ONE OF THE MOST VERSATILE
INSTRUMENTS EVER OFFERED THE
HI-FI ENTHUSIAST

- UNIQUE TWO COIL GALVANOMETER TYPE PRECISION METER MOVEMENT
- SEVEN RANGES OF METER SENSITIVITY
- EFFORTLESS BALANCING OF STEREO SYSTEMS
- PROVISION FOR USE AS VU METER AND TAPE RECORDER LEVEL INDICATOR
- MAXIMUM METER SENSITIVITY 120 μ v

The TM-66 provides the solution to all stereo balancing problems. This unique precision meter movement utilizes 2 separate coils set in a single magnetic field. Each stereo channel feeds a separate coil through a full wave bridge rectifier. When both signals are equal and balanced the resultant deflection on the scale will measure 0. Unlike conventional stereo indicators having two unrelated movements, calibration of one meter against the other (channel A vs. channel B) is unnecessary. Since the two separate coils interact within a single magnetic field, the single needle movement acts upon channel A and channel B simultaneously, automatically maintaining the unit in constant calibration. Individual channels may be measured by means of the two slide switches. An extremely stable meter action and protection from peak voltages is provided by special damping networks. Since the unit is in continuous calibration the need for individual range controls are eliminated. The single seven step range control serves for both channels and facilitates the use of the meter with all amplifier power levels. By properly positioning this control the movements may be used as VU meters when terminated across the 600-ohm load. The scales are calibrated in "Volume Units". Sensitivity is 1.2 volts, for 0 vu or 100 percent indication. The metal case is finished in a rich satin gold. Overall size is 4 1/4" L x 3 1/2" H x 4-3/16" W.

10,000 OHMS PER VOLT AC
- 40 MICROAMPERE 3"
D'ARSONVAL METER MOVEMENT
- HIGH INPUT RESISTANCE
ON ALL DC AND AC RANGES

A new multimeter with extra-luxury features, at a down-to-earth price. Uses a large 3" meter with two color scales for easy visibility. The 40 micro-ampere meter movement permits a high input resistance on all ranges: 20,000 ohms per volt on DC; 10,000 ohms per volt on AC. This permits the measuring of voltages without unduly loading the circuit, thus preserving accuracy of readings. 1% tolerance resistors further help in this respect. A single knob selector switch greatly simplifies operation.

Besides the extreme sensitivity and superior versatility of this instrument, it features ranges not found on other, competitively priced VOM's. Measures 0-10-50-250-500-1000 DC volts, 0-10-50-250-500-1000 AC volts, 0-10K-100K-1 meg ohms, 0-500 microamperes, 0-10-250 milliamperes, -20 to +36 decibels, PLUS two special ranges 0-5000 henrys inductance and 250 mmf to .02 mfd capacity. A real bargain! Size 3 1/2" x 5 1/2" x 1 1/2". Shpg. wt., 3 lbs.

A new, versatile stereo control center preamplifier-amplifier whose excellent performance, advanced stereo features, compatibility with all existing monaural applications, and low cost make it EASY TO SET UP YOUR OWN STEREO SYSTEM NOW! A totally new kind of amplifier, the new LAFAYETTE LA-90 has been "custom-tailored" for stereo high fidelity. It has special speaker connections (dual output taps up to 32 ohms) to allow parallel operation of the 2 amplifier channels for 28 watts monaural output to single speaker systems of up to 16 ohms impedance; or, you can add it to an existing 20-30 watt hi-fi system for a second 28-watt stereo channel, providing a balanced stereo system and protecting yourself against obsolescence of the older amplifier, since you will always be able to play stereo; or, you can feed one 14-watt amplifier channel to a woofer and the second to a mid-range and tweeter combination for a 28-watt monaural system with electronic crossover. Its performance for standard 2-channel stereo is highly satisfying: frequency response is 20-20,000 cps; full record equalization is provided; inputs are present for every type of stereo or monaural program source, such as tape head, tuner, and crystal or ceramic or magnetic cartridge; It has a channel reverse switch so that music which should be on the left or on the right is properly positioned; it has a speaker phasing switch to overcome the loss of some frequencies due to stereo recording deficiencies sometimes unavoidably present. Other special stereo/monaural features are individual channel balance controls to obtain the balance necessary for good stereo effect, a master level control for controlling volume of both channels without disturbing stereo balance, separate bass and treble tone controls for each channel, mounted concentrically so that bass or treble can be adjusted individually for each channel—and once adjusted can be used simultaneously to maintain tonal stereo balance. A special tape monitor output and tape monitor switch allow you to make stereo or monaural recordings and to play them back, using a tape deck and one or two record/playback preamplifiers permanently connected to the LA-90.

LAFAYETTE PROFESSIONAL BULK TAPE ERASER AND DEMAGNETIZER

- COMPLETELY ERASES TAPE
- REDUCES NOISE LEVEL
- FOR 3", 5", 7", OR 10 1/2" REELS
- TWO ERASING COILS
- 6 1/2 AMPERES DRAIN

Regularly **49.95** Special **21.50**

A carefully designed and precisely manufactured professional tape "degausser" for complete erasing of tapes. Just place the tape reel on spindle of demagnetizer, slowly rotate 2 or 3 turns, take off, and that's all—a completely clean tape. The demagnetizer removes every signal on the entire tape—even extra strong sounds too loud to be removed by the recorder's own erase head. Completely clears tape of any prior recordings. In addition, by leaving tape completely unmagnetized, it serves to reduce tape hiss to the level of new "virgin" tape. In fact, tape hiss is so low that subsequently passing it over the erase head of a recorder actually INCREASES noise by 4-6 db. To take advantage of this noise reduction, some users

prefer to permanently disconnect the recorder's erase head, and use only bulk erasure. Two completely separate coils are used for doubly-effective erasure, even of large, 10 1/2" reels. An extra powerful unit for heavy-duty use—draws over 6 1/2 amperes. The Lafayette Tape Demagnetizer offers all of these features, and at this special price. Can be used to demagnetize tape, magnetically striped film, plus tools and watches. This professional unit has a heavy, custom finished case, a rugged non-magnetic top, heavy duty on-off switch and power cord. Has built-in fuse. Pilot light prevents accidentally leaving it turned on. Size 6 1/2" x 7 1/2" x 3 1/2". Shpg. wt., 14 lbs.

LAFAYETTE TAPE HEAD DEMAGNETIZER

3.95 REMOVABLE POLEPIECES **3.95**
EXTRA CONVENIENT

Unlike other demagnetizers, the Lafayette Tape Head Demagnetizer uses removable polepieces. Three complete sets are furnished: straight, 45°, and 90° (right angle), permitting quick and easy use with any tape head. Tape heads need no longer be removed from the recorder so they can be reached by the clumsy polepieces of older head demagnetizers; the Lafayette Demagnetizer's polepieces reach every head.

Far from being a luxury, a tape head demagnetizer is necessary for best tape recorder performance. Among all the possible sources of noise in tape recorders, there is only one which is common to all recorders and is a perfectly natural, common occurrence—tape hiss due to magnetized heads. Although unmagnetized when new, tape heads gradually become magnetized by sharp switching pulses occurring while switching the recorder from play

to record or vice versa. Some audio sources (especially the human voice) produce unbalanced signals containing more power peaks in one direction than in the other. This unevenness is also sufficient to cause magnetization of tape head.

The solution is to use a demagnetizer to remove this permanent magnetism from the head, thus reducing the noise level. Periodic head demagnetization is required for all tape recorders to insure optimum signal-to-noise ratio. For this reason, some professional tape recorders are demagnetized as often as several times weekly. Now, Lafayette enables anyone with even the most modest budget to perform this necessary demagnetization, with a minimum of effort. For 110 volts 60 cycles. Shpg. wt., 1 lb.

THE LAFAYETTE KT-600 SOLVES EVERY STEREO/MONAURAL CONTROL PROBLEM

In Lafayette's constant effort to bring you the very latest and most advanced developments in electronics — and particularly in high fidelity — at prices everyone can afford, Lafayette went to the most forward-looking experienced brains in the electronics/high fidelity industry and has now DARED to produce what we think is the MOST REVOLUTIONARY DEVELOPMENT IN STEREO HIGH FIDELITY — A BRILLIANT NEW ACHIEVEMENT — THE LAFAYETTE KT-600 STEREO MASTER AUDIO CONTROL CENTER!

The KT-600 provides 4 dual concentric input level controls for balanced use of different types of program sources — such as AM and FM tuners, tape recorder with microphone, phonograph plus microphone, etc., and without overloading inputs; 3 controls are for high level input, and a separate level control is provided for the output of the preamplifier stage. The KT-600 provides separate turnover and rolloff dual concentric switches for 24 possible positions of accurate equalization on each channel; equalization on each channel may be set independently of the other. Furthermore, all inputs can be variably mixed, monaurally, at will (mix with phono, tape recorder with phono, etc.). The Bridge Control permits cross-channel feed or optionally acts as a volume control for the 3d channel (Bridge) output to eliminate "ping-pong" or "hole-in-the-middle" effects. An audible, sharp, accurate "null" (dip in sound output) is provided by the "Calibrate" positions of the Stereo Function Switches working in conjunction with the clutch-type Balance Controls for precise stereo balance — highly important for good stereo performance. The 3d channel output can also serve for mixing any stereo program (stereo record, tape, AM/FM stereo) to produce excellent monaural recordings or to play a stereo program monaurally through a separate amplifier and speaker system. In another room, the KT-600 has Electronic Phase Reversal to make up for reversed-phase recordings sometimes found commercially, in which there

is a loss of some portions of the frequency spectrum, and to correct speakers connected out of phase. Channel reversal is also present for correct positioning of stereo music to the right or to the left — and this may optionally be accompanied by phase reversal for best overall stereo sound. The KT-600 has a Presence Rise Switch which pulls a solo instrument out of the general musical background with minimum disturbance of orchestral balance.

AND STILL OTHER PROFESSIONAL FEATURES OF LAFAYETTE'S KT-600 ARE: Tape head equalization for the new 4-track stereo tapes; Master Gain Control for individual or simultaneous adjustment of channel levels; inputs for constant velocity (magnetic) and constant amplitude (ceramic, crystal or capacitive) phono cartridges, all equalized by the Rolloff and Turnover selector switches; individual channel concentric bass controls and concentric treble controls which permit pre-setting for good stereo tonal balance and maintaining that balance at other tone control settings; tone control circuits use 5% tolerance components and 2 1/2% tolerance precision potentiometers for accurate centering of their "flat" positions; switched rumble and scratch filters; switched Fletcher-Munson loudness contour compensation; tape monitor output jacks and tape Monitor-Play switch permit monitoring with recorders having special monitor heads and preamplifiers and also permit a stereo/monaural tape deck with 1 or 2 record/playback preamplifiers to be permanently connected to the KT-600 for recording and playback; "plate follower" output stages for low impedance (1300 ohm) outputs with extremely low distortion; special low-flux power transformer and DC operation of all filaments for exceptionally low hum and cool operation; low-noise deposited metal-film resistors and 7 of the new premium low-noise type 7025 tubes are used for extra-good signal-to-noise ratio. The KT-600 has printed circuit board construction for ease of wiring and maximum performance stability.

THE LAFAYETTE STEREO-TUNER IS UNIQUE AND INCOMPARABLE

More than a year of research, planning and engineering went into the making of the Lafayette Stereophonic Tuner. Designed against obsolescence, it incorporates every practical and worthwhile feature that is considered necessary for your complete satisfaction of all present and future types of broadcasting. Already, breathtaking stereophonic programs are being transmitted via FM and AM. It will certainly become more and more the popular method of high fidelity broadcasting. The tuner also provides an output for multiplex FM stereophonic reception, enabling you to enjoy the ultimate in high-fidelity sound reproduction. Since the FM and AM sections are completely independent of each other, this tuner can be used furthermore as a dual-monoaural tuner. In this way, the music lovers are able to listen to concert programs on the FM channel in one room, while the younger-set can listen to a different program on AM in another room. In addition, on a monoaural program which is broadcasted simultaneously via FM and AM, this tuner will enable you to tune in both channels and reproduce them through individual amplifier-speaker systems. The improvement of quality will be immediately noticeable because the sound source is now distributed and at the same time, the hole-in-the-wall point source effect is completely eliminated. Of course, the unit can also be used as an ordinary type of FM-AM tuner, providing you with unsurpassed quality of reception.

Apart from its unique flexibility, this is, before all else, a superior high-fidelity tuner, employing many features found only in the highest priced units. An inspection of the tubes and parts used will reveal that this tuner is engineered without compromise of any kind. With the Lafayette Stereo-

Tuner you are assured of noise-free, drift-free, distortion-free performance. You will not only hear this quality, but also sense it even in the mechanical details, in the "feel" on the velvet-smooth easy flywheel tuning, in the professional appearance of the tastefully selected colors that will blend with any decor. The just-right shade of gold-brass escutcheon contrasts just enough with the dark maroon background, and is set off by matching maroon knobs with gold inserts. The design of the cabinet has the simplicity of modern styling, touched by a stroke of traditional elegance. Carefully designed for easy installation in console if desired.

Deluxe features include separate FM and AM sections, each tuned with its own 3-gauge tuning capacitor, and each has its individual low impedance cathode follower output. This means that the tuner can be installed using shortest possible FM antenna lead-in wire to minimize undesirable pickup. Long output cable can be used to connect tuner to control center without fear of high frequency loss. Also, separate volume controls are provided for each channel so that, when used for stereophonic reception, a proper balance between channels can be achieved. Without this important feature, the wonderful realism of stereophonic sound would be destroyed. Convenient front panel switch changes from stereo to monoaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control "locks in" FM signal permanently. Ferrite rod antenna with loading ring is supplied to bring in weak AM stations for quality reproduction. Designed for easy assembly, the kit is built around two printed circuit boards and prealigned IF's, making construction and wiring simple, even for such a complex unit.

THE REVOLUTIONARY NEW LAFAYETTE VERTICAL-LATERAL KNIFE-EDGE 12" & 16" STEREO TONE ARMS!

- PERFECT TRACKING WITH THE LIGHTEST STYLUS FORCE
- EXTREMELY EFFECTIVE FOR PERFECT REPRODUCTION WITH "45-45" STEREO DISCS

RUGGED CONSTRUCTION — FOOLPROOF — TROUBLE FREE
A remarkable advance in tone arm design is presented in these new Lafayette tone arms. An unusual new principle, utilizing 2 vertical and 2 lateral hardened-steel knife-edge pivots supported by hardened steel bearings, provides extremely low horizontal and vertical friction. This unusual type of bearing provides minimum waveform distortion and no undesirable motion or loose-jointed action as viewed from the stylus end. Groove tracing is smooth, with excellent tracking even with very light pickup weight, due to the absence of frictional losses. Friction in horizontal and vertical directions is low, but mechanical impedance is high at 45°, providing maximum effectiveness with 45-45 stereo cartridges. The unique knife edge bearing construction makes it possible to draw out the 2 shielded leads from the center of the support column, eliminating "stiffness friction" due to the leads. A highly-precise bubble level is provided at the top of the support column; the bubble plus 3 adjustments on the base make for perfect levelling. Height of the arm is adjustable from 1 1/8" to 2 1/8" above motorboard. Overall length of PK-270 12" arm is 12 1/4"; linear distance from support column to stylus tip is 10"; the PK-280 16" arm is 14 1/2" overall; effective length is 11 1/2".

NEW TWEETER CROSSOVER COMBINATION

These specially combined units extend and smooth out the high frequency response of any speaker presently used. The brand new Lafayette SK-105 tweeter is rated at 20 watts continuous power. Its extremely wide frequency range will extend system response to 16,000 cycles. The very high flux density of 13,500 gauss guarantees excellent efficiency and essentially flat frequency response. This tweeter uses a pleasingly styled, small exponential horn made of a single-piece casting, carefully designed to eliminate unwanted resonances in the audio range. The Lafayette LN28 6 dB/octave network has crossover frequencies at 2500 or 5000 cycles. It includes a brilliance control attached with a 2 1/2 foot cable. 8-16 ohm impedance. Shpg. wt., 10 lbs.

ACOUSTIC RESEARCH AR-1 and AR-2 SPEAKER SYSTEMS

Based on new "acoustic suspension" principle. Utilizes cabinets filled with Fibreglas, and with specially-constructed speaker-mechanism suspension plus air-tight cabinet in which compression of the air by the speaker causes spring-like return of the speaker cone. Advantages of this new principle are lowest bass harmonic distortion in the industry, exceptionally uniform extended low frequency response, and small cabinet size for optimum performance. The AR-1 includes an acoustically-suspended 12" low-frequency mechanism and an 8" mid-range and high-frequency unit. AR-1 is a 4-ohm system. Amplifier should be 10 to 30 watts. Woofer magnetic circuit is 3.3 lbs. Alnico 5 plus 6 lbs. Armo iron. System resonance: 43 cps ± 16 cps. Response 38-1000 cps $\pm 1 1/2$ db; 1,000-13,000 cps ± 5 db; down 15 db at 20 cps and 17,000 cps. Harmonic distortion (10 watts input) 25-70 cps: 4 1/2%; 70-1100 cps: 1%; 1100-14,000 cps: less than 1%. The AR-2 is a lower-priced version of the AR-1 with 10" acoustic-suspension speaker and newly-developed tweeter assembly. Response 42-14,000 cps ± 5 db; down 10 db at 30 and 16,000 cps. Harmonic distortion (10 watts input) under 2% down to 60 cps, under 3% down to 50 cps, 8 ohms. Requires amplifier delivering 10 or more clean watts over entire audio range. Size: AR-1—25" w x 11 1/2" d x 14" h; AR-2 24" w x 11 1/2" d x 13 1/2" h. Shpg. wt., AR-1: 60 lbs.; AR-2: 45 lbs.

20,000 OHM PER VOLT MULTITESTER SEMI-KIT

• 40 MICROAMPERE 3" D'ARSONVAL METER MOVEMENT

The semi-kit is a new concept in test equipment kits. All the important or difficult parts are already mounted. All that remains to be done is to mount and wire in a few small parts — a job so simple you'll finish before you realize it, and best of all, you'll have one of the finest high sensitivity multitesters on the market. When used in a circuit, the high input resistance on all DC and AC ranges does away with the highly inaccurate readings

common to low resistance testers which load the circuit. Ranges: DC Volts, 0-10-50-250-500-1000; AC Volts, 0-10-50-250-500-1000; DC CURRENT, 0-500 ua, 0-10-250 ma; OHMS, 0-10K-100K-1 meg; DECIBELS, -20 to +30; PLUS 0-5000 henries and 250 mmf. to .02 mfd. A LAFAYETTE SPECIAL TUBE TESTER!

COMPLETELY WIRED — NOT A KIT
• MOST ADVANCED ENGINEERING TO FIT SERVICEMAN'S NEEDS

26.95

A new streamlined tube tester with a realistic approach to the problem of quickly testing the ever increasing number of tube types. It incorporates new and advanced engineering features and all at a price of about half of even the most ordinary tube tester. Read these Specifications.

"FREE POINT" ELEMENT SELECTOR SWITCHING: Newly designed, it reduces possibility of obsolescence to a minimum because any pin may be used as a filament pin and voltage applied between it and any other pin, or even the "top cap". Tubes with tapped filaments or with filaments terminating in more than 1 pin are truly tested.

MULTIPURPOSE TUBES: Special isolating circuit allow each section of multi-purpose tubes to be tested individually as if it were in a separate envelope.

SHORTS AND LEAKAGES: Supersensitive method checks shorts and leakages up to 5 megohm between any and ALL elements; continuity between various sections individually indicated.

SIMPLICITY: Fast simple operation. The 4 position fast action snap switches are all numbered in exact accord with RMA standards. Thus when testing element terminating in pin No. 7 of a tube — you use button No. 7. You can't insert a tube in the wrong socket — there's one for each type of tube base.

TUBE TYPES: Test all octal, loctal, 7 pin miniature, 9 pin miniature as well as the new novel and Sub-Minor types. Old type sockets used for testing obsolete types — that you rarely see anymore — have been eliminated.

SIZE: A practical size to carry with you as well as for use in the shop — only 9 1/2" x 6 1/2" x 2 1/4" deep. Shpg. Wt. 5 lbs.

They're new, they're different, and they're better! Now, at a price for less than that of ordinary plastic molded tubulars, Lafayette brings you, for every day service work, a condenser that was designed for critical industrial applications. The case is of durable glazing porcelain, a ceramic known for its high degree of impermeability to moisture and resistance to heat. The capacitor is of finest quality, tested at 3 times the rated voltage with much closer capacity tolerance. It maintains its characteristics under extreme conditions of heat and humidity. Its mechanical construction is excellent, the leads are firmly attached and sealed — they won't twist or break off. We've selected the most popular values and put them up in two serviceman designed kits. Each condenser is plainly marked. Each value is mounted on separate handy strips. All are conservatively rated at 600 DC working volts. See chart for contents of each kit.

NEW! Achromatic BARLOW LENS

4.95

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Improves Definition!
- Provides Greater Eye Relief!
- Greater Illumination—Wider Field!

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharpens definition and reduces image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb. Net 4.95

DIRECT VISION PRECISION SPECTROSCOPE

- 400-800 MILLIMICRON SCALE
- ADJUSTABLE SLIT WIDTH; DRAWTUBE SLIT FOCUSING
- HORIZONTALLY SPLIT FIELD

A prismatic type, hand-held instrument that has most features of the finest standard laboratory instruments. The millimicron scale is adjustable for sharp focus and for position (with "lock-in" feature to fix scale with relation to known spectral lines). Highest grade optics yields a broad dispersion field of high intensity obtained from best quality glass dispersing prisms, while excellent lens system resolves the closest spectral lines into 2 distinct lines. By a twist of the collar, a horizontally split field is obtained by which a comparison can be made of two light sources simultaneously. Tubes and collars are constructed of highly polished corrosion proof steel. Equally suited to laboratory or field work, the spectroscope has a wide array of applications: emission spectrum analysis of light sources; qualitative chemical analysis and metallurgical analysis by emission spectra; qualitative analysis of absorption spectra by examining aqueous or other solutions contained in the small test tubes provided. Absorption spectrum analysis has application in many branches of technology—color and dye chemistry, blood chemistry, clinical medicine, criminology. The slit has adjustable width and can be focused sharply by means of an eye piece draw-tube, assuring easy viewing and establishment of Fraunhofer lines of the Solar spectrum or bright lines of the emission spectra. SUGAR REFRACTOMETER

- MODIFIED ABBE DESIGN
- READS % SUGAR DIRECT
- NO MOVING PARTS TO WEAR OUT
- CAN BE USED TO DETERMINE REFRACTIVE INDEX

Here is a beautifully constructed scientific tool of simple design, easy to operate, with no moving parts, except for the focusing eye piece. Operation is very simple. A few drops of the sample are placed on the prism, the cover is closed and observation is made by means of tungsten illumination or daylight. A perfectly clear field, completely color corrected, shows a reticle graduated in percent from 0-32%. With the sample in place as described above the field will show a sharp dividing line between a bright and dark portion; where the dividing line falls determines the reading, which can be estimated to 0.1% accuracy. The instrument can be converted to a universal laboratory type by changing % readings to "index of refraction" readings. No. (Consult Chemical Handbook or literature.) A true "mechanical universe," designed for and dedicated to those who recognize the challenge and adventure that lie on the frontiers of space. The concept of the celestial sphere is the most convenient means of illustrating and discussing the common motions of the stars and the individual motions of the members of the solar system. It offers an easily used and easily understood working model of our universe. An invaluable aid in visualizing and identifying the stars and constellations and their relationship to each other, to terrestrial position, and to times and dates. Permits comprehensive explorations in time and space beyond the earth atmosphere. The Lafayette celestial sphere may be defined as a sphere of infinite radius with its center located at the center of the earth. This system of geocentric celestial coordinates will illustrate the true geographic zeniths of the sun and stars at any time on any day. All systems of astronomical spherical coordinates, such as this equatorial, galactic, ecliptic, etc., which are based on the celestial sphere, rotate with the sphere. The apparent contra-rotation of the stars, actually due to the earth rotating about on axis is clearly demonstrated. The sphere will illustrate how the sky will appear at any hour—on any date—from any point on earth. With it you can tell time by the stars—learn to tell time by the sky—clearly illustrate and help solve navigational problems. Traces the orbits of man made satellites and finds their overhead positions. Serves as a superb star chart. Sun and moon positioned by external controls. Artificial satellites automatically circle around the terrestrial globe. The various stars, constellations and their identifications are permanently molded—not printed—on the celestial sphere. The various stars, constellations and moon pointers—fixed globe centered within. Equipped with horizon ring—time ring—fixed meridian ring—twining meridian ring—sun and moon pointers—fixed ecliptic—detachable "planet"—indications—universal base—and complete instructions. Ship.
