VARIABLE FREQUENCY OSCILLATOR
 The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6A67 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive an 807 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Close frequency setting is obtained by means of the vernier control arm at the right of the dial. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from all annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.

NEW BUD ADD-a-RACK SERIES

It has always been necessary to buy special racks without louvers on one side to obtain a maximum of panel space with a minimum of floor space. Now, you no longer need to buy a whole new cabinet when you want additional panel space. Through our new and exclusive Add-a-Rack series, BUD not only offers additional racks at a lower cost, but provides you with a sturdier, better looking assembly.

The illustration at top shows two Add-a-Rack cabinets assembled together. The illustration below shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entire new outfit, you purchase only four parts: (1) a door (2) a top (3) a bottom and (4) an Add-a-Rack coupling unit. The right (or left) hand side of your present relay rack is removed and replaced by the Add-a-Rack coupling-unit; next, a top and bottom is fastened into place, and the side taken from the first rack is fastened onto the second rack which has been added. Place the additional door into position and you have two racks properly and efficiently coupled together. In the same simple way, more racks can be added at any time and every one will be in a CONTINUOUS ONE-PIECE assembly.

This series is available in two ways. (1) a double unit consisting of two racks and the Add-a-Rack coupling unit, (2) Add-a-Rack unit, consisting of a door, a top, a bottom and an Add-a-Rack coupling-unit. These units are furnished with all necessary assembling and panel mounting hardware.

BUD SUPER DE LUXE RACKS (2 door)

This new Relay Rack is made of 18 gauge steel with 3/4" panel supports. The construction is similar to the series of Bud de Luxe Relay Racks shown above. The panel mounting supports are recessed, so that no edges of the panel will be exposed, and they are also adjustable from front to back at various stopping points. This enables you to utilize the space in front and behind the panel to any degree. When placed as far back as the knockouts provide, the panel is 6" from the front of the Rack.

These Racks have both front and rear doors; the rear door to cover any of the equipment behind the panel, providing easy access. The front door provides a means of concealing dials, knobs, etc., that may be in the front of the panel.

These relay racks also have the exclusive Bud feature of supports on the bottom, so that the casters may be fixed directly to the base. AVAILABLE IN BLACK OR GREY WRINKLE OR LIGHT GREY HAMMERTONE FINISH AT NO EXTRA CHARGE.

BUD FREQUENCY CALIBRATOR FCC-90

To comply with federal regulations, some means of accurately checking transmitter frequency must be available at every "ham" station. The BUD FCC-90 consists of a 100 kc. crystal oscillator that is **Completely Self-Powered**. It will give 100 kc. check points on all bands up to 30 megacycles. This enables the operator to determine exact band edges.

No extra wiring is required to install this unit. Plug the FCC-90 into a 110 volt receptacle, connect the pick-up lead to the antenna binding post of the receiver and the unit is ready for operation. An ON-OFF switch and a STANDBY switch are provided.

BUD GIANT TRANSMITTER CONDENSER—Single Section

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16" thick aluminum end plates, connected by 3/8" diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064" thick

highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

BUD MASTER TRANSMITTING CONDENSERS—Dual Section

All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

BUD NEUTRALIZING AND HIGH FREQUENCY TUNING CONDENSERS

This line of condensers will fill every neutralizing and high frequency tuning requirement that modern circuits pose. The two-pillar construction makes this unit unusually sturdy and eliminates any possibility of capacity variation due to vibration. The movable plate is adjusted by means of the threaded shaft to which it is attached, and it is permanently locked in any position by the lock-nut provided. Any loose thread is taken up by a special nut and locked to give smooth operation. Plates have rounded edges. Steatite insulation is used.

BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS

In circuits utilizing tubes with the grid lead terminated in the base a feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated is feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 890 and No. 852 are ideal neutralizers for popular low power beam tubes. No. 890 condenser is base mounted only.

All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies. Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3 1/4".

IRON CORE R. F. CHOKES

The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "G" possible with this construction results from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 1/2" x 1 1/2" x 1-7/16".

HEAT RADIATING PLATE AND GRID TUBE CONNECTORS

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

DATA TRANSMISSION • SELECTIVE CALLING AND SUPERVISORY CONTROL EQUIPMENT

POINT TO POINT SIGNALING

The Hammarlund Standard Duplex Signaling Unit consists of a tone generator and receiver designed to operate over wire lines, telephone or power line carrier, and radio or microwave communications circuits for signaling, dialing, slow speed telemetering, supervisory controls or other information. Transmitters and receivers are available for 36 frequency channels between 2000 and 6475 cps. This equipment is being used by military and governmental agencies, pipeline and power companies, railroads and other groups requiring remote on-off switching, continuous indication of operating conditions, and automatic detection of wire line or power source failures along their systems.

PROTECTION THROUGH SUPERVISORY CONTROL

The Hammarlund "Multi-Gate" Remote Supervisory and Control System is engineered to provide highly efficient, fully reliable operational controls of important remote equipment such as used by refineries, pipelines, utilities, railroads, civil defense and other commercial, as well as military, groups. Because of a unique design by which a single tone activates a receiver, which in turn will then accept a second tone to operate a relay, this equipment can be used where disturbances on connecting wire or radio circuits make ordinary tone-operated remote controls impractical. Up to 21 individual on-off functions can be handled over a single circuit employing only 7 audio signaling tones.

SELECTIVE CALLING OR SIGNALING

Hammarlund Selective Calling equipment, added to 2-way radio systems used to control large fleets of vehicles, or distant fixed stations, adds privacy, speed, safety, quietness and convenience to day-in-day-out operations. By the push of a button the dispatcher within 0.8 of a second selects the station which he wants to contact. Only the selected operator or group of operators can receive the call. If the operator of the car or station being called doesn't answer, an indicator lamp remains lighted to show he was called. This simple equipment can be added to any present installation, or incorporated in any type of installation now projected.

COMMUNICATIONS RECEIVERS

The New "HQ-140-X"

The "HQ-140-X" is a new superheterodyne type receiver that provides amateurs and other short wave listeners with all the advantages of modern professional design and circuitry. In addition, it incorporates those outstanding features that have made Hammarlund "HQ's" famous for quality and performance. This receiver retains the high degree of sensitivity and selectivity of the "HQ-129-X," and in addition features notably improved frequency stability and image ratio. It covers a continuous range of frequencies from 540 kc to 31 mc, or from 555 meters to 9.7 meters, in six bands.

Band spread tuning is supplied on the four higher frequency bands, with actual calibration in the 80, 40, 20, 15, and 10 meter amateur bands. Many types of noise and other interference have been substantially reduced by the outstanding noise limiter and the special Hammarlund patented crystal filter.

The "SP-600-JX"

The "SP-600-JX" communications receiver, now also available to hams, is a masterpiece of receiver design and already is world-known for its outstanding construction and performance. This professional receiver, with its six bands covering the frequency spectrum from 540 kc to 54 mc, is being used in large quantities by the military and governmental agencies, as well as by commercial services, for both single and diversity reception.

This magnificent receiver is a 20 tube dual conversion superheterodyne. The power supply is an integral part of the receiver chassis. Operation on any of six crystal controlled fixed frequency channels within the range of the receiver is immediately available. This designates it as the perfect receiver for point-to-point and network operations. Pre-arranged day and night fixed frequencies. With crystal control you can select your desired channels immediately.

Stability is .001 to .01 percent depending on frequency to which receiver is tuned, image rejection is 80 db to 120 db down, and spurious responses are at least 100 db down. Sensitivity is 1 microvolt CW and 2 microvolts AM, while selectivity for the three calibrated crystal and three non-crystal ranges is from 200 cycles to 13 kc. Radiation is negligible with no cross-talk in multi-receiver installations.

"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION—Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver-plated beryllium-copper. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity, 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

High Speed Ball-Bearing Models Also Are Available

"MAC" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered to achieve the smallest dimensions practical to meet the requirements of a miniaturized component.

CONSTRUCTION—Its silicone treated steatite base is only 3/4" x 5/8". Rotor and stator are soldered assemblies and are of brass, silver-plated. Rotor and stator terminals are positioned to permit single hole mounting.

SPECIFICATIONS—Straight line capacity. Screwdriver adjustment. Air gap is 0.017" nominal. Tested at 750 V. R.M.S., 60 cycles.

"FC" and "FNC" COUPLINGS

FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flash-over voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

"APC" CAPACITORS

FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Hexagonal collar on slotted shaft permits rotor adjustments to be made with wrench or screwdriver. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS

FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

"NZ-10" CAPACITORS

FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor-bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitor, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver-plated beryllium-copper wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting.

D—Split stator

X—Wide-Spaced

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

"HFA" and "HFBD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal soldered to the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but otherwise incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

"MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. The "MCD" is a split-stator panel-mounted capacitor.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver-plated beryllium-copper spring wiping against a wide disc on the rotor.

"VU" CAPACITORS

FEATURES—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance.

R.F. Transformer for HV Power Supply

These R.F. power supply transformers for use with television receivers and cathode ray oscilloscope make possible construction of an inexpensive source of high voltage. Two types are available, the 4525 for voltages

to 5000 DC and the 4526 for voltages to 10,000 DC (or 30,000 DC in a voltage rectifier tripler circuit). Type 183-GT tubes are used as rectifiers and the R.F. oscillator circuit uses one or more type 6V6 or 6Y6 tubes connected in parallel. The high frequency AC source permits use of simple and inexpensive resistive capacitive filters with low ripple content in the output. Typical circuit diagrams are supplied with each coil.

Ferrite Rod Loop Antenna

The electrical characteristics of this newly developed type Ferrite Rod Loop Antenna make possible a general replacement loop that offers outstanding performance. Reception of distant stations will be improved to the extent that no antenna or ground will be required, and on local stations much better reception will be insured. The Loop Rod Antenna has an adjustable inductance which makes it possible to peak the antenna stage by merely sliding the coil along the ferrite rod; this also enables it to be used with a variety of tuning condensers.

Ferrite Rod Loop Antenna

The electrical characteristics of this newly developed type Ferrite Rod Loop Antenna make possible a general replacement loop that offers outstanding performance. Reception of distant stations will be improved to the extent that no antenna or ground will be required, and on local stations much better reception will be insured. The Loop Rod Antenna has an adjustable inductance which makes it possible to peak the antenna stage by merely sliding the coil along the ferrite rod; this also enables it to be used with a variety of tuning condensers.

B & W FARADAY SHIELDED LINKS
... fit all B & W variable link air inductors

These shielded links effectively reduce harmonic or spurious signal radiations normally transferred by capacity coupling. Adaptable to all conventional link coupled circuits, the B & W Faraday Shielded Links materially aid in the reduction of TV and BC interference. They may be used with external antenna tuning units or, in conjunction with harmonic reduction filters of the low-pass or band-pass types. It is impossible to specify the exact number of link turns required because loading is affected greatly by the antenna input impedance and this is not generally known with any degree of accuracy.

On 10 and 20 meters, a one turn link is normally satisfactory for 50 ohm lines, two turns for 75 ohm lines and three turns for lines having higher impedances. For average conditions our two turn link should suffice.

B & W TVI LOW-PASS FILTERS

- Provide extreme attenuation to all harmonics above 30 mc
- Eliminate individual filters for each band
- Handle 1 kilowatt with ease
- Insertion loss less than .25 db

Three years of intensive study of TVI problems made possible the B & W Faraday Shielded Link. Its natural companion, the B & W Low Pass Filter, was developed concurrently and is now available. VIKING II TRANSMITTER KIT

VIKING VFO KIT

JOHNSON VIKING II TRANSMITTER KIT

Effectively TVI Suppressed!

180 Watts CW Input
135 Watts Phone Input
100% AM Modulation

130 Watts CW Output
100 Watts Phone Output
Completely Shielded

The JOHNSON Viking II is a self-contained, bandswitching, TVI suppressed amateur transmitter supplied in kit form and complete to the last detail. Full output is available on the 160, 80, 40, 20, 15, 10-11 meter amateur bands. Complete range of output frequencies is as follows:

BAND	LOW FREQ. LIMIT	HIGH FREQ. LIMIT
160	1.8 mc.	2.4 mc.
80	2.9	4.4
40	5.2	8.0
20	9.8	15.0
15	15.0	21.8
10-11	21.0	30.0

The RF section consists of a 6AU6 oscillator, a 6AQ5 buffer/multiplier and parallel 6146 output amplifier. Modulator, pp 807's operating class AB₂ with 6AU6 speech amplifier and 6AU6 triode connected driver. Parallel 5R4GY HV rectifiers, 5V4G low voltage rectifier and 6AQ5 clamper screen voltage regulator. Fixed bias applied to buffer and output amplifier permits break-in CW operation. Audio response is limited to the center of the speech range. The pi-network amplifier matches a wide range of impedances and provides up to 30 db second harmonic attenuation before the addition of a low-pass filter.

One of the outstanding features of the Viking II is its completely new cabinet. Heavily copper plated, it is the equivalent of a solid copper box. There are no butt joints which would permit RF leakage and cause TVI. The dial window and meter are equipped with copper plated shields to prevent radiation from these panel openings. The lid is bonded to the cabinet with silver plated phosphor bronze bonding fingers. It can be opened easily however by the removal of just three thumbscrews. Both lid and bottom plate are perforated permitting free circulation of cooling air.

Power leads, VFO power receptacle, key jack, microphone connector and meter leads are filtered to prevent radiation from these points. Filters consist of chokes and low inductance capacitors, not simply bypass capacitors. Other filters are used in the transmitter to suppress spurious output at its source. Antenna relay terminals are provided and they too are filtered. Shielded coaxial connectors are used for VFO input and RF output terminals.

When used to feed an antenna system directly, the pi-network output coupling circuit is capable of matching unbalanced loads within the range of 50 to 600 ohms. The pi-network can tune out several hundred ohms reactance as well. In order not to compromise this flexibility unnecessarily, low pass filters which require fixed impedance loads have been omitted from the Viking. There are many urban areas where the shielding and inherent harmonic attenuation of the amplifier are sufficient to eliminate television interference completely. Where required, however, the JOHNSON 250-20 JOHNSON Low Pass Filter (available as a separate accessory) will provide 75 db of additional harmonic attenuation (above 54 mcs.) making the Viking II virtually TVI proof.

All parts furnished including a complete set of tubes, cabinet, punched chassis, wiring harness, wire, terminals, grommets and all other hardware. Carefully detailed and illustrated instructions for assembly, test and operation are also included. The Viking II is available wired and tested by factory authorized wiremen at nominal additional cost.

Supplied for 115 volt 50/60 cycle operation only. Cabinet dimensions 20" wide, 10 1/2" high, 13" deep. Net weight assembled, 65 pounds.

VIKING VFO KIT

An extremely stable variable frequency oscillator designed for use with frequency multiplying transmitters. Using two entirely separate oscillator tank circuits, the VFO delivers 8 to 10 volts RF throughout the range 7.0 to 7.425 mcs., 5.5 to 7.5 volts throughout the range 1.75 to 2.0 mcs. Although designed as a companion unit for the Viking transmitter it will excite any transmitter having a conventional pentode crystal oscillator circuit. The transmitter oscillator stage serves as an isolating RF amplifier or frequency doubler when driven by the VFO.

The tuning capacitor is a special ceramic Insulated JOHNSON with full soldered construction. Ceramic insulated air dielectric trimmers, temperature compensated ceramic padders, ceramic coil form and rigid construction are features contributing to the high overall stability. The tube complement consists of a 6AU6 electron coupled oscillator and an OA2 regulator. Excellent isolation between oscillator and the output circuit together with screen grid voltage regulation account for the clean, chirp-free keying.

The Viking VFO is accurately calibrated for all amateur bands from 160 to 10 including 15 and 11 meters. A 5" dial with 180° bandspread and 6-1 vernier dial provide smooth tuning and high reset accuracy. Power requirements, 6.3 volts AC or DC, .3 amperes; 250-300 volts DC, 15 ma. unregulated. (Power and RF input connections provided on every Viking transmitter.)

Kit furnished complete with all parts, assembly and calibration instructions but less tubes. When used with a Viking II or other shielded transmitter having filtered power leads, no TVI suppression measures are required.

Size 7"x6 1/4"x6 1/4", net weight assembled, 4 pounds.

JOHNSON "MATCHBOX"

Transmitting Antenna Coupling System

More than an antenna coupler, the JOHNSON "Matchbox" performs all transmission line matching and switching functions required in medium power amateur stations. The unit is bandswitching and completely self-contained.

Almost an infinite variety of antennas can be loaded throughout the amateur bands from 3.5 to 30.0 mcs. Balanced antennas from 25 to 1200 ohms resistance can be matched while unbalanced or single wire antennas within the range of 25 to 3000 ohms resistance can be successfully loaded. Furthermore, the "Matchbox" is capable of tuning out large amounts of reactance. Nominal input impedance is 52 ohms, power rating 250 watts. A special JOHNSON dual variable capacitor with four stator sections serves as a capacity divider providing continuously variable matching to the load.

A change-over relay built into the "Matchbox" switches the antenna from receiver to transmitter and grounds the receiver antenna terminals in the "transmit" position. This same relay will also serve to mute the receiver while transmitting. The "Matchbox" improves receiver performance by matching antenna impedance to the input impedance of the receiver. Adjustment for matching receiver input impedance is independent of transmitter loading adjustments. For CW operation a keying monitor may be actuated by the RF probe provided.

The "Matchbox" is supplied in a fully shielded maroon and gray cabinet matching the Viking II transmitter, cabinet dimensions 9 $\frac{1}{8}$ " wide, 10 $\frac{1}{2}$ " deep, 7" high. Supplied only as a completely assembled and tested unit, the "Matchbox" weighs approximately 6 pounds. Ceramic insulated output terminals, SO-239 coaxial RF input connector and seven terminal receiver and relay terminal strip are all located on the rear of the cabinet.

Cat. No. **Amateur Net**
250-23..... **\$49.85**

LOW PASS FILTER

The JOHNSON Low Pass Filter consists of four individually shielded sections, capable of handling more than 1000 watts RF, amplitude modulated. Cut-off frequency is 45 mcs. with "M" derived end sections adjusted to provide maximum attenuation at 57 mcs., the center of TV Channel 2. Attenuation of harmonic and spurious frequencies above 54 mcs. is 75 DB or more. Insertion loss less than .25 DB at 30 mcs. Characteristic impedance of the filter is 52 ohms. Construction permits the replacement of Teflon dielectric of the fixed capacitors should there be damage due to accidental overloads. Standard SO-239 coaxial connectors are used for input and output terminals. Completely assembled, pretuned and equipped with convenient mounting hardware.

When inserted in a 52 ohm flat line between transmitter and an antenna coupler such as the "Matchbox" (above), flexibility is not impaired and the filter is operating under the matched impedance conditions required for maximum harmonic attenuation. Dimensions: 2 $\frac{1}{2}$ " dia. x 9 $\frac{1}{8}$ " length overall, weight approximately 1 $\frac{1}{2}$ lbs.

Cat. No. **Amateur Net**
250-20..... **\$16.50**

STANDING WAVE RATIO BRIDGE

Provides accurate measurements of standing wave ratio enabling an operator to adjust his transmission line and antenna coupling system for minimum SWR. A necessity for most effective use of a low pass filter. Other uses include measurement of antenna reactance and antenna feed point impedance.

Impedance is 52 ohms, can be changed to 70 ohms or other desired value by simply changing the standard resistor. Designed for use with a 0-1 ma meter but supplied with data for 100 and 250 microampere meters thus any standard multimeter may be used as an indicator.

Shielded construction, 2 $\frac{3}{8}$ " dia. x 4 $\frac{1}{2}$ " overall length. Equipped with SO-239 coaxial connectors and polarized meter jacks, weight $\frac{1}{2}$ pound.

VIKING MOBILE TRANSMITTER

DYNAMOTOR POWER SUPPLY

VIKING MOBILE TRANSMITTER KIT

Designed for most effective amateur mobile use, the Viking Mobile Transmitter Kit features:

- Instant bandswitching, 75, 40, 20, 15, 11-10 meter bands
- Gang tuning
- Efficient antenna coupling circuits
- Front panel control—dash mounting
- Up to 60 watts PA input
- All stages metered—illuminated meter

Not only does the Viking Mobile cover six bands but all coils are self-contained and switched from the front panel. Maximum input of 60 watts 100% amplitude modulated. Sufficient audio gain for either high impedance or carbon microphones.

Three gang tuned RF stages, 6BH6 oscillator, 6AQ5 buffer/multiplier and an 807 amplifier. Panel mounted crystal holder accommodates four crystals and VFO/crystal selector switch. The transmitter may be driven to full output with the Viking VFO and VFO RF input and power receptacles are provided for this purpose.

The 807 amplifier stage employs three separate inductors, permanently mounted in the transmitter and selected by the bandswitch, to cover the tuning range. Each inductor has a series tuned antenna coupling link. These ganged links, adjusted by means of a front panel control, eliminate "cut and try" antenna loading methods. The final amplifier is equipped with a trimmer which serves to tune out antenna reactance when a change in operating frequency is desired without the necessity of adjusting the antenna mounted loading coil.

The audio system is comprised of a 6AU6 speech amplifier, a 6AU6 driver and pp 807 modulators operating class AB₁. Audio gain control and three circuit microphone connector for "push to talk" operation are located on the front panel. Input circuit may be wired for either carbon or high impedance microphones.

A unique and exclusive feature of the Viking Mobile is its RF type fixed bias supply. Utilizing one triode of a 12AU7 as an oscillator operating around 4.5 mcs. and the other triode as a half wave rectifier, the supply provides fixed bias for the 807 modulators, 807 final amplifier and 6AQ5 buffer/multiplier. By this means cathode bias is eliminated, RF tubes are protected in the event of an excitation failure. Modulator "no signal" current is kept low thus greatly improving efficiency by reducing the total battery power required for each transmitting cycle. The bias supply is well shielded and decoupled from other circuits, radiation is negligible.

An illuminated meter, switched from the front panel, measures oscillator, buffer, PA and modulator cathode current also PA grid current. Locations of the meter and crystal selector switch are reversible providing maximum visibility with the transmitter mounted either to the right or left of the driver. Knobs are marked so that their positions are visible at wide angles.

Ready accessibility to the chassis has been a paramount design consideration. Front panel, rear cover, bottom plate and chassis are all one assembly. The cabinet is a sturdy steel cover consisting of top and sides, open at the ends and with lips at the bottom supporting the chassis. It is thus possible to slide the chassis out of the cabinet without even the necessity of disconnecting cables. Since the cabinet is open at the bottom, the empty cabinet can be very simply and easily mounted.

PA excitation control, filament switch, audio gain control and a three position function switch ("Tune-Transmit-Receive") are located on the front panel. Optional auxiliary functions of the "Tune-Receive-Transmit" switch include "Non-Swish" VFO tuning, receiver muting and use of receiver power supply for exciter and speech amplifier plate voltage. Where convenient the exciter and speech amplifier may be operated from a separate supply delivering 260 to 300 volts at 70 ma. The class C amplifier may then be operated from another supply avoiding the necessity for voltage dropping circuits and securing maximum use of existing equipment.

The Viking Mobile may be wired for either 6 or 12 volt operation. With the power supplies listed below, power output is approximately 32 watts. Using a 600 volt DC supply maximum output is 42 watts. Eighteen watts output can be achieved with a 300 volt supply.

The Viking Mobile is another outstanding JOHNSON transmitter furnished in kit form. Included are all necessary component parts, punched and formed chassis and cabinet, wiring harness and hardware. Assembly instructions are carefully written and the order of assembly worked out so that no difficulty will be encountered. Instructions include photos at various stages of assembly, supplemental drawings, alignment data, receiver interconnection, antenna suggestions etc. The experienced amateur will find the Viking Mobile easy to assemble and convenient to use.

JOHNSON ROTOMATIC ROTATOR

An improved all-weather rotator designed for the most rigorous service. The housing is an aluminum casting, light weight yet sturdy enough to withstand the stresses imposed by high wind loads and icing. Rotator is conservatively rated to support 20 meter arrays together with higher frequency antennas weighing a total of 175 pounds. Rotating table is $\frac{3}{16}$ " steel, is drilled and tapped to accommodate JOHNSON Boom Assemblies.

The main shaft is driven by an oversized, continuously lubricated worm gear assembly. Drive unit consists of a 1/20 HP, instantly reversible, capacitor type gear motor. Total reduction is 1200 to 1 resulting in $1\frac{3}{4}$ RPM rotator speed. Both the motor and its integral gear assembly are equipped with ball bearings and special lubricant; full torque is delivered even at extremely low temperature. Motor creates no radio nor TV interference. RF slip rings, insulated with glass bonded mica, permit continuous rotation thru 360 degrees in either clockwise or counter-clockwise directions. Heavily chrome plated slip rings provide low resistance contact, noise-free operation and resist corrosion. Rotator is equipped with auxiliary slip rings and convenient terminals for beam switching relay.

A hinged base permits the entire rotator and antenna assembly to be tilted a full 90° for antenna adjustment. The rotator may be turned while in the tilted position. The complete 138-112 assembly includes a control box with selsyn direction indicator. Accurate azimuth bearings are continuously presented on an illuminated dial. Controls include Clockwise-Off-Counterclockwise rotation control switch, power switch and antenna relay switch.

Rotator nominal dimensions, $15\frac{1}{2}$ " x $15\frac{3}{4}$ " x 15", weight 76 pounds, mounting area required 11" x 14". Control box dimensions 6" x 6" x 6", weight $2\frac{3}{4}$ pounds. Eight conductor interconnecting cable for rotator and control box furnished as a separate accessory item.

JOHNSON ANTENNA ARRAYS

Parasitic beam antennas for the 10, 15 or 20 meter amateur bands. Dual 10 and 20 meter arrays may be mounted on the same boom and selected by means of the 138-108 relay. Elements are strong, lightweight aluminum alloy tubing, grounded at the center to the boom assembly. Both element lengths and spacing are continuously variable, elements may be located at any point along the boom. Balanced open wire transmission lines may be matched to the driven element by means of the adjustable "T" matching section. Coaxial transmission lines matched by "Gamma" or half "T" section.

Boom assemblies are 2" galvanized steel tubing. U-bolts, together with element support clamps are used to fasten each element to the boom. Elements are firmly clamped to the boom and cannot work loose yet their positions are readily adjusted. The assembled boom requires no cross-bracing and has low wind resistance.

Ten meter elements consist of a $\frac{3}{8}$ " diameter tube 12 feet long with $\frac{3}{8}$ " adjustable end sections. Maximum element length 19 feet, minimum length 12 feet. Fifteen meter elements are similarly constructed with maximum length of 25 feet. Tubing diameters of 20 meter elements are $1\frac{1}{8}$ ", $\frac{3}{8}$ " and $\frac{5}{8}$ ", elements extend to a maximum length of 36 feet. Bushings are used to insure close fit, minimum resistance and maximum rigidity of telescoping elements.

Because of the large number of antenna combinations available, boom assemblies and element kits are listed separately. Boom assemblies are not included in the prices of antenna element kits. For example, a dual three element 10 and 20 meter interlaced beam consists of one 138-210-3 element kit, one 138-220-3 element kit and a 138-153 boom assembly. In addition, a 138-108 beam switching relay is required.

Boom assemblies have fixed length and are available as follows:

Stated maximum and minimum values of capacitors are nominal, subject to plus or minus tolerances. Guaranteed values, or "lowest maximum, highest minimum" should be requested from the factory if necessary.

TYPES "E" AND "F" CAPACITORS

Designed as rugged, compact units for medium and low power transmitters, type E and F capacitors are in a class by themselves. They have more capacity per cubic inch and occupy less panel space for their rating than any other capacitor on the market.

Points of superiority: Heavy aluminum plates, .032" thick, with rounded edges for maximum voltage rating — Heavy aluminum tie rods 1/4" diameter for frame strength and rigidity — Steatite insulation — mount with stator up to reduce capacity to ground — heavy phosphor bronze contact springs, cadmium plated — Center contact on dual models — Chassis or panel mounting — Stainless steel shafts.

In addition to mounting foot shown, removable single hole brackets are furnished so that capacitor may be inverted from position shown, or other components mounted above.

EXPLANATION OF TYPE NUMBERS

The first part of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size. A second letter D indicates a two section type. The final number multiplied by 100 is the approximate peak breakdown voltage. Capacity measurements of the E and F types are made with the capacitors in the position shown in the above illustration. The C and D types are measured in inverted position.

TYPE "L" CAPACITORS

Perfected ceramic soldering assures permanent rigidity and maintenance of capacitance. JOHNSON ceramic soldering leaves a bond which is stronger than the rugged end plates themselves. There are no eyelets, nuts or screws to work loose which would cause stator wobble and fluctuations in capacity.

Split sleeve tension bearing assures silent operation on highest frequencies. Ceramic end plates, 1 3/8" square with two mounting posts tapped for 6-32 screws on 1 1/8" centers. Mounting (M) dimension is 3/4" more than L dimension.

Two sets of stator contacts. Corrosion resistant, bright alloy plating has low electrical resistance.

These new variables are suitable for the severest conditions of portable-mobile operation. Other capacities and spacings on special order in production quantities.

EXPLANATION OF TYPE NUMBERS

The first part of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter D indicates a two-section type. The final number multiplied by 100 is the approx. peak breakdown voltage.

Steatite and porcelain RF insulators with a long history of user satisfaction. Dense molding and glazing impart fracture resistance together with low moisture absorption. Extended creepage paths provide maximum voltage breakdown compatible with compact design. Relatively large mounting faces permit substantial lateral loads. Heavily nickel plated brass hardware suitable for exposed applications.

STAND-OFF INSULATORS

Steatite insulators combining excellent strength with economy for surface mounting applications. Heavy integral mounting bases; ample clearance for screw heads.

SHAFT COUPLINGS

All JOHNSON shaft couplings are manufactured with high quality, low loss insulation, accurately machined and suitably finished metal parts. Each is capable of many thousands of operating cycles without failure due to fatigue. DC "breakdown" ratings derated in accordance with good engineering practice. The phosphor bronze springs of the -250 and -251 series shaft couplings provide flexibility without backlash and adjust to minor shaft misalignments. Rigid types -252, -262 and -261 meet the requirements of accurate shaft alignment and high torque. The -259 is a bar type shaft coupling recommended for high voltages or very high frequencies. The -264 is a small ballite insulated flexible shaft coupling for DC or low voltage RF applications.

JOHNSON KNOBS AND DIALS

A distinctive line of matching knobs and dials suitable for the finest electronic equipment. All types are derived from a new basic knob design, the first in years. Knobs have twelve well defined flutes and present an essentially round appearance.

Tough, scratch resistant black phenolic is used for all malded parts. Metal dial scales have an etched satin chrome finish. This contrasts greatly with deeply etched and filled engraving, provides maximum legibility under poor lighting conditions. All types have accurately centered brass inserts for $\frac{1}{8}$ " shafts.

In addition to the items listed, JOHNSON is prepared to supply variations (in production quantities) such as; special shaft sizes, scales, set screws or indicators.

PILOT LIGHTS

JOHNSON Pilot Lights are built to exacting standards from the finest appropriate materials. The listings on these pages include only those standard units in greatest demand. Many other types and variations from standards including those meeting military specifications are available in production quantities.

Standard finish for jewel holder bezels is polished chrome except for $\frac{1}{2}$ " and $\frac{3}{8}$ " sizes which are finished in nickel. Black oxide finish is frequently supplied to meet special requirements.

In addition to smooth and faceted types, one inch jewels can be furnished with colored, plastic backing discs which impart color to the clear inside frosted jewel only when the lamp is lighted. This prevents external light from giving false indication of illumination. Where required, lettering, numerals or insignia can be printed on the backing disc and arranged to be visible either continuously or only after lamp is lit.

Standard jewel colors are clear, red, green, amber, blue and opal. Be certain to specify jewel color on all orders.

TELEVISION COILS

These components when used in a properly designed circuit can provide a gain of approximately 10,000 × in the picture I.F. amplifier with overall response as illustrated. The sound I.F. system can supply a gain of approximately 7,000 × from the converter grid to the grid of the last I.F. tube and a discriminator slope sensitivity of approximately 0.08 volts/kc. with 1.0 volt signal level at the last I.F. amplifier tube grid. The overall sound I.F. and discriminator response is linear over 150 mc.

SMALL SWITCHES, LIMIT SWITCHES, AND MAGNETIC RELAYS

SMALL SNAP-ACTION SWITCH, G-E SWITCHETTE CR1070

This new, lightweight switch mechanism lends itself especially to applications where space is limited and long life is required.

The Switchette is operated by movement of the spring-return button located in the housing. This button can be actuated by a lever, bellows, or other means. Snap-action, double-break-contact construction gives the G-E Switchette a high current rating and makes it suitable for applications where the vibration is severe.

FEATURES AND ADVANTAGES

1. Small (approximately $1\frac{1}{4}$ in. by $\frac{1}{2}$ in. by $\frac{1}{2}$ in.) and weighs only 9 grams (0.02 lb).
2. Resists vibration and corrosion.
3. Phenolic-resin operating button provides protection from live parts during operation.
4. Contact tips are 99.95 per cent pure silver.
5. Particularly suited to electronic applications because of negligible amount of contact bounce.
6. Five terminal arrangements are available, including the two shown above.
7. Wide variety of forms available; for example, three basic contact arrangements: single-circuit, normally open; single-circuit, normally closed; and two-circuit, normally open and normally closed. Also many special forms.

Switchettes are available in ratings up to 10 amperes at 115 or 230 volts a-c. Write for Bulletin GEC-796.

Switchettes showing two terminal arrangements

LIMIT SWITCH, CR1070-D112

This sturdy, open-type limit switch is operated by a plunger which provides $\frac{1}{2}$ -inch overtravel. The contact mechanism of this device is the G-E Switchette, which can be wired to control one normally open circuit and one normally closed circuit. Rated 10 amperes at 230 volts a-c. Write your nearest G-E Apparatus Sales Office for Bulletin GEC-197.

Open-type limit switch with push-rod operation

GENERAL-PURPOSE RELAY, CR2790-E

The CR2790 relay is a compact, attractively finished device for use either as a motor starter or a relaying unit. Available in either an open form or enclosed in a general-purpose or explosion-proof housing. Three contact arrangements available: single-pole, single-throw; double-pole, single-throw; and double-pole, double-throw. In the open form, all three contact arrangements use the same base, which facilitates mounting. In the enclosed form, the U-shaped cover makes wiring and servicing convenient. Rated 10 amp continuous, 110/120 volts a-c.

Applications

Control of pilot circuits in response to remote control switch or thermostat, or for direct control of small motors which have built-in thermal overload protection.

As a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits, and signal systems. Bulletin GEC-257.

Multi-Section Rotary Switches

High grade, phenolic-insulated, rotary switches for radio and electronic equipment in circuits not exceeding 500 volts DC. These switches have self-wiping, silver-plated, copper alloy contacts which assure long, useful life. All models feature an adjustable stop. A 2 1/4" mounting area is required. Mounting depth is dependent on number of sections. Switches have 1/4" round shafts, 2" long, and 3/8"-32 bushings. Each switch supplied with pointer knob and mounting hardware.

INSTRUMENT AND TESTER SWITCHES (LAMINATED)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting

SS-14-2

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

JBT Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability—Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with pure silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf-type (SS-20), and sharp detent assure positive indexing. Springs of both switches are generally replaceable without disturbing soldered connections. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".

SS-20-2

Military Variations—The following can be supplied on special order at extra cost: (a) laminated plastic, Grade LTS-E-3 or better, per Spec. JAN-P-13; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered, presently available in 14 positions only; (d) 14 or 20 live positions, no off (add suffix F, as SS-14-2F).

BASIC 14-POSITION: 1 1/4" Bar knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown, 13 contacts per deck. One to six decks; for each additional deck (or gang) add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Adjustable Stop normally is supplied on standard cataloged switches. Panel locator positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION: 2" Bar knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat on shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown, 19 contacts per deck, continuous rotation types. One to six decks; for each additional deck, add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Panel locator positioned as shown unless otherwise specified on bulk orders.

SWITCH KIT (Laminated Phenolic)

Many of the 14 and 20 position laminated switches shown on this page, plus special variations as needed, can be assembled quickly from the kit shown on an adjoining page. Designers, service engineers, laboratories, and industrial maintenance departments will especially appreciate the convenience, flexibility, and time saved.

NEW-BUT PROVED-MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting

MS-14-4

MS-20-1

- All moving contacts enclosed — minimizes dirt and corrosion.
- Contact lugs permanently integrated into switch assembly.
- Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft through decks for precision indexing.
- Interchangeable, electrically and mechanically, with J-B-T 14- and 20-position laminated switches, widely used by industry and Armed Services.

FEATURES:

For description of rigid 3-post construction; heavy pure silver plating to meet 100-hour salt-spray test; excep-

tional compactness; .007 ohm average contact resistance; current-carrying capacity and voltage breakdown; see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2" circle for compactness. Molded end cover regularly supplied on MS-14 series. 1 1/4" Bar knob included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. One to ten decks add 1/8" per deck (or gang) to depth; for eleven decks and over, add 1/2" to depth for double indexing mechanism; add 3/8" to depth for adjustable stop mechanism. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. Panel locator is available on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2 1/8" circle for compactness. Molded end cover regularly supplied. 2" Bar knob included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms and self-wiping collector ring are standard construction. One to seven decks; add 1/8" per deck (or gang) to depth. Continuous rotation type supplied; on quantity orders, pre-set fixed stops are available. Panel locator available on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

SS-14-1L3S-R, 3 live positions, no off; shorting85

Positive Type, 3 or 4 position. These sturdy lever switches are adapted from the well known J-B-T SS-14 series rotary switches, widely specified where quality is the first consideration. Single deck lever models, not illustrated, now are built into tube checkers, inspection apparatus, communications set-ups, and hobby equipment. The new 4-position types, interchangeable except in slot length with the standard 3-position, make an excellent replacement wherever an extra circuit is needed. Mounting dimensions are given below. Holes for 4-36 screws or 1/8" rivets can be supplied on long runs involving set-up charges. Individually boxed with 6-32 mounting hardware and KN-19 black knob, as shown. Spacing between single deck switches: recommended 3/4"; minimum, 9/16". Also, see list of available mounting plates.

TWO-DECK LEVER-ACTION SWITCHES. These new 3- or 4-position, 2-deck switches cost a bit more than conventional types, but one look shows why they are worth it, and more! They use the same strong parts, 3-pole suspension, and double-grip collector arms which feature the SS-14 laminated phenolic rotary switches on another page and the 1-deck lever switches on this page. Spacing is 3/8" between decks, the same distance as on TV twinlead wires. Excellent for centralized systems in radio, sound, intercommunication, or public address equipment. Convenient for connecting 3 or 4 single channel TV antennas to one receiver. Bracket mounting holes 1 1/2" apart. Recommended spacing between switches, 15/16"; minimum spacing, 13/16". Non-shorting (break before make), positive action, individually boxed, including KN-19 knob and 6-32 hardware.

COMPACT MOLDED HOUSING

BASIC du-op SWITCH

The type DU-S "du-op" is a precise action limit switch. The centrally-located plunger acts directly on the wide phosphor-bronze blade to insure instantaneous contact at each point of repetitive plunger travel. Delays of pre-travel blade action are eliminated—an important factor at high switching speeds.

Lifters, when used, are made of dark bone fibre, wax impregnated. The leaf insulators, when used, are made of natural fabric base laminated phenolic, wax impregnated.

FRAME: Cold rolled steel, cadmium plated.

LONG AND SHORT FRAME JACKS

LONG JACKS . . . The original long jacks were adapted from the telephone switchboard jacks. Long rugged, phosphor-bronze springs parallel to the plug axis give precise action. These jacks take minimum panel mounting space, less than the

short jacks. Supplied with nickel-plated hex. Shoulder mounting nut and nickel-plated washer.

SHORT JACKS . . . Carter short jacks are small and compact, but do a full-sized job. Depth behind the panel is cut down by placing the tempered nickel-silver springs parallel to the panel. High quality sheet bakelite and tubular ebonite insulators are used throughout—no paper or fibre used in Carter Jacks. Supplied with nickel-plated hex. mounting nut and nickel-plated washer.

Short and long jacks mount in single $\frac{3}{8}$ " hole in panels up to $\frac{1}{8}$ " thick. Fit of the plug in the jack is not affected by the thickness of the panel. Fit all standard plugs in two and three conductor types. Strong bright cadmium plated steel frame. All contacts between springs are fine silver, giving minimum contact resistance.

"Imp" TAP SWITCH Bushing length $\frac{3}{8}$ " Shaft $\frac{1}{8}$ " from end of bushing.

Positive snap action—strong wiping contact grounded to shaft and bushing. In operation, contact breaks between makes—non-shorting.

PR Series— HEAVY-DUTY POWER RELAYS

PR 11

PR 3

On these pages we list a few of the relay types we class as standard.

Stocks of either completed relays shown or component parts on hand assure prompt delivery. From these relays a type can be selected for almost any application.

All contact ratings given are for 115 volt 50-60 cycle, non-inductive load. All coils are baked varnish impregnated to government specifications, for protection against moisture and mechanical damage.

To actuate relays from 220 V. DC line use a 110 V. DC relay with a 5 watt wire-wound resistor with resistance approximately the same as the relay coil, in series with relay winding.

CONTACT LEGEND: S—Single; D—Double; P—Pole; T—Throw; N—Normally; O—Open; C—Closed; B—Break; M—Make.

Designed for power circuits such as across-the-line, starting, up to 1 HP., heater loads up to 20 amperes, remote break-in control of transmitters, electro-plating devices, elevator controls, or any high load circuit requiring fast, positive switching. AC types operate on 10 volt amperes; DC types require 2 watts. Pure silver $\frac{1}{4}$ " dia. contacts rated (double break) 20 amperes, (single break) 15 amperes. MS Series—MOTOR STARTING RELAYS VOLTAGE ACTUATED

MS 2A

MS 4A

Voltage controlled relay insures throw-out of the starting winding when motor reaches rated speed regardless of the load on the motor. May be mounted on the motor or remotely located. Ideally suited for use with hermetically sealed or explosion-proof motors that are capacitor start, induction run. Operates on back EMF of running winding.

Pull in voltage can be varied over a wide range by adjusting armature gap. Unusual design permits an exceptionally wide differential between pull in and drop out voltages. Normal adjustment for 115 volt motors is to pull in at 140 V and release at 40 V or less. For 230 V motors, pull in at 255 V and release at 80 V or less.

FR Series—PHOTO FLASH RELAYS

Designed for photo flash units using a high voltage discharge through a gas filled tube requires a relay with extremely high voltage breakdown insulation. RELAYS DESIGNED IN ACCORDANCE WITH OUR INTERPRETATION OF UNDERWRITERS SPECIFICATIONS.

These Spemco magnetic relays can be used for remote control of electric power and lighting loads, pilot lights and audible signals. It may also be used for controlling small single phase motors, serve as circuit switching relays for machine tools, processing control, electrical interlocking systems, electronic applications, follows a "Bug" F B and many other applications too numerous to mention; however, relays serve as control devices only and do not provide motor overload or short circuit protection.

MAGNET COILS for AC Coils only. Relay coils are available for voltages ranging from 1 1/2 to 220 volts with commercial frequencies of 25, 50 and 60 cycles. Coils are designed for continuous service and will operate safely at plus 10% or minus 15% rated voltage.

All coils are designed for 50/60 cycle service for any given voltage rating. Coils will pick up readily at 80% of rated voltage. All magnet coils are impregnated and baked.

POINTS. Fine silver to silver contacts provide long life and low contact resistance. Silver contacts never require cleaning or dressing and do not corrode, thus reducing maintenance. Substantial contact pressure assures dependable contact action even on light loads or low voltages.

All wiring terminals are accessible from the front of the relays and are so arranged that relays may be mounted on minimum centers without obstructing wiring terminals of adjacent relays. All Steel parts are plated.

LATCHING RELAYS

These relays are employed where it is not desirable to have current continuously on the coil. The latching arrangement is such that when the relay coil is energized the armature closes and locks in a closed position by mechanical latching. An electrical impulse on the reset coil releases the armature from the latch and allows the relay to assume its initial position. 3/16" fine silver contacts. Bakelite Base. Size—3 3/4" x 2" x 3/4".

For 100' Range For 150' Range

Exciter Lamps and Electronically Operated Relays for 250' and 500' ranges are externally the same and are weatherproof.

FOTOLECTRIC COMBUSTION SUPERVISOR

A three-piece set consisting of Exciter Lamp, Photo-cell Receiver and a choice of three Electronically Operated Relay units. Operates on the smoke detection principle. Dependably sets into operation the controls that maintain combustion efficiency. Fotolectric units are mounted opposite each other on the boiler breeching, so that the beam of light traverses the flow of smoke. A predetermined increase in density of smoke operates whatever alarm or automatic control equipment is used.

Electronically Operated Relay and Control Cabinets available in three models:

MODEL No. 71A — For use where no time delay is necessary. Usually used as an alarm device, and to actuate automatic combustion control equipment.

MODEL No. 71B — Equipped with input time delay circuit to prevent needless operation of control equipment from voltage drop or short puffs of smoke.

MODEL No. 71C — Same as Model 71B plus additional time delay holding circuit to continue operation of combustion control equipment for a predetermined period of time. Prevents cycling of equipment.

FOTOLECTRIC FIRE PROTECTION

The Worner Fan Motor Stop installed on ventilating ducts detects smoke, gives alarm, stops fan to prevent fan-driven fire to a succession of outbreaks. Approved by Underwriters Laboratories. For full details, write for Bulletin 650.

GENERAL

DRY BATTERIES

GENERAL dry batteries contain many outstanding advancements such as extra heavy seamless extruded zinc cups, the famous paper thin separator permitting more mix and more active zinc area by utilization of the cell bottom, the curled rim lock seal which seals each cell individually. These features, found only in Generals, assure long shelf life as well as the maximum in dry battery performance.

GENERAL A & B RADIO FARM PACKS

General A-B packs are made with L size cells in the A section. These cells are 40% longer than the largest conventional 1 1/4" diameter cell. This construction assures the perfect balance between these "A" and "B" sections for current drains established by the Radio Industry.

ATR SUPER HEAVY DUTY RADIO INVERTERS

Specially Designed for Operating Large A.C. Radios, Public Address Systems, Tape Recorders, Amplifiers, Intercall Systems, and Radio Transmitters from D.C. Voltages in Vehicles, Ships, Trains, Planes, and in D.C. Districts.

Featured cut illustrates all ATR SUPER HEAVY DUTY Types except Types 6 and 12-HSG.

This group of ATR Inverters is especially recommended for use with large A.C. radios, amplifiers, and similar electronic equipment, being exceptionally well filtered to insure interference-free operation. With ATR Inverters, the need for special equipment is eliminated. They are designed for long-life operation. All models indicated are equipped with ATR twenty-contact plug-in Inverter Vibrators and also with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. High operating efficiency is provided. These Radio Inverters are recommended for use with loads having power factors in excess of 80%.

ATR Inverters should be used only for the applications as outlined above.

ATR Inverters are not recommended for operating refrigerators, washing machines or similar motor-driven appliances; also, ATR Inverters are not recommended for operating toasters, electric irons, sun lamps, or similar appliances of high wattage or low power factor. Any attempt to use the Inverter for applications not recommended will ruin the Inverter immediately and void the guarantee.

Mallory 6RS25 Heavy Duty Six Volt DC Power Supply

The Mallory 6RS25 6 volt, 25 ampere rectifier type power supply is designed to replace storage battery-charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 6RS25 operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Three capacitors totaling 30,000 mfd. filter the output to less than 1 volt ripple and suppress RF and power line interference. A 0-10 volt DC voltmeter and a 0-40 ampere DC ammeter are included.

Conduction cooling of the full-wave Selenium Rectifier Cells, automatic overloading protection, and a self resetting circuit breaker insure long life.

The Mallory 12RS6D is a dual purpose bench power supply designed for use on the radio service bench for operating conventional 6 and 12 volt automobile and truck radio sets. Fully AC-operated from the 115V/60 cycle line, the 12RS6D supplies rectified and filtered DC in either of 2 ranges. Range "A" supplies 0 to 16 volts at 6 amperes continuously, or 12 amperes intermittently. Range "B" supplies 0 to 8 volts at 10 amperes; or 20 amperes intermittently. Both ranges are infinitely variable from zero to maximum output to permit precise adjustment of bench test voltages. The 12RS6D is equipped with a DC voltmeter, a DC ammeter, infinitely variable voltage control, a range switch, an on-off toggle switch, automatic overload protection, primary fuse and rubber-covered line cord and plug. The rectifying system employs a full-wave metallic rectifier. The cabinet is sheet steel finished in blue enamel and measures 6¾" high, 10¾" wide and 5½" deep. Shipping weight approximately 8 lbs. Catalog No. 12RS6D \$39.95 Net

Mallory 12RS5 Bench Power Supply

Similar to above, but provides single output range of 0-16 volts at 5 amperes. Catalog No. 12RS5 \$34.95 Net

Mallory 6RS10 Bench Power Supply

The Mallory 6RS10 6 volt power supply has been designed as a convenient source of DC current wherever 115 volt AC current is available. It is particularly suited for testing of automobile radio sets and has ample power to operate those with electrical tuning mechanisms. DC voltage is continuously variable from 0 to 8 volts. The unit may be safely operated continuously at 10 amperes and intermittently at 20 amperes. A 10,000 mfd. capacitor is employed as an efficient filter. Full-wave rectification is obtained from a conservatively rated Mallory Magnesium-Copper Sulfide Rectifier Stack.

The power supply is fully equipped with a 0-20 ampere DC ammeter, a 0-10 volt DC voltmeter, a self resetting circuit breaker in the DC line, a switch and fuse in the AC line, and a six foot AC cord. Overall dimensions: 6¾" wide, and 5½" deep. Shipping weight approx. 13 lbs. Catalog No. 6RS10 \$36.75 Net

Mallory Vibrator Testers

The Mallory Vibrator Testers have been designed as companion units to the famous Mallory Service Bench Rectopower Supplies 6RS10, 6RS25-1, 12RS5, 12RS6D or 12RS14D (acting as variable power supplies) to test directly, without adapters, most of the popular vibrators and all of the 6 volt passenger car radio vibrators used since 1940. Either 6X5 or 0Z4 rectifier tubes may be plugged into the front panel, thus permitting interrupter vibrators to be tested in conjunction with the rectifier tube with which they normally work in the equipment. Defective vibrators or rectifiers can readily be determined by the substitution method. Self rectifying vibrators are tested by removing the rectifier tube. Either shunt or separate drive vibrators can be tested of any frequency from 100 to 250 cycles. The condition of the vibrator being tested may be read directly from the "good-bad" meter scale. Shipping weight approximately 8 lbs.

Mallory Six and Twelve Volt Fast Chargers —Unfiltered DC Power Supplies

6AC75
12AC60D

Mallory Fast Chargers, designed in extremely compact form, provide the advantages of portability with high-charging currents. Light weight, small size, perfect balance and a convenient carrying-handle make them ideal for one man to transport directly to the job for most efficient operation. Suitable for use wherever a reliable source of 6 volt, high amperage power is required, such as: garages, filling stations, parking lots, electrical service shops, schools and testing laboratories. The portability of these units provides many advantages over the conventional stationary or semi-fixed type supply.

Despite their small overall size, these Mallory Fast Chargers are ruggedly constructed with full-size components. Heavy duty, metallic rectifiers, connected in full-wave circuits, are cooled automatically by means of built-in, electrically-operated fans, assuring long life and effective service under the most severe conditions. Strong sheet-metal cabinets offer adequate protection against accidental damage. A tough, white enamel finish not only adds to the appearance of these units but also protects the metal cabinet from rust and corrosion.

Operating refinements found in Mallory Fast Chargers, usually omitted in conventional fast chargers, permit both fast or slow charging rates by the throwing of a panel switch. Three rates of fast charge and three rates of slow charge may be selected by means of a positive acting, rotary panel switch. A panel-con-

trolled, synchronous motor, timer mechanism with a range of from 1 through 57 minutes in increments of 1 minute is a standard part of these units. When pre-set, this timer automatically disconnects the charger from the 115V/60 cycle line at a predetermined time up to a maximum of 57 minutes. A switch is included to disconnect the timer motor for continuous operation when using the charger as a power supply.

All Mallory Fast Chargers are equipped with: easy-to-read 2¼" ammeters to indicate charging rates; abrasion-resistant, rubber-covered, 6-foot, AC-line cords; and heavy-duty, 2-conductor, 12-foot, rubber-covered cables to which large copper battery clamps are attached. Each charger is equipped with racks to accommodate the power cables when not in use. Cabinet dimensions are: 7¼" x 6½" x 15". AC input is 115V/60 cycles, single phase, for both models.

Model 6AC75 is rated at 75 amperes with a minimum DC voltage of 6 when used as a fast charger on a 3-cell battery. An output of 60 amperes at the same voltage may be obtained when using this model as an unfiltered power supply.

Catalog No. 6AC75 **\$109.50 Net**

Model 12AC60D has a dual range output selected by means of a panel switch. Range A: 6 volts DC at 90 amperes when employed for battery fast charging and 65 amperes at 6 volts when employed as an unfiltered power supply. Range B: 12 volts DC at 60 amperes for battery fast charging and 45 amperes at 12 volts when employed as an unfiltered power supply.

Automatic Instantaneous Voltage Regulation

SOLA Constant Voltage Transformers are static magnetic voltage regulators. They are designed to provide a constant output voltage which is unaffected by changes in input voltage. You will find, listed in the following pages, the widest range of ratings and types available from stock offered by any manufacturer.

In addition, CUSTOM DESIGNED UNITS can be manufactured in capacities from 1 V.A. to 25,000 V.A., to suit your individual specifications. When ordered in substantial quantities, they cost only slightly more than standard units of the same general size. Often, time and money can be saved by direct use or modification of a regulator from the several hundred special designs on file. Custom designs can include: SPECIAL VOLTAGE RATIOS, SPECIAL FREQUENCIES, COMPENSATION FOR FREQUENCY VARIATION, MULTIPLE OUTPUT VOLTAGES, THREE-PHASE SERVICE, and MILITARY SPECIFICATIONS.

SOLA Constant Voltage Transformers have eight distinct advantages over regulators which depend solely upon saturation of core materials for their regulating action, or electronic type regulators:

1. Response time, 1.5 cycles or less.
2. No moving or renewable parts . . . no manual adjustments.
3. Completely automatic continuous regulation.
4. Self-protecting against short circuits.
5. Current limiting characteristic protects load equipment from excessive fault currents.
6. Can often be substituted for conventional non-regulating transformers.
7. Relatively compact.
8. Provide isolation between input and output circuits.

* These units are supplied with an "L" terminal which allows connecting in the field to limit the output voltage to the applied voltage. If "L" type connection is required on other models, the "L" must be included in the type number when ordering.

† When these POWERSTATS are "L" connected so that the output voltage does not exceed the applied voltage, the frequency range is 50/60 cycles.

** When a motor-drive is required, prefix the letter "M" together with the speed designation letter to the type number, Z - 6 seconds, Y - 14 seconds, X - 19 seconds and W - 45 seconds for full range travel. Since the driving motors are frequency sensitive, be sure to specify whether 50 or 60 cycles is required. Only manually-operated unit weights are listed. For motor-drives add 10, 11 and 14 pounds to the 116-216, 1126-1226 and 1156-1256 types, respectively.

EFFICIENT • ACCURATE • DEPENDABLE

POWERSTAT variable transformers are autotransformers of toroidal core design with a movable brush tap which is rotated to deliver any desired output voltage from zero to, or above, line voltage. Glass smooth commutator surfaces and advanced winding techniques assure smooth operation and permit adjustment to a fraction of a volt. Other important features include: excellent regulation, high efficiency, conservative ratings, zero waveform distortion and rugged mechanical construction.

A wide range of standard POWERSTAT variable transformers are available for 115, 230 and 460 volt, single and three phase operation. Both manually-operated and motor-driven types are offered. The rating chart lists some of the most-called-for standard POWERSTATS. Others — specifically designed to customer requirements — are available to fulfill each application. Consult us about your specific needs.

STANDARD TYPES for VARIED APPLICATIONS

POWERSTAT VARIABLE TRANSFORMERS FOR

OIL-COOLED OPERATION

TYPE O-1126

By immersing a POWERSTAT in transformer oil, the rating above normal air operation is increased and duty in a corrosive atmosphere is possible. A standard line is offered in various ratings and sizes.

EXPLOSIVE ATMOSPHERES

TYPE X-1126

To provide safe operation in hazardous areas where a small arc or spark could cause an explosion, explosion-proof POWERSTATS are available. Standard models are approved by Underwriters' Laboratories for Class 1, Group D service.

HIGH CURRENT NEEDS LIMITED OUTPUT RANGE

TYPE 2106LC

Relatively large amounts of power can be controlled by a small POWERSTAT when used in conjunction with a fixed-ratio transformer. This combination is known as a POWERSTAT Line Corrector. It can be used to correct line voltage variations to maintain a specified output voltage and to supply a limited output voltage range. A multitude of ratings are available.

TO MEET EACH NEED**

TYPE IE (INSTANTANEOUS ELECTRONIC)
for the most exacting control

Type IE is completely electronic in operation with no moving parts. Providing instantaneous correction, it is ideal for laboratories, test lines, as a component of other equipment . . . and everywhere that the most exacting voltage control is required. At no load, full load or any intermediate stage, constant output voltage is maintained regardless of line fluctuations. The output voltage is held to within ± 0.1 volts of nominal for wide line variations and within ± 0.15 volts of nominal for any load current or load power factor change from .5 lagging to .9 leading. Waveform distortion never exceeds 3%. Standard types are listed below. Consult us about your specific requirements.

TYPE IE51002R

TYPE IE5101R

TYPE EM (ELECTRO MECHANICAL)

for large industrial loads . . . for applications requiring zero waveform distortion and high efficiency

Type EM is an electro-mechanical device with a very sensitive detector controlling a motor-driven POWERSTAT variable transformer and auxiliary transformer. While not instantaneous, Type EM corrects faster than most other automatic voltage regulators. Highly efficient in operation, it finds widest application in controlling large industrial loads and also in electronic equipment where zero waveform distortion is essential. Features include: complete insensitivity to the magnitude and power factor of the load, no effect on system power factor, no critical adjustments and adjustable output voltage. Standard types listed below.

One Source for Voltage Control Equipment

VARICELL D-C POWER SUPPLIES

A VARIABLE RANGE OF STABILIZED AND REGULATED
D-C VOLTAGES FROM AN A-C SOURCE

The ideal source of low d-c voltages, the VARICELL is simply plugged into any convenient, single phase a-c outlet supplying a nominal 115 volts at 60 cycles and it is ready to operate. Turning the handwheel provides any desired output voltage from 0 to 30 volts. Its load rating is 15 amperes. Any setting is unaffected by changes in line or load current. For any setting from 6 to 30 volts, R.M.S. ripple voltage never exceeds 0.1 volts, and stabilization and regulation is ± 0.25 volts.

VOLTBOX A-C POWER SUPPLIES

A COMPACT, PORTABLE SOURCE OF
VARIABLE A-C VOLTAGE

This is a handy instrument widely used in chemical, physical, electrical and other laboratories and in inspection, testing and plant maintenance departments. It eliminates the need for collecting a variable transformer, voltmeter and connection leads when tests involve variable a-c voltages. All necessary components are housed in a compact, aluminum case. By turning the "On-Off" switch to "On"; snapping the line-load switch to "Load" and rotating the knob, the desired voltage is available at the output receptacles and binding posts. Ratings are available to meet every requirement.

RADIART Seal-Vent RED SEAL VIBRATORS

NOW — with the RADIART SEAL VENT, the vibrator is sealed BEFORE it is used — and VENTED after it is put into use. The RED SEAL rubber-faced bakelite plug prevents formation of an insulating film on the contacts. Heat generated when the vibrator is put into service melts the wax out of the sealed vent-hole and permits air circulation . . . FOR LONGER LIFE AND EVEN GREATER PERFORMANCE!

The Radiart Vibrator Guide is the Standard of the Industry — Ask your jobber for your copy today!

There are many reasons for the nation-wide preference for Radiart Vibrators! One is the absolutely complete selection of types manufactured . . . there is a CORRECT Radiart replacement vibrator for most every need, to original specifications. In addition, the precision engineering behind the design of each type is backed up by highest standards of manufacture that assure peak performance . . . always!

CUSTOM CONVERTER 300-400-500 WATT, 115 V. 60 CYCLE AC OUTPUT

FREQUENCY CONTROLLED CUSTOM FOR PROFESSIONAL AND BROADCAST TAPE RECORDING

The Custom is the latest addition to the Carter line of small DC to AC rotary converters. Created to meet the demands for a compact and highly efficient two pole rotary converter, the Custom has been designed especially for amplifiers, office business machine, marine and mobile communications and high quality tape recorder requirements.

The Custom is the only small rotary converter manufactured in recent years that has been expressly created to incorporate in its design all of the new materials and technical improvements developed in the past few years.

300 Watt Largest Continuous Duty Output Available for 12 Volt Input.

The new Custom Converter with manual frequency control has been developed to provide a portable DC to AC power source for professional and broadcast tape recorders, heavy duty electronic measuring devices, and Tape recorder-AC motor driven camera combinations. Now for the first time, sufficient frequency constant AC power is available to operate this type of equipment from DC lines or battery source.

The rheostat control and the frequency meter are mounted in the attractive aluminum housing. A noise filter is also available in the same housing, although it is not usually necessary for operating recorders, amplifiers or other audio devices. Filtering is required when radios or other RF circuits are operated from the converter.

Convenient recessed DC male plug is furnished for 32, 64, 115 and 230 volt DC input models. 12, 24 and 28 models are equipped with heavy stranded input leads for battery connections, as shown. A flush AC mounted receptacle is supplied on all models for quick AC connections. The sturdy carrying handle allows the converter to be moved immediately after its operation, a life-saver for taping remote broadcasts.

Each model must be designed to properly match the power factor, voltage, frequency, and load requirements. Any of the Custom models can be furnished with frequency control. Model listed below has been laboratory tested and is matched to provide perfect operation. Kindly send your special requirement to the factory for prompt and careful consideration.

Carter Custom-Matched Converters for Popular Wire and Tape Recorders - Sound Projectors - Phono Motors - Television

Whenever DC to AC Rotary Converters are used to power wire and tape recorders or other similar recording equipment, the Converter AC output frequency and Converter Power Factor must be perfectly matched to the recorder load to assure proper recording and play back performance. Most wire and tape recorders are of medium Power Factor design, approximately 70%. Standard high power factor (85 to 100%) Rotary Converters therefore *will not operate* the recorders properly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load. It is imperative therefore, only factory-tested and recommended Converters be selected for wire and tape recorder operation. The equipment listed below has been laboratory-tested and the correct Carter Converter recommended for each model. Use this chart for your recorder Converter requirements. If the equipment is not listed on the chart, please write to the factory and information will be supplied, if available.

HIGH FIDELITY TRANSFORMERS

CHICAGO STANDARD TRANSFORMER CORPORATION

HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ± 1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

TRANSISTOR TRANSFORMERS

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power. Write for Bulletin 462 showing typical circuit application.

These transformers are designed primarily for transistor audio application but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations. Mounting style is coil and iron only.

SPECIAL Stancor ultra-miniature transistor transformers, designed and built to your requirements, can be supplied in quantities of five or more. Send your specifications for information on price and delivery.

MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ± 1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in $\frac{7}{8}$ " square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1 $\frac{1}{4}$ ". The case has two 2-56 threaded inserts, $\frac{1}{16}$ " centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces. Mounting type UM.

HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS

HF Series

These units have a wide frequency response of 20 to 20,000 cps with ± 1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. Poly-Pedance units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

MULTI-PURPOSE INTERSTAGE—PIE-WOUND SPLIT SECONDARIES

May be used as a single plate to single grid, single plate to push-pull grid, or push-pull plate to push-pull grid interstate transformers. Overall ratios are 3:1, however, primaries are center-tapped and secondaries have split windings, thus providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications.

POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for

matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

Testing Autoformer—Designed especially for various service and test application. Incorporates a convenient tap switch to permit variable voltages from 90 to 150 volts. It may be used to apply an overload voltage to amplifiers, radio receivers, or other electronic

devices being serviced, which will indicate and cause suspected parts to break down. Primary equipped with 6 ft. approved cord and plug. Secondary connected to female receptacle.

LINE ADJUSTING AUTOFORMERS

Stancor Line Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for altering a 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means

of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale.

SIX VOLT DC POWER SUPPLY

The Stancor Model 752 Master Pack replaces bothersome storage batteries, meeting the needs of the serviceman for a six volt power supply that is practical in design, convenient to use, and large enough to handle heavy-duty jobs.

The Stancor Master Pack is conservatively rated to provide 6 volts D.C. at 12.5 amperes continuously from the standard 115 volt, 50-60 cycle source. An instantaneous rating of 25 amperes makes the Model 752 ideal for demonstrating or testing auto radios with push-button or floor-switch magnetic tuning. Reserve power permits simultaneous operation of two or more receivers. Separate voltmeter and ammeter afford a continuous, visual check of voltage and current delivered to load. Meter needles are damped to prevent annoying "wobble." The extractor-type line fuse gives positive protection against damage from excessive overloads. Thorough filtering, less than 3% ripple through a choke-capacitor filter, allows use in applications where the hum from a poorly filtered power supply cannot be tolerated. Selenium rectifiers are used for dependability and cooler operation. Controls and terminals are conveniently located on the front panel. The sturdy steel case is finished in durable gray hammertone. No detail has been slighted in making the Stancor Model 752 Master Pack the outstanding power supply for the service bench. Size overall, 9 1/2" high, 7 3/8" wide, 12" long. Weight in carton, 30 pounds.

Hermetically Sealed POWER COMPONENTS 50-60 Cycle

The MIL-T-27 procurement specification is written to assure our military services of transformers which will give continuous and unflinching service under extremely adverse conditions of climate and overload. Good commercial equipment also must use only the best

obtainable components since failure would cost much more in "downtime" than the savings in cost of parts. TRIAD "HS" Series Power Transformers are designed to fill these stringent applications. These are the finest transformers available.

Combined PLATE and FILAMENT Transformers

Primary 115 Volts — Double Filament Windings 6.3 or 12.6 Volts

Avoid redesign—Use Triad HS and HSM transformers in military prototypes.

Since Triad HS and HSM series transformers use MIL-T-27 standard sizes, plus electrical and mechanical design to meet all MIL-T-27 requirements, equipment using these transformers need not be redesigned to submit for military approval. The basically good design factors which are necessary to meet MIL-T-27 standards for performance insure longest life in any class of service.

These transformers are permanently marked with electrical and test data as specified in MIL-T-27. All are "Climatite" treated, use sturdy TRIAD terminals and are beautifully finished in grey enamel.

HIGH FIDELITY OUTPUT TRANSFORMERS

TUBE TO LINE — TUBE TO VOICE COIL — LINE TO VOICE COIL

Hermetically Sealed HIGH LEVEL OUTPUT

TRIAD "HS" Series Output Transformers represent the application of the most modern techniques in the design of fine audio equipment. Use of the very best core materials, combined with interleaved coil structures, have resulted in an open circuit inductance to leakage inductance ratio of 10,000, representing a frequency response range

of better than 13 octaves. These transformers will deliver full rated power output within 1 db from 7-50000 cycles. Full DC plate current can be carried through the primary windings, but every effort should be made to balance the two plates in push-pull circuits to obtain optimum results at the extreme low frequencies.

TOROIDS

TOROIDS for Filter Components

The nearest practical approach to perfect inductance of no resistance, no capacity and infinite "Q" is made by winding on a pressed molybdenum permalloy dust core of toroidal shape. Depending on size and composition of core materials, Triad Toroids will develop (under certain conditions) "Q"s of greater than 200, inductance values up to 25 Henries on the EH series and stability with level, temperature and humidity almost beyond belief.

Triad Toroids, adjusted to within 1% of the values shown, are ordinarily encapsulated in a clear plastic material, but may be obtained in a hermetically sealed case if desired. When ordering hermetically sealed Toroids, order by the uncased number, followed by the letters HS.

Special inductors, made to your specifications as to inductance and "Q," may be ordered from the factory. Prices on request.

TRIAD TRANSFORMER CORP.

PULSE

These miniature blocking oscillator transformers are now in quantity production for manufacturers in a number of applications and with outstanding results. Their multiple winding construction makes them available for a variety of circuits and their fast rise time (.05 microseconds) makes them exceptionally useful. Positive hermetic sealing prevents deterioration of performance with time (absolutely necessary for long shelf life).

Type No.	Description	List Price
PL-4	2 equal windings. Pulse widths .35 to 1.2 microseconds. Duty cycle .05 max. Dimensions .4" dia. by .625" long.	\$28.00
PL-5	3 equal windings. Pulse widths .15 to .65 microseconds. Duty cycle .05 max. Dimensions .50" dia. by .68" long.	24.20
PL-6	3 equal windings. Pulse widths .15 to .65 microseconds. Duty cycle .05 max. Dimensions (Transformer only) 1/4" dia. by 3/4" long. Mounts with 8-32 x 1/2" stud.	21.25

As a Hybrid Transformer	This precise matching transf. is an excellent hybrid unit for operation from two 250/300 ohm sources. Balancing resistor of approx. 125/150 ohms required in pri. circuit. For max. attenuation between sources the exact value of resistor should be determined from measurements made in circuit where transf. is used. Correct value will yield average attenuation of 27 to 30 db with a max. attenuation of approx. 50 db at some point between 500 cps and 1,000 cps. LINEAR STANDARD AUDIO TRANSFORMERS

LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leakage reactance.

UTC LINEAR STANDARD transformers are the **ONLY** audio units with a **GUARANTEED** uniform response . . . ± 1 DB from 20 to 20,000 cycles.

MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semi-toroidal, coil structure which affords maximum neutralization of external fields. In addition, all units employ high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in X employ multiple alloy shielding, making possible a transformer with extremely low inductive pickup.

NEGLECTIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching, minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortion at 30 and 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value, generally 10 cycles to 50,000 cycles (see page 6).

MULTIPLE TAP WINDINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of .1% . . . perfect balance of inductance and capacity . . . exact impedance reflection.

DEPENDABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole will clear all terminals. Coils are vacuum baked and impregnated. Semi-hermetic sealing is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

LS OUTPUT TRANSFORMERS THE FINEST

While the UTC Linear Standard line is generally designed for a flat response from 20 cycles to 20 Kc., a much wider response is required for output transformers. As is noted in the first curve below, typical UTC output transformers are down less than 1 dB at 10 cycles and less than 1 dB at 40 to 60 Kc. Because of this, a fine power output curve is possible. (Second curve.) The third figure below illustrates square waves obtained with the LS-63 transformer in a "Williamson" Amplifier Circuit. Of particular interest is the short rise time, which is far superior for UTC transformers than any standard make which we have measured.

In choosing power components for broadcast and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise, 40°, and high insulation safety factors. Only the finest of materials and workmanship are used throughout.

HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

ULTRA COMPACT AUDIO UNITS

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing-coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level $+7$ DB.

SUBOUNCER UNITS

FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

UTC Sub-Ouncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

SUB-SUBOUNCER UNITS

UTC Sub-SubOuncer units have exceptionally high efficiency and frequency range in their ultra-miniature size. This has been effected through the use of specially selected Hiperm-Alloy core material and special winding methods. The constructional details are identical to those of the Sub-Ouncer units described above. The curves below show actual characteristics under typical conditions of application.

OUNCER AUDIO UNITS

STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing $\frac{7}{8}$ " diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform from 40 to 15,000 cycles, except for O-14, O-15, and units carrying DC which are intended for voice frequencies from 150 to 4,000 cycles. Maximum level 0 DB.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

NEW "M" TYPE TOROIDS

MAXIMUM Q
MINIMUM SIZE

UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The MQ series of coils provide the highest Q factor in their class (see curves below), with miniaturized dimensions. All units are hermetically sealed to MIL-T-27 Specifications.

The stability is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

Other values of inductance than those listed are available on special order at the price of the next higher listed value.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +90%, -50% from mean value is obtainable. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1 1/2" long, 1/4" wide and 1 1/4" high with mounting centers on terminal board side 1 1/8" by 3/32". Weight is 5 1/2 oz.

UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simultaneously with their frequency discrimination.

BMI units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attenuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid.

HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms. LMI units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency. Input and output 10,000 ohms. HML (High Pass), and LML (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms. BML (Band Pass) have input of 500/600 ohms, output to grid.

All of the standard filters are housed in hermetically sealed cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.

In addition to the stock filters listed, any of the six types are available as special units for any frequency from 100 to 12,000 cycles. Order by type followed by frequency, as LMI-2500, designating low pass interstage filter—2500 cycles cutoff frequency. These special units are priced at \$35.00 net.

BROADCAST AND RECORDING EQUALIZERS AND FILTERS*

* 500/600 ohms

3AX UNIVERSAL EQUALIZER

The universal characteristics of the UTC 3AX equalizer have made it the most popular item for broadcast and recording equalization. This unique unit, with which most communications engineers are already familiar, is an accurately calibrated, quickly adjustable, combined low and high frequency equalizer. The low frequency controls include a switch for adjusting the maximum equalization frequency to 25, 50, or 100 cycles and a calibrated T-pad for exact adjustment of the amount of equalization. The high frequency portion of this unit includes a switch to set maximum equalization point at 4000, 6000, 8000, 10,000 or 15,000 cycles, and a similar calibrated control reading directly in DB. Equalization up to 25 DB available at any frequency selected.

TYPICAL CURVES OBTAINABLE WITH 3A OR 3AX EQUALIZER

Through a unique arrangement of compensating pads, changes in adjustment of the 3AX equalizer do not affect the apparent aural level. This permits changes in tone color, with negligible change in volume. Where rapid change-over is required in service from one line to another, or from recording to play back, it is merely necessary to predetermine the required setting. The actual adjustment of the controls can be taken care of almost instantaneously. The construction is of the depressed chassis, etched panel, rack mount type. Thoroughly shielded against inductive pickup with UTC Trialloy Shielding. Dimensions of panel 3½" x 19". Depth 7½". Weight 15 lbs.

3A UNIVERSAL EQUALIZER

The 3A equalizer is identical to the 3AX described above, except that it does not incorporate the compensating pads for constant insertion loss. The insertion loss is roughly proportional to the amount of equalization employed. All other characteristics identical with the 3AX unit, this item weighs 10 lbs.

CHARACTERISTICS OBTAINABLE WITH 4C FILTER

4C SOUND EFFECTS FILTER

The use of filters to obtain unusual sound effects is now finding wide application in broadcast technique. The Model 4C Filter was originally developed for one of the large broadcast chains, and is now used extensively by most broadcast stations. Two controls are provided on the 5¼" x 19" panel, which is similar in appearance to the 3AX unit. The weight of the 4C unit is 20 lbs.

The low pass switch can be set for cutoff frequencies of 100, 250, 500, 1000, 2000, 3000, 4000, or 5000 cycles. The high pass switch has identical frequency points. The great number of cutoff frequencies provides for a wide latitude of tone control. If desired, though not normally necessary, external potentiometers may be inserted in the circuit for attenuation control.

UTC VARITRANS

The UTC Varitran is a simple autotransformer whose turns are arranged on one layer with the insulation removed so that every exposed turn may be used as a tap of the winding. A special non-fusing contact can be moved to any position on the winding, permitting the exact voltage desired to be obtained. The regulation

VARITRAN RATINGS

The Varitran autotransformer current and wattage rating is based at 115 volts. As the voltage is reduced, the wattage output is reduced correspondingly. The maximum current can be taken at any point from 0 to 20 volts and from 95 to 130 volts. Between 20 and 95 volts the current capacity tapers off from the two ends to approximately 60% of the rated maximum current at the 65 volt point. The mounting facilities are at both top and bottom of each unit to assure ease of mounting on panel, chassis or for laboratory bench service.

HERMETICALLY SEALED COMPONENTS

For over fifteen years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to latest military specifications, which are now catalogued as UTC stock items.

Terminals on items H-20 through H-24 are neoprene-ceramic assemblies. All other units employ glass bead headers. Items H-1 through H-11 can, however, be supplied with neoprene-ceramic terminals where required. To so order, specify the type number followed by NC (H-1 NC, etc.).

The frequency response ratings are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown.

The level ratings are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible.

The impedance ratings are listed in standard manner. Obviously, a transformer with a 15,000 ohm primary impedance can operate from a tube representing a source impedance of 7700 ohms, etc. In addition, transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce frequency range and level rating.

COMMERCIAL GRADE COMPONENTS

The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. Type numbers are identical with the PA units except for the prefix "CG."

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear. $\pm 1\frac{1}{2}$ DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

NEW UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest developments in design and manufacture, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency controls permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium-mu triode stage will provide both proper gain and source impedance. (See circuit on centerfold, page C.) The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

CGE-1A Panel Dim. 2 3/8" x 3 1/2". Wt. 2 Lbs.

DYNAMIC NOISE SUPPRESSION-INDUCTOR

Incorporates two accurate High Q coils [.8 hy. and 2.4 hy.] for use in dynamic noise suppression circuits. Excellent circuit accompanies unit.

CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

.2, 4, .5, .62, 1, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5, 5, 5.5, 6, 6.25, 6.6, 7, 7.5, 8, 9, 10, 11, 12, 14, 15, 16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75.

Where speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load. The ever increasing number of vacuum tubes available for audio and RF applications has increased the difficulty of obtaining transformers suitable for matching to the various correct tube loads. If a standard transformer having a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is inevitable. While a 20% mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflected to the tubes. The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, GG or LS grade components should be employed. Tapped coil structures on power, and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

REPLACEMENT TYPE COMPONENTS

(PREVIOUS POWER TRANSFORMERS TYPE R-1 THRU R-13 AND R-54 WILL BE AVAILABLE UNTIL 1951)

The UTC replacement type transformers represent the culmination of years of development in this field. All units are vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel.

The UTC shells and universal brackets employed make possible a latitude in mounting dimensions never approached heretofore. A minimum number of transformers have been developed to cover any requirement in the replacement field. Pri. 117V. 50/60 cycles.

DOUBLE SHELL TYPE

The universal feet may be used for upright or horizontal mounting, or eliminated for flush mounting.

SINGLE SHELL TYPE

UTC flush type transformers are husky units designed for low temperature rise and good regulation. The rugged solder terminals permit ease of circuit change for the experimenter.

VERTICAL SHELL TYPE

UTC vertical power transformers are unusually attractive in appearance, having smooth drawn cases finished in high lustre black enamel.

CHANNEL FRAME TYPE

Channel frame chokes and audios are conservatively designed. Standard black enamel mounting channels are employed. Coils are tropic-sealed by vacuum-pressure method.

DETAILS OF NEW EQUIPMENT LINE MOUNTINGS

H-TYPE MOUNTING—Hermetic sealing meets all MIL-T-27 specifications. Steel base cover is bonded into the case by deep-seal soldering. Terminals are hermetically sealed by unique rubber gasket—ceramic bushing construction. Units are stud mounted.

C-TYPE MOUNTING—Moisture-resistant compound surrounds coil and core. Ten-inch, RMA-color-coded leads, ends stripped and tinned for easy soldering. Flange-mounted drawn steel cases.

S-TYPE MOUNTING—Precision-fitted steel base-covers and terminal boards, plus compound filling, keep moisture out. Solder-lug terminals are clearly identified, easy to use. Drawn steel cases are flange-mounted.

B-TYPE MOUNTING—Steel bases are bonded into the drawn steel cases by deep-seal soldering to make units completely moisture proof. Stud-mounted cases take minimum chassis space. Convenient, compact, pin-type terminals.

CHICAGO PUBLIC ADDRESS RANGE AUDIO TRANSFORMERS

Frequency Response within ± 1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers.

(16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

Low Pass Filter No. LPF-1

For attenuating frequencies above 3,000 cycles in low level speech amplifiers. Operates out of a 15,000 ohm source, e.g., the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to -3 db. Complete with operating instructions. S type mtg. Case size 13. (See pg. N-54).

ISOLATION TRANSFORMERS

CHICAGO Isolation Transformers are designed for a dual purpose: (1) To supply 115 volts isolated from a line of above/below normal, or normal, voltage—primary switch sets for 125/115/105 volts, 50/60 cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground (particularly important on "hot" AC-DC television sets). Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

Modern high fidelity broadcasting and transcription apparatus require the utmost performance and reliability in the audio transformers used in their circuitry. The Freed "Quality Grade" audio transformers are wide band, high fidelity components featuring astatic construction, longitudinal balance, low harmonic distortion, uniform response, high efficiency, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished by use of humbalanced coil structures and multiple alloy shielding. High fidelity is achieved on every tap of universal impedance winding without line reflection of transverse coupling.

All Quality Grade Components are thoroughly impregnated in a special non-hygroscopic varnish, and fully encapsulated in a moisture proof, high-melting point compound.

MODULATION TRANSFORMERS—THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

FILAMENT TRANSFORMERS—THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

STACO Transformers are compact and modern in design. Only the highest quality silicon lamination steel is used which assures cool operating transformers. Each coil is layer wound with the best quality enameled wires, each layer is insulated with heavy insulating material, each coil is varnished impregnated and high temperature baked. High Voltage Breakdown Test is performed on each coil and transformer in accordance with existing RMA Specs. This combination of high quality materials plus the finest workmanship is assurance of better and lasting performance at highest operating efficiency, yet costs no more than average.

Finishes: Mount type #1, Black baked enamel, Mount type #2, Black baked enamel, Mount type #3, Natural Buffed Aluminum, Mount type #4, Black Wrinkle baked enamel.

TRANSFORMERS

This group of transformers are hermetically sealed in standard Mil-T-27 case sizes, and are designed to meet the full requirements of the Mil-T-27 specification. They provide the highest standard of quality necessary for professional and military requirements.

The range includes the specific types stan-

dardized by the Armed Services Electro Standards Agency for universal military use, as well as a group of standard types for 400 cycle power supplies.

Use of these standard high quality components in experimental equipment will avoid the necessity for redesign for production.

FERRANTI TRANSFORMERS

Military Standard Audio Transformers

The Armed Services Electro Standards Agency has specified these types of audio transformers for universal military use. All units are hermetically sealed in Mil-T-27 case size AJ and are designed to meet the full requirements of the Mil-T-27 specification.

Use of these standard units in equipment at the experimental stage will avoid the necessity for redesign for production.

See dimension chart for AJ case details.

Fixed Ceramic Capacitors

Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temperature change can be tolerated. ZT is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from -55°C to 85°C. NT is negative temperature type with a negative coefficient of 750 parts/million/degrees C. These capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radially placed bars, tinned-copper leads approximately 1/4" long.

Voltage Rating—600VDC.

Instructions for use of RTMA Color Code

Hold capacitor with arrow pointing to right. From left to right, the first dot shall always be white to indicate standard RTMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.

Example shown above = 1300 mmfd. ±2% , 500 V.W.

The key to color significance is as follows:

Color	Sig. Fig.	Mult.	Tol.	Class.*
Black	0	1	±20%	A
Brown	1	10		B
Red	2	100	± 2%	C
Orange	3	1000	± 3%	D
Yellow	4	10000		
Green	5		± 5%	
Blue	6			
Violet	7			
Gray	8			I
White	9			J
Gold		0.1		
Silver		0.01	±10%	

* Denotes various electrical characteristics. Voltage ratings vary with capacitance as shown in RMA Specification—April, 1946.

TYPE PRS • DANDEES • TUBULAR ALUMINUM CAN ELECTROLYTICS

• Singles • Triples
• Duals • Quads

Tubular units encased in aluminum containers especially suited for compact assemblies. Single element units have solid wire leads. Dual, triple, and quad units are supplied with stranded wire leads and safety sleeves.

The higher voltage listings meet the new radio and electronic circuit potentials, particularly in cathode-ray applications like television receivers and oscillographs.

PRS units are normally supplied with etched foil, but plain foil is available. High-purity aluminum construction. Vented for excessive gas pressures.

HI-VOLTAGE • TYPE 84 • TUBULAR PAPER CAPACITORS

Hi-voltage type 84 oil impregnated, tubular capacitors are compact high-grade units. Overall wax dipped for high resistance to humidity. Units rated from 2500 VDCW and up are designed to meet the elevated peaks and transients encountered in television and other cathode-ray tube applications and to reduce the effects of corona. These high-voltage units are encased in cardboard tubes with tinned wire leads, and have an improved end-seal for longer life under operating conditions to which they are subjected. Supplied with radial mounting band at no extra cost.

A compact superior-grade oil-impregnated, oil-filled, drawn-metal case capacitor. Hermetically sealed, immersion-proof. Built for severe operating conditions as in aircraft, police, broadcast, public address and other types of communications equipment. The AeroVox-designed terminals are constructed with "doublerubber bakelite" insulators permanently riveted to the case, and make a sturdy, absolutely immersion-proof assembly.

TYPE 20 • HIGH VOLTAGE TRANSMITTER CAPACITORS

High quality oil-capacitors designed to meet the exacting service requirements of communications and electronic equipment, and general DC applications in industrial equipment. Single capacitors or parallel grouped capacitors available in ratings from 6000 to 50,000 VDCW. These units consist of precision wound, adequately insulated sections connected in parallel and assembled in heavy, welded copper bearing steel tanks, designed to expand or contract with changes in temperature. Finished in long lasting dark grey lacquer. Heavy duty, wet process porcelain insulator assemblies are gasketed, pressure sealed, and oil-filled to prevent internal creepage and corona. The assembled units are heat vacuum dried, vacuum impregnated with Aerovox Hyvol and hermetically sealed for long life under exacting, operating conditions. Single units rated at 30 KV or less are normally supplied with the capacitor element insulated from ground. Type 20 units not carried in stock but are built to order. Submit full application information when ordering.

**AEROVOX
MODEL 76 Re-
sistance Ca-
pacitance**

Bridge is the new postwar general-utility instrument combining simplicity of operation, remarkable degree of accuracy, and modest price. Extreme ruggedness makes it equally suitable out on the job, in the shop, or in the laboratory.

Sloping panel 10" x 6". Aluminum, etched and anodized. Steel cabinet, black crackle finish. All readings taken from main 4" dial. Same calibrated scale eliminates trouble and chances for errors in reading. Linear scale, also an exclusive feature, means no crowding at high end to make readings difficult and inaccurate. Both the resistance and the capacitance readings are covered by six overlapping ranges, as against two or three in usual service instruments, for maximum sensitivity and accuracy. Positive "magic eye" indicator.

Here is what Model 76 bridge does: (1) Measures capacitance from 100 mmf. to 200 mfd. in six ranges. (2) Measures resistance from 10 ohms to 20 megohms in six ranges. (3) Measures power factor from 0 to 50%. (4) Provides D.C. polarizing potential for leakage measurements, from 0 to 600 V.D.C., continuously variable and calibrated in volts. (5) Checks leakage or insulation resistance.

Instrument is provided with shockproof, color-coded test leads fitted with banana plugs for panel jacks, and with clips. Instructions. Measures 10" x 7 $\frac{1}{4}$ " x 8 $\frac{1}{4}$ ". Weight 8 lbs. 3 oz.

Aerovox Motor-Starting Capacitors

A TYPE FOR EVERY APPLICATION

Aerovox motor capacitors are available in two general categories: (1) Exact-Duplicate Replacements, precisely matching the mechanical and electrical features of the original equipment; and (2) Universal Replacements, for a minimum stock of numbers taking care of the maximum range of motor applications. Exact-Duplicate Replacements do the "same-as-new" service job insisted upon by critical customers. Universal Replacements mean maximum convenience with minimum investment. And of course Aerovox also supplies the hardware, housings, caps, mountings.

AEROVOX RESONANT CAPACITORS

Again the radio-electronic art imposes still more critical capacitor requirements. This time it's adequate bypassing of IF circuits in order to keep IF frequencies from entering such circuits and causing troublesome squeals and howls. And AeroVox comes up with the new AEROVOX RESONANT CAPACITORS.

AEROVOX RESONANT CAPACITORS, Series RC, are now available in conventional paper tubular design, wax impregnated and wax sealed as follows:

HI-Q DISK CERAMIC CAPACITORS

Hi-Q ceramic disk capacitors are available in a range of capacities from 10 mmf to 30,000 used for by-passing, blocking and coupling applications. They are sturdily constructed, precision tested, and moisture-proofed against high humidities. In many instances these Hi-Q disk capacitors offer advantages over the regular capacitors through their space saving features. Multiple capacities can be fabricated on single disks

affording additional savings of space and installation costs. The silver electrodes are fired directly to the ceramic dielectric to assure low noise operation. They are coated with a non-hydroscopic phenolic and are impregnated with a micro-crystalline wax which protects the units from humidity and affords a sturdy construction.

DISK CAPACITORS

General Purpose

Hi-Q by-pass disks are fixed ceramic dielectric capacitors specifically suited for by-pass or coupling applications or for frequency discriminating circuits where Q and capacity stability are not of major importance. These disks are available in the capacities listed below. 10 mmf to 30,000 in tolerances as specified. The smallest possible standard disk has been used for each value of capacity.

HI-Q TEMPERATURE COMPENSATING DISK CAPACITORS

The temperature coefficient of ceramic capacitors is an inherent characteristic of the ceramic body. By controlling this coefficient, the use of ceramics has been extended to countless applications in the electronic and communications fields. Temperature coefficient is determined by the ceramic mix and therefore certain tolerances are standardized. Following is a list of standard recommended tolerances used in this listing:

Temp. Coef.	Tolerance—PPM	Temp. Coef.	Tolerance—PPM
NPO	+30	N330	±500
N080	±30	N750	±100

The tolerances shown are maximum deviation. The actual average temperature coefficient usually runs close to nominal. Aerovox Hi-Q is the first to offer temperature compensating capacitors in both disk and tubular styles as stock items.

Hi-Q temperature compensating disks are specifically suited for resonant circuit applications or any other applications where high Q and stability of capacity are essential. They meet all specifications of RTMA Class 1 fixed ceramic dielectric capacitors. These disks are unusually suitable for limited space applications. These capacitors are available from stock in the capacity ranges and tolerances listed below.

N330 — Deflection Yoke Capacitor for silvered mica capacitor replacement.

HI-Q TUBULAR FEED-THRU CAPACITORS

Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements. All units are flash tested at 1250 volts D.C.

Hi-Q Eyelet Feed-Thru Ceramic Capacitors provide the ultimate in miniaturization. They can be soldered directly to the chassis and provide excellent by-pass performance where space is critical. Especially recommended for use in UHF.

HI-Q TUBULAR STAND-OFF CAPACITORS

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped for capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 3% and the installation resistance is above 7500 megohms.

UP, UPT & UPE TWIST-PRONG BASE ELECTROLYTICS

TYPE UP

TYPES UP, UPT AND UPE

Types UP and UPT capacitors are small, conveniently-mounted, round can-type electrolytic units furnished with bakelite and metal mounting washers. Terminals are tinned for soldering. They are dependable in operation over wide temperature variations with minimum capacity change.

Units are especially designed for use in television, radio, amplifier and other equipment where extremely high temperatures, voltage surges and ripple currents are encountered. They are particularly popular as replacement capacitors for all standard television receivers.‡

Type UPE units are designed for use in selenium rectifier circuits. When using selenium rectifiers in television, radio or other equipment, care must be taken to employ ONLY this type electrolytic capacitor and protective resistor—See page 6.

A protective series-resistor of approximately 50 ohms for a 100 ma. load, and at least 10 ohms for a 250 ma. load, should always be used to protect both the rectifier and filter capacitors. Use only type UPE in selenium rectifier circuits.

MOLDED TUBULAR CAPACITORS

"THE CUB"

The Cornell-Dubilier "CUB" is an outstandingly superior molded tubular capacitor unequalled by any molded tubular heretofore developed.

The "CUB" possesses characteristics that will meet the wide and demanding applications found in critical industrial, military and experimental electronic equipment.

This is the unit recommended for general replacement service.† Sold exclusively through C-D electronic parts Distributors.

The "CUB" is molded in extra hard, non-inflammable bakelite—tough, durable and exceptionally resistant to moisture, high temperature and shock.

The unit is processed by special vacuum—temperature—cycling impregnation—the 200 and 400 volt series are impregnated with HT compound and the 600 volt and up series are impregnated with oil (Dykanol "C").

In countless production test runs, the "CUB" has survived an average of 30 cycles of the punishing JAN and MIL Temperature and Immersion Cycling Test.

The "CUB" is dry assembly processed and sealed immediately after impregnation. This advanced technique results in life long high insulation resistance, low power factor, and exceptional capacitance stability. Each unit is tested at over two times its rated voltage to insure high dielectric strength.

At least a 50% greater resistance to humidity and a 15%-25% greater voltage breakdown over comparable molded tubulars, is built into the C-D "CUB".

Extra strong copper-weld leads eliminate breakage during assembly and throughout service life. The leads are permanently crimped and solder sealed securely to the unit and will not part during soldering operation.

TEMP. RANGE: HT Compound —40°C to +90°C
Dykanol "C" —55°C to +100°C

MOLDED MYLAR* TUBULARS

MYLAR* Polyester Film MOLDED TUBULAR CAPACITORS

Cornell-Dubilier's new PM SERIES of molded tubular capacitors are designed to meet the need for a rugged, high-temperature MOLDED unit. These are fabricated with the Du Pont Company's latest new dielectric material, "MYLAR" which maintains excellent electrical characteristics at temperatures up to +130°C. Over the temperature range of from -55°C to +100°C full rated voltage can be applied, and to +130°C voltage is derated only to 75%. Insulation resistance values are exceptionally high at any operating temperature and capacitance variation with thermal change is relatively small. The dielectric absorption and the power factor of the new capacitors is unusually low.

Non-inductive construction is employed with lead wires securely soldered to the extended foils, insuring low resistance connections and low radio frequency impedance. The durable thermo-setting plastic case construction holds copperweld lead wires and sections firmly in place to withstand extremes of handling, soldering temperatures, vibration and shock.

Standard sizes in 400, 600, 1000 and 1600 VDC ranges are listed in the accompanying table.

*DU PONT trade mark.

STEATITE-CASED TUBULAR CAPACITORS "BUDROC"

BUDROC STEATITE-CASED TUBULAR PAPER CAPACITORS

C-D "BUDROC" capacitors are made with non-inductive paper and extended foil elements housed in the finest grade ceramic (steatite) tubes with Polykane end-seals. "BUDROCS" are designed and especially recommended for manufacturing applications. Except for the C-D molded tubular "CUB", the C-D "BUDROC" surpasses the performance of any molded tubular unit available.

The steatite tube provides exceptional protection against heat and humidity. The Polykane end-fill is tightly bonded to the steatite tube and lead wires, cannot soften, melt or flow at any rated operating temperature. This assures a permanent seal to moisture and humidity besides providing a rigid support for the lead wires.

TEMPERATURE RANGE:

"BUDROC" capacitors rated up to and including 400 VDCW are impregnated with high quality HT compound (-40°C to +90°C). Units rated above 400 volts VDCW are impregnated with C-D Vikane (-55°C to +100°C).

MINIATURE METAL-CASED TUBULARS "DEMICONS"

The Cornell-Dubilier series of "DEMICON" capacitors offer miniaturized tubular metal-cased units designed and processed to meet rigid and severe operating requirements particularly where space limitations are an important factor.

Unique and improved manufacturing processes have contributed to a product of unusual stability, dependability, and longevity, as attested to by field-test proven service over a long period of time.

Cornell-Dubilier DEMICONS are hermetically sealed in metal cases, with glass-to-metal seal terminals and are available in a wide variety of mounting styles, impregnants, tolerances, and internal construction. See Bulletins NB-147 and NB-151.

COMPACT METALIZED-PAPER CAPACITORS

Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4 and NB-152.

TEMPERATURE RANGE: -40°C to $+60^{\circ}\text{C}$.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

UNIVERSAL "MITYMIKE" HIGH VOLTAGE CERAMIC CAPACITORS

FEATURES OF "MITYMIKE" HIGH VOLTAGE CERAMIC CAPACITORS

- New, superior design and construction.
- High insulation resistance, low power factor.
- Generous factor of safety permits use at FULL rated voltage.
- Choice of terminal styles to meet all TV assembly requirements.

The C-D Universal Type MMU "MITYMIKE" is an entirely new and superior quality unit developed from extensive field experience over a long period. Weaknesses heretofore found in this type capacitor have been eliminated by C-D processing techniques.

Thus, the special quality encasing material forms a complete homogeneous bond between all elements and the ceramic dielectric. The permanent bond between the casing material and the ceramic element prevents formation of corona, hence preventing deterioration of the capacitor.

High purity silver electrodes are heat-bonded to the dielectric

— and the silver-plated terminal studs in turn, firmly soldered direct to the electrodes.

A high degree of operating stability in service and extended life can be expected of the C-D MMU.

Six selected terminal styles are furnished with each body, permitting many combinations of terminals to cover a wide range of installation designs.

Because of the superior materials and quality construction of the MMU, a generous factor of safety is built into the "MITYMIKE", allowing operation at FULL RATED VOLTAGE.

MOLDED MIDGET MICA CAPACITORS

Types 1W, 1D, and 5W are suitable for numerous electronic uses and are specially adapted to serve many important functions in low-voltage radio receiving circuits. They are individually tested for accuracy of capacity and voltage breakdown and designed to give dependable service where small size units are required.

STANDARD TOLERANCE: ±20%.

Also available, on order, in plus or minus 10%, 5%, 3% and 2% tolerance ratings (or within 1 mmfd.—whichever is greater). For capacity tolerance of: 10% add 10% to list prices; 5% add 20% to list prices; 3% add 40% to list prices; 2% add 75% to list prices.

- "9A" UNTAPPED MOUNTING HOLES. Standard units are tapped for 6-32 and furnished with round head screws. For untapped mounting hole, .144" diameter (No. 6 clearance), add "A" to Cat. No. (example: 9A-11030).
- "9F" HIGHER VOLTAGE CONSTRUCTION, rated 6,000 v.d.c. test, 3,000 v.d.c.—1500 v.a.c. operating. Capacity range limited. Moulded in low-loss Bakelite. The thickness of these units, or "A" dimension, is $\frac{7}{16}$ " for capacities up to .002 mfd. and $\frac{3}{4}$ " for capacities from .0022 to .005 mfd. max. To order, add "F" to Cat. No. (example: 9F-63050, the numeral "6" designating 6,000 volts test). Prices of "9F" units are double the list prices shown.

"9R" HIGH STABILITY UNITS—Special high stability units, comprising low-loss Bakelite, temperature aged and sealed construction for use as low power master oscillator tank capacitors or accessory positions. These units are fixed and permanent in characteristics, having a capacity-temperature coefficient of approximately plus .003% (30 parts per million) per degree C. To order, add "R" to Cat. No. (example: 9R-52020). Prices of 9R units are double the list prices shown.

CAPACITOR NETWORKS

These capacitor networks are designed for radar and industrial equipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required.

General Electric pioneered in the development of mineral-oil-treated paper dielectric capacitor networks for air, sea, and land radar, and was a prime supplier for the government services. The products supplied varied from the miniature types used with aircraft and guided missiles to the large designs for land-based radar.

STANDARD COMMERCIAL TYPES

For A-c and D-c Applications — Fixed Paper-dielectric Capacitors

A-c/d-c dual-rated Pyranol capacitors for motors, controls luminous-tube transformers, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol, its use as a treating material has made possible a capacitor far superior to those formerly available and much smaller in size.

Design Advantages

- (1) Units are small and compact, because of the use of Pyranol.
- (2) A wide range of ratings is available in rectangular, cylindrical, and oval cases.
- (3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

Case Style 70

Case Style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed paper-dielectric capacitors in Case Style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-action construction, with a capacitance tolerance of ± 10 per cent. Cases are isolated and the two bushings are brought out through the cover. Units in 600-, 1000-, and 1500-volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar-

Case Style 60

These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Mounting lugs, of either the removable or attached type, are of very sturdy construction.

These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

The metallic containers are hermetically sealed, and of deep drawn construction.

Case Style 60 units have no brackets, but removable brackets of either the footed or spade-lug type can be supplied.

CAPACITORS FOR OSCILLATOR TANK CIRCUITS

This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance (0.01 μ f) for high-frequency units, yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

METAL-CLAD AND TANTALYTIC CAPACITORS

SUBMINIATURE METAL-CLAD TUBULAR CAPACITORS

Pyranol* Filled

These capacitors with a Pyranol liquid dielectric and silicone end seals will operate from -55°C to $+85^{\circ}\text{C}$ without derating.

Twenty per cent smaller than comparable oil-filled units, they are the same size as the old-style wax units but have superior life characteristics. The silicone end seals, of all-welded construction, provide maximum resistance to thermal and physical shock and permit soldering up to the bushing without danger of seal damage. In addition, in severe humidity conditions, the new silicone end seal permits a polarized voltage to be applied to the capacitor.

They can be supplied in standard case sizes, in either tab or exposed foil designs, with ratings from 0.001 to $1.0\ \mu\text{f}$, and in voltage ratings of 100, 200, 400, and 600 volts, d-c.

Permafil Solid Dielectric

Subminiature metal-clad tubular capacitors are made with silicone end seals and a solid dielectric Permafil, for operation from -55°C to $+125^{\circ}\text{C}$ without derating. With small size, no liquid leakage, and high insulation resistance, they will withstand extreme temperature cycling. The new silicone end seals with all-welded construction permit leads to be soldered next to case without damage to seal, and also allow a polarized voltage to be applied under severe humidity conditions.

Meeting all military requirements, capacitors can be supplied in both tab and exposed foil designs. Ratings range from 0.001 to $1.0\ \mu\text{f}$ in voltage ratings of 100, 200, 400, and 600 volts, d-c. Cases are available in standard sizes from 0.235" diameter and $\frac{1}{8}$ " length to 1" diameter and $2\frac{5}{8}$ " length.

TANTALYTIC CAPACITORS FOR LOW-VOLTAGE USE

The Tantalytic capacitor is designed for certain direct-current, low-voltage applications where aluminum electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior performance and small size are the major factors.

This capacitor is a foil-type, tantalum-electrode, electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but smaller in size because of the characteristics of the tantalum foil and the electrolyte employed (compare with match book in illustration). The Tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (-55°C to $+85^{\circ}\text{C}$), without derating, than the conventional aluminum electrolytic capacitor. Tantalytic capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

TYPES "GA" and "HA" OIL FILLED

These inverted mounting capacitors fill a definite need where chassis space is the prime factor.

Types "GA" and "HA" are INCCO Oil "A" impregnated and filled. The case is a one-piece metal extrusion with a "locked-in" molded neck. This construction meets and surpasses the Army and Navy requirements for a submersion-proof capacitor.

Type "GA" is available in the twelve standard ratings listed below, but can also be supplied in other capacities and/or voltages to manufacturers' specifications.

In the standard "GA" and "HA" types the container is insulated. A grounding lug can be supplied for connecting one terminal to the case. Fiber washer for insulating container from chassis, when case is grounded, and insulating cover for insulating the container from adjacent equipment, can also be supplied on special order.

ET SERIES ELECTROLYTIC CAPACITORS

"ET" series capacitors have been designed for ease in installation and reliability. They are constructed to withstand the most severe operating conditions encountered in industrial and electronic equipment. Especially controlled manufacturing processes insure that the equipment in which these capacitors are used will function without interruption. Capacitors can be supplied for operation at temperatures ranging from minus 40 to plus 85 degrees Centigrade. Mounting is effected by inserting the capacitor through the slots in either the chassis or mounting plate, and twisting the mounting prongs 90 degrees.

INDUSTRIAL By-Pass Capacitors are non-inductively wound and designed for maximum efficiency up to the highest frequencies. The units themselves are completely impregnated and sealed with a special non-hygroscopic sealing compound, thus preventing moisture penetration under the most humid conditions.

Type MM

An extremely popular type of condenser due to its exceptional high quality and midget size. Hermetically sealed in a small metal case and scientifically vented, to protect against adverse operating conditions of voltage, temperature and humidity. Container is insulated by a high grade tube which is spun over the ends of the can to eliminate shorts when wires are bent close to container. Easily mounted by their rigid wire leads.

Type SM

Type "SM" units are embedded in a high temperature wax and then sealed in a thoroughly impregnated cardboard tube, affording complete immunity to moisture penetration. New high voltage formation gives complete protection against surges and high peak voltages. The addition of the strap mounting bracket has proved favorable in its use due to its wide application in AC-DC and portable sets in the replacement field. The strap can be moved to the best mounting position and then bolted or soldered. Supplied with color-coded, Underwriters' Approved, rubber covered leads.

RADIO INTERFERENCE ELIMINATORS

INDUSTRIAL CONDENSER CORP. has made a special study of the suppression of noises caused by fluorescent lighting. No. 7249 capacitor is designed with three leads, two leads to be connected across the 110 volt line and the single lead to be grounded. No. 4219 is housed in a metal container and is self grounding. It is supplied with strap mounting for easy installation. No. 4252 is a flat type unit designed to mount on the ballast support of circline ballasts. The convenient mounting flap grounds the unit when the stem of the lamp is placed through the mounting hole.

GENERAL INFORMATION

Technical Information Available in Catalog 1117A
Stabelex Capacitors represent a new series of capacitors being made available to industry for the first time.

Advancements in science and industry have created the need for capacitors having characteristics far superior to either laboratory type or commercial capacitors now available.

Advanced designs in equipment which have not been possible because of the unavailability of suitable capacitors have now become practical.

The Stabelex family of capacitors has been developed after a long period of research and has been made for special applications for quite some time. However, it is only now that these capacitors became available to industry.

Other Stabelex capacitors will be announced from time to time, each having its own special characteristics for use in applications for which they are most suited.

Suggested Applications

Input Capacitors	Computers
Coupling Capacitors	Filter Networks
RC Circuits	Radio Frequency Circuits
Meter Damping	Etc.

Many variations and special characteristics are possible with Stabelex capacitors that are not possible with any other type and it is, therefore, to the interest of the user to indicate, where possible, the application to which these capacitors will be put.

TELEVISION • TRANSMITTING • INDUSTRIAL

HIGH VOLTAGE MICA CAPACITORS

DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS

Molded in CM-20, CM-35 and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

PAPER TUBULAR CAPACITORS CP TYPE

EL-MENCO CP type paper tubular capacitors are sealed into STEATITE TUBES which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with MINERAL OIL, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The NON-INDUCTIVELY wound paper and foil units are sealed in the CERAMIC TUBES by means of baked SYNTHETIC RESIN END FILLS which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to in the insert. Leads are of tinned copper 2 1/4" long.

Many of the large TELEVISION, TRANSMITTER and HIGH VOLTAGE AMPLIFIER manufacturers have found these capacitors to be of highest quality. Breakdown tests have exceeded the required standards.

El-Menco High Voltage Capacitors are manufactured in accordance with JAN and RMA specifications for molded mica capacitors and are additionally designed to operate at higher voltages than normally expected of units of this size. They are ideally suited for use in high voltage, low power circuits, particularly where space requirements are an important factor. Axial wire leads provide simplicity of wiring through elimination of added mounting devices. All units are molded in low-loss phenolic cases and are wax-dipped for protection against salt-water immersion.

CUP CERAMICS

- These precision capacitors are widely used in high stability r-f oscillators where frequency control is important. Tolerance on capacitance can be held to $\pm 1\%$, and on temperature coefficient to ± 10 ppm.
- Hermetically sealed construction and low self inductance are noteworthy as are high Q, capacitance stability, and retrace characteristics.
- Available in 500, 1000, 1500 volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details.

PRECISION TUBULARS

- Designed for exacting circuitry in electronic instrumentation and high stability oscillators. The same stacked disc construction as metal cup ceramics but with higher capacitance range.
- Hermetically sealed in plated metal tubes for moisture protection. Rated for -55°C to $+85^{\circ}\text{C}$ operation as are cup ceramics
- Available in $\pm 1\%$ capacitance tolerances
- Available in 500, 1000, 1500 volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details

CERAMIC TRIMMERS

- Widely used in military equipment and precision circuitry where maximum stability is required — Characteristics remain constant under most severe vibration and atmospheric conditions
 - Unlike ordinary low cost trimmers, the special construction of these top-quality units prevents corrosion, permits mounting against chassis, and guarantees long, trouble-free life
- Write on company letterhead for complete details

FILTEROL® TYPES

Filterol 1 Filterol 2 Filterol 3 Filterol 4

- Suppress Man-made Radio and TV Interference
- Small, Completely Self-contained
- Quickly, Easily Installed

Filterol Types 1, 2, and 3—Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4—A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

IF-11—DUAL HIGH-CAPACITY FILTER with completely enclosed safety construction. Designed for use on motors over 1 horsepower and up to 220 volts AC or DC. Also used on high-current arcing or sparking devices.

IF-21—COMPACT DUAL FILTER for use across brushes of fractional horsepower motors with the can grounded to motor frame. May also be used across line terminals of motors.

IF-51—SINGLE SECTION 2-LEAD FILTER with can completely insulated. For use across make-and-break contacts, such as thermostats, circuit breakers, door-bells, buzzers, relays, etc.

IF-37—3-SECTION DELTA-CONNECTED FILTER especially designed for fluorescent fixtures. Only one IF-37 required for each offending fixture. Also effective on make-and-break governor-type motors. Underwriters' Laboratories approved.

PRICED SO YOU CAN AFFORD IT!

The handiest instrument you can buy! Modern service shops find it a must. Although moderately priced for radio and television repair shops, it offers you the

- **CAPACITANCE BRIDGE** measures up to 2000 mf in five overlapping ranges. The special 1 mmf to 100 mmf range is exclusive with the Sprague Tel-Ohmike.
- **INSULATION RESISTANCE** directly read on large meter up to 20,000 megohms for paper, ceramic, and mica capacitors. No guessing with neon lamps.
- **LEAKAGE CURRENT** of electrolytics measured directly on meter, with exact rated voltage up to 600v. applied from continuously adjustable power supply. Two ranges: 0-6-60 ma. No guessing on eye-width or counting lamp blinks when you use a TO-4!
- **POWER FACTOR** of electrolytic capacitors measured by Wien Bridge up to 55% in three ranges.
- **RESISTANCE BRIDGE** measures from 2.5 ohms to 25 megohms at line frequency.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance, power factor, and resistance measurements.
- **PUSH-BUTTONS** for instant range selection, also discharge capacitors for safety automatically upon release.
- **POWER SUPPLY** self contained for 115 volt, 50 to 60 cycle a-c operation.
- **MODERN CASE** finished in two-tone gray; measures 8 7/8" high, 14 5/8" wide, 6 1/4" deep. Weight only 12 1/2 pounds.

quality and the accuracy required by the nation's outstanding laboratories. The TO-4 comes complete with step-by-step instruction manual and capacitor guide.

CERAMIC CAPACITORS

MOLDED DISC CERAMIC HI-KAPS®

For Bypass, Coupling and General Applications

Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance. "MD's" can be placed directly against a chassis, or adjacent to

high voltage leads without danger of flashover or breakdown. Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating — Ultra conservative 600 V.D.C.W., 1,800 V.D.C. test. Maintain high capacity and stand up under +85° C. operation. Insulation — Molded Centrathene†, 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption .005%. Power factor of molding .02%. Fungus resistant. Unaffected by ozone, salt water, any known acid, or solvent at room temperature. Will not become brittle at -55° C. Leads — No. 22 tinned copper 1½" long. All units one size — 11/16" diameter, 3/16" thick, maximum. Packaged — 5 units per polyethylene bag. 5 bags (25 units) per carton.

CERAMIC CAPACITORS (Cont'd)

TC TEMPERATURE COMPENSATING TUBULARS

Designed especially to limit frequency drift in r.f. circuits where temperature variations are prevalent. These capacitors are constructed with a ceramic body which changes capacities as the temperature varies. Use Centralab TC Hi-Kaps when servicing superhet receivers—replace older types in oscillator and detector circuits in TV, AM and FM receivers. 1,200 volts D.C. test; 600 volts D.C. working.

TCZ TUBULAR HI-KAP®

All TC Hi-Kaps conform to JAN-C-20A specifications. NPO Units (JAN-CH-CJ-CK) which show zero capacitance change over temperature range —20° C. to +85° C.

CERAMIC FEED-THRU HI-KAPS®

TYPES FT AND MFT

Type FT Feed-Thru or bushing mounted capacitor has been specifically designed and widely used in high frequency circuits where, in addition to feed thru, a capacity ground to either chassis or shield is desired. Lead inductance is virtually eliminated. Type MFT MINIATURE Eyelet Feed-Thru is a condensed version of the above units required in many new ultra-high frequency applications where space is at a premium. PRINTED ELECTRONIC CIRCUITS (P.E.C.)

The term "printed circuit" has come to be a catch-phrase to describe anything from a piece of tinfoil cemented on a plastic plate to a carbon-backed piece of adhesive tape. As the pioneer and leader in the field, we designate the true Printed Electronic Circuit as a complete circuit element... wiring, capacitors, and resistors. Centralab Printed Electronic Circuits offer a combination of resistors and capacitors of ultra-compactness and permanence. No other modern development in electronic circuitry offers so many advantages in low powered applications such as small size, low assembly cost, and utmost reliability. 25,000,000 now in use.

MODEL II AMPEC® COMPLETE THREE STAGE AMPLIFIER

There is no other electronic device like Centralab's Ampec. In this compact unit, permanently bonded to a master plate, are all the components of an audio amplifier-tube socket, capacitors, resistors, wiring, a three tube, three stage speech amplifier. Similar Centralab units are used widely in hearing aids, for the most trouble-free performance ever attained. Ampec has other interesting applications such as mike pre-amplifier, miniature or portable radio receiver (pocket type), amplification for walkie-talkie or portable amateur field equipment. Each unit packaged in a hinged cover plastic box, with complete instructions for use.

METALLIZED PAPER CAPACITORS

ENGINEERING DATA

GENERAL DATA

The major constructional difference between conventional paper capacitors and metallized paper capacitors lies in the replacement of the separate layers of metallic foil with an extremely thin metallic film, deposited directly on a lacquered surface of the paper dielectric by a high vacuum vaporizing process. This lacquer coating considerably improves the dielectric strength and insulation resistance of the paper.

The metallic films most commonly used are zinc and aluminum. Zinc has a lower melting point and is much easier to apply to the dielectric. It is not, however, as stable as aluminum and yields a slightly higher power factor. Therefore, aluminum coated paper is preferred and used for most metallized paper capacitors produced in this country.

SELF-HEALING CHARACTERISTIC

The unique characteristic of self-healing is derived from the thinness of the deposited film, which is in the order of three millionths of an inch. This film oxidizes, melts or vaporizes away from any conducting particle or other flaw within the dielectric layer when voltage is applied. Thus, the weak particle is isolated from the rest of the winding. This characteristic permits the use of less insulation between the electrodes than is commonly used in conventional capacitors. The combination of a very thin aluminum deposit and less insulation accounts for the marked reduction in volume and weight. This is dramatically shown in the following table:

Rated Voltage DC	Approximate Volume Reduction in % (as against conventional capacitors)
200	75
400	50
600	30

VOLTAGE DATA

Due to the self-healing characteristic, metallized paper capacitors will rarely fail, assuring long life when operated within proper voltage and temperature limits. As a matter of fact, the insulation resistance generally improves with time. Since the insulation is normally highly stressed, the application of over-voltages or excessive temperatures will increase the frequency of sparking. If the over-voltages are of an intermittent, momentary nature, shorts that may develop will clear themselves and the capacitor will continue to operate normally. Should over-voltages be prolonged, contin-

uous sparking will occur, causing carbonization of the impregnant and of the dielectric. Thus, the insulation resistance is rapidly reduced making the capacitor unsuitable. It is for these reasons that accelerated life tests are not considered a reliable measure of the quality of metallized paper capacitors and are therefore not recommended.

The test voltage of metallized paper capacitors is normally not in excess of 150% of the rated working voltage at 25°C. applied for a period not exceeding 5 seconds.

The term "test voltage" as applied to metallized paper capacitors, is taken to mean the value at which the number of sparks is relatively small indicating that the faults have been cleared. The test voltage is applied through a resistance that limits the charging current to 50 milliamperes. The capacitor is then discharged through the same resistance.

DERATING

To prevent the reduction in life expectancy at high temperatures, metallized paper capacitors are derated when operated at ambient temperatures exceeding 55°C. as follows:

Reduction in Operating Voltage from Rated Voltage, in %

Temperature Centigrade	Mineral Wax Impregnant Rating up to 200 VDC	Mineral Oil Impregnant Rating 400 and 600 VDC
55°	0	0
60°	5	5
65°	10	10
70°	15	15
75°	20	20
80°	25	25
85°	35	30
90°	50	40
95°	65	50

INSULATION RESISTANCE

The average value of the insulation resistance of metallized paper capacitors is lower than that of conventional paper capacitors, particularly those with a single paper dielectric where a larger number of conducting paths are present. This is due to the higher voltage stresses employed and to a certain amount of deterioration of the impregnant around the

conducting paths that occurs during self-healing, or clearing of the fault. Because the number of faults cleared varies with the number of conducting paths, the variation in insulation resistance is greater than in conventional capacitors. For most applications, the minimum insulation resistance limits exceed actual circuit requirements.

The insulation resistance measured at 25°C., and for an electrification time of two minutes maximum, equals or exceeds the megohm values listed below. The applied voltage will range from 100 VDC to not more than rated working voltage.

Working Voltage	Capacitance	Minimum Megohms/Mfd.	Capacitor Need Not Exceed Megohm Value of
150 VDC	all capacities	250	750
200 VDC	up to 2. mfd.	500	1500
400 VDC	all capacities	1000	3000
600 VDC	all capacities	1000	3000

LIFE TESTS

A resistance of one ohm per volt to 200 ohms per volt of applied voltage should be connected in series with each capacitor during life test.

Normal life tests are conducted for 1000 hours at DERATED working voltage at 85°C. for hermetically sealed units and 65°C. for non-hermetically sealed units.

As noted previously, accelerated life tests are not recommended. If conducted, however, the applied voltage should be 125% of the DERATED working voltage for 250 hours at 85°C. for hermetically sealed units, and at 65°C. for non-hermetically sealed units.

On completion of tests, the capacity change will not exceed 5% and the power factor will not exceed 1½%.

APPLICATIONS

At radio frequencies, the RF impedance of metallized capacitors is of about the same order of magnitude as for conventional capacitors. They are ideal for use as by-pass capacitors and for use in interference filters. Because of their light weight and small size, they are well suited for use in portable radios, instruments, aircraft noise suppression systems and other communications equipment.

For use in AC circuits, it is important that the capacitor selected have a DC rating in excess of the peak voltage present.

Due to the generally lower insulation resistance they are not recommended for high impedance circuits, coupling circuits, RC timing circuits, RC oscillators, or grid-plate blocking capacitors. The thinness of the aluminum film limits the current carrying capacity of metallized paper capacitors. Therefore, they are not suitable for photoflash circuits or similar heavy current pulse applications.

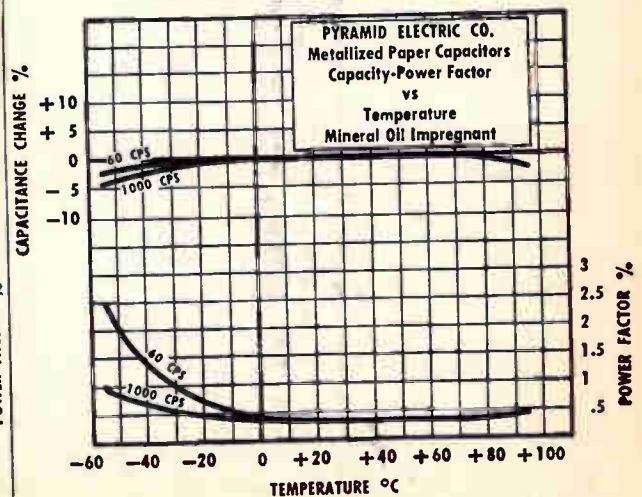

POWER FACTOR: The power factor limit of metallized paper capacitors is 1% maximum when measured at or referred to 1000 cycles per second at 25°C.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE MT-MTD-MTH

Chieftain

SANGAMO Type MT "Chieftain" electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position. Double-thick paper spacers assure adequate breakdown characteristics and all sections are tightly held in place within the container. Multiple staking connects the terminal tabs to the electrodes and provides permanent low resistance contact throughout the life of the capacitor. Low voltage units utilize etched cathodes to maintain uniform capacity when they are subjected to combined conditions of heat and high ripple currents.

TYPE FM

Arrowhead

The SANGAMO Type FM "Arrowhead" electrolytic capacitors are similar in design to the Type MT "Chieftain" in every respect except leads. The Type FM is equipped with flexible, insulated wire leads and stud terminals eliminating the problem of crossed wires and the necessity for the use of insulating sleeves. They are much smaller than the wax-end filled types with insulated leads. The capacitors themselves are housed in round aluminum containers which are encased in heavy insulating sleeves. They are especially designed for the rugged television requirements where 85°C. operating temperatures are encountered.

TYPE MMT

MINIATURE TUBES

SANGAMO Type MMT miniature tubular electrolytic capacitors are designed for use in miniaturized equipment and are ideally suited to meet the precise operating requirements of low voltage circuits. They are small in physical size and are self supporting by means of strong bare finned copper wire leads.

The Type MMT capacitors are contained in drawn aluminum tubes encased in a fitted cardboard insulating sleeve. Polarity of all units is clearly marked on the cardboard sleeve.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE PL

FOR TELEVISION AND OTHER
ELECTRONIC APPLICATIONS . . .

The SANGAMO Type PL "Warrior" electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

TYPE SL

wet electrolytics, the Designed primarily as replacements for Type SL electrolytic capacitors are assembled in round aluminum cans with threaded necks providing easy mounting to a chassis with the aid of a palnut which is supplied. The Type SL is completely insulated from the container, the negative connection being made to one of the insulated leads extending through the threaded neck of the can.

TYPE TS

Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base. The base pins are nickel-plated to prevent corrosion and insure good contact with the socket terminals.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE CS *Tomahawk*

The SANGAMO Type CS "Tomahawk" electrolytic capacitors are contained in wax-filled cardboard tubes with insulated leads approximately 8 inches in

length extending from both ends of the unit. Capacity, voltage and polarity of each section is clearly indicated by color of the lead wires; coding information necessary to identify the individual sections is clearly stamped on the tube. Each unit is supplied with a mounting strap to facilitate mounting to the chassis.

TYPE EM (MOTOR STARTING)

Trailblazer

The SANGAMO Type EM electrolytic capacitor is a standard universal replacement for all motor starter types presently in use, and its dimensions are comparable in every respect. The Type EML is provided with solder lug terminals, the Type EMS being equipped with screw types; otherwise the two units are identical in construction and operational characteristics. Insulating tubes are supplied with both types.

COLOR CODE OF WIRE LEADS FOR TYPES FM, CS, AND SL CAPACITORS

Black	Common negative
Orange	Positive, highest voltage or capacity
Red	Positive, next highest voltage or capacity
Blue	Positive, next highest voltage or capacity
Yellow	Positive, next highest voltage or capacity
Brown	Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will designate the voltage; with the same voltages and unequal capacities, the lead color will designate the capacity. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed R.T.M.A. Color code.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 71 *Seminole*

SANGAMO Type 71 diactor impregnated and filled paper capacitors have the advantage of light weight, and are smaller than the case size specified by JAN-C-25. Diactor* is a specially compounded, chemically purified chlorinated dielectric oil. This synthetic impregnant, whose characteristics can be controlled with great uniformity, possesses a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is non-inflammable and non-explosive. Type A mounting brackets are supplied with each capacitor as standard equipment. If Type B or C brackets are required, they must be specified when ordering. Either composition rivet or stand-off porcelain terminals can be supplied, and the type desired should be specified.

SANGAMO CAPACITORS

NEW MOLDING COMPOUND FOR SANGAMO WIRE LEAD MICAS

All SANGAMO wire-lead micas are molded in HUMIDITITE, a new molding compound developed by Sangamo, that gives them moisture resistance characteristics far superior to any others on the market. The standard moisture resistance test described in MIL-C-5A (proposed) Specification requires mica capacitors to offer at least 100 megohms of insulation resistance after ten 24-hour cycles in a humidity chamber at 90% to 95% relative humidity. The best competitive micas barely meet this requirement . . . but Sangamo HUMIDITITE Micras, under the same conditions, all tested in excess of 50,000 megohms! For additional information about HUMIDITITE, write for Engineering Bulletin No. TS-111.

Types SA thru SM are miniaturized, high quality, hermetically sealed paper tubular capacitors. These units are encased in non-magnetic tubular metal cases. Hermetic sealing is accomplished by the use of glass-to-Kovar solder-seal terminals. Types SA thru SM are available in capacities from .001 to 1.0 mfd. and in WDVC ratings from 100 to 1000 volts. They can be operated at temperatures ranging from -55°C . to $+125^{\circ}\text{C}$. For design convenience, several choices are available with regard to tolerances, circuit assembly, lead styles, mounting brackets, insulating sleeving, and inductive or non-inductive sections. For more complete information write for Engineering Bulletin No. TS-105.

SILVERED MICA BUTTON CAPACITORS

Small and light in weight, these silvered mica buttons are made particularly for high frequency circuit applications. Their high "Q" is indicative of their low loss. Rigidly constructed and electrically and mechanically stable, they meet all requirements of component capacitors for V.H.F. and U.H.F. applications. Tested for dielectric strength and leakage at 1250 V.D.C. (500 W.V.D.C. or 350 W.V.A.C.) . . . capacitance checked at r.f. . . sealed against moisture for insulation resistance in excess of 10,000 megohms . . . high "Q" value standards at all capacities. Minimum capacitance tolerance limits of $\pm 2\%$ or $\pm 1\text{ mmf}$, whichever is greater, can be furnished; also buttons with temperature coefficients and drift characteristics up to "E" of the joint Army-Navy specification JAN-C-5. Operating range from minus 50°C . to plus 85°C . For more complete information, write for Engineering Bulletin TS-110.

HERMETICALLY SEALED BUTTONS

Most of the silvered mica button capacitors described in Engineering Bulletin TS-110 can be supplied on special order in hermetically sealed construction, utilizing glass-to-Kovar, solder-seal terminals. This process slightly increases overall capacitor length and provides an absolute moisture seal under all operating conditions. These capacitors may be operated over a temperature range from -55°C . to $+100^{\circ}\text{C}$. Write for engineering information and prices on special hermetically sealed buttons for your particular applications.

ERIE CERAMICONS are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

"GP" GENERAL PURPOSE CERAMICONS are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important—in other words for all receiver applications *except* in frequency determining circuits. Working voltage—500 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

NPO Zero Temperature Coefficient CERAMICONS®

NPO zero temperature coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Cerami-

cons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage—500 volts D.C. Can be used as replacements for silver mica condensers.

ERIE HIGH VOLTAGE DISC CERAMICONS

Designed to employ the same basic diameters that have been standardized in 500 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thickness-

es to assure conservative ratings in the high voltage line.

They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

ERIE FEED-THRU CERAMICONS®

These very practical feed-thru capacitors are highly recommended for by-passing R. F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage.

ERIE STAND-OFF CERAMICONS

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R. F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

ERIE CERAMICON TRIMMERS

Erie Ceramicon trimmers give maximum stability and ease of adjustment. Capacity change is constant per degree of rotation. Silver electrodes are fired onto ceramic rotor and base. 360 degree rotor completely covers entire track on stator thus preventing dust and other foreign matter from affecting characteristics of the unit.

HIGH CAPACITY ELECTROLYTIC CAPACITORS

These capacitors are available in a wide voltage range. They are hermetically sealed in extruded Aluminum cans by use of a combination Bakelite and rubber washer. Terminal connections and lugs are over-size to handle the high currents normally encountered in these capacitors.

These units are popular for use in electrical circuits having high voltage or ripple currents. Excellent for voltage stabilization and where high current storage capacity is essential.

"Glassmike" PLASTICON CAPACITORS

Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range —60°C to +85°C, extended range —60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications. All 19/32 diameter Glassmikes are supplied with pigtail leads.

Plasticon dielectric is superior to the finest linen or kraft condenser paper hitherto used. Plasticon is a thin plastic film, free from metallic particles or other foreign matter. Much higher tensile strength than paper and does not become brittle with age and heat. Not porous as paper and has higher breakdown voltage.

"Glassmike" PLASTICON CAPACITORS Type LSG

LSG type capacitors have Plasticon L film-silicone fluid impregnant in Glassmike style case. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF losses, more conveniently mounted, utilize less chassis space, impervious to moisture and smaller in overall volume.

FIRMLY SECURED LEAD

Can't be pulled out, even under soldering iron heat.

Here at last is a capacitor that affords **ABSOLUTE PROTECTION** under every condition—a capacitor you can rely on completely—**ASTRON BLUE-POINT**, the **BONDED** capacitor. This capacitor is produced by an exclusive new design and manufacturing process (patent pending) developed by Astron engineers.

The all-important **BLUE POINT** which distinguishes this new capacitor actually **BONDS** itself to the tough, heat-resistant outer shell and leads—forming the **TIGHTEST SEAL AGAINST MOISTURE** ever produced!

The **Blue-Point DRY-ASSEMBLY** process—as used in hermetically sealed metal encased capacitors—prevents contamination, provides still further protection against moisture, and assures uniform **QUALITY** and **DEPENDABILITY** for every Blue-Point.

The **Blue-Point** is mineral oil impregnated† for continuous operation at 85°C. The blue point seal itself makes ingenious

use of a special thermo-setting, heat-resistant, non-inflammable **BONDING AGENT** as a positive protection against moisture. With the Astron Blue-Point, you may solder leads as close to the capacitor as you like. Leads will not pull out, nor will the heat of the soldering iron damage the lead or the connection. Further, every Blue-Point is clearly marked with rated voltage and capacitance, and is imprinted with outside foil identification.

The Astron Blue-Point Capacitor gives you greater protection against heat and moisture at every stage—assuring long life and dependable performance from **EVERY** unit—to a degree never before possible with molded plastic capacitors.

From now on, look for the Blue-Point—ask for exclusive Astron Blue-Point Capacitors by name... more than ever before, **DEPEND ON... ASTRON!**

TYPE EY SAFETY MARGIN* TWIST PRONG DRY ELECTROLYTICS

Manufactured under rigid quality control specifications, Astron Type EY twist-prong dry electrolytic capacitors have earned their wide acceptance by radio and TV manufacturers and service technicians. Astron offers a complete line of replacement twist prong dry electrolytic capacitors for all popular television chassis. They are simple to mount by means of twist prong tabs on a mounting plate, or directly on the chassis, in filter and by-pass circuits. The mounting tab ring is electrically welded to the cathode of the capacitor, and serves as the negative terminal. Multiple section units are concentrically wound and have common cathode. Terminal tabs are securely fastened to the terminal lugs, insuring permanent low resistance connections. Compact and hermetically sealed in a seamless aluminum drawn can. Operates at ambient temperatures up to 85°C. Smallest practical sizes. Coding clearly etched on container.
