INDUSTRIAL SECTION — MIL TYPES MIL-C-25C

TYPES CP53, CP54, CP55

Hvylol J or H oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is $\pm 10\%$ (K), on multiple section units $\pm 20 - 10\%$ (V).

INDUSTRIAL CERAMIC CAPACITORS ULTRAMINIATURE CAPACITORS DIPPED-RADIAL & AXIAL LEADS MOLDED-AXIAL LEADS

CERAFIL[®]

Cerafil[®] capacitors are the smallest ceramic capacitors available anywhere. These remarkably ultra-miniature units are designed primarily for air-borne and space-borne equipments, having critical space and weight parameters. They are also designed for transistorized circuit applications in hearing aids and other critical requirements where space and weight are at an absolute premium. The unique design and construction features of Cerafil[®] capacitors make it possible to obtain extremely high capacities per unit volume. These tiny capacitors are the ideal answer to many problems created by the growing trend towards miniaturization of electronic assemblies and equipments. When tested using Cerafil[®] ratings, these units will meet or surpass the requirements of MIL-C-11015B.

- All 29 stock values are available in three styles.
 1. C80V dipped axial leads (Also referred to as C80A or C80T)
 2. Dipped radial lead units (Also referred to as C80R)
 3. Completely new molded MC80V

The new molded unit features a rugged epoxy encapsulation which provides an even greater degree of reliability to the already missile proven Cerafil[®]. Increase mechanical strength, the uniform dimensions make the molded Cerafil[®] ideal for automated assembly operation. Certain values of the C80V have been assigned military part numbers; CK12 thru CK18. These units are marked in the listing below. The applicable military specifications for these units is MIL-C-11015B, and they may be procured against Signal Corps spec sheet SCL-640T/1.

INDUSTRIAL CERAMIC CAPACITORS (cont.)

HIGH CAPACITY, HIGH RELIABILITY, ROLLED CERAMIC CAPACITORS

Cerol® capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating tempera-

ture range at rated voltage —55°C to 85°C and at 50% rated voltage —55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015B.

Cerol capacitors are available in three types; type CR89, CR90 and CR91 rated at 50V, 100V and 200V respectively at 85°C and derated by 50% at 125°C.

Units are stamped with the rated voltage for identification of type.

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitors make the eyelet type ideal for high frequency bypass.

RECEIVING MICA CAPACITORS — (Continued)

Type 1469HV and 1464HV

Designed especially for television, low power transmitters and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished in silvered mica molded in red Bakelite. Standard Tolerance is plus and minus 5% and they are tested to meet EIA standards. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

DIPPED, SILVERED MICA CAPACITORS TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

- High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 megohms at 125°C.

Capacitors will be marked with capacity and tolerance. In addition voltage rating will be marked on all units other than 500 volts rating.

Potted Transmitting Capacitors**

These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

Stack-Mounting Transmitting Capacitors**

These stack-mounting transmitting mica capacitors are especially intended for various applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installations. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.

Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM15 and DM16. Crimped lead gage of DM15 and DM16 is #20.

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/16 to 3/32 from one of the capacitor surfaces.

The "W" dimension specifies the distance from the top of the capacitor to the point where the visible dip-coat ends on the leads. However, for reliable lead attachment, another 5/64 lead length should be allowed for resinous coating before solder connection is made.

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

SCDM15 capacitors are units which have been given a single protective resin coat rather than the full series of dips to which standard units are subjected. There is a marked difference in size of these thin-coated capacitors, but there is a sacrifice in moisture resistance as a result. SCDM15 units are therefore recommended for applications requiring extreme miniaturization such as military and transistor filter, networks, and delay lines. However, for long term high reliability of operation, the capacitors should receive additional environmental protection such as encapsulation, circuit potting, or hermetic sealing.

HIGH VOLTAGE DUR-MICA

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes. The Dur-Mica design provides advantage of higher tempera-

ture operation (125° C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW. All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

TYPE HTCM

We supply Elmenco Type HTCM capacitors for these temperature grades requiring operation above the old limit of 85°C. After extensive characteristic evaluation and analysis of hundreds of life tests under varying temperature, voltage and other environmental conditions; it was found that modification of standard design molded mica capacitors was necessary to maintain our standards. We admit that we are very conservative in our design parameters, but we believe that this is the prime reason for universal acceptance of Elmenco products. The modifications which affect the price are as follows:

1. Every mica film is selected for excellence of electrical characteristics at elevated temperatures. This is done 100%, not on a sampling basis.
2. A more expensive molding material is used to preserve strength and electrical characteristics at temperatures in excess of 150°C. This molding material was also selected for the lower molding pressure required. The lower molding stress greatly enhances reliability of the mica films.
3. A solid high temperature impregnant is used in place of the wax for greater stability and retention of resistance to moisture. Wax will have a tendency to melt out at the specified temperatures, causing possible change in capacitance value, loss of moisture resistance after a few cycles, and possible fouling of adjacent circuitry.

With these modifications a vast improvement is obtained in operating reliability at elevated temperature. The expected failure rate is reduced to a small fraction of what might otherwise be expected of standard design capacitors.

ELMENCO
CAPACITORS

Type
VCM-20

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to RMA Standards. All units are wax-dipped for protection against salt water immersion.

DIPPED MYLAR* —PAPER (Elmenco type MPD)

The new Elmenco Type MPD (ARCO dp) capacitors are dip-coated tubular Mylar*-paper dielectric capacitors. They represent a double breakthrough in capacitor design by combining missile and computer quality with commercial radio-TV cost. The "dp" series is designed for near universal use from TV by-pass to critical industrial applications requiring stringent electrical and environmental characteristics. New high levels of ruggedness, stability, and reliability have been achieved, yet these new Elmenco capacitors are miniaturized for transistor circuitry.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

STEATITE TUBULAR CAPACITORS CP TYPE

**MINERAL OIL IMPREGNATION
NON INDUCTIVE WINDING SYNTHETIC
RESIN END SEALS — STEATITE CASE**

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2 1/4" long.

CERAMIC DISC

MINIATURE GENERAL PURPOSE

ARCO Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a $\pm 10\%$ tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, ARCO CCD units fill the bill with dependability and economy. The 'space-saving' size of ARCO discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000VDCW (Type 3CCD) and 6000VDCW (Type 6CCD) disc ceramics are supplied in tolerance of $\pm 20\%$.

TEMPERATURE STABLE

This new ELMENCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to -55°C. to $+125^{\circ}\text{C.}$ without derating of the 1000VDCW specification. Standard tolerance is $\pm 10\%$. The combined small size, low cost, and high stability represents another significant advance in the quality line of ELMENCO capacitors. All units are marked "TS" for identification.

TYPE CCTO

Elmenco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Elmenco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the Elmenco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of -750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

PRINTED CIRCUIT TRIMMERS

The Elmenco Type 46 trimmer series has been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped-in" the circuit and firmly held until soldered.

This printed circuit trimmer, available at present only in the Type 46 style, is identified by the prefix letter "PC". All capacitance ranges listed for Type 46 are available, designated as part numbers PC460 through PC468.

VARIABLE COMPRESSION MICA CAPACITORS

TYPE S46

Net Price:

trimmer alone

A complete Type 46 trimmer assembly with mounting bracket and adjusting shaft for ease of tuning. Can be supplied as pictured from stock or with construction variations to order.

To specify precede trimmer part number with the letter "S".

For example:

Type 460 trimmer will be ordered as S-460.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within $\pm 2\%$.

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.

The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain a padder with the special screw, precede the regular padder part number with the letter "L". For example, a 302 padder with the special screw would be specified as "L-302".

Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

PLASTIC FILM CAPACITORS

**TYPES
PT, PJ**

Type PT capacitors are polystyrene dielectric enclosed in non-ferrous metallic tubes with compression glass end seals. The principle features of this type are high stability, high insulation resistance, low dielectric absorption, and low dissipation factor. Their principle uses include precision filter and tuned circuits, analog computer circuits, pulse networks, servo systems, reference capacitors, and high Q applications.

SPECIFICATIONS:

DISSIPATION FACTOR: .02% max. at 25°C.
.04% max. at 85°C.

Type PJ capacitors are polystyrene dielectric enclosed in silicone treated fused polystyrene jackets. The same superior quality of the Type PT hermetically sealed units is preserved in Type PJ units while effecting a marked saving in both size and price. Extensive evaluation has confirmed the excellent moisture resistance of this design as well as extreme ruggedness. The Type PJ will meet MIL tests for vibration, shock, moisture resistance and immersion as well as providing the excellent electrical characteristics specified.

Type LSG

Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range -60°C to +85°C, extended range -60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

LSG type capacitors have Plasticon L film-silicone fluid impregnated designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF loss, more conveniently mounted, utilizes less chassis space, impervious to moisture, and smaller in overall volume.

All 19/32 diameter Glassmikes are supplied with pigtail leads

"BLUE BEAVER" Tubular Electrolytics

CLASS 201.01

BR

Type BR is the compact unit in aluminum can with cardboard outer sleeve. Fits neatly into the cramped quarters, self-supported by rigid tinned copper leads. Larger sizes may be further supported by a metal strap. NEGATIVE TERMINAL IS GROUNDED TO CAN.

BBR

Type BBR "BLUE BEAVERS," miniature versions of the BR, are especially popular for cramped space installations in television receivers, hearing aids, miniature radios and other small assemblies. They are hermetically sealed in tubular aluminum containers with cardboard sleeve and ideally suited to meet requirements in low voltage circuits. NEGATIVE TERMINAL IS GROUNDED TO CAN.

The anodes AND cathodes of all 150 volt BBR and BR units are ETCHED. This feature recommends these types for use with JUNCTION RECTIFIERS.

TEMPERATURE RANGE: to +85°C except 500 V. D.C., to +65°C.

Phenolic-Cased Parallel-Leads Electrolytics

ECPB

Type ECPB is an aluminum foil electrolytic capacitor embedded and sealed into a premolded phenolic case with single-ended, parallel lead termination. A special cast-resin sealer is employed which forms a moisture-tight seal and anchor for the pull-proof leads. This construction is especially well suited to printed board assemblies and because of its ultra-small size, is ideal for compact transistor circuitry.

Scrupulous selection of high-purity materials and precise fabrication assure a unit of the highest dependability.

TEMPERATURE RANGE: -20°C. to +65°C.

TOLERANCE: -10%, +150%

"ELECTOMITE" Metal-Cased Electrolytics

NLW

Type NLW is an aluminum foil capacitor, hermetically sealed into an ultra-small tubular aluminum can which is tightly fitted with an outer transparent plastic sleeve to insure freedom from "shorts" with adjacent components commonly found in compact assemblies. All terminal connections are securely welded. Despite their extremely small size, "Electomites" exhibit excellent electrical characteristics as well as rugged physical construction. Ideal for by-pass, filter and coupling applications in low-voltage, compact, miniaturized equipment.

TEMPERATURE RANGE: -40°C. to +85°C.

TOLERANCE: -10%, +150%

TWIST-PRONG CAPACITOR ADAPTERS for PRINTED BOARD MOUNTING

Standard Base

Large

Small

Converted Base

ADAPTERS

This special C-D ADAPTER makes it possible to convert the standard twist-prong capacitor base so that it can be mounted in a printed circuit board. In this manner a standard stock twist-prong unit can be utilized in servicing a printed board originally designed to use the special "plug-in" type unit (C-D types UPC and UPL). A speedy, sturdy and permanent substitution can thus be made.

Two sets (4 each) of C-D ADAPTERS are included in each packet: the larger adapters No. 55277 are for the terminals; the smaller adapters No. 55278 are for the mounting lugs.

"SILVER-MIKE" Molded Midget Micacs

HIGH-STABILITY "SILVER-MIKE"† UNITS

Type 22R miniature "Silver-Mike" capacitors are especially adapted for use in circuits where accuracy and stability of capacity is of prime importance. They are rated at 500 volts D.C.W. and tested at 1,000 volts D.C., molded in low-loss red plastic and fully protected against physical damage or changes in characteristics due to varying atmospheric conditions.

STANDARD TOLERANCE $\pm 5\%$, but in no instance less than $\pm 1\text{mmf.}$

Types 1R, 1DR, and 5R "Silver-Mike" capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. Ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, tuning circuits and other similar applications.

SIZES: 5R— $5/16'' \times 1/32'' \times 7/32''$
1R— $1/16'' \times 1/16'' \times 1/4''$ See Note bottom of column 1.
1DR— $1/16'' \times 1/16'' \times 5/16''$

SIZE: $1/2'' \times 1/8'' \times 3/16''$

Where high voltage, capacitance stability and high Q are important and units of the smallest size are requisite, the "HIVOMIKE" is ideal. Recommended for commercial—civilian and military uses under Characteristic "B." Voltage ratings actually exceed those required under MIL-C-5B.

SIZES: 1DP— $1\frac{3}{16}$ " x $1\frac{3}{16}$ " x $\frac{5}{16}$ "; 5P & 5RP— $\frac{5}{16}$ " x $1\frac{1}{2}$ " x $\frac{7}{32}$ "

Low-Power Molded Micacs

TYPE 4

TYPE 9

TYPE 9: 6-32 THD. TAPPED HOLES
TYPE 9A: .144" DIA. HOLES

C-D types 4 and 9 are designed to meet applications in power amplifiers and low-power transmitters. Principally employed for grid and plate blocking and for r.f. by-pass. Units are molded in a low-loss bakelite and have a special salt water immersion seal against humidity. In the type 9 the two terminals are tapped to receive mounting screws.

STANDARD TOLERANCE: ± 10%.

Molded Tubular Mylars*

CDE

PM

CDE type PM is a MYLAR* dielectric, high temperature, moisture resistant molded tubular capacitor. The thermoset molded case is tough and non-inflammable. The Mylar dielectric assures dependable operation under high humidity conditions, and it exhibits very high insulation resistance. Low RF impedance of these capacitors makes them ideal for all general bypass and coupling applications. High stability under changes in temperature makes these capacitors excellent replacements in tuned circuits.

TOLERANCE: $\pm 10\%$

TEMPERATURE RANGE: -55°C to $+130^{\circ}\text{C}$.

†Derate voltage by 10% at 100°C ; by 50% at 130°C . Full rating at 85°C .

204.28 Film-Encased Tubular Mylars*

WMF

Type WMF is an ultra-compact Mylar dielectric tubular capacitor encased in a thin, tough Mylar film wrapping and end-sealed with a high density thermosetting plastic. A most desirable unit where a metal-cased unit is not indicated. The WMF is extremely small in size, has high resistance to humidity and excellent capacitance stability with temperature and life.

TEMPERATURE RANGE: -55°C. to $+125^{\circ}\text{C.}$

Full rated voltage at 85°C.

Derate voltage 10% at 100°C.

Derate voltage 50% at 125°C.

TOLERANCE: $\pm 10\%$.

204.45 Side-Lead Dipped Paper-Mylars*

DPMS

Type DPMS is unique in that it is constructed with TWO dielectrics—Mylar® Polyester Film and a film of the very highest grade paper. The combination of the two thus provides the best features of both —

- ★ HIGH TEMPERATURE OPERATION
- ★ HIGH INSULATION RESISTANCE
- ★ HIGH RELIABILITY
- ★ COMPACT — SPACE SAVING
- ★ IDEAL For Printed and Transistorized Circuitry

"FIXFIL" impregnant, a C-D exclusive, assures stability of temperature characteristics. This solid thermosetting compound will not crack, soften or flow, even at maximum operating temperatures.

The DPMS has a "dipped" rock-hard casing which holds wire leads rigidly at fixed spacings. This tough, durable material has high humidity resistance, high dielectric strength against grounding and is unaffected by accidental contact with soldering iron. The crimped side-leads are space saving and permit uniform mounting of units parallel to the plane of the chassis or printed wiring board.

CORNELL-DUBILIER ELECTRONICS

Triclad Metalized Papers **CLASS 207.09**

MPY

CORNELL-DUBILIER TYPE MPY CAPACITORS are metalized paper, resin-impregnated units for operation from -55°C to $+125^{\circ}\text{C}$ at full rated voltage for 200, 400 and 600 Volt DC Working.

These capacitors are unique in that they are encased in the CDE-developed Triclad tube—a laminated tube that is completely wax-free and extremely resistant to moisture. The Triclad tube consists of a resin-impregnated Kraftboard exterior bonded to a foil-film shield. In addition to being moisture-proof, it is also heat resistant. The Triclad tube is unaffected by accidental contact with a hot soldering iron. This tube is clean-handling because it is completely wax-free and is therefore ideal for manual or automated assembly.

Type MPY capacitors have the self-healing characteristics of metalized dielectric capacitors when subjected to momentary over-voltages. The resin impregnant will remain solid throughout the entire operating temperature range and will not soften, melt or flow.

TEMPERATURE RANGE: -55°C to $+125^{\circ}\text{C}$

"QUIETONE" Filters

QUIETONE® Interference Suppression FILTERS

NFF and NFT types are coaxial feed-thru capacitors. Since the conductor is completely surrounded by the capacitor, these provide much more effective bypassing at frequencies encountered in Citizens Band, Amateur Radio, and other high frequency communications services. MC-8D98 is a heavy-duty bypass capacitor, specially designed for use on vehicular accessories.

NFF-055B is designed to be used in place of the conventional condensers on the automobile generator and spark coil. NFF-315D is intended for use at the generator and battery terminals of the voltage regulator.

The A-C line on a fixed-station transmitter can be effectively filtered against TVI by using two of the Type NFF-315D as terminals on the chassis and connecting the line-cord to them with conventional insulated plate caps. (This also provides easy removal of the line-cord to prevent unauthorized use of the equipment).

FOR USE ON INDUSTRIAL AND HEAVY-DUTY ELECTRICAL EQUIPMENT

Cornell-Dubilier UNIVERSAL Quietone filters offer a practical solution for the suppression of interference from many types of household, industrial and heavy duty electrical equipment. See "Radio, TV and Appliance Quietones." A partial list of such sources is shown in the QUIETONE APPLICATION SELECTOR. Because high frequency disturbances are usually carried through

the power lines, most effective interference suppression is obtained when the Quietone filter is installed on the equipment as an integral part thereof.

C-D Quietones are designed to give optimum suppression on the equipment for which they are intended and can be relied upon to render excellent service.

CORNING ELECTRONIC COMPONENTS

FIXED GLASS CAPACITORS

Stack ultrastable glass and foil, attach leads, fuse under heat and pressure, and you have a practically indestructible Corning capacitor. Its properties are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. Properties like these at 1 Kc and 25°C.: dissipation factor less than 0.001; temperature coefficient within 10PPM with absolute retrace. Standard values from 0.5 to 10,000 pf are the same as standard decade values in applicable military specifications. Our distributors across the nation can give you fast service at factory prices on top reliability Corning capacitors.

ERIE TUBULAR CERAMICONS

Erie Style 315 and 316 Tubular Ceramicons have molded insulation for excellent durability and uniformity of size. Axial leads are ideal for either point to point wiring or printed board installation. As in the case of Erie Disc Ceramicons, the raw ceramic dielectric tubes are made in Erie's modern Technical Ceramics plant. Erie Tubular Ceramicons meet performance specifications of EIA Standard RS198 for Class 1; Temperature Compensating, class 2 Hi-K; and are on the QPL for MIL-C-20D and MIL-10509B at +85 C.

TEMPERATURE COMPENSATING CERAMICONS

Erie Temperature Compensating Ceramicons are capacity sensitive to temperature in predetermined degrees depending upon the ceramic dielectric used. Because of this controlled and reproducible characteristic, they have found widespread applications as temperature compensating elements in circuits that must be temperature stabilized over wide temperature ranges.

Below 12 pf non insulated Style 301 with white baked enamel coating are supplied. For capacitances 12 pf and above, molded case Styles 315 and 316 are supplied.

ERIE GP[®] GENERAL PURPOSE CERAMICONS

These rugged tubular units are ideally suited for coupling and by-pass applications in circuits where temperature coefficient is not important, such as non frequency determining circuits. Working voltage is 600 Volts DC based on 1,000 hour life test at 1,000 VDC. Flash test 1,500 VDC, Capacitance Tolerance $\pm 10\%$ 5pf through 1,500 pf; $\pm 20\%$ 1,800 pf through 2,200 pf; $+80\%$, -20% 2,500 pf through 10,000 pf.

ERIE TRIMMERS

CERAMIC TRIMAcons†

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the amount of overlap. Capacitance change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

ERIE STAND-OFF CERAMICONS

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purpose of by-passing R.F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

ERIE FEED-THRU CERAMICONS

These very practical feed-thru capacitors are highly recommended for by-passing R.F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage.

FILTERCONS†

FILTERCON is the name applied to Erie's high frequency, low pass filters.

Standard tubular ceramic feed-thru capacitors have been used for many years in by-pass applications in the RF range. The advent of the UHF range (above 100 MC/sec) requires in many cases the application of new techniques in feed-thru design to eliminate parallel resonance peaks inherent in the UHF range as a result of the conventional design. Erie's Filtercons were designed to provide maximum effective filtering in the UHF range.

STYLE 1201 is a bushing type FILTERCON intended for rugged applications. The filter element is soldered inside the bushing and then both ends are resin sealed to completely protect the element. The center terminal consisting of formed 20 AWG-tinned copper wire is ideal for connection. The bushing is silver plated and silver plated lockwashers and hex nuts are supplied.

STYLE 1203 is a miniaturized eyelet type FILTERCON similar in performance to Bushing Style 1201. The heavy tinned eyelet and solder coated terminals facilitate ready assembly of the FILTERCON to the chassis. Soldering can be accomplished through oven or iron soldering techniques. In the latter method the soldering iron should make contact with the chassis only and not with the FILTERCON.

STYLE 1202 is a larger version of Style 1201 but incorporating the identical husky construction. The resin seal at both ends of the FILTERCON assures protection of the element. Headed terminals are formed from 16AWG copper wire and are readily solderable. The bushing is silver plated and silver plated hex nuts and lockwashers are supplied.

STYLE 1204 is an eyelet type Filtercon similar in characteristics to Style 1202. Soldering directly to the chassis is the means for mounting style 1204. Mounting can be accomplished through using either oven or iron soldering techniques. Care must be exercised in iron soldering so that the iron contacts the chassis only.

ERIE STRIP-PACK†

Strip-Pack consists of a XXXP phenolic board with continuous metal terminals inserted on that board.

Strip-Pack is ideal for simplified bread-board applications as well as production-line assembly of components. Assembly and circuit make-up is simplified by built in series connection design of the continuous terminals. Unwanted series connections are easily cut out of the terminal strips.

This flexible system which can be adopted to many variations of complex circuitry features:

- Space between terminals permits usage of most standard electronic components with an excellent density factor.
- Cross over connectors can be made through the use of jumper wires under the components.
- Practical and economical for prototype and volume production.
- Reliability, serviceability and neatness inherent in the finished assembly.

F-C-I POLYSTYRENE CAPACITORS

F-C-I Polystyrene capacitors are characterized by a unique combination of low power factor, high insulation resistance and low dielectric absorption ("soakage") which cannot be duplicated by any other type capacitor except Teflon units. Furthermore, the capacitance stability is excellent, and the temperature coefficient of capacitance is very small. F-C-I Polystyrene capacitors are furnished as standard units

in hermetically sealed metal shells; in bathtub cases with low loss steatite terminals; and in style CP70 metal cans with low loss steatite terminals. Special units, including multi-section blocks are also available to order.

TOLERANCES TO .25% AVAILABLE.

F-C-I TEFLON CAPACITORS

F-C-I Teflon capacitors, available in all capacity and voltage ranges, are essentially identical to polystyrene capacitors in their electrical characteristics, with one important difference—Teflon capacitors may be operated at temperatures up to 200°C, whereas polystyrene capacitors have a maxi-

mum operating temperature of 85°C. Furthermore, the insulation resistance of Teflon capacitors is many times that of polystyrene at elevated temperatures.

SOLID STATE HIGH VOLTAGE PACKAGED POWER SUPPLIES

Completely enclosed and hermetically sealed power supplies operating on 115 volt, 60 or 400 cycle, AC input. Output ranges from 2,000 vdc to 50,000 vdc. Standard sizes as follows: Non-standard supplies available upon request.

FILM CAPACITORS, INC.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D-6 capacitors employ a newly developed plastic film, plus Kraft paper dielectric which, with suitable processing, produces capacitors which are better, smaller and cheaper than could ever be produced before. F-C-I Type D-6 capacitors are suitable for practically every type of high voltage D-C application. Type D-6 capacitors can be used up to 125°C with proper derating. With

these capacitors available, it is no longer necessary to stock groups of units each outstanding in only one property. F-C-I Type D-6 capacitors are furnished in steatite tubes with hermetically sealed metal end caps and either threaded studs or wire leads. Sizes not listed here can be furnished upon request. Ask for our quotation.

MINIATURE MYLAR® CAPACITORS HERMETICALLY SEALED — CLOSE TOLERANCE

F-C-1 miniature "Mylar" capacitors are furnished in metal shells hermetically sealed with metal-steatite compression type seals. The capacitor elements are non-inductively wound, and wire leads are carefully soldered to the swaged, extended foils to minimize self-

inductance, power factor and noise. The Mylar dielectric capacitors are characterized by high insulation resistance (10⁶ megohm-microfarads at 20°C); 0.5% power factor; and a temperature coefficient of +500 PPM/°C.

The capacitors listed above are suitable for continuous operation at 125° C without derating. For 85° C operation, 100 volt series HD capacitors may be operated at 200 volts; 200 volt capacitors at 400 volts; 400 volt capacitors at 600 volts; and 600 volt capacitors at 1000 volts. To correctly designate 85° C capacitors, omit the letter "H" in the part number, and correct the single number standing for the voltage rating.

Prices listed above are for ±5% tolerance. For ±2% tolerance, add 20% and for ±1% tolerance, add 50% to these prices. These capacitors are also available in ceramic shells with epoxy resin end fill. Write for prices.

We are set up to produce these capacitors in any quantity to any odd value of capacitance at close tolerance for manufacturers of filter networks, R-C networks and the like. Write for information.

HIGH CAPACITANCE MYLAR® CAPACITORS HERMETICALLY SEALED — HIGH INSULATION RESISTANCE

F-C-1 Series D-2 capacitors are Mylar dielectric capacitors which possess extremely high insulation resistance, together with good power factor and dielectric absorption. The insulation resistance runs well over 10⁶ megohm-microfarads at room temperature, even for the highest values of capacitance. The power factor and the dielectric absorption are both on the order of 0.5%. These proper-

ties make Series D-2 capacitors extremely useful in computers of moderate precision, in timing circuits, and similar types of circuitry. Standard tolerance is ±10%, and closer tolerances are available on order. (Case sizes indicated below are in inches.) (D3 indicates bathtub case and D2 CP70 cases.)

HIGH VOLTAGE TYPE KM-2 CAPACITORS — 85 C OPERATION WITH SOLDER-SEAL CERAMIC BUSHINGS

F-C-1 type KM-2 capacitors have been designed specifically to meet the need for smaller, more reliable capacitors that will withstand the severe operating conditions encountered in military and industrial electronic equipment. The dielectric employed is a combination of synthetic Polyester film and the finest grade capacitor tissue. Capacitor cases are of CP70 rectangular construction. Units will meet the requirements of proposed specification MIL-C-19978. Terminals are of the solder seal ceramic type with screw bolt terminations for easy connections and true hermetic sealing. Capacity tolerance is plus or minus 10% with an insulation resistance of 20,000 megohm microfarads. Specify type KMH-2 for operating temperatures up to 125°C. Case sizes for the KMH-2 and engineering data for both series are available upon request. CP07 mounting brackets are available for all sizes.

ELECTRONICS service-designed capacitors

General Electric has taken the confusion out of the capacitor business! With General Electric's new line of Service-Designed Alumalytic® Capacitors, you will now be able to make all your electrolytic capacitor replacements with one-fourth as many types. In fact, you'll be able to handle over 70% of your electrolytic capacitor replacement needs with just 20 G-E types!

Fewer G-E types are needed to meet your requirements because every G-E capacitor meets not just one, but a range of capacitance and voltage requirements. This extended-range approach reduces the total number of types in much the same way you are already doing it in the rectifier field when, for instance, you use a 500 ma unit to replace units rated at 500 ma or less.

As a result of the greatly reduced number of types necessary to meet your capacitor replacement needs, you can:

SIMPLIFY YOUR PURCHASING PROBLEMS. You can now replace any aluminum electrolytic capacitor used by any radio and TV manufacturer in the past ten years with one-fourth as many types. Ordering is faster and easier — because A FEW WILL DO!

MEET MOST NEEDS WITH A SMALL STOCK. If you wish, General Electric can suggest a stock list of 20 or more types which will meet 70% or more of your replacement needs. If you presently stock a large number of aluminum electrolytic capacitors, you will be able to reduce your inventory and still meet most of your needs. If you do not presently stock capacitors, you will now be able to carry a small assortment and save on single-unit ordering and pickup costs — because A FEW WILL DO!

ELECTROLYTIC TUBULARS (Type QT)

Application: General Electric Type QT electrolytic capacitors are designed for all television and other electronic applications requiring high reliability and long life. Each capacitor listed can be used as a replacement in applications requiring a capacitance value at or between the two capacitance values shown and provided the application voltage does not exceed the capacitor's rated voltage.

The larger bold type capacitance value is the absolute value or the value normally shown on ordinary capacitors.

Example: The rating of QT1-10 (15-20 mfd up to 475 VDC) means that this is a 20 mfd capacitor which can replace capacitors rated 15, 16, 17, 18, 19 or 20 mfd at any voltage up to and including 475 VDC, and still be well within approved limitations.

ELECTRONICS service-designed capacitors

TWIST-PRONG ELECTROLYTICS (Type XC)

Applications: General Electric Type XC electrolytic capacitors are designed for all television and other electronic applications requiring high reliability and long life.

Each capacitor listed can be used as a replacement in applications requiring a capacitance value at or between the two capacitance values shown and provided the application voltage does not exceed the capacitor's rated voltage.

The larger bold type capacitance value is the absolute value or the value normally shown on ordinary capacitors.

Example: The rating of XC1-2 (15-20 mfd up to 500 VDC) means that this is a 20 mfd capacitor which can replace capacitors rated 15, 16, 17, 18, 19 or 20 mfd at any voltage up to and including 500 VDC, and still be well within approved limitations.

Description: The 100% use of high purity aluminum foil for anodes insures longer shelf and operation life with superior capacitance, resistance, and leakage current characteristics. These capacitors are hermetically sealed in aluminum cans and packaged with phenolic mounting wafers.

Temperature Range: -20°C to 85°C.

PAPER-MYLAR SIDE-LEAD TUBULARS (Type MPC)

G-E Type MPC is especially designed for use in printed circuits as well as conventional wiring in television and radio. It has two dielectrics—Mylar[®] polyester film and highest grade paper—which provide high insulation resistance and high reliability while saving space. Type MPC capacitors have maximum stability of temperature characteristics because they are dipped in a solid thermosetting compound which will not crack, soften or flow, even at maximum temperatures.

Side leads are held rigidly at fixed spacings by a dipped, rock-hard casing with high humidity resistance and high dielectric strength against grounding. This tough, durable material is unaffected by contact with soldering iron. Crimped side leads save space and permit uniform mounting of units parallel to the plane of the chassis or printed wiring board.

Temperature Range: 55°C to +125°C. (Derate working voltage by 25% for +125°C operation)

Dyna-Tan[®] Tantalum Capacitors in production quantities

**Available
Ratings**

**.0047UF to 330UF
6VDC to 50VDC
-80°C to +125°C**

All Series SD capacitors are designed with a porous tantalum or wire tantalum anode formed by electrochemical means to produce an extremely stable oxide dielectric. The anode is then coated with a solid semiconductor type of electrolyte, thus preparing it for a

conductive coating that is used for the cathode. The entire assembly is then hermetically sealed in a hot-tinned brass can with a time tested glass-to-metal seal, thus giving full protection against all adverse outside environmental conditions for long term operation over a temperature range from -80°C to $+125^{\circ}\text{C}$, and under proper conditions can be operated to temperatures approaching 150°C .

GLP Series SD Capacitors are designed to meet or exceed the requirements of style CS 12 and CS 13 of MIL C 26655A Characteristic B.

Dyna-Mite[®] Micro-Miniature Tantalum Capacitors

Available Ratings

.001UF to 10UF
1VDC to 30VDC
-55°C to 85°C

Micro-Miniature Solid Tantalum Capacitors are designed to operate from -55°C to +125°C where reliability and performance are prime factors. Type MM capacitors are designed with solid non-corrosive elements. In order to obtain extremely low

power factor and a maximum operating temperature of 125°C, the capacitor elements are housed in a solid silver case with a securely bonded high temperature epoxy end-fill which completely covers the positive terminal. The end result is a completely moisture-proof unit. Since the case of Type MM capacitors is of a negative potential, two types of insulation are available:

1. Type M—Mylar[®] Sleeve
2. Type G—Plastic Coating

All units manufactured with weldable leads.

GENERAL INSTRUMENT CAPACITORS

GENERAL INSTRUMENT CAPACITOR DIVISION

MOLDED RADIAL LEAD SILVERED MICA CAPACITORS

G.I.'s new "modern designed" MECAPS are the first MOLDED, radial-lead mica capacitors available with precisely controlled body dimensions. Being molded . . . not dipped or encapsulated, each capacitor is exactly the same size, and symmetrical, so units can be conveniently "stacked" in an assembly to reduce component space requirements. MECAPS are available taped for mechanical insertion, and with leads straight or crimped. These MECAPS meet and exceed MIL-C-5B specifications, can be furnished in "B", "C", "D", "E" and "F" characteristics. Operating temperatures from -55°C to 125°C (standard range is from -40°C to 85°C). MECAPS, with their consistently high quality, and many advantages of design, are no more expensive than dipped types.

DIPPED SILVER MICA CAPACITORS

TYPE RDM10

G.I. Micaps are silvered mica capacitors having the same mica capacitor sections as the molded styles CM 15 and CM 20. They differ in that they are hermetically sealed by a dip coating method and have radial wire leads instead of axial leads. This latter feature results

in a shorter RF current path and greater ease of installation, making them specially suitable for use in printed circuitry. Micaps are smaller than the comparable molded types and are particularly applicable in the development of miniature equipment.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS

FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with 1/2" extended shaft for knob control or shaft coupling. (Type "B") "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS

FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC". Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. (Type "B") "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

"NZ-10" CAPACITORS

FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

Net Price \$4.77

"FC" and "FNC" COUPLINGS

FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

SPECIFICATIONS—Straight line capacity. Air gap is 0.0245" nominal. Tested at 1000 V. R.M.S., 60 cycles.

"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC". Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods. "M" type plates and ball-bearing construction can also be made available as specials.

"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION—Brass rotors and stators are

soldered and nickel-plated. The contact wiper is heavily silver plated phosphor bronze. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

"VU" CAPACITORS

FEATURES—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 mega-cycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table at left. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

"MAC" and "MACBF" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered and designed to produce a rugged, stable, highly reliable miniature component for today's equipment.

CONSTRUCTION—Its silicone treated steatite base is only 3/4" x 5/8". Rotor and stator are soldered assemblies and are of brass, nickel-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

SPECIFICATIONS—Straight line capacity. Screw-driver adjustment. Air gap is 0.017" nominal and tested at 880 V. R.M.S., 60 cycles, except the MAC-30 which has an air gap of 0.0135" nominal and is tested at 600 V. R.M.S., 60 cycles. "MACBF" is the butterfly version of the "MAC". It is designed for dual split-stator capacitor use.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"MC", "MCA" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. Hammarlund "MC" capacitors, except for "MCA" types, have silver plated phosphor bronze wiping contact, silicone-treated stearite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. Multi-section capacitors can be designed for special applications.

A rotor stop is available on "MC" capacitors on special order.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated stearite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated stearite base. Front and rear bearings with wide individual silver plated phosphor bronze wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. Multi-section capacitors can also be made available to customer specifications.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HFA", "HFA DIFFERENTIAL",

"HFA DUAL", and "HFB" CAPACITORS

SINGLE SECTION CAPACITORS—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher breakdown ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

DIFFERENTIAL TYPE CAPACITORS—The "HFA" type units are now available as standard items in the differential type construction. The unit is mounted with an ungrounded rotor making it suitable for a wide field of application. In addition to the features of the "HFA" the design also incorporates the use of a spring bronze silver plated wiping contact on the rotor.

DOUBLE SECTION CAPACITORS—The "HFA" and the "HFB" are dual balanced rotor capacitors employing front and rear panels plus a single ball rear thrust. Both units are applicable to transmitter design. The construction features are similar to the "HFA" and the "HFA Differential" type capacitors. Additional special feature employed on the "HFB" type incorporates the use of an insulated shaft extension on the rotor to safeguard against shock hazards with the application of high voltages.

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFB" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

SPECIAL VARIABLE CAPACITORS FOR ALL NEEDS

AVAILABLE MODIFICATIONS

Hammarlund's more than 50 years experience in the development and manufacture of capacitors has resulted in an endless knowledge of techniques. Such "know-how" includes the making of special capacitors using standard techniques and/or components, or giving birth to a completely new custom product—from concept through to production.

An example of this extended knowledge is the fact that Hammarlund now manufactures over 750 different types of APC capacitors.

These capacitors came into being as a result of the many modifications required by our customers for their specific applications. Any standard capacitor listed in this catalog can be modified to customer requirements. Such variations include end-panels, shaft diameter and lengths, bearings, special materials and finishes, special air gaps on most units, etc.

Custom made precision units to suit all electrical and environmental specifications can be fabricated on special order. The combinations are endless.

PHOTOFLASH CAPACITORS

Mallory photoflash capacitors are especially engineered to meet the requirements of electronic flash circuits. All three types offer exceptionally low leakage and minimum charging resistance to provide maximum battery life.

Model HC45003—Plastic case, 2 1/8" dia. x 4 3/8", 300 μ f at 450 v. DC. Maximum Series Resistance: 0.8 ohm. Maximum DC Leakage (at 5 minutes): 5.5 ma. May be used with VR clamps, or HB bracket and PL caps for mounting (not included). Net Each **\$8.47**

Model FF45052—Plastic case, 2 1/8" dia. x 4 3/8", 525 μ f at 450 v. DC. Maximum Series Resistance: 0.35 ohm. Maximum DC Leakage (at 5 minutes): 2.0 ma. May be used with VR clamps, or HB bracket and PL cap for mounting (not included). Net Each **\$13.50**

Model FP240—Metal can, 1 3/8" x 3", dual section, 50 μ f each section at 450 v. DC. May be paralleled for 100 μ f or used with switch to provide high and low outputs. Maximum Series Resistance: 4.8 ohms. Maximum DC Leakage (at 5 minutes): 1.29 ma per section. May be used with TH-25 clip and CE-6 insulating tube (not included). Uses standard FP twist-prong terminals. Net Each **\$2.31**

Tantalum Capacitors

Mallory Tantalum Capacitors are specified by either the 13 digit Mallory number or the 12 digit MIL number where it applies.

TAF 254 M 150 N O A
a b c d e f g

"a"—Type.
"b"—Capacity in μf , first 2 digits are significant and 3rd shows zeros.
"c"—Tolerance: M, $\pm 20\%$; K, 10% , etc.
"d"—WVDC at designated temperature.
"e"—Polarized (P) or non-polarized (N).
"f"—Uninsulated (0) or Mylar* sleeve (1)
"g"—Size or configuration.
See appropriate specifications for explanation of MIL numbers or ask for **Mallory Cross-Reference**.

TANTALUM FOIL CAPACITORS
Furnished in both plain and etched foil types, polarized and non-polarized and either of two operating temperature ranges, -55° to $+85^\circ$ C and -55° to $+125^\circ$ C. All foil types except TAF non-polarized are specified by the appropriate MIL-C-3965 style number.

The "slug" type of tantalum capacitor utilizes a porous anode of sintered tantalum; with axial leads. Intended for polar applications, these capacitors offer the best characteristics of all the types described on these pages. They exceed the vibration test of MIL-C-3965B, Grade 3, thereby meeting the requirements of Grades 1 and 2 as well.

Available from stock in two physical types—the "hat-shaped" type, 3 sizes (U,F,G) and the "straight-cylindrical" type, 1 size (SU) which, while smaller than size U, has the same range of capacitance and voltage. Hat-shape types are offered in two operating temperature ranges, -55°C to +85°C and -55°C to +125°C. Tolerances are shown in

footnote under price tables. All tolerances are not supplied on all stock capacitors — see footnotes under stock table. Units designed to meet MIL-C-3965B, are also stocked. Units insulated with plastic sleeve are available at slight extra cost. Stock listings below and on next page.

FOOTNOTES FOR SLUG CAPACITOR TABLES

†Complete stock no. as follows: Add K, S or M to indicate tolerance except on high-capacitance units for which use only K or M. Add "A" after tolerance letter if insulating sleeve is desired.

*Complete type designation as follows: For un-insulated insert "4" after "CL4_" or "CL6_" for insulated insert "5" instead. Insert S, T or M before "P" to indicate tolerance, except for high-capacitance units which are supplied only in M tolerance.

‡High-capacitance units.

Tolerances: K = ±10%; S = -15+20%; M = ±20%; T = -15+50%.

Smallest subminiature electrolytic capacitors available. The anode is specially processed tantalum wire sealed into a silver case. Axial leads are 2" long. Units are insulated with Mylar plastic sleeve. These polar type units are used in DC circuits where capacitance can exceed nominal circuit values (standard tolerance, -0 + 100%). Wide use in hearing aids and other subminiature apparatus. Operating

temperature range: -55°C to +85°C. Nine of thirteen available case sizes stocked.

Dual Section Electrolytics — Type "IL"

Hermetically sealed in aluminum tubes with completely flexible leads. U/L Approved, plastic coated leads are rivetted directly to the condenser end disc, eliminating the use of rigid terminal risers, allowing capacitor to fit into smaller space and eliminating lead breakage. IL capacitors have wrap around mounting strap and are common negative, guaranteed for one year.

TYPE PX — CLOSE TOLERANCE BATH TUB CONTAINER

TYPE PX Capacitors are close tolerance polystyrene capacitors housed in hermetically sealed bathtub containers. Terminals are solder lugs mounted on glass solder seal bushings. Extended foil (non-inductive) construction is used.

CAPACITANCE TOLERANCE available is plus or minus 1%, 0.5%, 0.25% or 0.1%. Add the suffix "E" and the numbers 1 for 1%, 05 for 5%, 025 for 0.25% and 01 for 0.1% capacitance tolerance to the part number required.

TYPE LK DC FILTER CAPACITORS

Type LK capacitors are an entirely new design which have been proved by rigorous testing in the laboratory and by usage in the field for several years. This is the first listing to be published.

Type LK capacitors are smaller and have a reliability factor which is unexcelled. Their primary usage is for DC filtering and DC blocking applications.

Temperature Range is minus 65°C to 105°C. With full rated voltage from -65°C to 85°C.

Life 25000 hours at rated voltage at 85°C.

Case is the CP70 style terne plate metal, primed and finished with a synthetic enamel.

ENVIRONMENTAL and other testing may be performed per MIL-C-25A, Characteristic E. Type LK exceeds the best characteristics of paper capacitors in a much smaller size. Comparison of sizes will show that the volume is much less than required for MIL-C-25A equivalents in Characteristic F and are better than characteristic E quality.

HV SELENIUM RECTIFIER TYPE is smaller than the HV SEALED TUBE.

INPUT 118 volts 60 to 400 cycles. HV SELENIUM RECTIFIER TYPE is designed to avoid rectifier type failures by the use of long life selenium rectifiers with an estimated life of 20,000 hours at 50°C temperature. Lower ambient temperature will increase life.

METALLIZED MYLAR* has several advantages that are outstanding. The self-healing characteristics are well-known and extend the useful life of the capacitor. The second, and most over-looked feature, is the possibility of making full use of the highest volts-per-mil rating of the film by eliminating all the weak dielectric areas. This results in extra small size without sacrificing life, reliability and economy. Sizes and net prices are given for the floating case style and 20% capacitance tolerance. Each part number shown should be ordered with the suffix "BW" 20 added. Other styles and tolerances are also available.

TYPE AB Capacitors are metallized Mylar* elements hermetically sealed in a bathtub style container. The self-healing and clearing characteristics make possible the smallest high quality capacitor for the given rating.

TYPE AZ

Miniature Epoxy Sealed Capacitors

TYPE AZ capacitors are a rather recent development. Metallized Mylar* is used for the capacitor element. The protective housing is a specially formulated epoxy material such that a multiple dipped finish coating may be applied. The housing is relatively flexible, resistant to heat, and adheres well to the transfer band at the point of lead entry. All the fine electrical characteristics are maintained of the Mylar* film.

TYPE AZ capacitors are available in a tubular and a flat oval shape with either radial or axial tinned-copper wire leads. A short list of the 200 volt type (AZ2) follows. The complete part number consists of the letters AZ followed by the voltage in hundreds of volts capacitance is the standard designation and is hyphenated in the prefix plus a letter for the style; i.e. AZ2-104Z is a 200 volt 0.1 mfd. capacitor in the flat oval style.

TYPE OT - TUBULAR TO 120KV

TYPE OT capacitors are designed for long life at high voltage in the medium temperature range. Type OT capacitors are the smallest and most economical capacitors available for high voltage DC filtering.

CASE is hermetically sealed and designed for operation under oil. Many of the lower voltage units may be operated in air. Many capacitance values at stated voltages are available in two physical sizes, providing the design engineer flexibility in placement of parts and circuit wiring.

MOUNTING. Must be mounted vertically, corona cap at top.

TEMPERATURE RANGE. Type OT capacitors will give long life in the temperature range of -40°C to 55°C with the rated voltage applied.

TERMINALS and mounting studs are axial 3/8-16x3/4" long.

SANGAMO ELECTRIC COMPANY capacitors

TYPE DCM

(Mounting Bracket Optional)

Type DCM COMPUTER GRADE FILTER AND ENERGY STORAGE ELECTROLYTIC

The SANGAMO Type DCM is a high quality, long life, electrolytic capacitor, specially designed for use as an energy storage or filter capacitor. The Type DCM is enclosed in an aluminum can and is normally furnished with a clear plastic insulating sleeve. Aluminum terminals, which are permanently molded into the top, include #10-32 machine screws. A pressure-sensitive vent is provided as a safety mechanism in each top. In the listings, the Sangamo specification number has been adopted as the catalog number. The numbers "539" in the catalog number indicate the type as DCM. ELECTRONIC COMPONENTS

Type PL and Type PLP Electrolytics

TYPE PL
For Twist Tab
Mounting

The Sangamo Types PL and PLP, "Twist Tab", electrolytic capacitors are specially designed for television and electronic applications requiring long life and dependable performance at 85°C. They are sealed in round aluminum cans with the element tabs securely clamped and staked to the terminal lugs, thus assuring permanent, low resistive connections. In all cases the aluminum can and mounting ring are grounded. All units are manufactured to satisfy conditions of high ripple currents and high surge voltages.

The Type PLP has a combination base allowing interchangeable use for mounting in printed circuit boards and also for conventional twist tab mounting. For a complete listing of available ratings write for Catalog 2152E.

TYPE PLP
For Printed Circuit
Mounting

Types BK, BW, TS and BT Electrolytics

TYPE BK
with 7/8-16 threaded
neck and hex nut

TYPE BW
for bracket mounting

The Sangamo Types BK, BW, TS and BT which are furnished in aluminum containers, meet all specifications of Mil-C-62B. The Type BK corresponds to the military type CE41 & 42, the BW to CE31, 32 and 33, the TS to CE51, 52 and 53, and the BT to CE63 and 64. For complete listings and information on these types write for Bulletin 2233.

Types MT, MMT and MTD, Electrolytics

TYPE MT

TYPE MTD

TYPE MMT

SANGAMO Types MT, MTD and MMT are specially designed for radio and television applications and other electronic equipment operating at temperatures up to 85°C. They are encased in drawn aluminum containers with cardboard insulating sleeves on which polarity is clearly marked. The Type MMT, which is a miniature version of the MT, is ideally suited to meet the precise operating requirements of low voltage circuits. Because of their small physical size the MMT and MT, up to 3/4" diameter, are self-supported by means of reinforced bare tinned copper wire leads. The MT and MTD units are provided with mounting straps in 7/8" and 1" diameters.

SANGAMO ELECTRIC COMPANY capacitors

GENERAL SPECIFICATIONS FOR MICA CAPACITORS

Mica capacitors have been continuously manufactured and improved by Sangamo for over 35 years. The quality of Sangamo mica capacitor is the result of long experience in the selection of superior grades of India ruby mica, and know-how in the formulation and selection of unique enclosing materials such as molding compounds. Our laboratory and manufacturing facilities are equipped with specialized

and modern equipment and are staffed to provide constant attention to continuing development of quality and customer Service. All Sangamo micas are designed to exceed the performance requirements of applicable Military Specifications such as Mil-C-5B and Mil-C-10950B.

NOTE: In line with industry standardization, pF is used in place of mmF.

MARKING

Sangamo wire lead mica capacitors can be marked by either ink stamping or color coding. Ink stamping can be supplied to the Sangamo identification or the Military des-

ignation, both of which are defined below. Color coding can be supplied for Mil-C-5 or E. I. A. Other ink stampings and color codes are available on request.

Type C-CR MICA CAPACITOR

Type C foil mica capacitors are molded in tan Humiditite in either 10% or 20% tolerance. These units are only supplied as "B" characteristic.

Type CR silvered mica capacitors are molded in red Humiditite. These units are normally supplied as 5% tolerance and "C" characteristic. Units can

be supplied to $\pm 1/2$ pF or $\pm 1/2\%$ whichever is greater, as well as D, E or F characteristic.

Both Types C and CR are available in two thicknesses. Where the thicker version is required, the letter "K" should follow the type designation (for example CRK5C682-0). For additional engineering information write for Bulletin 2320.

SANGAMO ELECTRIC COMPANY

capacitors

ELECTRONIC COMPONENTS

Types F1-F2-F3 MICA CAPACITORS

Type F1-F2

Types F1, F2, and F3 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

M100

SANGAMO Type M Silvered Mica Button[®] Capacitors are designed particularly for application in high frequency circuits. Their high "Q" is indicative of their low loss. These units meet all requirements for V.H.F. and U.H.F. applications and are constructed to be electrically and mechanically stable.

The silver-plated case design performs the dual purpose of shielding and being the low potential terminal. The high potential terminal through the center of the capacitor allows 360 degrees electrical

current distribution, resulting in extremely low series inductance and more efficient performance in high frequency applications.

All units are normally furnished in characteristic "E" and in 500 working volts D.C. Case sizes are in accordance with Mil-C-10950B as general types CB11, CB21, CB75 and CB76. The Type MHC are hermetically sealed and will far exceed the environmental requirements of Mil-C-10950B. For more complete engineering information write for Bulletin 2311A.

ELECTRONIC COMPONENTS

Type S

Subminiature hermetically sealed
metal tubular paper dielectric capacitors

SANGAMO Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. These units are encased in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished using glass-to-metal, solder seal terminals. The impregnant used in the Type S is Ethern-an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to $+125^{\circ}\text{C}$. Styles listed below are supplied with the case floating (circuit $\text{---} \text{---} \text{---}$). To complete catalog and military type nomenclatures insert proper designation to indicate type desired in accordance with the following cross reference table.

| SANGAMO TYPE | MILITARY TYPE | Description |
|--------------|---------------|-----------------------------------|
| SBA | CP04 | bare case (tab construction) |
| SBB | CP05 | insulated case (tab construction) |
| SDA | CP08 | bare case (Extended foil) |
| SDB | CP09 | insulated case (Extended foil) |

The Type S is also available in many other designs. Case sizes are in accordance with Mil-C-25C specification. For more detailed information write for Bulletin 2421.

Sangamo Types 40, 41, 42, and 43 paper dielectric capacitors are ideal for use in high voltage filter applications. Enclosed in aluminum containers, they mount to the chassis by means of a 3/4-16 threaded neck. In the Types 40 and 42, one connection is provided by an insulated terminal and the other is provided by the case and washer with a solder lug. In the Types 41 and 43, both terminals are completely insulated from the case. Each of the 4 types is provided with mounting nut and lock-washer. The Types 40 and 41 are impregnated with Diaclor to provide an F characteristic. Types 42 and 43 are impregnated with mineral oil to provide an E characteristic. All units are designed in accordance with electrical characteristics of Mil-C-25C. For more complete engineering information write for Bulletin 2424.

SANGAMO ELECTRIC COMPANY capacitors

ELECTRONIC COMPONENTS

Type 71 PAPER

SANGAMO Type 71 paper dielectric capacitors are impregnated with Diaclor - a specially compounded, chemically pure, chlorinated dielectric oil, SANGAMO Diaclor is a synthetic impregnant whose characteristics can be controlled with great uniformity and possesses a high dielectric constant, high resistivity, low power factor, high dielectric strength and is non-flammable and non-explosive. The Type 71 is an excellent choice in medium and high voltage circuits where light weight per unit volume is an important factor. Each unit is finished with grey lacquer paint over a zinc chromate under coat. All units are built in accordance with applicable paragraphs of Specification Mil-C-25C. Type 33M MOLDED MYLAR® TUBULAR CAPACITORS

The Sangamo Type 33M, which uses a Mylar® dielectric is molded in thermosetting plastic to provide more stable capacitances, high insulating resistance, excellent seal and operation up to 125°C when the voltage is derated to 50% of the 85°C value.

They are specially recommended for use in test equipment, instrumentation and filter networks all of which require small physical size and dependability under extreme heat, humidity and physical stress. The Type 33M is manufactured to meet moisture requirements of Mil-C-91A specifications. For more complete Engineering information write for Bulletin TSC-206C.

SPRAGUE CAPACITORS

85°C FOIL TANTALEX[®] CAPACITORS

- For applications where small physical size, stable electrical characteristics, and long service life are important.
- Type 110D and 112D also available marked to meet MIL-C-3965B. Order by complete military type designation.
- High capacitance stability even at low operating temperatures, unlike aluminum-foil electrolytics.
- Extremely low leakage current.
- Standard capacitance tolerance:

- Types 110D and 111D. $\pm 20\%$;
- Type 112D and 113D $+75, -15\%$.
- Listed units have plastic wrap. For bare case, end Cat. No. in "0" instead of "1" and subtract \$.10 from price.
- For complete technical data refer to latest issue Engineering Bulletin 3601.
- For prices on quantities from 25 to 999 pieces, see your Sprague Industrial Distributor.

SPRAGUE CAPACITORS

VITAMIN Q[®] SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Her-

metically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: -55°C to $+85^{\circ}\text{C}$ and -55°C to $+125^{\circ}\text{C}$. Because of their Vitamin Q impregnation, these subminiature capacitors have

a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

For prices on quantities from 10 to 499, see your Sprague Industrial Distributor.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses

are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

TYPE CP04 CAPACITORS TO MIL-C-25A

- Impregnation with Vitamin Q assures capacitors exceed MIL-C-25A performance requirements.
- Inserted tab construction for applications where minimum size is necessary.
- Positive hermetic closure of the metal cases assured by glass-to-metal solder-seal terminals.
- Type CP04 has plain metal case.
- Available in Characteristic E (-55°C to +85°C) or Characteristic K (-55°C to +125°C).
- Only popular insulated section (ungrounded case) capacitors are listed. For information on grounded case units, consult your Sprague Industrial Distributor.
- For prices on quantities from 10 to 499 pieces, see your Sprague Industrial Distributor.

SPRAGUE CAPACITORS

TYPE CP05 CAPACITORS TO MIL-C-25A

- Vitamin Q impregnation assures performance above and beyond MIL-C-25A requirements.
- Inserted tab construction for applications where minimum size is necessary.
- Positive hermetic closure of the metal cases assured by glass-to-metal solder-seal terminals.
- Type CP05 has insulating sleeve.
- Available in Characteristic E (-55°C to $+85^{\circ}\text{C}$) or Characteristic K (-55°C to $+125^{\circ}\text{C}$).
- Only popular insulated section (ungrounded case) capacitors are listed. For information on grounded case units, consult your Sprague Industrial Distributor.
- For prices on quantities from 10 to 499 pieces, see your Sprague Industrial Distributor.

SPRAGUE CAPACITORS

118P DIFILM[®] METALLIZED CAPACITORS

- The Best of Their Type Possible to Produce at the Present State of the Art
- Rated for Operation at 125°C WITHOUT VOLTAGE DERATING
- Unique Dual Dielectric — a Combination of Metallized Paper and of Polyester Film, Impregnated With Special High-Temperature Mineral Wax
- Subjected to Stringent Quality Control During Manufacture
- Higher Insulation Resistance Than Any Other Metallized Paper Capacitors—at 125°C, Minimum Product of Insulation Resistance and Capacitance is 10 Megohm-microfarads for 200 V Units or 40 Megohm-microfarads for 400 and 600 V Units
- Capacitor Sections are Effectively of Non-inductive Construction, Resulting in Capacitors Unmatched in Performance Quality by any Other Metallized Capacitors
- Hermetically Sealed, with Glass-to-metal Solder-seal Terminals
- Have Unusual Self-healing Characteristics, in the Rare Event of Capacitor Dielectric Breakdown
- May be Used at Extremely Low Voltages Where Metallized Paper Construction has Previously Been Unsatisfactory
- For Complete Performance Characteristics, see Latest Issue of Engineering Bulletin 2211
- For Units With Outer Plastic Insulating Sleeves, Change Last Digit of Cat. No. From 2 to 4 and add \$.075 to Price.
- Capacitors Listed Below Are Ungrafted Case (Insulating Section) Units Without Outer Insulating Sleeves. For Information on Other Styles Consult Your Sprague Industrial Distributor
- For Prices on Quantities From 25 to 999 Pieces, see your Sprague Industrial Distributor.

SPRAGUE CAPACITORS

121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING — extremely important in military and industrial equipment where higher temperatures are encountered.
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page.
- High insulation resistance — at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads.
- Hermetically sealed with glass-to-metal solder-seal terminals — capacitor cases are of corrosion

resistant materials — similar in appearance to Type 118P.

- May be operated at low voltages, unlike many other metallized capacitors.
- For complete performance data, see latest issue of Engineering Bulletin 2210.
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor.
- For prices on quantities from 25 to 999 pieces, see your Sprague Industrial Distributor.

- For units with outer plastic insulating sleeve, change last digit in cat. no. from 2 to 4 and add \$.075 to price.

SPRAGUE CAPACITORS

METAL-CLAD FILM CAPACITORS

Polystyrene film dielectric capacitors have the lowest dielectric absorption of all film capacitors. The exceptionally high insulation resistance will generally exceed 10,000,000 megohm-microfarads. They have extremely low power factor, close capacitance tolerance, high capacitance stability with temperature change and high operating temperatures. The unusual properties of these capacitors make them particularly suitable for circuit applications demanding such characteristics. All capacitors listed here are hermetically sealed in metal cases.

114P STYRACON™ TUBULARS

Specially processed polystyrene film dielectric • Operating temperature range, -55°C to $+85^{\circ}\text{C}$ • High insulation resistance • Low dielectric absorption (under .05%) • High capacitance stability (less than $\pm 2\%$ drift) • Extremely low power factor (high Q) • Units listed below have capacitance

tolerance of $\pm 5\%$. For $\pm 20\%$, change 8th digit in catalog number from 5 to 0; for $\pm 10\%$ change to 9; for $\pm 2\%$ change to 2; for $\pm 1\%$ change to 1 • Units listed below have plastic insulating sleeves. For plain metal case, change last digit in catalog number from 4 to 2 • For complete technical data, refer to latest issue of Engineering Bulletin 2510 • Prices available upon request.

FILTEROL[®] FILTERS

FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices ... A 3-terminal network with the case as one terminal ... The selected filter should have a rating higher than the continuous operating current of the offending device ... A single Filterol connected to the high side of the line is usually sufficient ... In severe cases a Filterol in each leg of the power line may be necessary ... For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating a Sprague HYPASS[®] Capacitor ... Provides exceptionally high attenuation at frequencies above 5 megacycles ... Intended for small devices with continuous current ratings up to 20 amperes.

SPRAGUE PRINTED CIRCUITS

BULPLATE[®] and MULTI-COMP[®] PRINTED CIRCUITS

- Bulplates (rectangular plates) and Multi-comps (circular discs) are especially designed to save space and reduce assembly time
- Combinations of resistors and capacitors of maximum compactness
- Integral connections are "printed" and brought out to external leads which are anchored to the basic ceramic plate
- Completed units are protected by a tough moisture-proof coating
- Maximum voltage to be applied across these units is 250 volts d-c, except on D-1 which is rated at 100 volts d-c
- Types V-14 and V-15 are Multi-comp disc-type units — All others are Bulplate rectangular plates

The superior electrical and mechanical characteristics exhibited by Vitramon® capacitors are attributes of their solid state composition — fine silver electrodes molecularly fused within a solid block of high grade porcelain, forming a monolithic unit that requires no case or hermetic seal.

"Layering" of electrodes makes possible a much greater active dielectric area within the same cubic content. Perfect bonding of materials minimizes loss and noise and results in greater stability over a temperature range of —55°C to 200°C.

Vitramon® capacitors are used extensively in guided missiles, jet ignition, proximity fuses, and in radar, servo, guidance, fire control, telemetering, and carrier telephone systems.

HIGH RELIABILITY SPECIFICATION S-1002B

Every VITRAMON® Capacitor purchased against our High Reliability Specification S-1002B is accompanied by a detailed documentation verifying a reliability of better than 0.5% per 1000 hours. Continuous control testing of in-process material for all parameters, including 300,000 unit hours of life tests every six weeks, has consistently demonstrated an A.Q.L. for VITRAMON® Capacitors 12 times higher than Mil Specifications.

ALPHA-TEMPIL^o Temperature Indicators

Marketed to the Electronic Industry by Alpha Wire and Sold Nationally Through Alpha Distributors.

TEMPILAQ^o (Liquid)TEMPILSTIK^o (Solid)

Measure surface heat with better than 1% accuracy — at a cost of less than 1 cent per application!

Typical Applications

- Determining critical temperatures of electronic components.
- Monitoring metal-to-glass sealing temperatures of vacuum tubes.
- Measuring shaft bearing and rotating component temperatures.
- Preventive maintenance to detect overheating.
- Studying temperature rise of transmitter tubes.
- Detecting overloads in power switches and electrical equipment.
- Testing cooling and ventilation efficiency.
- Measuring temperature on surface of circuit elements adjacent to heated component.
- Checking efficiency of heat sinks used in soldering.
- Safeguarding against hot spots in environmental testing ovens.
- Testing temperature of soldering irons and other heated devices.
- Simulating heat dissipation tests.
- Working within prescribed metallurgical temperature limits.

ALPHA-TEMPIL^o products tell you instantly when any critical temperature is reached. Below rated temperature, the TEMPIL^o mark is dull and chalky. When exact temperature is reached, the mark liquifies sharply and becomes glossily transparent... a change easy to recognize. Components throughout the entire circuit can be temperature-checked to $\pm 1\%$ without expensive and complex thermocouples. Complete temperature profiles of any component can be determined by using several different TEMPILSTIK^o or TEMPILAQ^o marks.

Characteristics

- Accuracy** — Within plus or minus 1% of stated temperature rating.
- Response** — Melting action begins within a millisecond of reaching desired temperature.
- Permanence** — Once melted, TEMPIL^o heat indicators remain glossily transparent... do not revert to the original dull, chalky appearance.
- Readability** — Melting action is fast and unmistakable.
- Shelf life** — Lasts indefinitely.

Using TEMPIL^o temperature indicators...

TEMPILAQ^o: Apply a thin dab to the surface to be heated. This will dry almost instantly to a dull mark, ready for use.

TEMPILSTIK^o: For temperatures below 500°F, stroke a mark on the working surface before beginning the heating cycle. For higher temperatures, stroke the surface occasionally during heating.

Cramolin® products

CRAMOLIN fluid is a combination protection and cleaning preparation. It is preferably applied on contacts already in use, or on apparatus where contact deficiency has occurred and where these contacts should be protected against oxidation. May be used on old and new contacts, and with other CRAMOLIN products.

CRAMOLIN-SPECIAL fluid is not a cleaning preparation, however, it does provide the essential protection needed. It is mainly used in the manufacture of new instruments or apparatus where the improvement of performance is desired as well as to preserve and increase the life of the apparatus. Should be used on new contacts or those contacts that have been previously cleaned with CRAMOLIN.

CRAMOLIN-PASTE is a semi-solid form and is also a combination protection and cleaning preparation. Usually used for high amperage and/or high voltage use. Can be used after applications of CRAMOLIN for good results.

Ask or write for Bulletin C-200 for complete Technical Data.

HERE ARE 14 REASONS WHY CRAMOLIN IS THE MODERN CONCEPT ON IMPROVING CONTACT PERFORMANCE

1. Reduces contact resistances to their minimum values.
2. Reduces sparking of brushes on commutators.
3. Improves performance of contacts and collector rings.
4. Protects against salt air and sulfidic atmosphere and will not absorb moisture.
5. Applied on moving parts, Cramolin will stay on. Cramolin contains a chemical compound which is strongly attracted by metal surfaces and cannot be removed completely, even by high pressure friction.
6. Fungus growth will not develop on Cramolin-films, because Cramolin contains mineral and synthetic ingredients only.
7. Cramolin is not aggressive on baked varnishes, although it may affect some nitro-cellulose lacquers.
8. Max. effective operating temperature range is -34°C to $+150^{\circ}\text{C}$.
9. Cramolin can be safely used at a relative humidity of 95% and temperatures up to 100°C .
10. Cramolin will perform equally as well under air pressure as well as in a vacuum.
11. Insulation resistance of 10^{13} ohms between contacts at distance of 1 cm on Trolitul (phenol-formaldehyde resin).
12. Tests have indicated that no injurious secondary effects arise.
13. Cramolin may be applied on old contacts without special precautions. All non-metallic layers, dust, resin, etc., will be dissolved and removed at once by rubbing it off, or by operating the contact several times.
14. Under general operating conditions Cramolin should be reapplied after two to three years (on high frequency and low current contacts). In highly corrosive atmosphere (containing acid, sulphide, etc.) reapplication should take place after one year. If the air contains unusual quantities of ammonia, contacts should be treated with Cramolin-Special.

Industrial Adjustable R.F. Coils

Ceramic Adjustable R.F. Coils

The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

Frequency Selective R.F. Chokes

Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designer's task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

The RFC-3.5, RFC-7, and RFC-14 are the standoff type, mounted by a single 6-32 screw. All other coils are mounted with axial leads.

Ceramic Form R.F. Chokes

A series of high quality fixed coils wound on a silicone impregnated steatite form. The coils are the standoff type and are mounted by a single 6-32 screw. They find primary application

in low power transmitters and associated equipment where relatively high current capacity and low distributed capacitance are important.

Radio Frequency Chokes

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form $\frac{3}{8}$ " diameter x $\frac{3}{4}$ " long. Iron core form $\frac{3}{8}$ " diameter x $\frac{7}{8}$ " long. Leads are $1\frac{1}{2}$ " long.

F.M. Variable Capacitor

This 3-gang 7-plate variable capacitor is rigidly constructed with widely spaced (.042 Air Gap) plates to assure highest stability. The plate cantour results in an almost linear frequency versus rotation characteristics. Although the capacitor is supplied with 3 trimmer capacitors attached, it is recommended that the oscillator trimmer be replaced with a small NPO adjustable ceramic. The tuning capacitor has a $\frac{1}{4}$ " diameter shaft $1\frac{1}{16}$ " long. Capacitor range is 6.6-23 mmf. Trimmer capacitor will add to these values.

Dimensions: $3\frac{3}{16}$ " x $1\frac{1}{16}$ " x $1\frac{1}{16}$ "

F.M. Stereo Multiplex Inductors

Basically the system involves pick-up of sound by two microphones, the left (L) and right (R). Subsequently the two audio signals are combined in such a way that L plus R frequency modulates an F-M carrier in the conventional way while L minus R amplitude modulates a 38KC stereophonic sub-carrier, and the resulting double side-band AM signal (23-53KC) with suppressed carrier. Likewise frequency modulates the FM carrier. A 19KC pilot sub-carrier signal also frequency modulates the FM carrier and at the receiver provides a means of controlling the frequency and phase of the 38 KC carrier for re-insertion. When broadcasting Stereo Multiplex the region of 53 to 75KC is allotted to the station for SCA signals.

In the receiver the output of the F-M detector comprises the L+R audio signal, the 19KC pilot sub-carrier, and the 23-53KC A-M modulated (L-R), suppressed carrier signal. It is then required to separate the 23-53KC signal by means of a suitable filter, generate a 38KC signal under the control of the 19KC pilot sub-carrier, re-insert the sub-carrier, and detect the resulting signal. This yields L-R. This must then be combined in a suitable matrix with the L+R signal in such a manner that the L signal appears at one output terminal and the R signal at another.

Illumitronic Engineering has developed a complete, versatile series of air core inductors designed especially for the amateur rig, or for prototypes of RF transmission equipment. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. The series consists of a standard coil type, a variable pitch type, and an indented type, in a range of diameters from 1/2 inch to 3 inches. All Air Dux® coils are constructed of tinned (silver or formvar) copper wire wound on large low loss polystyrene rods for the highest mechanical strength and lowest electrical losses.

CAPTIVE HARDWARE

CHOKES

National is a leading manufacturer of radio frequency chokes, producing both standards and unique designs such as our new Ferrite Bead Choke which disappears from your circuit electrically at low frequencies. Hundreds of values are kept in-stock at all times for immediate shipment. National engineers will also custom design to your specifications on short notice. You will find National chokes stocked locally by all leading distributors.

National's unique approach to stainless steel captive hardware has caused an overnight revolution. A hexagonal head forced into the thin aluminum causes the parent material to cold flow into a special cavity. The hardware is thus permanently captured so it can't push, pull or torque out even under abnormal pressures, giving a stainless steel thread which will allow insertion and removal of screws many times. A wide variety of configurations in nuts and studs is available from stock.

COIL FORMS

If you require complete flexibility in choice of coil forms, your logical source is National. We manufacture perhaps the widest variety available anywhere. New forms are constantly being added. National's enormous stocking facilities assure fast delivery when you need it.

KNOBS

Whether it's Mil-Spec or Commercial Knobs you want, National makes a complete line to suit your every design need. More than 200 different Commercial Knobs styles are available . . . many *in stock* for immediate shipment. Our Custom Department will give you immediate service to fill specialized needs. National Mil-Spec knobs are made to specification MS91528. All types and styles are available for immediate delivery. National will custom mark dials for Mil-Spec knobs in any size required.

DIALS & DRIVES

National is a long-established leader in the design and manufacture of mechanical devices for electronic equipment such as vernier drive mechanisms, precision gear drives and vernier dials. National can quickly adapt its vernier mechanisms to dials marked to your specifications. All mechanical component parts are made to exacting standards and undergo extensive quality control inspection to insure complete reliability in the finished product.

WANT MORE INFORMATION? National has complete specifications and drawings available on all lines. In addition to those mentioned above, National carries tremendous stock of a large variety of other components such as: ceramic tube sockets, crystal sockets, ceramic platecaps, terminals, shaft locks, couplings, ceramic insulators, and dial locks. National also makes a new kind of cable called *Elasticable* which can stretch to triple its relaxed length. Elasticable is available in a single or multiple conductor cable, covered in nylon or neoprene. For more information on an application of specific interest to you, write directly to our Component Sales Department.

MASTER & COMMUNITY ANTENNA SYSTEM COMPONENTS

for motels, hotels, apartments, houses, schools, communities, etc.

SINGLE CHANNEL AMPLIFIERS

MODEL MCSc AGC CONTROLLED AMPLIFIER

An MCSc is available for each VHF channel and the MCSc-FM covers the entire FM band. Each MCSc has a built-in, fuse-protected power supply. MCSc units also have built-in mixing networks so that the output of each MCSc in a system may be plugged into the next MCSc; at the final output all of the channels are being fed into one coaxial cable.

AGC action enables MCSc units to provide uniform outputs even though the strengths of the inputs vary. Two operating controls (Gain & AGC) increase the versatility of these amplifiers.

Gain: at least 46 db, ch. 2-6; 38 db, ch. 7-10; 35 db; 11-13. Max. output; 1.0 volts (for less than 1% cross-modulation); 2 volts (for less than 3% cross-modulation).

Net MCSc—\$89.00. MCSc-FM—\$180.00

MODEL CB MAST-MOUNTED PREAMPLIFIER

Completely weatherproof. Amplifies any specified VHF channel. Low noise. 21 db minimum gain on lo band; 18 db minimum on high band (when 1 output is used). Max. output 0.5 volts for less than 1% cross-modulation. 300 ohm input; two 75 ohm mixing outputs. Net \$39.00

MODEL PA HIGH-GAIN FAST AGC PREAMPLIFIER

Automatic modulation control with up to 18 db of speech clipping provides magnificent audio with "talk power" greater than many kilowatt rigs.

This beautiful unit with its ultra-stable VFO is the ultimate in VHF equipment for amateur and Mars operation.

CLEGG INTERCEPTOR VHF RECEIVER FOR 6 AND 2 METERS

Designed for the serious operator on these bands, the INTERCEPTOR, with cabinet and panel exactly matching the famous ZEUS transmitter, offers performance features unmatched by presently available equipment for these frequencies.

For example, here is a receiver with virtually no cross modulation. Nuvistor RF stages give an extremely low noise figure and sensitivity better than .25 microvolts. Stability is ideal for exacting requirements of SSB and CW.

CLEGG 99'er TRANSCEIVER FOR 6 METERS

This famous little transmitter-receiver is ideal for both fixed station and mobile operation. Small in size, low in cost, and tops in performance, the 99'er offers operating features unequalled in far more costly equipments. The double conversion superhet receiver provides extreme selectivity, sensitivity and freedom from images and cross modulation. The transmitter section employs an ultra-stable crystal oscillator which may also be controlled by external VFO. An efficient, fully modulated 8 watt final works into a flexible Pi network tank circuit. A large S meter also serves for transmitter tune-up procedure.

SEE THESE NEW STARS ON THE VHF HORIZON!

Continuing its leadership in the field of V.H.F. ham gear Clegg Laboratories announces the release of several sparkling new units for this most exciting area of the ham spectrum.

Among them are the "Mercury," a medium power sideband transmitter for 6 meters and the Thors VI and II . . . 50 watt transceivers for 6 and 2 meters respectively.

Featuring digital type frequency control and crystal lattice filter, the "Mercury" is by itself, an outstanding performer on 6 meter sideband. It can also be used to drive a linear final to maximum legal input.

The Thor VI transceiver includes both BFO and Crystal

frequency control in the 50 watt transmitter section which can be used either for AM or CW type emission. The double conversion superhet receiver section includes a BFO for CW and sideband reception, and will feature extreme sensitivity, selectivity, low noise level and freedom from overload. The Thor II is a 2 meter counterpart of Thor VI and a brilliant performer on its band.

Together with the famous trio listed above, these new Clegg products are specifically tailored and designed to meet the exacting demands of the vast number of hams either entering or switching to VHF . . . the most rapidly expanding area of ham communications.
