• Powerful Handling Capacity—30 Watts
• Powerful 10" Woofer with 1 lb. Magnet
• "Tuned" Enclosure with Tube-Type Ducted Port
• High Frequency Brilliance Control
• Overall Response 30-19,000 Cycles

An unusually compact speaker system that delivers really "big" sound. Enclosure is a bass-reflex design using a ducted port of the tube type to provide proper acoustic "tuning." The tube provides a special path for the low frequency sound waves radiated from the rear of the woofer so that they emerge "in-step" with those radiated from the front and thus provides substantially greater bass sound power from the system. Solid wood construction, plus the use of sound absorbent material ensures an extremely rigid enclosure, free of undesirable resonances. A powerful 10-inch woofer provides reproduction of the low frequencies. A 4-inch cone-type tweeter provides reproduction of the mid-range and high frequencies (to beyond Audibility) and is of the closed back type to prevent interaction with the 10-inch woofer. Smooth transition is achieved by means of electrical crossover at 2800 cycles. Features high frequency brilliance control at rear of cabinet. Dimensions are 21½Wx11¾Hx10¼" D. Overall frequency response: 30-19,000 cycles; nominal impedance: 8 ohms; power handling capacity: 30 watts program material. Shpg. wt.: 30 lbs. Imported. Oiled walnut finish on 4 sides.

- Lights Up When You Transmit
- Visibly Verifies Your R.F. Output
- Guides CB Mobile to Your Location

The "Speakin Beacon" is an exciting new concept in CB antennas. This deluxe omni-coaxial CB Base Station antenna lights up when you transmit. A red neon light at the top of the antenna is triggered by Radio Frequency energy when the microphone of your CB Transceiver is keyed. No separate wires are required for hook up to neon light. You now can visibly verify your R.F. output, and guide CB mobiles to your location. Static-light ball surrounds neon light and dissipates static discharge, minimizing noise build up. Exclusive Range Boost circuit greatly increases the average talk power. Fine tuning
vernier control with 2.5 KC total bandspread simplifies precise zeroing-in on frequency.
Highly selective circuits greatly supports adjacent channel interference (—45 db) and a
variable squelch effectively quiets the receiver between calls. Switchable power level allows
operation at 100 milliwatts for transmission over short distances. Illuminated front panel
meter shows relative RF output in transmit position and doubles as an S-meter during
reception. Front panel switch converts transceiver to a handy 4.5 watt public address
amplifier. Comstat 25 features push-to-talk relay switching and a plug-in ceramic
microphone with coiled cord. Rear socket is pre-wired to accept Lafayette PRIVA-COM
selective call unit. Supplied with vari-tilt mounting bracket. Size: 12Wx8½Dx5¾H". Imported.
