# Heavy-Duty Enclosed Fuse Cutouts 

200-amp., 5.2-kv Cutout Mounted on Crossarm
$5.2 \mathrm{kv}, 200 \mathrm{amp}$. indicating fuse cutouts having same advantages of fuse renewal as the porcelain-enclosed indicating and dropout fuse cutouts.

Llave interrupting rating of 10,000 to $14,000 \mathrm{rms} \mathrm{amp}$. at 60 cycles. Applicable for use on banks of transformers feeding industrial plants or for sectionalizing heavy feeders.

200 -amp fuse cutout convertible to a $400-\mathrm{amp}$. disconnect cutout by replacing fuse holder door with a disconnect door.

## Call Graybar FIRST for ...

## G-E Porcelain Enclosed Fuse Cutouts

## How the Cutout Operates

1. Fuse link in phace. Ilastic--tu-metal lateh holds door closed.
2. Spring-actuated fip-out semaphore hed in position by the fuselink calle.

## As a Drop-out Cutout

4. Remove converting bar and bottom of door is free to kick out when the fuse lin' has been ejected.
5. Compressed spring and weight of door lets door latch disengage from housing and drop open as shown. Allows plenty of time to permit clearing of the are within fuse-holder.

As an Indicating Cutout
3. Fuse link melts, flip-out semaphore flips to position shown, aids interruption of low fault current, provides visual indication of hown fuse With comverting bar in place door remains closed as shown above.

## As a Disconnect

6. Install a disconnect-blade door, and housing converts to a discomect. Door has a one-piece, silver-plated, copper blade hinged at the lower ead. When disconnected, blade hangs below the housing where it is electrically isolated from the circuit yet always availaile and ready for use. Lineman can tell at a glance when the circuit is open.

## G-E Heavy-Duty Fuse Cutouts

Fuse Cutout Complete with Fuse Holder and Hanger

Cutout Having Disconnect Blade Instead of Fuse Holder 9F16Cl376 5.2 kv
Max. 100 ........ $35 \quad 15 \quad 53.37$

## Parts for the Cutouts Listed Above

79×307
Door, complete with fuse holder
$61 / 271 / 225.86$
79×311
disconnect hlade
$61 / 271 / 220.53$
Note: The above doors can be used with superseded Model No. $9 F 16$ A7, $91 / 16$ A70, $9 F 161376$, and $91 \times 16131376$ cutouts. When so used the interrupting rating of the Cat. No. 79X307 will be limited to 8000 antperes at 5.2 kv and 12000 amperes at 2.5 kv .
*These ratings conform to maximum design ratings of distribution fuse cutouts in aceordance with NEMA standards.
$\dagger$ For single-phase, line-to-neutral installations on 8330 volt, 4-wire circuits, or wherever voltage across a single cutout does not exceed 5.2 kv .
$\dagger$ On 4160- or 4330- volt, 4-wire circuits, or wherever voltage across a single cutout does not exceed 2.5 kv .

## G-E Open-Type Fuse Cutouts

Provides overcurrent protection throughout full range of fault currents up to their
 rated interrupting capacity, on distribution circuits of 15 kv and below.
Wet - process - porcelain insulator has undercut pettirats for greater insulating strength. Solid construction prevents insects from nesting inside.

Birds and animals prevented from bridging insulator, and blowing fuses by a com-pression-clamped through porcelain mounting support, free of outside clamps
All hardware is made from nonferrous metals.
Fuse holder drops to completely open position for easy identification of blown fuse.

Have EFI-NEMA Standard mounting bracket for separate mounting on crossarm, direct to pole or wall, and for combination mounting with lightning arresters on crossarm.

## Cutouts Having Disconnecting Blade Instead of Fuse Holder

| 9F3KB21 | 7.8 | 200 | 18 | 21.23 |
| :--- | :---: | :--- | :--- | :--- |
| $9 F 3 K B 31$ | 15 | 200 | $201 / 4$ | 26.32 |

*These ratings conform to maximmm design ratings of distribution fuse cutouts in aceordance with NE.VA Standards. Cutouts rated 7.8 kv max. may be used on grounded-neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 7.8 kv and where the insulation to ground meets the operating conditions.

## G-E Open-Type Fuse Cutouts

Supply-part Fuse Holder Complete and Disconnect Blades, Which Are Interchangeable in Equivalent-voltage-rated Open Fuse Cutouts

Supply-part Fuse Holders, Complete with Load-break Device, Interchangeable with Equivalent-voltage-rated Cutouts Above

§Can also be used with corresponding ratings of Cat. No. 9F 3 F . and 9173G. open-type cutonts.
$\ddagger$ This 3000 -amp. interrupting rating conforms to latest NEMA standards and applies only with fuse-holders that have this 3000 -amp. rating shown on the fuseholder's namephate. Fuse-holders of this same Model No. (furnished on earlier designs of 9F3II21 or 9F3HC21 cutouts) which have no interruptinar rating on the nameplate conformed to the previous NEDIA Standard and are eapable of interrupting only 2000 -amp.
*These ratings conform to maximum design ratings of distribution fuse cutouts in accordance with NEMA standards. Cutouts rated 7.8 kv . max. may be used on grounded-neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 7.8 kv and where the insulation to ground meets the operating conditions.
\#The 7.8 -ky rating will break any capacitive or inductive load current within the voltage rating and load-break of cutout.
GWill break any capacitive load current within the voltage rating and load-break rating of the cutout. Will also break any inductive load current within voltage rating and load-break of the cutout providing cight miles or more of energized line remains on the system. This small milage of connected line is advantageous with the 15-kv load-hreak to slow the rate of rise of the recovery voltage which is inherently faster on higher-voltage systems; and thereby prevent restriking after current interruption by load-hreak.
$\dagger$ lucludes EEIT-NEVIA Standard mounting bracket.

## G-E Flip-Open Fuse Cutouts *50 Amperes

A fuse link provides over-current protection without the conventional hinged fuseholder tube. Expulsion action ob)bained entirely by the fuse-link tube-a unitary part of the fuse-link. Spring contact arms pull the lower cable terminal out of the fuse-link tule when the fuse-link melts.

An inexpensive cutout for rural-line service where the circuit conditions impose a less-severe interrupting duty on the cutout, and where the advantage of the hinged fuseholder type of conventional cutout may be dispensable.

Mechanically and electrical reliability is embodied in these cutouts. Their ahility to meet the shocks and stresses of service has heen demonstrated ly flashover tests, both wet and dry, short-circuit tests, tension test of the metal-to-porcelain joints, and accelerated life tests.

| Model No. | Voltage Rating Max. Kr | Mounting Bracket | Ship. <br> Wt. <br> Lb. | $\begin{aligned} & \text { Llst } \\ & \text { Price, } \\ & \text { Each } \end{aligned}$ |

## Hubbard Heavy-Duty Cutouts Open Type Fuse

No. 2468
Rugged metal and porcelain parts withstand damage by handling, gun shot and vandalism. Optional addition of load break to meet local service conditions.

Conveniently placed line connectors with non-separable parts, insuring tight connections with aluminum or copper conductor, either stranded or solid.

Easy and convenient opening and closing, insertion or removal of fuse tube by any length of fuse stick under all weather conditions. The fuse link clamp with non-turning washer prevents mutilation of fuse cable strands for proper dropout with low current operations.

## G-E Fast-Blowing Universal Cable-Type Co-ordinating Fuse Links

The 51-, 52 -, 101 -, and 102 -ampere fuse links have timecurrent characteristics of $75-, 100-, 150-$, and 200 -ampere fast-hlowing fuse links respectively. The 103-ampere fuse link has time-current characteristics of 200 -ampere slow-blowing fuse link. These co-ordinating fuse links are rated only 1, 2, and 3 , amperes higher than the 50 - and $100-\mathrm{amp}$. links, as this is the limit of their $100 \%$ continuous current carrying ability. They will save the expense for larger cutouts where neither the load current nor the short-circuit current exceeds the safe operating ability of either the 50 - or 100 -ampere cutout. These links require more than 230 per cent of their rating to melt within five minutes and are, therefore, not "N"-rated to NEMA Standards.

Packed 25 in a carton.
Over-all length of fuse link- 20 -inches.

| Fuse Link Model No. | Fuse Llink Cap. Amp. | For Use in Cutouts Rated, Amp. | Shlp. Wt. Lb. Per Carton | ListI <br> Price, Each |

| 9F1C84 | 103 | 100 | 7 | 1.62 |

## G-E EEI-NEMA Universal Cable-Type Fuse Links

These fuse links, in accordance with NEMA Standards SG9-90, will carry rated current continuously with a maximum temperature rise of 30 C for conducting parts of the fuse holder above an ambient temperature of $40^{\circ} \mathrm{C}$.

The relation of the 300 -second (or 600 -second) minimum melting current to the fuse-link rating is approximately $200 \%$ for fuse links rated 100 -amperes or below and $\mathbf{2 4 0 \%}$ for fuse links rated over 100 -amperes. Because of superior low-meltingpoint characteristics, these fuse links have over-current continuous ratings. These ratings parallel the current ratings of G-E "N"-rated fuse links.

*The Type letters " $K$ " and "T" identify a series of fast and slow fuse links respectively as established by the EEL-NEMA Standards for distribution links. The terms fast and slow are used only to indicate the relative speeds of "K" and "T" fuse links. EEI-NEMA current rating and type letter ( $K$ or $T$ ) are stamped into the top of the button-head cap. When packaged, they can be identified by color-code stamping of descriptive data on one end of the carton-green for Type $K$ and blue for Type $T$.
$\dagger$ Use $1-, 2$-, and 3 -amp. ratings of 5 -amp. series Hi-surge fuse links.
$\dagger \dagger$ This overload rating applies only when the fuse is used in 100 -, or 200 -ampere cutouts.
§These fuse links can be substituted for G-E " $N$ "'-rated fuse links to obtain a comparable degree of protection.
\#EEI-NEMA preferred ratings.
GConform to $20-\mathrm{in}$. NEMA Std. min. spec. If extra length is required, fuse links can be supplied at the stated price additions over and above the prices listed above.

[^102]
## G-E High-Surge Universal Fuse Links <br> $100 \%$ "N"-Rated Double-Duty Fuses

For use in expulsion or flip-open-type distribution fuse cutouts.

Provide maximum overcurrent protection for distribution transformers (at 1, 2 or 3 amperes) yet provide the same freedom from surge blowing as a conventional 5 -ampere fuse.

Hi-Surge, Universal, Cable-type Fuse Links

| Cat. No. | $\begin{gathered} \text { Hi-surgo Fuse-link Rating, } \\ \text { Amperes } \\ 100 \% \% \text { or } \end{gathered}$ |  | $\begin{aligned} & \text { Ship. } \\ & \text { Wt., Libs. } \\ & \text { pet } \end{aligned}$ |  |

| 9F1FH25 | 8 | ( 10 -amp fuse $)$ | 2 | 80 |

5-Ampere Series (red auxiliary tube):
Low Current-1-, 2-, 3-ampere rating for over-current protection.
High Current-5-ampere characteristic for withstanding surges.
10-Ampere Series (black auxiliary tube)
Low Current-2-, 3-, 5- or 8 -ampere rating for overcurrent protection.
High Current-10-ampere characteristic for withstanding surges.

## For Transformer Installations they offer these Outstanding Advantages:

1. Improved Overcurrent Protection where 5 -ampere minimum fusing has previously been used.
A. With the same freedorn from blowing by motor-starting, inrush lightning, or other surge currents.
B. Without rechecking their co-ordination with linesectionalizing devices.
2. Reduced Blowing by surges where 1-, 2-, or 3 -ampere conventional fuses have previously been used.
A. With the same overcurrent protection.
B. With no need for rechecking their co-ordination with line-sectionalizing devices, in the majority of applications.

Note-In these applications of Hi-Surge Fuse Links the only factors to consider are:
A. That overload eurrents do not exceed the fuse rating.
B. That they co-ordinate with service-entrance fuses.

## G－E Fast－Blowing Universal Cable－Type Fuse Links

For Use with All G－E Reclosing，Enclosed Indicating and Dropout，Enclosed Nonindicating，and Open－type Fuse Cutouts
These fuse links are rated on the 100 per cent basis，and are designed to carry their rated current without blowing， and to blow at not over 230 per cent rating within five minutes． All G－E fast－blowing universal cable－type fuse links may be operated safely and continuously at 100 per cent rating，with a maximum temperature rise of $30^{\circ} \mathrm{C}$ ．for conducting parts of the fuse holder above an ambient temperature of $40^{\circ} \mathrm{C}$ ．

Packed 5 fuses in a carton， 250 and 300 amp．

## G－E Secondary Indicating Fuse Cutouts

The G－E secondary fuse cutout gives positive indica－ tion that the circuit is open whenever a fuse fink is blown，by pushing the Texto－ lite housing down from the upper terminal cap and dis－ playing the red fuse－holder tube which is readily visible from the ground．This sec－ ondary cutout makes trans－ former－secondary banking， transformer－secondary pro－ tection，and the isolating of service－entrance faults eco－ nomically possible．

The fuse link is protected from the weather；in this way， maintenance is minimized．The small size and light weight of the cutout cnable it to be mounted in the space between secondary lines，attached directly to the line conductor，or mounted directly on the clamp terminals of a distribution transformer（using an adapter）．Cutout can be easily and safely refused．

## G－E Oil Fuse Cutouts

The G－E oil fuse cutout is completely metal－enclosed，with a fusible element under oil，by which the circuit is hroken safely and rapidly．Standard oil fuse cutouts are available in three designs for pole，subway，or pothead service on circuits up to 7500 volts and 300 amperes．

The＂U＂－shaped universal fuse links consist of laminated－ metal terminal strips，forming the vertical legs and supporting a horizontal section of fusible alloy having a low melting temperature．This horizontal section is housed in a specially formed expulsion tule of insulating material．Fuse carrier is locked in place before circuit is closed．

Flame from arc is confined within housing，and prevents ignition of explosive gases and external damage．

Fuse link is under oil－this prevents deterioration from oxidation or electrolysis．Gases are released，but oil is confined． Subway fuse cutouts have operated for years while submerged in water．
Fuse links are quickly and easily replaced．Oil level can be maintained without removing cutouts from service．

Heavy self－aligning contacts make possible repeated open－ ing under load．
Cutouts may he fused closely to load，priviting simul－ taneously protection against overload and heavy short circuits．
G－E oil fuse cutouts are particularly applicable for sulbway service，for replacement of potheads，and for installations where high current－interrupting ability is required and where high－speed operation is essential．Other locations in which they can le used to advantage are：

Where quict operation is desirable．
Where the cutouts are exposed to sinoke，corrasive furnes， salt air，explosive gases，or inflammalle dust．
All indoor installations．
Where it is desired to have no exposed live parts，whether the cutout is in the open or the closed position．
They are ideal for indoor industrial applications．As no flame is expelled，and as all live parts are completely enclosed， the oil fuse cutout best meets the requirements of the National Electrical Code．

New G-E Universal Fuse Links For Oil Fuse Cutouts Having Notched Carrier Plugs

Universal Fuse Link Time-Current Characteristics
Iniversal fuse links, when used in G-E oil fuse cutouts of the proper rating, will carry continuously 100 per cent of the rated current of the fuse link. They will melt at approximately 150 per cent of their rating in 300 seconds ( 5 minutes).

## Application

These universal fuse links are designed for use in all oil fuse cutouts, 100 to 300 amperes, with Model No. in the 91/2D, -E, and -F series. These cutouts all have notched fusecarrier plugs, as illustrated.
I niversal fuse links can also be used in all superseded designs of G-E oil fuse cutouts, in the Cat. No. $9 \mathrm{~F}^{2} 2 \mathrm{C}$ series or earlier (except 50 -ampere, 2500 -volt rating), simply by cutling a notch in the lower end of the wooden fuse-carrier plug. A template is included in cach carton of universal fuse links to facilitate correct notching.

These fuse links are packed 2 in a box with 5 boxes per carton.

# G-E Power Capacitors for Kilovar Supply <br> Pyranol* Capacitors 

Compact and easily installed, with hangers available for crossarm monting or for direct bolting to the pole, these units are especially suited for gaining kw carreng capacits and reducing voltage drop on distribution circuits.
"They permit extremely etrective distribution of the capacitor hear in small blocks and at many points over an contire feeder. In small blochs, they supply reactive ha comonnically and with great flexibilit y for future arrangement.

For application data, see Bulletin (iE'T-2360.

## Individual Enclosed Units <br> Type EDT and EWT

For Low-voltage Industrial Application Single-phase or Polyphase, 60 Cyctes 230 Volts, 0.5 to 7.5 and 15 Kvar 460 and 575 Volts, 1, 2, 5, 10, 15 and 20 Kvar

These units are for indoor and
 provement of powar factor directly at individual motors or other small loads. Gromp installations, consisting of a small number of enclosed units, can be made if the hilovars required exceed those of a singrle mit.

For larger loads, enchosed mits may be grouped in a bank and in these applications small honsed units (type ISO) or I'T'sil) are recommended. Ask for Bulletins GEX-2712 and GiEC-1:331

## Small Rack-Type Equipments Type DTSR and LSO

Single-phase or Polyphase
230 Volts - 30 to 120
460 and 575 Volts - 40 to 240 Kvar.

In the improvement of plant power factor, it is very often desired to locate capacitor aquipment in one group on the low-voltage circuit, or perhaps in several smaller gromps. The total kva rating generally exceeds the output of a single individual capacitor unit.

Ask for Bulletin GliC-13:31A.
Prices on application.
Dust-tight design for
Indoor service,
Class DTSR
*Itegistered trade-mark of General Electric Co.

## Open-Type Stack-Rack Equipments

For High-voltage Transmission Lines and Substation Application-24 to 138,000 Volts

These factory assembled rachs are designed to minimize installation tume and provide reliahility and eeonomy where loonsed equipments are not required. A wide range of har and voltare ratings may be obtained by ommiting units or eombining racks. Each individual rack is a complete "Imilding bloek" assembly and is oesigned so that relocation or changes in bank size may he easily accomplished. The racks consist of capacitors, imlividual tms-mumbed fuses, interomecting material, and insulators.

## Large Equipments - Class LLI and LLO For Low-yoltage Applications Single-phase or Polyphase 230 to 575 Volts - 270 to 1320 Kvar

Large capacitor equipments afford a means of applying large blocks of kilovars as, for example, in sulstations or large industrial plants. These equipments are available for either indoor or outdoor service, with or without air cireuit hreakers. The units are easily accessible through hinged doors in the sides, and adequate ventilation is assured through screened openings in the housings.

## G-E Power Capacitors For Kilovar Supply Small Equipments - Class HSO

## For High-voltage Industrial \& Substation Applications Single-phase or Polyphase <br> 2400/4160Y Volts, 45-180 Kvar. 4800 and 7200 Volts, 90 and 180 Kvar.

Class IINO equipments are for use on indoor or outdoor circuits where small blocks of power-factor-improvenent capacity are desired.

In the application of capacitors on circuits of 2300 volts and higher in small industrial plants, ratings 180 hvar and less are often desired. These small equipments are ideal for this purpose, and in large plants a number of these installed at various load centers may prove more advantageous than one large equipment.
IINO equipments are also used on outdour circuits where small blocks of power-factor-improvement capacity are desired.

In applying capacitors on outdoor primary circuits for small industrial plants, ratings 180 kvar and less are oftern desired. This is especially the case where the power is motored on the primary side of the transformer bank. These Ils() equipments are ideal for this purpose, and in larger plants. a number of these installed at varions points may prove more advantageous than one large equipment. Ask for Bulletin GEA-2860.

## Large Equipments - Class HLO For High-voltage Industrial Substation Applications Single-phase or Polyphase <br> 2400-13,800 Volts 600-5400 Kvar.

Large rapacitor equipments afford a means of applying large blocks of power - factor - improvement capacity which are frequently desirable in sulstations or large industrial plants. These equipments are available for either indoor or outdoor serviee, with or without oil or magne-blast circuit breakers.

## G-E Auto-Switch Equipments

For High-voltage Power-distribution Lines, 3-phase-2400-13,800 Volts. 150, 300, 450, and 600 Kvar

Open-Type Auto-Swltch Capacitor Equipment
For distribution circuits requiring adjustable power-factur improvement hecause, where permanently connected capacitors would result in ower-voltage or leading power factor at light loads, switched pole-top open capacitor equipments are available. These equipments are switched on and of antomatically.

For further information, please contact Craybar.

## G-E Specialty Capacitors Standard Commercial Types

For A-C and D-C Applications Fixed Paper-dielectric Capacitors

A-c/d-c dual-rated Pyranol capacitors for motors. controls, electronic equipments, and other applications will: reduce inventories, simplify design problems, and inerease standardization. Capacitors in the voltare ranges 236 through 660 volis, a-c, and lat through 1.500 volts, d-c, are now duatrated and can be used for cithor ate or d-c applications. Other a-c and d-c ratines available: 0.01 to 7.5 mu f. 2.36 to 660 volts, a-c, and 100 to 100,000 volts, d-r.
Ask for Bulletin (ilec-809.
Prices on application.

## Capacitors to Meet Joint Army-Navy Specification MIL-C-25A

100 to $\mathbf{1 2 , 5 0 0}$ Volts, D-C - $\mathbb{0} .01$ to 15 Microfarads

These fixed paper-dielectric capacitors are designed to meet the rigid requirements of the joint Army-Navy specifications for use in electronic equipment for the armed forces. Hermetically sealed in metallic containers, these capacitors for d-c applications are available in Characteristics $E$ and $F$ and in case st yles C1--53, -51, -61, $-63,-67,-69$, and -70 .

In addition to regular applications, these units may also be used at higher temperatures, higher voltages for short-life applications, and with a-c voltages.

Ash for Bulletio GEC.-810.

# G-E Specialty Capacitors 

# Permafil Capacitors <br> For High-temperature Operation 0.01 to 10 Microfarads - $\mathbf{1 0 0}$ to $\mathbf{1 5 0 0}$ Volts, D-C 

Permafil d-c paper-dielectric capacitors are especially designed for operation in high ambient temperatures. They require no derating for temperatures up to 125 C . Their function is to provide suitable components for the many recent applications involving operation at ambient temperatures above 85 C .
Hermetically sealed in metallic containers and provided with permanently sealed silicone bushings, permafil capacitors, meeting MIL-C-2. A characterist ic K requirements, are available in case styles 53 and 61 .

Ask for Bulletin GEC-811.

## Tantalytic* Capacitors 3.75 to 150 Volts, D-C $\mathbf{0 . 1}$ to $\mathbf{2 5 0}$ Microfarads

The tantalytic capacitor was deveioped to fit certain direct-current, low-voltage applications where aluminmm electrolytics and paper capacitors have not proved entirely satisfactory, and is suggested for applications where superior performance and small size are the major facturs.
The tantalytic capacitor is a foil-type, tantalum electrode, electrolytic unit, similar in construetion to an alnminum electrolytic capacitor, but because of the characteristies of tantalum foil and the electrolyte emplosed, is smaller in size. The tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (-5.5C to +85 C ) than the eonventional aluminum electrolytic capacitor. Currently, they are being used in telephone and military communication equipment.
Ask for Bulletin GEC-808.
*Trademark of General Electric Co.

## High-Temperature Tantalytic* Capacitors

High-temperature Tantalytic capacitors are rated for operation at 12.5 C. These capacitors come in rectangular- and double-case, cylindrical designs. The: are row being applied in missiles and other military communication and ordnance equipment. They feature low leakige current, suall size, long shelf life, and a wide range of temperature cperation.
*Trademark of General Electric Co.

Capacitor Networks

For guided missiles, aircraft, and land and sea radar equipments. Whether for a service life of 10,000 hours, or just 100 hours, (i-E networhs. designed to meet exacting specifications, will give you the reliahle performance you require.

These pulse-forming network capacitors are used for radar equipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required.

For more information, see Bulletiii GEA-4996.

## Low-Voltage, High Mu-F Capacitors

These small-size, lifhtweight capacitors were developed to provide aircraft and commmication felds with a high-quality replacement for many of the applications where metallized paper capacitors are not entirely satisfactor: Selected ratings for the MIL-C-25A case styles CP-53 and CP-61 are available. The units are intended primarily for low-veltage, d-c applications.

Contact Graybar for further information.

## G-E Specialty Capacitors

## Drawn-Oval and Drawn-Rectangular Capacitors <br> 330 A-C/600 D-C to 660 A-C 1500 D-C Volts-1 to 40 Microfarads

These are a-c and d-c capacitors in drawn seamless containers. They are designed tor use in fluorescent lamp ballasts, air-conditioning equipment, voltage stabilizers, business machines, luminous-tube transformers, and submersible pumps. Drawn-oval and drawn rectangular capacitors are smaller, lighter, meehanically stronger, use less critical material, and cost 10 to 20 per cent less than standard fixed paper-dielect ric capacitors.

Ask for bulletin GEA-5777.

## High-Frequency Paper-Dielectric Capacitors For Blocking and By-pass Applications 5000, 15,000, 20,000 Volts D-C

Class IIF paper-dielectric capacitors are for use in electronic oseillator circuits of high-frequency induction - heating equipments. These capacitors may also be used advantageously in other high-frequency circuits of a similar nature.

G-LE high-voltage paper-dielectric capacitors are of relatively high capacitance for high - frequency units, and yet they are more ceanomical than conventional hirhfrequency units of considerably smaller caparitance values. They can, therefore, be applied with savings in cost, as well as with reduced losses and lower voltage drop across the capacitor.

## Oscillator-Tank-Circuit Capacitors Class HFP-Series 300

Hiyh - frequency. liquid-filled, parallel-plate capacitors designed specifically for use in the resonant circuit, or "tank circuit" of high-frequeney elemenic osillators. such as those used in olectronicheater equipments. The unique synthetie liguid dieleetric. lectronol. coupled with an improwed watercooled design. permits an umusually compact assembly whese case measures $9 \times 9 \times 9$ inches. This results in high current rating per unit volume. Designers find these smalier. low-loss units contribute materially to more compact. powerful, efficient heaters.
The capacitor. when comected in parallel with an inducttance coil, constitntes the resonant circuit which determines the frequency of the oscillator.
These units are briilt in a standard size which is convenient to handle and install. Available in ratings which will meet most requirements.
For further information, please contaet Graybar.

## Pyranol Energy-Storage and -Discharge Capacitors <br> 2000 to 6000 Volts, D-C 12.8 to 100 Microfarads

General Electric d-c Pyranol capacitors for light-dut y energy-storage applications are the result of years of experience in the design and manufacture of capacitors for this type of service. The use of Pyranol provides a relatively small, lightweight, stable capacitor which has a life consistent with the application involved. They are completely liquidfilled and hermetically sealed in terneplate containers. Their gray-lacquer finish is attractive. durable. and corrosionrevistant. For full information, see Bulletin (iEC-1357.

## Molded PVZ* Tubular Capacitors

These capacitors have applications in computers, missiles, telephone equipment, and other high-grade military and commercial electronic equipment.
Ratings: 100 to 400 volts. Can be supplied from 0.000 .47 to 0.022 uf in the 100 -volt range and from 0.00017 to 0.15 uf in the 100 volt range. Tolerances: $\pm 5 \%, \pm 10 \%, \pm 20 \%$. Temperature range is from -55 C to +125 C .
*Trademark of (iencral Electric Co.

## D-C Alumalytic* Capacitors

For radio, television, and other conmmications equipment manufacturers, General Electric supplies d-c aluninum electrolytic capacitors of high quality, in ratings to meet varied industry requirements, in ligh production quantities which assure availability

Extensive test data and performance data of General Electric electrolytic capacitors is readily available on request or sample capacitors built to your specifications will be supplied for testing purposes. I nits nay be supplied to meet particular specifications or to the industry general use specifications (RETMA IRS-154).
Tubular units may be insulated or uninsulated, single or dual-sectional, with a choice of various leads and terminals. The "can-type" units may be insulated or non-insulated, in standard diameter and length cans, with either solder-lug or hayonet pin terminals.
*Trademark of General Electric Co.

## G-E Watthour Meters

General Electric provides a complete line of single-phase and polyphase watthour meters and wathour demand meters, meter sockets and water-heater time switches.

The single-phase line of wat thour meters now includes the new I-60)-S, Class 200 meter. The polyphase line has been expanded by the addition of the new $\backslash$ - 60 family of polyphase meters.
Both the I-60 and the V-60 family of meters incorporate all the time-proven features of magnetic suspension with its resultant savings in bearing replacement and greater sustained accuraey.

## Single-Phase, Single-Stator 60-Cycle

 Types I-60, I-55 and I-50

The single-stator product line comprises a complete group of wathour meters, each one designed to meter one of your particular single-phase loads; yet each design incorporates the time-proven, yet extremely modern features that signify the narne $I-50$.

The newest addition to the line, the Type I-60-s', is a Class 200 meter, which means it can accurately meter loads up to 200 amperes. The I-60 meter, however, not only extends the range to 200 amperes, but also provides outstanding accuracy at light loads

In the preceding paragraph, mention was made to meter class. The meter class is a recently established industry standard which defines the current capacity of a meter. For example, the I-60 is a Class 200 meter and the I-55 is a Class 100 meter ( 100 ampere current capacity).

## Popular Plastic Socket-Meter Covers

Designed and engineered to meet new requirements of socket meter users.

Constructed of unbreakable clear plastic.

Weather-tests indicate covers are not affected by temperatures of almost $200^{\circ} \mathrm{F}$.

Seal-tight rim eliminates use of gasket.
Furuished for all modern meter types and street light controllers.

Prices on application.

## G-E Watthour Meters

Types V-62-S and V-62-A 3-Wire

Intended for use on circuits consisting of two "line" wires and the "neutral" obtained from a 4-wire Y, 3 -phase circuit. These meters can also be used on 3 -wire, 1,2 , or 3 phase circuits.

Extended-range current capacity of the 15 -ampere meter is 100 antperes (Class 100) and of the 30 ampere meters is 200 amperes (Class 200).

Type V-62-S is for socket connection and the V-62-A for bottom connection. Approximate dimensions for the " $s$ ". type are 7 by $7 \frac{1}{4} \mathrm{in}$.; for "A" type, $71 / 8$ by $87 / 8 \mathrm{in}$. Approximate shipping weight, 12 lbs.

## Types V-63-S and V-63-A <br> 3-Wire

Type V-63-S

Type V-63-A

Type V-63 meters in both self-contained and transformer ratings are intended for use on 3 -wire, 1, 2, or 3-phase circuits. Transformer-rated meters are provided with potentialindicating lamps.

Extended-range current capacity of the 15 ampere meter is 100 amperes (Class 100), and of the 30 ampere meter is 200 amperes (Class 200).

Type V-63-A is for bottom connection and the Type V-63-S is for socket monnting. Approximate dimensions for the " S " type are 7 by $7 \frac{1}{4} \mathrm{in}$.; for the " $A$ " type, $71 / 2$ by $61 / 4$ by $91 / 2 \mathrm{in}$.

## G-E Portable Meter-Testing Standard

## Type IB-10

Here is a portable standard which combines, for the first time, the capacity ossential for the testing of both high and fow-current-rated meters with the light weight and small size of the best kow-capacity standards.

The use of four current coils has resulted in wide operating range and excellent flexibility. All coils will carry $200^{\circ}$. current contimuously making it possible to test service meters of all ratings up to 100 amperes.

It has a completely new electromagnet, with low inherent errors, and excellent load, voltage and temperature characteristics; has also exeellent halance (aceuracy) between current circuits.

This is the first portable standard to use the G-E antiparrallax arrangement of dial and pointers, which promotes speed and accuracy as the reading is always the same regardless of the angle from which the scale is viewed. The large sweep hand, compled to the disk shaft makes one revolution for each one of the disk. The anti-parallax seale is divided in 100 clearly marked divisions in order that readings, even elswer than 1 /100th of a revolution can casily be taken. Small dials within the large one make it possible to take readings up to 100 revolutions of the disk.

## G-E Switchboard Watthour Meters For Use With Instrument Transformers

These back-connected single phase and polyphase meters comhine elements of front-connected meters with narrow $51 / 2$-inch uni-versal-type switchhoard case.

For use with instrument transformers in 2.5 ampere rating. Ised with good accuracy on loads up to $400 \%$ of normal load.

Test links are not provided for these meters. Separate test blocks can be furnished for this purpose.

The listed switchbord wathour meters are of surface mounted construction. Semi-flush and drawout construction are available.

Switchboard meters are also available for use on circuits other than those listed. Information and prices on request.

## Single-Stator, Single-Phase <br> Type IS-8

Available only in 2-wire construction. For 3 -wire service, we recommend Type IDS-19. Three-wire, single-phase circuits can be metered with the 2 -wire meter (Cat. No. 97X335) when connected with double primary, single-secondary, 3 -wire type current transformers.

Approximate size: $6 \times 51 / 2 \times 7$-inches. Ship. wt. 20 lbs.

Catalog numbers cover meters with ball-type learings.
Instrument tramsformers are not inchuded with above meters. Specify ratios of transformers with which meter is to be used. It is standard practice (for meters of modern comstruction) to use 2.5 ampere meters with current transformers having 5 ampere secondary rating.

## G-E Type MC Phase-Shifting <br> Transformers

## For Var (reactive volt-ampere) Metering

These phase-shifting transformers can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the phase-shifting transformer. When ordering these phase-shifting translormers for voltages ontside these limits, the normal operating voltage should be specilied. Types listed are without test switches.

## Type VM-62-S

With Type M-30 Register
These meters are intended for use on circuits consisting of two "line" wires and the "neutral" obtained from a 1 -wire Y, 3 -phase circuit. These ineters can also be used on 3-wire, 1, 2, or 3 -phase circuits.

Fxtended range current capacity of the 15 -ampere meter is 100 -amperes (Class 100), and of the 30 -ampere meter is 200-ampere (Class 200).

| 15. Min. Interval | 30.Min. Interval | Volts | Amps. | Full- <br> Scale <br> Kw. | List Price Each |

*lotential coils are wound and rated for "line-to-neutral" voltage and these are the values used in the listing above.

Approximate shipping weight, 14 lbs.
All meters listed are in a 60 cycle rating.

## Type VM-63-S

## With Type M-30 Register

The Type V-63 meters in both self-contained and transformer ratings are intended for use on 3 -wire, 1, 2, or 3 -phase circuits. Transformer-rated meters are provided with poten-tial-indicating lamps.

Extended-range current capacity of the 15 -ampere meter is 100 -imperes (Class 100 ), and of the 30 -impere meter is 200 amperes (Cluss 200).

## Types VM-6-S and VM-6-A

For use on the circuit obtained from a bank of two or three power transformers connected in $\Delta$ with the center tap of one transformer brought out, provided the 120-volt voltages of the lighting circuit (between the center tap and the outer wires) are balanced within limits that would permit the use of a 3 -wire, single-phase wathour meter on the lighting circuit.

All have two 2 . 0 -volt potential coils and three current circuits, with the 3 -wire current coil located on the left-hand element.

## G-E Square Watthour Meter Sockets <br> Without Circuit-Closing Device

Square socket with
Type 1-55-S meter
horizontal mounting

I sed with single-phase and network meters of four, five, and six terminals. The S-l is extremedy versatile, as illustrated by the numerous features included in every socket.

Easily converted from vertical to horizontal monnting and fifth and sixth terminals may be added with use of serewdriver only.

To eonvert from vertical to horizontal mounting:
limove sochet cover.
Interchange adjacent line terminals.
Interchange adjacent foad terminals.
Rotate meter socket 90 degrees.
Replace cover so that rain lip is on top and locking clip is on trottom.

Square socket with cover, 4 terminal cover, 4 terminai

With Serrated Ground Strap

With Lay-In Bu5-Type Ground Terminals

Standard shipping cartons contain 12 sockets; shipping weight approximately 46 lls .

## G-E Box-Type Sockets With a Manual and Visible By-Pass

Single Phase
with Manual Ey-Pass

For use with single-phase and network meters that require a manual by-pass such as for all trans-former-rated meters and for selfcontained meters when it is imperative not to interrupt service upon removal of meter.

Sockets available with four, five, or six terminals.

## Specifications:

ltating: 100 amp.
Terminal Clamp Capacity: Maximum wire size is $3 / 0$ stranded copper or aluminum wire.

Conduit Outlets: Boxes may be ohtained with hubs suitable for 11/4-in., 11/2-in., or $2-i n$. conduit.

Kinorkouts: Nides - Concentrie knockouts for 1-in., 11/4-in., 11 -in. conduit lowated at botlom of each side. Bottom-Concentric knowkouts for 1 -in., $11 / 4$-in., I $1 / 2$-in., 2 -in. conduit. Also has grounding knockouts of $1 / 4-\mathrm{in}$. and $1 / 2-\mathrm{in}$. diam. on the bottom.

Material: Boxes made of galvannealed steel. Aluminum supplied on request. P'inished with gray paint, baked on, or sheet aluminum.
Terminals: J-shaped open top type and equipped with maxinmm diam. screws with specially formed bottom ends that secore copper or aluminum wires firmly and without injury. Maximmon wire sizes are $3 / 0$ on line and load.

Grommes: (iround terminals are the same as the line and load terminals. Available with either single or double terminals.

Mantal IBy-pass: Circuit can be completed manually by inserting and fastening the by-pass links on the studs, allowing meter to be remosed from the socket without interrupting serviee.
By-pass consists of two porcelain blocks in which stuhs are provided for link type by-passes. Wiring connections from line and load terminals to hy-patss stubs are furnished. Cover over by-pass compartment cannot be replaced in the by-pass lines are in the circuit.

Construction: Outdoor weatherproof.
Dimensions: Overall-131/4-in., by $71 / 4-i n$. by $31 / 2$-in.
Shipping Weight: Approximately 13 lbs ; if aluminum 9 lbs.

By-Pass links not furnished with the sockets and must be ordered separately.

Sockets also available with Snap-action Sealing Ring.
For further information, contact Graybar.

## G-E High-Capacity, Box-Type Sockets

## Specifications

Conduit Outlets: Cabinets with
 hub suitahle for use with 21 -in. conduit, or less, are standard. Hubs are of the removable type.

Knockouts: Sides-Concentrio knockouts for $11 / 2-i n ., 2-i n$. , and $21 / 2$-in. conduit are located at the bottom of each of the two sides. Back-Concentric know in., $2-i n .$, and $21 / 2-i n$. conduit Bottom-Two sets of concentric knockouts, one set $11 / 2$-in., $2-i n$., and $21 / 2$-in., and the other set $1 / 2$-in., 3/4-in. and 1 -in.

Material: 16-gauge galvanneal steel. Aluminum supplied on request. Finished with gray paint, baked on, or sheet aluminum.

Jaw Contaets: The four highcapacity contacts are $3 / 16$-in. silverplated copper. Good contact is further assured by heavy duty backup springs. Four terminal sockets are standard, five contact sockets are available.
'Terminal IBlock Issembly: Jaw contacts and cable terminals are mounted on large porcelain base assuring rigid and permanent aligmment of the jaws. The whole assembly is removable to facilitate mounting the box, pulling in and preparing the cable for making the final connections to the socket.

Cable 'Terminals: Six pressure-type connectors, four accommodate $1 / 0$ cable, while the two grounding terminals $2 / 0$ cable. Cable terminals and jaw contacts have unit construction, minimizing potential sources of hoat.

Sealing ling: One piece, stainkess steel, snap-action is standard. Supplies on request with slip-lock ring or with no ring.

Circuit-closing Device (IBy-pass): Supplied with or without this feature. This spring loaded eircuit-closing deviee automatically opens when the meter is insorted, and closes gain before the meter is fully removed from the socket

Test links: Nome
Construction: Outdoor weatherproof.
Rating: Maximum contimous rating of the socket when wired with $1 / 0$ cable is 200 amp. Combined rating of sorket and meter depends on thermad rating of meter. When the I-50, 50 amp. meter is used, the maximum continuous rating is 200 amp.

Dimensions: Overall $15-\mathrm{in}$. by $71 / 4 \mathrm{in}$. by $41 / 2-\mathrm{in}$.

# G-E High-Capacity Connection Boxes 

## For Use with A-Type Meters

## Applications

Single-phase, 3 -wire circuits rated 240 volts, 200 amp. for use with the I-50-A 50-amp. neter.

## Specifications:

Conduit ontlets: Boxes with a hub suitable for use with $21 / 2$-in. conduit are standard. The huls are of the removable type.

Knockouts: Vides - Concentric knockonts for $11 / 2$-in., -in. and $21 / 2$-in. conduit are located at the bottom of each of the two sides. Back - Concentric knockouts for 11/2-in., --in. and 21/2-in. conduit are located on the back. Bottom(with hub)-Two sets of concentrio knockouts, one set 11/2-in., 2-in. and $21 / 2$-in.: the other set $1 / 2$-in. $3 / 4-i n$. and $1-i n$. (Without hub)-Three sets of concentrio knockouts, two sets $11 / 2-i n ., 2-i n$. and 21/2-in.; other set $1 / 2$-in. $3 / 4$-in. and 1 -in.

Material: 16-gauge galvanized steel with gray paint baked on. Outdoor, weatherproof construction.

Ventilation: Natural draft through sheltered vents at bottom and top of cover.

Dinnensions: Overall $211 / 8-i n$. by $91 / 2-i n$. by $45 / 16$-in.
Shipping Weight: 18 lhs.
Vaximum continuous rating when wired with $1 / 0$ cable is 200 -amps. Combined rating of mount and meter depends upon he thermal rating of meter. When the $1-50-\mathrm{A} .5(0-\mathrm{amp} \mathrm{m}$. meter is used, the maximum continuous rating is 200 amps.

The cable terminals are mounted on a large porcelain block which is easily remoyable to facilitate momoting the box and pulling in and preparing the cabte for making final connections to the terminal block.

The line and load terminals are pressure type connectors and accommodate $1 / 0$ cable. Two neutral terminals are of similar size joined by a bus on which is mounted a terminal for $2 / 0$ cable for connection to ground.

A steel collar and rubber gasket effectively seals glass meter cover operning

# G-E High-Capacity Polyphase Box-Type Sockets 

## Specifications:

Conduit Outlets: A hub suitable for 3 -in. condnit is standard. No hulb or huls suitable for 2 -in. or $21 / 2-\mathrm{in}$. eonduit are available on a sperial basis. Ilubs are renmovable.

Kuockouts: Sides - Coneentric knockouts for 2 -in., $21 / 2$-in., and 3 -in. conduit are located at the bottom of each of the two sides. Back - Concentric knockout for $2-i n ., 21 / 2-i n$. and 3 -in. conduit. Bottom - Two sets of eomerntrie knockouts, one set $2-\mathrm{in} ., 21 / 2$-in. and 3-in. and the other set $1 / 2$-in., $3 / 4$-in. and I-in.

Material: Galvanneal steel or sheet ahmminum finished in gray paint baked on or natural ahmoninum.
Jaw Contacts: The six high-cupacity contacts are $3 / 16$-in. silver-plated copper. (iood contact is further assured by heavyduty contact springs. The seventh contact is used for potential and is standard contart elip.

Terminal Block Assmbly: Jaw contacts and the cable terminals are mounted on large porcolain base, assuring rigid and permanent alignment of the jaws, the whole assembly bring removable to facilitate mounting the box, pulling in and preparing cable for making final connections to the socket.
Cable Terminals: The six cable terminals which accommodate $4 / 0$ cable and the jaw contacts have a unit construction, minimizing potential sources of heat. Grounding terminals are also of the pressure type and accommodate $1 / 0$ cable.
Sealing Ring: Snap-action, stainless sted sealing ring is standard. Slip-lock ring or no ring can be suppliod on request.
Circuit Closing Device (by-pass): Supplies with or withont this feature. This spring-loaded circuit-closing device automatically opens when the meter is inserted and closes again before the moter is fully removed from the socket.

Test Links: None.
Construction: Weatherproof.
Rating: Daximum continuous rating of the socket when wired with $4 / 0$ cable is 200 amps. The combined rating of socket and meter depends on the thermal rating of meter. The V-5-S and $V$ - $6-5$ have a maximum continuous rating of 125 amps. when used in this soeket.
Dimensions: Owerall height 19-in. (including hub), Width $91 / 2-\mathrm{in}$., Depth $511 / 6-\mathrm{in}$.

Sockets listed have galvannealed steel cases. If sheet aluminnm case is desired, order as "similar to standard Cat. No. except with aluminum case." Add.... Each \$4.50.

## G-E CT Sockets

## For Use with Transformer-Rated Wathour Meters

Current transformers are included and are properly wired making the sockets ready for immediate installation in the line.

## Specifications:

Sealing Ring: One-piece all-welded, stainless-steel, snapaction ring is standard.

Terminal-block Assembly: Remains in position when cover is removed.
(ircuit-closing Device: Automatically opens when meter is inserted in the socket and closes again before meter is fully removed from sucket.

Ilubs: Removable type.
Knockouts: Sides-Concentric knockouts for 3-in. and $31 / 2-\mathrm{in}$. conduit loated at bottom of each side. ButtomConcentric knockouts for $3-\mathrm{in}$. and $31 / 2$-in. conduit located in the bottom.

Grounding Knockouts: $1 / 2$-in., $3 / 4$-in., 1 -in. located in the bottom.

Construction: Outdoor type.
Material: Galvanized steel, with baked gray finish.
Transformers: Type JCA-O, butyl-molded.
Rating: Maximum for 200 -amp. (TT's, $200 \%$ load ( 400 amp); maximum for $400-\mathrm{amp}$. CT's, limit of entrance eable (one 600 MCMI or two 250 MCM per terminal).
Shipping Weight: 70-ll, for sockets with two transformars; 115 lbs . for sockets with three transformers.

# G-E Switchboard Instruments <br> <br> Long-Scale Models <br> <br> Long-Scale Models Type AB-18 (A-C) - Type DB-18 (D-C) 

Type AB-18 Ammeter

These compact lony-scale instruments are intended for general switchboard service on both large and small equipments. They are excellent for control stations, test equipment and other installations where space is limited. Five instruments can be mounted on a 24 -inch panel.
They are particularly attractive hecause of their long concentric scales, which are very accurate and casily read. Readability is also improved by a new cover designed for shadow elimination. The srale angle is $\mathbf{2 . 0} 0$ degrees for all except power-lactor meters (which are calibrated over 180 or 360 degrees) and synchroscopes.

Drawn steel, dustproof cases, with molded front. designed for semi-flush mounting. Anti-parallax scale and pointer, magnetic damping, and external zero adjusters are standard features. White scales with black marhings are standard. Black scales with white marhings can be supplied on all listed ratings. Numbered major divisions are accented to save time in reading.

## A-C Voltmeters

All ratings, except 300,600 and 750 volts, have the resistance housed in a ventilated molded cage on back of case. 300 -volt ratings require one 2 -tube external resistor. Those rated 600 and 750 volts require one t-tube external resistor. Type.

D-C Ammeters
These ammeters are normally self-contained in ratings up to and including 60 amperes. Higher ratings are supplied with external $50-\mathrm{mv}$. shmuts and 6 -ft. leads, which are included in the price of the instrument. Longer shunt leads can be furnished at an additional price. If the one-way lead lengelt exceeds 15 feet (or the two resistance evcerds 0.170 ohms) a $100-m \mathrm{v}$. instrument and shunt are required.

## D-C Ammeters with Lead-Length Compensator <br> For Use with External Shunts

For use when it is not practical to specify the length or resistance of the shont lead when ordering, ammeters, less shunt and hads (Villivoltmeters) are available with internal lead-length eompensators. Compensation for lead resistance can be made affer installation by means of a shaft extension with a serew driver slot, accessible from the back of the instrument.

Shunts are not ineluded, but should be ordered separately. Leads can be ordered separately or supplied by the user.

## G-E Switchboard Instruments

## 6-Inch Rectangular Class

## Type AD (A-C) -Type DD (D-C)

llere is a generalpurpose line of instruments that has long been used for inst rumentation of power switchgear, control bourds, test benches and similar industrial apparatus. Wr have a most complete line, including such specialized forms as heavy-duty types for steel mills and similar industries, alarm contacts, tachometers, voltmeters and highfrequency instruments for induction-heating applications, besides more stundard forms listed in this catalog.

All have welded, pressed steel cases (except lieary-duty typr, not listed) with a durable hach finish. Non-glare glass, anti-parallax scale and pointer, magnetic damping and external zero adjusters are standard features. White scales with blach markings are standard-black scales with white markings can be supplied.

The bodd, monument-shaped pointer and prominent scale markings facilitate reading from a distance.

Listings below are for surface-mounted, Type AD-6. Unless otherwise noted, add \$4.00 for semi-flush "lype AD-7.

In addition to these listings a complete line is availalne including folyphase watmeters, varmeters, frequency meters and power factor meters.

## A-C Voltmeters

Single-range voltmeters rated 300 volts or lower have selfcontained resistance. Those rated 600 and 750 volts require one 2-tube external resistor.

Dual-range voltmeters are self-contained for the low range; an external resistor is used for the high range.

| Single-Range |  |  |  |  |  |

## G-E Strip-Chart Recording Instruments Switchboard and Portable Models Type CH-For A-C 60 Cycles and D-C

Portable

Switchboard, Back-Connected

Available as switchloard instruments for surface or semiflush mounting and also as portable instruments. There is a complete line for a-c and d-c circuits, including ammeters, voltineters, wattmetors, varmeters, and frequency moters. They can be furnished with a variety of chart speeds and drives. Single speed, inches per hour, are standard on switchboard instruments, and doulle speed inches per hour and minute are standard on multirated pirtalles. Gears are availalle to provide as many as 28 various chart speeds, from $1 / 4$-inch per hour to 2 -inches per second. Driving merhanism is either a 120 -volt, 60 -cycle or a $120 \% 210$-volt, 60 -cycle synchronous motor. Special voltage ratinys and frequencies are also available. A double-speed handwound clock can he furnished. This clock will run 60 days without winding at speeds of one inch per hour or slower. Type CII recorders are all of the ink type. llave a new-design spillproof throw-away $3-12$. inhwell which comes sealed for casy insertion with no spilling, and needs no refilling or cleaniug. Record rolls are $150-\mathrm{ft}$. long, require less-frequent changing, and are six-in. wide with a $41 / 2$-in. calibrated width.

Switchboard instrument dimensions are $163 / 16 \times 107 / 8 \times 125 / 8-$ inches.

Approximate net weight, 30-lb.; shipping weight, $40-\mathrm{fl}$.
Only a partial listing of the available standard ratings is given here. For additional ratings, cansult Graybar.

# G-E Strip-Chart Recording Instruments 

Portable, Inkless, Type CF<br>For A-C and D-C

## Type CF-1 for A-C

Designed to proside recording voltmeters, ammeters, milliammeters, micrommeters, wattmeters and tachometers for applicalion where reliability and maximun convenience are important to the user. (Information on items not described below furnished on request.)

For either indoor or outdoor service. The instrument illustrated is the portable type. but can be wall- or polemomed. Switchbord modets can also be furnished.

The sperial leature of this instru-
 ment is inkless recording, no ink to dry up, freege or spill. Type Cl* recording instruments having a charl sued of one inch per hour (optional) make possible continuous operation for 30 days without attentiom. They are ideal for installations where freguent servicing is impractical.
Chart size 1 inches wide. 6.3 fo. long. Chart sperd, standard 3 inches per hour ( 1 inch and? inch per hour type available). I ineh per day type ean be furnished at $\$ 15.00$ additional. Size一 $103 / 4 \times 83 / 4 \times 6$ inches. Weight, I2 Its.

## A-C Voltmeters Type CF-1

Has $120 / 210-$-olt or 2.10 '1880-vol Pelechron motor circuit. Connections to separate teminals on terminal boek. Motor ratings changed hy link arrangement on terminal block.
Amperes.
0-.5/10
List Price Each
$\$ 235.00$

## Type CF-2 for D-C

The G-E: Type CF line, previously offered only for a-c applications has heen extended to include d-c instruments in the usual ratings of voltmeters, ammeters, milliammeters and microammeters, which makes it now ecomonical to apply recording instruments to many applications where heretofore the expense of suitable equipment could not be justified. (laformation on items not described below furnished on request.)

All d-c instruments listed are accurate to within $2 \%$ of fullscate value.
TYpe Cr'-2 voltmeters and ammeters are insulated for and designed for use in circuits not exceeding $\overline{6} 0$ ) wolts to ground.

All listed instruments have 60-eycle, $120 / 2 \cdot 10$-volt motor circuit brought out to separate terminals. 25- or 50 -cycle motors or 240 (480-wolt motor circuit may be specified at no addition in price.

D-C Voltmeters-Type CF-2
Rexistance Approximately 233 Ohms per Volt.

TYpe CF recorders can now be furnished in attractively styled cases for swithbord monting Type CF--t for a-c, TYue CF-S for d-c. For complete information, contact Girayluar.

## G-E Type CF-7 Recording Volt-Ammeter

## For Recording Current on Circuits Rated up to 8700 Volts; Also Records Voltages up to $\mathbf{7 5 0}$ Volts. A-C Only.

Very convenient for measuring current in transformers and feeder circuits; permits measurement to he made without interrupting service.

Ef(uipment includes a Type Cl- 7 recording volt-ammeter, 10-ft. Lead, and a butyl-insulated book-on current transformer.

When in use, the transformer hook is clamped around the calle or lead in which the current is to be measured.

Accuracy-3 per cent, except above 62.3 amp., 4 per cent.
Length of Lead . . . . . . . . . . . . 10-ft. (add $\$ 14.00$ for $50-\mathrm{ft}$. lead)

50 -cycle operation or 1 -inch-per-hour chart speed available at same price.

## G-E Panel Instruments

General-purpose type, particularly suitable for use in radio equipment and industrial applications where medium accuracy and high quality are required and space is at a premium.

The direct-current instruments operate on the permanentmagnet, moving-coil principle; the alternating-current instruments are of the moving-iron type.

All are accurate to within $2 \%$ of full scale.
Voltmeters, ammeters, millianmeters and micro-ammeters can be furnislied in all required ranges and in $21 / 2$-inch, $31 / 2^{-}$ inch and $4 \times 1 \frac{1}{4}$-inch sizes.

Two st yles are available in each of the $31 / 2$-inch and $21 / 2$-inch classes, all in *lextolite. In addition to the round, flushmounted model, there is a flush-mounted square style available at the same price.
*Reg. trade-mark of General Electric Co.

The $41 / 4$-inch rectangular type listed is a standard, flush model in Textolite. There are also available in illuminated types-one using rear illumination through a clear Lucite case, at an additional price.
All instruments are unshielded, but external magnet shields. can be supplied for $31 / 2$-in. and $41 / 4-\mathrm{in}$. sizes.

| Description | $\begin{aligned} & \text { 21/2. } 1 \text { Inch } \\ & 0 \cdot C \end{aligned}$ | $A \cdot C^{31 / 2 \cdot \operatorname{lnch}} \text { D.C }$ |  | 41/4-Inch |  |

## G-E Indicating Instruments

Type AP-9
For General A-C Measurement

Designed for general utility testing and made for rough usage. Ideal for motor testing, maintenance work and trouble investigation. Their high aceuracy makes them suitable for measurement work in school and industrial laboratory. The dustproof case of dark-red Textolite has top of simulated leather, and a leather handle. Large window opering, knife - edge pointer and mirror scale are standard.

Over-all Size- $27 / 6 \times 69 / 16 \times 1{ }^{13 / 16}$ in.
Weight-21/2 lbs.
Accuracy- $3 / 4$ of $1 \%$.
Frequency-2.5-133 cycles.
Scale Iength-1. 1 In.
Operating Principle-Ammeters and Voltmeters; Thomson Inclined-Coil; Wattmeters and Voltwattmeters; Electrodynamometer.
Damping-Magnetic.
Shielding-Excellent Shielding from Stray Fields.

# G-E Indicating Instruments <br> Portable <br> <br> Type DP-9-For D-C Measurement 

 <br> <br> Type DP-9-For D-C Measurement}

Accurate and dependable. For general utility testing these instruments will find wide application in general plant testing, electrolysis measurements, equipment maintenance, battery testing and electronic measurement.

Has sturdy dusiproof, Textolite case, with hinged cover and leather handle.

The large clearance hetween moving parts afforts maximum readability, long service and sustained aceuracy.
Knife-edge pointer and mirror scale are standarl features.
 curacy- $1 / 2$ of 1 c. Scale Length-i $11 \ln$. Operating Principle -Permanent Magnet. Moving-Coil. Damping-Magnetic. Shielding-Shielded for Stray Magnetic F゙ields.

## G-E High Accuracy Instruments

## Type AP-11-A-C Instruments

Conform to ASA specifications C-39.1-1951, for 0.5\% accuracy class portables.

Accuracy- $1 / 2$ of $1 \%$ of full-scale values; Standard Temper-ature-2.5 ( 72 F ); Temperature Compensation-Viariations of $2.5 \pm 10 \mathrm{C}$ have negligible effect (about $1 / 4$ rated aceuracy); Frequency Range- 25 to 125 cyeles; Scale Length-5.5 inches; Pointer-Kinife-edge over mirrored scale; Operating Mechanism-Ammeters and voltmeters: repulsion vane.

Wattmeters: electrodynamometer. Burden - 5 amp. ammeter: 1.5 volt-amps.; 1.50 volt voltmeter: 6 volt amps.; 5 amp., 150 volt wattmeter. Current circuit: 2.5 volt-amps. Potential circuit: 1.0 volt-amps.

Adjustinents-External screw-type zero set; Internal screwtype full-scale set (ammeters and voltmeters).

Has molded Textolite Case with carrying strip. Terminals designed for spade, plug or wire-lead connectors.

Size $73 / 4 \times 77 / 8 \times 3 \frac{1}{4}$ inches. Shipping wt. 10 fbs .

## G-E High Accuracy Instruments

## A-C-D-C Portables Type AP-12

Type AI'-12 portable standards are suitable for a-c as well as $\mathrm{d}-\mathrm{c}$ current, voltage, and power measurements. They are reconmended for calibrating or checking lower-accuracy instrmments. Rated accuracy of $0.25 \%$ (ASA class) is maintained over a wide range of operating conditions. Those newly designed instruments are recommended for laboratory and electric-utility, as well as factory and field use whenever highest accuracy is an important factor.
'Type AD-12 instruments conform to ASA specilications C-39:1-1951, for 0.2.\% accuracy class portables. Dissential data, including termperature-correction factors are given on a leather tay attached to each instrument.
Aceuracy-1/4 of I/ of full-scale values; Standard Tempera-ture- $2.5 \mathrm{C}(77 \mathrm{~F})$; Frequency Range- 25 to 105 eveles; 1)-C measurements-hated acruracy ohtained from aserage of a direct and a reversed polarity reading; Scale length-5.0-in.; Pointer-Knile-edge over mirrored scale; Operating Mecha-nism-Ammeters and volt meters: repulsion-vame; wat tmeters: electrodynamometer; Burden-5 amp. ammeter: 1. .) volt-amp; 150-volt voltmeter: 6 volt-amp.; 5 -imp., 150 -volt wathneter: current circuit: 2.5 volt-amp.; potential circuit: 1.0 volt-amp.
Adjustments: (Ammeters and voltmeters), Fxtemal serewtype zero set. Internal serew-type full-scale set.
Has molded Textolite case with carrying strap. Terminals designed for spade, plug or wire-lead connectors.
Size $73 / 4 \times 77 / 8 \times 31 / 4$-in. Shipping wt. 10-llss.

## Single-phase Wattmeters

## Accurate D-C Portables Type DP-11 Portable Indicating Instruments

Conforming to all applicable requirentents of ASA $0.5 \%$ Class I'ortable lnstrument Specification C39.1-1951, these instruments are intended for general testing where dependability, readability, and durability are paramonnt.

Sturdy, break-resistant molded Textolite case and molded shadow-reducing window enclose the shock-resistant mechanism. Knife-edge pointer and mirror scale and springmounted jewel bearings provide accurate measurement mader adverse operating conditions.

Size, $8 \times 8 \times 3 \frac{1}{2}-\mathrm{in}$.; Weight, $5-11$.; Accuracy $1 / 2$ of $1 \%$ of full scale; Scale Length, $51 / 2-\mathrm{in}$.; Operating Principle, Permanent magnet. moving coil: Damping, Magnetic; Shielding, Shielded arainst stray magnetic fields; livot learing, Spring-mounted jewels.

## D-C Microammeters

These instruments depend upon external circuits for damping. External-shunt resistance in values up to twice the critical resistance can be used satisfactorily.
$\left.\begin{array}{cccc}\text { Microamperes } & \begin{array}{c}\text { Resistance, } \\ \text { Ohms }\end{array} & \begin{array}{c}\text { External Resistance } \\ \text { (or Critical }\end{array} & \text { List Price } \\ \text { Damping.OMms }\end{array}\right]$

## G-E Hook-On Wattmeters

## Type AK-2

Provides a convenient method of measuring power on single-phase and polyphase a-c circuits. This handy portable instrument will solve easily and quickly many power-generation and industrial measurement problens.
Will hetp make quick and accurate checks on active and reactive power for survey and trouble-shonting applications.
Assembled in a sturdy Textolite case, molded in one unit for maximum strength and safety. The over-all appearance, including the hook arrangement is
similar to that of the popular G-E Type AK-1 hook-on voltammeter.
Strong 6-ft. voltage leads are mounted permanently through the handle of the instrument. The leads have sheathed alligator clips for connection to non-insulated points on the conductors. Range selections can be made by simple one-hand switching of the potential circuit.

Rating-Full-Scale, Single-Phase Kw.: Voltage Range100 to 600 Volts A-C. Current Range- 15 to 600 Amperes, A-C 3-6-20-60-200-300. Frequency Range-50-70 Cycles. Accuracy -5\% of Full Scale. Scale Length-2 $1 / 2$ Inches. Size- $14 \times 4 \times 21 / 4$ Inches. Diameter of IIook Opening-2 In. High Potential-4000 Volts (rms). A-C volts hook to potential circuit.

| Cat No. | Dosstiption | List Price Each |

| 8941377 | Leather carrying case | 14.00 |
| Weig | complete with leads 3.65 lbs . |  |

## G-E Hook-On Polyphase Power-Factor Meters

Type AK-3

This meter has all the portability and convenience of the $\Lambda \mathrm{K}-1$ and AK-2 meters. Permits direct measurement of power factor without cutting conductors or interrupting service. Can be used on any balanced three-phase circuit. Measures both lagging and leading power factor on circuits of 100 to 600 volts
and 15 to 600 amperes.
Iispecially desirable and handy for industrials to check requirements for corrective equipment to reduce power costs. Central stations will find it useful in determining how best to utilize existing distribution facilities.

G-E Portable Instruments Hook-on Volt-ammeter, Type AK-4

Has an exclusive range and scale selector to eliminate the possibility of misreading scales with multiple markings.

By means of a rotating scale drum, each selection of a current or voltage range simultaneously exposes the corresponding scale. Thencedlethin pointer, noving across the clearly marked straight scale, permits fast, accurate readings. Current scales are marked in black, voltage scales in red.
The voltage leads of, the AK-1 screw in and are provided with recessed terminals thus preventing accidental pullout and protecting the operator when the leads are removed. One set of terminals serves all voltage ranges, which are switched by the selector knol.

The insulated hook is trigger-operated, providing safe operation near bare conductors. Wach instrument is tested to withstand 4000 volts a-c. A pointer-stop mechanism permits quick determination of peak currents in welding equipment and surges, such as starting currents.

Ranges: $0-10 / 30 / 100 / 300 / 800$ anperes, a-c

$$
0-150 / 300 / 750 \text { volts, a-c }
$$

Accuracy: $3 \%$ of full scale.
Scale length: $23 / 8$-inches
Dimensions: $91 / 8 \times 31 / 2 \times 11 / 2$-inches. Hook admits conductors up to 2 -inches diameter.
Weight: 11/4-lb. net, 5 -lb. shipping

## Type AK-5

Similar to Type AK-1, except covering a lower range of currents, $0-5 / 20 / 80 / 350$ amperes a-c, and not provided with pointer stop. Note the new low range, 0-5 amperes.

All come complete with leads and leather carrying case.

## G-E Portable Transformers

For use with meters, instruments and similar devices. For laboratory and general testing work.

Current transformers are available to cover a wide range of primary currents.

The Type JP-1 covers a wide range of 10 ampers to 1000 amperes by using a wound-primary construction for the lower current ratings and a window construction for the higher currents.

The Type JP-2 uses the window construction for currents wer a range of 1200 to 2500 amperes.

The Type JP-3 is designed with a combination of selfcontained wound-primary and window or through-primary construction. The wound primary is tapped to give either three or four current ratings.

The Type JP-6 uses a window construction but it is also a split-core type for clamping over conductors without interrupting the circuit.

The Type JP- 7 is of the wound-primary construction for all current ratings. The primary winding is divided into four coils and the ends of these coils are brought out through eight studs on top of the transformers. These studs are connected by removable links with wing nuts which permit connection of the coils in series, series-multiple and multiple to give three primary current ratings. Three additional ratings on the six rated transformers are obtained by a tap in the secondary winding.

Type JP-1

| Cat. No. | Volts | Current Ratio, Amperes Primary: Secondary | $\begin{aligned} & \text { List Price } \\ & \text { Each } \end{aligned}$ |

## G-E Double Bridges <br> Portable

For measuring low values of resistance in electric apparatus, such as motors, generators, transformers, cable, appliances, etc. simple and very practical.

All internal parts, galyanometer ratio switch, dial, hinding posts, are mounted on the top panel which is easily removable for checking or adjusting.

Accuracy- $0.1 \%$ of full scale.
Scale-P'otentiometer dial calibrated in ohms.
Range- 0.0001 to 22 ohms.
Size-9x $13 \times 8$ inches.

## Double IBridge-Complete with One Set of

5-Ft. Connection Leads
List Price Each $\$ 545.00$
Weight each 16 Itse, net shipping weight, 30 Its.

## G-E Gauss Meters

## For Measurement of Flux Density

An efficient and simple device for direct measurement of density of flux of permanent magnets and d-c electromagnets. Compact and low cost, but equal or superior to electronic fluxneters.

Operated by holding the meter in one hand and placing the rigid exploring rod, protruding from the back of the meter, in the field to be cheched. A small magnet in the end of the tubular prod is connected by a movable shaft to the pointer. The magnet lines up, in direction and polarity. with the field. Manual rotation of the instrument case gives direction of flux. when pointer is at 0 position, and magnitude of flux when pointer is at maximum deflection.

Accuracy-士.5\%
Dimensions-
Case, 2-in. diameter, 1-in. deep.
Prod, 0.07.5-in. diameter, $11 / 4$-in. long, or
$0.090-\mathrm{in}$. diameter, $5-\mathrm{in}$. long. ( $0.052-\mathrm{in}$. diam. by 11/4-in. long at slightly higher price.)
Complete with carrying case and standard magnet.
When ordering, specify range in gausses, and give prod length.

List prices range from $\$ 119.00$ to $\$ 176.00$.
Weight each, 3-ozs.; net shipping weight. 1 ll .

## G-E Thermocouple Vacuum Gauge

## Portable and Self-Contained

These gauges provide a convenient means of measuring pressure from 1-1000 mierons Ig . They work on the principle that the heatloss of the gauge-tule filament is a function of pressure of the medium enclosing the filament.

By use of tuhes installed at desired locations, pressure readings at several points in the vacuum system can be obtained.

## Description

List Pileo
Each
With scale marked 0-1000 microns; with standard gauge tube,
$\$ 141.00$

## G-E Halogen Leak Standard

A portable precision device used to calibrate a halogen leak detector mahing possille quantitative leak checking.

Enables accurate leak size determination $\pm \mathbf{1 0 \%}$ full scale. Plug in to 110-120 volt, 50-60 cycle power supply and turn on power. Adjust leak standard to desired leak rate value. Then insert probe of leak detector firmly into gun fitting of leak standard and read out put indicator.

Dimensions $7 \frac{1}{2}$ in. wide $\times 9 \mathrm{in}$. high $\times 16 \mathrm{in}$. deep. Ruggedly designed and equipped with rechargeable containers providing low cost maintenance.

Shipping wt. 25 lbs .

## Leak Detector. Type H-1 For Locating Leaks in Closed Systems

The Type H-I leak detector, which detects the presence of
The Type $11-1$ leak detector, which deteets the presence of
halogen vapors. is used for rapid location of minute leaks in closed systems that nust be leaktight. Bxtremely sensitive, it can locate a leak of $1 / 100$ of an ounce of Freon per year. Durably constructed, it is used in the field, in testing, or on the assembly line.

Leaks can be located in systems in which one of the halogen family of pases is present or can lie introduced. Among the many applications of this instrument it cam be used to detect

Type H-1 Control Unit and Fixed-Head Unit
Specifically designed to facilitate antomatic, high-pronluction leak testing at low cost. Ised by the container manufacturing industry, and manufacturers who pachage in pressurized cans which utilize Freon* or its equivalent as a propellent, Ised also in area monitoring. I las high sensitivity: $1-3$ ppm. Rasily installed and sturdily designed.

Ilalogen gas concentration of 1 part per million can be detected. Sensitivity is varied by selector switch.

leaks in: Refrigeration and air-conditioning systems; Transformer casings; Ilermetically sealed products; Tanks; Instrument tubing, and Sports equipment.
The leak detector consists of a detector unit and control unit. The detector unit is a hand-held probe with a plastictipped metal nozzle. It has an element sensitive to halogen vapors and a blower which draws in a continuous air sample. The control unit contains the power supply, amplifier, indicating instmments, loudspeaker, and necessary controls. The loudspeaker gives an audible indication when a leak is deteeted. A jack is provided on the front of the cover for optional use of earphones. A sensitive electronic relay is available to operate a light, horn or other indicator or control when leaks are detected

Many of its advantages are: 11 igh sensitivity, detects leaks in a moment; Versatility, designed for production line, as well as lield use; beonomical, minimizes risk of breakdowns caused by leaks; Time saving, provides fast efficient means of inspecting seams, welds and it's compaet, lightweight in in portable design.

## Specifieations:

Power: 105-125 volts, 60 -cycles, 85 watts.
Dimensions and Weights:
Detector unit- $61 / 2 \times 2 \times 10$ inches; $21 / 2 \mathrm{H}$.
Control unit- $141 / 2 \times 8 \times 61 / 2$ inches; $15 \%$.
Leak detector, Type II-1, includes: Detector nnit, Cat. No. 91.39 .32 G 7 with 10 ft . of cable lead, and control unit, Cat. No. 9159506 G 4 , with 25 ft . lead, carrying case and strap.

The molecular vacunm gage measures and continoously indicates pressures encountered in many manulacturing and chemical processes. Fintirely new in its principle of operation the F - F molecular vacumm gage eliminates the need for external detectors. Instrument is valuable in vacumm metallurgy. metal purification, refrigeration, vacumm coating, plating etc.

The gage is a complete unit in itself. 'Two calibration types are available: one for dry air indicates pressures between 0 and 20 millimeters, while another type with a linear seale of 100 uniform divisions is available for other gases.

Detecting cylinders, constructed of thin vaned brass, are coaxially aligned. A driving motor rotates one detecting cylinder, monnted in ball hearings lubricated for life, which sets gas molecules in motion. The movement of the molecules rotates the other detecting cylinder (jewel-hearing mounted). The indicating pointer is coupled directly to the cylinder rotated by the moving molecules.

Advantages are that the unit is self-contained with no external detectors; has a wide range of 0 to 20 millineters; is low in cost; completely mechanical, no tube burnouts; easy to use, no controls to adjust; and is direct reading, the calibration is unaltered through continuous operation.

Model 924

The instruments have black japanned Bonderized steel cases, and are available in flush or surface type, with either embossed or smooth fronts. The smooth front cases harmonize with the Model 496 Gronp. Size at Base $53 / 4 \times 6$ in.

Unless otherwise specified all instruments will be furnished with embossed fronts.

Prices below are for flush type cases; if surface type are wanted deduct $\$ 3.00$ from list.

## D-C Voltmeters - Model 921

Accurate within $1 \%$. Scale length 5.12 in
Type: Permanent magnet moving coil.
Resistance 100 Ohms per volt, self-contained.

| Range | Scale Div. | Each |
| ---: | :---: | ---: |
| 15 | 30 | $\$ 97.00$ |
| 150 | 30 | 97.75 |
| 300 | 30 | 100.00 |

Can be supplied with a sensitivity of 1 ma for use with tubular resistors.

## D-C Ammeters - Model 921

Ranges up to and including $\mathbf{5 0}$ amperes are normally supplied with self-contained shunts. All external shunt ammeters are supplied with standard 5 ft . shunt leads. Higher ranges available through the use of external shunts.

Instead of the standard 5 ft . leads furnished, any leads having a total resistance of 0.065 ohm can be used. This model can be supplied with leads of higher resistance up to 1.5 ohms at a surcharge of $\$ 4.50$.

*Where current transformers are used the instrument will be scaled in terms of transformer primary.

## Wattmeters, Power Factor Meters, Frequency Meters and Synchroscopes

We can furnish a complete line for the conventional switchboard, in designs matching the voltmeters and ammeters listed above. Contact Graybar for complete bulletin and prices.

# Weston Portable Instruments 

For Testing Direct Current

Model 931
Accurate within $1 / 2$ of $1 \%$. Scale length 4.01 in .
Type: Self-shielded permanent magnet moving coil (shielded from external magnetic fields).
Well compensated for temperature changes.
Size Case: $31 / 4 \times 5 \times 51 / 4 \mathrm{in}$.
Approximate wt. 2 lbs.
Model 931 Voltmeter

## D-C Voltmeters

Ranges are self-contained up to 1000 volts inclusive. Up to four ranges can the provided on binding posts, or 11 ranges with a switch and two hinding posts. On instrments of 1000 ohms fer volt sensitivity, higher ranges to 5000 wolts may be obtanted with external resistors. Instruments with a sensitivit y of 5000 ohms per volt can ohtain ranges to 3000 volts with external resistors.

| Rantes | Scale Dlv. | 1000 Dhms Per Volt Each | 5000 Dhm Per Volt Each |
| :---: | :---: | :---: | :---: |
| 75/30/7.5 | 150 | \$106.00 | \$121.00 |
| 150/15/3 | 150 | 106.75 | 121.75 |
| 300/150/3 | 150 | 109.00 | 124.00 |
| 750/300/150 | 150 | 11575 | 130.75 |

## D-C Ammeters

Ranges are self-contained up to 50 amperes inclusive. A maximum of three self-contained ranges can be supplied on binding posts.

| Rango | Scale Div. | Each | Range | $\begin{aligned} & \text { Scale } \\ & \text { Div. } \end{aligned}$ | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 100 | \$94.00 | 10/1/0.1 | 100 | \$109.00 |
| 5 | 100 | 94.00 | 15/3/01 5 | 150 | 10900 |
| 15 | 1.50 | 94.00 | 25/10/2.5 | 100 | 10900 |
| 30 | 1.30 | 94.00 | 30/15/3 | 150 | 109.00 |
| 5/0.5/0.05 | 100 | 109.00 | 50/5/0.5 | 100 | 109.00 |
|  |  |  | 50/25/10 | 100 | 109.00 |

Note-For maximum thexibility and where one instrmment is requireal to measure current of a few anmeres to hundreds of amperes, a 50 my. instrument with 5 -fti. leads and a group of external shonts is recommended. External shme ammeters are calibrated with scates to suit the shmots selected. When these instruments are desired add price of appropriate shunts to instrument price.

## D-C Milliammeters

Ranges up to four can be provided self-contained on binding posts, a maximum of 10 ranges can be provided with a switch and two binding posts.

## D-C Microammeters

Up to four self-comtaned ranges can be provided on binding posts, a maximum of 10 ranges can be provided with a switch and two binding posts.

## For Testing Direct Current and Single-phase Alternating Current

Model 432
D-C and Single-Phase A-C Wattmeters
Accurate within $1 / 2$ of $1 \%$.
Scale length 4.01 in .
Type: Electrodynamometer (shielded from external magnetic fiedds).
Size case: $31 / 4 \times 5 \times 51 / 4 \mathrm{in}$.
Approximate wt., $31 / 4$ lbs.

## Model 432 Wattmeter

Power Consumption: Potential circuit at 115 volts, 60 cycles- 1.2 watts, 1.2 volt-amperes. Current circuit at 5 amperes, 60 eycles- 0.65 watt, 0.68 volt-amperes.

Frequency Coverage: Alternating current at frequencies from 2.5 to 12.5 cycles. Can ly compensated at a surcharge, to cover a frequency span up to 1000 cycles at an accuracy with $1 / 2 \%$, or to 2.500 cycles within $1 \%$ accuracy.

Self-contained Ranges: Double voltage and single or double current ranges, self-contained up to 300 volts and 50 amperes.

Range Extension: Potential Ranges can be obtained up to 750 volts with external multipliers. Iligher ranges require the use of potential transformers.

## For General Use

| Volts | Amperes |  | Watts, Range |  | Scale Div. | Each |

## Y-Boxes for Model 432 Wattmeters

A Model 432 single-phase a-c wattineter can be used to measure the power in a balanced 3 -phase, 3 -wire system by means of an external Y-Box.

| $\begin{aligned} & \text { Type } \\ & \text { Box } \end{aligned}$ | Normal Voltage Instr. | Y-Box Multiplyine Constant | Normal Line Voltage With Y-Boz | Marimum Voltage With Y.Box | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 51 | 75 | 3 | 150 | 170 | \$51.25 |
| 52 | 150 | 3 | 300 | 310 | 51.25 |
| 52 | 150 | 4 | 400 | 150 | 51.25 |
| 53 | 150 | 5 | 500 | 5.30 | 51.25 |
| 53 | 150 | 6 | 600 | 650 | 51.25 |

Note-All orders for Y-Buxes must give the instrument potential range with which the box will the used and the line voltage of the 3 -phase system to be measured.

Carrying Cases-For all standard ranges $\mathbf{\$ 2 0 . 0 0}$ List. For instruments requiring extended cases, $\mathbf{\$ 2 5 . 0 0}$ List.

## Weston Portable Instruments

For Testing Alternating Current

## Model 433

Accurate within $3 / 4$ of $1 \%$. Scale length 1.04 in .
Typr: Movable iron shielded from external magnetic fields).
Well comperisated for temperature changes.
Size Case: $31 / 4 \times 5 \times .{ }^{1 / 2} \mathrm{in}$.
Approximate wt., $21 / 2 \mathrm{lls}$.
Model 433 Voltmeter

## A-C Voltmeters

Power Consumption: 1.50 volt range at 11.5 volts, 60 cycles - 2.5 watts, 2.5 volt-amperes.

Frequency Coverage: Standard, altornating current 2.5 to 125 cycles. 1ligh frequewies, at a surcharge, as many as 3 self-contained ranges can be supplied for a coverage of 2.5 to 1000 cycles providing the ratio of the highest to the lowest range is not greater than 1.1 owest practical range is 1.5 volts, highest 750 volts. About 3.3 watts minimum is required to operate single range instruments or the low range of multirange units.
Coverage to 2500 cycles is possible in single range voltmeters only, with an accuracy within $11 / 4 \%$. Single ranges from 20 to 750 volts are practical and have an extension on the case to accommodate the additional resistance necessary. Approximately 10 watts are required for operation.
Self-contained Ranges: Single, double and triple volt ranges up to 750 volts. Higher ranges can be obtained with multipliers or by using a Model 311 Potential Transformer in connection with a 150 volt range.

Single Range

| Single Range |  |  |  |  |  |  |  |

## For Testing Alternating Current

## Model 330

Model 330

A compact multi-range a-c voltmeter recommended for use wherever the current drain of the instrument must be limited to a low value, as in testing railway signal eircuits, ete.

All ranges are fused for protection of overloads, and a range-changing switch is incorporated for range selection. Parallax errors are eliminated by use of a knife-edge pointer and mirror scale.

Contained in a black molded Bakelite case with hinged cover and leather carrying handle.

Accuracy: $1 \%$ at 60 cycles; $2 \%$ at 25 to 100 cycles.
Scale length 2.67 in .
Tyike: Iron core dynamometer.
Size Case: $35515 \times 17 / 8 \times 1^{13 / 6}$ in.
Approximate weight $13 / 4 \mathrm{lls}$.

## Model 540

## D-C Fused Six Range <br> Volt-Ammeters

Designed especially for railway signal testing, for school use and for general industrial work.

Accurate within $1 \%$.
Scale length 2.7 in.
Tyie: Permanent magnet moving coil.

Size Case: $3-15 / 16 \times 47 / 8 \times 21 / 2 \mathrm{in}$.
Approximate weight 2 lis.
All ranges are fused and brought out through a selector switch to three binding posts; a common + , a current, and a potential post. The arrangement facilitates connections so that both current and voltage readings can be taken by turning the switch without changing connections. The line is closed at all times when connected to the ammeter binding post regardless of the position of the range selector switch.

Black bakelite case, hinged cover and leather carrying strap.

| Range, | Range, | Scale |  |

## Weston Portable Instruments

## Model 461

A general purpose current transformer with wide varieties of ranges in three types, with adequate accuracy for most industrial measurements.

Type 1 - Primarily for use with ammeters.

Type 2 - llas a nickel alloy core and corresponding low phase angle, and is preferable for wattmeters and ammeters.

Type 5 - Similar to l'ype 2, but designed primarily to standardize ammeters, particularly in the lower ranges, but can be used with wattmeters and anmeters to measure load currents and power. Because of the relatively high voltage drop in the low ranges it may be necessary to increase the voltage source to the load liy the amount of the transformer drop, in order to maintain the voltage across the load.

For voltages beyond the ratings listed, Model 9960 Iligh Voltage Insulating Sleeve should be used. A secondary shortcircuiting switeh is provided.

Types 1 and 5 are in black Bakelite cases; Type 2 in a tan or natural color canvas filler Bakelite Case. Size: $8 \times 65 / 8 \times 23 / 4$ in.

Approximate weight 8 lbs.

| Ranges, Amperes | Typal | Typo 2 | Typa ${ }^{3}$ |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & * 800 / * 400 / * 200 / 100 / 50 / 20 / \mathbf{1 0} \\ & \text { Pri. to } 5 \text { Sec. } \end{aligned}$ | \$ $\$ 132.00$ | \$169.00 |  |
| $\begin{aligned} & * 1000 / * 500 / * 250 / 100 / 50 / 25 / 10 \\ & \text { Pri. to } 5 \text { Sec. } \end{aligned}$ | 132.00 | 169.00 |  |
| $\begin{aligned} & * 500 / * 250 / * 100 / 50 / 25 / 10 / \\ & 5 / 2.5 / 1 / 0.5 \text { Pri. to } 5 \text { Sec. } \end{aligned}$ |  |  | 182.00 |

*These ranges are olstained by inserting one, two, etc. turns, respectively, of the primary through the core opening; other ranges are on binding posts.

## For Testing Direct Current

## Model 281

Accurate within $1 \%$.
Scale length 2.97-in.
'Type: Core magnet moving coil. (Nhielded from external magnetic fields.)

Size Case: $4-2 / 5 \times 4-3 / 5 \times 11 / 2 \mathrm{in}$.
Approximate weight 14 oz .
Iland calihrated scales; knife-edge pointers, combined with mirrors to eliminate parallax errors.

Recommended wherever precision d-c testing is required.

## D-C Voltmeters

Resistance approximately 100 Ohms per Volt.

| Range | Seale Dir. | Each | Rango | Scale Div. | Each |

## Weston Portable Instruments

## For Testing Alternating Current

Double Range Voltmeter

## Model 528

Miniature portalles for checking small electrical products and for servicing them in the field; also for use in research and educational laboratories and for general testing.

Accurate within $2 \%$.
Scale length 2.03 in .
Type: Movable iron.
Size: $327 / 32 \times 35 / 32 \times 21 / 8 \mathrm{in}$.
Approximate weight 11 ozs.
In Dlack molded Bakelite Case. All single and double range instruments have binding post connections. 'Iriple range voltmeters have pin jacks to receive standard pin-tipped leads which are supplied at no extra charge.

## A-C Voltmeters

For use on frequencies from 25 to 125 cycles. Made in double and triple range combinations, having high internal resistance with correspondingly low current consumption. Self-contained for all listed ranges. Complete with 48 in . tests leads.

| Double Range |  |  |  |
| :---: | :---: | :---: | :---: |

*Vacuum Thermocouple Type.
$\dagger$ Supplied as a current squared galvanometer, with a uniformly divided scale figured 0.100 . Scale indicates values proportional to square of current, and is uniform throughout. A curve is supplied from which the approximate value of the current can be derived from instrument indications.

Call Graybar FIRST for ...

## Model 476 A-C Instruments

Accurate within $2 \%$. Scale length 2.03 in .

## A-C Voltmeters

Power Consumption: 150 volt range at 115 volts; 0.84 watt. At 60 cycles, 0.81 Volt-ampere.

Normally adjusted for use on frequencies of 25 to 125 cycles; they can be adjusted for use on 100,800 or 1600 cyrles or any specified frequency up to 2500 cycles for a nominal surcharge. An accuracy of $2 \%$ will be maintained at the specified frequency. Can also be furnished compensated for a frequency land from 25 to 1000 or 2.5 to 2.500 cycles - Write Graybar.

| Range | Approx. Ohms per Volt | Scale Div. | Each | Range | Approx. Ohms per Volt | $\begin{aligned} & \text { Scale } \\ & \text { Oiv. } \end{aligned}$ | Each |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1.5 | 3 | 30 | \$19.00 | 50 | 52 | 50 | \$19.00 |
| 3 | 6 | 30 | 19.00 | 100 | 110 | 50 | 19.75 |
| 5 | 10 | 50 | 19.00 | 130 | 110 | 26 | 20.50 |
| 8 | 10 | 10 | 19.00 | 150 | 110 | 30 | 20.50 |
| 10 | 14 | 50 | 19.00 | 250 | 167 | 25 | 22.00 |
| 15 | 1.4 | 30 | 19.00 | 300 | 167 | 30 | 22.75 |
| 30 | 26 | 30 | 19.00 | 500 | 167 | 50 | 25.75 |

Higher ranges require external resistors or potential transformers.

## A-C Ammeters

Power Consumption: 5 ampere range at 5 amperes, 0.25 watt. At 60 cycles, 0.26 volt-ampere.

For use on frequencies from 25 to 500 cycles. On special order ammeters and milliammeters can be furnished, at a surcharge, adjusted for higher frequencies.

| Range | Approx. Res. | Scale Div. | Each | Rangs | Approx. Res. | Scale Div. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0.17 | 50 | \$19.00 | 10 | 0.0037 | 50 | \$19.00 |
| 1.5 | 0.092 | 30 | 19.00 | 15 | 0.0027 | 30 | 19.00 |
| 2 | 0.0 .52 | 40 | 19.00 | 20 | 0.0012 | 10 | 19.00 |
| 3 | 0.021 | 30 | 19.00 | 30 | 0.0008 .5 | 30 | 19.00 |
| 5 | 0.010 | 50 | 19.00 | 50 | 0.00072 | 50 | 19.00 |

For higher ranges, 5 ampere instruments should be used with Model 601 Current Transformer.

## A-C Milliammeters

For use on Frequencies from $\mathbf{2 5}$ to $\mathbf{5 0 0}$ cycles

| Range | Approx. Res. | Scale Div. | Each | Range | Approx. Res. | Scale Div. | Each |

# Weston Panel Instruments 

Models 861, 862, 863 (IIluminated)

Model 861-Milliammeter

Models 961, 962, 963
(Not Illuminated)

Model 962 VU Meter

These matched groups of large, rectangular panel, semiflush, bakelite instruments combine well proportioned mechanicul design with easy readalility of long scales through large openings.

Both groups have removable molded bakelite fronts. All are monnted the same as round types - only one round opening for instrument body and four small holes for mounting studs leing necessary.

The a-c movalle iron type instruments incorporate excellent magnetic damping, high sensitivity, good torque to weight ratio and low response time consistent with well-balanced design. A dielectric test of 5000 volts a-c is given each instruments. Steel cases provide magnetic shielding and make it unnecessary to specify the panel material, since mounting on magnetic panels will not change the calibration. The a-c scales approach uniformity for the upper $90 \%$.

The d-c, thermo and rectifier type instruments have bakelite cases, and if used on steel panels, thickness of panel should be specified to assure proper adjustment. They are also sulijected to the 5000 volts a-c dielectric test.

Instruments in Model 861 Group (Models 861, 862 and 863) are equipped with two self-contained miniature base 6 -volt 0.15 amp. lamps, ordinarily connected for dial illumination. (illumination feature is not included in the Model 961 Group - Models 961, 962 and 963.)

Accurate within $2 \%$. Scale length 3.17 in .
Type: Thermocouple.
Size: $4.25 \times 3.94$ in., Depth 2.5 in., Diameter of panel hole required 3.25 in .

## D-C Voltmeters

Approx. weight 1 lb .
Ranges listed lelow are self-contained and have a sensitivity of approximately 200 ohms per volt up to and including 200 volts; higher ranges are 1000 ohms per volt.

## A-C Rectifier Type Instruments Models $\mathbf{8 6 2}$ and 962

These instruments are offered as the only practical means of measuring small a-c currents. They may be relied upon to within about $5 \%$ of full scale value on wave forms closely approximating sine wave at ordinary room temperatures.

Rectifier Type

Rectifier Type
A-C Microammeter

| Range | Approx. Res. Dhms | $\begin{aligned} & \text { Scale } \\ & \text { Div. } \end{aligned}$ | Mod. <br> 862 <br> Each | $\begin{aligned} & \text { Mod. } \\ & 962 \\ & \text { Each } \end{aligned}$ |

| 500 | 900 | 50 | 51.50 | 44.00 |

## Type 30 VU Meters

Available with a choice of two scales, and because of their size and balanced design are most practical.
Type A scale stresses the level in VU and is used largely in monitoring wire lines.
Type B scale emphasizes per cent use of transmitter output and is the standard for broadcast service.

| Model | Scale | Each |
| :--- | ---: | ---: |
| 862 | A or B | $\mathbf{\$ 5 9 . 0 0}$ |
| 962 | A or B | $\mathbf{5 1 . 5 0}$ |

## Thermo Ammeters

Power Consumption: 1 to 4 amperes inclusive varies from 0.2 to 0.4 watt per ampere. Approx. 5 amperes and above 0.2 watt per апрегe.

Frequency errors less than $2 \%$ up to 65 megacycles.

| Amps. | Scale | Model 863 Each | $\begin{aligned} & \text { Model } \\ & 963 \\ & \text { Each } \end{aligned}$ | Amps. | Scale | $\begin{aligned} & \text { Model } \\ & 863 \\ & \text { Each } \end{aligned}$ | $\begin{aligned} & \text { Model } \\ & 963 \\ & \text { Each } \end{aligned}$ |

| 4 | 40 | 47.00 | 39.50 | 20 | 40 | 47.00 | 39.50 |

Available for d-c and a-c rectifier types, in both round and rectangular cases. Instrument can be mounted interchangeably on magnetic or mon-magnetic panels without need for special adjustment.

Accuracy: D-C. $+2 \%$ of full scale range. Rectifier type A-C $+3 \%$ of full scale when used on sine wave of 60 cycles at normal room temperature of $25^{\circ} \mathrm{C}$. Lance type pointer. self-shielded Cormag mechanism. Case $31 / 2$-in. round or rectangular flush bakelite. Terminals: Solder type up to 10 anpueres.

*Does not include shont or leads. Leads provided only when specilically called for on order. Inless otherwise specified 0.065 ohm is allowed in adjustment of the 50 millivolt instrmment for shmit lead resistance. Where specified, - ft . shunt leads, I N $-1: 31142$ (instrument end of wire stripped and timed-cye terminals at shont end) will be provided for specific use with this instrument at a price of $\$ 1.00$ list per pair. List price for this millivoltmeter is $\$ 15.00$ when provided with any of the listed ammeter scales. Other scales are available on special order.
**All d-c voltmeters have sensitivity of approximately 1000 ohms per volt. Hesistors are precision metal film Weston Vamistors. Wire wound resistors are available on special order.

## Weston Sight Meters

Sightmeter

## Model 703

Pochey-size, direct-reading instruments for measuring light. Size: $458 \times 25 \times 15 \times 1$. Can be used by anyone. Can br placed on chair, desk or machine in home, office or factory or held in the hand in whatever position the light is to be measured. The scale on the sight Meter instantly indicates whether or not the light is adeguate for a particular seering task.

They are invalisable aids for the promotion of better sight through the use of better light.; and ideal for use in the selling of home lighting equipment. such as lamps and reflectors.
'lha' use of the Sight Meter Multiplier Disc over the *Photronic Cell will extend the range ten times its normal full seale value.
Model 703, Type 7 Sight Meter, (0-100 foot-candles
(with $+V 1$ S: Oli and Cosine correction filters)....
Model 703, Type 6A Sight Meter, 0-75 foot-eandles (with †VINCOR tilter).
Model 703, Type 3A Sight Meter, $0-75$ foot-candles (Unfiltered)
Model 9924 Multiplier Dise (x10) not usalle with Cosine corrected instruments. .
Cosine corrected instruments...
Iodel 9959 Jeather Carrying Case.
*Whotronic and $\dagger$ Viscor - Registered Trade Marks.

## Weston Foot-Candle Meters Model 614

This versatile instrument is for making general commercial lighting surveys and measurements requiring a wide range of light values. No correction factors are necessary. Any type of commercial lighting can he measured directly with this compact Foot - Candle Meter. Ranges are selected through the operation of a conveniently located range-changing switch.

The *Photronic Cell is mounted on a hinge, so that with the instrument lying flat, the cell can be tilted at an angle to facilitate measurements such as reflected light from a wall or ceiling. Entirely self-contained in a sturdy bakelite case equipped with a hinged cover and leather carrying handle; Size $73 / 8 \times 33 / 8 \times 21 / 4 \mathrm{in}$.

Model 614 - 0-100/250/500 foot-candles (with
*Viscor and Cosine correction filters) .... Each \$113.00
Model 614 - 0-60/120/600 foot-candles (with
*Viscor filter).
Each 110.00
*Photronic and Viscor - Registered Trade Marks.

## Weston Plug-In Illumination Control

This instrument provides automatic "on-ofl" control of artificial lighting. Operates automatically on the basis of light level in terms of foot-candles.
No resistors or capacitors are used, nor phototubes or vacum tubes. Consists primarily of a Photronic photoelectric cell, a relay, a clock motor, one or two mercury switches and a limit switch. Complete unit is ruggedly constructed and enclosed in standard weatherproof watthour meter glass case. To install simply plug it intor a standard watt-hour meter receptacle.

An ideal control for aircraft obstruction markers; air-way beacon and airstrip lights; industrial lighting and street lighting.
No. 1089
Types 1, 1R, 4, 5 Plug-In Illumi-
nation Control (One Mercury nation Control (One Mercury switch).

Each $\$ 75.00$
No. 1089 Types 2, 3, 6 Plug-In Illumination
Control (Two Nercury Switches). Wach $\mathbf{\$ 9 0 . 0 0}$

## Westom All Purpose Electronic Tubechecker

A new functional tubetester of the Proportional Mutual Conductance type. For industrial, laboratory and general testing of receiving tubes, voltage regulator tubes and low power thyratron tulies.

Provides meter measurement of leakage resistance as high as 5 megohns hetween tuhe elements, nine single circuit, twelve position selector switches protect against olsolescence, three togyle switches make it possible to check and compare sections of twin section tubes at only one setting of the selector switch.

Filament Voltages: $\quad 0.6 \mathrm{a}, \mathbf{0 . 6 5}, 1.1,1.5,2,2.5,3.3,5,6.3$, 7.5, 10, 13, 20, 27.5, 35, 47, 70, 85, 115.

Plate Voltages: $90,130,220$ volts d-c;22, 44, 160 volts a-c. Grid Bias: $0-5 \mathrm{~V}, 0-20$ volts d-c.
Signall Voltages: $5.2,2.6,1.3,0.65$ volts peak to peak. Gm Ranges up to 30,000 nicrombos.

Power Requirements: 100 to 125 volts, 60 cycles single phase, a-c, 30 watts.
Meter measurement of high leakage resistance provides accurate meter measurement of leakage resistance as high as 5 megohins between tube elements, thus being particularly useful for 'TV' servicing and TV line production assembly.
Roll index chart provides comprehensive, up-to-date test data on commonly encountered tubes as well as those used infrequently.

Case is gray hammertone finished steel.

## Weston Volt-Ohm-Milliammeter

A highly sensitive, accurate and rugged instrument with an etched circuit and a combination of functional ranges which provide a wide range of test measurement applications in the electronic field.
llas a d-c sensitivity of 20,000 ohms/volt, and an a-c sensitivity of 1000 ohms/volt. Accuracy is $2 \%$ d-c, $3 \%$ a-c.
lange and functional switching greatly simplified by use of a single dial for all ranges and functions.
Scale length $1.63-\mathrm{in}$. Black bakelite case.

Each
980
$\$ 43.50$

## Weston All Purpose Oscilloscopes

A high gain, wideband oscilloscope designed to accurately reproduce waveforms comprising a wide band of frequencies.

The high sensitivity of 15 millivolts per inch RMN makes the oscilloscope ideal for setting resonant traps; signal tracing in low-level stages: as a general null indicator; for phase characteristic measurement in Industrial Applications and for sweep frequency visual aligmment of 'TV' receivers.

Scope contains identical vertical and horizontal push-pull amplifiers with choice of a-c or d-c coupling without affecting either sensitivity or band width. Both amplifiers have compensated step at tenuators and cathode follower input.

## Specifications

Wide Band Frequency Response: Flat within 1.5 db from 0-3.6 mic and within-3 dh to 4.5 me on both vertical and horizontal amplifiers. Transient response: overshoot 2 to $5 \%$. Rise time: 0.1 microsecond.
High Deflection Sensitivity: 15.0 millivolts per inch' I MS, on both vertical and horizontal amplifiers.

Phase Shift: Between horizontal-vertical amplifiers. 0-500 $\mathrm{kc}-0^{\circ}$, to 1 mc within $2^{\circ}$; by internal adjustment with gain controls at max. $0^{\circ}$ phase shift possible on any specific frequency to 6 me.

Calibrating Voltages: $\mathbf{5 0 0}$ millivolts, 5 volts, 50 volts, 500 volts, peak to peak.

Sweep Frequencies: $10-500,000$ cps., variable. Preset TVN position- 30 cps. Preset TV/H position- 7875 cps. Retrace time-better than $2 \%$ to 100 kc ; at 500 kc less than $10 \%$.

Internally Phased Sine Wave: Adjustable through $170^{\circ}$.
Vertical and Horizontal Polarity: Reversible.
Imput Impedance: Vertical Amplifier (without Shielded Cable), 1 meg. shunted by 60 mmf. Vertical Amplifier (with Shielded Cable, 1 meg. shunted by 120 mmf. Vertical Amplifier (with Low Capacitance Probe), 2 meg. shunted by 15 MMF . Horizontal amplifier (without Shielded Cable), 1 meg. slumted by 60 mmf .

Power Supply: 105/125 volts, 50/60 cycles. Case: Grey hammertone finished steel. Approx. weight 40 liss.

## Weston Industrial Circuit Testers

Type 6A Multi-Purpose—Multi-Range

For testing communication systems, tclephone, radio, etc. Electronic circuits and equipment. Lighting and power circuits. Resistance in all types of circuits. Signal systems, police, fire and burglar alarm. Transformers, loads and wiring.

Size: $13 \times 121 / 2 \times 51 / 2 \mathrm{in}$.
A most complete ultra-sensitive single unit 28 -range tester for general maintenance and test purposes. General maintenance work, such as checking motors, lighting circuits, etc. can be accomplished with a minimum expenditure of time. Current and potential leads can be connected to the instrument at the same time for instantaneous current and voltage readings.

## Specificatlons

Standard Weston $41 / 4 \mathrm{in}$. instrument. D-c sensitivity 50 microamperes. New ternperature compensated rectifier circuit gives greater a-c accuracy.

## Ranges

## A-C Volts, SIx Full Scale Ranges:

$5 / 15 / 30 / 150 / 300 / 750$ volts ( 1000 ohms per volt). Accurate within $3 \%$.

## A-C Current, Four Full Scale Ranges:

.5/1/5/10 amperes. Accurate within $3 \%$ on 60 cycles. Slightly less on 25 and 133 cycles. Higher ranges with external current transformers.

## D-C Volts, Seven Full Scale Ranges:

$1 / 10 / 50 / 200 / 500 / 1000$ volss ( 20,000 ohms per volt), and 100 millivolts direct or for use with external shunts. Accurate within $2 \%$ to 500 volts $-3 \%$ at 1000 volts.

## D-C Current, Six Fuil Scale Ranges:

50 microamps . . . 1/10/100 Milliamps . . . 1/10 Amps. Accurate within $2 \%$. Iligher ranges, at full scale reading, with 100 mv external shunts.

## Resistance, Flve Full Scale Ranges:

3000/30000/300000 Ohms. . . . . . . . . . . . . . . . . 3/30 Megohms
25/250/2500/25000/250000 Ohms. . . . . . . . . . . . Center Scale
(Self-contained Batteries). Accurate within $2 \%$ of linear arc length on any ohmmeter range.

## Weston Power Analyzers

## Model 639 - Type 2

A complete power analyzer designed to analyze industrial loads by measuring a-c current, voltage and power, in single and polyphase circuits; as well as power factor in 3-phase, 3 -wire balanced circuits. It is convenient, safe, compact, light in weight, rugged and portable.

Ideal for use in industrial plant maintenance; by utility service engineers, electrical contractors, marine service men and in general testing and installation work.

Accurate within $1 \%$ for voltmeter, ammeter and power factor meter, and $2 \%$ for wattmeter.

Scale lengths 3.5 in. Size case: $187 / 8 \times 107 / 8 \times 67 / 8 \mathrm{in}$.
Approximate weight 32 Ibs.
Unit consists of four Model 610 instruments ( $4 \times 4 \frac{1}{2}$ in.) a voltmeter, ammeter, wattmeter and a power factor meter, all in a rugged oak carrying case. These instruments contain the large, rugged mechanisms as used in the Weston 6 in. Line.

The ammeter has an adjustable pointer stop making it. possible to quickly determine the maximum of starting currents. The wattmeter has a single scale with nultiplying factors given on the instrument panel.

Internal connections eliminate possibility of "outages" due to improper connections; or damage to individual meters. Heavy insulated binding posts are located at top away from the operator. Instruments are placed along a horizontal centerline, with all switches below. Danger of interference with other equipment is minimized, due to less external wiring.

## Insulated for 1000 volt service.

Self-contained - All interconnections are made within the unit, saving considerable time when power studies are being made. Only a few simple connections are necessary to place this instrument in circuit. Internal switches facilitate rapid measurement of all line currents and voltages. Fine line scales with knife-edge pointers, and "Straightline"" grouping of identical instruments, provides easy readability.

Low Burdens - Potential circuit per phase, 7 voltamperes. Current circuit per phase, 6 volt-amperes.

High Overload Capaeity - Current circuits are designed to be used continuously at $25 \%$ above their rated values and may be subject to greater overloads for shorter periods of time.
Built-in Aecuraey - Current transformers are handwound on nickel alloy ring type cores, making it possible to maintain the phase angle and ratio errors at a minimum. The overall accuracy of the wattmeter and power factor meter is maintained even at low power factors as a result of the low phase angle of the transformers.

Series resistors, consisting of inert cards which are wire wound, and well spaced throughout provide maximum cooling for sustained operation and accuracy.
Model 639, Type 2........................... . . Each $\$ 763.00$

## Weston Portable Standards

## For A-C and D-C Power Measurements

Model 310
Accurate within $1 / 4$ of $1 \%$. Scale length 5.25 in .
Type: Electrodynamometer (shielded from external magnetic field).

Size Case: $81 / 2 \times 103 / 8 \times 57 / 8$ in.

Approximate weight, 12 llbs.

## Power Consumption:

Forms 1 and 3-Potential circuit at 115 volts, 60 cycles - 2.9 watts, 2.9 volt-amperes. Current circuit at 5 amperes, 60 cycles- 0.81 watt, 0.95 volt-ampere.
Form 2-Potential circuit at 115 volts, 60 cyeles- 1.4 watts, 4.1 volt-amperes. Current circuit at 5 amperes, $60-$ cycles- 3.5 watts, 3.9 volt-amperes.

This is a true electrodynamometer and will measure true rms values when used on commercial wave forms, since the wave form error in general is exceedingly small and practically unreadable.

All are calibrated at $25^{\circ} \mathrm{C}$. A certificate provided with each instrument supplies all essential data.

## Description of Forms

Form I-For general service on d-c, and on frequencies to 125 cycles. Not compensated for instrument losses, ranges based on product of normal volts and amperes. Compensated for normal temperature changes. Potential circuit has push button switch.

Form 2-For low power factor service. Potential circuit power compensation is provided as ranges are usually quite low, and the power consumed by the instrument is therefore an appreciable portion of the total. Switch is provided in potential circuit to omit or include compensation. Ranges are based on $\mathbf{2 0 \%}$ of the product of maximum volts and amperes. Frequency coverage same as Form 1. Special instruments, without potential circuit power compensation can be built, at a surcharge, to cover a frequency span up to 1000 cycles with the standard accuracy.

Form 3-Similar to Form 1, except that the potential circuit is designed for use on higher frequencies and therefore is not so well compensated for temperature changes as Form 1. On 50 volt range, frequency coverage is from 25 to 600 cycles; 100 volts and above, 25 to 1200 cycles. Special instruments can be built, at a surcharge, to cover a frequency span up to 2500 cycles with an accuracy within $1 / 2 \%$ above 1200 cycles.

| Summary |  |  |  |
| :---: | :---: | :---: | :---: |
|  | Form 1 | form 2 | Form 3 |
| Compensated for large temperature changes | Yes | No | No |
| Compensated for potential circuit power. | No | Yes | No |
| Equipped with push button switch | Yes | No |  |
| $\dagger$ Current circuit overload capacity.. | 100\% | None | 100\% |
| *Potential circuit overload capacity. | 50\% | None | 50\% |

Frequency range for normal accuracy:
Form I-d-c \& 25-125.
Form 2-d-c \& 25-125.
Form 3-d-c \& 25-600; 100 volts and above, d-c \& 25-1200.
$\dagger 100 / 50$ ampere range $50 \%$ overload only.
*Applies to ranges up to 400 volts; alsove 400 volts overload is $20 \%$.

*This range is not compensated for potential circuit power and is useful for special conditions only. Power required for instrument operation will often equal, and in some cases be more than, the power to be measured. Correspondence giving full particulars of the problem is usually required before placing the order.

All ranges listed are self-contained. Higher current ranges are obtained by using a 5 ampere range in conjunction with Model 461, Type 2 or Model 327, Types 1 or 2 Current Transformers. Higher potential ranges are obtained with multipliers or Model 311 Potential Transformers.
Leather Cases-For all Standard Ranges

## Weston Portable Standards

## For Testing Alternating and Direct Current

## Model 341

Accurate within $1 / 4$ of $1 \%$. Scale length: 5.25 in .

Type: Electrodynamometer (shielded from external magnetic fields.)

Size Case: $81 / 2 \times 103 / 8 \times 57 / 8$ in.

Approximate weight 11 lbs.

Power consumption: (300/ 150 and $300 / 150 / 75$ volt instruments) 150 volt range at 115 volts, 60 cycles- -4.0 watts, 4.0 volt-amperes.

A true electrodynamometer, self-contained, and suitable for $\mathrm{d}-\mathrm{c}$ and a-c voltage measurements. Will measure true rms voltage when used on common wave forms since the wave form error, in general, is exceedingly small and practically uireadable.
All are cailibrated af $25^{\circ} \mathrm{C}$. A certificate provided with each instrument supplies all essential data, true temperature correction factors and true frequency correction factors.
Instruments with all ranges of 7.5 volts and above are accurate to within $1 / 4$ of 1 c 0 of full scale and are usable on d-c. and a-c from 25 to 125 cycles. They are calibrated on d-c and have a negligible frequency error at 60 cycles.

All instruments with one or more ranges below 7.5 volts are accurate to within $\boldsymbol{Y}_{2}$ of $1 \%$ of full scale and are calibrated on 60 cycles. The sustained operation influence is, of necessity, somewhat greater for the 1.5 range than for higher ranges. All ranges may be used ou d-c, or a-c frequencies from 25 to 125 cycles by applying a small correction factor.

## Weston Portable Standards

For Testing Alternating and Direct Current

## Model 370

Accurate within $1 / 4$ of $1 \%$. Scale length 5.25 in.

Type: Electrodynamometer (shielded from external magnetic fields).

Size Case: $81 / 2 \times 103 / 8 \times 59 / 4$ in.

Approximate weight, 10 lbs.

Power Consumption: 5 ampere range at 5 amperes, 60 cycles - 4.5 watts, 4.7 voltamperes.

For measuring a-c and d-c current. True electrodynamometers of the shunted moving coil type in all double range combinations, and all ranges above .5 amperes.
Will measure true rms current on commercial wave forms since the wave form error is unreadable.

Instruments can be supplied for d-c, and a-c from 25 to 125 cycies, or $\mathrm{d}-\mathrm{c}$, and a-c from 25 to 1000 cycles at a rated accuracy within $1 / 4 \%$ of full scale. At a surcharge these instruments can be compensated for frequencies up to 2500 cycles. The accuracy of such instruments will be within $1 / 4 \%$ for $d-c$, and a-c from 25 to 1000 cycles. From 1000 cycles to 2500 cycles the accuracy will be within $1 / 2 \%$. All are calibrated at $25^{\circ} \mathrm{C}$. A certificate provided with each instrument supplies all essential data.

All ranges listed above are self-contained. For higher ranges use Model 461, Type 2 or Model 327, Types 1 or 2 Current Transfurmers.

Leather Carrying Cases-For all Standard
Ranges
Each
$\$ 44.00$

Weston Portable Standards
Model 329
Accurate within $1 / 2$ of $1 \%$. Scale length 5.25 in.
Type: Electrodynamometer (shielded from external magnetic fields).

Size Case : $91 / 2 \times 101 / 2 \times 81 / 16$ in.

Approx. weight, 18 lbs.
Power Consumption per element: Potential circuit at 11.5 volts, 60 cyeles - 3.4 watts, 3.4 volt-amperes. Current circuit at 5 amperes, 60 cycles - 0.80 watts, 0.91 volt-ampere
Made in three types: Form 1, 2 and 3, with characteristics comparable to those of Model 310 Watmeters.

Consist of two electrically independent single-phase wattmeters having their mevable coils monted on a common shaft, with each coil surromed by its own system of field coils. Each systeni may be used independently with seale errors of less than $1 / 20$, which is of great importance for measurements on umbalanced polyphase circuits, or on balanced three-phase circuits at low power factor.

Have double ctrrent and triple voltage ranges. Current ranges changed by means of links, and voltage ranges have independent hinding posts. Power measurements on direct current - single-phase a-c, two- or three-wire circuits - twophase, three- or four-wire circoits, and on three phase circuits, may be made directly. All instruments have "On" and "olf" switch in the potential cireuit. Calibrated at $25^{\circ}$ C. A certificate, provided with each instrument, supplies all essential data.

Model 329 Form 1 or 3
Approximate Sensitivity per Element at Normal Voltage - $\mathbf{2 6} \mathbf{~ M a}$. Polyphase Wattmeters

| 10/4/2 kw | 2 kw |  |  | 100 | 858.50 |

All ranges listed are self-contained. Higher current ranges are obtained by using a 5 amp . range in connection with two Mode 461. Type 2, or two Model 327, Type 1 or 2, Current Transformers. Potential ranges are extended by using multipliers of two Mudel 311 Potential Transformers.

## Weston Portable Multi-Purpose Instruments

Model 633 Clamp Volt-Ammeters and Clamp Ammeters

Type VA-1
Dependable magnetic circuit. Ringged bakelite case and solid bakelite handle. Completely insulated for 750 volt service. Fast, well-damped movement, accurate within $3 \%$ of full scale value. Non-shatterable scale glass. Lasily-read double scale. Pear-shaped puinter. Adjustable pointer stop for measuring motor-starting currents. Successive voltage and current readings at the flick of switch. Positive 6-position range and selector switch. Safety type trigger - designed for glove or bare hand use. Can be hung on a conductor 2 in. diameter, leaving operators' hands free.

Note - Can be used for continuous duty up $\mathbf{5 0 0}$ amperes.

## A-C Clamp Volt-Ammeters

Combines in one instrument 3 a-c voltage ranges and 5 a-c current ranges. Provides complete coverage of the voltages and currents most frequently encountered in industrial and utility service work. It is the ideal maintenance tool for on-the-job testing.

## Model 633 - A-C Clamp Ammeters

These are basically of the same design as the Clamp VoltAmmeter, except that they are not provided with the voltage features or regularly equipped with an adjustable pointer stop.

Current measurements can be made at a distance from the clamping jaws when the instrument is used in conjunction with Model 9958 50-ft. Extension Cable. This is done by removing the indicating instrument from the clamp-ammeter and inserting it in the receptacle provided on one end of the extension cord. The plug end of the cable is then inserted in the clamp-ammeter.
Note - Extension cannot be used with Type VA-1 Clamp Volt-Ammeter.
Type VA-1 - For 750/350/175 Volts; 1000/250/ 100/25/10 Amperes: Includes Potential leads. . $\$ 125.00$

Weston Clamp Volt-Ammeter
A-C Pocket Size

Lightweight, compact clamp volt-ammeter designed for the electrician, service man, engineer and motor repair shop.

Contains six current ranges and three voltage ranges that are quickly readable from any angle on one large size scale.

Precision ground faces provide positive jaw contact. Shatterproof wrap-around plastic window.

Accomodates conductors up to 1 -inch round or $13 / 4 \times 3 / 8$ in. rectangular.

New shock-mounted core magnet mechanism. Fully insulated for 750 volt service. Accurate within $\pm 3 \%$ of full scale value when used on $50-60$ cycles. Scale length, 2.36 inch.

Supplied complete with sturdy carrying case, voltage test leads with insulated battery clips and three accessory probes.

## Ranges

$300 / 150 / 60 / 30 / 15 / 6$ amperes a-c; $600 / 300 / 150$ volts a-c.

## Portable Laboratory Instruments

Same heavy bakelite case as Model 880 above. Mirrored, $41 / 2 \mathrm{in}$. hand drawn scale with knife edge pointer.

Model 9 has a D'Arsonval movement accurate to $1 / 2$ of $1 \%$ of full scale. Model 10 has an iron vane movement accurate to $1 \%$ of full scale.

## Simpson Panel Meters

$21 / 2,31 / 2$, and $41 / 2 \mathrm{in}$. round and rectangular a-c and d-c panel meters. Engineered and constructed for long life and lasting accuracy. D-C models are supplied with D'Arsonval movements. A-C models have iron-vane movements. Highly polished pivots are set in jewel bearings. All meters are damped and have heavy bakelite cases. Meters are supplied with mounting hardware and template.

## Model 125

$21 / 2 \mathrm{in}$. round case, open face style. Flange diameter, $23 / 4 \mathrm{in}$. Depth over-all, $25 / 6$ in. Body diameter, $211 / 16$ in. Scale length, $17 / 8 \mathrm{in}$.

## Model 25

$31 / 2 \mathrm{in}$. round case, open face style. Flange diameter, $31 / 2 \mathrm{in}$. Depth overall, $21 / 4 \mathrm{in}$. Body diameter, $23 / 4 \mathrm{in}$. Scale length, $29 / 16$ in.

## Model 127

$21 / 2 \mathrm{in}$. rectangular case. Width, $23 / 8 \mathrm{in}$. Height, $23 / 8$ in. Mounts in round hole. Body diameter, $2^{3}$ 后 in. Scale length, $17 / 8 \mathrm{in}$.

## Model 27

$31 / 2 \mathrm{in}$. rectangular case. Width, 3 in . Height, $31 / 8$ in. Mounts in round hole. Body diameter, $23 / 4 \mathrm{in}$. Scale length, 29\%6 in.

## Model 29

$41 / 2 \mathrm{in}$. rectangular case. Width, $421 / 32$ in. Height 41364 in . Mounts in round hole. Body diameter, $23 / 4 \mathrm{in}$. Scale length, $329 / 2 \mathrm{in}$.

## Simpson Wide-Vue Panel Meters

All Wide-Vue meters listed below are supplied with new core magnet movement (except 0-2.5, 0-50 d-c microammeters and V. I. meters).

The coremagnet movencont is self-shiclded and requires no calibration allowances for mounting on steel panels.

One-piece covers for these $31 / 2 \mathrm{in}$. size meters are molded from clear methyl methacrylate. Scale lengths are extra long for easy reading. Meters supplied complete with hardware and mounting template.

## Simpson Horizontal Edgewise Panel Meters

Edgewise meters require only half the panel area yet provide a scale length comparable to a conventional $21 / 2$-in. meter. Choice of two self-shielded core magnet meter movements offers a wide range of sensitivities.
ligrewise meters are supplied complete with mounting hardware and meet these specifications:

Accuracy: D-C, 2\% of full scole. A-C rectifier type, $5 \%$ of full scale.

Types: D-C and A-C rectifier.
Pointers: Knife-edge, lance, and spade types
Scale length: $17 / 8 \mathrm{in}$.
Case: Dustproof, molded lucite.
Standard scale: l3lack numbers on white background.
Terminals: Solder or stud type.
Weight: Approximately 5 oz.

## Simpson Plate Conductance Tube Testers

Tests any receiving tube, including 9 pin miniatures and sub-miniatures with base arrangements in a line or circle. Extra low volt leakage test will not damage any tube.

The Model 1000 is ideal for radio-TV and industrial control servicing.

Ilate conductance method provides simple, positive and aceurate tests.
Snap-out snap-in transparent plastic windows are provided wer the roll chart. Add new tube data at any time.

Todel 1000 operates on a line voltage of $105-125$ volts, $50-60$ cyeles. Supplied complete with operator's manual.

| No. | $\begin{gathered} \text { Length } \\ \text { lif. } \end{gathered}$ | Depth In. | $\begin{gathered} \text { Height } \\ \text { In. } \end{gathered}$ | Shpg. Wt. Lbs. | Each |

## Model 262

Deluxe instrument offers 33 ranges on hig 7 -in. scale.

Shielded coremagnet meter movement permits compact design for rasy portability.

D-C volts: 1.6, 8, 10, 160, $400,1600,4000$. . 20,000 ohnens per volt.

A-C volts: 3, 8, 40, 160, 800 . . . 5000 ohms per volt. AF output voltage: 3,8 , 40, 160 volts.
Volume level in decihels: -12 to +45.5 decibels in 4 ranges.
D-C resistance: $0-500$ ohms ( 1.5 center) ; $0-5 \mathrm{~K}$ ohms ( $\mathbf{~} 5 \mathrm{ohms}$ center) : $0-50 \mathrm{~K}$ ohms ( 150 ohms center) ; $0-500 \mathrm{~K}$ ohms ( 4500 ohms center); 5 megohms ( 45 K ohms center); $0-50$ megohms (450K ohins center).

D-C current: 80, $160 \mathrm{ua} ; 1.6,16,160$ ma; $1.6,16$ a.
Supplied complete with leads and operator's manual.

|  | Width | Height | Depth | Shpg. WL |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Me. | Ir | In. | In | Lbs | Each |
| 262 | 7.16 | 6 | $215 / 16$ | 6 | $\mathbf{\$ 5 9 . 5 0}$ |

## Model 240

Designed for radio testing . . . 1000 ohms per volt, a-c and d-c.

A-C volts: $15,150,750,3000$.
D-C volts: 15, 75, 300, 750, 3000 .
D-C milliamperes: 15, 150, 750.
Ohms: 0-3000 (center scale 30);0-300,000 (center scale 3000 ).

Supplied complete with leads and operator's manual.
Model 240.
Each \$28.95

## Model 230

Low cost multi-purpose tester ideal for many industrial test needs.

A-C volts: $10,250,1000,(100$ ohms per volt).

D-C volts: 10, 50, 250, 1000, (1000 ohms per volt).

D-C milliamperes: $10,50,250$.
Ohms: 0-1000, 0-100,000.
Model 230 supplied complete with leads and operator's manual.
Model 230.
Each $\$ 27.95$

Simpson Volt-Wattmeters For A-C and D-C

Model 391

A-C. d-c volt-wattmeters used for simultaneous readings of volts and watts. Dach has 2 separate 3 -in. sf. meters, built-in cord and phag for connection to the line outlet, and separate toggle switches for range selection, a-c or d-c. Supplied complete with cord, plug and operator's manual.

| Na | Ranges | Votts | Watts | Each |
| :--- | :---: | :---: | :---: | ---: |
| 391 | A-C, D-C | $0-130$ | $0-1500$ | $\mathbf{0 3 4 . 9 5}$ |
|  |  | $0-260$ | $0-3000$ |  |
| 392 | A-C, D-C | $0-130$ | $0-1000$ | $\mathbf{3 7 . 9 5}$ |
|  |  | $0-260$ | $0-5000$ |  |

## Simpson A-C Volt-Amp-Wattmeters

Rugredly built tester provides four wattage ranges which cover testing requirements for practically any appliance.

Volts: 0-150, 300.
Amps: 0.3, 15.
Watts: 0-300, 600, 1500, 3000.
Tester supplied complete with break-in plug, leads, and operator's manual.
Model 390. $\qquad$ .Each \$43.95

## Simpson Vacuum Tube Volt-Ohmmeters

Unusually versutile instrument with easy-to-read 41/2 in. scale may be used as an electronic d-c voltmeter, ohmmeter, a-c or AF voltmeter, IRF voltmeter (with accessory probe), output-meter, and other applications.

Model 30:3 is supplied with DCV probe, ACV-ohims probe, ground lead and operator's manual.

D-C voltage: ranges- $1.2,12,60,300,1200$.
Ohms: Ik ohms ( 10 ohms center) ; 100 K ohms ( 1000 ohms center) ; I megohm ( 10 k ohms center); 10 megohms ( 100 K ohms canter) : 1000 megohms ( 10 megohms center).

A-C voltage: ranges-1.2, 12, 60, 300, 1200.
Al' voltage: ranges- $-1.2,12,60$.
Decilsels: -20 to +63 decibels in 5 ranges.
RF voltage: range- 20 volts maximum. Frequency flat 20 Kc to 100 Mc .

Line voltage: $105-125$ volts, $50 / 60$ cycles.
Model 303
Each $\$ 68.00$

No. 4326

## Simpson Carrying Cases

Simpson Ever-Redy instrument carrying cases protect instruments and save time.
Large, one-piece lid folds back to expose meter and selection switches. Flip the lid and the tester is ready for instant operation.

| No. | Description | Each |
| :---: | :--- | ---: |
| 4236 | Vinyl case for Models 260, 303 | $\$ 9.75$ |
| 1818 | Leather case for Model 260 | $\mathbf{7 . 7 5}$ |

## Simpson Volt-Ohm Microammeters For A-C and D-C

Self-sliielded movement for dependable performance. 100,000 ohms per volt capacity makes the Model 269 a suitable replacement for VTVM's for many voltage and resistance checks.

D-C Volts: 1.6, 8, 40, 160, $400,1600,4000 \ldots 100,000$ ohins per volt.

A-C Volts: 3, 8, 40, 160, 800 . . 5000 ohms per volt.
AF ontput voltage: $3,8,40,160$ volts.
Volume level in decibels: -12 to +45.5 decibels in 4 ranges.
D-C resistance: $0-2 \mathrm{~K}$ ohms ( 18 ohms center); $0-20 \mathrm{~K}$ ohms ( 180 ohms center); $0-200 \mathrm{~K}$ ohms ( 1800 ohms center); $0-2$ megohms ( 18 K ohms center); $0-20$ megohms ( 180 K ohms center); 0-200 megohms ( 1.8 megolims center).
D-C current: 0-16, 0-160 ua; 0-1.6, 0-16, 0-160 ma; 0-I.6, 0-16 a.
Tester supplied complete with leads and operator's mannal. Weight, 4 lbs.

| Mo. | Length, | $\begin{gathered} \text { Helght } \\ \text { li. } \end{gathered}$ | Deppth | Shpe. WL. | Each |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 269 | 715/16 | 6 | 215/6 | 6 | \$88.00 |

## Simpson Midgetesters

Self-shielded a-c d-c volt-ohmmeter
 that fits in your shirt pocket. Rated at 10,000 olims per volt a-c or d-c. Ideal for appliance repair, radio-TV service. Utilizes a rugged core magnet meter movement.
D-C voltage: 3, 12, 60, 300, 1200.
A-C voltage: $3,12,60,300,1200$.
D-C resistances: $0-10 \mathrm{~K}$ ohms ( 120 ohms center); $0-100 \mathrm{~K}$ ohms ( 1200 ohms center); $0-1$ megohm ( 12 K ohms center); $0-10$ megohms ( 120 K olims center).

Supplied complete with leads and operator's manual.

|  | Width | Height | Depth | Weilght |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 23 | $11 /$ | In. | 02 | Each |
| 355 | $23 / 4$ | 41/2 | 1 | 7 | \$34.95 |

## Simpson Low-Ohm-Meters

Features greater accuracy from 0.1 to 25 ohms and low circuit current. Utilizes currents of only 5 ma maximum, which assures damagefree testing of low current components. Accuracy is $3 \%$ of the full scale value, in two ranges, $0-5$ ohms and $0-25$ olims.

Checking motor armatures and fields, switch and relay contact resistances, shorts between generator windings and grounds, shorts in TV and radio chassis wiring, electrical equipment in industrial plants are typical uses. Supplied with calibrated test leads.

| Helsht | Width | Deplh |
| :---: | :---: | :---: |
| In. |  |  |
| $57 / 8$ | 3 | $21 / 2$ |

Each
$\$ 24.95$

## Simpson Ohmmeters

Broadly useful instrument features a wide range of measurements from 0.2 ohm to 50 megohms in 6 ranges.
Center scale values are 5 ohms, 50 ohms, 500 ohms, 5000 ohms, 50,000 ohms, and 500,000 ohms.
Ohmmeter supplied complete with leads and operator's manual.
Model 372. $\qquad$ Each $\mathbf{\$ 2 7 . 9 5}$

## Simpson Handiscopes

Handles practically any TV-radio jol. Small, handy size and rugged construction mean you can carry it anywhere. Take reading of $5-\mathrm{in}$. screen.
Frequency response of vertical amplifier: from 15 cycles $/ \mathrm{sec}$. to $100 \mathrm{Kc} / \mathrm{sec}$., flat within $\pm 1 \mathrm{db}$; 6 db . down at 250 $\mathrm{Kc} / \mathrm{sec}$.; usable to $1 \mathbf{M c} / \mathrm{sec}$.
Maximum vertical deflection sensitivity 30 millivolts RMS/inch.
Frequency response of horizontal amplifier: from 15 cycles sec. to $20 \mathrm{he} / \mathrm{sec}$., flat within $\pm 1 \mathrm{db}$; 6 db . down at 100 ho/sec.
Maximmm horizontal deflection sensitivity: 0.7 volt RMS inch.

Z-axis sensitivity (voltage reqnired to extinguish beam): 20 volts RNIS.
Calibrating voltage (at 117.5 vac power source): 1 volt $P-1 \pm 10 \%$.

Maximum inpmt voltare: 100 volts peak.
lnput resistance: 0.1 Meg (at atten. x 1); 0.5 Meg (al atten. $x$ 100).

Input capacitance: to uuf (at atten. x 1); 35 uuf (at atten. $\times 1(0)$ ).
Sawtooth sweep range: 15 cyeles/sec. to $80 \mathrm{Kc} / \mathrm{sec}$.
Power consumption: (at 117.5 volts a-c) 50 watts $\pm 10 \%$. Handiscope supplied complete with lead and operator's manual.

| No. | Height | ${ }_{\text {Width }}^{\substack{\text { in. }}}$ | ${ }_{\text {Depth }}^{\text {Di. }}$ | Each |

| 466 | 121/4 | 8 | 161/4 | \$144.95 |
|  | Simpson Therm-0-Meters |  |  |  |

Takes temperature of air, gases, solids, or liquids with $71 / 2$ in. thermocouple leads.

Measures $-50^{\circ}$ to $+1000^{\circ} \mathrm{F}$.
Two models, each supplied with internal battery and one $71 / 2 \mathrm{in}$. general purpose prole.

Size is $715 \times 16 \times 2 \times 25 / 16$ inch. Operator's manual included.
Model 388-3L (for up to 3 probes) supplied with one general purpose probe.
.Each \$64.50 Model 388 (for 1 probe) supplied with one general purpose probe.

Each \$59.50

## Simpson Temperature Meters

Compact instrument developed principally for refrigeration equipment measures temperatures from $+70^{\circ} \mathrm{F}$. to as low as $-50^{\circ} \mathrm{F}$. Operator's manual included.
Model 385-3L (for up to 3 probes) supplied with 1 general purpose, $15-\mathrm{in}$. Thermisistor lead. $\qquad$ .Each $\$ 33.95$
Model 385 (for 1 probe) supplied with 1 general purpose, $15-\mathrm{in}$. Thermisistor lead . Each $\$ 30.00$

No.
387

# Associated Research Electrical Testing Instruments 

## Vibrotest Insulation Resistance Testers

Vibrotest megohmeters give fast, accurate insulation resistance measurements for complete electrical testing of circuits, panels, motors, circuit-breakers, cable and wiring. Many models have ohm and a-c and d-c voltage ranges. All-electric, self-contained, push-button operation, requiring no cranking or leveling. All tests made from one set of binding posts, readings made on large $41 / 2-\mathrm{in}$. meter. All steel case size $87 / 8-\mathrm{in}$. x $6-\mathrm{in} . \mathrm{x} 81 / 4-\mathrm{in}$. Complete with test leads, batteries, record cards and instruction manual.

## Vibroground Ground Resistance Testers

Vibroground tests are the quick, sure way to check resistance to earth of man-made grounds to insure safety of personnel and equipment from lightning or superimposed voltages from other circuits. No cranking, leveling or complex calculations are necessary with Vibruground. Accurate readings are made directly from instrument panel with null balance meter, potentiometer and range selector. Fully portable in enameled steel cases, size 6 -in. x $9-\mathrm{in}$. x $81 / 2-\mathrm{in}$. Furnished with batteries and instruction manual.

| Model | Ranges | Each |
| :--- | :--- | ---: |
| 251 | $0-12.5,0-125,0-1250$ ohms | $\$ 120.50$ |
| 255 | $0-3,0-30,0-300,0-3,000$ ohms | $\mathbf{1 4 2 . 5 0}$ |

## Vibroground Test Kit

Consists of 2 T-shaped reference ground rods, 18 -in. long; 1 test lead $40-\mathrm{ft}$. long; 1 test lead $20-\mathrm{ft}$. long; 1 test lead $5-\mathrm{ft}$. long; durable carrying case for complete kit. Leads are kinkless, rubber-covered, with spade terminals at both ends. No. 7104 ..... Each $\$ 27.50$

Vibroground Model 263A

Designed for testing soil resistivity, anorle-ground resistance and circuit resistance. Rugged, lightweight self-contained field instrmment, powered by 8 standard flashlight hatteries. Accurate, highly sensitive, simple to use and read directly from instrument panel.

Provided with all steel enameled case with removable cover 9 -in. x 6 -in. x $61 / 2-\mathrm{in}$.

| Model | Ranges | Each |

## Associated Research Electrical Testing Instruments

"Hypot" High Potential Testers

Makes high-voltage a-c tests for leakage, breakdown and shorts; gives clear visual indications ly means of glow lights on the instrument panel. Actual voltage output across transformer secondary shown on $1 \frac{1}{2}-\mathrm{in}$. meter. Breakdown or short causes antomatic voltage collapse for salety and nondestructive testing of circuits, components, small meters, etc.

Provided with all sterl enameled case, size 6-in. x 9 -in. x $81 / 2$-in. Furnished complete with leads and instruction manual.

Diract-current Itypots of comparahle test capacities are generally smaller and much less expensive than equivalent a-c instruments. In addition, they show true leakage current dircetly when testing wire and cable, large motors, transformers bushings, etc.

Soundy enginered and built for dependable, accurate operation under production-line or field conditions.
Case is gray wrinhle-finish steel, rack and panel type, $22-\mathrm{in}$. wide, $113 / 4-\mathrm{in}$. deep and $125 / 16-\mathrm{in}$. high.

Input 115 V. A.C., 50/60 cycle.

$4240-5000$ V. D.C. $41 / 2-\mathrm{in}$. d-c voltmeter Calibrated 0-5 KV d-c. 41/2-in. micro ammeter, ranges $0-\mathbf{3} / 10 / 50 / 100$ microamps. . $\$ 397.50$
*421 0-10,000 V. D.C. $1 / \frac{1}{2}-\mathrm{in}$. d-c voltmeter Calibrated $0-10 \mathrm{KV}$ d-c. $41 / 2$-in. micro ammeter, range 0-500 microamps.
387.50
*Same as Model 421 except equipped with high-voltage bushing which stands $13 / \mathrm{g}$-in. above case. For additional information contact Grayhar.

## Jackson Wire Tracers

## Trace-0-Meter

Fast, low cost circuit tracer for multi-conductor cables does complete job without need for color coding.

Built-in neon lamp shows whether voltage is a-c or d-c also gives indication of amount by brightness of glow. Range: 60 to 600 volts a-c. 80 to 600 volts $\mathrm{d}-\mathrm{c}$.

Traces $30,000 \mathrm{ft}$. \#10 AWG or 2,500 ft. \#22 AWG with nine test blocks.

Black non-metallic case. Bhue-gray carrying case, hattery and test leads furnished.

Meter marked for "opens", "shorts" and nine conductor circuits.

Biddle Meg Type Megger Insulation Testers

This popular Meg type of Megger insulation tester is a comveniently portable instrument with constant voltage hand generator. This compact, casy-tu-use instrmment has become the 'rost popular of all Megrer Testers simply because of its quick availability for service at any time-no dependance on Inat teries or ot her current supply.

Lasy to use-easy to read-and rugged in constant service. Weight 8 lls.

[^106]
## Biddle Midget Megger Insulation Resistance Testers

A compact and rugged little set for detecting and diagnosing faulty insulation before serious and costly damage occurs.

Camera-type leather case permits operation without removal from case.

For rugged shop and field use. Range 50 megohms, 500 volts d-c.

Weight complete 4 lbs.
No. 705 with No. 7716 leather case and 12-ft.
leads.
Each \$115. 00
Biddle Meg Type Megger Ground Testers

For measuring resistance to earth of ground connections. The method is quick, easy and economical, requiring no previous experience. Weight $71 / 2 \mathrm{lbs}$, mounted in cast aluminum case. Scales are logarithmic in character, so as to cover as wide range as possible within the limits of practical field accuracy. llange 0 to 300 ohms.
Description

## Biddle Motor Rotation Testers

Saves time in electric motor hook-ups, eliminates guesswork and danger.

With it you can easily and quickly determine the direction of rotation of any size of 1,2 or 3-phase motor and make your first connection permanent; also test circuits, check phase sequence and identify windings of multi-speed or niulti-voltage motors.

Weight, approx. 10 lbs.

No. 7370 Complete with leads.
Vach $\$ 80.00$

## Biddle "Seely" Motor Testers

For measuring the electric resistance of a-c energized windings while at the same time observing winding temperatures under actual load conditions.

Particularly effective for testing hermetic refrigeration motors, since thermocouples cannot be readily used and since motors cannot be shut down during test for resistance readings, without disrupting the test.

| No . | Desseription | Exch |

## Biddle Jagabi ${ }^{\text {dit }}$ Speed Indicators

The Jagabi speed indicater for measuring average number of revolutions per minute without any calculations, for speeds up to $20,000 \mathrm{rpm}$. After a short interval of 3 or 6 seconds of running time, the hands stop automatically at positions which indicate the measured speed.

The instruments do not show instantaneous speeds or speed variations. The spindle is set in ball bearings thereby eliminating need for lubrication. Weight 1 lb.

| No. | Dessription | Each |
| :---: | :---: | :---: |
| 9920 | Complete with case and accessories | \$44.00 |

Note: Other ranges available up to $100,000 \mathrm{rpm}$.

Has 5 ranges $30-120$, 100-100, 300-1200, 10004000, 3000-12,000 rpm. It is direct indicating, shows instantaneous speeds and speed variations.

Built - in refinements include hall bearings, thrust plates, ample sizo gears, overspeed protection and jewel bearings for the indicating mechanism.

Ranges up to 48,000 rpmavailable.

Weight 2 lls.
No. 554 Complete
with case and accessories
lach $\$ 72.00$

## Biddle "TTR" Transformer Turn Ratio Test Set

A portalle, simple-to-use and highly accurate device for measuring turn ratio in power and distribution transformers, including auto-transformers. Invaluahle for checking new units and units during and after repairs. Size $1 \cdot 41 / 2 \times 8 \times 91 / 8$ in.; weight approximately 31 lhs .
No. 55003, Model 3.
Each $\$ 790.00$

## Biddle Frahm Resonant Reed Miniature Frequency Meters

Frahm resonant reed miniature frequency meter having 11 reeds calibrated $55 / 65$ cps. One cycle interval between reeds, for operation on $100 / 150$ volts. Inherent simplicity, accurate, long life, low power consumption. Approx. wit. 1 lb .

$$

## Sunshine GEL Time Meter

To identify gelation point of thermosetting compositions.

During polymerization, fluid thermosetting compositions such as monomers, resins, and varnishes pass through a critical point at which the viscosity increases suddenly.

The length of time required to reach this point of gelation is important for both quality control and research because it is a relative measure of the rate of the polymerization process.

The gel time meter is a comparative viscosimeter designed to measure this characteristic property.
No. 22
Each \$276.00

## Sunshine Switchboard Electric Clocks

An attractive electric clock matching (i. E. Switchboard types AB-18 and D(3-18 in frontal appearance and mounting dimensions.

Case design eliminates scale shadow caused by overhead lighting and is dust tight.

Also available equipped with a tining switch for process or alarm timing.
No. 31A . . . . Each $\$ 70.00$

## Sunshine Coil Turn Counter

| 16-1A | Connter-Less Rods. . . |
| :--- | :--- |

| 16-1C | Counter-Iess Iods. . . |
| A16 | Magnetizing Rods. . . . |
| B16 | Magnetizing Iods . . . . |

The coil-turn counter is used in factories and Iaboratories for determining or checking the number of turns in aircore electric coils which can be placed over a $9 / 16$-inch or $1 / 4$-inch core.

Three models are available with the following ranges: 0-11, 110 turns; 0-31, 110 turns; or (0-61, 110 turns.

This unit indicates a coil turn count with an accuracy of 0.1 percent and makes it possible to meet the most exacting specifications.

## Sunshine Coil Tester

A single short circuited turn of \# 12 AWG copper wire can be detected with this sensitive tester.

I aluable before assembly of coils in relays. radios, small transformers, instruments, etc.

## Sunshine Metals Comparator

leerrous or non-ferrous parts are compared against a pre-selected standard to detect differences in composition, heat treatment, hardness, plating thickness, case depth, or other characteristics which alter the resistivity or magnetic properties.

No. 27 Comparator-I Less Test Jleads and Coils. . . . . \$898. 00

Sunshine Anodized Aluminum Tester

The tester quickly and accurately determines the effectiveness with which either a chromic or sulphuric acid type anodized coating has been applied to an aluminum surface.
No. 12. . . Each $\$ 295.00$

## Sunshine Analog Field Plotter

The plotter solves problems by means of electric flow patterns set up in a sheet of semi-conducting paper.

There is an analogy between the electrical field and similar fields as found in electrostatics, electromagnetics, aerodynamies, thermal flow and iluid flow.

| No. | Description | Each |

## Sunshine Lamp Type Ground Detector

A Switchboard-type instrument matching the G.E. AB-18 long scale instrument cases, using lamps as a means of detection.

Lamps are rated at 120 volts or 240 volts.

Under normal operation all lamps glow dimly. When a ground occurs the corresponding lamp goes out and the remaining ones glow brightly.

No. 32.
. Each $\$ 60.00$

## Exide Storage Batteries

## In Multi-cell

These new batteries in plastic have been designed and engineered to give-
long, Trouble-free Life.
Unsurpassed Dependability for the most vital applications.
Low Operating Cost. Extremely low internal resistance and losses, hence minimum charge currents are required.
Low Maintenance Cost. No solutions to change, nothing to renew, require water only once or twice a year. Smooth, streamline design facilitates cleaning.
Inercased Power (watt) output jer unit of space.
Less Weight per ampere-hour output.
More Attractive Installations.
Less Space Required.
Ilighly-sustained Useful Voltage even under heavy discharge.

Damage Resistant.
Transparent as glass, the plastic containers and covers are lighter in weight, more compact and possess much greater shock-resistance. The plastic is polystyrene-impervious to electrolyte-amealed for high mechanical strength and heat resistance. The cover seal is permanent-electrolyte will not leak out. Container surface is smooth and easily kept clean.

Elements are precision-fit and cover-suspended. Adequate water space is provided. Lines on all four sides of the container show recommended upper and lower electrolyte levels. Pilot balls indicate approximate state of charge. Units are supplied filled and charged (charged and wet) ready for use. They can be supplied charged and dry without electrolyte in the cells. Terminals come equipped with connector holts. Interunit connectors are furnished when two or more units are ordered.

## Type PLX

Type 3-PLX-13

For telephone, emergency lighting, laboratory and many other services. Batteries assembled in two and three compartment plastic containers. 'IWo cell unit equipped with one set of pilot balls. Three cell unit has two sets of pilot balls.

## Tytex

Type 2-COE-7
End-to-End
Small power in plastic. A flat plate battery providing long life with less weight per ampere hour output. Where space is limited, operating conditions satisfactory, service requirements light and price a consideration, Tytex is recommended.

Small power in plastic. Has the famous Exide long life manchester positive plate.
Double insulation with microporous separators together with slotted plastic separators. These provide maximum insulation with minimum resistance between phates.

Unbreakahle and sprayproof plastic vent plugs. Addition of water made easy by molded-in-cover fumel filling vent.

Available in three styles of containers in capacities of 8, 16, and 24 A. 11. at the 8 hour rate.

A. H. at the 8 hour rate.

## Exide Manchex Batteries

## Type EMP-13

For all stationary power applications. Batteries equipped with Manchester Plante poritive plates assembled in shockabsorbing, leakproof polystyrene container.

Heavy terminal post provides ample electrical path for high current requirements at maximum sustained voltages. Ample electrolyte enables cellis to deliver all rated capacities.

Cells furnished with neeessary connector bolts and lead plated copper intercell connections for $1 / 2-\mathrm{in}$. spacing between cells. Full eharge speeific grarity $1.200-1.220$.

## Exide Calcium Grid Batteries

These latteries are recommended only for applications where repulated full float charging methods are used.

The Exite Tytex with Cakcium cells correspond in capacity, dimensions, and weight with the Exide Tytex with Silvinm D(O' and EOP' cells. They are designated as DCD and ECP cells.

Type EW Exide Calcium Grid cells are available corresponding in capacity, etc. to EWA cells with Silvium. Data on cells with capacities up to 1680 ampere-hours at the 8 -hour rate of discharge supplied on request.

Counter EXIF cells are also available.
All steel battery racks cim be supplied for any battery.
For complete information and prices, contact your Graybar representative.

## Exide Lead Calcium Grid Batteries

## Type EW and FW

In plastic containers capacities of 2 and 3 cell 180 A.H. Single cell 240 to 660 A.II. all at 8 hour rate.

Double insulation of microporous rubber separators and Vitrex retainers. Lead plated inter-unit or intercell comnectors furnished provides $1 / 2-\mathrm{in}$. spacing between units.

Full charge specific gravity $1.200-$ 1.220. Dimension Type EW: $101 / 8-\mathrm{in}$. wide, 181/4-in. high. Type FW $14 \frac{17}{22}$-in. wide, 23-in. high.

*Cell final volts at all discharge ratings includes the resistance drop across the standard intercell connector in series with the cell.

## Exide Storage Batteries Type EWA

With Silvium for Telephone Service in Plastic (Polystyrene) Containers

Batteries were developed especially for float operation in telephone service. A most desirable quality is preater capacity per unit of space.

Explosion control construction prevents harmful amounts of explosive gas from accumulating in cells.

Microporous separators and Vitrex retainers which are inert to electrolyte immersion are used. 2-EWA-7 is a 2 cell unit. 3-EWA-7 is a 3 cell unit. Dimensions: $101 / 8$ in. wide, $18 \frac{1}{4} \mathrm{in}$. high.

Information on cells with capacities up to 1680 amperehours will be furnished on request.

## Exide Steel Battery Racks

All stecl rachs, strong and of modern design. Provides maximum safety and easy servicing for your battery.

Steel frames are fabricated from structural steel $2 \times 11 / 2 \times$ $1 / 8$-in. or $2 \times 11 / 2 \times 1 / 4$-in. angle iron with welded joints throughout. Steel rails for supporting the cells are made from $17 / 8-\mathrm{in}$. x $17 / 8$-in. steel channels. Plastic insulating channels, having a dielectric strength of 5000 volts, are fitted snugly over the channels to insulate the cells from the steel rails. lifinish: Two, eoats acid resisting gray. Shipped massembled. Four basic types of racks available, single row- 1 tier, single row- 2 tier, two step and 3 step.

## Schauer Battery Chargers Rectifier

## Type "G"

Trichle charger for small common batt ery exchanges and small storage battery used in telephone service.

Battery charger consits of transformer having adjustment taps for varying charging rate: rectifying element; ample choke to eliminate d-c ripple; sturdy output terminal block; rubber cord and plug. Unit mounted on steel hase, nio housing.

## Schauer Rectifiers, Battery Eliminators

Type "RB"
Automatically maintains the terminal voltage of a set of batteries at a relatively constant value regardless of load condition.

Battery charger consists of transformer; continuously rated full wave Selenium rectifier; magnetic regulating equipment ; ample choke-type filtering system; d-c voltmeter; rubler cord and plug. Iloused in ventilated st cel cabinet and designed for wall mounting.

For Small Telephone Common Battery System

## Type A

Designed for supplying direet eurrent of suitable smoot hness to operate small telephone common battery system, apartment house and inter-communicating telephone systems, which are not of lamp signal type.
Type PA $0.500 f$ is commonly used for operators cirenit in magneto switchboards. This model is equipped with power-off relay for automatically transferring power to stand-l)y dry cells in the event of a-c power failure.
Battery eliminator consists of a transformer; full wave copper-oxide or selenium rectifying element; ample choke and condenser filtering system; cord and phog. All parts housed in a ventilated steel case Designed for wall mounting.

Model with taps for 60 cycle a-c ringing also available

Schauer Rectifiers, Battery Eliminators
For Lamp Signal and Automatic Switchboard

Type "RA"
Automatically provides constant voltage output. Consists of transformer; full wave Selenium rectifier; magnetic regulator; ample choke and condenser filtering system: precision d-c voltmeter; cord and phug. Housed in ventilated steel cabinet that is designed for wall mounting. Power-off relay optional.

For AM and FM 2-Way and Marine Radios

To Replace Dry Cells In Magneto Telephones

Provides sufficient smorth, noiseless d-c current to operate one magneto telephone transmitter, replacing the two dry cells used for this purpose.

Comsists of a transformer, full wave copperoxide rectifier, filter choke and condenser, housed in tubular steel case.

[^108]Raytheon Battery Charger Rectifiers
New 48-Volt Recticharger Series
Designed and Produced for Telephone Industry

The Recticharger is a completely automatic, constantvoltage battery charger developed specifically for use by the telephone industry.

New design, smaller, compact and lighter cabinet. The Recticharger uses no tubes and no moving parts. It can literally he installed and forgotten. Recticharger automatically maintains battery at full charge under all normal load conditions by means of small trickle charge which offsets "local action" at the battery plates. Recticharger supplies power at constant voltage to normal battery load, with no discharge/ charge cycle of the battery. Increases charging current to proper value after an overload has drawn power from the battery. Recticharger restores a completely discharged battery to full charge at optimum charging rate without battery gassing and heating.

All controls, connectors, and fuses are mounted on a panel, conveniently mounted inside hinged door of cabinet.

# Raytheon Battery Charger Rectifiers <br> 24 Volt Recticharger Series <br> <br> For Telephone Switchboard Power Supply 

 <br> <br> For Telephone Switchboard Power Supply}

These battery chargers are of the constant potential type for use in telephone service. They are essentially rectifiers of the dry-dise type, combined with a control circoit which maintains a cointant voltage output over a complete load range rogardless of the wide line voltage fluctuations found in many communities.

For emergency and peak period a small storage battery is Iloated acrose the oufput terminals and is kept at an essentially constant cell voltage, making a complete and permanent ate to d-e telephone power unit, and regardless of outside conditions it produces constant d-e voltares. The battery is maintained at a given coll whtage and never becomes overcharged or undercharged. This operation is performed automatically without moving parts of any kind.

Because of this constant potential method of charging, battery gassing is prevented and there is no loss of water aside from normal evaporation.
By maintaining the close voltage limits required by diat systems, such trouble as short lamp life, incorrect ringing, noise on the line, ete., is eliminated.
All apuipment is enclosed in a steel cabinet, finished with durable paint and provided with hinged door. Cabinet is arranged for wall mounting. Brackets are available for wall or floor monnting.

## Raytheon Voltage Stabilizers

Ioltage regulation is very essential to most electrical and electronic equipment.

Nagnetic type requbator, the performane of which remains constant throughout many years of useful life. Rapid in voltage correction and precise in operation. Compensates within $1 / 20$ of a second, a voltage ontpat that may vary from 9.5 to 130 volts or a fluctuation of more than $\pm 1.5 \%$ of rated output and controls it to $\pm 1 / 2 \%$. Proterts most sensitive electronic devices against adverse effects of voltage change.

Regulators have no moving parts . . . nothing to wear out; compaet design, rugged construction. Recquires no adjustment or maintenance as stabilizer is completely automatic.

Regulatars are self-protecting and cannot be damaged by overload. Current is limited to abont $200 \%$ or rated load. Their principal operating characteristic is their ability to maintain constant voltage with varying input voltare. Degree of control is maintained at any load, and change from no load to full load results in small change in output voltage when load is pure resistance ( $100 \%$ power factor).

## Raytheon Rectifilters

## For Telephone Communications Service

Rectifiters offer a modern and economical method of obtaining d-c power direct from an a-c source. They provide full, filtered, noise-free power for the best operation of telephones and reduce cost of maintenance to a minimum. Their compact design permits quick and easy installation in a small space.

They operate entirely without moving parts, units consisting of a power transformer, dry disc rectifier element, a retardation coil and condenser for filtering, and in the 1. 0 ampere and larger sizes, a saturahle core reactor for voltage control, all mounted in a gray lacquered steel calinet, with hinged front. Each one complete with built-in voltmeter.

## Rectifier Uses:

The econony and efficiency of these Rectifilters have been definitely established by many time-tested installations for various uses:
. . . to eliminate the installation of storage hatteries and provide operation direct from an a-c source.
. . . to operate one or more PBX direct from an a-c source. . . . to operate one or more equipments direct from an a-c source.
. . to operate in series with the regular 24-volt central office battery to give 48 volts for toll service. When placed in series with the large central oflice batfery, it eliminates the use of a supplementary battery.
to use for seasonal installations, such as resort areas to eliminate the necessity for installing a liattery at the beginning of each season, and removing it when the season closes.
. . . to release for revenue-producing service cable pairs for supply of $\mathrm{d}-\mathrm{c}$ power to remote installations.

## Steady D-C Voltage

To provide uniform voltage for proper operation of conmunication systems, the 1.0 ampere and larger sizes include an exclusive a-c stabilizing circuit which operates magnetically and requires neither adjustment or maintenance; also insures closely stabilized d-c voltage for proper operation of switchboards under conditions of changing traffic load normally encountered.

## For Continuity of Service

Continnous d-c supply is normally assured from the Rectifilter without auxiliary power sources, as the a-c source is generally dependable; however there may be certain applications that require an alternate power source for contimity of service. In such cases relays can be provided that will antomatically comnect to a standby power source (dry cells, etc.) the instant the a-c power fails.

## Also Avallable

The Rectiringer, a combination of the Rectifilter and a 20 cycle ringer, is also available. Contact Graybar for complete information and prices.

When not listed, order by adding suffix " $R$ ". Example: RFR-1041-AR.

## Brach Rare Gas Arresters

lexposied wires are subject to
 the effects of lightning induction. When exposed wires are near other exposed wires carrying high voltage, they are suitject to induced voltages from the high voltage circuit. Rare Gas Arresters are the recommended type for protection from both these conditions.

The electrodes of the Rare Gas Arrester are in a sealed chamber and free from effects of atmospheric conditions, dirt, insects, or other maintenance problems that generally affect the operation of arresters.

Combines speed of operation with capacity for heavy currents, and ability to restore itself to normal functional characteristics after discharges in protecting low-voltage circuits. Provides high normal insulation and functions repeatedly within a predetermined voltage range. It is highly conductive and restores itself instantly after the passing of the abnormal voltage. Can be mounted in small space and easily installed and maintained.

The Arresters are treated chemically and constructed to function at a relatively low voltage. They are made in two general classes, one having plain electrodes with the ability to carry high currents for short duration, the other having thermostatic electrodes with the advantage of carrying currents for long periods. Other types are available having plain electrodes with external thermostats to protect the arresters from leaks from adjacent high-voltage circuits.

| No. | Length <br> In. | Width <br> In. | Height <br> In. | Each |
| ---: | :---: | :--- | :--- | :--- |

The Vincent Rare Gas Relay may be used on magneto or common battery lines. Either harmonic or coded bells may be used.

Relay consists of small glass tube containing special combination of rare inert gases acting in contact with special metal electrodes which allow current to pass above closely pre-determined voltage. Enclosed in heavy bakelite shell and equipped with "single hole" mounting clip.

Relay has no moving parts and is not affected by temperature or atmospheric changes.

*Since these grommets are designed to compress in order to seal around the cahle, it is necessary to choose a grommet size than is somewhat larger than the cable size.

## Cook Building Terminals

With Lead Or Plastlc Cable Stub

No. 60
Gas-tight, moistureproof building terminal that is designed for interior cable distribution.

Furnished with surface type steel calinet with hinged black enamel cover with snap lock.

Core section has same design feature as Cook Stranterm. Made of special unsaturated polyester thermo-setting plastic with fiber-glass filler in which heavy studs are emhedded. Cable studs are soldered to these studs.

## With 51/2 Ft. Plastic Stub

## Cook Underground Cable Terminals

## Unprotected Type UX 6, 11, and 16 Pairs

Cable terminal designed to facilitate installation and service in manhole termination and distribution of underground cable systems.

Body and cover made of cast, nonporous red brass; locking screw and hinge pins made of brass. Silicon bronze mounting bracket. None of these materials are affected by dampness or water. Cover fits tightly making a water-tight seal. Ileavy Everdur studs are rigidly set in molded bakelite face plate.

Terminal may be mounted with cable stub out of top or bottom. Service outlets provided in sides of terminal and sealed with $3 / 8$ in. brass pipe plug.

Terminal is available with or without stub.

506-548 Stuffing Box Complete for $3 / 8$-inch cable.

# Cook Building Terminal Boxes 

This box is the usual method of housing the WX 13 terminal inside buildiugs.

Made of heavy gauge steel, enameled both inside and out, a vailable in four sizes to accommodate the diflerent sizes of termimals.
liquipped with a close fitting cover to protect the terminal from dust and dirt. Lock and key optional.

Box available for flush or surface mounting. When ordering, specify type also with or without lock.

## Cook Utility Substation Protectors

Ilas variety of uses in the outside plant. Provides protection for suall cables and open wires, up to six pairs per unit, at railroad crassings, power line crossovers and parallels. Especially valuahle for protection of subscriber drops where several instruments are closely frouped.

As many as six type II protector units can be monnted on the heavy-gange, galvanized steel hase. Galvanized hood and insulated entrance holes in base mahes entire unit weatherproof. Brackets for pote or wall mounting are such that the base unit may be brought to horizontal position for easy wiring. Dimensions: 6 in . high, 9 in . wide and $6 \frac{1}{2}$ in. deep.

## Cook Fuseless Protectors

## No. 2

Indoor arrester consisting of solid piece of glazed porcelain fitted with liverdur linding posts, nuts, washers and Phosplior bronze springs.

Arresters are nongrounding TruGap dischargers and plain ground carbons set in recess and covered with ventilating metal cap. Dimensions: 2-in. high; 3 -in. wide; and 3-in. long.

Description
244-1606
Wilh 'lru Gap Dischargers

## Cook Power-Cross Protectors

The contimued extension of the practice of joint occupancy of wood poles by communication and power circuits of higher voltages has ereated a need for heavy-duty arresters on communication circuits. Arresters must be capable of carrying the fault current long enough to allow the power breakers to operate and de-energize the power circuit. l'or this protection, below is listed, two power-cross protectors which also furnish protection from lightning damage.

$\underset{\text { Single }}{\substack{\text { Sing }}}$

Five
Circult

## Single Circuit Hy-Cap Power-Cross Protector

Miniature protector consists essentially of three carbon electrodes mounted on porcelain base with metal cover, held in place by suitable spring. Dach electrode equipped with fusible element which melts and further reduces impedance of fault-current path when fault current continues over an extended period.

Three insulated copper wire leads are attached to protector for easy installation. Steel angle bracket permits direct mounting on pole or crossarins.

## Five Circuit Hy-Cap Power-Cross Protector

With this unit five circuits can be protected at low cost. Only one ground wire. "'en carbon electroles are fixed to porcelain base which has weatherproof aluminum cover. Each electrode has a fusible element which forms direct path to ground when an extended discharge occurs.

Ten insulated copper wire leads are factory connected to protector and are cut to correct lengths for installation on a 1913 crossarm. Wire entrances sealed with rubber grommets. Steel bracket permits easy mounting.

## Cook Indicator Alarm Type Fuses

## (Grasshopper Fuses)

These fuses can be used to set off an alarm when fuse wire has separated causing the bottom spring to contact an alarm circuit.
This type fuse normally used on circuits operating up to 90 volts, but are also made for circuits up to 160 volts limited current, with fuse wire enclosed in glass or porcelain tube to prevent side flash.
When ordering, specify catalog number and rated capacity.

## Cook Resettable Grasshopper Fuses

Combination of grasshopper fuse and heat coil provides a new economical and positive acting fuse, arc free, with accurate operation time. Is now available to wire communications and electronic equipment. Resettable by re-engaging heat coil ratchet. Parts easily replaceable.

Iteat coil operation simple and positive. When sulject to more than rated current, the ratchet releases the ground and alarm spring. After trouble has been cleared, and current flow is normal, fuse can be reset manually by ratchet which is again locked into position.

## Overload Failure Warning Relay

Accessory item for operation with Grasshopper fuses. It energizes when Grasshopper fuse operates and shorts against the bus. The relay coil connected in series with bus then energizes and warning contacts close. Operates at 2.1 or 48 volts, $d-c$; or with external shunt removed 135 and 165 volts, d-c.

## Reliable Protected Cable Terminals

## Type B

Designed for terminating lead-covered cable and to facilitate drop wire distribution. Add greatly to the convenience of installation of wiring and maintenance. Has detachable mounting bracket to simplify installation.
Square aluminum cover, will stay in any raised position and cannot be tilted into contact with live parts. Cover, bracket and base assembly are of corrosion-resistant aluminum alloys.
Binding posts are at front, accessible to lineman without removing fuses or reaching around cable terminal. Binding post insulation is high grade molded plastic.
Discharge blocks are the self-cleaning sawtooth type and are held by individual springs and cannot be accidentally loosened or crossed.

Cable terminals are very close to pole or building - no tilting.

Binding posts, fuse clips and carbon springs are corrosionresistant and are free from season cracking.

Complete with 5-ainp. fuses, No. P195-L saw-tooth discharge blocks; No. Pl384 carbons and a 7 ft . No. 24 A.W.G. stub.

Type B27 is fitted with No. 27L Ceramic fuse; Type B36 is fitted with No. 56 liibre fuse; Type 135.5 is fitted with No. 5.5 L Ceramic fuse. Specify Type and Number of pairs reguired.

The following tahle applies to Types B27, B56 and B5.5:

## Reliable Protected Cable Terminals Type RP

Compactly designed and made of corrosion
resistant aluminum alloy throughout making it light in weight, but substantial. Meets the requirements of a small protected terminal of high quality and fine workmanship.
Ruggedly constructed; calle chamber is a heavy casting. Sliding cover is reversible, eliminating luother of handling separates types for installation with stub at top and bottom. Mounting bracket is detachable for easy installation.
Molded bakelite insulation. Discharge blocks are of the self-cleaning type and are held by individual springs and cannot be accidently loosened or crossed.

Complete with 5-amp. Cuses, No. P195-L sawtooth discharge blochs, No. P663 Carbons and a 6-ft. No. 24 A.W.G. stub out of top.

Capacity 6 Pairs; Height overall 11 in .

Reliable Unprotected Cable Terminals

## Type RU

Reversible; protects terminals from weather and pernits installation with stub at top or mottom.

Has ribhed aluminum alloy sliding cover. Chamber filled and sealed with Reliable cable compound when supplied with stub.
Hat fanning plate simplifies wiring and, in combination with a cover which surrounds the wires at the back, makes an umusually weather-proof terminal. Gives the lineman more convenient working space.
Equipped with gravity catches to hold cover in raised position, grlide rings for jumpers and bead chain. Siliconbronze screws - Free from season cracking - are monnted on bosses to increase surface leahage distances and are locked in panels of highest grade molded insulation.
Furnished with 6 ft. of No. $2 \cdot 1$ A.W.G. Double-wrap paperinsulated cable unless otherwise specified.

Extra length cable stubs will he furnished on request at an additional charge.

All cable terminals except GR type can be made gastight at an additional charge of \$1.20 each.

Reliable Single Pair Protectors

No. 451

Designed to drain lightning and static voltages from open wires and long drop wires that are connected to cable.

When used with a grood ground, it can be depended upon to reduce thes ${ }^{2}$ voltages at the cable-open wire junction, thereby reducing cable trouble.
Equipped with sawtooth discharge blocks, porcelain base. aluminum cover with stainless bead chain and cover locking screw.

Aluminum bracket has two $9 / 32$ in. round holes for wool screw mounting, and one $13 / 32$-in. square hole for carriage bolt mounting. Units measure 4 -in. x 21/2-in. diameter.

## Burgess-Manning Acousti Telephone Booths

Heavy duty, all steel construction.

Duralle gray wrinkle finish. Highly eflicient acoustic construction.

Ideal for use in stores, restaurants, hotel lobbies, prwer slations, factories, public buildings where outside noises mane telephoning difficult.

Equipped with liglat fixture and shelf. Outside dimension: 31 -in. wide; $381 / 2$-in. deep; $793 / 5-$ in. high.

## Sherron Outdoor Telephone Booths

## Special

Reinforced construction of zine coated cold rolled stem with integral rigid steel hase and safety plate flowr.

Constructed with equal-leaf folding domr. Has backbard for monnting coin collector, corner shelf, tubular wiring standard. Italf patme construction with lower half panels on three sides and upper rear half patmel steef acoustic filled, upper right and left side half panels of wire glass.

Equipped with flush incandescent light fixture in ceiling. Provided with solid lintel patmels, decal "Telephone" sign with weatherproof entry fittings in rear lintel patmel.
Booth has fexitive action door choser and peaked sted roof.
Finished in Dul'ont laked synthetic enamel, standard color flame red. Booth completely packaged, set up, as deseribed, no extras or sulstitutions.

## Sherron Outdoor Telephone Booths

Designed for increased acous-
 tic efficiency. Booth is of Cold loolled sted fireproof construction. Has cold rolled steel base with limoleum covered steel flow. Booth has perforated motal linings backed by 3 -in. thick acoustie sound absorbing material.

Equipped with extra thick insulated equal-leaf folding door with half-lemgth glass panels. Door panels are double glass with $1 / 4 \mathrm{in}$. dead air space between.
Regularly equipped with standard flush coiling light with self closing lens and automatic door switch.
Furnished as specified with either standard bachloard corner shelf and tubular standard for pay station use or with straight [0-in. wide shaff across rear fitted with tubular standard and having provision for up to three hand-set telephones.

Finished in Dupont baked synthetic enamel, standard colors: Exterior of booth light brown, dark brown, maroon, red. gray; Interior of twoth gray. Special finishes available at extra charge.

Extra Fquipment Available: Seat Assembly, cold rolled stecl, linoleum covered. Ventilating Unit, for concealed installation (155. 60 Cycle a-e). Stainless Steel Base, lor added protection at floor line. Kick Plates, for door, stainless steel. Signal Light Arrangement for visual outside summons.

## Sherron Indoor Telephone Booths

Steel fireproof construction. Integral steel base with linoleum covered steel floors. Equal leaf folding door.

Perforated metal linings backed by acoustic sound absorbing material. Equipped with drilled backboard and shelf mounted on tubular wiring; adjustable for standing or sitting position. Hinged brachet, hinged ceiling assembly. Concealed automatic dowr switch and decal "Telephone" sign on front lintel. Large area translucent plastic light. Dimensions: 30-in. wide, 30 -in. deep, $833 / 4-\mathrm{in}$. high. Shipping weight 500 lhs .
Optional extra efpipment such as linolcum covered seat assembly, stainless steel shelf and base; directory lights, etc., also available.

No. 18-S Type 11: Constructed of zinc-coated cold rolled sted. Baked enamel finish. Exterior of booth available in light and dark brown, maroon, red, gray; interior of booth gray.

No. 19-S Type 3.: Constructed of stainless steel, interior and exterior for free standing installations. Includes stainless steel base, shelf and backboard.

No. 19-s Tצpe 3F: Same as model 19-S Type 3A except for recessed installations. Zinc-coated cold rolled steel exterior side, rear post and back panels.

## Sherron Outdoor Telephone Booths

## Clearview

Reinforced construction of zinccoated cold rolled steel. Stainless steel base with safety plate floor, equal leaffolding door.
Quarter panel construction. Lawer panels solid steel clad with ventilating louvers, upper three panels each side clear safety glass. Specify if solid steel panels are preferred.

Translucent plastic hinged ceiling assembly and telephone signs on front and two sides. Equipped with door switch, stainless steel shelf assembly and kick plate, door ckasing device, spring door stop, weatherproof entry fittings and two 10 -watt circline fluorescent fixture.
Booths finished in baked synthetic enamel and colors available are flame red, alert orange, highway yellow and hunter green. Please specify.
Optional Extra Equipment: Cold rolled steel seat assembly; wire duct at rear for incoming services from ground; photo electric light control switch with adjustable light sensitivity control.

## U. S. Instrument Dial P. X. Switchboards

Private Automatic Exchanges
Dial Telephone Switching Equipment

Line Rack

## Type 50B Dial PX

Completely new, completely automatic dial telephone switching system designed to provide private, self-operative internal telephone service for industrial plants, offices, department stores, ships, institutions and other installations.
The 5013 PX requires no operator. Compactly constructed in single units for 50 station lines and a maximum of seven connect ing links. An unlimited number of units may be furnished.
Exchanges with 100 lines or less, two digit numbers are used and connecting links consist of connectors. Larger exchanges, three digit numbers are used and selectors and connectors are required.
The line Racks have sufficient space for 50 preselectors and seven connectors with relay sets. One ringing and signaling machine provided for each two line racks. Line racks are $71 / 2$-ft. high, $201 / 4$-in. wide, and 13 -in. deep. Plur-in type ringing machines. 24 -volt storge battery with charger, or battery eliminator required. Maximum conductor loop is 500 ohms or about 2.9 miles of 22 gauge cable.
The Selector Racks accommodate 15 selectors with relay sets. Selector racks are $71 / 2-\mathrm{ft}$. high, $181 / 2 \mathrm{in}$. wide and 13 -in. deep. All racks wired for the full complement of equipment.

Emergency right-of-way may be installed to permit an executive to interrupt a call in progress. Minimum maintenance.

For full information contact GRAYBAR.

Type 50A Dial PX

# Telephone System For Industrial Plants, Institutions, <br> Offices, Department Stores, Ships And <br> Other Installations 

Switching Equipment Type 50A

Completely automatic dial telephone switching system designed to provide private, self-operative internal telephone service. The new 50A $1 \mathbf{X}$ requires no operator. It contains its own switching equipment enclosed in an attractive wall cabinet. The compact wall mounted cabinet is $25-\mathrm{in}$. high, $231 / 2$-in. wide, 12-in. deep and weighs 128 pounds.

The dial telephone switehing system enables extension users to dial their own calls. Unit operates on a 2.4 volts d-c power supply outside the cabinet. Commercial power with or without a standby battery may be used.

Connection to central office lines or to other PX's can be made available with supplementary equipment. Up to 28 stations and four interconnecting links are available, although equipinent may be furnished with an initial installation of fifteen stations and three connecting links.

For full information contact GRAYBAR.

## U. S. Instrument Sound Powered Telephone Sets

## Equipped with Magneto-Howler Call

The voice of the user supplies all the power necessary to operate sound powered telephones. Tho voice causes fluctuations in the magnetic circuit of transmiter creating altermating current. 'lhis current is transmitted to receiver where sound waves are created, reproducing sweaker's voice.

Designed to withsiand exacting shock, vibration, salt water corrosion, temperature and pressure lests. Dolded parts aro of impact material. Netal parts made of nom-corrosive materials wherever possible.

No. 4543
Wach station consists of a sumd powered telephone handset mounted on a watrepoof cast almuinum case, which contains a 1000 eyche magneto generator. a howler unit with comeeting horn, the necessary trminal blocks and, if selective ringing is required, a rotary selector switch.

## Common Talking-Common Ringing No. A541 Station

Four stations per system with maximum separation bet ween any two stations of four miles. Wiring reduced to minimum. T'wo twisted pairs per system of No. 2e AWGor larger. One for calling and one for the telephone. Tho call, turn generator crank, this oprerates howlers at all stations except originating station. To talk simply press and bold down button on handset.

## Common Talking-Selective Ringing No. A542 and A543 Station

No. A542: Maximum number of stations per system is eight. No. A5 13: Maximmm number of stations per sysiem is sixteen. 'Twisted pairs ol' No. 22 AWG or larger recommended for louth telephone and calling lines to avoid cross talk. To call simply turn selector switeh to desired station and turn generator handle. LIowler operates only at selected station, To talk, press and hold down the bution on the handset.

## Master Station Systems <br> No. A540 Substation

Designed to be used in conjumetion with a master station. Any selective ringing station. No. A5t2 or 4.513 may be used as master stations. Master station may call any substation, but substation may only call master statiom. Fhree I wisted pairs wiring reguired between each substation and master station.

## Approved by Bureau of Mines

These somed powered telophone stations have been tested and approved ley the Burcan of Mines. D. S. Department of the Interior, for use in mines. The Burean states: "Permissible" as used in the schedule means formally apposed by the Burean for use in mine atmospheres that may contain methane or coal dust. The approval plate will be placed on all shations listed below. Nus shiolding or special protection is reguired to mahe these systems explosion-pronf thronghout, other than cantion against eontact with power or light lines noted on the approval plate.

wiring diagram of common talking.common minging systems

## Common Talking-Common Ringing No. A544 Station

Four stations persystem with maximum separation letween any two stations of four miles using $N(20$. AWG wire will give gond performance. $111 / 4-\mathrm{in}$. long, $103 / 4$ - in . wide, $43 / 4$ - in . deep. Approximate weight 9 llos.

## Common Talking-Selective Ringing No. A545 Station

Maximum number of stations per system is eight. Specifications similar to A. 12 but is supplied with terminal tube. $111 / 4-\mathrm{in}$. long, $103 / 4-\mathrm{in}$. wide. $\boldsymbol{5}^{3}{ }_{4}-\mathrm{in}$. deep. Weight 10 lbs .

## No. A546 Station

For sixteen station common talking-selective riging system. Sprcifications similar to No. A.5 $1: 3$ station but is supplied with terminal tube. $11 \frac{1}{4}-\mathrm{in}$. long, $103 / 4-\mathrm{in}$. wide, $53 / 4-\mathrm{in}$. deep. Approximate weight, $10 \mathrm{lh} s$.

## No. 2961 Hood

Can be used with any station listed on this page. It is particularly useful in mine areas where falling rochs or dirt is an ever-present hazard.

## U. S. Instrument Sound Powered Telephone Sets and Accessories

Sound Powered Handsets

No. $A 560$
No. A560 Weatherproof Handsets
With built-in press-to-eprerate switch, recommended for heavy duty uses or where portability is desired. When button of press-to-operate switch is depressed. the handset is connected to the line. Supplied with 4 ft . of rubber covered cord. Weight without cord is 22 ounces.

## No. A555 Weatherproof Handset

Without built-in switch. Itas 4 feet of rubber covered cord. Weighs 20 ounces without cord.

## No. A257-2 Underwriters' Laboratory Handsets

With built-in press-to-talk switch. Approwed by I nderwriters' Laboratories, Inc. for hazardous locations Class I, Group D. Supplied with $41 / 2-\mathrm{ft}$. rublher covered cord. All ol her interconnecting limes are to be enclosed in grounded rigid metal conduit to safeguard against aceidental contact of telephone circuits with power lines or other circuits.

Type 333 Approved Coast Guard Handsets
A weatherproof sound powered handset for use where Coast Guard approval is required.

Special Handsets
Handsets providing special switching requirements can be made up on order as can handsets with three or fiour conductor cords.

## Mounting Hooks

No. A-281

No. 5200

No. 5200 Nounting llooks: Standard mounting hook for left hand mounting. Stainless steel. Weight $23 / 4$ ounces.

Vo. 5201 Mounting llooks: Similar to No. 5200 but for right hand mounting.

No. A281 Mounting Ilooks: For use where there is motion. vibration or shock. Receiver end of handset is held by a rubler padded fork; transmitter end hy a coil spring eovered by bakelite rollers. Aluminum frame is finished black. Weight is $91 / 2$ ounces.
No. A325-1 Mounting Hooks: Similar to No. A281. But provides for various switching arrangements in base which are activated by removiag or replacing the handset.
For more complete infurmation contact Gili YBAR.

## Head-Chest Sets

No. A602: Ileary duty design, recommendedasan all around instrument wherever it is desirable to have oprerator's hands free.

Furnished with built-in press-to-talk switch which controls transmitter only. Supplied with 10-ft. rubber cord.

No. A603: Sound powered weatherpromf simgle receiver head-chest set is same as Agot except has single receiver.

## Headsets

No. A331: A sound powered weatherprow double receiver headset supplied with 19-in. rubber covered cord.

Weight without cord, 16 ounces.

No. A602

## Pocket Telephone

No. A278
This sound powered poret telephone is a combined reociver and transmitter that is easily carried. Combenient for tests or periodio reponts.
1:quipped with $31 / 2-\mathrm{ft}$. rubber covered cord. Weight without cord is 7 ounces.

## Instrument Units

## No. UA1614

Sound powered units serve as
 microphone and receiving units in diversilied products such as gas masks, power meqgaphones and geophesical instruments. Standard units available with warble frequency impedances of approx. 6 to $2.3,010$ ohms. Supplied with a chemically treated almminum diaphragm grill and nylon cover.
When ordering specily exact requirements.

Plug and Panel Mounted Jack

No. A529 play: Designed for use with portable sound powered telephone equipnent and can be supplied separately or at tached to telephone cord.

No. A689 I'ortable Jack: For use with A529 plug.
No. A530 P'anel Mounted Jark: For use with A529 plug.

# Crouse-Hinds "ET" Series Telephone Sets 

## Explosion-Proof and Dust-Tight

Manual, Dial, and Magneto Types With Built-In Ringer

## Class I, Groups C and D (NEMA Type VII) <br> Class II, Groups E, F, and G <br> Class III (NEMA Types IXA, IX, and V)

Manual and dial type telephones for use on common battery systems. Magneto telephones for local battery talking and magneto signaling, but in some cases can be arranged for common battery talking and magneto signaling.

Telephones used only on straight line or divided ringing circuits. They are not suitable for use on harmonic ringing circuits.
Telephones available for either desk use or wall mounting and are equipped with a built-in ringer mounted in base. Telephone housing and handset cradle made of cast aluminum. The desk and wall type are equipped with explosion-proof handsets. Each handset furnished with a $\overline{5}$-foot length of flexible cord and a factory-sealed connector. Two conduit hubs in base.

## Magneto Type-Local Battery Talking Magneto Signaling

## Battery Housing

Battery
Houslng

Furnished with terminal block. Arranged for Ray-O-Vac 386C, or equal dry cell battery. Battery is not included.

Without choke coil. For ETDG23 and ETWG23 with Western Electric Company interior.

SIze, Hub $3 / 4$

## Installation

The table below lists accessories required for telephone installations both with and without auxiliary signats. This does not include the miscellaneous itens such as junction condulets, sealing condulets, conduit and other material which will he required.

In hazardous locations all conduits entering the line switch, battery housing, power cut-off switch, relay, or wall type telephone must be sealed with explosion-proof sealing condulets. Where elbows, tees and junctions are required in the conduit installation, the GUA series are especially suitable. The ETS 22 line switch is so arranged that when it is turned to the "off" position the line is opened and the condensers discharged at the same time.

Telephones with Western Electric Company interiors are gquipped with bleeder resistors which diseharge the condensers. This allows the use of type ETS terminal block condulets, in place of the ETS22. The ETS264 should be used with Western Electric telephones.

When these terminal block condulets are used in place of the line switch it will be necessary to remove the fuses or disconnect line wires from the telephone line protector in the non-hazardous area before opening the telophone housing for service.

## Crouse-Hinds "ET" Series Telephone Sets

## Wiring Diagram

For ET Series Manual Or Dial Telephone Condulets

## Hazardous Locations

When ET series telephones are to be installed without auxiliary signals, only the lower part of the above wiring diagram need be used. These telephones, nianual or dial, are available in both desk and wall types and each type is equipped with a built-in bell in the base.

The upper parts of the diagram show the connections and the equipment required when auxiliary signals are to be installed. Figure 2 shows the connections for the ringer which
operates on the telephone ringing current. Figure 3 shows connections for horn or bell signals which operate through a relay on a separate 115 volt a-c, 60 cycle source of power.

Sealing condulets are indicated in the diagram at several points. Types EYS, EZS, and EZD listed in section J are recommended for this application. Where elbows, tees, and junctions are required in the conduit installation, the GUA series condulets listed in section $G$ are especially suitable.

## Crouse-Hinds Magneto Telephone Sets

Types ETG and ETWG
Installation Drawing
Hazardous Locations
 Desk Use

Factory-Sealed line cord of Desk Type Telephone is connected to top hub of Type ETG Battery Housing

To Auxiliary Signals. These are connected as shown in Figures 2 and 3 . of the Diagram on Page 4.2. If Auxiliary Signals are not used. the side hub of the ETS must be plugged.

## Crouse-Hinds Telephone Sets and Accessories <br> Explosion-Proof and Dust-Tight

Auxiliary Ringers: Type ETR ringers used with manual. dial or magneto type telephones. Used as auxiliary loud ringers and in conjunction with built-in ringer in base of telephones.

Line Switch: ETS22 condulet equipped with tumbler switch used to open the line to telephone unit, at same time discharge the condenser. Three threaded hubs in housing for $3 / 4-\mathrm{in}$. rigid conduit; mounting set with fastening holes and threaded eover.

Power Cut-Off Switch: ETS21 Condulet has switch used to disconnect separate source of power from relay contacts and the horn signal.

Nos. ETS22 \& ETS24

## No. ETR

Dialing Unit: The ETD21I used to convert manual telephones to dial telephones. Housing provided with round threaded covers, through-feed threaded hubs for $3 / 4-\mathrm{in}$. rigid conduit and mounting feet with fastening holes.

No. ETC29

No. ETC232

No. ETD211

Extension: The "ETF" designed for use with manual telephones. Housing contains a double pole, double throw tumbler switch which is operated by handset and fork in which it rests. Housing has threaded hub for $3 / 4-\mathrm{in}$. rigid conduit at top and mounting feet with fastening holes.
Line Selector Switch: Type ETS Condulets provided with double pole rotary selector switches which make it possible to mechanically select any one of several telephone lines for purpose of monitoring or making calls. Fipuipped with $3 / 4-\mathrm{in}$. hubs and monnting feet with fastening holes.
Terminal Block: Type ETS Condulet provided with 4 or 6 terminal blocks. Provided with $3 / 4-$ inn. hubs for rigid conduit and round threaded cover.

## Crouse-Hinds Sound Powered <br> Telephone Sets Type ETWS

Explosion-Proof and Dust-Tight-Hazardous Locations

Dimension-Type ETwS
Type ETWS sound powered telephones for common talking, selective magneto signaling. Satislactory transmission assured under normal conditions for 30 miles or more, using No. 22AWG wire. Available with either 16 or 21 circuit selector switches.

Designed for wall momnting, llandset is furnished with a 5-foot length of cord and a factory-sealed connector. Telcphones provided with through-feed threaded huls for 1 -inch rigid conduit and an additional 1 -inch threaded hub at the bottom. Selector switch controls only the magneto signaling.

Housings are in two sections which are held in flame-tight relationship by large cover serews. The lody and cover are approximately the same depth. Terminal block for comection of the line wires is mounted in the body. All other interior parts are mounted in cover, with a cable assembly connecting them to the block.

## Crouse-Hinds Sound Powered Telephone Sets <br> Type ETWS

## Wiring Diagram

For wiring in hazardous locations, twisted pairs of telephone cable of No. 22AW'G run in conduit are recommended. For overhead wiring on poles in non-hazardous locations, No. 22AWG lead covered telephone cable should be used.

Wire size given is the minimum size. On long runs, somewhat better performance may be expected when wire sizes larger than those given are used.

## Installation Drawings

The installation drawings immediately above show the auxiliary equipment required when installing type ETWS sound powered telephones.

In both types of installation, the EZD30 inspection seal condulet is recommended for sealing the incoming telephone wires or cable. This sealing condulet is selected as its design allows inspection while the seal is being poured, to make certain that each of the many conductors is surrounded by compound.
When installing a type ETWS telephone with built-in relay for horn or bell signals operating on a separate ll5-v. a-c, 60 cycle source of power, the ETS24 power cut-off switch is recommended, but is not necessary when a convenient

means of disconnecting the power is available. EZS26 sealing condulets for horizontal or vertical conduit are used to seal at the power cut-off switch.

Where elbows, tees, and junctions are required in the conduit installation, the GUA series condulets are especially suitable.

Crouse-Hinds Magneto Telephone Sets Graybar Type GB Weatherproof-With Built-In Ringer

Local Battery Talking, Magneto Signaling (Similar to Western Electric No. 1336E Telephone)

A complete magneto telephone station in an attractive weatherproof enclosure for local battery talking and magneto signaling. Suitable for use in industrial plants, outdoor locations, and non-hazardous areas of mines.
Cabinet and hinged door made of cast aluminum. Mounting straps with fastening holes at each end are attached to back of cabinet. A carn catch firmly tightens the door against gashet cemented to calinet, providing a raintight joint. If desired a lock and key can be supplied in place of the cam catch at a slight additional charge.

Handset, handset hanger and magneto crank mounted on front of hinged plate. Removal of two screws allows plate to be opened outward, exposing the magneto, condenser, induction coil, hook switch and terminal block which are attached to the back of the plate. Ringer is fastened to the bottom of the cabinet.

Space is provided in loottom of cabinet for two No. 6 Gray Label dry cells used to supply necessary 3 volt d-c for the talking circuit. (Batteries not included.)

A $1 / 2$-in. conduit opening is provided in bottom near the back for entrance of the cireuit wires. Insulating bushing with a $1 / 2$-in. hole is also supplied.

## Stromberg-Carlson Imtercommunication Tellephone Systems

All Sub-Station TS-51, TS-52, TS-53<br>Common Ringing . . . Common Talking

All sub-station, or party line, inter-commonicating telephone systems are used extensively where an economical system of two to six telephones is required. When only two telephone instruments are needed, a two wire system (TS-5l) or a three-wire system ('TS-52) can he used. When three to six telephones. or a two-instrument system that might be expanded, are needed. a four-wire system (TS-s3) is required.

Sul-stations are common talking. Only one eonversation can take place at a time but any or all telephones can le in on the conversation.

Code ringing is employed on systems of three to six telephones. Each telephene equipped with single push-button which, when depressed, rings all other telephones in the system. A pre-arranged code of signals is used to call desired party.
The telephones which can be used in these systerns, and mixed in the system when desired are the TD-11 and the TW31. The TD-11 may be converted to wall-mounting by means of TK-3 conversation int.

| Installation Material |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| System | Max. Lgth. of Line : a | Wire No. <br> 19 Gauge | Retard Coil | 11/2 Volt Batteries (b |
| T T-51 | 4350 l't. | 2 conductor | None | 3 to 16 |
| TS-52 | 4350 Ft . | 3 conductor | 1 No. 51-II | 4 to 8 |
| 'TS-53 | 1150 Ft . | 4 conductor | 1 No. 51-H | 4 to 8 |

(a) Max. Igth. using No. 19 gauge conductors, heavier gauge wire increases maximum length.
(b) 2 conductor system, batteries divided and installed at each end of line. 3 and 4 conduchor systems, bat teries and retard coil at one instrument. Raytheon Rectifilter Model 1024 is satisfactory on TS-i3 system only.

## Stromberg-Carlson Intercommunication Telephone Systems

Master to Sub-Station TS-41 Selective Ringing-Common Talking
The "Master to Sulo-Station TS-11" system is ideal for installation where there is little meed for communication between sul-stations. An inter-communication telephone system which provides a single master station that can call and be called by a number of sub-stations.

TW-31

Although only one conversation can take place at a time, any number of stations may be in on the conversation. While sub-stations cannot eall each other, they can call the master and request the master to ring the desired sub-station.

Master stations available are the TD)-18 for desh use, the TW - 28 and 2527-C8 for wall mounting. Substations used in the system are the TID-11 and the TW-31, which can be mixed in the system. The TID-11 can be converted to, wall monting by means of the TK-3 conversion hit.
The TI)-18 Master Station and the TID-11 Sult-station telephones supplied complete with a 5 ft . line and cord and terminal block to facilitate installation. TW-28 and TW-31 telephones provided with terminals in telephones to which building wiring is terminated.

## Stromberg-Carlson Intercommunicating Telephone Systems <br> All Master TS-31 <br> Selective Ringing-Common Talking

"All Master" T'S31 system is an inter-commonicating telephone system for master-to-master operation especially suited to small offices, banks and residences. Has selective ringing so that any master can select and ring individually any other master telephone in the system.

A common talking system using only one pair of wires for talking purposes. Ouly one conversation can take place at a time although any number of stations can be in on the conversation. Very satisfactory for systems of nine telephones or less.
Three master station models available that are interchangeable and can be mixed in the system.

Deskset Model TID-18 is supplied complete with a 5 ft . line cord and terminal box to facilitate installation.

Models TW-28 and 2527-C8 provide two types of wall mounting instruments.

## Altec Lansing Velocity Microphones

Ilas an improved sensitivity and frequency range. A compact microphone providing excellent broadeast quality, high signai-tomonise ratio, and extremely low hum pickıp.

Frequency response 30 to 16,000 cycles. Directivity, lidirectional. Impedance 30/ $50,150 / 2.50$ ohms. Outpat level - $54 \mathrm{dbm} /$ 10 dynes $/ \mathrm{cm}^{2}$. Hum (max.) - 130 dim ref $10-{ }^{3}$ gauss.

1 Las $5 / 8$-in. $\times 27$ swivel head. Finished in dark gray.

When ordering add the suffix "A" for three directional patterns. Add suffix "B" for six directional patterns.

## No. 670B Cardioid Microphone

Provides high quality performance and excels in frequency response, front-to-back discrimination and low hum pickup.

Three directional pattern, omnidirectional, bidirectional and cardioid are easily selected by means of adjusting screw at back of microphone.

It is possible by shutter adjustment hetween the patterns to shift the null points of the microphone over a $90^{\circ}$ angle and effectively suppress undesired sounds.

Screwdriver switch pernits selection of proper output inpedance.

Frequency response $30-16,000$ cycles. Output impedance $30 / 50,150 / 250$ ohms. Output level - $56 \mathrm{dbm} / 10 \mathrm{dynes} / \mathrm{cm}^{2}$. Discrimination average front to back, 20 db . ILum (max.) - 130 dbm ref $10-3$ gauss.

No. 24C
Short desk stand that provides minimum microphone height on speakers' tables.
Has $5 / 8$-in.-24 thread and adapter for $5 / 8$-in.-27 thread.

Finished in gray.
No. 24C. Each \$8.50

A compact, 165 watt, medium gain power amplifier designed for pulbic address applications, either portable or fixed location.

Negative feedback is carried around all stages from a tertiary winding on the heavy duty output transformer permitting output to feed an ungrounded load or load with one side grounded as the case may be.

Especially designed for stable 70 volt line operation under all output load conditions without impairment of program quality.

Two pairs of input connections are provided. Terminals one and two, which connect directly to the input potentiometer, are provided for unbalanced high impedance sources or for bridging unbalanced low impedance lines having signal voltage of one volt or more. Terminals three and four connect to standard octal socket which permits low impedance input with the accessory 4605 plug-in transformer.

Output taps for loudspeader loads of 8 , and 16 ohms , and 70 volt line ( 32 ohms) are provided.

IIas two controls. Volume control and a-c power switch. If "push to talk" operation is desired, provision has been made for mounting an accessory relay.

## Specifications

Gain 72 db ; input sensitivity 1.0 volt rms for rated output; power output 165 watts at less than $3 \%$ thd, $70-20,000 \mathrm{cps}$; frequency response $\pm 1.0 \mathrm{db}, 10-50,000 \mathrm{cps}$; input impedance 100,000 ohm potentiometer; source impedance 30/50, 250/300, $500 / 600$ ohms with 4665 plug-in transformer; load impedance 8, 16. 32 ( 70 v line) ohms; output impedance less than $10 \%$ of nominal load impedance; noise level, output noise - 25 dbm : 77 db below rated output; power supply $117 / 125$ volts, $60 \mathrm{cps}, 350$ watts; external power available 117 vac receptacle on chassis.

Finished in green.

## No. 1568A

Rack monnted, a-c operated. 40 wat powor amplifier for use in sonnd reinforeing, paging, and musie distribution systems. Wasy to install and service. Provides low disfortion, wide frequency range, and complete stability with any load.

Occupies frve units of rack space and has a hinged front panel which contains the power switch, pilot light, and continuously variable gain control.

All eircuitry is completaly accessible for installation and servicing when the panel is openced. 'I'he output provides for 70 volt and 25 volt lines as rell as a variet $y$ of load impedances.

The Altec No. 12066 Cabinet may be used for mounting this amplifier on wall or table when rack monnting is not desired.

## Specifications

Gain: 65 db ; Input Sensitivity: 0.9 yolt: Power Output: 40 watts at less than $2 \%{ }^{\circ} \mathrm{I}^{\prime} .1 \mathrm{I} . \mathrm{D} .1010120,000 \mathrm{cps}$; Frequeney

## Altec Lansing Amplifiers

A 30 watt power amplifier for professional applications, such as recording and broadcasting studios, requiring the highest quality and reliability.

An improved version of the 127 type amplifier, retaining all the sturdy features of the 127 , including metering, step-type gain control and the trouble-free class $A B_{1}$ circuit.

Provision for plar-in input transformer and accommodation of the full variety of load impedances make for wide versatility.

Amplifier mounts on a relay rack or in 12066 cabinet.

## Specifications

Gain 68 db ; Input Sensitivity .66 volts rms for rated output; Power Output 30 watts at less than $2 \%$ thd, $30-20,000$ cps, 15 watts at less than $1 / 2 \%$ thd, $30-20,000 \mathrm{cps} ;$ Frequency hesponse $\pm 1 \mathrm{db}, 5-50,000$ cps; Input limpedance 100,000 ohm potentiometer; Source Impedance $30 / 50,125 / 150,250 / 300$, $500 / 600$ olnms with 4665 plup-in transformer; load Impedance 16 ohms grounded, 1.30 ohns ( 70 v . line) halanced, 270 ohms grounderl, 600 ohms with C'l balanced; Output Impedance less than $20 \%$ of nominal load impedance; Noise Level - 37 dbn ; 80 db helow rated output; I'ower Supply $117 / 125$ volts, $50 / 60$ cps, 110 watts; External Power available 380 v . d-c at 10 ma , 6.3 vac at .6 a.

## Altec Lansing Amplifiers

A 260 watt amplifier of low distortion and wide frequency
 ramge for public address and industrial control applications.

Protected by thermal cutout. Filament warm-up periond controlled by delay relay, permitting remote full on-off control.

Instantaneous on-off control of tube plates available by installing additional relay powered externally.

Designed for rack mounting; accessory brackets permit mounting to wall.

## Specifications

Gain $50 \mathrm{dh} ; 30 \mathrm{db}$, bridging 600 olm line; input sensitivity 1.2 v rms $/ 600$ ohms; power output 260 watts @ less than $2 \%$ thd, 5.5 cycles- 1.5 kc ; frequency response (a) 10 watts $\pm 0.5 \mathrm{db}, 20-20,000 \mathrm{cps} ; \pm 3 \mathrm{db}, 5-70,000 \mathrm{cps} ;$ source impedance $500 / 600$ ohms and 5,000 ohms bridging; load impedance 9 , 19, ( 70 v line), 6.5 ( 130 v line) ohms; output impedance less than $12 \%$ of nominal load impedance; noise level- 16 dbm ; 70 db below rated output; power supply $105 / 117 / 125 \mathrm{v}$, 60 cycles, 600 watts.

## Altec Lansing Limiter Amplifiers

Allows higher average level recording, broadeast, and oublic address amplification without danger of distortion, eedhack, or damage to speaker load.
()perates as true linear amplifier up, to a specified level and dimits the volume output heyond this point. The $100 \% \mathrm{~d}$, imiting meter may be used for tube testing.
Both input and output gain controls are provided and a witeh that provides equalization for the NABT'S high 'requency recording pre-emphasis.

## Specifications

Gain 68 dh at 1,000 cos. equalizer ont ; 60 dth at $1,000 \mathrm{cps}$, yqualizer in ( 31 db less gain from bridging ingut); Limiting Threshold normal, +25.2 dhm, high 33.2 dhm; Frepuency Response $\pm 1 \mathrm{dl}, 20-20.000 \mathrm{cps}$, cqualizer out NART'S reoording characteristic, equalizer in; source lmpedance 600 shms; Load Impedance 600 ohms; Attach Time . 6000 seomed; Limiting Ratio 10:1: Voise devel - 37 dbm; 62 dh below normal limiting threshold; Power Supply 275 vde at 100 ma regulated, 6.3 vac at 2.0 a .
Finished in metallic gray.

## Altec Lansing Compressor Amplifiers

Self-powered unit capable of driving any Altec power amplifier to full output from low impedane microphone.

Occupies $31 / 2$-in. of ratk space and equipped with level control, power switch, liuse, pilot light and compression meter momed on a hinged fromt panel.

Provided with two inputs: a microphone input and a bridging input.

For use in automatic level eontrol applications in recording, TV broadensting and public address systems.

## Sperifications

Gain 90 dl, from microphone input : 10 db bridginge 600 ohn. line: input sensitivity $6 . \overline{7}$ millivolts on bridging input $t$ reach compression threshold; maximum eompression 30 d (. $\mathbf{0} 0 \mathrm{~d}$ d change in input results in 20 dh change in output ; power output +19 dhou at 30 dh compression; +21 dhm as straight implifier; frequeney response $+1.5 \mathrm{dt}, 40$ to 10,000 cps; input impedance bridging, 20.000 ohms unbalanced; source impedance microphone input, $30 / 50$ ohms; hoad int pedance 150 and 600 ohms; power supply 117 volts, 60 cps , 22 watts.

Altec Lansing Compressor Amplifiers

No. 436A
Suatl. self-powered DA and industrial amplifier providing line level output and antomatic qain control.

Occupies $31 / 2$-in. of rack space and contains a fromt pancl meter to indiate dto of compression, a power switch, fuse and pilut light.

## Specifications

The input employs a high impedance transformer which (am bridge a 600 ohm line or the output of the 1.510 A and 1.511 premplifiers. The output translormer provides load taps of 150 and 600 ohms or may be operated directly into the high impedance input of the 1520.1 or 1.3304 amplifiers. Frequency response is $\pm 1 . .5$ dh. $30-15,000 \mathrm{cps}$. Gain is 56 dl ) from 15,000 whin source: 12 db bridging 600 ohm line. Maximum compression is 30 db ( 50 d ) change in input results in 20 dh chagre in output). Hamonic distortion at 2.5 dh compression is less than $1.5 \%, 3.5-1.5,000$ cps; at 30 dh of compression, less than $2.5^{\prime \prime}$, 35-10,000 eps. P'ower output is +19 d dm at 30 d , compression; +26 d m an straight amplifier. The attach time is approximately 50 milliseconds with $63 \%$ recovery in 1 second.

No. 4361
Each \$168.00

Compact 20 watt amplifier and control preamplifier for paging and music distribution systens in oflices, factories, churches, restaurants, nightclobs, and wherever sound is required.

Features individual gain controls for each channel which may be pre-set so that the proper level is established automatically when the selected bution is pushed.

Has separate bass and treble controls and an a-c line switch. The three inputs may be used for phono, microphone, tuner, tape, telephone line programing, or music distribution service Phono input is equalized for standard RIAA curve.

Altec 166.5 Transformer may be plugged in for use with balanced lines.

## Specifications

Gain: phono 9.5 dh 1 KC tone controls flat, microphone 95 db 1 KC tone controls flat, line 82 db 1 KC tone controls flat; Input Sensitivity: phono 0.02 volt for rated output, microphone 0.008 .5 volt for rated output, line 0.16 volt for rated out put; Power Output: 20 watts at less than $2 \%$ गllli); Frequency Response: $\pm 2 \mathrm{db} 20-22,000 \mathrm{cps}$; Inad Impedance: 8, 16, 2.50 ohns ( 60 v . line); Output Impedance: Less than $20 \%$ of nominal load impedance; Noise Level: phono 50 db bolow rated output, microphone 51 db below rated output, line 71 dh below rated output; Controls: Push button switches select phono, microphone, or line output, individual volume controls for each channel, separate bass-treble controls and a-e line switch; External Power Available: 117 volts 60 cps 8.5 watts; Tubes: 2-12AX7, 1-6CG7, 2-EL8t and 1-1E/81; special lopatures: Printed circuit board with eyelets for components; Accessories: One 3 prong male comnector supplied with equipment. No. 12116 cabinet in blonde or mahogany may be ordered separately. No. 466.5 Plug-in Transformer is available.

## Altec Lansing Amplifiers

A wide-band, general purpose amplifier of very low distortion similar in appearance to the 310 Amplifier used in Iligh Fidelity music systems.

Adapted to a variety of applications including public address and commercial sound systems.

Plug-in transformer No. 4605 may be used to convert immediately to low impedance inputs.

## Specifications

Gain 63.5 db ; Input Sensitivity 1.2 volts rms (across input potentiometer) for rated output; l'ower Output 35 watts at less than $0.3 \%$ thd, $25-20,000$ cps; Frequency Response $\pm(0.5 \mathrm{db}, 5-50,000 \mathrm{cps}$; Input Impedance 100,000 ohm potentiometer; Source Impedance 30/50, 125/150, 250/300, 500/600 ohms with "plug-in" input transformer; Load Impedance 8, 16 whms and 70 v . line. Output lmpedance less than 3.5\% of nominal load impedance; Noise Level 85 db below full output; Power Supply 117 volts, $60 \mathrm{cps}, 160$ watts.

## Altec Lansing Horn and Driver

## No. 50A

New wide range public address speaker for either outdoor or indoor use. Based on a new technique in speaker design, the 50 A combines an "Acoustic Filter" with a long air column to give an extremely good fow frequency response and is flat through the higher register.

Provides excellent reproduction of both spereh and monsic under any critical conditions. Nay be casily used in large umbers from a single system without loss of frequency response or efficiency.

The transducer, containing a heavy magnet, durable phenolic diaphragm, and a high impedance voice coil, is integrally mounted on a high impact plastic horn with a threc-foot air column.

Facilities are included for encasing the Altec 15075 Transformer within the weatherproof housing.

## Specifications

Power: 30 watts: Freguency Response: 17.5 to $12,000 \mathrm{cps}$; Impedance: 16 whms: Jorizontal Distribution: $90^{\circ}$; Vertical Distribution: $50^{\circ}$ : Dlounting Facilities: Arranged for mounting at any vertical or horizontal angle: Acoustical Cross-()ver: 1000 eps.

## Altec Lansing "Biflex" Loudspeakers

Nos. 408A, 412B, 415A
No. 408A
Small light speaker using a large magnet and carefully designed matenetic structure to achieve outstanding efficiency. Gibamated frequency response 60 to 16,000 cyeles. Power 15 watts; impedance 8 ohms; momnting hole dianneter $67 / 8$ - in.

## No. 412B

Employs Alter multiple concentric compliances to ohtain outstanding eflicicacy, quality of reproduction, smoothness and breadth of frequoncy response. Giaranted frepuency response 10 to 15.0100 cevces. Power 20 watts; impedance 8 ohms; mounting hole diameter $10 \frac{1}{4}-\mathrm{in}$.

## No. 415A

Designed to provide full hass and wide range high fidelity reproduction. Ltilizes the Attec Biflex principle of multiple concentric complianess to achieve amazing performance. Guaranted frepueney response 30 to 1 t,000 cycles. Power 25 watts; impedance 8 ohms; mounting lole dianeter $131 / 4-\mathrm{in}$.

## Altec Lansing Duplex ${ }^{\text {® }}$ Loudspeakers

No. 604D
No. 604D
Improved 15 -in. cone and newly desigued exponential multicellular horn and 1600 eycle metwork makes it pessihle for this muit to have a guarimed freguency response from 30 cyrles to 22,000 cycles. I landers 50 watts of peak power wit $h_{-}$ out distortion. l'ower 3.5 watts ( 50 watts prak): Impedance 16 ohms; horizontal distribution $90^{\circ}$; vertical distribution $10^{\circ}$; mounting hole diameter $131 / 4-\mathrm{in}$.

## No. 601B

Combines $12-\mathrm{in}$. low frequency speaker with high frepuency driver unit and horn and a 3000 cyde crossoner motwork. Frequeney response 40 eycles to 22,000 eycles. Power 20 watts ( 30 watts peak); impedance 8 ohms: horizontal distribution $90^{\circ}$; vertical distribution $10^{\circ}$; mounting hole dianeter $10 \frac{1}{4}-\mathrm{in}$.

## No. 602B

Companion piece and identical to the 6011s, exeept it is monnted on F -ing frame with latger low frequeney magned and new high freguency driser and horn. Power 2.5 wates (30 watts peah); impedance 8 ohms; horizontal disribution $90^{\circ}$; vertical distribution $10^{\circ}$; momenting hole diameter $131 / 4-\mathrm{in}$.

## Altec Lansing Portable Consoles

Meets all requirements for fiold use in AM, FM, and TV remote pichup. Wired for high level mixing, it incorporates two 1510 A preamplifiers, one 1510 A line amplifier, 530 A power supply, a large illuminated VI, meter and a master volune control providing control of four microphone inguts.

May be operated from either 110 v a-c or from an external battery supply. Facilities are prosided for headphone monitoring.
May he ordered with either AB carbon or Daven mixing potentiometers.

## Specifications

Gain 102 db maximum, each channel; power output +25 dhm at $2 \%$ thd, $50-7,500 \mathrm{cps}$; frequeney response $\pm 1$ dh, $30-15,000$ cps; source impedance $30 / 50,12.5 / 1.50,2.50 / 300$, 500/600 ohms, each channel; load impedance $125 / 150$ or $500 / 600$ ohms; power supply 117 v., $50 / 60$ cps, 50 watts or 270 v and 6 v batteries.

| No. | Height In. | Width In. | Depth In. | Wh. Lbs. | AB Carbon Each | Daven Type Each |

## Altec Lansing Console Mounting Assemblies

This assembly houses the complete 1500 system in a con-sole-type enclosure for use on a desk or table.

Accommodates one 1.568 A or one 1.569 A power amplifier and the equivalent of four $1.510 \mathrm{~A}, 1511 \mathrm{~A}$, or 1550 A units, or any combination of these units.

Finished in blue gray.

| $\mathbf{1 5 6 0 A}$ | $101 / 4$ | 24 | $213 / 4$ | 40 | $\$ 135.00$ |

## Altec Lansing Consoles

Fixceeds F.C.C. standards of quality. Hinged front panel permits fast servicing of mixing pots, switches, tubes and immediate access to the plug-in power supplies.

Vight low level microphone or turntable inputs are controlled by four mixing knobs. The other two knohs control four line inputs providing a control of twelve inputs with facilities for mixing six at any one time.

The output channel can be switched to either of two output lines and antomatically connects the control room telephone to the unused line.

The eight watt monitor amplifier normally used for talkback and public address can be switched to replace line amplifier in case of emergency.

The large VU meter monitors program output channel, remote lines, or the plate supply and relay supply voltares.

Cue in circuits provided on the line input controls. The console is completely self-contained.

## Specifications

Gain 100 db , microphone inputs: 15 db , line-level inputs; power output +20 dlm at $1 / 2 \%$ thd, $30-15,000 \mathrm{cps} ;+24 \mathrm{~d}$ bm at $1 \%$ thd, $30-15,000$ eps; frequency response $\pm 1 \mathrm{db}, 20$ $20,000 \mathrm{cps}$, any input to promram output; source impedance $30 / 50,125 / 150,250 / 300,500 / 600$ ohins, mic. inputs. 600 ohms, line level inputs ( 150 or 600 olims if repeat coils are used); load impedance 150 or 600 ohms, line outputs $2,4,8,16$ ohms, loudspeaker outputs; noise level 74 d ) below +24 dbm (mixer and master controls adjusted for 70 db , net gain) -equivalent input noise- 120 dbm; power supply 117 volts, $60 \mathrm{cps}, 100$ watts; external power aitailable 12 vde for relay operation.

Finished in blue gray.

## Altec Lansing Consoles

No. 250A
Contains five 428B preamplifiers for microphone preamplification, two 428B preamplifiers for bosters, two 42913 line amplifiers, and one 42913, 8 watt monitor amplifier, two 52213 power supplies, and one 52313 power supply. These provide a total of nine mixing controls and eighteen input chamels.

As equipped, five of the mixing controls conneet with ten low level microphone inputs. Each of the other four mixers connect to one line input and one utility input. Two of these line inputs can be converted for microplione use by insertion of two extra 428B preamplifiers in the pre-wired receptacles.

The output of any of the mixer controls can be switched to either of two output channels. Each output chamnel has its own master mixing control and illuminated VU meter and phone jack for headset monitoring.
An independent channel for loudspeaker monitoring of either output, any of the incoming lines or the cue circuits, is provided. This chamel may also be used to feed cue programs back to the remote line circuits or for talk-back or either of the two studio loudspeaker circuits.

Console wired for four 15036 line input repeating coils. Controls are color-coded according to function and placed for efficient and convenient operation.

Tube checking facilities provided. Console completely selfcontained.

## Specifications

Gain 100 dl , microphone inputs: 60 db , utility inputs: 40 db, remote line inputs; power output +20 dhm at less than $1 / 2 \%$ thed, $30-15,000 \mathrm{cps} ;+21$ dhru at less tham $1 \%$ thd, $30-$ $15,000 \mathrm{cps}$; frequency response $\pm 1 \mathrm{db}, 30-15,000 \mathrm{cps}$; source impedance $30 / 50,125 / 150,250 / 300,500 / 600$ ohms, mic. inputs. 600 ohms all other inputs ( 150 or 600 ohms when repeat coils are instilled); load impedance 600 ohms, line, audition or cueing outputs 2, 4, 8, 16 ohuns, londspeaker outputs; noise level 70 d h helow +18 dbm out put (mixer and master controls adjusted for 68 db net gain); power supply 117 volts, 60 cps , 200 watts; external power available 12 vdc for relay operation.

Console finished in blue gray. Table top finished in dark green.

# Webster Teletalk Intercommunicating Systems and Speakers 

## Listed by Underwriters' Laboratories, Inc.

## Teletalk Systems

Deperidable, economical two-way intercommunications systems. Save time; relieve congestion of telephone lines; provide crystal clear, sensitive intercommunication at the flick of a switch.

Available in designs to meet the specialized needs of all businesses. All models are housed in attractive cabinets to harmonize with the finest olfice furniture.

## Master Stations

1100 Series: A master slation in walnul grain plastic calinet, with goldd tone front and bach metal panels. Sersions clack momed on front panel. Opreates on 110-12. volts, 60 cycle current only. Models of from five to ten station capacity available.
No. $\mathbf{1 0 0 0}$ Series: Same as the floo series but without sessions clock. Models of from five to ten station capacity available.

No. W606M Series: Similar to 1000 Series except for wall mounting.

## Administrative 2000 and 2100 Series

Available in two great new units; the new 2000 Series Vacuum Tinte Madels and the new 2100 Series Transistor Models. Both series have a host of enstom features styled-in, at no extracost; Printed Circuits; Tolebar Central Control that provides, at the option of the user. completely private conversation or "remote reply"without manual operation; separate Busy signal light and Pilot Light; Built-in Silencing Circuit; incoming signal Volume Control; Iexecutive Priority for rush calls; Plug-in Junction Bux Comuctors for easy replacement of units. Additional optional features available are Visible and Audible Anmmciators, All-Call, Three Position Selector Keys, Itandset and Bonster Amplifier Connectors.

Units housed in Brooks Stevens styled cabinets, in driftwood or walnut finish, with rich gold-tone grille and transparent controls.

A vailable in a wide range of models with facilities for connecting from 6 to 60 stations.

## Executive 3000 and 3100 Series

Provides instant contact with key people, however complex the organization.

Available in the 3000 Series vacum tube models or the 3100 series transistor models with all the fine custom features st yledin to the Administrative Series as well as these additional optional features; Visible and Audible Annunciators and Three P'osition Selector Keys, Iandset, and Bouster Amplifier Connectors.

May be equipped with telephone-t ype handset for private conversations. I p to on stations can be obtained in standard nodels. Gireater capacities available upon request.

Available in walnut or driftwood finished cabinets with gold-tone grilles.

## Teletalk Speakers

For use with Teletalk Master Stations

## Model 3D45

Flush mounting 3-in. Speaher combined with push button for operating bell, chimes, buazer or other signaling device.
Push button operates independently of speaker.

Weather-proofed construction permits installation on door jambs and other exposed areas.

## Model 5G45

I las 5 -inch spaher housed in a molded bakelite cabinet, simulated walnut finish.

For use in most indoor locations where moise level is not excessive.

Can be used with all master station models in the $\$ 1$ series for receiving and replying to calls, and with the si series for receiving calls.

Also available with push buttons for use with annun-ciator-type master stations, with switeh for origimatimg calls by voice, or with switch to operate in connection with silencing circuit system.

## Model 4H45

Type P.M. Dymanic (Alnico V) speaker. Equipped with silencing switeh on top of cabinet.

Chasis dianl. 1-ill. Spaher sizo: Width 638 -in.; Height 338 -in. Depth 6 $7 / 8$-in. Power Capacity Maximum 5 waths.

Cabinet has walnut linished side Panels and (iold-tome Cirille. Can be placed on desk or hung on wall. Also available with callin switch on left side of cabinet and push button on top of cabinet.

## Model 5E45

A flush-mount ing $5-\mathrm{in}$. speaker for interior focations where only a moderate area is to be covered and where the noise level is relatively low.

Face plate is finished in white enamel with a plastic grille over speaker opening.

Also available with annunciator push buttoil and silencing circuit switch (Model 5Et5I3S).

## Model 8C45-2

Type P.M. Dynamic (Alnico V) speaker. Furnished with l'niversal wall mounting bracket.

Moisture Proofed Come Chassis 8 -in. in diam. Speaker size: Depth 5-in.: diam. $83 / 4-\mathrm{in}$.
Cabinet is round metal housing with baked brown crackle finish.

Power Capacity Maximum 8 watts.

Correction Factor For Room Temperatures Over $30^{\circ} \mathrm{C}$., $86^{\circ} \mathbf{F}$

Alumimum Conductors. For aluminum conductors, the allowable current-carrying capacities shall be taken as 84 per cent of those given in the table for the respective sizes of copper conductor with the same kind of insulation.
lare Conduetors. If bare conductors are used with insulated conductors, their allowable current-carrying capacity shall be limited to that permitted for the insulated conductor with which they are used.

Application of Table. For open wiring on insulators and for concealed knob-and-tube work, the allowable currentcarrying capacities of Table 2 shall le used. For all other recognized wiring methods, the allowable current-carrying capacities of T'able 1 shall be used unless otherwise provided in the code.

More Than Tliree Conduetors in a Raceway. Table 1 gives the allowable current-carrying capacity for not more than three conductors in a raceway or cable. If the number of conductors in a raceway or cable is from 4 to 6 , the allowalle current-carrying capacity of each conductor shall be reduced to 30 per cent of the values in Table l. If the number of conductors in a raceway or cable is from 7 to 9 , the allowable current-carrying capacity of each conductor shall be reduced to 70 per cent of the values in Table 1. Exceptions to the foregoing are permitted in the code for certain applications.

Neutral Conductor. A neutral conductor which carries only the unbatanced current from other conductors, as in the rase of normally balanced circuits of three or more conductors, shall not be counted in determining current-carrying capacities as provided for in the preceding paragraph. (In a 3 -wire circuit consisting of two phase wires and the neutral of a

4-wire, 3-phase system, a common conductor carries approximately the same current as the other conductors and is not therefore considered as a neutral conductor).

Ultimate Insulation Temperature. In no case shall conductors be associated together in such a way with respect to the kind of circuit, the wiring method employed, or the number of conductors, that the limiting temperature of the conductors will be exceeded.

Use of Conductors with Higher Operating Temperatures. If the room temperature is within $10^{\circ} \mathrm{C}$ of the maximum allowable operating temperature of the insulation, it is desirable to use an insulation with a higher maximum allowable operating temperature; although insulation can be used in a room temperature approaching its maximum allowable operating temperature limit if the current is reduced in accordance with the table of correction factors for different room temperatures.

Voltage Drop. The allowable current-carrying capacities in Tables 1 and 2 are based on temperature alone and do not take voltage drop into consideration.

Overeurrent Protection. If the standard ratings and settings of overcurrent devices do not correspond with the ratings and settings allowed for conductors, the next higher standard rating and setting may be used, but not exceeding 1.50 per cent of the allowable carrying capacity of the conductor.

Deterioration of Insulation. It should be noted that even the best grades of rubber insulation will deteriorate in time, so eventually will need to be replaced.

## Number of Conductors in Conduit or Tubing

The following applies only to complete conduit systems, and does not apply to short sections of conduit used for the protection of exposed wiring from mechanical injury.

## 1 to 9 Conductors <br> Rubber Covered: Types RF-32, RUF, R, RH RW, RU and RUW <br> Thermoplastic: Types TF, T and TW

## Conductor A.W.G.

18

## Definitions of Electrical Terms

Alternating Current-Current which reverses its direction of flow twire in each cyele.

Ampere - The unit of measurement for electrical current. That amomen of current which will be caused to thow in a circuit of one ohm resistance when a potential of one volt is applied.

Arrestor-A device to conduct lightning surges to the gronnd and limit the following line current, thas protecting the line and assoriated equipment.

Carrier-In telephony, a carrier wave impressed on a netallic circuit making possible the transmission of more than one conversation simultanoonsly.

Cirenit-The complete path of an electric current including the originating device, the using device and a means of opening or closing the circuit.

Common Battery-A single hattery, usually in the central oflice. which supplies direct current to all of the associated telephone circuits.

Condenser-(Also a capacitor) A device to introduce capacitance into an electrical circuit. Commonly used to correct low power-factor.

Contactors-An electro magnetic switch which may be operated by a control circuit from a remote point. Generally not fused.

Controls-Generally motor controls which include switches for starting, stopping, reversing and regulating the speed of clectric motors.

Cut-Ont-A fused switeh for disconnecting the primary circuit from a distribution transformer.

Decilom-A unit of measurement for sound.
Delta-An alternating eurrent. threr-phase power source connected in the form of the Greek letter $\Delta$ or Delta.

Direct Current-Current which flows steadily in one direction in a circuit.

Dist ribution line - The conductors with laterals serving transformers which feed secondary circuits.

Follow Current-That line current which tends to follow a lightning discharge through an arrester to ground.

Footcandle A unit for measuring illumination. The illumination produced at a surface, all points of which are at a distance of one foot from a standard candle.

Footlambert-The average brightness of any surface emitting or reflecting light at the rate of one lumen per square foot.

Fused Disconnert-Generally an air break switch with a fising unit in the blade. For opening and closing high voltage circuits.

Grounded Circuit-In telephony. a circuit where the current flow in one dircetion is through a metallic conductor while the return is through the ground. In power use a circuit is grounded when one wire of the cireuit is connerted to ground at one or more points.

Kilowatt - A unit of measurement equivalent to one thousand watts.

Line Loss- The voltage drop resulting from the passage of electrical current throngh the resistance of the line.

Lumen-The total amount of light falling on an area of one square foot, all phints of which are one foot from a source equal to one standard candle.

Metallir Cirenit-In telephony, a two !wire or completely metallic circuit, no part of which is through the ground.

Mierowave A very high frequency radio transmission with line-of-sight characteristics. Now replacing long distance telephone lines.

Motor Starter-A switch with current limiting characteristics or delayed fusing to acconmodate the high initial current of motors being started.

Network-An assembly, usually consisting of capacitors and resistors, to provide the reguired clectrical characteristies in a telephone circuit. The network in the base of a telephone set is a very good example.

Normally Closed-Contacts which open when the switch is operated.

Normally Open-Contacts which close when the switch is operated.

Ohm-The unit of electrical resistance or the resistance of a circuit in which a potential difference of one volt will produce a current of one ampere.

Panel-Commonly a device to provide individual switching and circuit protection to circuits branching from the consumers service entrance.

Power Factor-The ratio of active power to apparent power.
Protector-A device to protect a telephone circuil from the effects of lightning or other high voltages accidently impressed on the line.

Receiver-The telephone device which transforms the transmitted electrical impulses back to audible sound waves.

Recloser-A cotout which automatically reoloses a specified number of times after cach operation of the fuse element.

Resistor-A device used to limit or reduce the flow of current in a circuit.

Ringer-In telephony, the signalling bell which rings to indicate there is an incoming call on the line.

Secondary Line-The conductors connected between the secondaries of distribution transformers and the consumers service entrances.

Single Ihase-A two-wire circuit energized by a single alternating electromotive force.

Sub-Station-An assemblage of equipment for changing transmission voltages to distribution voltages. Generally includes transformers. switching and protective equipment, support structures and enclosing fence.

Three Phase-A combination of three circuits energized by alternating electromotive forces that differ in phase by 120 degrees or one-third of a cycle.

## Definitions of Electrical Terms

## Concluded

Threc Phase, Four Wire System-A three phase four wire system is a system of alternating-current supply comprising four conductors, three of which are connected as in a three-phase three-wire system, the fourth being connected to the neutral point of the supply, which may be grounded.

Transformer-An electrical device withont continuously moving parts which transforms electrical energy from one circuit to another with changed values of voltage and current.

Transmitter-The telephone device into which a person speaks and which transforms the voice into electrical impulses for transmission.

Transmission Line The conductors which transmit electric power from generating station transformers to remote transformers feeding distribution lines.
Volt-A unit of electromotive forer which, when steadily applied to a circuit whose resistance is one ohm, will produce a current of one ampere.

Voltage Regnlator- A device for maintaining a constant voltage on a line.
Watt-The electrical unit of measurement for power which is roughly equivalent to the work done by one ampere of current at a potential of one volt.

Wye-An alternating-current three-phase power source connected in the form of a $Y$.

*In two-phase, three wire circuits the current in the common conductor is 1.11 times that in either other conductor.
Note: $\mathrm{E}=$ Volls; I = Amperes; \% Eir. = Per Cent Efficiency; $\operatorname{Cos} \theta=$ Power Factor.

## Wiring Formula <br> For Copper Wire

For determining the correct wire size for a particular installation, an adaptation of ohms law may be used. The formula below permits such a determimation, and considers the effect of voltage drop. TWo use it, the distance of the eircuit one way (D) must be hnown, and the allowable voltage drop (V) must be selected. The conductor area in circular mils, then is:

$$
\text { C.M. }=\frac{2 \mathrm{DxCxIR}}{V}
$$

Where $r$ is the resistivity (ohm-circular mil per foot) of the conductor. For annealed copper conductors used $\mathrm{r}=10.8$; for hard drawn copper conductors use $r=11.06$. Note: these values are based on a temperature of $30^{\circ} \mathrm{C}$, and will be larger at higher temperature.

For allowable current carrying capacity for the selected conductor size, consult the National Electric Code.

## Miscellaneous Information

Latent heat of vaporization of water $=970$ BTU per lb .
Latent heat of melting of water $=144 \mathrm{BTV}$ per ll .
To evaporate 1 lb . water from and at $212^{\circ}=16.859 \mathrm{Kw}$. minutes.
T'o evaporate 1 lb . water from and at $212^{\circ}=0.281 \mathrm{Kw}$. hours.

Weight per cu. ft . of water $=62.42 \mathrm{lb}$.
Weight per gallon of water $=8.33 \mathrm{lb}$.

## Units of Measure

The following mechanical units of the Metric system are International Standards. From these Metric units electrical units are derived and converted for engineering use.

Meter-The fundamental unit of length in the Metric system; one ten-millionth of the distance along a meridian from the pole to the equator; approximately 39.37 inches.

Gram-The fundamental unit of mass or, practically, of weight. Equals the weight of a culic centimeter of water at a temperature of 4 degrees Centigrade.

Second-A unit of time, $1 / 60$ of a minute; a unit of angular measure, $1 / 60$ of a minute of arc.

## Electrical Units

Volt-The practical unit of electromotive force; the clectrical pressure which will cause a current of one ampere to flow through a resistance of one ohn. The force which will charge a condenser of one farad capacity with a coulombl) of electricity.

Ohm-The practical unit of the resistance of a material to the flow of current. That resistance which will permit the flow of one ampere when a voltage of one volt is imposed across the resistance.
Ampere-The practical unit of the rate of flow of electrical charge; one coulonb per second arross any given cross-section of a circuit. The current that will flow in a resistance of one ohm when an electromotive force of one volt is impressed across the resistance.

Couloml-A quantity of electrons; the quantity of electrons passing any given cross-section of a cireuit when a current of one ampere flows for one second. The quantity of charge stored in a condenser of one farad when suljected to an e.m.f. of one volt.

Farad-The practical unit of electrical capacity. The caparitance of a condenser wherely a stored charge of one coulomb produces an e.m.f. of one volt.

Watt-The practical unit of electrical power. The rate of expenditure of electrical energy. One joule per second.

Joule-The practical unit of energy or work. The work done to raise the potential of one coulomb one volt.

## The Circular Mil

The standard unit of wire cross-section in English and American wire tables. Eiquals the area of a circle whose diameter is one mil ( 0.001 inch).
To obtain the number of circular mils in a solid wire of a given diameter, express the diameter in mils and then square it.

To obtain the diameter of a solid wire having a given number of circular mils, take the spuare root of the circular mils and the result is the diameter in mils.

One circular mil equals 0.88 .94 square mils.

## Ohm's Law

The relationships between current, voltage and resistance in a circuit are expressed by Ohm's law. Where $I=$ current in amperes, $\mathrm{E}=$ voltage in volts, and $\mathrm{l}=$ = resistance in ohms, the following relations permit any one value to be found when the other two are known:
(1) To find the current through a circuit when the voltage across the circuit and the resistance of the circuit are known:

$$
\mathrm{I}=\frac{\text { Voltage }}{\text { Resistance }}=\frac{\mathrm{E}}{\mathrm{R}}
$$

(2) To find the voltage across a circuit when the resistance of the circuit and the current througb it are known: $\mathrm{E}=$ Current $\times$ Resistance $=1 \mathrm{l}$
(3) To find the resistance of a circuit when the current through it and the voltage across it are known:

$$
\mathrm{R}=\frac{\text { Voltage }}{\text { Current }}=\frac{\mathrm{E}}{\mathrm{I}}
$$
