*Can be furnished with any size tapped holes. Specify if other than the standard tap is desired.

## Hubbard Static-Proof Hardware

Static-proof hardware is a type of hardware that can be permanently locked in place by using threaded washers and lock nuts.

Standard hardware is subject to loosening by shrinkage of wood and vibration; it is necessary to retighten hardware regularly twice a year.

Static-proof hardware provides a bond between all metal parts, secured by threaded washers and loek nuts and has the effect of making the hardware into a one-piece assembly.

All holes in arms of poles should be bored the same size as the bolt, for a drive fit. When ordering brace bolts, add $1 / 2$-inch to standard lengths to allow for the use of threaded washers, and 1 -inch to standard lengths where both standard nuts and washer nuts are to be used.

## Hubbard Pole Reinforcing Material

Hot Galvanized

Type A

When pole butts become rotted and wakened, reinforcing is accomplished by banding to a stub. Band and pipe assemblies are tightened in place by drawing the band together. No. 7852-A is a malleable casting which serves the same purpose as the pipe.

The band is first attached by a nail through the small hole in the end of the band. After wrapping pole and stul) tightly by hand, a $1 / 2$-inch lag screw is driven through the loose end so that it engages both inside and outside wrap. Lay screws may be driven in either of end holes which are spaced farther apart than others. This allows lining up with nearest inside hole. Four bands and four pipes are needed for a set. Lag sorews and take-up bolts should be ordered separately.

| Type "A" |  |  |  |
| :---: | :---: | :---: | :---: |
| No. | Oescription | Slze | Shipping <br> WI., Lbs <br> Per 100 |

## Hubbard Universal Messenger Hangers

## Hot Galvanized

Universal Hangers are formed from new open hearth steel. They have a curved messenger groove which permits their use on slight angles as well as straight runs. Two $1 / 2$-inch clamp holts hold the messenger securely in place. The hanger is mounted by means of a $5 / 8$-inch crossarm bolt and a $1 / 2$-inch lag screw.

| No. | Steel Size | Oimensions - Inches Length of Legs | Slize of Strand | Approx. <br> Wt., Lbs. <br> Per 100 |

## Hubbard Cable Extension Arms Hot Galvanized

Cable Extension Arms are used to suspend cables at a distance from the pole. They are attached at the top by one $5 / 8-$ inch crussarm bolt. The " 1 " iron brace is fastened by lag screws. Cables are attached by means of a short $5 / 8$-inch machine bolt with a washer under the head. A three-bolt Cable Suspension Clamp, No. 8903 is attached on the machine bolt under the arm in a flat position. When drawn tight, the machine bolt clamps the entire assembly firmly together. Extension of the cable from the pole can be varied $81 / 2$-inches with No. 8920 and 18 inches with No. 8921.

| No. | Extensions From Center of Pole | $\begin{gathered} \text { Angle } \\ \text { Size } \end{gathered}$ | Approx. Shippine Wt. Lbs., 100 Pcs |

## Hubbard Guard Arm Hooks Hot Galvanized <br> 

Used on guard arms as dead-ends for telephone services. They bolt through the arm.

Diameter steel, $1 / 2$-inch. Overall length, $57 / 8$-inches.
Diannter eye, $7 / 8$-inch.
Approximate shipping weight, 45 pounds per 100.
No. 9245.

## Hubbard Guard Arm Braces Hot Galvanized

No. 9240
Giuard arm braces are used for supporting guard arms at points on poles where a cable is suspended.

Steel size, $18 \times 17 / 32 \times 7 / 32$ inches. Diameter hole straight end, $7 / 6$ inch. Diameter hole bent end, 9/6 inch.

Approximate shipping weight, 170 pounds per 100 pes.
No. 9240.

Hubbard Grade Clamps Hot Galvanized

No. 8484

No. 8989

Used to presont crepare where cables are run on grades. The pressed strel type is made with a large clamping area sot that the soft cable may he firmly gripped but not erushed. It is tightened by means of the $3 / 8 \times$ linch stove bolts furnished.
Drop-forged clamps are equipped with four $1 / 2$-inch, oval neek clamp bolts, which cannot turn while muts are being tightened.

Tolerances on all styles are held very close in order to grip both cable and messenger with the proper pressure when tightened in place.

## Diamond Drive Rings

For use with the new Neoprene jacketed Drop and Bleck Wires. $5 / 8$ and 7/8-inch sizes. These new designs have larger lonps to increase the wire carrying capacity to accommodate six $5 / 8$-inch and sixleen $7 / 8$-inch Neoprene jacketed Drop Wires. Ilot dip gralvanized by Diamond process, eliminating flaking of the galvanizing if the pin is bent to $45^{\circ}$ angle.

When installed in nasonry use the size Diamond Hammer Drive Anchor shown below.
D.II.D. Wammer Drive Anchors are listed on page 8.56. Order "less nails".

Reliable Cable Hangers

The use of the hangrers eliminate wear on cable sheath. Grade clamp is not required as the entire sheath is grounded solidly to messenger, cable does not creep on steepest grade.

Zinc: For supporting leat covered cable or insulated conductors to galvanized strand. They wrap around the cable - no sheath cuts. They also bond the sheath and strand to give added protection against lightning. Should be used with neoprene jackeled wires.

Copper: For supporting insulated wires or cable to copperweld and bronze strand. Ilold firmly and will not cut the cable. Where cable consists of separate insulated conductors held torether against the messenger, this close-fitting support will reduce wear or wind whipping.

## Hubbard Point Type Transposition Brackets

## Hot Galvanized

H-On Insulator-High Point. L-On Insulator-Low Polnt

The "Boint Type" Bracket is designed to effect the transposition of a pair of wires on a single, solid bracket by providing two diagonally opposite pins at the correct elevation, approximately 2 -inches above that of the other diagonally opposite pair. No cutting of wires is necessary at each location. For existing pairs which are to be transposed, it is practical and elficient from a labor-saving standpoint, to THMOW IN the transposition. The utility of this process is its applicability for voice frequencies on carrier systems (single or multi-channel) where brackets support the wires above the arms.

Right and left hand Point Type Transposition Brackets are a thoroughly tried and proven development. They have been in use for many years. Patent No. 2,299,960 covers a method or system of transposing wires. Hubbard Point Type Brackets listed on this page were designed specifically for use with this system. The purchaser of Hulbard Brackets is assured a license permitting the transposing of wires as covered by the above patent.

The bracket is attached to standard-bored crossarms through adjacent pin holes by $1 / 2$-inch by 6 -inch crossarm bolts fitted with elipped washers. Both attachment holes are slotted to provide a total of two inches of adjustment. Additional mechanical features may be noted in the illusstrations. Transpositions taked place on a rigid bracket, mounted above the arm, and wire spacings are maintained uniformly the entire length of the span. There is no spiraling of wires about each other as is the case with ordinary transposing methods. This is a tremendous advantage in cases of damaged or destroyed lines where restoration of transpositions must be made.
With the right and left point type method of transposing, it is unnecessary to cut wires to straighten out tangles during reconstruction. Simply untie the transposed wires and pull out of the working lengths of line ready for re-stringing.

Mounting bolts and washers are furnished. Threads, either of the wood cob or lead variety, are made to fit transposition insulators having 1 -inch pin holes. Specify the type of thread desired.

For more complete information communicate with the nearest Graybar oflice.

## Oescription

C. Wire Bracket

13 Wire Brachet
Pinch Bracket
Transposition Bracket

Bracket is intended to hold the neutral conductor away from the surface of the pole. so that the nentral conductor is placed in a diflerent vertical plane from the phase wire carried above the neut ral on single phase const ruction. The need for this bracket is due to the consideration that when the neutral and phase conductors are suljected to ice loading, and the ice subsequently drops from the neutral conductor. the conductor llips up into the phase wire and causes burning of the phase and neutral conductors. This bracket materially reduces the possilility of this contact occurring.

Sporl insulator No. 355 or No. 155 should be ordered separately.

Prices on application.

## Hubbard Service Brackets

## Hot Galvanized

Brackets are used for service attachunents on ranch type homes. Three brackets are murmally mounted on a short length of $11 / 4 \mathrm{in}$. to $21 / 2 \mathrm{in}$. standard pipe which also serves as the "mast" and has a service entrance cap attached at the top. Most masts are 2 or $21 / 2$ in. nominal pipe diameter.

## Hubbard Pressed Steel Corner Pins Hot Galvanized

No. 4724

Formed from ${ }^{3}$ 佔-imely flat steel. Stabilizing "logr" on these pins is planed toward the inside of the eorncr angle, lacludes strap and carriage bolts.

Fin rooled erossarms. One inch diam. Lead lhreats.

No.
4724
Designed for angle and corner construction.
Each pin is forged from a single piece of hot rolled open hearth stee. The broad base rests evenly on the arm and prevents pin from cutting into the wood, while the liour lugs hold the pin from twisting on the erossarm.
U-Strap type pins include crossarm mounting strap. Carriage bolt type ineludes 2 carriage bolts, 2 square nuts, M. F. locknuts and a $5 / 16$-inch flat sted washer plate. Pin height above arm, $53 / 4$ inches.

Lead threads are securely bonded to the steel and carcfully formed to meet insulator manufacturers' standards. There are no troublesome fins or mold marks. Pins for use on wood erossarms are furnished with Square Washer, Square Vint, and M.F. Loeknut. A Saddle Washer adapts these pins for use with roofed crossarms. Short shank linis, for use on steel crossarms, are furnished with a souare nut and spring lock washer.

Economical aids in the stringing and sageing of conductors. When a section of conductor has been sagyed properly and tied in, the Wire Stringing Tools are removed and employed further along the line.
Made in two styles. The Pin type tool is placed over the threads of a 1 -inch lead thread insulator pin for sagging along a straight run or a slight angle, while the Suspension type is used for stringing conductors on angles of from 30 to 60 degrees and is attached to the insulator string. Both types are assembled with sperial alloy steel stripper bolts and oil retaining bronze bushings.

| No. | Clearance For Conductor, Inches | Attachment | Approx. Shipping Wt. Lbs. 100 Pcs. |

Popular for rural construction. Itas suflicient eonductor clearance for low or medium voltage lines.
llses No. 1608 wet process insulator, ()Val moming hole, $11 / 16 \mathrm{x}$ $3_{4}$ inches.
Approsimate shipping weight, 16.5 prumeds per 100.
No. 1339, with Insulators.
No. 1340
IIas a higher thashover rating than
 the No, 13:39. An asset on lines requiring high meshanical strength and endurance.

Steel size ${ }^{3} / 16$ x 112 inch with $5 / 8$ inch diammer ootter elevis bolt. I ses Vo. 1600 wet process insulator. Oval moumting stot $11 / 1 \mathrm{~F}_{\mathrm{a}} \times 3 / 4$ inche's.

Approximate shipping weight, 31.5 pounds per 100.

No. 1340, with Insulators

## No. 1330

I sed extensively on medium voltage lines for eorner or dead-end at tachments. Recommended experially for foo(ovolt primaries. The $5 / 8$ inch attachment bolt is designed for fastening on eye or book bolts. Pole momating boits not included. Lead sheeve on insulator bolt availabar at extra cost.

I se's Vo. 161:3 wet process insulator.
Shipping weight, 609 pounds per 100.
No. 1330, with Insulators.
No. 1344
Desigmed for through bolt or
 crossarm holt monnting. Similar to No. l330 clevis shown above.

Wounting bolts on insulator available at extra cost.

I ses Vo. 1613 wet process insulator.

Oval mononting slot. 11/1́6 $x$ 3/4 inches.

Approximate shipping weight 5.50 pourids prer loo.

## Hubbard Insulated Clevises Hot Galvanized

Formed of heavy channel steel. A sturdy dead-end or corner attachment. Used with No. 35.5 dry proces. insulator for low voltage lines.
Oval mounting hole, $11 / 16 \times{ }^{25} 5$ inches. Approximate shipping weight, 306 pounds per 100.
No. 561, with Insulators.

## Nos. 8820 ańd 8821

Formed of flat steel.

Has 11/6-inch diameter mounting hole for $5 / 8$-inch mounting lolts.

Uses No. 357 dry process insulator. Shipping weight, per 100, No. 8820, 131 lbs. No. 3821, 131 lbs.
No. 8820, with Insulators.
No. 8821, same as No. 8820, except with 96 -inch mounting hole. Includes $1 / 2 \times 41 / 2-\mathrm{in}$. Mach.
Bolt and Round Washer
Nos. 1352 and 1353

## Hubbard Swinging Type Insulated Clevises

Pricludes Vo. 2969 shackle which provides flexibility and allows mounting bolt to be inserted without dismantling the clevis. Mounting slot size, $11 / 16$ $\times{ }^{13}$ /6 inches.

Hubbard Sagger Brackets
Hot Galvanized-Patented

No. 710

Fig. 1

Fig. 2

Sagreer Brachets provide flexibility in the solution of secondary distribution problems. They serve as single point secondary racks which may he used with ant desired spacing in whatever numbers the situation requires. Figure I is of an installation approaching a three wire secondary rack with the spacing defned by the engineer. $1 \dagger$ shows the sagger bracket with insulators in lorizontal position free to rotate about insulator bolt and act as a wire stringing tool. When the correct sag has bern set, the conductor is "tied in" to the insulator and the insulator is raised to the vertical position, Fignre 2 to be smapped home over the two keeper lons. Sagger bracket smap fit assures fanltless service and yet allows for on-the-spot repairs.

## Hubbard Racks <br> Hub-Rak-Light Type <br> Hot Galvanized

Designed for light service. Forged steel rack points, solidly riveted construction. A special indentation in the bach allows for a secure wrench hold when the side slots are to be used for monnting. Furnished with No. 1606 dry process percelain insulators.

§E.E.l. Std.

## Hubbard Extension Brackets For Secondary Racks Hot Galvanized

No. 3355
I lsed for mounting secondary rachs when a greater extension from the supporting structure is desired than the rack itself offers.
Made in two styles, with flat and curved backs, for wall and pole use respectively. Both st yles have one $11 / 1$-inch hole and two 9 -in-inch holes for mounting. Made from No. 9 gage steel, they have a 1 -inch bearing on the pole or wall.
Equipped with one $5 / 8$ x 2-inch carriage bolt.
Also has two $9 / 2$-inch holes in bottom (one at each end) (1) allow water to drain out.

## Hub-Rak

Medium and Heavy
Hot Galvanized
A solidly constructed durable rack, the criterion for rack quality and workmanship. Forged steel points are permanently aligned and riveted to the Hub-Rak back. The permanent alignment of points assures a more even stress distribution along the entire length of the $5 / 8$-inch diameter rack bolt.

Hlub-Rak Secondary Racks are furnished with
 No. 35.5 dry process procelain insulators.
Available with either extended or nonextended lacks. See table below for ordering data.

For turning angles from 10 to 120 degrees. Clamp attaches directly to eye or clevis of suspension insulator.
Reversible keeper piece; clamp takes conductors from No. 6 A. W. G. copper to No. 2 ACSR with armor rod.

Clamp body and keeper of malleable iron; bolt of steel. All parts hot-dip galvanized.

No. 81460

Additional $O$ - 13 Pintypes and line Pusts are available through 69 kv . Other assemblies are described below.

## Suffix Number System

()-B high-voltage pintype and line post iusulators combine a choice of pinhole dimensions or slud arrangenumts, and in certain cases offer an option between 'lie-'lop and ( lamptop heads. Because of the large namber of possible combinations involved, a suffis system is used. The besic catalog mumlors above desoribe the porcolain body. A suffix momber should he selected from this chart to specify the complete assembly refuired.

## Power Insulators

For handling the requirements of the low and medium voltage power distribution field. Each insulator meets or exceeds the electrical and mechanical specifications set up by the Edison Electrical Institute for its class of service.

## Ohio Brass Suspension Clamps

Available in a wide variety of sizes to obtain proper fits with all commonly used transmission conductors. Light in weight; minimize conductor fatigue from vibration.
Bolts are of ample size and strength to assure proper con-
tact between clamp and cable, thus preventing burning of cable in clamp seat.

Available with or without socket and clevis fittings.

*Information on larger sizes furnished upon request.
Malleable clamps will be furnished with either copper or aluminum liners when specified. Deduct 0.1 in . from max. conductor diameter to allow for liner.

Prices on application.

## Ohio Brass Strateline Clamps

These clamps provide an inexpensive and effective means for deadending distribution primaries and station buses. Easily hooded for hot-line work, they can be detached from supporting insulators simply by removing cotter pin and rivet. Ifolding power of these clamps meets the requirements of primary distribution service where larger sizes of aluminum cable are involved.

Prices on application.

## Ohio Brass Hi-Lite Strain Clamps

## Malleable Iron

For use with copper, ACSIR, Copperweld and steel conductors. Develops ultimate strengths of standard conductors having rated strengt hs within the limits of the clamps.

Clamp bodies, herpers and fittings are of malleable iron; bolts and rivets are steel. All ferrous parts are hot-dip galvanized.

## Continental Rubber Communications Insulators

Western Union Standard

No. R-3

No, R-4

Niminates danger of insulator breakage in transit or during installation; minimizes breakage due to rifle-fire or olther malicionsness.

Resilience of these insulators reduces line breakage due to erysiallization or abrasion of the line near poles. l'rovide ariple strength to take the increased load on angle turns.

Iligh operatiag efliciency in severe fog and humidity conditions; eacellent wather resistance. One madel designed for stanlard wood pin or the threaded wood coh on steel pin, and on model designed for steel pins. Interior threading gives tight, screw fit on pins.

Hubbard Linemen's Safety Platforms
Patented

Used in connecting transformers, making up cable joints, replaciug and washing hi-line insulators, and soldering joints. Developed for efliciency and safety in line construction and operation. Is readily adaptable to almost any position. Steel spears for pole contact are designed to eliminate side movement of the platform while in use. Width, $95 / 8$-inches; length, 71-inches.
No. 600, Shipping Wt., Lbs., Each 50.

## Hubbard Pole Balconies <br> Hot Galvanized

Used for convenience and comfort in telephone terminal box work and serve as switching platforms with the power companies. Frame, braces, and guard rails of this batcony are made of open hearth steel. Platform wood is thoroughly seasoned and, painted with two coats of standard green pole paint. seat $1.4 \times 30$ inches. Nos. 903.5 and 9045 are identical except railing of No. 9035 fastens to a felephone terminal box and No 9045 fastens to pole. The complete balcony includes all bolts for fastening the parts together but not the bolts for attaching to pole.

Approx. Shipping Wt,
Lbs. 100 Pcs.

[^63]
## Chance Universal Platforms

Universal platforms provide a safe, time- and labor-saving means for working on transmission and distribution lines, switches and other equipment. Particularly useful for prolonged johs or work on lines otherwise inaccessible from pole or tower leg.

High-strength aluminum alloy is used in most plaform fittings to minimize weight. Double brace provides extra stability; folds for easy transportation. A wood keel provides added rigidity on 8 -foot platform. All platforms furnished with non-skid safety tread.

Ilatform Assemblies: Universal platforms are available. in either adjustable or pivot type assemblies. Pole and tower attachments of both adjustable and pivot designs are interchangeable; by removing a hinge pin and attaching the de-

## Adjustable Assembly

| Na | Description $L$ | $\begin{aligned} & \text { Length } \\ & \text { ate } \end{aligned}$ | ${ }_{\text {WL }}^{\text {Wb }}$ | Each |
| :---: | :---: | :---: | :---: | :---: |
| *M4901-2 | Pole Type assembly, less keel | 6 | 14 | \$78.00 |
| 114901-3 | Pole Type assembly, with heel | 8 | $5.51 /$ | 90.00 |
| 114901-6 | Tower type assembly, less keel | 6 | $4.41 / 2$ | 71.50 |
| 114901-7 | Tower type assembly, with keel | 18 | 531/2 | 82.00 |
| *14901-10 | Pole at tachment only |  | $5{ }^{3} 3_{8}$ |  |
| M4901-11 | Tower attachment only |  | $81 /$ |  |

## Chance Rope Railings

Provides additional security to linemen on platforms. Railing is made of $3 / 4^{\prime \prime}$, manila fiber rope and 4 laminated spruce poles. Stands $2.1^{\prime \prime}$ alove board. Complete with $2^{\prime \prime}$ double blocks. Folds flat for easy transportation.

| Mo. | Platiorm Size | WL, Lbs | Each |
| :---: | :---: | :---: | :---: |
| *M4901-35 | $15 / 8^{\prime \prime} \times 11^{\prime \prime} \times 6^{\prime}$ | $123 / 4$ | $\$ 38.00$ |
| M4901-45 | $15 / 8^{\prime \prime} \times 11^{\prime \prime} \times 8^{\prime}$ | $131 / 8$ | 39.00 |

sired fitting, the platform is quickly adapted to the specific: job. Attachments are available separately.

Pivot Type IPlatform : Use of pivot attachments facilitates work on H-frame suspension construction and other jobs requiring platforms to be set at several angles. This can be done without changing the position on the pole. Platform may be rotated within a $180^{\circ}$ arc; turning hand nut holds platform in desired working position.

Pivot Type Assembly

| Na | Descripition $\quad \substack{\text { Length } \\ \text { Feit }}$ | WL | Each |
| :---: | :---: | :---: | :---: |
| * 114901 | Pole type assembly, less keel | $68{ }^{3}$ | \$127.00 |

| *14901-13 | Pole attachment only | $271 /$ |  |
| \14901-15 | Tower attachment only | $301 / 2$ |  |

## Chance Utility Platforms

Designed for use on poles, in substations where space is limited, or where linemen must work for long periods. Attached with a single safety locking chain tightener. Cannot be accidentally loosened. Aluminum alloy fittings keep weight down.
Has folding brace for convenience of transportation.
Non-skid tread and cleats at end provide safe, sure footine.

## Hanlon \& Wilson Rail Bonds

## Type RHD-9

Made with solid cadmium copper terminals. Selected hecause of its similarity of expansion to railroad steel, excellent "cold flow" properties, and high conductivity. Average pull-out test is more than double ordinary other types.

Punch supplied with every 200 IRIID-9 Bonds.

## Type BSB-6CH

A high conductivity conductor made entirely of cadmium copper and stainless steel.

Powerful wedging action makes strong positive electrical commection.
llas maximum resistance to vibration fatigue.
Quickly and easily installed with a hammer. The flexible strand permits rapid and easy forming into the most suitable shape and location.

This bond was designed for use at switch points and frogs.

## Type 7B-10C

A hard drawn "copperweld" strand. No heat or welding used in compression process.
Llas pulled as high as 10.000 lhs. in destruction tests.
Added Copper Sleeve serves as a cushion for the strand in the steel terminal and at point of greatest stress.

No special skill to install the one-piece pin. Available in other strand constructions on request.

## Type BSB-5CH

An improved and perfected plug-type signal bond easily installed behind or in front of the splice bar.

Stainless steel teminals offer maximum resistance to corrosion.

The strand is composed of hard drawn cadmium copper with a high fatigue resistance.

## Type RHD-6

A high conductivity strand mechanically applied. Nonchipping tool steel drive pins assure safety in installation.

Has complete over-all protective zinc plating and pull test equaling the tensile strength of wire.

Expands excessively to fit over-sized holes.

Type DS-1T

Bonds and jumpers, shunt connectors, track circuit connectors made of a combination of copper and steel wires, butt welded.

Prices on application.

Macoid Plastic Tree Wire Guards

For auxiliary protection on power and light conductor or telephone drop wire where it is impracticable to obtain adequate clearance from trees, making it necessary to protect conductor or wire from abrasion. Particularly useful where conditions require protection on a considerable length of wire. Can be spiraled on wire already in place or can be threaded over the free end of a wire. Furnished in five types:

Type "lי", 7 "佰" I.D. x 0.015 " wall, 36 " length. Tree guard. 10 pieces in a package. Also furnished in coils 100 to 500 feet long. Approx. weight per package, 1.4 pounds.
Price per package, \$2.40.
Type " $\mathbf{S}$ ", 7/6" I.D. x .04.5" wall, 36 " length. Tree guard. 10 pieces in a package. Approx. weight per package, 1.4 pounds.
Price per package, $\mathbf{\$ 1 . 8 0}$.
Type "1". 3/16" I.D. x 037 wall. For use in insulating line wires. 100 feet in a coil, 10 coils in a carton. Approx. weight per carton, 16 pounds.
Price per coil, \$1.90.
Type "E", $1 / 4$ " x .040 " wall. To protect station wires where attached to walls or passed through partitions. 50 feet per coil, 10 coils in a carton. Approx. weight per carton, $111 / 2$ pounds.
Price per coil, \$1.80.
Type "IL", $3 / 8$ " O.D. x 0.035 " wall. For insulating line wires. 100 feet in a coil, 5 coils in a carton. Approx. weight per carton, $111 / 2$ pounds.

Price per coil, \$2.90.

## Copperweld Grip-Flex Insulator Ties

Use Copperweld Grip-Flex Ties wherever Copperweld or copper line wires are being tied to pin-type insulators. This preformed tie assures uniformity of construction-reinforces the conductor over the entire length of the tie and prevents chafing of conductors. It's strong, non-rusting, simple in design, easy and inexpensive to apply. When ordering specify the size of the line conductor. Wach tie consists of one preformed Copperweld Reinforcing Wire plus a length of straightened, annealed Copperweld Binding Wire sufficient for making a pigtail type of binding on any standard type of side groove insulator.

Complete Grip-Flex Tie packed in bundles of 100.

| No. | Apprex. Weitht Par 100 Ties | Line Wire Size, In. |
| :---: | :---: | :---: |
| GFC-78 | 14 Lbs. | 128 |
| GFC-910 | 8 Lbs. | 104 |
| GFC-1012 | 7 Lbs. | . 080 |

These high-tensile, low-resistance telephone line wires make possible lomger-span. lower-cost construction on new lines: powide stronger spats. with lawer maintenamee expense. on present lines. Development of Indiana sterel and Wire Company

Gatuanzed by the Crapo process. Which produces a heavy, dense. uniform enating of zine that adheres tenacionsly to the wire and provides dependable protertion against comrosion.

## Crapo HTL-85

I'sed extensively for bulh new construction and for repatement. When need on existing pole structures it tends to increase strenght ol lime. lessems hazard of ice and wind, minimizes service intermptions, and rednces maintenance cosis.

Alfords improved transmission at voice lrequency with currents of volier frequency magnitude.

Ilas a trisile stranth more than bo per cent greater than standard B.B. wire of the same diameler. Vo. 12 B.W.(i. size mahes possihn spans of 210 feed in heaw lonading. 330 feed in medinn lomding. and 40 loret in light loading districts.

F'urnished in combimoms lengths without splices or joints. (ialvanizon! sted emmpression-type sleeves are recommended for splicing this wire.

Copymght 1936, 1939, and 1915 by Inbiana Steel \& Wife Co.

## Crapo HTL-135

Possesses two and one-half times the strength of standard B.13. wire which makes posible spans of 350 feet in heaw
 6.50 feet in ligho loading districts.

The average mumber of pole st metures per mile can usually be redmed to approximately one-hatl the number required for B.B. wire.

The ellicetive resistance at voice frequencies with currents of wief frequency magnitude is superior to that of the older grade.

Requarly furnishod in No. I2 B.W. (i. and in continnous lengthe without splieve of josints.

Galsamzed steal compressionitype sleeves and dead-ends are reconmended fior use with this wire.

## Crapo Galvanized Steel Strand

 Class A, B and C Coatings

All wire used in forming a particular size and grade is produced from steel of selected properties, scientifically processed under laboratory supervision and galvanized by heavy, uniform gine coatings. Both wire and strand are subijected to laboratory tests for tensile strength, elongation galvanizing, ductility and gage to insure high uniform quatity in the linished product.

Available in Class A, B \& C coatings, conforming respertively with AS'TM designations Al22-54'T, and A218-5 t'T or latest revisions thereof.

Furnished in following standard lengths: $3 / 8$-inch diameter and smaller in 2.50, 500 and 1000-foot coils and 2.500 and
 500 -foot cuils and 1000,2500 and 5000 -foot reels. When ordering, specify size and grade, method of paching (coils or reels) and number of feet per coil or reel.

## Crapo Preformed Armor Rods

Preformed Armor Rods provide a simple, practical econonimal method of reinforcing and protecting overhead conductors and statie wires at the pwint of. and in the region of', the supports. They minimize wear and chating, eliminate danger from ties and clamps, absorb and dissipate ibration. and aet as an armor over the conductor, protecting it against flash-overs and arcing. Provide excellent holding power against slippage.

## Installation

Easily and quickly installed. Liach rod accurately preformed into an open helix or spiral with an inside diameter slightly less than the outside diameter of the conductor.

Appilid in sets, the rods form a sumg-fitting, compact, cylindrical armor over the conductor.
N o clamps or clips are repuired to hold the rods in place.
Instaliations on energized circuits can be made with "hotline" tools designed for the purpose.

## Repair of Conductors

Used successfully to repair stranded conductors and to rastore the strength of worn or broken conductors where lines are being rebuild.

Short length rods are also available to protect conductors arainst abrasion where taps are applied.

Vade by Indiana steel \& Wire Company. Available in Galvanized Steel, Stainless Sted, Aluminum, Copperweld and l3ronze for all sizes and types of overhead conductor and static wire.

## Preformed Armor Rods for Gaivanized Strand Left-Hand Pitch Standard

*Recommended for doulble pin-type insulators and single suspension insulator supports.

## Crapo Galvanized Steel Strand

- For Overhead Ground (Static) Wire

Designed and manufactured for shielding transmission lines against lightning. Produced in continuous lengths, without welds or joints in the individual wires or finished strand.

Made in accordance with ASTM designation A363-55T or latest revision thereof.

A vailable in Class A, B and C coatings in Iligh Strength and Extra Iligh Strength Grades in $5 / 6-\mathrm{in} ., 3 / 8 \mathrm{in}$., $7 / 16-\mathrm{in}$., and $1 / 2$-in. sizes.

Furnished in the following lengths for at least $95 \%$ of the order.
$1 / 2$-in., 3600 to $6100-\mathrm{ft}$. . $7 / 6$-in., 4700 to $7900-\mathrm{ft}$.; $3 / 8$-in., (a), 3600 to $5800-\mathrm{ft}$.; $516-\mathrm{in}$. (b) 4800 to $7700-\mathrm{ft}$.

Up to $5 \%$ of the order may be furnished in lengths below these minimums but not in less than $1500-\mathrm{ft}$. lengths.
(a) Lengths up to $9 \cdot 400-\mathrm{ft}$. and (b) $12,000-\mathrm{ft}$. available on special order.

Prices on application.

## Crapo Galvanized Steel Cable Lashing Wire

"C" Coated
Used with modern cable spinning machines to lash cable to messenger strand. Extra heavy Class "C" coating.

Wire Diam.-. 091 \& .061in. In neat, compact, threelay coils with straight or tappered arbor holes. Packed 6 inctn .

Dimensions: Straight IIub Arbor hole- $17 / 8$-in.; Tappered Ilub, 2 to $21 / 2$-in.; Coil O.I). 6 -in.; Width-1 $1 / 2$-in. Length Wire: Size . $091^{\prime \prime}$ -325-ft.; . $061^{\prime \prime}$ - $650-\mathrm{ft}$. Weight: . $091 l^{\prime \prime}-7.2 \mathrm{lbs}$; $.061^{\prime \prime}-6.15 \mathrm{lbs}$.

Crapo Stainless Steel Cable Lashing Wire

Developed specifically to meet demands for a spinning wire with a high strength to weight ratio and superior resistance to corrosion.

For general application, regularly produced from Type 430 Stainless Steel - A chrome alloy. Also available in Type 302 - A chrome-nickel, and Type 316 - A clirome-nickelmolybdenum steel.

| $\begin{gathered} \text { Sizo } \\ \text { Diam.. In. } \end{gathered}$ | Type Arbel Hole | Nominal Coil Length, Ft. | Nominal Coil Wt. Lbs. |

## Crapo Galvanized Steel Conductors

A high tensile, low-resistance steel conductor which makes possible long spans, reduces the number of pole structures required, saves man-hours and material, and reduces over-all construction expense.

I sed for rural taplines and single-phase extensions, hightension transmission lines and branches, primary distribution lines, primary circuits; for mixed commercial, residential and farm service, primary neutrals of three-phase rural feeders and series street lighting circuits.

Available in two grades: Crapo IITC-130 and Crapo IITC-80. Each grade available in stranded (3-wire) construction.

Resistance and Reactance in Ohms per Mile of Single
Conductor at 60 Cycles for Various Currents and Conducto spacings When the Ambient Temperature is $\mathbf{2 0 ^ { \circ }} \mathrm{C}$. $\left(68^{\circ} \mathrm{F}\right.$.)

# Crapo Tie Splints <br> For Telephone Line Wire <br> <br> Crapo Pre-Tied Splints 

 <br> <br> Crapo Pre-Tied Splints}

A radically new method of "tying-in" telephone line wire. Tie wire and insulator can be pre-assembled in the shop or warehouse on a production line basis, or on the ground at the project site. The applied splint grips the line wire securely and prevents slippage. Protects line wire against wear and abrasion. Simplifies the re-sagging problem. In galvanized steel for use with galvanized line wire and in copper covered steel for use with a erpper/steel or copper line wire.

No.

## Crapo Double V Tie Splints

Especially designed for long span construction. Reinforce and protect telephone line wire at the point of support. The twin " $V$ " notches prevent contact between line wire and insulator, minimizing wear and abrasion. Spiral sections provide a gripping action to prevent slippage under loading.
Available in gatvanized steel for use with galvanized line wire and in copper-covered steel for use with copper-steel or copper line wire.

## Crapo Preformed Spiral Tie Splints

A simple, ecomomical means of reinforcing and protecting felephone line wire from abrasion and wear at the insulator. Prevents stress concentration at points of support, reduces possibility of failure due to vibration. Easily and quickly applied hy hand. Vo tools recuired.

Available in gadvanized steel for use with galvanized steel telephone wire. Can also be furnished in copper-covered steel for copper'steel or copper telephone line wire.

## Crapo Tangent Supports

For plastic-coated one-pair parallel rural telephone distribution wire of galvanized steel or copper-covered steel.
Preformed from tough, springy, corrosion-resistant stainless steel wire, and coated with neoprene. Provides simplest and most effective method for suspending plastic-conated one-pair parallel telephone wire.

Neoprene coating increases friction between support and conductor, further reducing the possibility of slippage.
Support is formed from a large single stainless steel wire of $109-\mathrm{in}$. diam. The spirals conform to ennductor shape, provide a doser, more uniform gripping action. Soop eye attaches support to pole easily and quickly.

Packed 125 pieces in corrugated carton. Weight, 9.5 Lbs.

## Copperweld Power Transmission and Distribution Conductors

## Copperweld-Copper-3-Wire Stranded

Used for all types of overhead distribution lines and are particularly well suited for long span lines where high strengths are advantageous. They provide safe, permanent and economical construction, and are available in a wide range of strengths and conductances.

The three wire triangular shape of these conductors tends to minimize line vibration, and their large individual wires provide a very substantial and rugged conductor. Easily installed and give excellent performance.

They combine the high conductance of copper with the high strength of Copperweld. The Type A conductors are composed of one extra high strength Copperweld wire and two hard-drawn copper wires. Other types include the Type C, composed of one $40 \%$ conductivity Copperweld wire and two hard-drawn copper wires, and the Type D, composed of two Copperweld wires and one copper wire.

The following table includes the more generally used sizes of Copperweld-copper . 3 -wire strands. Other sizes, and Copperweld-copper 7 -wire strands used principally for the higher conductance requirements are available upon request to GIRAYBAR.

## Copperweld Telephone Line Wire

Ise Copperweld Line Wire wherever you need to combine strength with good conductance. It is non-rusting, light in weight. easy to handle and economical to string.

Conperweld's voice transmission characteristics are better than any other high. strength conductor. It is the only long-span wire suitable for carrier current systems. The permanent high strength of Copperweld permits safer long spans that stand up under severe weather conditions. For long distance and carrier current lines, the recommended sizes are $\cdot 128$-in. $40 \%$ conductivit y Iligh Strength and I 01 -in. $\mathbf{4 0 \%}$ eonductivit y Iligh Strength. The choiee usually depends
on electrical requirements. For short subscriber loops, the . 080 -in. $30 \%$ conductivity Extra IIgh Strength Copperweld Wire has adeguate conductance and is most economical. For longer loops where the electrical requirements are more demanding, use .10 t -in. $10 \%$ or .080 -in. $40 \%$ High Strength Copperweld.

* Double support rods are recommended for doulbe-pintype insulators and simgle suspension insulator supporls.

Specifications of rods for larger sizes of A.C.S. $\mathrm{It}_{\mathrm{t}}$, and for All-Alaminmm Cable furnished on request.

Aluminum Alloy Preformed Armor Rods
For A. C. S. R. Conductors

## Aluminum Alloy Armor Rods

liods can be bulked pucked or furnished in sets. If requested, armor rods . 182 -in. and larger are center-marked at no udditional eharge. A smadl charge will be made for center-marking rods sumaller than .182-in.

Specilications for the following lreformed Armor liods furnished on request:

Ahminum alloy rods for A.C.S.lk. Gonerally used as overhead kround wire.

Copperweld and bronze rods for copperweld, copperwold-copper and topper conductors.

Alnminum alloy line guards for A.C.S.It. and all-aluminum conduetors.
Aluminum alloy line guards for self-supporting service-drop cable.
Aluminum alloy tap rods for A.C.S.R. and all-aluminum conductors.
( Sopperweld and bronze tap rods for copper and copperweld conductors.
Aluminum alloy patch rods for A.C.S.S. and aft-aluminum conductors

## Alcoa Tapered Armor Rods

## For A.C.S.R.

Illustrations below show the common applications of tapered armor rods on the larger sizes of A.C.S.R. Table below gives detailed information for ordering by catalog number, and for choosing suitable cable grooves in clamps or insulators.

Where double supports are widely spaced, as sometimes occurs when two strings of suspension insulators are used, armor rods of special length may be required. When ordering such special armor rods, specify distance between centers of supports.

Armor rods are shipped in straight bundles tied in sets as follows:
(a) $67^{\prime \prime}$ and less in length are tied at each end and at two intermediate points equally spaced.
(b) Over $67^{\prime \prime}$ in length are tied at each end and at three intermediate points equally spaced.
*Choose suspension clamps or pin insulators with grooves perferable 5 to 15 per cent larger than this dimension.
\$Armor rods for double supports.
$\dagger$ Armor rod clips (V-lx)lt type) or armor rod clamps are required for holding the ends of the armor rods. On high voltage lines where corona is a factor, armor rod clamps are preferred. Two clips or two clamps are required per set of rods.

Alcoa Straight Armor Rods for A.C.S.R.

St raight armor rods are shipped in straight hundes tied in sets. t'lwo Clips recpuired per set of rods.

* Choose insulators or suspension clamps with grooves preforable 5 to 1.5 per cent larger than this dimension
§W rench size "E" with integral die may be used for these sizns. $\ddagger W$ rench size " $D$ " with integral die may be used for these sizes.
Alcoa Twisting Joints for A.C.S.R.

Dach joint consists of two aluminum sleeves. Catalog number specifies complete joint $\bar{i}$. e. two sleeves. For making this joint two twisting wrenches are required. In ordering wrenches, specify same catalog number as joint. Prices on application. $\dagger$ Order Catalog No. 551 Twisting Joint Wrenches.

Perma-Grip

## Chance Hot-Line Clamps

Provide secure, high-conductivity connections. Current carrying capacity is in proportion to that of the maximum jumper wire for which each clamp is designed.

Derma-Grip Clamps: These clamps made in a complete range of sizes, each being scientificaly proportioned to give electrical condnctivity without heating. They have high mechanical strength and have been proved in use for many years. Gripping jaws make a 3 -puint comfact with conductors. USS threads permit quich, easy application and a tight, positive grip.

Protected Thread "I'.C." Clamps: Have protective hood over all working parts and include a sealed waterproof thread chamber filled with corrosion-resistant compound. Clamps may be easily removed from the line after long periods of exposure and use.
Wide jaws assure good current distribution. Secure contact assured by loching spring. Jumper terminal above the conductor balances the eye screw to alleviate torsional stress.
"P.C." Clamps are available with contact surfaces preenated with Chance z.l.n. 100 Electrical Contact Aid. Each clamp is scaled in a tramparent plastic hag to protect it from damare and forcign matter. Linemen can remove clamp without removing their globes by

Thread Clamp
 snipping end of thag with side-cutters.

To order precoated individually packaged Series 500 Uniclamps, add "With z.l.n. and Pachage" after catalog number. Add $\$ 5.00$ per 100 to price shown.

Iligh sirength heat treated aluminum alloys.
For connceting to copper or copperweld wires, bimetallic aluminmm-copper inserts are used. The copper faces of this bimetal contact the copper wire, and the alumimum sides are locked into heavy sections of aluminum alloy which separate dissimilar wires and prevent corrosive action lretween them.

Exeflent for general-transmission and heavy-distribution comertions, lonps, taps, ete.

Available in a 1 -holt (with either aluminum or steed hardware) and a 2-lolt type (with aluminum hardware only).
Cast of high-strength, heat-treated aluminum altoy, these connectors are designed for making aluminum-to-aluminmm connections.
They are "brightdipped" and coated with compound to assure low-resistance contact surfaces.

Both 11 -Bolt and 2M-Bolt Connectors are engineered for long-lived joint efficiency.

Contact surfaces have the area required to make tight, low-resistance connections.
Conductor grooves are contoured to trap all outside conductor strands - within the clamp-design range - tu prevent "hird caging" under surge conditions.
Nommal installation torque places castings and bolts under a resilient stress that maintains a good conneetion under varying operating loads and temperatures.

Chance II -Bolt and 21 -Bolt Commedors are desizned to meet all applicable NEXA and REA sperilications. They have bern thoroughly tested to assure performance.

Available with contact surfaces precoated with Chance \%.l.n. Electrical Contact Aid. Wach comeetor is sealed in a transparent pastic bag to protect it from damage and foregign matter. Linemen can remove connector without remwing their gloves by snipping end of bag with sidecutters.

## Reliable Service Entrance Connectors

## Aluminum Bodies

An extruded alomimum body with a lot of area and with slothed aluminum serew and two spaters provides a technically papro combetor for alaminum to copper and almminnon to aluminum-the entire connertion, when made up with conductors, is premoderantly aluminam.

The first spacer under the screw protects the one eonductor from screw. The second spacer separates the two condactors. Opposing spacer surfaces are grooved to lime up the condmetor. Ahmmimm bodies and almmimann spacers are cleaned and treated to eliminate oxidized contant surfines.

Quantity prices on request.

## Chance Parallel Groove Clamps

No. PG100

No. PG200 clamps have overlapping contacts on both sides. Clamps are available with steel hardware.

Clamps are available with contact surfaces precoated with Chance z.I.n. 100 Electrical Contact Aid. Each clamp is sealed in a transparent plastic bag to protect it from damage and foreign matter. Linemen can remove clamp without removing gloves by snipping end of bag with sidecutters.

| PG240-AA | 4/0 to 2 | 4/0 to 2 | 30.4 | 63.00 |

Note: If aluminum hardware is desired, substitute " 1 " for " 0 " in the above numbers. For example: PG110-AA becomes PG111-AA.

To order precoated individually packaged Parallel Groove Clamps, add the suffix "P" to the Catalog numbers. For example, PG110-AA becomes PG110-AA-P.

解 are designed for low-cost, easy-to-install power-line connections. They are made in "AA" series for alumimmeto-aluminum connections and an "AP(" series for all connection combinations. "AGP" clamps are protected with a heavy FORTIFIED cadmium coating that wards off oxidation and corrosion between unlike metals. "AA" clamps are uncoated.

There are two types of clamps as to contacts. Series 100 clamps have overlapping contacts on one side and a straight slide-in groove on the other. Series 200

## Chance Parallel Groove Clamps

Designed to withstand high mechanical and electrical stress, for maximum joint efliciency and current-carrying capacity. They are adaptable to both distribution and heavy-service connections-for making jumper connections at dead-ends, or to connect tap lines or branch feeders to main-line conductors. They meet NEMA and REA specifications for power connectors.

Clamps are cast of high-strength, heat-treated aluminum alloy for use on ACsil or all-aluminum conductors. "Bright dipping" and a coating of compound assure low-resistance contact surfaces. Clamps available with either aluminum or steel hardware.

Clamp body is contoured to make the bolts self-aligning and self-centering, thus applying equal pressure on both main and tap lines. Conductor grooves contact and support all conductor strands.

Installed on brushed conductors, they will carry fault currents without pitting, arcing, or burning. Fault currents ranging from 8500 to 25,000 amperes were employed in tests.

Available with contact surfaces precoated with Chance z.l.n. 100 Electrical Contact Aid. Each clamp is sealed in a transparent plastic bag to protect it from damage and foreign matter. Linemen can remove clamp by snipping end of bag with sidecutters.

2-Bolt Parallel Groove Clamps

A360A $5360 \mathrm{~A} \quad 417 \mathrm{MCM} \quad 4 / 0 \quad 600 \mathrm{MCM} 250 \mathrm{MCM}$
'To order precoated individually packaged 2 and 3-Bolt Parallel Ciroove Clamps, add "With z.I.n. and Package" after catalog number. Add $\$ 5.00$ per 100 to price.

## Chance Cable Clamps

For use on outside and inside cable installations; also for supporting power cables at dead ends, corner turns, etc.

Can be used on all copper power cables from $3 / 0$ to 2000 MCM inclusive. Only one size required. Must be clamped on bare wire after removing $41 / 2 \mathrm{id}$. of insulation.

They eliminate the need for costly splices, hazardous soldering operations and waste of costly cable, where power cable is used in industrial plants or on transmission cable where strains do not exceed 1200 lls . (They are not for use on telephone or aluminum power cables.)

Standard length Formed Bail (Centerline), 63/4-in.

## Deadend Adapters Only

For Use with Tension Splices and Strain Insulators

Has sufficient length to allow space to feed the end of the wire through. Play is allowed between the cartridge and clevis hole to permit tilting so the wire may easily be fed through. The cle is is hot galvanized steel, with hole for inserting bolt or hook for pulling up slack.

$\dagger$ For extra long ( $13^{\prime \prime}$ ) clevis use code LLD.

## Reliable Straight-Thru Deadends

## Flexible Clevis Type

For deadending to spool or strain insulators. . bail and yoke are of high strength bronze. The cartridge contains interlocked jaws, cold forged of silicon bronze, which grip with many tiny points and do not injure the wire or reduce its breaking strength. Permits easy adjustment of slack.

## Wirelink

Copper tuhes, bronze jaws-deadend has bronze yoke and stainless sted bail for use with eopper and copperweld. 5078 Wirevise 9 and 10 AWG $\quad 71 / 2 \quad 65.00$
5079 Wirelink 9 and 10 AWG $61 / 2 \quad 45.00$ .102-.114
Wirelink and Wirevise may be assorted in carton quantities or standard packiges along with Strandlink and Strandvise to ohtain quantity prices.
Quantity prices on repuest.

## Reliable Snub Deadends

For use on ACSil without armor tape.

Develops approximately the strength of the conductor and distributes the strain equally on all strands. The spiral lorm carries the snul principle to full advantage.
Lasy to install; has enough margin of holding power so that moderate tightening of the clamp develops the full strength of the wire.

The light weight of the clamp minimizes vibration fatigue strains and probongs the life of the conductor.

For sizes 2 or I ACSIR Wires.
No. 420 Shipping Weight $11 / 4 \mathrm{lhs} . . . . .$. . . . . . Each $\$ 1.42$

## Pulling Hook for Snub Deadend

No. 9054-Pulling Ilook for Snul, Deadend.... Each \$0.75

## Reliable Strandvise With Stainless Steel Bail

For deadending galvanized, corrosion resistant or stainkess sted suspension strand; guy strand; static wire. All grades and all tension ratings.

## Reducer Strandlink

## Reliable Insulated Tension Splices

Consist of two straightline splice units attached to an insulating section of strong, tough glass melamine with high, dielectric strength, low moisture absorption and great chemical stability. Convenient for sectionalizing secondaries, for secondary banking, for series street lighting and wherever a break is needed in the line. They will develop full line wire strength and can be installed on existing construction without splicing in an extra piece of wire or resagging the line.

## For Copper Wires

## Reliable Reducer Splices

These combination splices will save money in urban distribution where a line drops a portion of its load and the next smaller wire size will carry the current flowing through the rest of the line.

For Copper Wire Combinations

## Reliable Straightline Splices

These splices will break soft, medium or hard drawn copper, solid, three-strand, or seven-strand at approximately its full strength. All have screwdriver slot release.

Reliable Straightline Splices
" 55 " Series Tension Splice For Copper Conductors

A new splice designed to prevent improper installation of stranded conductors. Conductor ends reach well past the gripping jaws. Factory-installed pilot cups jrevent jaws from gripping conductor until conductor is "home".

## " 55 "' Series Feed-Thru Type Tension Splice For Aluminum Conductors

Heat treated aluminum tubes, housing heat treated aluminum gripping chucks make up these tension splices and deadends for all aluminum solid and stranded conductors. These same splices and deadends are also suitable for aluminum alloy conductors.

Only splice cat. nos. AL61, AL41 and AL21 for solid conductors have release slots. Starting with cat. no. AL5547, all splices for stranded conductors are " 55 " Series feed-thru type with pilot cups. Strand end is enclosed by cup and guided through gripping chuck to center stop. All splices are greased and individually packaged at the factory.

## Reliable Split Cable Sleeves Tinned Copper

Conform to E.E. I. recommended specification TID-8, 1910, for straight timned copper conneetors for stranded conductors. Smoothly tinned; easily soldered.
For use on round or sector cable. Dead soft anneal permits tight clamping on conductor lefore soldering.

Squeez Sleeves and Tools with standard dies are made to the close tolerances characteristically neessary for the work to be done. Slecesesizes, as well as die groowe dimensions. are pro-deternined by the size and tensile strength of the wire to be joined.

All types of Reliable Squeez Slecves except Squeez Taps, are internally impregnated with a dispersion of fine, sharp silicon carlide particles to assist holding ability. The eleetrical properties of a made-up joint are highly efficient. The resistance of a made-up joint is less than an equal length of wire. This high electrical efliciency is stable.

## Reliable Concentric Cable Clamps

## Flexible Bail Type

Low cost damps that hold the cable securely under all conditions withont bending or smbbing, or otherwise damaging the insulation. Have a large margin of strength over field requirements, are easy to install and neat in appearance.
Made of non-corrosive materials - the phosphor bronze bail is a universal attachment for racks, wire-holders, eyebolts, hooks, messengers, etc.

For Round Conductors

## Reliable Telephone Drop Wire Clamps With or Without Stainless Steel Floating Type Shim

All-Stainless steel Clamps for general purpose nse (including Coastal), and economical combination Stainless and Aluminum Clamps for "normal" areas.

Advantages of floating type shim are: (1) Permits smoother clamping of the drop wire; (2) Clamps sets-in readily at initial installation yet will compensate for further loading and (3) Plain floating shim makes removal easy and prevents damage to insulation.

## Chance Universal Splice Tools

I ised in conjunction with Nico-Press splice tool or with any automatic splices.
M4455-52 ( niversal Splice Tool. . Each \$12.25

Model 12-A
Designed primarily for installing Ileoa Tubular Compression Acessorites on distribution line conductor. Twelve tons thrust can be developed by this portable hand-operated compressor.

Withal C-head capable of being rotated through 180 degreess, the emmpessor is easily hoohed over conductor or acesesory. Dies are advanced, closed under compression, and rit racted by simple manipulations at the compressor handles. An andible salety value operates when the compression is completed.

Veoprene covering far body and handes is reommended to provide mechanical protection for lool as well as guard against contact with live parts. It is not intended to athord protaction to operator for hot line work.

The Model 12-A may be adapted to use with "Hot Sticks."
Matal case provided for the eompressor contains sted rack fir dies.

## Reliable Squeez Tools

The Reliathe Squer Tomls arr made in two types. The Number 1, 2 and 10 tords are rugged tognle type touls which oprater smeothly and easily. yet which apply a maximum anount of pressure on the sheve. Can be ensily and acenrately adjusted. The Number 3 towl has Vinyl pliastisol handles. Other wols available with insulated handles, at additional cost, when sperilied.

 manhole wall by $16 \times 1$-inch expansion loolts or No. 2: 16 Awhor [Bolts. Cable rack extensions for moming racks away from wall are available. I2 grape pressed sted hooks will accommodate from one to four cable rack insulators installed as shown in the above illustration. Insulators No. 2llt and 211.5 occopy the same hook length and are interchangeable. "Hat is, No. 2111 designed for $1^{3}$-inch cable requires 41 inchos of hook longth, and No. 21 [5, while designed for $25 / 8$ ineh cable reguires the same space.

When more than one insulator is used, they are generally placed an inch or so apart to provide electrical and mechanical clearance. A stop is provided on each hook to prevent the insulators from sliding olf the end.

## Hubbard Cable Rack Extensions Hot Galvanized

For mounting racks away from the wall. Racks mounted on extensions take approximately $41 / 2$-inches less wall space than is needed for the rack. If extension is turned around and mounted, it will occupy 10 to 13 -inches more wall space than the length of rack. Mounting holes are for $1 / 2$-inch bolts. Order two extensions for each rack to be mounted.

## Hubbard Underground Cable Racks Hot Galvanized

The Rack sections are made in three lengths which can be combined into almost any desired length. Made from $11 / 2 \times 9 / 16 \times 3 / 16-$ inch open hearth steel channel, strong enough to support the heaviest cable. Fasten to manhole wall with $1 / 2 \times 4$-inch Peirce Expansion Bolts. The hooks are cut from open hearth steel $T$ sections and have a smooth, well rounded top surface $11 / 2$ inches wide which will not injure the sheaths of cables. Hooks are easily attached and, with the weight of the cable on them, hold securely to the channel back.

## Locktype

Designed to allow for variations of cable spacings where desired. Hooks are certified malleable iron, and lock into place easily. Locktype desigu eliminates loose, wobbly fits and insures minimum movement in all directions. insulators are locked on the hook by a stop at the onter end.

Heavy Type
Offset at the lower end to permit the joining of successive racks vertically. lacks may be mounted to manhole walls with two $1 / 2$-inch by 4 -inch expansion bolts or two No. 2246 anchor bolts. Insulators fit snugly over the pressed steel hooks and are held in place by the weight of the cable.

## Locktype Racks

Rack Section - $3 / 8 \times 13 / 4-$ in. Steel

## Reliable Steel Cable Grips Single Eye Luffing

Preferred by some operators as the eve lies flat against the cable when strain is applied.

Vote：When ordering grips，please specify outside diameter of cable．

Quantity prices on request．

## Natco Underground Clay Conduit

This conduit has many features that make it ideal for cable protection. Made of special highgrade clays, vitrified into a tlint-like rock and glazed to smooth glass-like surfaces. It will not soften or swell, deform or disintegrate on exposure to heat. moisture, stam or chemical attack. Absolntely free from caustic alkalis, acids and organie compounds. Protects cable from corrosive soils or gromed waters, from cinder fills or chemical wastes. Will safely carry all normal street loads and stand up under severe traflic vibration. Also permits immediate back-filling of trenches.

Natco Standard Single Duct Conduit
Adapted for high tension power lines, single cable terminals or for low ternion laterals, as in telephone or signal lines.
When building יp duct banks it provides two heavy insulating walls between adjacent cables, and permits breaking or stagrering of all joints throughout duet bank.

Individual duct lines, in approaches (o) manholes, can be splayed and separated. The four outer sides are scaritied lengthwise to provide anchorage for bedding mortar. Inmer ediges of duct entrances are beveled and smoothed to eliminate projections and make pulling of cables safor and casy.

Certain shapes of symare bore single duct have throurh dowel holes in corners for use of steel dowel pins for assembling, centering and aligning duct lines.

## Natco Standard Multiple Duct Conduit

For telephone, telegraph, railway signal, fire alarm and low tension light and power service.

Provides longer lenerths and multiplicity of duct holes economical and quickly installed.
The $31 / 4 \mathrm{in}$. is the standard bore; $31 / 2 \mathrm{in}$. bore is for certain municipal installment; $41 / 4$ in. bore is the over-size type for most telephone service and certain low tension power and lighting systems.

All above have an adequate number of dowel holes for assembling and aligning duct holes.

## Natco Socket Joint Single Duct Conduit

This duct is self-centering and provides positive alignment, lays up fast and can be installed liy ordinary labor.
May be readily troweled or sealed with cement mortar. Especially adapted for single duct lateral lines and duct bank construction.
*Nominal Bore..In. $31 / 2$ Round 4 Round $\quad 41 / 2$ Round Length......... In. $18 \& 2424$
*Actual size of duct hole $1 / 8$-in. larger than nominal.
Prices on application.

## Natco Scored or Split Conduit

These ducts can be split apart on the job and used for repairing or replacing duct lines without the necessity of removing cable. Split sections can also be used to enclose cable joints or splices instead of building manholes.

## Natco Factory Split Clay Conduit

Before Reassembly

After Reassembly

This new split conduit is now available already split apart and reassembled at the factory and securely banded and held together in its original position by means of steel straps until ready for use. Has diagonal marking on one side of each piece to insure reassembly in their original position.

Saves labor and breakage and loss in splitting by inexperienced workmen. In convenient lengtlis for easy installation.

Note - Bore sizes $31 / 2$ and $41 / 4 \mathrm{in}$. in 18 in . lengths made special to order only; 36 in. lengt hs made only scored to split. Prices on application.

## Natco Mitered Conduit

This shape provides a simple and flexible means of constructing perfect curves in underground lines of clay conduit. It is made in one segmental form - in all single and multiple duct shapes and in either flat or edge positions.
Can be used to construct simple or reverse curves in either horizontal or vertical planes.

Only one mitered shape is required for any curve from 10-ft. radius up. The radius is varied simply by interposing straight short pieces between the mitered pieces. The arc or angle of the curve, from 3 degrees up, is governed by the total number of pieces used. Joints are all uniformly even and tight fitting and cables can be easily pulled through the true, easy curves thus formed.

Eliminates the need of manholes at bends or turus and especially at approaches to central offices from street or alley.

Minimum radius 10 ft . Angle of section $3^{\circ}$. Requires 30 pieces to a $90^{\circ}$ curve. Approximate length $6 \times 65 / 8$ in.

Note - Mitered conduit in smaller or larger radii made special to order.

## Natco Branch Conduits

One end of this conduit is the same shape and size as standard conduit, while at the other end the individual ducts are more widely separated by means of double wehs which permit aligmment with abutting branch lines.
This conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line.
Such a division is highly advantageous in splaying main duct lines for entrance to central oflice huildings or to manholes, or in straddling pipe lines or other underground obstructions, or for crossing viaducts or bridges where shallow duct lines are required.
Main duct lines may be splayed vertically so that duct will enter cable vault of a central office building approximately in line with the cable racks.

Correct alignment of duct openings and tight joints are provided - no cutting, fitting, or breaking into main lines, and all accomplished without the necessity of expensive manholes.

| No. Duct Holes | Type | Length over all 24 in . |  | NomInal 8ore In. |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |

| 9 | 3-6 | 1 3-way and 16 -way | 5490 |  | 5890 |

Note - Also a vailable scored for splitting apart.
Prices on application.

## Natco Transposition Conduit

Transposition conduit solves construction problems presented by undergromind street ohstructions and facilitates changing the position of cables on approaching manholes, cable vaults, viaducts, bridges or other crossings. Alsoprovides a means of changing the overall heirht of condnit lines wilhoul interruption thereto and without the necessity of expensive manholes.

The position of ducts and cables in a multiple duct couduit line can be transposed either a quarter turn of $90^{\circ}$ or a half turn of $180^{\circ}$. Direction of twist may be cither right or left hand or a combination of hoth.

| NomInal Bore <br> In. | Degree of Twist | No. Pleces In |
| :---: | :---: | :---: |

## Natco Pipe Connectors

Single Duct

Two-Way

Three-Way

Rear Vlew of Connector Ready to Receive Conduit.

For connecting clay conduit lines to cast irm or steel pipe lines as in pole risers, or to enter buildings.

They are made of cast iron. One end shaped to receive the end of clay conduit line, the other end reamed to receive the cast iron or steel pipe lines.

When ordering-Specify whether pipes are cast iron or steel, and if steel, whether threaded or slip joint.

| Type Connection | Single Duct | 2.Way | 3.Way |
| :---: | :---: | :---: | :---: |
| 31/4-in. Bore to 3-in. Pipe | 9020 | 9022 | 9023 |
| $4 \frac{1}{4}$-in. Bure to 1 -in. Pipe | 9040 | 9042 | 9043 |

Prices on application.

## Call Graybar FIRST For . . .

'This illustration shows the conversion of a 4-way multiple duct line into two 2 -way multiple duct in an edge position, one of which is flexed or curved to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted $90^{\circ}$ from an edge to a flat position in a distance of 8 ft . and then continued straight on in the form of a standard 2 -way multiple duct conduit - in a flat position.
(B) One-piece 4-way type 2-2 branch conduit 2 ft . long (for dividing the 4 -way line onto two 2 -way lines).
(E) Six pieces of 2 -way mitered conduit - edge position $3^{\circ}$ 10-ft. radius, $61 / 4 \mathrm{in}$. long (for llexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is $18^{\circ}$, but any angle of flexure divisible by three may be attained by varying the number of mitered pieces).
(II) One-piece 2-way standard conduit 2 ft. long (laid in edge pusition to extend the flexed 2 -way line on toward the pole).
(R) One cast iron 2-way connector for 3-in. wrought iron pipe.
(P) Four pieces of 2 -way left-hand transposition conduit 2 ft . long, $221 / 2^{\circ}$ (for transposing the other 2-way line $90^{\circ}$ from an edge to a flat position).

## Natco Dowel Pins

Generally used for joining and aligning individual sections of conduit.

All multiple duct and some single duct conduit is made with not less than two conlinuons dowel holes large enough to accommodate these pins. Two pins are used at each joint or for each piece of conduil, regardless of size.

Pressed steel pin, with integral center flange.
No. $\mathbf{9 0 5 0} \ldots$. . . . . . . . . . . . . . . . . . . . . . . . . . . . . Size 5/16 x 3-in.

## Natco Wrapping Tape

A special prepared tape which is frequently used for wrapping joints before applying the joint mortar.
It adheres closely and firmly to the conduit surfaces, and aids in waterproofing the joints.
Made of paper with a waterproof paraffin coating.

Especially valuable when installing conduit duct in trench, subway or masonry structures before pouring concrete encasemeut.

## In Rolls of $\mathbf{1 0 0}$ Linear Yards

No. 9060 - Width 4 in. Weight per roll 8 lbs.
No. 9061 - Width 6 in. Weight per roll 12 lbs.
When ordering specify total number of yards required.
Prices on application.

## Orangeburg Fibre Conduit

This Fibre Conduit has been used for many years for underground communicalions and power circuits, and has demonstrated its ability to give maximum, permanent, low-maintenance service under conditions that expose ducts to attack from ground waters and chemical wastes, both acid and alkaline.

Its first cost is low; it is light in weight, yet amply strong to resist breakage; can be transported to the job in large truck loads; one man can carry several lengths at one time.
The material is easy to cut and work. Angle couplings, bends and other useful filtings are available to make installation simple and economical.

Taper Slecve Joint
The uniformly long sections and readily assembled taper sleeve joints make for labor saving and low installed cost.
Protaction from Cable Sheath Alrasion - The smooth bore and alsence of any harsh materials in the composition of Orangeburg Fibre Conduit offers better protection against abrasion or scoring of cable sheath.

Protection from Pulling Tension - The coeflicient of friction is lower in this conduit than in other types of duct material so that pulling tensions are kept at a ninimum.

Published data made by one of the large utilities, reveal the following coeflicients of friction for a large actual installation recently made in which oil-filled cable was used:

| Size of Cable |  |  |  |
| :---: | :---: | :---: | :---: |
|  | SIze of Duct | Coefficient |  |
| $300,000 \mathrm{CNI}$ | $21 / 4-\operatorname{In} . \mathrm{O} . \mathrm{D}$. | $31 / 2-\mathrm{In}$. | $.25-.30$ |
| $650,000 \mathrm{C} .1$ | $21 / 2-\ln . \mathrm{O} .1)$ | $4-\ln$. | $.25-.30$ |

Protection from (able Sheath Corrosion - The tight laper sleeve joint and the impermeable wall of Orangeburg Filore Conduit protect the cable by preventing infiltration or corrosive ground waters through the duet structure.

General Iroperties - Composed of $2.5 \%$ wood fibre and $75 \%$ of coal tar pitch. Wall sections are homogeneous and impregnation is uniform throughout.

## Specifications:

And many Puhlic Litilities Specifications.

## Orangeburg Standard Conduit - Type I

## For Installation with Concrete Encasement

For main distribution, high tension, and downtown locations.

## How to lay Type I Standard Conduit:

Tier-By-lier Method-A fundation of conerete is first placed on the bottom of the treneh which has been graded. The thickness of this hase is gaured by grade stakes which have bern placed in the center of the trend. (On this concrete base the bottom tier of ducts is laid, the horizontal separation of duets being maintained by wooden or metal combs placed 3 to 5 fit apart. The space between the ducts of this first tier is then filled with concrete and the ducts covered to the top of the eomb separators which are then removed and used on suceseding tiers.
Built-up or Monolithie Method: This method utilizes plastic or precast concrete separators which are used to erect a self-supporting structure with the conduit in position before the concrete is poured. For sparors (Bridge somarators) see following pages. For more detailed inliormation contact Graybar.

## Orangeburg Nocrete Conduit - Type II

## For Installation without Concrete Encasement

For honse conmections, laterals and extensions; airport, street and parkway lighting, fire alarm and signal systems; industrial and institutional grounds.

This comdnit has three prime characteristics; ( $\mathbf{A}$ ) mechanical strength; ( B ) ability to endure permanently, and (C) give lasting cable protection. It is also immune to suil corrosion and electrolysis.

## How to Lay Orangeburg NOCRETE Conduit:

## Trenching:

Dig not hess than $1-\mathrm{in}$. Ivelow desired grade. I ise template to detect high spots and holes. Fill holes and depressions, tamping thoronghly.
place abont 4 -in. selected backlill, free from stones, and tamp lightly.
Bed the Nocrete conduit in the selected back fill $1 / 4$ to $1 / \frac{1}{3}$ of the conduit diameter. Ihder no circumstances should bricks or other supports be used to bring conduit to grade.

After conduit is leedded and checked for grade, ad-
 ditional selected backfill is phaced by shosel at sides of conduit and tamped. By carefin tamping at this point. the conduit can support a much greater load, and is less likely to be sulsequently disturbed or shifted. More selected backfill is now placed, and lightly compacted by tamping with shovel or walking over it, compacting the soil so that subsequent back-filling will not allow stones to damage conduit. (No large boulders should be put back into the trench.)
The trench may now by backfilled by any conventional means-bulldozer-loader-etc., and the Nocrete conduit is protected.

Prices on application.
Orangeburg Fibre Conduit With Taper Joint Couplings

Orangeburg Conduit Reducers

For reducing from one size filore conduit to another. Available in all combinations from 2 to 6 in., inclusive. The standard reducer is taper sleeve joint at both ends.
When ordering specify whether for Standard or Nocrete conduit and sizes involved.

## Orangeburg Conduit Adapters

Adapters from metal pipe to fibre conduit are available in all combinations from 2 to 6 in., inclusive.
The standard adapter is taper sleeve joint at the fibre end and threaded for metal piper size specified. Can be supplied strainht lore for unthreaded metal pipe.

When ordering specify sizes and types.

Orangeburg Conduit Bell Ends

For use at conduit terminals in manholes, at substations, elc.

2820-6 3-In. Nocrete
Prices on application.

## Orangeburg Spacers

## For Orangeburg Standard Conduit (Type I) Only

## Plastic Spacers

For building duct formations, preparatory to concreting, lightweight interlocking plastic spacers are available.
Intermediate spacers provide vertical and horizontal separation of $1,1 \frac{1}{2}, 2$ or 3 in . between outside walls of adjacent conduits. Base spacers provide a 3 in . separation between bottom row of ducts and trench bottom with 1, 11/2, 2 or 3 in . horizontal separation.

Spacers are made as a one-way unit with interlocking lugs, as illustrated, which permit assembly to the desired combination in the field.

If specified, spacers will be shipped already assembled in 2 , 3, or 4 -way combinations.

These plastic spacers are molded at high pressures and temperatures to produce a tough, lightweight spacer which withstands rough landling in transportation and installation.

One-half to one-fifth the weight of other types, the skeletonized structure provides "locked-in" construction. The

interlocking feature allows quick adaptation to field requirements and eliminates multiplicity of combinations in ordering.

Each spacer is marked to indicate conduit size and separation.

## Spacer Links

A horizontal separation greater than 3 in . is occasionally required to separate ducts carrying power and communication cables. T'o provide this additional separation, 2 in . spacer links are available. They are inserted between base or intermediate spacers in multiples required to produce desired separation, and are assembled with interlocking lugs in the same manner as regular spacers.

## Concrete Spacers

Where specifications refuire, concrete spacers for 2 to 5 in. conduit sizes, inclusive, may be supplied with $1,1 \frac{1}{2}, 2$, or 3 in. separation. However, transortation costs may make it more practical for the large user to make his own spacers. lnformation as to mix employed will be furnished upon request.

## Shipping Weights and Data

## On Orangeburg Fibre Conduit

## Economical Transportation

Orangehurg Conduit is transported most economically because it combines light woight with ample strength to resist breakage. The langest truck bodies can be loaded to maximum cubic carrying capacity, reducing trips and hourly costs to an almost negligible cost per fioot.

## Price Schedules

Orangeburg price schedules are based on total weight of material, including bends, elbows and items classified as fittings (both STA VDARD and NOCRETE); excluding items classified as accessories, such as spacers, etc.

## Shorts

The manufacturer reserves the right to include $15 \%$ leurths shorter than standard. Shorts are cut to even lengths -each piece is tooled and coupling is furnished. All are packed separately in any shipment to facilitate identification and easy count.

Class A (Orders- $30,000 \mathrm{lbs}$. (Minimum car) or over.
Class 13 Orders- 10,000 to 29,999 lbs.
Class C Orders- 9,999 lbs. or less.

## Packaging and Bundling

There is an extra charge for lundling Class $A$ and $B$ orders, if so specified. Class C orders are usually packaged for less than carload handling.

The weights listed are used for pricing computations only (approx. shipping weights).

Approximate Shipping Weights Orangeburg Standard Conduit

| Conduit Sizs, In. | Wt. Per 100 Ft . Lbs. | Min. No. of Feet to 30,000 Lbs. | Min. No. of Feet to 10,000 Lbs. |
| :---: | :---: | :---: | :---: |
| 2 | 115 | 26,100 | 8,700 |
| 3 | 140 | 21,130 | 7.114 |
| 4 | 200 | 15,000 | 5,000 |
| 41/2 | 210 | 12,500 | 4,167 |
| 5 | 300 | 10,000 | 3,334 |
| 6 | 425 | 7,059 | 2,353 |
| Orangeburg Nocrete Conduit |  |  |  |
| 3 | 270 | 11,112 | 3,704 |
| 4 | 360 | 8,333 | 2,778 |

Weights of bends and other fibre items are included in figuring minimum weights - such items on an order will decrease fortage in the conduit weight tables.

## Call Graybar FIRST For . . .

## Crouse-Hinds Traffic Signals

Front View

## Design

The Crouse-IIinds Company is offering a complete new line of traffie signals incorporating a really dusttight optical system. Reflector and lens assemblies will stay elean resulting in a more brilliant signal indication. This new optical system will retain its prak efficiency for the life of the signal.

Every detail in the design of these new sigmals has been carefully considered not only from an operational and maintenance standpoint but for appearance as well. Hinges and catches are concealed not only improving the appearance of the signal but eliminating protruding lugs which are casily broken.

## Materials

The casing, door, and hood are made of special silicon aluminum alloy, cast in steel dies under great pressure. Such construction insures a uniform and homogeneous casting of great strength, capable of resisting corrosive atnospheres, including salt air. Castings are extremely aceurate and similar parts are interchangeable on all signals.

The red, amber, and green lenses are selected especially for purity of color and high transmission. The outer surface of the lens is smooth, which makes cleaning casy, while on the inner surface there are prisms for distributing the light downward and to the sides.

## Dust-Tight Optical System

Signals are equipped with a complete optical unit for each signal indication. Each optical unit consisting of a receptade, reflector, lens and door, is kept free from dust by the use of specially designed gaskets between the component parts. Beam candle power is maintained at high levels indelinitely.

The reflector used is an extromoly aceurate parabolic reflector made of polished glass, silvered to form the reflecting surface. The silvoring is protected by electrolytically deposited ropper over which is placed a backing of baked enamel. Hiph efficiency Alzak finished aluminum reflectors can be furnished when specified.

The reflector is mounted in an aluminum spider which also holds the lamp receptacle. The left side of the reflector support ring is hinged to the casing, and one catch on the right accurately positions the assembly behind the lens. In a normal position, the reflector assembly is rikidly fastened to the casing and does not have to be disturbed for relamping. When access to the rear is wanted, it is only necessary to loosen the single catch and swing the reflector out ward on its hinges.

The optical system is designed to take the standard 60 -watt traffic signal lamp mounted in an A-21 clear bulb. Traflic signal lamps of 25,40 , or 100 -watt sizes may also be used.

## Body Construction

The bodies of the new Crouse-Ilinds signals are of unit sectional construction, which features an individual body casting for each optional system. This insures a rigid, compact casing which is dust-tight and watertight. Signals of two, three, four, or five sections may be built up as desired.

Unit construction, with complete interchangeability of parts, is of great benefit to cities using any quantity of signals, since any desired combination and arrangement of signal bodies can be made up locally.

# Crouse-Hinds One Section, One-Way Beacons and Signals 

## Without Motor Flashing Switch $\dagger$ With Amber Unlettered I.T.E. or Special Lenses

Crouse-Hinds one-way, one section beacons and signals are similar in all respects to standard traffic signals, except that they have only one section instead of the usual three.

All beacons except TSE-111DT are regularly equipped with amber, unlettered I.T.E. lenses.
Type TSE-111DT is equipped with WALK or ARROW lenses and is used for mounting beneath existing signals. They are furnished complete with $1 \frac{1}{4}$ inch diameter pipe nipple, lead gasket, and check nuts.

Type TST-111DT beacons are equipped with an auxiliary reflector and receptacle for illuminating an information or warning sign mounted on the supporting standard immediately below. Auxiliary reflector is designed to take any lamp not exceeding $31 / 8$ inches in diameter or $6^{15} / 16$ inches in length. A standard 100 -watt lamp is recommended. On the bottom of the type TST111) T beacon, there is a slip fitter for 2 -inch pipe, cast as part of the beacon base. Set-serews are provided for fastening it to the 2 -inch supporting pipe.

| Type |  | No. | Mounting | Lens | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |

| TST -111DT | l'G | 50475 | 2-Inch Post with Sign Reflector and (ilass | Amber | 87.50 |

Prices do not include incandescent lamps, motor llashing switches, or radio interference suppressors.

Beacons are furnished with KL9 removable sheet aluminum hoods. There is no deduction in price for the omission of hoods.
$\dagger$ Lenses of any standard color can be obtained without extra charge. Lettered lenses can be furnished at an advance of $\$ 2.50$ per lens in the price. For each lens omitted, deduct $\$ 2.50$ from the prices.

APrice does not include pole clamps.

# Crouse-Hinds Automatic Synchronous Controllers <br> Jack Mounted-Weatherproof Cabinets 

With Gear-Shift—Adjustable Time-Cycle, 40, 50, 60, 70, and 80 Seconds<br>10 Amperes, 115 Volts, 60 Cycles A.C.-6 to 15 Color Circuits, 16 Intervals

Type Ks-2
Mounted in Size 16 Cabinet

## Types KS-2 and GS-5 Non-Interconnected Synchronous

The non-interconnected type is for use at adjacent or isolated intersections. They will keep in step with each other and provide limited progressive traffie movement. They can run of hours a day, be shut down, or turned to flashing, hy means of time switches. All are equipped with reset circuits. At time of installation of controllers, if there is the possibility of future interconnection, the future-interconnected type should be purchased as the small additional cost would easily be justified.

## Type GS-5 Future-Interconnected Synchronous

This future-interconnected controller meets the immediate problem for cities desiring to install a signal system, but lacking sufficient money to purchase cable. The signals and controllers may be installed and the interomecting cable purehased and installed later. These controllers are similar to the non-interconneted type except they are designed and wired for intereonnection tater.

The terminal board is designed for interconnection; fuse clips for the interconnecting cable are furnished and the remote-control relay subbases for signal shut-down and flashing are installed and wired complete. The automatic reset circuit is also added.

Remote-controlled relays are not supplied with future interconnected controllers. They may be purchased at time of interconnection and mounted on the relay subbases.

## Type GS-5 Interconnected Synchronous

Type GS interconnected controller is the one generally used in congested portions of cities and on long thoronghfares. This system permits progressive signal operation and provides all of the necessary control features except control of the time-cycle from the master.

The following features may be incorporated in the system by running an interconnecting cable between the controllers, automatic reset, remote shut-down, remote flashing, and remote emergency all-red. One positive wire in the cable fur each remotecontrol feature, in addition to the common wire.

# Crouse-Hinds Automatic Synchronous Controllers <br> Jack Mounted-Weatherproof Cabinets <br> *With Gear Shift—Adjustable Time Cycle, 40, 50, 60, 70, and 80 Seconds $\dagger 10$ Amperes, 115 Volts, 60 Cycles A.C.-6 to 15 Color Circuits, 16 Intervals 

## Type KS-2 for Non-Interconnected Operation With Hand Reset Switch

Size 12 Cabinets Wood-Pole Mounting With Wood Pole Brackets

TYye 'Tss-20 has large diameter, widebreak. non-corrosive metal contacts and will hande an incandescent lamp load af 10 amperes. It is driven by a variable sped induction-dise motor, the magnetic cireuit of which is laminated throughont, thas giving high torque at low watlage input.

The speed of flash may be varied between 20 times a minute and 60 times a minute.
In addition to the motor flashing switch itself, a terminal bork with properly identifed terminals for all field connections is provided. A set of fuse clips for the hot side of the power line is mounted on the terminal block.

The entire switel assombly may be removed as a unit from the cabinet to facilitate installation.
Cahinet: Type Tss-20 motor tashing switch is mounted in a cast abminum, weatherproof cabinet, equipped with a heavy duty brass lock. The hinged door of the eabinet is equipped with a gasket to exelude dast and moisture.

Radio Interference Suppressor: Type TSS- 20 motor flashing switches are listed below with and without radio interforence suppressors.

Type GF Super-Trafflex Secondary Controller in Size 22 Cabinet

## Full Flexible-Progressive Control of Traffic

Crouse-llinds Trafllex Control system provides for a full flexible-progressive movement of traflic, in which the operation of the signals is determined by the traffic requirements at individual intersections. The time relationship bet ween adjacent controllers permits a smooth, unimterrupted flow of tratlic in all direetions at varying speeds.

## Trafflex Control System

The Trafflex control system consists of a Super-Trafflex master controller located at control headquarters, within or near the control area, and a Super-Trafllex secondary at each of the controlled intersections.

The Type GF Super-Trafflex controller is driven by the Cronse-Ilinds standard Trafflex motor which employs both driving and buching coils and provides for remote control of the time-rycle.

The Super-Trafllex master, which controls the speed at which traffic may flow, acts upon the Super-Trafflex secondaries, slowing them down or speeding them up as may be required, and keeps the secondaries in their proper time relationship with respect to each other.

When the time-cycle regulator of the master is adjusted to give a different time-cycle, the secondaries respond instantly to any change in speed control, always keeping in step. No synchronization the the master is required when the time-cycle is elianged.
This system provides for remote cont rol of the time-cycle, shut-down, flashing, emergency all-red, control of the offset from zero time, division of the time-cycle into the correct number of intervals, and automatic supervision of all secondaries.

Crouse-Hinds Trafflex system places in the hands of the traffic engineer means for controlling all phases of vehicular and pedestrian traflic.

This flexible-progressive control of traffic is the only method of traffic control which is entirely satisfactory for large interlocked areas. The system is simple to install, easy to maintain, inexpensive to operate, requires little maintenance expense, and may be readily extended as traflic conditions warrant.

# Crouse-Hinds Synchronous Traffic Signal Controllers 

## Type LS

Type LS Controllers can be supplied with one, two, or three dial-units. Each dial-unit can be set for a different time-cycle, a different timing-split and a different offset. All controllers are provided with jacks and wiring for three dial-mits regardless of the number originally purchased. Therefore it is ideal for use where a single-dial controller is sufficient at the time of installation but where future needs may call for additional dials.

Type LS controllers have separate dial-units each complete in itself. A complete controller consists of from one to three dial-units mounted on a sliding shelf, a face plate, a rear panel and a cabinet housing the assembly.

These controllers are available for non-interconnected and interconnected operation. These types are essentially the same and differ only in the auxiliary features for interconnection.

Type LS Three-dial

*All-Red IRclay Subhase, sulstituted for flashing relay subhase without extra charge.

## Extra Dial-Units and Accessories

## Crouse-Hinds Semi-Vehicle-Actuated Controllers

 Type SVA

The intersections of heavily-traveled major streets with minor streets on which traffic is relatively light present a special traffic problem. 'Traffic signals are required at such intersections to interrupt main strect traffic flow so that vehictes on the cross streat may enter the intersection in safet y. However, cross street traffic is usually intermittent at these intersections, and conventional fixed-time controllers do not always provide efficient operation.

Type SVA controller is especially designed for use at such intersections. It is of the semi-vehicle-actuated type and requires the use of vehicle detectors placed in the cross street. The contruller is so designed that the sigmal indications are green tumain street traffic until a detectur is actuated. Such actuation causes the main street green indication.

Interior VIew, Type SVA-2 Controller
with MNA-1 Amplifier

## Pedestrian Operation

In some instances there is considerable pedestrian traflic at intersections where SVA controllers are required. To provide protection for pedestrians wishing to cross the major street, the controller may be aetuated by pedestrian pushbuttons.

## Interconnected Operation

When provided with the proper auxiliary equipment, type sVA controllers may be installed in interconnected systems. Such controllers are equipped with automatic reset circuits so that the oflset relationship of the actuated cycle may be coordinated with the operation of other controllers in the system for progressive traffic movement. T'ype SV A controllers can be furnished for installation in type GS or LS interconnected synchronous systens. They are also available for use in Super-T'rafflex control systems.
For information and prices on type SVA controllers arranged for interconnected operation, contact GRAYBAR.

## Crouse-Hinds Pedestals and Poles

Pole with Ormamental Base and 4-Inch Pipe Shaft

No. KL2428,
For $11 / 2$-Inch Arms

Poles and pedestals on this page have an ornamental cast Feraloy base and a shaft of tubular steel.

The 34-inch pedestal has a shaft of either 3 or 4 inch diameter pipe, and is designed for mounting control cabinets. The longer poles, for mounting signals, have a tubular steel shaft of t-inch pipe with an overall height of from 5 to 10 feet.

Poles and pedestals shembld be mounted on conerete foundations. They require four foundation bolts, $3 / 4$ inch in diameter, 16 to 18 inches long. Foundation bolts are not included in the catalog mumers listed below.

There is a door in the ormamental base which is fastened to the base with machine serews. The opening of this door is $31 / 16$ inches high, $21 / 2$ inches wide at the top and $103 / 4$ inchess wide at the bottom. This large opening provides ample room for making splices.

## G-E Fluorescent Street Lighting Luminaiers

Form 202S

Form 202S (2880 lumens) is designed for lighting residential and sumbrban streets. The soft. dilfused fluorescent source scatters light in broad IEs Type I distribution pattern which illuminate streets, sidewalks, and adjacent bushes and trees. Long-life lamps with low power consumption provide the economical operation so necessary in suburban areas.

Application of units over roadway is now possible ly means of slip-fitter mometing. Applied over the roadway, unit provides excellent pavement lorightness and, hence, improved silhouette visibility.
Form 202s consists of aluminum hood; clear, acrylicplastic side-hinged grobe; hinged aluminum reflector, and interral-monnted ballast wired to terminal hoard. Unit operates two two-fort, rapid-start lamps that generate a total of 2880 lumens. Approximate projected area, 2 sq. ft.

## Form 204S

Form 201s ( 7200 lumens) is designed for lighting residential and light-traffie streets. Elongated fluorescent source can be elfectively monted over the roadway to produce excellent pavement brishtuss and. hence improved visibility. Luminaire produces hroad IES Type I distribution pattern. Low luminaire brightness means minimum glare.

Where mounting heights are restricted by pole height or overlapping trees, Form 20.14 provides a convenient and attractive solution.

Form 2015 consists of aluminum hood: clear, side-hinged. acrylic-plastic ghobe; himged almminmm rellector. and integralmounted ballast wired tw terminal board. I nit operates two four-foot, rapid-start lanns which generate a total of 7200 lumens. Approximate projerted area, 3.75 sq . ft.

Form 206S

For 206S ( 11.500 lumens) is designed for lighting primary traflic areas. This versatile unit, however, is ideally suited for other applications, such as medium business and shopping areas.

Easy to install and maintain. Form 2068 provides soft, diffused light with virtually um glare. Exceptional uniformity of pavement brightness, even under wet weather conditions, is afforded by this unit.

Form 206 S consists of aluminum hood; clear, acrylicplastic glohe; hinged aluminum reflector, and integralmounted hallast wired to terminal board. I nit operates two six-foot, rapid-start lamps which generate a twal output of 11,500 lumens.
Laminaire is slip-fitter-mounted and grobe is one-piece and side-hinged. Resilient gasketing material is used between hood and glohe as weather seal. Recessed double-contact-base lamps are casily installed in spring-loaded sockets. Approximate projected area, 5.8 sq . ft.

For further information contact Graybar.

## Form 4065

Form 406S (23,000 lumens) is designed for lighting highways and expressways, primary and secondary traflic and business streets, interchanges, parking lots, service areas, and other areas requiring a relatively high level of illumination.

This four-lamp unit provides soft. diffused light with virtually no glare and exceptional uniformity of pavement brightness which improves the overall appearance of street or area illuminated. Form 406s is slip-fitter-mounted luminaire with aluminum hood, side-hinged clear aerylic-plastic glole, and hinged aluminum reflector. Availathe with integralmounted multiple or series hallasts wired to terminal board, or series external ballast for pole-base momting. (For series circuits over $\mathbf{3 0 0 0}$ volts OCV , external ballasts are required.)

Form 406s houses four six-foot, rapid-start, recessed double-contact-base lamps which generate a total of 23,000 lumens. Approximate projected area, 8 sal. ft.

## Form 106U

Form 1061 is a luminaire specially designed for use at the relatively low mounting heights of underpasses and tumels. At such limited mounting heights. optimum visibility can be produced only by the combined low brightness factur (and high light output) of the Form 1061 luminaire. Properly installed, the units minimize brightness eontrast. thus reducing eye fatigue and inereasing visual comfort.

Correct application of this hminaire assures miform light distribution over the pavement and esperially over side walls and ceiling of the tumel or underpass. Designed primarily for mounting: (a) at the junction of ceiling and side walls; or (b) along the center of an arched ceiling. Where desired, a continuous line-of-light effect can be achieved with end-to-end positioning. Blaintenance and operating costs are minimized by the long life and low energy consumption of the fluorescent lamp.

Consists of an ahminum hood, specular-finished aluminum reflestor, and a scalloped acrylic-plastic globe for improved light diffusion. Easy servieing and relamping is assured by a side-hinged ghobe secured to the hood hy three sturdy tugrle-latehes. To prevent entrance of moisture, dirt, and insects, globe is gasketed and firmly clamped to the hood. Adjustable mounting hrackets permit adjustment of luminaire at various angles to the roadway.

An outstanding increase in performance of fhorescent street lighting is provided ly luminaires utilizing the newest development in lighting the Power Groove fluorescent lamp. Lumen output provided by the Power Groove lamp is shown in table.

## With Power Groove Lamps

| Luminaira | High Output Lamp Lumens | Power Groove | Percent Increase |
| :---: | :---: | :---: | :---: |
| Form 204S | 7200 | 12000 | 67 |
| Form 206S | 11500 | 18600 | 62 |
| Form 406S | 23000 | 37200 | 62 |

## Type I Light Distribution

## Forms 101RV and 101VR

Type RV is a high-elficiency optical assembly producing a two-way light distrilution (11s Type I) intended for center-of-street (or near-center) mounting. Wost effective for lighting relatively marrow residential and light-traflic streets where the eomony of 4000 and $6000-\mathrm{lumen}$ filament lamps at longer spacings, is desired. Alfords very good house-side and streetside shielding, and generally is reommended for illumination levels from 0.2 to 0.1 fort-cande.

The $101 /$ V luminaire consists of a $1 \frac{1}{4}-\mathrm{in}$. slip-fitter, diecast aluminum hood for internal wiring, an aluminum reflector, and a refractor. Available in spun-scaled, roller-lateh, and clamp-hand optical assemblies.

Type VR is a higheeficiency optical assembly producing two-way light distribution (IDS Type I) and intended for center-of-street (or near-center) momiting. Designed for long spacing on residential and very light-trallio streets using from 4000 to 10,000 -lumen filament lamps. Iamp is high in rellector prowiding excellent shichding on both honse-side and streetside of luminaire. Recommended where illumination from 0.2 to 0.1 ft.cenadle is required.

The 101 VR Inminaire consists of a $1 \frac{1}{4}$-in. slip-fitter, diecast almminum hood for internal wiring, an aluminum reflector, and a refractor.

## Types II and III Light Distributions

## Forms 101R, 101FR, 11050

The Type R optical assembly, utilizing a specially designed refractor, produces an IES 'Type II light distribution particularly suited for narrow streets. with luminaire mounted at side of roadway and overhanging pavement three to four ft. Filament lamps ranging from 2.500 to 10,000 lumens can be used in this optical assembly which is also ideally suited for all applications requiring use of IES 'Type III distribution on medium-width light-to-heary-traflic strects. arteries, and highways.

The 101 R luminaire consists of a $1 \frac{1}{4}-\mathrm{in}$. slip-fitter, die-rast aluminum hood for internal wiring, an aluminum reflector, and a refractor. A vailable with spun-sealed, roller-lateh, and clamp-band optical assemblies.

The Type SO is a modern, open reflector having an IES Type 11 light distribution. Specially designed for use with

2500-lumen lamps, at spacings normally used for residential streets ( 1000 -lumen lamps may be used by changing socket pesition). Mounting should he near side of roadway with three to five-ft. overhang. Shields used in suburban areas to minimize objectional light toward residencos. Shields redirect stray light into two major beams. The 110 SO luminaire has die-cast aluminum hood with integratly cast $11 / 4-$ in. slip-fitter, internal wiring, plur-in photoelectric control unit, and an aluminum relletor. The 110 hood is avalable with all other optical assemblies.

Type FR is a high-frepuency optical assembly which accommodates filament lamps up to 1.0 .000 homens and with appropriate reflectors can produce IIS Type II or III distribution patterns. Luminaires with FR optical assembly provide excellent uniformity of pavement brightness and are effective where high illumination levels are desired. Mounting at or near side of street is recommended.

The $101 F R$ luminaire consists of a $11 / 4-\mathrm{in}$. slip-fitter, diecast aluminum hood with internal linding posts, an aluminum housing with internal aluminum reflector, hinged roller-latch holder and a refractor.

## Type IV Light Distribution Form 101D

Type D optical assembly produces an IES Type IV light distribution and is best-suited for wide pavements, intersections, and area lighting. Side-of-street monnting is recommended; and lanps from 2.500 to 10.000 lumens can be used. Reduced luminaire brightness renders this unit advantageous for streets and areas having eonsiderable pedestrian traflic.

The 101I) luminaire consists of a $11 / 4$-itn. slip-fitter, die-cast aluminum hood for internal wiring, an alaminum reflector and deflector, and a rippled globe. Available with spun-sealed, roller-latelh, and clamp-band optical assemblies.

## Type V Light Distribution Form 101S

Type $S$ optical assembly produces symmetrical, or circular, light distrilution (IES Type V). Accommorlates filament lanps ranging from 2.500 to 10,000 lumens; and has its main application at strect intersections, auto parking lots, and in institutional or campus areas.
The 1015 luminaire consists of a $1 \frac{1}{4}$-in. slip-fitter, die-cast aluminum hood for internal wiring, an aluminum reflector and a globe. Available with spun-sealed, roller-latch, and clamp-band uptical assemblies.

## G-E Mercury Street Lighting Luminaires

Constructed with distinctive tilted design which is functional as well as attractive, improving optical performance and making the luminaire unusually easy to service.

Ghasware, lamp, and reflector are tilted to put mone light on the street and to provide greater accessibility for servicing. Ilinged glassware swings open when the roller lath is lifted, making interior of luminaire completely accessible. Reflector and glassware can be detached from unit without using tools.

Can operate on either conventional circuits with ballasts, or in series on the new Ballastless Wercury circuit. Type 2 and l'ype 3 distribution patterns available to permit various spacing arrangements on dillerent width streets.

Form 400

A high-efliciency mercury luminaire producing either an IES Type 11 or Type 111 distribution with proper selection of reflector. The 100 uses II250-A5, I 400 -AI, or II 100-EI mercury lamps (or their color improyed yersions) and is designed for use where high level of illomination is reguired, as on high-speed expressways, heavily traveled main urban traflic areas, and downtown "whiteway" lighting.

Consists of an alumimm housing and slip-fitter with provision for internal wiring, hinged detachable glass refractor, and an aluminmm shap-in reflector.

Two reflestors availalise: one for Ilis Type II and the other IEs Type 111 light-distribution patterns.

Designed for use with the new 700 or 1000 watt mercuryvapor lamps. Principal application is in large-area lighting, primary retail-traflic streets, and expressways.

Itas high fevel of illumination produced in ILS Type IV pattern. Application of Form 102 may be either single- or twin-momed, and both luminaire and lamp size may justify a moniting height in the $30-35 \mathrm{ft}$. range.

Designed for the 700 or 1000 -watt mercury lamps. The luminaire consists of a roller-lateh, hinged detachable glassware, aluminum internal reflector, and mogul maltiple socket for use with either clear or color improved lamps.

## G-E Constant-Current Transformers

## Type RO-2 and ROC-2

Type RO-2 constant-current transformer provides constant current to series street-lighting circuits with normal power factor.

Type ROC-2 is similar to the IRO-2 but has outdoor-type capacitors for high-power-factor operation. The ROC.-2 is reconnmended for long or heavily loaded distribution feeders where it is desirable to limit voltage drop and losses through minimum ha demand.

Morhanism designed with moving coil which automatically adjusts to various load factors. l'rovides a source of constantcurrent output which is neressary in seris's street-lighting circuits.

Designed to supply a variety of loads, regardless of whether they are incandescent, mercury, or lluorescent.

The weight of the Type RO-2 and ROC-2 transformers has been reduced. Less oil is used, and the internal mechanism weighs less than on previous models.

## How the Constant-Current Transformer Operates

The moving-coil. constant-current transformer is a variableimpelance device for regulating output current to a constant value through a large range of load impedance and with limited variation in primary supply voltage.

Its equivalent circuit may be considered as a conventional, low-reactance distribution transformer with external, selfadjusting variable series reactance.

This reactance is magnetic-leakage reactance and always adjusts itself to a value which, when added to the load impedance. permits constant eurrent to flow. The amount of reactane is determined by the moving-enil position, which in turn is maintained by the force of repulsion between the coils.

The desired ontput current sets up a definite corresponding force of repulsion which floats the moving coil in the position that produces this current. For any given set of conditions, a state of mechanical erfuiltrium is attained whereby the force of repulsion exactly halances the weight of the moving coil.

Where the transformer is fully loaded and minimum series reactance is needed, the moving coil floats near the bottom of the core window. As load is removed and more reactance is required to regulate current, the coil floats higher.

Changes of load tend to unbalance the equilibrium of forces by increasing or decreasing the force of repulsion .In a freely moving, well-balanced mechanism, these are immediately connteracted by the movement of the floating coil to a new position, which restores the mechanical-electrical balance.

## G-E Types IL and ILH Transformers Polle-base and Aerial Types

Type 11, is a series-to-series incandescent single-lamp transformer designed for use in constant-current series circuits. Provides a means of reducing high cireut voltage and permits the use of low-voltage cable from transformer to luminaire. Eliminates system outages otherwise caused by breahdowns between the main cireuit and the luminaire. Adequate insulation is provided for luminaries mounted on metal poles, and high-current, high-efficiency, concentratedfilament series lamıs may be used. Protects lamps from line surges.
"Fype ILII transformers are designed to provide the correct Starting and operating voltage for mercury lamps. High-power-factor multiple lag-type hallasts have capacitance added so that more lamps and ballasts may be used on a circuit. Series transformers are designed to isolate series circuits l'rom the luminaire and provide the necessary starting and ruming characteristics for mercury lamps.

Construction of aerial and pole-base units is the same, except for the addition of a satchel handle for mounting the aerial type. Leada are brought out through rubber taping sleeves in the cover.

Core is made of carefully annealed, high-permeability, nonageing, cokl-ralled silicon steel. lligh and low-voltage windings are wound and insulated separately, then inpregnated under vacumm before assembling to the core. Entire casing is filled with high-quality insulating compound. Case is constructed of a cast-aluminum cover spun-sealed to a one-piece drawn-aluminum can.

## G-E Film Cutouts

Rolled metal edge Rolled metal edge
makescutoutstronk makescutoutstronk
and easy ta install.

Smooth flat surfuces insure sood elextrical contact.

Stiff fiber insulation securely clamped, makes cutout mechanically sturdy. it will not fall apart

Fiber insulation ex
cludes moisture; cludes moisture; fication of rating. Oxidized copper disk pives excellent uniformity of dielectric value.
Indentation centers copper insert.
"All-roniud" contuct makes cutout pressurejroof.

## Enlarged Vlew of Film Cutout

An enclosed copper-oxide film cutout designed for use with individual lamps in series circuits to provide circuit continuity when the lamp fails. These cutouts are recognized for dependable operation and sturdy construction.

The dielectric value of copper oxide is carefully controlled for uniformity, and the film is not affected by heat or pressure. Oxidizing disk is securely enclosed in moistureproof aluminum and filer casing which resists damage and will not separate.

## G-E Electric Protectors

Type J-1A
protector for multiple
control circuit

Developed to operate in conjunction with a primary control switch, and its function is to open this prinary switeh as soon as an open circuit occurs.

Consists of two small transformers, a thermal switch, a relay, a set of disconnecting contacts, and a timing resistor. One of the two small transformers is energized by the control circuit and the other by the load circuit to be protected. Under normal operating conditions, the disconnecting contacts are closed on the multiplecontrol type, and open on the seriescontrol type.

When an open circuit occurs in the load circuit, the relay becomes deenergized, choses, and completes circuit. Then the thermal switeh will operate and open the disconnecting contacts on the multiple type (close on the series type) to de-energize the controller operating coil. This allows the controller contacts to open and de-energize the primary of the constant-current transformer.

After the open circuit in the load circuit has been repaired, the protector can be reset (reconnecting the transformer to the main system) by means of a reset lever conveniently located in the lootom of the casing.

This protector operates entirely in air and is housed in an attractive drawn-steel case. Operation is unaffected by changes in ambient temperature.

## G-E Photoelectric Controls Type $\mathbf{P}$

Strap-Mounted

Meter-Socket-Mounted

Turns streetlights on when needed, regardless of the time of day. Provides sensitive, low cost control of either series or multiple cirenits.
Automatically actuated by changes in daylight intensity, these controls provide either high-level or low-level illumination with six different units available. 'These simple-toinstall, reliable, and easy-to-maintain units are particularly suited for outlying districts not served ly series circuits. When applied in this manner, they effectively control individual luminaries from existing multiple circuits. Also used to control primary switeh on series street-lighting circuits.

## Series Circuit Transformers

Aerial and pole base type transformers are available for series circuit street lighting. Standard units are designed for a 6.6 amp. circuit, but can be furnished to operate on 7.5 . 10 . 1.5 or 20 amp. circuits. All units are comphetely weatherproffed, having a 300 -minimmm open circuit secondary voltage to insure starting in cold weather.

These transformers are insulated for series circuits $u p$ to $\mathbf{1 0 , 5 0 0}$ volts. A 22,000 volt test applied to every unit insures against failure in the field.

[^67]American Concrete Lighting Standards
Prestressed Stress-Spun conerebe standards are made by the centrifugal process and should not be confused with concrete posts made by other methods.
The Hy-Lite combination of prestressed steel reinforcement and spun pressure-dense concrete, produces a standard of great durability - highly resistant to damage in handling and severe exposure in service. Following a specially developed moist steam curing process, the standards are wetground and polished to expose the sparkling aggregate and produce a beantiful, lasting granite finish.
Precast butt foundations climinate the need for cast in the field foundations and anchor rods. saving time, material and money. Dainting is never required.

For Twin Brackets Sperify Twin after Catalog Number.
$4^{\prime \prime} \times 6^{\prime \prime}$ handhole with reinforcing frame and cover furnished extra upon request on Type No. 1 poles.

All poles furnished with nominal wall thickness of $.188^{\prime \prime}$ unless otherwise requested.
All poles furnished complete with anchor bolts, nuts and washers.
Bracket arm supplied with $114^{\prime \prime}$ slipfitter end unless otherwise specified.
For bracket, arm and base detaik, see page 1027.
*For Type 1-T Poles-the mounting height includes 20 " high transformer base.

Laminaires not included.
**Mounting heights are for poles with 6 ft . bracket. For 4 ft . brackets deduct 6 in. from mounting height and for 8 ft . brackets add 6 in .

Prices on application.

## Hapco Bracket, Arm and Base Details

For complete information and prices comtact (;rayhar.

## Union Metal Steel Monotube Poles

For Power Distribution

Fluted Pole

Monotube Power Distribution Poles are used for the same purpose as wood, structural steel, or sectional tubular poles. They are the product of more than 50 years of experience in namufacturing steel poles, and their construction is based on this practical experience plus sound engineering principles.

These poles taper uniformly from top to bottom, with the largest diameter at the ground line where the maximum strength is needed.

Monotule poles are of continuous one-piece construction made from the highest grade, open hearth steel. The exclusive cold-rolling process used in fabricating Union Metal Monotubes greatly increases the yield point and ultimate strength of the original metal. Nonotules combine great strength with flexilility. This feature of flexibility is doubly important in overhead wiring installations where ice, wind, and dead-end load conditions are present.

The Monotube pole achieves maximum ability to withstand shock and impact. Even when the yield strength has been exceeded, the pole bends rather than breaks.

Monotubes are made in two designs, round and fluted. A steel base, arranged to accommodate the foundation bolts, is securely welded to the lower end of the tube. The round design can also be furnished for embedment directly into con(rete. Doles are available in 11 gage, 7 gage, 3 gage, and 0 gage steel, and ground line diameters range from 6 to 14 inches.

Monotube power distribution poles can also be used in combination with other numicipal services, carrying combinations of two or more power and lighting circuits, st reet lighting circuits and luminaires, trolley span wire suspension, fire and police alarm circuits, etc.

No matter how specialized the requirements, Union Metal Monotube poles can be built to meet them, and with the added advantages of economy of installation and maintenance, great strength with light weight, attractive appearance with excep, ional utility.

Contact your nearest Graybar Office or warchouse for complete information on prices and delivery.

Printed information on various types of Monotube poles is available.

Round Pole

## Union Metal Steel Poles <br> For Slip Fitter Type Fluorescent Luminaires

These poles are recommended for use with $2^{\prime \prime}$ slip fitter type luminaires, each having a maximum weight of 110 \# and a maximum projected area of 8.5 sq . ft ., or an equivalent drag force of no more than 225 , at 100 m. .p.l. (101.6) winds in accordance with the National Bureau of Standards Handbook II 43, dated 1919 (National Electrical Safety Code). In hurricane areas pole sizes will be increased to meet local conditions.

The catalog numbers listed below cover 11 gauge steel. Contact Graybar for pole sizes for corner and dead end poles when used with overhead wiring.

The brackets as indicated mount luminaire at $5^{\circ}$. Tilts of $15^{\circ}$ and $25^{\circ}$ available upon request. The 2 -in. standard pipe brackets furnished are $21-\mathrm{in}$. longer than span indicated for mounting of slip fitter type luminaire. The other luminaires with less than 2.4 -in. slip fitter depth, add difference to bracket span.

Twin brachet poles are available but must be specilied.

The mounting heights indicate distance from top of foundation to center of bracket arm where luminaire attaches. The heights specified are for brackets with 4 ft . span. Add $2-\mathrm{in}$. for 6 ft . span and subtract $2-\mathrm{in}$. for 2 ft . span.

Please specify both design and catalog number when ordering.

Consult your nearby Graybar office for prices.

## Union Metal Steel Davit Poles For Slip Fitter Type Fluorescent Luminaires

These poles are recommended for use with $2^{\prime \prime}$ slip litter type luminaires, each having a maximum weight of $110 \%$ and a maximum projeeted area of 8.5 sq . ft., or an equivalent drag force of no more than $225 \#$ at $100 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. (101.6) winds, in accordance with the National Bureau of Standards Ilandbook 11 43, dated 1919 (National Electrical safety Code). In hurricane areas pole sizes will be increased to meet local conditions.

For applications other than those using underground wiring, consult Grayhar for complete information.

The bracket end is complete with $23 / 8$-in. O.D. temon, length to be specified.

Iland hole with reinforcing frame and cover available if specified.

Contact Graybar for applications requiring twin arrangement.

Note：＂lemplate prints showing spacing and projection of anchor rods are mailed upon receipt ol order．

Finll iuformation avail－ able from（iraybar on heam clamps，fittings． couplings，etc．

Poles are of such length as to allow for maximum clearance of 16 ft ．with maximum signal height of 1 ft ．and still maintain minimum sag of 5 per cent of span in span wire．

Poles chosen on basis of maximm total weight of span wire and control cable equal to 0.8 lbs ．per ft．ower entire span．Sag in span wire was assumed to be minimum of $5 \%$ of span in all cases．

Where signal is less than mavimum allowed weight， pole rake may be cut down proportionally．

These poles are ade－ quate to meet heavy load－ ing district requirements．

Union Metal Steel Monotube Traffic Standards

Design numbers include pole, pole shims. anchor rods, $4^{\prime \prime} \times 61 / 2^{\prime \prime}$ hand hole frame and cover, pole top and complete mast arm, but do not inelude traflic signal and mast arm head.

The 10 ft . and 12 ft . mast arms do not have a center support.

Catalog numbers listed cover 11-ga. steel poles. Heavier ganges can be furnished, quotations on request.

Handhole with reinforcing frame and cover are not included as regular equipment. Must be specified if wanted.

Designs indicated include a Fabricated Steel Transformer Base. Ornamental transformer bases in cast iron or cast steel are available and will be quoted on request.

Bracket ends are arranged to accommodate a $11 / 4$-inch Slip Fitter Type Luminaire. A 2 -inch Slip Fitter arrangement or an End Knob with Plumbizer is also available.

Mounting heights given indicate distance from top of foundation to center of bracket arm where luminaire attaches. Heights specified are for brackets wilh 4 -ft. spread. Add 7 inches for 6 -ft. spread and 9 inches for 8 -ft. spread.

Bracket Arm is 2-ineh pipe.
$\star$ When ordering, specify both Design and Catalog Number.
Prices on application.

Hubbard Upsweep Street Lighting Brackets
Hot Galvanized

Hubbard Upsweeps allow the maximum heights in luminaire mounting. Thare is no pole space "wasted" by under or overhead braces. They can be momed at the pole top if desired. Actual mounting space on the pole is normatly less than 10-inches.

Ease of installation, graceful design, one-picee construction, and the absenee of aftendant acressories whieh demand warchonsing or handling, are a few of the advantages conjoyed by Ilubbard I pswerep Brackets. All sizes more than meet the strength reguirements demanded by the most severe conditions. Furnished with either thruaded ends for Levelite attachment, or plain ends for slip-litter attachment. Apecify when ordering.

Both Dhmicipal Type and Round Brace Brackets have the "Keyhole" features. These Brackets are similar except that the latter has a $3 / 4$-inch round brace welded underneath for additional strength. 'The Romod Brace Type requires no more mounting space than the Municipal type.

Hapco Aluminum Alloy Tie Rod Type Upsweep Brackets

Method of Mounting Hubbard Upsweep Brackets on

## Wood Poles

Simply "hang" the Brachet over the head of the bolt by means of the key-hole slot.
Then draw nut tight. Lag screws ( $1 / 2$-inch) are used in the lower attachment holes.

For metal pole attachment, there is no change in the design of the arm. The same arm may be mounted on either metal or wood poles. Bands are, as shown, constructed to attach to the top fastening of the arm and, utilizing two angle bolts, to attach to the botom fastening.

## Hubbard Pole Bands For Upsweep Street Lighting Brackets

Detail of a Bracket Mounted on a 4-inch Pole-Lower Band

All bolts are included, consisting of two standard $1 / 2$-inch machine bolts for the upper band, two special $1 / 2$-inch stud bolts for the lower band and one $1 / 2$ by $31 / 2$-inch machine boll with lock washer for attaching the bracket.
Ilubhard Athehment Bands are desiyned exelusively for installation of ILubbard I psweep, Brackets on metal poles.

I'rices on application.

## Hubbard Upsweep Street Lighting Brackets

## Hot Galvanized <br> Tie Rod Type

In the longer arms, more strength is needed to withstand both vertical and side loading. For this reason, Mast Arms of the No. 23108 series are installed with tie rods fastened to the side of the pole. These rods are an effective brace against side sway and, of course, make possible an extremely heavy vertical load. Conventional, key-hole type mounting is used as the lower attachment, similar to the Ilubbard One-liece type mounting.

The rise from the top of the lower attachment plate to the center of the pipe at its outer end is $285 / 8$ inches. Nominal Pipe Diameter $11 / 4$ inches. Also furnished in aluminum alloy.

Huhbard Truss T'ype Arms are designed to meet requirements for lengths bryond 8 feet, while at the same time embodying all the features of the ILubbard Line. This arm offers the same simplicity of design as the shortor arms. It rates much higher in all lenglls than the strength requirements demanded by the most severe loadim, rither vertical or horizontal. It is easy to install and is adaptable to either internal or external wiring.

As the illustration shows, this Truss Type Arm is supported by two $5 / 8$-ind double arming lolts (not induded).

Rise, lower pole mounting bolt to pipe center at outer end, 37 inches. Nominal pipe diameter, $11 / 4$ inches. Also furnished in aluminum alloy.

# Hubbard Street Lighting Brackets <br> For Fluorescent Luminaires <br> <br> Galvanized Steel 

 <br> <br> Galvanized Steel}

Supporting the weight of a heavier fixture is only one of three important requirements for fluorescent luminaire brachets. The design must also be able to withstand 100 -mile per hour wind velocities applied over a larger projected luminaire area as well as support the added seasomal weight of an increased snow-and ice-loading area.
"Ileavied-up" models of brackets designed for mercury vapor and filament type fixtures do not make satisfactory supports for fluoresent luminaires. As a result, a new design of brachets for fluorescent luminaires has been developed.

No. 23022 for use with luminaires with a maximum projected area not to exceed 1 square feet and total weight not to exceed 40 pounds.

No. 23032 for use with luminaires with a maximum projected area not to exceed 8 square feet and total weight not to exceed 110 pounds.

The hrackets shown abowe are a few of the additional styles of brackets mamfactured by Ilobhard and Company. For many years, llobhard and Company has olfered an outstanding servier in the desigut and mandefolure of material made to the customers' sperifications and requirements. We respertfully request that you allow us to be of service to you in any streel lighting sifuation involving sperial material.

For complete information and prices contact your nearest ©raybar Office.

## Hubbard Pole Plates Standard Type

Standard Type Pole Plates are generally used on Brackets of at foot lengths. They are formed of pressed stecl with a clamping arrangement which eliminates the necessity for threading on pipes.

No. 3701
For Wood Pole Mounting

No.
3701 3703

| Pipe Size | Mig. Hole |
| :---: | :---: |
| In. | Dlam. In. |
| $3 / 4$ | $9 / 16$ |
| $11 / 4$ | $11 / 16$ |

Ship. Wt Lbs. 100 22.5 365

## One Piece Type-Pressed Steel

These plates, designed for 11/4-imeh pipe Street ILood Brackets, are of one piece construction which insures the maximum strength of the No. 7 gauge stoed from which they are formed. The $91 / 2-$ inch horizontal pole bearing surface is espereally effective in eliminating side sway. No. 3933 is similar to No. 3901 except that the bracket pipe is held at a $45^{\circ}$ angle to the pole.

Approx. weight lls., 100 180.

Vo. 3901
No. $3933-1 \frac{1}{4} \mathbf{I}^{\prime \prime}$ pipe- Wt. -450 .

No. 3907

## One Piece Type With Porcelain Bushing

The No. soot Pole Plate is similar in appearance to the No. 3901 style shown above. The difference is that the V.. 3907 phate is furnished with a No. 3isl porcelain bushing for internal wiring. Clamping arrangement accommodates a $11 / 4$-inch pipe arm.

Approx. Ship. Wt., Its., 100
No. 3907

## Oval Back Type

Oval back type Pole Plates are made from certified Malleable Iron. No. 4728, with a flat back, is threaded for $3 / 4$-inch pipe. No. 4730, with back curved to fit the pole, is threaded for 11/4-inch pipe.

No. 4731 is simitar to No. 1728 in that it has a flat back. It is, however, unthreaded and is furnished with a set screw for $1 \frac{1}{4}$-inch pipe arm attachment.

All three sizes have a convenient opening at the base of the plate to permit internal wiring of the arm.

| No. | Style of Back |  | Olmensions - Inches |  | Approx. WL. Lbs., 100 Pcs. |

| 4730 | Curved | $11 / 4$ | 116 | 11/16 | 320 |

## Hubbard Levelite End Fittings

No. 3279

The Hubbard Levelite has been designed to provide a much needed flexibility on street lighting installations. Laminaires mas be leveled or purposely tilted in any directon, and permanenly lowhed in that position. Inder sperial conditions suth as building ohstructions, landsaping comsisting of trees which it is preferred not to trim, and instances where unforeseen thanges oncor after lines are in service, the lighting can be handed in a practical manner by levelite Ilevibility.

These individual units and continuons line systems are of heavy gauge steel construction with open end reflectors finished in "Tifetime" porcelain enamel; white inside and out. Rellecton's have apertured tops directing $2.5^{\prime}$ (nominal) of the light upward to reduce undesirable ceiling contrists. Reflector and eenter shield are of one-piece construction. Reflectors for 8 l't. units are two-piece for casier handling. Reflector maty he easily removed from chanmel by releasing two "Lok-Latch" fasteners. Lamps are held in place loy a pair of Benjamin patented "Springlox" metal-clad lampholders.

Continuons lines are made by joining two or more chamelsections with a channel coupling. 8 ft . chanmel-sections are normally supplied with a 4 ft . section at end of line if necessary. Units may be installed using knockouts on top of chamel or coupling. Sliding hangers are also a a ailable. Shielding angle is $27^{\circ}$; reflection factor is $8.5^{\circ}$ or higher. All units, listed, except 800 ma , meet RLNI standard Sl)-1. (lnits are wired with 6 in. leads; chamel-sections are finished in baked gray paint enamel.

## Benjamin Protected Fluorescent Units

General Specifications-Benjamin Protected lighting units are available in either the standard high quality construction or an unusually durable corrosion-resisting construction. All units have a one-piece steel housing finished in "lifetime" porcelain enamel; outside finish of housing is gray. Flat reflector plate in top of housing is removable for convenient access to control equipment; reflection factor is $85 \%$ or higher. All units have two weatherproof flanges on top of housing for suspension and entrance of wiring. Flanges are spaced on $171 / 2 \mathrm{in}$. centers and tapped $1 / 2 \mathrm{in}$. I.I's size standard; $3 / 4 \mathrm{in}$. when specified. Covers attach to one side of housing by three spring metal hinges. Three spring clamps securely and tightly lock other side of cover. TX units not available with covers.

Standard construction includes Benjamin SPlRIVGl, ()X steel body, lampholders and steel cover frimes. Both are finished in baked paint enamel. Corrosion-resisting units are supplied with monel metal SIPIINGIOX lampholders and a steel cover frame finished in porcelain enamel; with cover hardware of monel metal or stainless steel. Monel metal lampholders not available for starter type units with pre-heat hallasts. Units are supplied with 6 in . wire leads; metal-tometal loonds ground unit to conduit system.

## Smithcraft Industrial Units

Wherever the smitheraft A.L.S. is installed, many favorable production factors result : improved quality, areater accuracy, less fatigue, improved safety conditions, less employee turnover and alsentereism. The following quality lighting characteristics explain why the A.L.S. is "Lirhting for production" and why the unit provides today's most comfortable factory seeing.

High over-all efficiency.
$30^{\circ}$ crosswise shielding.
'Transverse uplighting* . . lights ceiling without "hot spots." (*Patent Reissue No. 23, 185. ) $19 \%$ of the fixture output is in uplighting.
The A.1..s. is more than 16 -in. wide; lamps are spaced 8-in, apart . . . results in extremely comfortable low brightness.
Continuous lines of lipht . . . all light from end to end . . . no darh areas between fixtures-lampholders are back to back.
In addition to these outstanding lighting characteristics, the A.L.S. is easy and economical to install and maintain and has several important safety features.

Lamps are roofed over for protection against falling dust.
Stays clean longer. Airflow construction minimizes accumulation of dust.
Reflectors are removed simply ly pressing conveniently located release buttons.

Iheflectors camot vibrate loose. Lamps are double-held . . . by lamp sochet . . . ly reflector.

Reflectors are rolled sections with box-like construction at both edges providing new strength and rigidity.

The A.L.S. is extremely easy and simple to install by any of the usual methods (rod, conduit, stem set, chain, messenger cable, etc.). The Smitheraft A.L.S. is fimished in White Supercoat Baked Enamel with a reflectance of $86 \%$.

## Al.S2-4012S <br> 2 F40T12RS <br> 35 <br> 55.88

Available with $800-\mathrm{MA}$ Rapid-Start for $8-\mathrm{ft}$. lamps.
Packed one complete unit to a carton.

Smithcraft Tech

No. TEC2-405RS

Engincered in accordance with today's most advanced factory lighting practice, the smitheraft Teeh provides approximately lor uplighting through openings in the top of the refledors. The smooth sides of the housing are constructed on an angle for maximum uplighting efficiency. Reflectors provide a shielding of $13^{\circ}$ and have a $V$-center construction that results in comfortable low-brightness and a shallow, compact unit. Finish of the Teeh is all white with reflectors of either porcelain or white bahed enamel. Through ant exclusive new Simitheraft monnting arangement, hangers are simply slid into the flamed channel which is the top of the housing, saving hours of installation time. Rods, chain or messenger cable clamps are easily attached to the hangers Large grip, spring-monted loops are given a simple quarter turn to release the reflectors.

## Wheeler Industrial Fluorescent Fixtures RLM Bi-Flo Upliter

Unique Wheeler construction incorporates center V channel, deep shielding side reflectors, with continuous openings above lamps. Provides $28 \%$ upward component, $30^{\circ}$ crosswise shielding.
Design permits a constant flow of air to circulate through fixture, redueing dust aecumulation.
Heavy ribbing at bottom, side panels are permanently fastened, one-piece center side panel support bridges entire fixture.

Improved spring-type latch, operated from either side with one hand, releases reflector quickly, positively, without use of tools.

Depressable type lampholders provide push-pull lamp insertion.

Lampholder supports are heavy gauge steel. Lampholder mounting plates have sloping skirt to pick up light and minimize dark ends.

All units interlock at ends for quick and easy continuous mounting and accurate fixture spacing.

$\$ 150$

* Painted Reflectors, high-temperature loaked enamel, are NON RLM.
$\dagger$ No existing RLLII standard.

## "D-8500 Line" Diffusers

## Single Length for Two 100 Watt, $96-$ In., T-12 Hi-Output Lamps

Designed for use with the 100-Watt rapid-start lamp. Provides move light per fixture, with a small component of light (approximately 12\%).
1)iffuser apertures also provide for necessary heat dissipation.
Ideally suited for medium to high mounting applications.
Instant starting-no starters required.
llas special depressible individual sockets. Lampholders are constructed of white I rea. Reflectors are porcelain enameled white outside and inside. Channel is finished in white baked enamel.

## Wheeler Commercial Fluorescent Lighting

 Fixtures "Flo-Liner"

Combines high elliciency and smart styling with great maintenance ease and eomonn.

When detached, louver assembly is automatically suspended below channel by supporting chains for quick, easy access to operating equipment.

2 lamp and 4 lamp units available for both single pin and bi-pin lamps.

Translueent plastic side panels and center panel give $85 \%$ efficiency with low brightness.

For more seeing comfort. $51 \%$ of the light is directed above the horizontal and $3.1 \%$ helow.

## Wheeler Specialized Fixtures <br> For Hazardous and Non－Hazardous Locations <br> Vapor－Tight and＂Series II＂Dust－Tight <br> 

All of these fixtures feature a one－piece body，rigidly formed and completely covered with two coats of vitreous porcelain enamel．
Flanges are gasketed to body to seal out dust and moisture．
Lampholders are the depressible turret type for positive protection against falling lamps．All parts are adequately grounded．

## Vapor－Tight－For Non－Hazardous Locations

Safety engineered units designed for use in locations where extreme dirt conditions，high moisture content，aeid or alha－ line atmosphere are prevalent．

## Wheeler Industrial Incandescent Fixtures <br> Alzak Aluminum Deep Bowl Units for Incandescent and Mercury Vapor Lamps

Designed to provide efficient qualit y lighting performance and a wide range of light distribu－ tions for all typers of medium and high bay instaltations．

## Reflectors

All reflectors in this listing are aluminum，with a hard oxide coating to preserve the reflecting surface and resist corrosive at－ mospheres．＇This superior finish results in rellectance of between $80 \%$ and $90 \%$ ．

A shielding angle of $35^{\circ}$ below the horizontal is provided in the incandescent types．

When mercury vapor lamps are used，the shiclding angle varies with the lamp type．

To reduce the heat around socket and wiring，all reflectors are designed with ventilating slots，so arranged as to prevent any meisture and dirt from falling onto the lamp．
Steel necks are provided for additional strenglh，zinc plated for superior corrosion resistance．

## Canopies

These reflectors are available in a variety of neek and canopy st tes．

Wheeler＇s Duratach construction permits the removal of lamp and reflector as a unit，without disturbing the canopy or wiring．

Whereler＇s Durex style permits the removal of the reflector， after the lamp has been taken out，without disturbing canopy or wiring．

Whererers Solid Neck st yle repuires the wiring to be loos－ ened from the socket before the reflector can be removed．

Duratach and Dures units are available with both pendent and outlet box style canopies．

Solid Neck units are equipped for pendant mounting，with an outlet box adaptor available as an aceessory．

All pendent types are threaded for $1 / 2$－in．pipe；threads for $3 / 4-\mathrm{in}$ ．pipe supplied when sperified．

## Accessories

A full line of accessories：wire guards，baffles，plaster and finish rings are avalable for such aphlications as store and gymmasium use．
For use with $300-500$ wat Incandescent and 400 watt Mercury Vapor Lamps．

## Benjamin "Turnlox" Two-Piece Reflector Units

Listed By Underwriters' Laboratories, Inc.
Units are composed of two separable elements: a hood with a wiring terminal base, and a reflector-lamp holder assembly.

The hood and reflector assembly are locked together by a three point bayonet coupling. Electrical and meehamical connection is made simultaneously with the engagement of the coupling. The terminal base in the hood is bached by a spiral compression spring that maintains the romtacts of the hood and reflector in positive electrical contact. Polarization is automatically assured by circular design of contacts which are hept clean by wiping action of engagement and disengagement.

Large, shallow wiring space in hoods allows ample room for casy wiring, no parts to be replaced after completing wiring.

Iloods with porcelain terminal base are availathe in thre styles-pendent, ceiling and angle. Hoods take either a medium or mogul base reflector-lampholder assembly.

Lampholder assemblies consist of a porcelain holder and a sted bayonet attaching plate.

Iloods are cast metal. Reflectors are life-time porcelain enameled steel; finished green outside, reflecting white inside; except "( ilasstee"' reflectors are white outside.

Rigid, heyless lampholders standard: for optional shockabsorbing lampholder (except on Elliptical Angle) add sulfis "SIIB" and \$0.28 to price. Pendant and Angle Ilood I nits tapped $1 / \frac{10}{\prime \prime}$ I.I.S. standard; except mogul hase Vlliptical Anvle Units are tapped $34^{\prime \prime}$ " standard. For $3 / 4^{\prime \prime}$ tapping add sulfix " ${ }^{3}{ }_{4}{ }^{\prime \prime}$ " to number. Ceiling llood 1 nits fit $31 / 4$ " or $\mathbf{l}^{\prime \prime}$ octagon boves.

## Benjamin Type RR Reflector Units Porcelain Enameled Steel <br> Listed By Underwriters' Laboratories, Inc.

Meets the lighting and service requirements of locations such as railroad yards, steel mills and industrial plants where equipment is constantly subjected to mechanical strain and the corrosive influences of smoke, fumes, grime, moisture and weather.
Type RIR thread consists of a $31 / 4 \mathrm{in}$. diameter, rolled metal thread attached to the reflector neck. Any type IR reflector will fit any type ISIS threaded hood.
The hoods have the lampholder included. Lower portion of the two piece lampholder may be removed for access to the heavy binding screws. Cast hoods are two piece, so the bottom half may be unscrewed for convenience in wiring.

Pendent steel units have a separable " $X$ " type fitting which allows the hood to he slipped back over the conduit for access to the lampholder. Cast hoods have set screw to prevent loosening of reflector.

Cast hoods finished in green paint enamel; steel hoods in green porcelain enamel. Reflectors are finished in life-time porcelain enamel; green outside, reflectors white inside.

## Benjamin "Socket-Reflector" Units

## Porcelain Enameled Steel

Listed By Underwriters' Laboratorles, Inc.

One-PleceConstruction With "X" Type Fitting

Weatherproof units for indoor or outdoor use recommended for locations where interchangeability and removal of reflectors are not a prime consideration.

The " $X$ " type separable fitting allows the porcelain enamel steel reflector to be slipped back over the conduit providing convenient access to the easily wired lampholder.

The fitting consists of a threaded lower flange, a threaded cap nut and two gaskets to protect the inside and outside of the reflector top. The lampholder is supported directly by the unit stem, while the reflector is held independently of the lampholder between the lower cast aluminnm flange and the cast aluminum cap nut.
Ihigid, keyless lampholders standard. For shock-absorling lampholders (except on elliptical angle), add suffix "SIIS" and $\$ 0.28$ to price. Units are tapped $1 / 2$-in. I.I.S. standard, except mogul base elliptical angel tapped $3 / 4-\mathrm{in}$. standard. For $3 / 4-\mathrm{in}$. tapping, add sulfix number with " $3 / 4$."

Reflectors are green outside, rellecting white inside; except Glassteel rellectors are white outside.

## Benjamin "High-Bay" Reflector Units Hoods, Lampholders and Fittings Listed By Underwriters' Laboratories, Inc.

Ceneral Specifirations-These units are for incandeseont and mereury bapor lamps with either porcelain enameded sted or Alzah aluminmon reflectors. Listings are for vented units. To order non-vinted units at the sanme price drop the "V" from the number. In 400 watt mercu"y vapor, and all incandescont units, venting is accomplished thru elongated slots in the meck; 1000 watt mercury vapor units have spacers between the neck and reflector.

Socket-Reflector - with a standard separable "X" type litting and mogul base lampholder. Unit tapped $1 / 2-$ in. I. P. size standard, $3 / 4$-in. when sperilied. (Cat. no. berginning with 5.)
'Turnlox-W Wentherproof bayonet type const ruction permits removal of reflector and lamp from hood as a unit for tasy maintenance. Includes mogul base lampholder. Cast aluminum hoods. Pendent hood units (Cat no. begimning with i) tapped $1 / 2$-in. I.I. size standard, $3 / 4$-in. when specitied. Ceiling hood units (Cat. no. bergiming with 9) fits $3 \sqrt[1]{4}-\mathrm{in}$. or 4 -in. octagonal outlet boxes.

Mercury vapor lamps will not operate on ordinary lighting circuits unless special fransformer or reactor equipment is used. Lamp, wire, transformer, or reactor are not supplied.

## Porcelain Enamel Units Spread Distribution

No. V5481

For general interior lighting. Spacing-to-monnting-height ratio is 1.0; distribution is spread with both incandescent and mercury vapor lamps. Steel reflectors finished in "lifetime" porcelain enamel: green outside. white inside, with a reflection factor of $85 \%$ or more. The spun steel neck bolts to the reflector. Std. 1'kg. quantity is 4 .

## Benjamin Pit and Tunnel Lighting Units

Availahle with either a plain or refractor glass cover which is protected by a guard. Units may be installed in walls, ceilings, floors or across wall corners. When installing units with refractor glass covers in pit side walls, the unit body need be tilted only 5 degrees from the vertical for satisfactory lighting results.
Where it is not possible to install the unit in the wall, ceiling or floor, it may be attached to supporting straps ly means of two lugs on the back of the body casting.

Finisled in Benjanin "lifetime" porcelain enamel. Reflecting surfaces are reflecting white, acid-resisting, porcelain enamel with a reflection factor of $85 \%$ or more. Sealed against dirt and water by neoprene gasket. Std. tapping $-1 / 2^{\prime \prime}$ I.P.S. at both ends; other tappings available.

Units listed as Vapor-tight by Underwriters' Laboratories. Where other than water vapors are present, installation is subjeet to rules of local inspection authorities having jurisdiction.

## Wheeler Industrial Light Reflectors

RLM Standard Dome
Reconmended for industrial plant lighting, railroad lighting, parage lighting and wherever rugged, serviceable lighting fixtures are required.
Fixtures consist of a canopy, socket and porcelain enameled eflector.
Canopies have aluminum screw ring which provides a sushion grip on the porcelain enameled threaded neck of -eflector. Canopies are short to allow exposure of socket for zasy wiring when reflector is removed. Finished in baked弓reen enamel.
All reflectors are interchangeable in all canopies and are lesigned to meet all mechanical and wiring requirements.

RLM Deep Bowl

RLM $\mathbf{3 0} 0^{\circ}$ Angle Type

Finish: Porcelain Enamel Green outside, White inside.
The four types listed below will fill the needs of the most diffirult and unusual lighting conditions.
KLM Standard - For general industrial lighting.
Shallow Dome - For platform, shed, warehouse and yard lighting.
KLMI Deep Bowl - For work benches and other locations where concentrated light is desired.
KLM $30^{\circ}$ Angle - For side lighting installations.
The high quality of material used in construction and the first grade porcelain enamel used in finishing assures long, uninterrupted service.

## Wheeler Improved Industrial Reflectors <br> Duratach

Modern. rugged construetion, ineorporating many new fratures for amazingly dasy, low-cost maintenance, plus complete interchangeability.
'To moment rellector assembly, simply push up into canopy and twist slighty. All medhanical and electrical commerdons are made simoltaneously by this ome simple operation.

Any Dusatach Reflecolor issembly can be inserted into ans Duralach (amopy without disturhing the wiring of the original installation.

Reflectors are durable porcelain enamel. Normally supplied green outside, white itside. They are also available "hite outside and inside on request.

Canopy and sorket assemblies include die-cast aluminum canopy, porcelain socket cap and socket body, medium or mogul base, a steel coupling, and attaching nuts and screws.
Once in position, the reflector assembly is kept from loosening by downward pressure of a unique retainer ring backed by a large coil spring within the canopy.

## Wheeler Reflector Canopies

## Reflector with Pendent Canopy

Canopy tapped $1 / 2$-in. standard, $3 / 4$-in. if speeified, at no ineroase in price.

Reflector with Dutlet Box Canopy
Canopy fits standard 4-in. Outlet Box.

Reflector with Side Dutlet Canopy
Canopy tapped $1 / 2$-in. standard.

Note: Provision is made formert standard nendant units to outlet box and side outlet mounting as slown above. Simply specify with "Outhet bex" camery or "Side (Outlet" canopy.

## Wheeler Vapor-Tight Pendent and Ceiling Fixtures

Designed to resist the deteriorating effects of vaporous and other adverse atmospheric conditions, for use where ordinary fixtures fail.

Lnits consist of a cast aluminum canopy cap and body. with choice of pendent or cailing top, socket, vapor-pronf glass globe, and an acid-resisting porcelain cmameled steel reflector.

All reflectors are interchangeable throughout the medinm base and mogul base range. Reflector is secorely fastened to the canopy for added safet y. Inique gashet bet weonghobe and canopy insures a tight, sealed mit.

Easy to wire and maintain. Simply remove the canopy cap from the camopy body to fully expose the socket. This
permits easy access to socket terminals for wiring and maintemance.
Campy for ceiling or pendent mountings. All aluminum canopy bodies supplied with pendent caps for standard $1 / 2-i n$. condait, or with ceiling caps drilled will two hodes for dit any standard t-in. outlet box. Conduit system is effectively sealed off from dirt, moisture or grases by stutling glamd buili info lixtures.

Suckets furnished in mediam base or mogul base. All sockets are heavy porcelain with large heads on eondact screws for easy wiring to terminals. A Wheeler "shock absorber" can be supplied at extra cost when specified.

## Benjamin Lampholder Extensions and Reducers

Llsted By Underwriters' Laboratories, Inc. Medium Base Extension
Permits use of 75,100 and 150 wat tamps in reflecturs designed for the next larger size lamp. It lowers filament of the lamps $7 / 8$ in., bringing the filament close to the proper position in the reflector lo ohtain maximum light output and eorrect distribution.

No. 91

No. 4396

Each \$0. 59

## Mogul Base Extension

Allows lampholder to the extended $21 / 2 \mathrm{in}$. and the lamp filament to be lowered eorrespondingly. 7.00 and 1500 walt incandescent lamp units may be converted for use with 300 and 500 watt hamps by addition of this extension. Body is porcelain with briss and copper contact parts.
No. 4396
Each \$2.06

## Mogul to Medium Reducer

Adapts mogul serew base lampholders for use with medium serew base lamps. When attached, the center combant is lowered $13 / 16 \mathrm{in}$. Both threaded shells are made of copper.
No. 98 No. 98. Each \$0. 69

## Benjamin Accessories For Reflector Equipment

## Strain Relief Cord Grip

Ataches to any lampholder tapped for $1 / 2$ in. I.I. si\%e, and accommodates any cord from ${ }^{3} \mathrm{k}$ in, $\mathrm{to}^{15}{ }^{15} \mathrm{~g}$ in. diameter. Two steel straps attached by machine screws to aluminumb hushing.
No. 1261.
Each \$0.39

## Strain Relief Watertight Cord Grip

Serves also as a watertight cord bushing for outdoor installations. Attaches to any reflector filting tapped $1 / 2$ in. I.P. si\%e, and accommodates

No. 1263.
... Each \$1.96

## Benjamin Shock-Absorbing Suspension Fittings

## Outlet Box Cover Aligners

Flexible joint allows unit to hang plomh from surfaces having up to $121 / 2^{\circ}$ slope. Fitting supported by steel cover which fastens to outlet box. Tapped 1/2" I.P.S.
No. 3366.
Each $\$ 1.67$

## Canopy Type Aligners

Supported by a strap with slots to slip over the sorews on the cars of $31 / 4 \mathrm{in}$. and I in. octagonal outlet boxes. Steel canopy is atlached lo the onter edge of the straps by a quarter turn to the right.

Finish is almmimm paint over electroplating, 'Tapped 1/2" I.P.S.
No. 3355
.Each \$2. 25

## Looped-Top Suspension Fitting

Cast metial housing, steel stirrup and a shock-absorbing steral wire spring. Finished in aluminum paint applied over electroplating. 'Tapped $1 / 2$ " I.P.S. (Female).
No. 6030
. Each \$1. 57

## Benjamin Stock-Bin-Lite Reflector Units

Provides uniformity of illumi-
 nation from top to bottom of the shelf or hin tiers in stock rooms, tool cribs and look stacks. Prevents direct glare from the filiament when looking down the aisles.
Reflector may be removed from hood by loosening two adjusting screws on side of hood and pulling down on reflector.
Deep-trough shape, steel refleetors finished in "lifetime" porcelain enamel, reflecting white inside and outside with a reflection fietor of $85^{\circ}$ ", or more. A V-shaped deflector bar is suspended below reflector.

Reflectors availalle in four mounting styles: pendent, angle. ontlet-box and feed-thru hoods.

| No.* | $\begin{aligned} & \text { Lamp Size, } \\ & \text { Watts } \end{aligned}$ | Diam., in. | Std. Pkg. | $\begin{aligned} & \text { Ship } \\ & \text { wh.'Lbs. } \\ & \text { Std.'PkI. } \end{aligned}$ Std. Pkg. | Each |

## Benjamin Master Sign Reflector Units

No. 5570

No. 5576

Used for lighting of standard and three sheet poster pamels, store and highway hulletins, roof and wall signs. Available in one-piece socket-rellector construction or two-piece anghe loom separable construction. Reflectors are porcelain enameled steel, green outside; also a a ailable white outside at same price.

Side outlet type of construction permits conduit to be led straight into reflector neck. Separable "X"-type fitting of Socket-leellecturs allows reflectur to be slipped bach out of the way for acess to the lampholder. Regularly supplied with Underwriters' listed one-piece porcelain mediun-hase rigid lampholder, with lampg grip to retard loosening of lamps under vilbration.

Two-piece angle hood arranged for base-up burning position making it possible to service from the gronnd. Reflector guickly removed by loosening two screws at top of the castiron hood. A set screw at conduit entrance locks reflector in position; also useful for attaching guy wire. All units tapped $1 / 2^{\prime \prime}$ I.P.S. Std.; for 3/4" tapping (same price) add sulfix "3/4".

Units possess strength in every part to withstand the pressures of internal explosions without breaking down or permitting flame, hot qases or sparks to escape and ignite surrounding atmosphere.
l'orcelain enamel steel reflectors attach to body of unit and are hedd in place by an aluminum retaining band. Inner auxiliary reflechors of aluminum, to prevent loss of light, are provided around neek of lamp. lloots have removable inspection phag for access to wiring terminals. Wiring connections are made to conventional binder-screw terminals of lampholder, which can be slipped out of the removable hood for easy wiring. The one-piece lampholder provides a barrier between the ghohe and hood so that explosions originating in either space camot be transmitted to the other.
Lampholder and enchosing-globe have metal gaskets formed on to them to seal effectively the unit at the hood and glone joints. All joints are close fitting, deep ilanged and threaded to sulficient depth to prevent escape of flame.

Reflectors are porcelain enamel steel, reflecting white inside, preen outside. Inner reflectors are aluminum, securely attached within unit bodies; polished roflecting surface on 100 w . units, oxidized on 150, 200, and 300 w . medium base units. Init hodies are cast aluminum, threaded at top for hood and boltom for guard. Giuards are cast alumimm.

Heat-resisting glass globes of clear glass, designed to withstand hydrostatic presure of 380 lls . per sq. in. minimum. Gilobe has formed-on metal masket.

## Benjamin "Il-G 600 Series" Dust-Tight Units

-Llsted by Underwriters' Laboratories, Inc. For Class II, Groups E, F and G Hazardous Locations Also Suitable for Class ill Locations

No. 657

Dust-tight, weather- and moisture-proof and suitable for installation in exposed or damp locations.

Units have one-piece, weather-proof copper casing tapped for $1 / 2 \mathrm{in}$. conduit. Fitted with removable, one-piece, easilywired, medium base porcelain lampholder with lamp grip. The glass globe threads into the copper casing and seats against an impregnated asbestos gasket. There is a choice of ghobes-plain clear, heat-resistant clear, and opal. Finish is natural copper. Guard-type units have removable heavy steel wire guards, welded and finished bright tin. Std. Pkg 10.

## Benjamin Type M Junction Vapolets

Listed By Underwriters' Laboratorles, Inc.

No. 6701

Water-tight outlet boxes for use in marine and seaboard duty and in non-hazardous atmospheric industrial locations where acids, vapors, dust, smoke and/or moisture is present. Box is cast iron finished in baked aluminum paint over electroplating: tapped for four No. 10-24 brass screws furnished to fasten cover. Cover is plain type made of heavy gauge steel; finish is baked aluminum paint applied over surfaces treated to insure paint adhesion and inhibit corrosion. Outside diameter is $11 / 2^{\prime \prime}$. Outside depth, including cover and rubber gasket is $29 / 16^{\prime \prime}$.

## Benjamin "6500 Series" Vapor-Tight Units

## Listed As Vapor-Tight By Underwriters' Laboratorles, Inc.

For use in locations where units are exposed to the deteriorating effects of non-combustible atmospheres containing corrosive fumes, vapors, dust, smoke and/or moisture. Lamp is enclosed in heavy glass screw globe. Single asbestos gasket between the hood and globe, and a gasket between the two sections of the hood assures a tight lamp closure. Plain clear, lieatresisting clear or opal glass globes are available.

Iloods are aluminum castings of two-piece construction designed to accommodate the non-corroding, threaded aluminum neck of the heavy gauge steel reflectors. Reflectors are finished in acid-resisting porcelain enamel, green outside and reflecting white inside. Std. Phg. is ten on medium and five on mogul base units.

lamps are not included with mits.

## Benjamin "II-G 8500 Series" Dust-Tight Units <br> $\Delta$ Listed By Underwriters' Laboratorles, Inc.

For Class 11, Groups E, F and G Hazardous Locatlons Also Suitable for Class III Hazardous Locations

No. 8500

Individually packaged, enclosed equipment for locations requiring dust-tight lighting equipment. Weather- and mois-ture-proof, and due to the prolection of the lamp afforded by the tlass screw globe, are valuable in food industries where there is danger of spoilage from breakage of uncovered lamps.
Acid-resisting, porcelain enamel steel reflector threads into the cast aluminum hood and is loeked in place by a set screw Imer auxiliary reflector of aluminum, to prevent loss of light, is provided around neck of lamp. Glass glohe serews into the reflector and is sealed to the hood by an impregnated asbestos gasket. A spring device prevents the ghobe from loosening. Cast hood separable for easy access to lampholder. Wiring simple. Unit tapped $1 / 2^{\prime \prime}$ I.P.S. Std. Std. Pkg. 10.

*llolophane Trade Mark.

## Holophane Industrial Lighting Units Holophane LOBAY* Units

A virtual standard of industrial lighting because of their high sustained efficieney. meedanical construction, and proper light distribution. The AL, numbers in both the incandescent and mercury vapor mits denote a spun-on aluminum reflector.

685 Series, Intensive distribution, for mounting up to $15-\mathrm{ft}$. 686 Series, Concentrating Distribution, for $15-20$-ft. mountings. 682 Series, Extensive Distribution, for uniform low-level lighting.
$\ddagger$ Medium base $6^{\prime \prime}$ l.c. lamp.

## Holophane LOBAY* Mercury Vapor Unit-No. 635-AL

A newly designed prismatic reflector for achieving the highest output from 400 watt mercury lamps.
Consists of a ventilated socket yohe and a highly efficient prismatic reflector with spun-on aluminum cover. Two brackets with thumb serews hold the socket yoke and reflector.
Efficient- The prismatic rellector delivers wer $62 \%$ of the E-III lamp lumens in the useful $0-15^{\circ}$ zone. (Wer $51 \%$ of the J-III lamp output is directed into the same zone!
Spacing ratio-1.2.. Diameter- $1.51 / 2-\mathrm{in}$., Depth- $177 / 8-\mathrm{in}$. Terminates in $3 / 4$-in. female pipe tap. Uses 400 Watt Mercury Lamp-E-Ill or J-IIl (Color corrected).

No. 635-AL
Each $\$ 25.85$
Holophane All Purpose Industrial Luminaires

No. 02420
Use wherever high level illumination is needed, indoors or outdoors.

Has a pre-assembled prismatic reflector and refracting plate combination, permanently held together by means of a spun metal cover. A metal hood engages an asbestos gasket for an effective vapor tight and dust tight seal. Latches can not loosen under vibration.
Prismatic glass assembly held by chain to hood while relamping.

Lamp Wattage; 200-300 (Medium base-6-in. light center).
Distribution-Intensive. Maximum Spacing Ratio-1.5.
Dimensions-Diam. $141 / 8$, Depth 14 -inches.
Terminates in $3 / 4$-in. female pipe thread.
No. 02420
*IIolophane Trade Marks.

Vapor Tight
For Indoor Use

No. 02423

Essentially the same as N o. 02120 in construction and performance evcept that the aluminum cover is omitted to provide an element of upward light. Prismatic glass is of special composition to assure safe operation under moist or severe conditions.
Total efficiency is over $80 \%$ or even in excess of typical open bottom industrial units without vapor-tight construction. Prismatic glass assembly held by chain while relamping.
Lamp Wattage; $200-300$ (Medium base- 6 -in. light center).
Distribution-Intensive. Maximum Spacing Ratio-l.5.
Dimensions-Diam. $111 / 8$, Depth 11 -inches.
Terminates in a $3 / 4-\mathrm{in}$. female pipe thread.
No. $02423 . .$. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Each $\$ 34.85$

# Holophane Industrial Lighting Units Holophane Incandescent Vapor-Tight, Dust-Tight Lighting Units <br> Underwriters' Approved Vapor-Tight and Dust-Tight, Class II-Groups E, F, and G 

These Holophane units not only meet vapor and dust tight operating requirements safely, but also direct the light to the work areas, producing higher levels of illumination with a reduction in high angle glare.

Nos. 02470, 02472, 02480

No. 02328-V

Nos. $02460-\mathrm{V}, 02476-\mathrm{V}$

Nos. 02368, 02378

No. 832-D

Itits consist essentially of a threaded metal holder tapped for $3 / 4$-in. conduit entry and a prismatic glass light director. Nos. 02363, 02378 are three-piere Reflector-Refractor* units. No. 832-D is a Wide-spred* refractor in a hinged, hooded, metal fitter.

When using a 100 watt lamp in units with lamp wattage of $100-150$, use a $5 / 8$-in. socket extension. Wire not furnished with any of above units.
**l nderwriters classify as vapor tight only.

## Holophane Outdoor Lighting Units

## Holophane No. 415 Wall Mounting Outdoor Unit

Ideal for residential, industrial and public area use.
Prismatic glass assembly built to direet light downward and outward for wide coverare, produces uniformly lighted appearance.

Die cast hood made to stand all weather conditions, is dust and rust-proof

Glass assembly hinged.
Wall projection $91 / 2-\mathrm{in}$.
Depth, $93 / 8$-in.
100-150 Watt Lamp.
Flanged for $31 / 4-4-\mathrm{in}$. outlet box, recessed or exposed.
No. 415
Each $\$ 17.35$

## Holophane No. 420 Wall Mounting Outdoor Unit

Actual usage will prove that No. 420 is far hetter than other outdoor lighting fixtures with the same lamp wattage.

Prismatic construction sends more light over a larger area. Class assembly hinged.
Hood weatherproofed.
Wall projection $105 / 8$-in.
Depth, $103 / 8$-in.
200 A-25 Watt Lamp.
Flanged for $31 / 4-4$-in. recessed or exposed outlet box.
No. 420
Each \$24.75

## Holophane Outdoor Lighting Units <br> Holophane Recessed or Surface Type REFRACTOLENS*

This family of units is designed for illuminating extensive horizontal areas from vertical mounting positions. Light distribution is mostly downward and fan-shaped. Ratio Spacing-4.0.

U-850, I -851 have $5 / 8$-in. tap mounting holes, all other units, $1 / 2$-in.
For conduit entrance-all units, except $1-826$ have a $1^{\prime \prime}$ tapered pipe thread on top and two in lack; lo-826 has $3 / 4$ thread on top and $21 / 8^{\prime \prime}$ slip fit in back. Entries at bottom or sides on special order.

## Holophane Outdoor Sub-Station Lighting Units

No. 0871-T Mounting Bracket

For lighting outdoor sul-stations. Features two basic light distributions, symmetric or asymmetric. Provides effective illumination of vertical surfaces with an absence of glare.

Cast aluminum holder, 2-piece prismatic refractor, blown glass outer globe, mogul socket, and prismatic bottom diffuser.
Main leam is adjustable.
Bracket (0871-T) is high strength cast aluminum with a span of $203 / 8-\mathrm{in}$. Terminates at fixture end with male thread of $11 / 2-\mathrm{in}$., opposite end $3 / 4$-in. female pipe thread; for attaching Nos. 830, 832 for additional ground light.

## Holophane A-WAY* POSTOP* Outdoor Lighting Unit

Ideal for driveways, campus grounds, gardens, motel approaches, drive-in theaters, garden apartments, etc. Many uses in the industrial field also.

Distributes light in an asymmetric pattern to provide even illumination on wide spacings, up to 3.5 times the mounting height above the ground (usually 8 to $10-\mathrm{ft}$.).

Unit consists of a $137 / 8$-in. cower, a two-piece prismatic glass refractor and a slip fitter. A medium base porcelain socket is positioned for 150 watt lamp (use a $5 / 8$-in. socket extension for 100 watt lamp). 'The anodized aluminum fitter for $N o .04 .3$ I3 slips over any standard 3 -in. post; the No. 04.3+t cast aluminum titter slips over a lin. pipe.

Metal parts are weather-resistant and the glass assembly is gasketed at both top and bottom to retard the entry of moisture and insects. Relamping is accomplished simply by loosening the top nut and removing the cover.

## Woodward Heavy-Duty Adjustable Lighting Fixtures

## Reflector Assemblies For Series 8RU, 8 U and 9RU

## Woodward Heavy-Duty Industrial Lighting Fixtures

Reflectors and shields are cast aluminum with high-temperature white interiurs and black wrinkle exteriors.

Raflectors equipped with McGill "Levohier" sockets.

Type 1
50-100 watt, pear-shaped reflector. Clamp mounted socket.

Same as Type 1. but complete with THFRMA-fil thD shield for safely and case of handling. Will mot burn oprator.

Type 4

Type 5

Type I has . 0 (0-100 watt, vertical parabolic reflector. Reflector will accommodate $\overline{-3}$ watt reflector-flood lamp.
 (il AlR shield for safely and case of handling. Will mot burn operator.

## One of a Series of Low-Cost, Versatile Localized Fixtures

Flex-arm type For continums rough duty service. Ilas overall reach of 26-in.; 32-in. model available.

Complete with $\mathbf{3} 0-100$ watt cast aluminum reflectors, 8-ft. sil-proof cord set and hey socket.

Type F C elampon base optional at extracost.
"nderwriters' Laboratories approved.

Model [3-33
Each \$8.00

FC Clamp

## Rugged Adjustable Backets

For Use with Reflector Assemblies
Swivels, hases and radial arms formed from specially alloyed, heat treated cast iron. Iprights and extension arms constructed of standard conduit tubing permitting "Customizing" where required. Castings finished in black baheol enamel. Tubing and hardware heavily plated. Complett. with 8 -ft. oil-proof cord set and Iniversal Base for momiting in any position reguired. Inderwriters' Laboratories approwed.

## Series 8RU

Reach werall 46-in. for reflector types 1 and 2, 10 -in. werall for types 4 and 5. Radial arm allows reach to be adjusted without changing height.
Model 8R1 -2.............. Each $\$ \mathbf{2 0 . 5 0}$

## For Disconnecting and Lowering Hangers

Pulleys are required for every installation of Thompsom Hangers; the types and quantities required of each depends on installation conditions.

## Sealtype Corner

I sed only with conduit enclosed herizental cable runs. The vertical run from the corner pulley to terminal fitting may be open or conduit-enclosed.
Threaded for $3 / 4-\mathrm{in}$. conduit, with bolt hole spaced to take U-bolts for $11 / 4$-in. pipe brackets. lior use will Sealt ype llangers AL-2390 and AL-1.590.
$\star$ No. Al_7080-sealt ype, fixed position, alumi-
num alloy, heat treated. Weight each $1.0 \mathrm{Jhs}$. . . Vach $\$ 6.70$

* Bolt hole spacing for cither $1 \frac{1}{4}$ " or $1 \frac{1}{2} 2^{\prime \prime}$ pipe size as specified.

## Thompson Pulleys

For Disconnecting and Lowering Hangers
Open Face, Straight Through or Corner

For use at the wall, column or pole where the direction of the chain or cable from the hanger is changed from inclined or horizontal to vertical and at intermediate locations between hanger and corner locations, as required.

Housings are cast $220-\mathrm{T} 4$ aluminum alloy. Composition wheels have excellent wearing qualities; are highly resistant to oils, acids, alhalies and corrosive gases. Bronze axles.

Pulley wheels have graphite-impregnated hubs to assure smooth operation and eliminate need for lubrication.

## Thompson Combination Suspension Assemblies

These assemblies provide all of the advantages of the heam rlamps and the adjustable angle fittings, and offer a solution fior many suspension prohlems.

Beam clamp parts are malleable iron, hot-dip galvanized.
Adjustable angle tittings and flange plates, aluminum alloy.

No. 7745

No. 7765

[^69]
## Thompson Disconnecting and Lowering Hangers

These hangers provide the necessary accessibility to lighting equipment in all types of lighting installations. They bring the lighting fixture down to the man instead of sending the man up to the fixture.

When the fixture is lowered the electrical circuit is brokenthere is no electrical hazard; when the fixture is raised after servicing it is returned to and locked in its original position and the electrical circuit is re-established.
Hanger consists of two members: the upper member carries a pair of contact assemblies to which the current feed wires attach (this member is firmly attached to supporting structure). The lower member carries the engaging lower contact assemblies, wired to the lighting fixture which it supports.

The entire operation of unlat ching, disconnecting and lowering, raising, re-positioning, reconnecting and latching is a manual one, by means of the regulated pull and release on the small chain or cable used to lower or raise the fixture.
Thompson hangers are suitable for hand-operated installations only. For safety sahe, 60 lbs. is the maximum recommended gross weight per unit.

## Underwriters' Laboratories: 15 Amps., 600 Volts; 30 Amps., 250 Volts, a-c. 10 Amps., 250 Volts, d-c.

Note: 2 -pole hangers are for single 2 -wire circuits only. 4 -pole units can be used in any combination of circuits within capacity ratings: (A) two circuits 2 -wire each; (13) two circuits 3 -wire and (C) three cirenits 4 -wire.

## Sheave Housings

Open face is most wrsatile and generally used. It permits the operating chain or cable to cotter at any vertical angle from $15^{\circ}$ above to practically $90^{\circ}$ below horizontal and is suitable for use with arch, sloping, sawtooth or flat ceilings.

Sealtype housing is tapped $3 / 4-\mathrm{in}$. pipe thread at $90^{\circ}$ to vertical and is applicable only to straight horizontal runs of conduit, such as next to flat ceiling indoors or with horizontal mast arms or wall brachets outdoors. Affords maximum protection of operating chain or cable from weather or tampering.

Note-When ordering be sure to give number and specify size of operating chain or cable, to assure correct stem reaming and swivel end fittings.

## Day-Brite Commercial Fluorescent Lighting Fixtures

Semi-direct all-metal shielded fixtures for $8-\mathrm{ft}$. Slimline or 4-ft. Rapid-citart lamus. For either 8 -in. or 24-in. suspension mountings. These fixtures are especially adapted to high-level sehool and office lighting. Ffficiency is $83 \%$ or morc.

Die-formed and welded construction throughout for uniformity and stability. Interlocking louver assembly-Center wireway cover, longitudinal louvers, supported to wireway by snap catches. One-piece enclosure. Ends, sides, center louver, and hateral lowers completely preassembled for maximum strength. forming a rigid one-piece unit that is casily installed. Shielding $35^{\circ}-25^{\circ}$. Service Chains support enclosure in lowered position for maintenance.

Enclosures and 8 - ft . chassis are supplied in double lamp lengths for 1 -ft. Rapid-Start. Merpuire less hangers and simplify installation and maintenance.
l'lenty of knockouls and mounting holes for installation and feed. Enclosure, chassis and lowver assembly finished in llotBonded Saper-White enamel, rust inhibited.

Simplified through wiring. Self-bushed holes in ends of chassis. Loeknuts, nipples not required.

Twin-Stem Hangers supplied with 4-ft. single units.
"A-J" Adjustable Single Stem llangers supplied for 8-ft. single units and conlinnous installations. All hangers have swivel fittings and all parts necessary for complete installation.

IIPV cortified CBM Rapid-Start or Slimline ballasts for 118 -volt, 60 -cyele, a-c operation. Incividnally wired for single mint or contimuous suspension monnted runs (thru circuit wires not included).

Approved by Underwriters' Laboratorles

'Twin-Stem Hangers supplied with 4-ft. individual units are finishod in lustre aluminum enamel with swivel fittings and all parts necessary for complete installation.
"A-J" Adustable Single Stem llangers supplied for continuous installations provide over one inch vertical adjustment thru externatly hand-operated fittings. Includes swivel filtings and all parts necessary for complete instalhation. llangers finishred in Ilot-Bonded Iustre aluminum.

Rapid-Start

## Day-Brite Commercial Fluorescent Lighting Fixtures

The Day-Brite Iloliday brings the solution to many lighting problems. Designed specifically for low ceiling applications in modern interions where recossing is not possible, Ideal for schools, oflices, stores, under babonies and in modern industrial areas involving cribical sering tasks.

The enclosures are of molded acrylic plastic to assure positive consistency of color, trimsparency, and dimensional stability. Snap catches release enclosure which is supported by separable hinges in lowered position. Can be completely removed and hinged from either side.

The Itoliday is a a ailable ats $1-\mathrm{ft}$. and 8-ft, units and fill-in sections. . . all for 2 rows of 1 -ft. Rapid-start lamps.

They arr recommonded for surface mounting and include ceiling monnting straps.
Simplified servicing features include 2-ft. plastic enclosure sections monnted in $4-\mathrm{ft}$. concealed type metal frames equipped with separable hinges and snap latches. No tools repuired for servicing.

All metal parts are rust-inhibited and finished in llotBonded Super-White enamel.

Fixtures are individually wired with CBM, HPF, RapidStart Batlasts for 118 s . 60 evele, A. C. operation. A fuse is included with each Badast to prevent overheating in event of Ballast failure.
U. L. Approved. Surface Mounting Type.

| $46500-8$ | 4 | 4 (tandem) | $981 / 2$ |

The Parawing-2. a two-lamp surface mounted fixture, is ideal for low ceiling application in schools. offices, and stores where a shallow surface mounted fixture is desired.
The Box-Wing plastic diffusers which form the fixture's sides neatly blend the light into surrounding ceiling areas. These plastic diffusing elements are double-walled and completely sealed to prevent deposits of foreign matter-stay clean longer.

Pamandic profile provides maximan efficiency and brightuess control.

One-piece interloched metal lonver assembly. Rigidly formed sted ehassis and ends are provided with adequate knockouts for casy installation.

Single units can be installed direct to ceiling or bex means of momenting straps included with all fixtures. Can le suspended through use of standard stem hangers.

Continuous runs made up of multiple single units as required for complete run. Self-bushed holes in ends of chassis provided for through wiring. Lockmots, nipples not required. Womiting straps are used at ends and at each coupling point.

All metal parts are rust-inhibited and finished in llotBonded Super-White enamel.
lixtures are individuatly wired for single unit or continuous installations, with HPF certified CBM Badlasts for 118 volt, 60 cycle, A. C. operation (through circuit wires not included).

## Day-Brite Commercial Rapid-Start Lighting Fixtures

## Corralume Corraline

## Corralouver

Sinart and modern looking, these units are designed for lighting corridors, pedestrians tunnels, book-stacks, bins and similar long narrow traffic areas. They are engineered to provide ceiling and side wall illumination. wiping out gloom and dark shadows normally fonnd in these areas. Their extreme flexibility of application makes them ideally suited for use under balconies, in reception areas, wash rooms, and powder rooms. Louvered units are ideal for hin and stack lighting.
Designed primarily for sarface mounting, all fixtures include mounting straps. They can he suspended by the addition of standard hangers.

Self-bushed holes behind knockouts at each end. Units can be momed end to end for continuous runs as required. Hot-Bonded Super-White enamed finish on all metal parts.

All units have IIPF certified CBM lapid-Start hallasts for 118 volt, 60 cyele a-c operation. Individually wired for single unit or continuons installations. (through circuit wires not included). All three fixtures have enclosures which can be completely removed or hinged from either side.

Approved by Underwriters' Laboratories

## Corralume

One-piece extruded polystyrene plastic enchosure with lamp in center-hlending at outer edges to emphasize the modern shape. Snap catches release enclosure which is supported by separable hinges in lowered position. These $4-\mathrm{ft}$. plastic sections are supported at ends and top edges by die-formed steel end plates and rails.

## Corraline

One-piece extruded polystyrene plastic enclosure has smart ribbed sides and diffused hottom to ninimize extreme brightness. Also has separable hinges and snap catches. Four ft. enclosure sections are supported by die-formed steel end plates and rails.

## Corralouver

All metal lower assembly and lompitudinal reflectors on a new and un'que design. They are completely interlocked for strengt and stability. I las snap catches and separable hinges. Entire assembly is rust-inhibited and finished in Hot-Bonded Super-White Enamel.

The Ilexoline is a complete lighting system, simple to install and maintain, efficient, beautiful, engincered and constructed by master craftsmen-and absolutely unequalled in versatility. Used individually, each element is complete in itself.

This fixture's great adaptahility makes it ideal for stores and showrooms, offices, sehools, libraries, puhlic buildings, banks, utilities, and institutions. Wnlimited pattern arrangements can be worked out with the addition of Plexoline fixed or adjustable accent units dosigned especially for use in combination with these Plexoline series (listed on another page in this catalog).

The entire l'lexoline system is quality built and engineered. Wherever the Plexoline can serve yon, it delivers its unprecedented versatility with quality performance and economy second to none.

All metal parts finished in Hot-Honded Super-White enamel. Plenty of knockouts and mounting holes. Selfbushed holes in ends of chassis. Locknuts, nipples not required. Ribbed plastic side panels have low surface brightness and high transmission. HPF Certified CBM ballasts for 118 volt, 60 cycle a-c operation. All glass and plastic enclosed units are wired wilh safety fuses to prevent overheating in the event of ballast failure.

Metal [ouvered-All steel lomver assembly is completely interlocked to prevent twistingor warping, Fntire assembly supported by snap lat ches. Hot-Bonded superWhite cnamel, rust inhibited.

Low IBrightness Lens-Ilolophane Controlens designed primarily to give the maximum amount of light with the minimam amount of glare. In hinged frames with separable hinges.

Cleartex Plastic-Fxclusive ribhed design in Cleartex provides both brightness control and distinctive appearance. In hinged frames with soparable hingeshinge from either side or completely remove-without tools.

## Day-Brite Recessed Mobilex Lighting Fixtures

Mobilex units 24 -in wide for two, three and four 4 -ft. Rapid-Start lamps.

Designed for flexilility of application, reduced in over-all weight and height. Even with the addition of suspension straps, the minimmon overhead clearance required by these fixtures is a mere $5 \frac{3}{4}-\mathrm{in}$. Lightweight rigid fixed construction ideally suited for use in new lighter weight suspended ceilings.

Can be mounted singly, end-to-end, side-by-side, or in any combination. Provides unusual versatility in merting architectural lighting requirements in offices, stores, aud institutions.

These units are available with a choice of enclosing elements.

The metal Egh-crate louvers are completely interlocked and supported in rigid die-formed metal frames. Entire assembly is rust-inhibited and finished in HotBonded super-White enamel, provides $30^{\circ}-30^{\circ}$ shielding.

The new plastic endosing elements-Cleartex and Daytex-are each an exchasive Day-Brite design, combining beauty of design, low brightness with high transmission, and a significant reduction in weight. Each is rigidly supported in a die-formed metal frame with separable hinges that can be hinged from either side.
Has removable wireway cover for access to control equipment and adequate knockouts for feed in ends and sides. Hot-Bonded Super-White enamel finish, rustinhibited before painting. Continuons through wiringlocknuts, nipples not required.

High Power Factor certified CB.II Rapid-Start ballasts for 118 volts, 60 cycle a-c operation. Individually wired for single unit or continuous installations (through circuit wires not included). Safety fuse is provided to prevent overheating in event of ballast failure.

Right with today's trend to Vodular plaming-reduced in weight, shallower in design, more flexible in application and instadlation.

T'wo and three lamp units complete with all mounting accessories required for instatlation in either flange or grid type ceilings as listed in schedule brdow.

Dir-formed construction throughout for uniformity and stability. Removable wireway cower for access to control equipment. All three endosing elements illustrated here have die-formed steel frames with separable hinges which can be hinged from either side or completely removed for maintenance. Plenty of knockouts for feed in ends and sides. "No-siar" couplings assure inline runs. Ilot-Bonded Super-White enamel finish, rust inhibited.

IIPF Certified CBMI Rapid-Start Ballasts for 118 volt, 60 eycle a-c "peration. Individually wired for single unit or continuous instalations (thru circuit wires mol included). Safety fuse provided to prevent overheating in case of ballasts failure.

## Approved by Underwriters' Laboratories

Plastic Cleartex enclosing elements are an exchasive Day-Brite design. They provide low-brighthess, high transmission and less weight.

White metal Egro-Crate louvers provide $30^{\circ}-30^{\circ}$ shielding.
I.ow-Brightness Holophame Controlensi for super comfort and maximum control of illumination.

## Alzak Paralouver Troffers

Fxclusive patented Paralouvers for longitudinal shielding (shiedding $12^{\circ}-30^{\circ}$ ). Surface of each lateral louser is a series of Parabolas which direct light to the working plane. Interlocked louver assembly supported by easy-turn latches. Lowers on chatins fior service without tools. Difluse Alzak body. D'lenty of knockouts for feed; no-satg couplings.

HPF Certified CBM ballasts for 118 volt, 60 cycle, a-c operation. Individually wired.

## Approved by Underwriters' Laboratories

## All-White Parabolic Troffers

Die-formed steel construction throughout. Interfoched hower assembly with easy-turn latches and service chains. Shielding, $12^{\circ}-22^{\circ}$. Entire tixture rust inhibited and finished in Hot-Bonded Super-White enamel IIPF certified CBMI hallasts. 118 volt, 60 cycle, ate. Individually wired.

## Day-Brite Commercial and Industrial Hangers

## Commercial Hangers

## Twin-Stem Hangers

Can be mounted to fixture stud or direct to ceiling. Has slotted arrangement to accept top swivel fittings of hanger stems. No locknuts required for attachment of stems to strap.

Self-centering of two-hole ceiling canopy is assured thru offset knurled canopy rings. Cannot go up off centered.

Bottom stem fittings machine crimped to stems. Threaded for attachment thru top of fixture channel. Locknut included. Rust-inhibited and finished in lustre aluminum enamel. Complete with all parts including sufficient fixture wire to reach outlet box connection.

## Grenadier

The Grenadier 11 is a louvered unit with metal-framed translucent white plastic side panels, equipped for use with either two 40 -watt fluorescent lamps in each 4-ft. section or two Slimline lamps in each 8 -ft. section. Available in three types: Stem, Canopy and On-Ceiling models. Units are interconnectable with standard parts.

The Grenadier IV is equipped for use with either four 40 -watt fluorescent lamps in each $4-\mathrm{ft}$. section or four Slimline lamps in each 8- ft . section. Available in two styles, the Stem and On-Ceiling.

Grenadier II and IV are matched in design and may be used harmoniously in adjacent installations.

## Wakefield Luminaires

## The Cavalier

A deluxe suspended luminaire with full length, unframed luminous plastic side panels supported internally by a steel frame. The steel frame is also the internal reflector, keeping side-panel brightness a pleasant 100 footlamberts.

Important feature is a sliding stem plate concealed in the top of the channel which can be moved to support the lu-
minaire at any point. eliminating problems of inline spacing of mounting points. If mounting hole or outlet box doesn't line up with the luminaire, adjustable ceiling straps line it up for you, providing up to $1-\mathrm{in}$. adjustment.

Special low brightness finish on louvers, side reflectors and chanmels. Louvers give $45^{\circ} \times 45^{\circ}$ shielding. Rapid Start or Slimline lamps. Light distribution about half up, half down.

## Wakefield Troffers

The new Wakefield Troffer is a standard packaged unit that offers many combinations. The overall depth of unit is $47 / 8-\mathrm{in}$. The body is one piece and is the standard Wakefield 20 -gauge construction. All units are available for flange, snap-in and lay-in types of ceilings. Modular units do not grow in length when units are used in continuous rows. Seven
types of light control: No. 70 Corning low brightness lensacrylic and styrene diffusing plastics-vinyl plastic-styrene lens- $35 \times 35$ degree louvers and Alba-Lite diffusing glass.

For Troffer with 277 Volt Ballast (BV) add suffix letter " $D$ " to catalog number.

1-Ft. $\times 8$-Ft.

2-Ft. x 2-Ft.
Note: Flange Troffers listed above are for use with acoustical ceilings using concealed mechanical suspension, yokes included in carton and price, but packed in separate carton.

## Change last two digits to the following for:

52-Flange Troffers for use with suspended plaster ceilings with plaster frames, yokes included in price, but packed in separate carton. To include plaster frame, add letter " S " and costs as shown at right.

53-Snap-In Troffers with safety yokes for use with metal pan acoustical ceilings using tee-bar suspension.
54-Hook-On Troffers for use with Acousti-Line and structural Acousti-Line ceilings, when mounted at right angles to Acousti-Line panels.
55-Grid Troffers or Lay-In Troffers for use with acoustical ceilings using exposed grid suspension. Use basic unit price above and deduct $\$ 3.00$ for Troffer sizes $1-\mathrm{ft}$. $\mathrm{x} 4-\mathrm{ft}$. and $1-\mathrm{ft}$. x $8-\mathrm{ft}$. Deduct $\$ 4.17$ for sizes $2-\mathrm{ft}$. $x 4-\mathrm{ft}$. and $2-\mathrm{ft}$. $\times 2-\mathrm{ft}$.
57-Hook-On Troffers for use with Acousti-Line and Structural Acousti-line Ceilings when mounted parallel to Structural Acousti-Line and Acousti-Line panels.

## Wakefield Luminaires

## Geometrics-OMEGA-On-Surface Type

A complete unit ready for on-surface mounting on existing ceilings with no required structurul changes. The ballasts and lampholders are in an individual metal housing that provides hook-on suspension points for the Wakefield Rigid-Arch diffuser.

The Rigid-Arch diffuser is molded with a sweeping arch, slightly higher in the center than at the edges to give greatly improved rigidity. It has a non-specular, matt finish that minimizes possible reflected glare from outside the building. Onnega is also available with louvers.
I nits may be used individually or combined in an unlimited variety of lighting designs. Width dimensions are to the exact inch module for precise co-ordination of various Omega sizes and with other building materials.

## Wakefield Luminaires

Geometrics-BETA-Recessed Flanged Type
The Beta is a modular flanged unit for mounting in suspended ceilings. It comes with either a RigidArch acrylic plastic diffuser or with $35^{\circ} \times 35^{\circ}$ low brightness steel louvers, and uses Rapid Start lamps. Ballasts and lampholders are contained in an individual metal housing. Bodies are equipped with a self-leveling device and are constructed of 20 gauge steel. Infra-red baked white enamel provides an $\mathbf{8 5} \%$ reflectance factor. Flange and diffuser frame are finished in metallic satin. Diffuser frames are designed to eliminate light leaks. Unlighted, the Rigid-Arch plastic diffuser blends with and appears as part of the ceiling. Its matte finish (molded into the diffuser) eliminates reflected glare or brightness from exterior or interior light sources. Its concave arch provides structural strength. Touch-Latch and hinge frame assembly provide ease of maintenance.

*Direct shipment packaging.

## Wakefield Magic Ceiling Lighting

You can picture for yourself how easily and inexpensively this classroom was transformed ly an $18-\mathrm{ft}$. x $28-\mathrm{ft}$. Magic Ceiling.

Two $18-\mathrm{ft}$. x 21 -ft. Magic Ceilings give this restaurant a happy look. Heating and cooling grills are in walls above the ceiling.

Auto showrooms are a natural for Magic Ceiling. Cars look their best under large area lighting. An $18-\mathrm{ft}$. x $21-\mathrm{ft}$. Magic Ceiling used here.

You should have seen the old unsightly ceiling of this store before two 24-ft. x $28-\mathrm{ft}$. Magic Ceilings glamorized and transformed it.

The Magic Ceiling comes in 11 stock sizes which alone or in combination will fit practically any area without having to be attached to the side walls. Simply measure the room, order the proper size and the Magic Ceiling comes to the job; as a complete package-straps, channels, grid Wakon diffuser, lamps.
Installation is quick and simple, no attaching to side walls,
perimeter obstacles like ducts, ventilators, etc., may be by-passed. No complicated computations; no ceiling construction work; no dirt, no plaster, no sawdust. Conceals everything above it-pipes, beams, ventilating ducts, sprinkler heads.

Gives shadow-free illumination throughout, transforms old dull interiors into new glamorous interiors.

*Actually footcandles will be considerably higher if installed on reasonably white ceiling and floats free a few inches up to two feet from light side walls. Make sure bare lamps are not visible from all possible viewing angles (e.g. through clear glass partitions, partial partitions, etc.)

Clean. modern, plastic-enclosed luminaire for corridorlighting in office buildings, schools, and other institutions. airports and rail and bus terminals.

Simple and modern. the Freeway is arehitecturally very pleasing lighting for corridors or for long narrow areas. Dark corridors and passageways are transformed into pleasantly lighted. comfortable areas with good lighting on watls, ceilings, and floors.

Shielding is a one-piece extruded polystyrene section with high impact strength, break resistance and light stability after prolonged use. It simply snaps in and out of place. after prolonged use. It simply shaps in and out of place.
Because unit is completely enclosed, maintenance is reduced to a minimum.
Installation, individually or in continuous rows is very simple. Kowhouts in the end of each housing are provided for contimuons wiring. Fixture end caps fasten together so that straight continuons rows are assured.

The Freeway is generally surface-mounted, but may be
pendent-mounted with the SS102 or SS105 Stem Sets.

# Smithcraft Commercial Fluorescent Lighting Fixtures 

The Federal

A very economical dependable 2-light louvered fixture of steel construction available with steel or plastic side reflectors for schools, stores, offices and similar installations. Steel parts are finished in Supercoat Baked Enamel. Federal may be mounted individually or in continuous rows, surface or pendent. Rigid louver provides shielding of $35^{\circ}$ crosswise and 2.5. Iengthwise. If desired, louvers providing additional shielding of $35^{\circ}$ crosswise and $45^{\circ}$ lengthwise or additional shielding of $45^{\circ}$ crosswise and $45^{\circ}$ lengthwise may be supplied at additional cost. Louver is released by simple finger action for re-lamping and cleaning and is suspended by chain at a convenient working distance from fixture. Or louver may be completely removed easily and quickly. Side reflectors are easily removed for cleaning.

## The Executive All-Steel Louvered Unit

A very shallow, attractive all-steel louvered unit, ideal for use in schools, offices, stores, etc. Particularly suited becanse of its shallowness for use in today's low-ceilinged schoolrooms and olfices.

The metal sides of the unit are illuminated by light from the fixture, reducing contrast. Eigg-crate louvers provide a shielding of $30^{\circ}$ crosswise and $45^{\circ}$ lengthwise. Nay be purchased with an open top for uplighting or with a top reflector for $100 \%$ downlighting.

The unit may be monnted individually or in continuous rows, surface or pendent. The louver is quickly and easily released by gentle fingertip pressure, and replaced by simply placing back in position. When opened, the louver is suspended by chains at a convenient level for relamping and ballasts and electrical components are casily serviced.

## Smithcraft Commercial Fluorescent Lighting Fixtures

## "The Director"

Through its distinctive appearance and outstanding lighting qualities the Director brings many "plus" values wherever it is installed. The Director is an all-steel, louvered unit finished in white Supercoat baked enamel with end sections in aluminum finish. It may be mounted individually or in continuous rows, surface or pendant. Higid egg-crate louvers, supplied in the same length as the unit provides a shielding of $25^{\circ}$ crosswise, and $35^{\circ}$ lengthwise. If desired, a deluxe louver may be supplied to provide increased shielding to $40^{\circ}$ crosswise; $35^{\circ}$ lengthwise. For relamping or other maintenance the louver is released from either end and is "shelf-suspended." Top reflectors may be supplied to direct all or part of uplighting downwards.

## Smithcraft Troffers

# Metro Troffers <br> For Use with Inverted "T" Grid Type Suspended Ceilings 

Smithcraft 2-ft. wide Metro troffers have been designed specifically for use with inverted "T" grid type suspended ceilings consisting of interlocked tees spaced 21 -in. by 24 -in., or 24 -in. by 48 -in.

Units are easily installed from below by tilting and placing in position or by squeezing the sides of the troffer to clear the ceiling rails, and the troffer is then locked in place.

Doors in door-framed units are instantly and positively contact-closed and instantly released without buttons, screws or other visible catches.

## Templex Troffers

With Attached Hangers for Ceilings Supported by $11 / 2-\ln$. Steel Channel, T-Bars, Wood Framing, Plaster Frame, etc.

Templex 2-ft. wide troffers are similar to the Metro troffers. except they are furnished with hangers attached for automatic positioning on ceiling supporting members. Inits are simply placed in the ceiling and hangers position automatically on ceiling supporting members. Leveling is from below by four easily accessible screws.

Troffers with catalog prefix TEM are flanged troffers for use in ceilings supported by $11 / 2$-in. steel channel, Pomeroy or other steel supporting members and for wood framed openings and plaster frames.

For Templex troffers without flange, substitute catalog prefix PAN for TEM shown below. The same prices apply.

## Pittsburgh Presidential Luminaires

The Coolidge

The Coolidge D-7000 series and the Tyler A-7000 series combine sound lighting engineering with functional design. Side panels are curved Allo-Lite glass, while the bottom is eggerate louver, hinged for easy maintenance. Louver on $\mathrm{A}-\mathbf{7} 000$ series is flat, while louvers on the D-7000 series is dropped. Both are distinctive either individually or continuously mounted.
A. $\mathbf{7 0 0 0}$ series luminaires are available in $4 \cdot \mathrm{ft}$. units only, and they utilize Bipin lamps. D-7000 series models are made in $4-\mathrm{ft}$. lengths and $8-\mathrm{ft}$. lengths, and they utilize pairs of Rapid Start lamps mounted in tandem.

The Grant

A-8240-A
The Grant series are completely glass-enclosed luminaires which are flexible and functional in design . . . outstanding in appearance and style.

Gracefully curved side panels and flat bottom panels are Alba-Lite glass. The metal frame enclosing the bottom panel is securely held in position by hinges and patented spring latches so that it may be opened or removed instantly if desired, without tools. Knockouts provide for service entrances, continuous wiring, pendent mounting, and the locking together of units for continuous runs.

Note: Contractihle Sliy-Lux also available. $4 \times 4$-ft. Plaster Frames for above luminaires can be furnished.
Sky-Lux also availahle with: Flat acryhc plastic diffiser, concave acrylic plastic diffuser, alba-lite glass, Hexcel Honeylite, and Corning \#70 lens.

# Curtis Strato-Lux Luminaires 

## With CurtiCell Louver Diffuser

Approved by Underwriters' Laboratories, Inc.

A complete packaged lighting system, with CurtiCell louver-diffusers create a soft shadowless, glare-free illumination combining complete diffusion and $25^{\circ}$ crosswise and lengthwise shielding of the diffusing medium.
Creates a sense of light airiness-the luminaire "floats" or is suspended entirely from the ceiling, with no juncture necessary between the luminaire and the side walls.
Made of two pieces of self-extinguishing vinyl plastic, a flat top sheet and a vacuum formed cellular bottom sheet. CurtiCell is available in $2 \times 2$ and $2 \times 4$-ft. panels.

**Values shown are for Frosty CurtiCell elements, with lamps on $2 \cdot 1$-in. centers, except where noted. See note on white translucent CurtiCell elements below.
***Lamps on $12-\mathrm{in}$. centers.

## Notes

1. Higher intensities can be obtained from the above assemblies by adding more lamps. Use the following adders, and specify the number of (total) lamps desired per unit.

For One Lamp, 72-in. or 96-in., add. . . . . . . . . . . . . . $\mathbf{\$ 2 0 . 8 0}$
For Two Lamps, or multiples thereof, add. . . . . . . . . $\$ \mathbf{2 5 . 0 0}$
2. CurtiCell louver-diffuser panels are available in two densities-Frosty (order from table above) and White. StratoLux assemblies with White CurtiCell louver-diffuser elements produce lower direct brightness and reflected glare, and approximately $20 \%$ less transmitted light.

To order White louver diffuser panels, substitute " 5 " for the third digit (9) in the catalog numbers listed in the table above.
3. Spacing between channels and plastic: Normal distance from the top of the wiring channels to the CurtiCell louverdiffuser elements in $21-\mathrm{in}$. for 24 -in. lamp spacing.

With $12-\mathrm{in}$. lamp spacing, a distance of $13-\mathrm{in}$. is recommended.
4. Larger room areas can be calculated by combining two or more of the elements shown in column 4 of the table above. Strato-Lux is available with a variety of diffusing and louvering media. Including Plastic Eggerate louvers and Ilexcel IMoneylite in $2 x 1$-ft. Modules; IIolophane \#6025 Controlens in $2 x 2-\mathrm{ft}$. Module.

[^71]

## Curtis Fluorescent Troffers <br> Listed by Underwriters' Laboratories, Inc.

The new Curtis Eye Comfort (B)troliers feature low brightness quality and I.B.O. aluminum lower lins for extra durability and brightness control in the critical viewing angles. Also available without louvers, these troffers install into virtually every type ceiling construction including Snap-in. "' 1 "' Bar, inverted " $T$ " grid, Burgess-Manning, Aconsti-Lith" and plaster ceilings. 'Total recessing depth required including Curtis U-Support Straps is less than $61 / 2-\mathrm{in}$.

Side reflectors are of $.040-\mathrm{in}$. aluminum for maximum efliciency and all aluminum parts are Alzak proeessed after fabrication for finish permanence. Cast ribs provide perfect reflector alignment in continuous rows without intervening end plates. Also available in steel finished white fluracite enamel.

Eye Comfort Steel Troffers with hinged dowrs available.

## Single Lamp Low-Brightness, Alzak Aluminum Troffers

[^72]
## Curtis Fluorescent Luminaires

## Edge-GIo

Curtis Edge-Glo luminaires combine high-fashion styling with high quality illumination. Long and shallow, Edge-Glo is just $31 / 2 \mathrm{in}$. thin. Side panels, illuminated by reflected light, present a soft, glowing effect.

Edge-Glo is available in 2, 4 and 6 -lamp sizes, in Alzak* Aluminum, Golden Alzak* Aluminum or baked white Fluracite enamel on aluminum, and a variety of bottom closures.

## Dimensions

Curtis Edge-Clo units are $487 / 8 \mathrm{in}$. long; 2 -lamp units are $121 / 4 \mathrm{in}$. wide, 4 and 6 lamp units are $231 / 4 \mathrm{in}$. wide; and all units measure $31 / 2$ in. in depth.

Prices for "FG" Series (for use in aluminum T-Grid ceilings) will be furnished on request. Statc quantity.

## Garcy Speed-Line Fluorescent Fixtures

Speed-Line fixtures have a specially formed wireway, designed for use with a special heavy duty joiner. The wireway and the joiner permit pre-assembly and pre-wiring of continuous runs of fixtures at convenient working level and make it possible to raise the entire run to the ceiling as unit.

Garcy's C12806 clamp-type, adjustable stem hangers add to the time savings. Attached to the continuous wireways at floor level, they hook easily into the pre-installed hickeys when the assembly is carried to the ceiling. Spacing flexible.

Two-lamp row units. ideal for school lighting. One-piece shield provides $45^{\circ} \times 4.5^{\circ}$ shielding to prevent glare; illuminated sides for minimum contrast; hinges from either side for cleaning or relamping. Baked white enamel. Slimline or RapidStart lamps.

## Holophane Fluorescent Lighting Units <br> Approved by Underwriters' Laboratories, Inc. <br> Holophane No. 9300 Series . . . Surfaced Attached HOLOFLUX*

The surface attached Iloloflux units afford the highest degree of seeing comfort with the most efficient performance. Their contour and unique prismatic construction are designed to produce the greatest useful output from the flourescent sources. Iligh levels of illumination are achieved with complete alosence of cumulative glare.
Shallow depth. $11 / 2-\mathrm{in}$. simulates recessed construction without the expense of roughing-in. I inits take 2 or 4 lamps of conventional bipin starter type, instant-start single pin lamps and the 4 - ft . rapid start lamps.
New, improved hinging and locking assures totally enclosed construction during operation yet allows easy access for relamping. specified wherever high efficiency lighting with the greatest degree of eomfort is desired.
Steel parts bonderized and finished with prime and white enamel coatings. Hinged doors. 181/4-in. wide, 41/2-in. deep.

F10'T12-starter type; F48'12 and F96T12-slimline; F40112/Rs-Rapid Start. All Holoflux units are wired.
Ballasts: 2 lamp units- $1-2$ lamp; 4 lamp units- -2 lamp.
Note: Four ft . and eight ft . additional sections available for mahing continuous runs.

## Holophane No. 9200 Series . . . Recessed HOLOFLUX*

Designed to produce the highest efficiency with complete absence of glare from any direction of view. I nits have smooth modern lines, can be installed inexpensively and maintained at low cost. A wide choice of lamp styles is available. A hinged door variety holds lenses securely in a frame, provides an unbroken streamlined appearance, unit ends are integrated smoothly into the ceiling.

Engineered to le as wide as possible to produce maximum efliciency and lowest possible brightness at normal viewing angles. Fourteen-inch width permits installation in practically all types of ceilings including wood joists on 16 -in. centers.
I nits can be insialled with ease in acrustic tile ceilings with a minimum amount of tile cutting. Maximum spacing. $11 / 4$ times the mounting height

## Benjamin Commercial Fluorescent Lighting Units

Shallow designed units for soft, well diffused illumination in offices, schools, stores and other commerical areas.

Louvers are injection molded, polystyrene with $1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime}$ cells which provide $55^{\circ}$ shielding. The D-shaped side panels of semi-tubular, translucent extruded phastic are chemically welded to the louver to form the unit enclosure.

Units are supplied pre-wired; finish is white laked paint enamel. Over-all width of twin-lamp unit, $131 / 8^{\prime \prime}$; 4-lamp unit $169 / 6^{\prime \prime}$. Over-all depth of unit is $t^{\prime \prime}$; but apparent depth is $31 / 2^{\prime \prime}$.

Individually pachaged units (less suspensions) are listed; complete lines are also available. For units with a $2.4^{\prime \prime}$ rigid stem canopy suspension add suflix " $s$ ", wo unit number. Suspensions regularly supplied with " $s$ " sullix units are: on $\mathrm{I}^{\prime}$ units, a twin-stem type at $\$ 4.06$ additional; on $8^{\prime}$ units, two single-stem type (with sliding hanger and $2^{\prime \prime}$ leveling adjustments) at $\$ 6.08$ additional. Suspensions with swivel stems also available, as well as top reflectors for ceiling mounted units. Prices on request.

Special sliding or mon-sliding type camopy stem suspensions are available; as are "Top Hellectors" for use in surface mounted units; data on application.

Units listed have one-piece injection molded plastic louver sections, with $1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime}$ cells, which provides $45^{\circ}$ shielding.

Individual units below are listed with canopy stem suspensions; complete runs also available. Units supplied prewired; finish is white baked paint enamel. Over-all length is 4 ft . $53 / 8 \mathrm{in}$. lor single length $\mathbf{4 0}-\mathrm{W} ; 8 \mathrm{ft}$. $\mathbf{7}$ in. for double length units. Length of 96 in . Slimline unit is 8 ft . $51 / 4 \mathrm{in}$. Depth is $517 / 52 \mathrm{in}$. Over-all width is $10 \frac{1}{4} \mathrm{in}$. for 2 and 3 -lamp; $161 / 4 \mathrm{in}$. for 4-lamp unit.

"Capri" Series (SC)

A luminous indirect, exceptionally shallow unit designed to meet present day school-lighting practice; also provides well dilfused light for stores, offices, etc. Designed for pendent mounting. Translucent polystyrene plastic side panels are easily removable for cleaning; bottom is vented to minimize dirt accummation. Individual units with canopy stem suspension are listed; complete rums also available. Units are supplied prewired; finish is white baked paint enamel.

Lamps are not included with units on this page. All 8', 40W. R.S. units are two units in tandem.

# Benjamin 12－Inch Width Recessed＂Trofferlites＂ 

Listed By Underwriters＇Laboratories，Inc．

A complete line of recessed troffers－outstanding for their versatility of surface brightness，high light values，efficiency of operation and low maintenance post．A feature of the Benjamin line is＂Vulti－Vent＂which provides both light and and air conditioning from the same unit－see data bolow． Units may be momeded individually or in continuous rows to， form almost any pattern．Individual units with end caps are listed．For continuous runs with necessary fittings change 4 or

8 in suffix（which indieates length of unit in feet）to desired line length in multiples of \＆feet．Price will vary somewhat as compared to equal footage in individual units．Stel housing， reflector，and end caps are finished white baked paint enamel． Reflector may be quiekly removed for access to ballast and wiring．Benjamin adjustaible or stationary incandescent down－ lights may be inserted in continuous lines for＂high lighting．＂

Lamps are not included with the units．

## Standard＂Trofferlites＂－Louvered，Baffled，Enclosed and Open＊＊

With $45^{\circ} \times 45^{\circ}$ Plastic Louver

Units listed have flange trim and two hangers（No．T－102－B）， for steel chamel furring．Trofler depth is $6^{\prime \prime}$ ．

Open troffers have $15^{\circ} \times 155^{\circ}$ polystyrene plastic louvers with $1 / 2^{\prime \prime} x^{1 / 2} 2^{\prime \prime} \times 1^{\prime \prime}$ cells．For troffers with $31^{\circ} \times 31^{\circ}$ steel louvers，drop ＂$P$＂from number and deduet $\$ 4.13$ and $\$ 8.27$ from price of each 4 ft ．and 8 ft ．unit respectively．For troflers with stecl balles，replace＂LIP＂in number with＂ 3 ＂and deduet $\$ 8.35$ and $\$ 16.69$ from price of each 1 ft ．and 8 ft ． unit respectively． For troffers with open housing，replace＂li＂＂in number with
＂（）＂and deduct $\$ 10.30$ and $\$ 20.59$ from price of 1 ft ．and 8 ft ． unit respectively．

Enclosed troffers have a deluxe hinge with a concealed depression lateh；himre may be installed on either side of housing．Units with＂Reglex＂glass covers listed；a wide variety of glass and plastic panels and specialized lenses also available．

## Benjamin 24" Width "Trofferlites"

Listed By Underwriters' Laboratories, Inc.
Louvered, Baffled, Enclosed and Open

Complete individual units with end caps are listed. To order continuous runs with necessary fittings change 4 or 8 in suffix (which indicates length of unit in ft.) to desired line length in multiples of $t \mathrm{ft}$.

Prices on lines will vary as compared to an equal footage in individual units. Listings cover troffers with $45^{\circ} \times 15^{\circ}$ polystyrene plastic louvers having $1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime}$ cells. Enclosed units with "Ireglex" glass covers (equipped with a deluxe hinge and a concealed depression latch) are also listed. Other variations of louvers and covers are available.

Steel housing, reflectors and end caps are finished in white baked paint enamel. Ballasts are removable by loosening two screws; over-all troffer depth is 6 in . Troffers listed have flange trim and two hangers (No. TW-102-B) for steel channel furring. Lamps are not included.

## Benjamin Translucent Lighting Systems With or Without Acoustical Baffles <br> Listed By Underwriters' Laboratories \& Approved By Factory Mutual Laboratories

Provides modern, attractive lighting for offices, stores and classroons. Any room cat be converted into a visual emviromment second to none with this wall to wall plastic diflinser. ( $3 \mathrm{ft} . \times 3 \mathrm{ft}$.) plastic sections supported by a framework of standard "V" shaped channels and finishing strips form the basis of the system. The framework is in turn suspended from the eeiling by rod assemblies which may be used with all common ceilings. Danels and louvers are interchangeable, or may be used in combination.

In romms with dimensions that are not multiples of 3 ft ., it is necessary to cut some of the louvers or panels and supporting channels to size. Louvers or panels are easily cut with scissors, and channels with a hacksaw. Finishing strip cenues in 6 ft . lengths and is fastened to walls.

Material-Translucent, white vinylite which is odorless, non-toxic and will not distort or shrink due to water absorption. It is highly resistant to most common chemsicals and does not support combustion-de-staticized, at the time of manufacture.

Pancl-Glo Panels-Panels are either corrugated or Safari design. They are specially const ructed for use in rooms using air conditioning and sprinkler systems so as not to aflect their operation.

Sky-Glo Louvers-The 2 in. x 2 in. x 2 in. louver vanes provide $45^{\circ}$ shielding.
Square-Foot Ordering-Systems with or without lighting equipment can be ordered under one catalog number for spuare or rectangular areas. The necessary panels, or louvers, lighting equipment (if ordered), and suspension parts are included. The quantity supplied is based upon an installation centered in the room.

Benjamin "Striplites" without rellectors are supplied with each comptete system. Where conditions permit, continuous rows of 16 ft . strips spaced on :3 ft . centers are used. For this spacing, the distance from the lottom of the lamp to the top of the panel should be at least 22 in. with "lanel-(ilo" and 28 in . with "sky( ilo." The 16 ft . length is made up of Iwo 8 ft . channels using 96 in. slimine lamps. Lamps operate from a twin lamp ballast located in one of the chamels. Where space does not permit 16 ft . lengths. 1,6 , or 8 ft . strips will be supplied.

| Price Per Square Foot* |  |  |
| :---: | :---: | :---: |
|  | With Lighting | Less Lighting |
| "Sky-flo" systems. | \$2.96 | \$2.18 |
| "Panel-Colo" systems. | 1.72 | 94 |

*Multiply adjusted length times widtla times the price per sq. ft.

Corrugated "Panel-GIo"

Acoustical Baffle
A perforated, metal housing filled with a soundabsorbent glass fiber for use with either the absorbent giass fiber for
"Panel-Gio" or "Sky-Glo".

## Ordering By The Square Foot <br> (For Rectangular and Square Rooms)

This method is based on a 4 -part catalog number that includes all necessary ordering information for an entire room-size system, either with or without lighting equipment. This catalog number is easily put together by the person estimating or laying out the installation:

1. First specify the type of ceiling desired by use of the following code letters: "L" for Sky-Glo louver, "P" for Panel-Glo corrugated panel, "i'3" for Panel-Glo Salari panel, "FL" for Sky-Glo with Striplite, "FP" for Panel-Glo corrugated with Striplite, "Fl'3" for Panel-Glo Safari with Striplite.
2. Next give actual room length and width in feet if already multiples of 3 ft ; or actual room length and width raised to next larger multiples of 3 ft . ("adjusted" room dimensions).
3. Next indicate the type of rod support by use of the code letters: " S " for ceiling strap rod suspension, "T" for toggle head rod suspension.
4. Final digits of the number will be the lengtlo of the suspension rod required-in inches.

For irregularly shaped room systems or systems with Acoustical Baffles, write and state requirements.

## All-Brite Fluorescent Fixtures

## Aerolouve - Direct-Indirect

This new luminaire combines high officiency with adequate shiolding. Outer fins of smooth. translucent, extruded polyst yrene plastic, are held by slots in lower bades.

Full-lengih louser provides $30^{\circ} \times 30^{\circ}$ shiolding, is held in plare by sell-aligning, captive catches and is secured to the case with chains for case of servicing.

All parts are procision die formed from heavy cold-rolled sted, primed with All-Brite 57X rust-resistant Cryscoat process, and electrostatically finished in high reflectance Formula 4. baked white cnamel.

For end-to-end mounting use No. 31-31 wireway joiner.

| No. | Lamps.In. | Leth., In. | Width, in. | W. Lbs. | Each |

## Constellaire - Direct-Indirect

Series 35 (Albalite Bottom) and Series 45 (Louver Bottom)
Features extruded, internally ribhed, externally smooth, D-shaped, luminous polyst yrene plastic side panels.

Wetal parts are precision die formed of heavy cold-rolled steol, primed with All-Brite 57 X rust-resistant Cryseobt process, and electrostatically finished in high reflectance Formula 4.1 baked white enamel.

Standard glass bottom is Corning Albalite.
Plastic lomers $33^{\circ} \times 30^{\circ}$ also available. To order louvers change Series No. to 45 (i.e. 15248 ).

## All－Brite Fluorescent Fixtures

## Bare Tube Fluorescent and Slimline Units

Inexpensive series ideally suited for eove，window，show－ case valanee or ofler types of st rip lighting．
lneorporates many features of higher priced I ypes of units， which result in simplified and more durable installations．

All metal parts are precision die formed of heavy cold－ rolled steel，prined with All－Brite 5－X Oakite Cryscoat rust resistant treatment and finished in formula IIX olectro－ statically applied baked white manmel．

All single lanp，units 37 －in．and less have three $1 / 2$－in． k．o．＇s in the hack of rase．All other units have two 1 2－in．and two $3 / 8$－in．k．o＇s in back，and a 3 －in．h．o．in center of baek．

Wasily nippled together for contimous runs．
For rapid start operation on 18 －in．units，add suffix RS．

| No． | Lamps．In． | Lgth．，In． | Width In． | Wt．Lbs． | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 251181．1 | 1－18 | 19 | 27／8 | 3 | \＄3．30 |

| 25296 | $2-96$ | 961／16 | $31 / 2$ | 30 | 26.25 |

＊Two lanns end to end operated by one ballast．

Sturdy．functional open－tube lighting unit．Emberties many of the features of higher priced units yet costs very little more than strip lighting．

Completely fabricated from heavy cold－rolled steel with 57X rust－resistant primer and high reflectance baked white enamel．

For continuous runs，use joiner \＃31－31．
I nits may be directly surface mounted by means of 2 All－Brite＂speed－easy＂thush－mounting brackets \＃FM－20．3．

For pendant momenting use single stem hanger \＃10．5 or double stem hangers 开 $^{2} 90$ ．

For rapid start operation on 48 －in．units，add suffix IRS．

| No． | Lamps－In． | Lgth．，In． | Width，In． | Wt．Lbs． | Each |

## Litemaster－Direct－Indirect

Slim．streamlined，has wide acceptance for general interior application．With lead－lag ballasts（slightly higher prices）， may be used beneath service station canopies and similar semi－exposed installations．

Fabricated of heavy cold－rolled steel with rust－resistant primer and high reflectance baked white enamel．

Surface or pendant mounting．
I se All－Prite double stem \＃290 for 4－ft．units；single stem \＃10．5 for 6 －and $8-\mathrm{ft}$ ．units．

Use joiner \＃．59－31 for full wireway coupling of runs of units．

Single lamp spotlight（\＃50sl）available for Series 59，both single lamp（\＃60sl＇）and double lamp（\＃269SP）spotlites available for series 69 ．

| No． | Lamps－In． | Lgth，In． | Width，In． | Wt．Los． | Each |

## All-Brite Fluorescent Fixtures

## Area/Liter - Ceiling Mounted

Area/Liter follows latest trends in good lighting towards selected luminous areas . . . with new comfort, new beauty, and new versatility.
Low-bright luminous areas provide freedom from glare, wide distribution of light and relief from monotony.
Plastic diffusing panel of the Area/Liter is more than twice the usual area, greatly reducing brightness without cutting fixture light output.
Textured, feather-like plastic diffusing panel is mattefinished, does not pick up reflections.
Area/Liter is a self-contained, fully enclosed unit, completely wired, and can be monnted individually or easily joined rud to end and side by side to form luminous areas, patterns, or rows.

Simple, rugged die-formed construction throughout, Area/Liter is a standardized fixture with custom-styled appearance.

## Grid Modu/Liter

A New Concept in Grid Fixture Construction and Design

One piece roll formed body with elincher type back provides greater rigidity, more efficient distribution of light, less maintenance and greater case of handling.
Exclusive built-in handles permit easy one man installation.
All fixtures treated with Cryscoat rust inhibitive coating prior to painting.
All units approved by Underwriters Laboratories.
The Grid Modu/Liter is available with feather-like textured plastic diffusing panels, Corning Albalite, clear Skytex glass panels, or sturdy $30^{\circ} \times 30^{\circ}$ steel louvers.

Basic units furnished in 2- or 4 -ft. lengths in 2, 3 or 4 lamp models.

These fixtures are for use with grid type suspended ceiling with rail spacing of $24-\mathrm{in}$. x 24 -in. or 24 -in. x 48 -in. center to center. Specify ceiling system being used when ordering.

This exceptionally shallow fixture combines beauty and econony. Its smooth side panels of translucent polystyrene snap into rigid steel supports. (Metal sides available at same price, add suffix M.)

All parts precision die formed from heavy cold-rolled steel, primed with All-Brite 57 X rust-resistant Cryscoat process, and electrostatically finished in high reflectance Formula 4.4 X baked white enamel.

Louver provides $35 \times 35$ shielding, is held in place by a self-aligning, captive catch, and is suspended with safety chains for ease of relamping.

This slender luminaire features illuminated all-metal side pancls, low brightness and high efficiency. Particularly adapted to installations requiring thin fixtures and all-metal construction for durability.

Louvers provide $35^{\circ} \times 35^{\circ}$ shielding, and are held in place by self aligning captive latches which are suspended on sturdy safety chains.

Units may be surface mounted directly or by means of FVM-205. Use \#290 double stem hanger for 4-ft. units, and \#105 single stem hangers for 6 - and 8 - ft . units.

For end-to-end mounting use \#31-31 wireway joiner to provide full wireway coupling.

For totally direct lighting, add suffix CT.
For rapid start operation, add suffix RS.

## Silvray Fluorescent Lighting

Listed by Underwriters' Laboratories, Inc.
Visionaire

No. 41-L

A compact, precision-made fluorescent lighting unit designed for wall mounting, either individually or in continuous rows. Designed to be used either in normal or inverted position in portable or permanent installations. A new lighting concept with 1001 commercial and residential applications including cove lighting, supplementary overhead lighting, beam lighting, work counter lighting, and reception room lighting. Made in three sizes for either 20 watt, 25 watt or 40 watt fluorescent lamps. In its normal position, it provides a semi-indirect light distribution with $70 \%$ of the light directed upward and outward from the fixture, and the remainder directed downward through a louvered opening in the bottom of the reflector. Made of heavy gage steel channel containing ballast, lampholders and starter sockets. Units are finished in baked white enamel.

Hubbell Jackrabbit Fluorescent Starters

No. FS-4

No. FS-40

No. FS4-NA

Vew ceramic condensers - hard as a rock and just as indestructable - assures longer starter life and uniform tup performance under all operating conditions.

Operation unaffected by high humidity at either high or low temperatures. Will not melt, burn, char, or disintegrate. Hesists heat and cold. Gives greater uniformity, and is smaller in size.

The Neostart, Nos. FS-2 and FS-4, is a glow discharge type of starter particularly suited to withstand the continued punishment resulting from lamp failure.

The Autoset-Antomatic Reset, No. FS-4NA, provides the time-saving economy of antomatic reset operation, effective under conditions involving low line voltage, ungrounded fixtures, etc.

Ten in a carton; 100 in standard pachage.
Weather-Resistant Type

For enclosed outdoor lighting equipment. Spring-mounting brachet. 'Two-hole mounting requires No. 6 screws (Screws not furnished). Llas 12-in. No. 18/2 1/32-in. SP-2 cord lead.

## For Lamps:

Watts-14, 15, 20, 25, 30, 10.
length-15, 18, 24, 33, 36, 48-in.
Dianteter-1, $11 / 2$ - in .
Type 13ulb-T-8, T-12.

## Rating 660 Watts, 250 Volts

No. 95X178...... 100 in standard package.
Turret Type

No. 502×92

No. $95 \times 936$
These lampholders offer a wide scope for fluorescent applications in industrial or commercial lighting fixtures. Sturdy, all-metal construction. Iave huilt-instarter sockets and holes for guiding leads to conneetion screws.

Vasily mounted on any flat surface with two No. 8 mounting serews (Serews mot furnished). Can also be mounted back-to-back for continuous lighting.

New lamps can be inserted and old lamps removed by depressing the face of either Turret lampholder with one end of the lanp until the other end clears the opposite face. Lamps are held securely and will withstand all normal jars, shocks and vibration.

For each twin lamp installation use two each of No. 502 X 92 or two No. $95 \times 934$ or one 95 X 935 w /one 95 X 936 . lior each triple-lamp installation use one $502 \times 8$ w/a $50-1 \mathrm{X} 61$ (which has one internal shmot) or use two 502 X 8 and make external sliunt and use a two lamp ballast and a single lamp ballast.

## For ILamps:

Watts-14, 15, 20, 25, 30, 40.
length-15, 18, 24, 33, 36, 48-in.
Dianeter- $1,11 / 2$-in.
'Type 13ulb-'T-8, 'T-12.
Rating 660 Watts, 600 Volts

G-E Slimline Lampholders
For Fixture Mounting

## Butt-On Type

A small, sturdy and compact lampholder set. Designed to accommodate
 slimline lamps. Made of white urea. The protected, but easily accessible terminals permit quich and economical wiring. 'The sleeve nuts provide square, rigid monnting not ordinarily found in bracket supported lampholders.
lnternal teleseoping of the cylinder in the high-voltage end provides additional security in relamping. Sleeve nuts for No. 6-33 screws are rigidly fixed to the sturdy ear nounting flange of the lamplolder, to a spacing of $15 / 8 \mathrm{in}$. This spacing assures a stuare, permanent alignment on the fixture. Lampholders may be monnted to Lamplength-plus or minus $1 / 16$ of an inch.
For Lamps:
Diameter- $3 / 4,1,11 / 2$-in.
Type Bull,-'-6, Г-8, 'Г-12

## Rating: 660 Watts

'len in a carton; 100 in standard package.

No. $502 \times 7$

No. $502 \times 6$

## Twin Turret Type

This lampholder simplifirs and speeds relamping. It eliminates the hazard of lalling lamps; simplifies lixture design; provides 5 -inch center spacing between lamps, and is huilt to withstand hard usage.
New lamps inserted and old lamps removed ly depressing with lamp ends the movalle molded parts in face of highvoltage Turret. Opposite end of lamp is then casily swung into position and held securely in place.
All-metal construction: white enamel finish.
Keyhole slots in mounting bracket provide easy mounting on any tlat surface. Distance between centers of keyhole slots $43 / 4$ inches.

Flongated wire holes guide leads to identified binding screws.
For Lampes:
length-42, 48, 64, 72, 96-in.
Diameter-3/4, 1, $11 / 2$-in.
'Type Bulb-'T'-6, T'-8, 'T-12

## G-E Slimline Lampholders <br> For Fixture Mounting

No. 502X63

No. 502X64

Plastic-Large Type
Accommodates all T-6, T-8 and T-12 slimline lamps.

Small and sturdy. Measurements from the lamp center to the hottom ol the base are the same as those found on the conventional bi-bin fixturetype lampholder.

Lampholders can be spaced so that the center of one lamp to the center of adjoining lamp is slightly less than $1 \frac{1}{2}$ inches.

All molded parts are white urea. Binding sorews are located in underside-slots for standard No. 8 nuts are located in the front of the base.

For Lamps:
Iength—12, 48, 6.t, $69,96-i n$.
Diameter- $3 / 4,1,11 / 2$-in.
Type Bull-T-6, 'T-8, T-12

## Preheat-60 Cycle

## Jefferson Indoor Mercury Lamp Ballasts 60 Cycle

Mercury lamps are being accepted as the modern way of lighting factories, warehouses, mills, offices, drafting rooms, exteriors, etc., as they give double the luminosity at the same power cost, or give equal intensity at one-half the power cost.

A vailable for $100,250,400,700$ and 1000 watt mercury lamps. Dual lines of transformers are available for 1000 watt mercury lamps. All transformers are equipped with knockouts, have color coded and tagged leads, sturdy mounting brackets and extra roomy wiring compartments which are readily accessille. Ileavy gauge steel cases are finished in baked enamel.

5301 Group-Recessed-Complete with Plaster Ring

## No. S5301

5300 Line
Designed for either recessed or pendent installation. Surface installations may be aceomplished lyy use of a surface mounting enclosure.

All fixtures in this group employ a basic reflector designed to afford the most effective utilization of silvered howl lamps. The dillerence between the three types lies in the shielding and diflusing devices.

The Vo. 5300 units are equipped with a delicately formed concentric ring louver of five 20 gauge narrow steal bands.

The No. 5301 units consist of a circular panel of bent glass approximately 18 -in. in diam. Glass is lightly etehed over-all and has superimposed design consisting of eoncentric enameled bands.

## Skylike Lighting Fixtures

## Louvered Incandescent Lighting Systems-Prewired

## 50 Series With Metal Eggcrate Louver Type A 24-In. Square Units <br> 

Skylike 50 Series louvered units are for general lighting rexuirements in stores. affices, classomms, anditorimus, gymnasinms and all similar applications requiring soft, well diffused light with minimum lixture maintename.
standard 24-in, relledor and its accessories permit use of 150, 200, 300 or 500 watt silvered bowl lamps.

Installations may be lully recessed, semi-recessed, surface momated or suspended.

Reflector is die-formed from 20 gauge electrolytically zinc coated steel. Louver formed from $2 \boldsymbol{2}$ gange steel in 1-in. ly 1 -in. grid and enclosed in 20 giage steel outer frame.

All units wired and include side-comertion junction box as an integral part of the mometing yoke. Junction box is Underwriters" Laboratory approved for "feed-thru" connection of low temperature building wires for 150,200 and 300 watt lamps. For 500 watt lamps, connections to junction box require wire rated at $75^{\circ} \mathrm{C}$.

Availathe with aluminum bulb guard for gymnasium lighting and auxiliary medium base socket accommodating up, to 25 watt lamp for night lighting.

50 Series With Plastic Diffusers
Type B and Type C 24-In. Square Units

8 Panel Plastic Diffuser

One Piece Plastic Diffuser
Available with two types of plastic diffusers. They are of approxinately equivalent lighting characteristics as both are formed from the same material.

May be used with 150,200 or 300 watt silvered bowl lamps. Reflector is die-formed from 20 gauge electrolytically zinc coated steel.
Type 13 plastic diffuser consists of 8 panels of injection molded styrene supported in a steel frame forming a grid of 8 panels.

Type $C$ plastic diffusers consists of one piece styrene diffuser dropping slightly below reflector thange and having a concentric square pattern. A metal frame supports the panel.

Installations may be fully recessed, semi-recessed, surface mounted or suspended.

# Silvray Lighting Fixtures 

Silvered Bowl Incandescent Lighting

No. 1500S/3R/2 and No, 1500/3R 2
Combines unique functional simplicity of design, high efficiency and great flexibility of application. When used with the silvered bowl lamp it is the ideal solution to the critical lighting requirements of schools, offices, tibraries, drafting rooms and all other areas in which close visual work is performed. When used with silvered bowl lamps the light distribution is totally indirect.

## "1500 Line" Specifications

Ring assembly is formed from 20 gauge steel with seamless weld; bonderized and finished in two coats baked white enamel. Pendent unit suspension has $15^{\circ}$ non-t wist swivel and threadless husk connection; bonderized and finished in baked Silclad process (satin aluminum). Ceiling units have satin white enamel canopy and Silclad husk. Standard Package 1 unit.

## Silvered Bowl Incandescent Lighting

Nos. 207PL/5 and CPL/5

Distribution Curve No. 207PL

Indirect luminaires with translucent plastic basins designed for use with the silvered bowl lamp. The luminous plastic basin is approximately of the same order of brightness as the lighted ceiling. These fixtures combine high efliciency, balanced brightness and pleasing design. Recommended for schools, offices, libraries, drafting rooms and similar areas where critical and prolonged visual tasks are involved. Fixtures lave a "non-t wist" locking device which prevents twisting or rotation of stem and wires when inserting or removing lamps. Hangers are finished Silclad Satin Aluminum.

## Silvered-Bowl-3500 Line

Totally Indirect or Direct-Indirect Lighting

Two shielding rings are formed from one pirce in this compact new design. Spoke-like members connect and join the two shiclding rings. When used with silvered bowl lamp, the light distribution is totally indirect.

The addition of a specular aluminusn reflector and concentric shielding louver, placed inside the inner ring of the fixture, changes light distribution to direct-indirect.

Both types available in the Silclad finish or in several decorator colors.

## Silvray Incandescent Luminaires

## The Pendent Silverspot

Offers a means of providing supplementary or special effect lighting where structural conditions preclude recessed or close ceiling mounted lighting elements.
Color impregnated reflectors in red, bhe or daylight blue, or gold may be sulstituted for the standard polished aluminum reflector.

The part of the pendent unit which encloses lighting element is formed in two parts from aluminum. The standard finish is satin aluminum, but the unit is available in enamel colors in blue, gold, red and black.

Pendent hanger furnished in two sections joined by specially designed coupling.

## Wakefield Incandescent Luminaires

Commodores

Manufactured in a complete series for wattages from 200 to 750 watts. Hangers and reflectors are similarly styled, so that an installation requiring units which utilize various sizes of lamps and reflectors will have complete uniformity of appearunce.

Hangers are made of steel with metallic satin finish. Reflecturs made in diameters from $1,5-\mathrm{in}$. to $23-3$-in. varying in wall thickness to assure uniformity of brightness for varions lamp siaes.

Provide excellent semi-indirect or luminous indirect illumination for oflices, drafting rooms, classrooms and other interiors where quality incandescent lighting is desired.

## Graybar Lighting Fixture Glassware Direct Lighting <br> Enclosing Units

Series No. G-830
A well designed Stalactite shape, ideal for high bay, corridor or hallway lighting. Ilas an umusual lateral distribution of light.

Made of distinctive type of opal glass. Single layer homogenous construction, with a mere suggestion of bluish pigment to avoid the monotony of a flat white glass.

| No. | Depph, In. In | Olam. <br> In. | ${ }_{\substack{2 \\ \text { In. } \\ \text { In. }}}$ | Watage | $\begin{gathered} \text { std. } \\ \text { skg. } \end{gathered}$ | Approx. Wt. Std. Pks. Lbs. | Each |

## Graybar Lighting Fixture Glassware Direct Lighting

## Enclosing Units

A well-balanced series of enclosing units for direct lighting. Made of an unusual type of opal glass - single layer homogeneous construction, with a mere suggestion of bluish pigment to relieve the monotony of a flat or "chalk-white" glass. Blown to proper weight for maximum transmission of light and elimination of excessive "hot spots".

## Alabax Porcelain Lighting Fixtures

## Approved by Underwriters' Laboratories, Inc.

Popular for installations in private and public housing projects, hospitals, hotels, schools, residential and all types of buildings. Glistening white glaze. Available in pastel ivory glaze or rieh jet black at a small extra cost. Glaze is fired permanently into porcelain, insuring lasting color.

Porcelain stays like new, will not rust, dull, peel, nor change color. Is as easily cleaned as a china plate. Fixtures are safe because porcelain is the best electrical insulation. Lamps are not supplied.

# Pittsburgh High-Efficiency, Silver-Mirrored Permaflectors 

## Where to use Pittsburgh Permaflectors

Many lighting installations require a "controlled light source." The most practical and versatile light source which meets this requirement is the incandescent lamp. This is true because incandescent lamps are the closest to the ideal "single point" source.

To the desirable qualities of the lamp, add the absolute cont rol of light direction and distribution possible with Pittsburgh silver-mirrored Permaflectors and the application possibilities are almost limitless.

## Key to Permaflector Catalog Numbers

The suffix numbers on each Permaflector catalog number indicate the use and equipment furnished with the Permaflector unit having that suffix.

The numbering system as illustrated below, is applied to every Pittsburgh Permaflector unit offered on this and the following page:

Catalog Number only-for surface or pendent mounting.
No. and suffix, 2 -for recessing with open bottom.
No. and suffix, 1 -for recessing with hinged roundel.
No. and suffix, 5 -for recessing with hinged louver.
No. and suffix, 7 -for recessing with hinged roundel and housing.
No. and suffix, 8 -for recessing with hinged louver and housing.

## No. E-75

## Permaflector

Application: The E-75 is a broadly distributing reflector for direct lighting service where a close spacing of low wattage lamps is employed for relatively low mounting. Combinations are available for various types of mounting and with lonver or roundel bottoms.

Bottom Opening: $63 / 4 \mathrm{in}$. diameter. Lamp size: $60 \mathrm{~W}, \mathrm{~A}-19$ or 7.5 W or $100 \mathrm{~W}, \mathrm{~A}-21$.

| E-75-4. | 12.67 | E-75-8 | 18.00 |

E-150

## No. E-150

 PermaflectorApplication: The E-150 series is a broadly distributing reflector with considerable center concentration for direct lighting where close spacing of lamps is required. Various combinations are available for either louver or roundel bottoms. The li150 series is also suitable for exposed service.

Recommended Spacing: Should not exceed distance between reflector bottom and work surface. Bottom Opening: $81 / 2 \mathrm{in}$. diameter. Lamp size: 150W, A-23.

## Holophane Commercial Lighting Units

## Approved by Underwriters' Laboratories, Inc.

## Holophane LO-BRITE* CONTROLENS* Units For In-Bilt Lighting

A recessed lighting unit used wherever unifurm illumination of the work area is required. Intensive light distribution is achieved through an optical system consisting of a square reflector and a L, -Brite Controlens with concave contour. The resulting distribution meets present-day practices of higher illumination levels and closer spacing ratios for uniformity on the work plane.
18-gauge steel housing with white enamel finish inside, baked gray enamel outside. 16-gange steel, pearl gray linished, face plate.

No. 1 - $1570-\mathrm{TS}$ designed with lift-olf top for above-ceiling servicing. l’A- 1560 for acoustic tile ceilings. T-1560 for JM metal tile ceilings. Lnits are not supplied wired.
$\ddagger$ Medium base $6^{\prime \prime}$ light center lamp.

## Holophane PARADOME* Lighting Units

C-5400

S-5400 "Point-ot-S: ${ }^{\text {Pale" lighting. }}$

The Holophane PARADOME* represents the clusest approach to achieving desirable natural lighting. I las a pleasing and attractive appearance and provides visual comfort and low brightness.

Optical assembly consists of a prismatic reflector $81 / 2-i n$. deep and a concave bottom CONTHOLSNS* 1,5/16-in. diam., with a removable disc $73 / 4$-in. for relamping. The lower 7 -in. of the reflector is enclosed in a specially designed filer glass cover. These elements produce a semi-direct light distribution.

Ceiling-attached and suspension metal fitters are available; finished in satin chrome plate.

| No. | Lamp | $\underset{\substack{\text { Ratio } \\ \text { Max Spacing }}}{\text { Res. }}$ |  | 18, In Depth | Each |

$\ddagger$ No socket extension required for 6 -in. light center lamp.
Size of top canopy-8-in. diam.
[nits are not wired.

## Holophane In-Bilt Counterlite

Provides an unusually efficient means of producing high levels of illumination on counters or along lines of display. I nique in that it projects an oval pattern of light-narrow and widespread along the counter. Concentrates light on the display for higher illumination and greater attraction. Spill light is sufficient to take care of traftic aisles and stock shelves. C'nsurpassed for

Semi-flush construction for partial recessing in ceiling.
Optical components, housed in a heary gauge steel box, are a square, compound, dished CONTluOLDEN:* and a polished metal rellector. Depressed inner lens controls almost the entire $360^{\circ}$ of the generatod light. F'inish: llox-gray baked enamel; hinged face plate-pearl gray enamel. Recessed depth-i-in. (Yerall depth $97 / 8-i n$. Face plate- $153 / 8-i n$. sq. lioughing box-133/4-in. sq. Plaster opening 11 -in. sq. Wire not furnished with units.

No. 1'-1814
Each \$42.45

## Holophane XTRAFICIENCY* Units

Provides "three-dimensional" controlled corridor lighting, so that this area will have high level comfortable, sate illumination conditions. Average brightness toward viewer is less than 1 candle power per spuare inch.
Enclosed prismatic glass refractor bowl with ceiling type fitter. Fitter consists of: a stee ceiling plate with mounting strap for a medium base socket, metal reflector, outlet box cover plate, and a steel housing $13 / 4$-in. deep with spring wire clips to support the refractor bowl.

Exterior finish-pear! gray haked enamel.
Dimensions: Depth-6-in., width-91/4-in., length-131/4-in.
Maximum spacing ratio-1.5.
Lamp wattage - 150 (A23).
No. C-824
Each $\$ 15.9$ ?

Litecraft deluxe recessed fixtures combine high efficiency with easy installation and servicing. I're-wired so that supply connections may be made with $60^{\circ}$ wire (Type R, T, TW, etc.), no ashestos wire required.
Mounting rails included with fixture make installation extremely simple, pliminates need for plaster frame. Door-within-door construction insures no light leak regardless of ceiling condition. Spring latched, hinged, stainless steel lens frame provides instimt access and assures a lifetime of tronble-free operation. Litecraft finishes dual-sprayel and baked twice at $375^{\circ} \mathrm{F}$. for permanence. Inion made and wired by 1 BliW-AFL. Underwriters' Laboratories approved.

Note: Wiring compartment extends added $21 / 4-\mathrm{in}$. heyond housing.

## Litecraft Pre-Wired Budget-Lites

Jumbo size connection box is removable from inside or outside fixture. Lnderwriters' Laboratories approved for connection with $60^{\circ}$ wire (Type R, T, TW, ete.), no ashestos wire needed. Ever-Tite spring hinges attach frame to housing with a snat, mahing relamping easy, no tools needed. No exposed hardware. Built-in liyht-trap prevents light leaks. Indented frame edges assure finger grip. Iitecraft finishes dual-sprayed and baked wice at 375 F to assure lifetime protection of the fine finish. Union made ly IBIEW-AFI, craftsmen.

## Square Concentrating Models

Used where ceilings are relatively high；most johs require the standard wide－angle units．

Square box is more easily installed than round box，and door being square permits stronger hinging，always a weak point on round doors．Finished in white enamel．

Light distribution is semi－concentrating on 1408 and 1413.

## Duo-Frame Recessed Units

One-lamp units with $8 \frac{1}{2}$ and 12 -in. lenses. Duo-Frame construction features outer frame that fastens to box after plastering and painting have been completed. Remains in position during servicing operations by means of drop hinges mounted to inner frame. Opens easily by means of knurled captive latch screw. No tools rexpuired.

Fixtures furnished complete with porcelain sockets mounted in removable wireways, specular Alzak reflectors and quality lenses for maximum efficiency. Fixtures are shipped unwired.

Frames and outsides finished in IFammerlord aluminum with Super-White inside. Rust inhihited before painting. Conveniently loeated mounting holes and hrockouts for easy installation and electrical connections.

Corning lensed bowl and Phoenix square bowl lenses extend below ceiling line to provide splash light on ceiling area surrounding fixtures. Creates distinctive appearance while reducing brightness contrast. (Although not listed here, DuoFrame units are also available with vertical lamp mounting and Iolophane prismatic glass reflectors instead of specular Alzak.)

Hinged louvered Nite Lite has die-drawn recessing box of heavy gauge steel. Duo-Frame construction porcelain socket is mounted to removable steel wireway and provides concraled wiring within the unit. I ses one 25 W A-19 lamp.

## Hinged Louvered Face Nite Light

## Litecraft Incandescent Downlights

Litecraft Ili-Hats, or downlights, are designed for installation wherever special lighting effects are desired as window displays in department stores, drug stores, reception rooms, or in homes. These fixtures are inexpensive, easy to install and take less space than ordinary fixtures.

Available in a wide variety of styles and sizes. The housings of Litecraft Hi-Hats are made of heavy-gauge metal. All finishes are dual-sprayed and baked twice at $375^{\circ} \mathrm{F}$. to assure lifetime beauty of the fine finish.

D840
Shower-Lite

The heavy-duty porcelain sockets used are rated at 660 watts- 250 volts. Litecrafts come wired with $41 / 2-\mathrm{ft}$. -14 G leads and are individually boxed. The gasketed D8. 10 Shower-Lite (not wired) is ideal for weather-resistant installations. It's flashed opal lens gives widespread light distribution. All Litecrafts IBEW-AFI, wired and labeled. Underwriters' Lathoratories Approved. Heavy-gauge steel plaster rings available at modest cost. Specify when ordering.

Compact, versatile and modestly priced. . . . Ideal for use as store window, counter, display or accent lighting where lighting needs change. Litecraft units are among the most flexible ever developed. Their positive-action adjusting mechanisms and neat appearance make them useful for almost any commercial or residential application.

The ruggedly built housings are vented for extra cool operation. Fquipped with 660 watts- 250 volts heavy-duty porcelain sockets, wired with $41 / 2-\mathrm{ft}$ - 14 G leads. Made by IBEW-AFL craftsmen and Underwriters' Laboratories approved. Standard finishes: Satin Aluminum or White. Litecrafts are dual-sprayed and baked twice at $375^{\circ} \mathrm{F}$. to assure lifetime beauty of the fine finish.

Heavy gauge steel plaster-rings available at modest cost. Specify when ordering.

Curtis Square Recessed Series downlights have unlimited applications for all interiors. Inits feature patented hinged steel door with no screws, nuts or hinges showing. Plushtype units mount at the ends or hetween sections of all Curtis Flush-type Eye-Comfort ( $B^{\circ}$ Troffers.

Units with horizontal lamps (2 100-2500 series) are supplied with socket positioned for 300 -watt lamp. Linits can be adspted to use 100,150 and 200 -watt lamps by repositioning the socket which automatically positions the lamp for maximum lumen output.

Units with vertical lamps ( $2800-2900$ series) are for use with one 200 or 300 -watt lamp only.

## Kliegl Flush-Louver Ceiling Fixtures

No. 26 F 14

Directional reflector design with louvered ring light shields, that are efficient in performance, decorative in appearance and afford protection to lamp.

Suitable for gymnasium and other locations where this design is preferable and most practical.

Sturdy cast aluminum louvers, spun aluminum reflector with permanent Alzak finish. U/L approved.
llinged louver permits easy access for relamping.
Completely wired with $5-\mathrm{ft}$. leads, ready for installation.
Surface mounted and suspension types of similar design also available to meet various structural conditions.

## Kliegl Shovel Lights

Illuminates entire wall from ceiling to floor, evenly, without scallops. Unigue reflector design projects the light through a small ceiling opening, $21 / 2$-in. x $21 / 4-\mathrm{in}$.
"Eyelid", projecting only. $3 / 4$-in. below the ceiling line, shields opening, and light source is practically invisible under normal viewing conditions.

With units spaced $31 / 2-\mathrm{ft}$. out from wall, on $31 / 2$-ft. centers, lighting will be uniformly graduated with an unnoticeable high value at eye level or normal picture height. L/L. Approved.

Removal of interior baffle permits straight down lighting.
Uses standard long life flood lamps. Flush center plate is removable for relamping.

Plaster ring is furnished for framing.
Reflector has permanent Alzak aluminum finish. Mounting ring is machined cast aluminum.

No.
2175

Lamp Watts
150

## Kliegl Baffled Downlights

No. 2510
Utilizes concentrated beam characteristics of standard reflector lamps for general illumination or accent lighting.

Cylindrical ring haffles trap the side spill rays and eliminate all glare or surface brightness. Lamp cannot be seen from normal viewing angle.

Units are easily relamped from below the ceiling through light opening.

Furnished fully wired with 5-ft. leads, ready for installation. $\mathbf{I} / \mathrm{L}$ approved.
Made in cylindrical form for flush inbuilt or surface mounting. Also with square housing and face plate for recessed installations.

## KliegI Pin Hole Downlights

No. 2144 No. 2147
Top relamping

No. 2145

No. 2146 Botlom relomping

Small flush-type ceiling fixtures with an objective lens system and framing shutters for adjusting the beam spread and shape.

Used primarily for accent lighting. Light rays are projected through small aperture in ceiling.

Vertical models are used for lighting dining tables, game room equipment, and the like.

Angular models are generally used for lighting pictures, showpieces, and similar objects of art or decoration. Beam may be patterned in square. circular or irregular forms to suit requirements. Easily relamped from above or below ceiling depending on design selected.

## Kliegl Klieglights

No. 1365

No. 1366

Projects high intensity light beam which nay be patterned to any desired shape.
Particularly serviceable where illumination of area with a well defined cut-otf of light is required.

Consists essentially of an ellipsoidal reflector and lens system coordinated with adjustable framing shutters.
Reflector is spun Alzak polished aluminum. Has stepped lens with black risers held in movable mount to permit focusing.

Four-way adjustable shutters are built in the unit. Slide grooves on front hold a color frame. U/L approved.
Units is supported in a swivel yoke and supplied with pipe clamp. Other sizes and mountings are available.

| No. | $\begin{aligned} & \text { Lamp } \\ & \text { Wats } \end{aligned}$ | Lens Diam. in. | Type Mounting | Each |

| 1366 | 1000/2000 | 6 | Pipe Clamp | 119.00 |

## Kliegl Booth Spotlights

No. 1174

Dyna-beam Klieglights
Produces an exceptionally powerful beam. Used to spot or floodlight the stage from distances of 75 to 200 feet.

Mounted on roller caster floor stand. Fitted with step (front) lens in sliding mount; auxiliary spread lens on hinged mount; inbuilt curtain and iris shutters; ellipsoidal polished Alzak aluminum reflector; forced air ventilating system.
No. 1179 is equipped with color boomerang attached to front of unit which permits quick color changes.

## Super-Klieglights

Similar in design to Dyna-beams, except they accommodate lower wattage lamps; are not equipped with auxiliary spread lens. No. 1175 is equipped with color boomerang. Super-K lieglights are effective within their working range up to 100 feet.

## KliegI Disappearing Footlights

Single row reflector type, 5 -ft. section, with 12 receptacles for $75 / 100$ watt A-21 lamps. Each reflector equipped with an Alzak aluninum reflector and 4 -in. glass color roundel.

Wired for three colors. Supplied with white (clear), blue and red color glass roundels.
Continuous style flooring with floor panel hinged to back strip, and provided with swinging bracket for tilt adjustment.
Equipped with splice box, terminal block and automatic inercury cut-off switches. $\mathrm{U} / \mathrm{L}$ approved.
No. 832. 5-ft. section, 12 outlets Each $\$ 114.00$

## Kliegl Permanent Borderlights

Individual reflector type with receptacles for $100 / 150$ watt A-21 medium screw base lamps, spaced 6 -in. on centers.

Wired for three or four colors as specified, furnished with glass color roundels in hinged-ring holders. U/L approved.

Prices on application.

No. 610-C
Universal type for 100 watt A-21 medium screw base lamps, spaced $63 / 8$-in. on centers.

Equipped with slide grooves on front of each reflector compartment. Furnished with removable frames for Cinemoid, gelatine or glass color mediums.
No. 610C. Universal borderlight..... . Price on application

## Crouse-Hinds General Purpose Floodlights

The FLA and MUA line of general purpose floodlights were designed for lighting athletic fields of all types, parking areas, playgrounds, outdoor storage areas and service stations, suitable for 750,1000 or 1500 watt, 1 PS-52 bull, lamps. Can be arranged for 500 watt PS-10 bull) lamp if specified. Aluminum reflectors are Alzak finished.

## Type FLA

The Type FLA floodlight was developed primarily for athletic field lighting. Because of its versatility, it is suitable for many general floodlighting applications.

The FLA floodlight can be furnished with five types of reflectors. A heat and impact resisting cover glass is sealed into the reflector.

A large hinged rear door makes relamping easy. A catch holds the door open.
Degree scales and a sight for aiming the floodlight are included.

The MI A line has two models of heads and eight different reflectors. Model II heads are especially suitable for athletic field installations. Alzak aluminum reflectors available with or without, hinged front door. All floodlights are furnished with four ft. of 2 -conductor cable, except Model I heads which have pigtail leads.

Note.-Model 1 Ilead will be furnished at same price when specified.

## Type MUA Multalux

With Porcelain Enameled Reflector
Models I and II Heads

Designed for lighting service stations.
Wide beam auxiliary reflector is sheet aluminum with etched Alzak finish. superimposes on the general distribution a wide beam of high intensity for lighting With Model 1 Head buildings and pumps.
Narrow beam auxiliary reflector is sheet aluminum with polished Alzak finish.

## Crouse-Hinds Heavy Duty Floodlights

Heavy duty floodlights are efficient, rugged and weat herproof projectors. They are made of corrosion-resistant cast aluminum and have internal reflectors of polished Alzak aluminum.
lleavy duty floodlights are recommended for the illumination of industrial areas, railroad yards, buildings, smoke stacks, large signs and other areas.

Types ADE-12, ADE-14 and ADE-16
Medium and Long Range

Type ADE-12

Type ADE-14 and ADE-16

A clear, smooth beam lens is furnished on floodlights for PS bulb lamp unless otherwise specified. A clear, diffusing lens, plain lens and two types of spread lens, $50^{\circ}$ and $100^{\circ}$, can be furnished without additional charge, if specified on the order.

Catalog numbers 44492, 42921A and 42743A cover floodlights with a special housing which provides the proper burning position for G-bulh lamps.

| No. |  | Refrector | Lamps |  | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Typo |  | Watts | Bulb |  |
| 42428A | ADE-12 | Wide Beam | 200 | PS-30 | \$86.00 |

| 44492 | ADE-12 | Narrow Beam | 250 | G-30 | 86.00 |
| 42740 | ADE-14 | Wide Beam | 500 | PS-40 | 136.00 |
| 42739 | ADE-14 | Narrow Beam | 500 | PS-40 | 136.00 |
| 42921A | ADE-14 | Narrow Beam | 500 | G-40 | 136.00 |
| 42741 | ADE-16 | Wide Bearn | 1000 | PS-40 | 170.00 |
| 42932 | ADE-16 | Narrow Beam | 1000 | PS-10 | 170.00 |
| 42743A | ADE-16 | Narrow Beam | 1000 | G-40 | 170.00 |

Slip fitter bases for $1 \frac{1}{4}$ (except ADE-12), $1 \frac{1}{2}, 2$ and $21 / 2^{-}$ in. pipe available at same price. Other hases and brackets available.

## Type LCE-1120

## Medium and Long Range

An efficient floodlight for illumination of large areas. A clear, smooth beam lens is furnished on floodlights for PS-bulb lamp unless another type is specified. Plain, $.30^{\circ}$ spread, $100^{\circ}$ spread and diffusing types are available without extra charge. When G-bulb lamp is used, the housing is inverted to provide the proper burning position. The standard base is flat. Other lases and brackets available.

|  |  | Lamp |  |
| :---: | :---: | :---: | :---: |
| Renector | Watts | Bulb | Each |
| Wide Beam | 1500 | PS-52 | \$280.00 |
| Narrow Beam | 1500 | PS-52 | 280.00 |
| Narrow Beam | 1500 | G-48 | 280.00 |

Color screens are available.
Types ADE-12, ADE-14 and ADE-16 are suitable for marine service on shipboard. To obtain these units carrying the U. S. Coast Guard approval, add suffix " $M$ " to the catalog when ordering.

## Types ADR-12, ADR-14 and ADR-16

Types ADR-12, ADR-1.4 and ADR-16 floodlights are rugged units especially arlaptable for portable use, either when a narrow beam spotlight or a wide evenly distributed beam of light is required.

Wiring Connections: Built-in weatherproof twistlock plug at rear of housing has spring door with gasket. No external cable in included with floodlights, but available as accessory.

|  | Alzak Reflector | 500 | G-40 | 415.00 |
| 44697 | With Wide Beam Etched |  |  |  |

Spread screen or diffusing lens can be furnished with RLEE-14 or ILLER-1 I. Add $\$ 20.00$ list to price of Iloodlight.

RCDE-6 is designed for permanent installation at fixed locations.
The RCDELR-6 is explosion-proof cast aluminum floodlight designed for aircraft maintenance, refueling operations and other locations where a portable floodlight is needed for use in class I, Groups C and D atmospheres. It is furnished with either a tripod or wheel base mounting.
The aluminum tubing tripod mounts the floodlight $51 / 2 \mathrm{ft}$. above the gromind when retracted and 10 ft . when extended.
When momed on a whee base, the floodlight is easy to handle because of its eompact design and convenient carrying handle.
The RCDER-6 with tripod can lue furnished to meet the requirements of Air Force- Vavy Aeronautical Standard 1)rawing AN2580, specification NIL,-F-6139. Information will be furnished upon request.

Description
With explosion-proof junction box for permanent installation, for 150 W , PAll-38 \& R-40.
With whcel base mounting, for 150 W , PAR-38 and 1-10 lamp
With tripod mounting, for 150 W , PAlt-38 and IR-10 lamp.

## Crouse-Hinds Explosion-Proof Floodlights Type RCDE-8 <br> Class I, Group 200-300-Watt

Designed to meet the requirements of an explosion-proof floodlight.

The IRCDE-8 pit light is recommended for lighting automobile greasing pits and lifts and for general use in hazardous locations.

## Type RCD-12

200-300 Watt Multiple 1000-6000 Lumen Series

The RCD-12 was designed for multiple or series lamps. It is suitable for surface mounting or for flush mounting in concrete or stone. Tinnnels and underpasses can be elliciently lighted from fixtures mounted overhead or along the sidewall. It is also suitable for lighting drives, walkways, and loading areas around industrial and public buildings, with sidewall mounted fixtures equipped with the deflecting spread lens.

The large wiring chamber is provided with four $1 \frac{1}{2} \mathrm{in}$. conduit hubs. Two external hubs on sides, one internal hub on top and one internal hub on back.

## Crouse-Hinds Underwater Swimming Pool Floodlights

Type SPS
For Dry Niche Mounting-500-1500 Watt
This unit is intended for pools
 Which have a passage around the ontside wall, or for installation in a manhole. The design is such that a very small manhole can be used, since it is unnecessary to enter the manhole for servicing. A 3 -conductor cable is furnished with the floodlight.

In a pool with tile facing, a square bronze mask, with satin chromium plate finish, is used for covering the edge of the tile.
When concrete wall exceeds $53 / 8$-in. thickness, use an extension ring listed below to provide an opening for the floodlight. No. 44124C Bronze Complete with porthole ring, door and floodlight for concrete pools.
$\$ 270.00$
44575B Bronze Complete with porthole ring, door, floodlight and tile mask for tile pool.
350.00

FI.2633* Sheet Steel Extension ring, up to 16 -in. $\quad 15.00$ Fl.3265* Sheet Steel Extension ring, l6-in. to $24-\mathrm{in} .20 .00$
*Specify thickness of eoncrate wall when ordering.

## Crouse-Hinds Underwater Swimming Pool Floodlights

Type RPS
500-750-1000 Watt

Underwater floodlight designed to be set in the wall of a swimming pool. It includes a flush floor box which is connected to the floodlight by a large tube. Combines the low installation cost feature of wet niche floodlights with the safety, convenience, and ease of servicing of the dry niche.

The lamp and lamp receptacle can be withdrawn from the floodlight through the tube and floor box. To assure safety in relamping, the unit is so constructed that the cord plug must be disconnected before the lamp receptacle assembly can be withdrawn.

No. Descorption Material Each
44133C Swimming I'ool Floodlight
for concrete pools
Bronze \$560.00
44572D Swinming Pool Floodlight complete with tile mask, for tile pools.

Bronze
650.00

Crouse-Hinds Lantern Floodlights

## Type GCP-14

300-1500-Watt Incandescent 400-700-Watt Mercury Vapor

An ornamental lantern type floodlight designed for the illumination of buildings, gasoline service stations, and other places where the appearance of the lighting unit is important. The daytime appearance is that of an ornamental street lantern. At night the large, eflicient reflector on the inside transforms it into a powerful floodlight. I'rame is cast aluminum.

$\dagger$ For use with standard single or double fixtures for extending source length for applications, such as larger poster panels, loading docks, and other similar uses.
$\ddagger$ Transparent-plastic door and rasteners for enclosing a single open Fluoroflood Fixture.
§Per double fixture (Shipped one double per carton).

For work-lighting or protective lighting around substations, home and farm buildings, construction jobs -either temporary or permanent.

Powerful wide-angle beam illuminates a large area. Inexpensive, durable, lightweight, thoroughly practical for general use.

[^77]
## General Electric Sports and Area Floodlights

## Type L-45A

For close-range illumination of filling stations, and work, storage, parking and sports areas.

Durable open floorlights. with porcelain-enameled reflector. Die-cast aluminum socket housing, with porcelain-shell mogul socket.
The auxiliary processed aluminum reflectors provide increased illumination of areas or buildings that require special emphasis.
supplied only with crossarm mounting which will fit all other mountings.

Type L-45A Floodlight for Crossarm Mounting for 300/1500 Watts

Approx. weight: Shipping, 13 lbs.; Net, $91 / 2$ lbs.
Reflector: Porcelain enamel.
Cat. No. A70G1
Each $\$ 21.00$
Lamps are not included.

Type L-46A Floodlight for Crossarm Mounting for 300/1500 Watts

Approx. weight: Shipping, 19 lbs.; Net, $131 / 2 \mathrm{lbs}$.
Type of Auxiliary reflector included: Porcelain-enameled steel.
Cat. No. A71G1
Each $\$ 31.50$
For use with 300 or 500 watt lamp, order similar to above Cat. No., and specify lamp wattage.

Lamps are not included.

## General Electric Sports and Area Floodlights

Type L-69A Floodlight for Crossarm Mounting

Aluminum floodlight available with either spun-sealed or clamp-band impact-resisting, tempered door-glass. Outstanding light control and bean elficiency is provided by anodized reflector designs available in very-narrow, narrow, medium and wide beam patterns.

Features $V$-notch aiming; rear relamping; handy terminalbox design for easy, low-cost installation and faceted rear reflector for improved candlepower.

Can be used for any long range lighting requirements, such as playgrounds, billwards, railroad yards, refineries, tank farms, baseball, foothall, aeronantical obstructions, ete.

The doulle parabola Alzak aluminum reflector design provides maximum light output with vertical burning lamps. Wide choice in beam control. Hinged lens ring for easy access, rotation stop with degree markings, sealed top for easy access to socket terminals, and sturdy construction. Parts are of non-ferrous metal, stainless steel, or hot dip galvanized.

This floodlight consists of two accurately shaped aluminum reflectors, the purpose of which is to permit servicing from the rear and not disturb the front setting or section.
The front section is provided with a plain clear impact-resisting glass cover which is rolled in place with a non-hardening cement to provide a perimanent water-tight seal.
The all-aluminum construction assures light weight. There are no loose parts to drop or dangle in the wind. Maintenance is safe and easy. Parts are of mon-ferrous metal, stainless steel or galvanized. Front and rear built-in sights enable accurate aiming.

Designed for use with a 750,1000 or 1500 -watt PS-52 clear bulb general service lamp with mogul screw base.

## Revere Alzak Open And Enclosed Type Floodlights

## 300 to 1000 Watt Lamps

Clamp Ring Cover Type

HInged Cover Type
This series of floodlights furnished for individual or Mercury and Incandescent Lighting jobs. Open-type reflector is $173 / 4-\mathrm{in}$. diam. Formed reflector is $173 / 8$-in. Closed types$161 / 2$-in. diam. Reflectors are made of Alzak Aluminum. All castings are Aluminum.
Telescopic arm provides vertical adjustment of $37^{\circ}$. Horizontal $360^{\circ}$. Arm operates within a one-piece casting comprising socket dome enclosure. Wiring is enclosed, protected from heat of lamp or moisutre.

When Mercury Lamps are to be used, enclosed floods reconimended for better lamp performance.

## R \& S Step Light

Designed to illuminate steps, terraces, entrance gates, patios. etc. Bronze construction eliminates corrosion. Arranged for flush mounting and supplied with diffusing glass panels. Brush natural loronze finish. Other finishes available. No. 2090 (Max. size lamp, 100-wat t) ................... $\mathbf{\$ 3 1 . 2 5}$
Outlets-Furnished with two $3 / 4$-inch maxinuum conduits on one end. speeial outlets available.

## R \& S Curb Light

Used in illuminating driveways. catwalks and terraces. Furnishod with internal half shade. The clear fresnel lens provides a wide horizontal beam of light, eliminating any tendency of light being thrown upwards on the surrounding landscape.
Constructed of cast bronze with all external parts brush natural bronze finish. Other finishes available on application.

[^78]Hope Threaded Pole Bases
With Junction Chamber Malleable Iron

Lighting poles easily fabricated by combining threaded pole bases with single or coupled lengths of galvanized conduit or pressure pipe. Limitless variety of custom-made uprights can be ereeted helow usual costs. Adapted to small or large quantities. Ilub is tapped deep for full locking engagement with all threads on pipe, with recess at top for field paching with lead. I Ieadless setscrew prevents turning. Ample junction chamber, open through bottom, for stubling up conduit run and for splicing and grounding. Attractive design of tough malleable iron. Available with standard plain gasketed cover or new NEMA 3 pole weatherproof receptacle eover for use of service tools. Standard finish hot dip galvanize. Sidewall tapped for $1 / 4 \mathrm{in} .-20$ ground stud.

Lighting Applications: Parking areas, service stations, car lots, piers and docks, railway station platforms, parks and playgrounds, schools, sewerage disposal and waterworks plants. Other applications: Vounting for signs, signals, police and lire boxes, yard speakers, electrical enclosures.

## Revere Hinged Floodlight Poles

These poles were created and developed by the Revere Blectric Mfg. Co. Many years of service have proved this type of pole most efficient and practical for floodlighting. The hinged construction makes it possible to obtain full benefit of light from any lamps used, because reflectors can be kept clean at all times. The poles also eliminate risky climbing and expensive maintenanceservicing can be done at ground level.

Poles are available in Square Type in $\mathbf{1 8}-\mathrm{ft}$., $20-\mathrm{ft}$. and 24 - ft . mounting heights, and Round Type in 20 and $24-\mathrm{ft}$. mounting height. Poles are available for base and bolt mounting, also for concrete mounting. The Square and Round Types accommodate one or two floodlights. The Ileavy-Duty Square Tapered Type, 199-E Series, will accommodate 1, 2, or 3 floodlights as well as one or two sign arms. The pole is also available in $30-\mathrm{ft}$. mounting height listed as 199-D30.

Brackets can be furnished for nounting extra area lighters (3018) or identification signs and

Designed for using WideLites in construction or salvage work; for temporary or semipermanent installations.

Adapter Kit For Duct Mounting
Adapts indoor Wide-lite and ballast for suspension and l'eed from universal trotley duct. Each \$16.00

## Benjamin "Duo-Service" Floodlights

## For Stationary Mounting or with "Saflox" Lowering Attachment

No. 27564-P-3

Combines in the same unit a large porcelain enatnel diffusing reflector, with a beam-producing, aluminum, inner flood-lighting reflector. For use in gasoline service stations. super-service stations, roidside inns, ete.

Inner reflector intercepts a portion of the light from the lamp and concentrates this light on the ohjeet to be enphasized. Balance of the light is utilized by the diffusing porcelain reflector for general illumination.
IIood and bracket are aluminum castings, the porcelain enamel finish of the diffusing reflector resists deterioration from smoke, dirt and unfavorable atmospheric conditions. Reflecting surface of the poreclain enamel never requires painting or refinishing.

Available with three types of brackets: closed-wiring slipfitter, open-wiring eross-arm and cross-arm with pipe clamp. Also available with "Sinfos" lowering attachment. Inner reflector can be adjusted from side to side to locate floodlighting bearn on building independently. Units listed have slip-fitter to fit $11 / 2^{\prime \prime}$ pipe; for 2 " pipe size, same price, add suffix "A".

## Benjamin "Type RD" Floodlighting Projectors

Model RD-14

A one-piece, seamless floodlight housing of heavy gauge aluminum provides strength with light weight. llousing, cover frame, cover clamps and mounting straps are of aluminum and will not rust or corrode. llousing interior is sealed by a special gasket (which is held firmly in place by a metal expanding luand) against the passage of dirt, smoke and moisture.

Cover is held firmly and with equalized pressure against the housing by means of easily operated, adjustable, lever type clamps. Mounting base is equipped with horizontal and vertical stops for automatic resetting of floodlights after lamp replacement or for floodlight cleaning.

Width of beam regulated by fucusing device, operated by aluminum knols at rear of housing. Mirrored glass reflector is designed to intercept as nueh light as possible.

## Crouse-Hinds Aviation Lighting

High Intensity Runway Lighting

The Crouse-llinds Company olfers all three types of high intensity fixtures, as illustrated above. to meet the three CAI Specifications ( $1,-818.1,-819$ and $1,-8 \div 0$ ). All are approved $\quad$ y CAA, and all provide the basic high intensity candlepower required. They have many construction features in common such as: cast ahminum honsing, I'yrex glassware, disconnecting cable connector, same breakable coupling and standard steel base with hase plate. All units provide the necessary top light and side light needed for planes not on the approach path; and use a 5 -stage brightness control.
Type IIIKC utilizes a double prismatic lens system on a cast aluminum lase, with a 500 -watt, 115 -volt lamp mounted on a movable socket. The main beams are antomatically "toed in" or "toed out" lyy a thermal control working in step with the applied voltage. The brightness setting selected by the operator produces automatically the most efficient aiming of the beams for any weather condition.

Type llill, fixture has a fixed focus double beam optical system. Wach fixture uses a 200-watt lamp and is provided with a series to series insulating transformer installed underground in the base housing.

Type IISL fixture has a cast aluminum housing with two 95-watt sealed beam high intensity lamps inside and a 15 -watt medium intensity light on top. Three insulating transformers are installed underground in the base. Wach of the three lamus may be switched separately from the tower.

## Type ERL Marker Lights

Type lilll, devated marker lights are constructed in accordance with CAA Specifi-
 cations I - 802 (rumway and threshold lights) and $1,-82 y$ (taxi lights). They are used on boith large and small airports. On large airports type lilll, fixtures are nommally used on non-instrument rumways. and high intensity fixtures (type IIRI, IlRC, or IISL) on instrument runways.

Series runway fixtures normally use the 30-watt, 6.6-ampere, 'I-I0 lulb lamp. 'The f.5-watt, 6.6-ampere lamp is used lor series threshold lights and taxi lights and man be used for rumway lights where a higher inttensity is desired. Multiple 115 -volt umits use the 40 -watt, 115 -volt damp.
Style A mounting includes a 30 in . anchor stake, surface flange, and a direct burial insulating transformer. Site IS includes a base plate for momating on the Fl. 1818 base (spereify (ransformer separately). Style C consists of a junction lox and 30 in . anchor stake.

The recommended system for new instablations utilizes a series circnit and fixtures with Style 13 momnting, Fl.I818 steel base housing and Flato03 insulating transformer. The Fla 1818 lase is large enongh to take care of future conversion to type llikI, high intensity fixtures. For a more comomical installation, as for small arports, Style $A$ mountiner with direct burial transformers and series circuit can be used.

Type EISI, with Style 13 mommting is used for converting existing flush fixtures to elevated fixtures. Practically any existing flush contact lights can be converted to lilkl type, by adding a series-to-series insulating transformer in cach hase, and adding the elevated light with the necossary adiaptor base plate. Information will be furnished on request regarding conversion of any particular style flash light.

## Photoelectric Control

For Aviation and General Service

Provides antomatic operation of lighting circuits at dusk and dawn. The control employs a light sensitive photo-tube, amplifier circuit, sensitive relay, and 2-pole load relay, assembled within a weatherproof cast ahminum cabinet.

The sensitivity of the photoelectrie control is adjustable within the light ranges listed below.

The contacts of the load relity are rated 25 amp. per pole, at 120 volts a-c. Separate load contactors for higher current ratings are listed.

| No. | Description | Each |

## Crouse-Hinds Aviation Lighting

## Type FCB-12 Fresnel Beacons <br> For Airport Identification and Hazard Marking Uses Two 500 Watt or 620 Watt Lamps

Designed for use as an auxiliary green code flashing beacon at airports, and as a red marker light for major obstructions to air navigation.

When used at airports, it is usually equipped with green color screens, and connected to a special code flasher to produce a Morse code signal, designating the airport. Code signal consists of from one to three letters. and must be approved by the CAA. Should be monted high enough to allow its beam to clear surrounding obstacles. Ilousing is cast alumimm alloy.
Lamps: 500-watt, 115-volt, PS-40 bulb, mogul prefocus base, 100 hour life, or 620-watt, 115 -volt, PS- 40 bulb, mogul prefocus base, 3000 hour tife.

| No. | Type | Description | Each |

| 41257D | FCIS-12 | Red Hazard Beacon | \$450.00 |
| 41258D | FCB-12 | Green Code Beacon | 450.00 |

## Type VAW Obstruction Lights

Made in accordance with Specification MIL-L-7830 to meet requirements of the Air Forces, Navy, and CAA. Particularly used as obstruction lights. Meets FCC requirements for tower lighting.
When used as obstruction lights, VAW fixtures are equipped with red globes. Glohes in other colors, for other applications, can be furnished.

Constructed of cast aluminum with 1 -inch bottom hub. Availahle in two styles: multiple units for use on standard 115 -volt circuits, and series units for use on 6.6-ampere series circuits.

The transfer relay is designed to complete the circuit to the spare lamp upon failure of the operating lamp. Relay is mounted in weatherproof housing.
The double disconnecting fixtures are used to mark obstructions to air navigation such as poles, towers, smokestacks, and water tanks, where it is desirable to lower the fixture for cleaning and relamping. Thompson llanger is not included.

## Type TSS Flashers

120 Volts, 50 / 60 Cycles

Used to flash "on-off" signals as required for type FCB-12 red hazard beacons, and to flash code signals as required for type l:CB-12 green airport identification beacons.

All type TSS standard flashers are arranged to flash "on-off" in accordance with CAA requirements for hazard beacons. Type T'S'-18 (No. 46397) eode flasher is furnished with the cam made to order to flash the code assigned to the airport by the CAA. The code flasher will flash most two-letter codes and some threc-letter codes.

Contacts of TSS-22 are inercury tube, rated 25 amperes.
Contacts of TSSS-18 are metal, rated 10 amperes.

## Type TGS Taxi Guidance Signs

Type TGS 3-Section Sign With Base Plate

The need for taxi guidance signs on airports has been emplasized more and more each year with ever-increasing ground trallic, larger fields, and increased activity under reduced visibility conditions.

The use of Type TGS signs provides a system of taxiway guidance such as is commonly used on highways, showing the pilot his location at each intersection and telling him how to reach his designation.

The sigis housing is lightweight, aluminum, box-t ype construction mounted on one or more breakable couplings, all in accordance with CAA Specification L-829. Each number, letter, or symbol (arrow, dot, dash) is contained in a standard 1.4" square removable and interchangeable cast aluminum panel. Signs can be either one-way type or two-way type (with letters both front and back). The letters are made with an orange-yellow plastic on a black background, providing excellent legibility for both day and night.

Signs vary in length from one to six sections. Each unit section base is detachable so that signs are casily converted from one size to another.

The signs may be mounted on either standard base housings or on standard anchor stakes as commonly used for medium intensity marker lights. A series circuit with series insulation transformers is generally used. A 115 -volt or $230 / 11 \mathrm{j}$-volt system may be advantageous for short run or lightly luaded circuits. Insulating transformers are not required for these units.

## Crouse-Hinds Aviation Lighting

## Type DCB-36 Rotating Beacons

## 36-Inch Diameter-1000 Watt

A rotating beacon of high efficieney which projects beams of light in two directions, $180^{\circ}$ apart. The optical system consists of a lens combination in each end of the housing, with a single lamp in the center. Each combination consists of an 18-in. inner doublet lens and a 36 -in. outer lens. The outer lens is made of a onepiece bull's-eye lens 20-in. in diameter, surrounded by twelve $30^{\circ}$ sectors ol an amnular ring.

When color is required in either or both ends of the beacon, the inner doublet lens is furnished in red, green, or yellow. Standard airport beacon listed below has one beam clear, one leam green.
No. 41281 B 115 volts, 60 cycles A.C...... . . Each $\$ 3600.00$

## Type DCB-24R Rotating Beacon

## 24-Inch Diameter-500 or 1000 Watt

A drum type beacon with drum rigidly
 mounted on rotating shaft. Beam can be raised and lowered by raising lowering lamp table on lamp-changer. Lampchanger shaft is calibrated in degres. Normal factory setting with beam $1.5^{\circ}$ above horizontal.

Beacons for advertising purposes can be furnished but must be approved by the CA A before installation. Speed of rotation required is 2 R.P.M., and beacon must be red.

In addition to beacon. it is necessary to inst all a 24 -inch fixed directional searehlight with automatic lamp-changer, the white beam pointing towards the nearest airport. Crouse-llinds type DCE-2t searchlights meet this requiremont.

One or more of these beacons with red lenses rotating at 12 R.I.M. can be effectively installed for marking hazardous areas.

## Type DCB-10 Rotating Beacon

## For Small Airports-500 Watt

Designed to meet requirements of small airports with no regular scheduled air transport activities. Provides alternate clear and green flashes from an optical system rotating at 6 IR.P.M.. thus indicating the location of' a lighted airport with the same beam characteristies as the standard type DCIB-36 airport beacon.

Constructed with a large Pyrex glass dome which completely encloses the rotating optical system. A magnetic lamp-changer provides a spare lamp which is automatically moved to the correct focal position and switched on when the first operating lamp fails. An indicating circuit is included.
No. 44035115 volts, 60 cycles A.C. . . . . . . . . Dach $\$ 990.00$

## Type WC Illuminated Wind Cone Fixtures

Type WC-36 is a heavy duty fixture equipped with a 36 -inch diameter, 12-ft. fabric wind sock.

Type WC-18 wind cone is designed particularly for use at small airports. It is also recommended as an auxiliary wind cone at larger airports.

Both the WC-36 and WC-18 fixtures include ball bearings for the wind cone swivel support and four lighting reflectors, which are 200-watt for type WC-36 and 150-watt for type WC-18.

| No. | Description | Each |

## Type WT Illuminated Wind Tees

Serves as a continuous day and night indication of the true wind direction. Gives the appearance of a single green "1"" when viewed from above at night and a single st roke chrome yellow "l"' when viewed from above in the daytime.
Can be furnished either as a standard wind tee responsive to and affected by the wind only, or can be furnished with any of several different combinations of aceessories to make it completely antomat ic or cont rolled by a remote operator.

## Type PTS Signal Projectors For Airport Traffic Control

'Type D'T'S signal lights are designed for projecting a high intensity beam of light for clear, green or red signals to planes in the air and on the ground.

New compact 'Type PTS \#4701! portable traffic signal can the operated with one hand. This light weight signal for airport control towers is supplied with an overhead trumnon and yohe support. It weighs only 6 lbs ., 9 ozs.

A single pistol grip contains all signal controls: an index finger trigger for selecting red or green color screens, a middle finger trigger for flashing the lamp. a thumb-operated lever for selecting a clear signal. Morse conle signals can be flashed.
No. 47014 Portable traflic signal complete with transformer, cable, \& two lamps.

Each \$260.00

## How to Order G-E Lamps

T'o expedite service and to assure best discount, order in standard package quantities whenever possible. Specify quantity desired of each type of lamp and order by Lamp Ordering

Abbreviations. These consist of watts, bulb shape and dianeter in eighths of an inch, color or other description. See illustrations below.

FILAMENT

## G-E Fluorescent Lamps

The life and light output ratings of fluorescent lamps are based on their use with hallasts providing proper operating characteristies. Ballasts that do not provide proper electrical values may substantially reduce either lamp life or light output, or both.
Ballasts certified as built to the specifications adopted by the Certified Jallasts Manufacturers (CBM) do provide values that meet or excced minimum requirements. This certification assures the user, without individual testing. that lamps will operate at values close to their ratings.

Life Ratings-hased on 3 burning hours per start: 7500 hrs.-T6, T8, and T12 preheat, rapid start, and slimline; $T 12$ instant start; T'17 preheat; all cirelines. Exceptions: F $1000^{\prime} 12 / \mathrm{HS}$ rapid start ( 7.500 hrs . for 10 hrs /start); 1 it watt T12 preheat. 6000 hrs.-T17 instant start, 6, 8, and 13 watt 'T5 preheat; 14 watt 'T12 preheat. 4000 hrs - 4 watt 'T5. Life Multiplying Factors-for 6 hrs. per start: 1.25; for 12 hrs. per start: 1.6; for continuous operation: 2.5. Lamp lengths include lamp and two standard lampholders.

## G-E Reflector Lamps

## For General Lighting

R52

R-52 reflector lamps are designed for general lighting applications, particularly where dirt conditions are severe. Dust and dirt collection on the sides of the bulb do not affect light out put since the metallic reflector coating is inside the lamp.

The 1M/RB32 has a double contour reflector design which permits using 1000 watts in the 1852 bulb size. All R.52 lamps require a shield to protect lamps from moisture or physical contact.

## G-E Reflector Lamps 120 Volts

Reflector Lamps are self-contained spot and flood lamps employing a silver reflecting surface. Some are made of ordinary soft glass, others of heat-resistant glass for better performance with high wattage filaments and for out-door use. Even heat resistant bulbs should be protected from falling moisture when used outdoors.

## G-E Ozone Lamps

G-E Ozone Lamps emit ultraviolet energy through the special glass bult which changes some of the oxygen of the air to ozone. This mashs odors in many areas such as hitchens. rest rooms, elosets, offices, stures, elevators, basements, etc. I se one lamp, for each 1000 culic ft. of space.

Lamps require a ballast to limit current during operation. This can be a chokecoil, a 40-watt light bulb or a resistance of the correct si\%e.

## G-E Projection Lamps $\dagger$ 115, 120 and 125 Volts

G-E Projection lamps are characterized by extreme concentration of light source made pussible hy a highly developed technigue in the forming. treating and mounting of tilaments.
These lamps are for use only in equipment specially designed to mantain bulb and base temperatures within safe limits.

## G-E Reflector Infrared Heat Lamps

## Medium Base

115-125 Volts (Design Volts 115)
Heat lamps help relieve muscular aches and pains, and have many other uses for quick drying and heating. The $110 / 10$ has built-in red filter to reduce brightness; is more rugged and has special glass providing protection against breakage by splashing water.

## G-E Projector Lamps <br> 120 Volts

Self-contained spot and flood lamps made of pressed heatresistant glass. They may be used outdoors, though the higher wattage lamps should be protected from moisture. With their excellent control of light they are also used in many indoor applications such as display lighting.

## G-E Photoflash Lamps

PowerMite M2 - Tiniest Flashbull, made. $\mathbf{6 6} \%$ more light than older type M2 bulls. Plenty of light for the casual amateur or professional. Makes exceptional pictures with either black and white or color tilms.
PowerMite M2B - First miniature blue flashbulb. Same characteristics as the PowerMite M2 but has blue filter coating for use with daylight color films.
No. 8 - Second smatlest flashbulb in the G-E line. In light output and size it is between the PowerMite and the No. 5.

SM-Gas filled no fo 1 flashbull). Flash duration about 1/200 second. Ideal for simple cameras because it lessens subject and camera movement.
No. 5 The standard bulb) used by professionals and amateurs with larger cameras. Precise, uniform, split-second flash for between the lens shutter synchronization.

No. 51 -Same characteristics as the No. 5 but with blue filter coating for use with daylight color films.
No. 6-For high shutter speed synchronization with most focal plane shutter cameras up, to $2 \frac{1}{4} \times 21 / 4$-in. negative size.
No. 11-Larger size serew hase bulb for synchronization with many between the lens shutters.

No. 11B-Same as No. 11 but with blue filter coating for use with daylight color films.
No. 22 For use with front shutter cameras, this bulb provides plenty of peak light for extra coverage and high speed shots.
No. 22B-Same as No. 22 but with blue filter coating for use with daylight color films.
No. 31-For high shutter speed synchromization with large focal plane shutter cameras. Over 4 times as much light as the No. 6 flashbulb.
No. 31B-Same as No. 31 but with blue filter coating for use with daylight color films.
No. $\mathbf{5 0}$-Most powerful flashbulb in the G-E line. Great light intensity in a compact bull) size to cover large areas or for exposure at small apertures.
No. 501 -Same as No. 50 but with blue filter coating for use with daylight color films.

## G-E Photoflood Lamps 105-120 Volts

$3.400^{\circ} \mathrm{K}$ Photoflood Lamps give maximum light for the amount of current used. Designed for use with Type A color materials, but are also ideally suited for black and white photography.
$3200^{\circ} \mathrm{K}$ Lamps are for general studio use with either black and white film or professional types of indoor color materials.

Reflector Photo Lamps have built-in reflectors. Beam spreads of these lamps vary from $20^{\circ}$ for the PII/RSP2, to $90^{\circ}$ for the PI/RF12.

# G-E Clear Neon Glow Lamps 

105-125 Volts

Screw laase lamps. Series resistor momed within hase. See values marhed "IN" in column "Series liesistance." Lamps suitable for use on higher voltages with addition of proper external resistance. Information on request.

Bayonet Base Lamps. Fxternal resistance required to limit current to normal amount. External resistors, supplied by user", should have values marked "EX" in column "Series Resistance," for use at rated voltage.

Pached 10 in unit package, except No. NE-2 which is packed 100 in unit package.

Outside colored orange or red available on G-10 or S-14 lamps at additional charge of 5 cents cach.
*Applies to new lamp.
$\dagger 210-250$ Volts.
$\ddagger$ Dimension for glass parts only. Wire terminals extend 1 inch.
$\|$ Designed for $67-87$ volts, d-c (operating voltage at 1.5 millimuperes, $53-65$ volts, (d-c.).

## G-E Train and Locomotive Lamps

15514/IF 100A21/3

Trainlighting: Voltage regulating devices should be adjusted to maintain rated lamp voltage at the sochet. 30 and 60-volt are best adapted to the voltage conditions normally encountered in trainlighting service.
Ifommotive lleadlight: Should be operated at rated voltage in headlight equipment protecting it from excessive vibration. The bulb must be protected from water which might strike it while hot, except in the case of the 200 -wat 1 A $13-56$, lamp, which is of heat-resistant glass. 'l'wo sealed-beam type lamps are used on road locomotives, one on switchers. 'The 2.50-watt lamp is designed for road locomotives equipped with reflectors. The 100 -watt is recommended for switching locomotives.
Ifocomotive Cal): For all-steam jocomotive lighting purposes except headlighting.

## G-E Aviation Lamps

Effective functioning of aviation lighting equipment requires accurate positioning of the light source. Bipost and prefocus bases provide a high degree of accuracy.

Aircraft Marker Lamps (Clear)

*Wind Direction.
$\ddagger$ Boundary Marker.
${ }^{\circ}$ Olis. Marker.
Note: For low intensity, semi-flush Airport Runway Marker lights, about 2-in. high, use A-21 lamps. For medium intensity elevated lights, about $2-\mathrm{ft}$. high, use T-10 lamps. For higher intensity elevated lights, on rumways where instrument landings are made, use 6.6A/T14P lamps.

## G-E Black Light Lamps

Mcreury Iamps. Four types of mercury lamps are commonly used for black light effects: the 1314 uses a red-purple glass filter for the outer bulb and the III00-s'P' spot (II $100-$ FLI flood). II250-A5 and II400-E1 require separate filters. Filament Lamp. A 250-watt filament lamp in a red-purple bulb is available for black lirht effects. K nown as the Purple X lamp, it is designed for intermittent service only.
Fluorescent lamps. Black light fluorescent lamps contain a special phosphor whose radiation peaks in the near-ultraviolet region of the spectrum. Lamps often used with filters to reduce visible light. Available with BLIB glass for use without filters.

*Rapid Start Lamp.

## G-E Rough Service and Vibration Lamps 120 Volts

rough Service lamp withstands shock and bumps, such as received when used as a portable light on extension cord. Some Rough Service Lamps available in 230 and 250 volts.

## G-E Mercury Lamps

G-E: Mercury lamps have high efficiency and long life and are applicable for general lighting in many industrial areas and for street and flood lighting. The reflector mercury lamps listed below provide good maintenance of light output even in dirty areas. They are intended for use in conventional high bay lighting units. Auxiliary equipment required to operate.

* Color Improved lamps contain a red producing inside coating that provides color balance more like incandescent tamps.

## G-E High Voltage Lamps

Durability and efficiency are less than with 110-125 wolt lamps, but are lamps designed for use in the few locations where only the higher voltage is available. Some rough service lamps and $\mathrm{R}-52$ and $\mathrm{R}-10$ lamps also are available in 230 and 250 -volt designs. Lamps listed below also available in clear bullis.

A unit package of sealed beam lamps consists of 1 lamp. A standard shipping package of sealed beam lamps consists of 8 lamps of the same G-E lamp number. A unit package of other than sealed bearn lamps consists of 10 lamps of the same G-E lainp number.

## G-E Sealed Beam Lamps

General Electric Sealed beam headlamps are of rugged, all-glass construetion-lhey do not grow dim! Same construction used in General Ëleetric fog lamps.

RS

## G-E Sunlamps

Used in homes, offices and solaria. - RS-Medium Screw Base. 275 watts. Is in a bulb with self-contained reflector and operates directly from 50-60 cycle, 110-125 volt a-c current with no auxiliary ballast required.
R-40, Inside Frosted bulb. Standard package, 6.

Each $\$ 9.95$

## G-E Infrared Industrial Lamps 115-125 Volts (Design Volts 115)

For service other than illumination. Speeds up drying and surface heating processes, by radiation. Used in drying photographic prints, industrial and automotive finishes, food products, localized heating, surface moisture, motor and transformer windings, blueprints, pottery, etc.

The reflector drying lamp fits into many specialty jobs not otherwise readily equipped.

## Reflector Lamps

## Commercial Fans

For Offices, Banks, Stores and Institutions

Desk Type
Can be Furnished in Various sizes and Types, in both Oscillating and Non-Oscillating

Floor Circulator Type
For Home or Offlce use.
In various sizes and colors

## Pedestal Type

Available in Several Sizes
While we show only three typical fans of current style desk, floor circulator, and pedestal - may we suggest that you call or write our nearest office or warehouse (see list at back of catalog) when you need technical help, prices, and delivery information.
For the latest fan information, be sure to contact your nearest Graybar office or warehouse

## Fresh'nd-Aire Air Circulators For Commercial and Industrial Use

Designed and built to deliver quiet, efficient, draft-free over all air circulation economically.

There is a model to cover alinost every requirement, from the smallest office or store to the largest industrial plant.

Made of the finest and best material available for the purpose, by expert workmen. All are very atractive and their perlormance outstanding.
Ileavy duty custom-built motor, with extra length sleeve bearings - floats on a cushion of rubher. Motor housing is air-cooled, assuring a constant flow of air in and around the motor; durable chrome finish. Patented plastic propeller, electrically, dynamically and permanently balanced to prevent motor wear and to deliver maximm air flow. Pullchain speed control - shows each operating speed at a glance. Ileavy steel wire safety guard, plated finisif.

Complete with 8 -ft. rubber covered cord and attachment plug cap.

Low Stand Model

Wall Mounted

Low stand or wall models are designed to be used basically as low stand table or wall circulators. Can be converted from low stand type to wall model by simply turning base as shown in "Wall mounted".

For Operation on 115 Volts, 60 Cycles A-C

| Model | Propeller. | CFM | Speeds | Wats | Ship. Wt. | Eac |

## Wesix Bathronm Heaters

No.
10 FC
12FC
15FC

## "Built-In"

A compact heater for bathrooms of average size. Features an "electric chimney" similar to those in major WESIX models. Easy to place in the smallest bathrooms, it will fit into standard walls under windows or in almost any location.

Standard voltage 120 a-c. (Can be furnished for 240 volts). Over all dimensions $10 \frac{1}{2} \times 20 \mathrm{in}$.

Ship. weight 11 lbs.

| Wattaga | Each |
| :--- | ---: |
| 1000 | $\$ 22.00$ |
| 1250 | 22.00 |
| 1500 | 22.00 |

## "Automatic"

Where automatic heat is desired, for cold climates or where the bathroom has a large outside wall area, we highly recommend this regular major air heater with its sparkling nickel finish.

It features the famous WESIX Thermostat which automatically regulates room temperature yet can be instantly and easily adjusted to any desired temperature.

Standard voltage 120 volts a-c. (Can be furnished for 240 volts.)

Ship. weight 17 lbs.

## Framing Details and Dimensions:

Heaters should not be located behind or in the way of hinged doors, under towel racks, tables or cabinets.

Heater rests on bottom strip that is set flush with studs, 6 in. above finished floor. Heater is fastened with screws through side flange and wall finish, into studs. Interior wall finish should run even with wall opening on top, bottom and sides. For plaster finish a lath edging or ground strip around opening prevents crumbling. Heater grille overlaps wall opening about 1 in.

## Ionix Wall Convector

Heating by controlled radiation and convection, the low temperature on the grille panel of the Ionix Wall Convector permits greater freedom in furniture placement and is ideal for use in schools, oflices, theaters or in other locations near work or play areas.

Exclusive with Wesix, the Ionix wall convector features ionization and air purification to destroy airborne bacteria, mold and pollen and make indoor air like outdror air at its best. "Air sterilization" which is also found on Ionix wall furnaces is enhanced by the system of baflles found on the Ionix wall convector.

## Wesix Centramatic Controls

With this complete, packaged kit, central control and automatic capacity control can be added to the alreadly "multiple zone controlled" electric heating system. Basic unit is 100 amp. switcl: which turns heating equipment throughout the home to high, low or off position antomatically. Capacity and indoor-outdorr control is by the easily installed "Climatwins" a sensitive outdoor and indon thernostat combination.

When outdoor temperature rises above a pre-set level, all automatic heating units are switched to 120 v . operation. In addition, house temperature is controlled ly overriding central thermostat whenever temperature setting is lower than setting of individual rom thermostats. Shipping wt. 55 ll s. I L A epproved. ## Wesix Electric Baseboard Panels

Here is a vastly superior perimeter heating system designed for maximum comfort and perfect compatibility with modern interior design. It employs the same principle of radiative and convection heating that has been used by Wesix successfully for many vears. Unlike so-called "panel" heat or "radiant" herating in floors or ceilings, these Baseboards are fully automatic and there is no time-lag or excess residual heat to bring waste and discomiort.

Installed bencath picture windows, the panels keep glass free of fog and count eract downdraft caused hy high heat loss.

No metal fitting on the joh. Two standard lengths are designed to fit any size room with sufficient capacity for design temperature difference up to 70 degrees $F$.

Controls are simple, assuring low installation costs. No expensive wiring or pipes to lay in concrete or plaster. No condensation, no furnace, no flues.

Bingineered for a maximum surface temperature of $150^{\circ} \mathrm{F}$., these units are rated at 250 watts per linear foot and operate on 2.40 volts a-c.

Note: For control by Wall Thermostat, specify Wesix No. DIV.
Standard Finish: Sea Grey.

## Installation

Baseboard panels are surface mounted on the wall above finished floor. Batlle alignment plates assure even alignment of panels and control section.

Thermostatic controls should be carefnlly adjusted in cach room for maximum comfort. In a well engineered installation in a properly constructed, well-insulated house, the temperature difference from corner to corner, floor to ceiling will be less than $2^{\circ} \mathrm{F}$.

## Big Beam Combination Portable Electric Hand Lamp and Flashing Red Signal Beacon

This combination portable electric hand lamp and flashing beacon No. 164 and incandescent bulb type No. 104 is the most popular of its kind on the market today. With beacon arm folded down over handle the beacon serves as a tail light. When beacon is raised toupright position, unobstructed vision is assured. When placed on ground or top of car. it serves as a warning or signal light. Two switches-one for head light- the other for tail light. Powered by one \#200, 6 volt lantern battery.

No. T-1600

No. T-2600

The sustained voltage, long life and low ampere hour cost make these batteries desirable for railroad, telephone and industrial use.
Available in simgle cell units and in batteries consisting of two cells in series. Average voltage per cell is 1.25 volts, falling to 1.0 volts per cell at the end of their capacity.
They are shipped dry, but use a liquid electrolyte. This prevents shelf depreciation.

## "Eveready Hot Shot" Batteries

No. 1461

For all purposes requiring four or more dry cells in series. Particularly adapted fur eleet ric fences. gas engines (tractors, notor lonats, ete.), blasting, fire and burglar alarms, gongs, bells. annunciators, signats. lights for elosets, outhouses, camps, boats, searehlights, etc.
These batteries are composed of specially selected cells. Internal comections are securely soldered and the cells are completely insulated against accidental short circuits. Terminals are insulated.

## Ray-O-Vac Lanterns

No. 303
Powerful lantern has a sealed beam spotlight momented in $180^{\circ}$ adjustable head, red swivel flasher with shatter-prool lens and dual switches on handle. Uses 918 6-volt lantern battery. Lantern, complete with battery, packed in individual display cartons.
No. 303 Sportsman® Lantern
Each \$12. 40

Same features as the No. 303 lantern, but without the flasher. A powerful lantern for outdoor use. Lantern, complete with battery, packed in individual display cartons.

Each \$9.95

## Ray-0-Vac Lanterns

No. 398
Versatile lantern has a 3 -inch reflector, 3 -position switch with flasher button and $180^{\circ}$ swivel head. I ses bulb Plk 12 or Plis. Lses either 8 No. 2LP or 5LP flashlight batteries, or one No. 9.11 sprial spring terminal 6 -volt lantern battery with no bulb changing. Available in individual cartons.
No. 398 II unter ${ }^{(8) \text { Iantern }}$
Each \$4.95

No. 298
Weighs only 3 o\%. Has a 3 -inch reflector, lucite lens, battery pomeh, adjustable headband. I ses 6-volt lantern battery No. 9.41 and bulb, PIIts. Available in individual cartons or 3 on display card No. M-329.
No. 298 Nite-Hawh (B) Ileadlite
Each \$3. 29

Highly resistant to breakage, chemical action, temperature extremes. Features removable end cap with spare bulh holder, phas replaceable lock-type switch. Available in individual phas replaceabre 'Two-cell uses two No. 3I.P or 2I,' and bulb Pr6. No. N 22 Workman(B) Flashlight

Each \$3. 25

## No. N22T

A combination Workman flashlight and continuity tester which mounts into the end cap and is removable. I ses two No. 3LP or 2LP and bulb No. Pl36. Available in individual boxes.
No. N22T Workman® Flashlight and Continuity Tester
Each \$6.75

G32
Rubber end caps and fibre harrel. Replaceable swith with positive lueh button. Available in individual cartons. (i22 uses two Vo. 3LP or 2 IIP hatteries and hutb PIng. Gi32 uses three Vo. 3LP ur 9 ld batteries and bulb Pll 7.
(i22 Heavy duty flashlight
Each $\$ 2.60$
(i32 Ileavy duty flashlight

No. AN22
Safety lights approved for use in explosive atmosphere by Inderwriters Laboratories and Bureau of Mines. Available in individual boxes. Two cell, uses two No. 3LIP or 21 P and bulb Plo.
No. AN22 Workman Flashlight
Each \$3.98

## Ray-O-Vac Penlights

No. PAA2 No. PK2

## Ray-O-Vac Signal Wands

No. W2

No. W4

No. W8
Unbreakable red polyethylene signal wands to fit all standard Ray-()-Vac flashlights. Snap-in cap gives choice of red warning glow or piercing white beam. Available in individual cartons.

## Sterling Pocket Meters

These direct current meters can be used for battery testing of any kind (as stated with each meter), in railroad signal work, for photo flash purposes and in telephone and lowvoltage electrical work generally. They are polarity indicators.

Metal case $21 / 4-\mathrm{in}$. diameter, $5 / 8-\mathrm{in}$. thick, nicely nickel plated.
All are packed in individual boxes, in standard package of 10; shipping weight 4 lis.

## Pocket Ammeters

For testing No. 6-6-in. dry cells. (0-3.5 ampere scale. I ampere divisions. Itas one fle xible terminal.

No. 24..........Each $\$ 2.75$

## Pocket Voltammeters

No. 44: For testing "Ilot Shot," radio "A" hatteries and $\mathrm{N}_{0}$. 6-in-in. dry eells. $0-35$ ampere scale, 1 ampere divisions; ( $0-10$ volt scale. $1 / 5$ yoll divisions. Has one flenible terminal.
No. 44
. Fach \$3. 25
No. 45: For testing No. 6 -6-in. dry cells and ordinary 45 wolt radio " 3 " batteries. (0-35 ampere scale. 1 ampere divisions; 0-50 wolt scale, 1 volt divisious.
No. 45 $\qquad$

## Pocket Voltmeters

For testing 15 volt and 90 volt "B" hatteries and $11 / 2$ volts radio " A " batteries. Has flexihle terminals which will fit any type of socket hole, prevent shorts and permit inclining meter for easy reading.
Scales: ( 0 - 100 volts, 5 volt divisions; 0-2 volts, $1 / 10$ volt divisions.

No. 38A
Each \$4.00

## Pocket Voltmeters

Graphic General Testers

A single tester for dealers and servicemen for testing all portable " $A$ " and " $B$ " batteries.
llas red and green color chart for all standard batteries. including 45 wolt and 90 volt " B " batteries and 1.5 , 4.5 and 7.5 wolt " A " hatteries. Has flexible terminals for battery protection and casy reading.
Scale: (1-100 volt for special size " 13 " batteries, 5 volt divisions.

No. 42A

## Pyrene Fire Extinguishers

## Approved by Underwriters' Laboratorles, Inc., and Factory Mutuals.

## Vaporizing Liquid, Small Pump Type

Light, compact and easily operated. Smothers all classes of incipient fires, particularly those in flammable liquid and electrical equipment. Douhleacting hand operated pump. Discharges a steady stream 2.5 to 30 feet from any position in any direction.

For motorcycles. airplanes and heavy vehicles, "shock absorber" construction; clamp type brackets for wall or steering post guard against wear from excessive vibration. Complete with charge and bracket.

## C-0-Two-Fire Extinguishers

Kills fire with Carhon Dioxide, a clean, pure, dry, odorless, non-damaging and non-deteriorating, inert gas.

The extinguishers smother fire instantly under a heavy, dense. blanket of cold Carton Dioxide gas, which is the fastest extinguishing agent known. It is stored in steel eylinders moder high pressure. and when liberated. the gas is discharged by its own pressure. without pmoning. and smulfs out fire in seconds. It will not freeze in temperatures as low as $10^{\circ} \mathrm{F}$. below zero, and is just as effertive indoors as out. in high or low climatic temperatures.

Ilighly recommended for the speedy extinguishment of highly inflammable liquids. such as gasoline, oil, grease. paints. lacguer solvents; will not damage electrical equipment. Leaves no odor or stain and does not damage or injure machinery. woodwork, finishes. fabrics or other materials with which it comes in contact.

PSA-5

Carlon Dioxide is non-corrosive. a nonconductor of elect ricity and does mot detericirate. A periodic weirht check of the extinguisher is the only maintenance required. Recharging stations are conveniently located in all principal cities.
Superior in design and construction, excellent quality material and workmanship.

No. PSH-15

Wevible discharge hose, wire. braid reinforced. with diepressed complings. Vom-metallie diseharpe horns are shatterpronil. and non-eonductors of electricity. resist eorrosion and moisture. Special rubber handle covers all metal parts of horn, couplings of discharge hose and swivel comections.

## Hand Portables

With Squeeze-Grip valves, easily opened or closed while carrying.

## Kidde Fire Extinguishers

## $\mathbf{C O}_{2}$ Portables (Trigger Type)

A pull on the trigger of a Kidde carlon dioxide extinguisher releases a fog of fire smothering gas which stops electrical and flammable liquid fires in their tracks!

This clean dry gas is harmless to foods, fabries, and finishes. It's safe to handle, and will not damage machinery, eleetrical equipment or insulation. It disappears without a trace following diseharge.

A jam proof locking pin prevents accidental or premature discharge.

| Model No. | $\begin{aligned} & \text { Cap. } \\ & \text { Lbs. } \end{aligned}$ | Averaga <br> Charged <br> Wt., Lbs. | Aver. Ht. Valve \& Cyl. ln. | Cyl. Diam. In. | Each |

## $\mathrm{CO}_{2}$ Portables (Squeeze Type)

This type of carbon dioxide portable is manufactured for those who prefer extinguishers with squeeze valve operation. When operated they diseharge a fog of fire smothering gas that smothers electrical or flammable liquid fires instantly.

This clean dry gas is harmless to foods. falrics, and tinishes. It's safe to handle, and will not damage machinery or contaminate chemical mixtures. It disappears without a trace following discharge.
Jam proof loching pin prevents accidental or premature discharge.

Cartridge Operated-Dry Chemical Portables
This cartridge-operated dry chemical portable comes in larger capacities and is your best weapon against larger fires, inflammable liquid, live electrical equipment, or textiles where dust and residue are not a problem.

IIas single trigger control of the dry chemical and $\mathrm{CO}_{2}$ valves, antomatio fluffing assures instant action and thorough expulsion of the dry chemical.

Exclusive diffuser horn covers wider area, gives more effective fire extinguishment.

| Model No. | Cap. Lbs. | Average <br> Charged <br> Wi., Lbs. | Aver. Ht . Valve \& Cyl. in. | $\begin{gathered} \text { cyl. } \\ \text { Diam. } \\ \text { In. } \end{gathered}$ | Each |

## Wet Chemical Portables

Wet chemical portables are available in a wide variety of container metals, construction, operation and capacities. Interiors are treated against corrosion and shells pass 500 psi pressure tests. Kidde foam, soda acid and cartridge operated water extinguishers are available in $21 / 2$ gallon bronze or stainless steel models. Pressurized water or water anti-freeze units are bronze.

Vaporizing liquid extinguishers with CTC come in pump capacities of 1 and $11 / 2$ quarts, pressurized in 1 and $11 / 2$ quarts and 1 gallon. Water pump tank extinguishers, in steel or copper cases, available in $21 / 2$ and 5 gallon sizes.

## Kidde Fire Extinguishers

## Pressurized Dry Chemical Portables

This pressurized dry chemical portable combines tremendous fire-killing power with quick, simple recharging that permits you to put the unit back into service.

Extinguisher pressurization with dry air or nitrogen varies with the size: Model 5DCP, 150 lbs.; Model 10DCP, 150 to 250 lbs.; Models 20 DCP and 30DCP, 22.5 to 250 lbs. While the range is greater at the higher pressure, complete discharge of dry chemical is obtained also at the lower pressure.
Easy-to-read gauge tells if unit is pressurized.
New 20 and 30 lb . units have easier, faster trigger operation, automatic trigger-lock, fully enclosed mechanism.

## Bean Power Sprayers

## Model 70-MTBT

Especially adapted for right-of-way brush killing; can be drawn by Jeep, passenger model car, light truch or tractor.

Pump delivers 7 gallons per minute at 400 lbs . pressure; driven by a 5 -h.p. Briggs \& Stratton air-cooled gasoline engine. Plunger-type pump, fully enclosed and constantly lubricated by oil bath; has positive-action disc-type valves and quichacting pressure-relief valve. " $V$ " belt drives to pump and agitator.

With 150 -gallon leak-proof and corrosion-resistant BeanBond tank. 200 or 300 -gallon tank available at extra cost. Spray liquid strained as it goes to tank, then filtered between tank and pump. Constant agitation by propeller-type paddles.

Tapered roller-bearing disc wheels for $1.5-\mathrm{in}$. rubber tires; tires not furnished but can be supplied at extra cost.

Complete with Spraymaster Deluxe spray gun with quichacting shot-olf and easy adjustment for close or distant spraying; $100-\mathrm{ft}$. of $1 / 2-\mathrm{in}$. high-pressure hose on re-wind reel; removable refiller with $20-\mathrm{ft}$. suction hose for lifting water from ponds or other common refilling points.

Length less drawbar, 61 -in.; height to top of tank 44 -in. to top of reel $581 / 2-\mathrm{in}$. to top of rail $77-\mathrm{in}$.; width $53-\mathrm{in}$.; clearance 11-in.; tread 45-in.

## Bean Power Sprayers

Spartan Model 33-LC

Equipped with 30 gal. all-steel tank with Bean-Bond anticorrosive coating protection. IIas 8 -in. opening with snap on filler lid for easy cleaning and filling. Pump feeds from tank directly through valve chanber equipped with removable screened cleanout. Provided with removable drain plug.

Mechanical, paddle-type agitator plus jet stream from pump keeps materials thoroughly mixed.

Adjustable relief valve gives desired pressure for spraying. Complete turn changes pressure 35 ibs.
John Bean "45" Spray Gun easily adjusts from fine mist to solid stream. Comfortalle pistol grip permits tireless operation with positive control. Furnished with $25-\mathrm{ft}$. of high pressure, heavy-duty hose, 1700 lb . burst proof tested.

Equipped with Briggs \& Stratton 11/2-h.p. air couled gas engine with spring recoil starter. V-belt drive to pump.

Provided with Model 61 pump, semi-enclosed with lifetime ceramic cylinders. Cold-forged crankshaft, full-stroke guided plungers, chemical resistant, wear compensating plunger cups, self-aligning ball bearings and heavy duty, cast iron manifold with built-in suction sereen.
llas ball bearing disc wheels. $4.00 \times 8$ pneumatic tires.
Length $36-\mathrm{in}$.; width $25-\mathrm{in}$.; height 40 -in.

Provided with 15 gal. all-steel tank with Bean-Bond anticorrosive coating protection. T'ank easily filled or cleaned through large opening. Pump feeds from tank through valve chamber equipped with removable filter screen.

Material kept in constant circulation by overflow jet agitation by-pass.

Relief Valve is adjustable to desired spraying pressure. Complete turn regulates pressure 35 lbs.

John Bean " 45 " spray gun adjusts easily from fine mist to solid stream. Itas conifortable pistol grip. Furnished with $25-\mathrm{ft}$. of high pressure ( 1700 lb . burst proof) hose.

Equipped with Briggs \& Stratton 11/2-h.p. air cooled gas engine with recoil starter. V-belt drive to pump.

IIas Model 61 pump with lifetime ceramic cylinders.
Furnished with stamped steel wheels with sleeve bearings.
Length $351 / 2$-in.; width $191 / 2$-in.; height 34 -in.

## Edwards Industrial Fire Alarm Systems

These alarm systems are made to meet almost any roquirement. The more popular and standard ones are listed below. Many details have been onnitted because of space.

Complete details concerning variations from any of these systems will be given promptly on reguest. Also detailed specifications for d-c and special systems will be supplied to meet specific requirements. For further information contact Graybar.

As fire alarm systems are protective in nature, conduit should always be used irrespective of the voltage or the type of system. 'The simplest and lowest-priced systems are operncircuit types which do mot provide antomatic detection of defects in wiring or connections, and are not listed by linderwritors. Open-circuit systems, however, are preferable to no system at all and afford valuable protection if properly inspected and tested at regular intervals.

All closed-circuit systems are fully supervised and have a control panel placing each unit of the system under constant electrical supervision. Open circuits or grounds in the wiring or in any device causes trouble bell alarm only. From the standpoint of safety and dependability they are the most satisfactory for the majority of buildings.
The installation of standard closed-circuit systems (SSA) is relatively simple since all stations are wired in series and are connected on one loop and the signals in series on another loop-all centralized at the control panel.

Many corle authorities limit the number of stations on one circuit to 20 and the number of signals on one circuit to 10 for a-c and 14 for $\mathrm{d}-\mathrm{c}$.

Keys are provided for "break glass" type stations to operate any station without breaking glass when fire drill is held.

## Information Chart

This chart presents the different systems at a glance and enables one to see the salient prints of each system and the apparatus used. It has been arranged with as great a degree of accuracy as the subject of such diversity will permit. The (*) at left of Catalog Designation indicates that the system is listed by I nderwriters' Laboratories and meets all requirements of NBFU Pamphlet 72.

Systems listed below are for operation from current supplied direct from a reliable light or power service. 3-Wire a-c single phase, with grounded nentral (one side to operate the signaling system and the other to operate the trouble bell) as recommended in Standards of the National Board of Fire Underwriters' Pamphlet No. 72. Some systems may be operated from d-c (Details furnished by Graybar on request).

# Edwards Streamlined Fire Alarm Stations Closed Circuit, Code Ringing 

For use with Fire Alarm Systems operating on voltages up to 120 Volts a-c or d-c.

No. 1250

No. 1253

## Pull-Lever Type-Local Non-lnterfering

For Systems Nos. SS and SSA
Positive, fool-proof action-just a pull, release, and alarm is in. Adaptahle to any circuit arrangement ever specified. "Ilug-the-wall" appearance. Diecast case, lustrous baked enamel finished, with polished metal bands. Transparent plastic protective cover over mechanissn. Front-connected terminal block for easy installation-saves up to $30 \%$ installation time over old stations. Elimination of special keys makes testing casier.

Size- $71 / 2$ in. high, $55 / 16 \mathrm{in}$. wide, depth $17 / 8 \mathrm{in}$. Flush model protrudes $17 / 8$ in. from wall. Cast hox available for surface mounting.

## Pull Lever Type

When ordering spercify P.P. No. 21901 Wall Box for surface mounting and P.P. No. 21900 Wall Box for flush mounting. This applies to all above stations.

## Edwards Home Fire Alarm

No. F-100
This low-cost, easily installed system assures effective and dependable protection against fire hazards. Central signal unit (either surface or flush mounted) is always ready to sound alarm. Test feature to check operation is included.

Underwriters' Approved thermostatic detectors set off alarm when heat beeomes excessive. Each detector offers 400 sq. ft. of coverage. Self-restoring, they may be tested for sensitivity by applying heat.

Two thermostatic detectors are provided with each system (which operates on house current), but additional detectors may be added to the system at any time.

## Federal Sirens and Accessories

## Industrial Sirens

## Type A Siren

All purpose siren which has quich pich-up to high maximum pitch for contrast with industrial and traffic noises.

Weatherproof housing, adjustable bracket. Itas $1 / 3 \mathrm{hp}$. sound output at 150 watts.

Choice of voltages includes $6,12,21,18$ and 110 , for 25 to 60 cycles a-c or d-c.

|  | Length, In. <br> Excluding Bracket | Diam. | Net Wi. | Ship. Wt. | Lbs. |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Model | Lbs. | Each |  |  |  |
| Type A | $111 / 2$ | $101 / 2$ | 13 | 15 | $\$ 65.00$ |

## Type J Siren

This siren is similar to type A, however it has a heavy duty motor for severe services on cranes and other heavy industrial equipment.

Available in 110, 220 or 250 volts, 25 to 60 cycles $\mathrm{a}-\mathrm{c}$ or d-c.

| Net WL. <br> Lst. <br> $151 / 2$ | Ship.Wt. <br> Lbs. | 18 |
| :---: | :---: | :---: |

## Type D Siren

Similar to types A and J but with a more powerful motor.
Produces $1 / 2 \mathrm{hp}$. sound output on 21.5 watts. Its deeper tone carries farther and provides a better contrast where ambient noises are high pitched.
Equipped with adjustable bracket. Weatherproof housing. A vailalle in 6, 12, 24, 48 or 110 volts, 25 to 60 cycle a-c or d-c.

| Model | $\begin{gathered} \text { Length } \\ \text { lit. } \end{gathered}$ | Diam. | Net Wi. | Ship. Wt. Lbs. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Type D | 12 | 91/2 | 14 | 17 | \$70.00 |

## Type L Siren

Heavy duty version of type D siren, for heavy industrial use and higher voltages.

Available in 110, 220 or 250 volts, 25 to 60 cycle a-c or d-c.

| Model | Length | Diam. | Nat Wt. | Ship. Wi. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Type L | 111/2 | 111/2 | 161/2 | 19 | \$80.00 |

## Model AX Explosion Proof Siren

This model is similar in sound output to the inodels A and.$J$ siren.

Meets rigid Underwriters specifications for use in Class 1 group $D$ and Class 11 groups F \& G hazardous locations. 110 volts only a-c or d-c.

| Madel | $\begin{gathered} \text { Lengrtb } \\ \text { lal. } \end{gathered}$ | $\begin{gathered} \text { Diam. } \\ \text { IL. } \end{gathered}$ | $\operatorname{Het~WLI}_{\text {Lbs. }}$ | Ship. WL. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Type AX | 10 | 7 | 16 | 19 | \$186.00 |

## Vertical Sirens

Inexpensive signal for fire, air raid and other alarm purposes in industry or municipality.

Vertical design distributes sound waves radially over distances averaging $1 / 2$ to 2 miles. Specially designed ball bearing motors assure quick pickup and high output. Weatherproof housing.
The two hp. universal motor will also operate on d-c; all others are for 60 eyele a-c operation with choice of voltage.

Model STII-10 differs radically in design and appearance with sound output proportionately higher than hp. indicates.

| Model | H.P. | Phase | Voltages | Shlp. Wt. Lbs. | Each |
| :--- | :---: | :---: | :--- | :---: | :---: |
| $\mathbf{2}$ | 2 | 1 | 110 or 220 | 70 | $\$ 275.00$ |
| 5 | 5 | 3 | $220 / 440$ | 300 | 500.00 |
| 5 | 5 | 1 | 220 | 32.5 | $\mathbf{6 5 0 . 0 0}$ |
| $\mathbf{7}$ | $71 / 2$ | 3 | $220 / 440$ | 4.10 | 550.00 |
| 7 | $71 / 2$ | 1 | 220 | 460 | $\mathbf{7 0 0 . 0 0}$ |
| STII-10 | 10 | 3 | $220 / 440$ | 4.0 | $\mathbf{7 5 0 . 0 0}$ |
| S'TH-10 | 10 | 1 | 220 | 470 | 900.00 |

## Remote <br> Control Relays

The remote control relays must be used with all large sireus to allow remote operation by push button, timers, alarm boxes or program clocks.

Remote Control for \#2 siren $\$ 35.00$.
limote Control for \#5, 7 or S'TlI-10 sirens. 3 phase $\$ 60.00$. Single Phase $\mathbf{\$ 8 0 . 0 0}$.

## Predetermined General Alarm Control

This accessory operates the siren up and down scale for $21 / 2 \mathrm{~min}$ utes but can be actuated by one or more remotely located start only push buttons. Choice of 110 or 220 volts.

## Fire Alarm

## Pull Box

A pull of the handle winds the clockwork actuated contacts to sound siren up and down scale for 2 minutes and then stop. No voltage limitations.

## Pull Lever Box

## Program Clock

The program clock can be set to blow the siren one blast for a time or test signal at any five minute interval in a 24 hour day.

Ilas self-starting motor. Available in 110 or 220 volts, 60 cycle a-c.

## Federal Paging Devices

## Push-Button Signakall

The Signakalls work with any existing horn, bell or light system or may be the nucleus of a new expanding system.

They relieve congested switchboard traflic: free held telephone lines: and speed location of key persommel. Signahall actuated systems prove indispensable in hos offices, stores. lactories and institutions.

Operates on 110 volt. 60 evele a-c, I ise of 110 volt line relay allows operation of low or high voltage signal circuits. Dimensions: $121 / 2 \times 61 / 8 \times 61 / 4$ inches.

Model Sk2: Initiates 20 different code signals. The selector knob in one position limits calls to 3 romends but in second position permits call to repeat until shat off.

Model SK4: A 10 button model. Availahle in the same size case.

| Ne. | Button | Net Wt. Lbs. | Ship. Wt. Lbs. | Each |
| :---: | :---: | :---: | :---: | :---: |
| SK2 | Twenty | 6 | 151/4 | \$175.00 |
| SK4 | Forty | 81/2 | 171/2 | 330.00 |
| Line | 10 volt | 10 a | pacit y) | 20.00 |

## Industrial Bells

Vibrating, Single Stroke And Chimes

Superior bells for all purposes. Strong impulses and special drawn steel gongs assure maximum sound output.

The standard model hells are weatherproof construction and will be so furnished undess otherwise specified.

Models with plug-in feature for surface or concealed conduit monnting on any standard outlet tox are available at no additional cost ; please specify. Standard construction on the chime, which is primarily for interior use in quiet areas such as offices, ete.
Industrial hells available for d-c as well as a-c 60 cycle. No extra charge for 25 cycle if specified. Special voltages also available up to 250 volts.

## Compressed Air Horns

Air horns for industries and municipalities or wherever a loud distinctive general alarm or code signal is desirable.

These air horns are ideal for short codes or prolonged alarms.

Each successively larger whistle has a deeper and more powerful tone. Projectors are specially machined cast bell hronze. Horns are available for speeifie pressures ranging from 15 pounds upward.

Diaplragms of special metal will last almost indefinitely at proper working pressure. Electric valves or hand valves available at prices depending on current and pressure characteristics required.
The numerals in Catalog Nos. indicate diameter of diaphragm. The letters 11, Mi or Lindicate high, medium or low pitch.
Valves are available for any common voltage in d-c from 6 to 250 volts; for 60 cycles a-c in $24,110,208,220$ and 240 volts; and for 25 cycle a-c on 110, 220 and 4.40 volts.

## Beacon-Ray Lights

The beacon-ray light is the finest general
 alarm warning device ly itself or to supplement audible signals in extremely noisy areas.
lt's an excellent signal in any danger spot such as drawbridges and other navigational or industrial hazards; also an exceptional attention getter on electric signs, drive-ins, etc.

The standard model is for 110 volt 60 cycle a-c. Available in a choice of red, green, blue, amber or clear white lenses.

Equipped with $1 / 2$-in. pipe flange and two wire leads for simple and easy mounting. No rectifiers or transformers required. Finished in hammertone gray enamel. Special models for other electric requirements available.

| No. | Volts | Het. | Diam. | Ship. Wt. | Price |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 27-S | $110 \mathrm{a}-\mathrm{c}$ | 14 | 61/4 | 6 | \$65.00 |

For all your paging device requirements be sure to contact GRAYBAR first.

## Federal Electric Horns

Excellent signals for coding as well as alarm. A variety of models available. The standard horns are the familiar industrial type. The lli-Power horns are twice as loud as the standard and are used for larger or noisier areas. The resonating horns are twice as loud as the Hi-Power, also have distinctive trumpet tone. The motor driven horns are less powerful than the resonating and have another distinctive sound; are not satisfactory for fast code signals.

Horns are pearl gray baked enamel unless otherwise noted. All horns are tapped for $1 / 2-\mathrm{in}$. conduit. The a-c models are 60 cycles hut 25 cycles are optional. D-C inodels are available as listed below.

## Vibratory Horns

$\underset{\mathbf{3 0 - 3 5 - 3 2 - 4 2}}{\substack{\text { Models }}}$

Models
30A-31-41

Models
$\underset{36-50-33-43}{\text { Models }}$

Models
F30B-F31B-F41B

Two major classes, standard and hi-power, with choice of grille, single or double projector. Projectors may le rotated $180^{\circ}$ to direct sound. Concealed conduit mounting optional if specified. Flush type also available. Horns constructed from material that will not corrode.

## Hi- Power Horns

The IHi-Power horns are identical in appearance and dimensions with respective standard models. Also available in d-c.

| A-C Models |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| No. | Voltage | Destription | Ship. WI. | Each |
| 31 | 6-250 | Grille | 41/2 | \$20.50 |
| 32 | 6-2.50 | Single Projector | $63 / 4$ | 27.50 |
| 33 | 6-250 | Double Projector | 71/2 | 36.00 |

| D-C Models |  |  |  |  |
| 41 | 6-250 | Grille | 4112 | \$30.00 |
| 42 | 6-250 | Single Projector | 63/4 | 36.50 |
| 43 | 6-250 | Double Projector | 71/2 | 44.50 |
| F41B | 6-250 | Flush Type | 63/4 | 36.50 |

The loudest electric horns. The weatherproof models have swivel bracket, straight projector and pearl gray finish. The interior types have coiled projector, plug-in mounting and red finish.

## Explosion Proof Horns

A number of electric horns available in explosion proof construction mecting class 1 group $D$ requirenents. Model numbers similar to corresponding non-explosion proof units but have an X appended.

Resonating and all d-c explosion proof horns are furnished complete with an explosion proof splicing condulet which is not required in other models.

Gives an extremely loud alarm signal that will overcome very high moise levels and cover wide areas. It is an airpressure horn ready to comect to existing eircuits-no auxiliary equipment needed. Fitted with standard speed $1 / 4 \mathrm{hp}$ motor. The powerful blast of the air trumpet is instantaneous when current is applied.
Ilammertone gray enamel finish. (Red can be furnished if specified.)
One in a standard package. Approximate weight: single projector 68 lbs. Two-Way Projector, 85 liss.

Faraday Industrial Horns
Listed by Underwriters' Laboratories, Inc.
For Coding and General Alarm-Heavy Duty

No. 121-U

No. 123-U

These horns give maximum signal strength, lond, commanding. clean-cut tone and positive instantanesus performance. Ifleal for medium noise-level signaling.
The a-c vibrating electro-magnet mechansim operates without contacts. The d-e mechanism has heavy tungsten contact prints.
Hammertone gray enamel finish. (Red cnamel finish can be furnished when specified).
Uni-Pact-Che adapter plate fits any standard 4 in. square or octagon outlet box, condulet or Wiremold titting. All wiring is made to the plate installation to simplify maintenance.
Standard-Horns are same as Ini-Pact except for wall mounting with connection to $\frac{1}{2} \frac{\mathrm{in} \text {. conduit directly to the }}{}$ housing or for mounting to an outlet box whell used with the hanger plate that is furnished at no extra cost if specified.

One in a standard package. Approx. shipping weight: Drum type $11 / 2 \mathrm{lhs}$. Short and Meqaphone type $51 / 2 \mathrm{lbs}$. Two-way type $91 / 2 \mathrm{lbs}$.

## Benjamin Type SNP Non-Weatherproof Howlers and Buzzers

Designed for use indoors where low current consumption, easy wiring and a sealed construction to keep out dirt are required. AC howlers operate on series or parallel circuits. DC howlers operate on parallel circuits only. DC howlers have interrupters with tungsten contacts protected from arcing by condensers.

Power consumption is 18 watts. Diaphragm is spring steel, $43 / 8$ in. diameter. Finish baked gray hammered enamel. Baked red enamel finish available when specified.

SNP Buzzers recommended where competing noise is not excessive. Construction is same as Ilowlers except that a steel cover is used in place of the projector or grille.

IIousings have $1 / 2^{\prime \prime}$ I.P.S. knockouts at back and side. Also holes for mountings to a flat surface or $314^{\prime \prime}$ or $4^{\prime \prime}$ octagonal loxes. No. 8731 Adapter Plate is required for alignment of Double-Bell INowlers when mounted on an outlet box and for mounting all llowlers on switch or $4^{\prime \prime}$ square outlet boxes. No. 8731 ineluded with I Iowlers, when specified.
A.C. deviees are 60 cycles std.; 2.5 cyeles optional at same price. Special voltare also available. 250 V. D.C. devices are also for use on $2: 30 \mathrm{~V}$. systems. Bell ringing transformers are not suitable for 12 and 2.4 V. A.C. devices; signaling type required.

## Benjamin Type SWP Weatherproof Buzzers

Listed By Underwriters' Laboratories, Inc.

Recommended where competing noise is not excessive. Same construction as type SWI weatherproof howlers except that a steel cover is used in place of the projector. Sound is produced by hammer action of a vibrating armature striking cover. Buzzers do not have a muting mechanism. Power consumption is 18 watts.

| No. (AC) | Each | No. (AC) | Each | No. (DC) | Each |

## Benjamin Type SWP Weatherproof Howlers

Listed By Underwriters' Laboratories, Inc.

No. N-8546-115V

No. N-8590-115V

Sound-producing mechanism starts and stops instantly with the current impulse, making it ideal for code-calling. AC howlers operate on series or parallel circuits. DC howlers operate on parallel eircuits only. DC howlers have interrupters with tungsten contacts which are protected against arcing by condensers.

Power consumption is 18 watts. Spring steel diaphragm, $43 / 8$-in. diameter. Interchangeable projectors, 7 -in. seamless single, or double bell-type projector assenbly plugs into housing.

Heavy cast iron outlet box attached to seamless steel projector assembly by a cast aluminum threaded ring. Assembly joint is sealed by rubber gasket. Two lugs provided for wall mounting.

Finish baked gray hammered enamel.
Construction of type SWP fire alarm howlers, designed for fire alarm system operation, is same as for heavy-duty weatherproof howlers, except funish is baked red enamel.

The SWPE corrosion-resisting howler is designed to withstand atmospheres containing highly corrosive forces. It is similar in construction to the regular weatherproof howler except that the diaphragm is made of corrosion-resisting metal, $43 / 8-\mathrm{in}$. diameter; threaded union housing ring is cast brass; projector is finished in gray porcelain enamel. Other parts of the howler are baked gray hammered enamel. A muting mechanism is not provided as on the regular howler.

## Benjamin Type EXH Explosion-Proof Howlers and Buzzers

Listed By Underwriters' Laboratories, Inc. For Use In:
Class I, Groups C and D Hazardous Locations Class II, Groups E, F and G Hazardous Locations Also Suitable for Class III Hazardous Locations

No. 8130-115V
Has ample strength in every part to withstand the pressures of internal explosions without breaking down or permitting flame, hot gases or sparks to escape and ignite surrounding atmosphere-and are of such design as to prevent the development of temperatures on ontside surfaces sufficient to cause overheating or ignition of dust.
Power consumption is 30 watts. Spring steel diaphragm 5 in. diameter, rigidly supported. $51 / 2 \mathrm{in}$. seamless steel projector assembly plugs into housing. Finish baked gray hammered enamel. Baked red enamel finish available. EXB Buzzers same general design, not as loud as Howlers.
Prices on application

## Benjamin Motor-Driven Weatherproof Howler <br> Listed By Underwriters' Laboratories, Inc.

No. 8170-115V
Distinctive tone obtained throngh use of a high torque motor that starts and stops with practically no lag or "coasting."

High torque motor, series wound, Universal type for DC to 60 cycle AC operation; $11.5,230$ and 2.30 v.; power consumption 80 watts; permanently aligned armature shaft bearings lubricated by large capacity wick-feed oil cups.

Diaphragm $51 / 2$-in. diameter, sealed by gaskets and rigidly supported. 18 gauge steel housing, sealed with rubber gaskets, weatherproof. Finish baked gray hammered enamel over electroplating on steel housing, mounting bracket and projector. Housing tapped $1 / 2^{\prime \prime}$ I.P.S.

## Edwards A-C Adaptahorns

These extra loud horns are esperially designed for use in schools, industrial plants and institutions, and particularly where louder results from less current are desired.

They have specially sealed in mechanism, fromt comection feature and special mounting plate, which can be mounted on $31 / 4,31 / 2,4$-in. octagon, $f$-in. square boxes or any box with a single gang phaster cover for indoor uses, on wall or Condulet or Wiremold fitting. Wires can be easily connected to large, conveniont binding posis on momenting plate. When wiring is completed it is only neressary to.slip Adaptahorn on sturdy hanger and plug feature automatically makes comection.

Light gray finish.

Nos. 3i2 and 371 Adaptahorns can also be used for outdoor installations by using this cast back box and gasket for Underwriters" isisted Weatherproof Installation.

The box is drilled and tapped on top to take $\frac{1}{2}-\mathrm{in}$. conduit. Bensess are also provided in the back and on the bollom which can be drilled for musual mounting requirements. Adds $17 / 8$ in. to depth of llorms.

No. 349 - Shipping Weight 2 lhs.............. Each $\mathbf{\$ 6 . 6 0}$

## Edwards Flush Horns

This Flush Type horn has the same characteristics and meehanism as Nos. 3 in and 37.4 Adaptahorns, except for flush installations.

Particularly suitable in buildings sueh as schools and other pulbie institutions.
Die-cast face, gray finish. Face plate $61 / 2 \times 61 / 2$ in. Wallcut size $-5 / 8 \times 5 \frac{5}{8}$ in. $x 3$ in. deep.
Shipping weight $33 / \frac{1}{4}$ lhs.
Furnished with No. 24687 wall box.

## Edwards Industrial Horns

## Resonating Type

Listed by Underwriters' Laboratories, Inc.

No. 5420
For mills, mines, yards and wherever a peowerful, distinetive signal is reguired. It is entirely electric in operation. eliminating expensive auxiliary equipment reguired for signats of eftual tone and caparity. Weatherproof?
Ilousing is tapped for $1 / 2 \mathrm{in}$. conduit, fiod lacquer finish. Swived mounting bracket permits horn to le swang or tilted to any desired angle.
For voltage up to 2.0 A-C. (Sperify voltage wanted.) No. Each 5420-Approximate shipping weight, 9 Its............. . $\$ 72.00$

## Benjamin Telecode Relays

## Listed by Underwriters' Laboratories, Inc.

For Panel Mounting normally closed, "NC," until the relay coil is emergized), or with lockime armatures.
lacking relays have two independent enils; a pull-up and locking coil. The locking eoil, usually commected in parallel with the sigmal, leoks the contacts, when operated, to provide contimuons operation of the signal until the cirouit is broken Ly a release swital.

The pull-up coil is comneeted to the telephome line or actuating eiremit and the locking coil is emmected in parallel with the howler or other deviee operated from the contacts of the relay.

Contads are tungston. (ails are form wound with moistureproof coverings and carefully impreqnated.

Contarts are rated 88 anmere at $1[0$ volts (will operate five vibratimetype howlers).

Standard coil windings are 1000 ohms. These will operate on a voltare range of 80 ta $[10$ volts 20 to 60 cycles and also on 18 volts I). (:. For use on lelephome ringers with other than 1000 (Ohns resistance spedily resistance of ringer and voltage and fremuency of ringing system. Not for use on harmonic ringing systems.

For Panel Mounting

Condensor eapacity is 1 mfd. Pressed steel box is $6^{\prime \prime} \times 6^{\prime \prime} \times 3^{\prime \prime}$. Explosion-proof and Watertipht Boxes are tapped "straightthru" $1 / 2^{\prime \prime}$ I.P.s. std.; $3 / 4^{\prime \prime}$ il specitied, at same price. Ex-plosion-proof Relays are listed by Underwriters' laboratories, Inc., for Class Il, (iroups $\mathfrak{F}$ and (i hazardous atmospheric locations. Also suitable for Class III hazardous locations.

## Faraday Kodemasters <br> Portable Desk Type

Consists of a synchronous motor-driven contact interrupter on which the desired conle is manually set up and automatically transmitted to the system of andible signals commected to it.

Thirty separate and distinct codes are provided each of Which is automatically set for the name that appears on index card when viewed through the cover slot. A code is set up by rotating the index wheel on risht side of onit to number desired. Operating the switeh lever on left so that the word "oN" appears in slot lights the filot light and energizes the driving motor which causes unit to transmit the code. Code is continuously tramsmitted until switch lever is turned back of the "ol'r" position.

If Kodemaster is shut olf while a code is being transmitted it will continue to complete the code and then stop itself. An automatic interlocking feature prevents code being changed while the Kodemaster is in operation. Completes corle even after it is manually shut off, therefore the code cannot be changed during this time as the mechanism must first stop and the pilot light goes out.

In addition to ca'ling individuals, may be used for general signals, such as: Litart Work. Dismissal, hest Period, etc.

Contact rating 3 amp. 120 volt a-c; Code signal load 1 anp. 120 volt d-c. Voltage 120 volts, 60 cycle a-c. Finish: Hammertone Gray Enamel. Front cover satin stainless steel.

Call Graybar FIRST For . . .

## Edwards Lokator Systems

These systems use a predetermined code on audible and visual signal devices to call or "lokate" individuals in offices, stores, factories, etc. They are amazingly inexpensive, having been specifically designed and engincered to meet the diversified requirements of business and industry. Their versatility, dependability and low cost make them outstanding.
They are operated entirely by low voltage, irrespective of the voltage used to oprate the signals. Mechanism is driven by sturdy, noiseless, synchronous motor.

Furnished in 20, 40 or 60 call units. All names can be typed on a printed form protected by a clear plastic strip. To locate an individual, operator need only slide the selector lever to desired name, apply a slight pressure and immediately the code of that person is sounded on all signal devices.

Wrinkle gray finish, with black panel and chromium relief.

## Power Supply Units

Whenconnected to standard lighting circuits they distribute 21 or 115 volts ate to the signals. but permit only low voltage to enter the selector unit. They provide correct current, protect the lokator from excessive line loads and provide a terminal box for centralizing all units in the system.

## Lokator Signals

No. 5005 Chime Signal

No. 5031 Light Signal

Designed especially for use on Lokator Systems.
Signal stroke bells sound a clear, crisp tone, audible over long distances and normal noise disturhances. Well built and will stand many years of hard service. light gray finish.

Chime signals are the most conmonly used. Emits a pleasant, musical tone, penetrating and clear, yet not annoying or harsh. Light gray finish.

Light signals-Ideal for locations where no noise whatsoever is desired. Call is shown by flashing light. Protruding glass dome enables it to be seen from all directions. Light gray finish.
Alove signals are designed, rated and standardized for operation together.

Irices on application.

## Edwards Return Call Annunciators Electro-manual Reset

For return call systems. All indicated drops reset at once-individual resetting not possible. Also manual, meehanical reset in case of emergency. hooms may be called from the oflice or central station, or vice-versa, and the call may be acknowledged.
Can be furnished in the following finishes - light gray, mahogany, walnut, oak, or any solid spray finish, if specified.
For other finishes, features. ete., and complete installation data contact Graybar.
No. 410-Surface Type, with Metal Case.
No. 412-Flush Type, with netal face plate and wall box.

## Edwards Annunciator Drops

Note-When ordering drops for anmunciators, give voltage, whether a-c or d-c (exact frequency if a-c., i.e., cycles, etc.). State whet her annunciator refuiring replacement drops has buzaer or extension signal and give catalog and serial number of annunciator.

## No. 8-Manual Reset

An eflicient drop used in all annunciettes. Its compact design gives a clear indication. but allows small, neat annumciators. Postive locking.

Approx. weight, 1/4 Ib.
No. 8
Each 57.70

No. 80-Manual Reset
A heary duty drop for high or low voltare as specified. It is used on Nos. 81 and 807 anmunciators.

Its action is positive and the locking feature foolpronf. Large indications are possible. Tag is 1 in . high, $11 / 4 \mathrm{in}$. wide.
No. 80
Add $\$ 4.50$ for each set of contact clips.

## No. 4-Electric Reset

Itsed in adl eloetrie reset annumeiators. The indication is a white arrow which points directly at the name card. When reset the arrow drops out of sight behind the name card. The arrow can be seen from any angle. Has no surings or eontacts and cannot shake or jar out of adjustment.
loocks in pither position and cannot indicate until current is passed through magnets. Indication card is $13 / 8 \times 5 / 8 \mathrm{in}$.
No. 4..
Each $\$ 11.00$

## Edwards Clock System Controls

## Manual Dual-Motor Resetting Unit

For operating units of 30 clocks.
For use with multi-circuit program instruments without clocks as a powerinterruption indicator.
Standard 115 volts, 60 cycles can be supplied for other voltages and frefuencies when specified. Contact (iraybar for details.)
This unit consists of a special switch plate, with hey type switches (to prevent tampering), power interruption pilot light and lits a 2 -gang wall hox with 2-gang cover, having a minimum depth of $21 / 2 \mathrm{in}$. (Wall box not included with unit.) Switch plate is brushed nickel finish, marked to indicate switch positions. The power interruption pilot light, located to the left of the switches, is a red jewel and lights only when power is restored.
When power returns after an interruption, clocks automatically start again, but are slow to the extent of the interruption, and the pilot light continues to show red. 'To return clocks to the correct time it is only necessary to throw the reset switch to "advance" prosition with the key provided. This canses all clochs to operate at an accelerated rate. When all clocks are again on correct time, the advance switch is thrown to normal position, the pilot light is set to normal and the system conlinues to keep time.

Approx. shipping weight 2 lbs .

## Edwards Centrally-Controlled Program Clock System

These systems are designed to meet the rigorous standards set by modern timing repuirements.

They are built around the famous dual-motored Telechron mopement, and eliminate contacts, reetifier, master clock, relays and produlum. The motor is bi-polar, self-starting and synchronous, with the motor for accelerated resetting geared direetly to the shaft on whieh the clock hands revolve.
(of the two motors, one is for normal time-keeping and the other for accelerated reselting. The time-keeping motor has the advantage of uniform torgue from standstill to synehronous speed, is virtually noiseless in opreation and instantaneous in starting and stopping, which minimizes scattering of clocks upon power stoppage.

These dock systems are in perfect synchronization with the incoming altermating current-there is no central control clock to be serviced or regulated.

III program instruments. clocks and signals deseribed are listed by the Underwriters' Laboratories and are designed for opreration on 11.5 volt, 60 cycle alternating current. (When so specified, units will be specially wound to operate on other voltages and frequencies.)

All devices are unqualifiedly guaranteed for perfection in material and workmanship.

The clock systoms described have unlimited installation range. They will give dependable and faithful service in schools, colleges, hospitals, instilutions, offices, industrial plants, stores. apartments and residences.

The systens described are clock and progran systents. There is mo eronomy in trsing to make one system do the work of three instead of doing one joh well. For example, program bells are not designed to call teachers to the phone or warn of fire.

## Audible Signals

They indude bells of excellent tone quality for use in corridors, playrooms, vocational rooms. ete.

Classroom buzzers may be housed in the clock outlet box or monnted separate from the cloch.
Chimes for classrooms have a more penetrating tone than a bell without objectional shrillness.

There are also horns for outdoor use where a bell is not desirable.

## Edwards Multiple Circuit Program Instruments

## Four-Circuit Type

For automatically controlling the operation of signals according to predetermined schedules. Can the installed as individual units or as parts of an Edwards centrally-controlled clock system.
Particularly suitable for large schools, institutions or industrial plants where classes or shifts are on different schedules.
Standard 115 volts, 60 cycles.
The program element consists of two perforated metal cylinders mounted vertically and revolving about their respective vertical axes.
By inserting metal pins (provided with each instrument) into proper holes in each of the two cylinders, signals may be operated at one minute intervals, 24 hours per day, seven days per week.

The timing unit is a dual Telechron motored movement geared to the program instrument. The timing unit also controls the operation of contacts which close every minute for a peried of 2 to 6 seconds, thus controlling signal duration through a relay having 6 ampere contacts at 115 volts a-c.

Size $-31 \frac{1}{2} \mathrm{in}$. high, 16 in . wide, 7 in . deep.
No. 1834.
. Each \$666. 00

## Edwards Signal Control Boards

For use in schools having multiple circuit progran instrument to transfer any roon from one sehedule or program to another. Has as many vertical conductor bars as there are program instrument circuits and as many conneeting forizontal bars as there are sipmals. Push buttons are furnished to manually sound signals in any romm.

Standard 11.5 volts, 60 eycles.
Available for four circuit program systems in 20, 30 or 40 buttoms; for six eireuit systems from 40 to 120 buttons in multiples of 10 buttons. (Specify exact number of buttons.) For flash mounting umless otherwise specified.
No. 1940 -Four-circuit, 20 buttons . . . . . . . . . . $\$ 175.00$
Add for each additional 10 buttons.
75.00

## Edwards Electric Clocks

## Indoor Flush Wall Type

Satin aluminum finish metal case. (iraceful hands, red sweep seoond hand.

Clear white dial, convex crystal glass and black arabie numerals for easy visibility from a distance.

1'owered by Telechron synchronous, noiseless dual-motored movement. (For use with No. 1900A Manual reset or No. 1902 A automatic reset control units.)
Hanger on back engages with special galvanized steel wall box and assures snug mounting to wall.

Wall box of ample size to accommodate clock movement and connecting wires. Also provides for mounting a program buzzer when desires. Wall box $75 / 8 \mathrm{in}$. high, $41 / 8 \mathrm{in}$. wide, 4 in. deep.

Dial 12 in. diameter. Outside diameter $131 / 4 \mathrm{in}$. Projects $11 / 4$ in. frons wall.

## Edwards Flushcall Signaling Devices

Modernized signaling and calling devices for replacement of old-type bells, buzzers, transformers and pushes in residences, apartment houses, ete.

Lach device fits slandard gang boxes and takes standard switch or receptarle plates. Can be ganged together with 115 voll receptarles, etc., in standard box and finished with standard plates.

All are designed for a-c operation only, with absolutely no adjusiment at any time.

Construction Details - Mechanism completely insulated from frame. Must-resisting metals or finish throughout. I'rante and louver front plate completely surround and protect gong and mechanism from wires in box. Large, accessible binding posis. Inclined construction of frame and shallow design leaves ample space for lock nuts and wires.

No. 660

No. 661

No. 664

All devices operate on 60 cycles. No extra charge for 25 cycles if specified.

## The Ringcall

For replacing old-style small door bells. IIas a pleasing tone and great carrying power.

| No. | Schedule | A.C Volts | Std. Pkg. | Appl. WL. Std. Pkg. | Each |
| :--- | :---: | :---: | :---: | :---: | :---: |
| 660 | S | $8-10$ | 6 | 2 | $\$ 2.09$ |
| 760 | S | 24 | 3 | $3 / 4$ | 2.59 |
| The Buzacall |  |  |  |  |  |

For replacing old-style buzzers. Has good tone and more carrying power.

| 661 | S | $8-10$ | 6 | $11 / 4$ | $\$ 2.04$ |
| :--- | :--- | :--- | :--- | ---: | ---: |
| 761 | S | 24 | 3 | $1 / 2$ | 2.48 |

## The Melocall

Sounds a soft, mellow, momentary "ding" - an entirely different "third" call that is not amoying.

| 663 | S | 8-10 | 3 | $1 / 4$ | \$2.86 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 763 | S | 24 | 3 | $8 / 4$ | 3.30 |
|  |  | The | us |  |  |

## The Tucall

A distinct improvement from the old-style combination surface-type bell and buzzer. Both signals are combined in a single unit occupying only one gang.

| $\mathbf{6 6 2}$ | S | $8-10$ | 6 | $11 / 2$ | $\$ 3.30$ |

## Edwards Hospital Signaling Systems and Equipment

A dependable signaling system is an absolute necessity in every modern hospital.

## Nurses' Calling System

May be either one of the following two types:
Locking-hutton Type in which the locking push button contains all the mechanism to actuate the audible and visible signals and to reset them when call has been answered, is suspended from a flexible neoprentrovered cord.

Pull-Cord-Switeh Type-consists of a special togyle-type switch installed in the wall and operated by a pull cord. It is for use in those hospitals where low initial cost is the deciding factor. As the operation of the pull-cord switeh requires more effort on the part of the patient, it is sonsetimes not favored.

## Psychopathic Alarm Systems

A tamper-proof system that the deranged patient cannot operate. By means of a switch outside the corridor the attendants can make the calling station in each room operative before they enter the room. Then, in the event of an unruly patient, assistance can be called for.

## Doctors' Paging System

As the services of the permanent staff and of visiting physicians are in constant demand in all hospitals, it is important that a doctor be reached as soon as possible. When visiting in a hospital, the doctor may have several patients requiring his attention, during which time a demand for his services may arise elscwhere.
These paging systems meet such conditions, as it permits calling three doctors to be paged at one time on any number of annunciators without disturbing the patients.

## Doctors' In and Out Systems

In both large and small hospitals where the visiting doctors are likely to arrive at any hour of the day or night, it is important to know when a certain doctor is in or out of the building. This is accomplished with an electrical reset annunciator, with the required number of indications, located in view of the telephone operator. In the main entrance or doctors' cloak roon is located a similar annunciator with switches. The doctor, by throwing the switch opposite his name lights the indicator showing his name on both annunciators. Throwing the switch in the opposite direction extinguishes the lights opposite his name in both instruments.

## Ambulance and Entrance Signaling System

This is chiefly a pust button located at doors leading out of the building and a lamp-annunciator having a lamp signal for each location, with buzzer as an audible signal. Very useful for night service.

## Nurses' Home-Calling Systems

Provides conmminication between office and nurses' and attendants' rooms at their homes.

Two types of systems can be used, viz:
Return-Call Annunciator 'Type. Intercommonicating Telephone Type.

A combination buzzer and push-button station is provided with the return-call annunciator system in the nurses' and attendants' rooms, and a combination anmunciator and posh button is installed at building olfice. This system permits the office to call the nurse and the nurse may answer the call by operating the corresponding push button.

Room stations can be provided with indicating drops which in a nurse's absence remain visible until reset, indicating that a call has been made.

In the intercommunicating telephone system a combination annumeiator and push button board is provided with an operator's telephone and the room stations are replaced by telephones. Room telephones can be provided with indicating drops for the same purpose as stated above.

Hospital signaling equipment is approved by the War Department for Army llospitals, Bureau of Yards and Docks of Navy llospitals, and Department of Interior for Indian llospitals.

## Engineering Advice

We will gladly cooperate with architects, engineers, hospital superintendents, etc., in charge of operation to lay out systems and make recommendations.

There is no charge for this service. For information, contact Graybar.

# Faraday Conventional and Uni-Pact Bells and Chimes 

Listed by Underwriters' Laboratories, Inc.

All Uni-Pact units are furnished with the same size and type, easy-to-install adapter plate so that the various signaling units may be interchanged quickly and easily without rewiring.

The adapter plate mounting fits any standard 4 in . square or octagon outlet box, condulet or Wiremold fitting.
All connections are made to the adapter plate and the electrical installation and testing can be completed before painting building.

Packed 6 of 1 color to carton. Ship. $w t .15 \mathrm{Hts}$.
No. 1.-16
Each \$7.95
Patent pending.

## Victory

Finished in copper enamel and black. Has 2 notes for front door, 1 note for rear door.

Dimensions: 7 -in. high, $11 / 2$-in. wide. 2-in. deep.

Packed 6 to carton. Ship. wt. 9 Ibs. No. L-17.
.Each $\$ 5.95$

## Mt. Vernon

Graceful colonial design, finished in hammered bass. Ilas 2 notes for front door, 1 note for rear door.

Dimensions: $113 / 4$-in. high, 7 -in. wide. Packed 6 to carton. Ship. wt. 20 lth . No. L-20.

Each \$11.95

## Mayfair

Modified tube model. Cover finished in walnut or lime oak, with goldtone tubes. Has 2 notes for front door, 1 note for rear door.

Dimensions: $115 / 8$-in. high, $75 / 8$-in. wide, $3-\mathrm{in}$. deep.

Packed 6 of 1 color to carton. Ship. wt. $16 \mathrm{lbs} ., 4 \mathrm{oz}$.
No. L-23.
Each $\$ 8.95$
Patent pending.

## Premiere

Cover attratively finished in the popular black and brass combination. Has 2 notes for front door, 1 note for rear door.

Dimensions: 7 -in. x 8 -in. x $21 / 4$-in. deep. Packed 6 to carton. Ship. wt. 17 lbs .
No. L-19.
Each \$9.95

## Jewel

Cover finished in walnut or lime oak, with goldtone tube on each side. Has 2 notes for front door, 1 note for rear door.
Dimensions: 7 -in x 9-in. x 3 -in. deep.
Packed 6 of 1 color to carton. Ship. wt. 23 lhs .
No. L-22
Each $\$ 11.95$

## Repeat-A-Matic

Three door chime. Has repeating chime for front door, 2 notes for rear door, 1 note for third door.
Finished in ivory and gold, or white and silver.
Dimensions: 7 -in. x $73 / 4$-in. $x$ $21 / 2$-in. deep.

Pitched 6 of 1 color to carton. Ship. wt. $1.5 \mathrm{lhs}, 8 \mathrm{oz}$.
No. $1 .-18 \ldots \ldots$. . . . . . . each $\$ 8.95$

## The New "Chord Tone" Chimes Desert Sand

Provides two chords for front door, 2 notes for rear door.

Desert simd cover. Smart grille pattern. Gold flecked grille cloth.

Dimensions: $77 / 66^{-i n} \times 9-$-in.-27/8-in. deep. Packed 6 to carton. Ship. wt. 23 lbs .
No. L-30.
Each \$12.95
Patent pending.

## Symphonic

Provides 8 or therd tone chimes, plus 2 chords for rear door, 1 chord for third door.

Cover finished in walnut or lime oak with brass tules and trim.

Transformer included.

## Edwards Push Button Panels

## No. 107

10 Button
A compact, sturdy push button panel for use in schools, public buildings, ollices, etc., where no "All" or "Master" push button is required.
They are ideal where space is limited and where economy is a factor.

For example- 3 to 5 buttons indusive are momed on a plate to fit a standard single gang switch box. 6 to 10 buttons inclusive are monnted on a plate which fits a standard two gang switch box. II to 15 buttons are momed on a plate that will fit a standard three gang switch box, ete.

Larger than 25 button panels are provided with a steel wall box for flush mounting. Terminal hoard is provided suitable for mounting in back box and is wired to panel on 28 latton panels and larger.

When ordering specify number of buttons wanted.

| No. | No. of Buttons | Each |
| :---: | :---: | :---: |
| 107 | 5 Buttons. | \$22.00 |
|  | 10 Buttons. | 44.00 |
|  | 15) Buttons. | 66.00 |
|  | 20 Buttons. | 88.00 |
|  | 25 Buttons | 110.00 |
| Larger sizes (multiples of 5 buttons only) per button $\$ 8.25$ |  |  |

## Benjamin Heavy-Duty Watertight Push Buttons <br> Listed by Underwriters' Laboratorles, Inc.

Single Button

Two-Gang Button

Rated at 5 amps. for 125 v . circuits with either inductive or resistance loads. This type of button is suitable for use with any Benjamin signal or any electrical device with a similar rating. Button proper (phunger) is nornally lecow the surface of the cap so the button camnot be accidentally operated. A waterproof neoprene rasket seals the plunger opening. All joints are watertight. std. Tapping: $1 / 2^{\prime \prime}$ I.P.S. at top.

## Edwards Door Openers

Compart and rugged. For use under varying conditions. Can be used on cither right or left hand doors. Door may be opened with the key in the usual way according to the type of lateh used. Electric operation of the door opener allows nosing to pass without use of key.
Has release check feature which keeps door openers in unlorked position after button is pushed, until door opener is tripped to its normal lorking position when door is pushed open.

## Mortise Type

For better grade jols and smaller mortise.
llas die-cast body. Forged hrass roller and nosing. Will stand up under most severe operating conditions. Face plate beveled for perfect fit.

Body Size-2-in, high, $27 / 8$-in. deep, $11 / 4-\mathrm{in}$. thich. Nosing opening $11 / 4$-in. l'ace plate $33 / 8 \times 1 \frac{1}{4}-\mathrm{in}$.

Standard package of 1 ; Weight of standard package $3 / 41 \mathrm{~b}$. Voltage: 1.3 - $6 \mathrm{~d}-\mathrm{c}$ or $12-16$ volts, 60 cyeles a-c.
No. 154
Each $\$ 9.90$
For special voltages up to 48 volts, add to list. Speeify A.C. or D.C. $\$ 5.50$.

## Mortise Type

For use where aconomy is desiredespecially for low rost apariment jobs.
llas solid brass face plate, forged brass nosing. Entire merhanism enclosed in rustproof case with easily removable cover. Fits same size mortise as same shape opebers of other mamufacturess.

Body size-35/8-in. high, 21/4in. deep, 1-in. thick. Nosing opening $13 /$ in $^{-i n n}$. Vace plate $57 / 8 \times 1 \frac{1}{4}-\mathrm{in}$. Complete with brass mounting screws.

Standard parkage of 6; Weight standard package . lhs.

Voltage: 4.5-6 d-c or $8-12$ volts, 60 cyeles a-c.
No. 9.
Each $\$ 5.78$
Rim Type

For operation with surface type lochs, bolted to door.
For surface locks, thin frames, oflice gates, etc. Has few moving parts to be affected by constant use.

Forged brass nose and cast frame, brass finish face plate. Easily installed, with readily aceessible terminals. Complete with mounting screws.

Body size-2-in. high, $31 / 8$-in. deep, $11 / 8$-in. thick. Nosing opening 11/4-in.

Voltages: 3-6 volts d-c or 6-8 volts, 60 eyeles a-c. Can be supplied for special voltages up to 48 volts.

Standard package of 1 ; Weight standard parkage 1 lb .
No. 152. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Wach 58.25
For special vottages up to 48 volts, add to list. Specify A.C. or D.C. $\$ 5.50$.

# Edwards High-Voltage Push Buttons 

## For Voltages up to 250 Volts Momentary Contact - Quick Break Type

Listed by Underwrlters' Laboratorles, Inc.

No. 820

No. 821

For heavy work. Sturdy, dependable mechanism requires a minimum of pressure to make contact and breaks fast regardless of how the pressure is released. Esprecially suitable on a-c where quich make is not a factor. Alse used on d-c operation at lower current ratings.

Heavy brass chrome plated shell. Vixtra strong spring contacts. Terminals are large and easily accessible.

Standard finish, chrome. Standard package of 1 ; weight standard pachage $1 / 4 \mathrm{lb}$.

Distance from back of rim to end of terminals $11 / 2$-in.

[^81]
## Edwards Light Switches

> For Bus Door Steps

A well construeted switch built to stand up under the constant operation of hus doors.
Heavy hrass face plate $21 / 2 \times 1$-in., polished nickel finish. Stainless steel planger head. Contacts enclosed in bakelite hase. Bumper plate $15 / 8 \times 5 / 8 \mathrm{in}$.

Complete with screws for mounting.
Approximate weight $1 / 4 \mathrm{II}$.
Operates on battery voltage.
Open circuit-depress plunger to open.
No. 504.
Each $\$ 5.50$

Edwards Door Bell Transformers
Tri-Volt-25 Watts
Provides a greater selection of secondary voltages. Primarily adapted to applications where an unusually long wire run exists.

Finish: Gray.
Size: $43 / 8$-in. high, 3 -in. wide, $27 / 16^{-}$ in. deep.

Standard package of 1 ; Weight of standard package $21 / 4$ lhs.

Primary 115 volis, 50-60 cycles; secondary 8 -16-24-volts, 25 watts.
No.
872 . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 6.05$
Note-Suecial primaries, secondaries, and 25 -cycle transformers can be supplied. Contact Graybar.

## Edwards Signaling Transformers

Completely enclosed in sturdy stamped inetal housings designed to form their own harriers between high and low voltages.

They have large, convenient binding posts on both primary and secondary to eliminate splicing, soldering and taping. linockouts into both compartments permit entrance with BX , conduit or open wiring.

No. 88-50 and 88-100 listed by Underwriters' Laboratories, Inc.

Primary: 115 volts, 60 cycles. Can be used on up to 130 volts.

Secondary: 1-83-12-16-20-24 Volts.

| No. | Wats | Height | size, inches Width | Length | WL. std. Pkg. Ibs. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 88-50 | 50 | 41/4 | $35 / 8$ | 77/8 | $51 / 8$ | \$11.77 |
| 88-100 | 100 | 1716 | $45 / 8$ | 85/8 | $83 / 4$ | 19.00 |
| 88-250 | 2.50 | 6 | 51/8 | $91 / 2$ | 161/8 | 48.40 |

## Kirkland Indicator Lamps and Annunciator Components

Ideal to engrave. Low voltage T31/4 bulls. 'Two sizes. IBlack frame. All colors.

## Combination Lamp and

 Relay Assembly

Type RBE-170 individual lamp Annunciator. Prewired, complete with cable ready to install. Ningle $13 / 8$-in. bole mount. [ip to 3 IDll l' relays. Ises so bull. Fingraving diam. 17/8-in. All modern alarm services possible on existing panels with ecomomy. Alarm services arranged so that a new audible aharm signal will never be lost. IRBE unit also available with beehive type lens ('Type IRBE-180).

## Typical Installation of RBE-180 Units

Monnted on existing panel. Present panels can be readily equipped with modern alarm service without the need for added cabinets. Just install IRBL: units and connect incoming wiring.

Type MLP Individual Alarm Units

Panel mount. 3-in. by l-in. area for illuminated message. Box contains: Relays, S6 lamp bulbs and terminal block on rear. Cabinet size- $41 / 8$-in. $x$ $13 / 4-\mathrm{in}$. Face plate-5-in. x $21 / 4-\mathrm{in}$. Depth from front panel $71 / 4-\mathrm{in}$. All standard alarm services. Ideal for group use. With or without toggle switch or push button.

## Type VIG Individual Alarm Units

 A wiring device. Mounts on standard 2 -gang outlet. Contains two lamps, one DPD'T relay, and toggle switch. Interesting alarm services possible. Ideal for industrial applications.

## Type CFA Flasher Assembly

For alarm service. Anti-dust container houses thermal unit, resistor and relay. 100 flashes prox. per minute. 8-point octal plug fits standard receptacle.

## Kirkland Custom Annunciators For Power Plants and Industry

## All Modern Alarm Services

Supervise liquid levels, motors, transformers, pumps, doors, vaults, sprinklers, production factors, pressure, valves, switches, etc.

Standard anti-dust container, with plug, contains relays completely wired for intended service. The relay containers mount in plug receptacles mounted on ebony asbestos panels that are wired to the terminal block. Wires from the panel go to the lamp bulbs, power, and audible signal.

A wide variety of standard size windows are available for illuminated messages. Examples: 1 -in. x 1 -in., 1 -in. $x$ 2-in., 1 -in. x 3 -in., $21 / 4$-in. x $21 / 4$-in., 4 -in. x 1 -in., 2 -in. x 2 -in., 2 -in. $\times 4$-in.

Other sizes are also available along with a wide variet y of indicating lamps (See catalog data) Plus Graphic Annunciators.

Typical wiring diagrans and suggested services available on request.

Mounted on standard switchplates or special cabinets.

Prices on application.

## Circular Push Buttons

## R\&S Unilarm

## Factory Built Unit Alarm System-Ready to Install

## Explosion-Proof and Dust-Tight-Class I, Groups C and D

Unilarms for Panel Mounting

Standard lens colors are White (normal), Green (low alarm), Red (high alarm).
Other colored lenses will be supplied if specified.
Lamp-S6-6 watt, 120 volt bulbs regularly furnished.
Unilarm can be supplied for surface mounting. Information and prices on request to Graybar.

## Crouse-Hinds Type EKP Visularm

## Explosion-Proof and Dust-Tight

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX, V and III)

Three Horizontally Mounted VISULARMS

Three Horizontally Mounted VISULARMS. Back Feed Condult Arrangement. Rear View of Panel

Type EKP VISULARM is a complete compact unit used to supervise and control manufacturing processes in cbemical plants, oil refineries, synthetic rubber plants and in other locations where constant control is necessary. The VISU1,ARM will indicate, by means of pilot lights, normal and abnormal temperature, pland level, speed, load or any other condition which can be electrically coupled to the circuit. It is desirahle to provide an audible indication of abnormal iquid evel, speed, load or any other cond are arranged to operate horns, sirens, and bells listed elsewhere in this catalog.
Auxiliary circuits can the furnished to actuate with other devices or control process equipment.
The VISULARM includes the following electrical features as standard: 1. Jack-mounted plate completely factory wired and tested. 2. High spead flasher n alarm light. 3. Independent horg circuit. 4. Resel switch. Silences horn and changes alarm light from flashing to steady until fault is corrected. 5. Teat ewitch. Permits periodic check of every device in the VISULAIMM insuring proper operation under abnormal conditions.

## Two-Light Two-Position Visularm

For Normal and Abnormal Indications
Signal Indications:

1. Normal-Bottom Green light on. Top Red light off.
2. Abnornal-Red light flashing. Horn on. Green light off.
3. Reset-Horn silenced. Red light on steady until conditions retura to normal.

## Crouse-Hinds Type KP Visularm

## Dust-Tight and Weather Resistant (Raintight) $\star$

## Class II, Groups E, F, and F; and Class III (NEMA Types IX, V, and III)

Type KP Visularm performs the same functions as type EKP explosion-proof Visularm which is designed primarily for Class I hazardous locations. The 'lype KP is ideal for use in boiler rooms, chemical plants, grain handing and food processing plants and similar moist or corrosive locations.

Electrically, types KP and EKP' are identical. The jack-mounted relay plates are also identical and interchangeable which allows stueking eommon spare plates for both types of ' isularm.

A $1^{\prime \prime}$ back hab is provided and all sides may be drilled and tapped for additional conduit entrances. Type Kl Visularms may also be bolted together with a suitable gasket between and with clearance holes to allow passage of wires between units.

Information on request to Graybar.

## Two-Light, Two Position Visularm $\dagger$

For Normal and Abnormal Indications
Signal Indications:

1. Normal-Bottom green light on. Top red light off.
2. Abnormal-lied light flashing. Horn on. Green light off.
3. Reset-Horn silenced. Red light on steady until conditions retarn to normal.

$\dagger$ Visularm does not include horn. Refer to listings of types ETH or WH horns elsewhere in this catalog. Pilot light jewels of colors other than those listed can be supplied. Information on request.
*Standard unit arranged for 115 volts A-C, 60 cycles. Visularm can be supplied for other voltages and frequencies or other circuit arrangements. Prices on application.
$\ddagger$ For panel $1 / 8^{\prime \prime}$ to $1 / 4^{\prime \prime}$ thick. Specify type KPA for panel $1 / 4^{\prime \prime}$ to $5 / 8^{\prime \prime}$ thick or type KPB for panel $5 / 8^{\prime \prime}$ to $1^{\prime \prime}$ thick.
$\star$ To maintain raintightness, cover threads must be kept liberally coated with a lubricant which will not flow at the operating temperature encountered. Crouse-Hinds type STL thread lubricant is recommended.

## Minneapolis-Honeywell Thermostats

## Line Voltage Thermostats

Designed to permit freguent cycling of low mass, quick-heating, quich-eooling electric resistance heating equipment

Cycles 1.5 to 20 times per hr. under normal $.30 \%$ heating load to assure close temperat ure control and long equipment life.

Cover anply vented for accurate air sampling.
Non-adjustable Differential, approximately $1 / 1 \mathrm{~F}$;
Electrical lkating (a-c only): Resistance load, 1000 watts at 230 wolts: 2000 watts at 115 volts. Pilot duty rating, 125 volt amps. at 155 or 230 volts.

Available with the following special features: Vodel with "Anto-Nite" switch to prevent antomatic operation. Wodel with temperature range stops and locking cover. Wall plate for momenting thermestat on vertical switch bex.

Finished in Silver bronze.

| No. | Switching Action | Rante | Height In. | Width in. | Depih in. | $\begin{aligned} & \text { Wt. } \\ & \text { ths. } \end{aligned}$ | Each |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| T40A | S.P.S.'T. | 56 to 8.1. F* | 27/8 | 5 | 21/4 | 1 | \$15 | Specify Model number and special features required.

Designed for ceiling cable type electrie resistance heating. Slower cycling, 3 to 6 times per hour, makes it ideal for high mass, slow heating, slow cooling installations. Cover amply vented for accurate air sampling

Elcetrical Rating (a-c only): Resistance load - 1000 watts at 230 v ; 2000 watts at 11.5 v . Pilot dut y rating
12.) 4 . anms. at 115 or 2305

Differential: Non-adjostable, approximately I $F$.

Dimensions: Height (including knob) 5 -in., width $27 / 8$-in., depth 21/4-in.
Finish : Silver bronze.
Available, with the following special features: Model with "Auto- Nite" switch to prevent automatic operation: Model with temperature range stops and locking cover; Wall plate No. 33410C for momenting thermostat on horizontal switch box.
 Specify Model number and Special leatures required.

This heavy duty thermostat makes contact on temperature drop.

Designed for aceurate and dependable control of line voltage heating equipment. Capable of directly handling motor driven units, blowers, and other line voltage loads.
Horizontally mounted allowing maximum circulation of air over the tempreature sensing bellows.

Non-adjustable differential, apmoximately $2 \boldsymbol{F}$.
Electrical Capacity - a-c, 115 volts, 10.2 amp, 230 volts, 6.,7 amp., dee 11.5 volts, 0.2 amp., 230 volts, 0.1 amp.

Available with the following sprecial features: Adaptor plate for mounting on vertical switch box and Conduit Adaptor for hanging thermostat in space.
Finished in Silver bronze.

Specify Model number, Range and Special features required.

## Light Duty Thermostats

This suap-acting, bimetal actuated line voltage room thermostat makes contact on temperature drop:
Suitable for cither line or low voltage applications.

Used for direct control of small motors, unit heaters, coal blowers, automatic burners, relays, motor starters, and similar еqиіринени.

Dilferential: Adjustable, $11 / 2$ to 6 F .
Available with the following special features: Locking cover, Manual nirht shutdown. Special ranges 64 to 96 F., 3.4 to 66 F or their Centigrade equivalents, Special finishes and 0181 sub-base.
Finished in Silver bronze.
Electrical Capacity - a-c, 11.5 volts, 1.6 amp., 230 volts, 2.3 amp., d-e, 11.3 volis, 0.13 anp., 230 volts, 0.07 amp .

| No. | Switching Action | Range | Height In. | Width In. | Depth in. | Wt. Lbs. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  | 54 to 86 F |  |  |  |  |  |

Specify Model mumber and Special features required.

## Heavy Duty Thermostats

Dakes eontact on temperature drop. I sed in either line or low voltage circuits to control heating systems.
Provided with proven, dependable mercury switch, this thermostat directly handles line voltage loads.
Difrerential: Non-adjustable 2 to 3 ド

Available with the following special fratures: locking coser; Centigrade scale equivalent to standard Frahrenheit range and Special finishes.
Elcetrical Capacity -ate, 11.5 volts, 7.4 amp., 230 volts, 3.7 amp., d-c 11.5 volts, $2.5 \mathrm{amp} ., 230$ volts, 1.3 amp.

Finished in silver bronze.

## Electric Clock Thermostats

Suitable for replacement of Series 10 or Series 80 thermostats. Standard voltage 11.5 volts, 60 cycles.
The Comfort Chronotherm antomatically lowers reom temperature at night for desired period of time (minimum six hours) and raises temperature in the morning to provide both day and night comfort.
Two handy fingertip levers allow convenient changing of day and night seffings. Hasy to read clock set in silver bronze case.
Universal heater clement eliminates med for changing leaters to mateh the rarious applications, yet provides the short, frequent hurner operations which are mecessary for maintaining accurate temperature control.
May be used with the CN82 Powerpile in the self-energized systems.
Ilas adjustable Differential and Cloch Transformer AT75A.
Available with the following special features: Night shutoll, Lacking cover, Centigrade scale 10 to 26 C., Special volt ages of 115 volts 25 or 50 cycles; 230 volts, 2.5, 50 or 60 cycles, Special finishes.

# Minneapolis-Honeywell Thermostats 

Ideal for motels or offices, where heat can be lowered in unoceupied mits and restored to comfort temperatures in oceupied units from a central panel.

Has double-setting, low voltare thermostat (Series 80). Heat leveling element in comfort stage. 2 S.P.S.T. switches.
Range: $56^{\circ} \mathrm{F}$. to $81^{\circ} \mathrm{F}$. A $77^{\circ} \mathrm{F}$. range stop and a locking cover are standard.
Switching: Panel switch in "Hi" position - Comfort stage circuit conpleted on drop to temperature setting. Panel switch in "La", position - Anti-freeze stage circuit completed on drop to $20^{\circ}$ below setting.

Eleetrical Rating: 2 amps at 2.5 v. a-c. Rating for heater plug in comfort stage 0.13 .5 to 1.1 amps.

Finish: Silver bronze. Special finishes available.
Temperature Sensing: Two bimetal elements.

| No. | Ht. In. | Width in. | Depth In. | Each |
| :---: | :---: | :---: | :---: | :---: |
| 'TA8021) | 5 | 2 | 17/8 | \$26.00 |

Note - When ordering specify Model number, volt age and frequeney of M-II device to be controlled.

## Round Thermostat

Designed for use with electric resistance heating. Reconmended for use with R879A, R87913 or other two-wire, low voltage electric heating relays. Adjustable heater provides means of regulating ON-OF' operating cyeles of electric heating equipment.
Temperature selector and thermometer scale are combined in one easy-to-read dial.
Mercury switch assures positive, dust-free contact operation.
The T86A29 is the standard model for use with electric heating equipment.

The T86A31 is the same as the T86A29 except it has provision for night shutdown.
Operating Differential: Approximately $1 / 2 \mathrm{~F}$., non-adjustable.

Eleetrical Rating: .5 amps . at 25 v . a-c.
Dimensions: Dianeter $31 / 4$-in., depth $1 / 2$-in., diameter of adaptor plate $\overline{\mathrm{j}}$-in.

Ileater: Adjustable for currents from 0.35 to 0.8 amps. standard.
Available with the following special features: Centigrade seale 7 to 23 C ; lacking cover; No. 10.528 B plate for mounting on outlet box; Ranges 35 to 65 F . and 45 to 75 F .

| No. | Switch | Range | Wt. Lbs. | Each |
| :--- | :---: | :---: | :---: | :---: |
| 'T86A29 | S.P.S.'T. | 5.5 to 85 F. | 0.5 | $\$ 12.95$ |
| 'T86A31 | S.P.S.' | 55 to 85 F. | 0.5 | 12.95 |

Note - When ordering specify Model number and Special features required.

## Pulsatherm*

Fast-cycling thermostat designed for use with the R879 Mereury Switch Relay to control electric resistance heating within a narrow temperature range.
Has non-adjustable thermosiat heat er which provides proper cyeling rate when operating an 1889 relay only.

Equipped with mercury swital that assures positive dust-free contart operation for the life of thermestat.
Temperature selector and thermometer seale are combined in one dial.

Electrical Rating: 5 amps. at 25 v . a-c.
Operating Differential: Approximately $1 / 2 \mathrm{~F}$. non-adjustable.

Dimensions: Diameter 31/4-in., depth 11/2-in.
Available with the following special features: Loeking cover; No. 10.5283 plate for mounting on an outlet box.

| No. | Swith | Range | Wt. Lbs. | Each |
| :---: | :---: | :---: | :---: | :---: |
| T86C | S.P.S.'T. | 5.5108 .5 F . | 0.5 | \$12.95 |

Note - When ordering specify Model mumber and Special features required.
*Trade Mark, Minneapolis-Honeywell.

## Heating-Cooling Thermostats and Subbase

A Series 80, double-acting, three-wire, low vollage thrmostat. designed for heating-cooling applications. When used with Q405 Sublase it provides complete control of heating cooling equipment.

Adjustable heat leveling pro"ided in the heating position and "Conling Anticipation" in the corling position.

Features dustproof mercury switch. Thermustat closes ne contact on temperature rise and another on temprature fall.

Range 5.5 to $85^{\circ} \mathrm{F}$. Differential, Adjustable, factory set at $1.5^{\circ}$ F.; Electrical Rating, low voltage a-c only (1..) amperes at 2.5 volts maximum); Heater adjustable for currents 0.1 to $0.8,0.8$ to $1.2,0.16$ to 0.32 amperes; Cooling Anticipation Non-adjustable, 0.6.3 amperes is standard. Adjustable from 0 to $0.8,0.7$ to 1.2, 1.1 to 1.5.

| No. | Description | Diam. | Each |
| :---: | :---: | :---: | :---: |
| '187A | Heating Cooling Thermostat | $31 / 4$ | \$13.45 |

## Q405 Subbases

When ordering speeify Model number of thermostat, Model number of subbase and special features required.

## Minneapolis-Honeywell Electric Heating Sets

The Y362A and Y362B Electric Resistance Heating Packagescontainthe TA802D Double-Setting Thermostat and the R879 Mercury Switch Relay. The TA802D is designed for installations sueh as motels or oflices where temperatures are desired to be lowered approximately $20^{\circ}$ from a central panel in unoccupied units or offices, and restored to the "comfort" temperature setting during occupied periods.
The Y362A contains the R879A IRelay capable of handling a single circuit up to 4600 watts resistance load at 230 volts a-c.
The Y369B contains the R879B Relay capable of handling two rircuits up to 4600 watts resistance load each at 230 volts a-c total 9200 watts. A transformer in the IR879 provides low voltage power to the control system.

Mercury switches in these relays are operat ed ly a plungertype solenoid having no metal-to-metal contact, insuring quiet operation.

Voltage and Frequency: 230 volts, 60 cycle standard.
Available with the following special features: Voltage and frequency of 208 or 115 volts, 60 cycle; 230 volts, 50 cycle.

| No. | Oesscription | ${ }_{\text {Lbs. }}^{\text {Wit. }}$ | Exch |
| :---: | :---: | :---: | :---: |
| Y 362A | Electric Heating Set | 5 | \$40.65 |
| Y 362 B | Electric ITeating Set | 5 | 51.00 |

Note - When ordering specify Pachage set number, voltage and frequency.

## Minneapolis-Honeywell A \& B Electric Heating Sets

The Y321 Filectric I leating Sets contain the T86A Round Thermossat and R879 Mercury Switch Relay. The Y321A contains an R879A Relay capable of handling a single eircuit up to 1600 watts resistance load at 230 volts a-c. The 1321B contains an R879B Relay capable of handling two circuits up to 4600 watts resistance load each at $2: 30$ volts $\mathrm{a}-\mathrm{c}$ total 9200 wat ts.

A built-in transformer in the 18879 provides low voltare power to the control system. Both thermostat and relay have quiet switching mercury switches.
Voltage and Frequency: 2.30 volts, 60 cycles, standard.
Available with the following special features: Night shutdown thermostat; 104528 B wall plate for monnting on an outlet box; voltage and frequency of 208 or 115 volts, 60 cycles.

| No. | Description | Wl. | Each |
| :---: | :--- | :---: | ---: |
| Y321A | Electric Heating Set with wall plate | $\mathbf{5}$ | $\mathbf{S 2 8 . 2 0}$ |
| Y321A | Electric IIeating Set less wall plate | - | $\mathbf{2 7 . 6 0}$ |
| Y321B | Electric Heating Set with wall plate | $\mathbf{5}$ | $\mathbf{3 8 . 5 5}$ |
| Y321B | Electric Heating Set less wall plate | - | $\mathbf{3 7 . 9 5}$ |

Note - When ordering specify Model number and special features.

## Minneapolis-Honeywell C and D Electric Heating Sets

These sets contain the fast cycling T86C Round Thermostat and the R879 Mercury Switch Relay. The fast cycling T86C has a narrow differential which provides 8 (0) 10 cycles per hour at $50 \%$ load conditions, prevents wide temperalure variations.
The Y321C contains an R879A Relay capable of handling a single circuit up to 4600 watts resistance load at 230 volts a-c. The Y321 D contains an R87913 Relay capable of handling two eircuits of 4600 watts resist ance load each at 230 volts a-c. 'The R879 has a built-in transformer. Thermostat and relay have mercury switches.

Voltage and Frequency: 230 volts, 60 cycle standard.
Available with the following special features: Voltage and frequency of 208 or 115 volts, 60 cyele; 10.4528 B wallplate for mounting thermostat on an outlet box.

| No. | Description | Wt. Lbs. | Each |
| :---: | :---: | :---: | ---: |

| Y'321D | Electric Heating Set | $\mathbf{0}$ | $\mathbf{3 7 . 9 5}$ |

Specify Package set number and special features required.
Minneapolis-Honeywell Mercury Switch Relays

Designed to carry a high amperage, line voltage, resistance load, when controlled with a two-wire low voltage thermostat.

Specially suitable for electric panel heating control application. lleavy duty sealed-in mercury switch, built to provide trouble-free operation, is actuated by plungertype solenoid having no metal-tometal contact. Designed to carry a single circuit, up to 4600 watts at 230 volts a-c.

Finish: Gray wrinkle.
Dimensions: Height $65 / 8-\mathrm{in}$., width 41/4-in. depth 3 -in.
Voltages and Frequency: 230 volts, 60 cycles is standard. 208 or 115 voits, 60 cycles available.

Rating in Amperes (a-c Resistance load only): 20 amps . at 230,208 or 115 volts, a-c.

| No. |  |
| :---: | :---: |
| R879A | Swith |

## Minneapolis-Honeywell Switching Relays

Designed for control of heavy duty loads such as cooling compressors.

Makes possible the control of relatively high current ly a low-amperage thermosiat. Relay has optiomal switching, D.P.S.'T. or S.P.S.'T.

Morlel lisita with voltage and frequency of 230,208 or 11.5 volts, 60 cycles, is used as control of cooling compressor with low voltage thermostat.
Model [ 284.7 B with voltage and frequency of 24 volts, 60 cycles, is used as a control of cooling compressor with low voltage control circuit.

| No. | Description | Height In. | Width In. | Depth In. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 12847A | With 'Transformer | $51 / 4$ | $11 / 4$ | $23 / 4$ | \$18.45 |
| R84713 | Without Transformer | $51 / 4$ | 11/4 | $23 / 4$ | 16.0 |

When ordering specify Model number, voltage, frequency.

## Minneapolis-Honeywell Relays

Small, compact switching relays designed for monnting in panel boxes or similar locations where relay will te covered.

May be operated ly two-wire line or low-voltage suap-acting thermostats or controllers to switch line or low-volt age loads.

The l2 288 operates directly on line voltage. The 18888 operates on low voltage ( 24 volts). An external transformer must be used with R888 Relay.

Voltage and Frequency: $1 \mathbf{1} 188$ 11.5 volts, 30 or 60 cycles standard. R888 24 volts, 50 or 60 cycles standard. Weight $3 / 4 \mathrm{It}$.

| No. | Relay Description | Each |
| :---: | :---: | :---: |
| 11488 ${ }^{\text {A }}$ | 115, 230/50, 60 | \$12.40 |

| 11888E | 115, 230/50, $60 \mathrm{w} /$ Transformer | 13.75 |

Special Features available: No. 14888 in olber voltages and frequencies. No. 18888 in 9.5 cycle low whage or with 115 or 230 wolt transformer.

When ordering specify Model number, voltage, frequency.

## Minneapolis-Honeywell Time-0-Switches

A line voltage timer designed to control
 operation of attic fans, store lights, or similar electrical equipment, which is to be shout off after a predetermined interval.

Timer may be set for "on" periods of from one-hali' to deven hours.

Mercury switeh controls the linevoltage circuit.

The Sto3l3 Time-()-Switch is similar to the 5103 A except that it is used in applications requiring timed "off" periods from one-half to eleven lours. The controlled equipment is turned "on" after the timed interval. "Mamual-Automatic" switch permits by-passing timer on both Models.

| Rating in Amperes (Full Load) |  |  |  |  |  |  |

When ordering specify Morlel number.

## Minneapolis-Honeywell Farm-0-Stat Thermostats

Ruggedly const ructed linevoltage thermostat designed for high humidity applications.
Ilas $1 / 2$ hp. Micro Switch totally enclosed and mot aflected by dust.

Durable red cover has slots in front and bottom to allow maximum circulation of air over the protected element.

Three mounting holes in base provide pasy means of surface mounting. Ilas easy to read dial and ext ernal adjustment hoob.

Differential: Non-adjustable, 2 F.
Eleetrical Capacity - a-c, 24 volts, 2.0 amp., 115 volts, 7.4 amp., 230 volts, 3.7 amp.

Special features available: No. 7640 IIF Bag assembly for post mounting.

Specify Model number and Special features required.

## Minneapolis-Honeywell Dehumidifier Controllers

Operates dehumidifying equipment automatically.
Whenever relative humidit y rises above setting selected controller turns dehumidifier ON. When hmmidity is reduced to setting sclected controller turns dehumidifier OFF .
Equipped with 6-ft. cord and an int errupter plug.
Operating Dilferential 5\% R.II. (approx.) non-adjustable.

Electrical Rating 11.5 v . a-e full load, 3.2 amp.; 115 v . a-c locked rotor, 19.2 amp.; 230 v . a-c full load, 1.6 amp ; 230 v . a-c loched rotor, 9.6 ampere. Gray Finish.

| No. | Switching | Range | Height | Width | $\underset{\substack{\text { Depth } \\ \text { In. }}}{\text { cen }}$ |  |

| 1145A | S.P.S.T. | 0\% IR.II. | 53/4 | 25/8 | 11/8 |  |

## Minneapolis-Honeywell Humidity Controllers

Operates dehumidifying equipment auto-
 matically. When relative humidity in room rises above setting selected, dehumidifier controller will turn dehumidifier ON. When relative humidity in area is reduced to setting controller will turn dehumidifier OFF.
Has permanent wiring terminals. May be used in line or low voltage circuits.
Operating Diflerential $5 \%$ R.II. (approx.) non-adjustable.

Electrical Hating 115 v . ace full load, 3.2 amp.; 115 v . a-c locked rotor, 19.2 amp.; 230 i. a-e full load, 1.6 amp.; 230 v . a-c loched rotor, 9.6 amp .
Provided with backplate for mounting on vertical conduit box. Fïnished in Gray. Weight 1 lb .

## Minneapolis-Honeywell Cutout Switches

Used to prevent possibility of re-
 verse circulation in connterflow furnaces, and for attic fan control.

In attic fan installation it serves as a safety shut-off switch to guard against fire hazards by shutting off fan when temperature of air indicates presence of fire. After it opens circuit it must be manually reset.
Cutout temperature is factory set at $125^{\circ}$ F., $135^{\circ}$ F., $165^{\circ} \mathrm{F}$., $200^{\circ} \mathrm{F}^{\circ}$. or $240^{\circ} \mathrm{F}$., Non-adjustable.

| No. | Rating in Amperes 115 volts A.C | $\begin{aligned} & (\text { Full Load }) \\ & 230 \text { volts A.C } \end{aligned}$ | Wt. Lbs. |  |
| :---: | :---: | :---: | :---: | :---: |

When ordering specify Model number, and Cutout setting.

## Minneapolis-Honeywell Pressure Controls

## Pressuretrol

The L 401 A breaks the circuit on pressure rise, and the L404B breaks circuit on pressure fall.

Used primarily as limit controls on steam heating systems. Bellows-actuated mercury switch provides S.P.D.T. switching. Day he used with air, liquids, and non-combustible gases that will not injure the bellows.
The L. 401 A and L .40 HB are two-wire line voltage controls.
Available with the following special features: External hand adjusting kneb (standard on 10 to 300 ll . range); Special Hange: 10 to 300 lls .; Siphon 11026 (standard on 10 to 300 lb . range).

Finished in Gray wrinkle. Differential is Adjustable.
Electrical Capacity - a-c, 115 volts, 7.4 amp., 230 volts, 5.1 amp., d-c, 115 volts, 2.4 amp., 230 volts, 1.2 amp.

| No. | Height In. | Width in. | Depth In. | Wt. <br> Lbs. | Each |

## Minneapolis-Honeywell Remote Bulb Thermostats

To control temperature in ducts, tanks, boilers, and similar applications. The T 415 Models are used in twowire line or low-voltage circuits and have an S.P.S.'T. mercury switeh.

No. T 115 s closes circuit on temperature fall. No. T41513 opens circuit on temperature fall. No. 61.5A used in line or low-voltage circuits and has an S.P.D.'T. mercury switeh which opens one circuit and closes another on temperature fall.
Can be used to operate the $k 20013$ notorized valve assembly or M2014 and MootB Modutrol nootors.

Bulb Size: CA lill $141 / 2$-in. x $11 / 16$-in.; IIT fill 1 -in. x $1 / 2$-in.
Element: $\bar{j}-\mathrm{ft}$. (including bulb) copper standard.
Sprcial Pratures Available: Knurled adjusting hnob, AllA; Models witı narrow differential; Low temperalure fill in place of cross-ambient fill; Special element lengths and materials: 10, 20, 30-ft. copper; 5, 10, 20, $30-\mathrm{ft}$. mild steel or monel; Separable wells; Pressure fittings for liquid installations.

Mercoid Temperature Controls
These remote stem temperature controls have many in-
 dustrial applications controlling temperatures of liquids and gases.

Furnished standard with 6-ft. copper stem and bull, but are available in stainless steel or other materials, and length of stem. Ilave easy outside adjustments for setting cut-in and cut-out temperatures. Visible calibrated dial. Mercury switch contacts.
Electrical capacity- 10 amp . 115 volts, 5 amp .230 volts, and on order 3 amp .440 volts.

Type DA-35
For Refrigeration and Air Conditioning

## Cordley Electric Water Coolers

## Five Year Guaranty

Entire cooler repiaced and freight paid both ways if defect occurs in hermetic refrigeration system or cooling tank.

Model G-2s: In Gray or White finish. 36-in. high. Uses 1 to 5 gallon bottle. Also available with cover for use without bottle.

Model II-3S Bubbler: Gray finish. $411 / 2-\mathrm{in}$. high. Conneets to municipal water supply and drain lines. Feather-touch "Accelerator-Pedal" handle for convenient operation. Adjustable automatic st ream regulator.

## The Standard Line

Completely vermin-proof. Fully sealed hermetic refrigeration systems. Meet and exceed U. S. sanitary codes. Coniply with Bureau of Standards CSI27-45. Tested and listed by IJ. L. and Cartadian Standards Assn. For operation on 115 colts a-c 50 or 60 cyeles.

Practical, extremely popular for commercial and industrial use. Bubbler models have connection on top for glass filler. Also extra connection on back for remote bubbler fountain (except IIC-í). All standard models have stainless steel top, infra-red baked gray calinet with black base.

Refrigerator Models: Compartments with 1 cu . foot of storage space plus two ice trays. Useful for storing lunches, beverages, doctors' vaccines, etc. Compartments may be loched.

Low Height Model J-8: Only $331 / 2$-in. high. Ideal for schools with small children, hospitals with wheel chair patients, etc.

## The Remote Line

For hook-up to fixed fountains, faucets, etc. Four models meet a wide range of requirements . . . in soda fountains, laboratories, restaurants, institutions, etc.

## Glass Fillers

## ILG Home Cooling Fans

Designed for top performance and utmost convenience these fans are ideal for ventilating bomes, oflices, stores or apartments. Provide top cooling comfort without installation cosis. Simply place in desired spot and plag in. Easy to move -these portable fans can be quickly rotated from room to room.

Using the type Q fan wheel the home cooling fans give you super quiet performance even when operating at the highest
of their three speeds-they are a sleeper's delight. Equipped with a totally enclosed motor direct-connected to the fan blade. Each moving part is precision balanced. This superior design assures you of top performance at all times. All fans come equipped with six foot rubber covered cord.

All home cooling fans are covered by Ilg's famous "One-Name-Plate" guarantee which includes motor as well as fan.

## Ilgwindowaire

No. 7062: 115 volts, 1 phase, 60 cycles used as an exhaust fan or as an intake fan. Includes adjustable window panel No. 261-381-A which will fit any double hung window from 28 to 36 inches wide.
Portable, easy to carry about. Four rubber feet, 3 -speed control, 6 ft. cord. Finish-Eye Rest Green.

LC-8 Built-In Ilgvent : Provides the moderate cost, high efficiency answer to small home ventilators. Totally enclosed motor with neoprene grease-proof connections, 18 gauge telescopic sleeves to fit various wall thicknesses. Pull chain operation, attractive grille furnished in chrome, cabinet French Gray.

LC-8 Automatic Built-In Ilgvent: Budget priced kitchen ventilator for wall switch operation . . . no television or radio interference. Neoprene covered grease-proof connections, attractive low air-resistor grille. Counter-balanced easy acting automatic back draft damper.

LC-10 Built-In Ilgette: Suitable for larger kitchens, incorporates every wanted feature for the modern kitchen. Easy to clean, patented type Q Ilg fan provides whisper quiet performance. Totally enclosed motor with neoprene grease-proof connections, pull chain operation. Grille and cabinet furnished in attractive gray tones.

LC-10 Automatic Built-In Ilgette: Full automatic operation, mirror finish aluminum grille, 16 gauge telescopic sleeves adjust to fit various wall thicknesses. Ilg " $Q$ " fan wheel provides super quiet operation. Grille and cabinet furnished in Freuch Gray.

## ILG Portable Floor Fans For Cooling Air in Industrial Plants

These fans discharge a large volume of air at high velocity and afford a practical and economical means of heat relief to the workmen in large industrial plants. They run at exceedingly high speeds and are intended for use in places where their air noise is not a consideration.

The cast aluminum propeller has four blades, adequately protected by heavy wire guards.

Cast iron weight of sufficient weight to prevent overturning of fan.

The 12 in . fan is equipped with 20 ft . cord and plug; larger sizes have standard enclosed switch. linish, attractive Green.

3-Phase, 60 Cycle, 220 Volts A.C.

For 115 or 230 volt d-c contact GRAYBAR.

## ILG Electric Propeller Fans

Air conditions in a given type of building are fairly uniform and it is possible to generalize on the rate of air change advocated for varions classes of buildings. The air change required in a room differs with the conditions found therein. The worse the air conditions the faster should be the air change. More rapid air changes are necessary in restaurants than in offices, etc.

To make it possible to select the correct size Propeller Fan, we give you the following:

Air Change Table

"Definitions: "Adequate Ventilation and Cooling": The use of rapid air change for the dual purpose of providing good ventilation and, in addition, effective cooling by (1) air movement (2) quick removal of heat caused by the sing, lights, equipment,, processes, human occupants, etc. "Thorough Ventilation": The use of air change carefully established by thousands of installations as sufficient for health and comfort required by the nature of the space.

Example: If it is desirable to change the air in a room each five minutes, figure the cubical contents of the room by mulliplying the length, width and height. Divide this figure by the rate of change, 5 in this case, which will give the amount of air the fan should handle each minute. Fans are rated in this manner.

## Self-Cooled Motor

Ilg propeller fans have the patented enclosed self-cooled motor which affords low operating cost of the open motor with the protection of the fully enclosed motor. The fan action draws clean air through the vent pipe in the bottom of the fan from the outside, circulates it through the motor and exhausts it. The motor stays cool and clean always.

## One Nameplate Construction

The entire fan, including the motor, is made by IIg. Fan wheels are dynamically balanced to assure freedom from vilration, quiet operation and long bearing life. Sizes 63 to 123 have permanently oiled bearings-sizes 1603 to 183 inclusive have permanely lubricated ball hearings. Size 72, type "W" fan is equipped with ball bearings and grease cup. IIg frames are rugged and wrap-free. Sizes 63 to 213 inclusive are cast aluminum. Size 303 and larger are steel. Finished in attractive and durable green enamel.

## ILG Type "LQ" Propeller Fans

Propeller fans are designed for free air delivery and should wot be used with extensive duet systems, flues or pipes, or to deliver air against greater than $1 / 8$-in. static pressure.

# ILG Types "PQ" and "XQ" Propeller Fans 

## Explosion-Proof Fans

## Type XQ

These fans have all the performance features of the Type Q propeller fans combined with the use of a ball bearing explosionproof motor carrying the Underwriters' Laboratories label, suitable for all Class I, Group D hazardous applications.

## Type PQ High Speed Fans

115, 230 and 208 Volts 1 Phase 60 Cycle

*Motors are Dual Voltage 115 and 230 Volts.
$220 / 440,208$ or 550 Volts 3 Phase $\mathbf{6 0}$ Cycles

* Motors are Dual Voltage 220 and 110 Volts.

## ILG Automatic Shutters

Automatic Shutters should always be installed on the outside of propeller fans to protect the fan and the interior of the building against rain or snow; also to prevent wind pressure against fan from overloading the motor, blowing out fuses or burning out the motor.
When fan is operating, shutter blades are held open by the air current; when fan is not operating the shutter closes automatically by gravity.
Rugged steel frame, with durable aluminum blades pressed on heavy duty rods. All parts are completely weather-re-
sistant.

|  | Fan in operation |  |  |  | Fan not operating |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | For |  |  |  | For |  |
|  | Site | Fan | List |  | Size | Fan | List |
| No. | In. | Size | Price | ${ }^{\text {No. }}$ | 1 ln . | Sizt | Eath |
| 638 | 8 | 83 | \$19.00 | 644 | 24 | 243 | \$56.00 |
| 639 | 10 | 103 | 22.00 | 645 | 30 | 303 | 85.00 |
| 640 | 12 | 123 | 23.00 | 646 | 36 | 363 | 121.00 |
| 641 | 16 | 163 | 26.00 | 647 | 42 | 423 | 176.00 |
| 642 | 18 | 183 | 34.00 | 648 | 48 | 483 | 234.00 |
| 643 | 21 | 213 | 47.00 | 651 | 72 | 300 | 447.00 |

Note-Size of shutter corresponds to size of fan-e.g. $36-\mathrm{in}$. shutter for 36 in . fan.
Shutters 48 -in. and larger are in two sections built in one frame.

Motor-Operated Shutters-For full information and prices contact Graybar.

## ILG Power Roof Ventilators

## Type "PRV-L \& PRV"

Provide positive controlled ventilation independent of wind or weather conditions in sizes providing air deliveries over the unusually large range of pressure from free air to $1 \frac{1}{2}$ inch static pressure.

Sturdy weather-tight welded steel frame and heavy gauge galvannealed housing. Type PRV has 16 -inch high base eliminating the need of expensive high-profile curbing and fitting of air control accessories into the roof or curling section. Easily and quickly installed, wired and serviced.
The top, hinged on two sides, can be removed without tools for access to the direct-connected motor. Has four screened louvers which are instantly removable.

Standard features include self-cooled, direct-connected motor, self cooled motor compartment, floated-drive sound isolation, non-overloading, backward curved type wheel. Ilg Green finish.

For 208 \& 220/440 Volts, 3-Phase, 60 Cycle

Also available for 115 volts, 1 -phase, 60 cycles and 230 volts, 1 -phase, 60 cycles.

Plk IVower Roof Ventilators also availathe for 115 volts- 230 volts: 1 phase, 60 cycles and $208,220 / 410$ volts, 3 phase, 60 cycles-for full information and prices contact Graybar.

An optiona! feature is sprayed-on insulation to prevent condensation forming on inside of hotising in the handling of steam, etc. in cold weather. Other uccessories can be furnishied, such as kravity or motor-operated shutters, manual or motor operated variable air controllers.

For exact construction information and other specifications, contact Gray luar.
*'Tbe lowest speed in each size provides the most quiet operation.

## ILG Power Roof Ventilators <br> New Type＂L－LSQ＂

Hects all modern in－ stitutional，commercial and industrial archi－ tectural requirements． The three new sizes in the 1 so series are 83，103，123．They in－ corporate the super quiet，high efliciency， low silhouette characteristies of the larger units．

The propeller fan is directly comerted to the motor ．．．no belts or pulleys ．．．literally no maintenance．Optional gravity type or motor operated shot ters lior easy curbing．

## Large Size LSQ，L－LSQ（Exhaust）and SRQ，L－SRQ <br> （Supply）Series

Larger sizes feature the ＂0＂propeller，connected directly to motor．Recom－ mended for large area roof ventilation．

All－Ahuminum housing provides year romnd pros－ tection for lan and motor． Type Lico and sho have selfecontained hase sufficient to homse various optional air control acemsories．Eiminates the need of expensive curbing． and the cost of installing air control acressories on the jot． Optional automatic or operated shotters．

## Constant Speed， 1 Phase， 60 Cycles

†A three speed switch for use with sizes 83 to 123 L－LSQ Roof ventilators is available as an accersory as follows： Size 83 at 115 volts．Cat．No． $825 \$ 16.00$ list，size 83 at 230 volts．Cat．No． $826 \$ 16.00$ list；size 103 at 115 volts，Cat． No．835，$\$ 16.00$ list；size 103 at 230 volts，Cat．No． 836 ， on application；size 123 at 115 volts，Cat．No．838，$\$ 22.00$ list，size 123 at 230 volts，Cat．No． 839 on application．

Note：Also available for two speed， 1 phase operation and constant speed， 3 phase operation－for full information and prices contact Graybar．

## ILG Penthouses For Power Roof Ventilators

These Penthouses are for use with ligg self－cooled motor propeller fans．They are solidly con－ structed of rust－re－ sisting sted and are thoroughly weather prowf．

Gauge Metal－ 10－to 16 －in．， 20 gauge： $18-10$ 18－in．， 18 gauge；72－in．， 16 gauge．
Equipped with an IIg automatic shut－ ter to protect the fan from the weath－ er when it is not in operation．
llinged top on back of penthouse furnishes easy access to fan for preriodic lobrication．（Top has provision for lock．）
Also available with insulated lining for use where conden－ sation of moisture during cold weather is a problem．

## ILG Volume Centrifugal Fans

## Type B

Combines ligh efficiency and low power consumption and is suitable for small volume, low pressure installations of any hind. Quiet and smooth ruming.

Die-cut sted housing and multi-blade wheel. Whed is carefully balanced. Cast iron base and inlet flange bears both the housing and direct-comected motor. Universal discharge.

*Dual voltage $11.5 / \mathbf{2} 0$ volt motors.
tEipuipped with shaded pole type motors, all other single phase fans have split-capacitor type motors.

Note: Contact GRAYBAR for information and prices on 25 cycle lolowers.

## Type B-Gasoline Engine Driven

This portable volume blower is entirely self-contained and is recommended for ventilating manholes, vats, tanks and other spaces where electricity is not available.

It is driven by a direet-eonnected t-cycle gasoline engine. Blower inlet is seremed to prevent paper. leaves and other litter from entering. Outlet has flampe for attaching canvas hose (hose most included). Bat teries or other connections are not required.
(Basoline consmmption per hour: No. B12, 1/3 pint: No. 15, 1 pint. Capacity of tank; No. B12, I quart; No. B15, I gatlon. Şpeed 1750 rpm.

## ILG Centrifugal Fans

Type BC Direct-Connected Constant Speed, 1 and 3 Phase, 60 Cycle

## Type BC

New line of Ilg Type BC centrifugal fans sizes 122-200, in both direct-connected and belted models is the latest development of Ilg Research Laboratory. Checked feature hy feature, the new Ilg fans with aluminum sides and scroll will be found to embody the characteristics accented in today's ventilation, air conditioning and air handling installation.

A backward-curved type wheel of all aluminum, spark-proof construction with nonoverloading characteristics, features airfoil blades. New design fan wheel is highly eflicient and provides quieter operation.

With wheel overhung on shaft, inlet is free of all obstructions. Every model suitable for both Class 1 and Class II duty. Sizes 45 through 70 cover the standard type BC fan with flat-bladed wheel.

Direct-connected data shown. For belted data contact (IIAYBAR.

*Prices include all controls except Room Thermostat or Manual Cut-Off Switch. Prices are for
115 volt, 60 cycle, single-phase electric service. Light duty thermostat optional. Price $\mathbf{\$ 2 4 . 0 0}$.
Input and output ratings are given in Btu per hour. Output rating includes allowance for recoverable heat due to jacket losses, etc., not concerned in determining efficiency. Ratings shown are for elevations up to 2000 ft . For elevations above 2000 ft ., ratings should be reduced at the rate of $\mathbf{4 \%}$ for each 1000 ft . above sea level.

## ILG Electric Unit Heaters

The entire unit eovered by Ily's one-name plate guarantee. An electric heater equal to every joh).

For extra heat capacity sizes 9 KW to 15 KW are available. 'This unit is designed for heravy duly, continuous or automatically controlled operation in industrial and commercial applications.

Steel hanger bracket accessories that make it casy and convenient to mount $11 / 2 \mathrm{KW}$ to 5 KW sizes on wall or ceiling, or to mount 6 KW and $71 / 2 \mathrm{KW}$ sizes on ceiling are available at an additional charge of List leach $\$ 6.00$.

Hg has developed a new line of small electric heaters, sizes $11 / 2 \mathrm{~K} . \mathrm{W}$. to $71 / 2 \mathrm{~K} . \mathrm{W}$.

Steel and spiral design are protected against overheating ly a built-in thermal cut-ont.

Safety design eliminates bare live wires or terminals in air stream.

## ILG Steam Unit Heaters

The new design and ad－ vanced engineering are re－ flected in every detail．The heaters are easily attached to the steam or hot water system in factory，store or oflice．

I leaters provide maximum heat where it is needed．

Clean，attractive lines， quiet，lushed operation， rugged construction ．．．free－ dom from mantenance atten－ tion．

Ninetern capacit y siz＇s are available．

## G-E Natural-Convection-Type Horizontal Unit Heaters

For heating out-of-the-way places. Easily installed and very convenient.

Consist of a number of G-E strip heaters mounted in a perforated, pressed steel case, with heat-resisting painted finish.

Free air circulation provides maximum heat. Are easily installed and connected to power line and quickly moved from one location to another.

Common typical applications-Sulstations, valve houses, punp, houses, warchouses, crane cals, airplane hangars, electric locomotives, blower rooms, repair shops, service stations, laboratories, garages, scale romis, watchmen's houses, elevators, drying rooms, waiting stations and ticket booth.
The Wall-Nlounted St yle can be furnished with and without switches (as below). Heaters with 3-heat snap switches make regulation of temperature simple and very economical.

Wall-Mounted Style

Equipped with heat baffles to prevent overheating and scorching of wall surfaces.

For mounting directly on wall, with main axis horizontal. Can be mounted with the cable emerging from either right or left.

Suitable G-E control is available for these heaters. Contact Graybar for complete details.

## G-E Forced-Convection-Type Unit Heaters

Fig. 1. Portable Style ( $\mathbf{2 , 3}$ and $4 \mathbf{K w}$.)

Heaters-Equipped with G-E tubular heater, with strong radiating fins that multiply its radiating surface. Fins are electric-furnace brazed to the heater and provide maximum heat-transfer efficiency.
Motor-A G-E totally enclosed motor with sleeve bearings, protected against direct radiation from heating units by ingenious baflle. Cool air is drawn over the motor frame at all times through the space between motor and baflle.
Fan-G-E aphonic pressure-type, with matehing outlet orifice. Efliicent and quiet in operation.
Wide Utility-The smaller sizes of heaters are designed so that they can be used as hot weather fans.

Fig. 2. Suspension Style (5, 7.5, 10, 12.5 and 15 Kw .)

*All 480-volt heaters have 115 -volt motors. These motors have separate thermal control, and heater lead brought out through conduit.
$\dagger$ Price includes 4-ft. of armored connecting cable as shown in Fig. 2.

## Chromalox Electric Unit Heaters

Listed by Underwriters' Laboratories, Inc.
Type CHF Hi-Flow Portable

Compact, functional design that pachs tremendous heating capacity into a small, space-saving unit -ideal for shopsis, homes and stores. Rugged, tulmar ehrome support stand allows it to be mounted on walls or ceilings or to operate freestanding on floors, counters or shelves.

All metal Chromalox fimed Microtuhe heating element provides rapid heat-up. Smooth running motor gently forces warmed air throughout the room. Controlled by a mannal on-olf swith and protected against overheat by a built-in thermal cutont swith.
All motal husing painted with durable, baked-on Mediter-rancan-Blue finish.
Overall size $15-\mathrm{in}$. high $\times 141 / 2-\mathrm{in}$. wide and $9-\mathrm{in}$. deep.

| CHF-240 | 210 A.C. | 4000 | 13618 | 22 | 69.50 |

All models supplied with $5 \frac{1}{2}-\mathrm{ft}$. UL listed cord and polarized plug.

Separate polarized wall outlet recommended.

## Chromalox Electric Convection Heaters

Small, eflicient, portable heaters which can be easily picked up and moved from one place to another.

For use in industry for auxiliary heating in many locations and also fir sole heat source in locations too remote for central heating plants.

Heating elements are the efficient, long-life, enclosed-type Chromalox strip heating elements.

Rugged construction throughout. Black enamel finish.
No. EII-810 and IEII-815 have 6-ft. heater cord and attachment plog. Larger sizes with 6 -ft. cord for connection to power lines.

All are equipped with 3-heat switch.
For 115, 230,250 and 460 Volts, 25 or 60 Cycles A-C, or D.C

## Chromalox Electric Unit Heaters <br> Listed under Underwriters' Laboratories, Inc. Re-Examination Service-Reference No. E-7061

## Type H

Designed for wall mounting to concentrafe heat near the flowr. Ideal for installation in crane cabs and beneath windows.
They discharge heated air horizontally and can be safely fastened to walls or wooden partitions.

The heating elements are efficient, long-life, enclosed type Chromalox strip heaters.

Sturdily constructed throughout to resist hard usage.

It is accurate within $1 \%$ of range within entire scale.

## G-E Flanged Water Immersion Heaters

These units were designed primarily for use in domestic vater heaters, either in the original equipment or as replacenent units for existing equipments. However, they can he pplied successfully to almost any application where a flanged
immersion heater is required. These heaters feature a copper sheath, with a steel, brass face plate lange. Sizes and ratings are available from stock.

## G-E Immersion Heaters

For Water-Copper-Sheathed

These heaters have a high heat density. A few of their applications are-water baths, cleaning tanks, water-jacketed containers, humidifiers, load resistors, industrial water heaters,
quench tanis, electric steam radiators, stills and sterilizers, steam generators, and many others.

250 Volt *Switches for Manual Control

Description
3-heat
3-heat
3-heat
3-heat
278610 3-heat

## For Water-Nickel-Silver Sheathed-Self-Protecting Type

Made only by General Electric-designed for applications in which the heaters are at times accidently exposed to the atmosphere. Some of the applications of these heaters are water baths, stills, steritizers and others where the liquid is likely to be boiled away or drawn off.

Self-protecting-the special alloy resistance wire which has a high temperature coefficient of resistance reduces the watt input as the temperature is increased, thereby limiting the sheath temperature.

## Heaters

*All switches listed are suitable for circuits of 250 volts, a-c or d-c.
$\dagger$ To maintain the self-protecting feature, the two elements must be wired in parallel when operating at rated voltage.
$\dagger$ To maintain the self-protecting
$\ddagger$ Nominal pipe-thread diameter.
For Noncirculating Oils-Steel-Sheathed

These heaters have steel headers and are particularly suitable for:
Oil heating
Oil sterilizing
Fuel-oil preheating
Impregnating waxes

Alkaline baths
Oil-jacket containers and
many similar applications.

They have also been successfully applied to alkaline cleaning solutions and cyanide plating solutions. They can be used in such alkalies as sodium carbonate, sodium cyanide, etc., which will not attack steel. Some of the plating-bath solutions which utilize cyanides are brass, bronze, cadmium, gold and copper.

## 3-Heat

250 Volt Switches $\Phi$ for Manual Control

| 278610 | 3-heat |

*3-heat only on 230 volts, cannot be run 1-heat on 460 volts.
$\dagger$ Terminal covers furnished with all heaters.
$\ddagger$ These heaters rated 25 watts per sq. in. All others rated 20 watts per sq. in.
$\quad$ Nominal pipe-thread diameter.
$\Phi$ All switches listed are suitable for 250 volts, a-c or d-c.
$\triangle$ Over-all length of No. 2D185 is $367 / 8$-in.; No. 2D185G2 is $361 / 4-\mathrm{in}$.
OOver-all length of No. 2D186 is $43 \frac{8}{8}$-in.; No. 2D186G2 is $431 / 4-$-in.

## G-E Strip Heaters

For use as air and clamp-on heaters. Here are a few of the many applications-Process machinery, drying ovens, warming tables. glue tables, water baths, drying cabinets, pipe lines, incubators, valve and pump houses, etc.

They are rigidly constructed to withstand vibration, give uniform heat distribution. Compressed insulation.

*Can be connected in series for 480 - or 550 -volt circuits. For these voltages, secondary insulation is required.

## With Terminals on Both Ends

*Can be connected in series for 440 - or 550 -volt circuits. For these voltages, secondary insulation is reduired.

## Chromalox Electric Strip Heaters

## Width $11 / 2$ Inches

## Type＂ S ＂

For use in heating platens，dies，hot plates，melting pots， kettles and tanks．air ducts，in plastic forming，plastic mold－ ing，drying operations，ete．

Type＂$S$＂has One Bolt Terminal at each end．

Type＂SE＂

Type＂SE＂has Two Bolt Terminals at one end；can be bent lengthwise or curved in cross section for clamping to curved surfaces．

For $\mathbf{1 1 5}$ or 230 Volts
Note Where line voltage is above 460 volts，strip heaters can be connected in series provided they are mounted on insulating bushings．Contact Graybar for prices．

## Maximum Sheath Temperature $750^{\circ}$ F． Heat Resisting Iron Sheath

Roof De-icing

Pipe Meating

New G-l: vinyl-jacketed heating cable sets are designed for general purpose appleations involving sheath temperatures up to $200^{\circ} \mathrm{F}$. and offer special features of durability, long life, and safety. Very flexible, easy to iastall and clean handling. Minimum bending radius $1 / 4$-in.

The cable is constructed of a resistance-type conductor with nylon covering, a layer of thermoplastic vinyl insulation, a [6 carrior timed-copper grounding braid, and an extruded vinyl jacket. 'lhis gives great resistance to abrasion and the action of oils, chemicals, and water.

Copper braid imbedded in jacheting provides tooth full clectrical grounding protertion, so external grounding connections are unmeressary. and additional mechanical st rength.

Provides efficient. low cost heat in a wide range of applications, I sed for soil heating-roold de-icing-protecting pipes, valves, and pumps from freming-warming pipelines that carry liguids-bromer and kemmel heating-poultry water warming-proterding sprinkler systems-floor hoalingmiseellaneons air heating.

G-E Heating Cable

## Soil Heating

Pipe Ileating - Protects against freezing: Kceps visoons liquids warm for increased flow. For still air (pipe beating, etc.), install approximately 0.8 watts per sif. ft. of uminsalated surfice per degree $\mathfrak{F}^{\circ}$ temperature difference between pipe and surrounding air. If insulated with 1 inels of insulating material, use $30 \%$ of this value.
Surface Ifeating - Melts snow and ice. Jostall 3 to 0 feet of cable per square foot of iced surface, depending on temperature time allowed, ete. For heating kennel floors, brooders, etce install appoximately 1 foot of cable for each square foot of lloor area.
Roof lle-icing- F'o herep eave gutters and downspouts free of ice (rool-ale-icing) install tor 2 feet of cable per foot length of futtor, depending on temperature, time allowed, ele. This method forms chammels throngh ioce dams on caves and in futters and downspouts, allowing water to drain off int stead of baching up underneath shingles, cansing interior water damage.
Soil Ifeating - Reliable, antomatic temperature control makes it possible to maintain ideal temperatures for plants this provides strong, healthy plants that grow faster and are ready for market when prices are highest. Cost of operation eompared with manure bed heating is decreased since this lype of hed necossitates expensive preparation and lase of time.

* Vominal.

Wall 'Thicknesses on all sets: 1st vinyl insulation . 03 t-in.; braid . 0063 -in, strand dia.; vinyl jacket .020 -in.

## Heating Wire Sets

Designed specifically for low-cost heating installations involving temperatures of $110^{\circ} \mathrm{F}$. or below. Ileating wire is lighter in weight than heating cable and possesse's greater flevibility.

Diameter of eomductor is approx. .002t-in.; insulation is $364-$ ins. thich. Resistances wire on IIW12020 is eolor conded with dark green stripes; other sets have tan stripe. Non-heating power

leads of 120 volt sets are yeflow colored. 240 volt power leads are red.

## Triangle Infrared Batch and Conveyor Ovens

## For Baking, Drying, Preheating, Dehydrating

These ovens incorporate the time-saving benefits of instant heat through radiant energy and the by-product, recirculated heated air-the combination of which produces greater overall thermal efficiency.

They have many excellent fentures which make for increased production, lower equipment installation and maintenance costs, great flexibility and ease of control, reduced space requirements, cleanliness and safety.

Being entirely enclosed, they make fullest use of both radiant and derived convected heat. This improved temperature control insures faster, better drying and bahing and cuts power consumption and operating costs.
The standardized prefaloricated panel construction makes for low-cost installation and a minimum of maintenance. Can he falricated to either supplement or complement other heating facilities and are adaptable to processing a wide range of work.

All wiring, lamp bases and sockets are enclosed in covered channels. Automatic or manual switching devices can be used to vary working temperatures-maintain different baking cycles. Accessibility to all vital parts permits fast, easy, safe servicing without interrupting oven operation.
The positive ventilation control removes all fumes and moisture from the system and speeds drying. The equalized, uniform over-all oven temperatures insure uniform, high quality baking results.
They are designed and engineered to meet individual requirements. Laboratory tests, which give the time and temperature required to accomplish desired results will be made by the manufacturer at no extra cost.

Standard Prefabricated Panels and Channels available for Construction of Infrared Banks.

## G-E Metallic-Rectifier Power-Conversion Units

General Electric metallic-rectifier
 power supplies are designed for Industrial applications, such as the excitation of synchronous notors; electrochemical and electrometallurgical process power supplies; computer power supplies; varions military and airlorne applications; and as constant-voltage power supplies for d-c motors. Isers of d-c power supplies include electric utilities and commercial buildings changing over fromd-c toa-e service. as well as industrials and others who find that purchasing a-c power from their electric utility is cheaper than generating their own d-c power but have no simple and inexpensive way to convert their present d-c equipment. In addition, users of machine tools and magnetic chucks will find these power supplies a reliable source of d-c power.

Ratings and prices are available on request.

## G-E General-Purpose Chargers

General Electric general-purpose selenium battery chargers are designed for charging and floating batteries of all types. Control, signal, and communication hatteries are especially well serviced by these chargers. Automatic control and output tilters are available as accessories. Resistive and inductive loads can also be supplied by these units.
Prices and ratings are availalle on application.

## Walker Silicon and Selenium Power Rectifiers

Heavy Duty

For elevator cranes, cual inine looists, magnetic separators synchronous motor excitation, speed contruls, electro-chemical plants, cathodic protection of pipe lines and other underground metal structures and wherever D-C. convection or fan cooling is available.
Efficiency and power factor is approximately 82 to $90 \%$ and $95 \%$ respectively. May be connected to any three-phase system two or three wire output. Cubides containing as much as 350 KW of rectification are made in single mits.
No maintenance required Contains mo moving parts except a fan in fan coolerd models; mo sliding contacts and a minimum of relays. Variable voltages required for synchronons motor field excithtion are oltained by safurable reactor comtrols which eliminate current interruption and sparhing, permitting explosion propef installations. Generally, single tap switches accomplish field excitation.
Selenium power rectifiers have lower efficiency than the silicon. Selenium types have been used widely in the low voltage-high current metal faishing industry. Silicon though, is more economical for D-C voltages from 120 to tho-volts.
Voltage regulation is approximately $3 \%$ for silieon and $\mathbf{7 \%}$ for selenium. Antomatic controls allow $1 \%$ regulation for either silicon or selenium with A-C line voltage variations as much as $10 \%$ from no load to fall load.

## Walker Selenium, Germanium and Silicon Rectifiers

## Metal Finishing Rectifying Service

These heavy duty metal finishing rectifiers whether used for
 electroplating, electrocleaning. electroforming, or anodizing are rugged and dependable. They are highly efficient and operate at lowest cost.

Germanium and Silicon reetifiers evidence no aging with continued use. They may be operated at full load 21 hours a day, seven days a week in high ambient temperatures and in corrosive atmospheres. The equipment has long life and requires little or no maintenauce. Easily installed requiring no special concrete or steel flooring as do large motor generator sets. May le placed in close proximity to plating tanks.

Calsinets are finished in acid resistant grey paint.
Three models are available: (1) Without voltage control; (2) An integral control unit with built-in voltage control; (3) A separately controlled type with a control at a remote location from the rectifier.
Voltage controls of various types are available, the above illustration shows the common three dial tap switch arrangement. A single dial tap switch rectifier is available as is a stepless voltage control using either variable transformers or
saturable reachors. All eontrols may be either manually or automatically operated. The efficiency of germanium and silicon plating eqjuipment is from 80 to 96 per cent while that of selenium is frum 70 to 80 per cert.

Sizes range from six volt, fifty ampere, metal finishing rectifiers to large sinute package fan or water eonded ten thousand ampere, forty wolt, reactor controlled plating units.

Equipment is designed for a low ripple of approximately $4.5 \%$ by use of three phase to six transformation. The use of interphase transformers assures uniform heating of all circuit elements. I'rotective circuits include A-C starter overload elements, thermal protection in the event of overload or fan mal-function, and protection against single-phase operation of the rectifier.

A unique protection cireuit on all automatically controlled saturable reactor, comstam. curreat or voltage stahilized rectifiers is provided. In the event of elevated temperatures a visible and audible warning is evidenced. If after two minutes the source of trouble is not removed the reetificr load current is automatically reduced to a safe operating limit. The plating work is thus unharmed while the plating process continues at a lower rate. This feature is particularly important if chrome is being plated. This proteetive work saver feature of Walker rectifiors alone may save eostly down-time and useless, expensive labor charges.
Most metal linishing applications are especially designed as to A-C voltage, ambient temperatures, method of control and cycle of operation. Equipment calling for special as well as standard requirements can be suppliet.
Periodic reverse equipment for the electroplater is supplied up to 1500 amperes and 18 volts.
Note: Consult Graybar for complete specifications.

## Walker Selenium-Germanium-Silicon Battery Chargers

Heavy Duty

For 1 dephone and railway communication servier, materials handling equipment, or unattended substation Battery Chargers.

Full wave, low ripple output for, float I wo rate, taper and aulomatic voltage control. Require no adjustment beyond initial setting.
Range: 6 V at 1 A .102 .50 V at 70 A . Sprecify use, input and output volts and anns. and any special liatures required.

## G-E Battery Chargers

Farm and Home Type

No. 6RS937A2 "'Overnight" Charger for 3 cells, 6 volts, 12 amperes
Sclenimm-rectifier ehargers-small and lightweight. Can he momated on shelf or wall, or phaced on garage or car floor. Will dharge battery without removing it from car, truck or tractor.

The No. $613 S 932$ A1 (One-day Model) will charge the mormally run-down hattery in 21 hours or less.
 average diseharged battery in 12 hours or less.

| Model No. | Capacity | A.C Volts | Cycles | D.CAmp. | Each |
| :---: | :---: | :---: | :---: | :---: | ---: |
| $611 \$ 937 \backslash 1$ | 3 crolls | 115 | 60 | $7-1$ | $\$ 23.00$ |
| $611 \$ 937 \mathrm{~A} 2$ | 3 colls | 115 | 60 | $12-7$ | 33.00 |

## G-E Tungar* Battery Chargers

Suitable for use in repair shops, garazes, servior stations, by car dealers, tire dealers, at airports, etc.
They are very efficient and have an adjustable charging rate of fromito 6 amperes.

|  | Auto <br> Operates on 105 | transformer <br> 125 Volts, 60 Cycles A-C Battery Capacity |  |

## G-E Tungar* Chargers Full-Wave

Model No. GR86B1
"6-12" Charger

## "6-12" Charger

A medium-capaeity charger, fast and economical in operation, that will handle-
Six 6-volt batteries at 12 amperes, or
Twelve 6-volt batteries at 6 amperes, or the equivalent.
Charging rate is adjustable from 2 to 12 amperes for 3 to 18 cells, and from 2 to 6 amperes for 3 to 36 cells.

## "12-24" Charger

A heavy-duty charger that will do fast, onco-day charging to meet all requirements of the busiest battery departments.

Will handle-
Twenty-four 6 -volt batteries at 6 amperes, or
Twelve 6 -volt batteries at 12 amperes, or the equivalent. Charging rate is adjustable from 2 to 6 amperes for 3 to 72 rells and from 2 to 12 amperes for 3 to 36 cells.

## Autotransformer

Operate on 105/125 volts, 50/60 Cycles A-C

## G-E Tungar* Rectifier Bulbs

Nos. 189048-49
and $99 \times 44$

Manufactured of the finest material a vailable and are laberatory-tested before being used. These bulls were first developed over thirty years ago, and romstant researeh has inproved their design. inereased their efliciency, and trebled their operating life.

Tougar bulbs make possible an exerelIont d-e power supply, free from noise and vibration. They operate with a very low woltage drop and emsequent high over-all efliciency of the equipment with which they are used. T'magar hulbs are ideal for baticery chargers ranging in size from the small home type to the large garage type which handles several batteries.

# Graybar Gasoline Electric Plants 

## 400 Watts to 15000 Watts <br> Air Cooled Models <br> Power and Light for Every Purpose-A Size for Every Need

These Electric I'lants have unlimited uses the world over for constant or standby service. The rugged, heavy-duty generators are backed by 32 ycars of manufacturing experience. . . powered by the linest engines in the world . . at prices below competitive makes. These Electric Plants will emable you to electrify your home, farm, ranch, resort, store. service station or cabin at surprisingly low cost.

Wach Electric Plant is compactly desirned and precision built to give years of satisfactory service. They cost less to own and operate and are easy to start and service. All features not essent ial for dependable operation have heen eliminated.

Available in 60 cycles, 115 or 230 volt, making it possible for you to use standard wiring and low cost A-C lights, radios, appliances and tools.

## Graybar Water-Cooled Gasoline Electric Plants 5000 Watts to $\mathbf{1 0 0 , 0 0 0}$ Watts

No. G10C18C

No. G15C18C

Rugged, dependable, and ideal water-cooled gasoline Electric Plants for a wide variety of uses, ranging from permanent power plants for lumber camps, oil fields, mines, nanufacturing plants to emergency standby hospital, airport, contracting, amusement centers and small factory service.
In selecting the proper size be sure the unit you select is large enough to take care of your total present requirements and anticipated needs. The cost of additional capacity is small compared to the inconvenience of having insufficient current to meet all demands instantly, or the cost of changing models at a bater date.

All capacity and honepower ratings are in accordane with S.A.E. and I.C.E.I. test codes, corrected to sea level and $60^{\circ} \mathrm{F}$. Deduct $3 \%$ for each 1000 feet above sea level and $1 \%$ for each $10^{\circ} \mathrm{F}$. rise above $60^{\circ} \mathrm{F}$.

## Graybar Portable Floodlight and Power Units

Dependably powered by air- or water-cooled engines. $115,115 / 230$ or $120 / 208$ volt, 60 cycle, single or 3 -phase A-C or D-C generator unit.
Large lighted steel control pancl, complete with voltmeter, ammeter, and rheostat to control voltage. Standard electric starter. All these features add up to make these units among the easiest to operate.

The panel is equipped with two plug-in duplex receptacles and outlets, For power tools and other auxiliary power needs or for use of portable floodlights away from unit itself. Side mounted tool box locks. A portable power plant for any emergency.

Ball-bearing wheels for high-speed transport. Front caster wheel retracts to transport position, let down for parking. Multiple leal springs. Shipped complete with 6:00 X 16 auto wheels and tires. Painted highway yellow.

Heavy structural steel chassis. Waterproof steel housing with folding doors. Alloy axle.

# Graybar Diesel Electric Plants-Air Cooled and Water Cooled 1500 Watts to 6500 Watts 

For more than 35 years large users of power have been using Diesel engines because they have proven to be the most dependable and economical source of power.

Now, all of the recognized advantages of diesel engines are brought to the small user of power. These Diesel Electric Plants are built in a range of sizes to meet the electric light and power needs of every farm, ranch. garage, hotel, theatre, hospital, school, small town, shop, mine, mill and factory.

All unnecessary parts have been eliminated from these plants in that all are designed especially for the service for which they have been sold.

Start easily even in the coldest weather.
Ilighest grade materials obtainable machined and finished to the closest tolerances give the plants an exceptionally long service life.
Available in a wide range of Diesel Engines, voltage output, phases, etc. Only a few of the most popular numbers are listed hereConsult Graybar for a complete listing. Electric start models only are listed, manual start models are available.

## White Diesel Generating Equipment

Diesel Generator Set, 150 to $\mathbf{5 0 0}$ Kw.

Itsed ly telephone companies, industrial firms, gas, water, and electric utilities for continuous or standby power. Reliable superior engines achieve low fuel consumption on non-premium fucls because of highly developed combustion system. Simple design permits easy maintenance. IIigh quality construction, minimum of parts means reliable service and low upkeep.

Generators are 3 phase, 60 cycle, 2 -bearing ac rated at .30 P.F. $50^{\circ} \mathrm{C}$. temperature rise continuous duty with loft mounted exciters. Bomed with engine and cooling equipment of diesel, on steel sulb-base. Standard generator voltages inay be $120 / 208,127 / 220,210,180$ or 600 as customer may specify. Special generator sets quoted on request. Controls mounted on generator frame on standard units. Gas, diesel or diaal fuel engines available. Automatic starting system available.

| Kw. | RPM | BHP | Wt. LSs. |
| :--- | :---: | :---: | :---: |
| 150 | 600 | 225 | 23650 |
| 200 | 720 | 290 | 24050 |
| 2.50 | 900 | 360 | 23525 |
| 300 | 900 | 430 | 25975 |
| 350 | 900 | 505 | 27200 |
| 400 | 900 | 600 | Variable with |
| 500 | 900 | 715 | requirements |

Order by kw size. Specify Voltage.

Mobile Generating Plants, 350 Kw. and 500 Kw.

Useful to electric utilities or telephone companies needing molile power the eompletely self-contained plants are available in 350 kw . and 500 kw . sizes. Superior diesel engines operate approximately 12 hours on non-premium fuel from tank below trailer. Lleavy duty 6 or 8 eylinder Superior Model 40 diesel designed for continuous duty at 900 RPM.
A thirty-two foot trailer houses switchboard, 500 Kw . generator, muffler, starting equipment, engine, and radiator. Jacks provided to level trailer when in use. Can be operated by one man. All components are standard production items engineered for mobile power plant by WIITTE DIESEL, ENGINE DIVISlon. The White Motor Company, Springfield, Ohio. Weight of 500 Kw . unit including White 3000 Series tractor approximately 53,000 lbs.

Prices on application.

## Advantages of Purchasing General Electric Motors

These motors are manufactured in a wide variety of types and ratings. The most widely used motors - those fulfilling the requirements of the great majority of industrial applica-tions-are listed in this catalog. Motors of large size, nonstandard rating, or special construction are described in other publications, available on request from Graybar.

General Flectric motors possess the exacting characteristics needed to power modern industrial machinery. They are mechanically sturdy, incorporate the latest developments in electrical design and provide the essential benefits of long life and unusually trouble-free service. Sperified values of current torque, and speed can be depended upon in every unit.

Electric motors form a most versatile type of drive. They permit the application of power directly to the job. They frequently eliminate gearing and belting requirements altogether. They make it possible to bring processing operations directly into a production line.

The wide choice available in (i-E motors permits the efficient application of motors in widely varying types of drives. The different enclosures offered permit the selection of motors that will stand up under the most severe conditions and that can be safely operated in the most hazardous locations. Enclosures ran be obtained for installation in the presence of explosive and corrosive fumes, magnetic and abrasive dusts, splashing liquids, outdoor weather, and other adverse conditions.

General Electric motors are backed up by renewal-parts and exchange-plan services that mean economy and long life to any motor installation. G-E renewal parts are built of the same materials and to the same specifications as the original equipment. G-E exchange-plan motors eliminate long delays in repair or replacement of motors in fractionalhp. sizes and some integral-hp. sizes up through 15 hp .

## Selection of Motors and Control

The selection of an electric motor and control for a given application depends upon the following factors.

## Available Power

Whether a-c or d-c; the voltage; and, if a-c, the number of phases and frequency.

## Selection of Motor Enclosure

The purpose of a motor enclosure is to protect vital motor parts, such as windings, from dust, fumes, water, and chemicals, and in some cases to prevent the possibility of an explosion due to over-heating or sparking of the motor when the atmosphere is laden with inflammable gases or combustible dust. (Open motors, especially of the drip-proof type, provide sufficient protection for all normal conditions and are the most economical from an initial-cost standpoint. Open motors should not be inslalled where more complete enclosures are required to provide low maintenance and long life. The following can be used as a guide in selecting the enclosure required.

Open (Dripproof)-For ordinary industrial conditionsall conditions not requiring the more complete enclosures identified below.
Totally Enclosed-For extremely moist, dirty, or dusty locations, outdoor operation, or corrosive atmospheres.

Explosion-proof and Dust-explosion-proof-For haz-ardous-gas and hazardous-lust conditions as defined by the National Electrical Code. These motors carry a special Underwriters Label.

## How to Select Polyphase Induction Motors

[^87]Consideration must be given, for example, to the number of speeds required, to starting and accelerating requirements, to character of the load and to required speed regulation. In Table I are shown the types of motors commonly available to meet driven-machine requirements. While the large majority of machine requirements are met by general-purpose squirrel-cage motors, the exceptional requirements are tabulated as an aid in preventing misapplication of generalpurpose types.

## Service Factor

The service factor is a multiplier, which, applied to the normal horsepower rating, indicates a permissible loading within the accepted safe limits of temperature rise for the insulation.

Service factors apply only to $40^{\circ} \mathrm{C}$. rise motors and range from 1.4 for the smaller fractional-horsepower a-c motors to 1.15 for integral-horsepower motors aloove $2 \mathrm{hp} .50^{\circ} \mathrm{C}$. and $55^{\circ} \mathrm{C}$. rise motors do not have a service factor.

## Voltage and Frequency Range

Motors will operate successfully under the following conditions of voltage and frequency variations, but not necessarily in accordance with the standards established for operation at normal rating:

Where the variation in voltage does not exceed 10 per cent above or below normal.

Where the frequency variation does not exceed 5 per cent above or below normal.

Where the sum of the voltage and frequency variation does not exceed 10 per cent (provided the variation in frequency does not exceed 5 per cent) above or below normal rating as stamped on motor nameplate.

The starting and maximum running torque of a-c induction motors will vary as the square of the voltage, the speed varying directly with the frequency.

Selection of Motors and Control

Fig. 1 Typical Speed-torque Curves of Squirrel-cage Motors

Type K-Normal-starting-torque, low-slip. NEMA de$\operatorname{sign} \mathrm{A}$ or B .

Type KG-Iligh-starting-torque, low-slip. NEMA design C.

Type KR-IIigh-slip, high-starting-torque. NEMA de$\operatorname{sign} \mathrm{D}$.

Fig. 2 Typical Speed-torque Curves of Wound-rotor Motor, with Different Secondary Resistances

Various speed-torque and corresponding speed-current curves can be oltained by using different values of external secondary resistance. Numbers on the curves indicate the secondary (rotor) circuit resistance in per cent of value required to give full-load torque at standstill. Other values can be olltained by varying the secondary resistance to meet specific requirements.

The curves for "no external resistance" are merely reference curves, as appreciable resistance is necessary to obtain positive values of initial starting torque.

# G-E Tri-Clad* "55"' Squirrel-Cage Induction Motors <br> Type K, Normal Starting Torque; Type KG, High Starting Torque; Type KR, High Slip 

1 to $125 \mathrm{Hp}, 3$ and 2-Phase, 60 Cycles A complete line of G-E motors-from 1 to $125 \mathrm{hp}-w i$ h increased operating effi-
 ciency packed into the new NEMA frame dimensions. The line includes the generalpurpose models, plus a variety of gearmotors, including the right-angle shaft gear motor. A vailable in most ratings are vertical, single-phase, wound-rotor, and multispeed motors, as well as NEMA Types C and D face- and flange-mounted units.

Because these Tri-Clad " 55 " motors are the result of extensive engineering research, their dimensions, operating characteristics, and appearance bear no resemblance to the former Tri-Clad line. Their lighter weight and smaller over-all size save money on shipping, handling, storing, and installing. Yet they retain the full power rating and servicefactor of previous models.
Features include: Greater rigidity, because of cast-iron construction. Increased protection from dripping liquids. Water-shedding stator assembly-the result of silieone Dri-Film* coating. Nonwicking leads protect internal connections. Formex* wire windings retard heat aging. New polyester-film slot and phase insulation is eight times stronger than ordinary electrical insulations. Attractive finish is casy to clean or repaint. Sealed hearing housing prevents lubricant leahage or entrance of dirt. Grease can be added during motor operation. Maintenance is casy with large knockoff lugs, stainless-steel nameplate, and oversize conduit box.

## Type K—Normal Starting Torque <br> NEMA Classification Design B

The Type $K$ is suitable for either full-voltage or reduced voltage starting, depending upon the permissible starting current of the particular application. It has the highest efficiency and power factor of all the standard lines of induction motors, and is well fitted for driving pumps, fans. blowers, line shafting, and similar equipment requiring contimous operation with fairly constant load.
In general this motor can le used for any application where continuous operation and constant speed are required, together with a fairly constant load.

Type KG-High Starting Torque
NEMA Classification Design C
The Type K G motor has hizh starting torque and low starting current and is intended to supply the need for motors having a higher starting torque than can be obtained from the Type $K$ motors with full voltage applied.
Recommended for such drives as compressors without unloading valves, conveyors which must be started loaded, and other applications requiring high starting torque.
Type KG motors starting at full voltage should be applied only where high torque at start is actually required and only when the driven mechanism will unt he injured by the sudden application of this torque. This latter caution applies especially to drives or driven machines utilizing lelts, either of the flat or $V$ type, chains or other flexible or flat elements.

Type K, Normal Starting Torque - General-purpose, Dripproof, Horizontal

DIRECTION OF ROTATION. For motors in frames 444 S and larger at 3600 rpm , the direction of rotation must be specified (as viewed from end opposite driving end) so that fan can be properly arranged for ventilation.
*208 VOLTS. Listed Type K motors in frames 445 and smaller are rated 208-220/440 volts. Motor warranties covering voltage and frequency variation apply to the 220 - and 440 -volt ratings.

220 -volt, 60 cycle ratings in frames 504 and above are usable on 208 -volt network systems.
Torques are reduced by approximately 11 per cent, and other characteristics are modified slightly when motors are operated on 208 volts.
$\mathrm{x}-$ Model Nos. $3 \mathrm{x}-5 \mathrm{KG} 215 \mathrm{AG} 601$. $5 \mathrm{x}-5 \mathrm{KG} 215 \mathrm{AG} 201$.

# G-E Tri-Clad "55"' Squirrel-Cage Induction Motors 

# Totally Enclosed, Fan-Cooled Horizontal <br> Type K-Normal Starting Torque <br> Standard and Explosion-proof-1 to $\mathbf{3 0}$ H.P. <br> 2 and 3-Phase, 60 Cycles, Continuous Duty, $55^{\circ} \mathrm{C}$ Rise 208, 220/440, or 550 Volts 

Enclosed motors are built in either nonventilated or fancooled construction. Motors in the smaller ratings are nonventilated.

In the larger ratings, the totally enclosed, fan-cooled design is standard. This latter construction draws air into the end of the fan cover and directs it over the motor frame toward the pulley end. The integrally cast blades on the rotor agitate the air inside the motor, thus dissipating heat from the frame.

General Electric also has a complete line of totally enclosed motors which have been tested and listed by Underwriters' Laboratories for Class I, Group D (specified gases and vapors); Class I1, Group E (magnesium or aluminum dust); Class 11, Group F (coal or coke dust); and Class II, Group G (yrain dust) service. Motors must be specified for the particular application in order that they may bear the proper Underwriters' label indicating suitability for the conditions applied.

Class 1，（iroup I）－All frames．

Class 11，Groups F and G－All frames except 3600 rpm motors in frames ． 30 Is and larger．
\＃Sleeve bearings．
DIRECTLON OF ROTATION．For motors in frames 50 t and larger at 3600 rpm，the direction of rotation mast be specified （as viewed from end opposite driving end），so that lan can be properly arranged for ventiation．
 and frequency variation apply to the 220 －and 4.10 －volt ratings．

220 －volt， 60 cycle ratings in frames 50.1 and above are usable on 208 －wolt networh systems．
Torques are reduced by approximately 11 per cent，and other characteristics are modified slightly when motors are operated on 208 volts．

## G-E Tri-Clad "55" Wound-Rotor Induction Motors

Type M-Tri-Clad wound-rotor motor

## General-Purpose, Dripproof

## Type M-Constant-Speed and Adjustable-Varying-Speed <br> 1-200 H.P., 2 and 3-Phase, 60 Cycles, Continuous Duty, $40^{\circ} \mathrm{C}$ Rise

Type M wound-rotor induction motors have looth constant- and adjustable-varying-speed characteristios, the desired speed eharacteristics being obtained by selecting controllers of the proper types. This type of motor is suitable for constant-speed applications requiring frepuent starting or reversing under heavy load, or where exceptionally high starting torgue is encountered. It can also be used on applications requiring adjustable-varying-speed characteristics. For this type of service, the speed can be adjusted to any value over a considerable range but, once adjusted, will vary with change in load.

*Three-phase motors only.
208 Volts. Listed Type 11 open 29-volt, 60-cycle motors are usable on 208 -volt network systems with an 11 per cent torque reduetion and other modified characteristics.

Dual Voltage. Notors for 220 and 4.10 volts in frames 4.5 and sualler are dual-voltage, 220/40 volts except those two-phase ratings identified as single-voltage.
Temperature 1 Rise. The temperature rise of 3600 -rpm motors in frames 501 S and larger is $40^{\circ} \mathrm{C}$ rise on stator and $75^{\circ} \mathrm{C}$ rise with Class 13 insulation on rotor.
Horsepower Output. The horsepower output at 50 per cent below normal speed will be approximately 40 per cent of nameplate horsepower for 60 -cycle motors and 30 per cent of nameplate horsepower for 60 -cycle motors operating at 50 -cycles, where 50 -cycle operation is authorized. The temperature rise at reduced speed is on a $50^{\circ} \mathrm{C}$ basis. For constant torque loads, requiring 50 per cent horsepower at 50 per cent speed, consult Graybar.
AThis page includes "Book" pricea subject to discount. For the correct discount, consult GiRAYBAR.

# G-E Tri-Clad " 55 " Integral-HP Single-Phase Induction Motors 

Dripproof, Horizontal 60-Cycle Capacitor-Motors<br>Type KC-General-Purpose, Capacitor-Motor<br>Type KCJ-High-Torque, Capacitor-Motor

Typleal Type KC Tri-Clad " 55 "
Capacitor-Motor

Type KC 'Tri-Clad " 5.9 " capacitor-motors may be used for air compressors, pumps, fins, conveyors, and other general-purpose applicalions. These moturs are rated in accordance with Vle.XI standards-breakdown torgues meet NBMA standards for general-purpose motors-starting curcents are of NDMA Classification Design 1.

The Tri-Clad ".53" design meets the advanced demands of industry. This modern, more enclosed design incorporates the latest developments in the art of notor manufacturing.

Type K C.J Tri-Clad "3.j" motors are designed for applications requiring high breakdown torque, such as compressors, saws and some farm applications. In general. Type KC.I motors should be selected when application requirements call for high breakdown torque. Contact Graybar for application recommendations.

## General Electric General-Purpose Synchronous Motors

## High-Speed-Open (Drip-Proof)-Horizontal-Two-Bearing

Type TS Tri-Clad-3-Phase, 60 Cycles
Type QS Tri-Clad-2-Phase, 60 Cycles

These motors make complete, compact power units which simply require connection to an a-c power supply for operation. They are especially advantageous where (1) good power factor is desired, (2) where power factor improvement is needed, (3) where high efticiency is wanted (in the case of steady, contimuous loads of 7.5 hp . and larger), or (4) where exact speeds must be maintained.

They have a mechanical simplicity comparable to that of squirrelcage motors. Where direct-connected exciters are used, the exciter forms an integral part of the motor structure and saves both space and installation cost over other types. oher typos.

Tri-Clad Synchronous Motor with Direct-Connected Exciter

*Price of direct-connected exciter includes suitalle field rheostat.
-This page includes "Book" prices subjeet to discount. For correct discount, contact Graybar.

## G-E Fractional-HP Industrial Motors

#### Abstract

Notice: These fractional-horsopower motors are for industrial service and are available to users, resale purchasers, and distributing manufacturers. They are not to be confused with the fractional-horsepower Utility motors distributed to dealers for farm, home-workshop, and incidental use.

## A Complete Line of Advanced-Design Form G Motors

Developed over many years by General Electric, these motors have many outstanding, exclusive electrical and mechanical design features. Available for general or special duty in open and enclosed frames, there is a model suited for noarly any fractional-horsepower application. Itp to 10 pereront smaller and $\mathbf{5 0}$ perem lighter, these motors are casier to handle, mount, and connect.

Now Flexibility-new bearing design makes possible all-angle operation. You can use (i.E.'s quiet, all-angle sleeve-bearing motors with shaft up, down, or in any position -and with no loss of lubriation. Direction of shaft rotation on all models is easily reversed.

Easy Mounting easily detachable cradle base means you can mount the base quickly wherever you want the motor, then simply attach the motor to the base with special clamps-which permit the motor rotation within the base.

Long Life-results from new insulation that resists moisture, corrosion, and electrical breakdown. Vou get the most advanced type of motor insulation in G-F: fractional-horsepower motors, with fanous G-E Formex* wire and insulating varnish stator protection, neoprene leads, and Mylart polyester film, made available for the first time in this motor.

Full NEMA Performance-all models meet or exceed AIEE and NEMA requirements.
Quiet, Smooth lhanning-made possible by completely new design of rotor, including unitized rotor-fan casting, precise rotor balaneing, and advanced magnetic design.

Slot and hetween-phase insulation of "Mylar" polyester film, Formex wire, and insulating varnish treat ment make the stator winding stronply resislant to heal, aging, moisture, elfetrical stresses, and other hazards. (ommatct, dielecloads, reduces sturling current.
linique locking device and thrust washer assembly maintains corrocl end-play adjustments. absorbs moderate thrust foads. needs no maintenance.
Advanced magnatic design and mified rotorfan casting provide quiet opralion.
Vertilating oponings and large fan combine to make a quiet. effective cooling systom, providing cool running and long motor life.

Reinforced, liphtweipht pnd shields improve appearance. Flat disk-typr design increases sirempth, promotes free ruming, lengthens bearing life.

Labrication system, with extra-large oil reservoir and spocially componnded wicking materials, lloats hearing surfaces in oil, prevents leakage. purmits uperation in any pessition.

Stoel cradte hase and latches sirongly support all-position monnting, permit rotalion of motor in base when required, make motor iustallation easy.

## G-E Fractional-HP Industrial Motors <br> Open Split-Phase, Type KH, 60 Cycles

## Features

Open (dripproof) construction, continuous duty, quiet all-angle sleeve-hearings, attractive bluegray enamel finish, detachable hase. Where to Use
40 C Rise Motors-Specially suited for loads which need moderate starting torque (approx. $150 \%$ of running torgue). Starting current is normal and meets all electrical codes for antonatically controlled devices. A 1.35 service factor permits motors to handle loads $3.5 \%$ above nameplate rating. This is advantageous if maximun load is doubtful. Typical applications are furnace and air-conditioning fans and blowers, office machines and similar devices.

50 C Mise Motors-Can be used on loads requiring moderately high starting torque (approx. $200 \%$ of running torque). They have high starting currents and should he used only on applications
Since service factor is $\mathbf{i . 0}$, motors should be used only when maxinum load is known. Typical
 where starting is infrequendinge evaporative coolers, small drill presses, jig saws, grinders, etc.
applications are summer cooling fans, eval

\#This model has double shaft extension ( $17 / 8$-in. by $5 / 8$-in. cach end).

** 230 -volt ratings also available.

## Open, Capacitor-Start, Type KC, 60 Cycles

 Features

Type KC Motor-Solld Base Base maximum load is industrial equipment, etc. $\dagger$ †llave $17 / 8$-in. liy $5 / 8$-in. double shaft extension.

## Open (dripproof) construction, continuous duty, quiet all-angle sleeve-bearings, attractive blue-gray enamel finish, detachable lase. <br> Where to Use

40 C. Rise Motors-Specially desipned for applications requiring exceptionally high starting torque (approx. $400 \%$ of running torque). Starting current is normal. Service factors of 1.2 .5 to 1.35 provide load-carrying ability above nameplate rating. These extra-heavy-duty motors are ideal when maximmm load is doubtful. Typical applications are pumps, air-conditioning compressors, conveyors,

50 C IRise Notors- Recommended for use on hard-to-start loads (starting torque $250 \%$ of running torque). Starting current is normal. Service factor is 1.0 and motors should be used only when maximum load is known. Typical applications are evaporative coolers, milking machines, attic fans,

Type K Open Motor

# G-E Fractional-HP Industrial Motors <br> Type K, Three-phase, 60/50 Cycles <br> Features 

Continuous-duty, all-angle sleeve-bearings for moderate thrust or heavy-duty ball bearings with 10 -year lubrication for heavy thrust, attractive bhe-gray enamel finish.

## Where to Use

For continuous-duty application where power supply is three-phase. Normal torque for starting, high pull-up torgue for inertia loads, and high breakdown torque for peak-load conditions.

## Ordering Directions

In placing order, specify:
(1) Complete model number if listed, type (First letters in model number, such as $\mathrm{K} I \mathrm{I}, \mathrm{KC}, \mathrm{K}$, etc.
(2) Horsepower, full-load speed, voltage, and frequency.
(3) Type of base (solid or resilient).
(4) Direction of rotation as viewed from end opposite the shalt-extension end.
(5) Overload protection, if desired.
(6) Enelosure and bearing construction.
(7) Standard control, if desired.

## Mounting Dimensions (For Estimating Only) Types KC, K, and KH

$\dagger-W=$ Allowance for variation in castings after final assembly.

## G-E Fractional-HP Replacement Motors

This listing represents those models of (ieneral Electric motors most commonly used for oil burners, fans, blowers, pumps, and compressors.

## Heating and Ventilation Motors

## Oil-Burner Motors

Split-phase, sleeve-hearing, 50 C rise, continums. Faclosure meets Underwriters' Laboratories requirements for totally enclosed oil-burner motors. NEMA standard flange monted ( $63 / 8-1 \mathrm{n}$. dia. rabbet); built-in mannal-reset werload protection; lightweight, compact design, clochwise rotation easily reversed at terminal luard; shaft diameter, $1 / 2$-ineh.

1725 Rpm-60 Cycles

*Lead location described facing end opposite shaft. Standard rotation is clockwise viewing the end opposite shaft. Motors with this rotation will be furnished unless order specifies counter-elockwise.

## Small Fan and Blower Motors

Type K SP, 51-frame unit-bearing shaded-pole motors are totally enclosed and have a large sealed-in oil capacity sufficient for yeurs of dependable operation. liquipped with 20 inches of two-conductor cord with eyclets, threaded shaft $3164-\mathrm{in}$. long with $1 / 4-\mathrm{in} .-20$ thread and special fan mounting with speed nut, they may be supplied for either horizontal or all-angle operation.

## Belt-Driven or Coupled Pump Motors

Type KC capacitor-start, open, quiet all-angle sleeve-hearings; solid base; continuous-duty 40 C rise; built-in automatic-reset thermal protector.

## G-E Fractional-HP Utility Motors

Notice: General Electric Ltility motors are built for farm, home-workshop, and incidental use. Their distribution is limited to dealers handling them as items of stoch for retail sale.

## New Form G Open (Dripproof), Split-Phase, and Capacitor-Start Solid Base, All-Angle Sleeve-Bearing, 60 Cycles

G-F Utility motors are especially designed for the large variety of general applications in the shop, farm, and home. Their attractive apparance, sturdy construction, dependable low-cost operation, and simple connections make these motors ideal as a high-quality source of power for incidental use.
Outstanding features are-
Continuous duty- $\mathbf{5 0} \mathrm{C}$ rise.
Open (dripproff) construction.*
Notors designed to operate in any position-quiet all-angle sleeve-bearings absorb moderate thrust load.
Attractive finish of durable bluegray enamel with red and silver label.
Large buitt-in terminal board-easy to comect.
Strong steel base rigidly clamped to bearing housing.

## Description

8-ft. 2-conductor gray cord. incl. molded plug \& cord thru switch. 8 -ft. 2 -cond. cord, incl, molded plug \& motor mitg. on-off switch. Same as above lut for frames as listed.

| For G.E Motor | Size <br> Book Price, <br> Each |
| :--- | ---: |
| All $1 / 4$ to $3 / 4$ IJ P. incl. | $\$ 3.00$ |
| Frames $33-35-38$ | 4.70 |
| Frames $42-13-45$ | $\mathbf{4 . 7 0}$ |

* Motors mounted in horizontal position meet VLMA specifications for dripproof construction.
$\dagger$ These motors are ideally suited for home workshop applications because the internal starting switch is protected against sawdust aceumulations.
$\ddagger$ Includes Federal Excise Tax.

## Warranty and Service Plan

[^90]AThis page includes "Hook" prices sulsject to discount. For the correct discount, consult Graybar.

## G-E Fractional-HP Gear Motors

## Horizontal, Floor-mounted, 60 Cycles

## Concentric-Shaft, A-C

Proved liy successful performance on industry's toughest jobs . . . a balanced combination of motor and gear in a single pachage.

Precision-machined, accurately assemhled, helical gearing delivers maximum power at the output shalt.

## Where to Use

Fractional-horsepower gear motors are especially applicable where dependable low outpat speeds are refuired.
Typical applications inchade all types of conveyors, mixers, agitators, pumps, materials-handling devices, and machine tools.

|  | 1/4 Horsepower |  |  |  |  |  | 1/2 Horsepower |  |  |  |  |  |  |

## G-E Integral-HP Gear-Motors

Tri-Clad "55"-Horizontal, Floor-Mounted-Class I, 1 to 5 H.P. Dripproof and Totally Enclosed-60 Cycles, Polyphase, 220/440 or 550 Volts

# Right-Angle Shaft 

## Where To Use

Right-angle shaft worm gear-motors are normally used when mounting configuration does not permit the use of either the concentric- or offsetshaft ratings. Examples of typical right-angle shaft applications are conveyors, door operators, and confined mounting positions on some machine tools.

*Nominal speeds are full-load sperds and are based on 1750-rpm full-load motor speed. If motor full-load speeds vary slightly, output-shaft speed will change.
$\dagger$ Totally enclosed, nonventilated in $2-h p$ ratings.
For Class II and Class III right-angle shalt gear-motors, and for single-phase right-angle shaft gear-motors, contact Graybar.

## G-E Direct-Current Motors

Dripproof-Industrial-Kinamatic*<br>Type CD (Frames 186A-505A) 150 HP and Smaller

Type CD Kinamatic motors in frames 186 to 50.5 conform to new NEMA Standards for industrial direct-current motors. Designed to supersede the "constant-speed" and "adjustablespeed" general-purpose direct-current motors. All motors are suitable for operation over wide speed ranges by a combination of field control and armature-voltage control. Fipuipped throughout with Class B insulation and rated 60 C . rise for continuous operation at base speed. Especially suitable for use in adjustable-voltage systems where precise, stepless
speed control with constant torque output may he ohtained in a relatively simple manner. Additional speed range with gradually inereasing availahle horsepower output may be obtaincd by using a rheostat to weaken the motor shunt-field excitation.
The completely integrated design of General Electric Kinamatic d-c motors permits application flexibility. Low armature inertia and high transient commutating ability make them ideal for systems involving quick starting, stopping, and reversing duty. The greater protection offered by the dripproof enclosure and Class 13 insulation permits application of the standard motor in much more severe environmental conditions than is possible with general-purpose motors. Rugred hall hearings permit mounting at any anglehorizontal to vertical, shaft up or down.

Typical applications include drives for machine tools, such as lathes, milling machines, boring machines, and grinding wheels. Can be used in the paper, textile, steel, printing, rubber, and plastic industries for driving reels, rollers, conveyors, and other continuons-processing machinery where speed flexibility is required.

Standard voltage rating 210 volts.

## Ratings

Graphical Representation of Ratings

## Continuous Ratings

1. Continuous 60 C . Operation:
a. The standard $h \mathrm{p}$ rating is the continuous 60 C . rating at base speed.
b. At 300 per cent base speed and above, the continuous 60 C . rating is 130-133 per cent of the standard hp. rating.

## 2. Service-factor Operation:

a. At base speed, the service-factor rating is 115 per cent of the standard hp . rating.
b. Between 150 per cent and 300 per cent base speed, the service-factor rating is 130 per cent of the standard hp. rating.
c. Above 300 per cent base speed, there is no service factor. For continuous 60 C . rating alove 300 per cent base speed, see 1 (b).

## Short-time Ratings

Standard Kinamatic dripproof industrial direct-current motors are suitable for operation at the next-higher standard horsepower rating without service factor for intermittentduty application, such as cranes and machine toots.

## Adjustable-Voltage Operation

Suitable for reduced-speed operation by adjustable armature voltage. Some derating may be necessary for applications requiring extended periods of low speed operation at full-load torque.

## Ambient Conditions

Designed for operation in a 40 C . ambient temperature and at altitudes up to $3300-\mathrm{ft}$. above sea level. These motors can he operated in ambient temperatures up to 50 C . or altitudes up to $8800-\mathrm{ft}$. without service factor.

## Enclosure

The standard enclosure for Kinamatic direct-current motors is dripproof. These motors are so constructed that drops of liquid or solid particles falling at any angle not greater than 15 degrees from the vertical cannot enter the motor, either directly or ly sticking and running along a horizontal or inwardly inclined surface.

The Standard General Electric industrial motor-generator set has been designed to provide a maximum source of d-e power in minimum space. The new matched ratings utilize full power capacity of both motor and generator to provide a small, more compact set-one that will mean important savings in initial cost and space.

Four-bearing construction of standard two-unit motor-
generator sets permits faster, more comomical replacement of units. By utilizing standard Kinanatic d-c generators and Tri-Clad induction motors, alignment problens are minimized and low inventories of spare mits and parts can le maintained.
Flexible steel complings allow free end float of shafts without imposing thrust load on either motor or penerator bearings. Lasily discomected couplings simplify alimment, and help assure smooth operation of motor-generator set.
Modern-design hase is constructed of solid steel-plate bed with rigid cross hracing. Extra strength of base simplities mounting and facilitates installation.

## Dimensions and Ratings, 3-Phase, 60 Cycles, 1800 RPM

$\dagger$ Generators for 125 -volt ratings will have extended frames.
*Registered trade-marks of General Electric Company.
$\ddagger$ Two conduit boxes required for this rating-one on either side of frame.

## G-E Speed Variators

## Packaged, Adjustable-voltage D-C Drives Operates from A-C Power-1-500 HP

Packaged, all-electric, adjustable-speed drive which operates from a-c power. The power unit converts incoming a-c power to d-c power and supplies it to a d-c drive motor. Speed of the d-c motor can he adjusted over a wide range by controlling its armature voltage and field current. Speed ranges of 200 to 1 and higher are available.
The basic model, with an 8 to 1 speed range, forms the foundation for the speed variator line. However, such a wide variety of modilications are avaibable for these drives that applications for the speed variator are practically unlimited wherever an adjustable-voltage d-c drive is required.
For the large majority of industrial applications where reliable adjustable-speed power is required the general industrial speed variator drive may be used. Typical applications are drives for cement, chemical, food, glass, lumber, machinetool, materials handling, metal-working, paper, paper converting, plastic, printing, rubber, steel, textile and wire drawing industries.

## Power Unit

The basic power unit consists of a mo-tor-generator set, full voltage starter for the indurtion motor of the M-G set, and the necessary d-c control for simple nonreversing opreration of the d-c drive motor, all packaged together in an attractive, ventilated cabinet.

Since the power unit is fictory assembled, wircol. and tested, the cost of installation is extrenely low.

Speed Variator Power Unit (Typical of $\mathbf{1 5}-30 \mathrm{HP}$ )

## Operator's Control

The lasic operator's control devices
 are: an oiltight push-button station for starting and stopping the d-c drive motor and a small rheostat which adjusts the field current of the d-e qenerator in the power unit.

The adjustment of the generator field current coutrols the voltage applied to the d-c motor armature which, in turn, controls the speed of the d-c motor over an eight-to-one range.
The push-button station is for surface mounting, and the rheostat is for front-of-board mounting.

## D-C Drive Motor

Kinamatle* Dripproof D-C Motor

The d-c motor included in the basic Speed Variator drive is suitable for constant torque operation over an eight-to-one speed range. It is rated 210 wolts d-e. 60 C . rise. Class 13 insulated in frames up through 50 , and is rated 230 volts d-c, 50 C. rise in larger frames. llas dripproof enclosure, ball bearings, and is shuntwound.
These motors make it possible to oltain rapid acceleration and deceleration with low-energy demand.
*Trade-mark of General Electric Company.
Prices and information on ot her readily available modifications on application.

## G-E Control Centers

1 to 100 HP, 220 Volts, 3 Phase
1 to 200 HP, 440/600 Volts, 3 Phase
Interrupting Ratings: 15,000 to 25,000 Amperes

Type DA7093
This pre-engineered control center permits the grouping of all switching and control operations at one convenient location. Compact design results in 50 percent saving of floor area.

Complete installation composed of standardized vertical sections, fusible or circuit-breaher-type control units, and acecssories as required. Easy to plan, install and maintain and can be used for all types of industrial and commercial applications. Easily expanded to meet changing control requirements.

This space-saving design permits use of nine NEDIA Size 1 units or six XEMA Size 2 units in one 90 -in.-high vertical section. These starter units can be either of the fusible or circuit breaker type and are readily interchangeable. Main circuit breakers and fusible switches are availahle.

Control sections can be supplied in either factory assembled NEMA Types A, B, or C construction or as units for field assembly. Where switching sections only are required, these can be furnished as complete equipments or as units for field assembly.

With the broad line of standardized sections and control units available, it is easy to select combinations to meet exacting motor control requirements, whether for a single machine, a department, or an entire plant.

This pachaged control center comes fully equipped with starters prewired to customer specifications. 1 and and control wiring on joh is minimized and can le done with units in place.

Maximum salety protection for operating personnel bailt into this design. Ilandle must be moved to OFF position before door can be opened and unit removed from section. Handle can be padlerched in either of three positions. Aluminum barriers provide isolation from unit below when unit atop barrier is removed. Interlocked handle on control unit has "by-passing" interlock release to permit inspection.

Wide-opening door permits easy access to section interior. Unit easily released from section by turning latching screw. I nit can be loched during inspection in safe position clear of buses by latch on horizontal barrier. All eomponents are mounted on mit frame for casy inspection or removal. Use of three scparate stabs makes replacement easy. hodividuad lms-har insulators assure complete electrical and mechanical protection.

Space saving unit size permits nine NEMA Size 1 units in one section withont reduction in pull-hox size. Flexible design permits $135 / 8 \mathrm{in}$. sections to be installed back to back with combined depth of only $27 \frac{1}{4} \mathrm{in}$. or single back to back arrangement in one structure with 24 in . depth.
Note:-Two speed Cuntrol Centers available. For further information contact Graybar.

## G-E IC7092 Motor Control Centers

Offers the answer to simplified installation and mantenance of a-e combination starters, lighting panels, lighting transformers, and feeder circuit breakers, as well as other associated rapipment for a group of motors in a central location.

Adapted for all starters in one factory area, or on a particular process-starters can he grouped and connected with one continuous power bus.

## Features of the IC7092 control center include:

Standard Dimensions-all starter units are constructed in even multiples of 11 in , high; Extra-large wiring trongh 4 in. wide (full height) continuous vertical wiring trough with calle supports for mit wiring; Vertical bus barrier soparates starter components from vertical bus; Front Comnectionall comections and terminals easily aceessible from the front; Removable Starter Inits: Flange-formed Doors; Free-lloating stalh-on Comector providing pesitive silver-to-silver contant on both sides of the vertieal bus; Back-to-bach momiting affords maximm space saving; I-beam eonstruction provides strong, rigid structure: Safety Interlock prevents opening starter door when circuit breaher or fused switch are in ON pesition.
Normally furnished with bus work braced to withstand 2.,000 rms amp. short-eirchit eurrent.

In cases where $\mathbf{5 0 , 0 0 0} \mathrm{m}$ ms amp. interrupting capacity is required, all fusih) e-type combination starters are supplied with current-limiting fuses. In addition, the bus is braced for 50.000 amp. A current-limiting reactor of proper rating. comeneted ahead of the motor control center, or a howk-stickoperated incoming-line Amp-trap current limiter may he comented on the incoming bus-to provide the required higher interrupting capacity.

## Motor control centers are available in three types:

NEXIA 'lype A construction-motor and controll leads connected direcily to contactor and interlocks at installation.

NBIIA Type 13 construction-motor and contron leads conneetod to individual terminal Inards located in the individual starter compartment at installation.

NEIA T'ype C construction-motor and control leads conneded at instatlation to mastor terminal lomard located in either top or bottom cable compartment of controd center. All intercomerting wiring is done at the factory and an over-all interomonection diagram is furnished.

## G-E Limitamp* Controls

The Limitamp* Control with IC.7160 starter with air-lireath contactor is designed to operate and protert squirrel - cage, wommd-rotor, and syn-- hromous motors: tramsformer ferders; and other equipmont used in special pplications. Can include control for anxiliary and accessory equipment. such as incombing-line pancls, lishting panmes, small lowwoltage a-c and d-e motor starters, relaving and melorimg expmpmont.

Weots NEVIA Class lis Stamdards; and furnished completaly assembled and wired in Vle\IA Type I free-standing, 30-in.-derp enclosiares.

Fipuipped with gampoperated disconnect switeh which will not allow acress to the high-voltage compartment unles contactor and isolating switch are in OF'F position.
'Type li..-2 current-limiting fuses provide shortcircuit protection.
Ambiont-compensated thermal overload relays protect mobor aquinst damaging overloads. Thime-delay undervoltage protection is also provided.

The IC:281玉 air-break improved contactor is designed for reliable service and easy maintenance. Its principal parts-
are chute, phase larriers, contact tips, interlock, and coilare designed for repotitive service.
llas 30 -in. deep enclosures with front connections requiring no rear-aisle space. All connections made from front, and line contactor rolls out for free working space.
In symchronous-motor control panels, load-anple field removal provides fastest fiold removal possible within the first half-slip cycle out of synchronism: motor field-loss relay is mot required. Precision-ingle switching is provided for ut most use of motor synchuronizing ability. (iraduated squirrelcage protection is included to obtain maximum advantage of motor's accelerating ability, protecting time-rated squirrelcage winding, yet allowing more time as the spered incrases

Limitamp interrupting capacity at 50 or 60 cycle power for 2300 volts, ate is $1.50,0000 \mathrm{hva} ; 4000$ volts, ate, $2.50,000 \mathrm{kva}$; and 4600 volts, a-e, $250,000 \mathrm{kva}$.

## G-E IC8070 Plate-Type Field Rheostats

These G-F: plate-type fied rheostats are field-control devices for all types of direct current rotating equipment. They can be used to adjust the output voltage of a-c or d-c generators, and the speed of d-c motors.
suitable for use in textile mills, paper mills, machinery manufacturing, steel mills, switchboard building, educational institutions, laboratories, etc. 'They are available for opentype, tolally enclosed, open-t ype concentric, totally enclosed concentric, open-type sequence operation-all for front- or hack-of-hoard mounting.

Features include: (1) Constant resistance-maintained by using resistance maturial afferedonly slightly by temperature: (2) Long mechanical life --sime contacl segments and brushes are made of special alloy material with long-weraring qualities; (3) Versatility-employing two adjustable stops, one at each end.

When ordering include ohms resistance, maximum ampere, and voltage for rheostat required. If for use with d-c motor, include information on motor rating (Model or Sierial No.) together with speed increase desired. If rheostat is to he used
with other than (i-F motor, the order should state naximum shunt-field current and ohms resistance necessary to insert in the field current to give maximum speed increasis.

IC8070 Field Rheostats for Use with D-C Motors
on General-Purpose Applications*

## G-E IC2820 D-C General-Purpose Relays

Four-clircult relay
Used for general-purpose switching, undervoltage protection, field protection, plugging, and similar applications.
The relays are front connected and can be mounted on either steel or insulating panels.

G-E IC2800 D-C Contactors

IC 1617 Contactor
Ileavy duty and atecsibility are the two special features of this line of dee contantors, as repards their ase by switchloward builders and panel assemblers for industrial service with machine tools, textile machinery, and the like.

1C2800 contactors are rated at $25-100 \mathrm{amp}$., 600 volts, maximum.
Both single-pole aud multipole contactors in all forms are unit-mounted, supplied already assembled in a sturdy steel base drilled for surfice mounting. All connections are made from the front.

Unit-style interlocks are available, factory-mounted or separately for field mounting. These can be easily changed from normally open to normally closed; or from normally closed to normally open.

Contactor Less Interlocks

## G-E IC9516 A-C Brakes

The IC0.ind ae brahe is a long-wearing deviee used primarily to hold rotating apparatus or machinery in a fixed position while it is not in use. The brake is especially designed for shops with samll a-c cranes: for spinning equipment in textile mills; and for use in lanndries, hakeries, food processing phants, small assembly plants, and metal-working plants.

Features of the 1C9.516 brake include: (1) Long mechanical life-balanced molybdenum-alloy wheel, highly resistant to wear; (2) Easy torque adjustment-achieved by adjusting nuts at end of spring which sets brake; (3) Solenoid-coil connectors protected - metal connectors and conduit box mounted adjaceat to solenoid.

The brake may also be used for stopping duty, if proper application rules are followed.
Brake shoes are lined with woven asbestos. Because the shoses operate at low unit pressure, lining wear is reduced, and normal time between relinings is lengthened.

Type B eonstruction with dripproof and splash-proof enchesures is available for outdoor applications; and Type C construction in dust-tight and watertight enclosures is available for severe atmospheric operation.

Hand-release mechanism also available.

*Prices include one overload-device heater which must he ordered separately. Heater may be omitted, or additional heaters may be ordered, at $\mathbf{\$ 1 . 0 0}$ each.

## Heaters for Thermal Overload Devices

Interchangeable heaters are available for a varicty of motor current ranges as shown in the accompanying table.

The table below gives the proper size heater to trip the switch on approximately 12.5 per cent motor current.

Listed values are for motors rated $40^{\circ} \mathrm{C}$. contimuous. For motors rated $50^{\circ} \mathrm{C}$. or $5.5^{\circ} \mathrm{C}$. continuous, multiply fill-liad current of motor by 0.9 and use this value to select heater.

Note: Refer to nearest General Electric office for recommendations for heaters to be used with definite-purpose motors.

## G-E CR106 and CR7006 A-C Magnetic Starters

For Connecting Single-, 2-, or 3-Phase Induction Motors Directly on the Line

Undervoltage Protection
Thermal Overload Protection 1-100 Hp. for 600 Volts, $60-25$ Cycles

The CR106 and CR7006 magnetic motor starter is used for full voltage starting of squirrel cage induction motors. These starters consist of a 2 - or 3-pole magnetically operated contactor with overload relays, mounted on a base and roclosed in a suitable case. Provide undervoltage protection or release. May be operated by means of a pash-bution station, tloat switeh, or other pilot device.

CR7006, Size 0, with cover removed
Prices will be guoted on request for starters with push huttons mounted in cover.

Order by CR number and specify rating of motor with which to he used and heater units required for overload protection.

Note: All starters listed alove are for separate push-button connection. Price does not include push-button station, but ineludes overload-relay heater units.

# G-E CR1062 Manual Motor-Starting Switches 

For 1- to 71/2-HP A-C Motors
$\mathbf{6 0 0}$ Volt5, Maximum, 60-25 Cycle5, Single-phase and Three-phase

Gencral Electric now offers a complete line of manual starters for application on blowers, grinders, pmons, farm machinery, laundry and textile applications, and small machine tools. Available in open and general-purpose enclosures
for push-button or toggle operation in 2-, 3-, or 4 -pole forms, Sizes 0 and 1. Toggle switches in the above forms are also available in cast-iron enclosures suitable for installation in moisture, dust-laden, and hazardous locations. A specially designed form for textile loom service is included in the line.

Bimetallic overload device and a wide range of heaters give accurate response to overloads and provide complete motor protection. When the relay trips, the toggle or push button assumes a meutral position, giving positive indication of overkad trip.

Guards around push button and toggle prevent accidental operation. Iloles in guards on toggle forms permit padlocking in ()n or Off position. All general-purpose cases may be padlocked closed to prevent tampering.

Lift-off covers, retained by screws top and bottom, are provided to minimize space requirements. Combination knockouts comveniently located are provided. All starters conforms to NEMA ratings and have I nderwriters' approval Renewal parts are available for all sizes and forms.

## G-E CR7051 A-C Reduced-Voltage Magnetic Starters

## For Squirrel-Cage Induction Motors

2- or 3-Phase, 3-Wire, 60 Cycles

No. CR7051-A1G
Provides remote control for constant-speed squirrel-cage induction motors on compressors, blowers, and any application that does not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour.

Consists chiefly of an autotransformer for supplying reduced voltage to motor during acctleration, accelerating contactor which connects autotransformer to line and motor to lowvoltage taps, line contactor, temperature overload relay, a definite-time relay which causes accelerating contuctor to open and line contactor to close alter a predetermined time.

## G-E CR1034 A-C Reduced-Voltage Manual Starters

For Squirrel-Cage Induction Motors

These starters are suitable for two- and three-phase motors, driving pumps, conveyors, compressors, blowers, or for other applications where reduced-voltage starting torques and currents are satisfactory for the load and power requirements. They afford hish-torque efficiency, flexibility, protection to operator, protection to motor and driven machine, and timedelay undervoltage protection.

Each starter includes an autotransformer provided with several sets of starting taps, which facilitates adjustment of the motor starting torque and current to suit the particular load conditions. An antotransformer, switching device, instantaneons undervoltage device, and a hand-reset overload relay are all self-contained within a sheet-metal enclosure.

To order, specify CR and Form number, giving the complete motor rating, including horsepower, voltage, phase, and frequency. Order ammeter attachinent, if desired. Book price, $\$ 198$.

# General Electric CR7008 A-C Combination Magnetic Starters 

# Full-Voltage Starters for Induction Motors 

Fusible, Nonfusible, or Circuit Breaker-Undervoltage Protection or Release<br>Thermal Overload Protection<br>11/2-100 Hp., for 600 Volts, 60-25 Cycles, 2- and 3-phase

Size 1 combination Size 1 combination magnetic starter with
fusible disconnect usible discon
switch in general-purpose enclosure
'This combination magnetic starter is available in three basic forms consisting of a full-voltage starter in combinalion with a monlusible discommeet switeh, a fused diseonmert swild, or a cincolit breaker. Shortcircoit proteretion is provided by the cireuit breaker and fuse. Undervoltage protection or melease, deponding ont the type of pilot device, is included.

A simple and reliable equipment for starting a small a-c motor is provided by a C.RT008 combination magnetic starter and a Clilo7, Clfios and momontary-eontact Start-Stop push-hutton station, limit switch, pressure gowermor, lloat switeh, or other pilot device. The combination provides complete protection to both the motor and oprerator. Starters and pilot devices are completely enclosed, preventing aceidental contact with any live parts.

These st arters are available in general-purpose, water-tight, indistrial use and automotive J1C cases, as well as in enclosures for hazardous and corrosive locations. The doors of all starters can be padlocked closed, and the swit ch can be padtocked in either the open or closed position. Positive interlocking het weon the switeh, or breaker operating handle, and the case, prevent opening of the door with the handle in the On position, providing increased satety.

## Advantages

Over-all Irotection. For complete, all-around protection to a-c motors, select a (i-Es combination magnotic starter. With fuses or cirenit brakers to open the circuit the instant a s'ort-circuit ocours, those units protect motor, wiring and the starter itself. In one compact low-cost unit, G-IS com-

Size 4 combination starter with circuit breaker in watertight enctosure
bination starters give full protection where you need it most. Non-renewable fuses or completely enclosed circuit breakers give the tamperpronf short -circuit prot ection that modorn distribution domands-the magnet ic starter and overload relays rive the instant response you need for protecting the motor from overloads.
Protection of Personnel.- Whe new rotary-action disconnect switch on the G-li combination starter makes it inpossible to open the cover without opening the circuit. The rotary action is positive and easy. Circuit-breaker forms have similar features.
Sinple-lnit Control-The G-E combination magnetic starter saves spar", speeds installation, because it's a single, compact unit that meets all National Electric Code requirements for circuit isolation and short-circuit protection. The combination starter provides complete protection to the equipment to which it is connected, and insures continuity of electric service to adjacent :nachines.

## G-E CR109 and CR7009 A-C Magnetic Reversing Controllers

## Full-Voltage Reversing Controllers For Squirrel-Cage Motors, Single-, 2-, or 3-Phase

## Alr-break - Undervoltage Protection and Thermal Overload Protection <br> For 440 Volts, $60-25$ Cycles

Slze 1 magnetic reversing controller with cover removed
G-E C:R109 or C: 187009 magnetic controllers are suitalle for use with reversing motors which are connected directly across the line. Each controller consists of two mechanically interlocked, magnetically operated, three-pole contactors with overload relay. The controllers may be controlled remotely through push-button station, limit switch, float switch, or other pilot device.

Undervoltage Protection or Release-These controllers are ordinarity operated by a momentary-contact Forward-Reverse-Stop push-button station. A normally open interlork is furnished on both the forward and reverse contactors of all controllers to complete the holding circuit. Undervoltage release is provided when maintained-contact pilot device is used.

Overload Protection-Sizes 0 through 4 include thermal overload relays that can be set for hand or automatic resel. Size 4 relays are hand-reset only. All use two relays externally reset from the front of the enclosure.

Enclosures-Controllers are enclosed in wall-mounted cases. Knockouts are conveniently located for conduit connections and for easy mounting.

Mechanical Interlock-The interference-type interlock is positive in action. Electrical interlocking is unnecessary.

*Single-phase rating.
$\dagger$ All forms 3 pole.
Note: All controllers listed above are for separate pushbutton connection. Price does not inclade push button. Above controllers Sizes 0 and 1 are also available in 2- and 4 -pole forms. Sizes 2, 3, and 4 are also available in 4 -pole form. Order by Cl number and description, giving complete motor ratings.

G-E CR2940 and CR2943 Push-Button Stations

Typical 3-button station for front-of-panel or

CR2943-NA 102A wall mounting

Typical watertight station,CR2940-NJ102A

CR29.40 push-button stations are for use in the control circuits of various magnetic controllers. The large contacts and substantial construction of these heavy-duty stations make them well able to withstand the frequent operation and rough usage of machine-tool and similar applications.

The stations listed are divided into two general classes: momentary-contact and maintaining-contact. With a momentary contact, the circuit is completed or interrupted only as long as the operator's finger depresses the button. This feature is required when the station is used with a controller that must provide undervoltage protection. A maintaining contact holds the circuit open or closed. Stations with a combination of momentary and maintaining contacts are available. Information on request.

Push-button stations come in two sizes: standard-duty, suitable for use with contactors up to and including 150 amperes, and heavy-duty, for use with any-size contactor.

## G-E CR2931 Enclosed Float Switches

## For A-C or D-C Motors

Form P
Suitable for use in the control eircuit of a-c or d-c automatic starters, and, except for the Form I', can directly handle the cir--cuits of small motors.
Arranged as furnished for tank operation - switch closes as lower liquid level is reached, and opens as top level is reached. Can be easily changed for sump pump opreration by interchanging float and counterweight. Standard Itwats should not be sul)- jected to pressure. Quotation on special floats will be furnished on request.

All switches are dripproof and splashproof, and are suitable for outdoor installation where they are not subjected to snow or sleet. Where the lifuid whose tevel is to be controlled is subject to freezing, a float switch should not be used.
All switches are quick-acting when closing and opening, insuring minimum arcing and burning of contacts.

| Form | No. of Poles | Description | Ship. Wt. Approx. Lbs. | Book <br> Price <br> Each |

## G-E CR2927 Pressure and Vacuum Switches

Diaphragm Type - For Starting Small Motors or For Pilot-Circuit Control

Pressure switch (cover removed) with unloader valve and differential-adjustling attachment mounted in place

These switches are designed to open or close contacts upon changes of pressure or vacuum of any gas or liquid which will not affect synthetic-rubber or brass or steel parts.

When larger motors than above ratings are used, these switches can be used in connection with automatic starters which will also provide overload protection.

# G-E CR9440 Lever-Type Limit Switches 

## CR9440-J1C1 and J1D1

The CR9440-J1Cl and J1D1 are sturdy, lever-operated limit switches enclosed in strong die-cast cases and molded phenolic covers. Their oilproof construction and single-pole, double-throw, double-break silver contacts of snap-action design make them very suitable for machine-tool and miscellaneous service.

Complete operation of the switches is obtained by a 12 degree travel of the lever with an overtravel of 24 degrees in either the clock wise or counterclockwise directions of rotation.

As supplied by the factory, these switches are arranged for clock wise operation, looking at the cover side. The direction of operation can be reversed by removing the base plate and transferring the return spring to the opposite side of the swing bar.

## CR9440-B1B

A heavy-luty, snap-action, single-pole, double-throw witch with two independent circuits. This limit switch should e used whenever a small, compact, heavy-duty reversing mit switch is required to open or close a control circuit and there maintained accuracy of operation is of primary imortance. Its field of application includes tapping machines, hreading machines, grinder tables, welding machines, and ther recipracating machines where a reversing limit switch ; applicable.

The contacts are double-break, and both stationary and movable tips are of fine silver to insure long life and dependable operation.

The movable contacts are held in either position by a small alnico magnet acting on an iron yoke. When the yoke is broken away from the inagnet face, by direct mechanical action of the operating lever a sturdy spring snaps the contact assembly to the opposite position, where it is held in by the same alnico magnet until the yoke is broken away in the opposite direction. For this reason, the operating point is determined entirely by the position of the operating lever and is independent of tension in the spring. This construction insures maintained accuracy of operation in spite of changes in spring tension caused by aging under repeated operation.

Switch is enclosed in an oiltight steel enclosing case with two gasketed side plates and an opening in the rear for $1 / 2-$ inch conduit connection. With the side plates removed, the terminals are easily accessible, and large working clearances make the switch easy to wire and install.

## CR9440-D2

Roller-Hever-operated, clockwise

Push-rod-operated, or spring-return atchet-operated, or spring-return
operating rod

A lever-operated, push-rod-operated, or plunger-operated imit switch. All except the plunger-operated form have nap-action conlacts. A variet.y of contact arrangements is ivailable, which can be changed in the field from normally *Registered trade-mark of General Electric Co.
See following page for ratings and prices.
open to normally closed operation, or vice versa. The operating heads can be interchanged, or turned 180 degrees. Holes are provided for mounting the switch on either its back or its side. These features allow maximum flexibility in application.

The switches are available in both open and enclosed forms. The open switches are particularly adapted to built-in applications where space is limited. Frames and plungers are constructed of molded *Textolite. The contacts are solid silver and are designed to close with a rolling action. All switches are equipped with flag terminals to accommodate two wires on each terminal. The construction is extremely compact and flexible. The enclosed form has a die-cast case, and is provided with velumoid gaskets and grease seals at shaft journals to make the switch oilproof for machine-tool use.

Application extends to virtually any authomatic equipment where a traverse motion must be converted into control of an electric circuit, particularly where the motion is slow and snap-action contacts are necessary to prevent burning of the contact tips.

## Mercoid Liquid Level Controls

For use on boilers as low water cut-off, feed water pump control and alarm purposes, and for many industrial applications where control is desired from change of liquid level of water, oil, gasoline, ammonia and other fluids.

Electrical capacity: 10 amp. 115 volts, 5 amp. 230 volts, and on order 3 amp .440 volts. Bodies on all types are cast iron.

## Low Water Controls

Standard with copper float

Type 72 and brass trim. Available semiautomatic, with hand reset. Also available weatherproof at extra cost.
Pressure Rating 150 lbs . Max.

$\dagger$ Max. pressure 300 lbs .; max. temperature $425^{\circ} \mathrm{F}$.

Have easy outside adjustments for setting cut-in and cutout pressures. Mercury switch contacts. Visible direct-reading dial. Bourdon tule pressure element.
Types DA-31, DA-531, DS-231 have light gauge Bourdon tube for applications where pressures change slowly and without surge.
Types DA-21, DA-521, DS-221 have heavier gauge Bourdon tubes and check valve for pressures which surge or pulsate.
Types DA-31, DA-21 have minimum differentials as indicated and electrical capacity: 10 amp . 115 volts, 5 amp .230 volts, and on order 3 amp .410 volts.
Types DA-531, DA-521 have closer, minimum differentials, electrical capacity: 11.5 volts - 5 amp . ac. $21 / 2 \mathrm{amp}$. dc; 230 volts - 2 amp . ac, 1 amp . dc.
Types DS-231, DS-221 are single adjustment type with very close operating differential. Electrical capacity: 115 volts 0.3 amp. ac, 0.15 amp . dc; 230 volts -0.15 amp ac, 0.07 amp. dc.
All are single pole, single throw to OPEN circuit as pressure increases. If desired to CLOSE circuit as pressure increases add suffix ( -3 ), such as DA-31-3, etc. Double pole and other circuits available on request. Also available semi-automatic with hand reset.

Diaphragin seals of stainless, monel, etc. also available.

## Struthers-Dunn Relays

The ratings of all relays are conservatively based on noninductive loads. Contacts will break $150 \%$ and carry rated load without overheating. Motor and lamp loads require special consideration because of high inrush ( 5 to 12 times normal).

Fine quality material is used throughout and each one is individually adjusted for correet wipe and pressure to assure maximum life. They are also adjusted for satisfactory operation at $15 \%$ under-voltage on a-c and $20 \%$ on d-c. Fine silver button contacts. Most relays can be furnished with any contact combination desired. Housings of various types are available if specified.

## Midget Relays

These are small size, plain magnetic relays for general control applications.

Coils-Shunt: Up to 230 volts a-c., 60 cycles and up to 115 volts d-c.
(Up to 230 volts $\mathrm{d}-\mathrm{c}$ with resistor.)
Series up to 30 amperes a-c or d-c.
Contact ratings: A-c, 115 volts 6 amperes; 230 volts 3 amperes. D-c, 24 volts 6 amperes; 115 volts 0.5 ampere. Noninductive loads.
Size base $23 / 4 \times 17 / 8$-in.

## Struthers Dunn Relays

## Mechanical Latch-in and Electrical

Type A5HXX

## Ratchet Type Sequence Relays

## Repeating Type <br> (Round and Round)

Thesi relays continuously repeat a predetermined contact sequence.

Contact ratings: a-c, 115 volts, 20 amperes, 230 volts, 10 amperes, d-c, 115 volts, 1 ampere, 230 volts, 0.25 amperes, non-inductive.

Goils: Intermittent duty.
Shunt-U C to 5.50 volts, 60 cycle, a-c; Up to 230 volts, (l-c. Series: Up to 30 amperes a-c or d-c.

Size base $5 \times 3$ in.
Type C85AXA
Sequence"O" open contact, "X" closed contact.

## Midget Sequence Type

Coils-Shunt: Up to 230 volts a-c, 60-cycles and up to 115 olls d-c. (Up to $2: 30$ volts d-c wilh resistor.) Series: Up to 30 amps a-c or d-c.

Non-Inductive Contact Rating, Amps.

## Emergency Lamp Control Relays

Type 20XXH5

For automatically cutting in an emergency or standby lamp when main lamp burns out.

These common circuit relays are single pole with series coil and normally-closed contacts on weighted armature for gravity return to normal position.

Relay can also be connected to an auxiliary source of power (as storage battery) to switch the emergency lamp into the auxiliary circuit should the main line voltage fail or the main lamp burn out.

The voltage drop at contacts is practically eliminated by low resistance fine silver contacts. Contact ratings: Finergency lamps, maximum watts-115330 volts., a-c, 800 watts; d-c, 100 watts.
Size of base, front connected, $4 \times 23 / 4$ in.
Single I'ole, Single Throw.

| Tyme | Description | Each |

$30 X X 115$
Double Break 860

## Telephone Auxiliary Signaling Relays

Type A5XXH501W6

For sustained signaling from telephone ringing circuit. Auxiliary signal remains on until relay is manually reset by pushing button in bottom of housing. For police and taxicab signals, ete.

Nechanical latch relay, $3 / 4$ Mf. condenser and push button mounted in cast iron housing and wired. Operates on 10 ma. at 90 volts, 60 cycles, with 7500 ohms impedence.

Contart ratings: 10 amperes at 115 volts a-c, 2 amperes at 11.5 volts d-e. Non-inductive.

When ordering specify type reset coil voltage and frequency (or d-e) and contact rating.

${ }_{50}^{\text {Type }} \quad$| Description |
| :---: |
| Each |

A5XXII501W6-In Cast Iron Weatherproof I Iousing . $\$ 49.60$

Type 4HXX56H3

## Mercury Contact Relays

For operating audible or visible auxiliary signals from telephone ringing current.

Relay and $3 / 4$ Nfd. condenser mounted in motal housing. Operates on 8 mat. at 90 volts, 20 cycles, with 9500 ohms impedence.

Contact ratings: 10 amperes at 115 volts a-c., 3 amperes at 115 volts, d-c. Non-inductive.

When ordering specify type and contact rating.

$$

## Solenoid Type

Recommended for high inrush loads (Motor-lamp, etc.) or dirt-laden atmosphere. Solenoid magnet assembly tilts mercury tube.

Contact ratings: a-c, 115 volts, 25 amperes, 230 volts, 20 amperes. d-c, 11.5 volts, 20 amperes, $2: 30$ volts, 10 amperes.

Coils-Shunt: Up to 550 volts, 60 cycles a-c. Up to 230 volts d-c. Series: Up to 30 amperes a-c or d-c.

| No. of Cont. | Normal Contact Position | Each |
| :---: | :---: | ---: |
| 1 | Open | $\$ 29.50$ |
| 2 | Open | $\mathbf{4 6 . 0 0}$ |
| 1 | Closed | 29.50 |
| 2 | Closed | $\mathbf{4 6 . 0 0}$ |

## Sensitive Relays

Type 112XAX

48AXX39
4813XX39
48XXA39
48XX 1339
operation and vibra tion resistant relays with low inertia and balanced moving parts result in high sensitivity.

Sensitivity, 0.015 watts, d-c, 0.19 volt-amperes at 60 cycles.

Can be furnished with interconnected coil and contact circuits for use with thermoregulators.

Single pole, double throw contacts on non-inductive loads rated 2 amperes, 115 volts a-c; 1 ampere, 230 volts and 0.25 ampere 115 volts d-c.

Base size, front connected, $21 / 2 \times 23 / 8$-in.
Coils wound with wire up to 44 gauge-prices varying with wire gauge.

Type 112XAX-Single Pole, Double Throw. Available with double pole, double throw contacts.

For more complete information and prices contact Graybar for bulletin.

## Struthers-Dunn Time Delay Relays Repeating Type (Round and Round)

Type APSY1

These timers continue to repeat the contact rycle as long as the motor remains energized. 'The single pole, double throw snap action contacts are individually operated by libre cams mounted on a shaft. The cam shaft assembly is rotated by a single wound synchronous motor.

Contacts rated: For a-t-10 amperes, 115 volts; 5 amperes, 230 volts; 3 amperes, 160 volts-non-inductive, or $1 / 2 \mathrm{hp}$. on $11 \overline{5}, 230$ or 4.00 volt dee motor load.

Size base $33 / 4 \times 21 / 4 \times 21 / 8 \mathrm{in}$.

Type
Description
Each
ABSY' One contact; Speed 1 rpm.................. $\$ 16.00$
We can also furnish other type timers, such as single cycle repeating, immediate recycling, ets.

| Contact Ratings |  |

For 'Type A Surface Box on all 94.1 Relays, add to list $\$ 8.25$.
When ordering any of the above relays be sure to specify correct voltage for operation of relay coils-a-c or d-c (give cycles); contact arrangement-Front, Back or l'ront and Back; number of cirenits contacts are required to open or close. Voltage and amperage contacts must handle. Is load inductive or non-inductive? Is relay to operate in series with any other device? Give any other information (or a sketeh) of its intended use.

## "Diamond H" Momentary Contact Toggle Switches <br> For Manual Control of Magnetic Switches, Relays, Etc.

No. 15009
A special switch for use with magnetic switches. Contacts are made of pure silver. Will fit all standard conduit boxes and takes a standard switch plate.

Packed 10 in a carton. 100 in a standard package. Package weight, 38 pounds.

## H-B Mercury Plunger Relays

## For Street Lighting Control

Hermetically-sealed Relay mounted in a weather-proof housing of new and simplified design. Coil and load fuses and lightning arrestor, singly or in combination as desired, are optional and are mounted on heavy bakelite hase measuring $33 / 16$-in. $\times 6$-in. $\times 3 / 8$-in.

Complete unit is made in both normally open and normally closed types, and for either open or elosed pilot circuits used in remote control of cascade lighting. Iond fuses are 30 amperes, coil fuses 2 amperes. The lightning arrestor is in coil circuit.

Assemblies also furnished with wired leads, when specified, extending $12-\mathrm{in}$. below bottom of housing at slight extra cost. Flexible stranded copper leads with moisture-proof (Type TW or equivalent) insulation are used. No. 8 wire used for load circuit. No. 10 for eoil (control) circuit. Mounted in cast aluminum housing.

*N/O: Normally Open. N/C: Normally Closed.
If flexible stranded wire leads, which extend 12 -in. below box, are desired, add suffix " $A$ " to catalog number and add \$2.00.

## Mossman Switches

## BASIC CONTACT FORMS

All contact forms are shown unoperated. Almost any combination may be made of these contacts up to a maximum of 15 spring in each spring stack.

When ordering a lever turn or push button switch, please specify: Series Number, giving switch Series number to identify the basic construction; the contacts required, using the basic form letters illustrated; the location of each contact by the switch position (or station) number; the ampere rating (standard ratings are at 110 volts, a-c non inductive); and the type of action desired whether locking or non-locking. For Interlocking Push Button Switches, give the desired type of operation.

## Mossman Switches

Custom Built Multiple Contact Leaf-Spring Lever,
Push and Turn Switches

or (O) Position

These switches are ruggedly const ructed for reliable service. 'They are furnished with silver or other precious metal contacts in almost any combination of contact arrangement and mechanical action. They are regularly constructed for long life applications in radio transmitters, signal systems, fire alarm systems, test sets, industrial process controls, etc.

## Series 4100 Heavy Duty Lever Switch

Affords great flexibility of circuit arrangement. Available in an almost unlimited series of combinations of contact assemblies and may be built up to suit specific requirements.

## Contact Ratings:

Standard Heavy Duty-Fine silver contacts $3 / 16$ in. diameter. Rated 10 amperes, 110 volts a-c, non-inductive.
Extra I leavy Duty-Silver alloy contacts $5 / 16$ in. diameter. Rated 20 amperes, 110 volts a-c, non-inductive.
Phosphor bronze springs with solder-lug terminals.
l'rame tapred for 1 No. $1-10$ machine serews, $5 / 8 \times 11 / 4^{\prime \prime}$ centers.
Series 4103-Three Position: Lacking or Non-Locking in active positions (Always locking in neutral position).
Series 4102 - Two Position: Always locking in active po-sition-has no neutral position.
Prices on application.

## Series 4200

## Lever Switch

Has many of the outstanding qualities of the series 4100 , but is lighter in weight and smaller in size.

Any combination can be made of the Basic Contact Forms.

## Contact Ratings:

Standard Duty-Fine silver contacts $1 / 8$ in. diameter. Rated 5 amperes, 110 volts a-c, non-inductive.
Extra I leavy Duty-line silver contacts 3/16 in. diameter. Rated 10 amperes, 110 volts a-c, non-inductive.
Phosphor bronze springs with solder-lug terminals.
Frame tapped for No. 4- 40 flat head screws, $13 / 16^{\prime \prime} \times 13 / 8^{\prime \prime}$ centers.
Series 4203-Three Position: Locking or Non-Iocking in active positions (Always locking in neutral position).
Series 4202--Two Position: Always locking in active po-sition-has no neutral position.

## Mossman Switches

Series 4803 Telephone Lever Key Switch

A high grade switch, more rugged than the average Telephone Key, designed for exacting applications in switching electronic, communication, signalling and control circuits and for other purposes requiring more positive action.
Available with all Basic Contact Forms except $F$ and $\mathbf{G}$.
llas detent or arresting spring to eliminate "bounce" or false operation of the contacts when key is restored to neutral position.

## Contact Rating:

Standard Duty-Code 4, 18 gauge welded Palladium; liated 3 amperes, 110 volts a-c, non-inductive.
Nichel silver leaf springs, with timed solder type terminals. Polished Dack phenolic handles are standard. Mounts with 4- \#3-18 oval head screws on ${ }^{17} 32^{\prime \prime} \times{ }^{13} 1_{6}{ }^{\prime \prime}$ centers.
Series 4803-Normally three positions; loching or nonlocking action available in the active positions. Locking always in neutral position.

## Series 536 Illuminated Push Switches

Designed for use on illuminated panels. Standard 24 or 48 volt telephone switchboard lamps are used to illuminate push button; lamps are removable from front by
lamp extractor. Standard contacts are code 4. 18 gauge Palladium, welded on nickel silver springs in combination of all Basic Forms except 1 f and G. Buttons available in red, green, blue, amber and yellow and clear, all snap fitted. Buttons may be engraved with desired characters.

## Series 4400 <br> Short Frame Push and Turn Switches

Theseswitches are more ruggedly constructed than the conventional jack switch of this type. Fine silver contacts $1 / 8 \mathrm{in}$. diameter: Rated 3 amperes, 110 volts a-c, non-inductive.

Contact Forms A, B and C available in any combination.
Black plastic push buttons and pointer knobs. Complete with mounting hardware.

Series 7700 and 7600 Switches

Provide for easy push button selection of multiple circuits in almost any combination. Molded nylon plungers mounted on phenolic rollers result in extremely smoth, easy operation. Each button depressed releases any previously operated station. Contacts of released station restore to normal hefore contacts of a newly operated station are actuated. Neries 7600 has $5 / 8$ in. plunger centers, series $77003 / 4 \mathrm{in}$. centers.

Furnished in standard construction with from 4 to 12 stations. Lip to 21 stations in a single row on special order. Optional features available include Loek-out or "No-twooperate feature" to prevent operation of more than one station at a time; non-loching stations; accumulative locking stations and illuminated buttons.
Contact Rating 3 amp,, 110 v. a-c (non-inductive). Basic: contact forms A, IB, C and D may be used in any combination to a maximum of approximately 10 springs per pile-up. Twin pile-ups may be mounted on each station to provide up to 20 springs per station. (Requires $3 / 4$-in. plunger centers).

Give complete Series number, state the type of operation desired and the required contacts for each station. Stations are numbered from left to right viewing from the terminal end with contact springs on the upper side of frame.

## CR7505-K201G2, CR7505-K202G2 Photoelectric Relays

These photoelectric relays are suitable where higher sensitivity to light changes and/or higher operating speed is needed. The -K 201 G 2 has a dust-tight/weather resistant enclosure and the -K202G2 has an explosion-proof/watertight enelosure.

They operate on either light increase or decrease, depending on the connections. A time delay may be added to make the relay insensitive to lipht change of short durations. They will operate from light flashes on interruption of $1 / 15$ second between impulses, with not less than $1 / 15$ second between flashes. They also have a maximum rate of 450 operations per minute. The d-c phototube circuit permits remote location of the phototube with no loss in sensitivity. Will operate from a $115 / 230$-volt, $50 / 60$ cycle power source with 10 voltamperes fower requirements.

The -K 201 G 3 is the same as the -K 201 G 2 , except that it has a solid front cover for use with a remotely located phototube holder.

## CR7505-K108G15 Photoelectric Relay

This device operates from a 115 -volt d-c, or 25 -cycle supply with a power requirement of 20 -volt-amperes. The unit is mounted in a dust-tight and weather-resistant enclosing case for outdoor use. The cover of the enclosing case is fitted with a 3 -in., lens and aperture for admission of light to the phototube. A metal visor is mounted over the lens to assist further in minimizing the effect of slanting sun rays. The relation of the lens and aperture is such that the operating light beam must be accurately aligned with the center of the lens and aperture behind it. Otherwise, the beam will not pass through the small aperture and will not reach the phototube. This system minimizes the effect of general daylight illumination, but the device must be so mounted that direct sunlight does not reach the lens.
The light source can be placed at a maximum distance of 35 feet from the phototube. A minimum illumination of 3 -foot-candles is necessary to operate this relay.

115/230 Volts, 50/60 Cycles
Phototube holder CiR7505-I211G:1 is similar in appearance to the -C201 light source. The P211G1 is furnished with six feet of special phototube cable and a plug for connecting the tube socket in the relay. CIT7505-P2I2G1 is similar in appearance to the -C203 light source. Because of its 3-inch lens it is used where greater operating distances are required. Jike the -P211, it is furuished with special cable and plug but no phototube, since a phototube is included in the $\mathrm{K}-100$ relay.

## G-E Photoelectric Devices

## High-Speed Relays

CR7505-N210G2 (Weather-resistant or Dust-tight) CR7505-N211G2 (Explosion-proof or Watertight) CR7505-N212G2 (Weather-resistant or Dust-tight)

These three photuelectric relays are identical in circuit design. They are especially adapted for photoelectrie applications where a device must respond to rapid light changes or short pulses of light or darkness. The relays can operate as rapidly as 600 times per minute. Since the magnetic
relay would be energized for such a short duration, the time might not be sufficient to perform the external control operation desired (t, flash a warning light, for example). A timedelay feature is provided to delay the dropout of the magnetic relay. This time is adjustable up to one-half second by means of a potentioneter dial.

While the photoclectric relay may be operated on either light increase or decrease, it may at the same time he used in either two ways, depending on the need. It may be resistantcoupled, allowing the relay to emergize with a signal without de-energizing the relay until after the original light level at the phototube is rostored. (Or, it may he caparitive-coupled, allowing the relay to respond to rapid changes in light by energizing the relay and then de-energizing it, regardless of the value of the light level. The time-delay reset alone determines when the relay will de-energize. The relays will respond to light changes as small as $1 / 2$ a foot-candle, providing there is suflicient light on the phototube.

## G-E CR7505 Photoelectric Accessories

## Light Sources

## CR7505-C201

The CIR7505-C201GI light source has a die-cast a'umimum enclosure. The back cover is spring-clipped in place so that it is easily removable for accessibility to the socket. An adjustable mominting bracket permits. monnting in almost any position. The unit can be mounted directly on $1 / 2$-inch conduit. The
 that it is weather-resistant and dust-tight.

The CR8\%0.5-C201 light source can lie monnted directly on top of the Cat. No. g'ग"3Y802.: transformer si that a completely assemWed light sumree with transformer results. This eliminates the use of protected learls to the light source, as connections can be made directly within the light-source enclosure.

## CR7505-C203

The CR7505-C203 is similar to the CR7505-C201Gil, except that the lens is $3-$ in. in diameter and has a $41 / 2$ inch focal length. CR7505C203siz is of weather-resistant and dustproof construction in accordance with NEMA specifications. It may be used on machines which must be washed down, provided that the unit is not direcoly subjected to the hose stream.

CR7505-C203
Light Source

## CR7505-C202

This light source is for indoor service. It is similar to CR750.5-C201, except that an additional lens is added to provide a short-focus, concentrated bean of light. This mit will comentrate an intense spot of light approximately $1 / 4$ inch in diameter at a distance of $2 \frac{1}{2}$ to $\cdot$-inches in front of the lens. The appearance and dimensions are the same as the CH7505-C201.

## CR7505-C208

## G-E Photoelectric Devices

## Electronic Timers

These timers are electronic de-
 vices which provide either a time delay or timed interval after an external switch, contact, or interlock is operated.

Among their many applications are:

## Immediate-start 'Timing

Accurate control of the time duration of operations such as paint spraying, electrophating. car washing, heat-treating, preliminary bag filling, photographic printing, delaying heattreating or painted parts until paint fumes are exhausted, prolonging fire siren operation afterswiteh is turned oll, ete.

## Delayed-start Timing

Accurate limiting of the time duration of a delay required for: shutting down helt conveyors if materiat-removal lag becomes excessive, preventing too frequent starting and stopping of a thermostatically controlled motor, etc.

## Sequerce T'iming

Two ar more timers in combination will accurately control the time durations of operations in a sequence such as: cutting time, drift time, or oscillations on bearing-grinding machines, several operations required in sequence on rod-coiling machines; stean scalding, hydraulic flashing on commercial potato-preling machines; low speed, medium speed, high speed on centifuges, etc. This sequence may be mannally or automatieally reinitiated (repeat sequencing).

All mestels have a contact rating at 115 or 230 volts, a-c of: 30 amp. inrush; 10 amp. carry; 10 amp. loreak.

Approximate shipping weight is 13-pounds.

## Infrared Filter Cap

This unit is a small cap which fits over the end of the lens barrel of the CI2750.5-C201, -C203 or -C208 light source to provide a practically invisille beam. 'The cap contains a filter glass which absorbs practically all of the visible energy radiated by the lamp, but permits the indrared energy to pass. The pantuelectrie relays are sensitive to this infrared energy. The sensitivity is reducel somewhat by adding a filter.

The CR7505-13200Cil is for $11 / 2$-in. lens; the CR7505B201G1 is for 3 -in. lens.

## Phototube Holders and Infrared Filters

## Electronic Relay

## CR7511-A126G2

The CR7511-A126G2 elec-
 tronic relay is used to oltain a reliable contact from the touch of two conductors through which only a small current can llow. It may be used as a dloathes liquid-level control in water. acids. salts, beer, ete. to operate motors, lights, solenoids, and contactors whenever there is suflicient change in the resistance of a eircuit.

The electronie relay is basically an electronic-tube amplifior, which consists of an electromagnetic relay, an electronic tube, and a supply transformer. The components are mounted on a metal chassis, which fits into a standard weather-resistant and dust-tight enchsing case. Conduit knockouts in the case, with ennveniently located large terminals on the chassis, greatly simplify installation.

The amplifier consists of an input or actuating circuit (the circuit which is to initiate the relay) and an output circuit which operates the electromagnetic relay. This relay is referred to as the anode relay, because it is in the anode circuit of the electronio tube. With the electronic relay connected for normal operation. the anode relay is circuit is closed as long as the contacts connected to the input circuit remain open. At the instant the input contacts are closed by a body having a resistance within the range of the input sensitivity for which the polentiometor is set, the anode relay opens.

When the electronic relay is connected for normal operation, a time delay is provided hefore the electromagnetic relay closes. This time delay depends on the external or actuating resistance. If the external resistance decreases greatly in value, the time delay is relatively short.

When the relay clsoes on an increase in the external resistance, the time delay depends essentially on the potentiometer setting. This time delay may be appreciable at high dial settings-partirularly if the external resistance increased from a very low value.

The time-delay characteristics for reversed operation are similar. When the external resistance changes ahruptly from a high value to a low one, the time delay will be quite short (Minimum 0.00.5 second); when the external resistance varies from low to high, the time delay may be much longer, depending essentially on the setting of the potentioneter.
$115 / 230$ Volts.
Frequency- 50 , 6i)-cycles.
2 spdt output-relay contacts.
Price Includes Tubes.
No. CR7511A126G2
Each \$80. 00

## Indoor Light-Source Transformer

These transformers may be used to supply low-voltage a-c to a 21- or 32-cp famp in any one of the indoor light sources. They are rated $115 / 230$ volts primary with a secondary voltage to provide approximateiy 1000 hours' life from either a 21 or 32-ç, 6-8 volt automobile lamp. A tap is also provided on the secondary to give approximately 3000 IIours' life from either a 21- or 32-cp, 6-8 volt lamp (with reduced illumination).

115/230 Volts

| No. | Typo | Cyceas | Approx. Ship. Wt. Lbs. | Each |
| :---: | :---: | :---: | :---: | :---: |

## G-E Timing Devices

General Electric Timing Devices include 3 distinct product groupings: (1) Time Switches; (2) Interval Timers; (3) Time Meters.

The following table will be of assistance in selecting the proper type of timing device for the desired operation.

Time Switches

| $\begin{aligned} & \text { Use } \\ & \text { Time Switch } \\ & \text { Type } \end{aligned}$ | For Uses Requiring |
| :---: | :---: |
| 'TSA-47 and 'Tis - 471 | Regular-duty operation, related to hour of day, indeor ase. |
| TSA-41 | Rearular-duty operation, related to hour of day, outhome use. |
| TSA-40 | Heavy-duty operation, related to hour of day, ontdoor and indoor installation. |

## Percentage Timers

TSA-14, Percentage Timer
lhepeating operation cyele, not related to hour of day (indoor).

## Time Meters

KT-11, -12, -13, -14 Counting units of time-operating time of machines or electromic equipment.

## Complete Line of New Time Switches

Type TSA-40
Time Switch

No matter what the particular applieation, there is the right General Electric time switeh to handle it. Now industry's only manufacturers of a complete line of general purpose time switches, General Eilectric's line can handle twoth indoor and outdoor jobs-regular-or heavy-duty-with up to 10 ON-OFF operations in a day.

## Regular-Duty Indoor Time Switches

> Type TSA-47

Used for a variety of timing jols such as advertising signs, store windows, floodlighting, heating, air-conditioning, refrigeration and motor starting. Newest addition to General Electric's complete line, the Tsi-17 is specially designed for flexibility on general purpose indoor timing johs. For example, toth double-pole and single-pole models are available. In addition, operations can be set as close as one hour apart with the TSA-17. Yom can get as many as 12 ON-()FF operations in a single day.

Gives heavy-duty protection, too. Contacts are rated at 35 amps., 210 volts per pole under tungsten-important for lighting loids. The TSS-t7 will withstand 3.50 amps . of inrush current. This built-in protection is in both the 120-volt and 240-volt models.

Adjustabie trippers are attached to the easy-to-read dial with thumb screws, actuate ON-OFF levers. Tripers for as many as 12 ON-OFF eycles may be placed on dial.

## Contact Rating Per Pole:

Spst: 35 Amps., Tungsten Load, 240 Volts A-C

| $\begin{gathered} \text { Motht } \\ \text { volt } \end{gathered}$ | Poles | Throw | List |  |  | List |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | ${ }^{+60-C y c l e}$ | Price, Each | +60. Cycle Cat. No. | Price, |

|  | tllain Dial. |  | Omitting | evice. |  |  |

For 50 or 2 z -cycle operation add $\mathbf{\$ 1 . 0 0}$.
For onitting device, catalog number 699 X 83 , for installation in the field $\$ \mathbf{3 . 0 0}$.
Extra trippers-standard "ON" tripper, standard "OFF" tripper or special "OFF" tripper for omitting device actuation .. . $\$ 0.25$ each.
Switches can be supplied without case and cover, and with special mourting brackets, for convenient mounting in equipment.

G-E Regular-Duty Outdoor Time Switches

Type TSA-41
Ideal time swith for such jobs as street lighting, sign, store, floodlighting, irrigation and pump control, motor control, plus many other outdoor applications.
Has raintight case offering better protection against all types of weather. It has heavy-duty contact ratings of 35 amps., 240 volts per pole under tungsten load, in beth 120volt and 240 -volt models.

As many as 12 ON-OFF operations per day can be set up on the easy-to-read dial. As on all other General Electric time switch, trippers can be set one hour apart.

Contact Rating 35 Amps. Tungsten Load 240 Volts A-C

$\ddagger$ Plain Dial with Omitting Device.
Note: Order by catalog number and rating.
For 50 or 25 -cycle operation, add $\$ 1.00$
For oniting device, catalog number 699X83, for installation in the field $\mathbf{\$ 3 . 0 0}$
Extra trippers-standard "ON" tripper, standard "OFF" tripper or special "OFF" tripper for omitting device actuation . . . $\mathbf{5 0 . 2 5}$.

## G-E KT Time Meters

An ideal indicator for compiling operating time and shutdown time for plant utilization records, to provide proper servicing and preventive maintenance on machinery and electronic equipment.

A complete line of KT time meters for every time-measuring application-includes $21 / 2$-in. and $31 / 2-i n$. sizes in either round or square case for panel mounting, conduit-type case, portable stand and also military sealed model.
Has 6 -digit register-extra large counter numbers. Counter digits are $21 / 2$-times the size of those found in any other meter. White numbers on a black background to provide unexcelled readability. Last digit in contrasting colors to indicate tenths.

Die-cast zinc hezel and plastic case completely enclose the mechanism. providing a dust-resistant enclosure.

Panel models meet ASA panel mounting specifications.
Time meter bas wide temperature operating range.

## G-E KT Time Meters (Cont.)

## Panel-mounted Case

Time meters for slush mounting on a panel board or in an equipment case. Die-cast zinc bezel with aluminized dial face. Available in $21 / 2-\mathrm{in}$. and $31 / 2-\mathrm{in}$. sizes, round or square cases; all models with or without reset hnob.

## 60-Cycle

## Conduit-mounted Case

Panel model, $31 / 2$-inch square time meter, mounted in a die-cast zinc case with durable glass cover. Available with or without reset knol.

## Paragon Interval Timers

(Series 2900)
Self-Starting, Synchronous
A manually preset interval timer
 for industrial control of plastic moulding, batch mixing, rubber curing, conveyor operations and other applications. The timer mechanism is mounted to cover, with inner terminal block for easy installation.

All models are single pole, double throw.

Can be equipped with lull's eye, signal buzzer, stop-start switch, etc. at a slight additional charge.

Write us for prices.
Surface mount case $8 \times 5 \times 35$ 靣 inches.

Shipping weight 5 Ibs.
120 Volt, 60-Cycle Motor
Capacity: 10 Amps., 1000 Watts, Non-inductive Load

## Paragon Time Switches (Series 700 ) <br> Seven-Day Catendar Dial

Provides individual settings for each day in the weeh. An entire week's program can he set in advance, with Sunday and holiday cutont.

For automatic control of heating, ventilating and air-conditioning systems in public huildings, schouls, churches, factories, etc. Also for control of machine tool warmup glue pots, linotype machines, ete., on weehly schedule in accordance with daily operating or working schedules.
The 7 -day dial is large and casy to set. Operations can be set to occur as cluse as 3 hours apart.
Surface-mounting case - $125 / 16 \times 61 / 8 \times 315 / 16 \mathrm{in}$. Shipping weight 10 lbs.

## Tork Time Switches

Economical Torkmaster

## Astronomical Dial Type

By automatically changing the ON and OFF operations to follow the daily changes of sun time，these time switches save their cost many times each year．ON time occurs at sunsel－may be set to turn off between 10：30 P．M．and 1：30 A．M． －or at sumrise．Insures ON time occurring when needed with a max－ imum saving of kilowatt hours．
Completely mechanical－may be installed wherever convenient．
Extreme accuracy is ontained by providing different operating cams for each 110 miles or $2^{\circ}$ of North Latitude．Simple to set． Extra heavy duty motor．Fully rated for incandescent lamp loads． 120 Volt -60 Cycles．Specify city of use．

| No． | Switch | Amps．Pet Pole | Each |
| :---: | :---: | :---: | :---: |

## Program Dial Type

| Na． | Swith |
| :---: | :---: |
| 801 | SPS＇I |
| $801 . \mathrm{NK}$ | SPS＇T |

Provides multiple ON－OFF operations by means of trip tals． Lach tal provides ON operation for 15 minutes－adjoining tals kecpoperation ON continuously． Many and varied OV and OFF times can be programmed to suit．
Special models available with dial speeds from one minute to one week．

Contracts rated 10 Amperes． 120 Volt－60 Cycles．

| $\quad$ Dial | Each |
| :--- | ---: |
| 21－Ilour | $\$ 19.95$ |
| Skip－A－Day | 24.95 |

## Optional Features

Any Tork Time Switch can be equipped with optional features listed below，except as otherwise noted．
$2 \cdot 10$－volt operation，add prefix＂ 2 －＂and $\mathbf{\$ 2 . 0 0}$ ．
20－I lour Reserve lower Unit to provide accurate timing during power outage，（all 24 hour models except Torkmaster）． and suflix＂-1 ＂and $\$ 35.00$ ．

Standard Line Time Switches

This＂Iligh Quality＂line fea－ tures solderless lug terminals tak－ ing wire size down to No．6 without bending and knockouts at top of case as well as sides， bottom and back for easy instal－ lation．

Separate manual On－Off levers．
Ileavy Duty all brass gears．
Twent y－four－hour dial， 45 min－ ute minimum， 15 minute adjust－ ments．
120 Volt－ 60 Cycles．

## Skip－A－Day Dial Type

Designed for commercial light－ ing，heating，air conditioning and other applications where working hours are regular five or six days a week and it is desired to＂skip＂ operation on Saturdays，Sundays or Ifolidays．
Equipped with a seven－spoke calendar wheel in addition to the 2 －hhour dial，which rotates one revolution per week．Selection of the day or days of the week on which operation is to be mitted is made loy simply inserting by hand knurled knob screws into the tapped hole of the appro－ priate spoke．

Fully rated for incandescent lamp loads．
Twent y－four－hour dial，ti－minute minimum，15－minute adjustment．120 \olt－60 Cycles．

| No． | Switch | Amps．Per Pole | Esch |

Flush enclosure，add suffix＂－FL＂and \＄15．00．
Waterproof outhoor enclosure，add suffix＂$O$＂and $\mathbf{\$ 1 5 . 0 0}$ ．
lhaintight enclosure，（all models except 3 pole）add suflix
＂－ $\mathbf{I R}^{\prime}$＂and $\mathbf{\$ 1 0 . 0 0}$ ．

## Sangamo Time Switches

All Sangamo time switches are powered by a Sangano Synchronous, high-torque, self-starting, low-speed 450 rpm. motor, unaffected by extreme high temperatures. Fine quality, carefully machined and inspected parts, with all metal parts corrosion resistant. Manual operation of switch does not affect subsequent automatic operation.

## Types L and W

For heavy duty, and continuous service under widely varying installation requirements. The basic time switch units can be arlapted to a wide range of applications by addition of special features available.

Type L

Type w

Case: Pressed steel, gasket sealed against dust, gray enamel finish. Size: $101 / 4$ in. high, $51 / 4 \mathrm{in}$. wide, 4 in. deep. Four multiple knockouts, with ample wiring space.
Operation: Two pairs of time-setting levers. Minimum ON period 30 minutes; minimum OFF period 90 minutes.

| Poles | Throw | $\begin{aligned} & \text { A.C Amp. } \\ & \text { Perp. } \\ & \text { Circuit } \end{aligned}$ | $\overbrace{\text { No. }} \text { Type L Each }$ |  | No. Type w Each |  |

| Triple | Double | 6 | 1.32 | 45.00 | W32 | 69.00 |

Approximate shipping weight 7 lbs.

## Type L-Synchronous

Synchronous motor drive, accuracy depends entirely upon frequency and continuity of power supply.

## Type W-Synchronous-Carryover

Combines synchronous timing with reserve spring clock operation, providing accurate timing during power outage up to 10 hours duration, and eliminates resetting the dial.

## Types LY and WY-Two Circuit

The timing mechanism, general construction and other features are identical to that of Types 1 . and $W$ standard switches, but made to control independently two separate circuits. Minimum ON period 30 minutes; Minimum OFF period $21 / 2$ hours.

When furnished with omitting device or astronomic dial, both ON operations occur together, while OFF operations are separate.
Type LY
Polos
Single

| Throw | A.C Amp. Por Circ. | No. | Each | No. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Single | 35 | LY-11 | \$43.00 | WY-11 | \$67.00 |

## Type B Time Switch

Powered by low-speed, hystersis motor same as used in heavy duty switches. Single - pole, single throw construction. liquipped with silver contacts and a service-tested timing mechanism that runs quietly and efficiently, needs no maintenance.
Dead front safety construction, housed in allsteel case with hinged cover and sealable hasp; no glass to break. Overall dimensions: height, $71 / 4$-in., width $41 / 4$-in., depth $31 / 8$-in. Shipping weight $2 \mathrm{lbs} ., 3 \mathrm{oz}$.

## Type SR and SJ Time Switches

| No. | No. of Operations |
| :---: | :---: |

| 15 Amp. | 15 Amp. | 13.50 |
| 10A. or 1/4 IIP |  | 15.75 |

Synchronous, self-starting, low speed 450 rpm. motor. Precision made gears. Single pole, single throw contacts operated by lever action.
Type Sll provides conduit k.o. on bottom, pryout on back, mounts on wall or switchbox.
Type SJ supplied with 6 foot pluy-in cord and built-in receptacle for portable use. For operation in upright position.
Ileight $55 / 16-\mathrm{in}$. high, $31 / 6-\mathrm{in}$. wide, $31 / 1-$ inl. deep. Type Si weight 2 lbs. Type SJ $21 / 4$ lbs.

Type T-Interval Timers

Type $\mathbf{T}$
These timers are for controlling attic fans, unit heaters, air conditioners and appliances.

Provide an automatic OFF' operation following a manually-set $O N$ period.

For operation in upright position.
Contacts are single pole, single throw, normally open.

For 120 Volts, 60 Cycles, A-C.
Type T for switchbox or wall installation.

Type TJ has 6-ft. plug-incordand built-in receptacle for portable use.
Basc: Pressed steel, ivory finish; Plaskon cover. Size: 53/8 in. high, 3 in. wide, $31 / 16$ in. deep. Shipping weight 2 lbs.

| '「J-121I | 15 min. to 12 hrs . | 10 amp. or $1 / 4$ Hp. | 21/4 | 15.75 |

## Astronomic Dials

Automatically turns lights on at sunset and off at sunrise, compensating progressively day by day for the change in the scasons. OIf operation can also be set at any time between 9:30 1'.M. and 2:15 A.M. Reversed On and Off switch operations a vailable.

Dials furnished as original equipment on Types L, LD, LY, W, WY and T'C time switches. Space limitations prevent its use on Types B, SJ and Sll time switches.

Astronomic Dials for latitudes $20^{\circ}, 271 / 2^{\circ}, 30^{\circ}, 321 / 2^{\circ}, 35^{\circ}$, $371 / 2^{\circ}, 40^{\circ}, 421_{2}^{\circ}, 45^{\circ}, 50^{\circ}, 52^{\circ}$, add $\$ 14.00$.

# G-E Dry-Type General-Purpose Transformers 

## Type M-For Indoor and Outdoor Service Type D- For Indoor Service Only

Widely used in commercial and industrial applications for supplying appliance, lighting, and power loads from 240, 480 and 600 volt distribution circuits. No vaults required, transformers can be located right at the load to provide correct voltage for the application.

Type $M$ transformers are totally enclosed, making them suitable for installation outdoors or where protection from dust and moisture is needed. Type $D$ transformers are enclosed by louvered case and are suitable for indoor installation only.

Types M and D utilize Class B insulation and are designed for continuous operation in a 40 C . ambient with a temperature rise of 80 C .

The following table shows the NEMA standards and levels which Type M quiet transformers are designed to meet.

| KVA | MEMA <br> Standard. Oecibeis | Typo M, Oecibals |
| :--- | :---: | :---: |
| $3-7.5$ | 50 | 40 |
| $9-30$ | 55 | 45 |
| $37.5-112.5$ | 60 | 45 |
| 150 | 65 | 45 |

Type M dry-type transformers 600 volts or below, singlephase and three-phase, 10 kva or less, 25 to 60 cycles, are listed by Underwriters' Laboratories Re-examination Service in the classification of Power Transformers.

# For General Light and Power Service Indoor or Outdoor, Type $\mathrm{M}-3$ to 500 Kva. 600 Volts and Below Indoor Only, Type D-Single-Phase - 60 Cycles

*Wherever possible, $240 / 480-120 / 240$ volt transformers should be ordered in preference to these units, to obtain stock shipment.
$\dagger$ These transformers are provided with (4) $21 / 2 \%$ rated kva taps below normal. 25, 37.5, and 50-kva Type D transformers can be wall-mounted by the use of hangers.

# G-E Transformers for General Light and Power Service 

## Indoor or Outdoor, Type M-3 to 500 Kva- $\mathbf{6 0 0}$ Volts and Below Indoor Only, Type D-Three-Phase-60 Cycles

Used for general light and power applications to supply and insulate $208 \mathrm{Y} / 120$ volts from 480 or 600 -volt circuits.

These Type $M$ three-phase transformers consist of main and teaser connected and sleeved together to form a single unit. Designed for wall mounting.
Type D three-phase transformers, because of their size and weight, are recommended for platform or floor mounting. Ilowever, units rated 75 kva and below can be wall-mounted ly use of the hangers.
Three-phase voltage transformation is often made with three single-phase transformers connected as a three-phase bank. Evch single-phase unit is one-third the bank kva rating. For example, three 50 -kva single-phase, 480 to $240-$ volt transformers can be connected as a $1.50-\mathrm{kva}$, three-phase bank, 480 volts delta to 210 volts delta.

## G-E Autotransformers for General Light and Power Service Indoor or Outdoor, Type M-Three-Phase-60 Cycles-5 to 25 Kva

More economical and smaller than transformers designed to carry the same load. Within their voltage limitations, they will perform the same function as transformers, with the exception of irsulating two circuits.
These autotransformers can be used to obtain 120 volts from a $\mathbf{2 4 0}$-volt circuit, to derive a neutral on a 240 -volt, 2-wire circuit, or to balance a 120/240*volt, 3 -wire circuit.
May also be used in bunks on polyphase circuits.

Type M Autotransformer
For Indoor and Outdoor Application

Input 120 or 240 Volts, Output 120 or 240 or 240/120
Volts, 3-wire, 60 Cycles

*Kva output at 120 volts, 2 -wire, or allowable unbalance at $240 / 120$ volts, 3 -wire.

# G-E Quiet Transformers for Commercial Buildings <br> 600 Volts and Below-Single-Phase and Three-Phase- 60 Cycles 

Type M Single-phase transformer for commerclal building

Type M single-phase transformer for indoor and outdoor Application

Small Type M three-phase transformer for commerclal bullding Application

Large Type M three-phase transformer for commercial bullding Application

These transformers are designed for a noise level of 45 decibels or below, making them suitatle for installation in commercial buildings, such as hospitals, libraries, offices, hotels, and other locations where population is dense. Some of the single and three-phase units, 15 kva and below, are also listed as part of the standard line dry-type transformers for

general light and power service.
The basic noise level of a transformer does not necessarily determine the moise in a given installation. Noise is transmitted throngh the air and the structural parts of the building, so care must be exercised when mounting the transformer.

# G-E B-B Transformers for Boosting and Bucking Applications Single-phase and Three-phase - $\mathbf{5 0}$ and $\mathbf{6 0}$ Cycles 

B-B transformer for indoor or outdoor service

Provide an economical and convenient means for boosting or bucking voltage on single and three-phase circuits. They are compact, light in weight, and can be easily installed for indoor or outdoor service.

Employed primarily for boosting single-and three-phase circuits by connecting them as autotransformers. When used as autotransformers, the voltage change is small and the kva load they can handle is large in comparison to their physical size.

The transformers with series-multiple $12 / 24$-volt secondary windings are suitable for a wide variety of applications. In addition to boosting low circuit voltages to rated voltage, they can be used as transformers to supply 12 or 2.4 volts, 2 -wire or $24 / 12$ volts, 3 -wire; also as autotransformers to supply 132 or 144 volts from a 120 -volt supply, or 252 or 264 volts from a 240 -volt supply. Two or more units can be used in various combinations to obtain many other special voltages.

New standard control-transformer line. Open and enclosed units

Many of these (i-l: control transformers (partioularly those with $12 / 21$ and $16 / 32$ volt secomdaries) provide an economical and comvenient means of hoosting or bucking voltage on single-phase or three-phase circuits. 'They are compact, light in weight, and can be casily installed. These transformers have both the primary and secondary windings
arranged for series-multiple eonmections.
With 13-13 transformers commeted in series or in multiple. a $\overline{\mathrm{B}}, 10$ or 20 per cent bost is possible. Because of the small voltage change required in such applications, the output of these small transformers is exceedingly large in comparison with their physieal size.

## Ordering Information

Listed below are model numbers for the (i-E standard control-transformer line. Select from either of the first two tables the volt-ampere rating you need and match it with the voltage rating you reguire. This will give you the translirmer frame size. Model numbers within a given frame size and construction type have the same mounting and overall dimensions. Model numbers. together with their prices and other pertinent selection data, are listed in the last table on this page.

Note: When ordering autotransformers, care should be exercised that the installation will meet local electrical inspector's requirements.

The aututransformers listed below are designed primarily to hoost the voltage of a three-phase secondary network system where the neutral is available and solidly grounded. They give the desired voltage at the minimum cost. Because of their small physical size as compared with the kva output of the bank, a very compact installation neat in appearance can be oltained.

Autotransformers of the bank ratings listed consist of three units with three leads brought out of each unit. Each bank of transformers consists of three separate units to he individof transformers

Three-
$\mathbf{2 0 8 Y}$ to $\mathbf{2 4 0 Y}$ volt 3-phase Transformation

## G-E Control-Panel and Machine-Tool Transformers

## $230 / 460$ and $230 / 460 / 575$ volt Primaries-0.050-1.5 Kva 115 and 115/95 volt Secondaries-60,50/60 Cycles

Panel mounted machine-tool transformer (G1)

These transformers have been designed for use by panel manufacturers, as well as those machine tool manufacturers who fabricate their own panels.

## Features

Full compliance with all electrical requirements of NEMA and JIC standards.

Low regulation.
Compact design saves panel space.
Rugged construction-built specifically for machine-tool operation.

Ease of mounting helps reduce installation costs.
Low price helps you keep overall equipment costs down.

## Wide Range of Ratings

More than one hundred different machine-tool transformers

Eleven volt-ampere ratings: 50 to 5000 va
Two frequency and primary-voltage combinations:
60 cycles, 115 volts-for domestic use.
$50 / 60$ cycles, $115 / 95$ volts-for domestic or export use.
Fïve construction combinations: 50 to 150 va.
Seven construction combinations: 300 to 1500 va.

## "Customer-specified" Accessory Groups

Machine-tool and penel transformer accessories available in seven different groups. The basic standard transformer ratings are available with fuses, circuit breakers, or leads.

The selection of one of these accessory groups gives the panelboard or machine-tool purchaser exactly the transformer he requires.

## Group 1 (Model No. Suffix G1)

Note-Units in this group may be ordered without "Gl" as a suffix to the basic model number.

Basic transformer equipped with terminal boards. Primary and secondary terminal boards of Textolite* material. Top quality copper terminals suitable for spade, closed, or open terminal ends, as well as stripped leads. No wrapping necessary. Leads held firm in contact with terminals as screw is turned down. Boards mounted as integral part of core-and-coil assembly.

Entire unit is compact, yet terminal arrangement allows ample connection space.

Series-multiple ratings include brass terminal links on primary board for simple changes from series to parallel connections.

[^97]
# G-E Control-Panel and Machine-Tool Transformers <br> $230 / 460$ and $230 / 460 / 575$ volt Primaries $\mathbf{0 . 0 5 0 - 1 . 5}$ Kva 115 and 115/95 volt Secondaries-60, 50/60 Cycles <br> "Customer Specified" Accessory Groups (Con't) 

Group 2 (Model No. Suffix G2)

Basic transformer equipped with terminal boards; fused secondary.

Primary and secondary terminalboard arrangement of Textolite material as in Croup 1, with the addition of a fuse* on the secondary board.

Sturdy fuse clips provide firm, vibration-free contact.

## Group 5 (Model No. Suffix G5)

Basic transformer equipped with terminal boards and 2 -fuse board.

Prmary and secondary terminalboard arrangement of Textolite material as in Group 1.

In addition, a 2-fuse* Textolite board is mounted on top of the transformer for easy access to fuses.
*Fuses not included with these transformers

Group 3 (Model No. Suffix G3)

Basic transformer equipped with terminal boards; circuit breaker in secondary.

Primary and secondary terminalboard arrangement of Textolite material as in Group 1, with the addition of a high-shock circuit breaker mounted on the secondary board. Fully accessible for quick resetting.

Group 6 (Model No. Suffix G6)

Basic transformer equipped with termiral board and 4 -fuse board.

Primary and secondary terminalboard arrangement of Textolite material as in Group 1.

In addition, a 4 -fuse* board of Textolite material is mounted on top of the transformer for easy access to fuses.

Group 4 (Model No. Suffix G4)

Basic transformer equipped with secondary terminal board; primary leads out.

Secondary terminal boards as described in Group 1. Eight-inch, stranded primary leads are stripped $1 / 2-\mathrm{in}$. for easy connection.

Group 7 (Model No. Suffix G7)

Basic transformer (leads out). Basic core-and-coil transformer with 8 -in. stranded leads out. Leads are stripped $1 / 2$-in. for easy connection.

## G-E Voltage-Stabilizing Transformers

For Indoor Service

## Dry-Type-Single-Phase-60 Cycles

Standard line of G-E Voltage-Stabilizing Transformers, rated from 15 VA to $\mathbf{1 0 , 0 0 0}$ VA.

These transformers give stabilized output voltage within $\pm 1 \%$ with input voltage variations of $\pm 15 \%$ when operating at rated load and 1.0 power factor. They provide a dependable source of constant output voltage for applications such as radio transmitters, laboratory testing equipment, precision electrical processes, or wherever voltage must be held within close tolerances despite wide fluctuations in the supply voltage. These transformers are totally insulated and are for indoor service only.

## Limitations

When considering voltage-stabilizing transformers for applications involving three-phase supplies, varying frequency sources, half-wave rectifiers, high starting curreuts (motors, relays, etc.), or where there is a need for nearly sinusoidal voltage wave shape, consult Graybar.

| Volt-Amp Output Capacity | Input Range | Stabilized Output | Mode No. | N | Ship | Net <br> Prics <br> Each |

## Jefferson Signaling Transformers

Listed as Standard by Underwriters' Laboratories, Inc.
For operating alternating current bells, horns, gongs and signaling systems.
linclosed in a heavy metal case with primary and secondary wiring compartments having hoochouts on sides and end. Screw terminals for quick and easy installation. All have secondary voltages: $4-8-12-16-20$ and 24 .
Primary 115, Volts, $50 / 60$ Cycles.

## Jefferson Machine Tool Control Transformers

No. 636-101

Window frame type construction, with use of heavy clamping bolts, assure quiet operation under normal operation. Fiphosed core type construction affords efficient heat dissipation.

No. 10 screw terminals accomodate Nos. 12 or 14 wire. Terminals securely fastened to coil wit histand heavy serewdriver pressure. All terminals accessible from front.

## Jefferson Power Circuit Transformers <br> Dry Type - Double Wound <br> No. 240-201 <br>  <br> No. 244-411 <br> 

All transformers are provided with brachets for quick installation at points convenient to the load to he serviced. Also possesses suitable large knockouts for conduit on both sides, bottom and back.

Transformer core is securely clamped on all four sides hy a continuous window frame type of bracket. Exposed core type of construction affords efficient heat dissipation while permitting a sulstantial reduction in overall transformer dimensions.

Doubly impregnated with highest quality polymerizing varnish. Varnish is highly resistant to moisture, never softening under operating heat conditions nor ever tending to become brittle.

**Transformer designed with 230 Volt Primary only.

Operates 3 phase motors from single phase lines at $100 \%$ rated load and with balanced currents.
This power converter is an aututransformer type phase converter, designed to efficiently operate 3 phase motors on single phase 208-220 volt lines. Balanced carrents can be maintained for specified loads up to $12.3 \%$ of rated horsepower.
Manufactured in ratings of 1 to 30 horsepower, the Add-APhase is matched in horsepower for the individual motor. Can be used in conjunction with several motors if two-thirds of the connected load is started, maintained and stopped simultaneously and the name plate rating is not exceeded Autotransformer phase converter can be adjusted for smaller motors than its rating.
Available with built-in magnetic starter. Add MC to model number. Available in several types with modifications. Contact Graybar for full information.

## T-P Phasing Units

T-P Special

T-P Super

All advantages of a three phase motor can be available ly incorporating a T-P' Phasing Unit with a three-phase motor and standard fusible motor control. Utilizes all protective devices of a controller.
The Standard Unit is approximately $85 \%$ of rated nameplate horsepower. The Special and Super Units allow full $100 \%$ of nameplate.
Available in two models that can be adjusted to produce accurately balanced current in three phases by simple adjustment of transformer output and capacitance.
The SPLECIAL. I nit is suited for variable load equipment which does not have to be started under full load. External transformer taps and capacitor terminal board make it easy to balance phase currents for desired installation.

The SUPER Unit is similiar to the Special except is designed where heavy duty operation is required. Particularly adaptable for use with air conditioners, irrigation pumps and similar equipment.

## G-E Low-Voltage Drawout Switchgear <br> WithType AK-1 Air Circuit Breakers <br> Interrupting Ratings $\mathbf{1 5 , 0 0 0}$ to $\mathbf{1 5 0 , 0 0 0}$ Amperes <br> 600 Volts Maximum-3-phase, 3-wire, 60 Cycles

Installation view of a metal-enclosed, low-voltage, drawout aircircuit breaker switchboard.

## Application

These equipments are available for indoor or outdoor service, for 600 volts maximum, in interrupting ratings of 15,000 to $1,50,000$ amperes, for a-c 2-phase or 3 -phase or d-c 2- or 3 -wire circuits.

They incorporate the latest improved features to provide inexpensively for the safe and reliable control of $600-\mathrm{volt}$ (or less) a-c generators, power transformers, incoming and outgoing feeder lines, synchronous and induction motors and motor branch feeders which may be used for general power and lighting service in power phants, municipal and industrial installations, and such "commercial" structures as office buildings, banks, hotels, theaters, department stores, hospitals and educational and public buiddings where the interrupting rating refuirement for the breaker does not exceed 150,000 amperes.

The relialility in service of low-voltage air circuit breakers, combined with their case of operation and economy in initiat installation cost and maintenance, has resulted in their general acceptance and adoption as the standard practice for the control of a-c circuits and apparatus rated 600 volts or less.

As a consequence, the application of low-voltage air circuit breakers to the universally accepted and generally preferred metalenclosed type of switchgear equipment has made similar progress, resulting in the production of the standard metal-enclosed low-voltage a-c switchgear efuipments described in this section.

In the general design of this class of equipment, the anticipated requirements for the comprehensive field of their application has been carefully studied, and to provide properly for such application, all the advantages and outstanding constructive features have been fully incorporated in these standard equipments.

These equipments are of the highest quality manufactured, and may be relied upon to give sufficient and satisfactory service for many years, with minimum maintenance attention and expense.

## Features

Completely metal enclosed.
Easily removed breaker, drawout relays and meters
Co-ordinated switchgear components.

Complete primary and secondary control assembly; factory
built. . $\qquad$
Standard unit construction $\qquad$ Maximum protection to personnel; fire hazard mininized: long life. Easy to maintain; short outage time; lightweight installation. Balanced engineering and design. Interchangeability of breakers reduces outage time for maintenance.

Lower over-all installation cost and purchasing expense; a finished tested job.
Low initial cost; flexibility in application; easy future expansion; simplifies station planning; high salvage value. Saves system investment.

## G-E Service Protectors

## Type LB-1

Combines a high-capacity switch with current-limiting fuses for servico-entrance and feeder applications in buildings by using power from networks or high-capacity 120/ 208 or $275 / 480$-volt systems.

It is a properly co-ordinated combination of inter-ruphor-switch and currentlimiting silver-sand fuses, possessing many outstanding features, ineluding a quickmake, quick-break operating mechanism.

Economical and practical eircuit-protective and switehing device for circuits capable of $\mathbf{2 0 0 , 0 0 0}$ amperes HMS symmetrical short-circuit current.

Application
Recommended for use in general industrial and switchgear applications. suitable for severe service, wher numerous opening and closing operations are required for general power and lighting circuits, and motor-starting service.

## Features

Small size. compact arrangement.
short-time rating equal to interrupting rating.
luproved multislot contact design.
Individual unit-pole construction simplifies maintenance.
lole units are mounted on metal plate. providing maximum fire resistance between front and back of breaker.

Variety of enclosures.
Complete line of accessories.

## Mounting or Enclosure

## Dead-front Switchboard

Breaker is not enchosed, excepl for are quenchers. Deradfront steel plate not furnished, except as an acressory.

## General-purpose, for Indoor Mounting, NEMA Type 1

Breaker is monnted in a sted enclosure. For indoor use only. AK-1-15. $-2 . \bar{x}$, and -50 wall-momuted, with easily removable breaker elentent, inchading terminal eomectors.

AK-l-7. . and -100 floor-momente stationary, with removable eovers.

## Semi-dust-tight Enclosure, NEMA Type 1A

This endowure is similar to the general-purpose enchosure, with the addition of a gasket around the cover and escutelueon.

## Weatherproof, NEMA Type 3

Fasily removable broakre is mounted in a weatherproof steel enelosure, including terminal connedtors. For indoor or outdoor use.

## Dust-tight, Watertight, NEMA Types 4 and 5

Dasily removatule breaker is mounted in it heavy-duty, welded-stecl-plati endosure with gasketed door, including terminal comnectors.

## Explosion-proof, NEMA Type 7

Breaker is mounted in a heavy-duty cast-iron enclosure. including terminal conmectors. Suitable for Class 1, Group D hazardons locations.

*Refer all transactions requiring 7.0)-volt d-c breakers to Graybar.

## G-E Air Circuit Breakers, Type AK-1

## Accessories

## Prices Include

## Manually Operated

Trip-free breaker, mounted on a metal base, with:
*Dual-magnetic time-overcurrent trip unit per pole. (Characteristic - 1 B furnished untess otherwise specified; see "Tripping Characteristics.")

Arc-quenchers.
Push-button mechanical trip.
Position indieator.
Provision for up to three padlocks (for loching loreaker in the trip-free position).

Bolted-type terminal connectors (enclosed breaker).
Revolving pistol-grip operating handle.
Seleeted enclosure (except breakers for dead-frout switchboard mounting).

## Electrically Operated

Same as manually operated breaker (except omit handle), plus:

Electric closing mechanism with closing relay.
Shunt-trip device.
Four-contact auxiliary switch.
Push-button closing switch.
Waintenance closing handle.

* Normally one overcurrent trip unit will the omited if reverse-current device (see "Accessories") is furnished, since buth units mount in the same location. In special cases, the reverse-current device can be mounted on a breaker housing three overcurrent units, but the size of hreaker base or enclosing case will be increased.

## Tripping Characteristics

 Time-current characteristics produced by individual elements of
Type EC-1 trip device for Types AK $-1-15,25$, and -50 breakers. For characterlstics of AK-1-75 and AK-1-100 breakers, consult your

## Dual-Magnetic Trip

The overcurrent trip unit of the AK-1 breaker is of the dual-magnetic type. It consists essentially of an electromagnet which is excited by the current in a series eoil, and a pivoted laminated-iron armature which is normally restrained by a spring whose tension can be increased or derreased hy means of a calibration knol, which, when set, indicates the tripping current values. The calibration range is from 80 to 160 per cent of the breaker rating.

Movement of the armature is further restrained by a piston in a sealed. fluid-filled cylinder, the armature is linked to the piston which is accurately machined and provided with a calibrated oritice for controlling the flow of the fluid. The piston fits into an accurately machined cylinder which is completely sealed to keep out all dirt. The movement of the piston is restrained by the flow of the silicone fluid through the orifice. Continuons overcurrent exerts a magnetic pull on the armature until it and the piston have traveled their full stroke, thus tripping the breaker.

The linkage between the armature and piston is connected by a heavy adjustable restraining spring. At currents exceeding 15 times normal breaker rating, the magnetic force exerted upon the armature is sufficient to overcome this heavy restraining spring and instantaneously trip the breaker without waiting for the piston to move.

The entire overcurrent trip device is assembled into a molded phenolic case and all external adjustments are thoroughly insulated from energized parts.

## G-E Control Switchboard Components

## Type SB-1 Control and Transfer Switches

For Panel Mounting - $\mathbf{6 0 0}$ Volts, A-C or D-C
For Circuit-Breaker and Motor Control-For Instrument Transfer (Specify Panel Thickness)

*Switches are constructed to use removable moninterchangeable handles. No other listed hande can be used to operate the switeh.
fiswithes are available for mounting on panels $1 / 8$ to 2 in. thick. Model No. are listed only for the $1 / 8$ in. thick panel; for other thichnesses, Model No, are derived by substituting the appropriate suflix no. following the " X " in the Model No. The sullix mo. indicates the number of $1 / 16 \mathrm{in}$. panel thickness. For example: $3=3 / 16 \mathrm{in}$.
$\ddagger$ Fixed operating handles are included in swith Model No. and price. Removable handles must be ordered, and priced, separately.
§"OIf" position furnished on switch, but not engraved on escutcheon plate.

- These meters are equipped with palladium contacts.

Note: Swithes other than those listed are available. Information on application.

## G-E Control Switchboard Components Type SB-1 Control and Transfer Switches

## $\dagger$ Switches for Hazardous Locations <br> For Class I, Group D 250 Volts, D-C- 500 Volts, A-C For Panel Mounting (Specify Panel Thickness)

It is recommended that where SB -1 switches are to be operated in explosive atmospheres that they be enclosed in explosion-prof housings. The front, or switel-support section of the housing is mate se that suflicient size of conduit opening is provided to accommodate the maximum number of control wires, as determined by the switch comections.

Fig. 3. Explosion-proof box with cover on

The lank or cover section is made in three lengths, to aceommodate:
(a) A maximum of 4 stages.
(b) A maximum of 8 stages.
(c) A maximum of 12 stages.
(d) Switch may also be furnished with removable handle or loch handle.
Any standard spring-return or sustained-contact Type Sl3-1 switch, with fixed handle. having a maximum of 12 stages, may be assembled with a housing as illustrated in Fig. 3.

tThis control is designed to conform with the standards of the Underwriters' Laboratories, Ine., but has not been tested or listed by the Laboratories.

## Control and Transfer Switch Housings

## Watertight, Dust-tight or Oil-immersed

For 600 Volt Servlce (Fig. 4 )
For flat surface vertical mounting, the top support is common to three sizes of tanks. Small - for 1 to 1 stages; Medimm - for 5 to 8 stages, and Large - for 9 to 12 stages, or for 13 to 16 stages. Top support will he drilled and tapped to accommodate conduit or pipe of 1 -inch maximum iron pipe size.

The same housing can be used for immersing the switches in oil when they are exposed to gaseous or explosive atmospheres. For such applications a $1 \frac{3}{4}$ inch spacer is used to lower the switch contacts into the oil in the tank, and the number of stages per housing is one less, as indicated in table.

Fig. 4
Net Price per housing any size, when sold with SB-1 Switeh
$\$ 42.00$

| Number of Stages |  |  |  |
| :---: | :---: | :---: | :---: |

## G-E Control Switchboard Components

## Type PK-2 Test Blocks and Plugs

For use with proper test equipment to facilitate the testing of a-c instruments, meters and relays. lror mounting on switchboard panels.

Test Blocks are 4-pole and 6-pole jacks provided with Textolite covers having internal plug contacts which make a through connection when the cover is in place. The contacts in the blocks are of the line-pressure type and provide positive contact with minimum contact resistance. For all current circuits auxiliary contarts are used which automatically short-circuit the current transformer when the cover or plug is removed.

Test Plugs are provided with studs and links, and can be permanently connected to the testing equipment for any of the various lest methods in use.

Routine testing is accomplished by simply removing the cover and substituting the properly connected test plug; normal connections are restored by replacing the cover.

Contact rating, 250 volts, 10 amperes continuously.

## Explanation of Listing

With each test block and cover is included a set of unmounted auxiliary contacts, jumpers and screws in sufficient quantity and variety to provide the combinations to suit any testing application desired-typical arrangements are shown in Fig. 10 to 15 on next page. There are also included mounting screws, nuts for the studs, and (for blocks for mounting on $1 / 8-1 / 2$-inch panels) bushings for the studs. Testplug links may be ordered by referring to No. V-2 153066 .

Type PK-2 Test Blocks with Covers

*Auxiliary contacts, jumpers, screws, mounting screws, and bushings, as required, included in Cat. No. and price.

$\dagger$ Above dimensions are subject to change and should not be used for construction without approval

## G-E Control Switchboard Components

## Type PK-2 Test Blocks and Plugs

Flg. 9. 6-pole block with jumpers and connectors

The above illustration shows a composite assembly of a 6 -pole test block with auxiliary contacts and jumpers, as follows:

No. 1-Auxiliary contact (Cat. No. 617968.5G3) used as a bridge to maintain the circuit during the period that the cover or the plug is not in place. Without this connection, loss of revenue is possible because of interrupted operation if the replacement of the cover or plug is long delayed.

No. 2-Auxiliary contact (Cat. No. 6179635G2) to shortcircuit the current transformer when the cover or plug is not in place.

No. 3-Jumper (Cat. No. 6179685 Gi ) to be used in connection with auxiliary contact No. 2 or No. 4, to serve the same purpose as No. 2 in short circuiting a current transformer, or to inter-connect phases when the coverfastening stud is to be by-passed.
No. 4-Auxiliary contact (Cat. No. 6179685 Gl ) equal to one pole of contact No. 2, to be used in connection with jumper No. 3 as shown in Fig. 9. If all poles are to be interconnected, as indicated in Fig. 15, contact bars No. 2, with jumpers No. 3 would be used.

## Typical Arrangements of Type PK-2 Test Blocks with Auxiliary Contacts and Jumpers

Flg. 10
Without auxlllary contacts, for potentlal elreults

Flg. 12
With auxllary contacts No. 1 for through-current connectlons

Flg. 14
With auxillary contacts No. 2, for current circults

Flg. 11
With one auxlliary contact No. 2, for potentlal and current clrcult

Flg. 13
With auxillary contacts Nos. 2 and 4, and Jumper No. 3, for relay and trip connections

FIg. 15
With auxillary contacts No. 2 and Jumper No. 3, for current transformer short circulting

NOTE-All test blocks are supplied with a sufficient quantity of auxlliary contacts and jumpers for any connection shown above.

## Interchangeability of Type PK-2 with Type PK-1

Test blocks Type PK-2 cau be surface-mounted on insulating panels in the PK-1 drilling, or surface-mounted on steel panels in the PK-1 drilling plus two small holes for mounting screw bolts. PK-2 plugs, 4- and 6 -hole are interchangeable with PK-1 plugs.

However, the base of the PK-2 is 1 -inch longer than that of the PK-1, therefore it may not always be pussible to mount the PK-2 blocks in the same location as the PK-1.

## G-E Control Switchboard Components

## Types ET-5 and ET-6 Indicating Lamps

For application where good visible indication, long lamp life, and low wattage consumption are desirable. They can be used for signal-light indication or in combination with control switches to show circuit-breaker position.

## Description

Devices include G-F telephone lamp, Type T-2, slide base, rated 24 v., $0.03-0.038 \mathrm{amp}$. Special Code 24 X lamp, Cat. No. $59 \times 2$ 2 3 , used in E"T-1.5 device, is suitable for use in Type ET-6 also. Itowever, the standard Code 24E lanp inchuded with the Type ET-6 device, cannot be used in the Type ET-5 combination. Screw-type color caps, easily removed, are used and give positive indjeation. Color of cap desired should be specified when ordering.

The resistor element slides over the receptacle hody from the rear. The eomplete deviee has provision for soldered or clamped connections.

*Includes Lamp, Color Cap, and Resistor.
$\dagger$ A spacer will be supplied for momting on panels of less than $1 / 8$ in. thickness.
Each unit is compact and simple in construction. Requires only one hole for panel mounting.

Series resistor prevents the possibility of a short circuit from a broken lamp filament, thos eliminating the need for special fuses and assuring long lamp life.
Low-wattage consumption results in economy and cool operation.

Telephone Type ' $\mathrm{T}-2$, slide base 24 v . lamp is used and is available the world over.

Color caps are designed for max. visibility and are available in six hasic colors: red, green, yellow, ilhe, white, and clear.

Terminals are readily accessible and have facilities for soldered or clamped connections.

The new Type ET-6 lamp has a molded base and is designed for momnting in panels up to $1 / 4 \mathrm{in}$. thick. It is similar in appearance to Type E'P-.) lamp and is interchangeable with the EM'-s on thin-panel applications.

# G-E Terminal Boards and Covers 

## Fabricated Types EB-5 and EB-6

Fig. 1. 4-pole board Type strips, Cat. 6422482G4

FIg. 3. 4-pole terminal board Type EB-6 with hinged cover In place, Cat. 6422494 E104

## Application

To be applied wherever leads are brought to any part for permanent or temporary connection, especially if many wires areinvolved.

## Description

Type EB-5 are fabricated terminal bards. Each is equipped with the necessary washer-head binding serews for circuit wire connections, and also a white marking strip for cireuit identification (Nee Notes A and 13 below). To mount, drill for No. 10 screw. Board will accommodate wire sizes No. 18 to No. 10 indusive.
Type EB-6 are fabricated terminal boards of the same construction and dimensions as Type EB-T, exeept that clamp-t ype eonnectors are furnished for eircuit wire connections. Boards will accommodate wire sizes No. 18 to No. 10 inclusive.

Boards are available with from 2 to 18 points, except those with shortcircuit strips.

* Cach board is furnished with a total of 4 short-circuit strips to provide for a total of 3 eurrent transformer secondary cireuits connected Y with grounded neutral. The short-circuit strips can be easily removed or added as required.

## Molded-Type EB-4

Molded-composition terminal boards mahe possible neat, compact arrangenents on the back of the switehboard. Especially desirable where a large amount of small wiring is necessary on the back of the switchboard and will be found very convenient for attaching the wires, not to exceed No. 8 in size. Each stud is furnished with four pronged washers.

$\ddagger$ Boards for more than six circuits to be made up of combinations of 2 -, 4-, and 6-stud boards.
$\dagger$ When ordering, use Catalog Number.
Note A—Unless speeified on the order, each board will be shipped with an all-white Fibre marking strip.
Note 13-On request, we can furnish a bi-plastic marking strip (black on one side, white on the other, or all black) suitable for engraving or marking.

# G－E Auxiliary Relays 

## Types HGA and HMA

Fig．1．HGA11A， back－connected

Instantaneous in operation，positive in action and attractive in appearance．

## Application

These relays are available for many applications，toth on a－c and d－c cir－ cuits．They can be applied where sev－ eral circuits are to be closed or opened as a result of closing one set of contacts in a proteclive or actuating relay． Where more than two circuits are to be controlled，the coils of two or more relays uay be connected either in series or parallel on d－c，or parallel on a－c to obtain the desired results．

## Features

Contacts are silver－to－silver，double－pole，double－throw （two）normally open，two normally closed）．Textolite base of high insulating qualities，molded in one piece，impervious to moisture．Cover，also of back Textolite，is held in place by two spring clips，casily removed and replaced．

Back－connected relays，with covers or front－connected relays without covers can be provided．The front－connected are generally used in enclosures where the back of panel is inaccessible．

$$

＊For 25－or 50 －cycle relays use same price as listed for corresponding 60－cycle relay．See＂Ordering Directions．＂
$\ddagger$ To obtain glass in cover of HGA relay add suffix letter ＂$G$＂to Model No．and add $\$ 0.85$ to selling price．Example： Model 121IGA11A58G，selling price $\$ 17.45$ ．（This feature not available in IIMA relays．）
$\dagger$ Within plus or minus $10 \%$ ．

## Ordering Directions

Order d－c and 60－cycle a－c relays by Model No．For 25－ or 50－cycle relays order＂Similar to Model No． （give 60 －cycle No．，except state for 25 －（or 30 －）cycles）

If relays are to be mounted on a steel panel，specify＂with short studs＂and order as a separate item，insulating bushings for each live stud．＇These bushings are furnished withont charge when ordered with the relay．）

Unless otherwise specified，back－connerted relays with short insulated studs suitable for steel panels up to $1 / 4$－in．thick will be furnished．

## Operation and Characteristics

Operation－These relays have an operating coil and an opening spring．When the coil is energized，the hinged arma－ ture is attracted，closing the normally open contacts and opening the normally closed contacts．

Characteristics－Both the a－c and d－c relays are nor－ mally adjusted to pick up at $80 \%$ of rating（hot）．This is approximately $60 \%$ of the rating for d－c relays（cold），be－ cause the coil resistance changes with heating．The a－c relays will drop out at approximately 40 to $50 \%$ of normal voltage； the d－c at 2 to $10 \%$ ．
These relays will withstand a $10 \%$ increase in voltage with－ out injury to the operating coils．

Ratings of contacts－The current－closing rating of the contacts is 30 amperes．The current－carrying rating is 12 amperes contimuously or 30 amperes for one minute．The interrupting ratings are listed in the following table．

| Noninductive Circuits |  |  |  |  |  |

## Call Graybar FIRST for．．．

## General Electric Load-Center Unit Substations

The New and Improved Way of Distributing Low-voltage Power in Industrial Plants, Commercial Buildings, and for Power-Station Auxiliaries.

A G-E load-center unit substation, with Pyranol transformer and metal-enclosed drawout air clrcuit breakers, installed indoors at load center

Load center distribution has many hig advantages. Elimination of long secondary cable runs, which cause voltage drop, results is better voltage conditions. Proper voltage at point of use means improved motor perfornance, bright and steady lights.

G-E metal-enclosed load-center unit sulstations are completely factory-engineered and factory-assembled and are shipped ready to install. They can be installed either indoors or outdoors, put underground in vaults, on the roof, on balconies, or in production areas, in a space that is otherwise unused.

Save Time - Only one purchase transaction is necessary. They can be selected and ordered quickly and easily from a line of standard units and standard arrangements that fill all requirenents of a broad range of applications. The units are shipped in two or three complete sections ready to be bolted together and connected to power cables. They are standardized, completely assembled and wired at the factory - no special knowledge being required by purchaser's men to install or disconnect for removal to new locations.

Greater Safety - All live parts are metal-enclosed. Circuit breakers of adequate interrupting capacity insure adequate circuit protection. Pyranol a noninllammable cooling and insulating liquid is normally used in the transformer, providing safety for indoor installations.

Flexibility - A wide variety of high- and low-voltage switching equipment is available, including oil, Pyranol or dry-type transformers, and circuit breakers for either nammal or electrical operation, making these substations adaptahle for practically every need.

Appearance - Compact and modern in appearance. No skeleton steel framework or exposed equipment. They require much less space than the old type.

Industrial Lighting - When the industrial load is not heavy, the same load-center unit substation which supplies motor power can be used. Dry-type lighting transformers (crapacities $5-25 \mathrm{kva}$ ), which step 480 volts down to 120 volts can be mounted or hung any place in the plant to supply the lighting load.

Ratings - These unit substations serve loads 600 volts and below ( $208 \mathrm{Y} / 120,480$ volts, etc.) from incoming lines up to 15 kv .

A complete unit substation may consist of metal-clad in-coming-line section with magne-blast power circuit breakers, a Pyranol (or dry-type, or oil-filled) transformer section, and a low-voltage feeder section with drawout air circuit breakers.

Here is the modern equipment to help insure an adequate power supply at all times - more important now than ever in the light of present conditions.

We will be glad to help you select a low-cost load-center unit substation to meet all your requirements. Other apparatus can be combined in one of these units if, for instance, you need the addition of a power rectifier. For further information ask GRAYBAR for Bulletin GEA-3592

## G-E Distribution Center Unit Substations Sectional Type

Provides a completely metal-enclused, co-ordinated substation for indoor or cutdoor installations. Ised to step primary voltages in the range 601 through 15.000 volts down to more clfectively utilized ratings of $600,480,480 \mathrm{Y} /$ 277,210 , or $208 \mathrm{Y} / 120$ volts.

Usually eliminates the need for expensive, space-wasting vaults or transformer rooms.

Provides the additional power needed for extra motors, air conditioning, and increased lighting loads without disturbing exisfing high-voltage lines and existing sulstations.

Can be effectively used in small plants. warehouses, railroad terminals. airports. hospitals, office buildings, schools, and light-duty areas in utility systems. Helps assure safety for men and equipment. reduces maintenance costs, and lessens possibility of production shutdowns.

Easily installed. Components shipped separately as packaged units. It is simply necessary to spot equipment in desired location, bolt together, and make necessary electric connections. The low-voltage section control center or switchboard can be located remotely from the rest of unit and connected by G-E Type LVD leeder busway.

The equipment steps down incoming line voltage to a voltage suitable for serving utilization loads and for supplying power to various loads through individual feeder circuit protective devices.

Incoming power can enter transformer section either directly through a cable terminal compartment or through an interrupter device. Interrupter device enables the customer to disconnect substations from incoming line. Incoming line may consist of any one of the following: Terminal compartment; Cutoul, fused or unfused; Unfused air interrupter switch; Fused air interrupter switch; Liquid-filled switch; Unfused air selector switch or F'used air selector switeh.
The transformer section steps primary voltages of 2400 through 13.300 volts down to utilization voltages of 240 , $480,600,208 \mathrm{Y} / 120$, or $480 \mathrm{Y} / 277$ volts and feeds the lowvoltage section. The transformer section contains the transformer with primary and secondary leads as well as provisions for changing taps on the primary side. There are four approximately $21 / 2$ percent rated kva taps, two above and two below rated primary voltage. There are three types of transformers: Pyranol filled for installation indoors or outdoors; Oil-filled for use outdoors or in approved vaults; Open-dry for indoor use in clean, dry locations.
In some applications, a transition or metering section may be used.

The Low-Voltage Section may consist of a free-standing switchboard of either the fusible or circuit breaker type; free-standing distribution pauelboard, either fusible or circuit breaker type; or a general purpose type motor control center.

Note: For further information contact Graybar.

G-E Distribution Centers

## Integral Units

One compact unit of three co-ordinated components: an incoming-line section, a transforming section, and a lowvoltage outgoing section consisting of a stationary moldedrase feeder-breaker pane!. Ideal for supplying up to 500 hva of power to light-load areas. either indoors or outdoors. This type of distribution center offers the additional adadvantage of having the low-voltage section integral with the transformer housing.

Incoming-Line section: May consist of simple terminal compartments or high-voltage switch. Three types of highvoltage switches are available: air switch (fused or unfused), oil cutouts (fused or unfused), and liquid-filled switch (unfused).

Transforming Section: May consist of oil-filled, Pyranol filled, or open or sealed dry-type transformer. The transformer primary is rated $2400-15,000$ volts and tho secondary is rated 600 volts or less. There are four $2 \frac{1}{2}$ percent full-capacity externally operated taps, two above and two below normal.

Low-Voltage Section: Consists of a panel containing stationary molded-case air circuit breakers, manually operated, with thermal-magnetic overcurrent protection and clamp-type terminals.

## Standard Transformer Ratings Available

|  |  Voltages | Outioing Feader Feeder Voltages |
| :---: | :---: | :---: |
|  | 2100 |  |
| 75 | 4160 | 120/208Y |
| 1121/2 | 1800 | 210 Delta |
| 150 | 6900 | 180 Delta |
| 225 | 7200 | 480Y/277 |
| 300 | 12000 | 600 Delta |
| 500 | 13200 |  |
| $\ldots$ | 13800 |  |

## G-E Load Center Units

A load-center mit substation is a completely co-ordinated factory-built equipment for stepping down primary voltage and protecting and switching low-voltage ( 600 volts and less) power-distribution eirwuits. The equipment is contaned within a grounded metal enclosure. The seetions (ineomingline, transformer, and outgoing) are designed to be easily and quickly bolted together at the point of installation. Init ofiers advantage of drawont low-voltage circuit breakers. A vailable in indoor or outdoor units, 300 to 2000 kva .

The sections are:
Incoming-Line Section: May consist of simple terminal compartments or high-voltage switch. Three types of highvoltage switches are available: air switch (fused or unfused), oil culouts (fused or unfused), and liquid-filled switch (nufused).

Transforming Seetion: May consist of oil-filled, Pyranol filled, or open or scaled dry-type transformer. 'Transformer primary is rated $2100-15,000$ volts and the secondary is rated 600 volts or less. There are four $21 / 2$ percent fullcapacity externally operated taps, two above and two helow normal.

Low-Voltage Seetion (outigoing): For the comnection of ane or more outgoing low-voltage feeders. Outgring feeders are protected and switched by drawout 'lype Ah magnetie air circuit breakers.

## I-T-E Unit Substations Indoor Construction

Available in liquid and dry types, indoor and outdoor. Conventional secondary unit sulstation rating from 75 (1) 2000 kva, primary voltage- 14,100 and helow; secondary voltage600 volts and below. Primary unit substations having ligher kva and voltage ratings are also available.
Engineered, built and tested as one complete, coordinated unit. Obtainable in any combination of switchgear and transformer types to mert individual requirements.

Provides effiedent means of stepping-down primary voltages to utilization values.

Metal enclosed for induor or outdoor installations. Voltage ratings of $5,7.5$ and 15 kv , through 2000 amps. continuous, with interrupling ratings from 50,000 to $500,000 \mathrm{k}$ va.

Provides safe, centralized electrical protection and control in industrial plants for incoming power lines, feeder and transformer circuits, heavy synchronous and induction motor drives.

Circuit breakers are properly coordinated with main buses, relays, meters, instruments, instrument transformers and other devices to form a complete unit designed to nucet exact requirements.

Low voltage, metal-enclosed drawout switchgear offers complete protection, indor ar autdoor, for voltages through 600 volts. Completely enclosed, self supporting structures containing one or more removable air circuit breakers and their associated equipment provide maximum service continuity and personnel safety.

Ideally suited as a centralized distribution system for low voltage power and lighting networks and may lee installed in or above the production area for maximmm space economy.

## Square D Switchgears

## High Voltage Metal Clad Switchgear

To control the high voltage circuits popular in so many modern distribution systems Square D offers Metal Clad switchgear using high voltage switches to provide a safe, convenient and economical means for handling high voltage power.

Voltages up to 15,000 volts.
Incoming aud outgoing cable terminations-potheads if required.

Lasad break air interrupter switches-fused or unfused.
High voltage main bussing.
Components completely enclosed in $1 / 8$-in. shel housing.
Standard depth 54 -in., height $91 / \frac{1}{2}$-int.
Pacilities for high voltage metering.

## Low Voltage Metal Enclosed Drawout Switchgear

For increased system reliabifity and easier equipment maintenance on systems up to foo volts, square D offers Low Voltage Metal Enclased Swithgear. Drawout construction enables large air circuit breakers to project from their enclosures for quich, safe inspertion, adjusturent or replacement.

Air circuit breakers up to 1000 A mounted on pantograph type drawout mechanisms in iselated compartments.

18 -in. wide section accommerlates 4 LA-25 ( 600 A .) or 1A-15 (225 A.) air circuit breakers.

26-in. wide section accontmodates 3 LA-50 ( 1600 A .) air circuit breakers.
$34-\mathrm{in}$. wide sections for 3000 A . breakers, $40-\mathrm{in}$. for 4000 A . breakers.

Instruments and meters on hinged door of isolated compartment.
Silver phated bussing braced for at least $50,000 \mathrm{~A}$.
Standard depth 54 -in,, height $91 \frac{1}{2}$-in.
Weatherproof enclosures for outdoor applications.

## Square D Switchgears Low Voltage Drawout Switchgear

Circuit breakers projected from individual compartments on pantograph drawout mechanisms.
Back of projected beaker is beyond front of enclosure for easy inspection of drawout contacts and compartment interior.

## Outdoor Low Voltage Drawout Switchgear

Standard Indoor switchgear Inside weatherproof housing. Doors-front and rear.
"Walk-in"" alsle space Inside enciosure In front of circuit breakers.
LIghts, space heaters and power outlets for tools.

## Low Voltage Drawout Switchgear

Two LA-50, 1600 A. and six LA-25 600 A. manually operated alr circuit breakers.
Two future breaker compartments for LA-25 circuit breakers.
Meters in isolated compartment; Instrument transformers.

## Square D Unit Substations

Square D offers a complete line of indoor substations having primary voltages up to 15,000 volts and secondary voltages up to 600 volts.

Designed in Power-style construction to match and include

Square D switchgear, switchboards and motor control centers these substations incorporate all applicable standards of NEMA, ASA and AIEE plus many Square D extras for better service.

## Package Unit Substation

Package Unit Substation
with combination type low voltage section.
High voltage load break fused alr Interrupter switch.
$\mathbf{3 0 0}$ KVA transformer In rear.
Main large alr circult breaker, 1000 A.; molded case feeder breakers.
Instruments and Instrument transformers.

Very compact yet versatile in design to accommodate a large variety of indoor application requirements, this substation is popular in schools, office buildings, shopping centers, factories and department stores.

Sizes from 75-500 3- KVA.
Primary voltages up to 5000 volts, secondary to 600 volts. $31 \phi$ dry type transformers in $3 \phi$ combination.

> Package Unit Substation with full panel low voltage section High voltage load break fused air Interrupter switch. 300 KVA transformer In rear. Molded case circuit breakers In full 60-In. panel.

Transformers individually mounted on base for minimum noise, easier inspection and removal, and longer life due to more eflicient cooling.

High voltage termination with air interrupter switch or oil cutouts-(fused or unfused).

Low voltage section with molded case circuit breakers, QMB fusible switches, large air circuit breaker and/or instrumentation.

88 -in. wide, 44 -in. deep, $911 / 2$-in. high.

## Sectional Type Unit Substations

Sectlonal Type Unit Substation
High voltage fused alr interrupter switch section. 500 KVA dry open ventllated transformer section.

Low voltage drawout switchgear sectlon.

Designed and manufactured to fill any load center substation requirements, this equipment combines high voltage and transformer sections with low voltage seetions of switchgear, switchboards or motor control centers tailored to the systerns needs.
Primary voltages up to 15000 volts, secondary to 600 volts.

Transformers-liquid filled or dry, up to 2000 KVA $3 \phi$.
High voltage termination with air interrupter switch or oil cutouts (fused or unfused).

Low voltage air circuit breakers, molded case circuit breakers, switches, metering and motor control equipment.

Standard depth 54 -in., height $911 / 2$-in.

# G-E Medium-Voltage Switchgear 

## Standard Metal-Clad Equipments

With Magne-Blast Power Circuit Breakers

75,000 Kva Interrupting Capacity-3-Phase, 3-Wire
4160 Volts-1200 Amperes

#### Abstract

Application

A brief description of metal-clad switchgear in this section will show the advantapes obtainable in completely factoryassembled, metal-enclosed, safet y-lype switching equipments for general power service in power plant main and auxiliary circuits, steel mills and ot her types of industrial applications, distribution substations, oflice buildings, hotels, theaters, department stores, hospitals, educational and public build- inss, and other similar locations. It will provide proper and reliable control for generators, Iransformers, inconning power and tie lines, feeder circuits, bus-tie and bus-sectionalizing circuits, synchronous and induction motor and condenser circuits, power capacitors, electric furnaces and other kinds of apparatus.

Standard Class M20 Metal-clad switchgear for the control of feeder and motor circuits

The equipment is available in standardized unit construction for installation where the interrupting rating requirements for the magne-blast power circuit breakers do not exceed $75,000 \mathrm{kva}$, and the service voltage does not exceed 4160 volts.

The faetory-built standard units have been installed (at a minimum over-all installation cost), in many important applications where reliability in the performance of the switchgear equipment is of first importance.

## Features

## Advantages

Completely metal-enclosed; segregated metal compartments for

Lasily removed vertical-lift lireakers; drawout potential trans-
formers and fuses; drawout relays and meters.
No hazard to personnel-fire hazard minimized; long life.
formers and fuses; drawout relays
Corordinated switchigear components
Vasy to maintain-short outage time.
Sequence interloching.
Complete primary and secondary control assembly,
factory-built. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .
Safety to operators; continuity of service.

Shipped Assembled.
Lower over-all installation cost and purchasing expense; a finished,
Standard unit construction . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Lasy initial cost flexibility in ap tested job.

Low initial cost; flexibility in application; easy future expansion; simplifies station planning; high salvage value saves system investment.

# G-E Medium Voltage Switchgear 

## Standard Metal-Clad Equipments

With Magne-blast Power Circuit Breakers

## Type AM (Oilless) Magne-Blast Power Circuit Breakers Stretch the Arc to Destruction

The magne-blast breaker used in these switchgear equipments interrupts by magnetically forcing the are into a series of gradually interleaving, closely spaced, insulating barriers. These barriers elongate the arc and absorb) its heat so that the electrical resistance in the path of the arc is greatly increased, reducing both the current and the phase angle of the circuit. At an early current zero the arc path is solong that the voltage is reduced and the gases produced by the arc so cooled that the arc cannot re-establish itself; and interruption occurs.

There are two sets of contacts on the magne-blast breahers - the silver-inlaid primary contacts, and the arcing contacts of an arc-resistant alloy.

On opening, the primary-contacts part first, shonting the current through the magnetic blowout coil and the arcing contacts. Thus the magnetic force will be sufficiently well established to drive the are when it is drawn on the arcing contacts.

The solenoid mechanisms used on the magne-blast breakers are the same as those used for many years on oil breakers. Conventional control and familiar equipment are therefore used in the mechanism of magne-blast breakers.

Schematic diagram showing the elongation of the arc in the magne-blast circuit

At section A-A the are is formed in a line letween the parling contacts. As the arc is forced into the chute, the fins constrict it and force it into a serpentine path as shown in Section 13-13, and finally, C-C.

Dlagram of section through magne-blast circult breaker, showing contacts (in open position), blow-out coils, and one side of arc chute with fins other side of arc chute removed to show details of construction

## Breakers are Safely Withdrawn or Replaced

The circuit breaker is easily lowered from the operating position to either a disconnected position, or for removal from the stationary structure for transporiation to another location for inspection and maintenance. A spare breaker can be inserted to continue operation and reduce outage time to a minimura.

# G-E Indoor Power Circuit Breakers 

Type FK-33
2500 Volts- $\mathbf{4 0 0}$ Amperes-15,000 Kva-12-Cycles Interrupting Time

FIg. 1. Triple-pole, manualiy operated breaker for panel mounting. (Terminal connectors and trip colls not shown)

## Prices Include

## For Manually-Operated Breakers

Single-throw Breaker with Type HA-2 trip-free manual mechanism, including necessary instantaneous or time trips. (Current transformers and relays not included.)

Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole breakers, 4 gallons; 4-pole breakers, 5 gallons).

Double-throw Breaker, complete with integral mechanical interlock and two operating levers, with mechanical cross trip.

## Application

These breakers are suitable for lightduty applications on circuits within their voltage and continuous-current ratings. The rated interrupting current of the breaker must be as great or greater than the maximum shortcircuit current which it may be called upon to interrupt.

## Prices Include

For Electrically Operated Breakers, A-C or D-C
Single-throw Breaker, with Type MS-5B solenoid mechanism mounted back-to-back on a steel plate, directcoupled.

Closing relay.
1-Potential trip coil (Current trip coils, relays, and current transformers not included).

4-stage auxiliary switch.
Terminal Board.
Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole breakers, 4 gallons; 4-pole breakers, 5 gallons).

Copper-oxide rectifier (if A-C operated).
Maintenance closing device, if required.
Double-throw Breaker, complete with two solenoid mechanisms, electrically interlocked.

## G-E Indoor Power Circuit Breakers

Following dimensions are subject to change and should not be used for construction without approval.

Fis. 3. Type FK-33 triple-pole, single-throw electrically operated breaker

## G-E Indoor Power Circuit Breakers Type FK-142 and FK-143

## Application

These breakers are suited for medium-duty applications on circuits wit!in their voltage and continuous-current ratings. The rated interrupting current of the breaker must be as great as, or greater than, the maximum short-circuit current which it may be called upon to interrupt.

## Prices Include

## Manually Operated

Single-throw Breaker: with Type IIC--5 trip-free manual mechanism, including necessary instantaneous or time trips. (Current transformers and relays not included).

Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole FKK-112 breakers, 6 gallons: 4-pole FK-1 12 broakers, 8 gallons; 2- and 3 -pole FK-14:3 breakers, ${ }^{9}$ gallons).

Double-throw Breaker: Consists of two single-throw breakers, with mechanical interlock and two operating levers with mechanical cross trip.

## Electrically Operated A-C and D-C

Single-throw Breaker: with Type MS-.) 3 trip-free solenoid mechanism, mounted back-to-back on a steel plate, direct-coupled, supported by steel framework.

Closing relay.
I-Potential trip coil. (Current-trip coils, relays and current transformers not included.)

4-stage Auxiliary switch.
Terminal board.
Standard bolted-type terminal connectors (no deduction for omission).

Veressary oil (2- and 3-pote FK-1-12 breakers. 6 pallons: 1-pole FK-142 breakers, 8 gallons; 2- and 3-pole FK-143, 9 gallons).

Copper-oxide rectifier (if a-c operated).
Maintenance elosing device, if required.
Double-throw Breaker: Consists of two siughe-throw breakers and two solenoid meehanisms eleetrically interlocked.

*For a double-throw lreaker, the price is exactly twice that of the corresponding single-throw breaker.
†Interrupting rating of FK-1 12 breakers, based on CO-2 min-CO duty cycle, and of FK-143, based on CO-15 sec.-CO duty cycle. $\ddagger 25$-cycle ratings, as compared with 60 -cycle ratings, are $600-600$, and $1200-1100$.

FK-14.4 nonreclosing oil circuit breaker.

Frame-mounted, electrically operated, 600 - and 1200 -amp, Type
FK-14.4 automatic reclosing oil CIrcult breaker

# G-E Type HR Automatic Circuit Reclosers <br> 50-Ampere Frame- 2400-14,400 Volts (Line-to-Line) <br> 60 Cycles-Single- and Three-Phase 

Flg. 1, Type HR single-phase recloser

## Application

These reclosers provide overcurrent protection for rural and suburban distribution systems. They are designed for dependable year-round co-ordination between reclosers in series; and between reclosers and sectionalizing fuses, branch fuses, and external or internal transformer fuse fuses.

The rating of the recloser to be used is based primarily on normal load and maximum short-circuit current at the point of application.

The continuous current rating of the recloser should at least equal the mormal load current. It is preferable to select a rating approximately $1 / 3$ higher than the load current to allow for future load growth. Reclosers have no overload rating and should not be applied beyond their continuous current rating.
The interrupting rating is given in terms of symetrical short-circnit current. This simplifies the application ly permitting the use of data from a conventional short-circuit study. All Type Illt reclosers can interrupt off-set curront up to 1.4 times the symmetrical value when the symmetrical value does not exceed the interrupting rating of the recloser. This factor of 1,1 is based on a system reactance to resistance ratio of 8 (maximum), which is seldom exceeded on distribution circuits.

Apply NEMA or AILE derating factors for elevations above 3300 feet.

Rechosers are available with different time-delay operating characteristics, providing a choice for "hold-closed" applications or for co-ordinating with reclosers of other manufacture. (See Fig. 2 and 3.)

## Lightning Protection of Reclosers

Protection is raquired to limit to safe values voltage surges caused by lightning. Requirements are similar to those for distribution transformers on the same system.

Some protection can be had by connecting only one arrester to the side of the recloser having the longest length of line. As long as the recloser is closed, the internal Thyrite* unit will elfectively by-pass a lightning surge from the other side. llowever, when the recloser is open, a lightning surge on the unprotected side could result in a bushing flashover and damage to the recloser. If this occurs on an moprotected source side, service is disrupted at least temporarily to additional customers.

It is preferable to provide complete protection ly installing arresters on both sides of a rechoser. One additional arrester is an especially good investment whenever the recloser serves a sizable number of consumers.

The arresters should be a type which permits no sizeable 60 -cycle follow-up current after a lightning surge. This will avoid unnecessary operations of the reclosers and needless blowing of fuses.

For Type Illk 50-impere frame reckosers, "Ili-stroke" rural lightning arresters are recommended. These may be conveniently mounted on either side of the recloser monnting bracket. These apply for altitudes up to 6000 feet and for systems where the line-to-ground symmetrical short-circuit current will not exceed 2000 rms amperes.
*legistered Trade-mark of General Electric Co.

# Type HR Reclosers 14,400 Volts (Maximum Design Voltage 15,000 Volts) (Impulse-withstand Test-95 Kv)

## G-E Components for Outdoor Substations

General Electric has designed and built thousands of outdoor sulstations many of which are the largest of their kind.
A variety of standardized completely co-ordinated, factorybuilt step-up and step-down stations in standard voltage and $k$ va ratings are available.

These sulstations are carefully and completely engineered to meet the exacting requirements of outdoor service and to conform to NEMA Standards. Complete lines of Gencral Electric apparatus such as transformers, power circuit breakers, power fuses, switches, lightuing arresters. insulaturs, and comectors are available and they are used as components of these substation equipments. Full responsilility for design and manufacture of the entire station thus rests with Gencral Electric and the purchaser is relieved of all details of design and co-ordination.
Inquiries for stations to meet any need are solicited and such inguiries should the accompanied by the lollowing minimum of information to enable the engincers to prepare complete phans and specitications.

1. A onc-line diagram of the proposed station umon which the following information should be recorded.
(a) Circuit layout
(b) Transformer ratings (kva)
(c) Line and feeder ratings (amps)
(d) Circuit voltages and frequency
(e) Circuit grounding
(f) Required metering and instrumentation
(is) Required protective relaving
(h) Maximmo availahle short-cireuit at the station terminal of each incoming line and tie feeder.
2. Plan of available ground space showing:
(a) Dimensions
(b) Points and directions of entry of all lines and feeders.
(c) Any minimum clearance requirements of lines and feefers beyond houndaries of station plot.
3. Size, type, and material of eonductors of all lines and feeders.
4. Automatic features refuired sueh as automatie reclosing or emergency line switching.
Contact firaybar for full information.

## G-E Components for Outdoor Substations (Cont.)

Type FGK-230-10000 power circuit breaker rated 230 hs . 1600 amperes. Available in ratings from 11.5 to. 35.5 kv .

Framework momet Type PK-3.:5 oil-1, last power circuit breaker rated 34.5 kv , 600 amperes. Available in ratings from 14.1 to 69 kv .

Floor-mounted Type FK-139 oil-blast power circuit lreaker rated $138 \mathrm{kv}, 1200$ amperes. Available in ratings from 69 to 161 kv .

Franework mounted Type FK-14.4-100 oil-hlast power eireuit loreaker rated 11.4 kv . T'ype Fh-227 breaker also available for circuits rated 7.2 kv .

## G-E Components for Outdoor Substations (Cont.)

Single-pole element of Type [RF group-operated switch rated 161 kv . Other ratings from 7.2 to $3 t^{\circ} \mathrm{kv}$ are available.

Singlo-pole element of Type IRB group-operated switch rated 69 kv . Other ratings from 7.2 to 115 kv are available.

Type EF-I non-dropout expulsion luse discomecting switch.

Type EF-2 dropout expulsion fuse disconnerting switch.

Type FA hook-operated disconnecting switch.

Type EKO-3C current-limiting fuse disconnecting switch.

Type EKO-lI) current-limiting fuse support (non-disconnecting).

## G-E Components for Outdoor Substations (Cont.)

Type MIR-8 motor operating mechanism may be applied to any group-operated switch.

Variable-size bus support fitting.

Reamed-to-size bus support fitting.

Class E flexible expansion connectur.

Stud termiual connector.

Tee connector.

Single-loolt block terminal commector

Ground connector.

## G-E Tilting Insulator Air Switch

## Outdoor, Group Operated <br> Type TA <br> 7.2 KV Thru 34.5 KV $\mathbf{4 0 0 , 6 0 0}$ Amps

Type Th Swith ies provide highly dependable low-met switching for fower circuit breaker is, ${ }^{\text {atation, for opming }}$ primaries of power transformer banis and for sectionalizing transmission lines.

When arcing horns are used, the switch will interrupt magnetizing current of transformer banks. 'The TA horn gap
switch may be used to interrupt small load currents in an emergency, but it is not recommended for general loadbreaking duty nor for hreahing line-charging currents of appreciable magnitude.

Consult Graybar for complete information and prices.

current which the switch shall be reduired to carry for at least one cycle. The current shall be the rms value, including the d-c component, during the manimum cycle as determined from the envelope of the current wave, and the test period shall be at least one second.
-The four-second rating is the total rms current, including the d-c component if present, which the switch shall be required to carry for forr seconds. For practical purposes, this carrent shall be taken as the integrated heating equivalent of the four-second rating; the maximum test period shall not exeeed eight seconds.

## G-E Tilting Insulator Air Switch (Cont.)

## Outdoor, Group Operated

Type TA 7.2 KV Thru 34.5 KV 400,600 Amps
Rating Approximate Dimensions in Inches

Dimensions are subject to change and should not be used for construction without approval.

## Substation Fence Enclosures

Usual height is $84-\mathrm{in}$. overall including 3 strands of barb wire. (Also furnished 6 to $10-\mathrm{ft}$. ligh.)

Fabric is $1-\mathrm{ft}$. less than height of fence. 2 -in. diamond mesh. 9 gange wire galvanized after weaving (also 11 gange and 6 gange). Advise if special galvanizing coat is required.

Top rail and braces $15 / 8$-in. O.D. heavy galvanized steel ріре.

Line posts of heavy galvanized pipe, set $21 / 2$ to $3-\mathrm{ft}$. in concrete.

Barb wire extension 45 degree or vertical pressed steel arms on malleable base to take 3 strands, 4 point, $12 \frac{1}{2}$ gange barb wire.

End, Corner and Gate Posts $21 / 2$-in. O.D. or 3 -in. O.D. heavy galvanized pipe, 1 -in. O.D. for larger gates.
Gates to match. single walk or double drive, $15 / 8$-in. O.D. or 2 -in. O.D. galvanized pipe frames; locking device. State opening between gate posts.
No. 64TR Line Post O.D. 2-in. No. $65^{\prime}$ Tl Line Post O.D. $21 / 2$-in.

Note-Mail in diagrams of fence enclosures with dimensions and any specifications other than above styles for delivered net prices.

## Chance Hookstick Disconnecting Switches

## Single-Pole, Single-Throw

Type BT

100-600-1200 Amp
Full NEMA-Rated
For sulstation and line applications where maximum mechanical and electrical reliability are required.
Rigid blade design and selfaliguing contacts mean positive closing even when operated with heavy side thrusts.

Feat ure blade latching, pryout opening and centored contact pressure. Silver-to-silver contacts; 100 and 600 amp switches also available with eopper-tocopper contacts.

Flanged base furnished as standard; channel base also available when specified.
Specify size and type of conductor on order.

## Type BTH

2000 Amp
Full NEMA-Rated
Rugged, high-current switch for vital industrial circuits. Tog-gle-jaw action combines highpressure contact performance with unusual ease of operation.

High-pressure silver-to-copper hinge and jaw contacts, and the bus-bar copper hot parts provide a high-conductivity, straightline current path.

Double-latch holds blade securely in closed position. Available with flanged stecl base, or channel base when specified.

| KV | *No. Vertical Mountin | $\xrightarrow[\text { Underhung }]{\text { *No. }}$ Mounting | Approx. Shipping W. Los. | $\dagger$ Each |

$\dagger$ Less terminals. Contact Graybar for complete data.
*With standard strength cap and pin insulators. When specified, station post insulators will be furnished at no extra cost; add prefix " S " to catalog number.

## Type BTL

200 Aınp NEMA-Insulated

An economical unit for lightload circuits where full NEMA insulation is required.

Has "hig switch" features for ease and reliability of operation. Rigid truss blade resists side thrusts; has $90^{\circ}$ stop. P'ositive lateh holds Iolade in closed position; opens with pryout action.

Multi-finger contacts are selfwiping; have phosphor bronze bach-up springs.

Galvanized flanged base has pull-off eyes for dead-ending direct to switch.

General purpose terminals take No. 6 to $4 / 0$ copper or No. 6 to $3 / 0 \mathrm{ACSl}$.

Crossarm hanger No. 92851 also available, $\mathbf{\$ 2 . 0 0}$ each.
*With cap and pin insulators. When specified, station post insulators will be furnished at no extra cost ; add prefix " S " to catalog tumber.

## Type M

$200 \& 400 \mathrm{Amp}$
Distribution-Level Insulated
Ideal for rural lines, suburban circuits, small subs, or wherever an inexpensive, distribution-level insulated switch is required.

Simple to install; no adjustments. Solf-aligning contacts. Rigid double blade made of highconductivity bus-bar copper; latch secures blade in chosed position. Pryout action makes opening easy. Furnished complete with crossarm hanger.

## 200 Amp

Terminals take from No. 6 to 2/0 copper or No. 6 to $2 / 0$ ACSR.

Terminals take from No. 6 to 400 MCM copper or No. 6 to 336.4 (26/7) ACSR.

## Chance Tilting Insulator Switches

## 3-Pole, Single Throw

Have Compensator Control Mechanism that automatically absorbs structural distortion and provides positive contact in all phases regardless of crossarm warpage, prevents shock in closing, simplifies installation and gives extra leverage for easy operation under the severest operating conditions. Blades have Crow Bar Action for ice-breaking.

Full NEMA-rated, with silver-to-silver cont acts and self-alinging elips. Deep-drawn galvanized steel base houses Compensator Control; flanges prevent cutting of erossarm. All mounting holes $9 / 16 \mathrm{in}$. diameter.

Standard terminal clamps tahe $1 / 2 \mathrm{in}$. and $3 / 4$-in. IPS tulbing or No. 4 through 600 MCM copper cable. For other sizes and types of conductor, specify size and type on order.

Type WN-3-Insulator

Detailed specifications for Universal brackets and capacitor racks available.
Prices slightly higher west of the Rockies, or in other zones.

## Hubbard Hub-Mounts

No. 2786

The Hub-Mount, developed for single pole mounting, will hobd one to three transformers with a eombined vertical load of 1.3 .000 Its. reducing the cost of double pote phatform structures for transformers.

The small diagrams above, which are drawn to scale, show how a llub-Mount is assembled (left) on a $61 / 2 \mathrm{in}$. diameter pole and (right) on a 16 in . diancter pole. The same size llub-Mount is suitable for these and all intervening sizes.

The turnbuckte bolts, made of long-life, corrosion resistant Cor 'Ten stece, are wrenched downward for tightening to prevent the possibility of the lineman from "cutting out" on a pole. The left hand muts, bofts and boxes are color coded for easy identilication for assembling. Only one lineman on the pole is required to install the mount.

## G-E Type HS Oil-Immersed Distribution Transformers

## Single-Phase, 60 Cycles, Self-Cooled

The G-E Type lls distribution transformer offers the highest degree of service reliability, bached by careful altention to all details of manfacture, inchoding the seleetion and preparation of the raw materials used, the adoption of the mosi progressive mamifacturing processes, and the constant improvenuent of transformer design.

Among the most recent of these imprevements is the woundcore construction, identified by the G-l: trade-mark Spirakore.*

T"his new design, now furnished on all sizes, results in higher efficieney at heavy loads, better voltage regulation at higher power factors. low exciting current, smaller size, and lighter weighl.

The lanks are of all-welded steel with fins, corrugations. or cooling tubes in the larger sizes to provide ample radiating surfaer for the dissipation of heat. Wach tank is given a coat each of primer and super-melaglyp paint, and oven-dried, resulting in an attractive and durable finish. For complete information, ask Graybar for Bulletins GEA-6070 and GEC-731.

For 480 or 600-Volt Circuits

Application: By connection of the low-voltage leads, transformers are arranged for series or multiple two-wire service, or for three-wire service.

Ilighi Voltage Taps (Rated Kva.): Above rated voltage. none; below rated voltage, two $5 \%$.

High-Voltage Rating, 480

## For 4160-Volt Circuits

Application: These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on $2400 / 1160$-volt Y eircuits. The use of this transformer gives the same service voltages as 10:1-ratio transformers connected hetween line and neutral.

By connection of low-voltage leads, transformers having low-voltage ratings of $120 / 240$ or $240 / 480$ are arranged for series or multiple two-wire service, or for three-wire service.

Service: Suitable for outdoor or indoor use.
Mounting: Sizes 167 hva . and smaller are arranged for direct pole momiting.

For 4800-, and 8320Y-Volt Circuits
Application: By connection of the low-voltage leads, transformers having a low-voltage rating of $120 / \mathbf{2 4 0}$ or $240 / 480$ are arranged for series or multiple t wo-wire service, or for three-wire service.

Transformers having low-voltage rating of $240 \times 480$ are arranged for series or multiple two-wire service.

Service: Suitable for outdoor or indoor use.
Mounting: Sizes 167 kva . and smaller are suitable for direct pole mounting.

## For 13,200- and 13,800-Volt Circuits

Application: liy connection of low-voltage leads, frangformers lavinh ow-voltage raling of $120 / 2$ to are arranged for series or multiple two wire service, or for three-wire service.
Transformers having low-voltage rating of $240 / 480$ are arranged for series or muliple two-wire service.

Service: Sutable or outacor or indoor installation. for direct nolo nounting.
Sizes $250-500 \mathrm{kva}$ are also available.

# G-E Type HSBA Oil-Immersed Distribution Transformers 

With Self-Contained Lightning Protection and Overcurrent Protection-Single-phase, 60 Cycles

With High-Voltage Tank-Wall Bushings

Class I: For universal use on delta and $Y$ circoits.

Complete with: "I'wo highvoltage bushings; t wo magnevalve lightning arresters; lowvoltage neutral gap; internal high-voltage fuses; low-voltage circuit breaker; overload signallatup (.7-k vanadabove); support lugs for direct pole mounting.

Class 13-1: For application on Y cirenits having solidly grounded nentrals.

Comblete with same features as Class A transformers, except omit one arrester.

## For 2400 \& 4160 Y-Volt Circuits

Application: By eonnection of the low-voltage lads to the bushing termimals inside the lank, transformers with lowvoltage rating of $120 / 240$ are arranged for series of multiple two-wire service, or for three-wire service.

## G-E Type HSBA Oil-Immersed Distribution Transformers

Class 132: For use on solidly grounded common-neutral circuits with the tank solidly grounded.

Complete with: One highvoltage bushing; one clampterminal tank-grounding connector; one mange-valve lightning arrester; low-voltage neutral link bolted to tank externally; internal high-voltage fuse; lowvoltage circuit breaker; overload signal lamp (lo-kva and above); support lugs for direct pole monnting.

## G-E Type HS Oil-Immersed Rural-Line Transformers <br> In Accordance with R. E. A. Requirements

Transformers are of the single-
 high-voltage-lushing design, with one end of the high voltage winding permanently connected to the tank which, in turn, is to be solidly grounded by connection to the common system neutral.
lach unit complete with: One high-voltage cover bushing; handhole in cover; three lowvoltage tank-wall bushings; provision for direct pole mounting with the low-voltage bushings 90 degrees from the pole; two mounting positions, on opposite sides of tank; two clamp-terminal tank-grounding connectors; fowvoltage neutral grounded to tank.

Application: By connection of the low-voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

## G-E Type HSBA Oil-Immersed

 Rural-Line TransformersIn Accordance with R. E. A. Requirements
IEmbodies the sime reliability as the conventional Type HABA tramsiormer. lightning prolection is aflorded by a lli-stroke rural arrester momeded directly on the tank, and overcurrent protection is provided by a lowvoltage circuit breaher momed inside the tank, under oil.

Each unit eomplete with: One high-voltage cover lussingr; one lli-Stroke rumalarester; internal high-voltage luse; handlole in cover; overload signal lamp (on sizes $71 / 2 \mathrm{kva}$ and larger); three low-voltage tank-wall bushings; internal low-voltage circuit breaker with external operating handle; provision for direct pole momnting with low-voltare bushings 90 degrees from the pole: $t$ wo mumting positions, on oppusite sides of tank; two clamp-teminal tanh-yrounding connectors; low-voltage neutral grounded to tank.

Application: By comertion of the low-voltage leads to the bushing termimats inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

## G-E Type HS Oil-Immersed Rural-Line Transformers and Gap and Internal HighVoltage Fuse

In Accordance with R. E. A. Requirements

Trausformer with gap and fuse is for service on solidly grounded, common-neutral 7200 -, 7620 - and $14,400-$ volt circuits.
Each unit complete with: One high-voltage cover bushing with double bushing gap; internal high-voltage fuse; handhole in eover; three low-voltage tankwall bushings with low-voltage neutral grounded to the tank externally; bracket for future mounting of lightning arrester; two clamp - terminal tank grounding connectors; two sets of support lugs for direct pole mounting in either of two positions. The support lugs are 90 degrees from the low-voltage bushings; name-plate; lifting lugs.

## G-E Portable Oil Testers 35,000-Volt 0.5 Kva

This oil tester affords a compact, convenient, and accurate means for testing oil in the field, as it combines in a single unit, a step-up transformer, a means for gradually raising the test voltage, a voltmeter to measure breakdown values, an automatic circuit breaker, and an oil-testing receptacle.

The successful operation of high-voltage oil-insulated apparatus requires that the dielectric strength of the oil be maintained at a high value. Assurance that the oil is always satisfactory dielectrically is possible only by testing oil regularly.

All live parts of the equipment are enclosed and complete safety features assure full protection to the operator.

Furnished complete with 15 feet of 3 -conductor attaching cord and plug.

For price and description information consult Graybar.

## G-E Insulating and Cooling Oil No. 10-C

G-E No. 10-C oil is a specially prepared insulating and cooling oil for use in transformers, feeder voltage regulators, and oil fuse cutouts.

The development of this oil and the attainment of proper characteristics and uniform quality have required the closest co-operation for many years between G -E engineers and oil refiners, and involve a careful selection of proper crude oil, as well as the use and control of special refining processes applicable only to insulating oil.

Refined from selected grades of crude oil by refiners experienced in producing oil for this highly special application, this oil has the characteristics which provide both the cooling and insulating factors essential to transformer operation; it does not affeet the transformer insulation, and is unaffected by these insulating materials. An important quality in transformer oil ; -vice life, the inherent resistance to sludge formation. $\quad$ in have such properties should be used for $t$

## G-E Type HS Pyranol $\ddagger$ Distribution Transformers

This transformer generally affords substantial savings over the total installed cost of oil-filled equipment for all installations indoors or in confined locations.

Filled with Pyranol, G-E's synthetic insulating and cooling liquid, which has all of the desirable characteristics of mineral oil and, in addition, is nonflammable. Pyranol transformers can, therefore, be safely installed indoors or in confined locations without expensive fireproof vaults. They can usually be
installed at the load center, giving additional savings by the elimination of long and costly runs of secondary copper, with improved voltage regulation at the load.

Pyramol transformers have made possible savings on overall installed costs of as high as twenty-three per cent, compared with the cost of oil-filled equipment.

It is recognized by the National Electrical Code.
Pyranot is suitable for use only in Pyranol transformers, designed especially for the purpose.

For complete information, ask for Bulletin GEA-2048.
$\ddagger$ Reg. trade-mark of General Electric Co.

## Single-phase, 60 Cycles, Self-cooled

## For $\mathbf{4 8 0}$ - and $\mathbf{6 0 0}$-Volt Circuits

Application: By connection of the low-voltage leads to the bushing terninals inside the tank, transformers are arranged for series or multiple two-wire service.

Service: Suitable for indoor or outdoor installation.

## G-E Thyrite Line and Station-Type Arresters

## Line-Type Lightning Arresters

cross orm strope for
$45^{\circ}$ croes orm
Cat. No. 5213764G5 base plate for doublecrossarm mounting

The standard top cap fitting of all of these arresters has a $13 / 6$ inch diameter hole by which the arrester can be suspended.
This fitting is included with suspension mounting arrester at no increase in price, if specified on order.
The fitting is known as Eyebolt Cap, Cat. No. 246B711G1, and is for use with suspension mounting ratings 20-21 inclusive.
*These mountings include crossarm straps or U-lolts for 4-by-5-inch crossarms.
$\dagger$ It is not recommended that these heavier arresters be mounted on a single crossarm, unless the crossarm is one of two parallel double arms or is otherwise mechanically supported to prevent tortional twisting of the arm by the weight of the arrester.

## Station-Type Lightning Arresters

Altitude, 0 to 6000 Feet

Model No. 9LA1H46
Thyrite arrester
(one pole only)
Max. rated 3kv for
4160-v grounded-or 2400-v ungrounded neutral systems
(half-unit shown)

Model No. 9LA1H66 Thyrite arrester (one pole only) ungrounded-neutra system

The G-E Form II Thyrite magne-valve station-type lighting arrester combines improved electrical characteristics and refinements of mechanical construction which establish a new standard of protective efficiency and over-all dependability.

Designed for protection of service continuity as well as apparatus insulation, the Thyrite magne-valve arrester provides excellent valve performance which prevents system disturbances or outages as the result of lightning diseharges.
The Thyrite magne-valve arrester can be applied indoors or outdoors for the protection of either large or small generating or substation equipment, on either grounded- or ungroundedneutral systems, and over a voltage range of 2.3 to 330 kv .

The simplicity of design and the small space requirement make this arrester ideal for mounting directly on power transformers and unit substations or for mounting on substation steel structures, as well as on concrete foundations or piers.

Possessing every mechanical and electrical feature known to the art of reliability, endurance, fidelity of protective performance, and economies of application, the Thyrite magne-valve station-type arrester should be applied at generating stations and substations where either the investment in equipment to be protected or the importance of service continuity warrants the highest degree of protection.

The unexcelled protection record established by Thyrite station-type arresters in service operation over the past fourteen years and the demonstrated economies of their interchangealbe unit construction, are notable evidence of the soundness of protection.

## G-E Thyrite Line and Station-Type Arresters <br> Station-Type Lightning Arresters

Distinetive features of these 'Thyrite magne-valve stationtype arresters inchude: (1) Excellent proteetive elliciency 20 per cent lower IIR drop). (2) Exeeptionally large discharge capacity- 3 times greater than heretolore availalile. (3) "Thyrite shunted and shielded gaj, eonstruction. (t) Interehangeable sealed-unit construction. (5) Freedom from moisture or
atmospheric influcnces. (6) Ease of installation.
The following information applies to single-pole arresters. For 3-phase eircuits, use three single-pole arresters.

For a complete diseription, ask Graybar for Bulletin GEA-130.4.

## G-E Distribution Lightning Arresters

## Pellet-type

For Circuits 1 to 15 Kv.

## Altitude 0 to $\mathbf{6 0 0 0}$ Feet

The electrie elements of these arresters consist of a pellet columm that forms the valve element and prevents the flow of system current following discharge, and a seriesgap assembly sealed in nitrogenfilled gap chamber which isolates the valve element from the line until it is sparked over loy a surge.

The dry nitrogen gas in gapchamber prevents entrance of moisture, makes arrester proof against atmospheric conditions and assures freedom from leakage and corrosion mermanently.
3-KV pellet arrester Model
No. 9LA10C21, Showing EE1NEMA Standard Mounting Bracket

Porcelains are wet-process type. well glazed. They have flexible leads securely soldered for line comection.
Clamp-type ground terminal permits clamping either one or two solid or stranded gromed wires to arrester, does away with connectors, splicing, soldering and taping-saves looth labor and material.

## Hangers and Mountings

Standard IEEI-NEMA mounting bracket and T bracket are available for all pellet arresters and can be used alone, in combination with primary fuse cutouts, or on transformer tanks.

Arresters have two nounting grooves on porcolain providing for alternate positions in either standard or special hangers, making it possible to balance either the clearances or the appearance of the installation. I'lue arrester can be inserted in any hanger either before or after langer has been mounted.
In addition to the EEL-NEMA standard mounting bracket, pellet arresters can be furnished with special hangers as shown in the detail at right. Arresters with special hangers have same prices as arresters of the same rating with standard mounting brackets. To determine number of arrester with a special hanger-Select the standard arrester from 'lables 1. 2, 3, or $t$, then refer to Table 5 for the number of the corresponding arrester with special hanger desired. (For complete description write for Bulletin (DEA-29-5).

## Number of Arresters Required at Installation

For Table I. I se two at each single-phase and three at each three-phase installation.

For Table 2. Ise one on phase wire at a single-phase installation made bet ween phase wire and neutral. Use also on neutral wire, a neutral gap if voltage to ground is not over 300 volts; if, because of mbalancing, voltage is between 300 and 1000 volts, use Model No. 9LA10C11, 91A10CA11 or 91 A 10 CB 11 arrester, depending on atitude. Use two arresters at a single-phase installation between outside phase wires. Ise three arresters at each 3 -phase installation.

For Table 3. Use one arrester at each installation.

## G-E Rural Lightning Arresters

## Hi-Stroke

Heavy-duty expulsion type, with many exclusive features of construction, designed specifically for Rural systems. They have high lightning discharge capacity and combine highest efficieney in impulse protective level and long operating life.

For separate mounting these arresters utilize the same arrester element ( $0-2000$ amperes rms. interrupting rating) and have the same performance characteristies as those furnished since 1914 on 'Type IIBA rural line 1 ransformers and which have established an excellent service operating record on many rural systems.

*Interchangeable with 9-kv, pellet arrester mounted on tank bracket of early designs of T'ype IHBA, 2200 -volt single-bushing transformer.

Unit-combination Shown with Mounting Bracket for Transformer Installations

§Cutouts rated 7.8 kr . max. can be used on grounded-neutral circuits where the voltage that an individual cutout is required to interrupt does not exceed 7.8 kv . rms.

- Includes EEI--VEMA Standard mounting bracket for crosearm or direct-to-pole mounting.

# Ohio Brass Thorex Dynagap Arresters Distribution Lightning Arresters 

DV-6 with External Cap

Sparkover distance is stretched 110 times its oriminal length loy the Dynagap. 'This transfers a major share of powerfollow current limitation to the gap element and permits
compounding of valve blocks to embody greater durahility and high immunity to low-current, long-duration system disturlances, including damaging components of natural lightning strokes.

Thorex DV supplied in two models: (1) with external grap, and (2) with supplementary internal gap and automatic ground lead isolator. Standard NEMA brackets are provided when units are to be pole-momnted. Size and weight of each type has been kept to a minimmm. Spring-prossure-follow soaling (imposing a dynamic loading on gasket joints) makes the 'Type DV completely air-tight and moisture-tight.

## Intermediate and Station Class Lightning Arresters

The Type (ip) 'Thorex, classed as "Intermediate," provides protection required in average station applications. Single unit GI' arresters cover the range hetween 3 and 37 kv ., while larger arresters are formed by stacking units in combinalion. The GP' spark gap structure features improved nonlinear resistance grading system.
Types MP and MPR 'Thorex arresters are for anplications where maxiatum durability and equipment protection is desired and/ar where severe contamination exists. T'ype MP' arresters are single units up to 37 kv and two-nnit stacks
from 10 to 73 kv . Above 73 kv the MPl offers single unit arresters with electrically continuous porcelain housings.

For voltage ratings up to 1.5 kv , both the GP and M1P are available with choice of metal caps at both ends or with a porcelain top. The latter is denoted by an " $A$ " after the type number. A much smaller terminal is featured on the porcelain top which reduces phase and ground clearances and permits closer grouping. The GP, MP, and MPR Thorex arresters are compact in size and self-supporting, from the lowest to the highest kv rating.

## G-E Pellet Meter or Service Protectors

115/230 Volts-Altitude, 0 to 6000 Feet

Model No. 9LA15A1. Pellet Frotector for Direct Metal-clad Metal-clad Mounting
Knockeut Hole

The indoor protector is designed to permit direct monnting in the knockout holes of a service switch, fuse hox, meter-connection cabinet, or meter case. In some applications, it may be preferable to locate the protector on the building wall at the point where the exposed secondary circuit enters the conduit goose-neck or the service cap of the enclosed service wiring. Therefore, another design is provided for such separate outdoor mounting.

For 115 -volt, single-phase, 2 -wire; or $115 / 230$-volt, singlephase, 3-wire grounded-neutral, secondary services. For indoor or outdoor service.

For complete description, ask for Bulletin GEA-2977.

G-E Thyrite Meter or Service Protectors
0 to 650 Volts-Altitude, 0 to 6000 Feet

Thyrite Protector, Three-pole, for Indoor Installation, Model No. 9LA15A13

Thyrite Protector, Three-pole, for Outdoor Installation. Model No. 9LA15A23

For protection of watthour meters, industrial power-service entrances, or consumer apparatus and appliances on singlephase or polyphase secondary circuits or services in the 0 - to 650 -volt class.

The case of the protector is of aluminum. Each single-pole assembly has a series grap and a Thyrite disk valve element 3 inches in diameter and $5 / 16$ inch thick. These single-pole elements are mounted in a Textolite container, and one, two, or three of these assemblies (for single-, double-, or three-pole protectors respectively) are sealed within the outer aluminum case. The side of the case bears complete nameplate data.

## Indoor Service-For Mounting to Knockout Hole

The indoor design is arranged for mounting directly in a knockout hole in the meter case or connection box.

## G-E Isolating Gaps

## For Distribution Circuits, 15 Kv. and Below

Model No. 9LA11A1, A2, and A3 with Mounting Hanger

Model No. 9LA11A5, A7, and A9 with Mounting Hanger

G-1: porcelainenclosed isolating gaps offect efficient intercomertion throurh a gap, where it is desired to isolate the primary lighning-arrester ground from the secondary neutral. These gaps can also be used wherever distribution-transformer tanks are to be grounded through a gap.

Standard spark-potential ratings have been established at 6 , 11 , and $15 \mathrm{k} .$, rms. These ratings are average values subject to aloout 10 per cent tolerance, phos or minus.

Model No. 9ldA11A1, A2, and A3 gaps are sturdily con, structed. and have no exposed live parts. Model No. 9LA11A5. A7, and A9 gaps are smaller and designed for mounting on a pole, crossarm, transformer tank, or for suspension from a line conductor.

Model No. 9LA11A1 gap ( 6 kv . spark potential) is recommended as a primary-neutral arrester for protecting the neutral side of distribution transformers operating on gromided-neutral systems with the system neutral grounded only at the substation, and where the nentral potential does not exceed 300 volts, rims.

$\dagger$ Isolated neutral.
$\ddagger$ Grounded neutral.
For complete description, ask for Bulletin GEA-2976.

## G-E Low-Voltage Pellet-Type Lightning Arresters

0 to 650 Volts-Altitude, 0 to $\mathbf{6 0 0 0}$ Feet

Model No. 9LA10A202 Single-pole Pellet Arrester with Mounting Bracket

Model No. 9LA10A204
with Mounting Bracket
For outdoor service, crossarm or pole monnting, on railwaysignal lines or secondary power lines, for protection of mailwaysignal transfurmers, distribution-transformer secondaries,
autotransformer hoosters, cables, and other line apparatus in the $0-$ to 6.50 -volt class.

The single-pole arrester unit consists of a series gap and a pellet valve column completely housed in a wet-process porcelain container.

The double-pole arrester consists of two single-pole units mounted in a single hanger. This arrester is economically advantageous on single-phase, 2 -wire circuits.

| Model No. | $\begin{gathered} \text { No. } \\ \text { poles } \end{gathered}$ | Circuit Voltage Rating, | $\begin{gathered} \text { Maximum } \\ \text { Permissiblo } \\ \text { Line-loground } \\ \text { Voltage, Rms. } \end{gathered}$ | Ship. Wt. Wbs. | Each |

## G-E Neutral Gaps

## Altitude, 0 to 6000 Feet

Model Ne. 9LA11A1

Cat. No. 146187

These neutral gaps are plain gaps having an impulse sparkover voltage of about 11 kv . crest on the AIEE standard impulse test, and embody no valve element. They are for application on the neutral wire of the usual grounded-neutral 3 -phase, 4 -wire primary systems, where the neutral-wire voltage to ground does not exceed 300 volts, rms.

Model No. 9LAllai embodies the same desirable features of construction and mounting that are incorporated in the standard pellet arresters for protection of the phase wires.

Cat. No. 146187 , being less expensive, does not possess the refinements of Model No. 9LA11A1. Unit has a ground lead similar to the line lead, and is mounted on crossarm by wood screws.

For complete description ask for Bulletin GEA-2975.

## G-E Lightning Protection Equipment

## For A-C Rotating Machines

The problem of protection of a-c rotating machines from lightning voltages applies to a-c generators, synchronous condensers, and large motors subjected to impulse voltages, either from directly connected exposed overhead lines or from those transmitted to the machine through transformers.

Protection from these sources can be obtained by a combination of line-t ype arresters located a short distance out of the station on each exposed line which is directly connected to the machine; by Pyranol filled protective capacitors and by station-type Thyrite lightning arresters in parallel with the protective capacitors, installed on the bus or at the machine terminals.

Thousands of equipments representing the advanced form of protection from lightning have heen applied since 1929, some of the earlier ones being made for protection of machines which had failed repeatedly, but since the protective equipment was installed, no further failures have occurred.

This equipment easily installed; requires no maintenance.
In the table below is listed equipment required for any given service application, and is applicable for protection of machines of practically any type or manufacture.

For Installation of Directly Connected Exposed Overhead

The same capacitors are applicable to either grounded- or ungrounded-neutral circuits. llowever, the arresters for machines 2400 volts and above have lower valve ratings for grounded-neutral circuits than for ungrounded-neutral circuits. The listing of arresters for grounded-neutral machines is premised on the circuit neutral's being solidly and directly grounded. If the machine neutral or circuit neutral is grounded through resistance or reactance, ask Graybar for assistance in making selection of arresters.
*For indoor service only.
$\dagger$ Tlrese arresters are Thyrite meter protectors.
${ }^{4}$ Clamp-type terminals.
\#Where machines have no direct connection to exposed overhead lines, and where connection to transmission lines is not through Y-Y or auto-transformers, use only one capacitor unit ( 0.25 mfd ), line-to-ground.
$\ddagger$ Where machines are directly connected to exposed-overhead lines, or are connected through Y-Y or autotransformers to transmission lines, use two capacitor units in parallel per phase to obtain a capacitance phase-to-ground of 0.5 mfd . This method will limit reflections within the winding of deltaconnected machines or at the neutral point of Y-connected machines which have their neutrals isolated or grounded through a resistance that is higher than the surge impedance of the machine winding. In general, if the neutral of a machine is grounded through a resistance of less than 50 ohms, positive reflections at the machine neutral will not occur. If a machine neutral is grounded through a reactance of less than 5 ohms
( 60 -cycle basis), positive reflections at the machine nentral will be negligible when 0.25 mifd. capacitance phase-to-ground at the machines is used. I Ience, when the machine neutral is grounded through a resistance of less than 50 ohms or through a reactance of less than 5 ohms ( $60-\mathrm{cycle}$ basis), only one capacitor unit ( 0.25 mifd . phase-to-ground) will be reguired. Where two or more machines are operated in parallel, with the neutral of only one machine grounded, the capacitor applied on the machine bus for protection of all machines, or applied at the terminals of machines having neutrals ungrounded, should be 0.5 mfd. capacitance phase-to-ground ( 2 capacitor units in parallel per phase). This method limits impulsevoltage reflections at the neutrals of those machines that have ungrounded neutrals.
$\Delta$ This arrester, Model No. 9LA1G295, rated 7.5 kv. , provides somewhat better protection than the Model 9LA1G292 unit rated 9 kv ., and can be used wherever there is little, if any, risk of the system line-to-ground voltage exceeding the arrester's maximum line-to-ground rating of 7.5 kv ., rms., under any condition of operation.
§'the pellet arresters listed for machines 2400 volts and above, can also be used in place of station-type Thyrite arresters for application at the terminals of rotating machines below 1000 kva . This application is recommended if economy of protection necessitates lower cost though less efficient protection.

Note: For altitudes above 6000 ft . ask Graybar for engineering recommendations. Prices on application.

G-E Porcelain Enclosed Fuse Cutouts

Now, all functions are available in one basic design with four interchangeable doors for each voltage and current rating.
Any housing of a given voltage and current rating can easily be converted to the desired function by simply interchanging any of the following doors.

Normal-duty in-
dicating or dropout door
(1) Normal-duty Indicating or Drop-out Door-provides visual inspection of a blown fuse by a flip-out semaphore or drop-out action of the door. Drop-out indication is provided by removing the converting bar.
(2) Normal-duty Indicating Non-drop-out Door-provides visual inspection of a blown fuse by a flip-out semaphore only. This door is specifically designed for those users who desire that the door remain closed after a fuse is blown.
(3) Heavy-duty Door (or Extra-heavy Door)-of the indicating drop-out type, is particularly applicable on system locations where high or extrahigh short-circuits can occur.
(4) Disconnect Door-with hinged blade, which has continuous current rating double that of the standard fuse-holder door, combines maximum safety with ready accessibility.

Doors for normal-duty indicating or drop-out, indicating non-drop-out, heavy-duty, extra-heavy-duty, and disconnecting make this cutout usable practically everywhere on the system. In most cases only two cutout housings will meet every need enabling lower investments and simplified stocking. The interchangeable doors avoid the necessity of discarding or changing-out the cutouts when systems grow and available short-circuit currents of the system increase; instead, merely up-rate the cutout by substituting the heavy-duty or the extra-heavy-duty door.

*For heavy-duty cutouts rated 200 amp ., consult Graybar.
$\dagger$ These ratings conform to maximum design ratings of distribution fuse cutouts in acoordance with NLEMA standards. Cutouts rated 7.8 kr maximum may he used on groundedneutral circuits where the voltage that an individual cutont has to interrupt does not exceed 7.8 kv and where the insulation to ground meets the operating conditions.
$\ddagger$ Current Rating-The fuse cutouts listed above, rated 50 and 100 amperes are designed to take fuse links of these capacities or less when the fuse links are rated on the 100 per-cent basis. Also, coordinating fuse links can le used in these cutouts. When these cutouts are used with fuse links that meet NEMA specifications, the cutont will carry its rating continuously with a maximum temperature of $30^{\circ} \mathrm{C}$ for the conducting parts of the fuse holder above and ambient of $40^{\circ} \mathrm{C}$. All G-E universal cable-type fuse links meet these specifications.
\#EEI-NEMA standard mounting bracket for separate mounting on crossarm, direct to pole, or wall, and for combination mounting with lightning arresters on crossarms, included in Model No. given.

- All 9F6D cutouts, including those now in service, are capable of interrupting these higher interrupting ratings.
**(1) Normally furnished as indicating, non-drop-out cutont, hut easily convertible to drop-out operation by removing the converting bar.
(2) Where large usage of drop-out function only is required, cutouts can be furnished for drop-out operation only.
§Operating Function-Letters indicate following:
A-Indicating or Drop-out-Normal-duty (Field Convertible).
B-Indicating Only-Normal-duty.
C-Indicating Only-IIeavy-duty.
XC—Indicating Only-Extra-heavy-duty.
D-Disconnect.
