HY-METS* HIGH TEMPERATURE METALITE® METALLIZED PAPER CAPACITORS

Astron Hy-Mets METALITE® metallized paper capacitors are engineered and constructed for operation over a wide temperature range to 125°C., with exceedingly dependable performance characteristics.

Aside from their extremely small size and unique self healing properties, other outstanding features of Astron Hy-Mets capacitors are exceptionally low power factor and long-life. Excellent RF characteristics are the result of Hy-Mets' extended foil, non-inductively wound construction and amazingly small size. Available in a variety of popular case styles and sizes. All case styles feature glass-to-metal hermetically sealed terminals except the plastic impregnated cardboard tubular MLL. This construction assures high quality performance over the entire temperature range of -55°C. to +125°C., not only under ordinary environmental conditions but also at extreme altitudes and wide variations in atmospheric pressures.

TYPE MLL

These sturdy plastic impregnated cardboard-covered METALITE® capacitors utilize the solid thermosetting impregnant which permits operation up to 125°C. Standard Tolerance: -20% +30%. Lead length 1/2" minimum.

Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

MALLORY MIDGETROL

SINGLE SECTION

Now the *time-proved* Mallory Midgetrol offers two important new time-saving features.

This sturdy ⅜" control is supplied with a permanently fixed, tubular brass shaft that can be adapted for split-knurl or flatted type knobs in a few seconds by inserting one of the two steel shaft-ends packaged with every Mallory Midgetrol. It gives you utmost convenience—without sacrificing a stable, permanently secured shaft.

Also, switch attachment is made simple and sure by positive indexing. Switch locks securely in position without removing the control housing.

DUAL SECTION

This revolutionary new control can be assembled in five easy steps, in less than five minutes—permits you to match a wide range of combinations immediately from convenient distributor stocks, and without high "time" costs.

The "exploded" view above illustrates the parts and assembled control sections supplied. Extremely simple instructions show you how to assemble them quickly and surely—without soldering—with only the simplest of tools.

Both front and rear sections are *factory-assembled and carefully inspected*. You can be sure that your final dual assembly will give the performance you want!

The Mallory Midgetrol gives you fast, sure, simple installation—with precision-controlled carbon element, smooth taper, quiet operation, accurate resistance value and less drift in TV sets.

DEPOSITED CARBON RESISTORS

P. R. MALLORY & CO., INC. · INDIANAPOLIS

Types HS and DC Deposited Carbon Resistors

(Resistors illustrated are approximately 2/3 actual size)

Type DC ± 1% Deposited Carbon Precision Resistors

Mallory Deposited Carbon Precision Resistors are designed primarily as low-cost replacements for expensive wire-wound resistors in high-quality laboratory instruments. Their unique operating characteristics also make them ideal for replacement or substitution in all radio, television, electronic, or electric circuitry where stability, close tolerance, low-noise, and low inductance are desired. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

These resistors are formed of pure, crystalline-carbon particles deposited on specially compounded ceramic. Each Mallory Deposited Carbon Resistor is equipped with 1/2" tinned copper, axially-placed leads rigidly attached to silver plated brass end-caps. Baked moisture-resistant insulation is incorporated in construction for protection against humidity. Each resistor is calibrated at a nominal temperature of 25°C, and each has a negative temperature coefficient range of approximately .03% for low resistant values, through .08% for resistances exceeding 1 megohm.

Each unit is inspected according to requirements of accepted government specifications, and each is marked with resistance value, type and tolerance, except the smaller types which have a separate label.

All DC Types are packaged in this dust-free plastic tube, assuring adequate physical protection.

Type HS Hi-Stability Deposited Carbon Resistors

For the first time the well-known advantages of high-stability, low inductance, and small size of Mallory Deposited Carbon Resistors are available at moderate cost for use in many commercial applications where accuracy of resistance is of less importance than the consistency of operation over long periods of time and through many changes of temperature. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

Television servicemen, laboratory technicians, and model shop engineers, in particular, will find these resistors ideal for critical television and other oscillator circuits where constancy of resistance is of utmost importance. The electrical and mechanical characteristics of HS types are exactly the same as similar DC types, with exception of the resistance tolerance which has been increased to ± 10% of the nominal value. The same quality and temperature coefficient, as featured in the DC types, is maintained throughout.

SPECIAL ORDERS

— Made to Your Specifications

Mallory Deposited Carbon Precision Resistors are also available in DC types made to exact customer specifications requiring a wider range of resistance values from 2 ohms to 50 megohms. DC type resistors are also available in hermetically sealed types and with special coatings or sleeves.

SPRAGUE RESISTORS

KOOLOHM[®] WIRE-WOUND RESISTORS

- Wound with wire which is insulated **before winding** with a flexible ceramic coating. This coating is impervious to heat as high as 1000°C.
- Each resistor is "tropicalized" by a glazed ceramic outer coating and new type end seals which offer complete protection against moisture or any other climatic conditions
- May be mounted anywhere—even flat against chassis or grounded parts
- Extremely high insulation resistance—10,000 volts from surface of ceramic jacket to inner resistance elements
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes for each wattage rating
- Insulated wire permits true "non-inductive" wound designs

NOTE: ALL NIT TYPES ARE NON-INDUCTIVE

CONSTANT IMPEDANCE CONTROLS

SERIES CIB OUTPUT ATTENUATOR

Rated at 10 watts, will handle up to 30 watts in audio circuit. Linear attenuation in 3 decibel steps up to 30. Black enameled metal case, 2" dia. by 2 3/4" deep. Equipped with dial plate and bar knob. One-hole mounting, 3/8" x 3/32 by 3/8" bushing. Shaft 1" long. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SERIES CIL AND CIT L-PADS AND T-PADS

Self-compensating volume controls known as L-pads or T-pads for use in sound systems. Rated at 2 1/2 watts DC, but may be used to handle up to 10 watts audio. Continuous range from 0.5 to 80 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value.

POWER RHEOSTATS

These power rheostats are built for extra-heavy duty. Simplicity of design, plus finest materials and workmanship, result in a unit that provides long, trouble-free service. These Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation, without excessive temperature rise. Standard overall resistance and taper tolerance $\pm 10\%$. Closer tolerances are available upon special order.

The metal cored winding is embedded in a cold-setting, inorganic cement and is thereby bonded to the ceramic body. This results in

the exceptional power dissipation in any portion of the resistance element. These units will withstand elevated temperatures due to severe overloads without smoking, burning, or charring.

A graphited-copper contact shoe in the cradle arm, contacting both winding and collector ring, provides short-path conduction, and at the same time a smooth, consistent mechanical rotation.

Units mount through a single hole. A locking pin is provided for rear panel mounting.

INSULATED CHOKES

IRC Insulated Chokes are available in two sizes designated as types CLA and CL-1. Both types are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

VOLUME CONTROLS

Preferred for Performance

TYPE Q

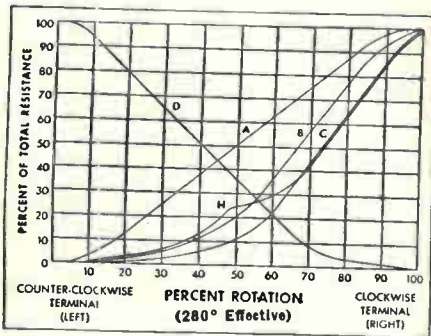

RADIO TECHNICIAN'S VOLUME CONTROL

A volume control engineered to meet the needs of modern radio and TV replacement. Compact $\frac{1}{8}$ " design is augmented with shorter bushing, only $\frac{1}{4}$ " in length. This tiny control will meet all small set requirements, and yet is capable of handling large receiver replacements. "Cushioned turn" rotation and quiet element combine to provide a modern control of the highest quality.

KNOB MASTER FIXED SHAFT. This is the standard Q shaft. It is a FIXED shaft, and handles most knob requirements. Knurled, flatted and slotted, it fits knurled and spring-type push-on knobs or set-screw knobs. 3" long with ample cross-section to prevent bending.

INTERCHANGEABLE FIXED SHAFTS. Quick replacement of standard fixed shaft to fit any of 13 Interchangeable Fixed Shafts provides ready conversion to "specials." This revolutionary feature is made easy by the IRC Resilient Retainer Ring. These special FIXED Shafts offer all of the advantages of Tap-in Shafts with the added security of fixed shafts. Widest replacement coverage is made possible with a minimum stock. These special shafts are illustrated and explained on the following page.

7 STANDARD TAPERS

- A—Used as potentiometer or rheostat in any circuit where uniform resistance change is required.
- B—A semi-logarithmic curve used as tone control or audio circuit control.
- B—Reverse — not shown on graph.
- C—A logarithmic curve. Used as audio circuit control or antenna shunt control.
- C—Reverse — not shown on graph.
- D—Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is of prime importance in controlling volume.
- H—A tapped logarithmic curve used as audio level control of automatic bass compensation.

CONCENTRIC DUAL CONTROLS for TV and Auto Radio

Preferred for Performance

4-PIECE CONCENTRIKITS

IRC CONCENTRIKITS are sets of mechanical parts needed to assemble various IRC Concentric Dual Controls. Kits contain: Panel Cover, Rear Cover, Bushing

Assembly or Ground Plate and Mounting Nut. Instruction sheet is included with each CONCENTRIKIT. In addition to proper CONCENTRIKIT, the following parts are needed for assembly of concentric dual controls: 1—Panel Base-Element; 1—Rear Base-Element; 1—Exact Duplicate Outer Shaft; 1—Exact Duplicate Inner Shaft; 1—Switch—when needed (76-1 or 76-2).

K-2 CONCENTRIKIT. For concentric duals having two carbon sections. Requires Type B Base-Elements. Includes standard bushing, $\frac{3}{8}$ " long. List \$3.80

K-3 CONCENTRIKIT. For concentric duals having 2-watt wire-wound panel section (Type W Base-Elements) and carbon rear section (Type B Base-Elements). Includes standard bushing, $\frac{3}{8}$ " long. List \$3.80

K-4 CONCENTRIKIT. For certain Motorola concentric duals. Bushing $\frac{3}{4}$ " long with turned down portion for use as bearing. List \$2.90

BASE ELEMENTS FOR CONCENTRIKITS

New Base Elements for CONCENTRIKITS are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements in many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts. Two Base Elements are required for each concentric dual.

Two types of Base Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel sections.

TYPE PQ AND RQ DISTRIBUTOR CONTROLS FOR INDUSTRY

TYPE PQ

RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact $\frac{1}{8}$ " Q Control. Power rating is $\frac{1}{2}$ watt, 500 volts maximum. Electrical rotation is the same with or without switch. $\frac{3}{8}$ " bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round $\frac{1}{4}$ " shaft, approximately 3" from mounting face, with $\frac{3}{8}$ " long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

List \$1.25

TYPE RQ. Very short screw-driver slot shaft, $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face with $\frac{3}{8}$ " long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ.

MULTISECTIONS FOR STANDARD DUALS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ or RQ Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 21 values, as shown in following table. Each MULTISECTION adds $\frac{1}{16}$ " to basic control.

CONTINUOUSLY VARIABLE LOUDNESS CONTROLS

TYPE LCI

IRC Type LCI Continuously Variable Loudness Controls actually bring high fidelity tone to commercial audio systems — even at whisper level! Only three connections are needed to install the new Type LCI Loudness Control. No special taps or complicated circuits are required. Type loudness controls, bass and treble boost circuits. Type LCI's do what these other devices have failed to do.

IRC Loudness Control also can be easily assembled with a standard IRC Type Q Volume Control and two Multisections. Simple assembly instructions are included with each Multisection. All parts, etc.

IRC TV ATTENUATOR Type QJ-3 — FOR ADJUSTMENT OF SIGNAL INPUT

Where excessive signal strength causes poor reception, IRC's Type QJ-3 TV Attenuator readily permits adjustment of signal input at the set. This attenuator has been successfully used to reduce or correct such undesirable conditions as: Adjacent channel interference — Background pictures on weaker stations — Horizontal or vertical patterns in picture — Poor picture definition — Annoying hum or buzz — Picture and sound break-over. Type QJ-3 is easily installed in any TV set.

POWER RESISTORS

Preferred for Performance

IRC FIXED AND ADJUSTABLE POWER WIRE WOUND RESISTORS

IRC Power Wire Wounds are rugged resistors specially engineered for dependable heavy duty performance. They are full size, thus continuous operation at full rated power can be maintained. Derating at high resistance values is unnecessary. Special IRC cement coating is noted for its rapid heat dissipation, and protection against humidity. Operating temperatures are lower, thus assuring long life.

All terminals are hot tin dipped for easy soldering. 10 and 20 watt sizes use combination lead and lug terminal from which lugs may be cut for tight space applications. Clear, permanent markings show type, size, watts and resistance. Tolerances: Fixed Types—standard $\pm 5\%$ for 50 ohms and over, $\pm 10\%$ below 50 ohms. Adjustable Types—standard $\pm 10\%$.

MICROSTAK SELENIUM DIODES

Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

Dimensions: (Type 6GA1) Length of leads — 1½". Body length — .450". Diameter — .145". (Type 9GA1) Length of leads—1½". Body length—.500", Diameter — .210".

TYPE 6GA1

Stock No. 6GA1-2B. Minimum forward current (at 2 V.D.C.) is 0.5 M.A. and corresponding resistance, 4000 ohms. Maximum inverse current (at 20 V.D.C.) is 20 microamperes and corresponding resistance, 1 megohm. Peak inverse volts —36. Continuous inverse volts —22. Maximum A.C. input (RMS volts with resistive load only) —26. Temperature range is —55°C to +90°C. PRECISION WIRE WOUND RESISTORS

A line of precision wire wound resistors for both old and new applications. Completely interchangeable with the long established and familiar types WW-2, WW-3, WW-4, and WW-5 plus new sizes all surpassing MIL-R-93A characteristic E specification.

Winding technique developed by IRC engineers provides winding control that substantially eliminates the effect of the human element thus eliminating possibility of shorted turns or winding strains. All wire used in the construction of precision resistors is subjected to rigid insulation tests of the enamel coating. Particular attention is given to insure transfer of wire to winding form without strain or break in insulation. Many production tests insure high quality in the finished resistor.

The winding is multiple vacuum impregnated with a new compound developed by IRC chemists, which has the unique characteristic of remaining approximately the same consistency throughout the entire range of temperature to which the resistor may be subjected. It is neither glassy hard nor tacky soft under any condition so that wire strains are minimized. This is conducive to a higher degree of stability and freedom from noise. This impregnant also provides a very excellent humidity protection to insure long life under all environmental conditions.

Tolerance—1% is standard. For special tolerance on all types except WW-10J, add to prices shown as follows: Add 10% for ½% tolerance (2 ohms and over); add 15% for ¼% tolerance (5 ohms and over); add 25% for 1/10% tolerance (20 ohms and over). On Type WW-10J, add 10% for ½% tolerance (65 ohms and over); add 15% for ¼% tolerance (200 ohms and over); add 25% for 1/10% tolerance (1500 ohms and over).

Temperature Coefficient—Minimum temperature coefficient of .003% per degree C, from 0°C to 100°C, is standard on all IRC Wire Wound Precision Resistors.

25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Type Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

TYPE "AB" ADASHAFT RADIOHMS®

SELECT THE CONTROL

ADD-A-SHAFT TO MEET YOUR NEEDS

Adashaft Controls are now built in the popular Model "B"—15/16" construction. The basic control unit is constructed with a patented stub shaft . . . usable just this way in many cases as a short, screwdriver slotted unit. A selection of nine basic shaft types are available, ranging from 3/8" to 10" in length, including auto types, insulating nylon and many others. This original, patented Centralab construction permits instant locking . . . resulting in a solid, integral, well aligned unit. There is no price premium on Adashaft . . . you pay for exactly what you need. After adding the required shaft, the units may be

converted to switch type with the new "Fastatch"† type KB line switches. All "AB" characteristics same as Model B. Packaged—

These Shallcross Features Mean

- ✓ BETTER PERFORMANCE
- ✓ BIGGER VALUE

- ✓ Off position attenuation well in excess of 100 db.
- ✓ 25% to 50% fewer soldered joints.
- ✓ Noise level ratings that are factual. (130 db or more below zero level).
- ✓ Non-inductive Shallcross precision resistors used throughout assure flat attenuation to and beyond 30 kc.
- ✓ Types and sizes engineered for all needs. Attenuation accuracies of 1%, resistor accuracies of 0.1%, on special order.

Shallcross Audio Attenuators are available in either variable or fixed units, the former often being referred to as a "control" and the latter, as a "pad".

Controls are available with as few as 5 steps or as many as 52 steps with an attenuation as small as 0.1 db per step. The total attenuation for a single control does not exceed about 125 db since such high attenuation approaches the noise level of the switching mechanism.

The complete story of Shallcross attenuators may be found in Shallcross Engineering Bulletin #4, copies of which are available on request. Specifications and prices are given below for a few of the most popular variable attenuators.

IMPEDANCE: 150, 500, 250/500, 600 ohms, except potentiometers, which are 100,000 and 250,000 ohms.

RESISTORS: All non-inductively wirewound, $\pm 5\%$ tolerance, except types preceded with "C", which are composition selected to $\pm 5\%$.

ATTENUATION: Increases for counter-clockwise rotation of knob end of shaft.

FREQUENCY RESPONSE: Flat over entire audio range.

SWITCH MECHANISM: Multi-leaf wiper arms, collector rings and contacts available in tarnish resistant silver alloy or brass. Noise level -130 db.

DETENT: Indexing mechanism available on any unit for \$0.75 list. Back of panel depth is then increased $\frac{5}{16}$ ".

DIALS: \$1.50 list each additional.

KNOBES (VA-16906): \$0.60 list each additional.

TYPES BX183A AND BX193—±1% IN COMMON VALUES—IN STOCK

In addition to the popular standard types listed here, Shallcross Akra-Ohm Resistors are made in a complete line of standard and special designs for precise electronic equipment demanding great stability and long life even under difficult conditions of temperature and humidity. Shallcross achievements include the development of really practical hermetically-sealed

units; BX processed resistors "tropicalized" against moisture and fungus; the use of spun glass insulated wire for applications where considerable power must be dissipated; bifilar wound resistors, 1000 ohms or less, for exacting instrument use; heavy-duty surge resistors; accurate heavy-duty power resistors, and various others. Write for Shallcross resistor bulletin R3-B for complete information.

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1 1/2" tinned wire leads.

The all-welded construction of the 5 watt unit makes it possible to extend the resistance range to 10,000 ohms, an unusually high value for a vitreous enameled stock unit.

OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units

are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

2 WATT MOLDED COMPOSITION POTENTIOMETER—TYPE AB

The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The single unit is 1-1/16" diameter and extends 9/16" behind the panel. The dual unit extends 1-3/16" behind the panel. The 2" long round shaft (including the 3/8" long mounting bushing) is available from stock on potentiometers with all three resistance tapers and on the dual unit. The screw-driver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator—popular the world over with servicemen, engineers and students—now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

WATT RATINGS

Nominal Watt ratings for Slideohm Resistors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approximately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Slideohm Resistors.

Price of resistor includes brackets and one adjustable band.

AEROVOX *Carbofilm* RESISTORS

PRECISION RESISTORS MADE WITH MATCHLESS ACCURACY

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments. All in all, Carbofilm resistors meet the requirements of accuracy, stability and economy.

The Carbofilm resistors are a carbon deposit type and are available in the following standard or jobber stock sizes with the resistance value shown in the listing.

Packed and sealed in plastic tubes for your protection.

"CARBOMITE" M-TYPE

Composition Resistors

(Actual size as illustrated)

M1-1 WATT

M2-2 WATT

M $\frac{1}{2}$ - $\frac{1}{2}$ WATT

Continental's "Carbomite" type M resistors meet all the requirements for a fixed, stable and rugged resistor. The insulated bakelite shell has a 1000 volt breakdown test and will not short out when stacked together. Instant solderability with a touch of a soldering iron is another of the features of this resistor.

- Meet JAN-R-11 Specifications
- Low Noise Level
- Small Size
- Insulated

They are packaged in boxes of 10 and 50 in the $\frac{1}{2}$ watt and 1 watt sizes and 10 and 25 in the 2 watt size. Standard RTMA Color Coding is marked on each unit. Both 5% and 10% tolerance resistance values are carried in stock.

WM $\frac{1}{3}$ - $\frac{1}{3}$ WATT

- Resistance Wire Molded in Bakelite
- Axial Leads
- Soldered Connections
- RTMA Standard Color Coded

Continental's type WM resistors are wound evenly to prevent shorting of turns. A minimum of .0015 inch wire is used for the winding. The terminals are securely and permanently connected to the winding.

They are resistance to moisture. The WM resistor is recommended for circuits requiring very low resistance which is not ordinarily available in the carbon style. Packaged in boxes of 10 or 50 each.

"Nobleloy" Metal Film Resistors

Trade Mark Reg.

X & PX TYPE

NF TYPE

NF—Continental "Nobleloy" type NF metal film resistors are small in size, with axial leads and are designed to meet government specification MIL-R-10509. Initial accuracy and long time stability make these resistors ideally suited for critical applications. RTMA color coded to standard values.

X — Continental "Nobleloy" type X metal film resistors have radial leads soldered to the body for a rugged construction. The hollow centers allow for greater heat radiation thus enabling these resistors to withstand overloads. The resistance and tolerance are marked on the body of the unit. Coated with gray rubberized enamel.

PX—Continental "Nobleloy" type PX metal film resistors are constructed the same as type X. A different improved alloy resistance film is employed to allow for better temperature coefficient. The resistance and tolerance are marked on each unit. Coated with an orange colored enamel for identification.

SUPPRESSORS

SUPPRESSORS

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor—yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

DALOHM DEPOSITED CARBON RESISTORS

FOR EXCEPTIONAL ACCURACY IN ANY LOW-HIGH RESISTANCE RANGE

Dalohm deposited carbon resistors are manufactured under a licensed agreement with Western Electric. The matchless stability and accuracy of these precision resistors are the result of years of intensive research and development. Dalohm deposited carbon resistors are manufactured by depositing pure carbon in crystalline form which is bonded to a selected ceramic core. They are intended for circuits calling for the accuracy and stability of wire wound resistors such as instrumentation, advanced electronics and critical television circuits but with the marked economy of carbon resistors.

Dalohm deposited carbon resistors are sealed from moisture by special silicone coating material having a high dielectric strength, excellent thermal conductivity, and offer high resistance to abrasion.

DALE Engineers and chemists have compounded a chemically inert material making possible these light weight, hermetically sealed precision resistors that surpass the requirements of JAN-R-93A and MIL-R-93A.

In addition to these resistors being completely impervious to the penetrating effects of salt ions, humidity, moisture and corrosive gases and vapors, this new material in which the Dalohm precision wire wound resistors are incased has very high dielectric strength and due to its coefficient of

expansion being very close to that of the wire itself it eliminates the possibility of distorted windings and shorted turns which are quite common in other types of resistors.

The superior quality of Dalohm precision wire wound resistors is assured through thorough testing, temperature cycling, salt water immersion, humidity and overload tests. These are without a doubt the precision resistors for dependable and long life operation under the most adverse conditions.

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

T9 BULB

AUTOMATIC REGULATION

WHAT IT IS! AMPERITE is an automatic "rheostat" designed to keep the current in a circuit at a definite value, e.g., 0.5 amps. Should the supply voltage increase, the AMPERITE will automatically increase in resistance to take up the increase in supply voltage. Since AMPERITE is a constant current device, it can only be used on a fixed load.

- T-6 1/2 L, Miniature. O.D. 1 3/8"; seated height, 2 3/8"
- T-9, Octal base. O.D. 1 1/8"; seated height, 3"

ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 10G min.) . . . Hermetically Sealed (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation per AMPERITE 50w per tube (ST19 bulb). Any number of AMPERITES with the same voltage range can be operated in parallel. AMPERITES should not be used in series.

AMBIENT EFFECTS

Variations of -50° to +70° C. will change the current of an AMPERITE approximately ±2% on the regulating portion of the curve.

LIFE EXPECTANCY

Average life 2000 hours prox.; if AMPERITE filament is operated at black temperature—average life 5000 hours prox., depending on use.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

Ⓢ = Threshold Current & Voltage

CHARACTERISTIC CURVE

Characteristic curve of a typical Amperite. Approximate curve of any other Amperite can be obtained by multiplying or dividing the current or voltage scale by any number.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current-voltage threshold value:

Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain 2% regulation on load. Better regulation is obtainable by increasing the voltage across the AMPERITE. In general, the higher the percent of the supply voltage taken by the AMPERITE, the better the regulation.

ACTUAL SIZE

Belden engineers have developed a UHF 300-ohm Transmission Line Cable for TV installation. This 300-ohm cable has the following qualifications:

A cable that can be handled easily without destroying the electrical characteristics.

A cable that can be stripped down to the bare wire in seconds.

A cable that can be twisted, without distortion, to get the proper line balance.

And a cable that can withstand rain and snow—no wet-loss.

In addition, Belden Ultra-Weldohm No. 8235 Resists Wind—has more flexibility; Resists Breakage—has longer wire life; Resists Oxidation—has copper-sheathed, 20-gauge, stranded steel wire; Resists Sun—made with 100% virgin polyethylene web.

Specify Belden Ultra-Weldohm Cable, and get a better picture, too!

INSULATED WIRE**

THE WILLIAM

AND CO., INC., WILLIMANTIC, CONN.

MINIATURIZATION WIRE

Specially developed for use in electronic equipment within the range of -55°C to +105°C, and maximum operating voltage of 600 volts rms. This wire is ideal for use in miniaturized equipment as both hook-up wire and lead wire for transformers, chokes and other components, where space is at a premium and operating temperatures are high. Available in both standard and flexible . . . in solid colors or candy striped with 1, 2 or 3 tracers.

The primary insulation is Turbo 540, an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalis and fungus. Over the primary insulation there is an extruded jacket of nylon to give added mechanical protection and abrasion resistance.

LOW TENSION AIRCRAFT WIRE & CABLE

The conductor consists of a stranded tinned copper wire. The primary insulation is an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalis and fungus. This wire has excellent electrical properties and has a rated working

voltage of 600 volts rms. This wire has an outer protective nylon jacket, with or without shield.

For general use. Low tension construction has excellent electrical and physical characteristics, light weight, and low space factor.

Rome Synthinol A ROME CABLE PRODUCT

THERMOPLASTIC INSULATED HOOK-UP WIRE

U/L Voltage Rating—300 Volts Max. Single and Two-Conductor Twisted Cable: Color Coded

Rome Synthinol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalies, moisture and flame, and possessing unusually high dielectric strength. Colors are of gem-like permanency. Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthinol.

Rome Synthinol is specially designed for the chassis and sub-chassis wiring of radio and television receivers and transmitters as well as all other types of electronic equipment. It has physical and electrical characteristics of unusual permanency.

SPECIFICATIONS

Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards. In order to provide maximum flexibility and prevent unraveling of the strands, a short lay stranding is used as follows:

RESISTANCE LINE CORDS for AC-DC Radio Sets

The cords have a wide market for replacement on AC-DC radios with worn out cords; also on those formerly having hot resistance. Consists of a 6 foot cord with red and black rubber covered line cord wires and an asbestos covered resistance having separate terminal braid. Consolidated cords have an exclusive tinned copper terminal on the resistance cord that can be soldered. Colored cotton tracer designates ohmage.

t-v lead-in cables

Cornish TV Lead-in Cables are furnished only in pure virgin polyethylene insulation to insure long life under severe operating conditions and are designed so that only exceptionally low losses at high frequencies are experienced. They are available with pure copper or copperweld conductors. Copperweld 300 Ohm lead-in cable has 1/2 times the tensile strength of copper and has approximately 2 1/2 times greater flexing life. It insures long service life in TV aerial installations requiring long runs.

open line tested and proved under all

UHF operating conditions

Imperial Radar and Wire Corp., largest manufacturers of Hi-Gain, Lo-Loss products introduces a new transmission line specifically designed for U. H. F. This carefully tested 250-275 ohm open lead wire is manufactured of pure copper and features a heavy triple coating of formvar which prevents corrosion, shorting out of signal or breakage due to climatic conditions (in most cases). Easy to install. The wire, designed and manufactured especially by Imperial, has a maximum stretch of only 15%.

Studies of the product by our engineers in a variety of test areas, including parts of the country with the highest percentage of salt air, show four times more gain than standard wire for both UHF and VHF on all bands. Note that the insulators on this transmission line are spaced for efficient performance on both UHF and VHF.

*Tests made in many areas including the Portland, Oregon territory.

NOW ... *Imperial* QUALITY GUY WIRE

Manufactured in 100 ft. continuous coils. Made of 6 strands of prime galvanized basic wire with a high coat finished, soft easy to work with, packaged in 1000 ft. cartons with each 100 ft. coil tied and continued (exclusive with Imperial). Will not rust nor unravel.

ANACONDA UHF CABLE

Developed and designed in cooperation with the UHF Engineers of one of the largest producers of UHF equipment in the country. Unique inner construction of jacket allows polyethylene tubes to literally float in air. Polyethylene thread centers high strength copperweld conductors assuring constant spacing at all times. This cable has been tested in pioneer ultra high frequency areas and has been found equally reliable over the entire range of VHF and UHF channels with lowest losses under adverse weather conditions. Characteristic impedance is 270 ohms. Attenuation in D/B is 3.6 at 500 MC and 4.8 D/B at 900 M/C. Both figures are per hundred feet. For best results sealing kit and insulator described below should be used in all installations. Size of cable is approximately 1/2" x 3/8".

ANTENNA SYSTEMS by VEE-D-X

VEE-D-X BR-U BOW TIE AND SCREEN REFLECTOR

MODEL BT-U

STACKING HARNESS BTH-U

Here is the finest, easiest to install Bow Tie ever made, yet costs no more than ordinary Bow Tie antennas. It is precision built and engineered for the performance-proven power for which VEE-D-X is so famous. No expense has been spared to meet the most rigid mechanical requirements so essential to good UHF reception. Look at the features . . . compare—and you will agree that here is the Aristocrat of bow ties.

EASIEST TO INSTALL

Thanks to the VEE-D-X exclusive FLEX-CLAMP, it is amazingly fast and easy to mount the BT-U, especially when adding to existing installations at rooftop. No fumbling or fussing with U-Bolts—just one screw to tighten and FLEX-CLAMP holds the antenna with a vise-like grip. FLEX-CLAMP also facilitates probing—just loosen the screw and move the antenna up or down or around the mast.

FEATURES OF THE VEE-D-X BT-U

- 8 db gain across the entire UHF band. 50% additional gain on stacked arrays.
- Grounded driven element especially engineered to eliminate noise pick-up—no fragile insulators.
- Engineered for super sharp picture reception from 470 to 890 mcs.
- Four easy steps to assemble—takes less than a minute.
- All zinc-plated, weather resistant steel construction. Reinforced screen reflector.
- Rugged construction and exclusive FLEX-CLAMP holds antenna rigid. Greatly reduces antenna movement in wind—the cause of picture flicker.
- Compact packaging—only 12" by 20" by 1½" deep.

THE VEE-D-X UHF COLINEAR

COLINEAR ALL-CHANNEL FRINGE

Engineered and developed principally for use in fringe areas where gain is the number one consideration. Each of the four bays of the Colinear consist of a full wave, radiator and reflector. The critical adjustments of harness spacing are designed for optimum gain at the desired channel. The Colinear's rugged four-bay construction of solid aluminum elements with Fiberglas cross-arms assures long life.

Model CA-U.....List \$11.10

SIDE-BY-SIDE STACKED COLINEAR

The VEE-D-X stacked Colinear has been described by a leading TV receiver manufacturer as "The most powerful antenna developed for UHF reception." The two Colinears may be stacked by using the VEE-D-X Stacking Kit, Model CA-U-SSH, which consists of two masts, two booms and a stacking harness. The additional gain assures powerful, long distance reception.

Model CA-U-SSH.....List \$13.20

Exclusive New Colinear MAST CLAMP

Simplifies — Speeds Installation

The diagrams above show the new improved mast clamps on each bay of the Colinear. This method eliminates sliding U-Bolts over the mast—a feature welcome to installation men when installing on present VHF mast at rooftop. This new clamp is faster, easier to install—facilitates moving the bays up or down when probing. A single screw tightens the clamp with a vise-like grip.

ULTRA Q-TEE FOR PRIMARY AREAS

The Ultra Q-Tee provides brilliant performance on all VHF and UHF (2-83) channels. It has solved one of TV's biggest problems by combining both VHF and UHF into a single antenna employing a *single transmission line*. It thereby replaces the need for two or more antennas and additional transmission line and switches. The Ultra Q-Tee employs eight unique, patented* printed circuit band reject filters that isolate the VHF and UHF portions of the antenna. Its ease of installation is due to VEE-D-X ruggedized pre-assembled construction. Can be stacked for additional gain.

**THE DELTA MATCH
COST-CUTTER**

This vital addition to the JC series is responsible for savings of more than 30% over standard Yagi antennas. Perfected by VEE-D-X engineers, it offers an ingenious method of selecting the exact impedance point of the dipole with any frequency. The Delta Match accomplishes an exact transformer action over an entire channel without loss of picture highlights or cutting of the audio portion of the TV signal.

**THE
DELTA-X****MODEL DX**

The new Delta-X is not only the lowest priced, but the finest of all 10-element Yagis. The Delta-X produces 30% higher gain on all high channels as a result of 20% (wide) spacing. In addition, the Delta-X has all-aluminum light weight construction — no heavy cumbersome steel boom. All elements are doubly reinforced at boom. All booms are of two-piece construction to reduce carton lengths for ease of handling. Low channels are 1 1/4" seamless boom, with heavy duty CL-11 mast clamp. High channels have 1" doweled lock seam booms of the new TV alloy #41. Boom struts are used on all models. Can be stacked in double and quad for additional gain. Has famous VEE-D-X Delta Match for perfect 300 ohm termination.

It has typical rugged, VEE-D-X pre-assembled construction. Can be stacked.

VEE-D-X**THE WORLD'S FINEST ANTENNA ROTATOR***the amazing new***VEE-D-X****ANTENNA ROTATOR***The rotator that obsoletes all others. Precise as a watch —
rugged as a bulldozer — streamlined as a rocket*

The VEE-D-X Antenna Rotator is a remarkable engineering triumph in design, construction and performance. It was developed to perfection in cooperation with world famous small gear specialists. Fast and easy installation results from its in-line construction. It is the only rotator that requires no meter adjustment to compensate for voltage drop resulting from varying lengths of lead lines. It utilizes a standard four-wire connecting lead. Positive antenna stop means no over-travel and assures pin-point accuracy.

**OTHER OUTSTANDING FEATURES**

STREAMLINED CASE DESIGN AND BALANCED MOUNTING give far better appearance, less wind resistance, relieve strain on mast and guy wires. No cumbersome offset—improved rooftop appearance.

THREE JAW CHUCK-TYPE MAST CLAMP at top and bottom is an exclusive VEE-D-X feature providing largest clamping surface of any rotator. Easily secured with a screwdriver.

PRECISION CAST GEARING provides dependable performance under all conditions. No backlash due to wear. Reduces objec-

tionable noise. One look at the gearing and you can see why this is the finest of all rotators.

FAST, EASY LINE CONNECTIONS accommodate 4 wire line. Exclusive snap-in cover slides into place—no screws to drop.

POSITIVE MAST ALIGNMENT with built-in self-centering mast guides.

EXTREMELY POWERFUL. Will support a load of over 200 pounds—thereby eliminating any need for an auxiliary thrust bearing. Motor bearings are silicone lubricated for long life.

THE RCA REVERSIBLE-BEAM TV ANTENNA ARRAY

For Locations with Co-channel Interference

The RCA-212A1 Reversible-Beam TV Antenna Array receives signals from only one direction at a time; eliminates co-channel interference where stations are approximately 180° apart. It also eliminates adjacent-channel interference where the receiver lacks selectivity. RCA-developed "V" attachments provide uniform directional characteristics for all twelve channels. A high overall front-to-back ratio is achieved through the use of driven elements, instead of parasitic elements. This design also makes possible the unique feature of lobe switching.

Sturdily built throughout of high-quality aluminum, the RCA Reversible-Beam Antenna consists of an array of four eight-foot dipoles in the form of a square. A dual transmission line connects the horizontal and vertical dipoles to an attractively packaged diplexing network located at the rear of the receiver. By the mere flick of a switch on the diplexer, antenna directivity can be reversed.

Molded Polystyrene insulators.

Hard aluminum tubular construction.

Separate Matching Network for different stacks.

The 2-stack (14-element) and 4-stack (28-element) arrays are not just multiples of the single unit (7 elements) but rather individually designed antennas with their own matching networks for closer matches to 300 ohms than can be obtained by merely stacking two arrays with stacking bars.

Flat response — Gains nearly uniform across whole high V.H.F. band and across whole low V.H.F. band.

Double-duty Elements — Elements 2, 3, 4, 7 (see above picture) receive in both bands, giving you double reception for each foot of tubing you buy.

BRACH MUL-TEL MASTER TV-FM ANTENNA SYSTEM
The Mul-Tel System is designed to operate 2 to 16 Television Sets from one common TV Antenna . . . The system discriminates against I.F. interference as it will pass only those frequencies in the TV band from 50-230 megacycles . . . The range of application for the Brach Mul-Tel System is virtually limitless . . . It is ideal for garden type apartment houses or other multiple dwellings, and for extra television outlets in the home . . . It is eminently suitable for multi-room restaurants, taverns and clubs which operate several TV sets on the premises . . . In suburban areas, it supplies the simplest and most satisfactory method of TV distribution for smaller dwellings and two-family houses.

Brach Mul-Tel provides the dealer with the outstanding advantage of being able to demonstrate up to sixteen TV sets simultaneously from one roof antenna, with uniform signal to each receiver.

TRANSFORMER (No. 72-300A) is designed to be a perfect termination at Channels 2-13. It also has a high pass filter action and may be used in interference areas to reduce diathermy and other I.F. interference. A coaxial fitting is provided with transformer #72-300A to make a low loss connection to RG59/U. It has negligible loss over the complete TV band and a voltage gain of 2:1. Recommended for all coaxial line installations with individual antennas in noisy and heavy interference areas and as a TV Set Matching Transformer in conjunction with the Brach Mul-Tel System.

2-SET COUPLER INPUT (No. 300-300) receives its signal from one antenna which may use 75 or 300 Ohm Down-Lead. The signals are filtered of I. F. interference and divided into two outputs which may, by proper connection, be circuited to either 75 or 300 Ohm TV receivers. More than 20 d. b. of isolation in regard to loading effects. A defective connection to either receiver will not affect the operation of the other receiver connected to the 2-Set Coupler. This unit functions on the "Berger Effect" principle as do all other Mul-Tel Units.

ZIP-HI

Telescoping Mast

The WARD "ZIP-HI" Telescoping Mast is engineered for quick, easy, one-man installation. Coming in 2, 3, 4 and 5 section models, it can be extended to any desired height and cannot collapse during installation. Self-locking guy-rings make collapsing impossible. Double-lock prevents pulling sections apart. Requires no matching of fastening holes. The "ZIP-HI" is constructed throughout of rugged electric weld Permatube. Durable plastic coating resists corrosion permanently, assures long, trouble-free life. Shipped collapsed and with guy-rings and all hardware. Antenna mounts directly on top section.

Model	Number of Sections	Diameter of Sections

ME 50	5	1/4" - 1/2" - 3/4" - 2" - 2 1/4"

The WARD DIPLEXER ingeniously solves the problem of separate lead-in lines, where a set or converter requires an individual VHF Antenna and another one for UHF. It combines these two Antennas into an integrated system. Simply connect the lead-in lines from the Antennas to the DIPLEXER and extend one single line to the receiving set.

TRIO MANUFACTURING CO.

GRIGGSVILLE, ILLINOIS

TRIO ZIG-ZAG TV ANTENNAS

Here's the TV antenna that is setting the standards for the industry! This sensational new design results in sharper directivity and higher front-to-back ratio. It provides snow-free pictures and fade-free sound in even the most remote fringe areas.

MODEL ZZ12L—For extreme fringe reception. Narrow forward lobe and a high front-to-back ratio for extreme fringe area reception. This pattern—in most areas—effectively solves the problem of co-channel interference, since it is highly directive. The antenna consists of 12 half-wave elements, all directly connected to the feed line at one point. The ZZ12L provides the ultimate in gain and directivity on the low channels, 2-6.

MODEL ZZ16H—Also for extreme fringe reception, covering all high channels 7 thru 13. Has narrowest forward lobe and highest front-to-back ratio, also effectively overcomes co-channel interference. This antenna has 16 half-wave elements all directly connected to the feed line at one point and provides saleable TV reception in areas where it had previously been considered impossible.

The ZZ12L and ZZ16H may be stacked for fine all VHF channel reception in even the most remote fringe areas.

MODEL ZZ8L—For normal fringe area reception, providing more than adequate gain on channels 2 thru 6. Radiation pattern is comparable to a well designed multiple element single channel yagi. Has 8 half-wave elements all directly connected to feed line at one point.

MODEL ZZ8H—Has same advantages and features as the ZZ8L but covers channels 7 thru 13.

Higher Gain Than Any Yagi! All Channels VHF Performance!

Antennas are shipped with all hardware mounted on the boom with the exception of the mast clamp. Complete assembly is only a matter of minutes. To provide added strength, TRIO ZIG-ZAG TV ANTENNAS now have stamped steel element clamps.

MODELS ZZ6L and ZZ6H—These models consist of 6 half-wave elements—have a pattern and gain comparable to a cut-to-channel yagi. They are recommended for near fringe installations. Model ZZ6L covers channels 2 thru 6; Model ZZ6H, channels 7 thru 13.

MODELS ZZ6A and ZZ4A—These antennas offer all-channel reception with a single bay. Model ZZ6A is for near fringe reception. Model ZZ4A is for suburban use. These effectively replace popular all-channel antennas by providing increased gain and greatly increased directivity.

TRIO ROTATOR & DIRECTION INDICATOR

Equally as famous as TRIO TV Antennas is the dependable TRIO Rotator. Tested and proved under every conceivable condition of load, weather, strain and stress. Two husky motors—one for each direction of rotation. Positive electrical stops, positive brake action—no drift. Fully guaranteed for TWO YEARS. Direction indicator is smartly styled, has easy-to-read dial face—finger touch control. A beautiful, dependable instrument throughout—the final product of more than \$50,000 in exhaustive research to build the most dependable, trouble-free rotator ever produced!

WEB-WIP CENTER LOADED ANTENNA

Total weight
22
ounces

A new and highly effective center-loaded antenna designed specifically for vehicular mounting or for small boats or aircraft. This antenna incorporates numerous mechanical features found only in the well-known WEB-TIARE marine antenna. Notable in this regard is the overall weather-proof construction and the thorough and complete protection of all metallic parts. The lower support column of the WEB-WIP center-loaded mobile antenna is an extremely sturdy but lightweight fiber glass tube. This column permits ample flexure to take up shock but prevents excessive sway at high vehicle speeds. The center loading section is wound directly on the upper portion of the fiber glass column and is protected by an external plastic covering. The top whip secures to the upper end of the loading section by a standard screw thread fitting and may be readily removed. This top whip incorporates many of the design features of the WEB high-quality, military and commercial whips. It is flexible enough to bend into a complete half circle yet is sufficiently rigid to prevent excessive sway while the vehicle is in motion. A bonded-on highly flexible fiber glass jacket provides complete protection against weather. Both whip and support column have Chrome plated brass fittings and the standard 3/8 thread utilized permits mounting on any standard type of base mount or with WEB special fiberglass mount.

Two amateur band models are listed though special antennas of this same general type are available for operation on any frequency from 1500 to 30,000 kcs. Prices on request.

The antenna has an overall height of 24 feet and the construction throughout will stand up under motion of the craft as well as heavy weather. The antenna is completely waterproof! Bottom support column is heavy-wall, water resistant aircraft aluminum, anodized and sealed with a most durable plastic coating. Upper loading section is also completely sealed and is watertight. Top whip has a highly flexible, bonded-on fiber glass covering and the whip design is such that it can be subjected to extreme flexure without fatigue or permanent set. Antenna comes with rugged, insulating mounts of die-cast, high impact bakelite. Holding bolts and wing nuts are bronze. Marine model covers 2-3 mcs. Models in other ranges are available on special order.

SILVER STREAK TWIN-DRIVEN 10-ELEMENT YAGI

For Single Channel 2-6

Designed for the weakest signal areas. Patented TACO twin-driven principle raises terminal impedance to match 300-ohm line, resulting in maximum transfer of energy to transmission line. Excellent directivity and front-to-back ratio for optimum reception in areas affected by noise or co-channel interference. Excellent gain on desired channel with sharp cut-off on either side for rejection of signals of other frequencies. Single bay shows gain of approximately 11 db, while stacked array provides 14 db. Extra-rugged construction provides years of trouble-free service under most adverse weather conditions.

CAT. NO. 1800-(*). SINGLE-BAY TWIN-DRIVEN YAGI ANTENNA. Consists of: 1 crossarm assembly supporting two antenna elements; seven directors and one reflector. Jiffy-Rig construction. Shipping Weight, 15 1/2 lbs., ch. 3; 14 lbs., ch. 5.

CAT. NO. 1801-(*). STACKED YAGI ANTENNA. Consists of: 2 Cat. No. 1800-(*) assemblies with stacking lines. Shipping Weight, 31 lbs., ch. 3; 28 lbs., ch. 5.

SILVER STREAK 10-ELEMENT YAGI

For Single Channel 7-13

Companion to the 'Twin-Driven' Silver Streak Antenna. Two-diameter driven element provides terminal impedance to match transmission line. As a single antenna, it provides a gain on the order of 11 db, and 14 db as a stacked array. Extremely rugged. Antenna is completely factory-assembled. All elements are spring-loaded, no screws or nuts. Simply swing elements into position and they are locked for installation. Designed for weakest signal installations where high-band channels are to be covered.

CUSTOM CABINETS FOR RADIO, PHONOGRAPH, TV, AND SPEAKER INSTALLATIONS INCLUDING SPECIAL FEATURES FOR HIGH FIDELITY REPRODUCTION

by RIVER EDGE INDUSTRIES

Distinctive designs built to the highest standards of fine furniture with hand rubbed finishes . . . in modern, provincial and traditional styling. Units are made from the original species of wood specified in the finish unless otherwise noted and constructed of heavy plywood, reinforced throughout for vibrationless performance. The wide variety of finishes includes: Cherry Mahogany, Cordovan Mahogany, Blonde Mahogany, Grey Mahogany, Walnut, Platinum Walnut, Lined Oak, African Oak, Ebony, Maple, Fruit-wood, Natural Birch and Knotty Pine.

High Fidelity demands a "care-constructed" cabinet that will not permit the slightest vibration to interfere with radio's new miracle of faithful tone reproduction.

Speaker enclosures are of two types—conventionally shaped cabinets and those designed to fit into room corners and to save space.

Conventional cabinets are bass reflex or horn loaded with C. G. McI'roud engineered *Flex-O-Port* which is adjustable to match any speaker; corner cabinets are horn loaded, and are also available for two-way systems.

Acoustically perfect grill fabric is used on all loudspeaker enclosures which are lined with approved sound absorbing material to minimize internal sound reflections. Television cabinets are available with pull-out phonograph drawers. Models will accommodate most chassis and tube sizes up to 27 inches.

Installing equipment in these cabinets is quick and simple—only a screw-driver is needed. All cabinets can be shipped with instrument panels pre-cut for easy installation of equipment.

MALLORY TV-101 UHF CONVERTER*

The Mallery TV-101 UHF Converter expands the receiving capability of any conventional VHF television set to include reception of all UHF stations located within the signal range.

Designed for continuous tuning, this UHF converter insures a compatible balance of inductance and capacitance over the entire, tuning spectrum from 470 to 890 megacycles with a single control.

The smooth and easy operation of the TV-101 Converter is the result of many years of Mallery research in the field of variable inductance tuning devices. This program has resulted in the successful combination of modern circuit techniques required for converting conventional UHF signals to intermediate channels. The TV-101 will result in added television entertainment, through wider program selection, from the conventional television receiver.

The TV-101 Converter is equipped with a built-in UHF antenna which permits installation without the need for special tools or technical skills.

To simplify the operation of this unit even further, a 3-position, "master control" switch is located on the panel to assure rapid selection of:

- (a) UHF station tuning.
- (b) Normal operation of the VHF set.
- (c) Switching VHF set and converter off and on.

Complete installation and operating instructions and warranty are included with each unit.

Catalog No. TV-101

DETAILED SPECIFICATIONS

Tuning Range: The tuning range of the TV-101 extends from 470 to 890 megacycles in a continuous, unbroken sweep of the tuning dial. This permits accurate tuning of all UHF TV channels without the addition of strips, coils, or band switches. The Mallery Converter is constantly tuned for operation in all areas of television reception.

Tube Complement: 6AF4/6T4 Oscillator; 6CB6 I.F. Amplifier; Selenium Rectifier; and a 1N72 UHF Diode Detector.

Circuitry: Three tuned circuits are employed in the UHF range to provide antenna pre-selection as well as the oscillator-mixer tuning function. These circuits are controlled manually by means of a single shaft actuated from the front panel of the converter. A 6CB6 amplifier, operating at a mean of 82 megacycles, is part of the TV-101. It provides additional amplification at the converter I.F. (either VHF channel 5 or 6). A combination change-over and AC on-off switch is provided to permit quick selection of either VHF or UHF stations from the front panel of the instrument.

Antenna Input Impedance: 300 ohms nominal. Either balanced or unbalanced line may be used.

Output Impedance: 300 ohms.

Stability: Oscillator drift and instability in the TV-101 are reduced to a negligible factor by the omission of all mechanically unstable parts, such as; air-tuned condensers, long leads, switches, and coil strips. Thermal sensitive parts are mounted away from heat producing components such as the I.F. and power supply tubes. The TV-101 stabilizes after approximately 1 minute when used with inter-carrier VHF TV sets, and after 3 to 5 minutes when employed with split-circuit sets.

Dial Mechanism: The dial is a slide-rule type, calibrated linearly in TV channels 14 through 82. Full coverage of the entire tuning range is accomplished with approximately 9.75 turns of the tuning knob. Numerals indicating calibration are in gold on glass, and extend approximately 4 3/4" across the face of the instrument.

Power Supply: The TV-101 is designed for 117 volt, 60 cycle operation. The power supply consists of a transformer, a selenium rectifier, and a resistance-capacitance filter. Approximately 25 watts of power are required for operation.

Cabinet: Cabinet is attractive molded plastic in modern design. Measures 9" wide, 6 7/8" deep, and 6 3/4" high. Bottom of cabinet has felt pads to prevent marring of furniture.

Weight: Approximately 6 1/2 lbs.

THE MALLORY UHF INDUCTUNER*

The Mallery UHF Inductuner, the result of years of research by P. R. Mallery & Co. Inc. in variable-inductance tuning of resonant circuits, is a compact assembly of variable inductances available in three sections. It will tune continuously the UHF range of television channels from 470 to 890 megacycles when used with proper circuitry.

Features of the UHF Inductuner include: reduction in overall capacitance while maintaining the same compact case as used for the Spiral Tuner; complete shielding between sections; shaping of the various sections for oscillator tracking at an I.F. of 82 Mc.; rugged contacts, and positive, uni-control coverage in 270° of rotation.

Additional information is available on request.

Mallory Spiral Inductuner*

The two, three and four gang Spiral Inductuners* are variable inductance tuning devices designed to provide efficient front-end tuning in deluxe television and FM receivers and boosters. When used in conjunction with suitable tubes and a minimum of circuit wiring, these Inductuners assure accurate, noise-free and continuous tuning of the entire frequency spectrum from 52 through 216 megacycles. The Inductuner eliminates the need for band switches, plug-in coils, turret coil assemblies or complicated circuit wiring when used for this purpose.

Tuning is accomplished in all models by means of a single 1/4" shaft to vary the inductance of each of the inductors simultaneously from the front of the equipment using the Inductuner. Automatic stops at the maximum and minimum inductance positions are provided to prevent damage to the inductors.

The individual coils have a maximum inductance of .985 uh and a minimum inductance of .025 uh. Total shaft turns are 5.925 ± .060-.000. Each Inductuner has a 1/2" shaft—1/4" diameter.

Model 8302 is ideal for use in a TV booster (see schematic diagram below). Models 8303 or 8304 are suitable for TV front-end service.

Other patents applied for.

Grid Bias Cells

Mallory Grid Bias Cells are small acorn-shaped, self-contained devices. The metal container or cup is the negative electrode. The black disc is the positive electrode.

The principal use of Mallory Grid Bias Cells is in the biasing of the first audio amplifier tube in modern high-gain receivers. The bias cell does not need to be by-passed to ground.

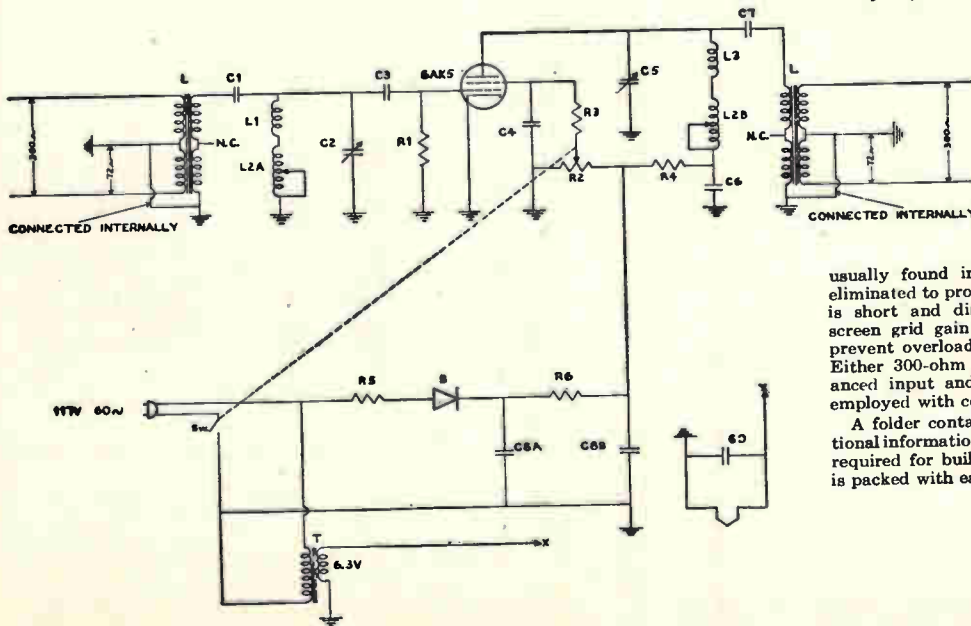

The no-current potential of the cells is within plus or minus 10% of their rated voltage. The cells are strictly potential or voltage cells for biasing class "A" amplifier tubes and should not be used for biasing power tubes or oscillators, or for any circuit where direct current may flow through, or be drawn from, the cells.

The cells may be used at temperatures from 0°F to 140°F. The voltage of the cells remains reasonably constant throughout this wide temperature range. Whenever possible, place the bias cells in the coolest location. The cells exhibit no change in characteristics when exposed to a relative humidity of 90% at 120°F.

Mallory Grid Bias Cells are non-reactive at audio frequencies. The DC resistance of the cell ranges between 10,000 and 40,000 ohms. The cells do not cause noise.

Two-Gang Spiral Inductuner Booster for TV, FM and General Purpose Tuning Continuous Range: 54 to 216 Mc.

At the left is a schematic diagram of a full-coverage, TV booster employing the Mallory No. 8302 2-gang Spiral Inductuner. This TV booster is entirely practical and suitable for home-shop construction by the average technician. The Inductuner supplies all the essentials required for tuning in one, compact, factory-adjusted unit, thus providing simplified construction. No tuning condensers, band switches or plug-in coils are needed. Possible errors usually attendant with hand-wound coils and unknown tolerances of tuning condensers are completely avoided.

The proven efficiency and high gain of a 6AK5 tube has been utilized to the fullest extent. The antenna changeover switch usually found in booster circuits has been eliminated to provide vital R.F. wiring, which is short and direct. An infinitely variable screen grid gain control has been added to prevent overloading by strong, local signals. Either 300-ohm balanced or 72-ohm unbalanced input and output feed lines may be employed with comparable results.

A folder containing detailed and constructional information, plus a listing of components required for building an Inductuner booster, is packed with each No. 8302 Inductuner.

PRINTED CIRCUITS

Simplify your wiring assemblies by using printed circuits. Our method of etching copper clad laminates produces conductor patterns at amazingly low cost and in extremely compact form, yet retains high efficiency. Variations in inter-wiring capacitance are eliminated entirely by the precision reproducibility of the printed pattern. Line widths and line spacings down to 1/64 inch are possible. Both photo-offset

and silk screen processes for forming the pattern are available. The choice depends upon quantities involved, production rate and precise definitions required.

For best performance and low cost, we recommend fibreglas mat-reinforced plastic with the following electrical and physical characteristics:

Peel strength 10 lb. (one inch strip) moisture absorption 0.52%, (after 24 hrs.) dielectric constant (1 Kc.) 3.62, arc resistance 29 sec. power factor (10 Kc.) 0.55%.

One-shot soldering dip. By a special process developed by Cardwell, solder in well formed fillets is deposited only at desired points. This permits rapid assembly of high quality conventional components with no extraneous pick-up of solder on conductor lines. Saves solder and eliminates shorts.

FEATURES

- Cut Labor Costs—Assembly time reduced approximately 30%.
- Reduce Weight—Up to 15% less weight.
- Less Rejects—Eliminates wiring errors and shorts.
- Solve Miniaturization Problems—Requires far less space. Ideal for stacking chassis layers.
- Flexible—Circuit changes made with little delay or additional cost.
- Eliminates elaborate cabling and tying of wires

MODEL 3300 UHF-TV CONVERTER

The Ultimate in UHF TV Conversion

Here, incorporated in one precision instrument, are the finest features to be found in any UHF converter available today!

Designed and built by E.V., the ELECTRO-VOICE 3300 UHF converter permits reception of ALL UHF Channels on TV receivers not having built-in UHF provisions. It features continuous tuning for "pin-point" reception. Dial is calibrated by channels and tuning knob is weighted for easy, effortless finger-tip tuning provided by a 25 to 1 micrometer drive system. Either Channel 5 or 6 of the TV set is used as the conversion frequency and 300-ohm line may be used for both the input and output circuits. Installation of the EV 3300 is extremely simple, requiring only the use of a screw driver to make the three connections necessary. The EV 3300 UHF CONVERTER is completely self-contained—there is nothing more to buy.

The EV 3300 UHF CONVERTER incorporates fine features proved by many years experience in building E-V electronic products. New high efficiency, low-loss "silver plated" printed circuits are used in the RF and Oscillator stages for maximum sensitivity and highest stability. Coin silver contacts assure quiet operation and long life.

Tubes used in the E-V 3300 UHF CONVERTER are all high-efficiency, low drain miniature types: 6AF4 rf oscillator, 6BC5 if and 1N72 diode mixer. Unusually thorough internal shielding is built-in to the EV 3300 to minimize radiation interference.

The built-in power supply uses a selenium rectifier for long life and trouble-free service. Power consumption is only 18 watts from the 110V-AC line. Operation is extremely simple. One control knob turns the converter and receiver on and switches from VHF to UHF. Second knob is for tuning dial.

The handsome case, of sturdy metal is attractively finished to perfectly complement all cabinet woods. The added shielding provided by the metal case, further reduces possibility of external radiation.

The EV 3300 is engineered inside and out for efficient, stable operation. Only highest quality components are used in this exceptionally small and compact converter. The EV 3300 measures only 5" high, 7 3/4" wide, 6 1/2" deep. Shipping wt. 6 lbs.

MOSLEY ELECTRONICS

A single source of supply for precision made plugs, sockets, connectors and other low loss accessories for TV transmission line.

BUD

NEW BUD FILTERS TO REDUCE OR ELIMINATE TELEVISION INTERFERENCE

The sources of television interference are most often short wave broadcasting stations, amateur radio transmitting stations, diathermy equipment, X-ray equipment, automotive ignition noises or similar

sources. The basic problem of eliminating this interference is that of rejection of the signals received from these sources.

BUD LF-601 LOW PASS FILTER

Interference to television receiver reception caused by transmissions from an amateur station can be caused by harmonics or by shock from the transmitter. The shock from the transmitter fundamental can be cured at the television receiver with a Bud HF-600 high pass filter. Harmonics can be greatly reduced or eliminated at the transmitter by use of a Bud LF-601 low pass filter.

The LF-601 high attenuation low pass filter has the following characteristics:

1. Minimum attenuation of 85 decibels on all frequencies above 54 megacycles and a minimum of 93 decibels above 70 megacycles.
2. Maximum rejection is adjustable from 55 to 90 megacycles. This tunable feature provides two slots at least 100 decibels down.
3. The cut-off frequency is 42 megacycles.
4. The unit will easily handle a full kilowatt modulated on a reasonably flat line.
5. The insertion loss is less than one DB.
6. Since the design of this filter provides an adjustable feature, the unit can be used with either 52 ohm or 72 ohm coax.
7. Each inductance is in an individually shielded compartment.
8. All capacitors used are variable.

LF-601

BUD WAVE TRAP

Bud Wave Traps are designed to eliminate interference caused by amateur radio transmission received through the AC line. Bud Wave Traps can be used in connection with any TELEVISION, AM or FM receiver. The three point installation method is simplicity in itself.

1. Plug the cord from the receiver into the receptacle in the wave-trap.
2. Plug the cord from the wave-trap into the AC receptacle.
3. Adjust the condensers, by means of hand tuning extensions, until the interference has disappeared. The entire unit is small, compact and completely enclosed.

Model WT-500 to be used to eliminate interference caused by a transmitter operating on the 10, 15, or 20 meter bands. Model WT-501 will eliminate interference caused by a transmitter operating on the 40 or 80 meter bands. Size of case 4 1/4" x 2 1/4" x 1 1/4".

BUD HF-600 HIGH PASS FILTER

The HF-600 high pass filter is designed to have a cut off frequency at 42 megacycles, thus this filter rejects signals from 0 to 42 megacycles. It is within this range that the majority of signals causing interference would be received. Since there is no attenuation above 42 megacycles, picture strength or quality is not affected.

This unit is easily installed and complete installation instructions are included. The filter is housed in an attractive aluminum case 3 1/4" x 2 1/4" x 1 1/8".

CHECK SUPERIORITY OF PR Crystals

Stability . . .

Drift characteristics of PR Crystals limited to less than 2 cycles per MC per degree. You get low drift, combined with high output, dependable frequency control. X-Ray orientation guarantees uniform cut for maximum low-drift performance.

Accuracy . . .

Guaranteed accurate within .01 per cent of specified frequency or better. When doubling and quadrupling accuracy is absolutely essential. You KNOW where you are with PRs.

Power Output . . .

PRs are designed to give maximum power output from the exciter stage when operating at the highest permissible voltages. PR Crystals can "take it."

Activity . . .

PRs give you high activity. They "come in" instantly on phone . . . key without chirps, even at high bug speeds, without excessive "backing off."

Unconditional Guarantee . . .

Every PR Precision CRYSTAL is guaranteed unconditionally, by the makers of fine crystals since 1934.

ELECTRIC SOLDERING IRONS

Embodied in these Electric Soldering Irons are features of construction and design that specialized experience — since 1894 — has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops; Army and Navy Services; in telephone, telegraph, radio and TV stations. Because of their proven efficiency and durability, they are preferred by those who measure the value of a tool by the service it renders.

No. 3138 Designed primarily for production and maintenance in radio, telephone, telegraph, ignition, switchboard and telephone installation work and similar industrial applications.

No. 3158 For the same purposes as the No. 3138 but for work requiring an iron of greater capacity.

No. 3178 For use on still heavier work; for light commutators, service and production work. A very useful iron for general purposes.

No. 3198 For heavy work of all kinds. Supplies a large volume of heat at high temperature. Used by manufacturers in many different lines; for shop, service, production work, etc.

No. 3128-A

No. 3128A A companion iron to No. 3128—the angle shape permits easy application to soldering operations difficult to accomplish with the conventional straight No. 3128.

No. 3128

No. 3128 For servicing TV, electronic and radio equipment and similar light work.

3138 3158 3178 3198

SPECIFICATIONS

Available in standard voltages and for 32 volts. No. 3138 also made for 6, 12, 24 and 64 volts. All irons can be equipped with three-conductor cord, one wire grounded, at slight additional charge. Separate heat-insulating stand supplied with each iron.

TERMINAL CONDUCTOR ASSEMBLY

This illustration shows the Terminal Connector Assembly used in all American Beauty electric soldering irons. It is designed for use with either 2- or 3-conductor standard heater cord or rubber-covered cord—Types SJ, HSJ, etc.

This assembly permits easy grounding for safety by a third conductor—particularly desirable when irons are used on 220-volt circuits or on metal benches accommodating groups of operators.

The cord is held firmly in place by a strain-clamp.

American Beauty COPPER TIPS

American Beauty Copper Tips are made from commercially pure, drawn bar copper rod and are heavily nickelled to resist corrosion and oxidation. Standard shaped tips with which various models are equipped are shown in illustration but pyramidal, instead of chisel type, and vice versa can be supplied when so specified without additional charge. For No. 3138 a special long, semi-chisel shaped tip (No. 3738-S) can be supplied for telephone, switchboard, television and radio work.

American Beauty TEMPERATURE REGULATING STAND

For use on (AC) Alternating Current Only

This is a thermostatically controlled device for the regulation of the temperature of an Electric Soldering Iron while at rest. Through an adjustment on bottom of stand the thermostat may be set for maintenance of any desired heat—from very low, or warm, to full working temperature. It is designed for use with Electric Soldering Irons up to 660 watts capacity and on circuits up to 240 volts.

the Work of **THREE!**

Now — more versatility with Ungar ELKALOY TRIPLETS plus two thread-in heating units: No. 535 for general soldering (23½ watts) and the new No. 1235 (37½ watts) for production-line industrial soldering where more heat is required. Now—Ungar Elkaloy Triplets make the famed Ungar Soldering Pencil 3 times more efficient. They save (1) Time (2) Money (3) Strategic Copper. Made of Elkaloy "A" for perfect tinning, stepped-up heat conductivity, and extra resistance to pitting and corrosion, each of the three tips threads into either of the heating units. In turn the heating unit fits the famed light-as-a-feather Ungar Handle. **YOU CONTINUE TO USE THE HEATING ELEMENT WITH TIP AFTER TIP!**

Check These Improvements

Ungar Handle
Now Better Than Ever!

Check these features: Extra length brass shell firmly engages all threads, keeps heating unit tight; Spring action rivet assures positive contact; Extra flexible cord protected with molded Neoprene sleeve; Cooler handle of durable molded plastic, perfectly balanced; Form-fit cork grip; Ceramic insulation for double safety; Underwriters' listed (110-120V, 37½ watts). No. 776 Handle & Cord Set only \$1.15 ea.

NEW PROTECTIVE RUBBER SLEEVE
fits over cord and prevents wear.

NEW FORM-FITTED CORK BUSHING
keeps handle tilted at 10-degree angle
— eliminates need for extra handle-rest
— keeps hot tip pointed up, away from bench surface.

UNGAR ELKALOY TRIPLETS SCORE THESE ADVANTAGES:

CONSERVES STRATEGIC MATERIALS. By substituting Elkaloy "A" for the tips, and iron for the heating units, we have helped solve the copper problem — and can assure you immediate delivery of heating units and Elkaloy Triplets **IN ANY QUANTITY.** (Note: Nos. 537S, and 537C and 538 Tips have been discontinued until further notice.)

SAVES YOU MONEY because you no longer discard the heating unit when the tip has worn down. Long-lived heating units can be used over and over again.

EASIER TINNING. Elkaloy "A" requires no special tinning procedure. Does not oxidize as rapidly as copper. No flux or paste ever required. Eliminates unnecessary and costly maintenance.

EXCELLENT HEAT CONDUCTIVITY. Elkaloy "A" absorbs heat from heating unit — delivers it directly to point of contact.

INTERCHANGE TIPS EASILY AND QUICKLY. When Elkaloy Triplet is worn down, simply unthread used tip with pliers and screw in new tip. Difference in co-efficient of expansion assures maximum heat conductivity — eliminates corrosion and gumming.

FOR FASTER SOLDERING... LONGER IRON LIFE

MAINTAINS DESIRED IRON TEMPERATURE BETWEEN JOBS • PREVENTS OVERHEATING
SAVES ELECTRIC CURRENT • ADJUSTABLE TO ANY SIZE IRON
SAVES TIME • NO LONG WARM-UP PERIOD

A practical, time and money saving device which accurately regulates and maintains soldering iron temperature between jobs. Lengthens iron life by reducing tip oxidation and amalgamation of tip with solder which increases with over-heating.

When placed on stand, iron rests in a copper cradle which conducts heat of iron and actuates a bimetal to open or close a switch. Temperature is easily regulated by an adjusting slide at bottom of stand. As iron is removed from stand, full current is instantly supplied. Stem rest adjustable to accommodate various lengths of irons. Stand is a heavy gray iron casting—stays firmly fixed without being fastened.

Plus PENTACOL

THE ONLY SOLDER MADE WITH NON-CORROSIVE, EXTRA-ACTIVE ERSIN FLUX

As a result of extensive research in the Multicore Research Laboratories, a "Tailored" molecule PENTACOL was evolved. Now, for the first time incorporated in Ersin Multicore Solder, it provides the following five advantages:

1. The careful formulation of Ersin Flux containing Pentacol has enabled a lower flux percentage to be standardized. You get more solder and less flux per pound, and, with correct soldering technique, dry and H.R. joints are avoided.
2. Pentacol is manufactured by a non-aqueous method which eliminates the possibility of any water being trapped in the rosin and causing corrosion. Ersin Multicore Solder containing Pentacol is guaranteed to be non-corrosive.
3. Pentacol is incorporated in the rosin by an intricate laboratory controlled process to form the Ersin flux. A completely separate process introduces the A.I.D. approved flux into the three cores of solder.
4. The activity of Ersin flux containing Pentacol dissolves the oxides and keeps the surfaces free from oxides until the solder has penetrated.
5. Ersin Multicore Solder containing Pentacol is non-toxic and free from unpleasant odor. The flux residue is non-hygroscopic, non-tacky, has high insulation value and is entirely non-corrosive.

TECHNICAL ADVANTAGES

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

MULTICORE SOLDER

Three separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are three cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

Now Available in
Extra High Melting Point
COMSOL ALLOY

ERSIN MULTICORE SOLDER is now available in Comsol Alloy having a melting point of 296° C. This is 113° above the solidus melting point of usual tin/lead alloys. Comsol is a special soft silver solder. Hitherto it has been available only in ingots or in solid wire. Now, for the first time, it is available in the form of Ersin Multicore Solder.

The usual range of tin/lead alloys in which cored solders are supplied have a solidus melting temperature of 183° C. and liquidus temperatures of between 183° C. and 275° C. It should be noted that joints made with these tin/lead alloys may not possess sufficient strength if the components soldered are subjected to excessively high temperatures.

For this reason, ERSIN MULTICORE COMSOL SOLDER is especially suitable for soldering processes in the manufacture of electric motors, projector lamps and all products which are likely to undergo relatively high temperatures during their working life.

ERSIN MULTICORE COMSOL SOLDER is as easy to use as tin/lead alloys and the same procedure should be employed by applying the solder either simultaneously with the soldering iron or after the components have been heated by a torch or other means.

An outstanding feature of Comsol is a great improvement in resistance to creep by comparison with tin/lead solders, both at

normal and at elevated temperatures. At 150° C., for example, a 50-50 tin/lead solder will fail under a load of 100 lbs. per square inch in approximately 10 hours. The following results were obtained with Comsol at the same temperature:

Load, Lb. per sq. in.	Time to failure
500	250 hours
250	about 1 year
100	No creep

PROPERTIES OF COMSOL.

Alloy	Composition	Melting range ° C.	Tensile strength tons/sq. in.	Elongation per cent	Electrical conductivity % IACS
Comsol	Silver-tin-lead	296	2.5	40	8.0

Ersin Multicore Solder in Comsol Alloy is supplied normally in 16 s.w.g. Other gauges are available to special order. The highest melting point Ersin Multicore Solder previously manufactured has been Pure Tin with a melting point of 232° C.

LECTROHM SOLDER POTS

FOR PRODUCTION-LINE TINNING OF SMALL WIRES and PARTS

- Individual Pots for Each Operator
- Sturdy Construction
- Two Sizes — 1¾ and 2 lb. Capacity

Here at last is an electric solder pot good for long life in production-line tinning yet inexpensive enough for only occasional use. Available in 1¾ and 2 lb. capacities, these pots are ideal for continuous operation in radio, motor and other electrical equipment plants where individual solder pots are required. By using a rheostat, Lectrohm Solder Pots can be used from 100 watts, for melting waxes and compounds, to 450 watts for maintaining solder at 850° F. Only small amounts of solder need be melted at a time, depending upon your requirements.

Lectrohm Solder Pot is composed of cast iron pot mounted by a single screw on a cadmium-plated steel stand. Single-heat, porcelain nickel-chrome heating element (easily and inexpensively replaced) heats the pot. The unit operates on 110 v. AC or DC but can be had for any specified voltage. Furnished with 6' Underwriters' approved cord and attachment plug. Spare elements of special wattages are available.

"Since 1857"

Mathias **KLEIN** & Sons
ESTABLISHED 1857 CHICAGO, ILL. U.S.A.

3200 BELMONT AVE. CHICAGO 18, ILL.

NO. 735 KNOCKOUT PUNCH SET

Designed primarily for the electrical trade to permit fast, easy enlarging of knockouts and cutting of holes for conduit in metal boxes and cabinets. Also excellent for automobile work where holes are needed for heater pipes and other accessories. Simply insert the tool in a knockout or small drilled hole and give the screw a few turns with an ordinary wrench. No. 735 set has four punches for cutting $\frac{7}{8}$, $1\frac{1}{2}$, $1\frac{1}{4}$, $1\frac{1}{8}$ -inch holes for $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$ -inch conduit. Set is neatly packed in leather case illustrated. The $\frac{1}{2}$ -inch punch will cut a $\frac{7}{8}$ -inch hole for $\frac{1}{2}$ -inch conduit where no standard knockout is provided when a $\frac{1}{8}$ " hole is drilled.

Heavy Duty Drive for $\frac{1}{2}$ " Punch

To increase length of service of the $\frac{1}{2}$ -inch Knockout Punch in cutting $\frac{7}{8}$ -inch holes in heavier-gauge sheet metals, the No. 1387 AV Drive Screw with No. 1388 AV Drive Nut illustrated is recommended.

NO. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of only two punches for cutting holes to accommodate $1\frac{1}{2}$ " and 2" conduit. Packed in leather case.

NOS. 738 AND 739 KNOCKOUT PUNCHES

For cutting holes to accommodate 2 $\frac{1}{2}$ " and 3" conduit. Design is similar to that of smaller GREEN-

LEE Knockout Punches: insert in a knockout or drilled hole and turn drive nut with an ordinary wrench. Packed and sold individually.

NOS. 741 AND 742 KNOCKOUT PUNCHES

For quickly making smooth openings for 3 $\frac{1}{2}$ " and 4" conduit. Hole is clean, no filing of burrs necessary. Operation is similar to that of other GREENLEE Knockout Punches. Simply insert in hole for 1" conduit and turn drive nut with an ordinary wrench.

No. 740 Knockout Cutter

Companion tool to GREENLEE Knockout Punches. Enlarges knockouts to take 1 $\frac{1}{2}$, 2, 2 $\frac{1}{2}$ and 3-inch conduit. Operation is simple since an ordinary wrench drives the tool. Cutting is done by the drive action of two wheel cutters. Special discs

can be furnished for cutting odd sizes of holes from 1 $\frac{1}{8}$ " to 3 $\frac{1}{2}$ -inch diameter. Packed in leather case.

NO. 7646 HydraRam KNOCKOUT PUNCH DRIVER

INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt, if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt. If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread. It will be our "circumference around pulleys." In measuring belts always remember that the circumference around pulleys is not the same as stretched out or cut length. A belt when cut, develops approximately $\frac{1}{8}$ " extra length when stretched out, depending on thickness of belt.

KLIPZON Type V&C High Frequency Crystal Probes bring added versatility to laboratory and service test equipment. Both types include Self Holding KLIPZON Test Points and Type B Mini-prod Connectors as terminals. Type V provides accurate means of measuring V.H.F. voltages with a vacuum tube voltmeter. Germanium crystal in low capacity, high impedance circuit, supplies rectified voltage to DC input. Complete shielding reduces hand capacity and antenna effect to minimum. Completely insulated. Reads to 200 Mc with 10% accuracy. Input capacity 3.5 Mmf. 400 V DC rating. Input resistance (approx.) .25 Meg-ohms @ 500 Kc, 150,000 Ohms @ 10 Mc, 25,000 Ohms @ 100 Mc. Reads .707 X positive peak of sinusoidal voltage. Type C adapts volt-ohm-milliammeters for indication and comparison of V.H.F. voltages. Has Germanium crystal and suitable network of resistance and capacity for connection to DC circuit of VOM, with at least 200 Micro-amp. sensitivity.
