**A BRILLIANT  
NEW CONCEPTION  
PERFECT  
AMPLIFICATION  
DESIGNED  
FOR TOMORROW**

Nothing before has been offered to equal it in the annals of the high fidelity market. The first complete audio amplifier incorporating compensated preamplifier, tone controls, power amplifier, and power supply all built upon a "printed circuit" wiring plate. This is the circuit technique developed and proved successful BY THE ARMED FORCES DURING WORLD WAR II. A major achievement in fine audio amplifiers. Combines technical perfection, startling realism and advanced features. The advantages of extended power range are provided without sacrifice of important low level characteristics. Here are both low distortion and plenty of reserve power. Only years of research and specialization could produce so advanced an instrument. The power output at both low and high frequencies exceeds any requirement but is indicative of the superb response achieved throughout the useful band from 20 to 20,000 cycles. Of major importance is the way this amplifier adapts itself to associated equipment and to particular room acoustics.

**LOOK AT THESE SPECIFICATIONS!** POWER OUTPUT: 12 watts, 24 watts peak at 1% harmonic distortion; 5 watts at 1% inter-modulation distortion; 3 db power rating, 30 cycles to 20,000 cycles. FREQUENCY RESPONSE 20-20,000 cycles  $\pm$  1 db. INPUTS: Radio, TV-Sound and Tape inputs: 1 megohm impedance. Phonograph Inputs: 27,000 ohms for magnetic and dynamic cartridges. Built-in equalizer for use of ceramic, FM (capacitance) and crystal pick-ups; adjustable equalization effective on all types of pick-ups. SENSITIVITY (Gain Factors): 6 millivolts at magnetic-phono input required for 12 watts output. 0.3 volts required at Tuner, Tape, TV inputs for 12 watts output. 42 db gain between magnetic-phono input and tape take-off jack. 10 db gain between Radio, Tape, TV inputs and tape take-off jack. OUTPUT IMPEDANCES: 4, 8 and 16 ohms. DAMPING FACTOR: 15. Source impedance much lower than internal resistance of loudspeaker. FEEDBACK: Four negative feedback loops result in virtual elimination of distortion; 20 db feedback around voltage and power amplifier stages. QUIETNESS: Noise plus hum 75 db below maximum output on Radio, TV, Tape input. 70 db below maximum output on phonograph input. (54 db below effective program level with 10 millivolts input.) TAPE TAKE-OFF JACK: Provides output of sufficient level to drive any tape recorder. Independent of volume control setting. POWER OUTLET: 110 volts for tuner, record player, etc., controlled by on-off switch. CONTROLS: SELECTOR (and TURNOVER control), 7 positions. Radio, TV, Tape and 4 phonograph positions for the following Turnover characteristics: AES, NARTB\*, 800, LP. ## GARRARD 3 SPEED RECORD CHANGERS

GARRARD  
"CROWN"  
MODEL RC90

The finest record changer in Garrard's history, with innumerable unique and entirely exclusive features. Plays all record sizes, all speeds. Features an entirely new type of strong, silent 4-pole motor with all three speeds adjustable! Speed adjustment is not achieved by mechanical braking but by an eddy current brake control. All speeds are, therefore, magnetically controllable, with sufficient variation at each speed for any purpose. Supplied with a regular spindle. A large center spindle for 45 RPM 7" records is available. Automatically stops after last record and tone arm returns to rest. Equipped both with muting switch which operates during changing cycle, and suppressor network across AC switch to eliminate loud "plops." Operates at 100 to 130 or 200 to 250 volts, 60 cycles. 15 1/2" left to right by 13 1/2" front to rear by 5 1/2" above motor board by 3 1/2" below motor board. Supplied complete with spring mountings, regular and large center spindles, transit fixing screws, two plug-in cartridge shells, template and instruction manual. Shpg. Wt. 23 lbs. **3-SPEAKER SOUND - SPHERE**

**REPRODUCTION**

The New Lafayette 3-Speaker Hi-Fidelity Unit includes an 8-Watt Push-Pull Hi-Fidelity Amplifier and 3-Way Speaker System All Mounted in One Cabinet. This unit is especially designed so that it can be used in conjunction with a 45 rpm record player, 3-speed record changer or tape recorder, etc. All you have to do is plug it into your record changer and you will have a Complete Hi-Fi System.

Incorporates Features found only in expensive Hi-Fi phonographs: 8-watt AC push-pull Amplifier. 2 Separate Output Transformers. 3 Speakers (2-6" speakers—side-mounted for Low Frequency and 4" speaker—center-mounted for High Frequency). Baffled Acoustically For Full Hi-Fi Sound. Can Be Used With Any Standard Record Player (RCA, Webster, VM, Columbia, etc., as well as any Tape Recorder, Tuner or Microphone). Its Two Jacks will take either a Crystal or Reluctance Cartridge. Can be used with any type AM-FM Tuner. Volume Control is compensated for uniform frequency response as the control is varied. It is also tapered to avoid accidental "blasting" of sound. Tone Control knob varies the frequency range of the unit from treble to deep bass. Dual AC Outlet for other electrical appliances, such as radios, lamps, etc. Requires very little space—set it in your bookcase or on any table. It is small in size yet gives quality Hi-Fi performance.

## JET-HELIX

A new and original design in VHF antennas combining a special flat plane conical with the never before used microwave helix design for real dynamic performance. The helix, which has heretofore been used exclusively for microwave signals because of its unusually high gain and directivity, has been adapted to television frequencies. This uniquely tapered helix by itself gives extraordinary high gain, high front-to-back ratio, excellent aperture and constant impedance. Completely constructed of aluminum. Less mast. Shpg. The Philco Television Booster Model TB-3 is a high-quality, push-pull, wide-band radio-frequency amplifier, designed to amplify r-f signals in the television bands. This unit employs two 6B6 tubes as r-f amplifiers, uses a selenium rectifier in a self-contained power supply, and has provisions for controlling the power to the television receiver automatically. It is designed for use with a 300-ohm line, and can be switched into or out of the antenna circuit by means of a switch on the front of the unit. The booster is switched out of the circuit when the switch is in the ST-BY (stand-by) position or OFF position, and can be turned to television channels 2 through 6 when the switch is in the LOW position, and to channels 7 through 13 when the switch is in the HI (high) position.

## THE RADIO RECEPTOR UHF CAVITUNER— FRONT END

Complete with 6AF4, 6BZ7 tubes and IN82 Diode

**A LAFAYETTE EXCLUSIVE!**

- Ideal for UHF tuning • Build your own UHF Converter • Build a Test oscillator

Here's a UHF front end that covers the entire UHF spectrum 470-890 mc channels 14-82 with the most advanced engineering features. The Cavituner consists of three cavities, two functioning as a band pass pre-selector, the third controlling the local oscillator frequency. The local oscillator, a Colpitts type, tunes below the signal frequency for double superheterodyne or converter applications. Cavity tuning is universally recognized as the finest. Its features include no moving electrical contacts, frequency stability, uniformly broad bandwidth and high selectivity over entire tuning range, low noise, high gain and completely shielded construction. The double-tuned preselector has an image ratio better than 50 db, an IF (80mc) rejection greater than 85 db, with an insertion loss of approximately 2 db at 890 mc. Cavituner preselector coupling is primarily magnetic and capacitance feed-thru is negligible. Mixing takes place in a low noise diode, with an IF appearing at VHF channels 5-8. It's an ideal unit for anyone experimenting with UHF frequencies, for building a UHF converter (it was the heart of the expensive Radio Receptor converter) for building UHF oscillators, as a tuner or basic front end. Supplied complete with 6AF4, 6BZ7 and IN82. These three parts alone are worth the price. Size overall 3 1/2" H x 4 3/4" W x 4 3/8" D. Drum extends 3/4" over top. Shpg. Wt. 4 1/2 lbs.

### AMPHENOL 300 OHM TWIN LEAD

Amphenol 14-056 represents the latest design in LF transmission line. Provides proper match of antenna to all standard 300 ohm input FM and television receivers. 300 ohm recommended by RMA for use with television receivers in broad band operation. For use indoors or outdoors. Low-loss polyethylene insulation is efficient, tough and withstands severe weather conditions.

### AMPHENOL LOW-LOSS HF COAXIAL CABLE

Dielectric is a solid, flexible low-loss polyethylene, proven most efficient in high frequency transmission. Jacket is moisture and mildew stable. All have a copper, woven shield braid over the polyethylene and a heavy vinyl outer covering overall. These cables are impervious to acids, alkalis, oils and gasoline. Other conductor types available.

# DO IT YOURSELF- Build Your Own Kits!

## OPTICAL KIT

15.75

Produced by the American Optical Co. in collaboration with the Museum of Industry and the Encyclopedia Britannica.

For the young scientist interested in the amazing world revealed by the power of glass. This kit was designed by top flight scientists to teach the basic science of optics. With it you can build the same kind of telescope that Galileo used 350 years ago and make a microscope of exactly the type that Van Leeuwenhoek used 200 years ago to study tiny living animals in rain water. You can repeat Isaac Newton's experiment in which he discovered white light is made of many different colors. Illustrated book full of exciting things, shows how to make periscopes, telescopes and microscopes; how to band light rays; how to make a magic lantern, a mirror-clock, a signaling spotlight and dozens of other experiments with light and sight. # ANOTHER OUTSTANDING LAFAYETTE VALUE TUBE TESTER!

• Priced to fit the Serviceman's Pocket-book.

• Most advanced engineering to fit the Serviceman's needs.

A new streamlined tube tester with a realistic approach to the problem of quickly testing the ever increasing number of tube types. It incorporates new and advanced engineering features and all at a price of about half of even the most ordinary tube tester. Read these Specifications.

**"FREE POINT" ELEMENT SELECTOR SWITCHING:** Newly designed. It reduces possibility of obsolescence to a minimum because any pin may be used as a filament pin and voltage applied between it and any other pin, or even the "top cap". Tubes with tapped filaments or with filaments terminating in more than 1 pin are truly tested.

**MULTIPURPOSE TUBES:** Special isolating circuit allow each section of multi-purpose tubes to be tested individually as if it were in a separate envelope.

**SHORTS AND LEAKAGES:** Supersensitive method checks shorts and leakages up to 5 megohm between any and ALL elements; continuity between various sections individually indicated.

**SIMPLICITY:** Fast simple operation. The 4 position fast action snap switches are all numbered in exact accord with RMA standards. Thus when testing element terminating in pin No. 7 of a tube—you use button No. 7. You can't insert a tube in the wrong socket—there's one for each type of tube base.

**TUBE TYPES:** Tests all octal, locial, 7 pin miniatures, 9 pin miniatures as well as the new novel and Sub-Minar types. Old type sockets used for testing obsolete types—that you rarely see anymore—have been eliminated.

**SIZE:** A practical size to carry with you as well as for use in the shop—only 8 1/2 x 6 1/2 x 2 1/4" deep. Shpg. Wt. 5 lbs.

# IMPORTED BINOCULARS

With Coated Achromatic Lenses and Prisms

## NEVER BEFORE AT THESE HISTORY MAKING PRICES

Lafayette has gone "all-out" to present these fine, imported Zeiss type binoculars at heretofore unheard of prices! Each of these extremely precise optical instruments have coated lenses—clamped in (not just glued!) prisms—light weight alloy all metal bodies—weather proof, tear proof outer coverings—maximum light transmission—minimum distortion. Made by leading optical manufacturers to our own rigid specifications. Whether you are a yachtman—hunter—hiker—sports fan—or a bird watcher—you'll find the binoculars you need in Lafayette's great selection. And Lafayette's famous money-back guarantee applies as always.

### INSIDE INFORMATION ON BINOCULARS

**FOCUS**—mechanism is either central focus (C.F.) by means of a single wheel and one adjustable eye piece, or individual focus (I.F.) wherein both eye pieces are separately adjustable.

**POWER**—is the number of times an image is magnified through your binoculars. For example 7X (7 power) means the object will appear 7 times larger (or closer)

than with the naked eye. The second number used (i.e. the "50" in 12X, 50) is the diameter in millimeters of the objective lens.

**COATED LENSES**—tend to reduce reflection and pass up to 50% more light than uncoated lenses.

**FULLY GUARANTEED FOR 6 MOS. AGAINST MECHANICAL AND OPTICAL DEFECTS.**
