4 CHANNEL
THE MOST SPECTACULAR SOUND
EVER REPRODUCED ON
A STEREO RECORD!

NEW! LAFAYETTE SQ-M 4-CHANNEL DECODER —
With this new decoder you can convert your present
home stereo equipment to play SQ records. The Col-
umbia SQ 4-Channel Quadraphonic record is the
latest development in 4-channel high-fidelity com-
ponents. With separate signals in each of 4 channels,
the SQ record provides a startling and brilliant listening
experience. It puts the listener right into the
room where the performance took place. The result
is the most natural sound possible in the home. SQ
records can also be broadcast on FM stereo radio and
received in the home as 4-channel sound with the
SQ Adapter. A conventional 2-channel stereo system
requires adding the SQ adapter, an additional stereo
amplifier, and 2 more speakers. Present 4-channel
systems not incorporating SQ circuitry only require
an SQ Decoder. The SQ-M Decoder also includes the
exclusive Lafayette Composer Circuit for deriving 4
dimensional sound from 2 channel records, tapes,
and FM broadcasts. A Master Gain Control adjusts
sound level for all 4 channels. Also includes a mag-
netic input for use with amplifiers or receivers not
incorporating a magnetic phono input feature. Size:
6W x 2 7/8H x 7 7/16" D. For 105-120 VAC 50/60 Hz. Im-
ported. Shpg. wt.. 6 lbs.

Matrix SQ 4-Channel Encoded Records
An advanced patented circuit developed by CBS Laboratories which decodes with a greater degree of separation and localization than other matrix systems. Already built into the LR-440, it makes possible decoding and playback of SQ records and SQ tapes as well as SQ records transmitted on FM stereo stations.

"Composer" Matrix 4-Channel
Built-in composer circuitry that recovers 4-Dimensional sound already present in most 2-Channel stereo records, tapes and FM broadcasts. Also decodes 2-channel records especially encoded with 4-channel information.

In addition the LR-440 takes your present conventional 2 channel FM stereo broadcasts, stereo records and stereo tapes and through its built-in "Composer" circuitry recreates from this material amazingly rich 4-dimensional sound. It also features an FM detector output jack for obsolescence-proof accommodation of any plug-in adapter required for reception of FM multiplex 4-channel broadcast system under consideration by the Federal Communications Commission. 4-Channel Sound is the latest advancement in recording technology. 4-channels makes recorded sound more natural and realistic. Four channel stereo makes you more of a participant in music than has ever been possible before. There are sounds and dimensions you did not know existed. Never before could you actually reproduce in your home the original recorded performance as it happened—you can have the spatial quality of the original concert hall right in your own living room—or you can literally be placed in the middle of a folk or rock session with your favorite singer or group.

4-channel stereo comes on tape, on records, and over the air via FM stereo broadcasts. There are 3 basic kinds of 4-channel sound: Discrete, SQ Matrix, and Derived.

1 DERIVED 4-CHANNEL

Conventional 2-channel material—records, reel, cartridge and cassette—whether played directly or when broadcast on FM stereo—contains special information not adequately reproduced by the conventional 2-channel stereo system. This material is "Ambience"—the original acoustics of the recording studio or concert hall, etc. This ambience can be extracted and reproduced through 2 additional channels to recreate the sound and feel of the hall or studio in which the original performance took place. This form of 4-channel sound is derived from conventional 2-channel stereo discs or via FM stereo broadcasts. If you now own a 2-channel stereo system, you may achieve derived 4-channel sound by adding a Lafayette QD-4 adapter and 2 speakers. No additional amplifiers are needed.

2 4-CHANNEL SQ MATRIX

A method developed by Columbia (CBS) of recording and playing back 4 separate channels of musical information on a phonograph record (disc). This is accomplished by a system of encoding (matrixing) 4 separate channels onto a stereo record groove. 4-channel SQ records can be broadcast via FM stereo. Playback equipment with SQ circuitry decodes the original 4 channels and reproduces them through 4 separate amplifiers and 4 separate speakers. No special record changer or cartridge is required. This form of 4-channel sound is produced from any SQ processed disc, whether played directly (or via FM stereo broadcasts) with Lafayette equipment incorporating SQ 4-channel circuitry or with the Lafayette SQ-M decoder. The decoder requires the addition of 2 channels of amplification and 2 speakers.

3 DISCRETE 4-CHANNEL

A method, presently limited to tape, in which the 4 separate signals are recorded onto 4 separate tracks, which in turn are played back by a 4-channel tape machine. This form of 4-channel sound is produced from any 4-channel stereo tape, whether cartridge or reel (and, in all probability, in the not too distant future, cassette). You require 4 channels of amplification and 4 speakers in addition to the 4-channel tape machine. If you now own a 2-channel stereo system, you may convert to discrete 4-channel by adding the Lafayette LA-424 amplifier, the RK-48 tape deck and 2 speakers.
FOR YOUR GREATER STEREO PLEASURE!

4 CHANNEL STEREO

LAFAYETTE 170-Watt Compatible 4-Channel Stereo Amplifier

Now you can hear the full performance in true dimensional depth not just a part of it... from discrete 4-channel 8-track cartridges, discrete 4-channel reel-to-reel tapes and, when they are available discrete 4-channel cassettes, 4-channel FM broadcasts, and 4-channel records. Has input for external 4-Channel "SQ" Adapter to play new Columbia 4-Channel "SQ" records, no additional stereo amplifier is required. Another feature is the "Composer" circuit which takes existing conventional stereo records, tapes and FM broadcasts and derives from this material, rich four dimensional sound in your living room. It also enables the tape recording of derived 4 dimensional stereo from your present favorite stereo records, stereo tapes, and FM stereo broadcasts. In addition the LA-44 can be used as the heart of two completely independent stereo systems, supplying two different stereo programs to two different locations from two different stereo sources. Simultaneously, i.e., phone and tuner, plus the flexibility of additional remote speaker locations for each pair of channels. The LA-44 features separate volume controls for front left and front right channels, rear left and rear right channels; separate Bass controls for front and rear channels; separate Treble controls for front and rear channels; headphone jacks for front and rear channels; and rear channel tape output jacks provided on both front and rear of amplifier chassis for your convenience; a "Reverb" position for use with an external reverberation unit to the rear channels only. The rear panel features Input jacks for 2-channel and 4-channel stereo for tape playback, magnetic and ceramic phonos, tuner, Auxiliary I and Auxiliary II; main and remote speaker outputs for all four channels. Includes one switched and one unswitched convenience outlet. Operates on 105-120 volts, 50/60 Hz AC. Size: 13½"x4½"x9½". D. Imported. Shpg. wt., 16½ lbs.

CONVERT to a Derived 4-Channel Stereo System with the LAFAYETTE QD-4 4-Channel Adapter

- Derive 2 Extra Channels from Your Records, Tapes, and FM Broadcasts
- Compatible with 4-Channel Encoded Records
- Features Exclusive Lafayette Geared Control Mechanism

Add the Lafayette 4-Channel Stereo Adapter and two additional speakers to any existing stereo amplifier or receiver and enjoy multi-dimensional derived 4-channel stereo sound from regular 2-channel stereo records, tapes, and FM broadcasts. QD-4 adapter actually recovers "reflected" sounds that already exist on regular stereo recordings but are "hidden" during conventional 2-channel stereo playback. During a stereo recording session, the microphones pick up two types of sounds: direct and reflected, both of which are always included on a stereo recording. Because of the limitations of a conventional stereo system with 2 speakers in the front only, the reflected sounds are not reproduced. The Lafayette QD-4 recovers these "reflected" sounds and reproduces them thru two additional rear speakers along with the direct sound from the existing front speakers. Now, the acoustics of the original recording location have actually been introduced into your own listening room. This adds a dramatic new dimension to all existing 2-channel stereo programs—the sound literally envelopes you and becomes astonishingly "live". Unlike other matrix adapters, the QD-4 preserves full channel separation and does not require an additional stereo amplifier. Connects to any standard stereo amplifier or receiver and 4, 8, or 16 ohm speakers. For even better results from your records, we recommend the Lafayette/Picking Phase 44 magnetic stereo cartridge (See page 27). The adapter has a 4-position Function Switch (Balance, 4-CH, Front Speakers, Rear Only), plus a Rear Speaker Level Control. Phone jacks on rear for easy hook-up to 4 speakers and amplifier/receiver. 3 pairs of cables supplied with phone plugs at one end. One 6 ft. pair for adapter to receiver, one 15 ft. pair for adapter to front speakers, one 25 ft. pair for adapter to rear speakers. Dimensions: 93/4" x 8, Dx 2 3/4" H. Imported. Shpg. LAFAYETTE/PICKERING Phase 44 Elliptical Diamond Needle Stereo Magnetic Cartridge

44.95

Designed to:
1) Track Columbia 4-Channel SQ Records
2) Be Used as the Cartridge in Derived 4-Dimensional Stereo Systems

The Lafayette/Pickering Phase 44 was especially designed to be used as the stereo cartridge in stereo systems incorporating circuitry to derive 4-dimensional stereo from 2-channel records, and to track the new Columbia SQ 4-Channel records. The Phase 44 cartridge will perform equally well when used in a conventional 2-channel stereo system. The playback characteristics of the Phase 44 have been tailored to achieve the utmost in performance. Channel separation exceeds 35db. A special 4 x 9 elliptical diamond stylus tracks at 1/4 (±1/2) grams. Frequency range is 10-25,000 Hz. Nominal output 5.5 mw. The patented Dustomatic stylus will protect your records from dust and preserve their natural sound. Shpg. wt. 4 oz.

COLUMBIA, the company that designed the LP record, now brings you the first 4-Channel Stereo Record (SQ). The SQ 4-Channel Record with separate signals in each of 4 channels provides a startling listening experience—actually puts the listener in the room where the performance took place. For this dazzling effect, the SQ record must be played on equipment incorporating SQ circuitry. The SQ record is also fully compatible, and will play like a regular 2-channel stereo record on any system equipped for standard 2-channel stereo.

- Balanced Input and Output to Virtually Eliminate Annoying Noise Interference

3 separate types of installations can be hooked up depending on requirements. (1) MASTER TO MASTER: All Master Intercom System incorporates up to 6 separate master stations enabling 3 private conversations or 6 station conferences to be held. Master can initiate calls to any other Master. (2) MASTER TO REMOTE: Enables 1 Master station to communicate with up to 5 remotes either separately or in a six station conference. Remote can be hooked-up private or non private. Remotes can initiate call back to Master, but cannot talk directly to other remotes. (3) INTERMIX SYSTEM USING UP TO 12 MASTERS AND REMOTES: The number of units in this system may be as high as 12 depending on how many masters are used. For example if 3 Masters are used, each Master has 3 of its selector switches available to call 3 remotes, thus giving a total of 3 Masters and 9 remotes or 12 units in the system. The maximum number of remotes associated with any 1 Master is 6 minus the number of Masters in the system. Master unit has 5 individual station selector slide switches, 2 position Press to Talk-Talk/Lock Bar, and Volume Control. Remote unit has 2 position Press to Talk-Talk/Lock Bar. Lafayette's compatible Telsat SSB-25 AM-True Single Sideband Solid-State 2-way Radio has been meticulously designed and engineered for outstanding citizens band performance. In addition to the deluxe features that result in exceptional conventional 23 channel crystal-controlled AM transmission and reception, the Telsat SSB-25 forges ahead with True-Single Sideband features that result in the addition of 46 more channel modes of operation with much greater effective transmit power, as well as in low noise, highly sensitive reception with a minimum of interference. Its powerful "true" single sideband transmitter, instead of dissipating its power in the carrier and duplicate sideband, concentrates all its power in the single selected upper or lower sideband. You get 100% talk power with far greater effective output and range! The transmitter also features internal RANGE-BOOST circuitry and adjustable antenna loading for maximum RF output. In addition to the highly dependable reception of the 23 crystal controlled AM channels, the superbly engineered dual conversion superheterodyne receiver receives 46 frequency modes on single sideband (23 on upper and 23 on lower sidebands) and features a crystal lattice filter that provides maximum signal-to-noise ratio resulting in far greater usable sensitivity while rejecting adjacent channel interference. The receiver also features a built-in product detector for superior reception of SSB transmissions, continuously variable fine tuning to clarify reception of SSB transmissions and to improve reception of AM stations, as well as unique RF noise silencing circuitry to minimize ignition type noise interference. Supplied complete with Push-to-Talk Dynamic Microphone, AC and DC Power Cables, Mobile Mounting Bracket, and FCC License Form 505. Operates as base station on 117 VAC and mobile on 12.6 VDC. The Logix electronic computer kit provides an introduction to computer technology by means of numerous experiments and programs. Its fundamental principles correspond to those of infinitely larger computers systematically showing what makes them work and how they can be used. “Snap-in” type parts simplify assembly of the console. Once assembled its manual details 39 different programs, progressing from very simple to more and more complex ones. Setting up a program simply involves connecting wires on the top side of the console exactly as shown in a wiring scheme. With each program is learned the logic that goes with it. You can play computerized games with an opponent, or match wits with the computer. Computerized weather forecasting is obtained by use of weather input. Similarly, the computer can diagnose illness and recommend therapy. You can program airline bookings, routing of long distance telephone calls, mixing of complex colors, translation of languages, detection of criminals and investigation of cybernetic problems. Nine advanced programs deal with the binary system, complex mathematical calculations, Venn diagrams and the law of sets as well as playing a game of simulated chess. In addition provisions are made for individuals own creative programming. Kit is complete with 112 page manual, less flashlight battery. Imported. Wt. 2 3/4 lbs.

Quantities Limited

With Integrated Circuits

A complete 4-control stereo amplifier with 2-IC's and 6-transistors which provides 4 watts RMS per channel; 8 watts continuous power total output! The four controls allow separate volume, balance bass and treble adjustments. The direct coupled complementary symmetric circuit gives a true Hi-Fi response of 45 Hz to 20kHz @ -3 db. 1 Meg input impedance allows this amp to be used with a wide range stereo crystal cartridge, FM tuner or other 1.5 volt snow. Use with 8 ohm speakers to give top performance. The amplifier includes power supply components (2 diodes, 1 filter capacitor) except the power transformer. Dimensions: 7½"x1½"x4¾".
