for use on lines to which a large number of telephones are connected and where code ringing is used. Although intended chiefly for mine service they are also recommended for out-of-door use as in railway service, police alarm, etc.

Equipped with a No. 143J switchhook and a No. 31 induction coil.

Special No. 1336 type telephones equipped with a heavy brass padlock with 2 keys are obtainable. The padlock is attached to chain in place of latch pin. Orders for these telephones must state that padlocks are desired.

No. 1336A telephone is not equipped with a ringer. Intended for use where an extension bell is preferred to the regular telephone ringer, also for service where all the calls will be outgoing.

No. 1336E differs from the No. 1336A in that it is equipped with a ringer and an iron hood for protecting the gongs.

No. 1336J differs from the No. 1336E only in that a condenser is provided to permit the ringers of this telephone as well as others on the same line, being rung even though its receiver may have been left off the switchhook.

To add a condenser to a No. 1336 type telephone that was not originally so equipped the following apparatus and parts should be ordered: No. 21W condenser, one condenser strap P-43065, and two round head machine screws P-110187.

Dry Cells

Two standard size dry cells are required for each telephone to furnish current for talking. Western Electric Blue Bell Dry Cells are specially designed for telephone service and are recommended because they last longer and are more efficient for this class of service than other dry cells.

Two special Blue Bell Dry Cell cartons, impregnated with moisture-proofing compound, are furnished with each No. 1336 type telephone. These are to be substituted for the standard cartons furnished on the dry cells. These cartons resist the action of any moisture that may form on the inside of the case and prevent current leakage and rapid deterioration.

Case

The box, outer door, inner door and gong hood are of cast iron heavily coated with a rust-resisting finish. When the outer door is closed only the metal transmitter mouth-piece, receiver, receiver cord and the generator handle are exposed. When the outer door is closed these parts are protected from mechanical injury. When using this telephone it is, of course, evident that only the outer door need be opened.

Entrance for Line Wires

The line wires may be brought in either at the top or the bottom of the case. A short length of pipe is screwed into the top of the case and is covered with a pipe cap. This cap prevents water running into the set by following the line wires. In case the line wire is to be run to the telephone in pipe (conduit) no difficulty will be encountered in joining the conduit to the telephone as the wire entrance hole at bottom as well as the top of the case is tapped.

Mounting

Wrought iron mounting bars are secured to the back of the case. The upper end of these have pear shaped holes, and with this arrangement the telephone can be readily mounted by one man and without any danger of damaging it. This is accomplished by driving two lag screws into the mounting surface until their heads project about 1/2 inch. The telephone may then be hung upon these mounting screws (the heads of the lag screws will pass through the large end of the pear shaped holes) after which the lower mounting screws may be driven into place through the holes in the lower end of the mounting bars. Wrought iron mounting bars are employed as they are less subject to breakage than if lugs were cast on the case.

Western Electric Magneto Mine Telephones

Continued

No. 1536 Type Telephones

Designed especially for use in mines and other locations subject to the hazard of explosive gases or coal dust and have been declared by the United States Bureau of Mines permissible for use in mines or other locations where methane or other explosive gases or coal dust are likely to be present in dangerous proportions.

No. 1536E telephone is the same as the 1336E except that protective features are incorporated in the electrical contacts of the switchhook, generator, ringer.

No. 1536E has a 149A switchhook, a 31 induction coil and is furnished without condenser unless the condenser is called for in the order. The outer door is omitted. Projecting hood over the door protects the transmitter, receiver and generator crank. Line wires are brought in either top or bottom, when from the top an angle fixture is provided so moisture cannot enter. Holes in the bottom of the set drain off any accumulation of moisture. Special cordage adapter is provided at the receiver connection of the cord. Unusually hard usage and hoisting will not fray the insulation. Internal mechanism, batteries, line connection, etc. in the housing are inaccessible without unlocking the door and removing the cap screws around the side of the door. Switch hook, generator and ringer are separately removable so they can be carried away for repairs.

Two Blue Bell dry cells with screw terminals are furnished as part of the set. Cartons P-201339 are furnished with sets, but new cells can be ordered without cartons as one carton has a longer life than the cell. Wrought iron bars are secured to the back of the set for mounting. Two lag screws are needed (but not furnished) to mount set. Set as furnished is permissible, any change automatically voids the approval of the Bureau of Mines.

Systems

For a system in which all the telephones are connected to a party line, the set should be of such a design that all the stations can be clearly signaled, for example: No. 1336J telephone set for service below ground or exposed locations above ground and the 1536E for gaseous locations. No. 1317S wall telephone set for service above ground in unexposed locations or No. 6004-B desk type telephone set.

It is preferable, in cases where the size of the system warrants, to use a number of lines connected to a switchboard rather than to depend on one party line. Any of the lines may be a party line but it is much better to have the important stations such as engine room and superintendent's office connected to the switchboard by individual lines. With a switchboard and individual lines the 1336E or the 1536E telephones should be used below ground and in exposed locations. For the lightly loaded lines above ground and not exposed the 1317AH wall telephone set or the 6003B desk telephone set can be used.

Ringers and Extension Bells

The ringers used in these telephones may be readily adjusted if necessary with a screwdriver. The gongs emit a loud distinct ring, which can be heard a long distance, particularly so underground. However it is often desired to provide loud ringing extension bells in connection with mine telephones and for this purpose the No. 392 and No. 342 type subscribers sets are recommended as they are designed to withstand the severe conditions encountered in mine service.

Protectors

The telephone installed above ground should be equipped with protectors consisting of open space cut outs (for example the No. 60AP protector) to prevent damage to the telephone by lightning. In case there is a chance of contact between the telephone line and a power circuit protectors consisting of open space cut outs and fuses (for example the No. 58AP protector) should be used.

Western Electric Street Railway Telephones

Magneto and Battery Types

No. 1278 type telephones employ weatherproof iron boxes and are provided with insulated circuits. They are intended principally for exterior use by street railway companies operating telephone lines on which there is a chance of crosses with low voltage power circuits. This type telephone is arranged so that its circuit is cut off from the line except when its door is opened. When the telephone is in use a repeating coil is interposed between the line and telephone circuit proper, so as to protect the user, as far

as possible, from the chance of injury should the line become crossed with a low voltage circuit. When the door is opened, a line switch is released which connects one winding of the repeating coil across the line and connects two fuses and two open space cut-outs into this circuit. The telephone circuit proper is connected to the second winding of the repeating coil and has no direct contact with the line circuit. The fact that a repeating coil is interposed between the line circuit and the telephone circuit reduces the efficiency of the telephone to some extent and, therefore, the use of these telephones is not recommended on heavily loaded lines, except where the protective feature is essential. See No. 1336 type telephones. In case a car is held up awaiting orders from the dispatcher the door of the telephone is left open so as to permit of the telephone being signalled. (It is impossible for the telephone to be signalled when its door is closed.) As the talking circuit is only closed when the push button in the hand set is depressed, the battery in the telephone is not wasted under the above condition. The apparatus of this telephone is mounted on an iron shelf, which may be removed as a unit from the telephone for inspection. The connection between the apparatus on the shelf and the line and ground terminals is made through the medium of clips which register with contacts mounted on a terminal block secured to the back of the case. The case and door are of cast iron and have a galvanized finish. Both the top and bottom ends of the case are tapped for receiving 1/2 inch conduit.

The F, G and J telephones are equipped with a lock which is arranged so that the key cannot be removed until the door of the telephone is closed. The No. 1278H is equipped with a hasp, staple and pin similar to that used on No. 1336 type telephones, but padlock is not included.

For Magneto Service

1278J 1001H 51AG 1000 None 13 25E 5B †Code Medium
Designed for medium line load.

In addition to the apparatus listed above these telephones are each equipped with: A special door switch. A special protector.

- 2 D. & W. No. 5001 Type C fuses—500 volt 1 ampere.
- 2 No. 2 protector blocks.
- 2 No. 1 protector blocks.
- 2 No. 3 protector micas.

Dry cells must be ordered as a separate item.

*Equipped with hasp, staple and pin the same as No. 1336 type telephones. Ringer is disconnected from the line when door of telephone is closed.

†Generators have special mounting brackets.

Western Electric Portable Magneto Telephones

No. 1330E Closed

No. 1330E Open

Nos. 1330 and 1331 Types

These are complete magneto telephones mounted in substantial wooden cases. They are primarily for use in railway service and are designed to withstand the jarring and rough handling incident to train service. In addition to railway service these telephones are suitable for any service where a substantial type of portable telephone is required. While these telephones are not waterproof they are designed to withstand ordinary weather conditions.

The Nos. 1330F and 1331F telephones are equipped with a six-foot waterproof cord and No. 146 plug for connecting them to a telephone line through a No. 186 pole jack.

The Nos. 1330E and 1331E telephones are intended primarily for use where connection to the line will be made with a line pole.

No. 1375 Type

The No. 1375B is especially adapted for use in cases where the telephone user must carry the telephone considerable distances. While it is primarily intended for use on moderately loaded lines, the design of the generator is such that it may be satisfactorily operated on heavily loaded lines.

The generator, induction, coil buzzer and terminal block are mounted on an aluminum frame and secured in the case by means of machine screws.

The case is made of high grade leather and is designed to withstand considerable rough handling.

No. 142

No. 142B Type replaces Nos 21Y and 21AL Condensers.

No. 142D Type replaces No. 21U Condenser.

The No. 142 Type Condensers require one No. 27A Bracket when mounted in place of the No. 21 or similar type condensers.

Arranged to mount on $\frac{1}{2}$ -inch horizontal and $1\frac{1}{4}$ -inch vertical centers. Furnished with two nuts and washers for mounting.

Safe continuously applied voltage, either d.c. or effective a.c. at 60 cycles or less and of an approximate sine wave, is 300 volts.

Nos. 147 and 149 Types

The Nos. 147 and 149 Type Condensers are equipped with mounting tabs at lower edge of condenser and may be mounted by means of this tab and a mounting strap.

Safe continuously applied voltage, either d.c. or effective a.c. at 60 cycles or less and of an approximate sine wave, is 180 volts.

If No. 147 Type Condenser when substituted must fill space of No. 21 Type, order should specify P-409555 Adapter, and for the No. 149 Type Condenser, specify P-409556 Adapter.

Western Electric A. C. Extension Bells

Intended for auxiliary use in connection with wall, desk or telephone arm telephones. They consist of a ringer on a suitable mounting and two line terminals or binding posts. For magneto bridging non-selective service only.

No. 127 Type

Ringer mounted in an oak box. Approximate dimensions, width 6 1/2 inches; height 4 7/8 inches; depth 4 5/8 inches.

Code No.	Ringer No.	Resistance Ohms
127E	38AG	1020
127F	38BG	2500
127G	38FG	1620

No. 392 Type

Moisture-proofed loud ringing bells having a black finish metal cover and base with galvanized finish gongs.

When the extension bell is to be used on a central battery line a 2 M.F. condenser must be connected in series with the ringer coils.

Base is arranged for mounting a No. 21D condenser. Condenser is not furnished, however, unless so ordered.

The connecting leads to the ringer coils are so arranged that the condenser can be easily connected in series with the ringer without disturbing the line wires when desired.

Code No.	Resistance Ohms	Diameter Gongs, In.
392A	1000	6
392B	2500	6
392E	1600	6
392G	1000	8
392H	2500	8

Biasing attachment for selective ringing can be added.

No. 342 Type

Loud ringing bells for use in mines and other places where a bell protected from weather is desired. Consists of a No. 392 type bell mounted on a No. 149A backboard having a sloping roof which protects the bell.

Code No.	Bell Used	Resistance Ohms	Diam. Gongs, In.	Code No.	Bell Used	Resistance Ohms	Diameter Gongs, In.

**Western Electric Tubular Fuses
Fiber Shell Type**

No. 7T

No. 7A

No. 11C

These fuses are carefully made from especially selected materials. The use of lead fuse wire prevents the possibility of overheating the shell. These fuses will carry their rated currents indefinitely without injury and will act reliably on one and one-half times their rated current values. Fuses of the same code number and rated capacity will give consistent performance as to rated and operating current values.

Code No.	Rated Capacity Amperes	Used with
7A	1 to 7 as Specified	Nos. 61, 77, 1074A and 1078 Protectors
7T	7	B Cable Terminals.
11C	7	Nos. 58AP and 1079AP Protectors

Western Electric Hand Generators

No. 48A

Western Electric hand generators are correct in both mechanical and electrical design and the materials used and manufacturing processes employed are such that their high efficiency is retained indefinitely.

All parts are accurately machined and fitted and the bearings are of such size that no trouble due to the armature scraping on the pole pieces will be encountered even after years of service. The gears are accurately cut.

All metal parts are given a protective finish and the armature winding is moistureproofed. The magnets are made from steel which was developed especially for this purpose.

No. 22 Type Generators

The No. 22 type generator is used on lightly loaded magneto lines and may be obtained for alternating or pulsating current.

These generators have three magnets except the No. 22E, which has only two.

No. 29 Type Generators

The No. 29 type generators are used where light weight is essential as in linemen's test sets, and portable telephones.

No. 48 Type Generators

The No. 48 is our most powerful hand generator and is used in telephone for heavily loaded line service.

No. 50 Type Generators

The No. 50 type generator was designed for use on moderately loaded lines and while it only has three magnets, it is considerably more powerful than a good many five-bar generators on the market, and will be found satisfactory for use on all but the very heaviest loaded lines. On a line of 12000 ohms, the No. 50 generator will operate six 2500 ohms Western Electric ringers and will operate thirty-five 2500 ohms Western Electric ringers on a line of about 1000 ohms.

The No. 50 generator is approximately 75% as powerful as the No. 48 type.

No. 50A

Western Electric Hand Generator Boxes

A hand generator box consists of a generator mounted in an oak cabinet having a hinged cover.

The leads from the generator are connected to terminals mounted close to the inside edge of the box.

Code No.	Generator	Current	DIMENSIONS OF BOX, INCHES		
			Width	Depth	Length
299F	48A	A. C.	8	6	9
299G	48B	A. C. and P. C.	8	6	9
303G	50A	A. C.	7 29/32	4 13/32	8 1/8

No. 1001 Type Western Electric Hand Sets

No. 1001A

The No. 1001 type hand sets have been manufactured for over fifteen years. They were originally intended for the use of linemen and are designed to withstand the rough handling, incidental to such service. This design proved to be so satisfactory that it is now used extensively for a number of different purposes, as described below.

The handles are made of brass tubing with drawn brass end pieces and the transmitters and receivers are provided with drawn brass cases equipped with screw clamping rings, thereby making an instrument that is extremely rugged.

The No. 1001-C, and H hand sets are provided with a push button switch which is connected so that these hand sets function the same as the No. 1020-AL desk stand. In view of this, they may be used in connection with our regular magneto and central battery desk set boxes in place of a desk stand, in cases where the service conditions are such that a hand set is required. These hand sets have a nickel-plated finish.

No. 1001A

Used by linemen as a test set on central battery lines. The cord is equipped with spring connection clips.

Code No.	Transmitter	Receiver	Cords		Push Button Spring Combination
			Code No.	Length	
1001A	244	131	243	8 in.	None
			574	2½ ft. (Waterproof)	

Nos. 1001C and 1001H

No. 1001C is used with Nos. 1330 and 1331 portable magneto telephones.

No. 1001H is used with No. 1375B portable magneto telephone.

Code No.	Transmitter	Receiver	Cords		Push Button Spring Combination
			Code No.	Length

No. 1002 Type Western Electric Hand Sets

No. 1002AC

The transmitter and receiver of the No. 1002 type hand sets are mounted on a nickel plated tubular brass frame, equipped with a hard rubber handle. A switch mounted within the frame is actuated by a plunger which terminates in a ring by which the hand set is suspended, when not in use. When the hand set is removed from the hook, the switch is automatically closed. These hand sets function the same as certain desk stands, and, therefore, may be used in place of desk stands, if required. A hook (No. 141A switch-hook) is furnished with each hand set.

No. 1002D

Used in place of desk stands and telephone arms in connection with Interphones. Also for general use.

Code No.	Transmitter	Receiver	Cords		Switch Combination
			Code No.	Length	
1002D	267	141	336	14 ins.	1 make and 1 break (4 conductors)
			402	8½ ins.	
			429	4 ft. 6 ins.	

No. 1002E

Used in connection with a janitor's switchboard in apartment house equipment. Also for general use.

Code No.	Transmitter	Receiver	Cords		Switch Combination
			Code No.	Length

No. 1003 Type Hand Sets

NOTE.—The No. 1003 type hand sets are listed under Interphones.

Western Electric Hand Set Hangers

No. 1B mounts on a vertical surface for holding a No. 1001 type hand set when not in use. The hand set is suspended by its receiver, which fits into a recess in the hanger. Cast brass; black finish. Overall dimensions, 3¼ inches wide, 2½ inches deep and 3¾ inches high.

No. 1C is the same as the No. 1B, except that it is equipped with rubber studs and a spring, so arranged as to prevent the hand set from swaying. Used principally on steamships.

No. 1B

Western Electric Desk Set Boxes

Nos. 300 and 315 Types

For Use with Desk Stands, Telephone Arms, Etc., on Magneto or Central Battery Lines

Used with No. 1020AL desk stand and Nos. 1020CC, 1048AA, AB and AC telephone arm. Oak boxes equipped with induction coil, and with ringer, generator and condenser as indicated below.

Ringers Operated by A.C.

Code Ringing

Code No.	Ringer Resistance Ohms	Type Generator	Con-denser	Service
315H	1020	No. 22 (3 Bar A.C.)		Light Loaded Lines
300K	2500	No. 48 (5 Bar A.C.)		Heavy Loaded Lines
300N	2500	No. 48 (5 Bar A.C.)	1 Mf.	Heavy Loaded Lines
300L	1620	No. 48 (5 Bar A.C.)		Medium Loaded Lines
300M	1620	No. 48 (5 Bar A.C.)	1 Mf.	Medium Loaded Lines

No. 1020AL Western Electric Desk Stands

For regular bridging magneto or common battery service. Insulated transmitter.

Includes one No. 20AL Desk Stand, one No. 323 Transmitter, one No. 144 Receiver and cords.

Black Japan finish.

No. 186 Western Electric Weatherproof Telephone Jacks

Weatherproof jack designed for mounting poles; affords a means of connecting a portable telephone to the line. Contains protective apparatus.

Lock will be furnished if specified in order.

No. 58AP Western Electric Telephone Protectors

Designed for protection against lightning and crosses with electric circuits.

Consists of two No. 11C-7 Ampere Fuses, two each Nos. 26 and 27 Protectors and Nos. 16, 29 and 48 Mountings.

Western Electric Telephone Protector Blocks

Nos. 19 and 20

No. 19

No. 20

Code No.	Description	Protector Blocks, No.	USED WITH Protector Micas, No.	Protectors, Nos.
19	Plain Copper Block with Two Pins	20	10	58B, 60B
20				

Nos. 26 and 27

No. 26

No. 27

Provides better telephone service through fewer interruptions of operation. They are used together without a separator (protector mica) and form an open space cutout which will afford the highest grade of protection against high potentials due to lightning.

The No. 26 protector block is a solid piece of hard non-dusting carbon. The face of the block is especially ground to present a smooth surface. The No. 26 protector block is mounted on the ground side of the protector mounting.

The No. 27 protector block consists of a porcelain frame with a countersunk hard carbon plug which is fastened in place with low temperature fusing cement. The surface of the frame which bears against the No. 26 block, when assembled in a mounting, is finished by grinding. The air gap between the carbon insert in the No. 27 block and the face of the No. 26 block is held to close limits by this grinding process and the consistent operation of the cutouts at the proper voltage is thereby insured.

Ordinary lightning discharges will cause an arc across the air gap between the carbon blocks but will not heat them sufficiently to melt the cement used for holding the carbon plug in place. A cross with an electric light or power line, however, will cause a discharge or repeated discharges, of such duration that the heating of the carbon insert of the No. 27 blocks will melt the cement holding it in place and allow the mounting spring to push it into direct contact with the No. 26 block, thus permanently grounding the line.

Code No.	Description	Used with Protectors, Nos.
26	Carbon Block	12AP, 58AP, 60AP, 76AP, 1268A and 1269A
27	Porcelain Frame with Carbon Insert	12AP, 58AP, 60AP, 76AP, 1268A and 1269A

The new blocks are interchangeable with the old combinations of No. 1 protector block, No. 2 protector blocks and No. 3 protector mica in all subscribers' set protector mountings and are therefore available for improving protective equipment already in service, during the normal replacements. All orders for replacements of Nos. 1 and 2 blocks and No. 3 micas in subscribers' telephone station protectors should specify the Nos. 26 and 27 protector blocks; no separator (protector mica) is needed with the new design of block.

Protector Micas

No. 10

Code No.	Protector Blocks, Nos.	USED WITH Protectors Nos.
10	19, 20 and 21	58B, 60B and 80A
11	19 and 20	178

No. 11 mica is twice as thick as the No. 10.

Western Electric Telephone Protector Mountings

No. 83A

No. 83A is designed to protect drop wires between the overhead lines and the subscribers telephone set from lightning. This protector mounting consists of an iron box approximately $8\frac{1}{2} \times 5 \times 2\frac{3}{4}$ inches deep with a cover and having a No. 84A protector mounted within it. Arranged to mount 10 pairs of No. 26 and 30 protector blocks. This

protector mounting provides for the protection of 5 pairs of wires. The box mounts directly underneath the crossarms on the poles. Two mounting lugs are provided for this purpose.

No. 86A is for housing the 58 type protector where outside installation is desired. Consists of a galvanized iron metal box having a sliding cover with locking screws. Three screws are furnished for mounting the protector in the box. Size, 10 inches long, $5\frac{3}{4}$ inches wide, $3\frac{1}{4}$ inches deep.

No. 86A

Western Electric Hand Receivers

No. 144

With hard rubber case.

Cord not included; order separately.

Western Electric Head Receivers

No. 528

Standard bipolar head receiver, brass case with improved wire type headband.

Used with operator's telephone set and all switchboards.

Western Electric Ringers

Have gong posts suitable for $\frac{5}{8}$ -inch woodwork; spacers can be furnished to adapt the No. 53 type to $\frac{3}{8}$ -inch woodwork and the No. 38 to either $\frac{3}{8}$ or $\frac{1}{2}$ -inch woodwork. Black finish gongs are furnished as standard, but nickel finish gongs can be supplied.

Used with central battery (magneto) telephones.

No. 53 Type

Code No.	Approx. Resistance Ohms	Gongs		Mounts In Woodwork Inches
		Code No.	Diam. Inches	
38AG	1020	26A	3	$\frac{5}{8}$
38BG	2500	26A	3	$\frac{5}{8}$
38FG	1620	26A	3	$\frac{5}{8}$
53AG	1000	29A	$2\frac{1}{2}$	$\frac{5}{8}$
53BG	2500	29A	$2\frac{1}{2}$	$\frac{5}{8}$
53FG	1600	29A	$2\frac{1}{2}$	$\frac{5}{8}$

Western Electric Transmitters

No. 323

High resistance, insulated transmitter. Provided with mounting lug and clamping bolt. Black finish.

Designed for use on magneto and central battery desk stands and telephone arms

No. 353

High resistance, insulated, bracket type transmitter. Black finished all over.

Designed for use on magneto and central battery wall telephones, requiring a bracket type transmitter

Western Electric Testing Sets

Type 90500

Each set consists of a hand generator and a ringer, wired in series, and inclosed in a wooden case.

No. 90530

Code No.	Will Ring Through Ohms	Consists of
90530	10000	1 No. 22K Generator 1 No. 19B Ringer
90510	35000	1 No. 22K Generator 1 Special No. 19 Ringer
90511	50000	1 No. 22N Generator 1 No. 19A Ringer
90512	100000	1 No. 22N Generator 1 No. 19B Ringer

Size of case is $5\frac{3}{4} \times 6\frac{5}{8} \times 5\frac{1}{4}$ inches.

It is finished in birch.

No. 1017 Type Western Electric Test Sets

No. 1017 Type

No. 1017B

A wooden box telephone test set equipped with a regular local battery talking circuit consisting of a No. 266 transmitter, No. 13 induction coil, No. 189 receiver and a special three-cell dry battery unit.

NOTE.—The No. 1017C test set differs from the No. 1017B only in that it is equipped with a specially designed high efficiency generator. The No. 1017B will, under ordinary conditions, be found entirely satisfactory, but in case a more powerful set is required to meet unusual conditions, the No. 1017C set has been developed.

No. 1017B. For lightly loaded lines—it will ring 15, 2500 ohm bells over a 15 mile No. 12BB iron metallic line.

Code No.	Weight Including Battery Pounds	Size of Case Inches	Finish
1017B	8	$4\frac{27}{32} \times 6\frac{3}{32} \times 7\frac{27}{32}$	{ Birch Mahogany
1017C	8	$4\frac{27}{32} \times 6\frac{3}{32} \times 7\frac{27}{32}$	{ Birch Mahogany

No. 1017C. For moderately loaded lines—it will ring 33 2500 ohm bells over a 15 mile No. 12BB iron metallic line.

Western Electric Lead Covered Telephone Cable

The outside plant is a very important part of any telephone system. Unless satisfactory material is used in its construction, it is impossible for a telephone company to furnish satisfactory service even though the central office and sub-station equipment is of the best. Lead covered cable represents not only a large part of the capital invested in the outside plant, but also a most important part of the construction due to its function of being the transmitting medium for telephone messages.

There are certain characteristics which lead covered cable must possess in order to properly and efficiently function in a telephone system:—

1. It must be so constructed that it will have long life and thereby reduce depreciation to a minimum.
2. It must be designed to transmit telephone messages with a minimum transmission loss.

The Western Electric Company manufactures cable designed to conform to the above requirements and by virtue of the fact that its experience in this field covers the entire period since the first successful installation of lead cable for telephone use, its product is as nearly perfect as present day knowledge of the telephone art permits.

The Western Electric Company occupies an important position in the manufacture of lead covered cable for telephone use by virtue of the following facts:

1. It is the largest manufacturer of this commodity.
2. It has specialized on, and developed this product since its origin.
3. It manufactures for the largest users.
4. It is responsible for practically every important development and improvement.
5. Conscientious careful inspection and testing make sure that specifications are rigidly adhered to.
6. The design and development work is done by the largest force of telephone experts in the world.

Cable for aerial and underground telephone use is composed of copper conductors, insulated with paper, twisted into pairs and enclosed in a lead sheath. In general, cable with single wrapped conductors is recommended, since its electrical and mechanical characteristics are perfectly satisfactory for most conditions, and the cost is less than cable with double wrapped conductors.

The sheath is made of pure lead, lead antimony alloy or lead tin alloy. Experience has shown that while either lead antimony or lead tin is satisfactory for aerial or underground cable, the former alloy, being somewhat cheaper, is more generally used. While pure lead cannot be recommended where the cable is subjected to vibration, it is satisfactory for use within buildings.

Extra Pairs

Extra pairs are placed in all cables containing conductors smaller than No. 16 to take care of any pairs which may become defective in manufacture. In the majority of cables all or part of the extra pairs will often be found good and may be used for additional circuits. All pairs of No. 16 A.W.G. and larger except in submarine cable are guaranteed to meet the specification requirements when the cable leaves our factory.

The coding of all cables is on the basis of the actual number of pairs. Actual and guaranteed numbers of pairs in the various sizes of standard cables containing conductors smaller than No. 16 A.W.G. are as follows:

Actual Pairs	Guaranteed Pairs
6 to 149	Actual pairs less one
150 " 249	" " " two
250 " 349	" " " three
350 " 449	" " " four
450 " 505	" " " five
606	" " " six
909	" " " nine
1212	" " " twelve
1818	" " " eighteen

Western Electric Lead Covered Telephone Cable

Cable Yard at Hawthorne Works

Transmission

The transmitting efficiency of telephone cable, considered as a separate unit, depends principally upon its capacitance and conductor resistance. When telephone cable forms a portion of a completed telephone connection, the transmitting efficiency of the telephone connection as affected by the cable portion depends somewhat on the relative position of the cable in that circuit and also by the type of other construction to which it is connected.

The following data are based upon average standard conditions, and may be used for approximate calculations. In the case of circuits involving several different types of construction, we recommend consulting our engineers.

A length of circuit which, when connected to short subscribers' loops, will cause a transmission loss of about 30 db (units of transmission loss, called decibels) is considered about the maximum length over which commercial transmission can be secured.

One db represents approximately the loss found in the following:

- 3.2 miles of No. 12 B.W.G.—B.B. galvanized iron circuit.
- 4 miles of No. 10 B.W.G.—B.B. galvanized iron circuit.
- 8 miles of No. 14 N.B.G. or No. 12 A.W.G. hard drawn bare copper circuit.
- 13 miles of No. 12 N.B.S. hard drawn bare copper circuit.

It then follows that 96 miles is about the theoretical commercial limit for No. 12 B.W.G.—B.B. galvanized iron wire circuit.

Under each listing is given the respective transmission loss or attenuation in db per mile of cable.

Capacitance

The capacitance of a cable circuit is important because it limits to a large extent the length of cable through which it is possible to transmit speech. The capacitance may be specified either as mutual, that is, the capacitance between the two wires or a pair; or as grounded, that is, the capacitance between a wire and all the other wires and the sheath. Mutual capacitance is preferable in defining the quality of the cable for telephone transmission, since the conductors are used in pairs as metallic circuits and seldom, if ever, singly as grounded lines. The grounded capacitance is about 1.6 times the mutual, but this ratio varies somewhat for different cables.

Capacitance may be measured by the d.c. charge method, the d.c. discharge method, or the a.c. method. The a.c. method, using a frequency of 800 cycles or higher, is preferable because it measures the true capacitance for the voice currents. The d.c. capacitance tends to be higher than the a.c. capacitance, and in specifying capacitance this fact should be recognized. The d.c. charge method is less subject to error due to improper manipulation of the testing equipment than the d.c. discharge method, and is therefore a more desirable testing procedure for d.c. testing.

Western Electric Cables are tested for mutual capacitance by the a.c. method, unless specifically requested otherwise.

Western Electric Lead Covered Telephone Cable

Continued

Special Cables

Special conditions often require cables with different characteristics from those which have been standardized and coded. Paper insulated cable, designed to withstand test potentials up to 1500 volts a.c., is supplied for special circuits such as for telegraph or signal circuits. If your condition necessitates special cable, write our nearest house, giving full details and information, and price will be furnished.

Submarine Cables

Paper insulated submarine telephone cable may be divided into three general classes, depending upon the use for which they are intended.

1. High dielectric strength, tight core cable, designed for use in comparatively long lengths, where the cost of repairing a break in the cable will be less than the cost of an entirely new cable.

2. High dielectric strength, loose core cable, designed for use in comparatively short lengths, where high transmission efficiency and high dielectric strength are of importance; for example: a short river crossing cable connecting important open wire.

3. Single paper insulated loose core cable designed for use in comparatively short lengths where so high a dielectric strength is not necessary; for example: a short river crossing cable connecting land cables.

Either single or double armored cable can be furnished. In many cases, single armor gives sufficient mechanical protection. Double armor is used only in cases of extremely severe mechanical requirements. In still water with a mud bottom, single armor will be sufficient. With a rocky or uneven bottom, or with strong tides or currents, double armor should be considered.

Composite Cables

Composite cable, that is, composed of conductors of two or more gauges can be furnished if desired. The combinations of pairs which will utilize the space within the lead sheath most economically are somewhat limited and our cable engineers will make recommendations along this line upon receipt of detail information as to the conditions to be met.

Terminating Cables

Paper insulated cables are usually terminated in buildings by splicing on a short piece of textile insulated cable. Commercial textile yarns are liable to contain soluble salts, which will cause electrolytic action when exposed to moist atmospheres and result in poor insulation and sometimes produce corrosion of the conductors. It has been found that by removing such impurities substantial improvements of the insulating properties of the textiles are obtained. Only purified textiles are used in Western Electric Cables.

The uses of the several types of textile insulated cables listed in the tables following are discussed briefly below.

Types FA and GA cables are generally used for terminating. In Type FA cable all pairs, except a tracer pair, have the same colors of insulation. In Type GA cable each pair is distinguishable from every other by a color code. These two types of cable are made up of wires covered with two servings of silk and an outer serving of cotton.

Type AUA has conductors covered with two servings of cotton and an outer film of lacquer. This type of cable should be used where there would be objections to the usual method of waxing the exposed insulated conductors during installation. It replaces Type UA cable.

Types MFA, MGA, and NUA are similar to Types FA, GA, and AUA respectively, except that the conductors are enameled. The enameled cables are intended for the same kinds of service as the other three types, but are used where the humidity may be quite high for rather long periods, as, for example, near the sea coast in warm climates.

Cables with wool insulated conductors were once used for terminating, but it has been found that the cables described above are equally satisfactory for this purpose and are less expensive and easier to handle.

Western Electric Lead Covered Telephone Cable

Cables for Burying Directly in the Ground

There are many situations where cables buried directly in the ground would offer advantages over other forms of construction. The life of unprotected cable sheath may be very short, depending upon the particular soil conditions. To meet this need, the Western Electric Company have developed a type of covering for the cable sheath which effectively protects the sheath from soil corrosion. This protection consists of wrappings of paper and jute which have been thoroughly impregnated with preservative compound and which are thoroughly flooded with asphaltic compound while being applied to the cable. Cables having this type of covering are referred to as jute protected. In cases where somewhat more mechanical protection is desired or where some protection against low frequency induction from power lines is desired, a steel tape armor can be furnished. This type of sheath covering is similar to that used for the jute protected cables except for the addition of the steel tapes and a further covering of asphalt flooded jute.

Jute protected cables are about $\frac{3}{16}$ inch larger in over-all diameter than the unprotected cables for the smaller sizes and about $\frac{1}{16}$ inch larger for full size cables. For the tape armored cables, the increase in diameter varies with the size of the cable from about $\frac{1}{4}$ inch to about $\frac{3}{16}$ inch. Any lead covered cable can be furnished either jute protected or tape armored if so noted on the order.

Recent Developments

A new form of paper insulation has been developed by the Western Electric Company which is known as pulp insulation because of its method of application to the wire. The paper is made directly on the conductor in such a way as to form a continuous, seamless tube.

A new method of constructing cable cores, known as the multiple unit design, has also been developed by the Western Electric Company. Units of 50 or 100 pairs are first separately stranded and then these units are cabled together to form the completed core. This construction offers a distinct advantage in splicing in that the color groups are units and require practically no time for separating in preparation for splicing.

No. 26 gauge cables, coded as Type AST, No. 24 gauge cables, coded as Type CSM, and No. 22 gauge cables coded as Type CSA are now regularly furnished with pulp insulation for all sizes and with the multiple unit design in sizes of 152 pairs and larger.

Type CSA Cable

For Aerial or Underground Use

SHEATH.—Lead antimony.

CONDUCTORS.—No. 22 A.W.G., pulp insulation, with color groups depending upon size.

MUTUAL CAPACITANCE.—A.C. testing, .090 microfarad per mile of cable.

CONDUCTOR RESISTANCE.—Not exceeding 92 ohms per mile of cable at 68 degrees Fahrenheit.

INSULATION RESISTANCE.—Not less than 500 megohm miles.

DIELECTRIC STRENGTH.—Insulation of each conductor capable of withstanding an a.c. test potential whose maximum instantaneous value is 500 volts.

ATTENUATION.—1.8 decibels per mile at 1000 cycles.

Western Electric No. 224-C Vacuum Tubes

Cathode Ray Oscillograph Tube

The Western Electric No. 224-C Vacuum Tube is a Cathode Ray Oscillograph Tube which may be used to obtain the performance characteristics of nearly every kind of electrical apparatus. It particularly fills the need for an oscillograph operating at frequencies up to a million or more cycles per second.

The spot of light produced by the cathode ray on a fluorescent screen within the tube may be moved simultaneously in 2 directions by varying voltages applied to 2 pairs of internal deflector plates, or by current passing through external coils, the resulting trace giving the relation between the 2 currents or voltages. A deflection of one inch is produced by 25 volts on a pair of deflector plates or by 25-ampere turns in suitable coils.

The power equipment required for the tube is a 300-volt B battery and a 6-volt storage battery.

Western Electric Type 20 Thermocouples

Type 20 Western Electric Thermocouples are for high frequency current measurements. Used in conjunction with an ungrounded, wooden-cased galvanometer or microammeter, they measure alternating currents of frequency well over 1,000,000 cycles with the same accuracy as obtained with d.c. instruments.

High grade materials, electrical spot-welding of parts and enclosure in a glass envelope evacuated to the same degree as high grade thermionic tubes, insure constancy of calibration.

Matching of couple elements for maximum sensitivity makes possible operation up to 15 millivolts output, with moderate power input in the heater. The almost linear characteristic in the 5-15 millivolt range increases accuracy of reading. This also permits use of more rugged galvanometers for measuring d.c. output.

Type 20 Thermocouples are convenient, precise, and dependable. They are mounted in hardwood containers with sturdy positive contact binding posts and identification plates.

Type	Maximum Heater Resistance Ohms	Couple Resistance Ohms	Nominal Current at 5 Millivolts Ma.	Nominal Current at 15 Millivolts Ma.

Western Electric Audiphones

Western Electric Audiphones reflect the skill and experience of their designers, Bell Telephone Laboratories and their makers, Western Electric Company—both leaders in the sound transmission field.

No. 36-A

The No. 36-A audiphone, illustrated at the left, consists of a microphone, a receiver, a rheostat, connecting cords and battery plug. It is suitable for those with a moderate degree of hearing impairment.

No. 36-A.....each \$50.00

No. 37-A

This audiphone differs from the No. 36-A in that an amplifier is added. This gives a wider hearing range and is suitable for those whose hearing impairment is of an extreme character. It is designed for those who wish to carry the transmitter and amplifier in separate pockets.

No. 37-A.....each \$95.00

No. 38-A

Similar to the No. 37-A, the No. 38-A is also equipped with an amplifier and is also suitable for those having a considerable hearing impairment. This audiphone has the microphone, rheostat and amplifier assembled in a neat, metal box. It is offered for those who prefer to carry this box rather than having the transmitter and amplifier in their pockets.

No. 38-A.....each \$95.00

Audiphone Accessories

Two types of ear pieces are available, a stock earpiece furnished with each audiphone or if preferred an individually moulded earpiece (not included in price). The No. 12-A carrying case is available for use with the No. 38-A audiphone. The No. 11-C battery box is a convenient means of carrying the batteries needed with all three models. Special batteries for audiphone use are available.

Western Electric Audiometers

No. 2-A

Offers physicians an accurate, dependable method of testing the acuity and quality of their patients' hearing. Office assistants can easily and accurately chart each patient's hearing and file charts for comparative records.

No. 2-A.....each \$550.00

No. 3-A

Developed for use in industrial health work. By use of this instrument hearing tests are made speedily and accurately.

No. 3-A.....each \$400.00

No. 4-A

Designed for school use; enables the school physician or teacher to periodically check an entire classroom at one time. As many as 500 children can be checked within one school day.

No. 4-A.....each \$518.50

No. 5-A

Successfully used in schools, industrial offices, automobile license examination rooms and by railroads.

No. 5-A.....each \$235.00

Full information on these audiometers on request.

Western Electric

Commercial and Police Radio Broadcasting Equipment

Broadcasting today has become a vital and recognized factor in the entertainment and education of the American public. The broadcasting business has achieved this recognition by successfully assuming their two outstanding obligations to listeners in (1) Constantly improving the quality and variety of programs and (2) Improving the quality and performance of their equipment.

Station popularity comes as a direct result of sending out clear, undistorted programs of merit with the least possible number of interruptions and at a satisfactory volume. Western Electric offers broadcasting executives a complete service to help them improve the quality, volume and continuity of their broadcasting. Bell Telephone Laboratories, leaders in sound research, are continually

50-Watt Police Transmitters

This new police transmitter offers the latest and best equipment for modern police work.

Police requirements in some sections showed the need for a 50-watt transmitter and it has been carefully designed to meet every police need.

Clear, dependable voice transmission is a feature of all Western Electric Police Radio Transmitters.

400-Watt Police Transmitters

More than 40 cities in every part of U.S.A. are using Western Electric Police Radio to combat crime in their police work. The success of police radio is no longer questioned—police officials everywhere recognize its importance in their work.

Western Electric Police Radio Transmitters have improved facilities for maintaining frequency stability. Speech is transmitted with great precision. Its superiority of mechanical and electrical construction assures dependable operation. The equipment is compactly assembled and operating costs are low. The equipment was designed and manufactured to meet the needs of police radio work.

studying, checking, testing and developing new equipment and improvements on equipment already introduced. Western Electric adds precision manufacturing, using the choicest of materials in producing the highest quality apparatus. Graybar Electric offers these soundly developed, well manufactured devices to you through its conveniently located offices in 73 principal cities throughout the United States.

Police Radio

In considering the problem of police radio, dependability in operation and clear transmission are often a matter of life and death. In the development of police radio equipment, Bell Laboratories and Western Electric have spared no expense to secure the utmost in quality and dependability.

100, 500 and 1000-Watt Commercial Broadcasting Transmitters

Western Electric offers commercial broadcasters a complete line of transmitting and speech input equipment from 100 watts to 500000 watts.

The 304-A Western Electric Transmitter has a power of 1000 watts secured by increasing the power of the 12-A transmitter (100 watts) by use of the 71-A amplifier. This unit can also be adapted to give a power output of from 100 watts to 1000 watts.

This equipment is a.c. operated, compact and offers the advantages of radiation cooled tubes, the latest in circuit arrangements, harmonic suppression, automatic control circuits and quality construction. It offers the small station owner the opportunity of easily and quickly increasing his power output along the most improved and up-to-date lines.

5000, 50,000 and 500,000-Watt Transmitters

The 5000, 50000 and 500000-watt transmitters offer station owners the very latest developments in the art of radio transmission. Dependability, quality of transmission, compactness and ease of operation were all considered carefully in the development and manufacture of these transmitters. Details regarding this equipment will be gladly furnished.

Speech Input Equipment

Western Electric 9-A Speech Input Equipment offers flexibility of equipment in handling studio as well as remote pick-up points. Microphone switching, together with mixing apparatus and monitor speakers, are all provided with this equipment. Other advantages are a.c. operation, moving coil microphones, improved volume indicator, single panel mounting, factory wiring and master gain control.

Police Radio Receivers

Graybar offers police departments a superior receiving set manufactured by the Stromberg-Carlson Company. This set was particularly designed to meet the special requirements of police work and represents the result of our experience with police radio installations in New York, Chicago, Detroit, Rochester and Atlanta.

Western Electric

Public Address, Music Reproducer, and Radio Distribution Systems

Wherever large groups of people gather, indoors or out, there is a need for Public Address Equipment. Speech or music may be reinforced and, with excellent quality, reproduced so that everyone will hear perfectly.

Public Address Equipment is used for entertainment and education, at public meetings, for re-broadcasting radio programs, amplifying record music for dancing, or music appreciation study, making announcements, amplifying speakers' voices, advertising purposes, descriptions of races, baseball and football games, paging, and a dozen and one other sound transmission purposes.

Bell Telephone Laboratories, recognized leaders in the development of sound transmission, are responsible for the design of all Western Electric Public Address Equipment. To sound design, Western Electric adds all the advantages to be derived from their well-known high standards of manufacturing. This material is made available to users everywhere in U. S. A. through Graybar's 73 conveniently located offices. More than 1300 installations of Western Electric Public Address Equipment have given us an experience in this field of great value to prospective users.

Hotels, Restaurants, and Clubs

The New Waldorf-Astoria illustrates the many uses for Western Electric Public Address Equipment and this installation is an indication that our equipment is accepted by the leaders.

Paging, voice amplification, transmitting programs of dance music (either records or hotel orchestra) wherever desired, re-broadcasting selected radio programs—any or all these things can be done through using our equipment.

Quality of reproduction is assured if Western Electric Equipment is used.

Schools and Colleges

Western Electric Equipment was selected for such modern schools as the Brooklyn Technical High School (Brooklyn, N. Y.) and the University of Texas.

Educators have found Public Address Equipment useful for many classroom, auditorium, gymnasium, and athletic field activities.

Our booklet "Greater Educational Facilities" will prove interesting to anyone in the field of education.

Churches and Auditoriums

For clear, undistorted voice amplification choose Western Electric Equipment—this has been the decision of many churches and auditorium managers.

To mention two leaders—the Atlantic City Auditorium (Atlantic City, N. J.) and St. Justian's Church (Hartford, Conn.).

Outdoor Installations

For outdoor installation of all types—amusement parks, football fields, baseball parks, race tracks, and others, Western Electric Equipment has proven thoroughly satisfactory.

A few of the largest installations are Playland Park (Rye, N. Y.), Rose Bowl (Pasadena, Cal.), Athletics Ball Park (Philadelphia, Pa.), and several well-known tracks and other types of outdoor installations.

Special Wire and Cords

Special wire and cords for Public Address and Speech Input Wiring can be furnished by Graybar. These wires and cords have been specially designed and manufactured for this type of installation work and full information and prices are available to any one from Graybar's 73 distributing houses or direct from executive headquarters at 420 Lexington Avenue, New York City.

No. 6116-A Loud Speaker

RADIO

The Graybar Electric Company offers its dealers a line of radio sets manufactured by the Colonial Radio Corporation of Buffalo, N. Y.

COLONIAL RADIO.—Always abreast of the time in circuit, style and construction and meeting the most exacting of performance requirements, embodies dealer and buyer advantages which make it one of the most outstanding lines on the market.

Every set produced at the huge plant in Buffalo, N. Y., must measure up to these Graybar-Colonial standards before it is offered to the trade. From the standpoint of engineering, it must be equal to or better than any other set in its class. From the standpoint of value, it must have the construction features and the style and deliver performance equal to or better than any other set at the price. From the standpoint of merchandising, it must have the popular

appeal which makes it a live, moving number in the dealer's store.

This is why an ever increasing number of retailers regard Colonial Radio as one of their dependable, year-in and year-out sources of profit. It is made right, priced right and promoted right for successful radio retailing. It is endorsed by Graybar as being in every way worthy of the dealer's and the buyer's confidence.

All of the new and proved radio developments are present in the current line. Literature describing the new models and the complete advertising and merchandising

service available to the trade may be obtained from any of the branches of the Graybar Electric Company.

JUDGE IT BY THESE "10 Features"

Get the facts. Compare Colonial Radio point by point with these 10 features as your guide:

1. ENGINEERING
2. CONSTRUCTION
3. PARTS
4. POWER
5. SELECTIVITY
6. TONE
7. OPERATION
8. DEPENDABILITY
9. SERVICE
10. GUARANTEE

Prices

The prices given on appliance and radio items listed on pages 676 to 706 inclusive are, in general, eastern prices. Prices on the Pacific Coast are slightly higher. This does not apply to Radiotrons. These prices are subject to change without notice and are not to be considered as quotations.

Graybar Clothes Washers

With and Without Pump

Four-bladed aluminum Agitators. Smooth finished with rounded corners. Top bearings of agitator shafts above water line.

Tanks are one piece armco iron vitreous porcelain enameled. Ventilated covers.

Pumps of two-bladed centrifugal type, gear driven. Cleaned by removing face plate, lubricated by a grease cup.

Motors are furnished for any frequency or voltage. Insulated from frame. Operate both agitator and wringer or spinner basket at the same time. Waste packed bearings.

Mechanism fully enclosed. Operates in a special lubricant. The floor space is 25x25 inches.

Cord, 10 ft. rubber covered with rubber attachment plug.

Two-Speed Washers

No. 18 Without Pump, No. 18P With Pump

Capacity, 8 lbs. Dry Clothes, 12 gals. water

TWO-SPEED AGITATOR.—At Fast Speed the agitator oscillates approx. half a revolution at a speed of approx. 60 cycles per minute. At Slow Speed it oscillates a third of a revolution. Action controlled by positive clutches operated by single selective control lever.

CHASSIS.—Shallow cylindrical steel shell with superstructure of steel, mounted on three braced pressed steel legs. Cadmium-plated casters.

TANK.—Supported and clamped between rubber mountings in chassis. Green outside, white inside. Rubber rimmed. Cover polished sheet aluminum. Tank 14½ in. deep, 22 in. diam.

MECHANISM.—Belt drive for the first reduction and worm gearing for second reduction. An oil pump within gear mechanism lubricates moving parts.

PUMP.—Operated by a lever on outside of machine. Tank is

also self draining, no shut-off valve. Nickel plated removable strainer.

MOTOR.—Approximate rating 300 watts, ¼ h.p. Movable for adjustment of belt tension.

Shipping weight, No. 18, 245 lbs., No. 18P, 250 lbs.

Two-Capacity Washers

No. 19 Without Pump, No. 19P With Pump

Capacity, Full Load, 8 lbs. Dry Clothes, 12 gals. Water
Small Load, Between 2½ or 3 lbs. 6-7 Gallons of Water

Two finishes—speckled green, black and white.

TWO-CAPACITY AGITATOR.—Reversible. Agitator disc at bottom of tank, upright for Full Load and Reversed for Small Load. Oscillates approx. half a revolution at speed of approx. 57 cycles per min. Action controlled by positive clutch operated by lever.

CHASSIS.—Pressed steel base mounted on four braced pressed steel legs. Cadmium-plated casters.

TANK.—Vertically corrugated. Cover, terneplate lacquered on outside surface. Tank is 13 in. deep, 22 in. diameter.

MECHANISM.—Single worm gear reduction. Moving parts lubricated by splash system.

PUMP.—Operates when motor is running. Cast brass shut-off valve controls draining.

MOTOR.—Approximate rating 300 watts, ¼ h.p. Shipping weight for No. 19, 182 lbs., No. 19P, 188 lbs.

Simplified Washers

No. 15 Without Pump, No. 25 With Pump

Capacity, 6 lbs. Dry Clothes, 10 gals. Water

Centrifugal types, spinner basket in place of wringer. Special feature, basket, mounted on a separate shaft in same tank with agitator, thus conserving floor space. Both operate simultaneously and are controlled by one switch. The second batch of clothes washes while the first batch dries, a convenience and time saver.

AGITATOR.—Is mounted on a splined agitator shaft within the center column and so designed that it cannot fit over the spinner shaft. Agitator oscillates between 140° and 150° at a speed of approx. 72 cycles per min.

SPINNER BASKET.—One piece drawn sheet aluminum with separate breast ring double-locked seamed. Embossed base and perforated side. Exceptionally smooth inside and outside. Speed approximately 430 r.p.m.

FRAME.—Consists of three pressed steel legs joined together by a steel brace. There is a reinforcing brace for extra strength. Casters, rubber tired, self lubricating. Caster cups available if desired.

TANK.—Bolted to legs. Rubber rimmed. Cover, polished aluminum. Tank is 16 in. deep and 22 in. diameter.

MECHANISM.—A belt drive for the first reduction and a spur gear train for the second reduction. Moving part lubricated by splash system.

PUMP.—Operates whenever motor is running. Cast brass shut-off valve controls draining. Nickel plated brass strainer, easily removable.

MOTOR.—Vertical ½ h.p. approximate rating, 230 watts. Easy adjustment of belt tension is provided. Rubber bumpers clipped to leg brace absorb motor vibration.

Shipping weight, No. 15, 125 lbs., No. 25, 143 lbs.

Wringers

Nos. 18, 18P, 19, 19P

Pressed steel cadmium plated wire brushed.

Reversible swinging types with soft rubber balloon rolls, 2¼ in. diameter, 12 in. long, clothes guides and tilting drain flume. Top section is separable.

Wringers swing and lock into any one of several operating positions. Simplified tension release, no gears, no oiling.

Wringers can be operated while agitators are running.

All the green finish models are equipped with wringer as illustrated, which has the release tension lever on top of wringer.

No. 19 black and white washers can be equipped with wringer having the new bar tension release located on both sides of wringer.

Prices upon Application

Apex Electric Ironers

Ironer has both ends unobstructed. Full open left end permits slipping of circular garments over roll.

With rubber-mounted, noiseless, horizontal motor fully insulated and enclosed in gear case. Knee control is rubber padded. Hand control is located on top of gear case. Intensified heat at full open end where major portion of ironing is done. Convenient control switches for motor and heating shoe. Has duo switch with bakelite housing and face plate.

Pilot light with Beetleware shield indicates current supply to heating element. With pressing lever to convert revolving roll to stationary pressing position for pleating or pressing. Shoe release lever permits open movement of shoe for cleaning or waxing; also an emergency release. Plated clothes rack swings to right of operator. Has rubber casters; two lock casters prevent movement while ironer is in use.

Model LF-3 Folding Ironer

When ironer is closed it occupies no more space than a kitchen chair. Easy to fold or unfold.

Dimensions when open: Width, 36 inches; depth, 20 inches; height, 36 inches. Dimensions when closed: Width, 20 inches; depth, 20 inches; height, 47 inches.

Shipping weight, 176 pounds.

Model LF-3..... each \$89.50

Model LL-3—Stand Type Ironer

Has 4 steel legs which support frame and are anchored with cross frame brace. At left or full open end a folding tray of 161 square inches of area is provided to rest large pieces while ironing.

Width, 36 inches; depth, 16 inches; height, 36 inches.

Shipping weight, 150 pounds.

Model LL-3..... each \$79.50

Shoe is of polished chrome-plated steel. The 1200-watt capacity heating element is compressed between two plates of mica insulation and is secured to back of shoe by heavy steel binder plate over strip of asbestos.

A strong, well ribbed steel stamping with a formed skirt provides the main frame.

Roll construction: 20 gauge rolled steel 5 inches i.d.; 6 inches o.d.; reinforced at left or free end with recessed steel stamping to receive roll drive and a steel stamped ring at right to accommodate roll bearing—provides non-sagging base on which is wound a knitted cotton padding protected with removable muslin cover. Roll swings up and into shoe when in ironing position, affording an overall pressure in excess of 150 pounds. Clearance between roll and receiving pan, 4½ inches. Roll revolves at the speed of 11 feet per minute.

Model LC-3 Deluxe Console Ironer

Combines all the advantages of beauty and utility. Porcelain table top finished in white vitreous enamel, edged with ivory to harmonize with white sides of cover and ivory legs.

Cabinet is scientifically balanced—a touch swings it over and down to an out of the way position at the rear, exposing the ironer for instant operation.

Length, 36 inches; width, 19½ inches. Height: To top of shoe, 35½ inches; to top of cabinet closed, 36 inches. Width folded, 28 inches; height folded, 35½ inches. Space required when closed, 36x19½ inches.

Shipping weight, 188 pounds.

Model LC-3..... each \$99.50

Model LL-4 Stand Type Ironer

This ironer has 4 steel legs which support the frame and are anchored by cross frame brace.

Similar to Model LL-3 ironer but without folding tray.

Width, 35 inches; depth, 16 inches; height, 36 inches.

Shipping weight, 140 pounds.

Model LL-4..... each \$59.50

Graybar Sewing Machines

Standard Heads for Models 1731, 1728 and 1409
With Knee Control

No. 2, Rotary Automatic Tension

No. 9, Shuttle Automatic Tension

Vindex C, Shuttle Side Tension, Disc Type

The three styles of standard heads, illustrated above, are full size lock-stitch types with chromium-plated bright parts, long slender lines giving streamline contour.

Equipped with built-in motor and built-in sewing light under arm, eliminating glare and shadows; small solid disc hand wheel, stitch regulator and bobbin winder.

Cabinet Designs

Model 1731

Model 1728

Model 1409

Size, closed, 17 $\frac{3}{4}$ x23 inches. Height, 30 inches.

Walnut and gum richly finished. An attractive overlay of beautiful burl walnut is on front of door. Turned legs, gum finished to match cabinet. A cross stretcher makes them decidedly rigid and strong.

Equipped with any one of the three standard heads illustrated above.

Shipping weight, 87 pounds.

Size, closed, 17 $\frac{3}{4}$ x21 inches. Height, 30 inches.

Walnut and gum richly finished. Lid top and door front of matched burl walnut. The legs, constructed of gum finished to match cabinet, are strong and rigid. Striped walnut overlays ornament panels at top of legs.

Equipped with any one of the three standard heads illustrated above.

Shipping weight, 80 pounds.

Size, closed, 16 $\frac{1}{2}$ x20 inches. Height, 30 inches.

Walnut and gum richly finished. Door is relieved by overlays of walnut with a pendant near the top. Figured pilasters and beaded molding add further decoration. Turned legs, gum finished to match cabinet. Pocket for attachments in cabinet.

Equipped with any one of the three standard heads illustrated above.

Shipping weight, 87 pounds.

Model 7000

Moderne in design, made of selected woods particularly adaptable for this style. The body is of genuine oriental wood similar in texture to our American walnut but with a finely figured mottle like burl.

Base and central feather on door, the edges of tops and overlays and the pilaster mountings are ebonized walnut.

The relief feather, frieze and pilasters on door are birdseye maple finished in rich tan pastel. The inlay trim is polished chromium.

When open, there is ample knee room. A deep pocket and shelf provide space for attachments and accessories.

This model comes only with the No. 2 Rotary Head and is equipped with knee control.

Size, closed, 16 $\frac{1}{2}$ x20 inches. Height, 29 $\frac{1}{2}$ inches.

Shipping weight, 108 pounds.

A Full Set of Attachments Comes with Every Machine
Prices on Application

**Graybar Sewing Machines
With Foot Control
Portables Nos. 1735 and 1120**

These models are designed with a view to convenience and compactness. When not in use they can be put away in the closet. Convenient to carry; set on any table; connect to any outlet. Constructed of genuine American walnut, and equipped with a convenient handle and locking device. There is a compartment in the base for attachments.

**No. 1735 Rotary
(Model B)**

No. 1735 is equipped with the full-size standard No. 2 rotary head; lock stitch, built-in motor, automatic tension, sewing light, chrome-plated bright parts.
Shipping weight, 65 pounds.

**No. 1120 Shuttle
(Expert BT)**

No. 1120 is equipped with 3/4 size No. 1 head; long shuttle type, lock stitch, motor recessed in arm of machine, sewing light, light weight, chrome-plated bright parts.
Shipping weight, 60 pounds.

Pavey Regal Models

Portables

Low-priced shuttle types, 3/4 size head, lock stitch. Motor built close to arm to allow use of small solid disc hand wheel, a feature of the higher priced machines. Spring tension on top of arm. Chromium-plated bright parts. Walnut veneer base with drawer for accessories.

No. 6002—Walnut cover with handle and locking device. Shipping weight, 60 pounds.

No. 1090C—Rubberized cover instead of wooden. Lighter in weight. Shipping weight, 45 pounds.

Cabinet No. 1408

Size, closed 16 1/4 x 20 inches.
Height, 30 inches.

Walnut and gum richly finished. Equipped with the same sewing head as the Pavey Regal Portable. Foot control.

Shipping weight, 82 pounds.

**A Full Set of Attachments Comes with Every Machine
Prices on Application**

Hamilton Beach Home Motors

This motor can be attached to any sewing machine, old or new. Set the pulley of the motor underneath the handwheel of the machine and slight pressure of the foot on the

speed control starts the motor.

Price, Motor with Speed Control, Cord and Plug . . . ea. \$12.50
Price, Fan Attachment each 3.00
Price, Grinder and Polisher Attachment each 1.50

Hamilton Beach Fit-All Sew E-Z Motors

This bracket is readily adjustable to any make or model sewing machine. Attaches in belt holes very ingeniously and is permanent.

Swings under head. Sews fast or slow or speeds between. Controlled by a slight pressure on the speed pedal. Operates on both A.C. or D.C., 105 to 115 volts, 25 to 60 cycles.

Furnished with speed pedal, cord and plug.

Hamilton Beach Fit-All Sew E-Z Motors each \$19.25

Hamilton Beach Tailor Type Sewing Motors

The tailor type motor fits and operates practically all types and models of light tailor machines.

SIZE OF MOTOR.—
Diam., 3 1/8 inches;
length, 5 1/2 inches,
length of shaft, 7 3/2 inches. Size of pulley, 1-6 inches.
Weight, 4 3/4 pounds.

Motor wound for 115 volts, a.c. or d.c., 25 to 60 cycles.
Watts, 41 to 70.

Shaft extension outside of motor is equipped with friction attachment for winding bobbins.

Furnished with speed control, cord and plug.

Tailor Type Motor each \$28.50

National Detachable Sewing Lamps

This lamp is so constructed that there is no glare to hinder the operator of the machine. There is a brilliant light on the needle and the work. Lamp fits all makes of treadle and electric sewing machines.

End of reflector is covered. A pull chain is provided.

Heavily nickel-plated finish.

With 6-foot cord and plug to fit any standard socket and wall outlet and Mazda lamp bulb.

Special voltage bulbs are extra.

Price, Complete with 110-Volt Bulb each \$3.95

Graybar Vacuum Cleaners

No. 40 Two Speed with Motor Driven Brush

The outstanding feature of this motor-driven brush cleaner is its two speed motor, which gives a Normal Speed and an Extra Speed. The Normal Speed gives a powerful suction that does a thorough cleaning job on any type rug. But if a still more powerful suction is wanted, a flip of a switch located underneath motor shell, will give a much greater speed.

This Extra Speed is particularly advantageous for quick cleaning or when an unusually difficult cleaning job is to be done.

The motor is rated at 300 watts, $\frac{1}{2}$ h.p., approximately 10,000 r.p.m. It is of unit construction and may easily be removed from the case. The motor is mounted on rubber supports which prevent excessive noise and vibration.

Overall dimensions, 14 inches wide by $13\frac{1}{2}$ inches long. Height at highest point, 8 inches. Weight 16 pounds.

No. 40.....each \$47.50

No. 46 Motor Driven Brush

With Exceptionally Strong Suction

Designed and manufactured to sell at an extremely low price that will be attractive to the consumer, yet it embodies the Graybar quality in construction and efficiency.

The motor is rated at 310 watts, $\frac{1}{2}$ h.p., approximately 10,500 r.p.m.

Overall dimensions, $13\frac{3}{4}$ inches wide and 12 inches long.

Height at highest point $7\frac{1}{4}$ inches.

Weight 13 pounds.

No. 46.....each \$27.50

Graybar Hand Cleaners

The hand cleaner takes the place of vacuum cleaner attachments.

It cleans just as effectively and much more convenient to use.

No. 44 Handy Cleanerette

Equipped with built-to-the-hand handle, modeled after hand set telephones; flat on the bottom and rounded on top; black moulded composition. Rubber bumper. The cleanerette has a rubber covered cord 15 feet long. Cord has moulded rubber attachment plug. Overall dimensions, $11\frac{1}{2}$ inches long without the bag, $19\frac{3}{4}$ inches long with the bag. Nozzle opening is $5\frac{1}{8}$ inches long and $\frac{5}{8}$ inches wide. Weight 4 pounds. Wattage 175.

No. 1 Accessory Equipment available for No. 44 cleaner consists of a combination blower and suction tool, a glass container, a rubber clamping device, an aluminum adapter with screen and a sample can of dichloride.

Separately priced at \$1.75. No. 44, without No. 1 Accessory Equipment... each \$16.00 No. 44, with No. 1 Accessory Equipment.....each 17.00

No. 50 Hand Cleaner

Hand cleaner is equipped with a black moulded composition handle and fabric covered cord 15 feet long. Cord has an attachment plug. Overall dimensions, $9\frac{3}{4}$ inches long without the bag, $16\frac{3}{4}$ inches long with the bag. Nozzle opening, $4\frac{7}{8}$ inches long and $\frac{5}{8}$ inches wide. Weight 3 pounds. Wattage 120.

No. 50.....each \$10.95

Specifications No. 44 and No. 50

FINISH.—Die cast aluminum nozzle and fan housing, drawn aluminum motor case.

BAG.—Dark blue, self-supporting with spring wire loop inside. Breach type connection to fan outlet. No. 44 has aluminum bag clip. No. 50 has aluminum bag clip, black enameled.

MOTOR.—Universal type, ball bearing needing no oiling. Seven-bladed suction, independent cooling fan which discharges air through slits in motor case.

BRUSH.—A small bristle brush permanently attached to the rear edge of nozzle.

CONTROL.—Tumbler switch located on top and at rear of motor housing, adjacent to handle.

Specifications No. 40 and No. 46

BALL-BEARING MOTOR.—Horizontal, universal type. Kept cool by means of an independent cooling fan. Bearings packed in grease and require no oiling. Large sized motor brushes. Especially designed suction fan with seven steel blades.

BODY AND NOZZLE.—Aluminum castings. Polished all over. Supported on three wheels. Rear wheel swivelled on end of motor housing. Nozzle edge protected by rubber bumper. No. 40 has moulded rubber wheels. Front wheels fitted with large cadmium plated hub caps and adjustable to regulate nozzle height. No. 46 has rear wheel adjustable to regulate nozzle height.

SIZE OF NOZZLE.—No. 40 is 13 inches long and $1\frac{1}{8}$ inches wide. No. 46 is 13 inches long and $1\frac{1}{8}$ inches wide.

HANDLE AND HANDLE BALE.—Steel, chromium plated. Cord hooks, heavy gauge aluminum. Trigger-type switch. Handle is spring balanced and detachable at top of handle bale. Insulated by fibre sleeve. No. 40 has an adjustable tilting catch and composition handle grip, corrugated on the underside. No. 46 has a black enameled wooden handle grip.

MOTOR DRIVEN BRUSH.—Metal spindle with chinese bristles set in tufts in spiral formation. Ball-bearings. Belt reduction from motor. Endless belt of flat rubber, extra belt comes with each machine. Brush held firmly in spring sockets. No. 40 has a special brush adjustment, provides for three adjustments.

Bag of dark blue. Hooks on handle. Breach type connection to fan outlet. No. 40 has a clip type emptying clamp, chromium plated steel. No. 46 has bag clip of aluminum, black enameled.

WIRING.—Motor cord detachable at base of handle. No. 40 has a rubber covered conductor cord fitted with rubber attachment plug. Cord is 20 feet long. No. 46 has a black fabric covered conductor cord with attachment plug. The cord is $18\frac{1}{2}$ feet long.

Graybar Quiet Type Fans

The Quiet-Type Fans move large volumes of air with exceptional quietness. This is made possible by the entirely new design of blades. These are so shaped and pitched that they handle the air extremely quietly, yet provide a volume of air and at a velocity found only in much larger Standard Fans. These fans will be popular for use in homes, hospitals, offices, etc. where quietness in operation is important. Blades are polished aluminum finished in clear lacquer to prevent tarnishing. Adjustable pedestals for tilting. 8 foot cord with plug.

Non-Oscillating A.C.

Small Model

Something drastically different in design for a desk fan. Interestingly modernistic with entirely new lines. Base, stem and rear housing are zinc die castings, finished in black enamel with a silver bronze stripe around edge of base. Guard and guard supports also black enamel. Guard is a departure from conventional design. Center portion of front has been omitted to show the pointed blade shell and blade construction. Blade shell is die-cast aluminum on which are riveted the three blades. A tumbler switch, providing single-speed operation, is located in front of base. Base is supported on four rubber feet to prevent marring. Silk cord, rubber plug. Net weight, 7½ lbs., shipping weight, 12 lbs.

No.	Each	Volts	Current	Speed	Watts
55X164G	\$13.95	110	60 Cycles A.C.	1425	40
55X166G	13.95	110	50 Cycles A.C.	1300	40

Oscillating A.C. and D.C.

Motor, oscillating features and base of the oscillating Quiet-Type Fans are similar to those used on Standard fans. The guards are conventional in design but very deep to accommodate the fan blades. Perforated base for wall mounting. A felt strip on base prevents marring. Entire finish black enamel with exception of blades.

Small Model, 3 Blades

Motor, oscillating feature and base of this fan are similar to those used on the Standard 10-inch Oscillating Fan. Three deep-pitch blades, single speed.

Net weight, 7½ lbs., shipping weight, 12 lbs.

No.	Each	Volts	Current	Speed	Watts
55X165G	\$14.95	110	60 Cycles A.C.	1490	37

49X478G	16.95	110	Direct Current	1490	23

Large Model, 4 Blades

This fan has four deep-pitch, 12-inch blades, and three speeds. Motor, oscillating feature and base are similar to those used on the Standard 16-inch Oscillating Fan.

This fan gives an air movement equivalent in cooling power to the 16-inch fan and yet has a quietness of operation equivalent to the conventional 12-inch.

Net weight, 17 lbs., shipping weight, 24 lbs.

No.	Each	Volts	Current	Speed			Watts
				1	2	3

Graybar Standard Fans

The Standard Fans are of drawn steel construction. Adjustable pedestals for tilting and a perforated base for wall mounting. Felt base prevents marring. Entire finish black enamel including the four blades. 8-foot cord.

Special finishes in colored spray enamel, chromium and electroplating may be had on special order. Samples of color shades should be sent with inquiries. Commercial color matching must be expected, exact tones and shadings not guaranteed. Net prices quoted upon receipt of specifications as to style, finish and number of fans desired.

8-Inch Oscillating and Non-Oscillating A.C.

This fan fills a long-felt need for a small yet powerful fan of high quality and low price. Sturdy single speed, induction type motor with switch mounted in back of motor case. Bearings provided with felt oil retainers, eliminating the need of frequent oiling. Steel blades.

Non-oscillating net weight, 4½ lbs., shipping weight, 7 lbs. Oscillating net weight, 5½ lbs., shipping weight, 8 lbs.

†42X461G	35.00	110	D.C.	960	800	600 65

*Series type. Other A.C. fans are induction type.
†Slow speed. Unusually quiet operation.

Special Types

Twelve-inch fans with enclosed motors can be furnished on special order. These fans are for use in factories and industrial plants or other locations in which damp and dusty conditions prevail.

Special types of fans for marine and railway uses, or for places where impregnated windings or enclosed motors are necessary for protection from atmospheric conditions, can also be furnished. Such fans are built on special requisitions only and are furnished in oscillating and non-oscillating models.

Prices will be submitted on specifications.

12-Inch Non-Oscillating A.C. and D.C.

These are the largest non-oscillating fans in the line. Aluminum blades.

The a.c. motors are induction type except the 110 volt, 25 cycle model. This and the d.c. models have series commutator type motors.

The three speeds are regulated by a 4-position switch in the base. Net weight, 12 lbs. to 14½ lbs., shipping weight, 27 lbs. to 28 lbs.

Graybar Ventilating Fans

6-Blade, 12-Inch and 16-Inch A.C. and D.C.

For removing fumes, odors and foul air. Mounted in walls or partitions to exhaust into free air. The 12 inch fan will displace about 1,000 cubic feet of air per minute; the 16-inch about 1,500 cubic feet per minute. The fans are supported in a ring frame complete and ready for mounting. Motors designed with light-weight drawn steel casings. Aluminum blades. Entire finish, motor, brackets, supporting ring and blades, black enamel.

Where it is necessary to install ventilating fans for vertical operation special bearings can be furnished at \$3.00 net extra (specify whether updraft or downdraft is wanted). Fans with these special bearings are not carried in stock.

Speed controllers with 4-position regulating switches providing three running speeds can be furnished when specified. Controllers are not necessary unless speed control is required.

Net weight, 11 lbs. to 15 lbs., shipping weight, 24 lbs. to 35 lbs.

Both 12-inch and 16-inch Ventilating Fans also available in other voltages and frequencies. Prices do not include cord or attachment plug.

Graybar Ceiling Fans

32-Inch Ceiling Fans

52-Inch Ceiling Fans

The 32-inch ceiling fans are symmetrical in shape and, because of their compactness and neat design, are especially adapted to installations not requiring the maximum of air circulation.

The a.c. fans have four metallic blades in unit assembly, finished in aluminum. The d.c. fans have hardwood blades finished in natural oak. All other parts are enameled in black.

D. C. fans are not equipped with switch and are single speed only. A pull cord two-speed is standard with a.c. fans.

Net weight, 24 lbs. to 27 lbs., shipping weight, 42 lbs. to 50 lbs.

146211G	44.00	220	D.C.	400 ...	75

The 52-inch ceiling fans are ideal for heavy duty installations. They are quiet, efficient and durable. The a.c. fan with drawn steel motor frame affords a 20 per cent reduction in weight.

Metal parts, black enamel with hardwood blades finished in a dull, natural oak.

Unless otherwise ordered, blades are arranged for a downward discharge of air. Fans for upward discharge of air may be had on special order.

Both a.c. and d.c. have a three speed switch with pull cord. Net weight, 41 lbs. to 45 lbs., shipping weight, 68 lbs. to 74 lbs.

Prices shown are for standard fans in regular finish and include insulated hanger, canopy and two hooks, but do not include hanger pipe. Black enameled iron hanger pipe, threaded both ends, will be furnished when specified at a slight additional cost. Special finishes made to order. Specify desired finish of wooden blades, otherwise blades

will be finished to harmonize with metal parts, that is, the brass, nickel or light finishes. Blades of natural wood filled and varnished supplied with motors of darker finishes.

Quotations will be furnished on receipt of specifications stating number of fans required.

Lighting Combinations With Ceiling Fans

32-Inch and 52-Inch, A.C. Only

Graybar Ceiling Fans may be used in combination with popular commercial lighting fixtures. This makes possible an economical and simplified installation for fans and lights.

There is no additional charge for Ceiling Fans furnished with 4 or 6-inch shadeholders. Ceiling Fans furnished with extra switch for separate on and off control of light, add \$1.00 to list price.

Ceiling Fans furnished less speed coil, deduct \$1.00 from price. Ceiling Fans furnished less switch, deduct \$1.00 from price.

Graybar-Crawford Electric Ranges

The features and design and construction of Graybar-Crawford Electric Ranges are not a matter of chance. They are the result of many years of close contact with the range buying public and dealers, and the interpretation of this contact by competent engineers and designers into terms of what the housewife wants in the way of a cooking device.

Wiring—Switches

The standard wiring of all Graybar-Crawford Ranges is for use with 3 wire, 110-220 volt service and all switches are load balancing type.

Colors

All Graybar-Crawford Ranges, except the four small apartment house models, are regularly furnished in a choice of gray and white, 2-tone ivory and pastel green and ivory full porcelain enamel.

Cast Iron Construction

The parts which get the greatest wear and abuse—the legs, cooking top, unit rings, oven and oven door frames, front frame and all brackets, as well as many concealed parts are made of cast iron. This adds rigidity to the range and prevents weaving and warping which causes most enamel chippage. The door hinge construction is exceptionally sturdy. The pins are integral parts of the cast iron front frame and fit into bearings which are a part of the door frame casting. The door stop is heavy steel. Door balance is maintained by a heavy coil spring, the tension of which can be adjusted to suit the operator.

Triple-Automatic Time Control

Triple-automatic time control triples the convenience of cooking with electricity. This unique feature makes it possible to automatically time control surface cooking, appliances plugged into the appliance outlet, or oven cookery.

Models 292, 290, 280 and 78 have the triple timer mechanism built in as a single unit, mounted under heat-resisting glass on shelf back and controlled by a Telechron movement electric clock. To the left of the clock dial is a selector switch that controls the unit which it is desired to time—the oven, top unit or appliance outlet—and in the case of the Epicure, the Speedwell cooker, which on this range can be time controlled by turning the selector switch to the "top unit" position. All other setting operations are done with two knobs at the right of the clock dial. Telechron timers are a.c. only, 60 cycles unless otherwise specified.

Other triple-automatic ranges are controlled by a timer clock—either hand wound No. 36 or electric wound No. 56, whichever is desired—which is plugged into a triple timer receptacle mounted in the step-back shelf. The unit which is to be controlled is selected by plugging the clock into the proper position in the receptacle.

Temperature Control

A mercury switch type thermostat which works on a.c. or d.c. any cycle, and is non-radio interfering. Controls oven temperature assuring accurate cooking results without worry and maximum economy of oven operation through maintaining the temperature.

There are no delicate parts to give trouble and control is easy to calibrate.

Timer Clock

Controls cooking operations in oven, on one surface unit or appliance outlet turning heat on and off at any desired time. Rigid contacts mounted on back eliminate cord and plug.

No. 36 with 24-hour movement, hand wound. No. 56 is electric motor wound, spring drive; for a.c., 60 cycles.

Oven Indicator Light

A positive action indicator which tells when oven has reached the temperature at which thermostat has been set and is ready for use.

Monel Wiring and Unit Terminals

All top unit lead wires are monel, assuring long life. No re-wiring of ranges is ever necessary because of wire fatigue. Unit terminal studs are monel, to prevent freezing of terminal connections. The use of nickel alloy metals for the three parts—leads, coils and studs—which are brought together at the unit terminals, eliminates loose connections and therefore burnouts at this point.

Model Code

- R—Right-hand oven.
- L—Left-hand oven.
- S—High shelf.
- P—All enamel.
- A—Time and temperature control.
- X—Unit for warming compartment.
- T—Temperature Control

Instructions for Ordering

State model number of range and add code letters, as shown, to indicate particulars and the equipment to be shipped with the range.

Specify colors desired—otherwise gray and white will be shipped.

Condiment sets, if desired, must be ordered separately unless listed as standard equipment.

Ranges desired with cookers should be so specified, i.e.—16-77 with cooker.

When ordering controls, specify whether a.c. or d.c. and cycles. Unless otherwise specified, heating units and controls will be furnished for connection to standard 3-wire 110-220 volt service, (115 volt units) a.c. 60 cycles. Special arrangements of units or voltages other than standard are furnished at an extra charge.

Specify whether shipment is to be by rail, water, express or parcel post; give routing and lines to be used.

No. EC-15 Everhot Electric Cookers

This cooker will satisfy the demand for a large capacity electric cooker.

A 7-pound roast and three vegetables may be prepared at the same time in this cooker.

Has chromium-plated body. The element is guaranteed against burnout.

Equipment: No. 271 three-quart covered utensil; No. 264 half round set, each utensil 1 1/4 pints; No. EC-26 baking rack with 2 pie tins; No. EC-395 special roasting rack; No. EC-35 utensil lifter; No. HC-15 heater cord; No. 301 cook book.

Overall dimensions: height, 15 inches; diameter, 12 inches. Compartment: diameter, 8 7/8 inches; depth, 10 inches. Liquid capacity, 10 quarts.

Wattage: 660 on high; 140 on low.

Shipping weight, 21 pounds.

No. EC-15.....each \$15.00

Everhot Broiler-Fryer Attachments

The Everhot Electric Cooker may be equipped with a broiler-fryer attachment, a reversible cover which has a built-in heating element that makes it possible to broil or fry steak or chops in the cooker; fry eggs and bacon, percolate coffee, etc.

No. 525, for No. EC-10 Cooker, Shipping Weight 3 Pounds.....each \$3.50

No. 530, for No. EC-15 Cooker, Shipping Weight 4 Pounds.....each 3.75

Special Model Everhot Hot Plates

A single heat hot plate; consumes 600 watts. Has heater cord attached. Nickel-plated body, black enameled legs. Special Model, Shipping Weight 3 Pounds.....each \$2.00

No. EC-10 Everhot Electric Cookers

A 4-pound roast, 8 whole potatoes, 1 quart of vegetables and 1 quart of extra vegetables may be cooked at one time in this cooker. Bakes pies and biscuits, browns like an oven. Popular for carrying hot or cold food on picnics and motor trips.

Waterless principle used. Has insulated body. Continuous cooking with current disconnected.

Body is chromium-plated and trimmed in dull ebony enamel. Has heavy seamless aluminum cooking compartment of 5-quart capacity. With strong bail and wooden handle.

Equipment: No. 161 two-quart covered utensil; No. 249 half rounds, each 1 1/2 pints; No. EC-27 rack and 2 pan set; No. EC-34 trivet; No. EC-35 utensil lifter; No. IIC-11 heater cord; No. 303 cook book.

Overall size: height, 13 3/8 inches; diameter, 10 inches.

Wattage: high, 450; low, 100.

Shipping weight, 17 pounds.

No. EC-10.....each \$10.00

Everhot Electric Casseroles

No. 7

Capacity, 2 3/4 quarts.

With No. EC-77 Pyrex baking glass cover, No. HC-14 six-foot heater cord, 3 point connector, rubber plug, and No. 326 instruction folder.

Overall size: height, 8 inches; width, 11 1/2 inches. Inside diameter, 7 1/4 inches; inside height, 4 1/4 inches. Diameter glass cover, 8 inches.

Wattage at 115 volts: high, 360; low, 120.

Standard package, 6; shipping weight, 63 pounds.

No. 7.....each \$5.50

No. 8

Equipped same as No. 7 and with pair of seamless aluminum half round utensils No. 249-B, with capacity of 1 1/2 pints each.

Shipping weight, 11 pounds.

No. 8.....each \$6.50

No. 9

Equipped same as No. 7 and with No. 525 electric broiler and fryer and broiling rack. Top element provides for broiling in casserole or may be used separately as a hot plate.

Upright it may be used for any open burner purpose (frying, broiling, percolating); reversed (element side down) it is an efficient broiler for steaks, chops, etc. Broiler, 660 Watts.

Shipping weight, 13 pounds.

No. 525 Broiler and Fryer

No. 9.....each \$8.50

No. 625 Everhot Casserole-Hot Plate Combinations

The surface burner, combined with the casserole, makes a fairly complete outfit for the light housekeeper, the summer cottage and the kitchenette apartment. Dozens of different foods may be cooked in the insulated casserole compartment. Can be used for many kinds of baking and roasting.

The casserole has a capacity of 2¾ quarts, enough for a family of 8 persons. The seamless aluminum compartment is equipped with removable aluminum utensil insert and Pyrex glass cover. Controlled by a 3-heat range switch.

Body is vitreous enameled, light green speckled color; black trim; has ball feet.

Two range type switches; separate control of hot plate and cassorole or work simultancously.

Equipped with No. 265 aluminum insert and No. EC-77 glass cover.

Hot plate is 6⅝ inches in diaméter; has 3 heats—700 high; 350 medium; 175 low.

Casserole wattage: 500 high; 250 medium; 125 low.

Shipping weight, 23 pounds.

No. 625.....each \$13.85

Everhot Kitchen Compakts

No. 630

Note the drawer. This is the broiling and baking section; contains a removable aluminum pan and a broiling rack.

Toasting is done on the square heating element above the drawer—4 slices—and also on the broiling rack, totaling 8 slices at one time when desired. Frying, coffee-making, etc., may also be done on the square burner. Has hinged cover.

Left-hand element is used for boiling, frying, etc.

Has two 3-heat switches.

Body is porcelain enameled in a delicate shade of green. Oven lining is rust-resisting steel.

Equipped with No. 11 square oven roaster and HP-314 rack.

Length 20⅞ inches; width, 11½ inches; height to top of deck, 6¼ inches; height to top of splash back, 9¼ inches.

Wattage: Left-hand burner, 550 high; 275 medium; 135 low; right-hand burner, 1100 high; 550 medium; 275 low. Total watts, 1650.

No. 630, Shipping Weight, 30 Pounds.....each \$19.95

No. 632

Same as No. 630 without the left-hand burner as illustrated above.

Dimen. 11½x12½x7 in. high. Wattage 1100 high, 350 low.

No. 632, Shipping Weight, 18½ Pounds.....each \$12.50

Everhot Kitchen Compakts

No. 631

The casserole prepares escalloped dishes, cooks vegetables, bakes biscuits, etc. Has pyrex glass cover; capacity, 2¾ quarts.

The drawer section broils, bakes, toasts and fries. Each section controlled by a 3-heat range switch.

Body is porcelain enameled in a delicate shade of green.

Equipped with casserole, No. 265 aluminum inset; broiler-fryer, No.11 square oven roaster. HP314 rack.

Length, 22 inches; width, 11½ inches; height to top of deck, 6¼ inches; height to top of splash back, 9¼ inches.

Wattage: Casserole, 500 high, 250 medium, 125 low; broiler-fryer section, 1100 high, 550 medium, 275 low. Total 1600 watts.

Shipping weight, 32½ pounds.

No. 631.....each \$23.50

No. 627

Consists of one 2¾-quart and one 4-quart casserole. Each has removable aluminum insets and pyrex glass covers; fully insulated. Each cassorole controlled by 3-heat range switch. The larger inset has a removable partition and false bottom so that two foods may be cooked at one time.

Body is porcelain enameled in a delicate shade of green.

Equipped with No. 265 and No. 274 insets.

Length 22¾ inches; width, 11 inches; height, 5¾ inches.

Wattage: Small casserole, 500 high, 250 medium, 125 low; larger casserole, 600 high, 300 medium, 150 low.

Shipping weight, 26 pounds.

No. 627.....each \$21.00

High Speed Hot Plates

No. 624

Has one 6⅝-inch and one 8-inch surface burner; Each burner controlled by 3-heat double pole range switch.

Body is porcelain enameled in a delicate shade of green.

Length, 18 inches; width, 10 inches; height, 5¾ inches.

Wattage: Small burner, 660 high, 330 medium, 165 low; large burner, 990 high, 495 medium, 248 low. Total, 1650 watts.

Shipping weight, 20 pounds.

No. 624.....each \$12.50

No. 623

Has 6⅝-inch burners. Dimensions, finish and shipping weight same as No. 624. Two switch control.

Wattage: Each burner, 660 high, 330 medium, 165 low. Total, 1320 watts.

No. 623.....each \$10.00

Proctor Hotplates

Proctor Automatic Heat-Adjusting Speed Irons

No. 930

This iron has a temperature control dial on which is marked the names of different fabrics, so that the placing of pointer on any name gives the correct temperature for that fabric.

Switch-off gives convenience of turning off current without removing plug from wall.

The attached cord removes all plug and terminal pin trouble.

Has a strong well-balanced heel rest and a cork insulated handle, air-cooled.

No. 930 has a magic stand. By pressing the thumb lever the stand swings under the iron. It may be placed anywhere, adds no weight and is never in the way.

No. 940

Over all dimensions: Length, 8¼ inches; width, 4½ inches; height, 5 inches.

- No. 930, 1000-Watt, with Cord Support each \$8.95
- No. 940, 1000-Watt each 7.95
- No. 941, 800-Watt each 5.95

American Beauty Irons

For domestic, laundry and industrial use.

Bottom, 6½x3¾ inches. Finished in chromium plate.

In standard voltage ranges: 100-109, 110-120, 121-130, 190-209, 220-240 and 241-260.

Nos. 44-AB and 66-AB—Adjustable-Automatic For A.C. Only

Through increase of wattage and extra supply of heat units, same results can be obtained with No. 44-AB iron as with heavier irons. If work is properly dampened, extra heat supplied permits of less pressure on work. As ther-

mostatic switch controls overheating, it is possible to use higher wattage and gain these advantages. Through the control lever thermostat can be adjusted for low heats for lighter work and for delicate fabrics.

No. 66-AB in 1000-watt size has great heat capacity for heaviest work; lower heats are under perfect control.

Has separate stand, No. 880 cord set and No. 808 plug.

Packed 6 in a case; shipping weight, No. 44-AB, 43 pounds; No. 66-AB, 53 pounds.

- No. 44-AB, 1000 Watts, Weight 4½ Pounds each \$8.95
- No. 66-AB, 660 or 1000 Watts, Weight 6½ Pounds..... each 8.95

Nos. 45-AB and 65-AB—Adjustable-Automatic For A.C. Only

With "on" and "off" switch which is operated by control lever. By turning control lever past "low" position to "off," current is turned off; reverse operation turns on current. Has attached heel stand, readily removable. Conductor cord is permanently attached to iron; connections enclosed in metal housing. With 6½-foot cord and attachment plug cap. In other respects same as No. 66-AB.

Packed 6 in a case; shipping weight, No. 45-AB, 37 pounds; No. 65 AB, 46½ pounds.

- No. 45-AB, 1000 Watts, Weight 4½ Pounds..... each \$8.95
- No. 65-AB, 1000 Watts, Weight 6½ Pounds..... each 8.95

No. 6½-B and No. 3-B—Non-Automatic —For A.C. or D.C.

This iron has a cut-away nose and a comfortable handle. With heat-insulating stand and No. 830 cord set having No. 802 detachable composition plug and attachment plug. Elements, contacts, contact sleeves, etc., of nickel-chromium and nickel-copper alloys.

In standard voltage ranges: 100-109, 110-120, 121-130, 190-209, 219-240, and 241-260.

Packed 6 in a case; shipping weight, 52½ pounds.

- No. 6½-B, 525 Watts, Weight 6½ Pounds..... each \$7.50
- No. 3-B, 350 Watts, Weight 3 Pounds..... each 6.75

American Beauty Pressing Irons

Type AA—Adjustable-Automatic—For A.C. Only

These irons are used for all kinds of commercial and industrial work.

Temperature and heat are controlled. The use of rayon and other fabrics makes imperative the use of low temperatures. At the same time where heat requirements are heavy the automatic thermostatic control permits the use of higher temperature in heating elements and a greater supply of heat.

Relative Bottom Shapes

Equipped with No. 880 cord set, 6½-foot cord and No. 808 metal-sheathed plug.

Finished in chromium plate. Furnished with separate stands.

Type DC—Adjustable-Automatic—For D.C. Only

The d. c. iron has the same general performance-characteristics as the Type AA iron.

With separate automatic relay switch which turns on and off the main current supply; switch action controlled by thermostatic switch within iron. Connecting cord (3-conductor) is connected to 3 terminals on iron (protected by metal housing) and has 3-point terminal attachment plug that is plugged into receptacle on relay switch base. Current may be turned "on" or "off" at the iron. Adjustable control lever when swung past "low" position turns off current; reverse action, "on." With 8-foot cord.

Relay switch should be fastened to wall or support in vertical position; will not operate properly lying down.

No. 100 Arvin Standard Fan-Forced Electric Heaters

This heater heats the air and circulates it. Has induction type fan. Air intake is through louvres in back.

This heater has a black enamel grille and handle.

The cabinet is of heavy gauge steel with attractive and permanent green morocco finish.

Operates on 110-125 volts, 60 cycles a.c. Uses 9½ amperes at 110 volts.

Size at base, 9½x5 inches. Height, 11 inches.

Packed 6 to a case.

Shipping weight, 7 pounds.

No. 100.....each \$5.95

No. 200 Arvin DeLuxe Fan-Forced Electric Heaters

This heater heats the air and circulates it. Has induction type fan. Air intake is through louvres in back.

With heavy gauge steel cabinet; green morocco finish. Completely enclosed bottom; convenient switch in front. With rubber feet.

Operates on 110 or 125 volts a.c. 60 cycles; also on 110 volts 25 cycles. Uses 9½ amperes at 110 volts.

Size at base, 10x5½ inches. Height, 13 inches.

Packed 6 to a case.

Shipping weight, 9 pounds.

No. 200.....each \$7.95

No. 1200 M-B Fan Type Auxiliary Heaters

110-125 Volts, 1000 Watts

A small quietly-operating electric fan located directly in back of the suspended heating element throws a clean steady flow of heat almost instantly to all parts of a room.

The circular heat outlets in front and back are guarded by wire grills and the brown wood handle at top makes the heater easily portable.

Metal case is finished in beige enamel; base and outline of case are dark brown.

Overall height, 14 inches.

Standard package, 3. Shipping weight, each, 6½ pounds. No. 1200.....each \$8.45

No. 1110 Proctor Electric Radiators and Dryers

Convactor Type

Serves as a quick dryer for small articles; equipped with telescoping rustproof racks.

Exposed surfaces kept at a maximum of 200° F. Made of heavy terne plate sheet metal; rust-resisting.

Separate circuit switches control two 660-watt elements; also with two 750-watt elements. For 110-120 volts a.c. or d.c.

Statuary bronze, pastel green or old ivory lacquer finish.

With 8-foot cord and plug.

Width, 9 inches; length, 21 inches; height, 23 inches.

No. 1110, Shipping Weight 24 Pounds.....each \$15.00

Hewitt Electric Heating Pads

The flexible woven elements used in this pad free it from all feeling of ridges and stiff wires.

Each of the two woven elements in the pad covers its entire area, giving an even heat distribution at all times.

Ready to use in 2 or 3 minutes after being turned on.

Non-radio-interfering precision thermostats and low temperature heating elements insure an increased factor of safety in use.

Size, 12x15 inches. Wattage, 60; voltage, 110-125.

Each pad is wrapped in cellophane.

No. 46—6 Heats—Wetproof

This pad has an outer cover of fine grade eiderdown—under this an inner covering made of a new permanently wetproofed fabric which permits the pad to be used for hot wet packs, etc., and also prevents damage through accidental wetting.

The label side always runs about 15° hotter than the reverse side, thus the user has the choice of 6 temperatures (two on each setting of the control switch).

Made in peach or lavender.

No. 46.....each \$6.50

No. 44S—3 Heats—Wetproof

A popular new model of a newly developed fabric with a soft and woolly outside and a permanently wetproofed inner surface.

The cover is snap fastened and is removable and washable.

Made in blue only.

No. 44S.....each \$4.45

No. 44—3 Heats

A full-sized eiderdown pad with interior construction, thermostats, etc., identical to that of the No. 44S pad, but without the wetproof feature.

Made in brown only.

No. 44.....each \$3.95

Hewitt Electric Heating Blankets

The warmth of this blanket is distributed evenly, leaving only a small unheated margin at sides and ends to permit tucking in.

Ten-foot cord has convenient on and off switch. Thermostats of low temperature setting are a positive protection against overheating, should blanket be folded up and covered over.

No. 173, 3 Heats, 120 Watts, 60x80 Inches.....each \$17.50

No. 183, DeLuxe Model, 3 Heats, 120 Watts, 66x80

Inches, All wool.....each 55.00

No. 190 Hewitt Electric Sweat Blankets

This multiple heat wool blanket has a heating capacity to induce copious perspiration. It is intended for use in hospitals, electro-therapy studios or in the home under the direction of a physician or skilled attendant.

Rheostat heat control from mild to very hot. A rubber sheet is provided to protect blankets from moisture.

Size, 66x80 inches. Wattage, 220; voltage, 100-125.

No. 190.....each \$85.00

No. 685 M-B Electric Heating Pads

110-125 Volts, 50 Watts

An outstanding feature of these pads is the sanitary washable velour cover. Simply slide back the zipper fastener, remove the unit, and wash the cover.

Furnished in three pastel shades: orchid, peach and apple green.

Full size, 12x15 inches.

A non-radio interfering unit.

With three heats (low, medium and high). Equipped with harmonizing 10-foot cord and pull plug.

Standard package, 3. Shipping weight, each, 2 pounds.

No. 685/2, Apple Green Cover.....each \$6.95

No. 685/4, Orchid Cover.....each 6.95

No. 685/5, Peach Cover.....each 6.95

No. 686 M-B Electric Heating Pads

110-125 Volts, 50 Watts

A permanently covered heating pad which meets the demand for a low-priced yet thoroughly dependable and guaranteed pad.

The eiderdown cover is light blue with a decorative white dot motif.

Full size, 12x15 inches.

With three heats (low, medium and high).

Equipped with 10-foot cord.

Standard package, 3. Shipping weight each, 2 pounds.

Type A Hamilton Beach Vibrators

For home use. Consists of 1 vibrator, with cord and attachment plug for connecting to electric light fixture, and 6 applicators, all packed in a fibre-board fitted carrying case. The motor has a speed regulating switch.

The following applicators are furnished: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and

No. 7 soft rubber with 12 prongs. Revised edition, "Health and How to Get It," furnished free.

Type A Complete.....each \$16.50

Type C Hamilton Beach Vibrators

Used by physicians, nurses and masseurs. Of heavier construction and has a more powerful motor than the vibrator for home use. For cases requiring energetic treatment. Packed in a black leatherette case, plush lined.

Following applicators are furnished with machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Type C Complete.....each \$19.25

Type D Hamilton Beach Vibrators

For family use and for the professional hair dresser and masseur who calls on patrons at their homes. Has no speed regulator. Instantly stopped or started by button in handle. Motor is universal and operates on either a.c. or d.c. Following applicators furnished with machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Type D Complete.....each \$13.50

Type F Hamilton Beach Vibrators

Provided with a speed controlling device. It gives both the rubbing and percussion strokes and is guaranteed against electrical and mechanical defects. Packed in fibre board fitted carrying case.

Following applicators furnished with this machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for the face; No. 3 velvet sponge for face; No. 6 soft rubber for the head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Type F Complete.....each \$13.50

Klenzairs

Circulates, purifies and refreshes 6000 cubic feet of air an hour. A gallon or so of water is used in the machine. Water is taken to four monel metal discs revolving at high speed. Spray dashes off edges of discs. Temperature of water is reduced, air is cooled and partially de-humidified in hot weather; in winter, humidification takes place.

Has rust-resisting steel body; chromium-plated hardware. Upper structure, vitreous porcelain enamel, grain walnut finish; lower structure, walnut tone lacquer finish.

Has 10-foot cord with standard plug; 60-cycle, a.c. or d.c., standard type, fractional h.p. motor; standard 2-speed "on" and "off" toggle switch.

No. 700, Floor Model

No. 725, Hay Fever Attachment

Fits No. 700 only. Consists of fabric tunnel with felt air filter and adjustable metal window shield.

No. 725.....each \$10.00

No. 700

No. B-182B Gilbert Standard Automatic Electric Humidifiers

Humidifies 7500 cubic feet of air.

An inverted revolving cone submerged in water draws water onto disc above it, which, also revolving and synchronizing with cone, throws water outward by centrifugal force against shutter-like vanes by which it is broken up into tiny particles that are propelled by disc and rising are absorbed by atmosphere.

With metal pedestal and copper container. Finished in green.

A.c. or d.c. 110-volt motor. Height, 37 1/2 inches. Weight, 25 1/2 pounds.

No. B-182B, Capacity, 1 Gallon...each \$32.50

No. B-185 Gilbert DeLuxe Automatic Electric Humidifiers

Humidifies 7500 cubic feet of air.

An inverted revolving cone submerged in water draws water onto disc above it, which, also revolving and synchronizing with cone, throws water outward by centrifugal force against shutter-like vanes by which it is broken up into tiny particles that are propelled by disc and rising are absorbed by atmosphere.

With metal pedestal, Fleuron Art Pottery container; humidity control automatically measures moisture content of room at all times and switches humidifier on and off. Light green finish.

A.c. or d.c. 110-volt motor. Height, 37 3/4 inches. Weight 35 1/4 pounds.

No. B-185, Capacity 1 Gallon....each \$49.50

Mixmasters

For mashing, juicing, beating, whipping, stirring and blending. Enclosed motor tilts back; bowls are easily removed. Bowls revolve on ball-bearing platform. Base and upright is one die-cast unit; handle turns down on side, out of the way of juicer attachment.

Ivory enamel and chrome finish; jade green bowls.
 Model D, with Beaters and 2 Bowls,.....each \$18.25
 Model K, with Beaters, Bowls, Juice Extractor and Strainer, Automatic Mayonnaise Oil-Dropper as Shown.....each \$21.00

Model B Hamilton Beach Food Mixers

For all mixing, beating, whipping and mashing. Has plenty of power for cakes, icings, salad dressings, etc.

Has self-revolving bowls with control that regulates speed at which bowls turn. Motor may be lifted from stand and used for mixing

over the stove in a double boiler or any pan. Motor tips back so beaters drain into bowl. Beaters are easily removed for cleaning. Has single agitator for mixing malted milk in a glass.

Furnished with two opaque glass ivory bowls; small bowl holds one quart, large bowl holds three quarts. With 6-foot rubber cord. Has three speeds. The Hamilton Beach motor operates on a.c. or d.c., 105-120 volts, 25 to 60 cycles; worm gear drive.

Height, 13 inches. Length of base, 12½ inches; width of base, 7 inches.

Ivory and black baked enamel finish; cast iron base has rubber feet; chromium-plated steel beaters.

Packed one in a carton. Shipping weight, 19 pounds.
 Model B.....each \$18.75

Attachments

Juice Extractor Attachment

Extracts juice from oranges, lemons and small grapefruit. Sanitary; no metal parts connected to bowls; may be washed. Has ball thrust bearings. With removable strainer, Beetleware reamer, ivory bowl of opaque glass, and removable spout to guide juice into glass.

Packed one in a carton. Shipping weight, 4 pounds.
 Each.....\$2.75

Potato Peeler Attachment

Removes peel by the abrasion method.
 Operation: Fill top container with water. Place 8 to 10 potatoes in peeling container. Run motor about 2 minutes or until water container is empty. Potatoes will then be peeled.

Height, 11¼ inches; diameter, 9⅞ inches. Made of galvanized steel, ivory enamel finish. Abrasion liner and revolving disc lift out for easy cleaning.

Packed one in a carton. Shipping weight, 12 pounds.
 Each.....\$8.00

Coffee Grinder Attachment

Sets on motor where extractor lifts off. No power unit is needed. Top glass jar holds one pound. Adjustable; grinds coarse for boiling, medium for percolating and very fine for vacuum or drip coffee makers.

Packed one in a carton. Shipping weight, 5¼ pounds.
 Each.....\$3.00

Slicer and Shredder Attachment

Cannot be used without power unit. Slicer cone with 6 knives revolves in housing and quickly slices potatoes, beets, turnips, cucumbers, apples and other fruits or vegetables. Slicer cone is easily replaced by shredder cone. Shreds practically all vegetables and fruits.

Packed one in a carton. Shipping weight, 2¾ pounds.
 Attachment without Power Unit.....each \$3.50

Meat Grinder and Chopper Attachment

For grinding meat, chopping vegetables, fruits and nuts and for crumbing bread or crackers. Cannot be used without power unit. Has inside cutter for grinding meat without crushing it; also has coarse plate and two cutters for chopping vegetables. Furnished with wooden stomper.

Packed one in a carton. Shipping weight, 4¼ pounds.
 Each.....\$3.00

Power Unit

For use with meat grinder and slicer-shredder attachment. Power unit is not connected to mixer, instead, motor is taken to power unit. Power unit stands on its own rigid base. Ball-bearing construction; drive attachments about 40 r.p.m.

Packed one in a carton. Shipping weight, 6½ pounds.
 Each.....\$4.50

Attachments

Food Chopper

Chops vegetables and fruit; grinds meat. With power transfer unit. Each.....\$6.25

Operates at same high speed as commercial mixers. No power unit required. With Mixing Glass...ea. \$2.25

Potato Peeler

Removes only surface skin. No power unit required. Each.....\$4.50

Freezer

No power unit required. Each.....\$3.50

Knife Sharpener

Puts smooth edge on knife and scissor blades. Uses same power unit as chopper. Without Power Unit...ea. \$2.25

Polisher-Buffer

For metal surfaces. No power unit required. With Sunbeam Polishing Compound....each \$.75

Slicer-Shredder

For vegetables and fruit. No power unit required. Each...\$5.00
 Grater Disc....each 1.00

Coffee Grinder

Grinds coffee coarse, medium or fine. Uses same power unit as chopper. Each.....\$2.50

Hamilton Beach Hair Dryers

115 Volts, A.C. or D.C.

Ideal for professional use in barber shops and beauty parlors, or for hard service in a large family.

Handy in a drafting room for quick-drying blue prints, in photograph galleries for all drying, and for medical heat treatment.

The case is of finest solid aluminum, triple-buffed and polished.

The convenient button in the handle controls the motor, as well as the cold and hot blasts, which are evenly distributed, by the improved high velocity muzzle.

Fan is fully enclosed.

Weight, packed, 5 pounds.

No. 2 each \$16.50

No. 3 Hamilton Beach Hair Dryers

110-120 Volts, A.C. or D.C.

Light, simple and powerful. Can be held in the hand or set in the stand at any desired angle, leaving hands free for scalp massage while hair is drying. Adjustment is instantaneous and automatic. Stays where it is put and stand is quickly detachable. Finished in ivory, old rose, orchid or robin's egg blue.

Fan is fully enclosed. Dries the heaviest head of hair in a few minutes.

Gives hot or cold blast by simply touching the switch.

No. 3, Without Stand..... each \$12.75

No. 3, With Stand..... each 14.00

No. 5 Hamilton Beach Hair Dryers

This dryer gives warm or cool blasts of air. Has a quiet, compact Hamilton Beach motor.

Ivory enamel finish. Gray silk cord.

Approximate shipping weight, 4 pounds.

No. 5..... each \$7.95

No. B-92 Gilbert Hair Dryers

110 Volts A.C. or D.C.

Designed for home use, for drying hair, shoes, delicate fabrics, etc.

This is a motor-driven blower type dryer; throws hot air only. Operates on 110 volts a.c. or d.c. 60 cycles or less.

Has ivory colored handle; finished in ivory.

Equipped with toggle switch, green cord and plug cap.

Weight each, 2 3/4 pounds; carton of 6 weighs 18 pounds.

No. B-92..... each \$5.95

No. S2 Electric Scissors

A fast, easy way to cut all kinds of cloth and fabrics.

Simple, compact and easily handled.

No. S2..... each \$6.50

No. 1 Gilbert Electric Mixers

A portable type mixer for mixing drinks, whipping cream, beating eggs and other light mixtures.

With 110-volt induction motor; operates on a.c. 60 cycles only. Encased in chromium-plated shell.

Detachable agitators are nickel-plated heavy gauge steel wire securely fastened to motor spindle. With metal base and rubber feet. Curved nickel-plated upright rod with extension supporting arm for motor. Adjustable at top and bottom for varying heights. Has large glass mixing receptacle.

Finished in chromium, blue and gray. Size, 5 3/4 x 8 3/8 in. Wt. each, 4 lbs. Packed 6 to a carton; wt., 38 lbs. No. 1..... each \$2.95

No. B-124 Sunkist Juniorette Apartment Size Juice Extractors

A compact, attractive juice extractor with useful glass and strainer.

Has toggle switch.

Operates on 110 volts, 60 cycles or less, a.c. or d.c.

Finished in ivory and nickel.

Height over all, 7 1/2 inches; width over all, 7 inches.

Weight, 5 pounds.

Packed 6 in a carton; weight, 42 pounds.

No. B-124..... each \$6.95

No. B-123 Gilbert Sunkist Junior Electric Fruit Juice Extractors

For home use. Quickly and efficiently extracts juice from oranges and lemons, leaving only the membranous tissue and the rind.

Universal motor operates on 110 volts, 60 cycles or less, a.c. or d.c. Motor protected from moisture.

With chromium-plated body, black base, removable bowl and reaming bulb, ivory.

Bowl 6 1/4 inches in diameter, 2 3/8 inches deep. Metal base with rubber feet. Toggle switch, standard cord with plug cap.

Height over all, 10 inches; width, 7 inches.

Packed 6 in a carton; weight, 64 pounds.

No. B-123..... each \$12.50

No. B-87 Gilbert Vibrators

110 Volts A.C. or D.C.

A universal motor vibrator that operates on 110 volts a.c. or d.c., 60 cycles or less. Complete with 3 applicators—brush, button and cup. Circular vibration. Automatic oiling system. Used on either a.c. or d.c. socket rotator, spring friction relief. Two part drawn

steel shell and ivory colored wood handle, finished in ivory. Has toggle switch and green cord with plug cap.

Length of handle, 4 3/8 inches; length over all, handle and motor, 7 inches. Weight each, 2 1/4 pounds.

Packed 1 dozen to a carton; weight, 30 pounds.

No. B-87..... each \$5.50

Warren Telechron Self-Starting Electric Clocks

Huntington Model

A low-priced tambour model clock.

Has mahogany case with Spanish high-lighted finish and relief ornaments. Ivory enamel dial, 4½ inches.

Height, 7¾ inches; width, 17¼ inches; depth, 3⅞ inches.

No. 563..... each \$8.95

Maynard Model

Has mahogany case with Spanish high-lighted finish; lacewood panels in front. Gold finished, etched dial, 4½ inches.

Height, 7¾ inches; width, 17¼ inches; depth, 3⅞ inches.

No. 4FO1.....each \$9.95

Norwood Model

A large tambour model clock. Mahogany case has Spanish high-lighted finish and carved base. Gold finished, etched dial, 5½ inches.

Height, 8⅛ inches; width, 20 inches; depth, 5 inches.

No. 5FO1.....each \$15.00

Commercial Clocks

Telechron commercial clocks need only be plugged into a regulated a.c. electric outlet and accurate dependable time is assured. Costs only a few cents a month to operate.

With sweep-second hand on 8, 10, 12 and 15-inch dials.

Auxiliary Movement Household Clocks

The Telechron auxiliary movement is a simple mechanism which maintains correct time when electric current is interrupted. Should a current interruption occur, it immediately starts to work, and continues to operate for a period of about two hours—should an interruption last that long.

This movement automatically starts, stops and winds itself. Equipped with Telechron self-starting motors.

Bullfinch Model

A half size banjo wall model clock. Has mahogany case with colored glass panels. Early American clipper-ship scene.

Enameled dial, 3½ inches.

Height, 20¼ inches.

No. 694.....each \$17.50

Renault Model—Directoire Style

Has mahogany case, Spanish high-lighted, lacquer finish with inlaid border. Dial, 3½ inches.

Height, 6 inches; width, 4½ inches; depth, 3⅞ inches.

No. 3A51.....each \$16.00

**Square Wood Case
Oak or Mahogany Finish**

No.	Oak Each	*Mahogany Each	Case Size In.	Diam. Dial In.
908	\$17.00	\$18.00	10¾	8

Warren Telechron Self-Starting Electric Clocks

Telebell Alarm Clock

With Butler-finish metal case; polished moulded plastic base. Ivory enamel finish dial, 3½ inches.

Height, 4¾ inches; width, 4½ inches; depth, 3 inches.
 No. 7F53A, Gold Color Case; Black or Ivory Base... each \$5.95
 No. 7F53B, Chrome Case; Green, Black or Red Base... each 5.95

Telalarm Alarm Clock

Dial can be clearly illuminated through diffusing glass by means of a tiny Mazda lamp.

Dura-alloy (silver color) case, non-tarnishing finish Moulded, black base.

Height, 5 inches; width, 4¼ inches; depth, 3 inches.
 No. 711.....each \$9.95

Signalette Alarm Clock

The unusual visibility of this clock (4½-inch dial) is immediately discernible.

Gold or chrome finish metal frame; glossy black plastic base.

Height, 5½ inches; width, 6½ inches; depth, 3 inches.
 No. 7F55A, Gold Finish.....each \$9.95
 No. 7F55B, Chrome Finish.....each 9.95

Autolarm Alarm Clock

Has an illuminated dial. With 24-hour, automatic alarm feature.

Moulded walnut color Heppel white style case with gold finished handle and feet.

Height, 6½ inches; width, 4¾ inches; depth, 3½ inches.
 No. 7B01.....each \$12.50

Daphne Model

Moulded Catalin (natural puffed finish) case in green, ivory, black, red or rose quartz.

Height, 3⅝ inches; width, 4⅞ inches; depth, 2⅞ inches.
 No. 3F53.....each \$4.50

Duke Model

Black moulded plastic case with gold-plated bezel, base outline and feet.

Height, 4⅞ inches; width, 4 inches; depth, 2¼ inches.
 No. 3F51.....each \$4.50

Telart Model

Gold or chrome finished metal frame; glossy black plastic base. Dial, 4½ inches.

Height, 5½ inches; width, 6¼ inches; depth, 3 inches.
 No. 4F51A, Gold,each \$5.95
 No. 4F51B, Chrome Finish.....each 5.95

Newberry Model

Polished lacquer finish case with relief ornament.

Height, 6½ inches; width, 6 inches; depth, 2¾ inches.

No. 3F55M, Mahogany Case.....each \$5.95
 No. 3F55MP, Maple Case.....each 5.95

Diana Model

With translucent illuminated dial. Rheostat can regulate intensity of light.

Beetle black case; chrome finished metal feet and handle.

Height, 7½ inches; width, 4⅝ inches; depth, 3⅞ inches.
 No. 358.....each \$9.95

Shelburne Model

Has mahogany case with Spanish high-lighted finish; lacewood panels.

Gold finished etched dial, 4½ inches.

Height, 9 inches; width, 7 inches; depth, 4½ inches.
 No. 532.....each \$9.95

Minitman Model

Brown mahogany case; matched satinwood ornamental front and top panels; statuary bronze escutcheon plate. Three drum type dials indicate hours and minutes.

Height, 6½ inches; width, 4⅜ inches; depth, 3¼ inches.
 No. 8B03.....each \$9.95

Minitmaster Model

Time is indicated by numerals; seconds "pass in review" on a revolving disc. Has illuminated face.

Black plastic case; gold finished metal ornaments; etched design on crystal.

Height, 6⅞ inches; width, 4⅞ inches; depth, 3¼ inches.
 No. 8B01.....each \$10.95

Revere Chiming Clocks

Telechron Motored Self-Starting Synchronous Movement

Westminster Chimes

Westminster chimes on all quarters on deep, resonant, silver-toned rods, with harmonious chord hour strike.

Chimes can be silenced.

No. R-642.....each \$50.00

Honduras mahogany, lacquer finish; bird's-eye maple overlay. Metal feet, handle and corner ornaments.

Height, 12 inches; width, 8½ inches; depth, 5 inches.

Dial, 5 inches. Raised numerals.

No. R-820.....each \$30.00

Honduras mahogany, lacquer finish.

Height, 11¾ inches.

Width, 7½ inches.

Depth, 5¾ inches.

No. R-802.....each \$35.00

Honduras mahogany, inlaid lines; lacquer finish.

Height, 7¾ inches; width, 18½ inches; depth, 5½ inches.

No. R-603.....each \$37.00

Honduras mahogany, lacquer finish; bird's-eye maple overlay.

Height, 9 inches; width, 21 inches; depth, 6 inches; dial, 5 inches.

No. R-822.....each \$40.00

Honduras mahogany, lacquer finish; burl overlay.

Height, 7¾ inches; width, 17½ inches; depth, 4¾ inches.

Raised numerals.

No. R-608.....each \$42.50

Honduras mahogany, lacquer finish; bird's-eye maple overlay.

Height, 9 inches; width, 20½ inches; depth, 6 inches.

Dial, 5 inches. Raised numerals.

Revere Chiming Clocks

Telechron Motored—Self-Starting Synchronous Movement
Westminster Chimes

Westminster chimes at all quarters on deep, resonant, silver-toned rods, with harmonious chord hour strike. Chimes can be silenced.

Floor model clocks are made in various models only two of which are shown. Special bulletins on other models gladly furnished on application.

**Vivienne Model
Grandmother Clock**

Early American style.

Honduras mahogany; lacquer finish.

Height, 73 inches; width, 13 inches; depth, 8 inches.

Silver dial. Westminster chimes.

Each.....\$110.00

No. R-444.....each \$55.00

Honduras mahogany, lacquer finish; clear maple end. Cast metal decorations.

Height, 10¾ inches; width, 22½ inches; depth, 6 inches. Six-inch gold dial. Raised numerals.

No. R-442.....each \$70.00

Honduras mahogany, lacquer finish; matched grain mahogany front. Hand carved decorations.

Height, 11 inches; width, 21 inches; depth, 7¼ inches. Gold dial six-inch. Raised numerals.

Hour and Half-Hour Strike

Strikes on hour and half hour on rich tone spiral silver-toned rod.

Roxbury Model

Colonial style.

Honduras mahogany, lacquer finish; burl panels, gold dial.

Height, 72½ inches; width 17¼ inches; depth, 12 inches.

3 Chimes on 9 Tubular Bells, Movement A. ea. \$340.00

2 Chimes on 7 Tubular Bells, Movement B. ea. \$300.00

1 Chime on 5 Tubular Bells, Movement C. ea. \$270.00

No. R-934.....each \$27.00

Honduras mahogany, lacquer finish; crotch mahogany panels.

Height, 11¾ inches; width 7½ inches; depth, 4¼ inches.

No. R-932.....each \$21.50

Honduras mahogany, lacquer finish bird's-eye maple overlay.

Height, 7¾ inches; width, 17¼ inches; depth, 4½ inches.

No. R-930.....each \$21.50

Oak or mahogany; raked grain, dove color finish.

Height, 9¼ inches; width, 6¾ inches; depth, 4 inches.
