- Derive 2 Extra Channels From Your Records, Tapes, and FM Broadcasts
- Does Not Require an Additional Stereo Amplifier

Add the QD-4 and two additional speakers to any existing stereo amplifier or receiver and enjoy derived 4-channel stereo sound from regular 2-channel stereo records, tapes, and FM broadcasts. During a stereo recording session, the microphones pick up two types of sounds: direct and reflected, both of which are always included on a stereo recording. Because of the limitations of a conventional stereo system with 2 speakers in the front only, the reflected sounds are not reproduced. The Lafayette QD-4 recovers these "reflected" sounds and reproduces them thru two additional rear speakers along with the direct sound from the existing front speakers. This adds a dramatic new dimension to all existing 2-channel stereo programs. The adapter has a 4-position Function switch (Balance, 4-CH. Front Speakers, Rear Only), plus a Rear Level Control. 3 pairs of cables supplied. This outstanding system is characterized for its ability to faithfully reproduce the high frequencies with crystal-clear clarity because of the electrostatic tweeter elements. As these types of tweeters require a power source, the ES85 has a 117-VAC line cord and switch. The current consumption is so low, the speaker can be kept on at all times. It is recommended that the ES85 be used with amplifiers rated over 12 watts per channel. Response 45 to 25,000 Hz. 5000 Hz Electrical Crossover Network. Handsome oiled walnut wood enclosure. Variable high frequency control. Impedance is 8 ohms. Size 11 $\frac{3}{4}$ x 21 $\frac{3}{8}$ x 8 $\frac{1}{2}$ ". Imported. No Money Down*.

13 $\frac{1}{4}$ " VECTORLOG® SLIDE RULE

- Laminated Bamboo Construction

The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick-easy-manipulation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P, P', and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums—these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage of these dynamic fields. VECTORLOG is the result of extensive tests for ease of manipulation. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in both degrees and radians, removing the necessity of bothersome conversion of units: a problem-tested location of scales; and adjustable screws to allow variable tension on the slide. Scales include: (FRONT) Tr-1, TR-2, P', P, Q, ST, S-1, S-O, C, D, LL01, LL02, LL03, LL1'; (REAR) Sh-1, Sh-2, DF, A, B, C, I, CF, Th, C, D, LL3, LL2, db.
