- Laminated Bamboo Construction
- P, P', and Q Scales
- For Direct Vector Addition
- Hyperbolic Sine and Tangent Scales
- Two Sine Scales—One Marked in Degrees. One Marked in Radians
- 5 Log Log Scales Plus a Voltage DB Scale
- Complete with Belt Carrying Loop and Leather Case
- With 10" Scale

The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick-easy manipulation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P, P', and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums—these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage of these dynamic fields. VECTORLOG is the result of extensive tests for ease of manipulation. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in both degrees and radians, removing the necessity of bothersome conversion of units: a problem-tested location of scales; and adjusted screws to allow variable tension on the slide. Scales include: (FRONT) Tr-1, Tr-2, P', P, Q, ST, S-1, S-O, C, D, LL01, LL02, LL03, LL1'; (REAR) Sh-1, Sh-2, DF, A, B, C1, CF, Th, C, D, LL3, LL2, db. Model PF-175

An advanced FM receiver that is outstanding in performance and features. Covers two VHF communications bands with super-sensitivity—fully tuneable or can be crystal-controlled for reception on a single frequency in either band. Also tunes to 162.55 MHz and 163.275 MHz U.S. Weather Bureau reports and disaster alarms in many parts of the country. Superheterodyne circuit includes tuned RF and mixer stages. Four IF stages, each using an advanced space-age Integrated Circuit (IC). No larger than a tiny transistor, each IC is actually a complete circuit with 5 transistors and 2 resistors—you get the equivalent of 20 transistors in the IF stages alone! 100% solid state design offers top reliability too! "Instant-on" transistor circuit permits immediate response to emergencies! Built-in universal power supply assures continuous monitoring under any conditions—the unit also operates from a 12VDC battery supply for field use or as an emergency portable if AC power fails. Front panel controls include a 4-position selector for choice of Xtal or

Tuneable reception on either of the two VHF bands. Variable squelch control lets you silence the receiver during no-signal conditions to reduce monitoring fatigue. Also equipped with illuminated slide-rule dial, plus handy on-off volume control.
