list prices include Motor Sentinel with one interchangeable heater.
Select heater from Table 3 above and use the heater symbol for the second section of the catalog number. Example: FD1211-BW5.

Other hub arrangements or hub sizes can be furnished by using Condulet bodies of the FD series, with special tapping for larger cover screws.

Type EPC Condulets are available with ITE, Westinghouse, and Trumbull circuit breakers; information on request to Graybar.
*Available in $\$ 100.00$ Condulet with $11 / 4^{\prime \prime}$ hubs.

## Type EPC Circuit Breaker Condulets

## Air Break Circuit Breakers

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)
Class I, Group D (NEMA Type VII); Glass II, Groups E, F , and G ; Class 111 (NEMA Types, IX, V, and III).

These Condulets with air break circuit breakers are suitable for service entrance, feeder, or branch circuit protection, for lighting, appliance, and motor circuit conductors. l'or manual closing, opening, or resetting, an external handle is provided. Four threaded huls are provided, two at the top and two at the bottom.

# Crouse-Hinds Condulets 

## Type EPC Line Starter Condulets Magnetic Across-The-Line Motor Starters <br> Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, V, and III)

Listed for looth air break and oil immersed starters. Oil immersion is especially useful in corrosive locations. Type EPC Condulets arranged for oil inmersed starters are explo-sion-prowf regardless of whether or not the oil level is properly maintained.

Air break starters have thermal overload relays arranged for mamal reset. For this purpose, a reset push Intton is mounted upon the front of the body.

Oil immersed starters have thermal induction overload relays arranged for automatic resetting; therefore, no external reset buttons are furnished.

The starters are opened and closed by push button "startstop" stations located at convenient points. "Types EFD, EFS, and EGI'serie's air break push button stations and type olFC oil immersed push button stations are recommended for this service. Push button stations are not included.

Ordering lnformation: When ordering complete type EIPC Line Starter Condulets, give complete catalog number and specify IIp., voltage, frecquency, number of pliases, R.P.M.. type and full-load ampere rating of motor. For two-speed motors, give full load ampere rating at each speed. If complete motor data is not available, specify ampere rating of heaters required.

Catalog numbers of oil immersed starters do not include oil.
§'Two-speed starters are also available for 500 volts at the same prices.
**Also available for 110 and 3.50 volts at the same prices.
Ifeaters: Air break motor starters are furnished with two heaters; oil immersed starters are furnished with two induction temperature overload relays with relay coils. Leversing starters are furnished with two heaters; two-speed starters are furnished with four heaters.

* Daximum horsepower ratings shown for two-speed starters are at the high motor speed.

Type EIPC Condulets are also available with General-Electric, Westinghouse, Allen-Bradley, Arrow-H.\&H., and Trumbull starting switches; information on request to GIRAYBAR.

## Crouse-Hinds Condulets

## Type EPC Combination Line Starter Condulets

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight
Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, V, and III)

## Type ERI-Explosion-Proof and Dust-tight

## Class I, Group D

30 Amp., 250 V., A-C-20 Amp., 575 V., A-C

## Two and Three Wire

No. 4240C

For use in chemical plants, oil refinerics, distilleries, solvent areas, etc., under Class 1 locations. Pug interlocks with switch and cannot be withdrawn or inserted under load. Rotating member of pluy throws switch to "on" or "off" position. Separate ground pole which "makes" first and "breaks" last.

Receptacle Enclosures-Cast iron, corrosion resisting baked enamel finish.

Plugs-Steel, cadmium plated. Furnished with aluminum alloy cable clamp and neoprene cable bushing.

## R \& S Circuit Breaker Cabinets

Types SWC and DWC
Waterproof and Dust-Tight
Class II, Groups E, F and G;
Class III—NEMA Types 3, 4, 5 and 9
Type SWC-With Single Pole Branch Circuit Breakers, 125 Volts, A.C. or D.C.
Type DwC-With Double Pole Branch Circuit Breakers, 250 Volts, A.C. or D.C.

No. SWC615-Complete
with Six Circult Breakers

Conduit Drilling-Regularly furnished drilled and tapped for conduit as follows: Mainone $11 / 2$-inch outlet in bottom: Branches-three 1 -inch outlets in top. Other sizes and combinations of conduit drilling can be furnished if specified on order. All conduit outlets are provided with dust caps.

Finish-Corrosion resisting.
Notc-Cabinets are furnished with insulated neutral strip, so that circuit breakers nay be used independently or as a panelboard.

## Enclosure Data

All enclosures have precision ground joints and are constructed of high tensile alloy with a corrosion resisting finish. Cover bolts are stainless steel. Enclosures are designed to allow generous gutter space between the breaker and all four sides of enclosure for throngh wiring, and permit casy comection to breaker lugs of customer's in-coming and out-going lines. Enclosures for G, J, $K$ and L frames are provided with hinged covers. All covers are removable, exposing entire breaker and gutter space.

## Conduit Outlets

Binclosures are provided with heavy pads for conduit tapping on sides as well as top and bottom. Specify size and location of outlets when ordering.

## Operating Data

Operating handles are of exceptionally rugged design and have means for padlocking in both the "ON" and "OFF" position. Substantially built slide mechanism on inside of cover transmits an in-line thrust to the breaker hande.
Complete details, listing and prices on application to Graybar.
Additional printed information on these and other products not listed is available on request to GRAYBAR.

$\ddagger 3$-position selector switch.
*Insert symbols for colors of lenses as a suffix to catalog number as follows: A - amber, C - clear, G-green, It-red.
*Pilot Light - S-6 bulb; 6 watts, 120 volts regularly furnished. For higher voltages use of a transformer is recommended. One transformer is required for each lamp and requires space occupied by one light.

Push button rocker arm can be furnished with Mushroom Head Extension Button. Specify location and add suffix "E", to catalog number. Price on application.

Special Contact Push Buttons can be furnished. Prices on application to Graybar.

Name Plate - Stop-Start, On-Off, Hand-Off Auto regularly furnished. Other markings will be furnished; specify marking required.

Enclosures - Cast iron, corrosion resisting baked enamel finish. Covers are provided with holes to accommodate padlock for locking buttons in depressed position.

Outlets - Unless otherwise specified, furnished with one $3 / 4$-inch outlet in top. Additional or larger outlets charged extra. Maximum conduit l-inch, top and bottom. Specify size and location.

Enclosures - Cast iron, corrosion resisting baked enamel finish.

Outlets - Unless otherwise specified, furnished with one 1 -inch outlet top and bottom. Larger outlets charged extra. Maximum conduit $11 / 4$-inch top and bottom. Specify size and location.
$\dagger$ Full load current rating of motor must be specified on order.

# R \& S A.C. Magnetic Starters Across-the-Line Type-110-600 Volts, 25-60 Cycles 

Style XS-Explosion-Proof and Dust-Tight Class I, Group D-NEMA Type 7

Style DS-Dust-Tight
Class II, Groups E, F and G-NEMA Type 9
Style WS-Waterproof and Dust-Tight Class III-NEMA Types 3, 4 and 5

No. XS413 MARL

Enelosures - Cast iron with hinged cover, corrosion resisting baked enamel finish.

Outlets - Unless otherwise specified, furnished with one outlet at top and bottom, size as listed. Additional or larger outlets charged extra. Maximum conduit: NEMA sizes 0,1 and $2-$ 2-inch at top and bottom, $11 / 2$-inch at sides; NEMA sizes 3 and $4-3$-inch at top and bottom, 2 -inch at sides. Specify size and location.
When ordering, specify catalog number, horsepower, voltage, phase, cycles and full load current rating of motor. Furnished complete with over load heaters.

## Enclosure Complete With Starter

*When ordering Type DS - Dust-Tight, substitute DS for WS in catalog number.
CATALOG NUMBER consists of above listed FORM NUMBER with the proper suflixes to designate the type of operation and interiors required as indicated below:

For Automatic Reset overload suffix "AR" to the Form number. Deduct $\$ 6.00$ from listed price.
For Manual Reset overload suffix "MAR" to the Form number. Price as listed.
For Local Stop-Start Push Button in cover add final suffix "L" to the completed catalog number. Add $\$ 20.00$ to listed price.

Reversing and two speed starters also available. Complete details and prices on request.

## R \& S A.C. Combination Starters

Style CBS-Explosion-Proof and Dust-Tight Class I, Group D-NEMA Type 7

## Style DBS-Dust-Tight

Class II, Groups E, F and G-NEMA Type 9
Style CBSW-Waterproof and Dust-Tight Class III-NEMA Types 3, 4 and 5

Types CBS Combination Starters combine an air brake circuit breaker with a line voltage magnetic starter in a single, convenient cast iron enclosure with hinged cover. Carrosion resisting baked enamel finish. Furnished with over load heaters.

When ordering, specify catalog number, horsepower, voltage, phase, cycles, full load current rating of motor and circuit breaker trip amperes.
Outlets - Unless otherwise specified, furnished with one outlet at top and bottom, size as listed. Additional or larger outlets charged extra. Maximum conduit: NEMA sizes $0,1,2$ and $3-2$-inch at top and bottom, $1 \frac{1}{2}$-inch at sides; NEMA size $4-41 / 2$-inch at top and bottom, 4 -inch at sides. specify size and location.

Enclosure Complete With Starter and Circuit Breaker

550 Volts, A.C.
550 Volt units available. Catalog numbers, prices and complete details on request.
*When ordering be sure to add prefix CBS for Explosion Proof, DBS for Dust-Tight, and CBSW for Watertight Starters to the numbers.

CATALOG NUMBER consists of above listed FORM NUMBER with the proper suffixes to designate the type of operation and interiors required as indicated below:

For Automatic Reset overload suffix "AR" to the Form number. Deduct $\$ 6.00$ from listed price.
For Manual Reset overload suffix "MAR" to the Form. Price as listed.
Above listings are for Remote Control. For Local Control with Push Button in cover, add final suffix "L" to the completed catalog number. Add $\$ 20.00$ to listed price.
Special combinations and unlisted ratings can be supplied.

 Air Break Circuit Breakers}

## Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX, V, and III)

#### Abstract

The Condulets with air breah circuit breakers are suitable for service entrance, feeder, or branch circuit protection, for lighting, appliance, and motor circuit conductors. For manual closing, opening or resetting, an external handle is provided. Two threaded through-feed huls are provided. Other sizes and arrangements can be furnished. Prices on application to Graybar.

## Crouse-Hinds Condulets

## Type DVS Circuit Breaker Condulets

## Air Break Circuit Breakers <br> Dust-Tight and Watertight

Class II, Groups E, F, and G; and Class III (NEMA Types IX, V, IV, and III)

These Condulets are suitable for service entrance or branch circuit protection, for lighting, heating, appliance and motor circuits. They provide maximum safety and convenience of installation in Classes 11 and III hazardous locations, and give complete protection where exposed to corrosive vapors, abrasive dusts, or weather.
Two threaded through-feed hubs are provided. Other sizes or arrangements can be furnished. Prices on application to GRAYBAlf.

## Crouse-Hinds Condulets

## Type EMH Instrument Condulets Explosion-Proof and Dust-Tight

Furnished with Mounting Plate and Supports for Instruments.

Four mounting lugs with fastening holes are provided at the back for surface mounting or at the front for flush mounting.
Bodies are equipped with mounting plates and posts to support the instruments near the cover window.

Surface

Flush

General Electric, Hickok, Westinghouse, and Weston instruments can he mounted in type EMII Condulets.

| Conduit Openings | Na . $\quad \begin{gathered}\text { Size } \\ \mathrm{In} .\end{gathered}$ | Each |

Over-all Dimensions: Diameter of body, $53 / 4$ inches; depth of body, $23 / 4$ inches; height of cover, 3 inches.

## Type TCH Electric Clock Condulets Factory Sealed <br> Explosion-Proof and Dust-Tight <br> Class I, Groups C and D; Class II, Groups E, F, and G: and Class III'

Type TCII explosion-proof

With Enclosing Band and dust-tight self-starting synchronous motor operated clock Condulets are for use in hazardous locations.

The dial is 13 inches in diameter. A resetting knob protrudes heyond the bezel. The motor and all electrical connections are enclosed in an explo-sion-proof and dust-tight housing. The gear train is enclosed in a gasketed dust-tight chamber located directly in front of the explosion-proof housing and is atlached to the back of the dial assembly.
Two styles are available: one for flush mounting, and one for surface mounting. For surface mounting, a sheet metal notched band can be supplied for enclosing the space between the wall and back of dial assembly.

| Na. | Motor | Watts | ${ }_{\text {Hub }}^{5128}$ | style | Each |

| TCH202 | Enclosing B | for | urfac | Mol | 6.00 |

25 and 50 -cycle clocks can be furnished at an advance of $\$ 10.00$ in the list price.

## Type HRC Thermostat Condulets

 Explosion-Proof and Dust-Tight Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX and V) Furnished with Thermostat, Thermometer, and Mercury Tube Switch
An external lever permits any temperature setting within the calibrated range. $\ddagger$ 'The thermostats will operate on a three-degree Fahrenheit differential. An accurate Fahrenheit thermometer is attached to the front for indicating room temperature.
Equipped with single pole switches. In units for refrigeration and air conditioning the switch makes contact on temperature rise. In units for heating the switch makes contact on temperature fall.**

## Type HRC-Through Feed §

Have $1 / 2$-inch union hubs.

| No. | For | Fahrenheit Temperature Range of Thermosta | Exh |
| :---: | :---: | :---: | :---: |
| H11C126 | Refrigeration | 25 to $60^{\circ}$ | \$60.00 |
| 111 C 137 | Ileating | 38 to $700^{\circ}$ | 60.00 |
| 1113C158 | Ileating | 56 to $80^{\circ}$ | 60.00 |
| H11C169 | Air Conditioning | 65 to $90^{\circ}$ | 60.00 |

## Furnished With Thermostat and Thermometer

The Condulets for air conditioning and/or heating are provided with single-pole, double-throw switches.
Connected for heating, the switch makes contact on temperature fall.

Positive-Off lever can be supplied on IH1RC42B and HRC42B-25 only.

Add suffix H 1 to the catalog number and $\$ 1.50$ to the list price.

Positive-On lever can be supplied on IIIRC42A-23 only. Add suffix G1 to the catalog number and $\$ 1.50$ to the list price

| Fahrenheit |  |  |
| :---: | :---: | :---: |

## Type ECT Transformer Condulets <br> Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class $\operatorname{ili}$ (NEMA Types IXA, IX, $\mathbf{V}$, and Iii)

Furnished with 50-133-cycletransformers.
2.5 and 50 -volt-ampere transform-
 ers are provided with tapped primaries for 230,460 , or 575 volts and 11.5-volt secondaries.
7.5 to 750 -volt-ampere transformers, inclusive, are provided with single voltage primaries for either 230,460 , or 575 volts and 115 -volt secondaries. The voltage required must be specified.
Transformers for other secondary voltages can be furnished.
Information on request.

| No. | Volt-Amperes <br> ( 50.133 Cycles) | Size Hub Hid |  |
| :---: | :---: | :---: | :---: |
| EC' 211 | 25 | $3 / 4$ | \$29.60 |
| ECT215 | 50 | 3/4 | 50.00 |

§These IIHC Condulets are furnished with threaded cap, GUII10, which can be used to close either hub.
** the list price.
$\ddagger$ Thermostat case is brushed silver bronze.

## Crouse－Hinds Condulets

## Type ESR Bell Signal Condulets

## Explosion－Proof and Dust－Tight

Class I，Group D；Class II，Groups E，F，and G；and Class III

Furnished with either 6,8 ，or 10 －inch diameter gong and with vibrating or single stroke hammer．

25 to 60 －cycle $A-C . *$
Size hub－ $3 / 4^{\prime \prime}$ ．

. .per foot \$. 535
*Not Listed by Underwriters' Laboratories, Inc.
Prices slightly higher in nine Western states.

## No. 2100 Plugmold <br> Multi-Outlet System Standard Wiremold Finish

210013-Base, .0.40-inch steel.
Furnished in 10-foot lengths, without couplings, 100 feet to carton. Weight, per 100 feet. 43 pounds.
No. 21001 (Channel) . . . per foot $\$ .253$
2100C*-Cover, 0.10 -inch steel.
Scored every 3 -inches. Furnished in 5 -foot lengths, 100 feet to a carton. Weight per 100 feet, 19 pounds.
No. 2100C* (Cover)
per foot $\$ .174$

* Cover can be furnished unscored on special order-no additional cost.
$\begin{array}{lllllllllll}\text { Wire No.................. } & 6 & 8 & 10 & 12 & 14 & 16 & 18 & 22\end{array}$
Single Conductor Capacity:
*'Type R or IRII,
with Receptacles
*Type ' $\Gamma$ or RI with Receptacles
Type R or R1I,
without Receptacles. 4
'Type ' 1 , TW, or RU. without Receptacles. $\quad 5 \quad 8 \quad 10 \quad 10 \quad 10 \quad 40$
Twisted Pair Capacity:
Type $R$ or RII,
without Recoptandes. . . .. . . . . . 10 10 II
*See individual listings in catalog.

## No. 3000 Wiremold Raceway Standard Wiremold or White Finish

las a wide applicat ion in industrial plants as a
 branch circuit feeder sislem, a multi-outlet whiring system to serve small motors, electric tools, etc., and is ideal for whiring infrared heating and drying units. Uso serves as a basis for the Wiremold Fluorescent Lighting Units.
300013 Base, . 0.40 -inch steel. Furnished in 10 -foot lengths, without couplings, 50 feet to a carton. Weight, per 100 feet, 80 pounds.
\o. 300013 (Channel)
per foot \$. 487
3000C Cover, . 0 10-inch steel. Furnished in 10-foot lengths, 50 feet to a carton. Weight, per 100 feet, 4.3 pounds.
No. 3000C (Cover) . . . . . . . . . . . . . . . . . . . . . . . per foot \$. 250
$\begin{array}{lllllllllll}\text { Wire No.................... } & 6 & 8 & 10 & 12 & 14 & 16 & 18 & 19\end{array}$
Single Conductor Capacity:
Type R or RH, *with
$\begin{array}{lllllll}\text { Devices in Place. . . } & 6 & 8 & 10 & 10 & 10\end{array}$

Type T, TW or IXU,
$\begin{array}{lllllll}* \text { with Devices in Place } & 8 & 10 & 10 & 10 & 10\end{array}$ without Devices.... $10 \quad 10 \quad 10 \quad 10 \quad 10 \quad 10 \quad 10 \dot{0} \dot{0} 10100$ Twisted Pair Capacity:

Type IR or IMI, with-
out Devices......... . . . . . . . . . . . 505050
*With standard tlush-mounted snap switches and attachmont plug receptacles of type not having pilot lights.

Prices slightly higher in nine Western States.

## National Electric "Lopo-Trim" Raceways

No Fishing-Just Tuck the Wires In.

Finish Trim for "Plug-in" Strip
A hollow steel quarter-round raceway used to carry low potential wires such as telephone, inter-communication and television antenna leads on top of the baseboard. Lopo-Trim has a neutral satin gray finish, matching "Plug-in" Strip, and harmonizes with all tones used in interior decoration. It can be quickly repainted to match baseboard, floor or walls.

Lopo-Trim fits neatly on top of any standard baseboard or on top of National lilectric "Plug-in"" Strip and held in place by projecting steel prongs. It is easily lifted to provide change of telephone placement or addition of wires. The design and positioning of steel prongs exert a tension that holds the trim snugly in place. No muss or fuss or scarred walls when installing Lopo-Trim for there are no nails, screws or fasteners of any type used. Approved by telephone companies, LopoTrim may be installed-

## As a baseboard trim

As a toe-plate where wall or baseboard meet
As a low potential wiring raceway at chair-rail moulding
As a quarter-round trim above or beneath (or both) installations of National Electric "Plug-in" Strip.
Low potential wiring can be brought out of Lnpo-Trim anywhere! Merely drill a hole through the rounded surlaceinsert a standard grommet and bring wires out. The 5 -foot 8 -inch sections of Lopo-Trim match perfectly for continuous installation. Sections are cut to fit and corners mitered identically like wood quarter-round.

Standard package: 18 lengths, 5 foot 8 inches long. Standard package weight, 20 pounds.
Per length

## National Electric Nepcoduct <br> Standard System of Convenience Outlets in the Floor Listed by Underwriters' Laboratories, Inc. <br> Installed under Article 354 of National Electric Code.

No. 7055H
Nepcoduct is a steel raceway system which provides convenience outlets at the floor surface. Standardization on one size raceway for both high and low potential wiring eliminates multiplicity of fittings. Nepcoduct may be used as a single duct system or it may be used in multiples of two or three ducts. For additional capacity and to provide separate wiring facilities for light, power, telephone, and signal circuits.

| No. | No. of Outlets <br> Per $10^{\prime}$ Leneth | Dlametes of <br> Outlet |
| :---: | :---: | :---: |
| 7005 | None | Blank |
| 7055 | 5 | $1.900^{\prime \prime}$ |
| 7055K | 5 | $2.385^{\prime \prime}$ |
| 7055II | 5 | $2.385^{\prime \prime}$ |

## Junction Boxes

Nepcoduct Junction Boxes are castings with cross-overs, incorporated with completely separated high and low potential compartments.

Junction boxes may be brought to correct floor level conditions by the use of adjusting screws for leveling and rough height adjustinent. Adjustable steel tops form a finer adjustment for height to meet newly finished floor elevations such as linoleum, cork or rubber. Ducts are secured to the boxes by tangent bearing set screws, assuring positive mechanical and electrical contact.

## Standard Saddle Supports

The Saddle Support is a two-

No. 7455-A piece assembly which harmonizes with progressive methods of installation, wherein the "layout crew" establishes all measurements and lines of duct by installing the base. The base also serves as an indicator to all tradesmen, warning against interference, which is a very important item in costs. It can be installed as early in the huilding schedule as desired and withstand abuses of normal construction operations.

## Walker "Preset Locked-In" Underfloor Distribution Systems

## For New Office Buildings and for Modernizing Existing Buildings

Phantom View of "Preset Locked-In" Underfloor Distribution System

A "Walkerduct" system is a network of one or more steel ducts with inserts cast in the concrete floor, forming continuous, concealed raceways for power, telephone, or signal wiring circuits. By means of closely spaced, "Preset" inserts formed in the duct during manufacture, convenient outlets for cach service can be quickly provided to serve any desk or machine that may be placed anywhere on the floor area.

This planned method of underfloor distribution of electrical serviers is practical, economical and convenient. "Ireset" sted raceways meet the highest standards of safety by insuring the continuity of the metallic ground throughout the system. Out of sight and under the floor, this system doess not disturb the appearance of your office, presents no ob-
struction to a smooth floor surface. and yet offers immediate availability for any additional serviees required, or to meet the needs of oflice rearrangement. Confusion, dirt, and noise are practically eliminated in making connections during the occupancy of the building.

The advantages of the system are not limited to new construction. The "Flushduct" system has been designed to make it entirely practical to secure the same desirable features in existing olfiees and buildings.
The flush type of duct may be installed in finished floors quickly and elficiontly: and once accomplished, will make it possible to secure the important advantages of the standard Underileor Distribution Systems.

## Duct

This is the new, large duct that is available for use in Walkerduct Systems. It has the large capacity required to meet today's electrical requirements and still have room for additional wiring in the future.

11-gauge steel protected inside and out by a layer of sherardized zine and a specially formulated, corrosion - resistant outer coating. Furnished generally in 10-foot lengths and with five factory pre-set inserts spaced on 2.1 -inch centers.
Inserts on No. 2 duct are 1.9 -in. or ${ }^{23}$-in. in diameter; Vo. 4 duct inserts are gencrally 23 -in. in diameter. Open end of each insert sealed with removable steel cap, recessed to receive ennerete.
Inserts arre threaded on inside tu provide secure fitting connections. Blank duct (without inserts) is provided for bome runs to distribution panels or cabinets. Shipping weight No. 2 duct. 200 Itsis per 100 feet: No. 1 duct, 350 llis . per 100 feet.

Prices and detailed information on refuest.

## Walker "Preset Locked-In" Underfloor Distribution Systems

Sherardized grey iron castings, with chemical-resistant fuish. Openings on 4 sides for either 1,2 or 3 ducts. Adjustable top assembly to suit types of floor and height of inserts. Adjusting screws for leveling. All corners arc drilled for conduit feeders.

Circuit Breaker Clamp-On I inits may be lolted to busses of plug-in duct between any two straight sections or at end of plug-in duct run. When used at end of run, order an end closure.
When ordering clamp-on units specify end or center type and rating of duct to which units will be connected.
Clamp units can be supplied as lug to bus main breakers ly adding suffix letters "LB" to above catalog numbers.

## Square D Plug-In Duct

Schedule EZ

## Straight Lengths and Fittings

Square D Plug-In Duct is an extremely flexible system of power distribution to branch circuits. Round hus hars prowide greater mechanical strength and resistance to short circuit stresses. Steel enclosure and rotating doors over plug-in openings exclude dust and dirt.

Plug-in units are easily attached. Powerful contact jaws, affording positive pressure, can he "rocked" into position on bus bars. Five units may be attached to either side of each ten-foot section. Flexible couplings join Plug-in bus bars-absorb expansion or contraction and eliminate section aligment prohlems.

Straight lengths-Availahle in 6, 7, 8, and 10-foot lengths. When ordering by catakg numbers add suflix number to designate other than 10 -foot length (i.e., SD-1342-6, SD-13.2-7, SD-1341-8). Other lengths can be furnished special and will require longer delivery. Sliding type hanger brackets are included in prices of straight lengths-one bracket for each 5 feet of duct.
Elbow-Iabor only prices do not include duct material; complete device prices include labor and 4 feet of duct material.

Tee Lalor only. prices do not include duct material: complete device prices include labor and 6 feet of duct material.
Cross-I alor only, prices do not include duct materials; complete device prices include labor and 8 feet of duct material.
*When ordering ellows. tees. or crosses add suffix letter to catalog number " E " (edgewise) or " F " (llatwise) (i.e., SD-1342-1J', SD-1313-LF).
$\star$ Cable Tap Box price does not include an end closure when tap box is used at end of rum, order an end closure. When ordering cable tap box, add suffix letter to catalog number-"C" (center type) or "E" (end type), (i.e., SD-33.42-C, SD-33.11-E).
$\dagger$ Flanged End prices cover flanged collar fittings, either with or without bus extension as listed above and do not include any duct footage. For flanged end fitting with bus extensions longer than 7 " standard, use price of fitting as listed without bus extension. then add for necessary bus extension from price table above.
Bus Extension-I ised in conjunction with flanged ends. When connecting a flanged end to a panel or satety switch, a 2 -foot bus extension is usually required. When connecting
 lems.

## Straight Lengths And Fittings

A very high efficiency, heavy power feeder with lowest known voltage drop characteristics. Exclusive design requires no ventilation for limiting temperature rise, permits completely enclosed dust-excluding structure.

Rigid construction resists heavy electrical stresses. Absence of all-metal enclosure climinates "ham" and iron tosses. Inderwriters' approved Feed-in Duct available with either aluminum or copper bus bars. Elonized ashestos insulating sheets permit close spacing of hus bars to oltain ext renely low energy loss and voltage drop.

The solid ebonized asbestos insulating plates which totally enclose bus, have great mechanical and high dielectric strength, conduct heat readily, are impervions to moistare and resistant to arc. The surge clamps provide structaral and mechanical strength necessary to withstand high slort circuit currents in accordance with NEMA standards.

## Pricing Of A Feed-In Duct Run

Aluminum or copper feed-in duct runs are priced in the same manner. A layont sketch of the run showing all dimensions in feet and inches and all fittings such as ellows, tees, crosses, flanged ends, end closures, cable tap boxes, expansion joints and reducers should first he made. Add all dimensions forether and adjust the total to the next higher whole foot. Multiply this total by the list price per foot as determined by the iype (alominum or copper) the ampere rating and the number of poles. To this add the lator only charge for each of the elthows, tees, crosses, flanged ends, expansion joints and reducers. To this add the list price for each of the cable tap boxes and end closures. Add for any bus extension needed. The sum total of all these items is the list price of the entire rum of duct. The price breakdown for each of the various fittings will be done by the factory.

## Straight Lengths

Aluminum straight lengths available in 3,5, 7 and 10 foot lengths. When ordering ly catalog number, add suffix numher to designate length (i.e. AFI)-3160-S7, AFD-5200-S10). Hanger brackets (one for each 5 feet of duct) and joint connection parts are included in duct prices.

Copper straight lengths are available in 6, 7, 8 and 10 foot lengths. When ordering by catalog number, add suffix number to designate length (i.e. FD-3080-S6, FD-3160-S10). Hanger hrackets (one for each 5 feet of duct) and joint connection parts are included in duct prices.

## Elbows

Aluminum ellow lalor only price does not include duct footage. Edgewise elbows are adjustable from 12 to 18 in. on each leg. Flat wise ellows are adjustable from 12 to 18 in . on each leg in the 600 A . to 1000 A . ratings, from 15 to 21 in on each led in the $1350 \mathrm{~A} . t 02000 \mathrm{~A}$. ratings, and from 18 to $2 t \mathrm{in}$. on each leg in the 2.500 A. to 3000 A . ratings. The 1000 A . duct consists of two parallel runs of 2000 A . duct. therefore the adjustment of 1000 A . elhows is the same as 2000 A . Catalog numlers indicate flatwise or edpewise type by " $F$ " or " $E$ " suffix letter. Factory set dimensions of each leg are indicated by suffix numbers in inches (i.e. a 15 in . by 13 in . edgewise ellow woald be AFD-3160-LEE1513).

Copper eltow latwor onty price does not include duct footage. Vidgewise and flatwise elbows of all ratings from 600 A . to 3000 A . are 2 feet on each leg. The 1000 A . duct consists of two parallel ruus of 2000 A. duct. Elbows are not adjustable.

## Flanged Ends

Aluminum flanged end labor only price does not include duct footage but does include 6 inch flared bus extension. Flanged end footage is adjustable from 6 to 12 in . in length when connected to straight tength. When connected to edgewise elbow, fontage between switchboard and center line of ellow is adjustable from 12 to 18 in . When connected to flatwise elhow, footage between switchboard and center line of elbow is adjustable from 12 to 18 in . in the 600 A . to 1000 A. ratings, from 15 in . to 21 in . in the 1350 A to 2000 A ratings, and from 18 in . to 24 in . in the 2.500 A . to 3000 A . ratings. The 4000 A . duct consists of two parallel runs of 2000 A . duct, therefore the adjustment of 4000 A . flanged ends is the same as 2000 A .

Copper flanged end labor only price does not include duct footage bat does inclade 7 inch flared bus extension. Complete flanged end footage is 2 feet long. Flanged ends are not adjustahle.

## Cable Tap Box

Ahminum and copper cable tap boxes do not require end closires when used at end of run. When ordering cable tap box, add suffix letter to catalog number; "C" (center type) or "E:" (end type). (i.e. AFD-3160-CTB, FD-5200-ETCB).

## Reducer (Unfused)

Aluminum and copper unfused reducers are used at a joint where copper is reduced to a lower capacity. I'rices listed in table are labor only and do not inchude any dact footage. Reducers do not occupy any footage in the duct run.

## Bus Extension

Aluminum and copper bus extension is used in conjunction with flanged ends or transformer tap connections. I'rice per foot listed in the table is for straight bus extension. For formed lus extension add $20 \%$ to price listed in table.

## Tees And Crosses

Aluminum tee or cross labor only price does not include duct footage. Fidgewise and flatwise tees and crosses are adjustable throughout exactly the same dimensional range per leg as ellows.

Copper tee or cross labor only price does not inchade duct footage. Flatwise tees and crosses are 2 feet on each leg. For dimensions of edgewise tees and crosses contact Graybar. Tees and crosses are not adjustable.

## Expansion Joint

Aluminum and copper expansion joint labor only prices do not include duct footage. Expansion joints occupy 3 inches of duct length.

## Joint Package Assembly

Aluminum joint package assemblies consist of all necessary parts to connect two straight lengths together and also hanger brackets (one for each 5 feet of duct). One package assembly is inchuded with each straight length. Dackage assemhlies are not needed with other littings. I'rices of package assemblies are included in duct prices.
Copper joint package assemblies consist of all necessary parts to connect any two straight lengelis or fittings together and also hanger brackets (one for each 5 feet of duct). One packige assembly is included with each straight length, ellow, tee, or flanged end and two with each cross. I'rices of package assemblies are included in duct prices.

## Adjustable Joint Assembly

Aluminum adjustable joint assemblies consist of all necessary parts to connect two straight lengths together and also two hanger brackets. This assembly is adjustable from $0^{\prime \prime}$ to $12^{\prime \prime}$ and is supplied for use on any rum of duct when needed to ohtain odd dimensions in feet and inches not possible with standard straight lengths and adjustable fittings. The need for an aljustable joint assembly will he determined by the factory from the sketch of the duct run. The assembly will be set to the exact dimension needed by the factory. Copper adjustable joint assemblies are not available.

## Finish

Aluminum and Copper duct is finished in blue-grey baked enamel.

Weatherproof duct enclosure consists of two-piece galvancaled steel housing with drip hoods on top of duct, joint connections and cable tap loxes.

Blue gray baked enamel finish.
Pricing Weatherproof Duct: Use the price per foot from the adjacent table for the "footage charge" and add the "labor only" charges and cable tap lox and end closure prices from the above tables.

Ordering Information: When ordering weatherprool' feed-in duct, it is necessary that a layout sketch accompany the order. Sketch must bear all dimensions and also whether duct is in flatwise, vertical or edgewise mounting position. If duct passes through a wall he sure to indicate wall thickness and dimension from wall surface to tap hox, ellow, flanged end or end of run.

## Bulldog Flexible BUStribution ${ }^{\circledR}$ DUCT Systems

## Ventilated LO-X® Duct for Feeder Circuits

Available in capacities ranging from 800 to 4000 amperes inclusive, for 2-Pole, 3-Pole and 3 -Phase, 4-Pole, 600 volts or less a-c or d-c, with Aluminum or Copper Bus bars.

Assures cooled electricity for feeder circuits, welders and similar heavy inductive loads.

It is a prefabricated lusway designed for general feeder runs and for serving single or grouped welders and other large inductive loads.

Standard factory-built units, including ellows, tees and crosses, as well as straight sections are merely bolted together to form rums of desired length and arrangenent.

Closely-spaced bus bars arranged in paired phase configuration neutralize magnetic fields and result in superior elliciency. This greatly reduces reactance and holds the voltage drop to a minimum.

Bus bars are wrapped with highdielectric tape and securely positioned in tors. The ventilated nature of the reinforced expanded metal casing provides for natural heat dissipation, insuring cool operation.
D) CT' SECTION-In addition to standard 10 -foot duct sections, fittings can be furnished to meet any building contour or installation requirements.

## Standard 10-Foot Duct Section

## Copper Conductor Pricing Data

[^39]
## Bulldog Flexible BUStribution ${ }^{\circledR}$ DUCT Systems

## Bus Plugs for Type BD Plug-in Duct for Branch Circuits

## Circuit Breaker Plugs

Rated from 15 (1) 600 amperes, 2, 3 and 4 pole, 600 volts or less.

Lised where an automatic protective device of the industrial breaker type with inverse time limit feature is required.
Quick-make and quich-breah, with cover interlock.

Temperature Indicating Plugs
This plug warns, by visual indication through a lamp, when temperatures along a Bus Duct run exceed an efficient operating temperature- $100^{\circ} \mathrm{C}$. ( $212^{\circ} \mathrm{l}^{\circ}$.) so that remedial measures can be taken to relieve the situation.

Ground Detector Plugs
For 1-Phase and 3-Phase, 480 volts and 2.40 volts.

Affords an easy means, through lamps, for quickly indicating grounds on the system. They also serve as potentializers by establishing a potential to ground betweon bus bars and cosing.

# Bulldog Flexible BUStribution $\circledR$ DUCT Systems <br> Type BD Plug-in Duct for Branch Circuits <br> With Aluminum or Copper Conductors 

Provides Flexible Plug-in Lighting and Motor Circuits wherever and whenever desired.
This prefabricated electrical distribution system has the flexibility to match today's dynamic production methods. It enables plant engineers to plan with freedom. Changeovers can be taken in stride because electrically driven equipment can be discomected, moved and reconnected to the bus duct with minimum expenditure in time and money.

When moving a machine, the protective Bus Plug, or tap-off device, is removed from the Duct and reinserted at any convenient plug-in opening.

Each 10 foot section has ten plug-in openings, five on each side. Duct is installed by bolting together the standard sections, elbows, tecs, crosses and fittings required to make runs of any desired length and pattern.

It is $100 \%$ salvageable - the factory-built units can be reused in the same or new combinations.
Capacities 225 to 1000 Amperes, for 2-Pole, 3-Pole Service, 600 Volts or less A-C or D-C; and For 3-Phase, 4-Pole, 250 Volts or Less.

Copper Conductors Pricing Data 10-Foot Duct Sections

Two BDII Hangers are furnished without charge with each "BD" eltoow, tee or cross; Additional Ilangers $\$ 1.00$ each.

Note-600 Amp. and 4000 Amp. prices furnished on request-Contact GRAYBAR

## General Information and Ordering Instructions

Standard Ducts - Prices include labor and material for making duct. $10-\mathrm{ft}$. lengths are slandard. Figure on pro rata basis for less than standard lengths. Do not figure fractional footage - figure the next higher even foot. For ampere ratings below standard ratings use next larger size. Full rating neutral prices furnished on request - contach (iraybar.
These Ducts have Tap Box Opening provisions at each handhole opening. When Tap Box is required over a hand hole opening, add price of required Tap Box. When Tap Box is required in a location other than at the handhole opening, add to the price of the proper section of Duct the Tap Box Opening and price of the Tap Box. When Tap Box Opening only is required in a location other than at a handle opening, add the Top Box Opening price to the price of the section of duct.

Elbows, Tees and Crosses - Prices include labor charge only for manufacturing. Figure material required for these fittings on a footage basis.

Prices for 3 -Phase, 4-Pole are for fittings having $1 / 2$ rating neutrals. Full raling neutrals prices on request - contact Graybar.

The arm or projection having the highest rating determines the fitting rating. Designate type elbow or tee by adding suffix figure to catalog number: No. 1 - Right-hand Flat wise. No. 2 - Right-hand Edgewise. No. 3 - Left-hand Flatwise. No. 4 - Left-hand Edgewise. Designate type of cross by adding suffix figure to catalog number: No. 5 - Flatwise. No. 6-Edgewise.

End Closers - Prices include labor and material.
Flange Ends - Prices include labor and material. Bus bar extensions or hole in switchboard NoT included.

Transformer Tap Opening - Prices include one opening in side of duct and cbony cover plate. Bus bar extensions NOT included.
Ebony Ends-Furnished with or without bus bar openings as specified. Bus bar extensions NOT included.

## Bulldog Flexible Trol-E-Duct © Systems Industrial Type <br> Portable Electricity

These mobile electrical systems provide a constant source of clectrical power for cranes, hoists, portable electric tools and other moving loads. Current is carried through copper busbars enclosed in insulated steel ducts.

The current is collected by trolleys which are wired portable to movable devices. Their flexible, unit construction and standardized design makes it possible to install, dismantle and reinstall many times to meet the ever-changing nature of modern industry.

No. TD310, 3-Pole Standard 10-ft. Duct Section
With each Duct Section, Drop-Out and Drop-Out Sectionalizing Section is furnished as standard: One Hanger Assembly, complete with Ilanger, Cover and Set of Bus Comnectors.

## Standard 10-Foot, 100-Ampere Duct Sections <br> 575 Volts or Less

## Feedrail* Pre-Fabricated Electrical Distribution Systems

FEEDRAIL ${ }^{(1)}$ is the modern system of distributing electric power. Sturdy prefabricated track sections, enclosing copper bus conductors can be joined together to form runs of any length, straight or curved. Trolleys with positive pressured contacts roll freely in the track and act as electric power outlets which can be moved to any point along the track run.
The FEEDRAIL® Systems-engineered and constructed by specialists who devote their time exclusively to trolley busway electrification systens-are available in 60, 100, 225, 375 and 500 ampere capacities. Superior to ordinary wiring methods in safety, convenience and adaptability, they provide a dependable source of power for cranes and hoists, production and assembly lines, test lines, movable machinery, machine tools, business machines, lighting, etc. Feedrail Systems are readily installed without any special tools.

## Feedrail "60" Straight Track Section 60 Amps- 250 V.-A-C. or D-C.

## Hoffman Oil Tight Sectional Wireway

Ised for electrical wiring on machinery, equipment and buildings, inside or outdoors, where protection is desired from oil, dirt, dust or water. A suitable substitute for conduit.

Constructed of 14 gauge sheet steel throughout except on the welded connection flanges which are made of 10 gauge.

No holes in cover, trough, or littings to permit foreign material to enter. Cover, which has neoprene gashet, is hinged to trough on one side and held with external clamps on the other. Flanges are welded to both ends of each section, on all fittings and bolt tuget her.

Standard finish is gray prime coat on a phosphatized surface. Special sizes and modifications may be specified.

Contact GRAYBAR for information on other sizes available.

## Hoffman "JIC" Electrical Wiring Troughs Listed by Underwriters' Laboratories, Inc. <br> Totally Enclosed

Used to provide protection against oil, coolant, water, dust or dirt.

The $21 / 2$-in. square sizes made of 16 gauge steel; 4-in. square sizes are of 14 gauge. Mounting feet are of 12 gauge steel.

All seams of trough and cover are welded. Cover, which is gasheted with cellular neoprene, is held to trough by external clamps and lift-off hinges and chaited to trough to prevent loss. Trough available with cover held on by screws. Mounting feet welded to trough.

Standard finish is a baked gray hammertone enamel over a phosphatized surface. Special finishes, sizes and modifications, such as holes for conduit, can be provided.

# G-E Hinged-Cover Wireways 

$4^{\prime \prime} \times 4^{\prime \prime}, 6^{\prime \prime} \times 6^{\prime \prime}, 8^{\prime \prime} \times 8^{\prime \prime}$
(Listed by Underwriters' Laboratories as wireways and associated fittings under File E-6780)

Elbow

Tee Fitting

The Type IIW wireway is an enclosed wiring trough or auxiliary wing gutter which is provided with a hinged cover. It is especially useful where space is limited and building contours complicated. All lengths and associated fittings are designed with a hinged cover arrangement which permits an unobstructed opening over the entire length of the run. Thus, all conductors can he "laid in" quichly and casily without the need of threading through the collars at the joints as is the case with conventional wireways.

The new design introduces a hooh-and-skot arrangement which permits the quich assembly of sections and fittings. One screw is used for a grounding. The hinged covers are provided with snap latehes which replace the conventional nuts and bolts. Ample hnockouts on looth sides of the wireway help as sure easy wiring. The wireway is finished in ASA No. 49 medium-light-rrey enamel over a rust inhibitor.

## Advantages

Low initial cost: G-E wireways provide today's most economical means of wiring factories, oflices, and commercial buildings. Dollar for dollar, foot for foot, no other method of wiring can be installed at a comparable low cost.

Quick, casy installation: llook-and-slot arrangement permits quick assembly of the wireway sections and fittings, eliminating need for screws. The elimination of all obstructions allows wiring to be "laid-in" without usual threading under collars.

## Standard 5-foot Length

Permits future expansion: Additional conductors can be laid in or existing wiring can be altered without extensive labor. No other method of wiring permits such easy expandability to meet changing load requirements.

Flexible: A complete line of standardized fittings are available, allowing the wireway to be virtually tailored to the requirements of any installation.

## Selection Data

The National Electrical Code limits the use of wireways as follows:
No conductor larger than 500,000 cm shall be installed in in any wireway.
Wireways shall not contain more than 30 conductors at any cross section, unless the conductors are for signaling circuits or are control conductors between a motor and its starter and used only for starting duty. The sum of the crosssectional areas of all contained conductors at any cross-section of a wireway shall not exceed 20 percent of the interior crosssectional area of wireway.
Splices or taps, made and insulated by approved methods, may be located within the wireway if they are accessihle. The conductors, including splices and taps, shall not fill the wireway to more than 75 percent of its area.

Conductors of various sizes may he included in one wireway but the total cross-sectional area of all conductors must not exceed the above limitations.

# G-E Plug-In Flex-A-Power* Busway <br> Type DH <br> 100 Amperes 600 Volts Maximum 3 or 4-Wire 

Fig. 2. Flexible Fitting

Fig. 6. Unfused Plug

Fig. 5. Center Tap Box

Fig. 8. Type TQL Circuit Breaker Plug

Fig. 9. Universal
Hanger

Type IDI is a low-cost, plug-in busway for indoor use wherever the convenience of phus-in recoptackes over a wide area is desired. Its principal applications are in industrial plants, commercial louildings, manual training shons, laboratories, and garares.
Type DII busway is lihe a panelloard mounted overhead and extending out over the area served. With its nine ondets on each side of a ten-foot length, it is nsed as a feeder for lighting systems and as a feeder or branch eireuit from switchouard or pancloward to a motor or other power-consuming equipment. When a 60 ampere (or less) power receptacle is reguired to feed a portable wolder or similar machine, the busway can be run down a column or wall tu the desired height.
The busway is rated 100 amperes. 600 volts maximm and manufactured in 3 and 4 wire construction. It will withstand a short circuit of 15,000 anperes ITNS asymmetrical or 12,000 amperes IVVIS symmetrical.

Fig. 3. Elbow Rigid

Fig. 4. End Tap Box

Flg. 7. Fusible Non-operating Plug

Fig. 10. Single Edgewise Hanger

A wide variety of fittines and accessories are available.
Joints between the compments are easily assembled by tightening six screws. Snap-on hangers for flatwise or edgewise monting require minimum labor.

Type DII busway can be hung on ten-foot centers in the edgewise prosition or on five-foot centers in the flatwise prosition.
The adjustable length and flexible fitting (ellow, offset or expansion fitting) eliminate the necessity for exact field measurements before ordering. Simply order by catalog number.

There is a minimum number of units to meet virtually all installation reguirements.

Standardized units can be taken down as load requirements change and moved to new location with complete reuse of all components.

Dead-liont plug outlets, even with knockout covers removed, assure safety to personmel. The joints can be checked for tightness without shutting down the system.

## Straight Lengths

The following lengths are available: 10-ft.-18 ontlets; 5-ft.-10 outlets; 3-ft. 6 outlets; $2-\mathrm{ft}$. - I outlets; and I-ft.2 outlets.

The outlets are arranged in pairs back-to-back on the busway, i.e., a lo-l't. length has 9 outlets on each side. A pher may be inserted in only one outlet of the pair on either side of the busway. The outlets are the knekont type.

Four-wire husway has full-capacity neutral.
Three Wire

These plugs are rated 60 amperes and are economical for tap-ofi's not exceeding $25-1$ 't. in length.

## Fusible, Non-Operating Plugs

These fusible tap-offs are rated 30 and 60 amperes, 250 and 600 volts, and are available in 3 and 4 -wire type. They are not horsepower rated but may be used as a disconnect for portable motors per NEC Article 4102e.

## Type TQL Circuit-Breaker Plugs

These plugs accept General Electric Type 'TQL or $R$ breakers, and are provided with knockouts in the cover so that single, two, or three-pole breakers can be used. The Ireakers are rated from 15-50 amperes, maximum 250 volts. Neutral is provided with terminals for three wires.

# G-E Busways <br> Type FVK Plug-In 

225-1000 Amperes, 600 Volts Maximum
3 and 4 Wire
(Listed by Underwriters' Laboratories, Inc., except as noted.)

## Application

Type FVK prefabricated IFlex-A-Power busways are designed for 225- to 1000 -ampere, 600 -volt secondary ferder systems. They are used for 3 -pole. 600 -volt, and 3 -phase. f-wire, $120 / 208$ Y-wolt, and $1801 / 276$-volt applications. 2pole type also available.

1000-ampere aluminum bus type also available.
Construction of standardized sections permits busway to be virtually form-fitted to needs of industrial plants. schools, oflices. commercial and public buildings. Type PVK husways are ideal as power risers in multi-storied buildings and as feeders for incoming services.

Wach 10 -foot straight section has outlets every foot along the run which permit plug-in to power right at load. Allows quick addition or relowation of machinery and other equip-
ment without lengthy shutdowns. Can be easily expanded to meet incroased reguirements. If necessary, entire system can be dismantled, mowed, and reassembled in minimum time without unnecessary loss of material.

## Ordering Directions

Bxerpt on simple installations of standard units the following information slombld be furnished:
a. Complete layout plans showing location, and any limitations in dimensions or specifications.
b. Whether system is to be run flat-wise, edgewise or as a vertical risur.
c. Completo details of any equipment to which busway will be connerted such as switehbeards.
d. Number and size of all cable terminal lugs.

Notes:

1. Price is per foot or any fraction thereof and includes material and labor of forming, two hangers per section, and necessary joint hardware.
2. Priece include labor of forming only. Add for material at straight footage price. Use forming price of highest ampere-rated Type FVK husway entering, "Tee" or "X" connections. Prices cover 90-degree angle units. For other angles, double the price.
3. Pries includes material and labor of forming.
4. Price includes material and labor of forming and lugs of appropriate size. End-of-run type includes busway end closure.

# G-E Busways 

## Type FVK Plug-In

## 225-1000 Amperes, 600 Volts Maximum

3 and 4 Wire

A complete Type FVK busway installation consists of standardized units which can be quickly and easily coupled and suspended to conform to the individual requirements of virtually any plant layout. These units consist of straight lengths, ellows, offsets, end and feed-in boxes, etc. The busway is available with either copper or aluminum bus bars.

Each 10 -foot straight section has outlets on one-foot centers to permit plug-in directly at the load. Take-off is made by Flex-A-Plug units of either the fusible switch or circuitbreaker type. Cover plates keep unused outlets closed to dust and dirt.
These Flex-A-Plug units provide a direct plug-in to the bus bars, even when the run is energized. Safety for operating personnel is assured because handle must be switched to OFF position before the fuses can be reached.

Bus bars are supported on porcelain insulators of highdielectric strength to eliminate possibility of tracking or carbonization. Supports in housing are spaced on maximum two-foot centers.

The housing is of formed 16 -gage sheet steel with a baked grey enamel finish over a rust inhibitor. An 18 -inch removable joint inspection cover is provided between sections to permit easy assembly of sections during installation and to provide easy access for inspections if necessary.

A complete line of fittings and accessories is available to meet the requirements of virtually any plant layout.

For changes in direction of runs and to permit run to avoid beams, columns, and obstructions, four types of elbows can be provided-edgewise internal; edgewise external; flat left; and flat right.

For intersections of runs there are flat or edgewise tees and flat or edgewise crosses available.

Cable tap boxes are used for connection of incoming power at end or center; transformer taps for connecting run to transformers; and switchboard stubs for connecting run to switchboards.

End boxes are used for closing the end of runs.

## Other Types

Type FVK busway is available without plug outlets at same prices as listed below.

Standard short-circuit ratings are as follows: 225-ampere type, 15,000 amperes RMS asymmetrical; 400-1000 ampere type, 25,000 amperes asymmetrical.

The following ratings are available at a price increase of $\$ 2.00$ per ft .: $225-\mathrm{amp}$ type, $25,000 \mathrm{amps}$ RMS asymmetrical 400-1000 amp type, 50,000 amps RMS asymmetrical.

## Notes:

5. Prices include material and labor of forming.
6. Price includes material and labor of forming but no busway footage. Switchboards stubs include flange, minimum length of bus-bar extensions. and lugs. Price of transformer taps includes opening in side of housing, slotted ebony-asbestos cover, minimum length bus-bar extensions, and lugs.
7. Includes material and labor of forming. No bus-bar extensions or lugs included. Price of flange ends includes flange and slotted ehony-ashestos cover only. Price of transformer tap includes opening in side of housing and slotted ebony-asbestos cover only.
8. Price is per foot or any fraction thereof. The price includes material, labor of forming, and drilling but no lugs.
9. Price includes labor of forming only. Add for material at straight frotage price. Use price of higher ampere-rated busway entering adapter or reducer. Adapters are for connecting type DE, FVK or FAP busway systens of same or different ampere ratings. Unfused reducers are for changing size of type FVK busway.
10. Price includes material and labor of forming. Floor or wall flange not included.

# G-E Plug-In Busways <br> Type FVK Flex-A-Plug Switch Units

# G-E Feeder Busways <br> Type LVD 

600 to 4000 Amperes 600 Volts or Less 2, 3, or 4-Pole 3-Phase, 4-Wire, Solid Neutral

## Straight Length of Type LVD Feeder Busway

Cross-Sectional View

The Type LVD is an enclosed bus-bar system incorporating low impedance with sturdy construction. It is extensively used for these applications:

Incoming service from transformers to switchboards
Feeders from switchbords to other distribution points or to branch husways
As complete riser distribution system for multi-story buildings
Welder feeders.
Type $L N D$ is available in 600 to 1000 ampere ratings. 2, 3, or 4-pole and in 3-phase, 4 -wire solid neutral construction. It is suitable for 600 volts or less. Because of its prefabricated standardized sections and fittings, it is simple to install and can he casily dismanted and moved to new locations without loss of materials. Additions to meet in-
creased production or expansion programs can be easily made at any time. A variety of hanging and supporting arrangements are available to permit horizontal mounting at any level between floor and ceiling or vertical mounting where risers are required. All parts are shipped ready for installation.

Available with either copper or aluminum hus bars. Aluminum hus bars are particularly recommended for applications where surrounding atmospheres contain high sulfur-dioxide concentrations. Both systems are alike in construction and both have the same performance features.

The housing is made of rigidly formed steel perforated to provide proper ventilation. Solid-cover-type housings for dusty or humid locations or enclosed weather-proof housings for outhoor use are also available.

## Components of LVD Busway

Typlcal Installation of Type LVD Busway

Standard Section-Consists of rigid steel housing which encloses bus bars of either hard-drawn. round-edge copper or aluminum. Low temperature rise at joints is assured through use of silver plating. Aluminum bus bars are first treated with a modified zincate process to prevent formation of high-resistance oxides and galvanic action. Special compression spring washers are provided to compensate for cold flow. Bus hars are narrow, closely spaced, and interlaced to assure low voltage drop. Air-rated type. designed for general purpose indoor use, has perforated cover to permit ventilation; solid cover type is designed for atmospheres of excessive dust or moisture; and weatherproof type is used for outdoor applications.

Ellows-Used where Type LVD runs in irrerular paths around pillars, beams, pipes, etc. Available in four types: edgewise external, edgewise internal, flat right, and flat left.
Offsets-Used where run must move short distances up, down, or sideways to avoid obstacles or to conform to building contours. Flat offiset consists of two flat elbows. Eidgewise
olfset is made up of two edrewise ellows fabricated in one piece.

T-Connections-Used where run is to he center-fed or where a branch is to be tapped from a main feeder.
"X"-Connection-Used to feed branch circuits from feeder runs; also to connect from an LVD circuit to branch or subfeeder on a multi-circuit installation.

Unfused Reducers-Used to decrease size of run without overcurrent protection.

End Boxes-Seal off end of run, giving mechanical and electrical protection to busway.

Switchboard Stubs-Used where LVD enters or leaves a switchboard.

Cable Tap Boxes-Serve as junctions for main cable feeders or branches or for connecting to power transformers. Boxes are mounted at end, or at any joint of LV D run.

Circuit Breaher Adapters and Fiuse Adapters-Provide overcurrent protection on branch runs.

# G-E Plug-In Busways <br> Type LVDP With Copper or Aluminum Bus Bars 600 to 4000 Amperes $\mathbf{6 0 0}$ Volts or Less 3-Pole 3-Phase, 4-Wire 

Cross-Sectional View for Dim. "W""

Standard 10-ft. Length of Type LVDP with Flex-A-Plug Switch Unit Installed

A plug-in-type, enclosed bus-bar system with low-voltayedrop characteristics. It can be installed at lower cost than most conventional low-voltage-drop feeder systems utilizing cable tap boxes for tap-ofls.

Designed for use in indostrial plants where high capacity and tow voltage drop are required to feed welders and similar equipment. It is also used as risers in multi-story buildings where frequent taporifs are refuired.

Type L\DP plug-in busway is provided in standard straight lo-ft. lengths only for use with components of the Type LVID3 and Type LND5 feeder busways. Bus-bar sizes are the same, rating for rating, as for those systems. These standard lengths can be installed in new or existing Type LID Dusway systems wherever plug-in tap-ofls are required, as they are interchangeable with standard $10-\mathrm{ft}$. lengths of Type LID D busway. Wach standard length is provided with 10 phug outlets-s on each side. Standard Flex-A-Plug switch units such as are used with the 'rype FVK
l'lex-A-Power* plug-in husway can be installed on Type LJDP busway without the need for alterations. The continuous current drawn from one $10-\mathrm{ft}$. length should normally not exceed a total of 400 amperes.

The low power loss and extremely low voltage drop of Type LDDP, even for low-power-factor loads, are obtained by interlacing closely spaced bus bars in recurring sequence with no adjacent bars having the same polarity.

Phase-collection straps are provided with each standard length of 'rype LDDP' to assure that all hus hars of the same phase will be connected together at each joint in accordance with NEMA standards. This also provides higher short-circuit strength.

The general construction of the Type LVDP' is the same as the Type LDD busway. The joints and plug contacts are silver plated and the bus bars are individually wrapped. A ventilated type housing is provided as standard, but a solid cover-type housing is also availalle.

3-Phase, 4-Wire, 3 3-Pole, 60 Volis Maximum 600 -Volt, Maximum, 3-Phase, 4-Wire, 346/600-Volt Maximum

*Reg. trade-mark of General Vilectric Company

## Short-Circuit Ratings

When properly protected, the Type LNDP busway will mechanically and electrically operate the same after being subjected to its rated short-circuit current as it operated before the short circuit.
The following table shows the short-circuit ratings in RMS asymmetrical amperes which have been assigned to the 'Type L'DP' busway. These ratings apply only when short circuits external to the busway are considered.

Note: In order to take advantage of these high ratings of LDDP, current-limiting fuses are recommended in Type FG Flex-A-Pluys.

|  | Short Circuit Ratings in RMS Asymmetrical Amperes NEMA Standard |  |  |

# Square D Light Duty Enclosed Safety Switches Type LD (Formerly Types D or G) Single Throw 

Type L.D light duty safety switches are designed for residential and commercial applications where price is limited and the service factor is not great-such as lighting, room conditioning and appliance loads. U/L approved File E2875. Meets Federal Specification W-S-86.5 for type D switches.
Positive make, positive break spring assisted operating mechanism. Side operated.
Plug fuse switches rated $120 / 2 \mathfrak{t})$ volts a-c only. All neutrals-Insulated groundable.
Blue-gray enamel finish. Raintight has extra coat of Glyptal. NEMA 1-General Purpose. VEMA 3R-Raintight.

$\Phi$ Catalog number 90000 series and 93000 series switches are rotor disc type-others are swing out type.
$\dagger$ Dual water heater switch not hp. rated. (Two 9321l's in one box.)
$\ddagger$ Same as 90211 except in larger lox.
*Ilas dead-front shield over interior not hp. rated. 120 or 120/210 volts, a-c.
$\Delta$ Raintight switches without threaded openings available. Use $R$ suffix instead of RO. Same price level.

AInterchangeable Ifuls for raintight enclosures. Type RO devices have threaded opening for interchangeable hubs or closing caps. Order hub or cap separately from table below, and simply screw into place.

## Square D Normal Duty Safety Switches <br> Type ND (Formerly Types H, S or A)-Single Throw

Designed for application where saffety is essential and reasonable performance and continuity of service are required. Mlet the new NEMA standards and Federal Sperifications W-s-86.J for type A switches. U/L approved. File E28-5. 800 and 1200 amp. are quick break only and have vault cover handle.

Quick make, quick lreak, indemendent of handle 30 to 600 amperes. 30 to 200 ampere are front operated, close ganging; 400 and up are side operated. NENA 1 -general purpose; NEMA type 313 -raintight.
All neutrals-insulated groundable. Finish: Blue-gray enamel, raintight-extra coat of glyptal.

## G-E Standard-Duty Industrial Safety Switches

## Type ND, Style HCI

(U/L Llsted as Enclosed Switches under File E-4669. Meet Federal Government Spec. WS-865 for Enclosed Safety Switches, Type A)

Switch is designed for all but the most severe applications. They are ideal for small industrial, institutional and commercial applications where service demands are not severe. Typical applications include motor-circuit protection and service entrance switches. These switches give circuit protection under normal indoor atmospheric conditions.

Features: meet NEUIA standards for Type ND switches; general-purpose enclo-sure-NLMA Type 1; quick-make, quick-break; visible contact blades; doublebreak contacts; interlocking covers; finish-medium light grey.

Order by complete catalog number and sperify cable lugs if other than standard.

## G-E Light Duty Safety Switches <br> General Purpose NEMA Type 1 Enclosures

(U/L Listed as Enclosed Switches Under File E4669. Meet Federal Government Spec. Ws86s, Type D.)

These switches are designed primarily for indoor use in distribution and branch circuits. They are used in service entrance applications in homes, commercial and farm-type buildings and for light industrial use where switehoperation is infrequent. Typical industrial applications include heavy lighting circuits, power tools, air compressors, refrigerating and heating equipment.

Features: meet NEDIA standards for Type LI) swithes; general purpose enclosuresNENA Type 1; fusible, plug or cartridge; positive make and break; locking provision; Bonderite* treated for increased corrosion resistance; silver-plated current-carrying parts.
*Parker Rust Proof Company.

## Fusible

2 Wire SN (1 Blade, 1 Fuse)

## G-E Normal-Duty Industrial Safety Switches

## Type ND, Style HCI and Knife Blade - Raintight NEMA Type 3R Enclosures

(U/L Listed as Enclosed Switches under File E-4669. Meet Federal Government Spec. WS-865 for Enclosed Safety Switches, Type C)

Switches are mounted in an enclosure which gives circuit protection under outdoor atmospheric conditions including a driving rain. They are designed for all but the most severe applications and are ideally suited for industrial, institutional and commercial applications.

Features: interchangeable raintight conduit hubs for ratings through 200 amp ; nonreleasable interluck available; quich-make, quick-break; visible contact blades; doublebreah contacts through 200 amp; handle padlocks ON or OFF; Bonderite* treated to resist comrosion: galvanmealed steel enclosures.
*Parker Rust Proof Company.

$$

*Standard 11/4" hub will te furmished unless otherwise specified. 1" hub also available.

Outdoor type breaker which serves as main discomect and over-current protection for the electrified farm. Install on yard pole or farm building.
Magnetic trip. Time delay holds breaker from tripping on harmess overloads, gives quich trip on short circuits, or dangerous overloads. After the circuit breaker opens, it may be cosed at once if current has returned to mormal. No resetting necessary, no confusing trip position-handle moves one way to "on" and the other way to "olr." Wattage loss negligible since nothing heats. Wiring compartment may be secured with meter seal or padlock. Solderless comections to circuit breakers and to neutral.

# Square D Industrial Circuit Breakers <br> Thermal-Coilless Magnetic <br> Type ML-General and Special Purpose Enclosures 240 Volts A-C, $125 / 250$ Volts D-C 

#### Abstract

All industrial circuit breakers are quick make and quick break. Types ML, ML, 1 and ML-3 have permanently calibrated integral trip mechanisms. Type K L and WL are equipped with interchangeable trip mechanism. I/L approved File EIOO2\% and EIO91i. Blue-gray enamel finish.

2 Pole, 240 Volts A-C 125/250 Volts D-C

# Square D Industrial Circuit Breakers <br> Thermal-Coilless Magnetic <br> Type ML-General and Special Purpose Enclosures 600 Volts, A-C., 250 Volts, D-C 

All industrial circuit breakers are quick make and quick break. Types M1L. M1,-1 and M1,-3 have permanently calibrated integral trip mechanisms. Type KL, and WL, are equipped with interchangeable trip mechanism.

$\ddagger$ These cast enclosures are furnished with standard conduit openings of sizes as shown, one in top, two in bottom, except 3 wire and 4 wire devices which have 2 in top and 1 in bottom. Iloles differing from stiundard can be supplied at extra charge. All cast enclosures for KL, and WL, breakers furnished without conduit openings unless size and location are specified on order.
$\Delta$ For 250 volt d-c devices add suffix D.C. after catalog number in this group.

- Explosion resisting enclosures for systems above 250 volt d-c are furnished without Underwriters' label. Enclosures for devices requiring hydrostatic tests-contact GIRAYBAR.
$\Phi$ Not available-use WL Frame Breaker.
*Type WL: 225 A-100 A available upon order.

NEMA 1

NEMA 4, S, 7 and 9

Type ML SO Amp. Frame Low Voltage

Type ML1 100 Ampere Frame High \& Low Voltage

Type ML3 225 Ampere Frame High Voltage

These non-automatic circuit interrupters are manually operated and are quick make, quick break. Construction is identical with corresponding size circuit breakers except for the omission of the automatic trip feature. Interruption capacity is much higher than comparable safety switches. Circuit interrupter units without enclosures are also available. Finish: Blue gray-enamel.
U/L Approved File E6294 and E19608.

circuit breaker operating handle extends through the cover in both enclosures.
The NELIA 3 is for outdoor use to provide protection against driving rain, snow or sleet. Enclosure is expipped with threaded conduit hub, matching hnockout in bottom, and inner dead front sheet over the breaker.

## I-T-E Individually Enclosed (Large Air) Circuit Breakers

## 600 Volts A-C-250 Volts D-C 15 to 4000 Amperes

" $K$ " line breakers provide overcurrent protection on main and feeder circuits where severe service, requiring frequent opening and closing operations, is encountered. Interrupting capacities are from 15,000 to 150,000 amperes, depending on the breaker selected. Breakers when incorporated into their own individual enclosures are referred to as Urelites.
Type KA, KB and KC Urelites are push-in, pull-out type with separable main contacts. Solderless connectors and stationary disconnect devices are mounted on insulating base attached to back of enclosure. This permits connection of cable before breaker is installed.
Type KC, KD and KE Urelites utilize a pull box with removable top, side, and bottom plates providing ample room for fast connection of cable.
Operating mechanisun is compact and easy to operate with construction assuring simultaneous closing of all poles. Each pole is an assembly of stationary and movable silver composition main and arcing contacts. Contacts respond to pressure of compression springs at all times. Magnetic arc chutes provide short arcing time, safe confinement of arc within the extinguishing chamber.
" K " line circuit breakers are electrically and mechanically nonclosable (trip free) on overload. Urelite general purpose enclosure exteriors are finished in gray; weatherproof overload. Urelite gen
enclosures, blue black.

Explosion Proof

Type liT＇circuit breakers are designed to provide maximum over current protection and long service life under various conditions．Rugged quality construction and ability to restore power quickly without replacement of parts or elements， make them ideally suited for industrial applications．The semi－dust－tight，NEMA 1A enclosure，incorporating the I－T－I：operating handle mechanism feature，and gasketed cover，is for indoor applications where limited protection is required．

Water－tight and dust－tight enclosures，NDMA 4 and 5 ，are suitable for applications outdoors or indoors，where the enclosure is exposed to rain，sleet and dust．The NFMA 12 enclosure is designed for applications where the surrounding atnosphere contains lint，fine dust，oils，or coolants．NEMA 1A and NEMA 12 enclosure prices are identical．

Cast iron enchosures for hazardous locations，NEMA 7 and 9，are designed for use in locations where combnstible dust and fammable gases or vapors are or may be present to produce explosive or ignitable mixtures．Prices on cast iron enclosures supplied on request．

## ＂Cordon＂Circuit Breakers

Combine the operating features of the ET type molded case circuit breaker and the current limiting high inter－ rupting characteristics of the Amp－trap to provide 100,000 rms amperes at 600 volts a－c， 2.50 volts $\mathrm{d}-\mathrm{c}$ ．The coordination is such that unkess the magnitude of the fault reaches the fusing point of the Amp－traps they are unalfected and the standard circuit breaker overload devices perform their normal function．

Can be used in load centers，switchloards，panelboards，or individual enclosures．I＇rices for Cordon circuit breakers will be supplied on request．

# Hope Current Limiting Type Enclosed Circuit Breakers 

Weatherproof-Raintight Class III-NEMA III, IV, $v$

## Weatherproof and Explosion Resisting

Molded case air circuit breakers of high interrupting capacity that provide a practical, economic answer to low voltage distribution prolslems, are now available in the "Cordon" type. They combine the design and operating features of molded case circuit lireakers and current limiting Anm-Traps in one compact unit to afford fault protection up to 100,000 rmis amperes. Low magnitude fault conditions are eleared through the breaker without affecting the Amp-Traps. At higher magnitudes, the Amp-Traps assume the fault clearing duty in less than $1 / 2$ eycle, limiting the short circuit current to a fraction of peak available value. Bus supporting members or current carrying parts need not be designed to withstand maximum peak currents.

Explosion Resisting
Class I, Group D-NEMA VII Class II, E, F, G-NEMA IX

Faclosures are fabricated of close-grained cast iron and finished in enduring hot dip galvanize. Wiring spaces exceed requirements and gutters will accommodate seven wires. To afford high strength and corrosion resistance, hinges on covers and breaker actuating mechanism are of manganese or silicon bronze. Handle and shaft are of one-piece construction; eccentric, adjustable stops on covers prevent overthrow of handle.

Boxes are additionally loossed in loack and sides for tappings other than "standard" locations.

NEMAA III, IV, V apparatus enclosures are equipped with raintight neoprene gaskets.

NENA VII and NEMA IX enclosures are precision machined to exceed the requirements of the Underwriters' Labortories, Inc. for flame- or dust-tight closure between bolt-on cover and flange of box.

| T（1．2170 | 70 | $\mathbf{1 3 . 0 0}$ |

Type＇rol，2－pole switching neutral breaker is designed for use in gasolime station dispensing pomp circuits．lt pro－ vides cireuit protection in compliance with NEC Article 510，Section 5120e．

One pole，with line and load terminals，contains thermal and independent magnet trip elements for automatic short circuit and overload protection．The other pole provides an isolated terminal for connecting the ineoming neutral wire to a nonautomatic switching medhanism．A wired－in lead completes the neutral circuit to the load center neutral assembly．

Availalle in ratings of 15 and 20 amperes， 120 volts a．c． Interrupting rating： 5000 amperes a．c．

Accessories For Circuit Breakers

No．
TRT－100
TIIT－102

Note：No charge when ordered with appropriate circuit breakers．

## G－E Circuit Breaker Enclosures

General Purpose，Semi－dust－tight， NEDA Type IA．

General Purpose NEMA Type 1，sur－ face or flush mounting，grounded solid neutral．

Boxes and covers are Bonderite＊ treated to resist corrosion．

Dic－cast aluminum operating handes on front provide extra ease of opera－ tion．

Handles can be padlocked in O．N or OFF maition．

For complete information on molded case circuit breakers in NWDIA type 4 \＆ 5 enclosures，consult Ciraybar．

＊Parker Rust Proof Company．
$\dagger$ Single－pole rated 120 v ，a－c， 125 v ，d－c．
§Insulated groundalle neutrals may be ordered for these enclosures，contact Graybar for complete information．

Note：Order general purpose enclosures by complete catalog number．

Molded case circuit breakers for these enclosures are listed separately．Order circuit breakers by complete catalog number．

## Square D Fusible Service Equipment <br> With Plug-In Construction

New fusible service equipment with plug-in construction is the answer to today's increasing residential loads. Deviees are available with either 100 ampere or 200 ampere main pullouts feeding lusses which will take plur-in fusible branches - plug fuses or 30 and 60 ampere pullouts.

Select the number and rating of the neeessary branches and plug them into the exact eombination needed for each joh. Two twin phag fuse sections (t plags) oeeupy the same space as a single 30 or 60 ampere pullout.

120 '210 volt a-c, single phase, 3 wire systems. U/L approved - Fille E2 3600.

## Fusible Load Centers

Mains: $120 / 240$ Volts A-C only.
Branches: Ningle Pole Nwiteh, 30 Ampere 120 Volts.

Side grutters $17 / 8$ in., end sutters 2 -in. on 4,8 and 12 cirenits; 3 -in. on 16 and 20 circuits. Box dimensions: 12-in. wide, 4-in. decp.

Bluc-gray fronts; boxes galvanized steel. Spring door catch fronts.
When ordering add suffix letter " S " or " F " to cataleg number to indicate surface or Mush mounting.

## Buss Super－Lag Renewable Fuses and Renewal Links

3 to 60 Ampere

Save time and money by decreasing out－of－service losses．
Buss Super－Lag Renewable fuses and renewal links will reduce the number of shuthowns caused by needless blows． P＇atent fuse－case and super－Lay link make this possible．

Super－lag design gives Buss Links a long time－lag that reduens mmber of hows on starting currents or other harm－ less overloads．

Links are made in one piece in all sizes．This makes re－ newal handy and prevents possibility of poor contact．

For tonvenience and to prevent dust，moisture or oxida－ tion from affecting them，links are packed in sealed boxes， each holding a small quantity．

BLisS Super－Lag links are interchangeable with all makes of standard fuse links．

For complete information contact Graybar．

## Buss Fusetron Dual-Element Fuses 250 and 600 Volts

## 

0 to 60 Amperes
Fits ordinary fuse holders. A Fusetron fuse has both a fuse link element and a thermal cut-out element. Llas long time lay and less electrical resistance.

For all types of cirenits or feeders. Iong time-lag prevents blowing on starting eurrents or other harmless overloads, yet they proteet against short-circuit with speed of a fuse.
(On normal installations, a size about 100 to $125 \%$ ampere rating of motor, installed in disconnect switeh or branch circuit panel gives safe and dependable motor-running protection.

Carries Underwriters' Laboratories label and is approved for both motor-rumning and circuit protection.

## Buss 15 to 30-Ampere Fusetron Dual-Element Plug Fuses

## For Voltages up to 125

On the ordinary circuit a 15 ampere fuse is the largest size that can safely be used, but such fuses often blow when motors start on washing machines and other deviees. 1.5 ampere Fusetron dualdement fuses won't blow on motor starting currents or any momentary harmuless overload, because of their thermal element, yet give exacting proteelion on dangerons overlonds or short eireuits. Larger ampere sizes give the same dependable protection on appliance eircuits. Packed 4 in a box. 100 in a shelf package.

|  | Symbol | Amperes | WL. LDs |
| :--- | :---: | :---: | ---: |
| Ter 100 | Per |  |  |
| T15 | 15 | 6.8 | $\$ 10.00$ |
| T20 | 20 | 6.8 | 10.00 |
| T25 | 25 | 6.8 | 10.00 |
| T30 | 30 | 6.8 | 10.00 |

## Buss 15 to $\mathbf{3 0}$-Ampere Fustats <br> Type "s" Base

## For Voltages up to 125

The Buss Fustat is a
 dual-element fuse with a fuse link and a thermal cutout.

A F'ustat will not blow from motor starting currents or harmless overloads of short duration, but gives safe, dependable protection on dangerous overloads or short circuits.
Stops dangerous practice of over-fusing as a larger ampere fuse will not lit adapter. Adapter locks in place so that lustat can be changed like a fuse.
Packed 4 in a box. 100 in a shelf package.

|  | tats |  |  | Adapters |  |  |

## Buss 0 to 14 Ampere Fustats

To protect against burn-out of motors and apparatus of voltages up to 125.
Correct size Fustats protect 0-125 volt motors against burn-out from such causes as dry bearings, tight belts, overload, ete. Adapter makes Fustats fit any plug fuse holder, locks in place so that Fustat can be changed just like a fuse. Prevents the use of oversize Fustats.

Fustats and Adapters are packed separately, each 4 in a carton. 100 in a shelf package.

|  | Fustats |  | Adapters |  |
| :---: | :---: | :---: | :---: | :---: |

| 14. | S14 | 20.00 | S 115 | 12.00 |

Many other sizes from $3 / 10$ to 9 ampere can also be obtained.

Adapters are not included with Fustats-order them separately and specify size Fustat for whieh they are required.

Fusetron and Buss plag fuses and Buss Fustats may be assorted to oltain quantity price.
Weight per 100: Fustats, 7 lbs .; Adapters, 4 lbs .
Listed as standard by Underwriters' Laboratorics, Inc
For further information contact your nearest Graybar office.

## Buss Special Fuses

Special fuses for every purpose can be furnished.
Submit a sample of the fuse needed if possible, otherwise submit full details as to type, voltage, amperage. etc.
Care must be exercised in ordering fuses as they are made to order and are not returnable. Contact Graybar.

## Buss Open Link Fuses

Buss open link fuses can be obtained with many other styles of terminals and in larger capacities. For open link fuses not listed below send sample or complete description.

Terminal 00 Terminal OL, OS, ON, or OW Terminal OH or OJ

| Amperes |  | $\begin{aligned} & \text { Terminal } \\ & \text { Symbol } \end{aligned}$ | Each | SET-LP CHARGE |
| :---: | :---: | :---: | :---: | :---: |
| 1 to | 30 | OD or OH | \$0.056 |  |
| 35 t | 60 | OH or OJ | 07 | \$1. 50 |
| 65 to | 100 | OJ | 11 | for each size and |
| 100 to | 200 | OL or OS | 18 | type fuse ordered |
| 225 to | 400 | OS or ON | 30 | on each shipment. |
| 450 to | 600 | ON or OS | 56 |  |
| 650 to | 1000 | OW or ON | 1.10 |  |

Unless otherwise specified, first mentioned terminal as above listed will be furnished.

| Dimensions of Terminals |  |  |  |
| :---: | :---: | :---: | :---: |
| Symbol | Old No. | Slot | Width |
| OD | 1 | 5/32" | $3 / 8$ " |
| OHI | 3 | 3/16 | $911{ }^{\prime \prime}$ |
| OJ | 5 | 1/4" | $11 / 16^{\prime \prime}$ |
| OL | 7 | $3 / 8$ " | 3/4" |
| (1) | 16 | 7/16" | $11 / 32$ " |
| ON | 10 | $1 / 2 \prime$ | $13 \%$ " |
| OW | 28 | 5/8" | 21/16" |

If terminals larger than those shown with above amperages are desired, the price is not determined by the anmperage of the fuse-the price that will apply will be the lowest shown for terminal desired.
Slots are slightly larger than dimensions given so that bolts of such sizes will fit the slot. Terminals are all copper.
In ordering, be sure to specify exact $1^{\prime \prime}$ A $3^{\prime \prime \prime}$ N amperage and length desired.
By length is meant the center to center dimension of the slots in the terminals. This dimension will be indicated by one of symbols shown alongside. This symbol immiediately follows the terminal symbol.

| $11 / 4^{\prime \prime}$ | C | $31 / 2^{\prime \prime}$ | R |

|  |  |  |  |  | 500 to 3000 | 50 | 2.50 |
| WEA | 6A | 19/16" | 1/4" | $3 / 4$ " | 75 to 250 | 05 | 1.50 |

SET-LP CHARGE applies on each shipment ON EACII SIZE AND TYPE.

## Buss Large Open Link Fuses

Terminals of cold rolled copper-entirely flat, one edge being slotted to receive the fuse strip.

When ordering, specify:
ampere rating desired, width, length and thickness of terminals, size of hole desired, center to center dimensions of terminal hole.
If more than one hole in each terminal is desired, a sketch of the fuse must be submitted in addition to the information alove requested.

## Buss Clear Window Plug Fuses

Carry Underwriters' Laboratorles Inspected Iabel.

Buss fuses have an extra large, clear window which makes it easy to see if fuse is blown. Metal cap protects fuse agains! any chipping of the top. Insulated with porcelain and mica.
l'acked 5 in a box. Information printed on box tells what to do when a fuse blows.

Shelf package, 100. Weight Per 1000, 65 pounds.

No...... W3 W5 W6 W8 W10 W15 W20 W25 W30 $\begin{array}{llllllllll}\text { Amperes. } & 3 & 5 & 6 & 8 & 10 & 15 & 20 & 25 & 30 \\ \text { Each...... } 09 & .09 & .09 & .09 & .08 & .08 & .08 & .08 & .08\end{array}$

## Economy Clearsite Non-Renewable Plug Fuses

Fuse link mounted under fuse window gives clear vision of the link.

Drop-out type link lessens the internal operating pressure.

Black fuse body made of heat-resisting molded insulation.

Standard package 50 plugs to a carton.
Retail package 5 plugs to a package, 100 plugs to a carton.

Economy Renewable Plug Fuses

Fuses packed 10 in a carton; weight, 11/4 pounds.
Links packed 100 in a carton; weight, 2 ounces.

## Economy Dual－Element Cartridge Fuses

Cutaway－Knife Type

## Knife Type

Econ Dual－Element Cartridge provides dual protection． 1．Time control protection against unnecessary blowouts from temporary and harmless overloads．2．Instantaneous protection against short circuits．Especially adaptable for motor circuits with high starting torques．

## Buss Aircraft Fuses

A complete line of Buss aircraft fuses is available．
For detailed information，write Graybar．

## Economy Delay Renewable Cartridge Fuses 250 and 600 Volts <br> Listed by Underwriters＇Laboratories，Inc．

Always operate at rated capacities．
May be used successfully under all conditions of service without filling material．
The delay renewal link is quickly and casily replaced． Takes only a few moments to restore a blown fuse to its original efficiency．

## ECO Non-Indicating Non-Renewable Enclosed Fuses

250 and 600 Volts
Listed by Underwriters' Laboratories, Inc.
Made of heavy tubing. Caps are all brass, permanently rolled on the tube. Ileavy copper lead-in terminals.

## Buss Glass Tube Fuses

For Auto, Radio, TV and Instrument Protection
NEW STANDARD FUSES
OLD TYPE "AG" FUSES

High-interrupting-capacity fuses are required in power circuits where available short-circuit currents exceed the interrupting rating of NEC fuses. (NEC fuses are usually considered to have an interrupting rating of 10,000 amp.) Has a tested interrupting rating of 200,000 rms symmetrical amps. at rated voltage and frequency. In addition, it provides improved protection because of its current-limiting action even on circuits where the NEC fuse can be properly applied.

Provides eflicient and economical short-circuit protection for feeders, lighting-branch circuits, motor-branch circuits, motor starters, control power circuits, and similar application, at 600 volts and below.

Silvered copper ferrules or knife blades at each end fit any standard NEC fuse holder or corresponding voltage and current rating, 600 amps . and below. Alnive 600 amps. tangs are provided for loolt mounting.

A box-cover on which a Fistat can be monnted-alone or in combination with a plug-in receptacle or switch.
There are four different cover sizes to fit hox you have. 1 nits have Edison base fusoholder so proper size Fustat Adapter can be used. 'They are listed as approved by Underwriters' Laboratories when Adapter has been inserted.
I se them to guard motors on home, farm, office, factory appliances and equipment-from such things as lach of oil, worn bearings, tight belts, overloading wrong or low voltage.
Simply install desired cover on box, then serew in proper size Fustat and Adapter. Units without switch for any motor ${ }^{3}$. h.p. or smaller. Inits with switch for a-c motors only $1 / 2$ h.p. or smaller.

On normal installations use Fustat of a size nearest to ampere rating of motors or a little larger.

## Buss Fuse Wire and Strip

Will carry indefinitely current shown
 under heading "Carrying Capacity." Will oprell the circuit when subjected to overload 2.5 per cent in excess thereof.
This is based on a distance between contacts or terminals of 2 inches.

When used on contacts of other distances the carrving capacity is affected as shown in the table below.

| Will Carry |  |
| :--- | :---: |
| More Current |  |
| Oistance |  |
| Benwen |  |
| Contacts | Per Coent |
| Inches | Additional |
| $1 / 2$ | 100 |
| $3 / 4$ | 70 |
| 1 | 4.5 |
| $11 / 4$ | 30 |
| $11 / 2$ | 1.5 |

| ${ }_{\text {Will Cars }}$ Cary Less Current |  |
| :---: | :---: |
|  |  |
| Between |  |
| Contacts | Per Cent |
|  |  |
| 21/2 | 5 |
| . | 10 |
| 4 | 15 |
| 5 | 20 |
| 6 | 25 |

The size of terminal and other local conditions will greatly affeet these figures. They are only approximate.

## Fuse Wire

The $1 / 4$-ampere size is furnished on 2.50 -foot spools; sizes $1 / 2$ to 3 -amperes, on $1 / 2$-pound spools; and 4 to 100 -amperes, on 1 -pound spools.
Furnished only in full spools.

## Ideal Safe-T-Grip Fuse Pullers

Ideal 心afe-T-Grip Fuse Pullers have notched edges which give a sure grip, eliminating any possibility
 of slipping. Eliminates the danger of pulling and replacing cartridge fuses by hand and the bending of fuse clips through improper removal. Also adapted for adjusting loose cutout clips, handling electrical parts, etc.

| No. | Size | Description | Each |

## Buss Fuse Reducers

60 to 30 Amp.

Wake it possille to use ordinary or Fusetron fuse of a size smaller than the fuse clips are intended to hodd.

Will fit any form of the ppring type or clamp tepe clip. in ans pand or switch.

They take no more pare than would a fuse of a si\%e to fit clips.

Reducers provide clamp contact throurhout eliminating troubles resulting from poor contacts.
lacked, one pair in a carton.

## Hoffman "JIC" Electrical Wiring Boxes

Listed by Underwriters' Laboratories, Inc.

Constructed of 14 gauge steel, except the three small sizes, which are of 16 gauge. Mounting feet are made from 12 gauge steel.
Cover is chained to box to prevent loss. No holes in box or cover; all seams welded. Cover is gasketed with cellular neoprene and held to box by external clamp and lift-off hinges. Covers held on by serews available.
Standard finish is baked gray hammerstone enamel over a phosphatized surface. Special finishes, sizes and modifications including holes for conduit connections and continuous hinges can be provided.
All models except 40. LP have four weld-nuts for supporting pancl on which chassis, terminal strips, relays and other components can be assembled.

## Hoffman Control Panel Enclosures NEMA Standards

## NEMA Type 12

Used to house electrical controls providing protection from dust, dirt, oil, coolant or water.

Door hinged to body with a continuous hinge, and gasketed with cellular neoprene. All 14 gauge enclosures have rolled edge extending around door opening. Special clamps welded to body hold door closed. Single door units have padloek hasp and feet for wall mounting. Each enclosure has removable print pocket.
Two door units have specially gasketed, overlapping doors which eliminate the need for center-posts. They are floor mounted on $12-\mathrm{in}$. stands and fitted with lifting eyes. Two door units have loching handle with three point latch.

Mounting panels finished with baked white enamel. The interior finished with baked white enamel. Exterior has gray prime coat. All surfaces phosphatized prior to painting. Special materials, sizes, modifications and corrosion resistant tinishes quoted on request. Disconnect switches installed on request.

Raintight with Removable Hubs

Square D Raintight enclosures use interchangeable hobs. Thus a minimum stock of boxes, together with a variety of hubs can casily satisfy any custonner application.

Flexihility is provided, merely screw lub into special threaded opening at top of the raintight box. Inside of hub, is threaded for condait.

Interchangeable hobs are available in the following conduit sizes: $3 / 4,1$. $11 / 4,11 / 2,2$ and $21 / 2$ inches. Type 130 raintight devices having mains rating up to 70 amperes will accept $3 / 4,1$ and $11 / 4$ inch hubs. R(3) devices rated 100 amperes will accept $11 / 2$ and 2 inch hubs directly, and the $3 / 4$. 1 and $11 / 4$ inch hubs through a reducer furnished with the raintight device. 130 ) devices having 200 amperes mains will accept the $21 / 2$ inch hub directly and the $11 / 2$ and 2 inch hub through a reducer furnished with the device.

Closing eaps may be used to close the threaded openings when no hub is reguired. Huls may be added to any device by cutting a hole and locking the hub in place with a locking nut of the size shown.

Type k devices without the threaded hub provisions arc a vailable in popular sizes.

AP-1 Fuse Block and Bracket Assembly (unmounted) $\$ 3.00$

No. 5008
No. SK3986
Tests without lamps-eliminates breakage. Voltage directly indicated on casily read, colored scale. May be operated using one or both hands. Can be carried in poeket.

Heary fibre case withstands 10,000 volts. Lead wires have vulcanized oil resisting insulation and 4 -in. fibre grips covering insulation-piercing prongs.

Testers cover the a-e and d-c scale up to 600 volts and from to 400 cyeles. Polarity cap indieates d-e polarity and is optional on all testers.

## QMB Saflex

Available Locally
Pamelbards with any combination of 30 . 610,100 or 200 ampere, 2 or 3 pole switches, 2.0! volts or 600 volts and main lugs up to 600 amperes are now available from your local (iraybar distributor.

For switches ower 200 amperes or mains in exvess of 600 amperes contart (ill IYBAIS so that these custom built panelboards can be ordered for you direct from factory.

## Switch Units

Each unit individually enclosed in steel. Dead front construction. Quick make, (puick break, horsepower rated. Ileany dut y east oprrating hande. Double spring mechanism insures positive opering under full load.

Visible blades for maximum safety. Positive pressure fuse clips and switch jaws assure maintenamer free connections. Cover interlock prevents unathorized access hut permits entrance for maintenance. 30 ampere thru 200 ampere units are plus-in type. Service entrance aproved with six circuits or less or with main switch.

Wains: Main hur only: 200, f00 or 600 ampere, main switch 200 ampere only.

Bramches: Quick-make, quick-break hp. rated phog-in switch units, 1 wo or three pole, 30 to 200 ampere caparity.

Boxes: Code grauge sted without knockouts, finished blu-grey over rust resisting phosphate primer. Dimensions: $30-\mathrm{in}$. wide by $101 / 2-\mathrm{in}$. deep.

Fromts: Code gauge stel, flush or surface mounting, with or without door with adjustable indicating trim clamps. Finishad blue-grey.

Wire Gutters: End gutters 7 inch. Side gutters $51 / 2$ inch,

## Selection of Components

1. List required eircuits including main switch if desired (ampere rating and poles).
2. Seleet catalor numbers of switeh units and determine total required unit spare from Table One. If solid neatral is required, sedect from Table Three and include height required when determining unit spate.
3. Soled interior, box and front catalog numbers hased on required mit space from Table Two (or Mans capacity).
4. Select blanks if required to complete unit space from Table Three. For 1 ph. 2 W. or 1 ph. 3 W. applications select switch units having CA lus connections. For 3 ph. 4 W. "Defta" applications all 21" switch units shonld have CA bus connections. For distributed phasing of 2l' switch units select proper assortment of $\mathrm{AB}, \mathrm{CA}$ and BC bus connections.

Note: Approximate box height is indicated by last two figures of box mumber. Wiring gutters-side and end gutters are 4 -in, in. all pantels.
thatings: 15 ampere single pole branches will be furnished untess otherwise specified. $20,30,40$ and 50 ampere single pole lireakers can be substituted without price change. Use of branch breakers rated more than 15 amperes may necessitate inereased mains.

Two-l'ole (Individual Trip): For each double pole, 15, 20 , 30 , 40 or 50 ampere (individual trip) $120 / 210$ volt circuit substituted for two single pole eircuits add $\$ 0.50$ list to panel figured on basis of all single pole circuits.
Two-Pole (Common Trip): For each double pole 15, 20, 30, 40 or 50 ampere (common trip) $120 / 240$ volt circnit sulstituted for two single pole circuits, add $\$ 0.70$ (list to panel figured on basis of all single pole circuits.
Three Pole (Common Trip): For each three pole 15-50 ampere (common trip) 240 volt circuit substituted for three single pole circuits, add $\$ 12.70$ list to panel fygured on basis of all single pole circuits.

## Type NQO-4

## 3 Phase 4 Wire S/N A-C Only Standard Width

$\ddagger$ Wains: $120 / 208$ volts a-c only.
Branches: Single pole, 15 ampere 120 volts, 2 -wire $\mathrm{S} / \mathrm{N}$ type (g) breakers. $\dagger$
*Boxes: 11 -in. wide galvanized steel. 200 ampere main breaker boxes $53 / 4 \mathrm{in}$. deep; all other 1 in . deep.
Fronts: Trim with door and flush lock. Blue-gray finish.

Suth-Feed Breaker: 70-100 ampere, two and three pole lreakers are available as sub-feed branches with no more than one per Main Lug Only pamel at $\$ 52.50$ for each two pole and $\$ 09.00$ for each three pole. No sub-feed breakers are available for main breaker panels.

Space Only: When space only for future branches is required, figure panel on hasis of total number of branches, including the future branches, and deduct $\$ 3.10$ list for each breaker pole omitted.
*Derp Boxes: When 14 -in. wide by $53 / 4 \mathrm{in}$. deep loxes are required, add the number " $\overline{3}$ " to the box catalog number, i.e. QOJ1913. No extra charge.
$120 / 208$ volts a-c only rating when one and two pole branches are in pancl. A 210 volt a-c only rating may be obtained when all three pole branches are used.

Two or Three-Pole 15-50 Ampere (Common Trip). When 2 or 3 pole common trip breakers are required in combination with pancls listed above; select the panel having the required number of single pole branches, then add for the 2 or 3 pole breakers. Add for increased mains, if required.

Two or Three Pole: 70-100 ampere breakers may be furnished as sub-feed breakers with not more than two per panel.

Space Only: When space only for future branches is required, figure panels on basis of total number of branches, including the future branches, and deduct $\$ 3.60$ list for each breaker pole omitted.

Ilandle Lock-Off Device: Cat. No. SK-5400 list \$0.70 each.

# Square D Column Type Lighting Panelboards With Types Q0 \& ML Thermal-Magnetic Branch Breakers 

## Factory Assembled Type

## Type NQO-3LX <br> Single Phase, 3 Wire, S/N A-C Only Narrow Width

Mains: 120/2 10 volts a-c only.
Branches: Single pole, 15 ampere, 120 volts $2-1$ ire $\mathrm{S} / \mathrm{N}$ type (0) breakers. $\ddagger$
Boxes: $8 \frac{5}{8}$ in. wide, 5 in . derep. Galvanized steel.
Fronts: Trim with door and flushlock. Blue-gray finish.

Two or Three Pole: 70-100 ampere breakers may be furnished as sub-feed breakers with not more than two per panel.

Space Only: When space only for future branches is required, figure panels on basis of total number of branches and deduct $\$ 9.70$ list for each breaker pole onitted.

Solid Neutral Bar: Deduct $\$ 11.00$ if solid neutral is not required.
Handle Lock-Off Device: Cat. No. SK-289.4, List price $\$ 0.65$ each.

# Square D Type MHP Circuit Breaker Distribution Panelboards With Plug-In Type MM, M1 and M2 Thermal-Magnetic Circuit Breakers Unassembled Type 

*Single Phase Three Wire mains are aceommodated by selecting breaker units having Type CA bus connections.

Thror Phase Four Wire "Wye" mains arrangement is a standard feature.

Three Phase Four Wire "Delta" mains can bee accommodated. The neutral on three plase four wire" Delta" systems is derived by center tapping one of the transformer phases. For this application, all single-pole and two pole branches requiring a neutral are connected to the two outside bus bars through the use of breaker units having Type CA bus connections. The third bus bar would be used only for 3 pole breakers in this system.

Distributed Phase bus connections for single pole or two pole branches are availahle by selecting proper assortment

3 Phase, 4 Wire, S/N 120/208 Volts A-C 3 Phase, 3 Wire, 240 Volts A-C<br>1 Phase, 3 Wire, S/N 120240 Volts A-C<br>1 Phase, 2 Wire, 240 Volts A-C

Mains: Lugs only.
Branches: Single pole 1.5 to 50 ampere 120 volts a-c. Two pole 15 to 100 ampere 240 volts a-c. Three pole 15 to 100 ampere 2.10 volts a-c.
Boxes: Galvanized steel. Ningle row-14 in. wide, 53/4 in. deep. Double row- 20 in. wide. $53 / 4$ in deep.

Fronts: Trim with door and flush lock. Blue gray finish.
Wiring Gutters: Single row- 1 in. end and side gutters. Double row- 6 in. end gutters, $t i n$. side gutters.

## Selection of Components

1. List required circuits (ampere rating and poles).
2. Determine total breaker mounting space required from breaker monnting space dimensions under "Plug-In Breakers" table. Include breaker mounting space for planned future circuits.
3. Select interior from "Interior Box and Front" table on basis of total "l3reaker Mounting Space" required. Corresponding box and front are also listed in this table.
4. Select required breakers from "Plug-In Breakers" table.
of Type AB, BC and CA breaker units to provide sequence phase connections.
Subfeed Lugs package assembly kits are available for adding a second set of lugs in the panelboards:

SK-4052 200 A. hugs for MHP-18 and MHP-27 $\$ 15.00$
Sh-4053 400 A . lugs for MHP-36 and MHP-3: 20.00
*landle Tie can be used for converting two single poles to a double pole individual trip heater No. HIIIT List Each $\$ 0.10$

## Square D Power-Style Switchboards

## Series I

## For Compact Installations to 2000 A.

Series I Power-Style switchboards are completely standardized front-connected switchboards that are used mainly on service entrance in small and medium size commercial, industrial, and institutional type buildings. The wide selection of section arrangements plus complete standardization make possible a compact, economical service installation with the shortest possible delivery.

Entirely front connected.
Only 1 -in. deep, 90 -in. high.
Can always be mounted against a wall.
Removable rolled-edge steel plates on front sides, and top.

Standardized current transformer compartments to meet Power-Company's requirement.
Standard horizontal main bus from 400 A . to 2000 A .
Bus duct conneetions to Feed-in or Plug-in Duct.
Molded case main or branch circuit breakers up to 800 A.
Fusible switches up to 600 A . in either QMB or Saflex construction.
Knife type and bolted pressure contact main switches up to 2000 A .
Standard bus provisions for future sections.
Complete standardization for fast delivery.

Bolted Contact Switch Service Station
Standard current transformer compartment.
1200 A. bolted contact main switch.

QMB Combination Service Section
Standard current transformer compartment. SIX QMB maln switches.

QMB Swltchboard
$\mathbf{8 0 0}$ A. molded case main breaker.
Standard current transformer compartment.
QMB branch switches.

ML Comblnation Service Section Standard current transformer compartment. 400 A. molded case maln breaker. Molded case branch breakers.

Standard horizontal main bussing.
Standard drillings for future sections on either end.

## Square D Power-Style Switchboards

## Series II

For Large Services and Equipment

1600 A. main air circuit breaker.
ML mounted molded case branch breakers.

ACB-CBI Switchboard
1600 A. main air circuit breaker.
CBI mounted molded case branch breakers.

ACB-QMB Switchboard
1600 A. main air circuit breaker.
Quick-make, quick-break QMB branch switches.
Power Company C/T compartment.

Scries II Power-Style switchboards are designed for use on service entrance and power distrihution in commercial, industrial and institutional type buiklings. 'The unlimited range of available equipment coupled with the following features make this the finest and most complete line of switchboards on the market:
lie formed sterl framework, welded and bolted together.
Removable rolled-edge steel plates all around.
Standard depthis from $20-\mathrm{in}$. to 60 -in.
Main bussing from 600 A . to 6000 A .
Chamel iron sills.
Stationary moonted air circuit breahers up to 5000 A .
Molded case circoit breakers up to $\mathbf{8 0 0}$ A. in either ML, or ClBl eonstruction.

Fusible switches up to 600 A. in either QM13 or Saflex construction.

Kuife type and holted pressure contact switches up to 5000 A.

Any arrangement of Power Company or customer's metering equipment.
Bus duct connections to Plug-in or Feed-in Duct.
Weather-proof construction.
18-in. or 30 -in. higlı pullboxes.

# Square D Control Centers 

## Class 8998

Square D " 1 'lug-ln" Model 3 control centers offer all the advantares of simplified planning, safety anal economy gained by gromping electric motor controls in factory assembled, free standing structures. Control centers basically consist of standardized combination starter units and vertical sections, but are custom-assembled for the job.

Space Feonomy: Up to six combination starter units fit in 20 -in. x 20 -in. x 90 -in. sections. Sections 20 -in. deep accommodate all starters through size 5.

Plant Changes: Units or whole sections may be added, removed or exchanged at will. Plug-in design and a wide variety of standard, interchangeable units provide the econonical way to keep motor control in step with plant changes. Salvage value is practically $100 \%$.

Safcty Features: Disconnect operators are specifically designed with full cover interlocking provisions to encourage modern safety practices. Busses and wiring are fully enclosed and desirned for ample full load and short circuit capacity. Unit enclusures isolate the control equipment for each motor.

NEMA 5 Dust-Tight Contral Center for Excessively Dusty Locations

Front-of-lhard Monnting: Xsually recommended because it allows full use of floor area next to walls or locations where the rear of the control center is not accessible. Alt equipment is mounted on the front face of the structure and wiring gutters are front accessible.

Baek-to-lBack Monnting: Provides control units mounted on both faces of the structure. Less length is required, but greater depth of thoor area is needed for aisle room on each side. Sections for front-of-board and back-to-back type mountings are $20-\mathrm{in}$. deep.

Control Units: Available in wide variety to handle any a-c installation. Standard units cover the normal requirements for disconnecting means, maynetic starters, lighting transformers, and lighting panels. Special control units are designed and built to order for the more unusual requirements.

Combination Starter Units: Include both disconnect and starter elements. The discomect may be either a circuit breaker or a fusible switch. The starters may lre reversing or non-reversing, line voltage or reduced voltage, sincele speed or two speed, and may have such optional features as push buttons, pilot lights, control transformers, and extra electrical interlochs.

## Special Purpose Control Class 8930 A-C Class 8930 A-C

[^41]Custom-built control is recommended for efficient operation of machine tools, processing machinery, conveyor systems, and other equipment involving notor drives or electrically controllea hydranlic or pneurnatic systems. Such control requires careful engineering to include features which insure maximum safety, uninterrupted production, and long service.

Square D special purpose control panels are grouped assemblies of motor starters, relays, timers, and other devices, complete with user terminals and interwiring for convenience of installation and maintenance. Circuits are usually designed for antomatic dequencing of mechine functions with minimum attention required of the operator.

Standard lines of devices are physically and electrically proportioned for efficient combination on special panels. A complete variety of enclosure types are available, and open panels can be supplied for mounting within machine cavities.

Other features available include line and reduced voltage starting, main line disconnect means with external operating handles, low voltage control circuits, branch circuit overcurrent protection, and motor running protection. Square I) custom-built control can be furnished to conform with the latest NMTBA or JIC. standards.

## Square D Stage Dimmerboards

Cross-Connect Stage Dimmerboard
Separable Cord System-Motor Driven House Dimmer Master Assembly-Branch Breakers

Square D Company now provides a complete line of stage dimmerboards for complete control of stage lighting. Each board contains all necessary control and protective devices arranged in a neat, convenient manner for maximum ease of operation. A large varicty of control systems are available, making it possible to select the right board for every application.

In addition to free standing stage dimmerboards designed for controlling stage lighting in large auditoriums, small wall mounted dimmer banks and single units are available for variable lighting control in smaller installations.

Among the many optional features available in Square D stage dimmerboards are direct and multi-scene preset, electrical and mechanical mastering, motor driven autotransformer dimmers, and various types of cross-connect systems. These, and many other fine standard and optional features, make this a truly outstanding line of stage lighting control equipment.

## Square D QMB Motor Centers

QMB Motor Starter Switchboard

This switchboard contains two 30A. 3P., QVIB switches feeding two size 1 starters, two 60A. 31P., QM13 switches feeding two size 2 starters, and two 100A. QMB switehes, one of which feeds a size 3 starter. The other 100A swith can be used either to feed an external device or feed future size 3 starter. This section is 14 -in. deep, $30-\mathrm{in}$. wide and $90-\mathrm{in}$, high.

Motor Starters can now be mounted in QMB Switchloards or QMB Panellocards.

Starters: Twin Units-Size 0 to 5; Cover Interlocked with Disconnect Switch; Line Side Wiring to Disconnect Switch above Starter; Non-Reversing (or Reversing-Single Unit)Across the Line Type; External Reset-Melting Alloy Overloads; Pushbuttons and Pilot Lights in Covers of Units (Optional).

QMIB Disconneet Switches: Quick-Make, Quick-Break; Visible Blades; Plug-In T'ype; Horsepower Rated- 250 volt or 600 volt; Voidable Cover Interlock to permit testing of fuses.

Starters combined in same Enclosure with Light and Power Distribution. Starters and Disconnect Switches are integrally mounted.

Factory mounting and wiring of Starters saves labor. Extra Conduit littings not required.

Can be used any place where Motor Control can be combined with Distribution Equipment.

Square D Manual Starters

| 2512 | CO-1 | 3 | 1 | 410-5.50 | $71 / 2$ |  | 84.00 |

Note: IPrices include thermal overload relay units. Deduct $\$ 1.50$ each if relay units are omilted.
*These two speed starters are suitable for star-connected separate winding motors only.
Ordering Instructions: Specify class and type number of starters: give horsepower, voltage, phase and full load current rating of motor. For starters in NEDIA 7 and 9 enclosures specify location of conduit fittings.

## A-C Manual Compensators

Designed for starting a-c squirrel care notors when it is practical to have manmally operated control, but whore inrush currents must be redaced or starting torque limited.

Redaced voltare for starting is obtained throngh the windings of an anto-transformer.

Prices are for 3 pole, 50-60 cycle, compensators. Four pole or $25-90$ cyrle compensator prices on request.

Three pole overhoad protection available at additional cost.

Price includes one thermal overload relay unit. Deduct $\$ 1.00$ if relay unit is omilled, Sellect relay unit from table shown on this page. VEMA Type 1 enclosures have one $1 / 2 \mathrm{in}$. hnockout at cach end. VEBAA Pype $1-5$ and $7-9$ enclosures have one $3 / 4 \mathrm{in}$. conduit hub at cither top or hottom as standard; types with $3 / 4 \mathrm{in}$. hub at both ends are also available. $\dagger$ Neon pilot light.

## Electrical Ratings

Used whenever it is desired to have overload protection as well as "off-on" control of small a-c single phase or d-c motors. Motor is started at line voltage. Low voltage protection and low voltage release are not possible with these manually operated starters. Open type starters fit in a standard switch or conduit box, and can be used with a standard flush plate.

$\dagger$ Neon pilot light.

## ORDERING INSTRUCTIONS

1. Specify Class and Type Number of starters; give horsepower, voltage, and full load current rating of motor.
2. Order thermal overload relay units by relay number from table below.

## Fractional Horsepower Manual Starters-Selection Table for Melting Alloy Thermal Relay Units <br> for $\mathbf{4 0}$ C. Motors Operating Under Normal Conditions

| $\begin{aligned} & \text { Full } \\ & \text { Load } \\ & \text { Loutor } \\ & \text { Mourent } \end{aligned}$ | Relay No. | $\begin{aligned} & \text { Foul } \\ & \text { Lood } \\ & \text { Motor } \\ & \text { Current } \end{aligned}$ | $\begin{aligned} & \text { Relay } \\ & \text { No. } \end{aligned}$ | $\begin{aligned} & \text { Full } \\ & \text { Lod } \\ & \text { Motor } \\ & \text { Mourfent } \end{aligned}$ | $\begin{aligned} & \text { Rellay } \\ & \text { No. } \end{aligned}$ |

# Square D Loom Switches <br> Manual Starters For Textile Industry Applications 

The Class 2.510 Type R and $S$ manaal starters are particularly designed for severe service rempired of loom motor staters. They have a topgle lever for operation and use protected type melting alloy overload relays. Way be group fused il all motors are rated 2 hp . or less. Low voltage protection and low voltape release are not provided.

These starters are also suitable for general use, simidar to the type $W$ manual starters.

Protected Type Melting Alloy Thermal Overload Relay 600 Volts Maximum

Prices include thermal overload relay units. Select relay units from Table. Deduct $\$ 1.50$ each if relay units are onitted.

Ordering Instructions: Specify Class and Type mumber of starter; give horsepower, voltage, phase and full load current rating of motor.

## Square D Reversing Drum Switches

Class 2601
May be used for across-the-line starting and reversing of at-c polyphase or single phase motors, or d-e motors.
Compatet and inexpensive, ruggedly constructed.
Type AG-3 breaks two lines to the motor; type AG-2 breaks three lines. These switches do not provide overload protection or low voltage protection.

Ordering Instructions: Specify Class and Type Number of drum switch. Give horsepower, voltage and phase of inotor.

Type JNG-2
Used as auxiliary devices for controlling small single phase motors or other light loads such as electric heaters, pilot lights or audible signals.

They do not provide motor overload protection and are ordinarily used in a two-wire control system: however any available normally open contact can be wired to serve as a holding circuit in a threc-wire system when a momentary contact pilot device is used. Pushbuttons, float switches, pressure switches and thermostats can be used for pilot service.

## Two Wire Separate Control

25-60 Cycles - 6-230 Volts

# Square D A-C Machine Tool Relays <br> Class 8501 

## Multipole, 15 Ampere

Typos BR and BII multipole I. ampere heavy duty relays may be used for switehing control circuits or for controlling small single phase or polyphase motors. if motor overload protection is required it must be provided separately.
Extremely long mechanical life is an important feature of these relays to the machine tool industry. All steel parts with wearing surfaces are hardened, this includes the complete magnet assembly, movable contacts and movable contact guides.

The resilient contacts on the BR type relays provide overlap between normally open and normatly chosed poles. The "wipe" characteristies of the berryllium copper resilient contacts makes these devices suitable where low voltage and low current may tend to give trouble with normally closed contacts.

## Class 8501

Multipole-Without Overload Protection or Holding Circuit-Unwired

Contacts on Types BHI and BR multipole relays are easily convertible from normally open to mormally closed (or vice versa), without the addition of extra parts.
$\Delta$ Devices with all normally open contacts are built in quantitios for stock. Devices with normally closed contacts are lnilt to order only. It is therefore generally recommended that devices with all mormally open contacts be purchased. lhis will result in a minimum inventory of relays and yet will permit coverage of all contact arrangement requirements by the simple conversion operation

Hardened Parts-Resilient Contacts 25-60 Cycles-15 Ampere-6-600 Volts

## Ordering Instructions

I. Spocify Class and Type number of relay; number of poles; and the voltage and frequency of the operating eroil.
2. Order suitable accessories and pilot control devices.
3. Describe clcarly any special features or modifications of standard devices that are desired.

## Square D A-C Magnetic Contactors

## Sizes 00 to 7, Three Wire Control Class 8502

## Without Overload Protection

Magnetic contactors are commonly used for many types of non-inductive loads. May be used also for electric motor loads within the horsepower rating shown, if overload protection is not required, or if other provision is made for it.

A holding circnit interlock for three wire control is provided on all of these Class 8.02 magnetic contactors.

When ordering, specify Class and Type number: give hp., voltage, phase, cycles and full load motor current. Order suitable pushbutton stations. Describe clearly any special features or modifications of standard devices which are desired.

A Also functionally equivalent to NEMA Type.5.
$\dagger$ No deduction for omission of holding circuit interlock.
Note: Contactors with enclosures for Class II Groups IE, F, and G, and Class I Group D Ilazardous Locations are also available.

# Square D A－C Magnetic Starters 

## Class 8536－Line Voltage Type

## Melting Alloy Overload Relays

I ine voltage magnetic starters provide the simplest method for starting and stopping a－c squirrel cage motors．They are used when full starting torque may he safely applied to the driven machine and where the resulting current inrush is not objectionable．

Motor overload protection is provided by melting alloy type thermal overload relays．

Price includes thermal overload relay units．Deduct $\$ 1.50$ ewh if relay units are omitted．Select relay units from Tables 1 and 3.
AAlso functionally equivalent to NEMA Type 5.

## Ordering Instructions

Specify class and type number of starter．Give hp．，voltage， phase，cycles and full load motor current．Select thermal units or heaters from proper tables．Order suitable push button stations and accessories shown elsewhere in catalog．

# Square D Thermal Overload Relay Units

# Square D Class 8538 A－C Switch Type Combination Magnetic Starters 

3 Pole Line Voltage Type－25－60 Cycles－ 600 V Max．

Combination starters provide all the control functions of Class 8.336 line voltage starters，described on the preceding pages，plus all the ad－ vantages of a disconnect means in the same enclosure．Class 8.738 starters have a knife switeh－either fusible or non－fusible－while Class 8．3．39 covers similar devices with a circuit breaker．

The single enchoure used has many advantages over separate starters and disconnects．A single device takes up less mounting space，and makes a neat installation．Installation and wiring costs are less hecause all wiring between the starter and the disconnect is made at the factory． Greater safety for the operator is provided in a combination starter，as the cover of the enclosing case is interlocked with the disconnect means to prevent opening of the cover with the disconnect closed－a feature not available with separate devices．

Order by Class and Type number of starter．Give horsepower，volt－ age，phase，and full load current rating of motor．

If special features are desired order Class． $\qquad$ Type Forin ，selecting the correct Form letter from the table on the following page．If more than one Form letter is nsed，arrange the Form letters in alphabetical order as＂Class 8538，Type DG－4，Form AF＂．＂Descrihe modification which cannot be covered by Form Letters．

Prices include thermal overload relay units. Deduct $\$ 1.50$ each if relay units are omitted.
*These trip ratings and breaker types do not necessarily apply to starters in NEAIA 7 enclosures.
${ }^{* *}$ Functionally equivalent to NEAIA Type 5. Standard deviees do not include externad reset for overload relays. External reset will be furnished as an optional feature.
$\dagger$ Current production is design Series A, except NEMA Size 5, which is design Series 13.
aGive motor horsepower, full load current, and locked rotor current or KVA, to select proper breaker trip unit.

Ordering Instructions: Speeify Class and Type Number of starters; give horsepower, voltage, phase, cycles and full load current rating of motor. Select thermal relays from proper table. If special features are desired, order class 8539. type form. . . . , selecting the correet form letter from table. If more than one form letter is used arrange the letters in alphabetical order as "Class 8539, Type EG-2, Form AFT." Describe clearly any modification which cannot be covered by form letters.

# Square D A-C Magnetic Starters <br> Reduced Voltage, Primary Resistor and Part Winding Types 

Class 8640 Part Winding Motor Starters

Class 8640 starters are used with part winding squirrel cage motors to provide reduced starting torque and current.

Melting alloy overload relays.
When ordering specify Class and Type Number of starter; give hp., voltage, phase, and cycles of motor and full load current of each motor winding

## Square D A-C Magnetic Starters

## Class 8606-Reduced Voltage-Auto-Transformer Type-Air Break *Three Phase-Melting Alloy Overload Relays

## 25-60 Cycles

Starters are fully automatic in operation.

These starters apply a reduced voltage across the motor terminals during the acceleration period by means of an autotransformer.

Greater starting torque per ampere of line current is provided than with any other form of reduced voltage starter.

## Ordering Instructions

1. Specify Class and Type number; give horsepower, voltage, phase, cycles and full load current rating of motor.
2. Select relay units from Table 3, listed elsewhere in this catalog.
3. Order suitable push button station. Spare parts, electrical interlock, and user modification kits may be ordered.
4. If special features are required order "Class 8606 similar to 'lype . . ." and state clearly features required.

Square D A-C Reversing Magnetic Contactors
Class 8702-Without Overload Protection

Reversing type magnetic contactors are used to start, stop and reverse a-c squirrel cage motors where overload protection is not needed or is provided separately.
$25-60$ cycles; 600 volts maximum.
Ordering instructions: Specify Class and Type Number of contactor; give horsepower, voltage phase, cycles and full lond current rating of motor. Spare parts, electrical interlock and user modification kits also available.
$\triangle$ Also functionally equivalent to NEMA Type 5.

Prices include thermal overload relay units. Deduct $\$ 1.50$ each if relay units are omitted.
A Also functionally equivalent to NENA Type 5.

## Square D A-C Multi-Speed Magnetic Starters <br> Class 8810-8811-8812

Class 8810-Type DG-3

Line voltage type a-c multispeed starters designed to control separate winding and consequent pole winding squirrel cage motors which operate at 2,3 , or 4 different speeds.
Starters available for constant torque, variable torque and constant hp. motor applications.

Motors protected by melting alloy type thermal overload relay.

## Ordering Instructions

Specify Class and Type Number of starter; hp., voltage, phase, cycles, Rpm and full load current of the motor at each speed. Furnish motor connection diagram.
Order suitable push button stations from Class 9001 section. Specify either two or three wire control.
If Form 1 compelling relay is required, add suffix " Fl " to Type number. If Form 2 accelerating relays are required, add sulfix "F2" to type number. If other special features are desired, order "Class . . . similar to Type . . ." and state clearly the features required.

Prices include thermal overload relays, deduct $\$ 1.50$ each if omitted.

## EC \& M Synchronous Motor Starters

Full and reduced voltage types. The synchronous motor starters provide fully automatic push button operation. Motor is brought up to speed as a squirrel-cage motor and pulled into synchronism by automatic application of direct current to the field.

$\Delta$ Price includes a-c line and d-c field ammeters and separate "start-stop" push hutton. If specified on order, push button will be mounted on door of enclosure at no additional cost.
$\ddagger$ For open starters, deduct $\$ 500.00$ on full voltage starters; $\$ 5.50 .00$ on reduced voltage starters.
$\dagger$ NEMA Class 116 EC\&M TAB-WELD Resistors supplied for separate mounting.

The polarized field-frequency relay applies full field excitation at the most favorable speed and also provides field removal and re-synchronization automatically.

Class 8820-8821, 25-60 cycles, 600 volts max.

## Square D Class 9001 Push Button Stations

Standard Duty

Class 9001 standard doty control stations are designed for use with magnetic motor
starters to movern the starting，stopping，or reversing of all types of elcetric motors． Push buttons，dither momentary contact or maintained contact，are assembled in barious onmbinations to form mified control stations．linclosures are lumished for surlace or llash mounting．

Order by Class and lype number．Specify voltage and frecpuency for pilot lights．

## Square D Oil-Tight Push Button Stations

Class 9001

Heavy duty oil-tight push button stations are well suited for machine tool controls or similar industrial applications.
They may be purchased in three different ways, to meet a viriety of repuirements.

1. Individual units-operators, contact blochs and legend plates may be purchased separately and combined as needed. Since any block fits any operator, a wide varicty of eombinations can be readily assembled from a small stock of standard parts.
2. Complete devices can be ordered, consisting of an operator, a block and a legend plate, packed together in one carton.
3. Assembled control stations are available, with any desired arrangement of units in an oil-tight cast enclosure.

| TN3 | . 30 | 10-24 | 1.10 | 1.30 |
|  |  | 25-49 | 1.00 | 1.20 |
|  |  | 50-99 | . 90 | 1.10 |
|  |  | 100 or More | . 70 | 90 |

## Ordering Instructions:

1. Order as Class 9001, Type....., and give the following additional information.
2. For pilot lights, specify color cap, voltage and frequency.
3. For push button units, selector switch units and pilot lights with legend plates, specify legend plate marking.
a. If standard legend plate marking is desired, use unit price as shown. (See table No. l for list of standard markings).
b. If special legend plate marking is desired, add price of specially marked legend plate to price of unit. (See table No. 2 above for price additions).
c. If a unit with TN3 large size legend plate is required, order control unit by Class and Type number. Specify "with TN3 Legend plate". See table No. I for standard markings. Use table No. 2 for additions.

## Square D Oil-Tight Push Button Stations

 Class 9001Heavy duty oil-tight control stations available for surface or flush mounting. One, two, three, four, six, nine, twelve and sixteen control units can be accommodated in any desired location.

Completely assembled stations can he supplied, or enclosures only and various control units can be purchased for assembly as control stations.
Standard Assembled Control Stations

| Type | No. of Units | Name Plate Marking | Feature | Each |
| :---: | :---: | :---: | :---: | :---: |

| TZ-33 | 3 | Open-Close-Stop |  | 31.00 |

Note: Joy Stick Type - 4 position operator with one lever to operate four type TA or TB contact blocks are available.

Enclosures Only and Base Prices for Non-Standard Stations

## Ordering Instructions:

1. Order enclosure only, flush plate only or closing plate assembly by Class and Type number. Order separate oil-tight control units, legend plates or attachments.
2. Order standard assembled stations by Class and Type number. Select control units desired. Furnish sketch or list control units by Class and Type number, reading from top to bottom of station in successive vertical columns from left to right.
3. Price assembled stations at lase price from table above plus total of prices for all control units specified. Use price of control unit with legend plate. For markings other than standard add $\$ 1.10$ list per legend plate.
4. Specify conduit drilling if other than standard.

Type A Limit Switch: Designed for modern machine tools, to govern starting, stopping, or reversing of electric motors and for use as a "luilt-in" contact mechanism on other types of applications. Highly accurate, precision snap action; capable of withstanding severe service without losing its accuracy or reliability of performance.

Type M Limit Switch: Designed primarily for machine tool applications. Provides accurate tripping, quick make and break coutact mechanisms and latch type mechanisms. Can be furnished with several kinds of roller arms, all adjustable through $360^{\circ}$. Only $8^{\circ}$ travel is necessary for operation and $8^{\circ}$ overtravel is provided.

Type A Small Precision Limit Switches 600 Volts Maximum-A-C and D-C Oil-Tight Enclosure-Spring Return

Square D Class 9050 Pneumatic Timing Relays
Adjustable Range－ 2 Seconds to 3 Minutes
Single Pole，Double Throw，Separate Circuit

Timing relays are used in many industriad applications where dependable operation and ease of adjustment over suitable ranges of timing are reguired． ing a circuit cither after energization on de－energization of the relay．All a－c allows conversion from one type of operation to other in the field．

Timers of the pnemmatic type may le obtained for delay in making or break－ timing relays，excopt thish mounting types have an invertible magnet which

## Square D User Modification Kits Class 9999

For motor control and pump control. The Class 9999 push button and selector switch kits are provided to enable one of these units to be added to the cover of a marnetic starter. Easily and quickly installed. These kits may le used on any Series A under Class $8502,8536,8.538$ or 8539 starter in NEMA 1 enclosure only.

*For 2 pole or 3 pole starters only.
Square D Class 9999 A-C Magnet Coils

These magnet coils are easily instatled on any standard a-c magnetic contactor or starter.
Size 00-3 coils in the 110 and 440 volt, 60 cycle ratings are attractively packaged and marked for easy identification and convenience in stocking.
A large selection of coils are available. Contact GIRAYBAR for additional information.

Square D Class 9013 Pressure Switches
Water Pump and Air Compressor Types

Type FSG-2

Type GSG-2

Class 9013
Type ASG-8 Type ASG-8
Form $X$

Used for the control of electrically driven water pumps and air compressors. Class 9013 devices cover the important electrical ratings for the direct control of motors in the usual pump and compressor applications. Switches are of two pole construction to open both lines.

Standard enclosure finished in machine gray enamel. The special enclosures of Types ASW and ASR are of sheet steel and cast iron respectively to provide dripprof and explosion resisting features where required. Interior parts treated to prevent corrosion

For air compressor applications a pressure release valve is desired; feature ordered as "Form X" or "Form Y."

Square D Industrial Pressure Switches

Industrial pressure switches are designed for the control of pneumatic or hydraulic machines-welders, machine tools, lubricating systems, etc. Devices are SID'T and are usually used as piloting controls for magnetic starters. Rating: a-c single phase 15 amperes, 115 V : $10 \mathrm{am}-$ peres 230 V ; d-c $1 / 2$ ampere, 115 V ; $1 / 4$ ampere 230 V .

Explosion Resisting Enclosure
Bellows Actuated

Footnote symbols apply to bellows actuated (ACW) switches only.
${ }^{*}$ Limits of pressure between which switch can be adjusted to operate on falling pressure.
$\ddagger$ Add to range setting to obtain operating point on rising pressure.

Notc: The following applies to piston units ADW only: Range setting is limit of adjustment on rising pressure. Subtract differential to obtain operating point on falling pressure.

Type AIDW Surge Reducer (Specify 9049A2.5) $\$ 8.00$ Add'I.
Type ACW Surge Reducer (Specify 90 19A26) $\$ 8.00$ Add'l.

## Square D Vacuum Pump Controls

## Class 9016

Designed for the control of electrically driven vacuum pumps. Controls cover the important electrical ratings for direct control of motors.

Contacts close on loss of vacuum. Pipe tap $1 / 4$ inch. Two pole. Range (inches of $1 / \mathrm{g}$. ) 5 -25. Differential (inches of 1 lg .) 4-12.

*For reverse action, add "Form IR" to Class and Type number. Type A and Type $G$ switches can be reversed in the field.
$\dagger$ Three Pole.

## Class 9037 Condensate Pumps

Class 9037, Type GG-4

Class 9037 Type GG controls are primarily used on condensate pumps.

Float movement is through a belkows seal. Switches are flange mounted.

8 -irn. rod length is measured from fulcruin of rod to center of round float. I engths of $6,10,12$, 14 and 16 inches also available. Two pole. Contacts close on liquid rise. For standard duty application.

## General Purpose Enclosures

| Class | Type | Float Movement | Each |

| 9037 | GG-6 | For vertically mounted switch | $\mathbf{5 2 . 3 0}$ |

## Class 9036 Sumptrols

Designed specifically for sump pumps or cellar drainers of the small domestic type.
A wide selection of switches with various enclosure modifications are available.

Controls can easily be adapted to practically all sump pump applications. Contacts close on liquid rise.

Class 9036, Type KG-1

# Marathon Medium Duty Terminal Blocks 

## 200 Series Controlead ${ }^{\text {® }}$ Medium Duty Terminal Blocks

Class A-Group 1

Series 200

Type "L’"

Type "HS"

Type "S*"

Improved disposition of material in this block results in barriers that are stronger, better supported on a base that resists breakage. Insulating plugs are molded as an integral part of the block, yet are designed for clean hnock-out to readily provide end holes or additional thru-holes.

Unobstructed circuit identification is pessible without disturbing the ease of wiring. Blocks also furnished with marking directly on the blocks.

Series 200:
Series 200-L:
Standard screw terminals both sides.
Screw 'Terminals on one side. Through-t ype solder terminals other side.
Series 200-IIS: Screw Terminals one side. Solder terminals other side.
Series 200-s:
Solder terminals both sides.
Series 200-IIF:
Series 200-F:
terminals other side.

## Marathon Heavy Duty Terminal Blocks 1000 Series Solderless Connector Controlead Blocks <br> 

For solid or stranded wires. Positive wire insertion guide. Secure wire grip-no wire damage. Most compact design a vailable.
Specifications:
Sizes: 2, 4, 6, 7, 8 and 12 lines.
Rating: (At $30^{\circ}$ Rise) 750 Volts - 80 ampere.
Dielectrie: Linc-to-line. 8000 volts ( KVS ).
Line-to-ground. 9000 volts (R Tis).
Wire size: No. 6 to No. 18 Awg. Solid, No. 8 to No. 16 Ang. stranded.
Series $\mathbf{1 0 0 0}$ with Standard Markers, No Covers

## Marathon Marker Strips

MEMC

|Fibre or Bakelite

Markers or eircuit identification strips are for use with Class A-Group I Terminal Bloeks. Three kind available. 1. MEMC Markers. 2. Fibre Markers. 3. Bakelite Markers. Markers are available either plain or imprinted.

## Marathon Sectional Terminal Blocks

 Heavy Duty-Controlead ${ }^{18}$ Pre-Assembled Units

The new sectional controlead ${ }^{(1)}$ offers versatility of hardware; arrangement; assembly, wire ranges, and electrical ratings. Double barrier guards assure you of positive protection. White vinylite strip provides flexible marking.

Stainless steel mounting channel may be quichly and easily attached. Provides rigid, accurate alignment of block.

No special tools required for mounting.
Series 10,000: Screw 'Terminals; Series 11,000: "Sems" Comnectors; Series 12,000: Pressure Comnectors.

Note: Each unit completely assemhled and individually boxed with the type and size ( $N$ o. of lines) clearly indicated on the box. White vinylite marking strips are included. Mounting screws are not included.

Components for Field Assembly

## Superior "Luxtrol" Equipment

The light control equipment exactly right for your needs. Provides smooth, stepless dimming, brightening and blending from full-on to blackout. Operation is cool, silent, efficient
and economical. Will control any number of lamps up to their full rated capacity and can be used with incandescent, cold cathode or fluorescent.

## Non-Interlocking LUXTROL Light Controls Manually Operated Models Two Wire-Single Phase

For effortless operation of the larger models or for convenient remote control, motor-driven LUX'TROL controls are available in the same ratings as manually operated assemblies.

| Type | Each |
| :---: | :---: |
| D MV2000 | \$250.00 |
| D M 7 2000-2E | 323.00 |
| D M1/2000-3E | 398.00 |

## G-E Circuit Breaker Load Centers

## (Trumbull)

## General Purpose NEMA Type 1 and Raintight NEMA Type 3R Enclosures

Raintight Circuit Breaker Load Center No. TRP240R2

G-E circuit breaker load centers can be used for the distribution of electric energy in homes of all sizes. farms, apartment houses. light commercial applications sueli as garages, and small office buildings. The smaller load centers can be used in small apartments and for the connection of water heaters, dryers and other 220 -volt appliance loads.

The 2- through 12 -circuit load centers, as well as the 12- through 20 -circuit split-bus load centers, are suitable for use as service entrance equipment when installed with a maximum of six operating handles where main disconnect not required ahead of the load center.

Raintight circuit breaker load enters provide for the distribution of electrical energy in the same types of applications as do the general purpose enclosures. Also permits installation outdoors for areas in which this is desirable.

In these devices, conduit may enter the box through an interchangeable hub in the top or through convenient knockouts in the bottom, sides and back.

## Raintight NEMA Type 3R Enclosures with Interchangeable Conduit Hubs <br> (Prices do not include hub. Order hubs separately.)

## G-E Panel-Base Assemblies

## Single, 2 and 3 Pole Plug-In Branch Breakers Lugs or Circuit Breakers in Mains

 Maximum 240 Volts A-C

Type TQLP Panel-base Assembly with Breakers

Standard-duty assemblies designed for control and protection of power, distribution, lighting and appliance circuits. Single, 2 and 3 pole branch breakers available. For a-c only. Plug-in branch circuit breakers and unit packaging provide for flexibility in stock handling.
Box. panel interior and surface front are packaged as one unit. Plug-in circuit breakers are ordered separately

Assemblies are furnished only as listed. No modifications available.
Interior mounted on reinforced back plate with panel busing arranged to maintain sequence phasing. Bus bars and connection straps supported by thermalsetting plastic insulators. Solderless main lugs. Code-gage galvanized steel box has NLEC-size wiring gutters and amplet hnockouts. Special knoekout arrangements not available.
Fronts construeted of code-gage sheet steel, ASA No. 49 medium-light-grey ename! finish over rust inhibitor, single door with heavy-duty semi-concealed steel hinges and paracentric tumbler combination catch and lock, with directory card and card loolder inside door. Surface fronts are standard. Dual-purpose type also available.

## 8 to 42 Branch Circuits Lugs or Breakers in Mains

3 Wire, 125/250 Volts, A.C. or D.C. 4 Wire, $120 / 208 Y$ Volts, A.C.

(Listed as panelboards by Underwriters' Laboratorles under File E-2366; comply with U. S. Federal Spec. W-P-131a, Classes A \& C.)
Ileavy-duty panelloards designed for control and protection of 2 -wire. 120-volt lighting and appliance branch circuits. Recommended where highest quality, most dependable equipment is required. Suitable for both alternating and direct current.

4-Wire, 3-Phase 277/480Y-Volt Service.
Type NIIB panels for this service and type NIIBX column type also availahle for this service. Consult Graybar.

## Description

Panel Interiors: Type TE interchangeable. single-pole Dreakers in branch circuits, and in mains (if required). Brcakers are quick-make, quick-break, trip-free, tripindicating with thermal-magnetic tripping mechanism.

Mans: Solderless lugs only or circuit breakers: 50 and 100 amp, Type TE (E frame), with interrupting rating of 7.500 amp RDIS. ac: 5000 amp de; or 20, amp, Type 'TJ (J frame), with interrupting rating of 25.000 amp R US at 210 s , ac, 10.000 amp de.

Branches: 1.5 to .30 amp , single-pole, Type TE breakers (E frame) with interrupting rating of 7.500 amp R MS, ac; $\mathbf{3 0 0 0} \mathrm{amp}$ de.

Boxes: Code-gage steel with 1 -in. wiring gutters and plenty of knockouts.
Fronts: Code-gage steel finished in ASA Yo. 19 medinm light-grey enanel over a rust inhibitor: single door with semi-concealed heavy-duty hinges and cylinder tumbler combination catch and lock. For flush or surface mounting. Circuit directory, card and cardholder on inside of door.

*Prices include 1.5 -amp branch breakers. Also available in 20, 30, 40 and 50 amp ratings at no increase in price.
$\dagger$ All boxes are 20 in . wide by $41 / 2 \mathrm{in}$. deep except as noted. For outside box dimensions, add $1 / 1 \mathrm{in}$. th dimensions shown. Buxes provided with knochouts.
$\ddagger$ Box is $53 / 4 \mathrm{in}$. deep.

1. Space for future circuits-select panellomard as if all circuits were required. A price deduction ol $\$ 9.70$ is allowed for each single-pole breaker omitted and space provided.
2. Two- and/or three-pole circuits using Class C, Type TE circuit breakers, 15 to 50 amperes-Convert 2-and/or 3-pole circuit breakers to ermivalent number of single-pole circuit breakers. Select panel having total number of single-pole hranches required and add $\$ 5.50$ for each 2 -pole breaker substituted for two single-pole breakers and $\$ 7.00$ for each 3 -pole breaker substituted for three single-pole breakers. 70 to 100 amps-Not more than two breakers per panel are allowed and they must always be furnished as subfeed circuit breahers. Add $\$ 52.50$ for each 2 -pole breaher and $\$ 69.00$ for each 3-pole breaker.

# G-E Lighting Panelboards <br> <br> Type NLAB 

 <br> <br> Type NLAB}

8 to 42 Circuits Lugs or Breakers in Mains

3-Wire, 120/240 Volts, A-C 4-Wire, 120/208Y Volts, A-C
(LIsted as panelboards by Underwriters' Laboratorles under File E-2366; comply with U. S. Federal Specification W-P-131a, Class A)
Type NLAB standard-duty panelboards are designed for control and protection of 2 -wire, 120 -volt lighting and appliance branch circuits. For a-c only.

## Description

Panel interiors: Type TQ interchangeable, single-pole breakers in branch circuits, and Type TE or TJ breakers in mains (if required). Breakers are cuick-make, quickbreak, trip-free, trip-indicating with thermal-magnetic tripping mechanism.

Mains: Solderless lugs only or circuit breakers: 50 and 100 amp, T'ype TE (E frame) with interrupting rating of 7500 amp RMS; or 22.5 amp , 'Type TJ (J frame) with interrupting rating of $2 \overline{5}, 000 \mathrm{amp}$ RMS.

Branches: 10- to $50-\mathrm{amp}$, single-pole, Type TQ breaker, with interrupting rating of 5000 amp RMS. Double-pole breakers also available. See below.

Boxes: Code-gage steel with 4 -in. wiring gutters and plenty of knockouts.
Fronts: Code-gage steel finished in ASA No. 49 medium light-gray enamel over a rust inhibitor; single door with semi-concealed heavy-duty hinges and cylinder tumbler combination catch and lock. For flush or surface mounting. Circuit directory card and cardholder on inside of door.

No. NLAB420L with door open

*Price includes 15 -amp branch breakers. 20, 30, 40 and 50 amp ratings also available at no increase in price.
$\dagger$ All boxes are 20 in . wide by $41 / 2 \mathrm{in}$. deep, except as noted. For outside dimensions, add $1 / 4 \mathrm{in}$. to timensions shown. Boxes provided with knockouts.
$\ddagger$ Box is $5 \frac{3}{4} \mathrm{in}$. deep.

1. Space for fiture circuits-select panel-board as if all circuits were required. A price deduction of $\$ 3 \mathbf{6 0}$ is allowed for cach single-pole breaker omitted and space provided.
2. Double-pole breakers can be provided as follows:

Class A, Type TQ circuit breakers, 15 to 50 amps-Convert the 2 -pole breakers to equivalent number of single-pole breakers Select panel having total no. of single-pole breakers required and add as follows:

Independent trip type-Add handle extention to two adjacent breakers at $\mathbf{\$ 0} \mathbf{5 0}$ for each 2-pole breaker.
Common trip type-For each 2-pole (common trip) breaker substituted for two single-pole breakers add \$6.30.
3. Two, and/or three-pole circuits using Class C, Type TE circuit breakers:

15 to .50 amps-Select the Type NLAB panelboard having required no. of Class A (Type TQ) breakers. Add $\$ 32.50$ for each 2-pole, Class C (Type TVE) breaker and $\$ 47.50$ for each 3 -pole, Class C ('Type TE) breaker required.

70 to 100 amps-Not more than two breakers per panel are allowed and they must be furnished as sub-feed breakers. Add $\$ 52.50$ for each 2-pole breaker and $\$ 69.00$ for each 3-pole breaker.

## G-E Lighting Panelboards <br> Type NLP Panel Base Assemblies

## 6 to 42 Circuits ugs or Circuit Breakers in Mains <br> listed by Underwiters'

3 Wire, 120/240 Volts A.C., Solid Neutral 4 Wire, $120 / 208 Y$ Volts A.C., Solid Neutral

Type NLP with breakers

Type NLP panels are standard-duty panel assemblies designed for control and protection of 2 -wire, 120 -volt lighting and appliance circuits. For A.C. only. Plug-in branch circuit breahers and unit packaging provide for flexibility in stock handling.

Box and panel interior are packaged as one unit; dual-purpose or surface front as a second unit; and plug-in circuit breakers as third unit.

Assemblies are furnished only as listed. No modifications are available.

## Description

Panel Interior and Box: Unit-type interior mounted on reinforced back plate with panel bushing arranged to maintain sequence phasing. Bus bars and connection straps supported by thermal-setting plastic insulators, each acconmodating six branch circuits. Solderless main lugs. Code-gage galvanized steel hox with 4 in . wiring gutters and ample knockouts. Special knochout arrangements not available.
Fronts: Code-gage sheet steel, ASA No. 49 medium-light-grey enamel finish over rust inhihitor, single door with heavy-duty semi-concealed steel hinges and cylinder turnbler comhination catch and lock, and directory card and card holder inside door. Choice of dual-purpose or surface front.

Cirenit IBreakers: Plug-in single-, two- and three-pole circuit breakers used in branches. Interrupting rating of 5000 amps RMS. Double-pole branch circuit breakers can be provided by using two single-pole Type $R$ or $T Q L$ circuit breakers with handle extensions, permitting sinultaneous manual operation but independent tripping of each pole or by 2 -pole, common-trip circuit breakers, Type TQL.

Ratings, Dimensions, and Prices
3-Wire, Single-Phase, 120/240 Volts A.C., Solid Neutral, Lugs Only in Mains

# G-E Distribution Panelboards <br> Type CCB Convertible Circuit Breaker <br> (Trumbull) 

15-800 Amp Molded Case Breakers
Maximum 600 Volts A.C., 250 Volts D.C.
(Listed by Underwriters' Laboratorles as panelboards under File E-2366. Comply with U. S. Federal Specification W-P-131A,
Classes $A, C, D$, and $E$ )
Type CCB is a heavy-duty panel-hoard designed for distribution of power from main feeders to power loads, to other distribution panelboards, and to lighting panelloards. For service where

Type CCB panelboard with four E frame breakers at top, four $j$ frame breakers in middle \& two K frame breakers at bottom as branch circuits. rating of mains does not exced 1200 amps . When lugs are used or 800 annps. when circint breakrer mains are used. Suitable for $600-v$ a.c. or $250-v$ d.c. service, 2 - or 3 -wire, single-phase, or d.e., 3 - or 4-wire, 3 -phase applications.

Unitized construction of Type CClB permits easy expansion to meet future requirements. New circuits can be added without removing panel from box.

## Description

Molded case heavy-duty circuit breakers used in branch circuits, and in mains (if required). Breakers are quick-make, quick-break, trip-free, trip-indicating with thermal-magnetic tripping mechanism.

Interrupting Ratings: The lowest-rated breaker in the panel-board determines the rating of the panel-board. The following intermpting ratings for (i-l: molded case circuit broakers are based on NEMA test procedures:

| $\underset{\substack{\text { Frame } \\ \text { Type }}}{ }$ | 240.V A.C. RMS Ampers | 480.V A.C. RMS Amperes | 600.V A.C. RMS Amperes | 250.C D.C. Amperes | $\begin{aligned} & 125 / 250-V \text { D.C. } \\ & \text { Amperes } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| TE* | 7,500 |  |  |  | . 3,000 |
| TV' | 20,000 | 15,000 | 1.5,000 | 10.000 | 10.000 |
| TJ | 25,000 | 20,000 | 15.000 | 10,000 | 10,000 |
| TK M | 50,000 | 3.5,000 | 25,000 | 20,000 | 20,000 |

*Ratings shown are for 1-2- and 3 -pole breakers. The 272-volt, single-pole broaker is rated 10,000 annps a.c. or d.c.

Mains: Max. 1200 amp. lugs or 800 amp . molded case circuit breakers.
Branches: Molded case breakers in six type-1: Frame - 15 to 100 amp; 1, 2, and 3 pole
 -125 to 800 amp ; breakers have sealed interchangeable trip units.

Boxes: Code-gage galvanized sheet steel with ample code-size wiring gutters. Firmished as standard without knochonts.
Fronls: Code-gage sheet steel, finished in ASA No. 49 medium-light-grey enamel finish over rust inhibitor, single dowr with heavy-duty llush hinges and cylinder tumbler combination catch and lock, directory inside door. Surface-t ype front furnished as standard.

| Sub-Feed, <br> Modifications |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | ---: |
| Double, or Feed-Thru Lugs |  |  |  |  |  |

*Price of split hus or meter loop is based on size and no. of poles of separately controlled or metered section, and not on mains of panelboard. For increased dimensions, refer to Company.

## Dimensions

1. Determine the total " X " units of ht. We sure to include " "", units for lop and bottom sections if" required. Each "X" unit equals $13 / 8 \mathrm{in}$.
2. Note that circuits 225 amps. or less (except $k$ frame) are arranged double branch.
3. Select box size from table helow. Vote box width and depth shown in table. Specily cat. no. of box.
4. Lelect appropriate front from same table. Specify cat. no. lpanelhoards are furnished with front for surface nounting as standard. Where flust-mounting front is required, please sperify, Change sullix letter in cat. no. from it to F . No change in price.

## G-E Distribution Panelboards Type CCB Convertible Circuit Breaker

15-800 Amp Molded Case Breakers<br>(Trumbull)<br>Maximum 600 Volts A.C., 250 Volts D.C. Pricing Information

Type CCB panelboards are not listed by cat. no. because of the wide range of combinations available. The desired panelboard is priced from the table below. The total list price of the panelboard, including box and front, is the sum of the prices for the following items:

1. Neutral bar (if required). Select rating the same as the mains.
2. Branch circuits (note that list prices are "per eircuit" but circuits 225 amps. or less, except TK-frame, are arranged in double branch construction.
3. Base list price, main lugs or main circuit breaker.
4. Additions for modifications.

Note: $\mathrm{X}-13 / 8$ inches.
*Height of end sections includes necessary space to provide larger wiring gutter. All wiring gutters conform to Underwriters' Laboratories standards.
$\dagger$-frame branch breakers can be located opposite each other, either 2-or 3-pole (double-branch construction), except that no breaker can be placed opposite an l-frane breaker which is serving as a main breaker.
$\ddagger$ Branch breaker, single-pole, with frame rated 125 volts a.c./d.c. maxinum.
§Single-pole, E-frame breaker rated 277 volts a.c. with 15 - or 20 -amp trips only available.
Only J-frame breakers or blank fillers can be mounted opposite J-frame breakers in double-branch construction.

## Ordering Directions

The following information should be included when ordering:

1. Service characteristics: wires, phase, voltage, a.c. or d.c.
2. Mains: Ampere rating, type (lugs or breakers), incoming wire size and location (top or bottom).
3. Branches: quantity, ampere rating, number of poles and frame type.
4. Neutral connections, if any.
5. Modifications.
6. Mounting: flush or surface.
7. Any special arrangement instructions.

# G-E Distribution Panelboards <br> Type NCB Convertible Circuit Breaker (Trumbull) 

Maximum 240 Volts A.C., 125/250 Volts D.C.
15-100 Amp E-Frame Branch Breakers (Listed by Underwriters' Laboratories as panelboards under File E-2366. Comply with U. S. Federal Specificatlons W-P-131a, Classes A and C)

Type NCB with two 3-polle breakers on left side and one single-pole, one 2-pole, and one 3-pole breaker on right side as branch circuits.

## Dimensions

Determine the total "X" units of height. Be sure to include extra "X" units for" top and bottom sections if required. Each " $X$ ", unit equals $13 / 8$ inches. Note that all circuits are arranged in double-branch construction.

Select box size from table helow. Note box width and depth shown.

| Panels with Max, 225 Amp Maia Luss or Breakers |  | Panels with Max. 600 Amp Main Lugs or 400 Anp Main Breaker |  |
| :---: | :---: | :---: | :---: |

| 31 | 611/2 |  |  |

Type TO and TOL breakers rated 10, 15, 20, 30, 40, or 50 amp , a.c. only, can be supplied mounted in Type NCi; panelboards. Minimum it single-pole or 2 double-pole. Refer to Graybar for panel dimensions.

A heavy-duty panelboard designed for distribution of power from main feeders to power loads, to other distribition panelmards, and to lighting panelboards. Designed for service where rating of mains does not exceed 600 amps, when lugs are used or 400 amps. When circuit breaker mains are reguired. Suitable for maximum 240 volt a.c., or $125 / 250$ volt d.c. service, single-phase or d.c., 2 - or 3 -wire, or three-phase, 3 - or 4 -wire applications.

## Description

Pancl Interior: Heavy-duty circuit breakers used in branch circuits and in mains (if required). Breakers are quick-make, quick-break, trip-free, tripindicating, with thermal-marnetio tripping mechanism.

Mains: Maximum 600 amp. lugs or 400 amp. circuit breakers.
Branelies: 15- to 100-ampere, 1-, 2-, and 3-pole Type TE breakers (E frame) with interrupting rating of 7500 anps. IVIS, a.c. or 5000 amps. d.c.

Boxes: Code-gage galvanized sheet steel with code-size wiring gutters (minimum 4-inch) and ample knockouts.

Fronts: Code-gage sheet steel, finished in ASA No. 49 medium-light-grey enamel over a rust inhibitor, single door with heavy-duty flush hinges and eylinder tumbler combination catch and lock, directory inside door. Dual-purpose front furnished as standard.

## Pricing Information

The total list price of the panelloward, including box and front is the sum of the prices for the following items:

1. Neutral bar (if required). Select rating the same as the mains.
2. Branch circuits (note that list prices are "per circuit" but circuits are arranged in double branch construction).
3. Base list price, main lugs or main circuit breaker.
4. Additions for modifications.

# Bulldog Duo-Guard ${ }_{\circledR}$ Pushmatic ${ }_{\circledR}$ Circuit Breakers Pushbutton Convenience Bolt-Tight Connection Pushmatic Protection 

Listed by Underwriter's La boratorles, Inc. Capacities: 15, 20, 30, 40, 50 amperes at $\mathbf{1 2 0} \mathrm{V}$. AC Single Pole; 15, 20, 30, 40, 50 amperes at 120/240 V. AC Two Pole Common Trlp. Short Clrcuit interrupting capacity: $\mathbf{5 0 0 0}$ amperes.

Pushmatics are small, compact, single and two pole (common trip) devices for controlling and protecting electric circuits. Their operation is simple. A slight push of the single operating button switches the circuit either "(ON" or "OFF". Another push, ONE MOTION, restores service aft er automatic tripping without any intermediate reset procedure. With Pushmatic there is only one operating rule: Push the Button.

Ambient compensated Pushmatiss (single pole only) employ an additional thermal element that automatically compensates for the effects of the surrounding air temperatures on the main thermal element. Constant tripping characteristics are maintained over a broad range of ambicnt temperatures ( $30^{\circ} \mathrm{F}$. to $150^{\circ} \mathrm{F}$.).

Single Pole Pushmatic shown at right.
Two Pole-Common Trip-P'ushnatic, left.

To add or change Pushmatle units they are merely hooked on mounting they
rlb.

## Easy to Install or Change

A screwdriver is all that is needed to remove or attach a Pushmatic to any point along the mounting rib. Disconnect service, raise locking har on mounting rib, remove wiring from the Pushmatic and remove Pushmatic. To install or replace, the procedure is merely reversed. Both operations are easily and quickly made.

The extreme compartness of the Pushmatic means that nore space is available in the cabinet for uncluttered wiring. If more space is required, the adjustable interior may be raised on its mounting posts until it is completely out of the cabinet, providing unlimited wiring space.

Wiring, itself, is easy. The "line" side of the Pushmatic is quickly attached to the tapped silvered bus bars by a screw with a smooth pointed leader. Threads quickly align thenselves without unnecessary fumbling. The "load" side terninal consists of a washer-head screw with a deep, rugred slot. The branch circuit wire is inserted straight into the terminal that can be tightened down without fear of destroying the
slot.

## Type P2B <br> Complete Factory Assembled

Single Phase, 3-Wire, Solid Neutral, $120 / 240$ Volts A.C

Type P2B Panel

Designed to provide group phasing of 1 -pole branch circuits. Where 2-pole branches are required a tie-handle is available for joining two horizontally adjacent 1-pole Pushmatics.

Ideally suited for installation where available space requires a compact control center having a minimum height. (See table for heights).

Mains: Lugs only (Solderless Wire Grips).

Branches: 1-pole, 15-amp. 120 volt Pushmatics, with Solid Neutral.
(20, 30, 40 or 50 amp . units may be specified; Price is same except when use of higher rated units necessitate increased mains.)

Boxes: Code gauge galvanized steel $20-\mathrm{in}$. wide, $51 / 2-\mathrm{in}$. deep. Wiring gutters 4 in. (I. D.). Height indicated ly numerals in box numbers.

Fronts: Code gauge steel, attractive gray finish.

## Panels and Cabinets

## Type P3B

## Complete Factory Assembled

Line-A-Phase Panels for Sequence Wiring

3-Phase, 4-WIre, Solid Neutral, 120 208 Volts A-C.

These Electri-Centers, when properly installed and operated provide perlect sequence phasing for constant balanced loading of phases.

Three vertical rows (one for each phase) are assembled side by side in the enclosure. Each row of Pushmatic units is connected to one main bus har or phase. This provides evident and natural phase association for each Pushmatic unit and its branch circuit.

Mains: Lugs Only (Solderless Wire Grips).
Branches: 1-Pole, 1.5-Amp. 120 Volt Pushmatics with solid neutral.
(20, 30. 40 or 50 amp. Pushmaties may be specified; price is same except when use of higher rated units necessitate increased mains.)
Boxes: Code gauge galvanized steel $20-\mathrm{in}$. wide, $51 / 2$-in. deep, with four wiring gutters 4-in. (1. D.), Height indicated by numerals in box numbers.

Fronts: Code gauge steel, attractive gray finish.
Note-Circuit identification adhesive strips supplement the regular directory frame on Electri-Center door. Each strip is divided into spaces the same height as face of Pushmatic unit, for writing positive and easy identification of each Pushmatic-controlled circuit.

## Accessories for Narrow Column Panels

Narrow column Electri-Centers are usually combined with a wireway extension designed to extend up the columns and pull boxes to be mounted at top of extension. Such combinations permit free wiring space in the Electri-Center, obviate the use of conduits running down to the Electri-Center and lend a streamlined appearance to the finished installation.

## Extensions

Standard Extensions: 56in. long. One end provided with a sleeve that fits snugly over a collar provided at the top of the Electri-Center. The opposite end of the extension is closed. A large rectangular hole near top of extension matches with a similar hole in the back of pull box when pull box is to be mounted on face of extension to complete the wireway. Where a pull box is to be mounted at the top of wireway extension, the end plate for extension is omitted and pull box without ent-out in backplate is mounted in its place. When ordering it is necessary to state type of pull box reguired.

Auxiliary Extensions: Short pieces of wireway designed to fit between Electri-Center ( $\Lambda$ ) and Standard extensions where additional wireway height is reguired. Available in 24- and 48 -in. lengths (D). Lach auxiliary extension is provided with a sleeve on one end and a collar on the other. These lengths will permit wireway extensions to 14 -or 16 - ft . Ceiling or truss heights. For intermediate heights between 12- and 14- ft. and 14 - and $16-\mathrm{ft}$., the sleeve end only of the auxiliary extensions may be cut down by user to the length required.

| Wireway Extensions |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
| Type. | Size, In. | Type | Wt., Los. | Each |
| NEX24 | 24 | Extension | $\mathbf{1 5}$ | $\mathbf{\$ 1 9 . 0 0}$ |
| NEX48 | 48 | Extension | 30 | $\mathbf{3 7 . 0 0}$ |
| NEX2548 | 48 | Adjustable Extension | 31 | $\mathbf{3 7 . 0 0}$ |
| NEX56 | 56 | Extension | $\mathbf{3 4}$ | $\mathbf{3 8 . 0 0}$ |

## Pull Boxes

Two types of pull boxes are
 vailable - one for front mounting and one for top mounting. The front-mounted pull box can only be installed on the surface or front of the 56 -in. standard extensions. The top-mounted is for momnting on the top of the panel proper or either of the 24- or 48-in. auxiliary extensions. Where a pull box is used, the neutral connections can be mounted therein.

## Pull Boxes

## Chance Holdfast Lamp Changers

Rubler covered flexible spring fingers grip lamp bulb firmly for removal or replacement in high places such as ceilings, side walls, electric signs, etc. Pull-cord at base of fingers will hend wristlike coil spring at any angle from vertical to 90 degrees. Changer will work as easily at right angle to the rotating pole as it will in the vertical position. Also available with rigid neck.

Changers are equipped with a coupling adapter for attachment to specificatly designed pole, when purchased in combination with one or more of these poles. When ordered individually, changers are equipped with regular neck for receiving round poles of the specified diameters. Coupling adapters can be purchased separately.

## Flexible Neck Changers

No.

## Description

1.2 For 50-Watt Romgh Service, 15 to 100 -Watt Mazda, and other lamps up to 3 inches in diameter. Shipping weight 1 pound.
1.3 For 150 to 500-Watt Mazda lamps and other large and odd shapes up to 5 inches in diameter. Shipping weight, 1 pound.

Rigid Neck Changers
1.4 For 50-Watt Rough Service, 15 to 100-Watt Mazda and other lamps up to 3 inches in diameter. Shipping weight, 1 pound.
15 For 150 to 500-Watt Mazda Lamps and other large and odd shapes up to 5 inches in diameter. Shipping weight, 1 pound.

## Poles and Couplings

The Standard Pole has one coupling which attaches to the lamp-Changer.
The Extension Pole, has two couplings: one coupling attaches to the Lamp-Changer; the other attaches to the coupling of a Standard Pole or another Extension Pole. No.

Description
1377 lole, 6 foot. Shipping weight, $13 / 4$ pounds.
1376 Extension Pole, 6 foot. Shipping weight, 2 pounds.
Prices on application.

## Hubbell 3-Wire Grounding Type Convenience Outlets With 2 Grounding Terminals <br> 15 Amperes, 125 Volts, Polarized-Side Wired Only

No. 5252

For erounding expesed metal parts of portable electrical equipment.

Competitive. dependable, duplex flushmounted receptacle for all practical applications.

Can be used with metallic or non-metallic wiring systems.
'I'wo qreen hexagonal grombling screws, one per side, permits wiring flexibility.

Has break-off frature for two-eircuit installations. Acemmmodates two armored or rubber caps. Ilas slots for 2 -wire regular and s-wire polarized caps. I -shaped slots for hround blade.

Washer-t ype plastor ears and wire looping slot. Rugged 2 -piece hatelite construction.

## 3-Wire Grounding Type Single Outlets

No. 5256

Shallow, commact device. designed for panel applications. Small round "shomlderless" body takes up nomore width than its face dimensions.

Can ler used with metallic or monmelallic wiring systems.
stors for 2 -wire parallel and 3 -wire polarized grounding capos.

Green hoxagomal grounding screw. Rugged bakelite construction.
5258 Single Outlet with $13 / 4$-in. Short
Strap, Nide Wired Only . . . . 10 . $00 \quad 7 \quad \$ 78.00$

## Hubbell 250 Volt Grounding Devices

## 3-Wire Back or Side, Wiring <br> 15 Amperes, 250 Volts-Polarized

No. 5662

No. 5661

This sories features tandem slots in receptacles and tanden blades in caps.

Can be used with metallic or non-metallie wiring systems. Giromding of metallie wiring system is directly through metal enclosurt, (iromoding of non-metallic systems is thromgh a third wire acting as a grounding conmector.

I -shaped slots take gromoding blade. also assures positive identification of groumding cincuit.

These outlets are designed with holes for bach wiring as well as hinding serews for eomentional side wiring.

Ilas wire strip gauge. break-off feature for two-circuit installations. and washer type paster cars.

No. 7052

## Hubbellock Wiring Devices

These devices combine a highly practical and exceptionally safe medium of applying electric current to industrial use.
Cap contacts are heavy brass stock machined to dimension and molded into special impact-resisting Bakelite supporting posts. This sturdy construction assures ground connection and position polarity at all times, and under any condition. The lock is positive and prevents any loss of production through the accidental breaking of electric current. The Dead Front Safety Shutter isolates contacts, snuffs arc, and keeps out dust.

## 3-Wire Connectors <br> Adjustable Cord Grip

Hubbell "Twist-Lock" Devices<br>10 Amperes, 250 Volts; 15 Amperes, 125 Volts

By a mere twist of the cap Twist-Lock devices make a fast and positive electrical connection which cannot be accidentally disconnected. Twist-Lack devices meet the recommendations of the National Electric Code rules advising installation of polarized and grounded devices to protect the operators of portable motor driven tools and equipment. These devices combine the nobreak contact feature of a permanent connection with the convenience of a plug-in connection for easy servicing of electrically operated and motor driven machines.

## Hubbell Super "Twist-Lock" Connectors 2-Wire- 3 -Wire 4 -Wire

No. 3321

No. 3323

With screwless pressure-grip terminals for faster, saler, more secure wiring. Both cap and connector body
are designed in two independent sections.
Torminal porkets hold wire ends sereurely in position and prevent spreading. The dead front "locks in" the strands, IIIO wires are exposed on the surlace.

Super "Twist-Loch" is small, light in weight, compact and rugred. Bither cap or conntertor body can be interchanged with regular "Pwist-Lach" mits of equal size and rating.

## Hubbell "Insulprene" "Twist-Lock" Connectors

## 2-Wire 3-Wire-4-Wire

Strongest, fourhest. most wear-resistant

No. 9966 Rubber Connector ever produced- ()il resistant, water resistant impaet resistant.

Tough fibre dise has beern modded into the Insulprene $1 / 8-\mathrm{in}$. from the face to insure positive polarity and anchor the blades securcly in posilion, thas preventing aceidental pull-out. Blade slots in dise accurately diestamped, prevent incorrect insertion of blades.
Fibre retaining piece anchors terminal plates and seals off wiring area from lint and dust. Large serews with No. 8 heads simplify wiring and provide a secure comection.

Powerful Ihbbell cord grios eliminate tension from terminals. Extra rugged ! 16 -in. brass terminal plates.
Double wire ligs on cach terminal plate effectively confine wires trands. Will accommodate same caps used with regular "Twist-Lock units.

With Heavy Gage Aluminum
Enclosure 50 Amperes, 250 Volts

## Hubbell 3-Wire Surface Type Range Receptacles

## Surface Type

No. 9390

## 30 Amperes, 250 Volts, Polarized

For dryers, air conditioners and other general installations.
L-shaped slot positively prevents interchangeability with 50 -amp. units.
Large linding screw terminals take up to \#8 wire. Built-in cable clamp interchangeable for back or bottom wiring.
Regularly furnished without No. 7989 grounding clamp.
Grounding clamp designed to comnect with ground strap on cap, providing secure ground connection.

No. 9395

No. Description
9390 Surface Receptacle, Mlack
Bakelite. 9390-I Forine.

Surface 'Type Power Outlet with Met al Cover Features Ilubbel swing-type pressure terminals. Designed to meet I'nderwriters' Laboratories requirements for metal cover, surface type units.
Withstands rough usage in industrial-commercial applications.

"Sandblast" aluminum cover and hack plate blends well with all kitchen interiors.
Phosphor-bronze springs insure strong grip. Channel takes $\mathrm{up}_{\mathrm{No}} \mathrm{p}$ to $\mathrm{H}_{6}$ wire.

${ }^{*}$ i,-shaped shot to prevent interchange with 50 -amp. units.
**Straight slots to prevent interchange with 30 -amp. units.

## Flush Type Power Outlet

No. 7962

Shallow, compact design simplifies wiring.
Auxiliarysteelspring provides constant contact pressure, keeping heat rise to a minimum even when used at its maximum rating.

Terminals recessed for extra safety.

No. 9350

Terminals cadmium plated to resist corrosion and permit use of aluminum building wire. Accommodates up to \#6 wire. Captive linding serews cannot contact sides of box.

## Double Grip Contacts <br> T-Slots

For Back or Side Wiring

No. 9260

No. 9260 Back View

No. 9260 is a sturdily constructed two-piece outlet with pressure type terminals which permit either back or side wiring. For back wiring strip wire to length indicated on strip gauge at back, insert wires in recesses and tighten binding screws at side. Convenient slots under plaster ears can be used for looping wire when outlet is side wired. Outlet becomes two-circuit type when connection between binding screws is broken.

## P \& S Plastic Pin Type Lampholder Contorm to N.E.C. Standards <br> Medium Base - 660 Watts, 250 Volts

Indoor or outdeor decorative lighting. No stripping, splicing, soldering or
 tapping of wires. Lampholder applied directly to wire. Sharp pointed pins pierce insulation and make positive contact. Wires held in phace by lampholder cap.

Lampholders may be positioned or moved to any desired spasing at any time, as pin contacts will not injure insulation of wire.

A detachable hook is furnished with each lampholder for hanging from tree or messenger wire.

For No. 12 or 1 HRW stranded wire.

## Pilot Lights and Night Lights

No. 1340
Conform to N.E.C. Standards
With Metal Iloods and Renectors. Each night light and pilot light is furnished complete with S-6, 6 Watt, 120 Volt lamp and metal reflector or hood.

Packed 10 in a carton. 30 in a standard pachage. Pachage weight, 3 pounds.

No. 1339
Rating-75 Watts, 125 Volts Night Lights With Clear Lamps Description

Per 100
No.
1339 With Chromium Plated Reflector.
$\$ 131.00$

Pilot Lights With Red Lamps
1340
With Chromium Plated Ilood.
$\$ 131.00$
When above Night Lights and Pilot Lights are desired without lamps specify regular catalog number with suffix "LL.," When Pilut lights are desired with Clear Lamps, specify regular catalog number with suffix "CL."

## Flush Neon Pilot Lights

Listed by Underwriters' Laboratories, Inc.

## 1/25 Watt, 125 Volts

Cold-gives off no heat.
Has unbreakable, prismatic, red Plexi-glass dome.

Ideal for all types of pilot light applications.

## Switches

## With T Rating

Switches having the letter T as part of the rating are capable of controlling tungsten filament or gas filled lamp loads corresponding to the 125 -volt ampere rating of switches. For 5 -ampere this means 625 watts, for 10 -ampere, 1250 watts, for 20 -ampere, 2500 watts and for 30 -ampere, 3750 watts.

## P\& S Residential Type

Conform to N.E.C. Standards

## P \& S Flush Tumbler Switches

Approved by Underwriters' Laboratories

No. 20AC1-I

No. 20AC1

Large silver alloy contacts assure long life under continuous, heavy duty service. Can be used to full rated capacity on fluorescent loads at voltages from 120 to 277. Can be used at full rated capacity on tungsten filament lamp loads and on inotor loads up to 277 volts at $80 \%$ of switch rating.

Designed for side or hack wiring-will accommodate up to No. 10 solid or stranded wire.

Length $23 / 16$-in. ; width $11 / 2$-in.; depth $17 / 16$-in.
20 Amps., $120 / 277$ Volts, A-C

## McGill Levolier Switches

Approved by Underwriters' Laboratories, Inc.
Lever Operated-Single Circuit 6 Amp. "T," 125 Volt-3 Amp., 250 Volt

5/8-inch thick. One of the smallest 6 amp., 250-volt pull switches made, yet has unusual capacity. Single pole, double break mechanism, erpupped with o-ft. eord or plain lever control. Standard tinishes: brass, dark bromze, and hornished nickel.
Widely adaptable for canopy or conduit box mointing for individual control of incandescent or fluorescent lighting, F'.II.I' motors, etc.

## Lever Operated-Single Circuit

6 Amp. "T," 125 Volt-3 Amp., 250 Volt

No. 39

Can be used on any chain fixture, and between any two links of chain. When installed in lintures that have been previously homer it fits in place of one of the chain links without altering the length of the fixture or necessitating rewiring or splicing of lead wires.

The Levolier link switch consists of a standard Ievolier pull switch, and Ievolier link.

| No. | Description | Carton | $\begin{gathered} \text { std. } \\ \text { Pkg. } \end{gathered}$ | $\begin{aligned} & \text { Pkg. } \\ & \text { WI. } \end{aligned}$ | Per 100 |

Ilousings.

## Levolier Vertical Pull Adapter

## For Levolier Switches

 With $7 / 16$-inch Stem DiameterAdapts Levolier switches to vertical or straight down monnting in odd shaped or close to the ceiling canopies. It has a short extension arm that elips to switeh lever and is aligned by slot in guide arm that is tightemed under mounting mut. Adapter can be installed in a few seconds.
Std. Phg.
100

## Lever Operated - Single Circuit

 6 Amp. "T," 125 Volt-3 Amp., 250 Volt

No. 71

The thinnest 6 Amp., 250 Volt "'l"" rated switch made -only $15 / 32$ inch thick. Plastic cased with b-inch wire leads, it has the famous Levolier mechanism. size lás2 $\times 19 / 32$ inches.
ldeal for small, and especially thin sectional fixture canopies.

## Superior "Luxtrol" Light Control

## Type WBD 360

## For Mounting in the Wall

LI XTROL replaces old-style "on-off". switehes in new or existing structures to produce any desired light intensity from eomplete darkness to full brightness by auto-t ransformer action. Because it is not a rheostat, operation is always conl, smooth and without flicker-only the current required to produce the desired illumination is used.

LI XTROL type WBD 360 eontrols 360 watts of incandescent or cold-cathode lanp load or up to six ho-watt rapid start fluoreseent lamps. A switch ineorporated at the "rfll" position shuts off the entire circuit. Both a fuse and a hermal overload are provided to assure complete safety. 'The knol and faceplate are smartly styled to harmonize with any room decor.

## Easy To Install

1. Attach wallbox to studs . . . foed input and output load BX through knockouts.

2. Screw control assembly to wallibox.

3. Connect circuit leads to color identified control color
leads.

4. Screw on face plate, attach dial, insert fuse... and LUXTROL is ready for operation.

## FOR LOADS UP TO 750 WATTS . . .

IUVTliOL, light control type WBDT50 provides cematrol up to a full 750 watts of incandescent lamp load or 12.10-wath rapid-start fluorescents. The functionally designed prime painted faceplate can le repainted or wallpapered to match or contrast with the watl finish. Knobs are either ivory, black or gray plastic.

An input switch Jiseonnects the unit and load when the knoh is in the "off" position. A thermal overload and a fuse lint protect the unit from aceidentab overloads and excessive overheating conditions.

## Touch-Plate Remote Control Switch System

Low Voltage

## Home Lighting Control

Tonch-Plate low voltage remote control wiring brings to the home lighting fied a combination of utility, convenience, athacliveness and safery that is actually amazing.

This superlative methor of home lighting control costs ouly slighty more than combentional wiring and oflers so many new and exceptional advantages ower older methods of home lighting that louch-Plate is being installed in both new and older homes of every price categery. Here are the reasons why fol CII-PATLE has received such widespread acceptance all over the combtry.

1. Swith hes at the entrances of all rooms which eliminates groping in the dark and the needless burning of lights.
2. An intriguing master panel which controls all lights from one convenient location and shows which lights are on in the home.
3. The lightest touch of the hand or elbow and lights go on or ofr. This casy operation is att ractive to every member of the family.
4. It's safe because of the low yollage, even current. Carrying parts can be touched safely with wet hands.
5. The switches operate miselessly.

You ret all these extra, lumery features with Touch-Plate plus the fact that the mits are built to last longer than the liketime of the home.

Low woltage momentary contact switehes only should be used to operate Touch-Plate relays. Wiring to 'louchPlate switches is open run low vollage-no conduit necesSary.* No B(OX NEED) ED D hecause of low voltare.* 'TouchPlate switches can be attached directly to phwood, ete. Wire in parallel for multiphe switehes. Siwitches tit standard outlet boxes or phaster rings. Both two-gang and threegang switches lit (wo-gang loxes or plaster rings. Available in buth ivory or brown with either fivory or brown buttons. specify colors when ordering.

## Master Panels With Pilot Lights

No. cc6

No. cc12

No. CC18

Provides a central point-such as the master bedroomfor the individual control of all house lights. The Famous TOU CII-PLATE Master Panel. All lights can be controlled from any convenient location (near bedside, in garage, elc.). Lucite luttons automatically illuminate indicating which lights are on in the home. Nost installations have two master panels; one in the garage to turn on or off all lights hefore entering or after leaving the house, the other in the bedroom. Touch huttons control individual relays. The low voltage indicator pilot lamps are controlled by individual transformers, also in Gil3 gang lox, which are wired in parallel with individual fixtures. Touch-Plate master panels mount on single or two-gang switch rings, or, where conde reguires - to extra deep (31/2") switch box.

## Transverter

TVR-1
Transverter is the source of the low voltage direct current to operate the relays. One such power supply only is nerded for each complete installation. Built around a current limiting transformer and gives an impulse of direct current for operation. Camet be burned out or damaged by direct short circuit on low voltage side. Comes installed in PWI Series. May be attached to mounting holes on M1RU-6 and 131-6 units. All gang boxes have provisions for mounting the TVIR-1. for separate installation a mounting plate is available that fits a standard t-S low.

## Kett Tall Reach Joist Borer

Here, in a single tool, is all needed for drilling hodes, anywhere at any angle, and through any material.

Reguiring less than eight inches clearance, the wood borer operates Inetween joists and studs. I sers report that offen this new tool pays for itself on one or two wiring jobs. Saves climbing up and down ladders, giving a big saving in time and money.

The rugged Tall leach Borer has ample power for every joh and stands up under severe use. It has ball-bearing construction with sealed in lubrication. Takes standard $1 / 2$-in. shanh machine bits with $3 / 8$-in. flat. Total weight with 9-ft. extension is less than 18 lbs . Supplied with $12-\mathrm{ft}$. cord.

Removed from extension with a $t$ wist of the wrist, the head becomes a light, easy to use hand borer.

The Panel Master Saw with its $3 / 8$-in. depth of cut is designed expressly for cutting metal laminated wall panelings such as Armorply, Met-L-Wall, Mirawal, Porc-Lin-Ply, chalkhoard, etc. It is the ideal tool for store front and interior contractors; partition installers; custom auto body, trailer, truck, and bus Luilders; and plastic fabricators.

It will cut mild stcel, aluminum, brass, lead, fibreglas, reinforced polyesters and resins, and all laminated and plain plastic sheets.

Powered with a $5 / 6$-in. capacity heavy duty, industrial type ball bearing, 110 -volt universal motor. It comes complete with four assorted blades and wrenches. A carrying case is also available for the tool.

Arrow Automatic Gun Tackers

For non-metalie shoathed cable up to $1 / 2 \mathrm{in}$. in diameter. No short circuits possible. The driving bade automatically stops short-dors not allow staple to injure wire eovering. 1'atented jam-prow mechanism uses $9 / 10$, 5/8, 7/8 in. divergent pointed (.07.) wire) staples, galalloy coated for high rust resistance, rowin coated for greater holding power. Also in rustproof monel; and in ivory and brown.
Type T-75 Automatic Gun Taeker. . . . . . . . . . . Wach $\$ \mathbf{\$ 1 5} .00$
Type T-25

For any wire up to $1 / 4$ in. in diameter-telephome. Bedl, thermostat, hi-fi, radiant heat, inter-com wires, ete. Patented jam-proof mechanism. Driving bhade antomatically stops short-does not allow staple to injure wire eovering. Tapered head gets into tight corners. Wses round top ( 0.05 wire) ${ }^{3 / 3}$, 7/16, 9 伯 in. galalloy coated staples. Also in rust proof menel.
Type T-25 Automatic Gun Tacker............ . Each \$15.00

## Capewell All-Purpose Saw Blades

## Dafiles-Cut in Any Direction

Cuts any material in any direction. Can be used for highspeed cutting in a power jig. Manufactured from a mild steel, cyanide hardened and water quenehed.

Case hardened to a depth of approximately .00.0-in., the core remaining relatively soft to give pliability and tensioning strength. Fits any standard hack saw frame when used with Dalile links. Blades: rough, medium and smooth. speeify when ordering.

| No. | Description | Per Doz. |

No. Description Each
8 Cutting edge 10, 12 or 11-in. (specify).......... $1.80
```

## K-D Convertible Hack Saw Frames

Spans Obstructions and Projections on Difficult Johs. Cuts Around Comers.

A finely batanced,
 solid st eel frame. Quick, easy adjustment for 3, $41 / 2,6,8,10$, or 12 -inch blades. One 3 -inch and one 1 -inch blade furnished. Net weight, 1 H., 7 oz .

No. 99 . . . . Each $\$ 4.45$

Capewell Hand Hack Saw Blades

Terhnite lligh Speed：Made from special alloy steel for use on hardest metals and are the finest hand hack saw blades for eutting high speed sted，carbon tool steel，chrome， chrome－nickel and other hard alloys．

Safetech lligh Speed Shatterproof：Designed to cut Lough metals easily and with complete safety．Hardened tooth edge eliminates stripping and its solt，tough back makes it a truly salfe，shatterproof blade．

High Sperd Tungsten：Made from tungsten high speed sterl for cutting hard metals．An excellent all－hard blade for use principally liy the skilled mechanie．

## Capewell Flexloy Hack Saw Blades

This Wade is all－hard，yet su flexibe it is practically un－ breakable when used in a hack saw frame．It is the economical Hade for electricians and other meehanics．

Call Graybar FIRST For

## Bartlett Shears <br> For Heavy Metal Cutting

Suips are forged with solid bades of crucible tool steel, heat treated. All pivots and parts made for the most trying work on metal.

Compnond lever action gives an evenly distributed cutting strain from a close throat start to the tinish at the point of Whe blade. In diflicult cutting it is not necessary to start with hades open to the full span, because of the even pressure at all pesitions. The short cutting blade is comneded to the short lever handle by links on each side with close fitting shoulder rivets, making a rigid comecting frame without side springing tendencies.

No. 10: Lenglh $101 / 2$-in., cut 20 gauge or multiples of thinner ganges.

No. 12: Length 12-in., cuts seams or multiples of thicknesses: is used for splitting large sheets and for many classes of work that uswally reguire bench shears.

No. 14: Length 14-in., is capable of much heavier work than the usual hand shear of the same length and in many ways takes the place of a bench shear for heavy cutting.

| No. | W., Lbs. | Each |
| :---: | :---: | :---: |

## Beaver Pipe and Bolt Machines

The world's fastest portable machine. A 2 -in. thread in 12 seconds, for example. A rugged heavy duty, deluxe pipe and bolt machine that euts, threads and reans $1 / 8-\mathrm{in}$. to $2-\mathrm{in}$. pipe.

With a drive shaft and geared tools it will cut and thread $21 / 2$ to 12 -in. pipe. Threads bolts $1 / 4$-in. to 2 -in. Cuts off bolts (with whed culter) up to 78 -in.

Foratures include: New Power-Grip Wrenchless Chock, right hand bathe-like operation, all controls in front, new Quadra-T'ype Die llead, 12 -in. of work ing space and oil pump forward or reverse. Inereased oil flow delivers two gallons oil per minute - means perfect threads and long die life. D'ump accessible for easy cleaning. High speed steel dies throughout for pipe bolt or conduit. Choice of whee or automat ic knife cutorr. Built-in outhoard Pipe Support - instantly indexes for size - no double chucking. Equipped with thread length gauge.

Your choice of 110 or 220 volt universal, reversible motor.
Knife cutolf $\$ 25.00$ extra.
This is a greatly improved version of the old Beaver Model A machine. I'roductivity has been increased at least 40 per cent, liy faster, more powerful motor and many new advant ages.

Weight 226 HIs .

## With Quadra-Type and Duo-Type Die Heads

## No. <br> Description <br> Each

A-5 With one Quadra-t ypre dic head and one set of quadra-type dies to thread $1,11 / 4,11 / 2$ and 2-in.
A-6 With one Quadra-t ype die head to thread 1 to 2 -in. and one duo-1 ype die head with dies to thread $1 / 2-\mathrm{in}$. to $\frac{3}{4}-\mathrm{in}$.
A-7 With one Quadra-t ype die head to thread 1 -in. to 2 -in. and two duo-t ype die heads with dies to thread $1 / 2 \times 3 / 4$-in. and $1 / 4 \times 3 / 8$-in.
A-8 With one Quadra-t ype die head $1-i n$. to 2 -in. and one each duo-t ype die head and dies $1 / 2$-in. $x 3 / 4-\mathrm{in} .1 / 4 \times 3 / 8$ and $1 / 8$-in.

Note: Also available with Duo type or Mono-type dieheads and dies.

Speed-0-Matic

Fastest - most powerful - most rugged - lightest weight pipe and lolt machine in its class. Weights only 150 lhs. Equipped with amazing new power grip wrenchless chuch. $1 / 8$ to 2 -in. pipe, $1 / 4$ to 2 -in. bolts. Up to $12-\mathrm{in}$. with drive shaft. Motor and switch fully protected. 110 or 220 volt, single phase. Machine lubricated for life.
Cut-olf, dieheads and reamer all pivot mounted, swing out of way when not needed. Vew full-floating Clear-Vu selfcentering wheel and roller cut off. Pulsating oil flow produces cven distribution of oil on all dies for perfect threads and long die life. Instant and arcurate easy setting rear pipe support, quichly indexes for size of pipe or bolt, eliminates double chuch ing.
All parts accessible for minimum upheep and maintenance. Quick acting alloy stecl 3 -flute reamer. Carriage always protected against damage.

Renewable hearings for long life and low up keep. Lathe type thread length indicator located right before your eyes. Made of high grade, tough alloy aluminum housing.

## With Quadra-Type and Duo-Type Die Heads

No. Description Each

## Greenlee Lightweight Hydraulic Power Bender <br> No. 884

Bends pipe and rigid conduit to $90^{\circ}$ with one ram stroke. Handles 10 sizes from 1 in . down to $1 / 2 \mathrm{in}$. Develops 10 toms of ram presure. High-strength aluminum alloy is used for the plates, pipe supports, bending shoes, and ram. 'The piston is of hish-alloy steel.

One man can set up and operate. Applied to pipe in any position without loss of fluid or power.

For faster johs bender may he used with Greenle No. 797-E-S \& Power Pump which can bend tin. pipe $90^{\circ}$ in only 30 seconds.

## Greenlee Lightweight Hydraulic Bender No. 880

Portable hodraulic bender desigued for bending 6 sizes of pipe and rigid conduit from $1 / 2 \mathrm{in}$. to 2 in. up $1090^{\circ}$ with one ram stroke. Consisting of a hydraulic hand pump and a bending ram assembly, the Bender units can he quiekly disconnected by using a special speed coupling on the hose and hand pump.
Power punch of 15 tons. Safety valve in the hand pump opens any time the pressure limit is exceeded. Aluninum alloy used in construction wherever porssible.
llas a two spered hydraulic hand pump with fast approach for noving rant rapidly to work piece. Can be used with No. 798 AC-SA Power Pump to speed bending.

## Tal Large One Shot Benders

No. 400

No. 600

For bending pipe (standard X, XX) rigid and thinwall conduit, copper thhing, bus bar, shapes in any size from ${ }^{3}$-ind ${ }^{\text {-ind }}$ to 8 -ineh and larger.
Bends cold without filling and in one shot, without moving the pipe. Latger benders can! be had with huilt-in hoist for handling and pesitioning piper. Saves expensive handling, entling, threading or welding, assembly and costly fittings such as ellows and complings. 'Tahes only 3 minutes actual bending time on the job to make a complete $90^{\circ}$ bend in an 8-inch pipe.

## Ideal Cable Ripper and Wire Gauge

For use on non-metallic sheathed duplex cable or lead-covered cable where oulside diameler is $5 / 8$ inches or smaller.
No. 45-018 .
Each \$0.43

## Ideal E-Z Automatic Wire Strippers

For stripping standard lamp and fixture wire, antomotive wire and all other stranded wire.

Provided with lever to stop the return of the arms until the wire is removed after stripping. This prevents crushing of stranded wire by returning stripper arm.

Suitable for stripping solid wires.

| No. | Wire Gauge No. | No. of Holes | $\begin{aligned} & \text { Per } \\ & \text { Pair } \end{aligned}$ |
| :---: | :---: | :---: | :---: |

| Extra B | ades for the li-\% |  | 1.15 |

## Ideal T-5 Wire Strippers

Used for stripinig, culting and tooping wires.

Sturdy, compact, constructed of hardened steel for rupged duty and long service life. Comfortable plastic grips for sure handling and safety.
Strips wires from 10 to 18 gauge size. Has flat design to conveniently fit in pocket or tool hit.

## Ideal Teflon Wire Strippers

Makes 'Teflon as easy to strip as any other insulation. I nique blade construction and extreme holding power of broad jaws permits fast, accurate stripping white meeting most rigid inspection standards-where marking of insulation must tee kept to an absolute minimum. Simple one-squere operation - just insert wire between blades at desired length (or adjust wire stop), squee\%e handle and release. Jaws suap back into position, ready for next strip.

## Ideal Stripmaster Wire Strippers

The only hand type Wire Stripper with automatic single-squeze operation. Exclusive antomatic feature holds jaws open after stripping to permit removal of wire and prevent crushing. A single squerze of the handes strip wire clean up to a full $7 / 8$ inch. No niching or fraying. Blades can be changed with the removal of only two serews.
Strips building, fixture or telephone wire. Antomotive, radio and aviation wire, also FM and TV down lead wire.

| No. | Wire Ga. | Weight 02. | Each |
| :---: | :---: | :---: | :---: |
| 45-090 | 8 to 10 | 10 | \$5.75 |
| 45-091 | 10 to 18 | 10 | 5.75 |
| 45-092 | 10 to 22 | 10 | 5.75 |
| 45-093 | 14 to 22 | 10 | 5.75 |
| 45-095 | 16 or 18 , and POS.I | 10 | 5.75 |
| 45-098 | 20 to 30 | 10 | 5.75 |

## Ideal Bench Type Wire Strippers

Strips solid or stranded wire up to 5/6" ${ }^{\prime \prime}$ dian. Forsingle conductor plastic, cotton or rubber covered wire where quantities are limited. Itas 8 -hole dial wire guide to center different sized wire betwern cutting blades.

No. 45-069 Complete.
Each \$31.80

## Ideal Rotary Type Wire Strippers

Strips all types of solid or stranded wire up to a maxinum of $1 / 2$ inch outside diameter. Motor is reversible, stripping according to natural twist of wire. Wire is properly Iwisted and polished after stripping. Furnished with $1 / 8,1 / 4$ and $3 / 8$-inch guide bushings.

No. 45-009 Complete, 115 v., 60 cy .
Each \$166.75

## Ideal Hot Blade Wire Strippers

Burns off insulation. Strips cotton, silk, synthetic (plastic) insulation or rubber coverings from stranded or solid conductors, that do not exceed $3 / 8$ inches. Stripping length adjustable from $1 / 4-$ to $11 / 2$-inch. Except for foot pedal, all parts are in a single unit. (Note: this unit is not suited for stripping ashestos, metallic, or
 other weather-proof covering.)
No. 45-073 115 v., 50-60 cy.

## Ideal Lever Type Cable and Wire Strippers

Productionstripperstrips single and parallel conductors and cables up to $5 / 8^{\prime \prime}$ diam. Recommended for Type S, SJ and Power Cables. Blades are available in 15 standard sizes to accommodate other sizes and types of wire.
No. 45-064
Complete...

## Ideal Twin Wheel Wire Strippers

## Bench Type

Quickly strips every known type of film insulation from AWG No. 50 to No. 25 wires.
The fibre glass cylindrical wheels strip up to $3 / 4-\mathrm{in}$. from body of winding. Simplicity of operation results in increased production, fewer rejects.

| No. | Description | Each |
| :---: | :---: | :---: |
| 45-107 | With 115 volt a-c Motor | \$145.00 |
| L-5278 | Replacement Wheels | 3.90 |

## Ideal Twin Cone Wire Strippers

## Bench Type

The fitre glass conical wheels of this stripper remove all types of film-insutation from AWG No. 50 to No. 25 wires efliciently without damage to wires or coils.
Designed to permit close stripping, within $1 / 8$-in. of coils, armatures, etc.

Hecommended for miniaturized components when work can be brought to the stripper.

| No. | Oescription | Each |
| :---: | :---: | :---: |
| 45-101 | With 155 volt a-c Notor | \$175 |
| L.-5279 | Replacenent wheels, per pair | 4 |

Efficiently removes film insulation from All G No. 50 to No. 30 wire. Long flexible shaft permits portable motor to be suspended overhead. Rheostat foot pedal gives operator complete control for added out put and safety.

Fibre glass conical wheels allow perfect stripping of leads to within $1 / 8-\mathrm{in}$. of gang-wound coils without dismantling set-up.

Unit can be moved anywhere in the production line, thus eliminating double handling of parts to be stripped. Lightweight feature of hand stripper increases speed of operationdecreases operator fatigue.

| No. | Desscription | Each |
| :---: | :---: | :---: |
| 45-104 | With 155 wolt a-c/d-c Motor. | \$150. 00 |
| L-5279 | Replacement Wheels per pair | 4.25 |

## Greenlee Hydraulic Knockout Drivers

Specifically designed for driving the standard Greenlee Punches. Develons over eleven tons of ran pressure and easily cuts holes up to $11 / 2-\mathrm{in}$. in 10 -gauge metal. Can be used even in tight places.

Consists of hand hydraulic pump, high pressure hose, $11 / 8$-in. threaded sleeve, 3 - 8 in, stud and bushing. Pump body machined from single piece of steel with attached reservoir of steel tubing. Air locks eliminated by automatic follower. By unscrewing the steel tube it is simple to add oil.

Will handle howekout punches for cutting $1 / 2$ to 4 -in. conduit holes and all Greenlee radio punches using $3 / 8-\mathrm{in}$. diameter screw. Packed in strong metal case. Priced without punches. Weight, 20 pounds.
No. 7646A
Each $\$ 100.00$

## Nye Knockout Punches

Four Point-Hydraulic

## No. NHPS

All hydraulic sets furnished in sturdy metal boxes. Patented coupler in IRAM connecting piston and cutter prevents damage to piston and punch. The high pressure coupler is tested to 24,000 p.s.i. Size feet of high pressure 10,000 pound hose tested for $21,000 \mathrm{lbs}$. bursting pressure.
Each set has own special ram. Capacity of rams \#1-10 tons: \#2 - 20 ton, \#3-25 ton. Pump develops $10,000 \mathrm{lbs}$. p.s.i.

| No. | Desscription | Each |
| :---: | :---: | :---: |
| V111s | Cuts 1/2, 3/4, 1 and $11 / 4$ in. pipe size holes in $1 / 8$ in. steel. $3 / 4,1$ and $11 / 4 \mathrm{in}$. cuts holes in ${ }^{5} / 32$ in. steel. Shipping weight 6 ths. | \$52.00 |

Nye Knockout Punches
"Four Point" Ball Bearing-Hand Operated

No. N1/2MS

Small, light, compact punches made of highest grade steel and engineered to do the best possible work. Ball bearing equipped chuck eliminates steel on steel friction thus producing a fast, easy out. Cuts clean burrless holes thus eliminates reaming.
Four cutting points provide greater shear angle, and consequently double the number of shearing edges. Four sets available, ten different sizes.

No.

## Description

Each
N1/2MS Cuts $1 / 2 \mathrm{in}$. pipe size holes in $1 / 8 \mathrm{in}$. steel. Furnished in leather pouch. Shipping weight $61 / 20 z$.
V1MS Cuts $3 / 4,1$ and $11 / 4 \mathrm{in}$. pipe size holes in $51 / 32$ in. steel. Furnished in sturdy metal box. Shipping weight $33 / 4 \mathrm{lhs}$.
N2US Cuts $11 / 2,2$ and $21 / 2$ in. pipe size holes in $3 / 16$ in. steel. Furnished in sturdy metal lox. Shipping weight $113 / 4 \mathrm{lbs} . . . . .$.
N3MS Cuts $3,31 / 2$ and 4 in. pipe size holes in $3 / 16$ in. steel. Shipping weight 33 lbs.......

## Whitney Punches

## Hand Lever Punches

Built for the hardest kind of service ancording to their rated rapacity．Fine halance．simple construction make punchers basy to use and kepp maintenance at minimum．
$\Delta l l$ main parts of the munches are made of drop－forged high－grade allos stere，with wearing parts heat－treated． Pumehes and dies are of A－1 grade toel steel，heat－treated and lempered．and are guaranterd agrainst defeets in material and workmanship．

May be furnished with button（tip）punches．

No． 1
For Punching ${ }^{3} 8-\ln$ ． Hole Through $1 / 4-\ln$ ．Iron

Has insertable pipe handens．Furnished complete with oun ponch and one die of specified size，and with die adjusting kes．
supplied with $5 /$ brinch $^{\text {－in }}$ punch and die．unless otherwise spreified．Extra pumehes and dies made in squares and orals on specilication；largest size， 13 测－in．spuare．

Furnished complete with one punch and one die of speeffied size，and with die adjusting hey．

Supplied with $1 / 4-\mathrm{in}$ ．punch and dic unless otherwise speci－ fied．Litra punches and dics made in square and oval on specification；largest size， $3 / 8$－in．square．

No．4－B
Tinners Punch for punching 1 －in．hole through 16 guage iron．
Furnished complete with 7 punches and 7 dies of specilied size and will die adjusting key and metal bux．
Unless otherwise sureci－ fied，supplied with 3 32． $1 / 8$ ． $5 / 32,3 / 16,7 / 32,1 / 4$ ，and $9 / 32-\mathrm{in}$ ． punches and dies．

No．8－B
For Punching $1 / 4$－in． Hole Through 1／8－In．Iron

Ilas side sauge marked in fractions of inches．Upper lever dones not throw back to right－angle．

Furnished complete with three punches and three dies （ 3 化． $7_{53}$ and $\frac{1}{4}$－in．unless otherwise specitied）and with die－ adjusting key．
special spuare or oval punches and dies on specification； largest size，＂仿－inch sefuare．

|  | Casters (optional) | 23.00 |

Main frame made of one-piece steel. Lever and gear segment is onepiece steel drop forging.

Has adjustable hold down.

Capacity
3/6 x 2 in. Bars
10 gauge sheets
Chieago Steel Slitting Shear............... . . . Each $\$ 39.60$

## Bartlett Bench Shears

For tool room, garage use and metal patterns shops. Powerful tool with ster castings used in its construetion. Blades made from tine grade of crucihle steel.

Designed to cut metal up to 12 gauge easily and the eceentric principle embodied makes it possible lo at just the hlade to suil the operator's requirements.

Adoped for use in cutting automobile brake hands, leather belting, wire choth and strip metal. In order that wide sheets. may he handled to advantage, tool designed to allow the sheared portion to clear the knife freely.

Blades adjusted by means of a taper wedge.

Made with the Bartlett compound lever principle. Constructed of well designed steel casting with all parts interchangeable for duplicate shears. Blades are solid crucible tool steel $7 / 32$-in. thick. Blades run full lengeth of the jaw, including pivot hole. so that the bearing back of this peint is on hardened stoel. (:an be remesed for shargening when desired.

Will cut 12 gatere sted easily and the arrangement of the jaws allows a full sheet to be handled to advantage.
Furnished with either right or left hand cat.

## Blackhawk Porto-Power Hydraulic Equipment

## Knock-Out Punches

For pull loxes, cabinets, troughs, panels. Work in cramped quarters and punch clean holes cxactly where you want them. No distortion or loosening of boxes. Kit includes punches and "pull-ram" for use with the same "Porto-Power" hydraulic pump and pressure hose serving Blachhawk benders.

## Electrically Driven Pumps

Helpes you install conduit up to 3 times faster. Converts hand-operated hydraulic equipment (such as benders and knock-ont punches) into speedy, electrically driven eguipment. Can he used on Inenders other than Blackhawk type. Prevents fatigue and loss of efliciency. Pushbutton action permits contimoous output. Adaptable to all popular types of current. Wt., 90 Hm .

| No. | Destription | Each |
| :---: | :---: | :---: |
| 1-182 | With a-c motor | . 5355.00 |
| P-254 | With d-c motor | 467.50 |

Mahes 90 degree bends in one setup. Completely portable. Beading frame weighs only $16 \frac{1}{2} \mathrm{Its}$. Frame, swisel and bending shoes are rigid lightweight aluminum. Degree of thend constantly indicated with Gptik Angle gange. Speeds making $180^{\circ}$ bends, double offsets, compound bends. Removable top plate. Loch-on lending shors eliminates Hreading. Bends $1 / 2$-in. through 2 -in. pipe and rigid conduit.

## Blackhawk Rigid Pipe and Conduit Benders

It is now possible to make 90 -degree bends through 3 -in. pipe and rigid conduit in just one setting-only three quick selups through $1-\mathrm{in}$. Nodeled after $\mathrm{S}-130$, alt units are completely portable. Liasy-tu-read Optih Angle gauge eliminates multi-setups, assures perfect bend everytime.

All models constructed of rigid, lightweight aluminum. All have removable top plates. Newly designed ram has homer stroke, requires less effort. Ram works in any position, upright, vertical, overhead-all angles.

| No. | Description | Each |

## Appleton Utility Tools

Schedule TH
For use with Compression-type Couplings, Connectors, and Appleton 2-Piece Connectors.

Combines a unigue non-slip wrench and a handy de-burring tool for smoothing both inside and outside of freshly cut thin wall conduit.

All stecl, smoothly finished for comfortable gripping and scientifically balanced for proper leverage. I as case hardened replaceable plate for the de-burring and non-slip sections.

The non-slip plate holds wrench positively on the individual nut to be tightened and will not slip from one nut to another. Rough edges of pipe are rotated in the V -shaped slots of the de-burring plate.

## T\&B Combination Wrench and Reamer

 For E.M.T.

A combination tool, extremely handy for all $1 / 2$-inch and 3/4-inch E. M. T. installations. The same tool tightens the glands on couptings and connectors, removes borrs from tubing, and reams edge of conduit. Drop-forged stere, heattreated and tempered.
No. 33 Each \$2.02

## T\&B Fish Tapes

Furnished with patented ball-points which enable the wire to turn sharpest bends with ease.
Wire has rounded edges; made of best grade of tempered stee, insuring strengt hand flexibilit y.

Furnisherl in 50, 100. 150, or 200-ft coils. Standard package, 1000 feet.

No.
3600

| 3617 | $1 / 2 \times .060$ | 6 | 96.00 |

## Barth Snake Charmers

"Leads" flat fish tape through conduit having twists between $90^{\circ}$ bends. Tapered for maximum flexibility which helps on many impossible pushes. Makes any push easier.

Complete with wrench for fastening to flat fish tape.

| No. |  | Dessription | Each |
| :---: | :---: | :---: | :---: |
| 120 | For tame $1 / 8$-in. wide |  | \$3.90 |
| 121 | For tape $1 / 4$-in. wide |  | 4.08 |

## Klein Chicago Fish Tape Pullers

A simple, husk y come-along for fishtape.

Fish-tape slips sideways into slot and a ratchet wheel assures a strong, positive grip. For a new bite slide the puller forward on the tape. Simple, strong, automatic . . grips like a vise . . . never slips. Will not injure tape. Pocket size.

## Ideal Fish Tape Pullers

Mechanical advantage of $21 / 2$ times for tough pulling johs. Tapes "frozen" into conduit can be readily freed with this new tool.

This tool pulls tape and presses the box or other outlet firmly against wall or structural member-no chance of pulling outlet lonse.

Can be used in outlet boxes, fuse boxes, large pull boxes, large \& small conduits-wherever there is a tough wire pulling job.
No. Description Each
31-185 Fish Tape Puller .
. $\$ 20.50$

## Ideal Fish Tape Reels and Pullers

For huilding construction and in-
 dustrial work. Reel serves as handle to give lirm grip in pulling on fish tape, eliminating special pullers, or dangerous bare-hand pulling.

Keeps tape fully protected. Trape is locked in reel when not in use and can not spring loose. Nine stock sizes of complete Fïsh Tape, Reels, and Pullers.
No.

## Ideal Round Fish Tape

Constructed for use in small conduit ( $1 / 2$-in. and less). Easily goes through small radius bends.

Has less friction-resistance than flat tapes so it can be readily pushed or pulled through conduit. Rolls onto reel without kinking or binding.

Tape is . $080-\mathrm{in}$. in dianeter with Fish Tape Ball on one end which lets it swivel and turn.

## Ideal Coil-Flex Fish Tape

For all types of conduit. The Ideal
 Coil-flex is extremely flexible; can the pushed or pulled with little effort through any and all bends allowed by the electrical code. Positively prevents cutting or damaging of aluminum. Ends are smooth and round to avoid catching or snagging.
The Coil-lex consists of a $25-\mathrm{ft}$, length of steel spring $11 / 32$ inch in diancter with a rustproof inner steel cable. A male titting on one end and a femate fitting on the other makes it easy to join together two or more lengths for jobs requiring a longer tape. Wasy on the hands, it gives a safe, positive grip. Divery Coil-Flex is factory inspected and tested at $\mathbf{0 0 0}$ pounds pull.

No. 31-081 25-ft. length.
Each
$\$ 9.60$

## Ideal Fish Tape Winders

A new tool designed to make the Ideal Fish Tape Reel and Puller still easier to use.
As the Winder handle is putled around the Reel, a wheel spreads the reel housing allowing the fish tape to wind or unwind easily. Tape can be reeled in or out with less effort. Three sizes available for all Ideal lish Tape Reels.

| No. | Description | Each |
| :---: | :---: | :---: |
| 31-180 | For Reels No. 31-007 \& 31-008 |  |

Cutaway view of Industrial Soldering Iron, 6A161 and 6A162 Series

Cutaway view of Industrial Soldering Iron 6A200, 6 A201 and 6A202 Series
Ilighly efficient for all work requiring soft soldering. Recommended for contimous production soldering as well as for intermittent duty.

Available with the following features:
Calorized Copper Tips: Durable, interchangeable, designed for extra-long life. Culorized coating retards corrosion and oxidation, prevents freering of tips to tip holder, slows pitting action of solder and flux on body of tip, and increases tip life.

Ironclad Copper Tips: Last up to 10 times longer than conventional tips. For high-speed, repetitive soldering. Affords greater protection in use with solder having ninimun of $35 \%$ tin. Prevents amalgamation of tin with copper for extra-long life.

Illustration at left shows effect of solder ( $250^{\circ} \mathrm{C}$. for 363.5 hours) on plain copper (left) and Ironclad copper (right) soldering tips.
Ileating Elements: Provide quick, dependable heating.
Heat-resistant Shell: Provides high corrosion resistance and low heat loss.

Handle: Cool, easy to grip.
Cord Strain Insulator: Will witbstand pull of 35 lbs .

G-E Soldering Iron Transformers

Specially designed transformers available as optional equipment in two types. Single-tap, for use where only one soldering heat is required. Four-tap, gives wide range of heats (from 25 to 35 watts) for close temperature control of tips.

List
Price Each
$\$ 12.30$
12.95

## G-E Miniature Soldering Irons

Developed especially for use by electronics component and instrument manufacturers who are required to do production line soldering of subminiature equipment, printed circuits, and instruments.
Fiunipped with long life vacuum processed iron tip, with tubular heater built into tip. Transformer is integral part of cord, plugs into any standard $11 \overline{5}$-volt outlet. Wit. less than 11/2 oz.

| *No. | Description | Chisel Tip and Heater Size In. | $\begin{aligned} & \text { Shank } \\ & \text { Lefl. } \\ & \text { Ln. } \end{aligned}$ | $\begin{aligned} & \text { List } \\ & \text { Price } \\ & \text { Each } \end{aligned}$ |

## §Renewal Transformer

No. 6A430 $\square$ List Irice Each $\$ 7.80$
*Also available with 6-ft. cord, but less transformer, List Price. . . . . . . $\$ 9.00$
†itandard pachage quantity is six.
§Includes 6-ft. integral cord set.

## American Beauty Electric Soldering Irons

## Transformer Type

## No. T-30

Designed primarily for production line use, it is intended for heavy duty, fine, precision soldering requiring extremely high tiptemperatures constantly maintained.
Tip-elements
made of AIR VICO inget iron brazed to stainless steel casings are pre-linned, will maintain their shape. Split-collet receptacle in handle permits quick change of tip-clements, either hot ur cold with transformer remaining connected to outlet.
Has heavy duty, adequately ventilated transformer 110120 or $220-2.10^{*}$ volts (a-c only). 12 wolt output, 30 -watt maximum capacity, 2500 volt-insulation.

Equipped with 7-ft., Type SV, rubber-covered cord. Handle constructed of bright red, hi-impact thermo-setting plastic.

## American Beauty Electric Soldering Irons

## Bantam

Lightweight irons with flared handles protect hand of user from coming in contact with casing of hot iron. for the electronic trade. Available for 110 volts only. Diamond point tips standard. Equipped with chisel type if specilied.
Stainless steel casing; nickel-chromium heating element, mica insulated. Equipped with of foot Type HPD superflexible heater cord and sta-tite rubber at tuchment plug-cap. Type SV rubber-covered cord also available. Separate heatinsulating stand supplied with each iron. For acc/d-c use.

| Angle-Type Casing |  |  |  |  |  |  |

Designed and intended especially for use on soldering jols diflicult to accomplish with conventional straight-casing soldering irons.
Streamlined, one-piece, projectionfree casings, highest grade material throughout.
All irons equipped with attached 6 foot Type IIPD heater cord and Statite rubber attachment plug-cap.
Diamond point tips standard. Equipped with chisel point if specified.
Available with rubber-covered cord, also 3 conductor cord either IIPD or S.I or IISJ at additional charge.

Nos. 3118-A and 3120-A : For use in television, radio, radar and similar lines of work.

No. 3128-A: Intended for servicing TV, electronic and radio equipment and similar work.

No. 3138-A : Designed for production and maintenance in TV, radio, telephone, telegraph, ignition, switchboard and telephone installation work and similar applications.

*Available in 40 watt input. ${ }^{* *}$ Available in 150 watt input.

## Transformer Type Electric Soldering Iron For Precision Soldering

For fine precision soldering on miniature and suli-miniature electronic components and similar assemblies. Equally adapted to other light soldering operations.

Tip elements are extrennely quick-heating. Heary duty type transformer. Equipped with 7 ft . Twin-parallel thermoplastic cord.

110-120 volts a-c only. Diamond point tip standard. Specify if chisel point is desired.

## American Beauty Electric Soldering Irons

$\begin{array}{lllll}3128 & 3138 & 3158 & 3178 & 3198\end{array}$

Sturdily comstructed uf fine material. Will withstand for long periods the hard service of indmsatrial usagre.

Four use on cither alternating or direct correme.
solid sterel rod core womed with chrome-nichel ribben resistance wire mica insulabed. Metal outer casing and shank. Equippod with altached 6 ft. lengeth of loype I I PD super flexible heater erod and staThite rublere attachment plug cap. Availahle alse wilh 3 eonductor cord, either Type
 grounded without attadimone reap at additional charge.
laquipped wilh herat insulating stand. 110 volts.
No. 3128: F'or servicing TVV, elecet ronic and radionequipment and similar light work. Aso avalablo with anglo-t ye casing covered by No. 3123-1.

No. 3128: F'or production and maintenance in 'I'V, radio, telephome, tolegraph, ignition, switchboard and telephone installation work and similar applications. Popular as a general purpose iron for lome use. If angle-type casing is required order No. 3138-A.

Vo. 3158: For same general uses as No. 3138 but for those particular applicalions that require an iron of greater heat eapacity and larger tip.

No. 3178: For sill heavier work than that for which the No. 31.38 is adapted: for medium-heavy soldering of all hinds.

No. 3198: For use on the very heaviest soldering operations.

Note: Specify tip element desired.

## American Beauty Temperature Regulating Stands

Automatic device for controlling tip temperature of electric soldering iron while iron is connected to current.

Sturdy base made from high-impact heat-resistant, shatter-prool plastic. A stem covering plate encloses bottom to proteet connections and thermostat

Enameled steel adjustable handle support-bracket provides a sure, safe and easy rest for the handle of soldering iron. Cradle of stand is of high-heat comductivity cop-per-alloy for maximum tramsmission of heat from easing of soldering iron to themostat of stand.

Designed for use with dectrie solderimg irons from 80 to 660 watts output. Epuipped with 6 foot IIPl) super-flexible heater cord and Sta-Tite rubher at tachment phomecap. Availathe with 3 eonductor cord either IIPD or rubber covered Sid or ILS. and 3 prong attachment plug-cap: also proumding receptade. Both may be had at additional cost.

## Standard Copper Tips For American Beauty Electric Soldering Irons

## Diamond Point

## Chisel Point

Made from commercially pure drawn oopler rod, heavily niekeled to resist corrosion and oxidation. Plug type.

Tip lengths are proportioned to size of the iron for which they are intended. All available in either diamond or chisel point.

Their heat-transfer qualities are such that their basic design has remained virtually unchanged. Plug type tip and set-sorew method of holding it in casing of the soldering irom allows quich and rasy removal for replacement or cleaning purpuses

## Vulcan Safety Soldering Iron Holders With Thermostatic Control

No. 2100-T
Holds and guards soldering iron and heeps tip at soldering temperature while in stand. Prevents overheating, tips retain timing, saves corrent and assures long life of iron.

When iron is removed from helder full current is antomatically applied. Adjusting screw on bottom of holder for setting thermostat to maintain proper temperature for iron used. Complete with cord and attachment plag for comection to current, and receptacle for plugging in soldering iron.

Cast iron stand, with slip-proof feet. I'rotecting cage made of expanded steel.

## For Use on A-C Only

## Vulcan Electric Soldering Irons

Approved by Underwriters' Laboratories, Inc.
These high powered irons are light in weight and have the hang or halamer which makes them comentiont to use. Very efficient ; will produce maximmm work lor current used.

Made of the best grade materials ohtainable for the parpose; linest forged copper tips; steel elmomt housing and tuhe; selected birch handles shaped to fit the hand; fireproof terminals. Fitted with 6-ft. heater cord and unbreakable rubber plug.

Nos. 20 and 25-For fine instruments, small fuses, light telephone repairs, radio and all very light soldering.
Nos. 30 and 35 -For radio and home use, fuses, instruments. inspectors' or linemen's tool kits, etc.

Nos. 40 and 45 - High speed tools; for telephone switchboards. electrical instruments, light manufacturing, fuses and radio apparatus.

No. 453-For high speed soldering for radio, television and electronic assembly and parts.

No. 50 For fast telephone work, art glass, light tinware and general home use.
Nos. 55 and 60 For light automobile repairs, light tinware, general utility and home use.
Nos. 70 and 75 For medium tinware, general manufacturing, metal patterns, automobile work, etc.

No. 80 For heavy tinware, shect sted and galvanized iron, metal boats, refrigerators, automobile radiators, roofing, etc.
No. 90-For automohile radiators, copper sinks, roofs, leaders, heavy metal patterns and all heavy soldering.

No. 900-For extra heavy soldering.

| 7,9, to $3 / 8$ | $\$ 2.90$ |
| $3 / 8$ to $1 / 2$ | $\mathbf{3 . 3 0}$ |

## Vulcan Industrial Soldering Pencils

No. P314
The new "Dart" indusirial soldering pencil is a heavy duty tool recommended for rapid, continuous production line work on electrical or electronic components and assemblies. Weighs only three ounces, less cord.

Slim tapering plastic handle with pencil grip stays cool even after eight hours of eontimous use.
lasily replaceable plag type tips hed in place in tip chamber with monoxidizing set screw. Heating elements replaceable.
líguipped with o-ft. approved rubber cord and plug cap. Operates equally well on a-c or d-e current.

Standard voltage 110/120.
Special features available: odd tip sizes and shapes and three wire cord and attachment plug.

Shows 3 -Heat Switch and Flexible Conduit Furnished with

P-15, P-25 and P-50

## Type P—For Soft Metals

For melting solder, lead, babbitt metal, tin and type metal (wher than zine).
High grade nickel-chrome cast iron pot, with heating clements clamped to bottom or sides totally enclosed by sheet metal jachet and insulating material. The location of heaters leaves interior of pot free for maximum capacity.
Maximum safe operating temperatures: '1'ype 1'8 to 1Po, $750^{\circ} \mathrm{F}$ with or without control: larger sizes $9000^{\circ} \mathrm{F}$.
Controls-Typer Plis to Po have 3 -heat manual switeh mounted on a conduit box, with 3 ft . flexible conduit. T'ype P'8 is supplied with 3 ft . Hexible conduit and an armored at tachment pluy for single heat operation only.
l'ype Plood to Pa must be controlled by a thermostat and magnetic contactor to prevent excessive temperature. (For prices of Wodel Mis Control and Magnetic Contactor contact Graybar).

# General Electric Metal Melting and Glue Pots 

For Soft Metals

For melting lead, babbitt, tin, solder, type metal and similar metals at a temperature up to $950^{\circ} \mathrm{F}$.
Zinc (spelter) should not be used in these pots as that metal will erode cast-iron. For these metals the jacketed-type pot is recommended. Lead is usually used in the jacket with castin heaters immersed in lead.

Some of the applications are dip soldering of subassemblies, pretinning before soldering, can soldering, remelting metal, curing rubber hose, storing molten metal, etc.

Other applications-railway repair shops, electric service shops, newspaper and printing plants, tin-plating shops, storage battery manufacturing plants, auto-body repair shops, bearing and fitting manulacturing plants and foundries.

## Maximum Operating Temperature, $950^{\circ} \mathbf{F}$

$\dagger$ When this size pot is wanted for melting babhitt, it is necessary to use either Cat. No. $2881146 \mathrm{G} \cdot \mathrm{t}$ or $28811 \mathrm{H6} \mathrm{G} \mathbf{3}$
$\ddagger$ None of these pots are recommended for use with babbitt alloy containing more than 4 per cent copper.

## Vulcan Electric Glue Pots

## Fairmount Solder Pots

Solder Pots shipped from stock.
Prices on request.

## Vulcan Electric Solder Pots For Fast Dip-Soldering of Small Parts

Ideal for timning parts, leads and fast-dip soldering. The rate of speed of pot soldering depends on correct size of pot, size of parts and the melting point of solder used. Elements are replaceable - when ordering specify number of pot and voltage.

No. 1700

No. 1706

For a-c or d-c (specify voltage).

All numbers have cast iron pots and heat-resisting base. All have Underwriters' Laboratories Inc. approved cord.

No. 1700 to 1740 inclusive have heavy sheet steel outer casings.

Flat Type ElementsNos. 1600, 1606, 1701, 1703, 1713.

## Air-Cooled

Makes it possible to pour metal drop by drop or in a steady stream, exactly where wanted. The positive "close-to-bowl" grip on the cool wood handle reduces overhang to a minimum, eliminates strain, and makes it easy to direct and control flow of the molten metal.

Pressed steel ladle, treated to prevent sticking of solder. Wood handle inexpensive and easy to replace.

| $\begin{gathered} \text { Diam. } \\ \substack{\text { Bowi, } \\ \text { In. }} \end{gathered}$ | Capaclly, Pints and | Weight $\begin{aligned} & \text { Each, } \\ & \text { ilbs. } \end{aligned}$ Lbs. | Each |

G-E Industrial Heating Thermostats

Type "N"

## Type "s"

General-purpose industrial thermostat, diaphragn-type; maximum temperature of thermostat is 700 F . Supporting base constructed of steel; cover is pressed aluminum.

Switching mechanism is double-pole, single-throw, shapaction construction. Contacts close at temperature below dial setting and open when dial temperature is reached.

Has Underwriters' approval, except for d-c operation with capacitors.

Two types of cases availahle: Type $S$ (screwdriver adjustment) in the $30-110 \mathrm{~F}$. range. Type N (knob adjustment) for all other listed ranges. Bulbs will stand 400 lbs . per sq. in. external pressure.

Approximate shipping weight is 4 lls s.

## Dillon Weight Indicators

Weighs light or heavy objects with equal ease. Can be hung on crane or hoist hook or suspended from any convenient support. Will save many man hours at inventory time and throughout the entire year.

This indicator is dampened; that is, the pointer comes to rest quichly. Large dial, 16 in. diameter, makes accurate reading possible even from considerable distance. Can be used indoors or outdoors.

Inconing shipments can be weighed as they are lifted from the car. Ileavy loads can be weighed at the stock rack and replaced in the same operation-no lost motion.

Heavy metal case encases the precision mechanism. Dial is fully linear and is covered with thick plastic crystal to prevent breakage. The calibrated beam is set in frictionless precision needle bearings. Loads hang straight-no critical leveling or halancing necessary.

Manufacturer guarantees accuracy to ONE division at any point on the dial. This represents $1 / 2 \mathrm{lb}$. on the $250-1 \mathrm{~b}$. model, 5 lbs. on the $2500-1 \mathrm{lt}$. model, etc. All readings can be split visually to one-half this value.

Comes complete with oversize attachment eye and swiveling hook. (Can be replaced with any type special fitting desired.) Quichly adjustable for tare.

|  | Dial Div. | Each |

Approx. weight, each 42 lls. net.

## Ideal Test Glo

Industrial quality for sufe, easy testing of electrical circuits, spark-plugs, motors, fuses, etc.

High-grade resisturs between each test prod and lead reduce voltage reaching leads.
Long thin handles with "no-slip" safety rings permit deep probing.
Neon lamp at front of prod handle, always in line of vision. 21 -in. lead wire (rated $10,000 \mathrm{v}$.) permits wide span. Cement sealed and moisture proof. For 80 to 600 v . a-c or d-c.
No. 61-040
Each \$2.75

## Ideal Fluorescent Fixture Testers

## Flur-Test

Now pocket-size tester that quickly locates the trouble and indicates whether it is in the circuit, starter or the tule.
'lester simply plugs into starter socket to make all three tests. Two models are avail-able-one for fixtures with 15 to 10 watt tubes and one of tixtures with 85 to 100 watt tubes.

Each tester has a lead of 8 -in. between the
Flur-'Test tube and the male plug, which fits into the starter socket of the fixture.

| No. | Description | Each |
| :---: | :---: | :---: |
| 61-015 | Tests 15 to 40 Watt | \$5.25 |
| 61-016 | 'Tests 85 to 100 Watt | 5.2 |

## Ideal Continuity Testers

Handy tester for checking continuity of dead circuits, grounds on conduit systems, identifying wires in multi-wire cables. Perfect for checking electrical control equipment, panel-board wiring and many other uses.

Unit is powered with two pen-lite batteries (not furnished) and gives light signal to indicate completed circuit.

Has 1 -ft. removalle cord equipped with alligator clip. Fits into preket like fountain pen.

| No. | Description | Length in. | Wt. Oz. | Each |
| :---: | :---: | :---: | :---: | :---: |
| 61-030 | Tester (less batteries) | 51/2 | 3 | \$2.75 |

## Ray-O-Vac Continuity Testers

A combination continuit y tester and flashlight. The flashlight is unaffected by all conmon chemicals and withstands extremes of temperature. Completely replacealile parts. Uses two No. 3LIP or 2L.P batteries and bulb No. PR6.

The tester has heavily insulated jach and leads, with positive grip clips. Tests fuses, loulhs, wire leads, switches, etc. The jack is removed for flashlight use.

It is not a volt age tester and is not to be used on live wiring.
No. N22T. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Each \$6.75

## 81/4-In. Speedmatic

For all types of extra heavy duty cutting; includes a new and safer telescoping guard and an exclusive calibrated depth gauge which eliminates guesswork as to how deep you are cutting.

Equipped with sawdust ejector; hickproof clutch and instant bevel adjustment. Comfortable new handle design; trigger switch located under index finger.

Broad base constructed from sturdy die cast aluminum. Complete with 10 ft . cord.

Cuts a full $27 / 8-\mathrm{in}$. at $90^{\circ}$ angle and $21 / 16-\mathrm{in}$. at $45^{\circ}$ angle. Powerful universal motor, 11.5 volts, a-c or d-c, 25-60 cycles. Saw also available in economical hit form.

## Porter-Cable Electric Routers

7/8 H.P. Router
Model 100 used for variety of jobs on wood, plastic and composition. Ilas 6.5 ampere, $7 / 8 \mathrm{hp}$. Universal motor, 11.7 volis. a-c or (l-c, 25-60 cycles. Split-type, $1 / 4-i n$. capacity collet, precision ball bearings.

Polished aluminum housing. lipuipped with recessed double pole switch and 10 ft . cord. Router includes motor adapter, hase, 2 wrenches, collet and Operating Manual.

## 1 1 1 2 H. P. Router

Model 511 is a heavy-duty router used by builders and woodworkers for a wide variety of cutting and shaping operations. Over 150 bits and cutters available for use with this router. New threadless Kam-Grip chuck provides positive accuracy. Ilas 8 amperes, $11 / 2 \mathrm{hp}$. Universal motor, 11.5 volts, a-c or d-c, 25-60 cycles. Oversized sealed bearings.

Polished aluminum housing. Equipped with recessed double pole switch and 10 ft. cord. Router includes motor adapter, hase, 2 wrenches; $1 / 4$-in. collet; $1 / 2$-in. collet; st raight wauge; templet guide; grinding wheel; lock nut and Operating Manual.

## Thor Safety Balancers

## For Tool Suspension

No. 5LB6

Min.
Cap.
Lbs.
0
1

Ilas automatic, built-in brake. Positively prevents load from dropping under any ciremonstances.

Provided with full swivel upper hook for ceasier handling, longer life, greater safety. Auxiliary suspension provision for double safety.

Adjustable counterweight tension; nospecial tonl required. Shochabsorber cable stop has simple adjustment from zero to full 6-ft. travel.

Constructed of heavy gauge steel housing with $3 / 3$-in. uylon-sheathed st cel eable and durable aireraft-t ype cable fittings.

Equipped with self-lubricating oilite hearings.
The No. Sl.Bg features in-line hook-to-hook suspension. The No. 10L.136 has tangential suspension for minimum cable wear with heavier tools.

| Distance <br> Hook to Hook <br> In. | W. <br> WLS. | Each |

## Oshkosh Tree Trimmers

A light. strong and eflicient trimmer that cuts limbs up to $1 / 2 \mathrm{i}$ in. diameter very easily.

The head is made of I wo pieces of light forged steel, properly remberced and riveted together; and acts as a guide for the thin saw steel entling bade, and will not permit the blade to elimb over the word and wedge to one side.
Blade being pivoted starts cotting with a slicing motion the instant the rope is pulled.
Pole consists of three sections of straight-grained clear Washington fir $1 \frac{1}{2} \mathrm{in}$. in diameter-one o-ft. scetion at tached to head and two $\overline{\mathrm{F}}$-ft. sections each titted with pusitive couplings; very rigid whon compled but rasily dismantled.
Complete with short section of rope. palley and ring. (Any size or hind of rope can be attached to lengthen pull; $1 / 2-\mathrm{in}$. rope is suggested for Incst results.)

## Oshkosh Tree Saws

This tree saw, and tree trimmer listed alwore, fills need of the lineman and others when trimming around wires, ete.
Steel frame and cap, with hook for hanging saw in tree and pulling out cut hanging branches. Strong. thin, fine-tooth steel blade 18 -in. long, ents fast and clean and leaves a smooth cut. Blade is fastened in frame so that parts camot fall if blade is broken.

Handle is elear, straight-grained Washington fir 6 ft . long, $11 / 2$ in. diameter, with ferrule at tottom which can be connected to pole seetions of $\mathrm{N}_{0} 915$ Irimmer.

## B \& L Star Brand C Hooks

Very comvenient for connecting a wind or palling line to a cable grip or core hitch. Can also be used at the cond of a winch line for attaching to podes, transformers, ete.

No. 5013 - Wt., each $21 / 2 \mathrm{lts}$.

## B \& L Star Brand Cable Blocks

No.
5051

This one-sheave bloch is a companion piece to the aerial guide and can be clamped to the mossenger strand in a similar manner.
Ised for goliding the winch line from the cable rings and messenger to the winch or other power apparatus.

Also for pulling cable around a slight corner; when used this way it guides the polling-in lime and also the cable when it reaches this point.

Steel liame, with steel roller and supplemontary sterel sloeve over sheave pin. Frame is himged and (itted with clamp) for fastening to messemer.

Description
Wt. Lbs.
for cable blocks to handle larger cables contaet (iraybar.

## General Machine Wire Cable Blocks

A quich detachable cable bloch, used
 as a lemporary support for multi-wire eable in rural areas where poles are considerable distance apart.

Easily mounted or demomed from the suspension bolt with unigue opening for wires or cable.
limited space on suspersion bolt permits cable block to be monnted beI ween pole and suspension champ. Wit. $3_{4}(1)$.
No. (i1023
Price on application

## General Machine Cable Blocks

For supporting aerial cable on suspension strand prior to lashing cable.

Frame and sheave of heattreated aluminum alloy; sheave has oilite hearings. Strand hooks have steel inserts on bearing surfaces.
laching lever reversible; bouchs may be locked in eithor posilion so cathle can be pulled in opposite dirretion.

No. 7268-Wt. $33 / 4 \mathrm{It}$ s.
Price on application

TTsed wilh tree promor handle sections for pacing cable blochs on suspension st rand. Camsists of an alumimmon alloy tobular seretisn which fits intot the tree prom(r handles an aluminum alloy cradle lor supporting the block, and a howk for oprorating the block cam lever. The hook can be sel in either of two positions $180^{\circ}$ apart for cother right or left hand cable positioning. Ileight wer all, $113 / 4$ inches: eradle width, $3^{3 / 4}$ inclues. Weight, approximatoly 3 pound. Sted hook is zinc or cadmium plated.

No. 7163. Price on application

## General Machine Cable Block Pushers

## No. 7180

Used for pusbing cable blochs abour 6.000. 10.000 and Io.000 suspension st rand during lashimg operations. Comsisis of a slotted tube will semi-rotalable sleeves al bach end which lock in opren and closed positions. (Due ernd has a cireular flamge for bearing agranst the lashine machine. The other end bears arainst the strand hooks of the cable biochs. ( Camot fall off during the lashing operation. I Dameter I I/1 inehes, diameter of flange, 13 , inches: lengrth 35 inehos. Weight, approximately 2 pounds. Zime or cadminm plated.
No. 7180
Price on application

## B \& L Aerial Cable Guide \& Straighteners

 serve to straighten out small kinks or waves in cable. Vade of pressed steel in two parts readily joined torether. a curved open section for guiding and a stratght closed section lior st raightening.

Fasily athached la mossenger wire; secomply ramoned for prevent end motions.

## General Machine Ladder Hooks

Designed to enable ladders to
 be hooked over and supported by steel suspension strands for aerial cable. When not in use, hooks may be swung inside uprights parallel to the rungs. Hooks are formed hot from steel pipe. lleavy phosphor bronze springs and a square manganese bronze collar holds the hooks firmly in either of the two positions. llooks will support a load of approximately 300 pounds each. Finish: Steel parts cadium plated. Weight, $13 / 4$ Its.

No. 7254
Price on application

## Pennington Steel Buildings

## No. 952 Tee Pee

Portable, all-steel building that's completely adaptable: useful on a construction project storing heavy equipment; handsome enough to be placed in yard of any home. Ilas 512 cubic ft. of storage space. Fasily assembled, screw driver and wrench are only tools required.

Bevel edged steel walls and formed steel shingle roof. Can he erected on wood or concrete foundation. All parts are precision pre-cut and pre-drilled for bolt type construction.

Window openings are factory pre-cut. Two beautifully crafted V-panel doors. Natural finish, kiln-dried, clear yellow pine with sturdy cross panels, interlorking corners and weatherproof glue throughout. Doors are dipped in the finest type clear wood preservative, to assure long life. Doors open to a service width of 48 -in. Fach door is $1 / 8$-in. thick, 24 -in. wide and $72-\mathrm{in}$. high and hinged at right and left, overlap in center. Comes complete with four hlach nickel hinges and two "L"' cabinet handles, one with lock. There is a $52-\mathrm{in}$. rain gutter alove the doors.

## Oshkosh Safety Extension Ladders

Designed and built especially for public utilities．Has many outstanding features，the most outstanding one being the automatic safety lock，which is absolutely foolprooff．
 When extending the ladder，the locking device lifts up automatically to allow the rungs to pass；but，the instant operator lets go of rope，the locking device drops in place and the top section is firmly locked．To lower，the operator gives a slight poll on rope，then lets top section deseend slowly－it cannot drop ac－ cidentally．

Side rails are straight－grained， properly seasoned airplane spruce． llungs are tough Mountain Ilick－ ory，absolutely straight－grained． Each rung has a shouldered tenon joint which is pressed tightly into side rails，assuring a safe，tight lit． The side rails of each section are connected at top，middle and bot－ tom with steel tie rods．

Each section is equipped with safety－tips and pikes and either section can be used as an individual ladder．

Other exclusive safety features： rubber faced tips；transparent safety finish；safety pole grippers；rubber guarded safety pikes．All metal parts are parkerized．

BI：SLRE to specify whether Straight Side Rails or Flared Side Rails are wanted－for s＇risilgil＇t Side Rails add letter＂s＂to num－ ber；for FIABED）Side Rails add letter＂F＂，

## Bond Wheel Chocks

For secure chocking. Made of laminated oak or maple, laminated with'T \& G joints under pressure.

Soaked in impregnating varnish for several hours and finished with two coats of green enamel.

With steel pullhandles bolted to chock; handy for attaching rope.
Also available with two steel shoes with spikes to prevent slipping.

## General Machine Aerial Tents

For the protection of workers on aerial cable in cold or storiny weather. Made of fire- and waterresistant canvas. Collapsible aluminum frames support the tents from cable suspension strand. Heayy canvas covers are reinforced at points of contact with frames. Vertical openings on both sides accommodate single cables. The $C$ cover has T-shaped opening on both sides for second cable when supported on opposite sides of the pole. Openings are equipped with ropes and grominets for closing the tents securely. Finish: Cover, unbleached $10-\mathrm{oz}$. cotton duck. Frame, natural alaminum; steel parts galvanized.

General Machine Ladder Tents

One-man tents designed for the cable splicer working from a ladder.

Prame of $5 / 16-\mathrm{in}$. diameter stainless steel strand attached to brome clamps which fasten on messenger in two places to form a $42-\mathrm{in}$. dianeter circle to support canvas.

Weather-resistant camas.
No. 7524 -Wt. 1. F lls................. Price on application

## General Machine Cable Lashers

Type B

No. 7019-2
A quick-adjusting automatic aerial cable lasher for cables
 wire. Aluminum alloy casting gives maximum strength with minimum weight. Spinning drum operates on 10 sealed ballhearings surfaces, and lashing machine has of ball bearings and .. needle bearings. All parts enclosed in streamlined housing prevents fouling in tree branches. Two cable lifting arrangenments, one at each end. Two rubber strand wherls located on opposite ends of the cable lasher provide continuons power to the drum. When tension on the pulling brider is relieved, a back tensioning device allows practically no slack in the lashing. All sterl parts are cadmium plated; other metal parts are non-corrosive metals. (verall length, $191 / 2$ inches; overall diameter. $121 / 4$ inehes; weight, 43 lhs. Lashing Wire: diameter of coil, 7 inches; lengths, 325 feet; tensile strength, 390 lhs . weight, $77 / 8 \mathrm{lbs}$.
No. 7019-2 Type B Cable Lasher, complete with towing bridle and instruction manual. Price on application.
No. 6991-1 Sturdy fiber carrying case for No. 7019-2, size, $22 \times 1 t \times 14$ inches. Price on application.
Can be supplied with conversion unit using 045 stainless steel lasling wire.

## General Machine Cable Lashers

Type C

## No. 7142-2

Holds two 1200-ft. coils of .0 .45 lashing wire. Will lash all cables up to $15 / 8$-inch diameter. Aluminum alloy casting. Has: sealed-for-life ball bearings on all vital shafts and on the spinning drum. Other moving parts are momited on Oilit. bushings. Two rubler strand drive wheels are mounted in the forward part of the carriage and a small trailer wheel is located in the rear. Driving is accomplished by direct gearing. This lasher embodies all the engineering principles of the " 13 " Lasher, plus automatic features, inchuding the fingertip operated all-range tensioning device; the selfregistering drum lock; the two-way brake to prevent bach roll and the center feed non-rotating wire coil. Weight without wire, approximately 33 lls .
No. 7142-2 Type C cable lasher complete with operating instructions.
No. 7143-2 Sturdy carrying case.

## Prices on application

## General Machine Cable Lashers Type D

Latest nordel in automatic cable lashers for aerial cable up to $31 / 4-\mathrm{in}$. diameter. Will lash to suspension strand with diameters from $1 / 4$ to $1 / 2-\mathrm{in}$. New tensioning device assures traction on strand far superior to previous lashers.

Two or more calles can be lashed to one strand if total diameter of calle assembly does not exceed 3-in.
Hold two 1200 foot coils of .045 -in. lashing wire at one loading; can be operated by one man from the ground.
No. 7360 - Wt. 43 Its. ............... . Price on application

## General Machine Cable Lashers Type G

Similar to the Type D Cable Lasher, except designed to lash $21 / 2$-in. to 5 -in. diameter cable to $1 / 3$ ap to $\frac{5}{8}-8 \mathrm{in}$. diameter strand with one or two left lay spiral wrapping of .04.5 SS wire. The lead of the lashing wire will vary from $151 / 2-\mathrm{in}$. to $171 / 2$-in., depending on the size of the strand.

The pulling mechanism pivots about the axis of the rear driving roller and applies a hold down force on the strand roller approximately 2.2 times the forward component of the towing force. Approximate weight 75 lbs .
No. G1050 Shipping weight w/case 106 lbs .
Price on application.

## General Machine Lashing Wire Grips

For securing lashing wire to suspension strand before releasing tension in wire. May also be used for temporarily fastening wire before lashing.

May be used with. 06.5 or $.091-\mathrm{in}$. lashing wire on all strand sizes and with . 04.5 -in. lashing wire on 611 and 1011 strands. Not for use as a permanent installation.
No. 7362, Wt. 10 oz...
Price on application

## Perfection Cable Splicers' Tent Heaters

Affords a convenient, safe, economical and dependable method of tent heating. Portable and easy to operate.
llas built-in ssildering irom holder and will heat iron for any soldering purpose.
Tank holds $1 / 2$-gallon of kerosene and will burn from 5 to 21 hours on one filling.
Sturdily constructed of heavy metal, securely welded and riveted. lleavy iron bottom band to prevent wear.
Body and inside base has bahed enamel finish; zincplated steel top and ventilating cone; porcelain-enameled heating drum.

Famous Perfection "IlighPower" wick-type burner gives instant heat, finger-tip control.
Dimensions: 1138 in. diameter, $197 / 8 \mathrm{in}$. high.
No. 11-B-Approx. shipping weight 12 lbs.
Price on application.

Chance Adjustable Cable Cars

Adjustable to desired height for the convenience and comfort of the user. Can be collapsed and strapped or tied for convenient transportation. Safety hand brake holds car steady during cable hanging or splicing and makes it possible to stop car anywhere on the line.

Iligh quality rubber tread wheels provide long wearing service.

| 30 '1'(i-1 | 36 | $113 / 4$ | 33.00 |

*I,ineman's Preference (I,P)-recommended by Chance Ilot line Tool Demonstrators.

## Rotating Gin

Designed for quick attachment to poles for hoisting transformers, crossarms, switches, or other heavy equipment.
Swivels to positions desired for hoisting equipment up around crossarins, conductors, etc. This also aids in maneuvering the load to desired positions.

Rated maxinum load including pull on fall line- 1300 Ll s.

## Chance Multi-Duty Gins

This gin will serve as the workhorse of line-construction and maintenance crews. It's a pole-top gin, a side mounting gin and a transformer gin in one tool.

The Multi-Duty (iin clamps on top of the pole to lift heavy equipment. On ridge pins and other types of construetion where a gin cannot be mounted on top of the pole, the gin can be monnted down the pole withont changing the mounting bracket. With the beam removed, the bracket can be used by itself for hanging single transformers or transformer clusters.

The " $Y$ " design of the aluminum-alloy bracket, and the sturdy maple beam, aceont for the great lifting power of the gin. The wide oponing bet ween the two arms of the mounting bracket gives sufficient clearance so that the bracket can be fitted over cross arms when used as a pole-top gin. Chain binders with wind-up tighteners speed application to the pole.

The bracket will also straddle a cross-arm when mounted at the top of the pole.

The Multi-Duty Gin is available with two sizes of beans. The same mounting-hracket assembly is used for both ratings.

## Bartlett Emergency Wire Cutters

The double pulley and compound lever provides tremendous power, ease of operation.

Lightweight, convenient sectional handle. Laminated sitka spruce pole is furnished in two 6 ft . lengths. Can be used as a 6 ft . pole or easily joined together with a PI5G Sileeve to make a 12 foot pole.

Wire cutters are used to cut 110 and 220 1RC wire. Can easily be used from the ground without use of a ladder.
Can also be used safely for cutting hot 1800 volt primary and service wire when hanging down close to the ground.

Weight 8 lls. 5 oz.
No.
1-BC

## Bartlett Wire Cutters

Especially made to facilitate the unloading of car lots of poles.

Operated from a safe distance, it easily cuts No. 7 have wire or steel straps at one strohe.
llas compound lever action. Ilead has a hardened hook with serrated edges.

Blade is $1 / 8$-in. crucible 1001 steel, operated with pull lever.

Pole is $1 \frac{1}{4} \times 17 / 8$-in. laminated, treated to prevent moisture absorption. Pole length, 12-ft.

No. 1-SC
Each $\$ 30.00$

Built for rugged, continums production line operation. special hoist motor with very high starting torcpue. perndant rope controls with fool-proof safety limit suitches, large heay duty contact points provide sensitive action.
For added safety and durability the positive action shoe type brake has 10 to 12 sq . inches of breaking surface.
Model J Iloists: llave a four step gear reduction. Available with $110 / 220$ volts, 1 phase, 60 cy . motors or $220 / 4.10$ volts, 3 phase. 60 cycles motors.
Model S Iloists: I ses exclusive Perry speed reducer. With this type of gearing there are more teeth in contact for better load holding. Available with 220/40 volts. 3 phase. 60 cycles motors. Special currents available on application.

If wanted without chain, please specify "Without Chain," and dedact \$11.00.

## Simplex Emergency Jacks <br> Ratchet Lowering

For Utilities and general duty service in induslry. Alsu for pushing and pulling.

Lifts vertically-lifts or pushes at any angle. Double lever socket for close quarter operation. Any link of chain can be engaged on the recessed cap. Base loching hook is foot operated. Corrugated to keps load from slipping. Large base area insures stability. Comenient carrying handle.

Complete with 5 ft . chain, auxiliary cap shoe and lever. Capacity 15 tons; Height $22 \frac{1}{4}$ inches; Lift $131 / 2$ inches; Minimum toe lift $21 / 4$ inches. Weight; Jack only, 74 llos .; Complete 109 Ihs.
No. 310A.
Each \$101. 75

## Simplex Pole Pulling and Straightening Jacks

For telephone and telegraph, light and power, railroad and street railway companies to pull or straighten poles.

One or two men can pult, straighten or move poles, with no service interruption and without digging, regardless of pole size or depth is the ground.

No. 325 Simplex Junior Jack: will handle poles up to 30 ft. high. Pivots on its chamel base to any angle; also used as guy line tightener or for pulling underground cables. Complete with 8-ft. pike pole for straightening poles located beside ditches. Recommended for rural maintenance and repair.

Nos. 1538 and A1538 Jacks will pull or straighten any size pole. "The "I" beam hase provides a firm foundation and the pole. will pivot on its base when base pawl is disengaged.

The No. A1538 has an aluminum housing, making it much lighter for easier porlability without sacrifice of strength.

## Duff-Norton Ratchet Lowering Jacks Genuine Barrett

## Single Acting, With Foot Lift

These jacks are expertly engineered. scientifically designed and eonstrueted of the finest and best materials, specially selected for the purpose for which they are intended.

Hach one is guaranteed by the maker to lift its full-rated capacity with maximum safety.

The rack bar can be pulled up to the required load height and lifting begins with the first down-stroke of the lever bar.
Being single acting, the load is raised only on the downstrohe of the lever bar, but can be ratchet-lowered, notch by noteh.

Nos. 514 MT to 521 MT : For contractors, mills, mines, quarries and general farm and industrial use. Can be dropped instantly (tripped) when not under lead.
Nos. 1020 to 1528: For ase in mines, shipyards and industrial plants; building and road work; by riggers, drillers, truckers, etc.

No. 2028: For boilermakers, contractors, riggers, wrechers; railroads, heavy machinery manufacturers and movers.
All have round double sockets. 10 and 20 -ton models can be furnished with small simgle round sochet. Equipped with operating lever of adequate diameter and length for case of operation. Nos. 1522,1528 and 2028 can be furnished with large round sockets for use with wooden operating lever; or with square sockets to fit lining hars.

## Duff-Norton Rachet Reel Jacks

## Genuine Barrett

Single Acting-Ratchet Lowering
"T" Frame Base

For lifting and holding heavy reels on outdoor jobs.
'This jach is standard with many major utility companies throughout the country. Designed to noet the niost exacting service demands of cable crews moder adverse field conditions.

Laminated oak weatherproof base, firmly bolted to prevent splitting. Tough malleahle iron jack honsing is spray-painted for protection against rust.
" "l" frame base overcomes rocking on uneven ground; swivel joint of head hook allows most advantageous spotting without binding spindle.

For rapid jacking, the rack bar is pulled up until the selected hook engages reel spindle-then a few easy down strokes of operating lever and the reel is clear of the ground

Can be furnished in pairs-one right and one left-so operators can lift in sight of each other for uniform raise.
Top swivel hook holds 3 in. cliameter spindles, two lower hooks hold $21 / 2 \mathrm{in}$. diameter spindles.
Single round socket ; complete with opsrating lever $1 \frac{1}{4} \times 62$ in. long. " ${ }^{2}$ " $\operatorname{leg} 71 / 2 \times 11 \frac{1}{4} \mathrm{in}$.

## Duff-Norton Journal Jacks

## Low Height Ball-Bearing Screw Type

Small, lightweight jacks that are easy to operate and easy to carry.
For inspecting and renewing journal lirasses, bridge and structural steel erection, machine and mill work, shiphuilding and in all other industries where powerful lifting and low height are required.
Rapid raising and lowering, powerful in lifting ability, absolutely sateup to rated capacity.
Low height range and small base dianeters permit quick spotting and full operation in cramped areas and limited heights. Mechanical design permits safe operation at any angle or upside-down.

Smooth ball-bearing screw action permits even precise increments of lifting and lowering.

Weatherproofed for rough outdoor use. Lifting meehanisu is totally enclosed, packed ingrease and sealed against leakage. Ratchet unit is open and aceossible for eleaning and oiling.

Duff-Norton Hy-Power Hydraulic Jacks

## 3 to 100-Ton Capacities

For all industrial applicationsin mines, mills and factories, oil fields, and ship yards; in railroad shops and on repair tracks.

Precision manalacture assures smooth, prsitive and unfailing operation, saves time and energy on every lifting and lowering job.
3 to 12-Ton Models-Have extension screws which can be quichly run up by hand to load height-lifting begins with the first strohe of the lever Dar. Bases are hravily ribbed, one-piece malleable iron, with integral pump barrels.
20-Ton Nodel: Single pump jacks designed for strength with light weight.
30 to 50-Ton Hodels: Have dual pumps; the speed pumps brings head up to load position instantly -switchoyer to power pump is then automatic without changing or missing a lever stroke. Bases are special alloy steel, with "Armor Plate" steel guards to protect pump barrels.
Rams and cylinders are high carbon seamless steel tubing, accurately machined and ground to gauges for close sliding tit.

Simplex Rol-Toe Hydraulic Jacks
10, 25 and 50 Ton Capacities

Will operate equally well in either horizontal or upright prosition and are ideal for lifting heavy machinery, transformers, etc., with minimum effirt and maximum speed.
The lifting toe rides on a roller bearing which carries the radial load against the stationary ran's flat-milled surface. The lifting capacity on the tue is the same as that on the cap. The heary, sturdy body lifts the load, reducing off-center loading by bringing the tue closer to the center of the ram.
The oil reservoir is independent of the load-lifting housing. Double pumps provide extremely quich operation. The high speed pump, positions, and lifts lighter loads and the high pressure pump handles the heavy lifting.

| No. | Cap., Tons | Height, Closed | Travel, In. | Ht. Toe, Closed | Base, <br> In. | $\begin{aligned} & \text { Wt., } \\ & \text { Lbs. } \end{aligned}$ | Each |

## Double Pump Models

These jacks have both high and low speed pumps which can be operated singly or in unison. Double lever sockets for close quarter operation.

Suitable for mill and factory work; for construction, mining, drilling, journal inspection, bridge work, culvert pushing or pipe bendirg.

Tligh carbon solid rolled plate bases. No. 1001 IJ has safety by-pass.

Complete with operating lever, $13 / 16$ in. solid steel, $20-\mathrm{in}$. long.

Simplex Re-Mo-Trol Hydraulic Pumps and Rams Remote Controlled

Consists basically of a powerful pump and a remotely controlled liydraulic ram, connected hy a high pressure hose. offers extremely simple operation for a thousand and one applications that it does beller. Re-Mo-Trol's adaptability unlimited; can be used to apply force in any direction.

Re-Mo-'lrol can he used where cramped space or other difficulties make the use of self-contained jacks or pullers impossible. One outstanding advantage is the famous "Center I lole"' tubular ram (on 7 models). It is only necosisary to insert a pull rod or serew through the tubular ramplunger. lod is drawn through in a direct-line pull.

## Pumps

12133-Hand pump, 7/16 in. Dia. Piston-1 in. Stroke- 54 cm . in. eapacity for RC102, RC106 and RC302 rams. \$26.95

IRP6A-Two speed hand pump with automatic changeover from high to low speed with pressure increase. 126 cm in. capacity for $\mathrm{RC} 306-\mathrm{RC} \mathbf{5} 06-\mathrm{RC613-12C1103A-13C2112}$ rans. $\$ 6790$

IRP8A-l Iand pump similar to IRPGA with the addition of a selector valve to reverse oil flow to raise and lower two way rans. 161 cu . in. oil capacity. Lised with IRC315-1RC60101RCII10A rams. $\$ 112.00$

No. 798AC-Electric Hydraulic Pump. Operates at continuous pressures of $5,000 \mathrm{P} . \mathrm{S} .1$. and intermittent pressures of 10,000 I'S.S. Has huilt-in $3 / 4$ horsepower 1725 R . M. IP., 115-230 volt, 60 cycle, A. C., single phase capacitor start motor. Selector valve reverses flow of oil to raise or lower ram plunger. For all rams. \$373.50

All pumps have built-in Safety By-l'ass Valve.
Also available Air and (iasoline Powered Itydraulic Pumps.

## B \& L Star Brand Pulling-In Frames

Designed to aid in installing cable in underground ducts.
Consists of two $13-\mathrm{ft}$. sections of 6 -in. steel channel, each with 24 holes on $6-\mathrm{in}$. centers to permit spacing the two sheaves to the proper position for any cable installation.

Has two almminm sheaves, one 20 in . and one $53 / 4 \mathrm{in}$. in diancter, each provided with Graphite Bronze selflubricating bnshings which do not require lubrication.

The diameter and groove of the large sheave are of sufficient size to allow cable to be pulled over it without injuring cable sheath when it is necessary to pull sufficient cable into the manhole for splicing.
No. 5032-Weight Each 260 Lbs.

## Simplex Pipe Pushing and Pulling Jacks

For contractors and public utilities engaged in pipe, duct and culvert installations under streets, alleys, tracks, walks or lawis.

A powerful, accurate and economical jack with reversible carriage which eliminates the need of reversing track when pulling pipe. Its design permits use of longer pipe lengths and considerable saving in threading and coupling. 'Tapered steel jaws completely suround the pipe-mo crushing or flattening.
llas double levers and extensions for operating singly, alternately or in umison on double tracks.

Equipment Includes: One set tapered jaws and one pilot for single diameter pipe, two $31 / 2-\mathrm{ft}$. steel lever bars and two steel pipes for extending levers. (Specify size of jaws and pilot required).

## Greenlee Hydraulic Power Pumps <br> No. 797

Pumps consist of double-piston, single-valve, high-pressure units, speeifically designed for operating Greenlee hydraulic equipment and wher hydraulic systems adaptable to their power. These pumps deliver 106 cubic in. of oil per min. at 10,000 psi max. pressure with a 2 hp electric motor and 213 cubic in. of oil per min. with a 3 hp motor.

They operate at an intermittent pressure of $10,000 \mathrm{psi}$ and at a continuous pressure of 6000 psi . Available with either a four-way valve (IA) for two-direction operation (high-pressure adiance and low-pressure return of a ram or piston) or a twoway (SA) valve for one-direction operation (high-pressure advance only).

## Greenlee Portable Power Pumps

## No. 798

No. 798-A C

The fast approach, high pressure No. 798 Portable Hydraulic Power Pumps can be used with any Greenlee Bender, Knockout l'unch lam, and other hydraulic systems requiring similar power. The same pump is used on all three hasic models and features a low pressure pumping arrangement for high volume delivery and rapid advance of the ram to the work and automatic change-over to low volume, high pressure delivery when the ram pressure exceeds 150 psi. The pump unit is a two piston radial type, capable of developing 6000 psi constant pressure and up to 10,000 psi intermittent pressure.

Each basic model is supplied with a choice of two value controls: SA type for one-direction operation (high pressure advance only) and TA type for twodircetion operation (high-pressure advance and low-pressure high-speed return of rami). Base dimensions all models, $10 \mathrm{in} x 12 \mathrm{in} .11 \mathrm{t},. \mathrm{l} 19 \mathrm{in}$., except No. $798-\mathrm{CO}$ which is 1.5 in. Uscable oil volume, $11 / 2$ qts., reservoir oil capacity. $11 / 2$ gals.

For contractors, drillers, riggers, railroads, shipyards and industrial phants.
Widely used in erecting bridges, docks, tanks and piling. and for pulling logether or pushing apart steel plates, sheets and heams. Also handy for straightening sides and ends of steel freight cars, as well as spreading or drawing in bent or split center sills.

With chains. howhs or pipe seeves the range of application is greatly increased. (Thesce items are mot included in price.)
Steel serew, muts and ratchet wheel are machine cut for easy, positive operation.

Nos. 1021 and 1029 furnishod with wooden operating lever 17/6 x 21 in . long; No. 1538 square sochel, without lining bar.

Can the furnished in greater lengths than listed above. Contact Graybar for specifications and prices.

## Simplex Trench Braces

## Drop-Forged

The only trench and timber braces constructed entirely of steel drop forgings. Blont safety lever nut prevents injuries and damage; ball and socket joints at each end allow quick adjustment, tight gripping. Has nail holes in shoes. Three-way nuts furnished in place of lever nuts if specified.

Complete With Pipe

| Pipe and Screw Diam, In. | Length of Screw. In. | "B" Leth. of Braced Closed, In. | "C' Lgth. of Pipe, In. | Safe Extn. of Screw, In. | Weight with Pipe, In. | Each |

## Simplex Manhole Sheaves

For pulling cable or carrying winch line at right angles in utility maintenance work.

Can be used on the end of a truck or over top of manhole in comnection with snateh block in manhole. Eliminates need for manhole skids. Handles cable up to 3 in . diameter and any size winch line.

Complete with $1 / 4-\mathrm{in}$. chain. 21 in . long. with speeial hook for anchoring and protection when winch line is released suddenly.
Large sheave 73 in. diameter, 3 in. wide. Small sheave $13 / 4 \mathrm{in}$. diameter, 3 in . wide.

No. 220 -Shipping Weight 100 Lbs.......... Each $\$ 119.00$

## Ideal Wire Guides

Prevents kinks and enables several conductors to slide into conduit smoothly and easily. Tempered steel spring forms smoth bend for wire to follow.
h nurled alumimm fitting can be used with all types and sizes of tooxes. in any position with plaster rings on or off. Spring will not slip off under pull. yet can be removed with single twist.

Description
Each
$\$ 9.20$

2.15 2. 65
*No Inshing necessary with $1 / 2$-inch size.

## General Machine Cable Feeders and Nozzles

For protection of cables being pulled into underground conduit. Complete feeders consist of main section and extension section with appropriate nozzles to fit conduit.

Main section is a 1 -in. flexible metal hose with bell mouth on one end and sleave for nozzle on other end. Extension section is a t-in. hose with bell mouth on one end and tube on the other end.

Separate bell-mouthed nozales a vailable for both round and square eonduit.

## Greenlee Cable Pullers

For pulling cable through conduit without damaging cable insulation or lowsening hangers. Provides all the power needed. rasy to oprate and portable. Has positive anchorage. Clamps directly to the conduit and pulls in line with it so that hangers are not loosened. Can be used to pull horizontal or vertical conduit. With flexible elbow attachment works on concealed conduit.

Cable is not furnished, but 3/8-in., 6-9 strand having a breaking strength of 11,000 lbs., or higher, is recommended.

| No. | Dessription | Wt, tbs. | Eact |

## Barth Cable Pullers

A power-driven tool which pushes the tape into the conduit and then pulls the cable through. Will push $30 \%$ more bends than the code allows at a speed of 4.5 ft . per minute.

Ilas salet control which stops the pushing if an otostruction is encomitered. and is overload protected. Will pull 1200 lbs dead weight (appoximate pull of 8 men) which is suflicient for all mormal rums of $3 / 4-\mathrm{in}$. throngh 2 -in. conduit sizes at 1.5 fi. per minute full load. Can be used in any pensition on 11. voll ane or d-e.

I seable tape length is 17.5 ft . of $.060 \times 1 / 4 \mathrm{in}$. best qualit $y$. light weight and compart for easy set up. Complete with attachments ready lo use.

General Machine Slack Pullers

Type E
For temporarily deflecting suspension strand in order to introduce slack into acrial cables for splicing and repair work.

Consist of an are-shaped frame supporting grooved pulleys at each end and a lifting screw in the center. Sorew is monted oul roller bearings and has a hook at the lower end for engaging the strand; has handle at the upper end.

## General Machine Test Mandrels

Available round or sipuare. of seasoned hardwood.

Tool sterel eutting ends provide means of testing conduit before laying cable. Specify size and shape on orders.

| No. | Shape | Size, In. | Wt.. Los. |
| :--- | :---: | :---: | :---: |
| $6318-\mathrm{T}$ | Round | $31 / 4$ | 7 |
| $6318-\mathrm{T}$ | Square | $31 / 4$ | 7 |
| $6318-\mathrm{T}$ | Square | $41 / 4$ | 8 |

Price on application.

## General Machine Laying Mandrels

For use in laying conduit. Made of hardwood, with steel dise at front end and leather wiping washer at other end.

Length $36-\mathrm{in}$, made in $31 / 4$-in. round only.
No. 6318-L_Wt. 16 Ihs. Price on application

## General Machine Washer Duct Cleaners

For cleaning conduit hefore laying cable.
Tough leather washers, graduated in sizes, wipe inside of conduit clean.

Three-inch diameter.
No. G1014-Wt. 8 lhs.
Price on application

## General Machine Crisscross Cleaners

For cleaning conduit of all foreign matter before laying cable.

Made of flexible spring steel; tool presents sharp cutting edge to interior of conduit, regardless of direction pulled.

Three-inch diameter.
No. G1011-Wt. 5 lbs .
Price on application

## General Machine Flexible Mandrels

For use in conduit with extreme bends; flexible cable of mandrel will follow contour of conduit.
Graduated dises of hardened steel provide a means of efficiently cleaning out ohstructions within conduit.

Three-inch diameter.
No. G1010-Wt. 15 lhs
Price on application

For making compound hends in lead cable up to 3 -in. diameter. Saddles are swivel-mounted for any kind of bend, including spiral. Tool may be rotated around cable for compound bends in restricted areas such as manholes.

Cent ral section arched to hend cables without harm. Frame of aircraft alloy steel tubing. Hardened steel ratchets have deep-cut teeth.
Over 1 -ton pressure can be applied on cable with approximately 100 pounds pressure on handle.
No. $\mathbf{7 4 1 0 - W t .} 13$ lbs................ . Price on application

## General Machine Water Tool Brush

For use by installers for washing and cleaning the hase plate of terminals. With nylon bristles $1-\mathrm{in}$. in diameter and $21 / 2-\mathrm{in}$. long, vulcanized into heavy ferrule of varnished wood handle. Overall length $71 / 4-\mathrm{in}$.

## General Machine Jar Hammers

For transmitting hammer blows by rod to worhing end. Used with cutting tool in removing ohstructions.
Heavy plunger, with $12-\mathrm{in}$. stroke, delivers a solid blow when rod is pulled back and forth.
Two-inch diameter.
No. G1015-Wt. 8 Ibs................ . . Price on application

## General Machine Rod Grapples

For use in rodding long lengt hs or muddy conduit.
Two loops on one grapple and four hooks on other permit positive engagement.

Useful in working from both ends of conduit at the same time.
No. 6931-Wt. per pair 2 lbs......... . Price on application

## General Machine Pipe Rippers

Re-designed to efficiently cut a longitudinal slot in pipe used as a conduit for cable, preparatory to removing the pipe from the cable. Tool consists of a hardened steel cuiting blade, two bearing points which serve as the pivot for the cutting action on the pipe, and a tubular handle. Renovable blades are heat-treated tool steel with two cutting edges. Ileattreated tool steel bearing points are triangular in shape, so that three individual cutting edges are available by rotating their position. Tubular handle is attachable to the head in two different positions. For greater leverage, a bar may be inserted in handle. Ripper can be used in restricted areas. Finish: Oiled. Length overall, 42 inches; handle, $301 / 2$ inches. Weight, 18 Ibs .
No. 7044
Price on application

## General Machine Soldering Coppers <br> 

Consists of pyramid-t ype forged eopper bits swaged on one end of one-piece sterel shanks. With coolant-type handles.

Available in $1,1 \frac{1}{2}, 2$ and $21 / 21 \mathrm{l}$. sizes.
Length, approximately 16 -in.
No. 6722 .
Price on application

## General Machine Numbering Dies

For stamping numbers on

Overall length $35 / 8$-in.
No. 6688-Wt. $1 / 2 \mathrm{lb}$. . tools or other steel items.

Roller, made of hardened tool steel, has ligures Ito 9 , dash-mark and letter X. Price on application

## General Machine Lead Sleeve Spreaders

Facilitates the work of spreading split-lead sleeves, particularly the smaller sizes difficalt to open by hand. Stee hande is formed at an angle of $1.5^{\circ}$ to the flattened shank to provide clearance for the hands in the spreading operation. Two steel hlades, pivoted to the flat tened shank, are so spaced that openings up to 2 inches may be obtained. Length, $85 / 8$ inches. Finish: ()iled. Weight, $101 \frac{1}{2}$ ounces.
No. 6748
Irice on application

## General Machine Pipe Spreaders

Quichly and easily enlarges the slot produced by the pipe ripper to facilitate the removal of conduit from a cable. Hardened steel fork engages the edges of the pipe wall at the slot. Handle is made of $11 / 2$-inch steel pipe for lightness and also so that a bar may be inserted when greater leverage is reguired. Length, 39 inches; width of fork, 2 inches. Finish: Oiled. Weight, $911 / 2$ pounds.
No. 7045.
Price on application

## General Machine Products Co.

No. Special purpose items manufactured in accordance with telephone companies' specifications.

Special purpose items manufactured in accordance with

## General Machine B Cable Lubricators

For use in applying lubrieant to underground cable by passing the cable direetly through the lubricator. it consistsol a sheet-st cel fummel for hooding the lubricant, a flexible leather tube for spreading and controlling the amonat of lubricant applied, and a hose clamp for attaching the tube to the lunnel. Fummel is equipped with two handles. T"his device is the most elfertive method of spreading lubricant evenly over an ent ire length of cable. Height, $2.23 / 4$ inches; diamcter of lunnel, 11 inches. foumel has 3 -inch throat.
Weight, 7 pounds. Finish: Metal parts oited.
No. 7287.
Price on application.

## B \& L Star Brand Cable Sheaves and Shackles

## No. 5033

For use instead of a pulling-in frame when advisable or possible to locate the truck directly over a manhole.

This deviee is attached to the manhole pulling iron, the winch line going over a roller or sheave at the rear of the truck, then down and under the cable sheave and shackle, then into the duct.

Special aluminum alloy sheave 20 in . in dianneter with groove large enough to take $25 / 8$-in. cable. Steel yohe, with drop forged steel hooh.

Description
Complete Sheave and shackle; Weight Dach 6.5 Lhs.
Complete Frame, withont Sheave; Weight Each 37 I.ls.
Ahminum Sheave Only, 20 in. Diam; Weight Each 28 Lbs.

## Empire Conduit and Sewer Rods With or Without Wheels

Best quality hickory, with quick acting automatic couplings. Fiurnished with straight stichs of uniform 1 inch diameter throughout. Furnished in three and four foot lengths. Suecify whether rods are wanted with or without wheels, and length.

| No. | Length Feel] | Weight, Lbs. | Wheel Diam. |
| :---: | :---: | :---: | :---: |
| 850 | 3 | $11 / 2$ | $11 / 2$ |
| 851 | 4 | $13 / 4$ | $11 / 2$ |
| 852 | 3 | $11 / 4$ | No wheels |
| 853 | 4 | $11 / 2$ | No wheels |

## Diamond Screw Duct Rods

7/8-inch diamoter best quality hickory, bronze new type coupling. Fommished in three and four foot lengths.

| No. | Length, Ft . | WL., Lbs. |
| :---: | :---: | :---: |
| 855 | 3 | $11 / 4$ |
| 856 | 4 | $11 / 2$ |

## Chance Conductor Cleaning Brushes

Vposition of broshes gives 2 -sided remaning action. As brushes wear, they eam be rotited, by loosoning the anclor sorews, so that mused bristles will come in contact with conductor.

Steel bristles. Will handle a wide range of conductor sizes.

| No. | Description | Wt. Oz. | Each |
| :---: | :---: | :---: | :---: |
| M4455-63 | Universal Conductor Cleaning |  |  |
|  | Brash. | 11 | \$4.65 |
| M1889 | Itand Conductor Cleaning |  |  |
|  | Brush. | 12 | 5.30 |

Most diameters a a ailable on special order from factory in overall lengtis of $12-\mathrm{in}$. and 18 -in. One week delivery notice required.

## Diamond N Drill Points

## No. 730

Point is carefully tempered to sufficient hardness to withstand the wear of cutting and the temper is drawn away toward the shank, to produce a softer steel where it enters the handle to prevent its breaking off at that point.

May be used with Diamond Drill Iolders Styles A, B and C.

## Diamond N Drills

No. 700 4-Point or Star Type Drill

No. 710 Diamond or Single Point Drill
Highest grade octagon drill rod. Quality of steel is tested for uniformity. Heat treatment is scientifically conducted; heats for hardening and drawing the temper are determined by pyrometer and thermometer. Actual tests on various kinds of stone are made from each batch of drills.

*For nichel or cadmium finishes only. Other finishes, prices on application.
fone-eighth inch length machine screws not available with flat or oval heads.
§One-half inch diameter machine screws furnished only with flat or round heads.
Prices for brass machine serews on application.

## Anaconda Filling Compounds

Anaconda filling compounds are available in several formulas to provide the best temperature characteristics and insulation for a particular jol.

## Superseal Compounds

No. 100-For lligh Temperatures: A hard, asphaltic compound not sulject to flow at unusually high temperatures. Recommended for use in potheads operating continuously at high ambient temperatures.

Pouring temperatures: Summer $375^{\circ}$ F.; Winter $425^{\circ} \mathrm{F}$.
No. 1.50-For General lise: llastic; recommended for use where a wide variation of operating temperatures is encountered. Remains plastic at low temperatures, yet has a minimum tendency to flow at high temperatures. Adheres to twoth poreelain and metals, thus preventing internal creepage.

Pouring temperatures: Summer $325^{\circ} \mathrm{F}$.; Winter $375^{\circ} \mathrm{F}$.
No. 250-For Flishing Potheads and Joints: Also used between layers of insulated tapes in hand-wrapped insulation. A compounded mineral oil, having relatively high viseosity.

Pouring temperatures: Summer $225^{\circ} \mathrm{F}$.; Winter $250^{\circ} \mathrm{F}$.
No. 300: For high voltage joints and potheads with reservoirs.

Pouring temperatures: Summer $225^{\circ} \mathrm{F}$.; Winter $250^{\circ} \mathrm{F}$.

## Packaging

Superseal Nos. 100 and 150: Available in one and twogallon steel huckets, or in tin cans $1 / 2$ and 5 gallons.
Superseal No. 250 and 300: Available in $1 / 2-, 1-, 2$ - and 5-gallon tin cans.

## Insoluseal Compound

For filling cable joints and potheads of paper or varnishedcambric insulated cables. Compounded of mineral oil and other hydrucarbons.

Recommended for voltages up to and including 69 kv .
As hydrocartons are injurious to rubber, this compound is not recommended for use with rubber-insulated cables. $\mathrm{P}^{\prime}$ 'ouring temperatures: Summer $250^{\circ} \mathrm{F}$.; Winter $250^{\circ} \mathrm{F}$.
Available in one- or two-gallon steel buckets.
Prices on application.

## Anaconda Safety Compound Kettles

A double-jacketed kettle for safe melting of tilling compounds.

Heat-conducting tube, brazed to the botton of the outer jacket, extends through the inner jacket into the compound chamber, allowing vents to form. 'This prevents accumulation of gas which otherwise might develop pressure at the botton of the kettle.
Capacity, 5 qts. Shipping weight, 7 lbs.
I'rices on application.

## Anaconda Jointing Material

Unit Packages for Makimg One Complete Joint on a Specific Slze and Type of Cable

Jointing materials in unit packages are available for all sizes and types of cable . . Sulid, paper-insulated, varnishedcambric, rubber or thermoplastic insulated or jacketed.

Each Init Package contains all the materials necessary to make one complete, secure joint on the specified cal)le.

## Drawing and Bill of Materials

|  |  | raconoa wire a cable co <br>  <br>  |  |  |  mieloen mata = Lito calle imate conouc ron. size _ $4 \%$ $\qquad$ |  |

|  |  |  |  |  |  |  |
| - ${ }^{\text {e }}$ |  |  |  |  |  |  |

For each type of cable the Unit Package is shipped with a hill of materials and a drawing showing the steps in making a proper splice. Makes splicing simpler and easier for the workman. A typical bill of materials is shown above.

Prices on application.

## Alcoa Joint Compounds

## No. 2 Electrical Joint Compound

For superior results with aluminum to aluminum or aluminum to copper connections, either bolted or nontension compression types.

The compound is noncorrosive to aluminum or copper.

Available in cartons of $12-8 \mathrm{oz}$. polyethylene bottles.

No. 2 Electrical Compound for bus conductor use is now available in 1-pint and $25-\mathrm{lb}$. bulk containers.

## Zinc Chromate Paste

Approximately 70 percent zinc chromate powder and 30 percent boiled linseed oil, by weight. Recommended as a filler for compression fittings used on conductor subject to tension. Compressing the fitting forces the paste between the strands and effectively seals out air and moisture.

Zinc Chromate Paste in plastic bags containing $1 \frac{1}{4}-\mathrm{lb}$. or compound are packed 12 per carton.

## Salisbury Non-Spillable-P. B. Compound Pots

Made of semi-hard durable rubber, they are non-conducting, non-breakable and not affected by usual P.B. compounds. Safer; more convenient; both materials and brush are contained in one unit.

Will stand upright or can be hung on wire, bus bar or brace. Inner flange of compound pot prevents contents from splashing out with rough handling.
Single Compartment, holds
1 pint.................. Vach $\mathbf{\$ 5 . 5 0}$ Double Compartment,
holds 1 pint with added small pocket for soldering paste..

Wach $\$ 5.80$

## Graybar Permagum

Soft, plastic, weatherproof, mastic compound for use on metal, wood, and other surfaces.
Keeps out moisture-laden air, protecting insulation against saturation and reduction of its insulating efficiency.
Readily workable, it can be thumbed into any opening and formed for sealing around inspection plates, conduits, openings, cable joints, etc.

Soft mastic consistency permits easy working with fingers at temperatures as low as $30^{\circ} \mathrm{F}$. Will not melt or run at any temperature up to $350^{\circ} \mathrm{F}$. Non-oxidizing, remains soft and plastic for an indefinite period at $70^{\circ} \mathrm{F}$. Does not become brittle at $0^{\circ} \mathrm{F}$.
Will not irritate or adhere to skin.

## Graybar Permagum-On Spools

Conveniently packaged, six handy rolls per carton. Easy to use, the lineman can handle even with gloves, tear off a section at a time, no waste material. The roll fits onto the tape thong attached to lineman's belt.

The dielectric strength is much higher than friction tape and is not affected by extreme cold or hot weather conditions.

Permagum can be kneaded or worked into any desired shape or size as the material will adhere to itself permanently. Packaged $5-\mathrm{ft}$. of 1'ermagum 4 -in. wide on a spool.

## Minerallac Insulating Compounds

For Iligh and Low Voltage Cable Joints, Potheads, Junction Boxes, Terminal Bells, etc.
High Voltage Compounds

No. 33. A specially compounded oil-insoluble insulating medium for Cable Joints, Potheads, Terminals and other electrical apparatus where a close seal against oil filtration is specified. Also as a protection to transformer bushings on oil-filled transformers. Melting point 49 degrees C. Diclectric strength 627 volts per mil at 30 degrees C.

No. 78. Cable Joint or Pothead Compound. Dense and very adhesive. Hecommended as an all-purpose insulating material. For voltages 600 and up. Melting point $90^{\circ} \mathrm{C}$. Dielectric strength 9.10 volts per mil at 30 degrees C .

## G \& W Insulating Compounds

Compound is not included in the price of G\&W cable devices, except splicing kits (Ozite B) and oil fuse cutouts (Novoid A).

## Asphalt Base

Novoid A (medium soft). For hernetically sealed high and low voltage potheads, boxes and cableheads.

Novoid C (medium hard). For splice boxes and indoor potheads without delinite scals.

Ozite B. For cable joints.

## Oil Insoluble

Novoid X (medium hard). For special cases to help prevent migration of impregnating oil and compound in paper-insulated cables.

## General Machine Sealing Compound

When mixed, sealing compound and activator form the proper flowable compound to produce a plag or dam when desirable to seal eable terminals. Compoond and activator packed as one unit to a carton.

No. 7458
Prices on application

## O. Z. Sealing Compound

This compound is recommended for use in compound bushings, cable terminators and other electrical equipment where a high grade sealing compound is indicated.

## Minerallac Cable Pulling Compounds

## For lead-covered cables. Not recommended for rubber.

Minerallac Cable Pulling Compound is applied with a stiff brush to the cable at the entrance of the cable feeder. This compound clings to and lubricates the full length of the cable and conduit. The compound follows through curves and bends in the conduit, eliminating damage to the cable sheath. It is chemically inert and causes no deterioration to either cable or conduit, including fiber conduit. To pull a 2.83 -inch diameter cable into approximately 400 feet of $31 / 2^{- \text {inch }}$ tile conduit requires only 5 to 7 pounds. Feature of eeonomy that should not be overlooked. Temperature does not affect it and cables may be pulled at temperatures as low as $10^{\circ}$ above zero ( F .).

## Ideal Wire-Pulling Lubricants

## "Wire-Lube"

Makes wire pulling easier and saves time. Protects insulation against breaks and strains. It can be used on rubber, lead or plastic covered wire or cable. The Iubricant may be applied by hand or brush. Wire or cable actually "rides" on a film of lubricant which dries to a fine powder. Ideal for use when adding extra wires in a
 conduit already containing wires.

## "Scotchkote" Electrical Coating

A fast drying sealant and strong bonding agent.
Recommended for use as an inner and outer seal ower cable splices subjected to oils. acids. alkalies and severe weathering in man-holes, underwater cable installations and corrosive atmospheric conditions in chemical plants, vil refineries. etc.

Resists oil, moisture and aliphatic hydrocarbons.

## "Scotchcast" Resins

## No. 4 "UNIPAK"

An all epoxy type resin of $100 \%$ solids, offering advantages of high adhesion, minimum slorinkare and greater heat stability than other synthetic resin classes.

No. 4 is a semi-rigid, insulating, moisture sealing resin.

The "UNIPAK" is a two-part plastic bag separated by a dividing membranc. When the seal is broken the container is kneaded, mixing the two parts. A corner of the container is clipped and the resin poured.
Through its own chemical action the resins become a solid in approximately 15 minutes, depending on size of motds, temperature, etc. Class A Temperature Classification.

## "Scotchcast" Splicing Kits

## No. 90-B1

Designed to give positive service in cathordic protection ground bed splicing. street lighting and traffic signal systems,
offers speedy, easy-tomake, factory-tailored splices which are moisture-proof and electrically iight. No special skill is required. Wach kit contains "sCot'TCICAs"" Resin No. t, Size B, in the "I NIDAK" container.

The self-venting split mold, made of durable plastic, offers a choice of 3 different positions from which the mold may be filled.

The stepped ends snugly accommodate cables of varying outside diameters simply by cutting the mold ends at the proper step diameter.

Combines the features of expoxy resin sealing and insulating and easy field application with adaptability to all configurations.

Is the most universal moisture seal and insulation.
Ease and simplicity of application afford it wide acceptance as a splice sealing and insulating medium.

Items needed are sold individually as its universal application makes a combined package impractical due to varying requirements.

## G \& W Telephone Cable Splicing Kits

Typical Unit Package KIt for Paraffin Type Splice

## Paraffin Type (TP)

Unit package includes all necessary splicing materials in the proper quantity and size for one straight 2 -Way joint.* Lead sleeve, for housing the joint. Wiping solder, for wiping lead sleeve to cable sheaths. Stearine, flux for wiping joints. Paper pasters, for limiting the wipes. Dry cotton tape, for protecting the individual conductors at the ends of the lead sheaths. Insulating sleeves, woven impregnated cotton tubes for enclosing splices of individual conductors. Muslin, for wrapping the spliced conductors. Paraffin, for removing moisture by boiling out the core.

## Desiccant Type (TD)

Same as paraffin type, except instead of paraffin it contains desiccant for removing moisture by absorption and Stripping oil to facilitate removal of insulation.

*Bridge (3-way) joint kits quoted on request. Give complete cable data.

## Splicing Kits

G \& W splicing kits are also available for all types of cables and all kinds of joints. Printed bulletins will be sent on request to Graybar. Please give complete cable data, fully describe cable, give operating voltage and state whether grounded or ungrounded neutral.

Prices on application.

## G \& W Splicing Kits

Each item supplied in the correct quantity for properly designed joint. Economical; accumulation of dead stock avoided.

Each kit is labeled for easy identification.
Splicing Kits For Light \& Power Cable Joints

Fig. 1 I -Kits are availabte for ANY kind of cable, single or
multiple conductor, lead, braid or Neoprene covered.

Fig. 2J-Straight 2-way ioint. Kits also furnished for 3-way Y.
When ordering splicing kits specify:
Total number of joints to be made
Type of joint (straight 2 -way, 3 -way Y, etc.)
Complete description of the cable:
Number of conductors ( $1 / \mathrm{c}, 2 / \mathrm{c}, 3 / \mathrm{c}, 4 / \mathrm{c}$ )
Size of conductors
Type of conductors (solid, concentric stranded, compact round, compact sector, etc.)
Type and thickness of insulation
Type of cable (shielded or unshielded) $1 / \mathrm{c}$ (belted or shielded) 3/c
Lead sheath or jacket thickness
Operating voltage as:
Grounded or ungrounded neutral (Important)
Catalog number of kit, if available
Shipment wanted (specify date)

## Ruberoid Rapid Asphalt Paint

A very quick-drying, glossy black coating with high insulating and moisture-proofing qualities. Resistant to acid, acid fumes and alkali.

For coating, switchboards, wires, cables, fibre conduit joints, taped connections and other electrical insulating applications. Also for coating the inside of tanks, vats, troughs holding liquids, refrigerators, etc., and for all surfaces subject to extreme moisture or severe exposure.

## Sold Only in Full Cases

## Graybar Insulating Materials

## Quality Insulation Meeting Rigid Specifications Class H- $180^{\circ} \mathrm{C}$.

Graybar Silicone Glass (Extra Thin)-An extra thin material of high tensile strength, good flexibility, exceptional dielectrie strength.

Graybar Elastic Fiberglas-Fully cured silicone rubber coatel fiberglas, flexible, tough, abrasive resistant, high dielectric strength, low power factor.

Graybar Silicone Ashestos-An inorganic asbestos paper saturated and coated with silicone resin. Extremely flexible. plus high dielectric and mechanical strength.

Graybar Silicone Glass (Regular)-Impregnated and coated with silicone resin, having exceptional resistance to moist ure corrosive vapors. Vechanieal stability and flexibility. High dieleetric. low power factor.

## Class B- $130^{\circ} \mathrm{C}$.

Graybar Bias-Class-Has good dielectric and mechanical strengith. As a tape it provides uniform, tight, and smooth lapping over irregular surfaces. Retention of varnish film after elongation, high abrasion resistance and protection of fraying action of the glass fibres.

Graybestos-Reinforced combination of treated glass cloth and purified ashestos paper. High degree of flexibility, maximum electrical and physical properties. A low eost composite insulation.

Graybar Adhesi-Glass-V arnished fiberglas with pressure sensitive adhesive. Provides excellent sealing without the use of added adhesion or further processing.

Graybar Varnished Glass-An insulating material of excoptionally high tensile strength, flexibility, thermal conductivity and dielectric strength.

## Class A- $105^{\circ} \mathrm{C}$.

Grayhar Class - New low cost Varnished (ilass Cloth which provides stronger more permanent support for insulating varnish than organic textile, material of equal thickness. Stronger and longer lasting, permitting Class A rated machines to withstand higher temperatures.

Dielcetric Board-Highly refined coated paper which eliminates the neressity of yacuum impregnation of untreated paper when used as layer insulation in transformers. Can be activated by leat; it softens and cures, providing a firm bond between wire and paper.

Graybar Varnished Cambric-(ieneral purpose insulating material possessing high dielectric and mechanical strength. Available in straight cut and bias woven. Both types possess gond flexibility in tape or shect form. Exceptional elongation without film rupture.

Craybar Pli-An insulating material using polyester film bonded to Rag or Kraft paper, possessing exceptional high dielectric and mechanical strength, available in duplex or tri-ply combinations.

## Newer Insulations Available

## Graybar Isocyanate Glass

A flexible high temperature insulation suitable for continuous service at temperatures up to $1.50^{\circ} \mathrm{C}$. Exceptional resistance to mechanical stress, flexing and creasing. High dielectric. approximately 1900 VPM, non-corrosive, low temperature flexibility.

## Graybar Banding Tape

High tensile, high modulus, high impact strength, thermosetting tying and banding tape with good electrical properties. Thermoseals to continuons tape at point of contact with no loss of tensile. Furnished in the " 13 " stage (semicured), complete curing effected after baking $31 / 2$ hours at $12.3^{\circ} \mathrm{C}$.

## Graybar Polyester Glass

Specially constructed woven fiberglas cloth pre-impregnated with a modified temperature stable polyester resin.

Available in a semi-cured stage requiring heat and pressure to effect the final cure.

Can be formed, molded, or laminated at low pressure, even contact pressure, curing completely at 5 to 10 minutes at $250^{\circ}$ to $300^{\circ} \mathrm{F}$.

## Graybar Coated Mylar®

Flexible polyester film coated on one or two sides with a special compound producing a very hard surface which reduces slippage and provides a wettable surface permitting varnish to adhere to the roughened surface.
Has good chemical and moisture resistance, high dielectric and mechanical strength.

## List of Graybar Insulation

Write Graybar's nearest office and warehouse for complete details on Eilectrical Insulation.

## Atlas Insulating Materials

## Glaspun* Woven Tapes

All-purpose efectrical insulating tape which resists moisture, rot. chemioals and high temperatures. Will not burn. Good carrying medium and reinforcement for impregnants used to insulite. Vade entirely of glass fibre yarn.

Approximate Temperature Limit : Strength begins to decrease at $6000^{\circ} \mathrm{F}$. and dedines to limiting temperature of about 1000 to $1500^{\circ} \mathrm{F}$. Softens at $1500^{\circ} \mathrm{F}$.

Applications: Electric motor windings--field coil wrapping, field coil supports, armature coil lead separators. Flameproofing of cable. Protective wrapping on exposed aircraft engine parts and exhausts.

## Continuous Filament Types

llas high strength-low lmulk ratio, smooth, white, evenly woven.

Nade with colored center stripe to guide operator's eye on haif-laps in coil winding. Style 2151 has black line; Style 2152 has orange line.

| 2153 | 150 | 150 | $1 / 2$ to $11 / 2$ | .015 | 1.4 .5 to | 4.7 | 36 |  |  |
| 2153 | 150 | 150 | $1 / 2$ to $11 / 2$ | .020 | 2.5 | to | 6.95 | 36 |  |
| 2153 | 150 | 1.50 | $1 / 2$ to $11 / 2$ | .025 | 3.3 | to 10.25 | 36 |  |  |

Note: Wider widths in all styles up to 6 -in., thicknesses .00 .-in. and above available on request.

## Staple Fibre Types

Used where a more resilient wrapper is desired and space is not ol primary importance. Appearance similar to natural wool.

|  | Conforms to O-C Type ESS-13A |  |  |
| :--- | :---: | :---: | :---: |
| Style | Width | Thickness | Roll <br> Lenfth |
| No. | In. | In. | 36 |
| 2275 | $1 / 2$ to 2 | .010 | 36 |
| 2275 | $3 / 4$ | to 2 | $.015, .020, .025$ |

Style 2511: Generally lighter in weight and somewhat more open in weave than Style 2275. Widths $1 / 2$-in. to 3 -in. Thicknesses. .010-in, .015-in., .020-in., .025-in., .030-in., .040-in. and . 060 -in.

Widths over 3 -in. and other thicknesses or designs on rerpuest.

## Treatments Available at Extra Cost

No. 2519: Chemical treatment to remove most of binder oils.
No. 1713: Ileat treatment to remove binder oils completely and anneal glass to reduce fraying.
No. 1983: Chemical stiffening treatment-applied to base fabric or after either above treatment, as desired.
*'Trademark of Atlas Asbestos Co.

## Asbestos Woven Cloth

Used for packings, safety clothing, pipe insulating jarkets, fire blankets, theatre and welding cumtains, lanimated plastios, conveyor Iolts, covers for laundry folls and ironing boards, etc. Custom Iabrics made on request.

Standard widths $36-\mathrm{in}$. and 40 -in.
Standard roll lengths approximately 50 yds.

## Textile Products

Glaspun' Tapes for Plastic Reinforcement: Continuous filament with woven selvages. Widths- $1 / 2-\mathrm{in}$, to 12 -in. Thicknesses-. 00.0 -in. to .022-in. Treatments-"11 4 " chronecomplex, Volan A, Garan, or Heat-Annealed.

Glaspun Tape for lipe lagging: Navy Spec. 32-G-9 Class "C", NIL_C-2007913.

Glaspun Wehbing: With Staple Fibre. Thicknesses to $1 / 4-\mathrm{in}$. Widths to 6-in.

Glaspun (ioths for Tooling by Piastie-Reinforcenent: Heavy staple Fïlre. Width 38 -in. Thichness to . 120 -in. Requires fewer plies in lay-up than conventional fabries.

Glaspin Rope: With Braided staple Fibre.
Glaspun-D)acron and Glaspun-Ashestos: Tapes of combination fibres.

Ceramic Fibre Tapes: Withstand temperatures to $2000^{\circ} \mathrm{F}$
Other tapes, tubings and cloths available. When ordering forward details of requirements.

## Asbestos Textiles

For industrial applications. Nade of high-grade asbestos yarn. Non-combustille, withstand high temperatures, durable. Resist moisture, fire, corrosion, heat, alkalis, mild acids, vermin. Insulate against heat, vibration, electricity and sound.

## Asbestos Textile Grade Classification

## (A. S. T. M.)

## Grade

Commercial $\mathbf{7 5 \%}$ up to but not incl. $80 \%$ Underwriters' $80 \%$ up to but not incl. $85 \%$ Grinde A Griade AA (Grade 9 a Gral AAA $9.9 \%$ up to but not incl. $99 \%$ Grade AAAA $99 \%$ to $100 \%$ inclusive
*Not olfered, use Grade AAAA.
Data in tahles cover grades shown in headings.
Other grades can be lurnished on request.

## Atlas Insulating Materials

## Asbestos Woven Tapes <br> Selvage Edges-Ferrous Type Underwriters' Grade

For electrical insulating. such as motor windings. Capable of absorbing a high percentage of resin to provide moisture barrier for elficient motor operation.

| 202 | Regular | Black | Yes |
| 212 | Shrinkable | Black | Yes |

## Mica Mat Electrical Insulation

A new insulating product produced in a thin, uniform, flexible continuous sheet. Made from tiny mica flakes without the use of binders or other strengthening agents. Has dielectric strength of about 500 volts per mil, a tensile strength of about 1500 psi , and a thickness variation of less than 10 per cent.

Can be used to form molded insulating products. Can also be treated with silicones or other resins to improve tensile strength and water resistance. Mica Mat is limber and flexible. Mica Mat raw material can be bonded to glass cloth, synthetic films or paper-backing materials, to improve its tensile and tearing strength.
 applied to end turns

Segments for insufation in commutators

Note-Mica mat tapes and wrappers are supplied in widths from $1 / 2$ to 38 inches in $1 / 4$ inch increments.
'l'apes are supplied in 1 inch OD cores in 36 yd. lengths.
$\ddagger$ When stored in the original package.
$\dagger$ Tensile is difficult to measure due to the glass threads.

## Mica Insulation

When properly selected and processed. mica has exceptionally good electrical properties, ligh dielectric strength. very low power factor and stability under varying humidity conditions and over a wide range of temperatures.

G-E segments and heater plate make use of special heat
resistant and stable resins with high resistance to flow and distortion. G-EE insulating varnishes are used in making flexible mica sheets and composites. These varnishes give added resistance to heat and chemicals, excellent electrical properties and good mechanical strength.

Typical Grades and Uses-Mica Plate
$\ddagger$ Drawings and orders should definitely indicate the kind of mica required; i.e., "white" or "amber,"
*Registered trade mark of General Electric Company.

## Sealing and Filling Compounds

Used for filling and sealing spaces in windings as in revolving a-c fields; between coils and case as in transformers, or over screw and bolt heads as in roceptacles, sockets, and other wiring devices. They are highly lilled and will not saturate porous materials like paper or culton. The bonding constit-
uent is most often a natural or synthetic resin or varnish.
Treating compounds such as G-E 1332 are made especially for the penetration of porous materials such as wood, asbestos board, cloth and paper.

## Applications and Properties

| $\begin{aligned} & \text { G.E } \\ & \mathrm{No} . \end{aligned}$ | Recommended for | Characteristics | Color | Type of Base | Weight Per Gallon, Lh., Av. | Mathod of Application | Thinner (if Required) |

## Electrical Insulating Varnishes

Used for impregnation and lilling of the spaces in porons insulation and the interstiecs lefween coil turns and assemblios of transformers and all forms of rotating apparatus. Varmishes are useful in lbuilding up film insulation upon wires, conls and coil assemblies. 'The varnish coating serves as a seal to pro-
tect windings and insulation against moisture, dirt, oil and chemicals. It is also usoful in bonding coils and winding assemblies, as in tramsformers or in cementing together mica splittings to produce built-up mica insulation.

| G.E. | Type of Varnish | Typical Uses |
| :---: | :---: | :---: |
| 457 | Black air drying | General purpose fast air drying varnish especialiy useful in treating white cotton coils, pole leads, collector rings, armature coils, and all types of windings. Excellent for use where baking is not practical. |
| $\overline{9470}$ | Black laking | Treating form and random wound coils, stators, armature and field coils and form winlings requiring multiplicity of dips and bakes. Suited to high voltage machines when it can be well laked. |
| 9564 and 1202 | Clear air drying | Quick-drying varnish, suitable for treating small windings or as a linishing coat, particularly when baked. Not recommended for deep coils or uses where a thermosetting type is noeded. Good finish coat where resistance to moisture, acid, salt water and oil is desired, especially when laked. Often used as the final coat over other varnishes. G-I: 1202 gives a faster air dry. |

## G-E Insulation Materials

## Electrical Insulating Varnishes

| ¢-E. | Varnish | Uses |
| :---: | :---: | :---: |
| 1673 | Clear haking | lispecially suited for treating all types of coils, windings, etc., as found in motors and transformers. Has good heat life and flexibility combined with excellent penetration and good moisture, acid, and oil resistance. Not recommended where high bonding strength at elevated temperatures is required. Where good hot bonding strength is necessary use (i-E 9700 or 9700 C . |
| 9700 and 9700C | Clear baking | General-purpose, giving maximum protection. Treats all types of windings, rotors, stators, etc., except high-speed armatures. Can be used as packaged or can be thinned. Good bonding strength at elevated temperatures. (i-E 9700 is medium viscosity, medium baking grade and C-E: 9700C is low viscosity, fast baking grade. |

## G-E Insulation Materials

## Varnished Cloths and Tapes

Due to their flexibility and high mechanical strength, they may be wound or wrapped tightly in place on many different devices such as cables, armature, field, transformer, and various types of coils. Their high dielectric strength, greater resistance to moisture, and superior heat-aging characteristics make them preferable to untreated fabrics.

The base cloth used in G-E tapes is selected for its high mechanical strength and controlled sizing content. This permits thorough penetration by the treating varnishes.

The varnishes are chemically inert in relation to the cloth to which they are applied, producing varnished cloth tapes which have high dielectric strength, permanent flexilility and high resistance to heat, oil and water.

## M-S-A All-Weather First Aid Kits

All M-S-A first aid materials for kits are packaged uniformly and to great advantage in the Type D) System. This method employs cardboard pachages of a standard unit size (or multiples of the unit size) for cach type of dressing or treatinent.
Rach package contains one or more complete dressings or treatments for a single injury; each treatment is complete in itself, avoiding waste.
'The unit packages fit like blocks in the cases, enabling rapid selection and use of the desired material, and simplifying refilling and maintenance.

All dressings are sterilized for instant use; all liquids are contained in hermetically-sealed ampoules or vials to prevent leakage or deterioration.

Kit cases are heary-gange steel, with welded rounded corners, durable blue metallic finish. Rubber gasket seals out dust and moisture. Ilave snap lock and carrying handle. Mounting lrackets enable attachment to wall or vehicle. All packages extend above sides of case for easy removal.

## Ten-Unit Kit

Pachages
1 1-in. compress bandage. 1 2-in. compress bandage. 2 1-in. adhesive bandages. $11 / 8$-oz. tube Foille for burns. 1 Merthiolate Swabs. 1 Ammonia inhalants 1 40-in. triangular handage. 1 Tourniquet and forceps. Size of Kit: $77 / 8 \times 51 / 2 \times 21 / 2$ in.

## M-S-A Snake Bite Outfits

This outfit contains selected and tested materials for the treatment of snake bite. All in a sturdy plastic case $4 \times 21 / 4 \times 1 \mathrm{in}$.
Contents include:
Plastic suction pump for removing venom.
Lancet for enlarging wound. 'Tourniquet. Antiseptic swabs for painting around wound.
Ammonia inhalant.

All in $11 / 2$-unit Type D pachages. With instructions.
No. FA-12619-Weight each 4 oz
Each
$\$ 3.00$

## M-S-A Pocket First Aid Packets

## Small

A metal hinged-cover box $1 \times 21 / 2 \times 7 / 8 \mathrm{in}$. containing a handy assortment of first aid materials for minor injuries-fits in the pocket.
Contents include:
Ammonia inhalants.
Merthiolate applicator.
Adhesive bandages.
Compress bandages.
Foille for burns.
No. FA-12260 - Weight Each $30 \mathrm{Oz} . \ldots$. . . . . Per $100 \quad \$ 98.00$

## M-S-A Poison Ivy Wash

Effectively relieves irritation and dries up inflammation if applied in early stages. Type D pachage of six.
No. FA-2682-In 4 cc. Vials. . . . . . . . . . . . . . . . . Vach $\$ 0.57$

## M-S-A Creosote-Burn Wash

For the clfective treatment of burns or irritation of the shin caused by contact with creosote from line pole, ties and creosoted timber. Type D packnge of six.
No. FA-2604-In 1 cc. Vials.
Bach
$\$ 0.57$

## M-S-A Foille For Burns

A modern treatment for burns; for emergency and hospital use. Rapidly anesthetizes injured tissues with characteristic absence of infection. Aids rapid healing, lessens contractures and reduces scarring.

Can be applied directly to injured area at serene of accident and does not require removal when treatment is contimed by physician. Provides quicker emergency aid with markeil control of pain and resultant shock. Type D package of two. No. FA- 12560 In 5/8-nz. Tubles.

Each 50.53
Note-Available in emulsion or cintment; and in larger pachages.

## Salisbury Marshall Tagging Devices

For tagging out open disconnect swilches. "Hold Cards" can be placed directly at source of the circuit's encrgy and thus prevent anyone from inadvertently closing the switch.

Equipped with rubber spear-shaped button to hold as many as five cards. A slot through one side of the cup accomodates the pulling lug of the switch pole.
Marshall Tagging Devicc.
Each
$\$ 1.30$

Salisbury Static Resisting Linemens' Coats

Special construction coat that retards static tingling at neck or wrists when garment is used during wet weather on work adjacent to energized conductors.

This safety factor plus comfort and strength makes coat popular with linemen and troublemen. Recently redesigned; now lighter in weight and more pliable, collar less rigid and cufts are larger with an accordian pleat construction for easier insertion of glove gauntlets.

Nometal used in const ruction of this coat. Button fastened. Material is a bright yellow Neoprene surfaced on cotton sherting. Will not crach or peel or stilfen up in cold weather.

Guaranterd to be free from all defeets in material or workmanship. Iength 47 inches. Weight 4 Ihs.
'Two-piece suits instead of full length coats as raingear is also available.

## Salisbury Switchboard Rubber Matting

Provides insulation when placed before switchboards or at any location where protaction from a possible ground is mecessary. It is solid robber with a corrupated surface. Meets A. S. 'I". M. specifications. Weight, 15 lbs. per square yard.

Widths, 2 !. 30, 36-in. Thichness, $1 / 4$-in. lengths, up to 75 ft .

Prices on Application.

## Salisbury Snap Button Blankets and Jackets

Will fold, wrap or hang in any position; particularly useful in covering secondary racks, dead ends, cut outs, pot heads, arresters and similar equipment, or for use in station and underground work. Because of the but ton method of fastening these blankets can be fixed in practically any shape. Buttons hold blanket edges fast and prevent opening or shifting of its position. 'Thickness, 1/8-inch.

All rubber. It is light in weight, extremely flexible and yet tough enough for the hardest kind of usage. Blankets are $1 / 8$-in. thick and have beaded edges. Two sizes, either plain or with six reinforced eyelets to the blanket.

Salisbury Slotted Rubber Blankets

A bianket of larger than the standard size and provided with a slot from one edge to center has been found especially useful in covering the electrical hazard usually present around secondary rachs.
By centering this blanket over the top wire, the slot permits the divided side to hang down as a curtain on the pole side of the secondary lines. The opposite side either hangs down or is draped over the service wires. As all parts of the rack, as well as the wires, are adequately covered, the workmen are well protected when climbing past, worhing above or closely adjacent to this type of construction. Size $46 \times 46 \times 1 / 8$-in. Weight, $123 / 4$ lbs.
Slotted Rubber Blanket
Each \$23.00

## Salisbury Lineman's Blanket Cannisters

Rubber blankets should not be folded when in storage. Folding will damage the blanket and considerahly shorten its life. These cannisters, holding rolled blankets, provide safe storage and convenient and safe transportation. They are made of strong galvanized iron, with caps of same material fastened to cannister with a chain.

## General Machine Pressure Gun Holders

For Use with Type B Guns

Hold gun in a vertical position for loading and mixing plugging compound in the gun barrel.

Frame has four prongs to prevent holder from slipping when secured to pole or other support by spring-tensioned chain, $36-\mathrm{in}$. long.

Size $33 / 8$-in. long, $25 / 16$-in. high, 3 -in. deep.
No. 7414 -Wt. $3 / 4 \mathrm{lb} . .$. . . . . . . . . . Prices on application

General Machine Pull Finder

For determining the "pull" on corner poles and for bisecting the corner angle to facilitate locating guy wire. It consists of a prod which screws into the corner pole and supports two pivoted sighting arms. A pointer on one arm indicates tho pull on a scale inscribed on the other arm. A scale on the first arm and an inder mark on the second arm enables one arm to be set to point along the bisecting line of the corner angle. A fine-grain cowhide carrying case is provided with each pull finder.

IFinish: Metal parts brass, heavily nickel plated and polished. Weight, $1 / 2 \mathrm{tb}$. including case.
No. 7200.
.Price on Application

## General Machine Pressure Plug Flanges

For attaching the threaded nozzle of pressure gun to leadcovered cable.
Consists of a booly for soldering to cable sheath and a screw for sealing the hole in the body.

Length $5 / 8$-in.; diancter $7 / 16$-in.
Packed 50 flanges and 50 serews per box.
No. 7418 -Wt. I Ib.
Prices on application

Type $\mathbf{T}$
I sed on cables maintained under gas pressure where talking facilities are required. Contactor mechanism and a terminal for the alarm and talhing pair are contained in a metal housing with an external adjustment screw to secure desired operating pressure.

Terminal chamber seated against entrance of gas from the main housing by means of a fused glass-to-metal seal. A pressure-testing valve is provided for testing operating pressure and another one for flash-testing terminal cover to determine the possibility of the entrance of any moisture.

Factory adjusted at 17.7 p.s.i. at $60^{\circ} \%$. Size, approximately $8 \frac{1}{2} \times 81 / 2 \times 1-\mathrm{in}$. plus $15-\mathrm{ft}$. lead stub).
No. 6766-Wt. complete 2- Ihs....... Price on Application

Type E-High Pressure
For use in connection with supplementary gas reservoirs to operate an alarm when auxiliary gas supply falls to a predetermined value.

Have a relief valve in housing to prevent damage to apparatus and cable should a teak occur in the high-pressure Bourdon tube.
Factory adjusted at 800 lbs , including $15-\mathrm{ft}$. lead stub and 4-ft. capillary tube. Approximate size, $81 / 2 \times 81 / 2 \times 4$-in. plus stub.
No. 7229 -Wt. complete 28 Ibs....... Price on Application

## General Machine Pressure Contactors

For use at contactor points on cables maintained under gas pressure. Supersede Type C; have adjustment screw to secure desired operating pressure outside the brass casting which houses the Bourdon tube and contact spring assembly. Factory adjusted at 17.7 p.s.i. at $60^{\circ} \mathrm{F}$. as standard.

Furnished with $15-\mathrm{ft}$. stub containing two conductors for bridging to alarm pair of cable.

Approximate size $6 \times 41 / 2 \times 21 / 4-\mathrm{in}$. plus stub.
No. 7442-Wt. 20 Its................. Price on application.

Foror use on cables maintained under gas pressure; designed for installation within a cable sleeve. Pressure-operated switches of the Bourdon tube type; adjustment switch provided outside the brass case that may le locked at the desired operating pressure. Factory adjusted at 20.7 p.s.i. at $60^{\circ} \mathrm{F}$. as standard for underground and buried cables.

Two insulated leads from the contact springs extend through the case for bridging to the alarm pair of the cable.

$$
\text { Size } 11 / 4 \times 33 / 4-\mathrm{in} .
$$

No. 7443-Wt. 1 lb..................... Price on application.

Complete equipment necessary for cable pressure testing, in convenient carrying case.

Consists of apparatus case, testing clamp for temporary reading points, two-grange regulator for use in charging cables with dry nitrogen for testing, cable drill for sheath and sleeves, regulator and acetylene torch wrench, 2-in. pressure gange for approximate measurements, valve repair tool and 8 -ft. hose assembly for connecting regulator to testing valve.
No. 7267 - Wt. complete 18 lbs . . .Price on Application

Pressure Testing Accessories
Flanges

Consist of lody to be soldered to cable and plug for sealing hole.

Bodies and plugs available in Type for for Ty fressuretesting valves and Type L for installing pressure testing plugs.

| No. | Nype | No. of <br> Bodies |
| :--- | :--- | :--- |
| 6808 F |  |  |
| 6808 L |  |  |

## General Machine Pressure Testing Accessories

## B Flow Indicators

For determining direction of tlow of gas for locating leahs in cablesmaintained under pressure. Can be used to show quantitatively the pressure difference between two cable points. Consists of aleohol manometer mounted on hinged aluminum plate and base, wood carrying case, and two lo-ft. lengths of rubber hose with snap-on chucks for conneetingtopressuretesting valves.

No. 7291 -Wt. 21 lbs $\qquad$ Price on Application

## Pressure Testing Ells

For use in soldering $1 / 4$-in i.d. lead pipes to lead covered cables. Made of scamless copper tubing, tinned for soldering.

Length $15 / 8$-in.; height $1 / 2$-in. Furnished 10 in a package.
No. 6817.................................. . Price on Application

## Portable Pressure Testing Gauges

For use where more accurate pressure measurements are necessary. Gange has a $31 / 2$-in. dial. ( $r$ raduated from 0) to 30 lbs. in ( 0.2 lb . steps. Complete with 18 -in. rubber hose and leather carrying case with shomider strap.

No. 6215.
.Price on Application

Main construction of brass with exposed parts tin-coated. Size: ${ }^{11} / 16$-in., 2 -in. wide.
No. 7050 -Wt. $1 / 2 \mathrm{lb}$. . . . . . . . . . . . . . Price on Application

## General Machine B Desiccant Injectors

Aluminum body injector with brass fittings.
Used with standard $160-\mathrm{gram}$ desiccant can.
Compressed air. applied to tank valve, forces granules of desiccant into cable joints.

| No. | Description | Wt. |
| :--- | :--- | :---: |
| 7014 | $160-$ gram can | 02. |
| 7361 | Injector | 2 |

Price on application

## Dillon Wire Stringing Dynamometers

 Model "AN"

This traction type instrument is widely used for placing conductor, strand and guys at correct tension. It indicates load applied to new lines groing up or can be used to check tension in old lines long standing.

Uses no springs or hydraulic pistous. Scientifically designed on cantilever beam principle and individually calibrated for greatest possible accuracy. Compact, 5 in . dia. dial is easy to read even from distance. Red maximum pointer remains at peak load until manually reset.

Dial protected by thick, shatterproof crystal. Each unit furnished with set of alloy steel shackles and pins. All capacities will sustain substantial accidental overloads without injury to calibration. Extremely high safety factor. No levers to adjust. No charts to refer to. All loads are read directly on the face of the dial the instant applied. Strong steel storage case included at prices shown.

Net wt. with shackles and pins: $81 / 2 \mathrm{lbs}$. Gross wt.: $121 / 2$ lbs.

## Chance Telefaults

A compact instrument that will exactly locate shorts of all kinds, damp spots, crosses, grounds, split pairs - in fact every kind of cable trouble except "opens."

Very easy to operate uses only one dry cell battery (Battery not included).

Because of the inductive field created it does not "noise" up other pairs.
With the instrument connected, the exploring coil is moved along the cable until a point is reached where the woodpecker tapping tone cannot be heard in the earphone, which indicates the exact location of the fault. The woodpecker tapping tone is very distinct and cannot be confused with other inductive noises. Maximum voltage under 5 volts.

Expertly constructed of finest material obtainable for the purpose. IIardwood, nicely finished. Size: $4 \times 73 / 4 \times 10$-in.
No.

Extra leceiver only; Wt. 2 llbs........................ 9.25
Chance Teleheight

This handy little instrument will save valuable time in quickly and accurately figuring heights of poles, trees, wires, buildings
 or other objects. No moving parts. Eliminates guessing.

Used by power companies, municipalities, electrical contractors, telephone and telegraph companies, and railroads.

Highly recommended for appraisal work. Real estate men use thern for figuring cubical contents of buildings.

Finest quality materials and workmanship. Complete with leather carrying case. Size: $1 \times 21 / 4 \times 51 / 4$-in.
No. CW-Weight Each 1 lb .
. Each
$\$ 13.80$

## Chance Safety Pole Guards

Protects linemen from shock by preventing the power line pole from touching energized lines when being raised or lowered through them. Safe to remove or replac poles from hot lines up to 45 kv . between phases. Easily assembled and disassembled. Attaches to poles ranging in diameter from 6 to 12 -inches.

## Chance Hot Line Auxiliary Arm Tool Sets

## For Use on 3-Phase Circuits through $\mathbf{1 5 , 0 0 0}$ Volts

Contain the essential tools for working straight rural lime construction. Fittings are heat treated aluminum, minimizing weight for casier handling

Laminated poles and anxitary crossarm are of Sitha spruce, tested to withstand $7 \overline{5}, 000$ volts per foot. Durable, weatherproof, canvas tool hage, for sets or individual tools are available. Doles are plastic protected.

Specially desipned for use as a side arm, but may also be used with wire tongs as a lifting arm. I'rovides quick, safe ehanges of insulators, crossarms and installations of new poles.

Attached to pole with fast action safety chain tightener.
Principle fittings are heat treated aluminum alloy. Furnished with automatic latching wire holders. Conductors may be quichly released by unlatehing holders with a tie stick.

Arms are fitted with safety brackets on each end, preventing conductors from arcidentally slipping off during change-over.

Straight-grained sitka spruce arm is tested to 75,000 volts per foet.

## Chance Hot-Line Dual Arm Tool Sets <br> For Use on 3-Phase Circuits through 15,000 Volts

The majority of rural line construction can be maintaned with this set.

Designed primarily for work on delta or four-wire grounded neutral systems.

Fittings are heat treated ahminum for ease of handling. Laminated Sitha spruce poles, tested 75,000 volts per foot Bags available for set or individual tools. Poles are plastic protected.

## Chance Temporary Grounding Equipment

Designed to furnish extra protection to linemen making repairs on supposedly "cold" lines, overhead or in substations. Prevent injury due to accidental energization of lines while work is in progress.

## 3-Wire Grounding Set

For 3-phase lines. Lightweight, high-strength clamps furnished with duck bills for ease of installation. Pressure type jumper contacts provide high-conductivity connections.

Main line maximum wire size, 4/0 stranded copper or $3 / 0$ A.C.S.R. Jumper maximum wire size, No. 2 ground cable.

## Chance Jumper Clamps

For Use Through $\mathbf{s} \mathbf{k V}$
Polyethylene Insulated

Main Line Sizes:
No. 10 Sol. Cu. to 750 MCM Str. Cu.

## Jumper Sizes:

No. 4 to $4 / 0$ cable, 5000 Volt.

Furnished with tough, weather resistant polyethylene plastic handles and caps. This material has high dielectric strength and is less subject to deterioration from aging and weather than crude rubber. Vot affected by oil, water, grease, or dirt.

Tested to 15,000 volts before shipment.
Overall length $9-\mathrm{in}$. Clamps weight 1 pound, 10 ounces each.
Furnished in pairs. Also available with cable completely assembled; prices on application; specify size and length of cable desired for complete assembly and add suffix "A" to catalog number.

Main Line Sizes: No. 10 Sol. Cu. to 750 MCMI Str. Cu.
Jumper Sizes: No. 4 to $4 / 0$ cable, 5000 Volt.

| No. | Description | Each |

| ( .51 -1 | Gin head adapter only | $31 / 4$ | 6.70 |

*-Lincman's Preference (LI)-recommended by Clance Hot Line T (ool Demonstrators.

## Chance Positive Grip Clamp Sticks

Vade for use on eye screw grounding or tap ofl clamps. Sochet holds eye serew securely, body rests in a growse holding the clanp rigid for easy mounting on the line. When a clamp is picked up, a one-guarter turn loeks it in the clamp stick head. (damp camot be dislodged accidentally.

Clamp can be mounted on the line and lightened at angles.
Maplace coated, laminated Sitka spruce poles, tested to 7.5 kv . pre foot for five minutes.

Can be furnished with an extra long head for long eye screw ground champs. Can also be fornished with a strong rigid splice.

| No. | Destription | Approx. wi. Lbs. | Each |
| :---: | :---: | :---: | :---: |

## Chance Universal Poles

Chance Universal Tools
For Use with Chance Universal Poles

## Rotary Prong Heads

I'rongs swivel freely, permitting a full turn on the tie wire without releasing contact.
*No. M4455-69—Wt. 6 oz...... . Each $\$ 6.50$

## Rotary Blade Heads

Wire is wrapped or unwrapped without turning universal pole. A $V$-notched carbon steel blade grasps tie wire securely.
*Vo. M4455-70-Wt. 6 oz....... . Each $\mathbf{\$ 8 . 0 0}$

## Adjustable Insulator Forks

Designed to grasp 8 and $10-\mathrm{in}$. disk type insulators used in dead end construction. It will raise most pin type insulators up to 15 lbs. Fiber jaws are opened and closed by rotating spline screw.
*No. M14455-67-Wt. 1 lb., 11 oz. Each $\$ 18.00$

## Self Aligning Shepherd Hooks

For pulling and lifting insulator strings. Swivel action permits it to rotate and maintain its alignment with the insulator at all times.
*No. M4455-39—Wt. 14 oz..... . Each $\$ 7.50$

## Ball Socket Adjusters

Useful in controlling the adapter between clevis clamps and ball and socket insulator pins. Chisel point for spreading cotter keys. *No. M4455-22-Wt. 9 oz. . . . . . Each $\$ 2.75$

## Bolt Holders

For replacing pins and bolts up to $5 / 8-\mathrm{in}$. diameter.
*No. M4455-2—Wt. 10 oz....... . Each $\$ 6.75$

## Cotter Key Installing Tools

Used for replacing cotter keys in insulator fittings or in fittings which are out of reach of linemen or near energized lines. Spring gripping jaw traps cotter key on tool, making installation easy.
*No. M4455-18-Wt. 3 oz.....
Each \$3.75

## Snapout Cotter Key Removers

Hammer-like action makes it extremely useful in pulling out stuck cotter keys. Release of the compression spring by a quick jerk of the pole deals the cotter key a hammer blow without disengaging the eye.
*No. M4455-12-Wt. 8 oz.
.Each $\mathbf{\$ 5 . 5 0}$

## Snap Out Disconnects

Impart a hammer blow to the pulling ring of a cutout door or disconnect switch. Release of the compression spring by a downward jerk of pole gives momentum to the blow, permitting operation in a contined area.
No. M4455-13-Wt. 8 oz. $\qquad$ . Each \$6.25
*-Lineman's Preference (LP)-recommended by Chance Hot Line Tool Demonstrators.

## Chance Insulated Hand Tools <br> Poles Tested to $\mathbf{7 5 , 0 0 0}$ Volts per Foot Flexible Wrenches

The flexibility of these wrenches permits application of nuts on hardware at varied angles. They may be provided with or without ratchet handle. Socket plugs are $1 / 2^{\prime \prime}$ square. Pole diameter, $11 / 2$ inches.

## All Angle Cog Wrench

Adjusts nuts easily in any position. Thumb lever on side of pole controls the position of the head until socket is fitted over the nut to be tightened. A cog wheel arrangement permits tightening nut at any position within $140^{\circ}$ angle by simply turning the pole. Pole is laminated spruce. Cogs are case hardened steel. Wrench fits any standard socket with $1 / 2^{\prime \prime}$ square recess.

*M1892-1 Mounted on $11 / 2^{\prime \prime} \times 6^{\prime}$ pole 2 lbs., 14 oz.. 36.25

For holding and manipulating ammeter when taking readings on or near energized conductors where insulation is necessary or for reaching inaccessible points. Itolds ammeter at $120^{\circ}$ angle for easy reading. May be converted to fit other ammeters. Laminated spruce pole. Plastic control rod has high dielectric strength.

*-Linemen's Preference (LP)—recommended by Chance IIot Line Tool Demonstrators.

## Chance Insulated Hand Tools <br> Poles Tested to 75,000 Volts per Foot Grip-all Clamp Sticks

For applying tap clamps, groumding clamps, grounding sets and suspension eutonts to conductors. The jans are opened and closed loy sliding the hand grip. Clamps may be pulled down into the barrel for control in hanging clamp on the line.
Loching screw holds jaws in any position. A safety latch prevents accidental dropping of the load. The pole and operating rond are of specially selected hardwool. The $12^{\prime \prime}$ fiber sleeve has high diekectric strength. Fittings are heat treated aluminum alloy except for bronze locking serews, salety liateh, and jaws. Poles lested to $\mathbf{7 5 , 0 0 0}$ volts per foot. Plastic protected.
llinged. Folds to half its length for easy transportation. Held securely in open position by two spring buttons, operates in the same manner as the regular Grip-all clamp stick.

Available with either aluminum or plastic heads. Alumimum heads are heat treated aluminmm alloy. A small moteh on the end of the prong aids in mamipulating open link fuses.

## Adams Winch Rope Winder

This is a positive drive, level winding device for use on power winches to distribute the coils of line evenly onto the drum. This increases the capacity of the drum, makes possible smoother, steadier pulls, makes accurate alignment of the truek with the pull unneeessary and prevents the line from cutting down through the lower eoils with the resulting damage to the line and difficulty in unwinding.

Ruggedly constructed of highest grade materials, aceurately machined for long, smooth and satisfactury operation.

This rope winder can be installed on A. 'T. \& T. type winches already in service, as illustrated above.
For other installations consult Graybar. Wt. each 255 lls . No. C. II. Winch Rope Winder.

Prices on Application

## Adams Winches and Power Take-Offs

The A. T. \& T. Type equipment includes all the latest changes dietated by up-to-date operation in every section of the country.

## Double Drum Winch and Power Take-Off Assembly

Winch and power take-off integrally moment and complete with sprockets, idlers, chains and spacers-ready for mounting on chassis. It is engineered and designed to eliminate costly mounting expenses and installation costs. (Available with adjustable mounting brackets which permit rapid adjustment of the power tahe-off of truck propeller shait). Single drum winch and power take-ofl package unit assembly is also available.
Single Door Package Assembly.
Double Door Pachage Assembly.

Single Drum Winch

Double Drum Winch

These winches are standard for either 86 or 90 in . body widths. Drum diameter 8 in., flanges 19 in. diameter. Single drum has a flange dividing the drum into 6 in . and 16 in . sections. Double drums are 6 in. and 16 in. between flanges. (Special Drum Widths available).

| No. | Description | Wt., Lbs. |
| :--- | :--- | :---: |
| L6-16-DE | Single Druin Winch | 573 |
| L16D-KE | Double Drum Winch | $\mathbf{8 3 4}$ |

Prices on Application

## Adams Collapsible Power Reels

For winding and stringing small diameter cable and wire quichly and easily.

Due to its construction and light weight one man can mount the reel on an extended winch shaft and manage its operation.

CR Reel

A half-turn of locking handle collapses outer rint segments, reduces diameter and allows wire to be slipped on or off reel.

All parts are precision machined to insure easy and trouble-free operation. Box section. reinforced edges of rim segments, fixed spider, yokes and segments are heattreated aluminum alloy.
llandle and sliding spider are cast steel. spindle and shaft seamless carbon steel tubing.

Reel dimensions: Inside, 20-in.; expanded, 28-in.; collapsed, 183/4-in. Winch shaft 27/16-in. diameter. Finish - Red.
No. CR - Weight each 70 lls .
Prices on application

No. M-18-8S
Designed to safely handle a working load of 18,000 pounds, and have many exclusive features to assure longer service, with minimum maintenance cost.

The large braking surface, positive clutch action, flush-type cable clamp and the exclusive oil-cooled automatic fast operating safety worm brake make these the outstanding winches for all kinds of general work.

The large pitch worm and gear absorb shock and heavy loads. Cast steel drum. liugged overall construction with easy interchangeability of parts.

Dimensions: Drum 6-in. diameter; flange, 1 t-in. diameter; length overall 67 -in.

18-8. *With Band Brake.
M-18-DS With Double Action Drag Brake, preloaded for more even braking (approximately 1.50 pounds).
M-18-BE *Band Brake type with extended Shalt for Bayonet Type Niggerhead or Collapsible Power lieel.
M-18-DE Drag Brake Type with extended Shaft for Bayonet Type Niggerhead or Collapsible Power Heel (approximately 510 pounds).
Winches equipped with oilless trouble-free bearings in the, drum are also available. When ordering designate as " 0 " type.
*Band Brake feature provides $20 \%$ more braking area than other comparable makes.

Prices on application

## Adams Light Cable Reel Trailers <br> or <br> Pole and/or Cargo Trailer (Optional)

This trailer can the quickly and easily converted lirom a Cable Theel Trailer to a Pole Carrying and/or Cargo Carrying Trailer by adding optional items: Crosshar and Pole Seat Assembly, and/or (Quich Removable Body.
Capacity: 2000 ll s. with $7.00 \times 1.0(6 \mathrm{ply}$ ) Tires (Ntandard) 4000 Jls . with $7.50 \times 16$ ( 8 ply) Tires ( 0 pticnal)
Haximmm Capacity: Up to 6000 lls s. with larger tires
( 0 ptional)
Reel Capacity Width: 1 p to 38 in . (Standard) Lp to 48 in . (Optional)
Naximam: (1) to 58 in . (0)ptional)
Reel Capacity Diameter: Up to 60 in. (Standard)
Maximum: Lp to 6 in. with Spacer (Optional)
Track: 56 in.-Trailer made for 38 in . Reel
66 in . -Trailer made for 18 in . Reel
76 in . -Trailer made for 58 in . Reed
Montel: sikC-1 (2000 llb. capacity)
SllC-2 ( 10001 H . capacity)
SRC-3 (6000 Ib, capacity)
Prices on Applisation.

## Adams Pole and Anchor Hole Diggers

Foror digging holes up to 20 in. diameter to a depth of 9 ft. either vertical or at an angle, and can be maneuvered for digging on hills, in gullies or other rough terrain.

Can be operated by regular line crew from any line truck carrying pole derrieks.
Operator has complete control of auger speed, direction and depth. lland control lever with five operating prsitions in a $180^{\circ}$ are permits operator to worh from the most desirable position.
llas 8 hp . engine mounting assembly which clamps on truck bed - easily removed - no power tahe-oll needed. Dower is transmitied through automatic cluteh providing autonatic overload control - engine will not stall if anger strikes obstruction (therefore no shear pins to replace). Nor does auger flight start to rotate until operator brings engine up to predetermined operating speed.

All steel construction, with castings of electric furnace steel. linest material and workmanship.

Uses 9, 12, 16 or 20 inch augers and digs holes up to 9 feet deep at distaners to 15 feet from truck. (Augers not induded.) Shipping weight approximately 525 pounds.

No.

## Description

P. E. Dipger, including Transmission, Flexible Drive Shaft, Fingine Mounting Assembly and Torque Arm, less Auger Filight.

Have split propeller shaft, and are made for single or double drive applications. Wain drive shafts of the standard takeoff have $13 / 4-\mathrm{in}$. - 10 splined ends. although a heavy duty unit is available having shafts with a $131 / 32$ in. - 10 spline.

| No. | Description | Wt. Los. |
| :---: | :---: | :---: |
| 1.1) | Single Power 'Take ()f | 152 |
| LIP2 | Double Iower 'Take Oif | 183 |

Vote-When ordering, give name of truch, model and year for which winch, side take-off or split takeoff is wanted. For additional information eont act Graybar.
Prices on Application.

## Adams Hydraulic Loading Cable Reel Trailers

Reels weighing up to 12000 Ibs. can be quickly and easily loaded and unloaded safely, ly one man, without the use of a witheh or truck.
Cantilever spring provided on each wheel keeps road shoch at a minimum. Also provided with independent whed suspernsion which is recognized as the finest method for safe casy riding.
Shipping weight: Approximately 3800 Its .
Model: IIIRC.
Prices on Application.

No. 176-A-80 - Wt. 62 lls.

Type CR
For rewinding and stringing small dianeter wire or calle: mount on the extending winch shaft of line construction tracks.
Wire casily mounted or removed by a halftwist locking member on end of shaft, collapsing the movable segments.
lixed spider, yokes and segments are heattreated almuinumalloy for lightness.
Price on application

## Premax Embossed Aluminum Letters and Figures

Made of $99 \%$ pure aluminum rolled especially for this purpose, will neither rust. tarnish nor corrode. Plain finish. smooth letters and figures donot catch or hold dirt. Standard package. 100 per carton.

## Standard Embossed Aluminum Tags

Tor determine the length of Tag needed for any specified Iettering, multiply total number of letters by the ligures shown in column.* Periods or spaces, if required, equal innhalf the width of letter.

Longer or shorter lengths, Vertical Tags, Special Designs and Consecutively Numbered Tags quoted on request.

Prices shown are for 1000 on length shown. Quantities less than 1000 at prices slown plas $\$ 5.75$ net set-up charge.

## National Poles

No more than two incising heads touch the pofe at any one time. Action is thorough, but not damaging.

## "Wood Engineered Incising"

National's exclusive incising method insures uniform penetration of preservative in a band 1-ft. alowe and 2 - ft. below the critical ground line where rot is most likely to strike. "Wood-engineered" knives cut, rather than crush, the wood cells, with incisions spaced at regular intervals. Famous "super Cedar," is incised full length, then pressure treated with creosote, giving one of the most lasting poles known.

## Quality Controlled Treating

National Pole is a pioneer in butt treatment, starting about 1911, and pressure treatment, starting about 1920. Its mechanical facilities are complete at both phants. Pressure and open tank creosote and full length open tank Penta treatment is available for National customers. All treating operations are supervised hy a graduate chemist and a graduate timber pathologist. Temperature, pressure and duration of each treatment is carefully controlled by scientific instruments. Complete records are kept, insuring consistency, from one cycle to another.

National Pole maintains at its concentrating yards, trained workmen who, for a small extra charge, roof, gain and stain poles to specifications.

## Pressure Treated Cedar and Fir Poles

Full Length, Incised, Pressure Treated "Super Cedar" Butt Treated Cedar and Fir Poles Full Length Open Tank Penta Treatment

Specifications, prices and full information will be furnished on application to your nearby Graybar Company office.

Full fength treatment is given in pressure retorts, equipped to give any standard type of creosote treatment.

Poles receiving open tank butt treatment at the Minnesota Transfer Plant. Nine carloads can be treated simultaneously.

All poles comply with A. S. A. current standard specifications, and all treatments comply fully with American Wood Preservers Assoclation Specifications.

International Creosoted Pine Poles

## Specifications for Southern Pine Poles

(Continued)

Knots" and "Defective Butts"; Nails, spikes, and other metal not sperifically authorized by the purchaser.

## 2.3-Permitted Defects

2.3.1. Sap Stain. Sap stain that is not accompanied by softening or other disintergration (decay) of the wood is permitted.
2.3.2. Firm Red IIcart. Firm red heart not accompanied by softening or other disintergration (decay) of the wood is permitted.
2.3.3. Spiral Grain. Spiral grain (twist grain) is permitted as follows:

## Length of pole

Maximum Twist of Grain Permitted
30 feet and shorter
1 complete twist in any 10 feet. 35 feet to 4.5 feet, incl. 1 complete twist in any 16 fret. 50 feet and longer

1 complete twist in any 20 feet.
2.3.4. IIollow Pith Centers. Hollow pith centers in the tops or butts are permitted.

## 2.4-Limited Defects

2.4.1. Checks and Splits in Butts. Through-checks or splits in the butt surface are permitted, provided that their height from the butt along the side surface does not exceed 2 feet.
2.4.2. Shakes. Shakes in the butt surface extending through an arc of not more than 90 degrees are permitted. Shakes extending through an arc of more than 90 degrees are permitted when they are inside of a circle the center of which corresponds to the center of the butt surface and the diameter of which is not greater than one-half the average butt diameter.

Shakes in the top surface are permitted in poles that are to be given full-length treatment provided that the width of the shake does not exceed $1 / 16$ inch and provided that the diameter of the shake is not greater than one-half the diameter of the top of the pole.
2.4.3. Insect Damage. Insect damage consisting of holes $1 / 16$ inch or less in diameter, or surface scoring or channeling are permitted. All other forms of insect damage are prohibited.
2.4.4. Knots. The diameter of any single knot or the sum of the diameters of all knots in any 1 -foot section shall not exceed the limits set up in the following table. K nots $1 / 2$-inch or less in diameter shall be ignored in applying the limitations for the sum of diameters.

| Limitations of Knot Size |  |  |  |
| :---: | :---: | :---: | :---: |
|  | Maximum Sizes Permitted |  |  |
| Length ol Pole (Feet) | 1 to 3 | Diameter of Any Single Knot (Inches) Classes 4 to 10 | Sum of Diameters of All Krots in Any One.Foot Section (Inches) |
| 1.) and shorter | 4 | 3 | 8 |
| 50 and longer . | 5 | 5 | 10 |

2.4.4.1. Dead Knots. Decas is permithed in knots provided it is not associated with heart rot.
2.1.5. Scars. No pole shall have a sear or turpentine face (southern pine) located within 2 feet of the ground line. Turpentine sicars need be trimmed only to the extent necessary to examine for evidence of funges infeetion and inseet damage. Other sound scars are permitted elsewhere on the pole surface, provided they are smoothly trimmed and do not interfere with the cutting of any grain, and provided: (a) That the circumference at any point on trimmed surfaces located hetween the buft and 2 feet below the ground line is not less than the minimum circumference specified at 6 feet from the butt for the class and length of the pole; and (b) That the depth of the trimmed scar is not more than 2 inches, if the diameter is 10 inches or less, or one-fifth of the pole dianeter at the location of the scar if such diameter is more than 10 inehes.
2.1.6. Dead Streaks. Sound dead streaks, not wider than one-fourth of the circumference of the pole at the point of measurenient, are permitted.
2.1.7. Compression Wood. The outer 1 -inch of all poles shall be free from compression wood.
2.1.8. Defective Butts. Hollowing in the butt caused by "splinter pulling" in felling the tree is permitsed, provided that the area of such a hollow is less than 10 percent of the butt area.
2.4.9. Shape. Poles shall be free from short crooks. A pole may have sweep subject to the following linitations:
(a) Where sweep is in one plane and one direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by more than 1 inch for each 6 feet of length between those points. (See Diagram 1 of subsidiary drawing entitled "Mcasurenent of Sweep and Short Crook in Poles").
(Continued on following page.)

# International Creosoted Pine Poles 

## Specifications for Southern Pine Poles

## (Continued)

(b) Where sweep is in two planes (double sweep), or in I wo directions in one plane (reverse sweep), a straight line eonnerting the mid-point at the ground line with the midpoint at the lop shall not at any intermediate point pass throngh the surface of the pole (See Diagram 2 of subsidiary drawing entitled "Measurement of Sweep and Short (rook in Poles').

## 3.-Pole Dimensions

3.1 Length. Poles less than 50 feet in length shall be not more than 3 inches shorter or 6 inches longer than the nominal length. Poles in feet or more in length shall be not more than 6 inches shorter or 12 inches longer than the nominal length.

Length shall be measured between the extreme ends of the pole.
3.2 Circomference. The minimum circumferences at 6 feet from the butt (exeept for Chasses 8. 9 and 10 ) and at the top. for each length and class of pole, are listed in the tables of dimensions. The circumference at of fert from the butt of poles in Classes I to 7 , indusive, shall be not more than 7 inches larger than the specified minimum.

The top dimensional repuirement shatl apply at a point corresponding to the minimum length permitted for the pole.
3.3. Classification. The true circumference dass shall lxe determined as follows:

Measure the eircumferene at 6 feet from the butt. This dimension shall determine the true class of the pole, provided that its top (measured at the minimum length point) is large enongh. Otherwise the circumference at the top will determine the true class, provided that the circumferene at of feet from the butt dors not exceed the specilied minimum by more than 7 inehes.

## Dimensions of Creosoted Southern Pine Poles (Fiber Stress $\mathbf{7 4 0 0}$ pounds per square inch)

*'llar figures in this colomm are intmoded soldy for use whenever in definition of ground lime is necessatry in order to apply spreitication ropuirements relating to sears. straightness. ible.

A No butl requirements on Classes 8,9 , and 10.

## 4.-Manufacturing Requirements

4.1 Bark Removal. Outer bark shall be completely removed from all poles.
On all poles mo patch of inner bark more than 1 inch wide shall be left on the pole surface between the butt and 2 feet below the ground line.

No patch of inner bark larger than 1 inch wide and 6 inches long shall be left on the pole surface between the top and 2 feet below the ground linc.
1.2. Sawing. All poles shall be neatly sawed at the top (unless othorwise orderet) and at the butt along a plane which shatl not be out of square of the axis of the pole by more than $\because$ inches per foot of diameter of the sawed surface. Bevelling at the edge of the sawed loutt surface not more than one-twelfih of the butt diameter in width, or an equivalent area unssmmetrically located, is permitted.
1.3. Trimming. Completely overgrown knots rising more than one inch above the pole surface, brameh stubs, and partially overgrown knots shall be trimmed close. Conipletely overgrown knots less than 1 inch high need not be trimmed. Trimning may be done by shaving machine or by hand.
4.I. Framing. All poles shall be roofed, gained, and bored in accordance with the terms of the purchase order before treatment.

All gains (mortise or slab type) shall be cut on the face of the pole; and the gained surfaces shall be in approximately parallel planes.

## 5.-Storage and Handling

5.1 Storage. When it is necessary to hold poles in storage, they shall be stacked on treated skids of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. The height of the piles shall be limited so as to avoid damage to poles on the bottom layers.

Poles shall be piled and supported in such a manner that all poles are at least I foot above the general ground level and any vegetation growing thereon.

No decayod or degaying wood shall be permitted to remain undermath stored poles.
5.2 Dandling. Troated poles shall not be dragged along the ground. Cant hooks. pole tongs, or other tools shall not be applied to the gromd line section of any pole.

## 6.-Definition of Terms

The following definitions shall apply in these specifications: 6.1. Check. A choek is a separation of the wood along the grain, the greater part of which oceurs across the rings of annual growth.

I through eherk extends from surface to surface of the pole, usually through the pith center.
6.2. Compression Wood. Compression wood is abmormal wood that often forms on the lower side of branches and inclined tranks of coniferous trees. Compression wood is:
(a) Characterized 10 relatively wide annual rings, usually recentric;
(b) Ilas a relatively high proportion of summerwood (frequently more than . 0 per cent of the width of the annual rimgs in whith it oecurs);
(c) Dixhibits but little contrast in color between springwood and smmmerwood: and
(d) Shrinks excessively lengthwise as compared with normal wool.
6.3. Cross-hrath (Crach). I eross-break is a separation of the wood cells acress the srain. Such breaks may be due to internal strains resulting from unequal longitudinal storinkage or to external forces.
6.1 Wead knot. A dead knot is a knot left by a brameh that dies before the tree is cut. In encased knof is a dead knot in which the growth lavers are not intergrown with those of the surrounding wood. Dead knots may wontain soft fibers (decay) that usially do mot extend decper than an inch or two from the pole surface. Thes are distinct from rotten or decayed knots in which the loose or soft fibers (decay) may extend the full length of the knot into the pole, and which are frequently associated with heart rot.
(Continued on follotoing page.)

## International Creosoted Pine Poles Specifications for Southern Pine Poles (Concluded)

6.5. Dead Streak. A dead streak is any portion of the sapwood in which the life processes had ended prior to the cutting of the tree. A dead streak starts from the hutt and differs from a wound, such as a cat face or scar, where the growth of new wood shows that life processes are still acting to repair the injured part.
6.6. Decay. Decay is the disintegration of wood substance due to the action of wood-destroying fungi. Rot and dote mean the same as decay.
6.7. Face of Pole. The face of a pole is the concave side, or the side of greatest curvature in poles having reverse or double sweep, between the ground line and top.
6.8. Ground Line Section. The ground line section is that portion of a pole between ifoot above and 2 feet below the ground line as defined in the pole dimension tables.
6.9. Hollow lleart. A hollow heart is a hollow in the heartwood of a living tree cansed by insects or fungi.
6.10. Hollon lith Center. A hollow pith center is a small hole at the pith center of the trunk or of a knot, caused by disintegration of the pith (small soft core occurring in the structural center of a tree or branch).
6.11. Insert Damage. Insect damage is the result of boring in the pole by insects or insect larvae. Scoring or channeling of the pole surface is not classed as insect damage.
6.12. Knot Diameter. A knot diameter is the diameter of a knot on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.
6.13. Red Heart. Red heart is caused by a fungus, Fomes pini, that occurs in the living tree. It is characterized in the carly stages of infeetion by a reddish or brownish color in the heart wood. This is known as "firm red heart." Later the wood, in the case of the living tree, disintegrates (decays) in small, usually distinct, areas that develop into whiteline pockets.
6.14. Sap Stain. Sap stain is a discoloration of the sapwood caused by the action of certain molds and fungi that is not accompanied by softening or other disintegration of the wood.
6.15. Scar (Cat Face). 1 scar is a depression in the surface of the pole resulting from a wound where healing has not re-established the normal cross section of the pole.
6.16. Shake. A shake is a separation along the grain, the greater part of which occurs between the rings of annual growth.
6.17. Short Crook. A short crook is a localized deviation from straiphtness which, within any section 5 feet or less in length, is more than one-half the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement or Sweep and Short Crook in Poles.")
6.18. Spiral Grain (Twist (;rain). Spiral grain is a type of growth in which the tibers take a spiral course about the bole of a tree instead of the normal vertical course. The spiral may extend right-handed or left-handed around the tree trunk. The amount of spiral grain in a pole is neasured as the distance in feet, along the axis of the pole, in which one complete twist of the spiral oceurs, and is expressed as, for example, 1 in 10.
6.19. Split. A split is a lengthwise separation of the wood due to the taring apart of the wood cells, extending from surface to surface of the pole.
6.20. Sweep. Sweep is the deviation of a pole from straightness. (See Diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

## 7.-Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:
"Measurement or Sweep and Short Crook in Poles."

## 8.-Subsidiary Standard

The foregoing dimension table is subsidiary to the text of these specifications: It is designated as: American Standard Dimensions of Creosoted Southern Pine Poles (05.1-1948).

## International Creosoted Pine Poles

Stacks Such as Here Shown on One of International's Condltlonlng Yards Make Possible Our Quick Shipment of Quality Creosoted Pine Poles
Top Dimension Poles
Top dimenslon poles conform in all respects to American Standards Association Specification poles, with the sole difference that top diameter poles specify minimum top diameter only; whereas A.S.A. Specification poles specify both minimum top circumference and circumference six feet from the butt. Length

| Length | Top Diameter in Inches* |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 15 | $5-6$ | $6-7$ | $7-8$ | $8-9$ | $9-10$ | $10-11$ | $11-12$ | $12-13$ |

*Note: Top diameter is determined by placing a tape around the circumference of the pole at the base of the roof.

## What an Order Should Show

To avoid delays and prevent the possibility of error, an inquiry or an order for International poles should contain the following information:

1-Name of consignee.
2-Destination of shipment.
3-Date shipment is desired.
4-Number of poles required.
5-Length and minimum top diameter.
6 -Number of pounds of creosote required per cubic foot of wood.
7-Type of framing desired. A blue print or sketch is preferable. Poles can be framed nore economically at a treating plant than in the field at point of installation. Insofar as possible therefore complete framing instructions are desirable.

Diagram 2-Measurement of Sweep in 2 Planes (Double Sweep) or in 2 Directions in One Plane (Reverse Sweep)

Note: Diagram No. 2 applies to the measurement of double sweep in Western Red Cedar and Southern line Poles.

For measurement of double swerp in Northern White Cedar and Chestnut Poles, sce text.

Case 2-Where Axes of Sections above and below the Crook Coincide or are Practically Coincident
Deviation

below the crook upper boundary of short crook
Case 3-Where Axis of Section above Short Crook is not Parallel or Coincident with Axis below the Crook

Note: The threc cases shown under diagram 3 are typical and are intended to establish the principle of mousuring
short rrooks. 'There may be other cases not exactly like those illusirated.

International Pine Poles have the Straightness and Symmetry of a Machined Product

# International Creosoted Pine Poles <br> *Specification for the Preservative Treatment of Southern Yellow Pine Poles <br> <br> Rueping Empty Cell Process <br> <br> Rueping Empty Cell Process <br> *Note: A descriptive specification only. It must be recog- <br> <br> Seasoning-Continued <br> <br> Seasoning-Continued Initial Air Pressure 

 Initial Air Pressure}
nized that specifications do not guarantee quality, and should not be regarded as adequate protection to the buyer. In any treated wood, the all important factor is the source of supply.

## General

The following specification is intended to obtain an empty cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and scasoning, material for each retort charge shall be selected as to comdition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the croosoting cylinder there shall be an overhead drum for the parpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shatl not be taken until the preservative is seen to overflow through the valve on top of this drum; there shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed regularly. The treating plant must have all the necessary chemicals. a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

## Seasoning

## Air-Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact letween individual pieces in cach stack. These stacks shall be placed on treated or otherwise permanent skids at least six inches above the ground on a well drained storape yard free from vegetation and decaying wood, so located that prevailing winds strike it freely, and each layer shall be separated by creosoted strips. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

## Seasoning By Steam

When time for air-scasoning is not available, steam seasoning shall be used. Live, saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the eylinder before the outlet value is closed. Pressure shall then be raised gradnally to the maximum temperature desired, this maximumbeing determined by the treating inspeetor. It should not be less than $2.51^{\circ} \mathrm{F}$ … not more than $2.59^{\circ} \mathrm{F}^{\circ}$. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

## Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacmum as possible, which must be at least twenty-four inches at sea level or proportionately less at higher altitudes. This vacumm shall be maintained for at least one hour or for whatever longer period is necessary, so that the wood may be as Iry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of stearn under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

In the case of air-seasoned poles, Initial Air I'ressure is the tirst step in the treating process. With steam-seasomed poles this step immediately follows the Initial Vacuam.

The poles shall be subjected to air pressure of sullicient intensity and duration (usually 10 lles. to 100 lb s.) to provide under a quick high vacumm the ejection of surplus preservative, and to insure a retention and proper distribution of the stipoulated number of pounds of preservative per cubie foot of wood.

## Treatment

The creosote shall be introdued between $170^{\circ} \mathrm{F}$. and $210^{\circ}$ F., the cylinder pressure being maintained constant until the cylinder is filled. The oil mast be seen by the inspector to llow from the overhead drum on top of the treating revlinder. thus assuring himi that the evlinder is completely filled with the preservative. The pressure shall then be gradually raised to and maindained at a minimum of 150 lta . per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention, caleulation being hased on readings of the working tank gauges and the weight of the creosote at $100^{\circ} \mathrm{l}^{\prime}$. The ruantity of oil for final retention shall be hased on the cubic content of wood in the treating eylinder as determined by actmal measurement of the top and butt of each pole in each charge. I nder mo conditions may shortare of oil in one charee le olfset by overage in another; the minimmon final retention in each case mmst be 100 per cent of the quantity of creosote specified.

## Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sullicient vacuum shall be prompitly eroated and maintained until the timber can be renoved from the eylinder free from dripping oil.

## Penetration

The treating processes shall be directed toward complete sapwood penetration with the preservative.

## Preservative

For preservative see Creosote Sureritication:
Note: A timal retention of 8,10 or 12 pounds of creosote per cubic foot is most frequently used. Of these, the 8pound treatment is specified in the grat majority of cases. Nonetheless, 12 -pound final retention gives $\overline{50} / \mathrm{m}$ more preservative in the wood at very litlle extra cost. Important pole limes, wstimg more all the time to buida, merit ample preservation.

For areas that are climatically severe; that is, high humidity or prolonged warm temperatures, or areas of abmormally heavy rainfall, IE-pound creosote final retention is urged. While the 8 -pound treatment. even in these areas. gives superb service the small cost of the additional creosote to protect poles and pole lines, whose value is constantly increasing, is an investment in eflicieney.

## Creosote . . . Pentachlorophenol

Since International began business in 187.5 there has been a constant streant of new preservatives entering the wood preserving field. They have been tried for a while-and they ahonst invariably have been discarded after having been found wanting in some characteristic. International will emtinue to wateh and test new preservatives, but will offer them to the trade only when sure of their value. Meanwhile as to the standard preservatives:

CREOSOTLE has stood the test of time and has had such widespread use as to prove its effectiveness under all conditions. It stays well in the wood, whether the service eondition is dry area. swamp. or even salt water subject to marine lxorer attack. International pole lines ten, twenty, thirty years in service still in perfeet preservation, attest to creosote's lasting qualities.

PENTACIILOROPIIENOL, while not nearly as long used as crensote has given a good record since its introdnction into the treating industry, and is having growing aceeptance.

## Standard Specification for Creosote Oil American Wood Preservers' Association

1-The oil shall be a distillate of coal-gas tar or coke-oven tar ${ }^{1}$.
2-It shall not contain more than three per cent of water.
3 -It shall not contain more than 0.5 per cent of matter insoluble in beazol².
4-The specifice gravity of the oil at 38 C.., compared with water at $15 . .5$ (.., shall wot be less than 1.03.
5-The distillate, based on water-free oil, shall be within the following limis:

> Ip to $210^{\circ}$ C., not more than 5 per cent.
> W to $235^{\circ}$ C., not more than 2.5 per cent.

6-The oil shall yield not more than 2 per cent of coke residue.
7-The foregoing lests shall be made in ancordance with the standard methods of the Ameriean Wood-Preservers' Assoriation.
(Ser Manual-Methods of Analysis.)
Owing to the complexity of the chomical composition and physical properties of coal har creosote, and to the fart that some of the samte compounds and properties which characterize coal lar crosote are found in cortain petrolemm derivatives, the determination of the purity of creosole is dillicult. When there is not certain assurance that the reeosote is a pure product, the following tests will aid in arriving at an opinion as to its coal tar origin:
A. Fraction distilling between $210^{\circ}$ and $235^{\circ}$ (.. is usually solid or contains some solids when cooled to $2.5^{\circ}$ (.
B. All of the fractions up to $315^{\circ}$ C. contain tar acids in varying amomots, usmally at least $16 / 9$ calculated on the amount of the fraction tested. (See M NOML-NI.)
C. The specific gravity of the fraction betwern $2.33^{\circ}$ and $315^{\circ}$ C. is usually not lower than $1.020^{5}$ and sperific pravity of the fraction between 315 and 35.5 is usually mollower than 1.08 .5 at 38 (.. compared with wator at 15.5 (.. However, some pure coal tar distillates fall slightly below those limits.

If the sample does not comply with at least one of the foregoing tests it is umdoubtedly not a pure coal tar croosote.
${ }^{2}$ Samples of creosote taken from working tanks may show increases in matter insoluble in benzol and coke residue due to treating operations. If neither the matter insoluhbe in benzol, nor the coke residue exceeds the specitication limits hy more than 1 per cent of the sample, and if it can be shown that the original creosote was of specilied quality, the used creosote shall he regarded as conforming to the spedification.

## Depth of Preservative Penetration

The increment borer shown here is used for extracting sections of wood from poles to determine how deeply the preservative has penetrated into the wood.

## Standard Specification for Creosote Oil American Wood Preservers' Association <br> Depth of Preservative Penetration-Continued

The use of this instrument is recommended as one means by which the buyer can qauge the quality of the product he receives. It does not damage the pole and the only precantion is that a ereosoted wood plag be driven into the hole after the boring has been extracted.

For adequate protection it is essential that the preservative penetrates wood deeply (see discussion on penetration later in this section).

Price for increment borers, on request to Graybar.

## Machine Trimming

The surface of all International poles is machine-smoothed over the entire length. These lathe-like turning machines are a modern improvement in the pole industry. Only a light shaving is made to remove the knots and other protuberances. The grading into sizes is done aftor trimming.

Hachine trimming has many advantages. The frestuly trimmed surface facilitates scasoning. Unnecessary outting inlo the body of the pole by hand trimming or gouging is climinated. 'The appeamance of the pole is preatly improved and bleeding is further reduced.

## International Creosoted Pine Poles Characteristics of Quality Pine Poles <br> Status of Pine Poles

During the period covering the past several years, more treated pinc poles have been used than all other treated poles. The utility company that uses treated pine poles is using the most gonerally accepted pole of the utility tied. Important lines that must stand up under greatest stress and for the longest period of time are well built when built with quality treated pine poles. Every sleat storm brings a further degree of proof of this fact. Knowing the salvage value even of an abandoned lime of treated pine poles. thes costliness of individual pole failures, and treated pine's comparatively low ammal cost, it is diflicult to think of any line not sufliciently important to justify their use.

## Transmission and Distribution Use

International treated pine poles of long length are being used increasingly in the higher voltage lines that eontinne to gain favor in power-line construction. Lines carrying $330-k . V$. are in the planning stage for International pine poles and such construction undoubtly will be used in the near future.

## Life of Creosoted Pine Poles

Entire lines of creosoted pine poles furnished by our supplier 25 and 30 years ago are still in use with practically no replacements, and are obviously good for many years to come. Fistimates have been made by many of the life to expert, and Pennsylvania Plectric Association, as the result of a research and study, estimated 35 years. This estimate of longevity seems conservative with so many International creosoted pine lines now approathing that age and still in good condifion. The oldest limes still standing, and differences in climatie conditions, make it impossible to forecast delinitely just what life to expert from the creosoted pine pole.

Section of the Chemistry Laboratory
Scientific Control is Essential

## International Creosoted Pine Poles

Characteristics of Quality Pine Poles (Continued) Value of Penetration

Several factors are important, particulariy the grade of preservative, but no single factor has such bearing on the life and the quality of treated pine poles as the depth and the mifiomity of preservative penctration. I ntreated wond of any hind commonaly used for poles will decay arentually, and the only preventive is to have the penetration of the preservation deep and unitorm and of proper grade. This is acemplishod only when skilled technicians amalye the preservative and apmy the treating process.

## Strength

The standard for ultimate tiber stresses for the commonly used pule woreds has been developed by the seetional bamimittee on Woad Poles under the sponsorship of the Tedephone Group, American Standards Assectiation.

These ultimate fiber stresses quoted verbatim are tabmlateal helow.
Vorthern White Cedar. . . . . . . . . . . . . . . . 3600 Its. per sp. in.
IIestern Red Cudar . . . . . . . . . . . . . . . . . 5040 lbs . per sq. in.
Chessimut 6090 lhs. pres sal. in. Soulhern Y ellow Pine (Creosoted) $\qquad$ 7 160 Ithe. per aig. in.

## Fire Resistance

Fiires raging across the dry cane fiedds of Cuba crack iesulators, melt steel, and burn untreated wood to astres. but creosoled pine poles stand the flames. This is the actual experienee. Along railroad right-of-ways lire gangs burn the aceds and it is a mat ter of common reeord that untreated pests burn compledely while crensoted pine poles are undamaged. I Ander these severe conditions the ereosoted pine pold may tahe lire and smedder and smoke, but finally the fire smothers itself out. leaving the mole practically modatnaged. The action is analogous to a hurning cil lamp wherein the wich though it forms the support for the flame is itself consumed very slowly.

## Appearance and Cleanliness

Early in the history of the development of creosoted pine poles the question was raised to their use on city streets. It was believed the bleeding of some of the pules might cause trouble if the clothing of pedestrians rubled againxt them. Such ohjections are heard no longer either in protest or propaganda.

International's care in timber selection, the skill of its production and manufacturing forces, and advaners in the science of timber treatment have all contribuied to overcome these oljections and to give to business distric! and residential area the economy and security of the creosoted pine pole.

Giraybar-International poles are in use in the husimes and residential districts of the largest cities of the Inited States, and in thousands of the smaller ones.
The present-day pole is clean, smooth, shapely, and stands with the appearance of tapered wrought-iron pipe. rather than of processed trees.

## Termites

Tormite attacks on poles are attracting more and more attention. Tormites are native to the forest, but as the forests become depleted they seek shelter elsewhere and find their way into untreated structural wood. Intreated pole lines have beron accused of acting as termite highways by means of which they could fly from pole to pole and then to residences; infesting new aras. Termites have now been found in all but three states of the United Sitates.

Creosoted pine polns are practically immune to termite attack. Chechs in the wood may form, but they do not go derop enough to expose untreated intorios wood that Wonld alford shelter lior termitas.

The illustration shows a new type of pole roof that many of the utility companies are standardizing upon. It is a oneWay roof, cut at an angle of $15^{\circ}$. It is to be recommended.

The advantages of lhis roof are:

## 1. Reduces Checking

A roof cut in this manner leaves a minimmon of wood along the center line. the natural deavage point of the pole. This invites checking. The one-way roof climinates this disadvantage.

## 2. Provides Better Drainage

As the roof of a pole wathers, the springwool rings of any species loeing softer than the smmerwood, weather faster, causing the summer woon to stand out in ridges. On the twoway roof these ridges form retaining cups for rain water while on the one-way roof they drain.

## 3. Conserves the Preservative

Evaporation is a surface phemomenon. There is less surface on a one-way than on a wo-way roof.

## Marked Poles <br> 

Absve are the marks by which Graybar-International poles are identified wherever found. A date-hrand is on the side ten feet from the butt of the prole; and is supplemented by an identifying brand on the top and the butt of each pole. These marks are positive evidence of our confidence in the qualit y of the product and the desire to be permanently identified with it.
beware of umarhed poles. If in a few years they began to fail, the experience is that it is not possible to tie them definitely to the source of supply. On the other hand when a company consistently saes high grade materials and good preservation treatment which result in long-time dependable service, the company willingly and permanently attaches its name to the product.

## Rainier Douglas Fir Crossarms

Indispensable characteristies in crossarms are strength and durability. Strength to carry the dead load of conductor. sleet and wind, and to withstand shock within any combination of these two duties that may be imposed upon the arm in service. Durability is as netessary as strength because the arm is intended for many years of service and the cost to replace an arm in the line is many times the price of the arm itself.

Light weight is also important. Lighter arms cost less to transport and install, and place a lighter burden on the pole struetures.
hainier fir crossarms meet all of these requirements. They are carefully graded with strength-reducing defeets eliminated and are seasoned to approximately equilibrimm moisture exntent which adds further to the strength. These crossarms are seasoned slowly and so controlled that from the start to the finisth of the seasoning process, the moisture content of the interior is substantially the same as the surface of the arm.

Mieroseopit as well as visible checking is held to a minimum, and the finished arm is sound and solid. It will not readily soak up moisture nor admit deeay fungi to the interior of the arm.

The largest factory is at Chehalis, Washington. The finest dry kilns and kiln control equipment are located there. Dry kiln operations are supervised by specialists and experts in the drying of crossarm sizes of Domglas fir. Carload orders are shipped econemically from Chehalis to all parts of the United States.

Minimm Carload Weight-Fir from Dacifie Coast Mills, 11.000 pounds. Small cars are searee and a weight of not less than $\mathbf{3 0 , 0 0 0}$ pounds should be figured on. Cars to contain as much as 90.000 pounds can be had.

For customers who desire ICCL quantitios of crossarms. particularly with drillings of non-standard sizes or sperially spaced, and to provide immediate delivery of any quantities in emergencies, factorics are maintaned at Chicagn, Minmeapolis, Kansas City, Danville, Da, and Gainesville, IFlorida. These factories are fully provided with manfacturing equipment and are substantially stoeked with crossarm lumber which permits prompt attention to the requirements of users in all parts of the eomery. Kiln drying at these factories is not economical due to the cost of fuel, lont each point carries a reasomable stock of blanks, kiln dried on the West Canst. for customers who ash for kiln dried arms. All these faetories have well designed drying sheds with controlled ventilation and are also equipped with precision inst rments for cheching the character of drying while the lumber is being conditioned. In all of them the highest standards of lumber grading are followed.

Actual use in the line proves that untreated Donglas Fir crossarms have given satisfactory service for over $\mathbf{5 0}$ years. and have an average life of 2.5 to 3.5 yers. With the use of full length pressure treated poles has created a demand for pressure treated crossarms. We ean furnish Domglas Fir crossarms incised or unincised, treated with either Pentachlorophenol or Creosote, either pressure, hot and cold dip, or five-minute hot dip.

## Rainier Douglas Fir Crossarm Specifications

1.2 Species. These specifications cover crossarms made of Douglas Fir (Pseudotsuga taxifolia), air dried or kiln dried, treated or untreated.
1.3 Crades. Two grades are included, namely: *Dense and †Close Grain. Mamfacturers may supply a mixture of both grades in any shipment.
1.4 Strength of Both Cirades. It is the intent of these specifications to have the qualit y of toth grades so described and limited that a crussarm meeting the minimum requirements for one grade will have equal si rength with a crossarm meeting the minimum requirements for the other grade. (Crossarms of both grades having better guality than the minimum limits of these sperifieations will, of course, have greater strength, depending upon other factors, such as density, st raightness of grain and freedonn from strength-affecting defects.)
1.5 Cross-Section limits. These speefications are intended for crossarms having cross seetions of not more than fonr (4) inches on one face by not more than six (6) inches on the other face.
2.1 General. Unless otherwise specified on the purchase order, all crossarms furnished under these specifications shall conform in all respects to the requirements hereinafter stated. The definitions in these specifications and the drawings which will be supplied, supplement the text and all shall be considered as parts of the specifications.

## 3. Options in these Specifications

3.1 Because these specifications cover crossarms for use throughout the entire Inited States where usage may be different and exposure to decay and insect damage varies between extremes, it is not lugical to limit these specifieations to but one grade, dimension, treat ment or preservative. Therefore the following options are listed and the selection desired must be specified on the purchase order.
3.11 Grade. If a mixture of both grades is not acceptable to the purchaser, then the grade desired shall be spreified, that is, whether dense or close grain.
*Dense (irade formerly was catled Dense Select Structural Grade. (Type B).
$\dagger$ Close (irain Grade formerly was called Standard Crossarm Stock (Type A).
(Continued on following Page)

## Rainier Douglas Fir Crossarm Specifications

3.12 Dimensions, length, drilling details and allowable tolerances shall be specified. (These details are customarily shown by drawings.)
3.13 A preservative treatment, if required, shall be specified. The options covering preservative treatment are:
(a) Pressure tratment and retention, namely, 6 or 4 pounds per cubic foot, or
(b) An opentank hot and cold treatment.
3.14 The preservative to be used (if crossarms are to be given a preservative treatment) shall he specilied. (See paragraph 7. F.) (Options for preservatives are:
(a) Creosote.
(b) Pentachlorophenol, or
(c) Vixtures of (a) and (b) above.
3.15 If the identifying hetters "DF" for Douglas Fir are required on each crossarm, it shall be specified.
3.16 When the purchaser does not wish to have the top center 12 inches of crossarms chamfered or romoded he shall so specify.

## 4. Grade Conformance

4.1 All close grain grade crossarms shall conform to the limitations listed in Tables I and III. However, if the density of the wood in a crossarm is determined to he in acordance with the requirements of the density rule, as stated in Table II, item 1, the crossarm shall then he considered to be dense and required to meet only the more lenient limitations of Tables 1 and II. Therefore, the density of the wood shall first be determined prior to further examination.

## 5. Manufacturing Requirements

5.1 Workmanship. All crossarms shall be of first quality workmanship. Crossarms shall be dressed on four sides, although heavy ships on the bottom and slight ships on one side are permissible. Splintering around holes resulting from bits breaking through shall be kept to a minimum.
5.2 Dimensions and Tolerances. 'The dimensions and drilling details of crossarms supplied shall conform to specifications or drawings supplied by the purchaser.
5.41 Marking. Treated Crossarms. All treated crossarms shall be legibly and permanently marked or branded with the following information: (a) manufacturer's designation, (b) vear of manufacture, and (c) code (as slown below) indicating treatment given. When specified on the purchase order alt treated crossarms shall also be legibly and permanently marked or branded with the letters "D)F" to indicate Douglas Irir.
(a) Coding. The type of treatment shall be indicated first, "6" or "4" to indicate a pressure treatment with 6 or 4 poumds final retention, respectively; or, "0" to indicate non-pressure "hot and cold" method.

The preservative to the used shall be indicated next, "C", for crensote; "l" for pentachlorophenol. For example, "6C" would indicate a pressure treatment having, a final retention of 6 pounds with number I cresoote. "()P" would indicate "hot and cold" non-pressure treatment with pentachlorophenol.

Other letters as found necessary may be used to indicate other treatments and preservatives.
5.42 Untreated Crossarms. All untreated crossarms shall le legibly and permanently marked or branded with the manufacturer's designation and the year of manufacture.

## 6. Limitations

6.1 Limitations shall be in accordance with Tables I, II and III as applicable.

## 7. Preservative Treatment

7.1 Explamation. It seems logieal to have crossarms last as long as poles. 'There is now a definite trend toward full length treatment of all poles, whether southern pine, cedar or miscellaneous conifers. Therefore, to make the normal lift expretancy of crossarms the same as poles, it is recommended that all crossarms-partioularly for use with full length treated poles-be givell a preservative treat ment.

The treatment to be riven crossarms mmst be decided upon after consideration is given to the conditions favoring decay and insect damage encombered in the area where the arms are to be used. Since erossarms do mot have direct contact with soil, as do poles, the need for heavy retentions of preservative is mot so great. The major peneiration resulling from any treatment of non-incised fir crossarms will be (b) in the sapwood, (2) longitudinally from the ends and from all drilled holes. Fir crossarms usinally have little volume of sapwod. They have many drilled holes which improve east of penetration of preservative where needed.
7.2 Ivailable Options. The required preservative, Ireatment and retemion-where applicable-shall he specified on the purchase urder.
7.3 Treatments. Any treatment giving the results required by paragraph 7.5 and 7.6 is acceptable. The most common acceptable treatments are:
(a) Pressure treatments with fimal retentions of 6 or 4 pounds per culbic foot.
(b) Non-pressure treatments using the "hot and cold" method. It is generally necessary to use a minimum treating time of 2 hours at approximately $2: 30 \mathrm{~F}$ and 2 hours at approximately 130 F .
7.4 Dreservatives. There are a mumber of satisfactory preservatives. 'Ihose preservatives, accophable at present are:
(a) No. I creosote, in accordance with Specification Pl of the American Wood-l'reservers' Association, except that the residue above 35 F C shall be less than $2.5 \%$.
(b) $5 \%$ solution of pentachlorophenol in a suitable petrokeum carrier.
(c) Mixture of (a) and (b) above. I isually about $15 \%$ of creosoter is used.
7.5 Penetration. The preservative should penetrate all the sapwood. It shall penetrate longitudimally not less than one and one-hatf inehes from pinholes. bolt holes and from the ends.
7.6 Effects of Treatnents, and Cleanlimess. The treating method used shall not injure the wood. After treatment, crossarms shall be reasonably clean to the touch and should rennain so.

## 8. Inspection

8.1 Inspection and acceptance shall be made at the place of manufacture, treating plant, or upon delivery. The supplier shall give to the purchaser, or his representative, such access to his works during worhing hours as is reasomable and necessary to determine I lie suitability of material to be supplied, and shall furnish all necessary apparatus, labor and other facilities for making the tests herein called for without cost to the purchaser. Inspection liy the purchaser's representatives or the waiving of inspection shall not relieve the supplier from! ohligation to furnish material in accordance with these specifications.

## 9. Rejection

9.1 All crossarms not in accordance with these specifications shall be rejected.

## Rainier Wood Insulator Pin Specifications

Scope. This specification covers wood pins made of yellow locust (sometimes called black locust from the color of its bark).

General. 'The specifications and drawings are intended to include all instructions necessary for the guidance of the manufacturer in bis work. They are intended to supplement each other and any details indicated in one and not in the other slall be executed the same as if indicated in both.

Dinensions. Pins shall be of the style and dimensions shown, and allowable variations must not be exceeded. Pins and threads shall be smoothly and aceurately formed. Figures on the drawing shall be followed in preference to scale modsurements.

Seasoning. Pins manufactured from green or partially seasoned wood shall, when seasoned, conform to the requirements of this specification.

Standard

## Material

Finished pins shall not contain any of the defects listed below, and where any of these defects are present, they shall be canse for rejection.

Anmolar lings. Rings which depart from parallelism with the center line of pin by a sufficient amount to allow a ring starting at the center of the bottom of the pin to run out of the side below the lower thread.
( Hrcks. Checks exceeding 3 inches in length or $\frac{1}{16}$-inch in width.

Knots. loose or unsound knots. Sound knots exceeding $1 / 8$ inch in diameter above the shoulder or exceeding $1 / 4$ inch in diametar below the shoulder. The least diameter of a knot shall be considered its diameter for the purpose of this sperilication.

IGose lleart. Pitell Ioekets. Rot.
Sapwood. Sapwood exceeding $1 / 8$ inch in thickness except on the shoulder of the pin.

Shakes. Cracks or splits concentric to the annular rings of the wool.

Wanc. Wane or bark above the shoulder.
Wormilloles. In the top 7 -inch section of the pin.

## Allowable Variations <br> 8-Inch

No. of threads per inch, 4, tapering 1.11 inch per foot.

| Dimension | 1 | d | U | xd |
| :---: | :---: | :---: | :---: | :---: |
| Over | 1/64 | 1/8 | 1/32 | 3/8 |
| l inder | 164 | 1/8 | 3,16 | 1/8 |
|  | 9-Inch |  |  |  |

No. of threads per inch, 1, tapering $\frac{1}{16}$ inch per inch.

Rainier Wood Insulator Bracket Specifications

Seope. Specification covers wood brackets made of oak. IBrackets. Jhruckets shall be free from cracks, shakes, brashy wood and all other imperfections, except as hereinafter specified.
Srasoning. The maximum moisture content of seasoned brackets shall be $20 \%$.

Cheeks. l'resence of checks is permitted provided they do not extend into threaded section of bracket or intersect any nail hole and are not greater than 2 inches in length.

Grain. 'The wrain shall be straipht and shall be practically parallel to the asis of the threaded portion of the bracket. The grain at eitwer of the right-angled corners at the end of the bracket shall not run out below the bottom thread of the opposite side of the bracket.

Insert-lIoles. In wood otherwise sound, a few small insect holes not exceeding $\frac{1}{16}$ inch in diameter may be present, provited that they are scattered and appear only in the portion of the bracket between the turned section and the small nail hole. No more than $5 \%$ of the hrackets furnished shall contain such inseet holes.

Knots. Brackets shall be free from loose or unsound knots. Sound knots are permitted in the turned section of the bracket up to a diameter not greater than $1 / 4$ inch, provided that the distance between 2 knots is not less than 1 inch. Sound knots are also permitted in the portion between the turned section and the small nail hole up to a diameter not greater than $1 / 2$ inch, provided that not more than 3 knots are present in this portion of the bracket and that all such knots are at least $1 / 4$ inch distant from either nail hole.

Sapwoorl. Brackets may contain sapwood along any edge provided it does not appear on any face to a distance greater than $1 / 4$ inch from the edge.

Rainier Wood Cross Braces

Wood cross braces increase the transverse strength of IIframe structures. Steel fittings are tapped to insure staticfree performance and are double-dip hot galvanized. Wood is structural grade Rainier fir.

| No. | Slze of Wood (Inches) | , | MtI, Bolt Diam. In. | WL. Lbs. 100 Pcs. |
| :---: | :---: | :---: | :---: | :---: |
|  |  | $7^{\prime}$ to $8^{\prime} 4^{\prime \prime}$ | $7 / 8$ | 11500 |
|  |  | $8^{\prime} 6^{\prime \prime}$ to $9^{\prime} 10^{\prime \prime}$ | 7/8 | 12500 |
| 1000 | $33 / 8 \times 43 / 8$ | $10^{\prime}$ to $11^{\prime} 0^{\prime \prime}$ | 7/8 | 13500 |
|  |  | $11^{\prime} 6^{\prime \prime}$ to $12^{\prime} 6^{\prime \prime}$ | 7/8 | 17000 |
|  |  | $12^{\prime} 8^{\prime \prime}$ to $13^{\prime \prime} 10^{\prime \prime}$ | 7/8 | 18000 |
|  |  | $14^{\prime} 6^{\prime \prime}$ to $15^{\prime} 4^{\prime \prime}$ | 7/8 | 20500 |
| 1100 | $33 / 8 \times 5$ | (14' to 15' ${ }^{\prime \prime}$ | 7/8 | 22500 |
|  |  | $\left\{15\right.$ ' $6^{\prime \prime}$ to $16^{\prime} 10^{\prime \prime}$ | 7/8 | 25000 |
|  |  | $17^{\prime}$ to $18^{\prime} 6^{\prime \prime}$ | 7/8 | 27500 |

Ordering Data: Specify center to center pole spacing and series number on order.
Braces are Furnished with all Necessary Mounting Bolts. Unless otherwise specified each set will include two $7 / 8^{\prime \prime} \times 14^{\prime \prime}$ and two $7 / 8^{\prime \prime} \times 16^{\prime \prime}$ bolts.

## Rainier "Vee" \& "Knee" Braces 2000 Series

The mounting holes for knee and Vee Braces may be punched for $5 / 8,3 / 4$, or $7 / 8$ inch mounting Iolts. Specify size of liole and give dimensions $\mathrm{S}: \mathrm{D}$ when ordering.

Kinee and Vee Braces are identical except for angle fitting on one end. K nee Braces fit against side of pole and top of wood filler block. Vee Braces fit against side of pole and side of metal spacer fitting. Mounting bolts for both Knee and Vee Braces are ordered separately as they are not included with the brace assembly.
Prices on application.

## Treated Wood Braces

Unless otherwise specified wooden members of these braces are furnished treated with a pentachlorophenol dip. Other types of treatment are readily available upon request.

## Rainier Wood Crossarm Braces

## Rainier Transmission Line Fir Crossarms and Timbers

American Crossarm \& Conduit Company crossarms for transmission lines are manufactured from carefully graded Douglas Fir timbers.

Douglas Fir is "King of Trees" in the great forests of the Northwest. Douglas Fir grows in dense stands and produces a clear. straight grained heart wood that is materially stronger than the average word of its weight. Because of its close, tight grain, it is highly resistant to weather in any elimate and has the strength and long lasting qualities so vital to a transmission line structure.

Kiln drying and air seasoning operations are scientifically controlled by expert timber engineers, and each piece of wood conditioned for long years of service in the line.

Each of the manufacturing plants of the American Crossarm \& Conduit Company is fully equipped for precision manufacture of transmission line crossarms, timbers, and braces.

Complete transmission line crossarm units, manufactured to the customer's own specification, either with or without hardware attached, are available from their plants at Chehalis, Wash.; Kansas City, Mo.; Clicago, [ll.; Minneapolis, Minn.; Danville, Pa.; Gainesville, Florida.

The 50 foot dual member crossarms, together with the cross braces and knee braces for this 230 kv . transmission line, were fabricated, shipped, and serving in the line less than four months after the order was received.

Design engineers may specify different sizes for their structures to suit some special service demands. We are prepared to furnish crossarms, timbers, and braces to meet the engineers' specifications, and your nearby Graybar sales office will gladly supply full and complete data, including treating, stress and loading tables for all sizes and types of transmission timber.

## Soil Classification

As an ad in determining the type and sige of anchor best suited for a sperific job, elassification has leern made of ame luo holding strengths in different types of soil and under different moisture conditions. Classification of holding power on the basis of soil type alone has been fomen to be insufficient, mot only from the standpoint of soil identification, hut also because of variations experienced in the holding power values.

Numeroms tests under different moisture conditions and in all types of soil have proven moisture content to be a preater factor than soil composition in determining soil-amdor holding power. The following soil classifications give consideration to both the type of seil and the moistare content. providing a more acrorate and easily-recogrized means al soil identification.

Class 1. HARD ROCK (solid).
Class 2. SHALE, SANDSTONE, (solid or in adjacent layers).

Class 3. HARD, DRY, (hardpan). Itsually found under a Class 4 strata, rescmbling soft rock. Repuires use of digging bar).

Class 1. CIKIMBLIY, DA IIP, (usually clay predominates. Insufficiently moist lo pack into a ball when squeering ly hand. Particles erumble off).

Class 5. Fili li, Molst, (usually clay predominates. Other soils commonly present. When squepand by hand will form into a firm ball. Most soils in well drained areas will fall into this classification).

Class 6. PLASTIC: WET, (usually clay predominates as in Class 5. Due to unfavorable moisture conditions such as areas subjected seasonally to heavy rainfall, sulficient water is present to penetrate ther soil to appreciable depth and though the area is fairly well drained, the soil during such seasoms beeomes plastic and whon squeezed will readily assume any shape. This soil is not umoommon in fairly flat terrain).

Class $\quad$. Looste, DRY, (fonnd in arid regions; usually: sand and gravel predominates. Filled in or built up areas in dry regions full into this class. As the term implies, there is very little bond to hold the particles together).

LOONE, WETT, (same as lomse, I)ry, for holding power. Iligh in sand gravel, or loam content. Iİolding power at sonnsoasons good. hut during rainy seasoms absorbs excessive meisture readily with resultant loss of holding power. Predominant in prorly drained areas. This Class also includes very soft wel (lay).
(Class 8. SIl AMPS and MARSIIES (includes areas that are marshes only seasomally).

Moist soils will vary in their classification during the year due to changes in their moisture content. Extreme conditions should be estimated.

## Ulimate Itolding St rengths

The ultimate seril-anchor holding st rempt has evaluated on the hasis of the preceding soil classitiontions are the values at which the anchor will start to pull out in the type of sail and under the conditions indicated. Valurs given in the tables om the following pages are based on testis with anchor rods set at $55^{\circ}$ and anchors set 7 -feet decp. For lesser depths, values are about $15 \%$ less for the tirst foot and $10 \%$ less for the next foot. A safety factor of 2 to 1 , or greater, is sugrested.

## Chance Expanding and Tamping Bars

For use with expanding anchors; the weight of the bar does the work. Also used for tanping-in the dirt above the anchor.

Hook wraps around the anchor rod for guide.

| No. | Lgth, Ft. | Wt., Lbs. | *Each |
| :---: | :---: | :---: | :---: |
| 10 | 10 | 2.1 | $\$ 15.40$ |
| 12 | 12 | 25 | 16.85 |

## Chance 8-Way Expanding Anchors <br> Without Rods

## Anchor Rod Specifications

Chance 8-Winy anchors are designed for use with standard threadid athor rods. The following table shows rod sizes for each anchor. Hods must he ordered separately.

| $\mid$ Anchor |
| :---: |
| No. |
| 88115 |
| 88135 |
| $88135-1$ |
| 1082 |

> Rod Size $5 / 8^{\prime \prime} \times 7^{\prime}$ and $3 / 4^{\prime \prime \prime} \times 8^{\prime}$ $5 / 8^{\prime \prime} \times 6^{\prime}$ and $3^{\prime \prime} 4^{\prime \prime} \times 8^{\prime}$ $1^{\prime \prime} \times 10^{\prime \prime}$ $I^{\prime \prime} \times 10^{\prime}$

Fight sterel blades expand to form a square, distributing the load evenly over the entire anchor area.

There are no non-holding areas Letween blades.

Base plate causes anchor to expand in a cone shape. Anchor has no himges or moving parts to hinder its smooth operation. Furaished with nut retainer and coated with special asphalt paint to guard agatinst corrosion.

Priecs sliphtly higher West of the Rockies, or in other zones.

## Hubbard Steelwing Screw Anchors

## Hot Galvanized

Provide quichly installed, permanent anchorage with suflicient holding power for normal pole line work. Easily reelaimed; has no parts to come loose and remain underground. To indicate holding strength, wing diameters are stamped on rod below eve (except Nus. 7542 and 7543 ). Available with Three-llubeye or E.E.I. oval eye. Three-llubeye eliminates need for a thimble. Nos. 75 th and 7543 designed for anchoring fences, trees and for similar light gaying.

## Chance Swamp Screw Anchors

For goying in swamp areas, marshy or sand soil or other dillieult locations where anchor must tee set deep to reach firm ssil.

Swamp anchors are set to the desired depth by attaching the required lemgths of standard pipe: lipe is not furnished.

Threaded to reecere standard pipe.
Flanged cotting edge is sharpened to aid in cotting through ronts. etc. Ilub is printed to aid installation.

Cast iron anchor shipped complete with malleable iron 'Tripleye mut. Single Thimbleye nut avalable on specification.
Asphalt dipped.

Priees slightly higher West of the Roekies, or in other zones.

## Chance Cone Anchors

Recommended for use with rock back fill for maximum efliciency. Particularly effective in hardpan, adobe clay or rochy soil.

## Chance Steel Cone Anchor

 Without Rodllas eight flat faces which are directly opposite, forming flat wedges against tamped rock.

Flaring base supports rock at the bottom of the hole, greatly increasing the effectiveness of the wedge.

Nut retainer prevents anchor from riding up during installation and permits salvaging of rod.

Hade of drop forged steel, dipped in cor-rosion-resistant black asphalt paint.

## Chance Cross-Plate Anchors

Helps speed up hig line-construction johs.
An inexpensive anchor that will take the phace of lugs, iron slugs, cross planks, and concrete dead-men for mandug holes in areas where loose rock or othor olstructions make it difficult to bore holes with an auger and expand or install conventional anchors. It's loss expensive than putting an opened expanding anchor of comparable area in this type of hole. Can he installed in a smaller hole than usually reguired for log or concrete dead-men.

Nut retainer helps control and prevent anchor from riding up the rod when dropped in the hole.
formed of two structural steel plates, heavily ribhed, for reinforement, and securely welded together with a steel reinalorcing plate at the hase.

## Hubbard Guy Shims

## Hot Galvanized

Six or more guy shims are used per pole to prevent messenger or guy strand from cutting into the wood. Nail holes are $1 / 4$-inch diameter.

7571
No........
Ship. Wt. Per 100.

## Hubbard Strain Plates Hot Galvanized

No. 7576

No. 7577

Used to protect the wood fibres of pole and moulding from being cut by the guy or messenger strand. No. 7574 and No. 7577 are combination guy hooks and strain plates. Nail holes are ${ }^{3}$ 伯-inch. On No. 7577 the mounting hole is "1/r-inch and on No. $7.7 .4-96$-ineh. The holes at either side of the hook are $7 / 16$-inch for $3 / 8$-inch lag screws.

## Hubbard Pole Struts

## Hot Galvanized

Itsed to make pole self-supporting by hog-guying when circumstances prevent normal guying. Struts are made of heavy steel channel with a broad bearing surface against the pole. They may be sprung slightly during installation to fit a variation in pole diameter. Two struts are needed for each pole. Three $1 / 2$-inch lag screws attach them rigidly in position. Braces are $1 \times 12 \times 1$-inch channels for all sizes listed.

## Hubbard Pipe Sidewalk Guy Arms And Attachments

## Hot Galvanized

No. 1501

Sidewalk Guy Arms provide a substantial anchorage, using minimum space where the standard method of guying is not practicable. The fittings listed on this page are designed for 2 or $21 / 2$-inch pipe.

Nos. 1501 and 1502 are the standard Pole Plate and End Clamp for this style of guy. No. 1511 replaces the elamp plate of No 1502 to form assembly No. 1503, for separating the guy int two parts above and below the arm. No. 1512 consists of No. 1502 with an extra clamp plate so that two guy wires may be used and attached at two points on the pole. Pipe is not included unless specified. Set screw fittings Nos. 1521 and 1522 require no drilling of pipe.

## Hubbard Steel Ground Rods

## Hot Galvanized

Made of new open hearth steel. Has a length of No. 12 gage copper wire bonded firmly to upper end with five inches free for making gromed wire connection. Top turn is looped under itself, relieving the bond from carrying strain concentrated at that point. Special lengths of wire can be furnished.

Seeger-Williams Insulated Wiring Nails
 Fibre Head

No. 12SW
Steel Cap

Vo. 18 for installation of commmnications, signal systems, telephone, radio and general wiring.

Vo. 14 has smaller head. For TV lead-in, and other applications where small head is desired.

No. 12SW has $3 / 8$-inch steel driving head insulated from work by fibre washer.

Brown, Ivory, or Green. White at $\$ 0.25$ extra per 1000 . lacked 100 or 1000 per box.

## Hubbard Copperweld Nails

Used for attaching strain plates, or for locking pins and detachable pole steps, mounting conduit or cable guard straps and many other attachments where permanent safety from corrosion is necessary.

Reliable Ground Rod Clamps

These clamps are bronze or galvanized steel as specified below. Coated to resist corrosion and galvanic action. Complete with hexagon head screw.
Corners become rounded at pressures of $200-29.5 \mathrm{~Hz}$.

Bronze Clamps-lior copper and copperweld rods. Galvanized Steel Clamps-l'or steel rods and pijes.

## Hubbard Detachable Pole Steps

## Hot Galvanized

To install, slip the plate, which
 acts as a bearing surface for the step, over lag serew and drive lag in until plate lites into pole. Step slips down in a groove on each side of the lay screw head and is prevented from turning by a lug projecting from bottom of the plate. A nail driven throngh a hole in the plate ollers additional security against turning. Five steps per pole are generally used. Unlicensed climbing is prevented by removing steps.

## Hubbard Pole Gains and Reinforcing Plates <br> Hot Galvanized <br> Pole Gains

Used to attach crossarms to poles effi-
 ciently and quickly without the need for gaining the pole.

They permit easy adjustment for alignment of the crossarm and space the arm away from the pole allowing drainage and rentilation.

Compared with gaining a pole for double arming, an added spacing of approximately 2 -inches hetween arms is obtained by using inctal gains. Four spurs on the gain hold the original alignment.

## Hubbard Extension Fixtures Hot Galvanized <br> No. 8054

Diagonal Brace, Back Brace, and
Vertical Brace Installed
Used to clear buildings or trees without the use of high poles, or to offiset arms on a pole to partially relicve the strain of a slight angle in the line. With extension fixtures the poles may be set at the roadside, and by extending arms either toward road or away from road, to compensate for conditions, the wires may be strung in a straight line.

## Hubbard Diagonal Brace, Back Braces and Vertical Brace <br> Communication Type

The Diagonal Brace is intended for use on both the 6 and 10 -pin arms. It is provided with a 6 -inch step for the lineman and may loe used on either side of the pole.

No. 80.51 is used with 6 -pin arms, and the No. 80.52 with 10 -pin arms. They are attached to the pole by a $5 / 8$-inch crossarm bolt and to the crossarm by a $1 / 2$-inch crossarm or carriage bolt.

The Vertical Brace shown is designed for 3 arms spaced 12 inches apart, or 2 arms on 24 inch centers: additional arms being cared for ly placing other Vertical Braces in "Series" with the first.

No. 1800 Series Braces are made from a wood section of 1596 by 2156 inches of clear. straight grained Douglas Fir: treated by immersion in Pentachlorophenol.

Extensive testing has shown that these braces are the strongest that Hubhard and Company has ever produced.
No. 4800 series braces are neat in appearance, are easily installed, and are interchangeable since there are no "rights" or "lefts."
