CONVERT to a Derived 4-Channel Stereo System with the Lafayette QD-4 4-Channel Adapter

29⁹⁵
With All
Connecting Cables

- Derive 2 Extra Channels from Your Records, Tapes, and FM Broadcasts
- Compatible with 4-Channel Encoded Records
- Features Exclusive Lafayette Gearing Control Mechanism

Add the Lafayette 4 Channel Stereo Adapter and two additional speakers to any existing stereo amplifier or receiver and enjoy multidimensional derived 4-channel stereo sound from regular 2-channel stereo records, tapes, and FM broadcasts. In addition, the adapter is compatible for use with 4-channel encoded source material. The Lafayette 4-Channel Adapter actually recovers "reflected" sounds that already exist on regular stereo recordings but are "hidden" during conventional 2-channel stereo playback. During a stereo recording session, the microphones pick up two types of sounds: direct and reflected, both of which are always included on a stereo recording. Because of the limitations of a conventional stereo system with 2 speakers in the front only, the reflected sounds are not reproduced. The Lafayette 4 Channel Adapter recovers these "reflected" sounds and reproduces them thru two additional rear speakers along with the direct sound from the existing front speakers. Now, the acoustics of the original recording location have actually been intro-

duced into your own listening room. This adds a dramatic new dimension to all existing 2-channel stereo programs—the sound literally envelopes you and becomes astonishingly "live". Unlike others, this adapter preserves full channel separation and does not require an additional stereo amplifier. Connects to any standard stereo amplifier or receiver and 4, 8, or 16 ohm speakers. For even better results from your records, we recommend the Lafayette/Pickering Phase 44 magnetic stereo cartridge (See page 32). The Adapter has a 4-position Function switch (Balance, 4-CH, Front Speakers, Rear Only), plus a Rear Speaker Level Control. Phono jacks on rear for easy hook-up to 4 speakers and amplifier/receiver. 3 pairs of cables supplied with phono plugs at one end. One 6 ft. pair for adapter to receiver, one 15 ft. pair for adapter to front speakers, one 25 ft. pair for adapter to rear speakers. Dimensions: 5¼Wx4¼Dx2¾H. Imported.

This 100-watt stereo receiver is one of Lafayette's finest with its distinctive styling and advanced solid state circuitry, truly a thing of beauty with top-notch stereo performance. The large tuning panel is black when the power is off, thus blending harmoniously even with the most luxurious decors. When the power is turned on, the tuning meter, FM Stereo indicator and AM and FM dials light up and are revealed with the utmost clarity, thus enhancing the attractive appearance of the LR-775 and that of the room in which it performs. Another styling innovation is the aluminum and black knobs which contrast nicely with the gold anodized brushed aluminum panel trim. The LR-775's sensitive FM Stereo circuitry will receive even the weakest signals while maintaining excellent fidelity and freedom from distortion. The AM tuner section offers very good selectivity plus a built-in, flexible-mount ferrite loopstick antenna for optimum

sensitivity. A meticulously designed amplifier section gives faithful reproduction with more than adequate volume from any program source. Output transistors are fused for full overload protection. The LR-775 also has a selector switch for Aux Phono, FM, MPX Filter, and AM; Front and Rear panel jacks for tape outputs; Rear panel stereo inputs for magnetic and ceramic phono, Aux, Tape Record, and Tape Play; and one switched plus one unswitched AC convenience outlets. 13¼" VECTORLOG® SLIDE RULE

17⁹⁵

- Laminated Bamboo Construction

The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick-easy manipulation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P, P, and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums—these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage for ease of manipulation. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in both degrees and radians, removing the necessity of bothersome conversion of units: a problem-tested location of scales; and adjusted screws to allow variable tension on the slide. Scales include: (FRONT) Tr-1, Tr-2, P, P, Q, ST, S-1, S-O, C, D, LL01, LL02, LL03, LL1; (REAR) Sh-1, Sh-2, DF, A, B, CI, CF, Th, C, D, LL3, LL2, db. Logix ELECTRONIC COMPUTER KIT

29⁹⁵

- Absolutely Safe—No High Voltage
- No Soldering
- Over 425 Parts
- 39 Different Programs
- 112 Page Detailed Illustrated Instruction Manual

Provides an insight to the Complex World of the Computer

The Logix electronic computer provides an introduction to computer technology by means of numerous experiments and programs. Its fundamental principles correspond to those of infinitely larger computers systematically showing what makes them work and how they can be used. "Snap-In" type parts simplify assembly of the console. Once assembled its manual details 39 different programs, progressing from very simple to more and more complex ones. Setting up a program simply involves connecting wires on the top side of the console exactly as shown in a wiring scheme. With each program is learned the logic that goes with it. You can play computerized games with an opponent, or match wits with the computer. Computerized weather forecasting is obtained by use of weather

input. Similarly, the computer can diagnose illness and recommend therapy. You can program airline bookings, routing of long distance telephone calls, mixing of complex colors, translation of languages, detection of criminals and investigation of cybernetic problems. Nine advanced programs deal with the binary system, complex mathematical calculations, Venn diagrams and the law of sets as well as playing a game of computerized chess. In addition provisions are made for individuals own creative programming. Kit is complete with 112 page manual, less flashlight battery. wt., 2½ lbs. Imported.

SOLID-STATE TREASURE/METAL LOCATOR

- Gives Positive Variable Audible Signal Indicating The Presence Of Buried Coins And Metal Objects
- Locates Both Ferrous Metals (Iron, Steel, Tin) And Non-Ferrous Metals (Gold, Silver, Copper)
- New Design Using Integrated Circuit

Pays for itself many times over . . . opens up a new world of excitement and adventure. Electronically detects metal objects as small as a half-dollar up to 6 inches beneath the ground: gold, silver, coins, anything metallic. No meters or dials to check; solid-state integrated circuit gives positive audible low frequency beat heard through a built-in 2¼" speaker whenever a metal object is approached. Audible signal intensity increases when the treasure/metal locator draws nearer the object. Practical for home and public utilities (gas and telephone servicemen) too. Helps locate plumbing inside walls, or find pipes in yard or garden before digging. Epoxied super-sensitive 6½" coil is shock, heat and water resistant. Special shield increases sensitivity, prevents false indications. Lightweight and easy to use. 36" handle collapses to 20" for easy storage. Not a kit—electronics completely factory wired and tested—merely requires attachment of loop and handle. Uses single 9v. transistor battery (not supplied). Overall length: 40"; housing 4x5x2¾". VALKYRIE-2 ROCKET KIT

- Launched Mechanically or Electrically

Here is an authentic, educational and yet entirely safe rocket kit for modelers and hobbyists which demonstrates the principles of rocket propulsion. The propellant releases no heat, is non-flammable, non-toxic and non-explosive. The 18 1/2 inch long Valkyrie-2 which blasts off to 1000 feet, can be safely held in hand. Uses durable polished aluminum rocket, engine and parts, with real working valves, separator and parachute. At liftoff, the rocket starts slowly at 4 "G's," with acceleration at burnout about 10 "G's." A timer assures deployment of the parachute which returns the rocket for another launch. May be either mechanically or electrically launched with a battery (not supplied). Complete kit includes rocket, engine, timer, separator, parachute, balsa nose cone, fins, loading valve and hose, electric firing assembly, launch stand, one can of propellant, accessories and instructions. VIKING TWO STAGE ROCKET KIT

The Viking is a complete, high performance, functioning two stage rocket with staging mechanism for in-flight separation. The first stage boosts the rocket to about 75 feet where a "burn-out" signal triggers the second stage engine. This accelerates to a velocity of 300 feet per second (200 miles per hour) while the first stage drops away. This velocity carries the second stage well over 1000 feet, where a parachute is automatically deployed to return it. All parts are recovered for future flights. Both engines are the same—re-loadable, highly polished aluminum construction, pre-assembled and factory tested, each using 2 ounces of propellant per flight. The kit is complete including launcher, 15 ounce can of propellant, clear, concise instructions and a booklet on the principles of multi-staged rockets. Size 20" long x 1" dia. Shpg. wt., 3 1/4 lbs.
