WITH ALL

CABLES

- Master Gain Control For All 4-Channels Of Amplification
- 2 Input Sensitivity Controls
- 4-Channel Tape Output And Input Jacks

A deluxe SQ Decoder featuring highly advanced logic circuitry for playing the new 4-channel Quadraphonic Records developed by Columbia. The SQ 4-channel record provides 4 separate channels of information, one for each of the 4 speakers. The 4-channels are distinct and different, one from another, resulting in absolutely the most realistic and brilliant sound you've ever heard in your listening area. In 4-channel SQ reproduction, the use of SQ logic circuitry increases the vital center front-to-back separation as well as vastly increasing rear channel separation. SQ records can also be broadcast on FM stereo radio and received in the home when using the SQ-L Decoder. The SQ-L features direct inputs for discrete program sources, 4-channel Tape Recorder input and Output jacks, 2 input sensitivity controls on the rear panel, and an AC convenience outlet. A conventional 2-channel

stereo system requires adding the SQ-L Decoder, and an additional stereo amplifier, and 2 more speakers. Present 4-channel systems not incorporating SQ circuitry only require an SQ-L Decoder. A Master Gain Control on the SQ-L Decoder adjusts the sounds level for all 4-channels, also includes the exclusive Lafayette "Composer" circuit for deriving 4-channel sound from conventional 2-channel records, tapes, and FM broadcasts. The Composer also makes the SQ-L compatible with all other 4-channel matrix circuits. SQ-L Decoder must be used with amplifiers or receivers incorporating a Tape Monitor feature. Size: 3"H x 8 1/4" x 8 7/8" D. For 105-120 VAC, 50/60 Hz. Imported. Shpg. wt., 6lbs.

## Convert to a Derived 4-Channel Stereo System with the LAFAYETTE QD-4 4-Channel Adapter

- Derive 2 Extra Channels From Your Records, Tapes, and FM Broadcasts
- Does Not Require An Additional Stereo Amplifier
- Features Exclusive Lafayette Geared Control Mechanism

Add the Lafayette 4-Channel Stereo Adapter and two additional speakers to any existing stereo amplifier or receiver and enjoy multi-dimensional derived 4-channel stereo sound from regular 2-channel stereo records, tapes, and FM broadcasts. The QD-4 adapter actually recovers "reflected" sounds that already exist on regular stereo recordings but are "hidden" during conventional 2-channel stereo playback. During a stereo recording session, the microphones pick up two types of sounds: direct and reflected, both of which are always included on a stereo recording. Because of the limitations of a conventional stereo system with 2 speakers in the front only, the reflected sounds are not reproduced. The Lafayette QD-4 recovers these "reflected" sounds and reproduces them thru two additional rear speakers along with the direct sound from the existing front speakers.

This adds a dramatic new dimension to all existing 2-channel stereo programs. Unlike other matrix adapters, the QD-4 preserves full channel separation and does not require an additional stereo amplifier. Connects to any standard stereo amplifier or receiver and 4, 8, or 16 ohm speakers. The adapter has a 4-position Function switch (Balance, 4-CH, Front Speakers, Rear Only), plus a Rear Level Control. Phono jacks on rear for easy hook-up to 4 speakers and amplifier/receiver. 3 pairs of cables supplied. One 6 ft. pair for adapter to receiver, one 15 ft. pair for adapter to front speakers, one 25 ft. pair for adapter to rear speakers. Dimensions: 5 $\frac{3}{4}$ "W x 4 $\frac{1}{2}$ "D x 2 $\frac{7}{8}$ "H. Imported. Shpg. wt., 3 lbs.

Columbia, the company that developed the LP record, now brings you the first 4-Channel Stereo Record (SQ). The SQ 4-Channel Record (33-1/3) with separate signals in each of 4 channels provides a startling listening experience—actually puts the listener in the room where the performance took place. For this dazzling effect, the SQ record must be played on equipment incorporating SQ circuitry. The SQ record is also truly compatible, and will play like a regular 2-channel stereo record on any system equipped for standard 2-channel stereo.

# WHY 4 CHANNEL?

4-Channel Sound is the latest advancement in recording technology. 4 channels make recorded sound more natural and realistic. Four channel stereo makes you more of a participant in music than has ever been possible before. There are sounds and dimensions you did not know existed. Never before could you actually reproduce in your home the original recorded performance as it happened—you can have the spatial quality of the original concert hall right in your own living room—or you can literally be placed in the middle of a folk or rock session with your favorite singer or group.

4-channel stereo comes on tape, on records, and over the air via FM stereo broadcasts. There are 3 basic kinds of 4-channel sound: SQ, Discrete, and Derived.

## ① 4-CHANNEL SQ

A method developed by Columbia (CBS) of recording and playing back 4 separate channels of musical information on a phonograph record (disc). This is accomplished by a system of encoding 4 separate channels onto a stereo record groove. 4-channel SQ records can be broadcast via FM stereo. Playback equipment with SQ circuitry decodes the original 4-channels and reproduces them through 4 separate amplifiers and 4 separate speakers. No special record changer or cartridge is required. This form of 4-channel sound is produced from any SQ processed disc, whether played directly (or via FM stereo broadcasts) with 4-channel Lafayette equipment incorporating SQ circuitry or with conventional 2-channel equipment and Lafayette SQ Decoders. Our SQ-M or SQ-L decoders require the addition of 2-channels of amplification and 2 speakers. Our LA-524 SQ Decoder/Amplifier requires the addition of only 2 speakers.

## ② DISCRETE 4-CHANNEL

A method, presently limited to tape, in which the 4 separate signals are recorded onto 4 separate tracks, which in turn are played back by a 4-channel tape machine. This form of 4-channel sound is produced from any 4-channel stereo tape, whether cartridge or reel (and, in all probability, in the not too distant future, cassette). You require 4 channels of amplification and four speakers in addition to the 4-channel tape machine. If you now own a 2-channel stereo system, you may convert to discrete 4-channel by adding the Lafayette LA-524 amplifier, the RK-48A tape deck and two speakers.

## ③ DERIVED 4-CHANNEL

Conventional 2-channel material—records, reel, cartridge and cassette—whether played directly or when broadcast on FM stereo—contains special information not adequately reproduced by the conventional 2-channel stereo system. This material is "Ambience"—the original acoustics of the recording studio or concert hall, etc. This ambience can be extracted and reproduced through 2 additional channels to recreate the sound and feel of the hall or studio in which the original performance took place. This form of 4-Dimensional sound is derived from conventional 2-channel stereo discs or via FM stereo broadcasts. If you now own a 2-channel stereo system, you may achieve derived 4-channel sound by adding a Lafayette QD-4 adapter and 2 speakers. No additional amplifiers are needed.

# Logix ELECTRONIC COMPUTER KIT

*Provides an insight to the Complex World of the Computer*

The Logix electronic computer provides an introduction to computer technology by means of numerous experiments and programs. Its fundamental principles correspond to those of infinitely larger computers systematically showing what makes them work and how they can be used. "Snap-in" type parts simplify assembly of the console. Once assembled its manual details 39 different programs, progressing from very simple to more and more complex ones. Setting up a program simply involves connecting wires on the top side of the console exactly as shown in a wiring scheme. With each program is learned the logic that goes with it. You can play computerized games with an opponent, or match wits with the computer. Computerized weather forecasting is obtained by use of weather input. Similarly, the computer can diagnose illness and recommend therapy. You can program airline bookings, routing of long distance telephone calls, mixing of complex colors, translation of languages, detection of criminals and investigation of cybernetic problems. Nine advanced programs deal with the binary system, complex mathematical calculations, Venn diagrams and the law of sets as well as playing a game of simulated chess. In addition provisions are made for individuals own creative programming. Kit is complete with 112 page manual, less flashlight batteries—Imported. Wt., 2½ lbs.

### VALKYRIE-2 ROCKET KIT

- Launched Mechanically or Electrically

Here is an authentic, educational and yet entirely safe rocket kit for modelers and hobbyists which demonstrates the principles of rocket propulsion. The propellant releases no heat, is non-flammable, non-toxic and non-explosive. The 18½ inch long Valkyrie-2 which blasts off to 1000 feet, can be safely held in hand. Uses durable polished aluminum rocket, engine and parts, with real working valves, separator and parachute. At liftoff, the rocket starts slowly at 4 "G's," with acceleration at burnout about 10 "G's." A timer assures deployment of the parachute which returns the rocket for another launch. May be either mechanically or electrically launched with a battery (not supplied). Complete kit includes rocket, engine, timer, separator, parachute, balsa nose cone, fins, loading valve and hose, electric firing assembly, launch stand, one can of propellant, accessories and instructions. Size: 18½" long x 1" dia. Shpg. wt., 2¼ lbs.

VIKING

BARON

### VIKING TWO STAGE ROCKET KIT

The Viking is a complete, high performance, functioning two stage rocket with staging mechanism for in-flight separation. The first stage boosts the rocket to about 75 feet where a "burn-out" signal triggers the second stage engine. This accelerates to a velocity of 300 feet per second (200 miles per hour) while the first stage drops away. This velocity carries the second stage well over 1000 feet, where a parachute is automatically deployed to return it. All parts are recovered for future flights. Both engines are the same—reloadable, highly polished aluminum construction, pre-assembled and factory tested, each using 2 ounces of propellant per flight. The kit is complete including launcher, 15 ounce can of propellant, clear, concise instructions and a booklet on the principles of multi-staged rockets. Size 20" long x 1" dia. Shpg. wt., 3¼ lbs.

### BARON ROCKET PLANE KIT

The bright red Baron Rocket Plane is a combination of a rocket and a plane. The rocket carries the plane up hundreds of feet, then catapults the plane free, at the height of its flight. While the Baron glides high in the sky, the booster rocket parachutes to earth. The aluminum booster rocket engine uses a non-flammable, non-explosive aerosol propellant and may be launched alone. The kit is complete with factory assembled and tested engine, fins, nose cone, parachute, 7 oz. can of propellant, decals, etc. and clear illustrated instructions. Size: 22½" long x 1" dia.
