- Power Output 15-Watts
- Sensitivity: 3 mv. Magnetic Phono
- 5 Input Selections
- Frequency Response: 30-20,000 cps ±1.5 db At Normal Listening Level

The new Lafayette LA-218 is a perfect combination of outstanding performance, beautiful styling and low price. It can easily be integrated into a fully equipped hi-fi system utilizing the 5 input selections. Because of its high input sensitivity, either magnetic or ceramic cartridges may be used, achieving full power output. A tape deck, even without playback preamplifiers, may be used in direct recording through tape output jack and in playing back through tape-head input. Also may be used with AM, FM or TV tuner music sources. A loudness control compensates for the loss of low frequencies when listening at low levels—you do not have to listen at high volume level to achieve full tonal quality. A scratch filter is useful in reducing noise of dusty or damaged records. Headphone jack is provided for private listening. Individual bass and treble controls each provide a boost of +10 db and can be used to adjust the frequency characteristics of the system. Full 15 watts is sufficient power to adequately drive most speaker systems. Perfect for use as a second amplifier for converting to stereo or for setting up monophonically and adding stereo at a later date. Engineered to include every practical feature at a low, low price. Beautifully staved in popular low silhouette enclosure and will add beauty to any room décor. Size: 12¼"Wx5¼"Hx8¼"D. Shpg. wt.: 18 lbs. Imported.

Deluxe LAFAYETTE “Decorette III”
3 Speaker 3-Way System

Designed by Lafayette engineers—built by the foremost English Hi-Fi Speaker manufacturer to Lafayette’s rigid specifications.

Features:
• Newly Developed 12” Poly-Foam Woofer with 1 lb. magnet and A Free-Air Response of 35 cps.
• 6” Closed-Back Mid-Range Speaker
• Specially Sealed Cone-Type “Super” Tweeter
• Specially Engineered “Tuned” Enclosure with Tube-Type Duct For Superior Bass Response
• Smooth Overall Response From 30 to 30,000 cps
• Crossover At 5,000 cps
• Power Rating—Up To 25 Watts Continuous, 50 Watts Instantaneous Peak
• Nominal 8 ohms Impedance

The enclosure is a bass reflex design using a ducted port of the tube type which is proportioned to provide correct acoustic “tuning” of the enclosure. This arrangement provides a special path for the sound waves radiated from the rear of the woofer so that they emerge “in-step” with those radiated from the front of the woofer. This provides a substantially greater bass sound power from the system. Solid 9/16” wood construction, internally braced, plus the liberal use of sound absorbent material, ensures an extremely rigid enclosure, free of undesirable resonances. A special 12” woofer covers the range to 2,000 cycles and employs a foam-treated cone that contributes greatly to the efficient, distortion-free bass reproduction. A 6” midrange speaker covers the 2000 to 5000 cycle range and is of the closed back type to prevent interaction with the woofer. A 3½” cone-type “Super” tweeter, also with closed back, provides coverage from 5000 cycles to beyond audibility (30,000 cps). All three speakers are acoustically matched and provide a well-balanced and smooth sound output over the entire range of the system.

NEW LAFAYETTE ULTRA-COMPLIANCE 2-WAY SPEAKER SYSTEMS

VERY SMALL IN SPACE—LESS THAN 1 CU. FT.
• Frequency Response 40-16,000 cps
• Especially Designed Vented, Tuned Duct Type Enclosures
• Unique Mechanical 2-Way Speaker With Heavy Magnet
• Enclosure Finished on 4 Sides • Excellent For Stereo

FULL SIZE PERFORMANCE—These outstanding Lafayette Ultra-Compliance 2-way speaker systems achieve a purity of sound and musical quality that is astounding from a speaker system occupying less than one cu. ft. of space. A perfect speaker for use anywhere in your home or office ... makes ideal extension units or use in pairs for stereo.

These Ultra-Compliance 2 Way Systems feature a unique dual cone speaker with heavy magnet structure, employed in a specially designed tuned ducted port enclosure. Both tweeter and woofer “Heat” on flexible, corrugated edges, with the outer edge of the tweeter cone attached to the mid-section of the woofer. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone radiates high frequencies. The same type of wide-range frequency response as found in true coaxial or multiple speaker systems is achieved in these unique “Ultra-Compliance” Speaker Systems. Frequency response is 40-16,000 cps—Impedance: 8-16 ohms.

Available in rich mahogany or oiled walnut. Finished on four sides—place it horizontally on its side or vertically on its base. Easily adapts to bookshelf placement or modular use. Dimensions are only 10¾”Hx18¾”Lx8¾”D. Shpg. wt., 15 lbs. Imported.

Lafayette is Headquarters For the Hi-Fi Enthusiast
**PHENOMENAL ELIPTOFLEX PERFORMANCE**

1. Newly Designed Elliptical Port
2. Specially Engineered Diffracting Ring

U. S. Patent No. 3,089,562

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provides an extremely smooth transition from duct to free air, broadens the frequency response and provides better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate "Eliptoflex" performance is demonstratively superior throughout the audio spectrum.

The "Eliptoflex"...

1. Meets space requirements of stereo.
2. Utilizes the full advantages of efficient 12" speaker performance.
3. Provides optimum performance without use of large wattage, expensive amplifiers.

The "Eliptoflex" utilizes a unique elliptical port which broadens frequency response and provides better transient response. A specially engineered diffracting ring eliminates cancellation effects between front and rear radiation. These engineering advances when coupled with the famous Lafayette free-edge SK-58 12" coaxial speaker with 3" cone type tweeter, 1/4 lb. TSK-5 high flux density magnet, — special 3/4" wide sheepskin cone-edge suspension and built-in crossover network plus level control offer a magnificent speaker system. (See listing below.)

"Eliptoflex" achieves a degree of natural smoothness, low-distortion and rich robust bass hitherto found only in large enclosure speaker systems or inefficient bookshelf speakers requiring high powered amplifiers. Due to its highly efficient design characteristics the "Eliptoflex" does not require costly high wattage amplification.

The "Eliptoflex" speaker system is beautifully finished on 4 sides in a variety of hardwood veneers for attractive room placement either horizontally or vertically. Dimensions are 14Wx23½Hx13⅞D.

work and Brilliance Control Extremely Efficient High Excursion Woofer Ideal For Stereo

Recovers The Entire Audio Spectrum With Concert Hall Faith-
fulness—The Lafayette "Trihelix." Fresh engineering concepts have resulted in a single 10-inch speaker designed expressly for use in bookshelf size enclosures. The "Trihelix" is in effect a complete three-way high-fidelity speaker system, with three mechanically and electronically independent speakers mounted within a single 10-inch frame. Although they are individual units the 2-inch tweeter and 5-inch midrange speakers have been especially designed to supplement the woofer. Special treatment of the cones and cone edges with polymer resins provides an even distribution and high frequencies without peaks or resonances. To minimize interaction between the three cones both the midrange and tweeter units are mounted eccentrically or off center in relation to the woofer and are completely enclosed by a specially designed baffle. These unusual design features result in effectively eliminating inter
modulation distortion—a common fault in conventionally designed 3-way speakers. The specially treated woofer cone employs a revolutionary "conical stiffener" located at the apex of the cone in order to stiffen the diaphragm and eliminate "breakup," thus providing a true piston action. This carefully designed cone
stiffening procedure, in addition to its very high compliance, enables the woofer to deliver a smooth, crisp, solid bass that balances naturally against a crystal clear midrange and natural treble. A built-in electrical crossover network with crossover points at 1500 cps and 5000 cps, allows each speaker to reproduce its portion of the audio range smoothly and efficiently. An adjustable brilliance control permits matching of sound to room acoustics. SPECIFICATIONS: Overall Response 20-20,000 cps (30 to 18,000 cps ± 3 db). Free Air Resonance 35-55 cps. Impedance 16 ohms. Power Rating: 20 watts Average Program Material. Cross
over Points: 1500 & 5000 cps. Overall Diam: 10". Overall Depth: 7". Baffle cut-out: 8¾". Screw type terminals are color coded for quick easy connection of amplifier leads. Shpg. wt., 8 lbs.

LAFAYETTE'S Popular MINI-DUCT® SPEAKER ENCLOSURE

A universal ducted-port bookshelf enclosure engineered for use with 1, 2 or 3-way speaker systems.

- SOLIDLY CONSTRUCTED OF 3/4" WOODS
- START WITH A SINGLE SPEAKER AND BUILD INTO 2- OR 3-WAY SYSTEM LATER
- ACOUSTICALLY LINED THROUGHOUT
- AVAILABLE IN A VARIETY OF 4-SIDED FINISHES

Now limited space need not necessarily mean limited sound. Thiy Lafayette Mini-Duct is acoustically designed to achieve smooth, distortion-free reproduction with a remarkably full, clean extended bass response that gives no indication as to its small size. Reducing boards are supplied so that the Mini-Duct will accept an 8" Woofer. 6" Mid-Range and a variety of tweeters. This versatility makes it possible to start with an 8" speaker and eventually build into a 2-way or 3-way speaker system. Solidly constructed of 3/4" veneers the Mini-Duct is beautifully finished in a variety of fine veneers on 4 sides. Designed for attractive horizontal or vertical placement anywhere in your home with dimensions 23Wx11½Hx11½D. Shpg. wt., 23½ lbs.

LAFAYETTE SK-98® 8" DUO-CONE HI-FI SPEAKER

The dual-cone construction used in these high quality 8" speakers, provides the same type of wide-range response normally found in true coaxial speakers or multiple speaker systems. The woofer and tweeter cones "float" on flexible corrugated edges. This mounting results in true mechanical crossover, so that both cones operate at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional characteristics and minimum distortion. Patented cone materials provide extremely smooth response over the range of 40-16,000 cps. Magnets are large and heavy, with a flux density of 10.500 gauss and total flux of 56,000 maxwells. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; free air resonance is 55-70 cps; voice coil impedance is 8 ohms. Size is 8" diam., 4½" deep and requires 6½" diam. baffle opening. Shpg. wt., 5½ lbs. Imported.

Baffle Design

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. "TRANSDOTHERM" PRECISION ELECTRONIC CLINICAL THERMOMETER

- Direct Reading—Large Easy-to-Read Dial
- Portable—Use It Anywhere • Unbreakable Corrosion Resistant Stainless Steel Probe
- Teflon® Insulated Cable • Light Weight—Only 4½ oz.
- Accurate to ± 1% • Battery powered

An advanced space age device which is infinitely superior to ordinary glass or metal thermometers and rivals similar units costing two to five times as much. The perfect temperature instrument for a variety of industrial and laboratory uses such as viscosity, calorimetric, distillations, cloud chambers, etc. Gives accurate readings in less time than it takes you to read this paragraph! The fantastic accuracy of ± 1% is achieved through its 9°F to 108°F range by individually calibrating each probe during manufacture. The non-corrosive stainless steel probe is integrally attached to a highly flexible teflon cable. This construction makes the cable inert to almost all chemicals and solvents except molten alkaline metals and fluorine at certain elevated temperatures. Readings are unaffected by vibration which is useful with checking stirrers of blowers. Unlike other electronic thermometers, the accuracy of the Transotherm is not affected by battery fatigue or meter precision eliminating the need for periodic recalibration or battery replacement. Fully contained in rugged, hi-impact plastic case. Size: 4¾" x 2¼" x 1¼". Includes compartmented case and instructions. Shpg. wt.: 3¼ lbs. 7F-824L Clinical Thermometer 94-108°F...

For the busy scientist, engineer, teacher,
businessman or student who must keep basic
information on file. Now the Geniac Porta-
ble Memory Unit, (PMU), a low cost infor-
mation retrieval system can conservatively

ical parts or gadgets. Sorting is by rods. In-
formation is coded into the cards by matching
prepunched holes around the edge of the
card. No previous knowledge is necessary.
Once coded the card is filed at random and
will automatically appear during sorts for
the various categories. Serves as a useful
adjunct to company integrated informa-
tion systems. The basic PMU contains a

### MOTOROLA TRANSISTOR IGNITION SYSTEM

**37.50**

$5 Monthly

Automatic ignition systems long have been responsible for a large share of fumes and fuel consumption, as well as emergency servicing. Deterioration of breaker-points, condenser and spark plugs are the most frequent causes as trouble. As plugs become fouled, it takes more voltage to fire them — voltage that conventional systems do not provide because the breaker points would have even shorter life. With this transistorized system, only a small amount of current is needed to "trigger" the much larger coil current and the condenser is eliminated. Circuits are separated so only the triggering current passes through the points. An advanced high turns ratio coil is incorporated, Voltage does not roll off at higher engine speeds. Points do not burn. Gas mileage increases as does the acceleration

**LAFAYETTE ILLUMINATED AMMETER & OIL PRESSURE GAUGES**

- Complete with Cable and All Standard Fittings 4.99  

Keep a constant check on the condition and performance of your car’s electrical and oil pressure systems. The ammeter calibrated in 60-0-60 scale measures the actual rate of current flow ... helps prevent generators from burning out and overcharging or discharging the battery. Exact oil pressure from 0 to 80 lbs. is indicated. Easily installs in any 6 or 12 volt car below the dash, without drilling or can be mounted right in the dash. Both meters are mounted in an attractive chrome panel. Easy to read meters feature 1¾" diam, black dial faces with calibrations in white. Size: 5¾ x 2¾ x 2½". Supplied with 6 and 12 volt bulbs and wire, all necessary fittings plus full instructions.

**MOTOROLA ALL-ELECTRONIC ALTERNATOR SYSTEM**

- Guaranteed For 3 Years (or 30,000 Miles)*

Low cost solution to the heavy demands made by your car on its electrical system ... Unlike D.C. generators, it supplies a charge at idle speeds and keeps the battery at a uniform high level of charge. The all-transistor voltage regulator has no contact points to stick or burn. Fills all domestic cars with 12-volt, negative ground electrical systems. The complete system includes: Alternator (with standard-size pulley); all-transistor regulator (with all connecting wires); universal mounting bracket; instructions for installation.

**24.95**

- Full Power at High RPM  
- Eliminates Point Giggling and Condenser  
- Easier Starting Especially in Winter  
- Includes Relay for High Current Switching

This 2-transistor ign. system will take the needless burden of high cranking on any weather, and automatically directs all power spark even at speeds exceeding 10,000 RPM. Modern 2-transistor circuit switches and controls the coil primary circuit through a combination amplifier-electronic switch action. Reduces point current to a low value and with proper use extends their life to the life of the car. Carries 100% primary current to over 20,000 RPM. A special low-inductance design coil delivers constant full voltage at all speeds. Full high spark voltage to over 10,000 RPM. Spark plugs last longer due to complete burning of fuel. Condenser replacement and problems are eliminated because the system eliminates the condenser altogether. Switching relay relieves ignition switch drain and loss of power due to long wires. High gas mileage and low timing make use very efficient. Transistors are removable and unit is serviceable! System includes double insulated coil, epoxy potted amplifier, ballast, and relay. LAFAYETTE ENGINE DIVIDED SLIDE RULES

NEW! LAFAYETTE® VECTORLOG™ SLIDE RULE

The Slide Rule for Communications Engineers and Physicists

- Laminated Bamboo Construction
- P'q' and Q Scales
- For Direct Vector Addition
- Hyperbolic Sine and Tangent Scales
- Two Sine Scales—One Marked in Degrees, One Marked in Radians
- 5 Log Log Scales Plus a Voltage DB Scale
- Complete with Belt Carrying Loop and Leather Case

The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick easy manipulation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P'q' and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums; these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage of these dynamic fields. VECTORLOG is the result of extensive tests for ease of manipulation. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in all degrees and radians, removing the necessity of bothersome conversion of units: A problem-tested location of scales; and adjustment allows to toggle variable angle of the slide. Scales include: (FRONT) TR-1, TR-2, P', P, O, D, S, L-01, L, D, LLO1, LLO2, LLO3, LLL1; (REAR) SH-1, SH-2, DF, A, B, CI, CF, TH, C, D, LL3, LL2, DB, with instruction book, leather carrying case, and belt carrying loop. Lafayette introduces an ingeniously designed 5-watt solid state, dual conversion superheterodyne, CB transceiver. The exciting Lafayette HB-500 packs a real wallop over distances up to 20 miles or more depending on terrain and antenna height. Its 15 transistors (9 are silicon mesa), 4 diodes, 1 zener diode and 1 thermostat provide instant and cool performance with low current drain. The 100% modulated 5-watt, crystal-controlled transmitter may be operated on any of 12 or the 23 channels. The receiver circuits provide for 12 crystal-controlled channels plus a tunable superheterodyne receiver that covers all 23 channels with a selectivity of better than 1/2 microvolt on 10 db SINAD ratio. The receiver employs a specially designed 455KHz mechanical filter for 50 db adjacent channel rejection and excellent selectivity. An automatic noise limiter and adjustable squelch circuit assures low noise performance. The receiver terminates in a 3½” speaker led by a 2.7 watt push-pull amplifier. Other features include; a spotlight switch, illuminated channel selector and vernier dial tuning, an “S” meter and earphone jack. NEW! LAFAYETTE Deluxe 23 Channel Crystal Controlled Dual Conversion 5 Watt CB TRANSCEIVER MODEL HB-400

With ADVANCED FULL WAVE "RANGE BOOST" CIRCUIT.

★ Frequency Synthesized Circuit Provides 23 Crystal-Controlled Transmit & Receive Channels—No Extra Crystals to Buy!
★ Dual Conversion Receiver With 3/10 uv Sensitivity
★ Advanced Dual Zener Diode Full-Wave "Range Boost" Circuit
★ Triple Crystal Delta Tuning Offers "Fine Tuning" of ±2.5 KC on Receive
★ Push-to-Talk Microphone & Electronic Switching
★ Variable Squelch, Variable Noise Limiter
★ Built-in 117V AC & 12V DC Power Supply
★ "Var-Tilt" Mounting Bracket for Easy Mobile Installation

Efficient, dependable 2-way communications in any fixed or mobile application is assured with this rugged, new 5-watt CB transceiver. A military-type frequency synthesizing circuit makes it possible to transmit and receive over the full range of 23 channels with crystal-controlled accuracy. Ten extra crystals are used in this circuit to buy and install! A zener diode full wave range-boost circuit increases the average depth of modulation during transmission and thus increases the average power in the sidebands. The result is improved transmission and terminations within the 5-watt limitation imposed by the FCC! And, the "Range-Boost" system in the HB-400 is fully compatible with existing CB transceivers. Highly efficient circuit designs use 13 transistors (including two zeners) and 8 diodes to provide top performance under a wide range of operating conditions. Dual-conversion receiver offers .3 uv sensitivity and low noise—plus excellent adjacent channel rejection. Includes every needed feature for optimum reception—crystal-controlled "fine tuning" capability of ±.25KHz (Delta Tuning), high-efficiency variable noise limiter, variable squelch, and Automatic Volume Control. Also included is an illuminated meter which indicates relative RF power output or received signal strength in "S" units. The transceiver is equipped with ceramic push-to-talk microphone and uses reliable electronic transmit-receive switching. Operates in a fixed or mobile location with equal ease...has built-in power supply for either 117V AC or 12V DC. Specially designed "Var-Tilt" mounting bracket simplifies mobile installation—permits fast removal of the transceiver too! And, there's nothing else to buy—just get all crystals and a built-in vibrator for 12V DC, plus 2 power cables. Measures a compact 12W x 5H x 10D (including controls and plugs at rear). HIGHLY SELECTIVE MECHANICAL FILTER
For Unsurpassed Rejection of Adjacent Channel Interference
With CB channels only 10 Kc apart, selectivity is important! In the HB-500, ultra-sharp selectivity is achieved by means of a true mechanical bandpass filter in the 455 Kc IF section. At 10 Kc on either side of the center frequency, the filter provides 60 db of attenuation. The filter consists of three sections—an input transducer, a mechanically resonant filter, and an output transducer. The mechanically resonant section consists of six metal disks supported and coupled by a thin rod. The use of this filter results in an IF bandpass curve which is almost rectangular in shape, with superior "skirt" selectivity.

LAFAYETTE "PRIVA-COM"™ SELECTIVE CALLER

The "Priva-Com" Selective Caller, when in "Standby" position, silences the speaker of the transceivers to which it is connected. When the "Priva-Com" call switch is actuated at either base or mobile, the transmitted dual tone signal is received by the other "Priva-Com" its indicator light goes on and the speaker is automatically activated. You can now speak or listen to the calling station. The light stays on until manually reset. If the car horn or an external alarm is connected to the "Priva-Com" terminals the received dual-tone signal causes the horn or alarm to sound for 1 second. Both base and mobile stations can initiate calls and monitor the air at anytime. Cable terminates in plug which mates with Lafayette 5-pin plug as complete with mounting bracket and instructions.
