sturdy metal finished in gleaming gold. A hold-down spring clip keeps hearing aid in place. Comes complete with 3 feet of flesh-tinted cord with plugs at both ends and special flesh-tinted earpiece. - Individual Volume Controls • Self-Holding Pause Control

Begin your stereo component system with this outstanding tape recorder reproducer. The RK-140 abounds in professional-type features making it suitable to meet every stereo and monophonic recording situation. Styled right too! Tape transport and electronic components are integrated into one lightweight unit, for use in either a portable carrying case or a handsome built-in home installation. Rugged tape transport has an ultra quiet 4-pole air-cooled induction motor and belt drive for double flutter filtering. Provides smooth drive action. Automatic tape stop at end of the tape or during a break in the tape, and handy pause control give absolute control over tape. Superb electronics consist of transistorized and tube stereo preamps for self-contained record and playback facilities. Makes 4-track stereo and monophonic recordings, plays back 2- and 4-track stereo and monophonic tapes. The two channels operate independently to permit recording one channel at a time (sound-on-sound). Clear FM multiplex recording is assured by high (80 KC) bias operation. Both heads and pressure pads are mu-metal shielded to eliminate hum. The simplicity of the RK-140

makes it easiest to use—all transport and electronic controls are located on the top panel for easy access. Two jacks are provided for connection of stereo microphones (not included) for making "live" stereo recordings. Two recording meters permit accurate recording levels to be set, making it simple to have professional-type recordings you will be proud of. The Pause control further assists in making "pro" recordings by stopping the tape momentarily for editing out commercials, poor notes etc. Other features include: Speed change lever/power on-off selects 3 3/4 or 7 1/2 ips; master volume control; rewind/stop/play lever; stop/fast forward; on-off pilot light. Takes up to 7" reels. For 117V, 60 cycles AC. Tape Deck is complete with preamps, 4 connecting cables and empty reel. Shpg. wt., 20 lbs. Less Case and Microphones

Precision engineered to satisfy the most discriminating music listener, the RK-141 will playback with uncompromising fidelity 1/4-track and 1/2-track stereo tapes plus 1/2-track and full-track monaural tapes. **"LET YOUR EARS BE THE JUDGE"**

The Stereo 250A... a completely new stereo high fidelity amplifier with a high quality of reproduction, remarkable versatility and new distinctive styling—worthy of a place in the finest stereo hi-fi music system. A full range of controls enables you to enjoy the utmost in listening pleasure in any situation. A unique "blend" control which provides continuously variable channel separation—from full monaural to full stereo—may be used to eliminate the exaggerated channel separation found in some stereo source material. Included is a clutch-type Volume-Balance control for independent or simultaneous control of both channels, concentric Bass and Treble controls which provide independent tonal control of each channel and a 4-position switch which selects phono, tuner, auxiliary or tape head stereo inputs. Simple slide switches provide channel reversal and phase reversal—or you can reproduce either channel through both amplifiers. A loudness switch permits the volume-balance control to function as a compensated loudness control. The LA-250A also features a 3rd channel output which may be used to feed a 3rd single channel amplifier and speaker to provide a wider sound spread, a Tape Output jack for recording purposes, plus dual terminations for 4, 8 or 16 ohm speakers.

Advanced circuitry includes DC operated preamp and tone control tube filaments for hum-free operation, 6CW5/EL86 push-pull output tubes, individual bias and balance adjustments on each channel and a hum balance control.

Lafayette introduces the KT-550 "Laboratory Standard" Dual 50-watt Stereo Amplifier Kit—the finest instrument possible to design and produce regardless of price. Advanced engineering concepts in audio design were used to achieve flawless performance at an output of up to 50 watts per channel for stereo operation or 100 watts combined for monaural. The sound reproducing capabilities of the KT-550 are in excess of the audible range... —1 db from 2 to 100,000 cps without evidence of ringing or instability. Perfect for low efficiency speaker systems. "Multiple loop" feedback design achieves very low distortion and high stability, with an absence of listening fatigue. Highest quality components were used throughout such as special massively designed output transformers, telephone grade electrolytics, and Corn-

ing deposited metal film glass case resistors. The 7027A output tubes are conservatively rated in the KT-550 to insure long life at lowest distortion levels. A well regulated power supply employing 4 silicon diode rectifiers is used. Engineered for the kit builder, two printed circuit boards virtually eliminate any possibility of error. Lafayette's famous step-by-step instruction manuals plus large pictorials provide ease of assembly equal to factory built units. Handsomely finished in contrasting brown and beige; control panel finished in brass. Complete with cover. Size: 17Wx12 $\frac{1}{2}$ Dx8 $\frac{1}{2}$ H. 105-120 V. AC 50-60 cycles. A TECHNICAL BREAKTHROUGH IN STEREO AMPLIFIER DESIGN!

**299<sup>50</sup>**

### FROM THE LAFAYETTE RESEARCH LABS — THE WORLD'S MOST ADVANCED STEREO AMPLIFIER!

Lafayette presents a basic stereo power amplifier so revolutionary in concept delivering a range of sound so flawless, performance so far advanced as to set new standards of professional audio component design. Years ahead in performance and design the LA-280 delivers a performance capability not only the equal of the finest tube-type equipment but in many respects superior. Using a total of 30 solid state devices (8 power transistors and 14 silicon rectifiers), the LA-280 develops 100 watts each stereo channel into a 4-ohm load. Its frequency response extends far in excess of the audible range, from  $\pm$ 0.1 db 15 cps to 20,000 cps; -3 db at 80 kc minimum. New circuitry techniques utilizing multiple feedback loops have achieved an unprecedented total of 70 db of feedback. Output transformers have been eliminated in the LA-280—unlike vacuum tube amplifiers which suffer from high distortion in the low frequency ranges due to non-linearity of the output transformers, LA-280 distortion levels are phenomenally low. Stability and square wave characteristics are of the highest order, far in excess of equivalent vacuum tube units.

Construction of the LA-280 is in keeping with its excellence of design. Wiring and construction are engineered to military standards. Specially designed transistors are hand selected for maximum performance. Computer grade electrolytics and fully potted massive power supply transformer are samples of the care and quality built into the LA-280. Its high power and revolutionary design enable it to effortlessly drive today's low efficiency speakers.

**ONE OF LAFAYETTE'S FINEST 12" SPEAKERS**

Constructed by master English craftsmen to Lafayette's rigid specifications, the "Lafayette SK-210 Sovereign 12" must be considered among the very finest 12" speakers available. Engineered to satisfy the most discriminating listener, the SK-210 achieves full 3 speaker performance through its advanced triaxial design. Woofer, midrange radiator and tweeter are all axially mounted within a single rigid, unitized die cast frame, to provide an integrated, efficient wide range speaker system. Construction features incorporate a 3 inch voice coil with an exclusive "Rigidflex" cone-bonding and cone-edge treatment process to form a virtually free-edged cone suspen-

sion. All irregularities of the audible frequency spectrum are smoothed out with standing waves and surround resonances eliminated. High efficiency and low distortion are further assured by use of a specially designed 2 1/4 lb. ceramic magnet. The quality of the Sovereign 12" is immediately evident in its uncompromising performance. Frequency response is 30-20,000 cps with a free-air woofer cone resonance of 35 cps. Bass response is tight and solid without boom or hangover to achieve a phenomenal realism. At 2000 cps, frequencies are channeled into a stiff-coned mid-frequency radiator by means of a smooth mechanical

- High-sensitivity allows use with any 4-16 ohm speaker
- Requires no high voltage or power supply
- Built-in 3,000 cycle crossover network

Achieve unequaled brilliance and musical warmth from your present speaker system or the system you're now planning. The Lafayette's Sphericon is an entirely new concept in tweeter design. Equipped with a built-in 3,000 cycle crossover network and featuring a specially designed domed phenolic diaphragm with spherical diffractor. The Sphericon produces a virtually linear response from 3,000 cps to beyond 40,000 cps, ± 2 db. to 22,000 cps. High frequencies are radiated in a 120° pattern in all directions, vertically as well as horizontally—with absolutely no trace of stridency or harshness. Unlike electrostatic tweeters the "Sphericon" is highly efficient and may easily be matched with any speaker or speaker systems... especially the low efficiency high compliance type. Precise matching of the "Sphericon" with today's low and medium efficiency speaker is accomplished by means of a special built-in attenuator designed not to affect or lower the efficiency of the woofer. As a result less amplification is needed assuring lower distortion. Power capacity is 30 watts. May be employed with any 4-16 ohm speaker. Recreates The Entire Audio Spectrum With Concert Hall Faithfulness—The Lafayette "Trihelix" represents a major breakthrough in three way speaker design. Fresh engineering concepts have resulted in a single 10-inch speaker designed expressly for use in bookshelf size enclosures, that delivers a quality of performance with the unmistakable feel, presence and clarity of a 3-way speaker system. The "Trihelix" is in effect a complete three-way high-fidelity speaker system, with three mechanically and electronically independent speakers mounted within a single 10-inch frame. Although they are individual units the 2-inch tweeter and 5-inch midrange speakers have been especially designed to complement the woofer. Special treatment of the cones and cone edges with polyester resins provides an even distribution of mid and high frequencies without peaks or resonances. To minimize interaction between the three cones both the midrange and tweeter units are mounted eccentrically or off center in relation to the woofer. In addition the midrange and tweeter are completely enclosed by a specially designed baffle. These unusual design features result in effectively eliminating intermodulation distortion due to interaction between woofer, midrange and tweeter cones—a

common fault in conventionally designed 3-way speakers. The specially treated woofer cone employs a revolutionary "conical stiffener" located at the apex of the cone in order to stiffen the diaphragm and eliminate "break-up," thus providing a true piston action. This carefully designed cone-stiffening procedure, in addition to its very high compliance, enables the woofer to deliver a smooth, crisp, solid bass that balances naturally against a crystal clear midrange and natural treble. A built-in electrical crossover network with crossover points at 1500 cps and 5000 cps, allows each speaker to reproduce its portion of the audio range smoothly and efficiently. An adjustable brilliance control permits matching of sound to room acoustics. SPECIFICATIONS: Overall Response 20-20,000 cps (30 to 18,000 cps ± 3 db). Free Air Resonance 35-55 cps. ### PHENOMENAL ELIPTOFLEX® PERFORMANCE

(Pat. Applied For)

FRONT VIEW

TOP VIEW

#### PERFORMANCE EXPLANATION

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provide an extremely smooth transition from duct to free air; broadens the frequency response and provide better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstrably superior throughout the audio spectrum.

- HIGH EXCURSION WOOFER WITH UNIQUE "CONICAL STIFFENER"
- HANDLES HEAVY BASS PASSAGES WITHOUT "DOUBLING"

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. The specially treated woofer cone has a unique "Conical Stiffener" at the apex which, coupled with its high compliance, enables the cone to operate in a piston-like manner—delivering a clean, powerful bass response. The 2-inch tweeter has its own voice coil and magnetic field. Special treatment of cone and cone edge provides even distribution of the high frequencies, with no peaks or resonances. The unusual off-center mounting of the tweeter and its elliptical baffle minimizes interaction between tweeter and woofer and insures an overall response free of intermodulation distortion. Electrical crossover from the woofer cone to the tweeter unit is provided by a built-in network. An adjustable brilliance control

### NEW LAFAYETTE SK-98 8" DUO-CONE HI-FI SPEAKER

- Mechanical 2-Way Design
- Overall Response 40-16,000 Cps.
- Large Magnet Structure
- Patented Cone Construction and Material
- High Excursion Woofer

**9<sup>95</sup>**

The dual-cone construction used in these high quality 8" speakers, provides the same type of wide-range response normally found only in true coaxial speakers or multiple speaker systems. Two separate cones act through a common voice coil. The outer edge of the tweeter cone is attached to the mid-section of the woofer cone; both cones "float" on flexible corrugated edges. This mounting results in true mechanical cross-over, so that both cones operate at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional characteristics and minimum distortion. Patented cone materials provide extremely smooth response over the range of 40-16,000 cps. Magnets are large and heavy, with a flux density of 10,500 gauss and total flux of 56,000 maxwells. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; free air resonance is 55-70cps; voice coil impedance is 8 ohms. Size is 8" diam., 4 1/4" deep and requires 6 3/4" diam. baffle opening. Shpg. wt., 5 1/2 lbs. Imported.

Outstanding Bandspeed, Selectivity with a built-in Q-multiplier, and sensitivity combine to make the HE-30 one of the "hottest" general coverage bandspeed receivers ever priced below \$200. For the crowded amateur bands—illuminated Slide Rule Dial, bandspeed with markings every 5 KCS on 80 and 40 meters (IT TAKES 16 REVOLUTIONS OF THE BANDSPREAD DIAL TO COVER EACH OF THESE BANDS), every 20 KCS on 20 and 15 meters, and every 50 KCS on 10 meters, plus an edgewise S-meter. For the SWL—a 0-100 logging scale for "instant reset" to a desired station plus coverage from 0.55-30 MCS. The 8-tube (plus a husky 5Y3 Rectifier) circuit provides an RF stage with an antenna trimmer for peak performance PLUS 2 IF stages for improved selectivity. The HE-30 utilizes a 5Y3 tube in a transformer Full Wave rectifier power supply for performance with a minimum of hum. Receiver sensitivity—1.0 microvolts for 10db Signal-to-Noise Ratio. The Built-in BFO can be used to separate CW stations by means of the pitch control, while the Q-multiplier adds the selectivity needed for crowded phone band operation. Front panel controls: FUNCTION SWITCH, AUDIO GAIN, SELECTIVITY (Q-Multiplier), FREQUENCY (BFO), BAND SELEC-

TOR, IF GAIN, TRIMMER, AVC-MVC SWITCH, ANL SWITCH, MAIN TUNING BANDSPREAD TUNING, and headphone jack. Selectivity — 60db at 10KC, 0.8 KC @ 6db (with Q-multiplier). IF — 455KCS, Speaker — External PM type (not supplied), 4 or 8 ohms impedance, Audio Output — 1.5 watts. Tubes — 6BA6 — RF Amplifier, 6BE6 Mixer, 6BE6 — Oscillator, 6AV6 — Q-Multiplier-BFO, 2-6BA6 — IF Amplifier, 6AV6 — Detector-AF Amplifier — ANL 6AQ5 — Audio Output, 5Y3 — Rectifier. NEW LOW PRICE

Enjoy the pleasure of handling phone patch traffic with this deluxe hybrid patch. Hybrid circuit permits use of AM or SSB with voice control by effectively isolating the receiver audio output from the transmitter audio input. Provides an accurate balance between 500-ohm line and station equipment—with negligible insertion loss. Four connections on rear for receiver output (voice coil, 3-4 ohms), transmitter input, station microphone, and telephone. Easy to operate after a few preliminary adjustments, all from the front panel. Null and balance controls are adjusted, with the aid of readings on the edge-wise panel VU meter, for balance and maximum receiver-transmitter isolation. Thus the receiver audio signal, which would ordinarily trip the VOX circuit, is balanced out from the transmitter audio section. The gain control is adjusted for proper transmitter and receiver audio level, VU meter continuously monitor's line level. The patch can be switched in and out by means of a front panel switch, so that it may be permanently installed. Compact, sloping cabinet will fit into any station arrangement. - SPOTTING SWITCH for Positive Frequency Location on Tuneable Receive
- NEW BUILT-IN SELECTIVE CALL CIRCUITRY AND SOCKET!
- ELECTRONIC SWITCHING

Quality engineering, design, and features give this Deluxe transceiver a place all-its-own in the Citizens Band Field. Operating within the limits prescribed by the FCC, the HE-20C supplies you with a highly efficient 2-way radio-telephone communications system from your office, truck, auto, boat, store, home, etc. Two or more will serve as an effective communications system over a distance of up to 20 miles or more, depending on the terrain and the height of the antenna.

3 dual-function tubes, 1-Quadri-purpose tube, 3 tubes, and 2 Silicon rectifiers give 14-tube performance. The transmitter section features precision engineering to insure power-packed communications. The 5 watt-input crystal-controlled transmitter may be operated on any 8 of the 23 channels assigned by the FCC. The operating channel can be selected by a knob on the front panel (transceiver comes with pair of crystals for channel 9). The receiver circuits provide for 8 crystal controlled receiving channels plus a tuneable superheterodyne receiver that covers all 23 assigned channels, with a sensitivity of 1 microvolt. Effective built-in Squelch circuit quiets the receiver when no signal is being received. Series Gate Noise Limiter materially reduces ignition noise and other unwanted interference. An illuminated dial with planetary vernier tuning is clearly marked with channel numbers and lights up when tuned to any channel. New tuneable or fixed receiver switch permits selection of tuneable and fixed receive operation. The receiver terminates in 4" speaker amply supplied by over 2 watts of audio power. The unit comes complete with a push-to-talk ceramic microphone that is conveniently mounted to the side of the transceiver. Push-to-talk operation is accomplished by reliable electronic switching. An illuminated "S" meter calibrated in S units 1-9 and to 30 db. above S-9, allows measurement of incoming signal strength. The meter is wired with a switch to enable monitoring of final amplifier relative wattage output and as indicator of transmitter efficiency. Features spotting switch for positive frequency location on tuneable receive. Incorporates PI-network for optimum matching to 30-100 ohm antenna for high signal output. A low-loss antenna jack is mounted at the rear of the cabinet to accept the popular PL-259 connector used with dipole, ground plane, rod, and direct

mounting (Lafayette HE-19). Antennas. Incorporates selective call circuitry plus input socket on rear of chassis for silent communications between calls when used with Lafayette HA-100 PRIVA-COM Selective Call Unit. ## 20,000 OHM PER VOLT SEMI-KIT MULTITESTER

- 20,000 ohms Per Volt DC
- 10,000 ohms Per Volt AC
- 40 Microampere 3" O'Arsonval Meter Movement
- Most Parts Already Mounted

This unit uses proven semi-kit construction with all major components pre-mounted and tested at the factory.

EXCEPTIONAL VALUE

**9<sup>95</sup>**

The semi-kit is a new concept in test equipment kits. All the important or difficult parts are already mounted. All that remains to be done is to mount and wire in a few small parts—a job so simple you'll finish before you realize it, and best of all, you'll have one of the finest high sensitivity multitesters on the market. When used in a circuit, the high input resistance on all DC and AC ranges does away with the highly inaccurate readings com-

mon to low resistance testers which load the circuit. Ranges: DC Volts, 0-10-50-250-500-1000; AC Volts, 0-10-50-250-500-1000; DC CURRENT, 0-500  $\mu$ a 0-10-250 ma; OHMS, 0-10K-100K-1 meg; DECIBELS, -20 to +36; PLUS 0-5000 henries and 250 mfd. to .02 mfd. Black case 5 $\frac{3}{4}$ x3 $\frac{3}{4}$ x1 $\frac{1}{2}$ ". Complete with test leads, all parts, and instructions and battery.

for reading 10 minutes after exposure should the first reading be below 10 r/hr. The Ratemeter may also be used in industry for determining protection in any isotope program. The Dosimeter records total radiation exposure and is calibrated from 0-600 roentgens.

## KAR-KOOL

Drive in Air Cooled Comfort All Summer Long Inexpensively

**29<sup>95</sup>**

NO MONEY DOWN

A fantastic new development in car comfort—cools air in seconds, instantly ends windshield fogging and steaming quickly clears tobacco smoke and odors. Here's how Kar-Kool works: using the principle of air expansion (expanding air is cooling air), the old air is drawn into the unit, compressed and released in an expanding state. The Kar-Kool motor runs at 4000 RPM which is produced by the car in motion, or directly from your 12 volt auto battery (uses only 2 1/2 amps). The air movement is 2200 feet per minute, through each of the two air vents. The entire air in the car is changed twice each minute, while at the same time drawing out dirt,

dust, tobacco smoke and odors. Operates with or without the car motor running. Equipped with mounting brackets, the Kar-Kool is quickly and easily installed under the car-dash by fastening two screws—operates off the cigarette lighter, or attaches to any live terminal in back of the dashboard. Attractive, sturdy extruded aluminum construction in contrasting black and silver. Now you can listen to the most dramatic sound of music ever heard inside a car with the Motorola R-200 vibrasonic reverberation sound system. The R-200 compensates for the absence of these reflected waves in a car by reproducing a second set of sound waves from a second speaker and acoustically mixing both sets of sound waves to deliver this new dimension in sound reproduction in a car. - 12 Transistors, Diode, and Thermistor • Crystal-Controlled Transmit and Receive • Superhet Receiver has AVC, Squelch, Push-Pull Audio Output • Optional Plug-in 117 Volt Power Pack

Another great Lafayette achievement in portable citizens band communication. The Model HE-100 represents a gigantic step forward in the design and performance of 100-MW power walkie-talkies.

The use of a separate microphone facilitates proper input impedance match. This results in excellent modulation with greatly improved transmitting range. No more compromises due to use of the speaker for input as well as output! Separate speaker and microphone assure maximum effective signal intelligibility even under difficult noisy conditions. Superhet receiver has variable squelch to reduce background noise. 12 transistor advanced design circuit is crystal controlled for both receive and transmit functions. Sensitivity is better than 1 microvolt for 10 db signal-to-noise ratio. Easy-to-use, lightweight... carry it anywhere for sports or business. Housed in a rugged hi-impact plastic case. Handy controls include push-to-talk switch, volume and variable squelch. Power is supplied by 8 miniature
