NEW FROM BIRNBACH INSULATED GLAS-LINE CABLE

Provides complete isolation of any antenna system where support must be obtained from metallic objects such as towers, windmills, etc.

NON-INDUCTIVE • NON-CONDUCTING • NON-ABSORBING
• NO SAG • NO ROT • NO SHRINK • FLEXIBLE •
USE FOR DIRECTIONAL ARRAYS, BEAMS, RHOMBIC SYSTEMS, ETC.

This Birnbach non-metallic guy wire is not to be handled as regular wire. Do not twist around itself for solid joint; it must be knotted firmly in place (use bow line knot) — use coupling devices such as our Nos. 472, 473 or 474 insulators. Must not be abraded by constant friction — will wear and break line; avoid tight turns. An open thimble should be used to couple the Birnbach "Glas-Line" cable to an eye-bolt at mast or tree. Glass fibers conform to Mil 1140 Spec. and plastic jacket conforms to Mil-I-631C Spec.

*The breaking strength indicated is applicable when "Glas-Line" cable is properly used.

DESCRIPTION: Fiberglass insulation with PVC insulation overall. Color coded per indicated tensile strength.

| Cat. No. | Put-Up | *Tensile Strength | Color | Nom. O.D. |
|----------|----------------------------|-------------------|-------|-----------|
| GL 1 | 100', 500', 1000' 2500' | 500 lbs. | Green | .125" |
| GL 2 | 100', 500', 1000' 2500' | 1000 lbs. | Gray | .2187" |
| GL 3 | 100', 500', 1000' 2500' | 2500 lbs. | White | .3125" |

For greater strength — doubling or tripling the cable will double or triple the tensile strength.

FISH SPINE BEADS

Made of L-5 Glazed Steatite. Useful for insulating Buss or Heavy Lines. Ball and Socket style interlocks permitting beads to follow bends and curves. Four Beads cover approx. 1" — Package of 100 covers 25" of wire. Dimensions: 5/16" O.D. 1/8" I.D. Beads are treated with special Dow Corning treatment to prevent accumulation of surface moisture.

STEATITE BUTTONS

This specially designed Steatite button is intended for use to simplify wiring and to be used as a binding post or a binding post insulator. Attention is called to the uniqueness of the design which prevents either section of the insulator from turning in respect to the special screw. The specially designed screw locks both sections.

"LUCITE" FEEDTHRU INSULATORS

These feedthru insulators are ideal for bringing high frequency leads thru a panel. They are made of genuine Dupont Lucite. Because of its low loss at high frequency, it is well adapted to insulated elements of high frequency circuits. The 1/2" dia. insulators have brass nickel plated 6-32 hardware and the 3/4" dia. insulators, 10-32 hardware.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

Small Size, Low Cost Motors for Continuous Timing Applications Beyond the Capacity of Standard Clock Motors

Hurst Synchronous Motors were developed to fill the repeatedly expressed need for a timing unit of larger capacity than clock motors, at a practical low cost, light in weight and compact in size. In this middle area of size and price, Hurst motors provide outstanding quality and performance.

Rugged synchronous motors for continuous duty applications. In a wide choice of output speeds for alarm systems, extra-large clocks, displays, railroad signaling equipment, process controls, code signal devices, time switches, program instruments, aircraft training devices, etc. Engineered for tough jobs requiring accurate timing. Will not overheat during continuous duty or in a stalled position. Gear trains are constructed to withstand considerably more than the motor's rated capacity. Venting prevents moisture contamination and insures proper lubrication at all times. Mounting can be made in any plane with assurance of trouble-free service. Specifications common to all Hurst motors: Operating temperature, 40° to 105° C. Power required, 5 watts, 95-130 volts AC, 60 cycles. Shaft, stainless steel 3/16" dia. x 1" long flattened. Finest quality bronze bearings. Hardened steel pinions and wheel shafts. Brass gears lubricated for lifetime service. Completely enclosed cases, cadmium plated. Mounting, 3 No. 6 holes spaced 120°.

SLO-SYN[®] Synchronous Motors

● INSTANT STARTING,
STOPPING, REVERSING

● 72 RPM SHAFT
SPEED WITHOUT GEARS

● CAN BE USED AS
O-C STEPPING MOTORS

A SLO-SYN Synchronous Motor is a permanent magnet type a-c motor having instant start, stop and reverse characteristics and a basic shaft speed of 72 RPM with 60 cycles applied. Adaptable for use as a d-c stepping motor or incremental positioning device that can be stepped 200 times per revolution of the motor shaft. Compact and economical, has almost negligible overshoot, no ratchets or detents. A single-pole,

three-position switch can give complete forward, reverse and "off" control because the motor has three leads only. Starts or stops in less than 0.025 second or approximately 1.5 cycles. No need for mechanical or electrical braking; stops in less than 5° of motor shaft rotation. Starting and operating currents are nearly identical; no excessive inrush current when motor is turned on. All types have lubricated-for-life bearings.

50 OZ-IN

TYPES SS50 AND SS50M

Well-suited for limited space applications, actuating selector switches, tape handling, process timing. Militarized type SS50M meets or exceeds applicable military specifications. Planetary gear types available.

PLANETARY GEAR TYPES

Standard types having specially-designed planetary gear assemblies are available. The speed reduction assembly is completely enclosed in a dust proof housing mounted on the shaft end of the motor. The load is evenly distributed over three nylon gears thereby reducing the possibility of tooth damage. The self-lubricated nylon gears provide quiet operation and long life. The planetary gear shaft is ball bearing mounted. When ordering, the basic type number must be suffixed with the desired planetary gear assembly number. For example, type SS50-P1.

SLO-SYN® Translators

A SLO-SYN Translator is a pulse-to-step converter intended for use with appropriate bifilar type SLO-SYN Synchronous Motors. It converts low-level signal pulses or square waves into the correct switching sequence needed to drive the SLO-SYN motor at 200 discrete steps per revolution. Internal power supply allows alternate operation from an external shorting switch if desired. Power input is 120 volts a-c, 0.5 ampere for type ST-250 and 120 volts a-c, 1.0 ampere for type ST-1000. SLO-SYN Translators are used in programmed positioning, remote positioning, indexing and indicating operations.

TYPES ST-250 AND ST-1000

FIGURE 1

FIGURE 2

Torque vs. speed characteristics for a SLO-SYN Translator type ST-250 are as shown in Figure 1 when used with a type SS250-1002 or type X250-1002 motor. SLO-SYN Translator type ST-250 can also be used with a type SS150-1010 motor or, for higher stepping rates, with a type SS50-1009 motor and a 2 ohm, 25 watt dropping resistor. Figure 2 shows the torque vs. speed characteristics for a SLO-SYN Translator type ST-1000 when operated with a type X1000-1002 SLO-SYN motor. For higher stepping rates, SLO-SYN Translator type ST-1000 can be used with a type SS400-1002, type SS250-1027 or type X250-1003 motor and a 1 ohm, 50 watt dropping resistor.

SS150 AND SS250 TYPES

BIFILAR SLO-SYN Synchronous Motors are used for d-c stepping applications where the use of push-pull circuitry and a center-tapped power supply is not possible or where increased torque at high stepping speeds is required.

Increasing the focal length increases the focal size. For example at 6" focal length the focal size is 1/2 x 3/8" and at 12" focal length the focal size is 1 1/2" (straight light beam).

AUTOTRON Photoelectric Controls

C-Series Impulse Actuated Photoelectric Timing Controls

C Series Controls are triggered (ENERGIZED) by electric impulses. De-Energizing is controlled by adjustable time delay—the relay remains energized through the timing period for which the control is set. DARK-energized Controls time out with LIGHT; LIGHT-energized Controls time out with DARK.

When the "ENERGIZING" light change occurs *before the timing period expires* the relay remains energized through another complete timing period.

Quick "Light Change" is required. Objects should travel at near 60 feet per minute (unless specified). Timing repeat accuracy, 1%. Power consumption, 20 watts.

Plate Relay: SPDT contacts rated 15 ampere at 115 VAC, non-inductive load.

A2BX Solar ON/OFF Control

Automatically turns lights "ON" at preset light value—and turns lights "OFF" when light exceeds preset value.

DPDT Control Relay energizes when light exceeds intensity for which control is set; de-energizes when light falls below the preset level.

In case of tube failure the relay de-energizes; providing same control action as when light falls below preset level.

Dual Time Delays prevent operation by either momentary light flashes or shadows. Modern, simple circuitry uses one rugged, premium type power tube. Light intensity adjustment from outside of housing. Gasket-sealed cast aluminum housing, tapped for 1/2" conduit. For 115/230 v, 50-60 c. Available with three adjustment ranges:

- No. A2BX-2; 1 to 5 fc for street lighting, parking lots
- No. A2BX-5; 15 to 50 fc for signs, parking lots
- No. A2BX-1; 20 to 150 fc for obstruction or tower lights

Tubeless Bin Level Control

Tubeless Photoelectric actuation — unaffected by pressure of material in the bin. Only rigid, non-moving Lucite probes project into the bin. Cast aluminum, gasket-sealed housing mounts to bin wall as shown. Removal of cover makes all parts accessible. Dust-covered plug-in DPDT 8-ampere relay provides ON/OFF control for either high or low bin level. All wiring connections brought out of case in 3-foot oil proof cable. For 115/230V, 50-60 C.

FOTOLECTRIC FIRE PROTECTION

SMOKE DETECTION For institutions, schools, hospitals, hotels, etc., where fire originating in or drawn into ventilating or air conditioning ducts are fan driven to a succession of uncontrollable outbreaks throughout building. The Worner Fan Motor Stop installed on air duct minimizes this hazard by early detection, automatic stopping of fan and signaling of alarm. Meets requirements of National Board of Fire Underwriters and listed by Underwriters Laboratories. Write for Bulletin 650.

HOT-STAMPED LEGENDS (Digits, Letters or Symbols) on Dialco Lamp Cartridge Lenses

SHORT and LONG CYLINDRICAL lenses can be hot-stamped with one to three digits of standard size, as follows: 1 DIGIT, 11/64" high (14 pt. type) . . . 2 DIGITS, 9/64" high (10 pt. type) . . . 3 DIGITS, 5/64" high (8 pt. type) . . . These standard sizes of Legends will be provided in a uniform manner per order—i.e., the size of type will be determined by the largest legend indicated in each individual order.

Standard—BLACK letters; but white, red, green, or blue letters can be supplied to order.

Colored Legends on black or gray lenses: Legends can also be furnished in "negative", or "reverse" style. That is, the legend is illuminated in white or other color while the background remains opaque black or gray. To order, insert -XP20B- for black lens and -XP20G- for gray lens.

A Complete "Data Matrix" and "Data Strip" Manufacturing Service

To expedite installation of multiple-indicators, let DIALCO perform the following manufacturing services for you:

- Fabricate a "Data Matrix" or "Data Strip" panel to your specifications . . . Punch the necessary holes therein for DIACO Lamp Holders and your fuses, switches, screws, etc.
- Mount the required number of Lamp Holders on the panel for vertical or horizontal reading . . . Lamp Holders can be spaced on any center-to-center measuring from $\frac{7}{16}$ " up. ($\frac{1}{2}$ " center-to-center spacing is standard, as shown on typical configurations illustrated above) . . . There is no basic (or stock) item; we can supply from 2 to 40 Lamp Holders on a panel or strip.
- Insert required Lamp Cartridge into Lamp Holders.
- Hot Stamp or engrave legends on lenses (see column at left).

The LIGHT SOURCE: Tiny Neon Glow Lamps NE-2D or NE-2J

These lamps have formed bulbs and midjet flanged bases; designated as NE-2D for the regular lamp, and as NE-2J for the high brightness type which has higher voltage characteristic requiring 110 volts A.C. or 140 volts D.C. for reliable performance. A resistor (or other ballast) must be used. Since the current is never more than 3 m.a., the resistor may be the 1/3 watt type. Recommended values are as follows:

| For NE-2D at 105-125 volts A.C. or D.C. | | |
|---|----------------------------------|---------------------------|
| Bright light 62,000 ohms | Medium intensity 100,000 ohms | Long life 220,000 ohms |

OMNI-GLOW PILOT LIGHT

For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus, OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built-in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting — only a 1/2" hole required for any panel thickness. Instant fastening

speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1.10 watt at 115 volts, long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is 1 1/4" long overall. Lens extends 1/32" in front of panel. Black plastic (105°C) leads are 4 1/2" long, stripped and tinned 1/2".

Four standard models have red (Model =1010A1), clear (Model =1010A2), amber (Model =1010A3), or white translucent (Model =1010A4) lenses.

Furnished complete with lamp and speed nut. OMNI-GLOW is UL approved—CSA Approval No. 13346.

MINI-VOLT VOLTMETER

(U.S. Pat. 2,644,134)

MINI-VOLT is an "abuse-proof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, this rugged unit is used by electricians, radio and TV repairmen, refrigerator and air conditioning servicemen, experimentors, lab technicians, handymen.

MINI-VOLT has wide application for all equipment whose proper operation requires correct voltage.

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model =400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity, measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately 1/2 megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Will provide a lifetime of service — glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-inch flexible test leads and test prods.

Lightweight impact resistant case and dial panel, thoroughly insulated. So rugged that instrument can be thrown into tool box or dropped to floor without damage. C.S.A. approval =8910.

SAFE-T-KLIP

(U. S. Patent 2,754,490)

New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is 3/8"; maximum height is 5/8".

Four models are available. The =1410A is for use with a wire lead and provides either a soldered or screw terminal connection. The nylon sleeve is threaded to the clip for easy connection. Overall assembled length is 2 1/4". The =1410B, with overall length of 2 1/32", provides positive clip connection to all standard (.081 dia) phone-tip test prods. The =1410C has a jack for standard banana plugs and an overall length of 2 1/16".

The 1410D is similar to 1410B except that the entrance hole is modified for Signal Corps. application

LINE-VOLT TEST LIGHT

LINE-VOLT Model No. 1310 is a rugged, compact test light covering the wide range of 55-550 VAC or 90-600 VDC.

LINE-VOLT tells immediately whether there is power in the line, checks fuses, can identify AC or DC lines, grounded components, continuity of line circuits.

Leads are 12" long overall and are heavy-duty flexible wire terminating in 3 1/2" insulated prods with really sharp points—able to pierce insulation, paint, or oxidation. Bright lamp provides immediate positive indication. 14" long overall, diameter 3/8".

UNIVERSAL INVERTERS

Specially Designed for
Operating Standard A.C.

Tape Recorder, Television Set,

Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.

Featured cut above illustrates
Model 12U-RHG.

ATR Inverters should be used only for the applications as outlined.

EMERGENCY LIGHTING AND POWER UNITS

Completely Automatic Standby-Power Units Specially Designed to Permit the Instantaneous Continued Operation of Critical Lighting Equipment, PA Systems, Amplifiers, Intercom Systems, Burglar Alarms, Fire Alarms, Synchronous Electric Clocks, Electric Time and Recording Clocks, Incubators, Gas Valves, Telephone and Test Equipment, and Similar Critical Devices in the Event of 115 Volt AC Commercial Power Line Failure. For Use: In Hospitals, Banks, Hotels, Theatres, Factories, Office Buildings, Schools, Homes, and Many Other Areas of Operation.

ATR Emergency Lighting and Power Units are actually a combination of an ATR Inverter, automatic Battery Charger, and transfer panel. These Emergency Standby-Power Units are especially recommended for applications as mentioned above and feature RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector. ATR Emergency Lighting and Power Units provide instantaneous operation of the equipment being protected, within approximately 1/20th of a second. They are designed for quiet long life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in type Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for the power load being protected. These Inverters are recommended for use only with loads having power factors in excess of 70%. Additional external power factor correction is required in order to operate lower power factor loads as low as 50%.

The ATR Charger portion is completely automatic and will maintain the storage battery at full charge, with minimum gassing, from regular 115-volt AC 60 cycle power line. In the event of power line failure, the storage battery, which has been kept fully charged for this purpose from the regular power line, is connected automatically to the lamps, or to the Inverter, or both. The Inverter then supplies power automatically to the load being protected. When the commercial power is restored, the transfer unit automatically switches the "protected load" to commercial power and turns the Inverter and lights off. At this point, depending on the state of charge of the battery, the battery charger will deliver approximately 6-3 amperes to a 6-volt battery (or less to a 12-volt battery) for fast recharging. As soon as battery reaches full charge, the charger will automatically switch to a trickle charge of 100-150 milliamperes (adjustable) to maintain this full charge.

 MODEL 1-GR (GRAY RIPPLE FRONT PANEL)

Input: 105-125 volts AC. 50-60 cycles.
DC Output Voltage: Continuously variable from 200 to 325 volts DC for load currents 0 to 100 ma.
Regulation of DC Voltage: Better than 1% for loads of 0 to 100 ma. and line voltage variations from 105 to 125 volts.
Ripple Output: Less than 10 millivolts rms.
Isolated Output: Both positive and negative sides of the output are isolated from ground. Either side may be grounded or the output may be left floating.
AC Output for Filaments: An isolated AC voltage of 6.3 volts AC at 3 amperes is available at the output terminal connections.
Overload Protection: A fuse mounted on the front panel protects supply against external overloads or internal failure.

Input and Output Connections: All input and output connections are made to a single terminal strip conveniently located on the rear of the chassis.

Dimensions: Standard 19" relay rack mounting. Panel Width: 19 inches; Panel Height: 5 1/4 inches; Depth Behind Panel: 7 1/4 inches.

Cabinet Finish: Standard Black ripple enamel.

OBsolete TYPES

It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring, sockets, or other

minor features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the CDR Vibrator Department, Fuquay Springs, N. C.

ROCK TOP PACKAGED POWER SUPPLIES

Snap-Together, Packaged Power Supplies with new patent applied for features. Consists of a molded basic transformer which has undergone rigid tests for insulation and power handling capacity; plus a ROCK TOP head containing the rectifier and filter section. This simple fool-proof construction results in longest possible life with minimum space requirements. Should repair ever be required, simply discard either the top or bottom section and replace with new element. In a matter of minutes, full operation is restored. The Filtered D.C. Output Voltage may be varied from zero to

full rated voltage by adjustment of input AC level with a rheostat or Variac. Output is completely isolated and either side may be grounded. Ideal for all high voltage applications and photomultiplier circuits. All units rated for 5 milliamperes current.

HANDY PORTABLE MODELS

New Mirror Scale Instrument Illustrated

One of the most popular power supplies on the market. Completely redesigned for greater ruggedness and convenience of operation. Widely used for powering electronic equipment and for routine breakdown and insulation testing. Output voltage is well filtered D.C. which is adjustable with convenient front panel control. Input is 115 Volt, 60 cycle A.C. Larger 6" precision 1/4 mirror scale movement available on order. Regulated models offer closely stabilized output voltage regardless of line or load changes.

Note. Regulated power supplies are of the radio frequency type and adjust from approximately 20% to full rated voltage. The 1 and 5 milliamperes types are transformer operated and have a range of zero to full voltage output. These are recommended for industrial service applications.

Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. Add \$50.00 to any meter equipped power supply.

For additional built-in current meter (both meters are 3 inch size), including automatic meter protector circuit, add \$50.00 to any power supply.

MOLDED ROCK design. Used for insulation and breakdown testing, meter calibration and for elimination of static charges on plastics and paper. Primary windings for 0 to 115 Volts 60 cycles AC. Secondary provides high AC voltage in true RMS. One side of secondary brought out to a LOW POST. High side of secondary is sheathed in plastic deep well for maximum safety. A third winding with 1/100 ratio permits standard low voltage precision voltmeter to be used to indicate exact value of high voltage.

HIGH VOLTAGE CONVERTERS

MODEL 10 MVT. Miniature chopper type voltage converter with built in transformer. Small and compact. Weighs only three ounces. Simply connect input to 1 to 3 volts DC or AC (60 cycles) and any voltage from 0 to 6,000 Volts AC or DC (when rectified) will be produced depending upon loading. Circuits supplied with each unit.

Model 10 MVT Converter Price \$10.00 each.

MODEL 18 VT. Chopper type voltage converter. Produces up to 18,000 Volts peak pulse from standard 115 volts 60 cycles AC. Special current limiting design for maximum safety. May be connected to half wave rectifier for up to 18,000 Volts DC (at very light loading) output or voltage doubler circuit for up to 30,000 Volts output. Full circuit details with each unit.

Model 18 VT Converter Price \$35.00 each

INDUSTRIAL POWER SUPPLIES

Standard hum level 5% or less. .01% to 1% ripple available. All power supplies have automatic overload cut-out control circuits. Regulated models available.

These industrial type power supplies are built for service and efficiency. All are of the transformer type and employ husky components that have been selected for their power handling capacity. Controls are arranged so that operation is greatly simplified and a number of safety features are built in for maximum protection of personnel and equipment. Output is continuously variable from zero to full rated value. Polarity reversing models (as illustrated) can be had at additional cost.

CONSTANT CURRENT POWER SUPPLIES

Designed for application where output current must remain constant regardless of loading resistance changes. Used for magnet fields plating applications, gasous lamps. Dependable magnetic current stabilizer has no moving parts, no tubes, no transistors to replace. Simply set current to desired level, no balancing or other adjustments needed. Ideal for lamp operation since operating state ionizing voltage in no way affects lamp current. Standard hum level 5%. Lower hum levels available on order.

"V.T." VARIABLE TRANSFORMERS

Toroidal core type autotransformers providing distortion-free continuously adjustable voltage from fixed AC input. Highly advanced Ohmite design. Sizeable bonus in current available in all units where output greater than line volts ("over-voltage") is not required ("N" suffix); "LN" suffix indicates low input (36V max.) and very high current output; positive current transfer achieved with direct brush to slip spring shaft. Mounting: VT2 panel mounting by 3/8-32 bushing; VT2

tandem units by 1/4-20 bolts; all VT4 and VT8 types panel or table mounting by 1/4-20 bolts; VT20, VT20B, panel or table mounting by four 3/8" dia. bolts or three 3/4-24 bolts. Shafts of VT4, VT8, VT20 units slide to brush or base side. Units not cased except where indicated. Over-all dimensions include shaft. Suffixes "2" and "3" indicate number of units in tandem assembly (shipped with connection instructions).

- Frequency shown is a minimum—units may be used to well over 400 cps.
- VT8H and VT8HN also have taps for 120V input with 280V output for VT8H and 240V output for VT8HN. With use of 120V input the max. current rating applies up to 120V output but reduces to approx. 50% at max. output voltage. (Cat. 500)
- Connected at factory for overvoltage output—easily reconnected by user for no-overvoltage output. On VT8G, switch selects overvoltage or no-overvoltage.
- Add 3/8" for knob thickness.
- Add 1" for knob thickness.

- User wires for desired output. Dial normally calibrated for overvoltage.
- Tandem assemblies normally furnished without interconnection between units.
- When transformers are series connected, load cannot be grounded.
- Includes knob and dial.
- May be used at 50 cps if connected for no-overvoltage output.
- Overvoltage connection must not be used.
- Specify 240 volt dial if desired.

CONSTANT VOLTAGE TRANSFORMERS

— automatic, instantaneous voltage regulators

Sola Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a stabilized output voltage even though the input voltage varies over a considerable range. They have nine distinct advantages over electronic-type regulators or regulators which depend solely upon saturation of core materials for their regulating action:

1. Completely automatic, continuous regulation.
2. Virtually instantaneous response time of $1\frac{1}{2}$ cycles or 25 milliseconds at 60 cycles.
3. Mechanically rugged — as resistant to mechanical shock as a conventional power transformer.
4. No moving or renewable parts — no manual adjustment or maintenance is necessary.
5. Type CVS units have the ability to improve a poor voltage wave-form applied to input terminals.
6. Self-protecting against short circuits on output or load circuit.
7. Inherently incapable of producing an output over-voltage.
8. Current-limiting characteristic protects load equipment from excessive fault currents. Inrush current is held within manufacturers' tolerance, eliminating the need for starting relays.
9. Available in step-up or step-down ratios, permitting substitution in place of conventional, non-regulating transformers.
10. Capable of serving a wide range of electrical devices. CVS Standard catalog items available in 51 different primary-secondary voltage combinations from 30 to 7500 volt-amperes. CVN units available in many combinations.
11. High degree of isolation between input and output circuit usually eliminates the need for electrostatic shielding. Input and output are isolated both physically and electrically.
12. Relatively compact compared to other equipment for a-c voltage regulation.

Sola static-magnetic transformers are supplied for a number of voltage-regulating requirements. They supply constant voltage in nominal line values, in filament and combination plate-and-filament values, and in variable voltage outputs.

The following pages list the widest range of stock ratings and types offered by any manufacturer of static-magnetic voltage regulators.

Standard Sinusoidal Type (CVS)

± 1% regulation of AC line input for electrical and electronic equipment

Sola Standard Sinusoidal Constant Voltage Transformers regulate voltage within ±1% regardless of input voltage variations as great as ± 15%. Displaying fast regulating action, their response time is usually 1.5 cycles or less. With less than 3% total rms harmonic content in their output voltage wave, they are particu-

larly suitable for use with rectifiers or other equipment which is sensitive to, or is affected by, harmonics in the supply voltage. Nineteen stock ratings are listed. Special designs are available in production quantities. Fifty cycle versions of popular items also available from stock.

Normal-Harmonic Type (CVN) — for built-in component use

*portable, fully adjustable unit.

These units provide the same ±1% regulation as the standard sinusoidal models on Page 2. They have an average of 20% total rms harmonic content in their output voltage. Along with the sinusoidal type, they offer simplicity, reliability and freedom from maintenance. They are reliable sources of voltage for most

electrical loads such as filaments, relays, solenoids, other transformers serving ac loads — in fact, all loads not affected by harmonics in the supply voltage. This series includes those mechanical designs specially engineered for use as built-in components. Special designs are available in production quantities.

Electronic Power Type

±1% regulation for filament voltage; ±3% regulation of plate-filament supply

Sola Electronic Power Type Constant Voltage Transformers are designed as components for simple assembly into electronic manufacturers' own product. The filament type provides 6.0 or 6.3 volts output, regulated within ±1% over line voltage variations as great as ±15%. The combination plate-and-filament type pro-

vides voltage regulated within ±3% for line voltages varying up to ±15%. Both types provide filaments with stabilized voltage supply, and thus contribute to reliable operation, long life, and reduced service expense for load equipment. Thirteen stock units are listed. Special designs available in production quantities.

*Voltage values are taken at output of 5Y3GT rectifier for No. 7104 and No. 7106 transformers and at output of 5U4GA-GB for No. 7107. Guaranteed

regulation of ±3% on plate voltage output is contingent on the use of Sola-regulated 5.0v filament supply winding for the rectifier tube.

"Structure code" letter refers to one of these general types of mechanical assemblies:

D—Drawn case; integral capacitor unit; flex leads.

S—Hermetically-sealed case; separate capacitor; solder lugs.

P—Portable adjustable a-c supply

F—Portable filament transformer.

E—Exposed core; end bells; separate capacitor; flex leads.

W—Exposed core; end housings; screw-type terminals in outlet box.

Y—Same as W, but duplex assembly.

Z—Same as W, but triplex assembly.

Cord/receptacle adapter kits

Adapter kits may be used when the convenience of input plug and output receptacle is preferred to the standard arrangement of terminals in the transformer housing. See footnote 1 and accompanying chart.

| Code | Adapter Kit Catalog No. | Input Cord | Output Connections | Net price each to industrial users |
|------|-------------------------|------------|--------------------|------------------------------------|

FLEXIFORMER[®] Packaged Transformer Primary

"THE
Do-it-yourself"

TRANSFORMER

- A SOURCE OF A-C VOLTAGE
- A CURRENT TRANSFORMER
- 150 VA AND 1000 VA TYPES

TYPE TP150

A FLEXIFORMER Packaged Transformer Primary is a self-contained toroidal primary coil encased in durable high impact plastic. Colored SUPERIOR 5-WAY Binding Posts for connections are integrally mounted. When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding is shunted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. Can be portable or fastened permanently

EXEL

Loading Reactor

Type LR2

120 volts, 60 cycles
2.0 amperes at 120 volts
Inductive reactance 60 ohms
D-C resistance 4.0 ohms
Inductance 0.16 henrys

Designed to provide a convenient inductive load which can be made adjustable when used in conjunction with a POWERSTAT variable transformer. Used primarily for testing apparatus at various lagging power factors, i.e., to simulate an inductive load. Essentially consists of a gapped, strip-wound silicon steel toroid core, wire-wound and imbedded in epoxy compound. Entire assembly enclosed in a self-contained, durable, high grade phenolic case having two SUPERIOR 5-WAY binding posts for connections. At 60 cycles, the EXEL has essentially a linear current curve from 0 to nominal 2.0 amperes for continuous duty and up to 3.0 amperes for intermittent duty.

TYPE EMHC64480YU

EMHC series

For heavy-duty applications to 480 KVA. Feature zero waveform distortion, efficiency as high as 99%. Patented re-entry rings and helical coils on variable transformer component permit extremely fine voltage adjustment with very low voltage drop.

DC Regulator Control

Provides automatically regulated d-c voltage adjustable from 25 to 100% of maximum with an input variation of $\pm 10\%$ in a-c line voltage at 50/60 cycles. Accuracy is $\pm 1\%$ of 100% voltage setting. Designed for use with a motor-driven POWERSTAT Variable Transformer and associated d-c components supplied by the user. Supply can be from either a single-phase full-wave or a 3-phase full-wave unfiltered source. Error detection requires either 1 milliampere, 300 kilohms or 10 milliamperes, 15 kilohms supplied from the d-c output.

STABILINE[®] automatic VOLTAGE REGULATORS

IE series

Instantaneous Electronic types have no moving parts. Hold output voltage to within $\pm 0.1\%$ for wide line variations, within $\pm 0.15\%$ for any load current change or power factor change from .5 lagging to unity.

TYPE IE5101

TM series

Tubeless Magnetic types have no tubes, transistors or moving parts. Response time for ordinary line and/or load changes is within $\frac{1}{2}$ second; accuracy is within a 1.0 volt bandwidth. Waveform distortion is 4% or less.

TYPE TM7101R

IET series

Instantaneous Electronic Transistorized types in ratings from .25 to 1.0 KVA. Output voltage remains within a 0.5 volt bandwidth for any and all variations in line voltage, load current and load power factor.

TYPE IET51002

TYPE EM4108MCR

MILITARIZED

Standard Instantaneous Electronic, Electro Mechanical and Electro Mechanical Transistorized types that meet requirements of applicable military specifications. Type EMTH41007MH is $3\frac{1}{2} \times 6 \times 4\frac{1}{2}$ "; others fit standard 19" relay rack.

MR series

Provide the constant RMS voltage required to maintain proper tube filament temperature. Response time will not exceed 0.6 second under most adverse line or load changes.

TYPE MR6F015

400 CYCLE

Instantaneous Electronic types in ratings of 1.0 and 5.0 KVA. Maximum waveform distortion is 3.5% under all input line and most load conditions. Other 400 cycle types listed under MR Series and Militarized types.

TYPE IEH5101R

AMPERITE

DELAY RELAYS

GLASS ENCLOSED • HERMETICALLY SEALED • A.C., D.C., OR PULSATING CURRENT

STANDARD

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are actuated by a heater . . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 60, 115V.
For 220V use a 6500 ohm-5 watt resistor in series with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

VARIATION OF DELAY WITH HEATER VOLTAGE

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

CONTACT RATING

| | Delay | Contact Rating Non-Inductive | DC Voltage Breakdown | |
|---------------------|----------------|---------------------------------|----------------------|-------------------|
| | | | Contact-to-Contact | Heater-to-Contact |
| STANDARD RELAYS | 2 to 10 Sec. | 115V — 3a AC | 250V | 500V |
| | 15 to 180 Sec. | 115V — 3a AC | 800V | 800V |
| | | 220V — 1a AC | 800V | 800V |
| MINIATURE RELAYS | 2 to 10 Sec. | 115V — 2a AC | 250V | 500V |
| | 15 to 180 Sec. | 115V — 2a AC | 800V | 800V |
| | | 220V — 1a AC | 800V | 800V |
| FLASHERS | | — 1/2a AC | 250V | 500V |

CONTACT DROP: —0.1V — Prox. at 1A.

AMBIENT TEMPERATURES: Relays are compensated for temperatures of -55° to $+80^{\circ}$ C. (Relays can be operated from -80° C to $+125^{\circ}$ C without damage). Tolerances given are for 20° C. Ambient temperature tolerances depend on type. Low voltage heater 26V or less have better ambient compensation than high voltage heaters.

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 50% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 100%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. **SHELF LIFE** of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a DPDT Magnetic Relay as shown at left. If normally closed is required — use a normally open Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG RECYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 8 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

FLASHERS have contact rating of 1/2a AC, non-inductive.

| Tol. FPM - 20°C | Standard Flashers Available | | |
|-----------------|-----------------------------|-------|--------|
| 10 ± 5 | 6F10 | 26F10 | 115F10 |
| 30 ± 15 | 6F30 | 26F30 | 115F30 |
| 45 ± 15 | 6F45 | 26F45 | 115F45 |
| 60 ± 20 | 6F60 | 26F60 | 115F60 |
| 75 ± 20 | 6F75 | 26F75 | |
| 90 ± 25 | 6F90 | 26F90 | |

Flashers operate approximately 1/3 on, 2/3 off. The percentage time on can be increased by reducing the voltage of the heater.

**ENCLOSED PLUG-IN AC RELAY
1210-N**

With Built-In Neon Lamp to Indicate Circuit Faults

This plug-in relay utilizes a miniature neon lamp connected across coil terminals. The lamp lights each time the coil is energized, or indicates a circuit fault when lamp is "dark." Ideal for detecting circuit faults in relay banks, mass relay arrangements, or where relays are visibly located at intermediate switching points of the circuitry. Precludes the use of circuit testers. Available with 8 pin octal plug for DPDT and 11 pin for 3PDT. Contacts rated 8 amperes at 115 V. AC, 60 cycles, non-inductive load. Shipping Weight, 3.5 ounces.

STEPPING CONTROLS

For accurate sequence selecting, pulse multiplying, pulse dividing, circuit selecting, automatic homing, remote homing, counting and latching. Guardian steppers are specified for automatic control of electrically operated business machines, accumulators (coin and other), animated displays, electric scoreboards, automatic overhead garage doors, assembly line controls, automatic packaging (loading) controls, sump pump controls, commercial slide projectors, electric scoreboards, among others. All Guardian steppers are *intermittent duty* direct-drive units with switching operations completed upon energization.

CONTINUOUS ROTATION

Type IR-P.C. Constructed with micro-finished shaft and Oilite shaft bearing. Beryllium copper pawl control shutter. Selection contacts are terminated on a phenolic board, solder beaded for easy soldering. Mechanical life expectancy estimated 4,000,000 steps. Will operate satisfactorily at 15% below or 10% above rated voltage.

Type IR-M.C. is a smaller continuous rotation operation stepper similar to the P.C. with life expectancy of 2,000,000 steps.

ELECTRICAL RESET

Type IR-P.E.R. Constructed with micro-finished shaft and Oilite shaft bearing. Positive mechanical stops limit total number of "steps" in any single unit. Returns automatically to home or start position when reset coil is energized.

Type M.E.R. A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second or even from its own selection contacts. Unit is capable of counting in groups up to 21, then resetting automatically. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

ADD AND SUBTRACT

Type IR-R.A.S. Non-ferrous shutters control motion of the pawl to extend life of unit and prevent skipping of the ratchet. Steps one step at a time in either direction, depending upon which one of two coils may be energized.

Type IR-M.A.S. Midget Add and Subtract Stepper is similar to the R.A.S. in general operation. A zero position switch is opened at home position.

Auxiliary switches connected in series with the commutator of the selecting finger may be added to the step and/or reset magnet to increase the normal contact rating. The Guardian Series 200-M3 Contact Switch Kit may be used to add switches (except RAS stepper). Contact fingers are insulated from the shaft. Guardian Steppers are *intermittent duty units* rated at 10% duty cycle (out of each hour), maximum energization single period, 5 minutes. See chart for details.

All stepper contact points are rated 1 1/2 amps resistive, at 115 V., 60 cps. Coil* Voltages are 115 V. AC, 60 cps.

GUARDIAN SERIES 200 RELAY with completely interchangeable COIL and CONTACT ASSEMBLIES

MIDGET CONTACT ASSEMBLY. Dotted line shows size of standard unit.

Two basic parts—a coil assembly and a contact switch assembly—comprise this simple, yet versatile Guardian relay. The coil assembly consists of the coil and field piece; the contact assembly consists of switch blades, armature, return spring and mounting bracket. The Guardian Midget Contact Assembly is interchangeable with the standard Series 200 coil assembly. Available with SPDT, DPDT or 4 PDT contact switch assemblies, each interchangeable with all A.C. or D.C. coils.

CONTACT SWITCH PARTS Use contact switch parts 200-3 for adding poles to contact switch assemblies 200-1 and 200-2. Use midget contact switch parts 200-M3 to add poles to midget contact switch assemblies 200-M1 and 200-M2.

A.C. INDUSTRIAL SOLENOIDS D.C. INTERMITTENT AND CONTINUOUS

A Complete Line for Every Industrial Application

Intermittent duty solenoids may be specified when the cycle of operations does not require energization of the solenoid coil for more than five consecutive minutes with a sufficient time lapse between operations to permit cooling of the coil to approximately the 24° C. (72° F.) ambient temperature. If energized more frequently and for shorter periods, the cycle should be such that the temperature rise of the coil is not greater

than 85° C. (185° F.) at 24° C. ambient temperature. Continuous duty solenoids are constructed that they will not exceed a maximum temperature rise of 85° C. above 24° C. ambient temperature under continuous operation, at rated load. Ambient temperature for temperature rise tests on these solenoids has been fixed at 24° C. (72° F.).

- * Voltage rating of current operated relays is specified at nominal resistance and may vary directly with actual resistance
- ** Current rating of voltage operated relays is specified at nominal resistance and may vary inversely with actual resistance
- † When energized from a high impedance power source.
- †† For timing purposes, nominal current is considered 5% above pull-in current
- + All ratings are for 100,000 operations minimum, with resistive load.
- ++ Not specified uses two internal rectifiers. Varies with source frequency ranging 47-440 CPS

They will fit into .050 inch diameter holes and project 1/32 inch beyond an 1/8 inch thick circuit board. Base plate area on the board is only 1.070 x .890 inches. Dimensional artwork for hole configuration is available.

CONTACTS: 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC Arrangement 1, 2 or 3 PDT.
COIL: D-C applications up thru 120 VDC, A-C applications up thru 120 VDC.
MOUNTING: Soldered into printed circuit boards.

TYPE "WC" MIDGET GENERAL PURPOSE WITH DUSTITE ENCLOSURE

Relay is identical to type "W". However, the unit provides a clear dustproof polystyrene case on Octal type plug-in base. Operating temperatures up to 85° C ambient. Variation of base or a hermetically sealed can, can be provided on request. This unit comes in standard Globe wiring. For special wiring to meet existing installations specify "WZ" wiring.

CONTACTS: 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

MOUNTING: Octal plug-in.

TYPE "WL" MIDGET LATCHING

This latching relay may be had with either coil to operate at any specified voltage. It is designed that either coil may be used to operate the contacts into a latched position. The other coil will latch or unlatch the contacts into the opposite position.

CONTACTS: 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC.
COIL: D-C applications up thru 120 VDC, A-C applications up thru 230 VDC on either coil.
MOUNTING: 2 holes for #6 screws in center of frame.

TYPE "P" MINIATURE TELEPHONE

A compact design incorporating a floating hinged armature mount for maximum resistance to shock and vibration. It offers proved dependability and long life through millions of cycles of trouble free operation. Available for both D-C, and A-C applications with the use of rectifiers. Ambient temperatures up to 125° C. Choice of single or bifurcated pattern blades with a variety of precious or semi-precious contact materials.

CONTACTS: Bifurcated Pattern—3 amps resistive @ 28 VDC or 115 VAC, 1P 5T thru 4P DT. Single Pattern—10 amps @ 28 VDC or 115 VAC resistive or inductive, 1P 5T thru 4P DT.
COIL: Up thru 120 VDC, up thru 230 VAC 60 or 400 cycles (w/rectifier).
CONFIGURATION: Hermetically sealed, Dustite enclosures or Open construction.

TYPE "PO" SENSITIVE MINIATURE TELEPHONE

Designed with 30 to 50 per cent more coil ampere turns, which provides greater sensitivity than conventional types. Even with this greater built-in power, the unique construction allows these units to fall in a miniature class. Available for both D.C. and A.C. applications with the use of rectifiers. Ambient temperatures up to 125° C. Choice of single or bifurcated pattern blades with a variety of precious or semi-precious contact materials.

CONTACTS: Bifurcated Pattern—3 amps resistive @ 28 VDC or 115 VAC, 1P 5T thru 6P DT. Single Pattern—10 amps @ 28 VDC or 115 VAC resistive or inductive, 1P 5T thru 6P DT.
COIL: Up thru 120 VDC, up thru 230 VAC 60 or 400 cycles (w/rectifier).
CONFIGURATION: Hermetically sealed, Dustite enclosures or open construction.

TYPE "X" DO IT YOURSELF ALL PURPOSE

An ideal relay for bread-boards, experiments and prototypes. Easily interchangeable coils with one screw installation. Relay is factory adjusted and has rugged construction. A limited selection of contact assemblies and coils provide a multitude of variations.

CONTACTS: 5 amps, 10 amps and 15 amps, 28 VDC or 115 VDC. Arrangements SPDT, DPDT, 4 PDT.
COIL: 6 VDC thru 120 VDC, 6 VAC thru 230 VAC.

Class 88 is basically a clapper type relay that is similar to and interchangeable with many relays made by others. The BIG DIFFERENCE is the Class 88 has been developed to maintain the high standards of reliability users have learned to expect from MAGNECRAFT Telephone Type Relays. The result is reliability, stability of adjustment and long life at reduced cost for a great range of application.

For the first time in a relay of this type, the MAGNECRAFT Class 88 has a rugged, pin type armature hinge with centerless ground stainless steel pin and heavy duty yoke with precision reamed bearing surfaces; this is the hinge design used on the finest telephone type relays to stabilize adjustment through long wear life, reduce friction and improve contact effectiveness. Other features include fiber glass melamine insulation to provide high di-electric strength and greater resistance to humidity and temperature change; independently riveted; ruggedized coil terminals; riveted contacts with built-in contact wipe.

The many refinements plus MAGNECRAFT quality control and inspection standards produce relays so outstanding you can see the difference.

Encapsulated MAGNEEED Relay Installation (see page 6)

Illustration shows four of seven encapsulated MAGNEEED Relays "plugged" into place. Spaces for the other three relays with sockets for their terminal pins can be seen between the four relays.

Please note the compact arrangement of the relays, the wide spaces between terminals and the extreme simplicity of the assembly.

Encapsulated MAGNEEED Relays are shown on page 6

All Terminal Pins are .040 Dia. and 1/8" long.

MAGNECRAFT

Ultra High Reliability MAGNEREED Relays

In this new approach to enduring relay reliability pre-adjusted gold contacts are hermetically sealed inside a glass capsule in an atmosphere of inert gas. The contacts are actuated magnetically by a coil around the hermetically sealed capsule.

Magnereed Relays are easily adaptable to mounting configurations as well as grouping to meet multi-pole switching requirements.

Magnereed Relays have many valuable features:

- Contacts are permanently sealed from dust, contamination and tampering.
- Contact resistance is stabilized over long life.
- Operation is sensitive
- Construction is simple.
- Switching is fast.

MAGNEREED Relays may be mounted in any position.

Encapsulated MAGNEREED Relay Assemblies have many Added Advantages

1. Switch capsule, coil and terminal leads are encased in Epoxy resin which forms a terminal board of great dielectric strength.
2. Rigid, tinned terminal pins, spaced on 0.1 inch grid centers, reduce printed circuit installation to a simple "plug-in" operation.
3. Wide spacing between terminals provides wide safety margins in insulation and dielectric strength and permits similar safety margins in printed board design.
4. Compact design and shape simplify mounting and facilitate compact printed board application.

MODEL "GPR" GENERAL PURPOSE RELAYS

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate and latching versions. Wide commercial and industrial use where economy and versatility are important.

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder-quick-connect (push-on) lugs which accept AMP 110 female connectors. Fixed contacts are integral link on the terminal itself. Terminal panel design permits use of relay in printed circuit assemblies.

Contact Ratings: Two ratings—fine silver contacts, 5 amps at 115VAC or 32VDC; silver cadmium fixed contacts, silver cadmium oxide movable contacts, 10 amps.

Contact Combinations: As shown in stock tables. (Also see GPR "Latching Relay" following for larger combinations.) Others made to order.

Insulation: Tested at 1000 VAC.

Coil Wattage: 1.4 watts DC operation; 1.60 watts (2.0 volt-amperes) AC (except see "Latching Relays")

Coil Operating Voltage: Up to 230 VAC 60 cycles or 115 VDC.

Weights—shown below stock tables, are based on 3PDT relays. Relays with fewer poles weigh slightly less.

Enclosed Relays (GPRTA, GPRTT, GPRTP) Three types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA"—("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT"—("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout.

Plug Mounting Type: "GPRTP"—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity—is designed with recessed pins which meet UL spacing requirements (150V).

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described above. Neon bulb furnished with coil ratings 115 volts and above; incandescent bulbs for coil ratings below 115 volts.

Plate Relays—Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit controls, i.e., in the plate circuits of vacuum tubes.

Latching Relay—Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, 1st relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Coil rating is higher than non-latching types, 3.70 volt-amperes. Unenclosed type "GPRLE". Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SR. Plug fits Jones S-324-AR socket.

Mercury-Wetted Contact Relays

DEPENDABILITY

Rare long life, high speed, and versatile application with unvarying dependability—all are the result of an unusual combination of advantages found only in mercury-wetted contact relays. The basic component of these relays is a glass capsule containing the contact arrangement. In if two sets of fixed contacts, a single movable reed armature (SPDT—Form D), and a small reservoir of mercury are hermetically sealed under high pressure hydrogen atmosphere. This arrangement does away with contact bounce, chatter, pits and welds. Make or break is positive—every time.

LONG LIFE

The use of mercury assures renewal of a film of mercury on all contact surfaces for every operation—the major reason why you can think in terms of billions of operations when you consider JM relays. Proper application, of course, is a requisite.

HIGH SPEED

Operate time for single capsule relays is just less than 3 milliseconds using 2 watts of power. Release time is about 3.2 milliseconds. Thus relays can be driven 100 times per second.

CONTACT RATING:

500 volts, and 5 amps, not to exceed 250 voltamperes with contact protection*. Available in Form D in SPDT single capsule, DPDT in two capsule, and 4PDT in four capsule construction.

TIMING:

100 operations per sec. for single capsule relays. 60 operations per sec. for 2 and 4 capsule relays. Operating time is as short as 3 milliseconds for JM1, 4 milliseconds for JM2, and 5 milliseconds for JM4. Repetitive accuracy within 1% of its "must operate" current.

DIELECTRIC:

1000 volts rms 60 cycles for single-wound coils, 500 volts rms 60 cycles for double-wound coils, and 200 volts rms 60 cycles for bifilar coils.

* Simple circuit for resistor and capacitor in series is required unless low level current is applied. Details of contact protection are packed with each relay.

RESISTANCE:

Contact resistance is 25 to 50 milliohms, constant within 1 or 2 milliohms for relay life. Coil: 2 to 25000 ohms.

SHOCK RESISTANCE:

Non-operating: 30 G's for 11 milliseconds. Vibrations up to 10 G's, 10-500 cps.

AP SERIES RATCHET, IMPULSE

A reliable compact unit for applications requiring on-off or reversing action on alternate operations. Positive ratchet operation at all speeds on impulses as short as 60 ms. Intermittent operation only. Mounting: Three $\frac{3}{32}$ " dia. holes on $3\frac{3}{8}$ " x $\frac{5}{8}$ " triangular centers. Contacts: $\frac{3}{16}$ " dia. silver. Weight: 7 ozs.

BU BUZZER

AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a host of other applications where a small light weight, dependable buzzer is required. Weight: 1 1/2 ozs. Mounting: No. 6-32 tapped core

KB SERIES LATCHING RELAY

Both release and trip coils must be for the same voltage. One coil operates relay to set latch and other coil releases it. Ideal for memory work and overload applications. Operates on momentary impulse to either coil. Mounting: Two $\frac{3}{32}$ " dia. holes on $1\frac{3}{8}$ " centers. Weight: 6 ozs. Contacts: $\frac{1}{8}$ " dia. silver rated 5 amps; "G" suffix indicates silver cadmium-oxide contacts on movables rated 10 amps. AC relays with 5 amp. contacts carry U/L and CSA® labels.

Only Bourns Trimpot Potentiometers Give You All Of These Outstanding Features

SPRING—Carriage spring provides positive no-slip performance during rotation plus a reliable idling feature at mechanical limits of travel.

LEADSCREW—Stainless steel leadscrew is corrosion-resistant, withstands salt spray.

O-RING—Silicone rubber O-ring seals potentiometer against humidity, withstands high temperature.

SHAFT HEAD—Stainless steel with machined slot for screwdriver adjustment. Meets military salt spray requirements.

WIPER CARRIAGE—Gold-plated carriage is welded to precious metal wiper for low noise.

SOLDER TERMINALS—Tinned terminals are compact, yet large enough for easy soldering. Teflon-insulated leads and printed circuit pins are also available.

SILVERWELD® TERMINATION—This exclusive Bourns feature is unequalled in ruggedness. There is a metal-to-metal bond from the terminal to the resistance wire.

PICK-OFF—Gold-plated beryllium copper pick-off maintains constant pressure on leadscrew.

ELEMENT—Special ceramic element card for maximum reliability is precision wound with low-temperature-coefficient resistance wire.

SHAFT RETAINER—Shaft is locked in place for top performance under extreme shock, vibration and acceleration.

SHAFT INSULATOR—High-dielectric-strength, ceramic insulator isolates shaft head from internal circuits.

This cutaway of Model 224 shows the typical high quality to be found in all Bourns Trimpot potentiometers, although some features may vary from model to model.

Indestructible Termination

The exclusive Bourns Silverweld® termination, alloyed with multiple turns of the resistance element, is indestructible under thermal or mechanical stress. It eliminates termination breakage, a major cause of potentiometer failure.

AEROVOX*Resistors***±1% PRECISION ® CARBOFILM AND ® CARBOMOLD RESISTORS****CARBOFILM PRECISION RESISTORS**

Precision deposited carbon resistors designed for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. The exclusive Aeroglaze conformal coating offers mechanical protection superior to any other coating eliminating the need for special tubes, sleeves and jackets. Aeroglaze coating will meet all moisture requirements of MIL-R-10509B. Carbofilm resistors offer outstanding stability, low voltage coefficient, low capacitance and inductance in high frequency applications.

CARBOFILM CHARACTERISTICS

TESTING: All Tests conducted in accordance with MIL-R-10509B requirements.

TEMPERATURE COEFFICIENT: Approximately 200 ppm per degree C in the lower resistance ranges and not exceeding 500 ppm per degree C in the highest values specified by MIL-R-10509B.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509B.

LOAD LIFE: When tested for more than 1,000 hours at full load operation in 40°C ambient temperature, maximum changes are less than 1% with an average change of less than 0.5%.

TEMPERATURE CYCLING: After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

SHORT TIME OVERLOAD: When subjected to 2.5 times the rated working voltage, but not exceeding 2 times the maximum rated voltage for 5 seconds, changes are less than 0.25% with an average change of 0.13%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.)

AGING: Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

CARBOMOLD PRECISION RESISTORS

A superior molded carbon-deposited resistor manufactured under the most exacting quality control standards and specifications assuring excellent performance under the most adverse operating conditions. Resistors are encapsulated in a strong reinforced moisture and heat resistant plastic for added stability, precision and reliability. Rated for full load operation at 70°C and linearly derated to zero load at 150°C. Will meet or exceed insulation resistance requirements of MIL-R-10509D.

CARBOMOLD CHARACTERISTICS

TESTING: All tests conducted in accordance with MIL-R-10509C requirements.

TEMPERATURE COEFFICIENT: Extends from approximately 200 ppm per degree C in the lower resistance ranges to and not exceeding 500 ppm per degree C at the highest values specified by MIL-R-10509D.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509D.

LOAD LIFE: When tested for more than 1000 hours at full load operation in 70°C ambient temperature, maximum changes less than 1% with an average change of less than 0.5%.

CLARODIALS

Ten-Turn Concentric Scale Dials

Calibrated dials designed for multi-turn potentiometers up to 10 turns or other rotary devices. CLARODIALS require only one inch of panel space. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. As a result, accurate readings with a ratio 1000:1 for ten turns are provided with zero backlash and no reading error. CLARODIALS are made of anodized aluminum for years of attractive use. Mounting requirements are 1/4" shaft and 3/8"-32 NEF-2A bushing. Adapters for 1/8" dia. shafts are available.

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is $\pm 5\%$ for 1 ohm and higher and tolerance below 1 ohm is $\pm 10\%$. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

Lead Length: 1 1/2" Lead Diameter: .032

POWER RESISTOR DECADE BOX

The Resistance Decade Box, Model 240-C for bench use. Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front panel dial-actuable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance

value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13" long x 8 1/2" deep x 5 3/4" high, weight 11 1/2 lbs., 250: 19" long x 13 3/4" deep x 7" high (fits in standard 19" relay rack), weight 18 1/2 lbs.

SUGGESTED USES: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

POWER RHEOSTATS

Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 10%. Closer tolerances are available upon special order.

AN Types (aircraft type) are basically the same units mechanically and electrically except that they are encased in a metal housing (versus ceramic). Terminals are screw type lugs to prevent corrosion. Approved under MIL-R-6749.

Units mount through a single hole, a locking pin is provided for rear panel mounting.

SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2 1/4 watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, 3/8" bushing diameter, 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have 3/8-32 bushing 3/4" long, and 1 1/2" round shaft.

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

- Attenuation range of 0 to 30 db over 90% of rotation, 60 db in remaining 10% of rotation. Attenuation will increase approximately linearly to 30 db with counter-clockwise rotation.
- Insertion loss less than 0.5 db.
- Input impedance within plus/ minus 20%.
- The CIT43 and CIBT43 (Bridged T Pad) have constant input and output impedances, while the CIL43 has constant impedance in the input only.
- Shafts and bushings are insulated from the circuit elements.
- Pads have 3/8-32 x 3/8" long bushing.
- 1/4" dia. round shafts 1 1/2" long beyond bushing.
- All pads supplied with bar knob and dial plates, as shown above.
- Dia. 1 1/8". Depth of body from mounting surface: CIL43 — 1 1/8"; CIT43 — 1 3/8"; CIBT43 — 1 1/2".

"GREENOHM"* WIRE-WOUND RESISTORS

FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without altering resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with EIA standards, overall tolerances are $\pm 5\%$ for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are $\pm 10\%$.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with EIA standards, overall tolerances are $\pm 10\%$.

Precision Film Resistors, Potentiometers, Wire Wound Resistors, Spark Suppressors, Carbon Resistors and Specialties.

There's long life and superior performance behind every C-W component
—meeting highest quality and reliability standards at a moderate cost.

Molded Deposited Carbon Precision Film Resistors

C-W molded carbon film resistors are designed and manufactured to meet or exceed performance requirements of MIL-R-10509D. Available: $\frac{1}{8}$ W. thru 1 W.; 10 ohms thru 50 megohms. Request Bulletin 2023-61.

Ceramic Encased Deposited Carbon Precision Film Re- sistors.

For the ultimate in environmental protection, C-W deposited carbon film resistors are encased in a non-hydroscopic ceramic tube, and sealed with high temperature solder. Available: $\frac{1}{4}$ W. thru 2 W.; 10 ohms thru 50 megohms. Request Bulletin 307-A-60.

Coated Deposited Carbon Precision Film Resistors

C-W coated deposited carbon film resistors — while being designed and manufactured to meet or exceed characteristic "X" requirements of MIL-R-10509, are more modestly priced than molded resistors. Available: $\frac{1}{4}$ W. thru 2 W.; 10 ohms thru 50 megohms. Request Bulletin 307-A-60.

Wire-Wound Potentiometers

Available in wattage ratings from 2 thru 5, with conventional single element or dual element for "L" pad and similar applications. Shafts, bushings, mounting hardware, and other features available to meet your specific requirements. Request Bulletin 2009 and Drawing F-889.

Nobeloy and Nobelette Metal Film Precision Resistors

For applications where fine precision and good stability must be complemented with low extremes in resistance range, or, low noise characteristics, at a moderate cost. Metallic resistance element deposited on low loss ceramic core, is protected by rugged vitreous enamel coating. Available: $\frac{1}{2}$ W. thru 5 W.; less than 1 ohm thru 15 megohms. Request Bulletin 302-60.

Automotive and Oil Burner Spark Suppressors

For suppression of radio and television noise interference due to ignition spark discharge at plugs and high tension distributor; and due to ignition discharge action of oil burner igniting coil. Complete line of resistive type suppressors. Request Bulletin 125-61.

Trimmer Controls

Two Watt with screwdriver slot for convenient adjustment in trimming and balancing circuits. Insulated or ground rotor; printed circuit board snap-to-chassis or rivet-to-chassis mounting. Moderately priced. Resistance range to 10,000 ohms. Request Bulletin 2009, and Drawings E-850, E-860, E-870, and E-818.

Your C-W distributor can supply prices, and bulletins mentioned above — also details on the convenient RESIST-O-FILE stocking plan for composition resistors.

DAVEN ATTENUATORS and Attenuator Networks

Over 25 years ago, Daven introduced the first attenuators as gain controls in audio program circuits. Since then, Daven has pioneered every important development in attenuators. Daven has produced more attenuators than all other manufacturers combined. Many of the first Daven attenuators are, in fact, still working perfectly **without one minute of service down-time!**

Today, Daven attenuators are accepted as standard in a wide range of other applications because of their extremely low switch noise level (below circuit noises), velvet-smooth control and wide range of attenuation. In broadcasting, recording and sound motion picture control installations there is still only one name synonymous with the finest: Daven!

BLUE RIBBON RESISTORS

A Complete Line of Flat and Stack Mounting Power Resistors

Blue Ribbon wire-wound power resistors are made of quality materials with matched coefficients of expansion and are covered by H-H gray vitreous enamel for complete protection against environment and overload. The aluminum through bracket improves heat dissipation, minimizes hot spots, and allows a higher wattage rating per unit of space. Bracket construction facilitates stacking and adds additional space saving.

When BR resistors are stack mounted they must be derated to keep within rated operating temperatures. Watt ratings shown are based on the use of a steel panel 10 inches square x .040 thick supported horizontally. For non-metallic panels reduce rating 15%. When mounted as described in an ambient temperature not exceeding 40°C the maximum temperature rise of the resistor will not exceed 300°C.

HARDWICK, HINDLE • INC AXIAL-LEAD RESISTORS

The "free air" wattage ratings of these axial lead resistors are based on a hot spot temperature rise of 300°C. (540°F.) in an ambient temperature not exceeding 40°C. (104°F.). These are the finest quality vitreous enameled wire-wound resistors made with application-tested parts and employing precision assembly. Since parts have matched heat expansion, crazing and cracks are eliminated. All welded construction.

Standard Sizes:

| Resistor Type | Tube Dimensions | | Watt Rating Nominal | Recommended Resist. Range | |

HARDWICK, HINDLE · INC ADJUSTABLE RESISTORS

The Quality
INDUSTRIAL LINE
since 1924

This resistor, embodying features originated by Hardwick, Hindle possesses the many advantages of Vitreous Enamel Construction, plus an adjustable feature. The winding is closely and evenly spaced,

assuring ample insulation between turns. Where winding is exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with adjustable band.

Hardwick, Hindle rheostats are exceptionally rugged without being over-designed or dependent on untried principles of construction. They exhibit "market quality" characteristics to meet the most exacting specifications, and special design features assure long life and protection under extremes of humidity and abnormal atmospheric conditions. The "bus bar" contact arm automatically adjusts for complete, continuous contact, and smooth, flexible control. Our blue-gray, high temperature enamel—thermo shock proof—gives increased service life with an extreme factor of safety.

In addition to the complete standard line of rheostats listed at the right, Hardwick, Hindle, Inc. welcomes the opportunity to work with you in the development of rheostats or potentiometers to your specifications. Tapered windings, tandem assemblies, special resistances, and many other electrical or mechanical modifications can be supplied.

Hardwick, Hindle rheostats are packaged one unit per box.

... for immediate delivery... fixed composition resistors in all standard RETMA values, 5% and 10% tolerances.

And now... 1/4 watt resistors... in addition to 1/2, 1 and 2 watt sizes.

These fine G-H resistors offer the jobber a product of highest quality... conservative in ratings... permanent in electrical characteristics... uniform in physical size and shape. Resistor bodies are molded brown bakelite, have great mechanical strength, are coded in brilliant lasting colors. Differentially tempered leads allow normal lead shaping for best circuit arrangement yet avoid too-sharp bends near resistor body.

G-H resistor packaging is modern... colorful... functional. Four convenient container sizes hold standard quantities of 1/4, 1/2, 1 and 2 watt resistors... have pull-out inner sections for easy access to contents without removing container from shelf. Gold and silver ends on these pull-out sections give immediate identification of 5% and 10% tolerance units. Quantity, wattage and resistance values are clearly printed on container ends. These stackable containers combine to make up an attractive, space-saving stock shelf display.

GIRARD - HOPKINS

MOLDED WIRE WOUND RESISTORS

TYPE BWH MOLDED WIRE WOUND RESISTOR

IRC's new BWH molded wire wound resistor can be used in most applications normally filled by the lower values of composition resistors. The BWH exhibits inherent stability, reliability, and long-term life characteristics of a wire wound unit. It also provides low resistances unattainable in composition resistors.

Exceptionally stable, small and completely insulated the BWH meets or exceeds all MIL-R-11C performance requirements. Because it is the RC-32 size it will fit any 1 watt composition resistor processing equipment.

BWH resistors are packaged by BODY TAPE or the exclusive IRC GRIP STRIP, GRIP REEL or ORIENTED BULK.

The rating of this resistor is:

- ½ watt at 137°C. ambient
- 1 watt at 115°C. ambient
- 2 watts at 70 C. ambient

INSULATION. A plastic housing molded with IRC manufactured thermosetting materials at high pressure and temperature results in a high insulation resistance. This protects the element from effects of extreme climatic conditions. Type BWH resistors are brown in color.

NOISE. Negligible.

SHELF DRIFT. Negligible.

TOLERANCES & RESISTANCE VALUES. Available in $\pm 5\%$ and $\pm 10\%$ tolerances in accordance with standard EIA resistance ranges. Minimum resistance: 0.24 ohm, maximum: 1000 ohms.

COLOR CODING. Resistance values are indicated by standard EIA Color Code bands, and are distinguished from composition resistors by a wide band for the first significant figure.

INSULATED RESISTORS

TYPE GBT-SR FIXED COMPOSITION CARBON RESISTORS

More IRC Type GBT-SR Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC GBT-SR's are by far the leading choice of Electronic Engineers—particularly since the new GBT-1/2 1/2 watt and GBT-1 1 watt give new appearance, new sizes . . . IRC's unsurpassed solderability has been maintained and no wax coating to gum up end equipment. For replacement, Service Technicians favor IRC GBT-SR's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

RESISTEG COATED ADJUSTABLE POWER WIRE WOUND RESISTORS

The adjustable feature of these IRC resistors provides an ideal solution to odd resistance values and to handling a variety of line voltages. For voltage dividing applications, one or more adjustable bands may be used.

IRC adjustable power resistors are standard Resisteg coated tubular units with a track of exposed wire to allow for adjustment. Adjustable resistor wattage ratings apply only when all the resistance is in the circuit. Resistor should not be adjusted with voltage applied.

TYPE 1¼AA 10-12 watts. Core size: 1¼" long by 5 16" dia. Terminals: 12A. One adjustable band: type A. Resistance tolerance: ±10%. Standard package: 1. Mounting hardware included: Z-0 brackets.

RESISTEG COATED FIXED POWER WIRE WOUND RESISTORS

MILITARY STYLE POWER RESISTORS

IRC's exclusive Resisteg Coating accounts directly for the superior stability of IRC power resistors. This coating is cured at temperatures below 205°F.—1000° less than required for other type coats. With low temperature curing, winding turns do not shift together. The wire is not "work-hardened" since excessive tension is not needed to prevent shifting. There are no failures from arc-over. And, RESISTEG COATED POWER RESISTORS NEED NO DERATING—even at high resistance values they operate at FULL RATED POWER! Low-temperature cured. Resisteg is an exclusive IRC feature.

RW29V 11 watts, military stamping, no hardware. Standard package: 1.

AXIAL LEAD POWER WIRE WOUND RESISTORS

These popular axial lead power resistors are the industry favorites for 5 and 10 watt applications. The compact shape fits among other components more easily. The axial lead design speeds installation. And, the superior solderability of the terminals assures sound connections every time.

A precisely wound element is sealed in a ceramic case—fully protected and insulated. Conservative rating permits continuous operation at full power. Resistance, wattage and tolerance are permanently marked on resistor body. Standard tolerance is 10%.

Popular Assortment of 20 PW10 resistors is available for handy bench stock. The values are selected on the basis of 10 watt usage. Resistors are mounted on plastic covered card with hole for hanging. Assortment 20A.

PRECISION WIRE WOUND RESISTORS

IRC Precision Wire Wound Resistors are designed and manufactured to exacting standards necessary to insure consistent accuracy in critical applications.

The ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Insulation provides greater humidity protection and also contributes to longer trouble-free service.

Maximum temperature coefficient of .0027% per degree C is standard on all IRC Precision Wire Wound Resistors at no added cost.

IRC Precision Wire Wound Resistors have either radial lug or radial lead terminal, designed to eliminate any strain on the winding. These terminals offer excellent solderability.

CLOSE TOLERANCE PRESTISTORS

UNMOLDED DEPOSITED CARBON TYPE DC 1% ACCURACY. 1/2, & 2 WATTS STYLE RN20X, RN25X, RN30X (MIL-R-10509B)

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Prestistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRESTISTORS make them superior to many popular applications.

IRC Type DC Deposited Carbon Prestistors are available in three sizes: 1/2 watt (body size 3/16" x 3/32"), M-Coat 1 watt (body size 1/16" x 3/32"), and 2 watts (body size 2 1/16" x 3/32"). Accuracy ±1% (25°C).

MOLDED DEPOSITED CARBON TYPE MDC 1% ACCURACY. 1/2 WATT STYLE RN70B (MIL-R-10509C)

IRC's Molded Deposited Carbon Prestistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded insulation provides improved load life characteristics, better insulation resistance and greater resistance to moisture effects. The Molded Deposited Carbon Prestistor provides all the advantages of the ceramic solder sealed types without the hazards of seal leakage, breakage and low dielectric strength.

Type MDC Molded Deposited Carbon Prestistors are particularly suited for applications where an unmolded deposited carbon unit cannot be used due to the risk of mechanical damage to its coating, insulation breakdown and excessive moisture conditions.

Wattage Rating: 1/2 watt at 70°C. ambient (per MIL-R-10509B) derated to 0 at 165°C. Dimensions: 2 3/32" x 1/4" (body size).

INDUSTRIAL CONTROLS

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact $\frac{1}{8}$ " Q Control. Power rating is $\frac{1}{2}$ watt, 500 volts maximum. Electrical rotation is the same with or without switch. $\frac{3}{8}$ " bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

SINGLE CONTROLS

TYPE PQ

TYPE PQ. Full round $\frac{1}{4}$ " shaft, approximately 3" from mounting face, with $\frac{3}{8}$ " long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

TYPE RQ. Very short screw-driver slot shaft, $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face with $\frac{3}{8}$ " long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ.

TYPE RQ

TYPE RQL

TYPE RQL. IRC's new line of 10% tolerance Locking Type Bushing Controls. Screw-driver slot shaft $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face, with a $\frac{3}{8}$ " split type bushing, and locking nut.

MULTISECTIONS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ, RQ or RQL Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls.

Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 25 values, as shown in following table. Each MULTISECTION adds $\frac{1}{8}$ " to basic control.

DUALS AND TRIPLES

IRC Type PQ, RQ and RQL Industrial Controls are supplied as single controls. Dual Control and Triple Control combinations are available by adding IRC MULTISECTIONS.

TYPE WP

Constructed with $\frac{3}{8}$ -32 x $\frac{3}{8}$ " bushing and $\frac{1}{4}$ " diameter, full round shaft 3" long from mounting face.

TYPE WPRL

A new line of IRC distributor industrial controls with short screw-driver slot shaft $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face, with $\frac{3}{8}$ " locking type bushing and locking nut, 10% resistance tolerance. Linear taper.

SNAPTROL REPLACEMENT CONTROL SYSTEM

SNAPTROL PROVIDES VERSATILITY AND EASE OF ASSEMBLY

EASY TO USE. Parts assemble into exact duplicate control in 15 to 30 seconds. Sections completely factory assembled. No shaft cutting or modification needed.

GREATER VERSATILITY. SNAPTROL provides new and unique designs which provide for better utility and adaptability of component parts:

1—Interchangeable Control Mountings. $\frac{3}{8}$ " , $\frac{7}{16}$ " and $\frac{1}{2}$ " diameter bushings or varying lengths and bores, quickly thread into front control sections. Accommodates thick panel requirements without extra bushing or adjuster. Specially designed tab mounting plates or printed circuit brackets easily attached in place of bushings. This exclusive new design feature reduces the number of front sections needed and extends their use in a greater variety of replacement needs.

2—Printed Circuit Terminals. All control sections are equipped with terminals that will handle both conventional and printed circuit wiring. This exclusive CTS-IRC terminal design doubles the adaptability of control sections.

3—Rotary or Pull-Push Power Switches. Either type of power switch snaps onto rear section in field. Another exclusive CTS-IRC design feature which very considerably increases the utility of control components. Three different rotary power switches snap onto front sections for single control needs!

4—Uniform Diameter Rear Section Shafts. New design of rear section (inner) shafts provide uniform diameter—permits use of heavy-walled front section (outer) shaft contributing better concentric shaft operation and superior knob retention. Simple compression type adapter fits rear section shaft to knobs normally requiring larger diameter. No drilling or modification of knobs needed. Shafts are flatted or slotted as required—no shaft insert or fine needed! This new design reduces the number of exact length shafts required for broad replacement coverage.

5—Front Sections Serve for Single Controls. Without modification or adapters, all SNAPTROL front sections may be used for single control replacements. Provides practical use of single front section for special bushings, tab mountings, printed circuits, special shaft needs and a variety of power switches. No other section-type control system provides such broad versatility.

FEWER COMPONENTS PARTS. Because of the realistic design features provided, SNAPTROL requires far fewer items of components than any other section-type exact duplicate control system which offers so broad a replacement coverage. (Nearly 1000 exact duplicate concentric dual controls and many thousands of single controls.)

BEST SELLING CONTROLS. SNAPTROL is a special replacement design of the world's most frequently specified and most widely sold CTS Series 45 control. Over 300,000,000 in current use—a strong testimony to the quality and performance of these outstanding controls.

RADIO-TV TECHNICIANS' TYPE Q VOLUME CONTROLS

IIRC's Type Q Control is the basic control for servicing all sets. It is carefully engineered to meet most replacement requirements with a minimum stock. The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction, easier installation and dependable performance provide more profitable servicing.

KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

1/4" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

SPECIAL PURPOSE CONTROLS

**Type QJ-3
TV ATTENUATOR**

- Reduces overloading effects on TV sets in strong signal areas.
- Diminishes interstation interference caused by nearby or powerful stations.
- Minimizes buzz due to high signal level in intercarrier systems.
- Permits easy adjustment of signal RIGHT AT SET.
- Frequently prevents mismatch of antenna load to set.

IRC's QJ-3 TV Attenuator permits ready adjustment of signal input to TV sets. In most cases, it corrects or substantially reduces such conditions as:—Adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breakover. Also useful in service work—duplicating fringe area signals when show is near strong local station

**Type LC-2
LOUDNESS CONTROL**

A continuously compensated control that boosts lows and highs as volume is decreased—maintains depth and brilliance even at whisper level. Type LC-2 replaces makeshift compensating units—tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Automatically maintains proper balance of all frequencies in the audio spectrum at any listening level. Simplicity itself—as easy to wire into an audio circuit as any standard three-terminal volume control. Complete instructions included, showing applications. Type 76-1, 76-2 or 76-4 switch can be added to this control.

STANDARD TAPERS FOR Q CONTROLS

A—For potentiometer or rheostat where uniform resistance change is required.

B—Semi-logarithmic curve for tone control or audio circuit control.

C—Logarithmic curve for audio circuit control or antenna shunt control.

D—Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is important in controlling volume.

H—Tapped logarithmic curve for audio level control for automatic bass compensation.

P—Semi-logarithmic curve—reverse taper for use in contrast and picture control circuits in television.

Q—Semi-logarithmic curve—reverse taper for use in contrast and picture control circuits in television.

S—Special taper—based on specific specifications.

TV HEIGHT CONTROLS

Type HLC. Provided for reliable operation in TV—and other B+ applications such as AGC, noise gate, focus, fringe lock and sync. Type HLC is a premium quality television height control with a 1 watt rating and small $\frac{15}{16}$ " diameter size. Slotted and knurled shaft is nylon, and can be easily shortened, if required. Control has tab mount design with rear adjustment. Supplied in six high range types with $\pm 30\%$ tolerance.

CONCENTRIKIT EXACT DUPLICATE SHAFTS

DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS

TRIKIT—factory-tailored for dependable mechanical fit. No filing, slotting, soldering or cutting required! Many shafts are flatted as well as slotted to provide wider replacement coverage. Each shaft is a complete assembly, including contactor. Factory-lubricated, packaged in cellophane and in individual carton.

Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting face when installed in control (L_1 is Outer Shaft length; L_2 is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32" or 2-5/16". Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32" should be subtracted to determine shaft length.

Save time—be assured of accurate fit! IRC now provides a complete line of Exact Duplicate Shafts for CONCENTRIKIT

STANDARD TAPERS

R Taper—Right Hand Taper with approximately 50% rotation when measured from Right Terminal to Center Terminal facing shaft end of control with terminals down.

U Taper—Standard Linear Taper.

L Taper—Left Hand Taper with approximately 15% of total resistance at 50% rotation when measured from Left Terminal to Center Terminal facing shaft end of control with terminals down.

L AND T PAD CONSTANT IMPEDANCE CONTROLS

For use in sound systems and for speaker control. Handle up to 10 watts of audio power (3 watts D.C.) L Pad provides constant input impedance; T Pad provides constant input and output impedances.

IRC L and T Pads provide unusual convenience features small size; Diameter—1 1/4"; depth behind panel—1 3/16" (L Pad) and 1 1/2" (T Pad). 3/8" bushing mounts Pad on panels up to 3/8" thick. Interchangeable bushing available for metal panels. Shaft length is correct for knob supplied—no shaft cutting necessary.

Each IRC Pad is individually boxed and includes knob and dial plate.

Some of the many "Special" LECTROHM Resistors

LECTROHM, while manufacturing the standard vitreous line, is also producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

Eleven sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers a range from 12½ to 1000 watts, in ratings that meet the major portion of design, production and emergency needs. Ratings of 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel.

The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MOLDED COMPOSITION POTENTIOMETERS, 1/2 and 2 WATTS

Used in commercial and military electronic applications where high quality and dependable performance are important. Type AB, 1 5/16" dia., is rated 2 watts at 70°C ambient and is available with 7/8" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU dual unit) and locking type slotted shaft (CLU). Type AS,

a miniature unit 1/2" dia. rated 1/2 watt, is available only with locking type shaft.

Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low. Single control Type AB units extend 5/8" behind panel; dual con-

trol 1 17/64". Type AS miniature unit extends 1 1/16" behind panel. An SPST switch for single Type AB units is available. Units are dust and splash proof, fungus and corrosion resistant and meet the latest requirements of MIL-R-94. Styles CMU, CLU and Type AS conform respectively to MIL-R-94 Styles RV4N, RV4L, RV6L.

OHMITE® STOCK AXIAL-LEAD RESISTORS

Ohmite axial-lead, vitreous-enamelled resistors are compact, wire-wound units available in four stock sizes: 1-Watt ($1\frac{1}{8}'' \times \frac{1}{8}''$), 3-Watt ($1\frac{1}{8}'' \times \frac{1}{4}''$), 5-Watt ($1\frac{1}{8}'' \times \frac{3}{8}''$), and 10-Watt ($1\frac{1}{8}'' \times \frac{1}{2}''$) . . . The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have $1\frac{1}{2}''$ tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is $\pm 5\%$. Resistance range for each size shown in price tables below.

Resistance values marked * are derated in wattage because of maximum voltage gradient considerations. Even with these voltage limitations, however, the wattage ratings are still adequate for most precision applications. However, where wattage requirements dictate, the same value shown in a derated area for either the 3 or 5 watt sizes can be supplied in the next higher wattage as the case may be.

OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on stearite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

LITTLE DEVIL COLOR CODER

Here is a handy little device that makes it easy to determine the resistance and tolerance values of EIA color coded composition resistors. Just turn the color wheels until the color corresponds to the color band on the resistor and read the resistance value directly in ohms in the windows.

Now Includes MIL-R-11 Types

Ohmite's famous molded composition resistors. The 1/4, 1/2, 1 and 2-watt sizes, conform respectively to Styles RC07, RC20, RC32 and RC42 of MIL-R-11C and meet all the requirements of this military specification.

Little Devils have molded insulation except for the 1/10 watt size which is coated with insulating material. Features: Great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Available from stock in the standard EIA resistance values in the tolerances and resistance ranges shown in the price table below. Ratings for maximum continuous RMS voltage drop are high: 150 volts for 1/10 watt units, 250 volts for 1/4 watt, 350 volts for 1/2 watt, 500 volts for 1 watt and 750 volts for 2 watt units.

STANDARD EIA VALUES

Figures in large, bold type are ±10% EIA values. All values listed are ±5% values. Price table lists the various "Little Devil" sizes and indicates the tolerances and resistance ranges in which they are supplied.

TRU-OHM

GOLD SEAL CARBON FILM RESISTORS

are manufactured to exacting standards in a clinically-clean atmosphere in humidity controlled, air conditioned rooms. Reliability tested individually, each and every resistor must withstand up to twenty-five times the rated wattage for 1 sec. duration to pass exacting TRU-OHM final inspection standards.

The continuous process method employed by TRU-OHM provides a completely uniform carbon coating applied to special ceramic core material. For example, in applications where these resistors are subject to extremely high frequencies, the uniformity of the film element is of utmost importance.

Years of accumulated experience in manufacturing resistors have been coordinated to bring about the development of nearly diamond-hard films bonded so perfectly to the ceramic core that it is impervious to the most severe scratch tests.

Despite their sub-miniature size — ruggedness is built into TRU-OHM Gold Seal Resistors — try the twist test on leads — they will withstand three times the military spec required.

Vitrohm® RING RHEOSTATS

WARD LEONARD

25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

Standard Resistance Tolerance ±10%.

Vitreous enameled wire-wound resistors built on a strong refractory core, and provided with low mounting brackets. Particularly suited for applications where space is limited. Specially adapted to stacking for networks.

The 20 watt Ministrip resistor is smaller in size than the standard Stripohms. They may be stacked by using 1/32" washers.

CONANT MINIATURE METALLIC RECTIFIERS

All Conant rectifiers are manufactured to the highest quality standards from individually tested and graded cells. Copper oxide cells are produced by the exclusive Conant Process and have 24K gold contacts applied in high vacuum.

The Conant Complete Color Code permits identification of rectifier type by color and physical form.

Only basic standard rectifier types are listed below. Many other standard catalog items are available and we are prepared to produce special items to meet customers' special requirements.

SILICON REPLACEMENT RECTIFIERS FOR TV, RADIO AUDIO AND SIMILAR APPLICATIONS

The most complete line of industrial and replacement silicon rectifiers. Type E are small, economy diodes. Type A is the new, all insulated miniature Mark VII, very high rated for its size. Type SD 500 is the most popular, hermetically sealed "Top-Hat," TV 500 and TV 502 are top-hats, mounted on heat-sinks as direct replacement for selenium stacks. Type M are "plug-ins."

SILICON BRIDGE RECTIFIER ASSEMBLIES

Pre-engineered and completely assembled single phase bridge rectifier stacks. The 1/2 and 1.2 amp series are sub-miniature assemblies of diodes on glass melamine board. All others are fin mounted assemblies. All diodes and rectifiers used are hermetically sealed and withstand extremes of temperature and humidity. Dual amp. ratings on B12 and B25 types are without and with fan cooling.

STOCK SUBMINIATURE GERMANIUM DIODES

Ohmite subminiature, gold bonded (gold whisker wire welded to germanium) germanium diodes are hermetically sealed in glass. These advanced diodes feature:

1. Unusual stability built in through temperature cycling, aging, and 100% shock test.
2. Wide operating temperature range: -85°F. through 194°F.

3. The absolute in moisture and gas resistance. All Ohmite diodes are leak tested at 100 psi hydrostatic pressure, subjected to mechanical and temperature shock, and checked for vibration stability through production random sampling. Ohmite diodes have standard EIA color coding, beginning at the cathode (germanium pellet) end. Rating: 80 mw at 68°F. Capacitance: approximately .5 μf. Storage temperature: to 248°F.

SCHAUER INSTRUMENT RECTIFIERS

TYPE BP2B

TYPE C4A

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation. Lead lengths to customer specifications.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5MA.

"B" SIZE CELLS (encapsulated) are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS are for general applications requiring larger output currents, and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem. Schauer has been manufacturing high quality, dry-disc rectifiers since 1930.

NOTE: The Schauer Manufacturing Corp. is the exclusive manufacturer of replacement Westinghouse copper oxide rectifiers

SV1 Silicon Varistor as compared in size to 25¢ piece. Chart shows its I vs E characteristics over four decades.

SCHAUER SV1 SILICON VARISTOR

SV1 Varistor consists of matched silicon junctions connected in parallel and oppositely poled. This voltage variable resistance goes through four decades of current for a half volt change in signal and makes possible its use as a single component to convert linear AC or DC information into logarithmic information following the curve $I_{ma} = e^{26(E-.59)}$ between the range $I = .02 \text{ ma}$ to 200 ma.

ELECTRICAL CHARACTERISTICS — Test limits: 50 microamperes max. at .2V D.C., 225 milliamperes min. at 1.0V D.C. Dissipation: ¾ watt at 25°C, ¼ watt at 100°C. Maximum ½ cycle surge current, 25 amps. peak.

SV1 is encapsulated with an alkyd molding compound. An inner epoxy seal, long leakage paths, and high pressure molding assure reliable performance in all environments.

Dimensions of SV1 Varistor. Also applies to Schauer ½ watt Zener Diodes. Zener cathode terminal is marked by red dot.

TRON PIGTAIL FUSES

Sub-miniature — hermetically sealed

Tron fuses are so small they can easily be used as an integral part of circuit — to protect miniaturized devices — or gigantic multi-circuit electronic devices — without sacrifice of space.

Fuse element hermetically sealed

Tron fuses may be potted or encapsulated without danger of sealing material affecting operation. Not affected by atmospheric or surrounding conditions. Designed for installation in high shock and vibration ambients.

They are self-protecting and operate without exterior flash or venting, so they can be installed anywhere in the circuit. Likewise, they may be teamed in one capsule or replaceable unit with such components as resistors or condensers.

Available in ratings from 1/20 to 5 amperes — for use on circuits of 125 volts or less where available fault current is not over 50 amperes.

Color coding indicates ampere rating and assists in final inspection of fused circuits.

Made with 1½ inch axial pigtailed that are adapted to feed through automatic wire forming machines — or with 1 inch right angle pigtailed conveniently spaced for assembly on printed circuit chassis. Leads are of No. 24 tinned copper wire.

Test specifications —

Characteristic A — Carry 100% load, open within 10 seconds at 200% load.

Characteristic B — Carry 100% load, open within 10 seconds at 150% load.

BUSS GMT Fuses — HLT Fuseholders

Signal Indicating

Alarm Activating

For multiple circuit apparatus where space is at a premium

GMT fuses and HLT fuseholders permit multiple mounting of fuses in limited space, for protection of communication equipment, business machines, computers, control circuits or any equipment operating at 300 volts or less.

Holders take panel mounting space of only ¼ inch horizontal by 1½ inches vertical.

Fuses give visual indication when blown by release of a spring indicator. The spring carries a colored plastic flag, in a different color for each fuse ampere rating.

The indicator spring when released makes contact with an alarm terminal in the fuseholder, which can be connected to activate a signal circuit.

Blown fuses are readily replaced without use of insulated tools. When mounted on minimum centers, removal of fuse is easy by use of a wire hook.

FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

BUSS In-the-Line or Panel Mounted FUSE & HOLDER COMBINATIONS

Non-Indicating
For voltages up to 300

In these two fuse and holder combinations the fuse and knob of fuse-holder are in one piece. When fuse blows, the entire fuse-knob assembly is replaced.

This gives added safety to the circuit because neither the HLR or the HLQ holder will take an ordinary type fuse. Thus a blown fuse must be replaced with the type of fuse originally installed.

Fuseholders can be mounted in-the-line — or panel mounted.

For panel mounting a snap-in steel clip is available that makes it easy to mount fuseholders.

Test specifications for GLR, GLQ, GMF, GMQ fuses
Carry 110%; open at 135% within one hour.
Listed by Underwriters' Laboratories, Inc.
Shipping wt. per 100: GLR and GLQ 1.5 lbs.,
GMF and GMQ 1.4 lbs.

HLR and HLQ Fuseholders

Recognized under the components program of Underwriters' Laboratories, Inc.
Shipping wt. HLR and HLQ holders 3.13 lbs. per 100.

Lead-in-Wires — Unless otherwise specified, HLR and HLQ holders are furnished with 6 inch leads of No. 18 solid copper wire with high temperature insulation. The bottom wire carries a clip to prevent it from sliding into holder. Leads of other types of wire can be furnished to your specification at slight additional cost.

Mounting Clip No. 6374 — BUSS Snap-in Steel Clip is available for mounting HLR and HLQ holders on any panel 1/32 to 1/16 inch thick. To mount holder, insert clip into mounting hole **BEFORE INSERTING HOLDER**. Then push holder into position in panel.

Packing — Fuses and holders are normally packed separately. Carton quantity: Fuses 5, Holders 10.

For production use, holders and fuses can be obtained packed separately, 100 to a carton.

Fuses assembled in holders also are available for a small additional charge.

HLR HOLDER SAFEGUARDS AGAINST USE OF WRONG TYPE OF FUSE

HLR fuseholders make it simple to protect a wide variety of devices or equipment from damaging fault currents because it is designed to take only GLR or GMF fuses.

HLQ HOLDER PREVENTS TOO LARGE A FUSE BEING USED

GLQ BUSS fuses or GMQ FUSETRON fuses used in HLQ fuseholders give a size limiting combination.

Each type of fuse is available in 13 ampere sizes, for voltages of 300 or less.

Over-fusing is prevented because ears on fuses match slots in holder. This prevents use of a fuse of larger ampere size than marked in holder.

This stops anyone from heedlessly replacing a blown fuse with one of a size too large to protect the circuit or equipment.

BUSS Add-On Fuse Blocks for $13/32$ x $1\frac{1}{2}$ inch Fuses

Single-pole fuse blocks and separate end barrier assemble into a unit block of one or more poles. Units lock in position. Assembled block becomes a single unit.

Each fuse can be used as a disconnect. See illustration. Raised fuse identifies open circuit and prevents confusion in getting right fuse back in circuit.

Marking strips so each circuit can be identified available.

No. 3949 Assembly consisting of one No. 3742 End Barrier —plus specified number of No. 3743 One-Pole Blocks

3742 End-Barrier Only \$.30

3743 One-Pole Block Only 1.50

Marking Strip in 50 inch lengths \$0.55 per length

When ordering, be sure to specify number of End Barriers and number of One-Pole Blocks desired. Only ONE End Barrier is required for each assembled fuse block of any number of poles.

Other standard and special fuses, fuse blocks, fuse clips and fuse holders

If the fuses, fuse blocks, fuse clips and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military

specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

*Snap-Action,
Momentary Contact*

The exclusive Hetherington snap-action mechanism reduces arcing and contact wear...provides far greater current capacity than the small sizes of these switches would indicate. Mechanism enclosed in dust and moisture-resistant anodized aluminum housings (phenolic in B2001 & B2002). 1-piece terminals and contacts firmly anchored to bases. Many types meet JAN and MIL Specs for aviation and military requirements.

Features and dimensions are subject to change based on engineering refinements. If dimensions or specifications are critical, obtain drawings from Control Switch engineering department.

SLOW MAKE, SLOW BREAK A-C ONLY SWITCHES

3-6, 10-15 AMP. A-c LINE

Low arcing properties of a-c make possible a simpler contact construction, lighter weight and more compact switch than is possible for d-c power. These advantages along with lower cost have been incorporated in C-H a-c only switches.

Features include: heavy duty independent springs for positive contact pressure, solid silver to silver contacts and strong substantial terminal construction.

Bushing length 1 5/32" on all single pole switches Double pole switches available with 1 1/32" or 1 5/32" bushings.

Available with screw, solder lug or spade type terminals.

PROJECTOR TYPE

These switches are the same as those listed above except the internal circuit is designed for a-c projector, air conditioning and room heater applications. They have a special contactor which provides for a full "off" position, then one circuit is made, then the second circuit is made while the first is maintained. In a projector circuit the switch will function as follows:

(A) off, (B) fan on, and (C) fan and lamp on.

The 7575 switch has an extra circuit to control the room lighting in addition to the functions mentioned above. Bushing length — 1 1/32" on 7511 and 7575, 1 5/32" on 7573 and 7574, and 1 1/32" or 1 5/32" on 7571 and 7572. All switches DPDT except 7511 which is SPDT.

ROTARY SELECTOR SWITCH

The C-H single or multi wafer selector switch is designed for applications where a large number of circuits must be controlled in consecutive steps. Switches have an indexing action which gives a positive "feel" as the shaft is rotated. Switches can be furnished with from 1 to 6 wafers with each wafer having 8 positions — 7 "on" and 1 "off". A total of 42 circuits can be controlled by one 6 wafer switch.

Rated — 5 Amp. — 28 V. D-c, 115 V. A-c One hole mounting. Bushing length — 1 1/2". Flatted shaft has 1/2" extension.

POSITIVE ACTION ONE HOLE MOUNTING

The operating mechanism employed in the C-H line of "positive action" switches has a direct coupling arrangement between the operating lever and moving contacts which permits positive breaking action and still allows the contacts to move independently of the operating lever. The switching action takes place in less than 1° of movement on the operating lever. Once the contact movement is started, the motion cannot be stopped until the switching is completed.

Switches are available with either the lever seal or environment seal. Both feature a silicone rubber seal bonded to the bushing and operating lever. They also are available in standard

lever models or lever lock types. The lever lock switches have an integral bushing design which permits the operating lever to be locked into position. In order to move the lever from a locked position it must be pulled upward.

Relays using Vacuum Switches

Type R and RH Vacuum Switches are available from Jennings mounted as relays for indoor use. They may be mounted with contacts normally open or normally closed or two switches may be mounted in a single pole double throw arrangement. Either ac or dc solenoids may be used. Insulation between the switch and its actuating solenoid is provided by a 2 to 12 inch puller rod providing 40 to 140 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use. Grade G7 silicone glass laminate is recommended for radio frequency applications.

LAMINATED SWITCHES

J-B-T INSTRUMENTS, INC., NEW HAVEN 8, CONN.

INSTRUMENT AND TESTER-TYPE ROTARY SWITCHES

14- and 20-Position — Single and Multi-Gang — Shorting and Non-Shorting

• **USES** — J-B-T Instrument-type Rotary Selector Switches are extensively used in quality test equipment, portable instruments, inspection setups, military or civilian avionics wherever trouble-free, dependable performance is of major importance. Available as a 14- or 20-position in laminated construction shown here or molded types described on opposite page—the design gives extra contacts in minimum space. One to six decks.

• **FEATURES**

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf type (SS-20), and sharp detent assure positive indexing. Springs are replaceable without disturbing soldered connections. Laminated plastic decks and rotors are selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.

SS-14-2 Laminated

SS-20-2 Laminated

Low Contact Loss — Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric (Conservatively Rated) — Carries 1 amp., 125 volts VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp, AC or DC; maximum voltage between contacts 1500 volts AC, R.M.S.; between decks and ground, 2000 volts AC, R.M.S.

BASIC 14-POSITION (SS-14): 13 circuits and "off" per deck in 2" circle for compactness, angular indexing 25°43'. 1 1/4" Bar Knob (KN-14) supplied only on individually boxed units—not on bulk orders unless specified. **Collector arm** normally placed directly opposite to flat of shaft so that knob pointer points to live contact. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION (SS-20): 19 Circuits and "off" per deck in 2-23/32" circle for compactness, angular indexing 18°. 2" Bar Knob (KN-16) supplied on individually boxed units—not on bulk orders unless specified. **Collector arm** normally placed directly opposite to flat of shaft so that knob pointer points to live contact. **Contact lugs** and common lugs positioned as shown below, 19 live positions per deck, standard. **One to six decks;** for each additional deck or gang add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Panel locator** positioned as shown; can be modified on bulk orders.

COMBINATIONS IN SS-14 and SS-20 SERIES: Besides the military and commercial variations listed above, shorting and non-shorting decks can be assembled on the same switch shaft. Reference to the sketch below will be helpful in numbering decks and contacts when ordering non-standard assemblies. Specialized requirements for stainless steel shafts, no flats or double-flats on shaft, longer projections beyond bushing, and other variations can also be supplied, with necessarily longer delivery time and additional cost.

MOLDED SWITCHES

J-B-T INSTRUMENTS, INC., NEW HAVEN 8, CONN.

FULLY-ENCLOSED INSTRUMENT AND TESTER-TYPE ROTARY SWITCHES Standard or Bonded Ruggedized Types—14- and 20-Position

MS-14-1

MS-20-3

- All moving contacts enclosed—minimizes dirt and corrosion; 3-post deck suspension for rigidity; double-grip collector arms for positive contact; and rectangular drive shaft for precision indexing.
- Interchangeable, electrically and mechanically, with SS-14 and SS-20 laminated switches.

FEATURES: See opposite page on SS types of laminated switches for current carrying capacity and voltage breakdown, also features such as heavy fine silver plating to meet 100-hour salt-spray testing; compact design; .007 ohm average contact resistance, and insulation resistance above

50 000 megohms. Besides fully enclosing all moving parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide rigid 3-post construction and the positive indexing which clearly identify the quality of J-B-T switches. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain, sand and dust; explosion; shock; and endurance values. (Ratings for MS-20-6DTS Types differ somewhat.)

BONDED RUGGEDIZED TYPES—As indicated in the tables, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types using cured laminations for ruggedization, shock-proofing and further enclosure. The cost is 35¢ per deck to catalog price of basic switch. Thus, 2-deck switch is MS-14B-2 at \$3.80. Bonding adds approximately 1/64" per deck.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2-3/32" circle for compactness. Molded end cover regularly supplied. 1 1/2" Bar knob (KN-14) included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is rounded and bent down for ready identification. Extra decks add 19/64" per deck (or gang) to depth; for 7 decks and over add 1/2" to depth for shaft support and 1/64" per deck for bonding; if adjustable stop type also add 5/32" to length. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered—r, on quantity orders, pre-set fixed stops (type MPS) are specified. Panel locator is available at extra cost on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator. Complete dimensions: for MS-14 switches, 1 to 6 decks, request Print SK-111, Rev. C, for 7 decks and over, SK-112, Rev. B.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2-5/8" circle for compactness. Molded end cover regularly supplied. 2" Bar knob (KN-16) included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft so that knob pointer points to live contact. Common or "off" contact lug is rounded and bent down for ready identification. Extra decks add 19/64" per deck to depth and, if 7 decks or more, 1/2" for shaft support and 1/64" per deck for bonding. Continuous rotation type supplied; on quantity order, pre-set fixed stops (type MPS) are available. Panel locator available at extra cost on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator. Complete dimensions: for MS-20 switches, 1 to 6 decks, request Print SK-113, Rev. C; for 7 decks and over, SK-114, Rev. B.

LEVER ACTION SWITCHES AND UNIQUE MOLDED SWITCHES

6-, 5-, 4-, and 3-Position Lever Switches—6-Pole DT per Deck—Time Saving Ring-Contact Rotaries

SS-14-IL4F-2
Two-Deck Lever-Action Switch

SINGLE DECK, POSITIVE INDEXING, 3- and 4-POSITION. These lever switches are derived from the J-B-T SS-14 instrument-type rotaries. Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw, and provide for an extra circuit. Individually-boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. Spacing between centers: recommended 3/4"; minimum 9/16". For dimensions, see drawing below. **Spring Return Type.** Single deck, 3-position switches may also be ordered with spring return. 5-Position Lever Switch

MOLDED 5- and 6-POSITION, POSITIVE-INDEXING. Designers and servicemen now have available 5 or 6 live positions, two circuits per deck, in an enclosed lustrous black molded construction. Both switches are adapted from the MS-20 series and have similar electrical characteristics. Besides sound systems, these models can simplify circuitry for control, inspection, test, experimental, and hobby purposes. Individually-boxed switches come with mounting hardware and KN-20 threaded black molded knob; bulk shipments, without knobs. For mounting data see SK-64 on 5-position and SK-119 on 6-position.

6-POLE DOUBLE-THROW PER DECK — 1 OR 2 DECKS

6-Pole Switches. Double-throw switching of 6 circuits per deck through two 18° positions (36° throw) becomes easy with this unique rotary - type molded switch. It is fully enclosed and similar in appearance to the molded MS-20 switches on page 1291. The illustration at the right shows internal construction with back protective cover cut away. Circuit arrangement is designated on the metal front of the switch. Quality features include .007 ohm average contact resistance; heavy, fine-silver plating for 100-hour salt spray test; double-grip collector arms. Now available in non-shorting (break before make) and shorting (make before break) 2 3/8" maximum diameter, one deck, 13/16" behind panel; two deck, 1 1/8" behind panel. DTS Shorting Types are rated 1500 volts R.M.S. between contacts and ground, 1000 volts R.M.S. between contacts.

NEW IDEA: RING-CONTACT SWITCHES

Perfect connections between adjacent switch contacts are assured because this distinctive design needs no soldered jumpers. An integral ring which holds together all the contacts on each deck can be snipped wherever wanted—to save valuable time in development and pilot runs. For production lots, J-B-T can supply various combinations of joined and unjoined contacts to slash the user's assembly costs and build-in quality. The ring-contact adds 7/32" o.d. to the MS-14 or MS-20 types listed on page 1291 (prints SK-88 and SK-89 respectively). The MS-20BR-1 shown here also has

bonded (suffix B) construction. Switches listed below are normally available. Others such as 3-decks, 6-decks, shorting, etc., require substantial lead time.

TOGGLE SWITCHES.....

J-B-T INSTRUMENTS, INC., NEW HAVEN 8, CONN.

HEAVY DUTY - SINGLE POLE, DOUBLE POLE AND 4-POLE - GOVERNMENT QUALITY

Designed for MIL-S-3950A, Series MS25068, MS35058 and MS35059, JAN-S-23, DDAX Series and MIL-S-21195A (Ships)

Overload... Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size **solid coin silver contacts** and **rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

Cold and Heat... Specialized aircraft lubricant facilitates mechanical and electrical operation at -85°F to 185°F.

Vibration and Shock... No momentary make or break or mechanical damage during severe shake and 75 G's drop tests.

High Humidity... Materials, dull finish on outside metal parts (per Armed Services specifications) and lubricant enable switches to withstand tropical climates.

Salt... Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

Rugged Service... Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Quality standards are maintained by in-plant production testing.

20 AMP - HEAVY DUTY - This page covers 130 models of heavy duty toggle switches nominally rated at 20 amp. at 125 VAC, and 10 amp., 250 VAC, and other ratings where specified in MIL-S-3950A. **6 Amp. Medium Duty** are described on next page.

4-POLE CONSTRUCTION - To exceed the rigorous electrical endurance requirements of MIL-S-3950A, J-B-T switch bodies in this MS25068-series are molded of a compound having high arc-resistance and low shrinkage. This superior material is readily identified by its light brown color, printed in silver. The 8 models in this family use single-hole mounting with single-throw or double-throw action as designated in the table below. All have silicone rubber bushing seals. Electrical Characteristics and Current Values are described in Bulletin TS-6D.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950A have internal toggle seal to meet 15 ft. water submersion test. MIL-S-3950 models are superseded by MIL-S-3950A models.

NOTE B: For heavy-duty switches in the MS25068, MS35058 and MS35059 series, MIL-S-3950A calls for SCREW TERMINALS ONLY. These terminals have SOLDERABLE FINISH and may be soldered after removal of screw. For medium-duty switches in the MS25068 and MS-25100 series on the next page, MIL-S-3950A calls for solder terminals only. Future procurement for military use is to be only to MIL-S-3950A, but many parts lists still refer to ST switches to JAN-S-23 and MIL-S-21195A (Ships).

↑ Cut-away view of self-wiping construction showing outside of double-grip moving contact

Like other J-B-T Switches, this series has quality as its first objective. J-B-T builds-in quality by doing its own design and manufacture, and by a continuous program of in-plant tests of production samples for quality assurance.

Typical Applications . . . This series is popular in communications circuits, electronic instruments, dry circuits (but with gold plated current carrying parts recommended for extremely low currents and voltages), measuring devices, miniature motor controls, and computers.

Self-Wiping Design . . . Even after long storage, a few flips of this switch bring the contact resistance well under the 0.01 ohm requirement of military specifications. As illustrated, the double-grip moving contact of phosphor bronze heavily silver plated wipes over the stationary contacts of brass, also heavily silver plated.

Sound Electrical Values . . . Tested to meet 50% overload for brief periods. High dielectric exceeds 1000 volts r.m.s., 60 cycles at sea level.

Exceptional Environmental Characteristics . . . Functions well throughout a range of -85°F to 185°F, with materials, plating, lubricant, and mechanical features to withstand tropical climates. Dull finish plating as stipulated in specifications meets 100 hour salt-spray test QQ-M-151a (twice the required minimum). Other plating quoted on request.

Rugged Construction . . . Solder type hot tin dipped terminals as used throughout this series withstand 5 lb. pull test . . . enclosed molded body has no unused holes for side terminals . . . no momentary make or break or mechanical damage during severe shake tests and 75 G's drop test.

LIMITED CURRENT FUSES & HOLDERS

A new approach to circuit protection completely eliminating the possibility of overfusing circuits. This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The Limited Current Fuse Holder is designed to accept only the size, amperage, range and type (regular or slo blo) in its amperage range. The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

POWER TAP SWITCHES NON-SHORTING TYPE

Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

MODEL 111 TAP SWITCH

Alternating Current Rating 10 Amps. 150 Volts — Diameter 1 3/4" — Shaft Diameter 1/4" — Standard Mounting: For 1/4" panel maximum, by means of 3/8"-32 threaded bushing and hex. nut.

Individual gain adjustment for each channel. Transistor amplifier (powered by 9 volt battery included) overcomes usual loss of resistance type mixer and actually provides a 6 db. gain; permits use up to 30 feet from Recorder or Amp. Accepts input signals up to 1.5 volts. (Use a Switchcraft Molded Cable Assembly with proper connection to fit your equipment—not included.) Low noise level; low distortion. Response 20 to 20,000 cycles.

PART NO. 05AF25 U.S.A. LIST \$1.50

"MIX-AMP"—Miniature Transistorized Amplifier designed for use with resistance type MIXERS, such as the Switchcraft "Mini-Mix" and four-channel Microphone Mixers overcoming the usual "losses" in such mixers and actually providing a 3 db. gain. When used with a "Mini-Mix", will accept signals up to 2 volts. Has a "HI-LO" Impedance Switch; in "HI" position, when used as a straight amplifier (without mixer) has a 200,000 ohm input and provides a 6 db. gain and in "LO" position has a 25 db. gain with input impedance of 5,000 ohms. Compact, approximately size of package of cigarettes; completely portable, requires 9 volt battery (included). Has standard 2-cond. Phono Jack Input and 2-cond. Phono Plug Output. Can also be used at a microphone, using cables up to 30 feet long, without serious loss of high frequencies. Frequency response 20 to 20,000 cycles. Also ideal for Phono Pickups (Magnetic and Crystal).
