15,000,000 MULTIPLE-SET OWNERS NEED

TRANSCEPTOR®

THE HOUSEHOLD SET COUPLER

ANYONE CAN INSTALL IN SECONDS

improves reception for additional TV, color TV, FM, stereo FM
 provides most efficient signal delivery
 automatically matches impedance
 proved in more than 50,000 installations
 snaps on without tools
 eliminates extra antennas, rabbit ears
 packaged and designed for consumer appeal
 more than 2 million new customers annually

Foolproof, simple, rugged TRANSCEPTOR was designed especially for the fifteen million multiple-set owners in this country. Now, with easy-to-install TRANSCEPTOR, they can run any combination of TV and FM sets — two or more, one at a time or all at once — *off one antenna* without amplification in normal signal areas. And, because TRANSCEPTOR uses electro-magnetic pick-up instead of resistance splitting of the signal, the line is not cut, there is minimum signal loss, and better set-to-set isolation.

Result: More customer satisfaction. More sales. More profits.

TOWERS

SELF-SUPPORTING UP TO 60 FEET HIGH
HOT DIP GALVANIZED HEAVY DUTY MODELS
ZINC ELECTROPLATED ECONOMY MODELS
NO LOST TOWER FOOTAGE
FAST, EASY SECTIONAL ERECTING

With these two Jontz Tower models you can fill any tower needs... from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Both models are self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from 1/4" x 18

ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1/4" x 16 ga. tubular uprights and is hot dip galvanized. (Model 300 is also available galvanized.) New, extra-wide corrugated cross-braces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking 3/8" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.

HOW TO ORDER: 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers. 3. If Model 300 is wanted with galvanized finish be sure to specify.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

JERROLD®**NEW UHF EQUIPMENT****SILVER-CIRCUIT PREAMPLIFIERS****FOR "SNOW-FREE" UHF**

MODEL UAP-7276

MODEL UAP-7083

Jerrold's new Mast-Mounting UHF preamplifiers are available in five 300-ohm models covering the entire UHF range, and one 75-ohm model especially designed to cover MPATI channels 72 or 76. These preamplifiers are distinguished by an ultra-sensitive input, delivering a high gain of 15 db minimum for all 300-ohm models and 16 db minimum on MPATI model UAP-7276, at a noise figure unequalled by any other unit. Components employed, such as tuned silver-plated broad-face transmission elements, pure silver coil strips, frame-grid tubes in a two-stage amplifier circuit, and stabilife design, create truly low-loss UHF circuitry at maximum output and long tube-life.

In addition, Model UAP-7276 has a dual output for feeding two mast-mounted converters, eliminating the need for a second antenna. All models are energized from the same type remote power supply, Model 409-P, doubly-filtered for maximum performance of the preamplifiers. A special voltage variation switch on the power supply insures proper preamplifier operating voltage when used with various types and lengths of cables.

Shipping weight of each model is 5½ lbs.

MATCHING TRANSFORMERS****300 TO 75 OHMS**

MODEL MTU-372 \$3.60 Net

MODEL MTUO-374 \$6.00 Net

Jerrold's new UHF Matching Transformers Models MTU-372 (for indoor mounting) and MTUO-374 (for outdoor mounting) are specially designed wide-band impedance matching units that eliminate the need for field construction of baluns. The transformers have a flat response over the entire UHF TV spectrum of 470 to 890 megacycles. Maximum insertion losses are from 0.6 db at 470 mc to 1.2 db or less at 890 mc.

In addition, Model MTUO-374 passes ac (current rating 1.0 amp. max.).

Both models employ new type crown washer screw terminals at the 300-ohm side for fast no-strip twin-lead connection.

Shipping weight of either model is 8 oz.

NEW**"ULTRA-VISTA" UHF/VHF CONVERTER
FOR MPATI AND TRANSLATOR AREAS****"TOP OF THE SET" MODEL UVC-7083****THE ONLY UHF CONVERTER WITH**

- RF PREAMPLIFICATION • NUVISTOR • TRANSISTOR
- FRAME-GRID TUBE • RADAR TYPE DIODE

CONVERTS UHF CHANNELS 70-83 TO VHF CHANNELS 7 or 8

The "ULTRA-VISTA" is the most advanced converter in its class featuring: built-in rf preamplification by a modern frame-grid tube — boosts antenna signals before they enter the mixer; an oscillator circuit with new type Nuvistor — for high stability; a mixer stage using a radar receiver type silicon diode — for low noise figure, reliable performance; a post-amplifier using a PADT type h.f. transistor — for long-life service.

Minimum gain is 10 db over the entire translator band, and at least 11 db over channels 72-76.

Bandspeed tuning makes the converter easier to tune than a radio. Housed in an exquisitely styled, high-impact plastic cabinet, the ULTRA-VISTA will enhance the interior of any home.

JERROLD®**TV RECEPTION AIDS
FOR THE HOME****NEW TRANSISTOR PREAMPLIFIER POWERMATE MODEL APM-101***

Jerrold's POWERMATE is a transistorized TV-FM preamplifier with exceptional high gain and excellent noise figure, far better than any single-tube or transistor amplifier in its class on the market. Ideal for fringe and weak signal areas, it works with any TV-FM antenna new or already installed, does away with tube replacements, needs no batteries and is fed from a remote power supply consuming only 3 watts (less than an electric clock). Compact, light-weight construction permits mounting directly on antenna boom for maximum transfer of antenna energy. The light metal case is weatherproof and serves as a shield against spurious signal interference. "No-strip sure-contact" terminals allow quick efficient hookup to antenna and receiver. Model APM-101 has dual outputs to feed two TV and/or FM sets, with Jerrold MF-type multi-couplers will feed up to five sets. Shipping weight 2 lbs. **\$26.63 Net**

JERROLD MAGIC CARPET* ANTENNA

THE INDOOR ANTENNA WITH OUTDOOR PERFORMANCE

**MODEL MK-1**

This new antenna by Jerrold is the first full-scale printed-circuit antenna. Truly a "Magic Carpet" carrying quality TV/FM signals to receivers in the home, the MK-1 is easily installed (lay it on any flat, horizontal surface in the attic, under a rug, or staple to a ceiling) and simple to orientate (shift its position for best reception). Ideal for use with the Jerrold Amplified TV/FM Home System, the Magic Carpet eliminates the unsightliness and maintenance costs of outdoor antennas. When properly installed, the Magic Carpet provides reception comparable to an outdoor, conical-type antenna mounted in the same location. This means that the MK-1 will provide excellent reception of TV stations within a 30-mile radius and of FM stations within a much greater radius. The antenna is shipped complete with 6 plastic strap insulators (Model HS-36) and 25 feet of twin-lead for attachment to a home amplifier or to a TV receiver. TV/FM 4-SET AMPLIFIED COUPLER**MODEL HSA-44**

The new JERROLD amplified 4-set coupler Model HSA-44 is a printed circuit amplifier employing a 6DJ8 frame grid tube and is designed to feed up to 4 TV or FM receivers from a common antenna. Minimum gain is 0.5 db at each of the four outputs. Model HSA-44 operates on an input as low as 100 microvolts, has an excellent noise figure and high isolation (13 db) between outputs. "DE-SNOWER" PREAMPLIFIERS

Mast-Mounted "De-Snower" Model DSA-202 with Remote Power Supply

JERROLD "De-Snower" preamplifiers provide the high gain and low noise figure necessary to deliver "snow-free" TV pictures and "hiss-free" FM sound to your TV/FM receiver. These mast-mounted units bring your TV/FM set to the antenna to take full advantage of extremely weak signals by overcoming noise pick-up and antenna lead-in losses.

Each "De-Snower" is shipped with a remote power supply (to be placed at any easily-accessible location) which provides low-voltage ac power to the preamplifier and acts as a feed-thru for amplified signal from the preamplifier to the receiver. Only one cable is necessary to carry ac power up to and amplified signal down from the preamplifier to the power supply.

"De-Snower" preamplifiers will improve color TV reception and boost TV/FM signal strengths in all fringe areas. See SPECIFICATIONS chart to determine which model is best suited for your particular needs.

"TRAP-EASE" TUNABLE INTERFERENCE TRAPS

BEFORE

AFTER

Eliminate adjacent channel interference, permit reception of weak, distant stations normally blocked by a strong local channel.

"TRAP-EASE" KNOCKS OUT ADJACENT CHANNEL INTERFERENCE. This tunable "deep notch" antenna trap (greater than 50 db) permits TV viewers to remove "beat" or "herringbone" patterns caused by adjacent channel sound or video carriers. Permits clear reception of even weak distant stations.

Works with any TV receiver and any 300 ohm antenna that would normally bring in pictures from the distant stations if the interfering adjacent channel was not on the air. Does not affect reception of regularly viewed channels.

MODEL
U2V

UHF Converter Model U2V
Pulling UHF pictures out of the snow where other converters haven't a chance, the U2V mast mounting mixer head converts right at the antenna. The UHF oscillator is mounted at the amplifier location (or at the TV receiver for individual home installation) and sends local oscillator signals up to the mixer, (a technique developed in radar installations). Signals leave the mixer as VHF so coaxial cable may be used. The U2V will convert any UHF channel to any VHF channel. Order by specifying UHF channel to be converted to a specific VHF channel. \$82.17 Net

Only a few minutes are required to convert the Mosley TA-33 Trapmaster Beam for operation on 40 meters. When installed on the driven element, the TA-40K will exhibit a typical figure eight pattern obtained from a half wave antenna yet 10, 15 and 20 meter operation is totally unaffected. TA-40K incorporates the famous construction and design features used in the Mosley Trapmaster Antennas which assure years of trouble-free performance. Because of the mechanical strength of some antennas as well as the differences in elec-

trical design, the TA-40K is not recommended for use on any antenna other than Mosley Trapmaster.

SCALA PRECISION TV ANTENNAS

- * FOR TRANSLATORS & CABLE SYSTEMS
- * TRANSMITTING & RECEIVING

5 & 10 ELEMENT YAGIS Channels 2 to 13

HIGH GAIN: Scala single channel yagis give maximum possible gain evenly distributed throughout the TV channel. They are designed to give flat response across the channel—no peaks that look good on a field strength meter at the sacrifice of signal information.

LOW NOISE LEVEL: Every precaution has been taken to eliminate the generation of noise within the antenna: welded feed points, one-piece boom and parasitic elements, no mechanical splices, no outside sleeving that can corrode causing noise generation later; the gain and low noise factor remain stable for the life of the antenna.

EXCELLENT MATCH TO TRANSMISSION LINE: VSWR is held within an average of 1.45 to 1. Yagis available with either 300 ohm balanced termination or 72 ohm coaxial termination (at additional cost). The 72 ohm antennas use Scala's exclusive trouble-free balun design. Choice of N type, UHF, or Jerrold connector on 72 ohm models.

PERFORMANCE CHARACTERISTICS: Horizontal beam width, 5-element models 48° to half-power point; 10-element models, 40°. Front to back ratio exceeds 18 db for all models. Beam width can be narrowed either vertically or horizontally by stacking two yagis; it can be further narrowed on one plane or narrowed on both planes by stacking four or more yagis.

MAXIMUM DURABILITY: Scala HDCA models are heavy-wall seamless 6061-T6 aluminum: 3/4" OD tubing for parasitic elements, 1.050" OD pipe (0.113 wall) for boom. Terminals

HDCA-5 ALUMINUM YAGI, 72 OHM MODEL. Also available in steel (Model HDCA-5).

HDCA-10, 10-element model not shown, available in aluminum only, has same rugged construction features, added bracing where required.

are stainless steel. Elements are mounted to boom by heavy machined castings, ribbed at stress points. The antenna to mast support clamp has two U-bolts. All castings have double set screws. No welds which can anneal and weaken aluminum are depended upon for mechanical support. Maple dowels are inserted for vibration damping in channels 2 through 6 aluminum yagis. For very extreme weather areas, Scala 5-element yagis can be ordered with machine steel elements and boom (Model HDCA-5).

EASY ASSEMBLY: All Scala antennas can be assembled in a few minutes. All necessary hardware is included. Steel yagis, 10-element yagis, and 5-element aluminum yagis for channels 2 to 6 are equipped with a 2-U-bolt clamp for fastening to a 2" to 2 3/8" OD circular support. The 5-element channels 7 to 13 aluminum yagis have a single U-bolt clamp for mounting the antenna to a 1" to 1 1/2" pipe (two U-bolt clamps for 2" to 2 3/8" pipe available at extra cost).

PARAFLECTOR® Channels 14 to 83

THE SCALA MODEL PR-450 PARAFLECTOR® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 Mc range. Essentially a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 Mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

ELECTRICAL SPECIFICATIONS: Gain of the Paraflector® on channel 14 is 16 db higher than that of a half-wave dipole. At the higher frequency channels, this gain increases and exceeds 17.5 db at channel 83. Horizontally polarized, the horizontal beam width is 30 degrees to the half power point, and vertical beam width is 22 degrees. The antenna is available with a termination of 72 ohms or 52 ohms.

MECHANICAL SPECIFICATIONS: Aperture—36" x 67". Mounting—Antenna fastens to a 2" to 2 3/8" circular support. Connectors—N type to mate to UG 21/BU or equal. Wind thrust at 100 mph with 1/4" radial ice is 303.5 lbs. Net weight 25 lbs. (approx.). Shipping weight 75 lbs. (approx.).

Why you get better performance with Scala Antennas —

* BUILT-IN BALUN

(pat. pending)

Provides a balanced feed system assuring equal distribution of current to the driven element, greater electrical and mechanical stability. The balun allows the driven element to be supported by metal and eliminates the necessity of using the insulator as a mechanical support.

* BUILT-IN HEATER

Most of the antennas described below can be obtained with a 24 volt heating system for maximum weather protection and assured winter operation.

* TESTING AND INSPECTION

Each antenna is tested twice for impedance match — once during manufacture and again prior to dis-assembling for shipment. New models are field-tested for one year before released for production.

** Shipped complete — all U-bolt mounting clamps and brackets are included. Unit is ready for installation.*

* RUGGED CONSTRUCTION

Elements are supported by machined castings providing a larger support area, damping vibrations and reducing the concentration of stress and metal fatigue. Mechanical splices are never used. All units are available in metals other than aluminum if desired.

* PROPER STRUCTURAL DESIGN

A machined casting, webbed for extra strength and structural support is used to hold parasitic elements in the ground plane antenna. Set screws and lock nuts provide simple assembly and easy installation.

1 MODEL CA5-150

2 MODEL CA5-450

3 MODEL GPC-150

4 MODEL OG-6

5 MODEL PR-450

1 YAGI — VHF

The Scala Model CA5-150 is a 52-ohm 5 element yagi. Nine db gain on the major lobe is assured by careful design and Scala's exclusive feed system which eliminates radiation from the feed line and provides equal distribution of current to the driven element. The VSWR is less than 1.3 to 1. For complete weatherproofing and year-around operation, the boom can be provided with a 24 v heater. The unit is anodized and dichromate sealed.

2 YAGI — UHF

The Scala Model CA5-450 general communications antenna is a product of years of extensive research. Its construction is possible only because of developments in foam plastics and Teflon insulated cable. A Teflon insulated balun is located within a chamber filled with a special foam plastic for complete moisture and corrosion protection. High strength 7/16" solid aluminum rod is used for the parasitic elements. VSWR is less than 1.3 to 1. Gain is 10 db. Two units may be mounted in an array for an increase in gain up to 3 db and greater directivity. Shipped completely assembled, the unit is anodized and dichromate sealed.

3 GROUND-PLANE — 40-170 MC

The Scala Model GPC-150 ground-plane antenna is ideal for non-directional, all weather communications. It is the first ground-plane antenna that can be obtained with 24 v heaters throughout — including the radial elements, providing a completely weatherproof and safe year-round operating antenna. Another version of this unit, comes equipped with a reflector and provides a cardioid radiation pattern with increased gain. In all cases the VSWR is less than 1.3 to 1. The unit is anodized and dichromate sealed.

4 OMNI-DIRECTIONAL GAIN ANTENNAS

Scala's Omni-Directional Gain Antennas — 150 Mc and 450 Mc — use half-wave independently fed radiators. Model OD-4 (150 Mc) provides 4 db plus gain over dipole; Model OD-6 (450 Mc) 6 db plus gain over dipole. All elements at DC ground supported by metal. Extremely rugged anodized aluminum construction. Shipped ready for installation.

5 PARAFLECTOR® — 350-1000 MC

The Scala Model PR-450 Paraflector® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 mc range. Essentially, a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

EXACTING DESIGN — TESTED MATERIALS — PRECISION MANUFACTURE

In addition to the antennas described above, and other standard communications, telemetering and community systems, Scala maintains a complete engineering service to design and manufacture special antennas to your specific requirements.

Tenna MIRACLE YAGI and CONICAL ANTENNAS

NEW MIRACLE REFLECTOR YAGIS

The finest, most powerful and best performing TV antennas on the market. Ideal for color reception. Covers all VHF channels, 2 through 13. The Miracle Reflector system consists of one reflector spaced 0.15 wavelength behind, and in the same plane as the rear driven element of the array; two reflectors are mounted above and below the driven element, 0.10 wavelength behind it. The two reflectors are spaced like the first two elements in a corner reflector, but are non-resonant and tuned for high directivity. In this way, the finest possible front-to-back ratio is achieved across the maximum number of channels. Antennas feature all-aluminum construction with 1" boom and 3/4" dipoles with reinforced elements where required. Powerful "Sure-Grip" mast clamp and positive spring-loaded elements clamps. Reflector reinforced with aluminum dowels. Low wind resistance.

STATUS CONTROLS—(ROOM TYPES)

Fig. A. No. A-701-2/- Room Status Control — Automatic. This Room Clerk unit is 3-board type. Has room Maid control of status.

Fig. B. Room Unit for A-707 Automatic may include Radio controls, Message light. For A-L3, light under Jack allows Maid to monitor her signal to office; see Room Unit, facing page.

Fig. C. Leamertronic No. A-L2-2/100 Manual Status Control, 100 rooms. This Room Clerk, Cashier Combination Panel has two separate columns of switches, a Registration File, and Maid Call lights (see insert). Up to 1,000 or more, rooms can be accommodated, upon order. Steel panel is hinged.

AMERICAN COMMUNICATIONS CORPORATION builds Status Controls to suit a variety of uses. Originally designed to speed room rentals in hotels and motels, special models may serve other needs for instantaneous sequential control and monitoring in hospitals (for bed status, between Head Nurse, Cashier and Housekeeper); factories, laboratories (production, process control); missile centers (data checkout); etc.

Operation of both Manual and Automatic types is exemplified in hotel/motel Guest Room Control units shown here. Both types show the renting status of rooms: green light indicates to Front Office, Cashier and Housekeeper that a room is Available; yellow, that room is Occupied; red, that room is Out of Order — awaiting change.

Color switching (status control) is accomplished by the flick of a switch (Manual types, Figs. C, D) or the touch of a luminous button (Automatic type, Fig. A). Each office may have its own Control, with 3 (or 4) lights and a switch for each room, Fig. A, or Front Office and Cashier may share a Combination Board, or panel, Fig. C; only Front Office section has name Registration File. Monitor Boards (lamps only) can show management the rental status at all times.

Where System wires into guest room a Room Unit (2-gang plate w/jack, and perhaps lamp) is supplied for each room; or, where the wiring of an existing facility is used, for economy, Room Unit may be made part of present plate, as Fig. B or the ultra-modern type for luxury occupancies, Fig. E.

Manual Room Status Control — Model Leamertronic. This simple and efficient design is available in three types:

A-L1-2 (2 board), A-L1-3 (3 board), 3 light. Is not connected to rooms by wire.

NEW "BLINK LIGHT" MODEL features MAID control:

A-L2-2 (2 board), A-L2-3 (3 board), 4 light. Connected to guest rooms by wire. Room Unit has jack only; Front Office and Housekeeper Controls have a 4th light that shows "white" when Maid plugs into room jack (Maid can then be paged in this room, over room radio speaker, by Housekeeper or Front Office).

A-L3-2 (2 board), A-L3-3 (3 board), 4 light. Wired to guest rooms. Room Unit has jack and light; Front Office and Housekeeper Controls have a 4th light. Both lights blink "white" when Maid plugs into room jack (Maid can then be paged), and change to steady the instant Maid signals, by plugging further into jack, that room is ready. See Fig. B.

- (t) Manual — A-L1-2/- , \$35.00; A-L1-3/- , \$40.00.
- *A-L2-2/- , \$44.90; *A-L2-3/- , \$49.75.
- *A-L3-2/- , \$51.80; *A-L3-3/- , \$56.95.

Automatic Room Status Control — Model 707. This facility includes relays which permit remote control of status on Control Boards: Inspectress or Maid, by room keyswitch or button, can change color to green when ready. Also, Front Office unit may include Totalizers that constantly show total occupancy and rental.

- (t) Automatic — *A-707-2/- , \$58.40;
- *A-707-3/- , \$63.40.

(t) Above Net Prices, per room, are less connecting cable, and labor, but including Power Supply — and, where necessary (*), Room Units — for 1 to 100 rooms. Applicable discount per any number of additional rooms upon request. Literature available.

Fig. E. No. A-ELP1 Electroluminous Panel. Operates on A-C. Diffuses a night-light glow in room. Mounts on standard outlet box. Manufactured to order.

Fig. D. No. A-L2-2/100 — Housekeeper panel. Hinged at base of frame, like Combo. panel (left). No. A-L3 would have almost identical appearance; A-L1, with only 3 lights, would be slightly less wide for same number of rooms. Panel is Console, Surface or Flush mounted.

AUDIO / VISUAL / SIGNAL SYSTEMS & PARTS FOR HOTELS — MOTELS — INSTITUTIONS

SIGNAL MAIL RACK & MESSAGE-AT-DESK

AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The Mail (and Message) Rack Signal System is comprised of numbered pockets, one for each room (or other unit), and a lamp and switch for each pocket, Fig. A. Each pocket is wired to a guest-room. When clerk files mail (or messages) in pocket, he switches on a corresponding lamp; simultaneously, a duplicate lamp in the remote room lights, and remains lit until guest acknowledges the signal, Fig. B.

A new 2-Way model, No. A-MR2, with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest, and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

The Message-at-Desk Signal System is identical with the Mail Rack System, except that there are no pockets — only lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described. Figs. C, D.

The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with shelf at top of each pocket for room key, Fig. E.

If guest room is not wired for radio, a separate wall plate, Fig. B, is provided for the signal lamp; otherwise, it can be included on the radio control panel (See Room Unit at bottom of page).

Long-life lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front. A metal stop strip across the back of each row of pockets, in the standard or No. A-MR3 Mail/Message Rack, permits insertions only from front. Model shown in Fig. A is for 100 rooms, but units can be built to suit 1,000 or more.

They may be made for Flush-wall (recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to wiring. Power Supply unit (included) is controlled by a switch. House signal wiring carries only low, safe voltage.

AMERICAN'S No. A-22X/- Multi-conductor Cable is used between boards, and No. A-19/2 Twisted-pair is used for house wiring to remote Room Units.

Fig. A. No. A-MR2/100 Mail/Message Rack, standard type, with stop strip and shelf at top of each pocket for room key. A designation strip below each row of lamps and switches identifies each room.

Fig. E. No. A-MR3 Mail/Message Rack has Key Shelf at top of pocket.

SPECIFICATIONS — Signal Mail/Message Racks

Standard finish, velvet black enamel. Material is steel. Standard pocket measurements: approx. 8" deep x 7-3/4" high (incl. 1-1/8" for Key Shelf, where used) x 2" wide. Specify whether wiring termination board is to be placed at left or right end of Rack.

MAID CALL SYSTEMS

No. A-MC-A/- is Visual type. Maid plugs into room jack, which lights a lamp on a Light Panel in Housekeeper's office. Maid can then be paged if installation includes paging facility. Light goes out when Maid removes plug from jack. This System includes Room Jacks, Maid Plugs, No. A-MC Light Panel (with lamps only), Power Supply and wiring.

No. A-MC-B/- *Blink Light type. This newest design makes room recovery extremely rapid, through its amazing Maid Monitor and Housekeeper "Blink Lights."

Soon as Maid enters guest room she plugs into Maid Jack on Room Unit. Immediately, a tiny light under the jack slowly blinks on and off; at the same time, a second light blinks on Housekeeper's Light Panel, indicating "Maid in room". Housekeeper can now page Maid if paging is provided.

Room Unit for No. A-MC-B/- Maid Call System. "Blink Light" confirms Maid's signals.

When Maid has readied room, she plugs all the way into room jack, then removes plug. Maid's light now goes out but Housekeeper's light changes to steady-on — "room ready"; she can switch light off at her convenience (but circuit will accept Maid's next signal).

Installation includes Room Jacks, Maid Plugs, No. A-MC1/- Light Panel (with lamps and switches), Power Supply, Blinker Unit, and wiring.

Room Clerk can use a No. A-MC Light Panel to monitor room status shown on Housekeeper panel.

SPECIFICATIONS

Maid Call Light Panels are built for Desk, Flush, or Surface mounting, in sizes to suit needs. Material: steel; standard finish: gray Hammettone enamel. Designation strips identify rooms. Lamps have long operating life, on 24 V. circuit.

MASTER RADIO OR TV ANTENNA SYSTEM (& CATV)

Installation requirements for an AMERICAN COMMUNICATIONS Master Antenna System whether for Radio or TV—or both—mainly depend upon field signal strength and local interference. A field-strength survey must be made to determine whether the received signals are sufficiently strong and reasonably "clean"

If TV signal strength in the area is low, a weatherproof No. A-BA Broadband Booster Amplifier (shown mounted on mast) located at the antenna may be used, for an additional 25 db gain on all VHF channels; power supply and Off-On control are a separate, remote unit, No. A-BAP (not shown), which may be up to 500 ft. distant. Input and Output, each 300 or 75 ohms. Terminals permit use as Broadband, High-band, or Low-band Amplifier.

The Radio signals are fed to the Centralized Radio System, and the TV signals are distributed to the various TV risers.

TV signals on UHF channels may be converted to unused non-adjacent VHF channels by means of a No. A-U/V-C Converter (not shown); its UHF Mixer head mounts at antenna, and delivers VHF signal to remote oscillator. Specify the UHF and VHF channels. Converters are also available to cover VHF High to VHF Low, No. A-V/V-C.

To deliver adequate signal strength at each TV outlet, it usually is necessary to use low noise, high gain, head-end amplifiers, one for each channel. A No. A-CH/- TV Amplifier Strip is shown here. A group of up to 7 such channel amplifiers can be assembled in one steel cabinet, No. A-C/CH/- (not shown here).

No. A-CH/- TV Channel Amplifier.

No. A-BA TV Booster Amplifier.

For Community Antenna TV (CATV) installations, special towers, high-gain directional antenna arrays, and low-noise amplifiers can be supplied. For Coaxial Fittings, see last two pages.

No. A-CR Centralized Radio Rack, complete.

The control center of AMERICAN COMMUNICATIONS' "Channelized" Radio System is the No. A-CR Rack Unit shown here. Signals from the Antenna System are fed to the Rack-and-Panel assembly, and then to remote speakers (guest rooms, public areas, etc.) through a system of properly selected cable and matching components as specified by the Supervising Engineer.

No. A-CR Rack can be modified to suit requirements. The standard Rack, however, is comprised of 4 AMERICAN No. A-300C AM Crystal-controlled Radio Receivers, 1 No. A-300T AM Tunable Radio Receiver, a panel-con-

CENTRALIZED RADIO SYSTEM

No. A-300C Radio Receiver.

trolled No. A-P/M Preamp/Mixer (for mixing a high-impedance microphone and phonograph), Monitor Speaker, power supplies and controls, and Timer. The Radio Receivers deliver a minimum of 35 watts audio power. (Additional amplification, if needed, is incorporated in a second Rack.)

If the tunable receiver is a No. A-300T (for FM reception), the house manager may tune it, like the A-300A AM Radio Receiver, to a continuous-music station for background music, available to guest when he switches to this channel—within the operating hours automatically controlled by the Timer.

The Monitor Speaker (optional), hinged to Rack, has same response as room speakers for true check of programs as received in guest rooms. Switching permits its use on background-music, P.A., etc.

If Rack is to be used with AMERICAN'S Emergency Alert System, the standard model will include 8 hermetically-sealed relays—one each for the 5 radio receivers, one in preamp/mixer, one in the automatic timer circuit, and one in a booster amplifier circuit. These enable remote Emergency Alert equipment to assume control and deliver to all the loudspeakers a suitably high signal whenever needed, regardless of off-on status of Rack, room speaker channel-selector switch, or P.A. system.

Rack can include additional facilities, as for example switching into Muzak or other wire line, or use of tape or record player, for background music. For Stereo FM reception, using a multiplexed FM station as the source of both stereo channels, a Stereo Multiplex Adaptor is added to the existing FM receiver, and the two resulting audio channels are fed to stereo equipment.

Receivers are high-fidelity type, with push-pull output. The No. A-300C Radio Receiver is shown here; No. A-300T, and -F, have same physical dimensions and general appearance. Several features make these re-

ceivers exceptionally reliable and efficient: (A) the single electrolytic capacitor is plug-in type for servicing convenience; (B) circuits are triple-fused (one each for power line, filament supply, high-voltage supply); and, (C) voltage regulator tubes limit surge potentials to safe values. For trouble-free performance over long periods of continuous operation in commercial service, only close-tolerance, high-quality components are used, and operated within wide safety margins, in a ruggedized receiver design.

SPECIFICATIONS

Rated audio output, 35 W. Each Receiver has a Selector Switch, knob-controlled from front of panel, for selection of (1) Radio; (2) Microphone or Phonograph; and, (3) Muzak, or other wire line.

DOCTORS CALL BOARDS

No. A-DCB/- Doctors "IN" or Call Board. Also available w/Message Signal, Intercom, etc.

Shown here is AMERICAN'S Doctors Call Board, flush-mounting type. Sizes and mountings to order. May be used wherever rapid, convenient check-in and check-out are wanted.

A column of switches at left of a column of translucent designation strips permits doctors to indicate whether they are on duty. Upon arrival, each moves his respective switch to "On." This "IN" Board can be operated by a Receptionist, instead. As doctor may arrive at an Entrance door, and leave by an Exit door, a second or "OUT" Call Board must be provided at this Exit.

Call Boards less switches can be provided for Head Nurse and Superintendent's offices, to show doctors on-duty status.

Doctors Call Board is also available with Message-at-Desk facility — without requiring additional wall space! The lamps under a name strip slowly blink off and on until this message signal is acknowledged.

Another Call Board model provides Intercom facility. This allows physician to receive his message without delay; upon leaving, he can give special instructions to front desk (usually, remote from exit).

Still another model is double-sided, so illuminated name can be seen from both Doctor's side of Call Board and from Telephone Operator's side.

SPECIFICATIONS

No. A-DCB/- Doctors Call Board (illus.) is 3 ins. deep; other dimensions as required. Steel panel swings outward, as do the individual nameplate panels (for change of names or lamps).

No. A-DCB2/- Doctors Call Board includes Message Signal.

No. A-DCB3/- Doctors Call Board includes Intercom.

No. A-DCB4/- Doctors Call Board, double-sided, with names readable from both sides, but switches on only one side. Net \$8.50 per name.

AUDIO/VISUAL (SILENT) PAGING SYSTEM

No. A-A/VP-D Decoder, Audio/Visual (silent) Paging System. Has 4" numerals.

No. A-A/VP-E 3 3-bank Encoder, for Audio Visual (silent) Paging System.

Designed for use with a Call Board, AMERICAN'S Audio Visual Paging System presents an efficient means of personnel paging in hospitals, department stores, schools, hotels, factories, offices, etc.

In operation, a designated person (Telephone Operator, for instance, in a hospital) sets up on a desk-top Encoder, the call number assigned to a person (doctor or nurse) whose attention is wanted. This can be any number from 1 to 999 per bank of push-buttons. This number then instantly appears in the window of remote readout indicators or Decoders, wherever located. The called person can acknowledge the call in a variety of ways — house phone, intercom, etc.

Encoder No. A-A/VP-E/3 shown here has two additional banks of buttons which permit two additional calls to be set up at the same time, and by automatic switching, each will be signaled, in sequence, 20 seconds after the preceding one. Or, by operating a switch, any one of the three sets of numbers can be held in view and shown steadily until acknowledged.

A jack on the front skirt, for microphone, permits audio paging, emergency instructions, etc. A pilot light indicates the "ON" condition. Encoders may be located in sev-

eral offices, and Decoders at any number of remote points.

SPECIFICATIONS

Encoder—No. A-A/VP-E/3, 3-bank, is a desk-top unit in metal housing. Dimen., approx. 11 x 5 3/4 x 14" deep. Operates on 115 V., 60 cv. A-C.

Decoder No. A-A/VP-D is a signal speaker assembly in metal housing approx. 25 (incl. flanges) x 5 3/4 x 15 1/2" deep. This unit is surface-mount type; other types of mounting can be supplied. Speaker is 5" PM type in an acoustic chamber designed for maximum intelligibility. Readout unit display: numerals 4" high that are readable at over 60 ft.

BUILDING ALERT SYSTEM

AMERICAN'S Emergency Alert may also be used with AMERICAN'S Building Alert System (particularly suited to apartment building complexes), in which the warble tone is fed to outdoor speakers to summon the patrolman on the beat, if any emergency arises.

PRE-SIGNAL FIRE ALARM SYSTEM

The Emergency Alert warble-tone signal is also part of AMERICAN'S Pre-signal Fire Alarm System designed to protect hospitals, schools, hotels, etc., against panic due to sounding of general evacuation bells by operation of heat detectors or manual break-glass stations. A Control Panel Assembly connects these detectors or manual stations to the warble-tone signal box, allowing an attendant in the occupancy to exercise judgment as to the urgency of the alert before sounding the general alarm.

EMERGENCY ALERT SYSTEM

The undulating, siren-like tone of AMERICAN'S (patented) automatic electronic Emergency Alert System commands instant attention in an emergency.

The control center of the system is a conveniently located Emergency Alert unit resembling a Fire Box. In operation, operator breaks glass covering switch, and moves switch to SIREN or TALK. In either case, remote relays (usually about 7 in number) take over the amplifiers and loudspeakers in the related radio and P.A. systems, and the priority electronic siren or emergency instructions are heard at high level in guest rooms and public areas, regardless of the sound program previously being received, and even if set is off.

Mounted on the front of the Emergency Alert steel box are the SIREN-OFF-TALK switch in a glass-covered recess, a chained hammer, red pilot light, dynamic microphone (for issuing emergency instructions), and an instruction card. Within box are the electronic siren, audio power amplifier, spare tube, power supply, connecting strip, and a relay.

System operates in conjunction with AMERICAN'S Channelized Radio System, which contains the necessary remote relays and special wiring.

GENERAL SPECIFICATIONS

No. A-EA Emergency Alert unit. Steel signal box, enameled in Chinese Red, measures approx. 15 x 15 x 5" deep; has knockouts for conduit. Supplied equipped as described. Fully fused at 5 A. Operates on 115 V., 60 cy. A-C.

No. A-EAR Relays, for Emergency Alert installations. Multipole, to suit audio circuits into which they connect. Coils operate on 24 V. D-C. Heavy contacts. Hermetically sealed. System quotations upon request.

No. A-EA Emergency Alert signal box has electronic siren with warble sound.

CLOSED-CIRCUIT TELEVISION

CCTV may be combined with AMERICAN'S Status Control System, for instantaneous sequential control and monitoring of manufacturing processes from remote points.

Equipment is sold separately, or as a complete installation — either outright or rental. Prices depend upon installation requirements, and quotations will be supplied upon request.

FINANCING

AMERICAN COMMUNICATIONS CORPORATION can arrange financing of its Systems installation and/or equipment, including TV Receivers.

AUDIO / VISUAL / SIGNAL SYSTEMS & PARTS FOR HOTELS — MOTELS — INSTITUTIONS

ANNOUNCING — American's Newest Invention *TV THEFT ALARM

Newest contribution by AMERICAN of electronic facilities for more economical hotel/motel operation is the TV Theft Alarm, available in three models:
A-TV-TA/A, for use with portable TV sets using so-called "rabbit ear" or built-in antennas;
A-TV-TA/B, for use where signal is fed to set via a TV outlet and master antenna system.
 Both above types employ a coded carrier radio alarm signal.
A-TV-TA/C, the third model, is for use where installation includes wiring to Front Office, as when Message-at-Desk system is available.

Basically, each operates on the same principle: any unauthorized attempt to remove a TV set from a guest room results in an alarm in the room and at the front office.

This alarm originates in and is controlled by an Alarm Control (illustrated) installed in each room. The TV set plugs into the Control which in turn will transmit either a carrier-RF alarm or a wire alarm the instant the plug of the TV set is removed from socket, the TV power cord is cut or the master antenna connection is removed from set.

The alarm signal is a loud, insistent, intermittent buzzing, from within the Room Control, which cannot be stopped until measures have been taken to check-out the alarm by management, which has been alerted by a duplicate signal at the front office.

This office signal is dual — the loud buzz above mentioned, and a flashing or blinking light. Where the occupancy employs AMERICAN'S Message-at-Desk system, the message light may be utilized as the intermittent light signal, as an added economy and convenience; otherwise, an RF carrier decoder and blink light are used.

In either case, re-set of the Alarm Control to "alert", after an alarm has been given, can be made only at the Control in the guest-room, after the Control has been unlocked. The Alarm Control mounts directly on the wall outlet box.

Purpose of the code is to identify the building in which the alarm is originating, where the installation involves two or more buildings.

Quotations upon request.

A-C Power Supply, \$350.00; A-MTS-1 Add-A-Board, for 24 phones, \$150.00; A-FP French-style Desk Phones, \$25.00.

MICROPHONE MIXERS

AMERICAN'S A-6M Portable Microphone Mixer has inputs for 6 low- or high-impedance microphones, individual gain controls (mixers) for each of the 6 microphones, master gain control, Cue jack for headphone monitoring of broadcast-quality program material, pilot light, separate Bass and Treble electronic tone controls, and "Off-On" switches for each of two power supplies (one for service and one for standby).

The 6 mixers work from individual low-noise pre-amplifiers into the master gain control; gain is adequate for remote operation.

Output is +15 dbm; gain, 55 db; frequency range, 30-15,000 cy./sec. ±1 db.

No. A-10M Portable Microphone Mixer (not shown) for 10 microphones is similar in construction.

*AUTOMATIC WAKE-UP ALARM

One of the newest of AMERICAN'S inventions in fully-automated electronic facilities especially designed for the hotel/motel trade is the A-WA-1 Automatic Wake-up Alarm System; a portion of its Master Control Panel is shown here.

Smaller, less expensive and more versatile and efficient than its predecessor, the A-WA Wake-up Alarm, AMERICAN'S A-WA-1 consists of a guest-room signal, and means for initiating this call signal at any quarter-hour within a 3-hour period — for example, 6 to 9 A.M.

Operation is simple: Room Clerk or Telephone Operator plugs into a guest-room Time Jack, on a small Master Control Panel, which corresponds (within 15 minutes) to the wake-up time requested by the guest. Operation is now fully automatic — Wake-up Alarm "remembers" calling time and sends a calling message at the proper time to the correct room.

The calling signal is both visible and audible: (a) at 2-second intervals a light blinks at both the office control panel, and in guest room; and, (b) in one model a recording advises guest to "shut me off" and in another a buzzer sounds. When guest pushes a button (alongside blink light on night stand), signal light goes out in guest room and on office panel, and audio signal stops.

Though guest's switch is now in his "off alarm" position it is still electrically in a circuit "on alarm" position so Clerk or Operator can signal next guest.

SPEAKER SWITCHING CENTER

Problem: Provide a means of controlling 43 high-fidelity loudspeakers in a large public room, so room can be partitioned into 5 acoustically isolated areas and specific sound programs directed only to these areas. **Solution:** AMERICAN'S No. A-SC/43 Speaker Switching Center. In this example, 43 5-position (and OFF) switches are shown mounted on a metal panel outline-marked to show the available 5 area divisions — a Stage and 4 Ballrooms — of a Main Ballroom. This design is applicable to any number of rooms.

In this No. A-MD/MP/65, a Message-at-Desk signal is provided to 65 rooms, plus control of speaker volume in 6 public areas, with choice of music or paging in these areas at controlled volumes.

harman kardon**COMMERCIAL SOUND DIVISION****BUILT BY SOUNDMEN FOR SOUNDMEN****COMMANDER SERIES****MODEL DA-35**
35 Watts — 4 Channels

Exceptional PA workhorse with unique input and control arrangements that provide remarkable installation and operation flexibility. Has two microphone channels, one of which incorporates a switched equalized input for magnetic phono cartridge and the other offers an alternate high sensitivity input (0.175V) for tuner, recorder or Xtal/ceramic phono. A third channel

is available for still another high level, aux. program source (0.35V sensitivity); the control for this channel useable optionally as Master Volume. An exclusive fourth "MIX" channel permits **one-knob** fading and also **blending** of a microphone with any high level source such as tuner, recorder or Xtal/ceramic phono. Two high level programs can be similarly mixed. Ideal for lectures, demonstrations, entertaining, etc. where such convenience leaves the user free to operate additional equipment simultaneously. The DA-35 is rugged and built for continuous duty; stable under all conditions. Other valuable facilities include individual cut/boost treble and bass controls; there is an output to a tape recorder, independent of tone controls; separate on/off switch to avoid upsetting controls; 4/8/16/150 ohms and 25V bal., 70V unbal. constant voltage outputs; 2 speaker sockets plus screw terminals, switched AC convenience socket; fused. Response 20-20,000 cps ± 2 db, fundamental hum and noise 80 db below rated output. Dimensions 15 $\frac{1}{4}$ "W, 6"H, 10 $\frac{3}{4}$ "D; shipping weight 23 lbs. \$119.95.

MODEL DA-100
100 Watts —
LoZ Microphone Input

No other popular price 100 watt amplifier like it! Has same input arrangements as described for DA-35, except that one of the microphone channels is equipped with a 3-pin mike receptacle (use Amphenol ± 75 -MCIF plug) for use with either high or low impedance microphones; on-

chassis socket for plug-in mike matching transformer. The output to a tape recorder is independent of both the master and tone controls. Separate master volume control is employed. Outputs are 4/8/16/50 ohms; also 25V and 70V constant voltages, both available unbalanced and balanced for greatest installation flexibility. Special circuitry prevents damage to the amplifier due to open or short-circuited loads, and performance is exceptionally stable under all operating conditions. All solid-state, full-wave voltage doubler power supply with 4 stages of filtering provides unsurpassed regulation, hum-free plate current and less heat. Response 20-20,000 cps ± 2 db; fundamental hum and noise 85db below rated output. Dimensions: 18 $\frac{1}{4}$ "W, 6"H, 11 $\frac{3}{4}$ "D; shipping weight 35 lbs. \$189.95.

Microphone input transformers for DA-100:

XT-1 30-50 ohms C. T., \$18.50 ■ XT-2 120-250 ohms C. T., \$18.50 ■ XT-3 500-600 ohms C. T., \$18.50 ■

MODEL DA-12
12 Watts — 3 Channels

An excellent and highly reliable moderate-power amplifier. One microphone input (hi Z) with gain control, plus two inputs for tuner, tape recorder, Xtal/ceramic phono operating through a "fader" control for smooth electronic switch-over. Master Volume control is provided and a 4-position filter adjusts system to best operating and acoustical conditions, including an "anti-feedback" position to help achieve max. sound output. Special high level 500 ohm output for feeding local or remote power boosters, or may be used to record. Response 30-20,000 cps ± 2 db; fundamental hum and noise 75 db below rated output. Dimensions 15 $\frac{1}{4}$ "W, 6"H, 10 $\frac{3}{4}$ "D; shipping weight 18 lbs. \$75.00.

MODEL DPR-7 Mixer-Preamp
4 Channels — 7 Inputs

A quality mixer-preamplifier worth much more than its cost. Four channels, with multiple inputs all switchable at the front panel: 1st channel mic/mag. phono, 2nd channel mic/aux, 3rd channel mic/aux, 4th channel has mic input and its control can be optionally used as Master Volume. The DPR-7 has its

own AC power supply; audio output is low impedance cathode follower permitting long line runs to the main amplifier when necessary. It can be flush mounted in a wall or panel; is also free-standing. Multi-stage filtering and DC on the tube filaments insure hum and distortion free response. The DPR-7 is the perfect instrument for expanding the number of inputs of a sound system, or for controlling several additional program sources from a remote location. It can also be used to directly drive a basic power amplifier. Dimensions: 5 $\frac{1}{2}$ "H, 11 $\frac{1}{2}$ "W, 5 $\frac{1}{2}$ "D; shipping weight 11 lbs. \$75.00.

**No matter what price level . . .
if it's a NEWCOMB,
it's DEPENDABLE!**

Sound installations vary greatly in their needs of complexity as well as requirements of cost. Yet, one important feature is required of all — dependability. No matter how complex, or how simple and inexpensive your needs may be . . . you can enjoy utmost dependability by insisting on a Newcomb amplifier for your sound system. No product bears the name Newcomb unless it is inherently dependable, no matter on what price level you find it. Under the Newcomb name there is only one standard for quality . . . the best! Newcomb amplifiers vary in their complexity, but never in dependability. Quality of parts, materials or workmanship are never sacrificed here to gain lower price. Lower cost of one Newcomb model as compared to another is always entirely the result of greater simplicity.

SOUND PRODUCTS

The RCA CONSUL SERIES Sound Amplifiers

The Consul Series represents the ultimate in flexibility and versatility in moderate priced sound equipment, for conventional applications as well as those requiring a wider choice of installation and operating facilities.

Whatever the application, you will find the correct choice in an amplifier from among those shown on this page. The three amplifiers described here provide a choice of power rating from 12 to 100 watts, all engineered to RCA's traditionally high standards of quality and performance to assure life-like reproduction from microphone, radio, record player, or tape input.

The phonograph top and combination mixer/preamplifier are custom engineered to work in perfect harmony with any Consul Amplifier or with your present sound system.

The Consul Series is the result of sound but imaginative engineering resulting in a product which represents a departure from the usual limitations and restrictions commonly associated with other than "deluxe" or custom engineered sound systems. Ruggedly constructed for continuous duty, the Consul Series is capable of performance and dependability far beyond that expected of such moderately priced equipment.

CONSUL 12

12 WATT PA AMPLIFIER
Type 17649

Dependable high quality sound reproduction is offered from this efficient unit. Rugged, versatile, and economical, the Consul 12 is ideal for use in low power public address systems, paging, garages, taverns, auctions, churches, amusement parks, and outdoor facilities.

The Consul 12 provides a low level, high gain channel, with gain control, for microphones of either the high impedance or quality dynamic type. Transformers are available for matching to low impedance microphones and telephone lines.

A second channel is provided for connection to a high impedance phono cartridge, tuner or tape recorder output. Since it employs a "fader" type gain control, two such program sources may be connected to this channel and controlled individually with a single knob for rapid switchover between two program inputs, further simplifying control action. A master volume control is also included for adjustment of amplifier power output without disturbing the gain settings. A four-position switch adjusts system frequency response for best characteristics for music, voice, program noise, and acoustical feedback conditions. A special signal source is available to drive a line or booster amplifier or tape recorder. Separate on-off switch permits the system to be turned off without disturbing control settings.

\$88.50*

CONSUL 35

35 WATT PA AMPLIFIER
Type 17650

The Consul 35 is an attractively styled, medium power amplifier, designed for simple operation and reliable performance. Excellent for speech reproduction, music, or paging, the Consul 35 will perform admirably both indoors and out, in auditoriums, ballrooms, churches, and schools.

Two low level, high gain channels and one high level channel are provided. Channel 1 may be used for a magnetic phono cartridge or a microphone of the high impedance or dynamic type, and line transformers are available for matching to low impedance microphones and telephone lines. A gain control is included.

Channel 2 affords a choice of microphone, or input from a tuner, tape recorder or phono cartridge. By means of a special combination mixer/fader/gain control, this may be mixed with another program source (channel 3) from a tuner, tape recorder or phono. It is thus possible to "fade" between channels 2 and 3 as well as mix and blend the two programs with one hand.

A master volume control is included, to preserve program source balance and gain settings when adjusting system power output. Individual, completely variable Bass and Treble cut/boost controls make it possible to meet practically any operating contingencies. A signal source is also provided for tape recording independent of the amplifier master volume and tone controls.

\$135.00*

CONSUL 100

100 WATT PA AMPLIFIER
Type 17651

The Consul 100 is an extremely versatile, highly efficient, high power amplifier designed to provide maximum sound amplification in hospitals, industrial plants, auditoriums, hotels, churches, etc.

This superb amplifier incorporates the same features, facilities, and operational advantages found in the Consul 35, with two low level, high gain channels and one high level channel.

Unique input and control arrangements permit an unusual degree of operational and installation flexibility.

For example, the Consul 100 features three channels which will accept inputs from a magnetic phono cartridge, tuner, tape recorder, or microphones of the high impedance or dynamic type. It will also accept inputs from low microphones and telephone lines through use of available line transformers.

In addition, inputs from two channels (2 and 3) may be mixed by means of a special mixer/fader/gain control making it possible to "fade" between channels as well as mix and blend two programs with one hand, single control action.

The Consul 100 also features a master volume control, individual, completely variable Bass and Treble cut/boost controls, separate power switch and pilot light. A signal source is also provided for tape recording independent of the amplifier master volume and tone controls.

The extra reserve power of the Consul 100 insures cool-running, trouble-free performance under any load condition; permits future expansion without resorting to additional booster amplifiers. A real work-horse, the Consul 100 provides 100 watts of power at a much lower price than you would expect.

CONSUL COMBINATION

Mixer-Preamplifier Type 17654

This exceptional combination unit is designed for use with any sound system, fulfilling the need for additional channels and providing a practical way to expand a sound or recording installation. Completely self-contained, the Consul Combination permits remote control of multiple program sources.

Seven inputs are provided, five low level high gain, and two high level. Channel 1 offers a choice of microphones or magnetic cartridge in-

put; Channels 2 and 3 each provide a choice of microphone or input from tuner or tape recorder and crystal or ceramic phono player. All are switchable from the front panel, thereby making it possible to use these inputs at will without having to rearrange input connections. Channel 4 is another microphone channel, which is convertible to a master volume control for the entire mixer by a front panel switch.

The Consul Combination features adjustable re-set indicators for all controls eliminating the need to log or remember previous settings. Low impedance output permits long line runs to the main amplifier or to a basic power amplifier, and delivers sufficient voltage to drive several amplifiers simultaneously. Output to a tape recorder is also available and an auxiliary AC power receptacle is included.

CONSUL PHONOGRAPH

TOP Type 17653

This excellent unit, designed for the rugged dependability required of all public address system components, will mount directly on top of the amplifier, or by itself at some remote location. It provides four

playback speeds and has a built-in 45 r.p.m. adaptor.

The Consul Phonograph Top features a turnover ceramic cartridge for maximum resistance to high humidity, temperature, and salt laden air. The tonearm can be secured to the base for safer portability when not in use and standard styli are used for easy replacement in the field. A separate power switch is used to turn the phonograph on and off.

PANEL LOCK COVERS

Attractive, sturdy metal panel covers are available, complete with lock, for each of the Consul Series Amplifiers. These covers are a must to guard critical system balance and volume settings against accidents and tampering. The amplifier pilot light may be viewed at all times with the cover in place and locked on the front panel. No screws or other adjustments are necessary to install.

One Model Meets Every Requirement

Setting a new standard in quality, design and performance, the new TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets every intercom need of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

ONLY THE TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" GIVE YOU ALL THESE FEATURES

- **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS**—Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non-private" to others, and retain full communication facilities.
- **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, you reply.
- **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.
- **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy". All units have facility to override "busy signal" for important calls.
- **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.
- **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.
- **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.
- **EXTERNAL RELAY CONTROL**—A standard built-in feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. For use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth.
- **RECIPROCAL POWER SUPPLY**—Each Master operates on 110-120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the Masters in the system can operate without being plugged-in.

ATLAS SOUND

ATLAS PAGING AND TALK BACK SPEAKERS

All speakers approved by Federal Civil Defense Administration.

All New Designs of HU and CJ type speakers are now equipped with the versatile "Versalock" mounting bracket. This new rigid, rugged and reliable bracket is completely adjustable on both a horizontal and vertical plane: Efficient: these speakers are especially efficient in the voice frequency range and provide the extra "punch" that overrides high level background noise. Talk Back: designed to offer a maximum of efficiency in talk back application. All HU type speakers are constructed of aluminum. All parts are chemically processed prior to final finish in gun metal grey, high gloss, high temperature baked enamel. The CJ type speaker horns are constructed of non-resonant indestructible fiber glass. All models are 100% weatherproof under all climatic conditions.

Type HU speakers are excellent for all paging and talk back systems where the utmost in efficiency is to be obtained. Ideal as replacements for inefficient cone type speakers that are usually inadequate for inter-com systems. ATLAS driver unit type paging speakers can be depended upon to offer at least three times the sound level of a small cone speaker at a given power input.

All models are double sealed against all weather conditions in all climates. The response is flat and uniform and free from peaks that often cause acoustic feed back and poor intelligibility. The larger type HU speakers such as the HU-24N offers an advantage in improved low frequency response and as a result is often adequate for the reproduction of music in non-critical industrial and amusement park areas.

Type CJ speakers are similar to the HU type but have the advantage of a wide angle sound dispersion characteristic. The one

piece fibre glass horns are non-resonant and will resist the most adverse weather conditions.

Type TP two-way speakers offer bi-directional sound coverage from a single source. The universal mounting permits the dual horns to be faced downwards or outwards from a wall surface at a 10° angle. Excellent for long corridors where one driver unit can do the work of two. Saves on installation costs. The larger TP-24N with oversized horns offers lower response and added efficiency.

Model DU-12 DéCor speaker combines the intelligibility, directivity and high efficiency of a driver unit type speaker with modern high styling that will harmonize with the most ultra modern décor. Finished in natural brushed aluminum.

Model DC-5 DéCor speaker is identical in outward appearance, size and mechanical details to the DU-12 described above. However, this model is equipped with an efficient 5" diameter cone speaker in place of the driver unit type reproducer. The cone type radiator will reproduce low level voice and music in a pleasing and natural manner. Fine for use in churches, hotel lobbies, restaurants and all quiet locations where appearance must be carefully considered.

The "positive lock" bracket of the DU-12 and DC-5 permits the speaker to be directed on either a horizontal or vertical plane. Connections feed thru the bracket and all wiring, transformer, etc. are concealed behind the canopy. The canopy is equipped with adaptor strap for electrical outlet box or for direct mounting on a wall or ceiling surface.

ATLAS DR PROJECTORS

NON-RESONANT—STURDY—WEATHERPROOF

Atlas DR projectors are the result of many years of acoustic research. This costly engineering and elaborate tooling has resulted in projectors that are without acoustical or mechanical equal. All acoustical sound paths are clean and uniform without steps or pockets to disturb the normal function of the horn. These critical design features eliminate conditions of turbulence, frequency cancellation and resultant signal distortion. All models are equipped with a heavy duty "U" bracket. This bracket is securely fastened to a main body casting which will not fail when subjected to extreme conditions of stress, strain and vibration.

ATLAS "FULL GRIP-VELVET ACTION" MICROPHONE STANDS

NO SLIPPING—NO RATTLE—NO NOISE—NO SCRATCHING—NO WEAR

The "Full Grip" clutch is standard on all models—it offers an extended length clutch body, permitting a secure, full hand grip. The clutch mechanism of all "Velvet Action" stands is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping or sudden dropping. All chrome plated surfaces are carefully polished prior to plating to assure a uniform "Super-Chrome" wear resistant, lifetime finish. All threads on tube assemblies are individually inspected to assure a perfect fit when assembled to the base castings. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most effective. All bases include self leveling, shock absorbing base pads, plus three additional "anti-tip" points located between the base pads. All models terminate with a $\frac{3}{8}$ "-27 thread at the microphone end.

MS-10C Economy model suitable for most applications where a low cost stand is required. Offers adequate base stability for average weight microphone.

MS-12C Similar to above but increased base weight offers an added advantage. Flat design of base is modern in appearance and is finished in a dark gun metal shrivel finish. Equipped with base pads to absorb shock.

MS-11C Full chrome design. Entire stand base and upright tube assembly completely finished in "Super-Chrome." Excellent for use where fine appearance is a requirement. An excellent choice for use with full chrome plated microphones. Equipped with base pads.

MS-4 Three section telescoping microphone stand permitting a wide variation of adjustment. Can be adjusted from 26 inches to 61 inches in height. Excellent for use in schools, etc. where it is necessary to adjust the stand over a wide range of height adjustment. Minimum collapsed length offers convenience in transportation.

MS-20 DeLuxe model. Maximum stability suitable for use with heavy, expensive microphones. Large oversize tube assembly, $\frac{7}{8}$ " diameter telescoping tube, $1\frac{1}{8}$ " diameter base tube, base diameter 12 inches. Oversize clutch assembly assures secure locking adjustment. Top adaptor included for $\frac{3}{8}$ "-27 microphones.

MS-25 Professional Microphone Stand. The ultimate in microphone stands. Features the "Safety Air Lock Cushion." This sensational feature prevents any accidental or sudden slippage of the telescoping section. If the clutch mechanism is accidentally released the stand cannot suddenly crash down—thus prevents damage to the microphone from severe mechanical shock. The telescoping section is at all times "cushioned on air" and the controlled escapement of air will only permit a slow smooth and quiet collapse of the stand. Base finished in a combination of chrome and shrivel. Heavy duty tube assembly, $1\frac{1}{8}$ " and $\frac{7}{8}$ " combination— $\frac{3}{8}$ "-27 top adaptor.

MS-11S - MS-12S Automatic "Sleeve Action" models. A fully automatic means of adjusting the height of the stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered—cannot change its position without a deliberate pressure on the actuating sleeve control. Two models full chrome base or shrivel finish.

CS-1 Fully collapsible, portable stand quick and simple to set up. Collapsible to a minimum overall length of 23 inches.

CS-42 Collapsible base stand. All the advantages of portable type stand without the loss of stability inherent in cast iron base types. When legs are extended they are securely locked in position. Upright tube assembly full chrome, base finished in grey shrivel, base pads provided. Packed: One complete stand to a single shipping carton.

CS Type Demountable Microphone Floor Stands—with full grip—"Velvet Action," fully collapsible—quick and simple "Come Apart" base design. This new and revolutionary design in microphone stands is ideal for fixed as well as portable applications. Excellent for use when it is desired to contain the stand within the amplifier or speaker carrying case. The stability of the assembled stand is equal to many types employing heavy cast iron base construction. The base legs are easily removed to permit minimum size, lightweight transportation. The spring lock leg-holding mechanism of this ingenious design offers a quick and simple "Come Apart" feature. No tools or screw fastenings are required to hold the base assembly together. No small parts to become lost. The self-leveling legs are chrome plated, tipped with skid-proof rubber shock absorbent bumpers—eliminates vibrational conductivity... protects polished floor surfaces against damage.

GENERAL PURPOSE MICROPHONES

Unidirectional Line Microphone

MODEL 644 SOUND SPOT—Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening, making it the most directional microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.

Cancellation from the rear and sides exceeds 20 db giving practically complete rejection of unwanted sound. This feature gives the most rejection of random noise in any microphone commercially available except E-V Model 643. Reverberation and feedback are vastly lower than any other microphone, allowing much greater leeway in loudspeaker placement.

The effective front acceptance angle is 45° each side of center giving best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than all other microphones.

Frequency response is smooth from 40 to 12,000 cps. High output: —53 db. Dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure diecast zinc with 3/4" aluminum tube. Rear diameter 2 3/16", length 16". Cable is 18'. Weight, 2 lbs. 9 oz. List Each.....**\$110.00**

MODEL 848-45—With 45-ohm voice coil. List Price **\$84.00**

Projector Horns

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

EXCLUSIVE COMPOUND HORNS permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area for uniform coverage. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

MODEL FC100—Similar to the famous CDP, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn, or concentrating high-frequency horn (HC1000) can be substituted for small diffraction horn. Large horn is of fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 cps. Mouth size, 10½" x 20½", depth (less driver), 20". Net Wt. (less driver), 10¾ lbs. Shpg. Wt., 12¼ lbs. List Price **\$50.00**

MODEL AC100—Concentrating version of CDP. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Diffraction high-frequency horn (HD1000) can be substituted for concentrating horn for flexible coverage control. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 cps. Diameter, 21"; depth (less driver), 21"; Net Wt. (less driver), 11 lbs. 6 oz. Shpg. Wt., 13½ lbs. List Price **\$47.00**

MODEL HD1000—Diffraction horn for converting AC100 to wide-angle (60° x 120°) coverage above 1,000 cps. Shipping Weight, 1½ lbs. List Price **\$6.00**

MODEL HC1000—Concentrating horn for converting FC100 to concentrated (30°) coverage above 1,000 cps. Shipping Weight, 4 lbs. List Price **\$10.00**

NEW REENTRANT HORNS provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die cast mounting plate plus precision die cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Versatile Convertible Drivers

Now, for the first time, here are drivers that can be used interchangeably in compound or reentrant horns. Used on either type of horn, the new Electro-Voice Convertible Drivers feature highest efficiency available. Increased power handling plus extra increased efficiency make the 40 and 50-watt drivers uniquely useful where high power at minimum cost is essential. The high efficiency of all E-V Convertible Drivers is achieved without resorting to "peaked" response which may increase loudness, but does reduce intelligibility. The smooth response of these drivers insures most natural reproduction of voice and music for more satisfying quality with vastly reduced feedback problems and greatly increased tonal range. Double flux ceramic magnets provide long-lasting high efficiency in entirely new low-loss magnetic circuits. Edgewise-wound ribbon voice coils give 18% more efficiency. The drivers are rugged and weatherproof; conversion to either reentrant or compound use can be made instantly in the field. Voice coils are also field replaceable, thus reducing repair costs to a minimum. E-V Convertible Drivers are available with 16 or 45-ohm voice coils or with built-in 70.7-volt line constant voltage transformers. This entirely new design concept gives better performance at minimum cost, making E-V Drivers your best buy.

They provide highly effective acoustic transformers improving the bass, transient response, dispersion, dynamic range, and definition far beyond the ordinary capacities of your speaker. They have consistently outclassed all other approaches in their ability to satisfy the most discriminating. As a result they are without a doubt the most highly recommended loudspeaker enclosures available at any price. Unexcelled for stereo use. Will outperform systems many times their size.

RELATIVE SIZES AND APPLICATIONS

KARLSON '15'—Enclosures for 15" Speakers

33" high, 22½" wide, 18" deep, wt. 80 lbs. This is the outstanding choice of the real experts. Better bass than even a horn 30 feet long with a 1½ foot mouth diameter—PLUS—unexcelled tonal definition and wide area presentation makes this the finest enclosure available at any price. Use for finest home and professional stereo and monophonic high fidelity systems. Excellent for electronic organs, musical instruments, theatres, studio monitors, music festivals and wherever the very best is required.

KARLSON '12'—Enclosures for 12" Speakers

24¾" high, 16¾" wide, 13¾" deep, wt. 44 lbs. This enclosure is ideal for those who want the biggest and best stereo sound available in a compact system. Its dynamic range in bass is only slightly less than the Karlson '15' and certainly much greater than mammoth systems costing many times more. Very efficient, doesn't need super power amplifiers for good bass. Suitable for almost all types of installation, including built-ins due to their small size.

SPECIFICATIONS AND FEATURES

All Karlson enclosures employ the basically new Karlson acoustic transducer (Pat. nos. 2,816,619 and 2,896,736) for greatly extended bass, ultra-uniform wide angle dispersion for all speakers in excess of 120°, and highly improved transient response, efficiency, dynamic range and signal definition. Cone break up and distortion is practically eliminated. Amplifier loading is resistive giving excellent control. Dynamic range in bass varies with size, with the larger units quite capable of filling the largest auditoriums with sound. High frequency response only limited by tweeter used. No tuning required with any speaker.

All enclosures may be mounted either vertically or on side with suitable loose footing provided for the Karlson '15' and '12' enclosures.

SELECTING A SPEAKER

The Karlson enclosures are designed for use with the finest extended range, coaxial, and triaxial speakers. Works best with high compliance speakers having a good linear suspension, strong magnets and smooth very extended tweeters. Separate tweeters may be mounted in the larger enclosures. Mechanical resonance not critical, no tuning is required.

Jensen Professional Series Speakers

8" SPEAKERS FOR DISTRIBUTED SOUND

VALUE ENGINEERED FOR LOWEST INSTALLED COST

This new line of Jensen 8-inch Professional Series loudspeakers is specially designed to meet the exacting rigorous demands of commercial sound service. The 8-inch size is ideal for the majority of all distributed sound systems giving more than adequate low frequency range with a minimum of enclosure and mounting complications.

A complete line of speakers value engineered for lowest installed cost with such features as the handy 10-pack, preattached transformers, exclusive solderless connectors, weather and corrosion resistant designs . . . and many more. A wide selection of models

to meet every need—from the lowest cost highly competitive application to the most sophisticated, highest quality system. Four conventional type speakers with varying sensitivity and power rating (magnetic energy) with the typical 90° coverage angle. One model has dual cone radiating system with 95° coverage angle and unusual high frequency range. A sixth basic model is an 8" coaxial with 110° coverage angle and unusual frequency range and smoothness for the finest quality and intelligibility. This 110° coverage angle provides approximately twice the coverage area, so fewer are required for a given installation.

PREATTACHED TRANSFORMERS

The six basic models mentioned above are all available with preattached 25-volt or 70.7-volt "constant voltage" transformers, Models 25CV4 or 70CV4. Factory attachment insures lower cost to the end user.

AVAILABLE IN HANDY 10-PACK

All of these speakers are available at added savings and convenience bulk-packed ten per carton (with or without transformers). These handy 10-pack cartons have individual sleeves for each speaker thus giving speaker protection of odd lots until actual installation.

KWIKON* INSTANT CONNECTORS

Simply twist bare ends of two 12" input leads supplied for each speaker to incoming signal cable leads. Insulate with wire-nut or tape. Slide sleeve clips onto input terminal lug of speaker or preattached transformer as speaker assembly is raised into place. KWIKON* instant connectors also provide simple fast power tap readjustment on transformer. *T.M.

"CONSTANT VOLTAGE" TRANSFORMERS

Specially designed for use with the popular "constant voltage" distribution systems. Primary (input) windings are center-tapped for balanced-to-ground input circuits or for special circuit needs. Tapped secondary windings provide adjustment of power to the 8-ohm speaker in 3 db steps from 1/2 watt to 4 watts. Nominal core size 3" x 3/4". Two 3/8" dia. mounting holes on 2 3/8" centers. Available separately or preattached to these special 8-inch speakers.

JENSEN HYPEX* PROJECTOR HORNS

These projector horns are acoustically coordinated in design for best performance with HypeX* Driver Units D-30, D-40 and DD-100A, any one of which may be used on any the of horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant baked tan enamel finish. Horns are threaded 1 3/8"-18 and may be used with any driver units with this thread. Sturdy steel mounting "U" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunion clutches.

(See separate description and specifications on RT-20 Rectangular Horn).

HYPEX* LIFETIME DRIVER UNITS

Jensen HypeX Lifetime Driver Units have many features which contribute to increased performance and reliability. As a result Lifetime Guarantee is extended against failure under normal conditions of use!

All driver units are threaded 1 3/8"-18 and may be used with all HypeX Projector Horns. They also make ideal replacements for other driver units, improving efficiency and power rating.

Specially shaped reinforced plastic diaphragms. Voice Coils are varnish wound and baked, resulting in a rigid assembly that is indestructible in normal use. Models D-40 and DD-100A have precision self-centering moving system assemblies. External leads connect to heavy binder screw terminals; strain reliefs on all units.

MODEL RT-20 RECTANGULAR HORN

These versatile horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 5' 9 1/2", giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

| Number of Units | Horizontal Coverage Angle |
|-----------------|---------------------------|
| 1 | 80° |
| 2 | 125° |
| 3 | 170° |
| 4 | 215° |
| 5 | 260° |
| 6 | 305° |
| 8 | 360° |

Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves out-

ward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3". Fits all Jensen driver units and horns. Net weight, 1/2 lb. Shipping Weight, 3/4 lb. BV-1—List Price \$15.00. Net Each \$9.00

JENSEN COMPLETE HYPEX* PROJECTORS

HF-100A WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty 8" "woofer" feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit. Horn outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester in matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

Jensen VH-91A and VR-11 Hypex* projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico-5 magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

MODEL VH-91A HYPEX* PROJECTOR

Equipped with new universal mounting bracket for adjustment in any direction and secure locking with a single wing nut. Extremely rigid vibration-proof clamping allows three hole flange mounting on flat surface, single hole mounting with ½" lag or machine screw through center, or mounting on top of standard ½" pipe.

MODEL VR-11 HYPEX* RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

LINE TRANSFORMERS

CONSTANT VOLTAGE: UNIVERSAL IMPEDANCE—

MATCHING TYPES—Individually Boxed
CONSTANT VOLTAGE LINE TRANSFORMERS for matching speakers to 70.7V or 25V constant voltage line. This method greatly simplifies matching several speakers to an amplifier, especially when the speakers must produce different amounts of power. The most complicated matching problem can be solved by adding the power required by all speakers and comparing to the rated power of the amplifier. These transformers are of the highest quality of response and efficient use of power.

These cabinets are made in two pieces, the cabinet itself, and the easily removable front panel. This construction, while essential for proper performance, allows for easy removal or installation of the speaker, as well as the changing of the grille cloth to fit the decor. The specially designed sound curtain will not deteriorate with use as many other materials will. Also this curtain retains its proper position and configuration even after excessive handling, for it is held in place by the mounting bolts and the struts on the back of the cabinet. These enclosures are specifically designed for optimum reproduction with the Oaktron coaxial speakers Models CA8-HD and CA-12.

SOMETHING NEW IN BAFFLES. This entirely new approach combines unique design with optimum sound quality. These baffles are engineered to possess extreme strength under all conditions of humidity or dryness. The sides, top and bottom are formed of one piece of tempered presdwood, riveted together at the top to a steel plate, which also acts as a wall hanger. The front baffle board is secured to the sides by riveted steel angle brackets. This highly rigid construction eliminates all vibration.

GENERAL PURPOSE MICROPHONES

"COMMANDO" ALL-PURPOSE MICROPHONES

The new Commando series represents a significant achievement in providing quality performance at nominal cost. These dramatic looking, rugged microphones can be used indoors or outdoors. Models 415 and 430 provide practical versatility of operation. They can be held in the hand, set on a floor stand or on a desk stand — can be inserted or withdrawn from the stand in a second, without the use of any tools. Model 420 is of more compact design and is intended primarily for use as a lavalier microphone. It is readily detachable from its lavalier clip for use as a hand held unit. Coupled with this versatility of usage, the Commandos are ideal for general-purpose applications where both voice and music reproduction are of critical importance. Commandos can be used for tape recording in the home; theater-restaurant public address systems; lecturing; paging and dispatching systems; interview-type shows; outdoor public address systems for carnivals, picnic and special events.

All three units are ruggedly constructed of attractive, non-reflecting gray, impact resistant polystyrene. The lower part of Models 415 and 430 are of die cast zinc with a satin chrome finish.

The Commandos are omni-directional units with a frequency response of 60-10,000 cps. They are controlled magnetic units and are unaffected by extremes of temperature and humidity. Models 420 and 430 are equipped with readily changeable pin jacks for a choice of two impedances (L — 150 to 250 ohms and H — High), without soldering.

MICROPHONE ACCESSORIES

QUICK DISCONNECT MICROPHONE ISOLATION UNITS

Designed for use with microphones normally mounted on desk or floor stands but which must be periodically removed from stand for hand-held or carry-around use. In addition, because of a molded rubber insert, the adaptors effectively isolate the microphones from mechanical vibration, shocks and noises carried to the microphone through the desk or floor stand. Quick disconnect operation is instant, easy, and silent. Made of aluminum and anodized for beauty and long wear despite frequent handling. Model A45 is designed for microphones incorporating an isolation assembly such as the Shure Models 556, 330 and 546. Model A47 is designed for microphones with connectors such as Shure Models 55S, 51, 545S, 540S, 737A or nearly all microphones with a standard $\frac{5}{8}$ "-27 thread.

MODEL ID-20 (20 watts) For speech and music systems requiring moderate sound power output, and where performance with economy is a primary consideration. Designed to deliver maximum output, the ID-20 utilizes its efficiency to the best advantage, producing a substantial "punch" with clear, penetrating sound.

MODEL ID-30 (30 watts) Redesigned version of the world famous MA-25—ideal for installations requiring single medium power units or multiple driver/horn arrangements. The ID-30, with its unusually wide upper midrange response (up to 7500 cycles), produces musical balance and noise penetration far in excess of higher-cost competitive models. Completely weatherproof with tropicalized 2" voice coil and breakdown-proof linen base diaphragm. A top value!

MODEL ID-40 (40 watts) Latest, maximized version of the famous, earlier Model SA-HF, often referred to as the "workhorse" of the sound industry, and widely used by high fidelity manufacturers and audio hobbyists as well. Extended high frequency response and excellent efficiency assure an essentially uniform response characteristic for pleasing, natural reproduction of speech and music, while delivering that extra "punch" needed to cut through heavy noise. Tropicalized and weatherproofed, the ID-40 can be relied upon to give continuous top-flight performance under adverse weather conditions.

MODEL ID-40T (40 watts) Offers the same power capacity, efficiency and frequency response as the ID-40, and incorporates a built-in line-matching transformer. The transformer terminal plate is inside the rugged, die cast aluminum housing; entrance is made through an exclusive watertight dural gland nut, assuring positive weatherproofing after connections have been made. Terminals are labeled in impedances and in wattage consumed on "constant voltage" lines. Transformer impedances: 45/122/250/500/1000/2000 ohms. 70 V. line power taps: 40/20/10/5/2.5 watts.

MODEL ID-60 (60 watts) The premium compression driver in the world famous University line. Ideally suited to applications requiring the greatest power handling capacity, maximum efficiency, widest range frequency response, and rugged construction that will withstand a lifetime of hard use. Extra large, super-power all-

Alnico V exclusive "W" magnet eliminates full 50% of reluctance losses normally present in other designs. Minimum gap width gives lowest leakage, and maximum gap flux density, resulting in peak electromechanical efficiency. Use of rugged overcast assures utmost durability even when abused or in hazardous environment. Watertight voice coil terminals are located at the base of the housing, for added convenience and greater dependability. Without question, the ID-60 is the finest wide range, high power Public Address driver unit ever offered.

MODEL ID 60T (60 watts) Similar to the ID-60, but with high-impact plastic over-cast, the ID-60T includes a husky built-in line matching transformer, with its terminals immediately available at the base of the driver housing. Ideal for rental work requiring repeated set-up and dismantling of equipment, and for semi-permanent systems where changes in the number or location of speakers are likely to affect line impedance requirements. Transformer impedances: 16/80/165/250/500/1000/2000 ohms. 70 volt line power taps: 60/30/20/10/5/2.5 watts.

"UNILINE"* SOUND COLUMN SPEAKER SYSTEMS

A Division of Ling-Temco-Vought, Inc.

UCS-6

NEW UNIVERSITY UNILINE ACOUSTICALLY TAPERED SOUND COLUMNS REDUCE ACOUSTIC FEEDBACK AND REVERBERATION TO INSIGNIFICANT LEVELS . . .

application:

UNILINE Sound Columns have been designed to provide complete sound coverage in large outdoor and indoor environments, solving difficult microphone and speaker placement problems by virtually eliminating the possibility of acoustic feedback and reverberation. UNILINE Sound Columns feature High 'A' (high audibility), optimum fidelity for music and speech, plus exclusive acoustic tapering to assure uniform sound volume from the front-row of an auditorium to the last row.

concerning sound columns in general:

Essentially, a sound column is a series of "point" sound sources each of which radiate equally in all directions—an in-line radiator using multiple speakers, one above the other, to provide broad horizontal dispersion and narrow vertical dispersion. The shape of the beam, therefore, is similar to that of a fan held horizontally, its apex representing the source of the sound. As a result of its restricted vertical dispersion pattern, the sound is placed only where it is needed, avoiding reflections from the floor and ceiling to reduce acoustic feedback and reverberation.

concerning UNILINE sound columns in particular:

Theoretically, then, all sound columns should perform with equal success—but only theoretically. There are two reasons why UNILINE Sound Columns can outperform all other types. Reason number one—the quality and the design of the UNILINE's speakers. By means of specially designed transducers, University has resolved the conflict arising from the simultaneous requirements of large speakers for high power handling capacity on the one hand, and small speaker diameter

for optimum point source behavior and widest horizontal dispersion on the other. By so doing, University can offer sound columns with the highest power handling capacity in the industry, while maximizing the advantageous directional characteristics of sound column design.

Reason number two—acoustic tapering. The vertical directionality of conventional sound columns tends to become too narrow at high frequencies, making it difficult to place the speaker so as to produce equal volume at all frequencies. Because the length of conventional sound columns is "increased," acoustically, at higher frequencies, and because the longer the column the narrower the vertical beam, some method must be used to "decrease" the length. University's exclusive acoustic tapering, the most perfect method yet devised to prevent excessive high frequency beaming—completely eliminates this imperfection. By using speakers whose response rolls off at high frequencies at the ends of the sound column, the effective length of the column at high frequencies is reduced, so that the proper amount of vertical dispersion is maintained at all frequencies. The result is uniform coverage in breadth, and in depth.

Another characteristic of UNILINE Sound Columns is High 'A'—high audibility—as evidenced by the considerable decrease in distortion UNILINE provides to improve intelligibility and greatly increase listener comfort. This is particularly noticeable when standing or sitting close to the sound source. More conventional high powered speakers tend to blast under similar circumstances.

Therefore . . . for optimum dispersion at all frequencies, for uniform sound level within the beam, for music and speech indoors and out . . . for all high reverberation areas . . . specifications and performance reveal that there is only one best line of sound columns—it is UNILINE.

With UNILINE, loudness is the same for a listener located anywhere in the auditorium.

A MUST FOR STEREO RECORDING

Most stereo recorders do not provide facilities for pre-erasing both tracks

Tape Head Demagnetizer — Model HD-40M (For Tape Recording Heads)

Permanent magnetizing of recording heads during normal use of tape recorders is a common occurrence. Magnetized heads cause high noise level and harmonic distortion.

The HD-40M Head Demagnetizer, when properly used, removes any residual permanent magnetism from the heads. It consists of a heavy duty alternating current electromagnet with an extended pole piece designed for easy access to the recording heads of most tape recorders. When energized, contact of the demagnetizer pole piece with the pole tip of the recording head causes the head to be saturated by an alternating magnetic field. Gradual removal of the head from this saturating field neutralized any residual permanent (DC) magnetism in the recording head.

- Removes permanent magnetism
- Reduces noise level
- Reduces harmonic distortion
- Improves signal to noise ratio
- Insures high frequency response
- Reduces hum of tape head
- Special finish on pole piece prevents marring recording head surfaces
- Rating 117 volts AC, 1 AMP.
- FINISH: High impact molded epoxy
- SIZE: 4" Long x 1¼" Diameter
- WEIGHT: 7 ozs.

HIGH FIDELITY LOUDSPEAKERS

from the audio research center of the world

T-7 LOUDSPEAKERS

featuring the revolutionary TICONALTM VII voice-coil magnets (30% more powerful than alnico V)

Truly among the world's most efficient loudspeakers, NORELCO T-7 units provide sound of professional calibre at all listening levels — and with less power (and subsequently, less distortion), than all other speakers of their type. Ticonal-7 steel alloy makes the big difference in efficiency; NORELCO-designed dual-cones and magnet systems let you hear the difference — unexaggerated bass and transient response, topped by clean, beautifully transparent high frequency reproduction. Listen to the sound — then examine the price tag. Only Philips of the Netherlands, the audio research center of the world, could have guild-crafted these speakers to give you the 'cleanest sound around' at such moderate cost.

NOTE: Where quality is the prime requisite but economy is an important factor, the NEW Norelco 12", Ferroxdure Ceramic AD-4201M/77* is the ideal solution.

NORTRONICS magnetic tape heads—original equipment on most major brands of tape recorders!

Designed to offer the highest quality performance and long, dependable service, Nortronics heads have long been "first choice" for most of the nation's major tape recorder manufacturers. Featuring the same sophisticated design and advanced production techniques as used on all Nortronics heads, these all-metal face heads provide: 1) Improved tape-to-head contact for increased high frequency response. 2) Smoother, harder surface to reduce friction, promoting more uniform tape motion and less flutter. 3) Reduction of magnetic oxide loading of head surface by the tape. 4) No build-up of static charge, since entire face is at ground potential.

PRODUCTION RUNS—Our capability and long experience as the Nation's largest manufacturer of laminated heads is your assurance of on schedule delivery of large production runs, consistent in quality to meet or exceed your specifications.

NEW! SERIES "L" MINIATURE HEAD

These compact, Series "L" miniature heads have a laminated core structure and all-metal face with hyperbolic contour. Face measures only 5/16" x 5/16"—head depth is just 3/8". Available in record, record/play, and erase types for track widths from .012" to .060"—inductances up to 500 MHY—and gap lengths from 50 micro-inches up. Base or rear mount types, available with terminals, or lead connections.

• NORTRONICS NEW HYPERBOLIC CONTOUR—Eliminates need for pressure pad on record/play heads in machines which have sufficient tape tension and wrap—greatly extends head life—increases tape contact pressure on the gap. May be used with normal capstan power (and corresponding pressure roller force) available in conventional pressure pad design recorders.

Efficiency . . . flexibility and operating ease . . . with the recording quality that has made Presto the world's foremost name in professional sound recording equipment. All models accept standard tape reels up to 10 1/2" and operate at 7 1/2 and 15 ips or 3 3/4 and 7 1/2 ips. The A908 amplifier has less than 1% total harmonic distortion at +20 dbm, from 25 to 20,000 cps.

Model 800 . . . basic, high quality, 1/4" monophonic recorder, easily converted to stereo by replacing the head assembly and adding another A908 amplifier.

Model 825 . . . 1/4" recorder, quickly and readily convertible to accept 1/2" tapes by merely interchanging recording heads and adding another A908 amplifier.

Model 850 . . . full convertible recorder, equipped with 3 or 4 stacked A908 amplifiers; for 4 channel 1/2" tape recording; can be changed from 1/2" to 1/4" operation (or vice versa) in a few minutes by changing the head assemblies. All 800 Series Recorders are available in portable, console and rack-mounted models.

BAS-101 — **Stereo Broadcast Automation System.** Starting-point of program tape cues in each selected transport. AUTO-POISE AUTOMATIC TONEARM

Only Rek-O-Kut AUTO-POISE, world's first automatic tonearm, can meet the critical requirements of the new, very high compliance cartridges.

At the touch of a button, Auto-Poise (1) lifts the arm from the rest and places it on the record as the turntable starts; (2) disconnects completely from the tonearm during play so that the arm is completely independent; (3) lifts the arm and returns it to the rest after the record is finished and (4) shuts off the turntable.

REK-O-KUT BOOKSHELF SPEAKER SYSTEM

3 SPEAKERS IN ONE COMPACT WALNUT ENCLOSURE

The Audax CA-60 is small enough to fit into existing compactly spaced bookshelves, yet can be used as a free-standing unit. True 2-way system (2 six-inch woofers and a separate tweeter) in an acoustically-engineered enclosure. Cabinet is finished in oiled, hand-rubbed walnut on 4 sides. Brushed aluminum grille in an attractive parabolic shape gives unit a character which blends with a variety of surroundings.

Although the CA-60 is true bookshelf size, it achieves quality of sound reproduction wholly consistent with the high fidelity reproduction of many larger systems. Unit is a "powerhouse" despite its size. Handles 20 watts of integrated program material. More clean bass than any structure of its size and price. Speaker delivers more than enough sound for any average living room with as little as 5 watts amplifier power.

Connects to amplifier—phonograph—radio or T.V.!

ROBINS INDUSTRIES CORP. FLUSHING 54, N. Y.

GIBSON GIRL® TAPE SPLICERS & ACCESSORIES

Robins Gibson Girl® Tape Splicers are the accepted standard of the professional and industrial users of recording tape. They have gained this reputation because of their ease of operation. The high standards of workmanship assures reliability. They are the only splicers which actually cut a diagonal joint in the tape and trim the splicing tooth and tape edges with an indented trim

cut, making "THE SPLICE WITH THE GIBSON GIRL® SHAPE". These slight "waists" formed in the tape prevent adhesion from contacting critical parts of the recording mechanism and prevent layer to layer adhesion. Adhesive deposited on tape guides, etc. is a frequent cause of wow, flutter, and erratic performance.

Gibson Girl® Tape Splicers are Available in Six Models.

GIBSON GIRL® "STEREO 4" • SERIES MAKES PROFESSIONAL SPLICES IN SECONDS!

NEW! Precision-engineered tape splicers that meet critical requirements of splicing 4-track stereo tapes. Operates equally well on single and 2-track tapes.

Stereo Dynetic

high fidelity "integrated" tone arm and cartridge

... FOR STEREO PERFECTIONISTS
... FOR CRITICAL BROADCAST
AND RECORDING APPLICATIONS

NOW! Improved Performance.

The overwhelming first choice of perfectionists who appreciate the full importance of "integrated" tone-arm and cartridge to optimum stereo performance. Tracks at incredibly light $\frac{3}{4}$ to 1.5 grams—with unparalleled fidelity... absolutely minimizes record wear, and CANNOT scratch records! We urge you to make listening tests of this unit before buying any stereo cartridge or arm—you'll hear the difference.

The Studio Stereo Dynetic has a special advantage for those music lovers who like to "index". The cartridge stylus is placed far in front, making it extremely easy for you to position the stylus on the exact spot of the record you want to play. Includes stereo cable.

Still another feature of the Studio Stereo Dynetic is the fact that the stylus can be changed in the home without tools—within ten seconds.

NOW! THE ULTIMATE IN INDEPENDENT TONE ARMS

SHURE SME

MODELS 3009-3012 SERIES 2

The most remarkable independent tone arm ever made — by any standard. Brings out the very best from any high quality cartridge, mono or stereo. Virtually frictionless bearings, both horizontal and vertical... pivot friction at stylus tip measures less than .020 gram! Knife edge bearings are absolutely protected against dust. Manufactured to incredibly close tolerances for Shure by skilled British craftsmen. Unprecedented combination of adjustments: height, overhang, length (up to 1'!), tracking force (so accurate no pressure gauge is required, ever)... even bias (to counteract tendency of arm offset to pull toward center of record and "favor" one side of

stereo groove over the other.) The result is an independent tone arm that carries the cartridge over the record surface with rock-like steadiness and precision — literally eliminates wear on the record and stylus. Lever operates arm through hydraulic damper. No resonances within audible spectrum! Complete with shell, alignment protractor, sockets.

Model 3009 Series 2 (for 12" records) \$89.50 net

Model 3012 Series 2 (for 16" records) \$99.50 net

NOTE: WHEN REPLACING STYLUS, use only genuine Shure replacement stylus with the certification, "Precision Made by Shure." Inferior imitations can seriously downgrade the performance of the cartridge.

Imlok "Prototyper" Cabinets

System of metal cabinet construction, ideal for research and prototype work, permits quick assembly of cases, cabinets and racks using the simplest of tools. Complex structures may be built to your design using a variety of corner castings and extrusions held rigidly with friction clips or screws. Panels may be cut to size from sheet aluminum or steel, fitted grooves or screw fastened. No grinding or welding needed.

Series "60" Racks

Scientifically designed to meet all requirements for human needs as well as component physical specifications; the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system. Very economical to the user, units are shipped fully assembled and ready for immediate use.

Basic frame welded in a solid unit composed of 14-gauge cold-rolled steel channels. Sides have "U" braces with perforated channels for fastening vertical adjustable mounting rails. Rails also support other types of equipment such as brackets, shelves, slides, etc. Eliminates need of drilling holes in the rack. Sides and rear door made of 16 gauge steel. Door may be mounted to open left or right. Vertical channel, 6" wide, welded to door to prevent vibration or whip. Two pairs of panel mounting rails are supplied; fully adjustable. Panels may be mounted in front and rear at the same time. Front rails drilled and tapped 10-32 W.E. spacing. Rear rails are drilled according to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in the Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door are easily installed.

Standard finishes are smooth baked enamel over a primer. For two-tone gray, specify by adding suffix **SG**. For two-tone blue, add suffix **SB** to order number. LMB PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVER AS ORIGINATED BY LMB

Built with the new original LMB popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be an bath top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis. The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

ALL METAL LANGUAGE LABORATORY FURNITURE

METAL WORKS new design in Student Booths brings you "tomorrow's booth" today! Featured below are three views of the 500 Series. These booths are designed to minimize noise entering the booth and prevent the students' response from adding to the general noise level. Designed to meet today's needs in an ever expanding educational program, they can be added to as funds permit, or as the language program expands, by simply bolting on additional units, consisting of only 1 leg and deck. They are adaptable to flush mount any tape recorder. Design is simple, yet unique in that the curved one piece leg conformation does away with sharp corners. No part of the booths protrude into the aisle leaving all aisle space clear for passage. 'K' leg permits easier entry and discharge from booth.

WHY METAL BOOTHS ARE BEST FOR SCHOOL USE

Metal Booths provide an important safety feature, insuring that all accessible surfaces are at ground potential. Metal Booths also provide better head dissipation permitting equipment to run cooler, and are less resonant than wood or plywood. An installation providing less mechanical hum from deck. Complete information about Metal Works all metal language laboratory furniture furnished on request.

PAR-METAL UNIVERSAL CABINET RACKS

GENERAL DESCRIPTION

Par-Metal Universal Cabinet Racks are now available in three series of models to solve your most difficult housing problems.

Our deluxe series "PL" and "FL" brings you a new trend in cabinet design.

Although smartly styled, there has been no sacrifice in the rugged construction which features all universal type racks. The same sturdy frame which is used in our "PR" series provides a solid foundation for maximum loading under severe conditions. Series "PL" may be combined with our console units listed on Par-Metal Pages 10 and 11 to solve your equipment housing problems.

Except where needed for purposes of adjustment or accessibility, all Universal Cabinet Racks are securely welded into an integral unit. No metal screws, clips, or similar devices are used. Every care has been taken to facilitate your assembly problems with a minimum of parts, an efficient utilization of space, and rapid accessibility to interior components.

RECESSED BASES are available for all universal type racks, and are purchased separately as an optional accessory.

MODULAR GROUPS: All universal type racks (in each series) may be joined into modular groups; cabinets of the same height, in varying panel widths, with and without front doors, may be intermixed.

DIMENSIONS: Racks are available for 19", 24", or 30" wide panels. Cabinet heights are 48 $\frac{1}{8}$ ", 67 $\frac{3}{8}$ ", 77 $\frac{1}{8}$ " and 83 $\frac{1}{8}$ "; depths available are 18" or 24".

DESIGN: All sizes listed may be obtained with conventional solid side walls, or with open side walls and detachable side panels. Side shields for use between racks are also available.

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

VERTICAL SIDE SUPPORTS: These supports provide a simple method for supporting chassis and other equipment in the racks. The means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical side supports also facilitate the installation of special sliding devices obtainable from slide manufacturers.

ADJUSTABLE FLOOR LEVELLERS are supplied with all racks as standard.

SLIDING SHELVES AND DRAWERS: Several models are listed on Par-Metal Page 8. These are constructed for mounting on the front of the racks the same as regular panels.

SLOPING INSTRUMENT PANELS and EXTENSION DESK TABLES for single and modular assemblies are available for all universal racks, as listed on Par-Metal Page 7.

ANGULAR SECTION FRAMES may be obtained for assembling adjacent cabinet racks. Complete information is available in our Catalog 62.

MODIFICATIONS: Without departing from the basic design of our universal cabinet racks, it is possible to modify them to meet your special requirements. Standard ventilated tops are available. They may also be modified with our standard dies for making openings, louvers, circular holes, etc., in sides, tops, bottoms and doors of racks. For additional information write for our complete Catalog 62.

All of our products incorporate the same exacting standards of quality and uniformity which we have maintained for over three decades. If you have a specific problem, do not hesitate to consult us. Personalized and interested engineering assistance is always available.

The same assembly can be made as a single unit or a longer multiple row, as all units are modular, and are available as 19", 24", and 30" panel widths.

Illustrated above is a modular group of three No. PL-7724-A Racks with sub-bases. They are available in various heights for panels 19", 24", and 30" wide.

DETAILS OF CONSTRUCTION AND ASSEMBLY

RACK CONSTRUCTION:

The frame shown is used on series "FL", "FR", "PL", and "PR" racks. The top and bottom is made from $\frac{3}{4}$ " steel. The four uprights are also $\frac{3}{4}$ " steel, and have multiple-formed angle bends to insure rigidity. Series "PX" and "FX" racks are similar, except that the solid side walls are made from $\frac{1}{2}$ " steel. The entire assembly is securely welded to form an integral unit.

DOORS:

For sake of clarity, doors are not shown on the frame drawing. They are stamped from one piece of $\frac{1}{8}$ " steel, and "dutch formed" on all sides providing smooth double-thick edges. Adequate ventilation is obtained from full ventilating (venetian-type) louvers. Short doors for fan or blower installations are available.

DOOR HARDWARE:

Door hinges are slip type to permit easy removal. Die cast, chrome plated handles are equipped with cam latches for door closures. Lock type handles are supplied on racks with both front and rear doors. Non-locking handles are used on racks with rear doors only; locking type handles are optional.

• SIDE MOUNTING BRACKETS:

These may be used separately or with shelves as shown. Slotted holes on the brackets provide any vertical adjustment required.

• PANEL MOUNTING ANGLES:

They are made from $1\frac{1}{2}$ " x $1\frac{1}{2}$ " x $\frac{3}{8}$ " thick structural steel. All holes are die punched to provide accurate spacings with close tolerances; holes are tapped 12/24 thread on $1\frac{1}{4}$ "- $\frac{1}{2}$ " alternate spacings for standard rack panels. Additional angles may be purchased for mounting terminal blocks or other devices.

• VERTICAL SIDE SUPPORTS:

These supports are fastened to the same bolt retainer rails used for securing the panel mounting angles. Holes are $\frac{5}{8}$ "- $\frac{3}{8}$ "- $\frac{1}{2}$ " alternate centers, tapped 10/32 thread, provide maximum adjustment for side mounting brackets and equipment shelves. They may also be used for attaching slides or other custom made brackets. The supports are made from $\frac{3}{4}$ " thick steel, locked in place with $\frac{3}{8}$ " diameter screws, lock washers and hexagon nuts, to afford maximum support.

• FLOOR LEVELERS:

Four are supplied with all universal type racks.

• BOLT RETAINER RAILS:

To these are bolted the panel mounting angles and vertical side supports, which may be located at any position from front to back. These rails are made from $\frac{3}{4}$ " steel, and are rigidly welded in place. Angles and supports are securely fastened to rails with $\frac{3}{8}$ " diam. steel bolts, lock washers, and hexagon nuts.

• ACCESS OPENING:

Opening in bottom is 4" x 14" on 19" panel racks; 4" x 19" on 24" panel racks; 4" x 25" on 30" wide panel racks.

• OUTLETS:

"Knock-out holes" are available on cabinet side for connecting cables; a duplex outlet, outlet box and plate are mounted on cabinet under rear door.

• RECESSED SUB-BASES:

They are available for all universal type racks as an optional accessory.

FRONT VERTICAL CORNER AND JOINING TRIMS:

In previous catalogs, wide corner trims were listed as standard on our universal racks. They overlapped the side edges of the rack panels to conceal the panel mounting screws. This type of trim was not suitable where sliding shelves, sliding drawers, extension desk tables, sloping panels and similar equipment were mounted on the rack.

Since such shelves, drawers, etc. are now being used on the majority of racks purchased from us, we will now supply as standard "narrow type" corner trims which do not interfere with the use of these accessories. Narrow type trims are shown on all racks illustrated on the opposite page.

PAR-METAL CABINET RACK ACCESSORIES

VERTICAL SIDE SUPPORTS

These vertical side supports are supplied in sets of four uprights to fit all universal racks listed on PAR-METAL Pages 4 thru 6. (Cut shows side mounting brackets in place which are sold separately—see listing below).

Supports are fastened to bolt retainer rails which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are drilled and tapped vertically to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices.

When installed in racks for 19" wide panels, the clearance between supports (from right to left) is 17 3/4". On 24" wide panel racks, the clearance is 22 3/4"; on 30" wide panel racks, the clearance is 28 3/4". Supports are 2 5/8" wide and 1 1/2" deep.

Supports are made from 7/16" thick steel, finished in aluminum enamel. Each set is supplied with 3/8" dia. bolts, lock washers, and nuts for rack mounting.

These panels are intended for installation on relay racks, and are installed the same as other standard rack panels.

The front slopes at an angle of 20°, and it may be used with the slope upward or downward (see illustrations) on PAR-METAL Page 2.

Front and back have removable panels. They are designed for single unit or modular group assemblies.

Constructed from 1/16" sheet steel; panels are included in prices listed below. Available in all finishes—please specify when ordering. All panels are 7 5/8" deep.

RACK TYPE EXTENSION TABLES

These tables are mounted to the front of cabinet racks as illustrated on PAR-METAL Page 2. They are made from 3/4" plywood, to which is bonded 1/16" thick formica of a dark grey pattern on both top and apron, which is 2 1/2" high.

The apron is substantially reinforced for fastening to horizontal channel type supports. The channels are made from 7/16" thick steel, and are bolted to vertical side supports which are securely mounted on the inside wall of the rack. The tables may be adjusted at any height from the floor. This assembly provides a very rigid structure, with a smooth writing space across the entire top. There are no metal parts exposed, and no painted metal surfaces to deteriorate with constant usage.

The tables may be installed on any of the cabinet racks (without front door) listed on PAR-METAL Pages 4 thru 6. They are also available for modular rows of four or more racks.

ALL OF THESE TABLE ASSEMBLIES REQUIRE ONLY 3 1/2" OF PANEL SPACE (height).

PANEL MOUNTING ANGLES

These panel mounting angles (or strips) are the same as used in all Universal type racks, (see PAR-METAL Pages 4 thru 6). They are supplied with necessary bolts to fit into the bolt retainer rails which hold the pair of panel mounting angles regularly supplied with each rack.

It is often desirable to use an additional pair of panel mounting angles for mounting chassis, terminal strips, etc. They may be adjusted to any depth within the rack from front to back.

PAR-METAL RACK TYPE SLIDE ASSEMBLIES

GENERAL DESCRIPTION

These slide assemblies will save considerable layout and assembly time as an alternate method of attaching individual slides directly to the interior of a rack. All models are screw mounted to the front panel mounting angles of relay racks, the same as regular panels. Additional holes are provided in the side brackets of the shelf assembly for mounting to our standard vertical side supports. Either method will provide a rigid support; both may be used together where desirable.

The basic slide assemblies for use in 19" wide panel racks will accommodate chassis up to 17" wide. All of the "usable space" noted below may be fully extended from the front of the rack; load capacities are based on the shelf in this position. All units are ruggedly constructed to withstand constant usage. The frames and brackets are made from $\frac{7}{16}$ " thick steel. All parts are securely welded or fastened with stainless steel rivets.

BASIC SLIDE ASSEMBLIES

The basic slide assembly illustrated is sold as a complete unit, ready for installation in all 18" or 24" deep racks. Panels may be attached to chassis by using standard *brackets or any other convenient method. The panel and chassis assembly is then bolted directly to the slide pan. Formed panels with a minimum height of 7" are recommended. Four models are listed to fit racks using panels either 19" or 24" wide.

The BS-1940 and BS-2419 are identical in size, but have different load capacities. All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended. All parts are zinc plated.

Special brackets are available for mounting rack panels, as listed on Par-Metal page 21.

STORAGE DRAWER ASSEMBLIES

These drawers are suitable for stationery, instruments, parts, etc. The drawers are mounted on the basic slide assemblies described above. They are available either 7" or 10 $\frac{1}{2}$ " high to match standard rack panels of the same height. Three models are listed for racks with 19" wide panels, and one for 24" wide panel racks.

DESK SHELF ASSEMBLIES

This assembly effectively provides a retractable writing desk, or may be used for supporting test instruments or other devices. When not in use, it saves valuable aisle space. The writing surface is charcoal grey micarta. The front requires only 3 $\frac{1}{2}$ " of panel space, and is provided with a drawer pull. It is made for racks using panels either 19" or 24" wide. No. SK-1970 and SK-2419 are identical except for load capacity.

PHONO DRAWER ASSEMBLIES

Consists of basic sliding shelf assembly with a drawer front and handle as illustrated. Drawer front is same size as standard formed panel 10 $\frac{1}{2}$ " high. (12 $\frac{1}{4}$ " high drawer fronts are also available.) The 17" width will accommodate almost all standard changers and turntables.

Where metal base pans are available with changers, it is recommended that such pans be used and bolted directly to the shelf.

ALTERNATE TRIPLE UNIT ASSEMBLY

The above unit consists of: two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. HS-103 high slope cabinet, one No. CD-24 center desk section and one CT-319 extension table, (door drawers, or rack panels for front and back are optional).

GENERAL DESCRIPTION

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

While it is obvious that no particular fixed design can serve every requirement, we have devised a group of standard units, the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. These models have been functionally designed and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.

The versatile pedestal racks are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our type "PL" cabinet racks listed on PAR-METAL Page 4. This would include panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are solidly built to withstand heavy strains whether in a laboratory or a moving vehicle.

Two models of pedestal frames are available, which are identical except for the depth (front to back). PD-224 frame (24 1/4" deep) unit may be used without an extension desk table as illustrated below.

There are four models of desk panel cabinets suitable for mounting on the pedestal frame top. (PAR-METAL Page 13) to make a complete console. Single or multiple unit consoles may be combined with our Series "PL" racks.

The PD-234 frame (34 1/4" deep) forms a complete desk structure without the use of extension shelves. When one of our desk panel cabinets is mounted on top, additional space is available in front as a desk writing surface. The 34 1/4" depth provides additional interior space, and may also be assembled with our Series "PL" cabinet racks to perform the same functions as our PD-224 (24 1/4" deep) pedestal frame. Unit assemblies are not limited to triple units, and may be extended to modular groups of four or more. If you have a specific problem, do not hesitate to consult us. Personalized and interested engineering assistance is always available.

The new side panels are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws — no metal screws or clips are used.

Our standard finish is a combination of light and dark grey hammertone enamel. Your desk requirements are easily selected from the group charts on the next page. For the turret, you may choose from four types of control cabinets listed on PAR-METAL Page 13. Other standard finishes, including black or blue grey wrinkle enamel, light grey or medium grey enamel or primer coat only, are optional without additional cost.

This is an interior view of our No. HS-103 high slope panel cabinet. Note the rigid bracing and well ventilated individual rear doors. This construction is typical of all panel control cabinets listed on Par-Metal Page 13.

PAR-METAL COMPONENT GROUP CHECK LISTS

The group charts below list all necessary and alternate components for single, double, and triple unit assemblies, and also provides a check list to determine your exact requirements. There are four models of desk panel cabinets specially designed to fit on the top of the assemblies detailed below. For simplicity, they have been omitted; for a complete description see Par-Metal Page 13. All of the 19" wide panels listed on Par-Metal Pages 18 and 19 may be mounted on these assemblies. Refer to Par-Metal Page 8 for sliding drawers shown in the illustrations on Page 9. Other component parts suitable for use with these assemblies are shown on Par-Metal Pages 11 and 12.

RACK PEDESTAL FRAMES

The rack pedestal is the principal component used in all single and multiple unit assemblies. It combines the essential features of our type "PL" racks listed on Par-Metal Page 4 and is attractively styled for any environment.

The bottom and step base are formed from $\frac{7}{16}$ " steel; all other parts are made from $\frac{1}{16}$ " steel. They are substantially welded together to insure the extra strength and stability needed for heavy duty installation, wherever located. They are capable of carrying heavy transformers, large power supplies, motors, compressors, and similar apparatus.

Panel space at front and back is 21" x 19". Panel mounting angles (or "strips") may be located at any position from front to back, and have tapped holes for mounting standard rack panels, sliding shelves, phono drawers, or storage drawers. Two pairs are supplied — one pair for front mounting and another pair for rear mounting. Additional tapped holes are available at the sides for mounting chassis supports and shelves.

FINISHES: Standard finish is a combination of light and dark grey hammertone enamel. Other optional finishes are listed on Par-Metal Page 9. We will be happy to answer any questions regarding dimensional information, construction details, etc. Write for assistance.

FORMICA BONDED TABLE TOPS

These table tops are made from 3/4" thick plywood to which is bonded 1/16" thick patterned grey formica. All sizes are edged with a narrow stainless steel moulding to prevent pencils and similar objects from rolling off the table. There are no metal spacers between units, providing a clear unobstructed writing surface across the entire top.

The table top required for any particular assembly may be easily identified from the check list of component groups on Par-Metal Page 10. The listings below are a cross reference and also include prices.

EXTENSION DESK TABLES

These extension tables are used in console assemblies illustrated on Par-Metal Pages 9 and 10. They are made from 3/4" thick plywood, to which is bonded 1/16" thick grey formica.

The formica covers both the top and apron of the table which is 2-1/2" deep. The apron is substantially reinforced for fastening to horizontal channel supports. The assembly provides a rugged structure with a smooth writing space across the entire top.

There are no metal parts exposed, and no metal surfaces to deteriorate with constant usage. As these tables are mounted above the front panels on the pedestal frame, the full front panel space of 21" may be used.

PEDESTAL CASTER ASSEMBLIES

These assemblies are made specifically for use on our No. PD-224 and No. PD-234 pedestal frames listed on Par-Metal Page 11. They replace the regular recessed sub-bases, and are used where mobility is required. The caster plates are made from 7/64" thick steel for heavy-duty usage. Casters are equipped with 3" diameter composition wheels, capable of supporting loads of 225 lbs. per wheel.

Where pedestal frames with caster assemblies are required, they will be supplied at an additional cost of \$4.00 per frame. Simply specify on your pedestal frame order "with casters." They may be obtained separately as listed in chart at the left for replacement of recess sub-bases on pedestal frames now in use.

MOUNTING BRACKETS

These brackets may be mounted on each side of the pedestal.

They are slotted to match the Tapped holes in the sides of the pedestal and may be adjusted to any height.

PAR-METAL TYPE "A" RELAY RACKS

DELUXE TYPE—FOR 19" WIDE PANELS

"ER" SERIES
WITH REAR DOOR ONLY

CABINET: The entire cabinet is made from 1/16" sheet steel. The sides are adequately ventilated with "venetian" type louvers similar to our universal cabinet racks. The vertical corner trims and formed mouldings at top and bottom are designed to effect a distinctive frame around the front of the rack. Racks are shipped "knocked down" for easy assembly.

CORNER TRIMS: All front vertical corner and joining trims are narrow type (do not overlap panels) to permit installation of sliding shelves, drawers, tables, etc.

PANEL MOUNTING: Angle irons are 7/64" thick steel, holes are accurately drilled and tapped 10-32 thread for all types of panels.

HARDWARE: Doors are the same as our universal racks. "Series ER-225A" racks are equipped with "automobile" type non-locking handles on rear doors. On "Series FD-225A" racks, similar handles with key locks are used on both front and rear doors. Hinges are the "slip-joint" type so that doors may be easily removed.

FINISH: Blue grey wrinkle finish is standard. Black wrinkle enamel finish will be supplied without extra charge if so specified on your order. Grey hammertone enamel is available at an additional charge of 10%.

ROLLER TRUCK: Roller truck No. RT-412 for Series ER-225A racks; use RT-418 for Series FD-225A; both are listed on Par-Metal Page 17.

PANELS: Panels 19" wide to fit these racks are listed on Par-Metal Pages 18 and 19.

SHELVES: For Series ER-225A Racks, use shelf No. ER-2212 listed on Par-Metal Page 21. To install shelves in Series FD-225A, it is recommended that Vertical Side Supports, Brackets and Shelves listed on Par-Metal Page 7 be used.

MULTI-RACK CABINET ASSEMBLIES

MULTI-RACK ASSEMBLY

MULTI-RACK ASSEMBLIES: Both Series "ER" and "FD" racks may be set up in rows as shown. The use of "venetian type" louvers provides a flat exterior surface on the sides of the racks; separate side plates with welded screw studs inserted at top and bottom of adjacent sides simplifies the assembly — no screwdrivers or wrenches are needed. Vertical joining trims overlap the joint between racks on the sketch.

SERIES "FD" RACKS: This series with front and rear doors has adjustable panel mounting angles, which may be located at any distance from front to rear of rack. VERTICAL SIDE SUPPORTS listed on Par-Metal Page 7 will fit into these racks.

PAR-METAL TYPE "A" RELAY RACKS

ROUNDED CORNER TYPE—FOR 19" WIDE PANELS

"ER" SERIES
WITH REAR DOOR ONLY

THESE RACKS ARE SIMILAR in construction to our Series ER-225 Racks. They provide a combination of standard functional design and superior construction at a modest price. The vertical front corners are nicely rounded, and the top and bottom are trimmed with chrome finished mouldings. The panels fit into a recess, so that the edges are not exposed.

CABINET: Entire cabinet is constructed of 1/16" thick cold-rolled steel. These racks are shipped "knocked-down" with necessary bolts for easy assembly. Screws for mounting panels are supplied.

PANEL MOUNTING: Angle irons are 7/64" thick steel, holes are accurately drilled and tapped 10-32 thread for all types of panels.

HARDWARE: Doors are of same design as our universal racks. "SERIES ER-215" racks are equipped with "automobile" type non-locking handles on rear doors. On "SERIES FD-215" racks, similar handles with key locks are used on both front and rear doors. Hinges are the "slip-joint" type so that doors may be easily removed.

FRONT DOOR RACKS: On Series FD-215 racks, the front panel mounting angles are recessed 2" deep to allow clearance for dials, etc. The clear inside depth behind the panel is 13½".

PAR-METAL CHANNEL RELAY RACKS

DELUXE TYPE RACKS for 19" and 24" wide panels

No. RR-197

These DeLuxe Channel Type Relay Racks are made from 7/64" thick steel, and extend the utility and applicability of the standard channel relay rack.

The panel space is 77" x 19", to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10/32 screws at both front and back, permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The full panel space of 77" x 19" is available on the back, the same as the front.

The clear distance between panel mounting flanges (from front to back) is 6-3/4". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on Par-Metal Page 21.

When such chassis are mounted at the back, the addition of standard or hinged type panels (see Par-Metal 19) will make a rack enclosure with a clear depth of 6-3/4".

The top cross-brace is provided with a grille for ventilation where needed. Two holes are located on each side for bolting racks together in rows; there are no projecting screw heads on the sides.

The top brace and the vertical channel members are securely welded together. The base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

FINISH: Standard finish is black ripple enamel. For grey ripple enamel, add 5%. For grey hammertone enamel, add 10%.

DESK PANEL CABINET RACKS For Standard 19" Rack Panels

In keeping with our other De Luxe racks, the vertical front corners are rounded and the top and bottom are trimmed with chrome finished mouldings. Panels fit into a recess, so that the edges are not exposed. Panel mounting holes are accurately drilled on universal centers, for standard rack panels. Holes are tapped for 10/32 machine screws.

They may be used with any chassis up to 13" x 17" in size. All cabinets are rigidly constructed of 1/16" thick cold rolled sheet steel, with all joints electrically welded. Louvres provide ample ventilation through sides and back. Piano type hinges are used on the top doors, which are provided with chrome plated handles. Panel mounting screws and washers are furnished.

FINISH: BLACK RIPPLE ENAMEL is standard. Blue grey wrinkle enamel will be supplied without extra charge if so specified in your order.

BRAKE TYPE CASTERS

During the past few years, the use of brakes on roller trucks has become desirable both as a utility and safety measure. This is particularly true where racks have been loaded to capacity with heavy equipment.

We now have available foot brake type casters as illustrated for use on all heavy duty roller trucks. Brake type casters are supplied to replace the two front casters of single roller trucks and to replace the three front casters of double roller trucks. Additional cost per roller truck is as follows:

| | |
|--|---------|
| For single units (HD-412, etc.)..... | \$ 8.50 |
| For double units (HD-412-2, etc.)..... | 12.75 |

WE CAN SUPPLY ON A "SEMI-CUSTOM" BASIS pressed steel roller trucks for our cabinet racks up to 36" wide and 88" long. They can be equipped with 4" dia. wheel casters and necessary foot brakes. The extra width is used in front of the rack assembly to provide stability where extension shelves and other accessories are mounted on the front of the racks. Drawings and prices available upon request

*mounting
instructions*

Tracks may be mounted on bottom or side. These instructions apply to either type of mounting.

1. Disassemble slide assemblies.
2. Fasten the short outer tracks to the cabinet with wood screws provided, keeping the track ends flush with the front of the cabinet. Tracks must be mounted parallel to each other to insure proper operation. (See Fig. A).
3. Fasten the long inner tracks to the chassis or moving unit, positioning them to conform in spacing to the outer tracks. Make certain that the stop pins protrude sufficiently to the rear of the moving unit to enable removal and replacement of the stop pins. (See Fig. B).
4. Remove stop-pin springs, then remove stop pins from the long inner tracks which are mounted to the chassis.
5. Place the chassis or moving unit into the cabinet by lining up the inner and outer tracks and sliding into position.
6. Replace stop pins and springs.

EXPAND-A-RACK SERIES

DESCRIPTION:

- A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
- B. Figure "A" shows two Expand-A-Racks joined together.
- C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
- D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
- E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
- F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
- G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

Capacitors

TYPE AFH (85°C)

Twist-Prong Electrolytic Capacitors SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong electrolytic capacitors with the very latest refinements. 85°C operation, improved moisture resistant sealing, special Types AFHS and PWHs for high ripple current circuits, high-purity aluminum foil construction throughout; either etched or composite-plate depending on electrical requirements. Types PWH and PWHs are special construction for printed wiring.

For use over a wide temperature range with minimum change in capacitance. Designed for filter audio bypass applications in radio-TV and amplifier equipment.

While AFH electrolytics enjoy a tremendous popularity as replacement capacitors for TV receivers, they are rapidly gaining acceptance in many industrial applications.

Capacity tolerances and surge voltage are listed in EIA Specification No. RS-154.

ELECTROLYTIC CAPACITY TOLERANCES:

0-50 Volts --10 - 250%
51-350 Volts 10 - 100%
351-Up 10 - 50%

TYPE PR WAX-FILLED TUBULAR CAPACITORS

Wax-filled electrolytic tubulars in wax-impregnated cardboard tubes. Sections manufactured to same high standards as more expensive metal-cased units. These units are made for exact duplicate replacements in television receivers and antenna rotating devices. Tolerances meet RETMA standards and are manufactured for operating temperatures of 0-65°C. PR numbers designate replacements for Television Receivers. XA numbers designate replacements for rotators.

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.

Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers. Also listed are Types PRSB—separate section, dual units for use in specialized applications.

Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.

Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct $\frac{1}{8}$ " from diameter and $\frac{1}{4}$ " from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.

Tolerance and surge voltage are in accordance with EIA Specification RS-154.

TYPE B C D UPRIGHT MOUNTING PLASTIC CASED ELECTROLYTICS

"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte. High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case.

TYPES HCB and NPB
High Capacity Low Voltage
Bakelite Cased Electrolytics

Type HCB units are polarized electrolytic capacitors designed for use in industrial applications such as battery eliminators, power supplies, electric fence controls and sound movie projectors. For non-polarized applications in welding and control equipment Type NPB units are available.

Both types feature heavy-duty, moisture resistant bakelite cases which eliminate the need for outer cardboard insulating tubes. Operating temperature range from -40°C to $+85^{\circ}\text{C}$. Capacitance tolerance up to 150 VDCW -10% $+100\%$, over 150 VDCW -10% -50% . High capacity etched plate construction assures long trouble-free operation. Units supplied with wrap around-footed brackets for vertical mtg.—horizontal mtg. available on Special Order.

AUTOPASS® Vertical Mounting Plastic-Cased Paper Capacitors

Aerovox Autopass capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space.

Aerolene impregnated and assembled into a Polycap® case, Autopass capacitors are then sealed with a thermo-setting end-seal. The end-seal surface is below the outside edges of the plastic case, permitting the capacitor to be mounted flush against the mounting surface. The leads of these capacitors are stiff, and critical spacing is closely held to facilitate their use in mechanized assemblies. Outside foil is identified by wire lead nearest to edge of case or by a paint stripe on the case nearest the outside foil.

FILTERS**SCREEN ROOM FILTERS**

Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for 3/4" and 1" conduit.

1 1/4" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

INDUSTRIAL SECTION—STANDARD TYPES (Continued) PAPER SUB-MINIATURES

Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case, for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10°C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Type P323S and P323SX are rigidly processed to assure operation over the temperature range of -65°C. to +125°C. The capacitor sections on types P323S utilize an inserted tab construction to obtain minimum size. Type P323SX utilizes extended foil construction for those applications where operation is required at very low AC voltages.

For equivalent types rated -65°C. to -100°C. in the same case size as shown order as P123S, SX, etc. and request prices.
