IF-NOISE SILENCER

Essentially plug-in 3 tube circuit designed primarily for use with the Hammarlund HQ-170 and HQ-180 communication receivers. Renders receivers inoperative during short duration of any individual noise pulse. Lapse or "hole" not noticeable because of extremely short duration. Excellent where severe noises must be contended with.

CR-1 WORLD WIDE RECEIVER

The CR-1 "World-Wide" receiver features the most recent advances in electronic packaging and design by including new compactron tubes to deliver the finest world-wide reception.

Wide frequency range covers from 540 KCS to 30 MCS. Actual ranges of the four-band CR-1 are: 540 KCS to 1620 KCS, 17 MCS to 5.0 MCS, 5.0 MCS to 14.0 MCS, and 13 MCS to 30 MCS — thus including standard broadcast and all short wave bands. Superheterodyne design and modern circuitry combined with unusual flexibility permits reception of CW (code) and AM (broadcast and shortwave bands). Additionally, the CR-1 may be used as a CD "Alert" receiver by switching to CD position. In this position, the CR-1 will receive normal voice signals as long as the transmitting station is "On-Air". However, (as in the case of a CD alert) if the station leaves the air, it will emit a high pitched audio note to focus attention to an "Alert" condition.

ACA-1 COMPRESSOR

The ACA-1 is a small compact AVC type audio compression amplifier comprising a built-in power supply; 1 KC tone oscillator for transmitter alignment; 90 to 3000 cps. audio filter of the passive network type; and input/output terminals for both high and low impedance circuits.

This new Hammarlund compressor is designed to be used between the microphone and the input of a radio transmitter, PA amplifier, telephone line, or any other audio device to automatically prevent over-modulation, flat-topping and blasting caused by uncontrolled audio peaks.

Compression action permits weaker audio tones to reach higher voice levels, resulting in greatly increased "talk-power" and readability.

AIR VARIABLE CAPACITORS

Whatever the choice . . . sub-miniature capacitors for printed circuit use—or large, heavy duty types . . . time and again engineers specify Johnson Air Variables!

More than 11 basic capacitor types are readily available in a wide selection of single section, dual section, butterfly and differential models. Units range in size from the diminutive sub-miniature Type "U" capacitors, to large, rugged heavy duty "C" and "D" types. Standard stock capacitors in a wide range of plate spacings, capacity per section, breakdown ratings, and finishes will meet many military and commercial applications . . . specials to your specifications are also available in production quantities.

TYPE "U" AND "UB" CAPACITORS

These tiny Type "U" and "UB" sub-miniature air variable capacitors require less than 0.2 and 0.3 square inch area respectively for chassis or panel mounting. Rotors and stators are precision machined from one piece of solid brass for outstanding mechanical stability and uniformity. Unit offers high "Q" (greater than 1500 at 1 mc), high torque-to-mass ratio, and low temperature coefficient—provides absolute freedom from moisture entrapment found in trimmer capacitors of enclosed or solid dielectric type. All metal parts silver plated—ceramic steatite Grade L-4 or better. Exceptionally uniform delta C and voltage characteristics. Extra heavy end rotor plate protects against accidental damage during handling. No special tools required for installation—slotted end accommodates large screwdriver for quick adjustment. Choice of wide, double pierced or printed circuit style terminals; and "LocTab," printed circuit, or two-hole mounting styles. Specials and Two hole mounting are available only in production quantities.

Note: When ordering "LocTab" add-1 to Cat. No.; Printed Circuit add-5 and 2-hole mounting add-7*

TYPE "M" CAPACITORS

These small Type "M" miniature air variable capacitors are excellent for use in compact equipment. Bridge type stator terminal provides an extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Large beryllium copper compression rotor contact provides steady torque—and rotor stays "put" where set. Rotor contact and all other metal parts are nickel plated—steatite insulator is DC-200 treated. Mounting bushing threaded with 1/4-32 flats to prevent turning—mounting nut furnished. Peak voltage 1250 volts on .017" spaced units; 850 volts on 160-130 which is spaced .013". 3/16" diameter shaft* slotted for screwdriver adjustment. Available in production quantities with the following features: locking bearings; 180° stop; various shaft extensions; high torque; silver or other platings.
*Instrument type tuning knob to fit 3/16" shaft available.

The No. 90923 oscilloscope is an extremely compact (3½ inches high) rack panel general purpose oscilloscope utilizing the type 3XP — 3 x 1½ inch rectangular face tube. The No. 90923 is complete with vertical and horizontal amplifiers for balanced deflection and a very linear sweep generator.

Miniature input terminals are on both the front panel and the rear for vertical amplifier input, horizontal amplifier input and synchronizing input. The linear sweep generator covers two cycles per second to 30 kcs. per second in seven overlapping ranges. The trace is unusually sharp and bright due to 2040 volts accelerating potential.

The No. 90923 is ideally suited for many applications, and in particular, for production test. Its small panel uses up very little space in a test rack and the mu-metal shield around the cathode ray tube shields it against magnetic fields so that the oscilloscope may be used accurately in locations with strong stray magnetic fields. The cathode ray tube is of the mono-accelerator type in which the electron beam is accelerated at the electron gun so that field distortions are minimized and excellent deflection linearity is achieved as well as a very uniform spot size over the entire area which the beam scans.

MINIATURIZED HIGH RELIABILITY VARIABLE CAPACITORS

NO. 25000 SERIES

MACHINED FROM SOLID BARS OF EXTRUDED BRASS

Modern demands for miniature precision, high Q variable air dielectric capacitors with high reliability require that all of the stator plates be machined from a solid block of brass and that all of the rotor plates be machined from a solid block of brass. Staked, soldered, or washer-spaced types of construction are adequate for larger capacitors with wider air gaps but are entirely inadequate for miniature high reliability capacitors for use at high frequencies. The stator terminal is an integral part of the stator. This results from extruding the exact shape required. The rotor shaft is an integral part of the rotor, thus alignment of shaft with rotor is perfect and there are no pins or press fits.

Special capacitors which can be manufactured using all or part of the tooling for standard capacitors are designed and manufactured to order.

MINIATURIZED COMPONENTS

DESIGNED for APPLICATION miniaturized components developed for use in our own equipment such as the 90901 Oscilloscope, are now available for separate sale. Many of these parts are similar, in most details except size, to their equivalents in our standard component parts group. In certain devices where complete miniaturization is not paramount, a combination of standard and miniature components may possibly be used to advantage. For convenience, we have also listed on this page the extremely small sized coil forms from our standard catalog.

Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be packed into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90604 thru 90610 are extremely small and designed primarily for engineering laboratory use where they will be handled

with reasonable care. The most useful combination being the group of four under code Na. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code Na. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a cantour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

Birnbach**"BEAUPUG" PLUG AND SOCKET LINE**

NEW Quality BIRNBACH "BEAUPUGS" PLUGS and SOCKETS

Our 1300 Series, now available in 15, 18, 21, 24, 27, 30 and 33 contact configurations have cadmium plated brass knife contacts; socket has double spring design phosphor bronze contacts; male contact is $\frac{3}{64}$ " thick by $\frac{5}{32}$ " wide brass. Bodies compression molded bakelite; back plates, XXXP laminated phenolic to NEMA standards; and are adhered to the body by epoxy resin which eliminates vertical drive pins (they are dimensionally interchangeable with the C-J 300 Series.) For greater economy, protection and utility the new molded high density polyethylene backshell is outstanding; this "Beauplug" series is attractive in appearance; highly impact resistant; non rusting, highly resistant to most acids and alkalis and is of one-piece molded construction thereby eliminating the use of additional insulating materials since it has excellent dielectric properties.

Connectors are rated at 750 V RMS and 10 amperes contact resistance is .003 ohms maximum. (Note — the third and fourth digit in the Part Number indicates the number of contacts.)

All Plugs are polarized to assist in correct insertion and removal. Plug numbering is opposite. Heavy duty locating or ground pin replaces contacts in position 14 on 1324, 1327, 1330; it is in position 17 on 1333. The ground pin and its socket are machined brass, heavily plated, with a 20 Amps current capacity.

ACCESSORIES FOR THE BIRNBACH "BEAUPUG" 1300 SERIES**LATCH (-L) and KEEPER (-K)**

LATCHES (-L) are installed on Shallow Brackets where a constant engagement of Plug and Socket must be insured, such as in Mobile Radio equipment. Usual installations call for a latch on each end of the Shallow Bracket as shown. Example: this is an S-1321-SB-L (21 contact Socket, Surface Bracket & Latch) KEEPERS (-K) are the studs on the Backshells which engage latches. Mating part here is S-1321-FHT-K

**HANDLE**

HANDLE (H) is generally used with the larger plugs or sockets using backshells. It is a simple device, made of woven Nylon cord, and can be almost entirely retracted inside the backshell. No metal parts are used, preventing any chance of shorts. Example: adding the handle to the Socket above, would be S-1321-FHT-H

CINCH HINGE CONNECTORS

37F50

37M50L

Plug and socket bodies showing contact arrangement.

Cinch Hinge Connectors eliminate contact damage caused by the high insertion and extraction forces encountered with ordinary multi-contact (20-100) connectors. Ideal for use in space-limited areas.

These plugs and sockets offer a maximum number of contacts in a minimum amount of space. Easy engagement and disengagement an outstanding feature. The plug and socket units are easily engaged with normal pressure, and the lock holds them securely together. Releasing the lock the units separate by the spring action of the contacts. A simple locking device insures positive contact. Wiping contact action keeps contacts clean at all times. Either the plug or socket body fit into the cap.

"300" SERIES PLUGS AND SOCKETS

The "300" series is from the famous line of "Jones" plugs and sockets which have been a standard of the electrical / electronic industry for over a generation. Designed for medium duty applications, ratings are 730 Volts RMS, 10 amperes, with a contact resistance of .003 ohms maximum. Insulating material is made of molded bakelite. Plug-socket polarization is designed to prohibit engaging any mate other than one of an equal number of contacts.

Plugs and sockets are arranged for either cap or panel mounting. Phosphor bronze contacts are used, plug prongs being 1/32" wide by 1/4" thick. Metal caps and fibre linings are formed. Caps are finished in black crystal.

Small in size with good separation between contacts. Made in sizes of 2 to 33 contacts. All Plugs and Sockets are polarized so that Plugs of one size cannot fit into Sockets of another size. Body of Molded Bakelite. Phosphor bronze "knife-switch" type Socket contacts engage both sides of flat Plug contacts—double contact area. Plug prongs are 1/32" wide by 1/4" thick. Formed metal caps are finished in Black Crystal. Fibre linings for caps are also formed. Plugs and Sockets arranged for either cap or panel mounting. Two contact Plugs and Sockets are round as shown at the right, all others are rectangular. Illustrated are the P-302-CCT and S-302-AB. Standard 24 to 33 contact Plugs have a special long polarizing pin in approximate center position to assist in correct insertion and removal.

2 to 12 contacts now utilize **MONOBLOCK** construction! Illustrated at right are the two-contact P-302-CCT plug and S-302-AB socket. Plugs and sockets having from 3-12 contacts are as illustrated below. All plugs and sockets from 2-12 contacts now utilize one-piece "MONOBLOCK" construction but are interchangeable with the old two-piece type.

MONOBLOCK construction eliminates internal moisture traps. Furthermore, MONOBLOCK'S new patented* snap-in socket contacts permit external prewiring, removal and replacement of individual contacts if necessary. Contacts are "locked-in" to withstand wiring stress.

24 to 33 contacts. Plugs have special polarizing pin to facilitate correct positioning of mating plug and socket. See illustrations on adjacent page.

"400" SERIES PLUGS AND SOCKETS

(Formerly "Heavy Duty")

GENERAL SPECIFICATIONS

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze "knife-switch" type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are $\frac{1}{4}$ " wide by $\frac{1}{16}$ " thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

"2400" SERIES PLUGS AND SOCKETS

The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.

This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass 1/4" x 1/16", cadmium plated.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified, the following size cable entrance holes will be supplied:

| | | |
|------------|------------|------------|
| 2402—3/8" | 2406—3/16" | 2410—3/16" |
| 2404—3/16" | 2408—3/16" | 2412—3/8" |

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.

Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

"500" SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{3}{16}$ " x $\frac{3}{32}$ ".

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from $\frac{1}{2}$ " diameter and $\frac{1}{4}$ " diameter in steps of $\frac{1}{8}$ ", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

LOCKS FOR 500 SERIES PLUGS AND SOCKETS

No. 500-L Locks

Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

BOARD-TO-BOARD
PRINTED CIRCUIT
CONNECTORS**

Employ same "Varicon Reliability Principle" as conventional Varicons for like contact, four coined mating surfaces. Supplied in disposable plastic strips at .200" spacing. One to 60 contacts to a strip. Staking of the contacts to the printed circuit board is made in accordance with modern mass-production techniques with special staking tools. Tools are available from ELCO either unmounted, for application to customer die set, or completely mounted in ELCO die set, as desired. Staking of contacts to the printed circuit board, and thereby to the printed circuit line assures a solid, low resistance contact, rigidly held in place. Dip soldering the board automatically makes an additional connection between contact and board thus creating an unsurpassed reliability for the joint. Over 65 pounds are required to tear a contact from the board if staked and soldered, 50 pounds if staked only, and 25 pounds if only soldered. For small-size modules brackets can be supplied separately. It is recommended that larger modules be guided by integral parts of the equipment. Contacts: Phosphor bronze. Finish: Gold flash over nickel plate. Contact Resistance: .002 ohm max. Insertion and withdrawal. Force: 8 oz. per contact, average. Contact Life: Unchanged after 5000 insertions and withdrawals.

**SERIES 7009
VARITWIN-PIN⁺
PRINTED CIRCUIT
CONNECTORS**

Female Connector Body: Constructed of one-piece molding. Insulator material is Diallyl Phthalate per MIL-M-18794-SDG. Guides integrally molded with the connector body insure perfect mating of the printed circuit module card with the connector. Mounting of connector accomplished by two .128" diameter mounting holes, one at either end of the connector. Width of connector is .580"; permits mounting of adjacent connectors on .600" centers. Contact configuration: Two rows of contacts on .200" spacing, with .125" between rows; one row offset .100" from the other, allowing .100" spacing of contacts on the module card. Varitwin-Pin Contacts have bifurcated terminations and each will accept two Series 53 taper pins. Terminal end of the contact with its dual positions, lies on a 53° angle with respect to the connector axis, and is recessed 95% into the connector body. Module card is 1/16" thick. Polarization accomplished simply by insertion of a polyethylene polarization tab; no loss of contact position is incurred. Male Connector: Printed Circuit module card is punched or drilled and ELCO contacts staked and soldered in, forming the male part of the connector. Hole pattern for the ELCO printed circuit contact lies on a .100" grid, and should be held to plus or minus .003" tolerance, non-accumulative, for hole location. Hole diameter is .052", .000", -.004". Current Rating: 10 amps. Contact Resistance (at rated current): 0.003 ohm, max. Contact Material and Plating: Phosphor bronze (per QQ-P-330 Grade "A"), nickel plate (0.0002"), gold flash (0.000010" to 0.000015"). Military Specification: MIL-E-19600A (WEP).

**SERIES 7001
AND 7008
CONNECTORS**

Subminiature Printed Circuit Varicon Connector with contacts arranged in two tiers. Lower tier has one contact more than upper tier. Contacts are located on .100" centers. Male member of connector consists of contacts supplied on plastic strips. Contacts are then placed into pre-punched or drilled holes in module board and stake directly into P-C card. Plastic is then removed with ELCO Heat Platen. Female portion of connector is a Diallyl-Phthalate insulator housing the contacts with which the module board is mated. Connector is designed for 1/16" thick P-C board with molded guides for properly mating the contacts. Sizes available for 17, 23, 29, 35, 41 and 47 contact units. 7001 and 7008 Series connectors differ in two basic respects: (1) The module card of the 7008 is .100" wider (.050" on each side) and .050" longer (added to the connector end of the card). (2) Polarization: On the 7001 Series, a tabular metal pin is used for polarization at odd contact numbers, i.e., 3, 5, 7, etc. Use of the first and last positions for polarization is not recommended. Pins are factory assembled. On the 7008 series, a polyethylene insert is inserted into the card slot at even contact numbers, i.e., 2, 4, 6, etc. These can be factory assembled, or furnished loose for your own inserting. Current Rating: 7 amps. Contact Resistance: .005 ohm, max. Contact Material: Phosphor bronze, nickel plated and gold flashed. Military Specification: MIL-E-19600A (WEP) para 3.5.5.

AN ELCO EXCLUSIVE! E-Z MATE SOCKETS

ELCO'S E-Z Mate Socket design saves time, tubes, tempers via an ingenious positioning key at top of socket which permits tube to "find" insertion point almost automatically. Hence, tubes may be inserted in "blind" or formerly inaccessible locations. All 7- and 9-pin base-shield and saddle type sockets (except ceramic) will be delivered in E-Z mate design AT NO EXTRA COST when available. If E-Z Mate specifically desired, add notation when ordering. Conforms to MIL 12883-A.

NEW LOWERED SOCKET PRICES

ELCO Sockets are now available at prices considerably less than before—with absolutely no lowering of our famous quality standards. These lowered prices are made possible by our new, larger manufacturing plants and the resultant production economies. We are happy to pass these dollar savings on to you.

NEW! MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028

Trademark Reg.

Micro-Gator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do... on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. It offers the speed, free-handed ease and convenience associated with other Mueller alligator clips. The Micro-gator is truly small (takes 30 to weigh an ounce!) including separate skin-tight insulator (the tip is no bigger than the head of a pin)! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 1/2" jaw spread. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

Clip weighs 1/20th oz., has tiny 1/16" O.D. nose, but ample 3/8" jaw spread. Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

COMPLETELY INSULATED ALLIGATOR CLIPS

Patent Pending

No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 15/64" O.D. The tight fitting sheath preserves all the slimmness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

No. 63—INSULATED ALLIGATOR CLIP (STEEL)

TEST SOCKET CATHODE RAY TUBE ADAPTERS

The PECO Test Socket Adapters are ideal for making measurements of voltage, resistance, and video from the base of the picture tube. The test socket adapter is inserted between the CR Tube base and its socket.

This completes the circuit and makes all connections readily accessible. Measurements can be made without tracing circuit wiring to test points below the chassis, thereby saving valuable time and increasing efficiency in trouble shooting.

FOR USE WITH TUNERS HAVING CAPTIVE OR TELESCOPING TUBE SHIELDS

The 7 or 9-HIGH adapter rises above the shields and places testing in the open. Shields or tuner covers do not have to be removed. All construction is the highest quality. Interelement distributed capacity is approximately 1.5 micro-micro farad. Voltage breakdown elements exceed 1800 V. AC or DC. The insulation resistance exceeds 5x10⁵ megohms at 40% R.H. at 24°C.

CONNECTORS**UHF • BNC**

These units are satisfactory at frequencies ranging from 200 to 500 megacycles but are not constant impedance connectors. They may be used at peak voltages up to 500 volts and some special units at 5000 volts. These are not weatherproof connectors except in the case of the MX-913/U cap and chain.

Adapters are available for use with other coaxial series such as the "N" and "BNC." We have available several high voltage applications which apply on the SO-239 receptacle and on the PL-259, PL-259A plugs. These units eliminate and replace the large cable connectors which formerly were needed for voltages up to 5000 volts. At the same time there are also many plate variations and modifications of the SO-239 receptacle. The PL-259 and PL-259A adapters are also available with different cable openings which eliminate reducing adapters and other accessories.

These fittings are small, lightweight, weatherproof, quick connect and disconnect connectors. They are designed for use with small R.F. cables, such as RG-55/U, RG-58/U, RG-58A/U, RG-59/U, RG-62/U and RG-71/U, and may be used for application where the peak voltage does not exceed 500 volts.

The BNC connectors are constant impedance, 50 ohm connectors, yielding an excellent electrical performance up to 10,000 mcs. There has been great usage of these units for aircraft test equipment. Adapters are also available between the BNC and other coaxial connector series. We can offer many modifications of these standard types in accordance with a specified requirement. These connectors are manufactured in strict conformance with Military Specification MIL-C-3608.

INSTALLATION PROCEDURE

1. For chassis or panels 1/8" (.125") or less in thickness, punch or drill hole .013" ± .002" LESS than the diameter of the bushing (dimension "A" in the tables). Minimum protrusion of assembled terminal should be .040" (dimension "B" less chassis thickness) for greater holding power. Recommendations for panels greater than .125" thick are available on request.
2. Countersink the insertion side of the chassis. For chassis thicker than .040" use 60° countersink. For chassis less than .040" thick use 90° countersink. Countersink depth should be such that "Maj. Dia." shown in drawing is equal to bushing diameter (Dimension "A") of the terminal.
3. Insert terminal in countersunk side of chassis, and press until shoulder of terminal seats against chassis.

"SNAP ACTING"

MOMENTARY CONTACT

SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/16 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated condition to its normal circuit

condition when the actuating force is removed

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

PRETRAVEL Pretravel is the distance or angle through which the actuator moves from the actuator free position to the actuator operating position

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position to the releasing position

ROCKER-ACTUATED TOGGLE SWITCHES

Combines advantages of Toggle Switch circuitry and current capacity with pushbutton control. Snag-proof keys prevent false actuation. Translucent plastic keys feature edge light indication. Lower half of key emits soft glow from light source in panel. Enables easy identification of actuator position. Transparent plastic keys mounted above flush. An insert with signs, symbols, or letters can be placed under the key.

Temperature range -65°F to +160°F. Sealed between bushing and rocker actuator, and between cover and case. **Std. Pkg. 10**

TEFLON* SPAGHETTI TUBING

Teflon tubing is ideal for slip-on insulation in electrical and electronics applications. Its exceptional insulating properties provide greater reliability and resistance to high temperatures. Due to its resistance to soldering temperatures, shrink-back during soldering is virtually eliminated.

SMITH Teflon tubing is available in most AWG sizes from ± 30 to ± 0 , in three basic wall thicknesses: Standard (.011 to .020"), Thin Wall (.009 to .015"), and Lightweight (.006 to .012"). Specific wall thickness for various AWG sizes is detailed in the table. All sizes are available in Natural Teflon, and any of 10 colors as indicated in the Color Code chart.

SMITH Teflon Spaghetti Tubing meets or exceeds the requirements of MIL-I-22129B, and colors conform to MIL STD-104. Standard and Thin-Wall tubing in sizes AWG ± 30 to ± 8 , and Lightweight tubing in sizes AWG ± 28 to ± 9 are supplied in 100-foot dustproof, re-useable reels, polyethylene covered and closed with a special polyethylene plug. Sizes to AWG ± 0 are carefully packaged in 50 foot coils to prevent distortion of the tubing.

AUDIO JACK PANELS

Extensively used in the broadcast field, on instrumentation systems, communication networks, etc. Listed below are the most common of a large variety of standard types. Jacks as ordinarily supplied (mounted on panels) have offset ground lugs, which considerably reduces wiring cost of installation. Straight ground lugs (duplicating W.E. jacks) available. Types 96-71 and 96-72 used with tip, ring, and sleeve plugs (No. 516 and No. 517); others usually used with twin plugs (No. 506) but will fit standard two-circuit plugs.

VIDEO JACK PANELS

A variety of standard as well as special panels are regularly produced. The jacks used in these mount in the same hole size as standard telephone types and can be assembled on any of our regular mounting strips described elsewhere. Listed below are several standard types of panels as usually used in broadcast stations. All use the No. 89-02 jack except panel No. 99-80 which uses No. 89-32 type jacks. The "99" series use an aluminum, sandwich-like panel construction. The "96" series use standard 3/8" thick bakelite panels. Of these, those with "—80" numbers are intended for direct attachment of the cable. Those with "—90" numbers have, behind the main panel, a sub-panel on which are mounted Amphenol No. 83-1R connectors from which wiring may be run to the coaxial jacks. Wiring not installed by TRIMM unless specified by purchaser.

MULTI-USE PLUG-IN-KIT:

TUBE SOCKET TYPE

TRANSISTOR TYPE

MULTI USE PLUG-IN KITS enable the user to readily wire and package a wide variety of circuits. Kits consist of an aluminum case with plug and accessories for mounting (a) Tube Sockets, or (b) Transistor type assemblies. For the tube circuits the Lip-Loc Case units (see left fig.) are used. These include the following parts: Mounted noval sockets, shield bases, 2 Zip wiring decks, and 11-pin Octal plug plus extra components as follows: equal number of 7-pin miniature sockets, shield bases and adapter mounting rings; plug buttons to close unused socket holes; one extra unpunched base with spacers and screws for mounting larger plugs such as the Amphenol Blue Line (not supplied in kit); one extra zip wiring deck. The extra components may be readily installed as required in place of the furnished items.

For transistor and printed circuit assemblies the Frame-Loc type case shown at the right above is used with Elco Varicon 16 pin plug and optional perforated epoxy-paper center wall with 1/8" holes on alternate centers of a 0.1" grid. T28 Push-In Terminals supplied (not installed).

Material specifications are as follows: case, caustic etch on aluminum; sockets, mica-filled phenolic, commercial grade; terminal strips and spacers are phenolic for tube units and epoxy-paper for transistor units. Overall height of all units is 3".

SYNCHRONOUS MOTORS AND TIMERS

Versatility is the characteristic which design engineers need—and find—in Bristol Synchronous Motors and Timing Devices. Bristol's unusually broad experience and range of design and manufacturing skills are particularly valuable where special requirements must be met.

The devices shown are among the most widely used. All can be mounted in any position, and take a minimum of space. Materials are selected on the basis of their suitability to provide long service, and perform well under a variety of conditions.

Bristol engineering service is available for applications that require custom design and manufacture.

Series 6100 Time Delay Relay. Universal Time Delay Relay provides self-holding solenoid starting with adjustable timed contact operation. Type 6110 provides three types of load contacts which give seven types of load circuit operation in a single unit. This model may be wired up to one of four basic types of operation: momentary start, automatic reset; momentary start, manual reset; sustained switching; and tandem or cascaded operation. Size: 3" in diameter by 5 $\frac{1}{8}$ " long. Timer case bezel $\frac{1}{32}$ " thick x 3 $\frac{3}{8}$ " inches square. Universal mounting allows standard 3-stud or 4-stud panel mounting. 115 VAC — Price \$44.00 each.

**Full Scale Available from 6 Sec. to 24 Hours
Interchangeable Mounting**

The 6100 series timers are provided with removable threaded studs. Timers are normally mounted with four studs, Figure A. Threaded holes are provided for alternate three-hole mounting, Figure B.

6200 Time Delay Relay. Companion to the 6100 series timers. This model is operated by a manual push button start on the face of the timer and provides unusual circuit versatility. This unit times out to the zero position and remains timed out until started by the manual push button. This timer does not reset on power failure. Size, 3 inches in diameter x 3 $\frac{1}{4}$ " long. Intended for lower cost variable delay timer operations. 115 VAC — Price \$27.00 each.

TEXAS CRYSTALS...FOR EVERY PURPOSE

Made to order crystals in pressure type holders can be supplied in five types as shown. All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

CRYSTALS MADE TO ORDER

| | | |
|---------------------|-----------|--------|
| M 1,001 to 1,600 KC | .005% TOL | \$4.50 |
| 1,601 to 2,600 KC | .005% TOL | \$2.75 |
| 2,600 to 9,000 KC | .005% TOL | \$2.50 |
| 9,000 to 10,000 KC | .005% TOL | \$3.00 |

Low frequency crystals from 1001 KC to 2100 KC are space mounted—all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without fracture. Order by frequency, type holder, tolerance, and circuit capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrode. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G. E.,

Matarala, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6-U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

MEASURING MACHINE
Sturdy and compact construction. Has a precision quality built counter with large numbers for easy reading and will register wire up to .9,999 feet for direct accurate reading. Can be easily reset to zero position. Wire passes through two rollers, the upper roller being self-adjusting and the tension of the upper roller can be set by a thumb screw to provide the proper grip for very fine as well as for heavy wire. Two hardened lead bushings with an opening of $\frac{5}{8}$ " diameter will guide the wire properly through the rollers. Bushings are removable to allow cables up to 1" dia. to pass through. Will measure accurately all electric wires, cables, coaxial cables, rope, tape, etc.

MEASURES IN INCHES AND FEET

Sold without baseboard.

BIRNBACH FLEXIBLE SHAFTS

Modern construction calls for more compact arrangement of parts. At times there is difficulty getting the controls to the proper position on the panel. With couplings and these flexible shafts, locations can be made with ease on an offset and angles up to 90 degrees. The flexible shafts are made of phosphor bronze and fitted into $\frac{1}{4}$ " dia. hubs.

SUB-MINIATURE TEFLON TERMINALS

NEW SUB-MINIATURE TEFLON* terminals provide instant mounting without any extra hardware of any kind because of the exceptional properties of Virgin Teflon*.

Low dielectric constant, low power factor (60 cps to 30,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (1500-2000 v/mil. s.t.), continuous service—450°F to plus 500°F, unaffected by soldering, chemically inert, damage resistant, water repellent, voltage rating, sea level 750v r.m.s., flash-over, sea level 3000v r.m.s., flash-over, 50,000 ft. 1300 v r.m.s.

Installed permanently in seconds, in metallic or non-metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Data: 1. Punch or drill the hole to a diameter that is .012" less than the diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the chassis permits, the entrance edge of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040" or smaller), countersink 45° to the diameter of the insulator.

Speeds up assembly—cut production costs, no nuts, washers, staking or soldering necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, telemetering, guided missile instrumentation and circuitry.

ALL-NYLON FASTENINGS

Zytel 101 per Mil P 20693 Spec, Mil S 7742 Spec
Birnbach All-Nylon Fastenings are made of Zytel 101*, a Polyamide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus lightness elasticity and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength thru a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors available to order. Zytel 101 per MIL-P-17019B.

BIRNBACH NYLON BUSHINGS AND SPACERS

Designed with wide flanges to completely isolate screw from mounting surface, useful where hi tensile and torque requirements require high strength non-insulating screws. Natural color.

#3801 ARBOR SWAGERS (FIG. A)

Specially designed by Cambion for mounting Cambion terminals on terminal boards. These Arbor Swagers are sturdy, precision-built, hand operated, cam action rolling tools; designed for quick, solid uniform swaging of solder terminals. Adjustable to a wide range of terminal board thicknesses by setting the anvil at the proper height. Terminals may be swaged, in place, as far as 1 1/8" from the board edge. Pressure is adjustable and uniform, assuring good, even peening. When ordering, specify terminal to be staked, PSA (anvil) and PSP (punch) toolings are used with the Arbor Swager, Net Each \$40.00. PSA and PSP tooling, each \$4.00.

BARRIER TERMINAL BLOCKS

The Jones Barrier Terminal Block is another product of Cinch designed to offer increased insurance against failure of electrical/electronic circuitry. By interposing barriers between each adjacent terminal position, not only are much higher voltage ratings obtained, but also addi-

tional protection from frayed wire faults is gained. The block is made of molded bakelite. The eyelets and binder screws are of brass, nickel-plated. The ¾W or Y terminals are of brass, hot tin finish. Widths indicated are measured on the barrier between terminals.

NEW "500" SERIES BARRIER BLOCKS

No. 2-540

The new 500 series barrier blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. The heavy construction adds strength to the strip minimizing warpage and shrinkage. A top-mounted marker strip can be furnished, as described elsewhere in this catalog.

Quick-Clamp* Terminals. Simplifies engaging of wires to barrier blocks. Wire is stripped, inserted into flared opening on Quick-Clamp and the screw tightened. Since wire is not bent around the screw, significant time savings result. Two built-in stops prevent conductors from extending beyond the rear of the terminal. Screws are brass, binder-head type.

RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS

Ball Bearing Type Compact, durable, exceptionally smooth action

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with concentric shafts whereby the output envelopes the input shaft. An added feature of type RDLC is the output shaft in the rear. The front concentric can be used as a coarse tuning (1:1 ratio to the output in the rear) and the small diameter shaft in the front can be used for fine tuning.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

SLIP-CLUTCH, SAFETY KNOBS

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For 1/4" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch", automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

Model No. K-1475 Slip-Clutch knobs are designed similar to No. K-1375 except for larger dimensions and utilize cast aluminum in place of Bakelite.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

JAN'S molded, black, shock-resistant plastic escutcheons are available in an exceptionally wide variety of different types and sizes. They provide a pleasing window to frame dial plates mounted behind the panel. Plastic escutcheons are available in the following ways: frame only; frame with clear windows; frame with clear window scribed with a center line. For especially large working areas, stamped aluminum escutcheons, finished in dull black are available to meet the needs for space economy. Withstands temperature shock -65° to +85° C. **NON INFLAMMABLE**

* To Order specify: (1) frame only, (2) frame with clear window, (3) frame with clear window scribed with a center line

TUBE BAIL ASSEMBLIES

VECTOR PUSH-IN TERMINALS

VECTOR PUSH-IN TERMINALS simplify "breadboarding" and production. Push them into .062" or .093" holes in 1/8" or 3/32" Vectorboard panels and they hold without stoking. (May be stoked by dipping off flush with board surface or flattening with a pair of pliers for maximum holding, if desired). All terminals except T9.4A have serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires. Small slot hold transistor leads. The T9.4A is supplied without "teeth" on the wire slots to permit easy removal of leads when soldered components must be changed. The T9.6 has a special "snop-in" slot to accommodate .075-080 diode leads. All types have thru hole construction enabling riser wire to be inserted down through center of terminal, and slot or hole in shank for additional connections.

SOLDERLESS SPRINGCLIP TERMINALS—Reliable truly solderless terminals for fast setup of experimental circuitry. May be used over and over—permits reusing expensive components by eliminating heat damage. Extremely low contact resistance—less than .002 ohms for T30. Order insertion tool P-92A for easy insertion in .093" holes. Suggested board thickness 3/32" for best support of terminal.

Now, for the first time ever, a combination Signal Generator and Signal Tracer priced at only **\$2840** COMPLETE

The true test of the claim "two instruments in one" is; can each of the two units be used separately as well as in conjunction with each other? In the case of this versatile combination instrument, the answer is emphatically yes, for, the Signal Generator will function as a full service instrument with a range of 250 kilocycles to 120 megacycles and the Signal Tracer will follow any signal whether generated by a broadcasting station or

injected by the Signal Generator section of Model 153. When used in combination with no dependence on outside signals, the compatibility of Model 153 provides ideal service, for unlike any standard signal tracer, the Model 153 first injects its own signal then traces that controllable signal to locate the source of trouble whether due to component or circuit by standard signal tracing technique.

SPECIFICATIONS:

SIGNAL TRACER: • Hi-gain cascode pre-amplifier • Pre-amplifier output available at front panel jacks for use with VTVM, oscilloscope or phones. • Low distortion triode output stage. • Audio Attenuator provided to prevent high signal overloading. • 4½ inch permanent magnet speaker. • Separate R.F. and Audio signal trac-

ing probes. **SIGNAL GENERATOR:** • Covers from 250 KC to 120 MC in 5 bands. • All popular and most used frequencies marked on panel in color. • High stability electron coupled R.F. oscillator. • Attenuator used on both R.F. and Audio circuits.

Model 153 comes complete with all necessary probes. Only **\$2840**

VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. Running Time Meters are synchronous motor operated instruments to automatically measure service periods or service requirements.

APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. Running Time Meters are often used in conjunction with reed type frequency meters.

New Precision, Miniaturized Electronic Instruments

New "Stethotracer" Signal Tracer Amplifies 1000 Times! Locates Defective Circuits Fast!

Now trace hum, oscillations, ground loops, breaks in printed circuits and other common trouble shooting ailments in seconds! The dependable vest-pocket STETHOTRACER detects and demodulates any low level microwatt audio or modulated radio frequency signal...the signal is then amplified 1000 times into a high quality earphone, or observed on a scope, using a plug-in scope adaptor (available optionally).

Ideal for test and trouble shooting all types of radio, amplifiers, phonographs, magnetic tape recorders, dictating machines, hearing aids, and phono pickup cartridges, or for use as a preamplifier.

Complete with earphone, cord, 3 interchangeable attenuator probes and RF detector-demodulator crystal diode probe, ground clip lead and battery.

SPECIFICATIONS:

AMPLIFICATION: 1000X approx. at 1kc (600 ohm load).

LOW FREQUENCY BANDWIDTH: Useable from 60cps to 100kc.

MODULATED HIGH FREQUENCY BANDWIDTH: 100kc — 200mc (with 1kc audio modulation) — microwave frequencies with special probes.

INPUT IMPEDANCE: 3,500 ohm at 0 attenuation
35,000 ohm at 20 db attenuation
350,000 ohm at 40 db attenuation

MAXIMUM AC SIGNAL INPUT VOLTAGE: One millivolt peak-to-peak for linear operation across 600 ohm scope adaptor load (0 attenuation).

Accessory probes (available optionally) include Vibration Pickup Probe, Miniature Microphone Probe, Magnetic Tape Head Probe, Microwave Demodulator Probe and Telephone Pickup, Input Adaptor, Scope or Output Adaptor.

MAXIMUM INPUT DC VOLTAGE: 250V DC max. from the input terminal to case ground.

OUTPUT VOLTAGE: 0.3 volts peak-to-peak across 600 ohm scope adaptor load (linear operation).

OUTPUT ACOUSTICAL LIMITING: The output sound is limited electrically to the earpiece at 2 milliwatt level so that audio output is limited to a comfortable and safe level.

EQUIVALENT INPUT NOISE LEVEL: 3 microvolt peak-to-peak broad band with input shorted.

DISTORTION: 5% max. harmonic distortion within its dynamic range.

POWER SOURCE: 1.5 volt standard A.A. size battery (EVEREADY #912 or equivalent). Battery life: 250 hrs. normal use.

PROBES: 0db, 20db, 40db, attenuator probes, and RF crystal diode probe included.

OSCILLOSCOPE PREAMPLIFIER ADAPTOR: (Optional) equivalent of 600 ohms impedance with a DC level of +0.80 volt (use AC input on scope) output plug will fit all laboratory scopes with plug adaptor.

"Mosquito" Signal Generator For Every Troubleshooting Application!

Find defective circuits quickly and exactly with the new MOSQUITO — a pocket-size, cordless, pen-size instrument which generates and injects a rich signal covering the audio, IF and RF spectrum!

The unique MOSQUITO contains a transistor oscillator, powered by a single 1.5 volt pen light cell, which completely eliminates, in many cases, the need for a large, expensive signal generator. It can be coupled into magnetic pickups and circuits without leads...oscillates at approximately 1,000 cycles per second, with a wave form rich in harmonics.

Ideal for use in radio, television, tape recorders, movie projectors, telephone circuits, sound systems, hearing aids, amplifiers, transformers, reproducers, transducers.

SPECIFICATIONS:

FREQUENCY: 1kc approximately with harmonics to 30 MC
OUTPUT VOLTAGE: 50 volts peak-to-peak approximately open circuit

OUTPUT IMPEDANCE: 10k capacitive

INPUT DC VOLTAGE: 600 volts max. from output tip to case ground

SUPPLY VOLTAGE: Use only one 1.5v conventional battery (EVEREADY #912 or any A.A. size equivalent).

BATTERY LIFE: 2,000 hours normal use

SIZE: 5 1/2" long x 1/2" O.D. ONLY!

WEIGHT: ONE OUNCE!

Also manufacturers of "VIBROTRACER" pocket sized vibration detector.

ELECTRICAL TEST LABORATORY**

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

LIST PRICE

\$4.95 Weighs only 2½ ozs.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The **CIRCUITRACER** is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits **AND** high voltage live circuits. It is made of the finest materials available and is designed for long life.

DESCO TEST PROBE ADAPTERS

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer® Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

EMPHASIZING MAINTAINABILITY

1. Calibrate these Power Meters in your plant or laboratory against low frequency power standards at power line frequencies. No need to ship to manufacturer for repair and recalibration.
2. No correction curves necessary.
3. Simple operation.

200 KC TO 500 MC — GREATLY IMPROVED

- Portable, Continuous Duty.
- Can be recalibrated anywhere with DC or Alternating Current Power against a low frequency standard.

These broad band R.F. Power Meters are of the absorption-type consisting of an oil filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. The meter box is easily detached, permitting location of the load resistor at a remote point. In cases where power measurements are not required the load resistor may be used as a dummy load. No correction curve is necessary to cover the frequency range. The spurious response usually associated with directional couplers and capacitive voltage dividers is absent in this purely resistive voltage divider. Since this is a resistive voltage divider which has the same voltage division at DC, 60 cycle AC, and at high radio frequencies, this instrument can be calibrated and its calibration can be checked frequently on 60 cycle supply voltages.

100 KC TO 200 MC

- Intermittent Duty.
- Portable.
- Can be recalibrated anywhere with DC or Alternating Current Power against a low frequency standard.

These broad band R.F. Power Meters are of the absorption-type consisting of an oil or air filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. It is designed to operate in the frequency range of 100 KC to 200 MC with an accuracy of plus or minus 5%. In this Power Meter a resistive voltage divider is used. This voltage divider has the same voltage divisions at DC, 60 cycle AC and throughout the frequency range up to 200 MC. Because of this feature it is possible to calibrate this Power Meter and its calibration can be checked frequently with DC power or with 60 cycle power. Since this is a resistive voltage divider, the spurious response usually associated with directional couplers in capacitive voltage dividers is eliminated.

DECADE CAPACITORS

The Freed series of Decade Capacitors covers a wide range of values and can be supplied as individual decades from 0.0001 mfd. per step to 1 mfd. per step or in various combinations of assembled decade boxes.

Single decade units can be assembled in different capacitor values for use in experimental and permanent equipment. The decade boxes are useful for laboratory work in bridge measurements and as components of filters and tuned circuits.

Polystyrene dielectric is used in the manufacture of the capacitor assemblies with the exception of the 1 mfd. per step unit which uses Mylar as a dielectric. All capacitors are non-inductively wound and heat treated for stability, low dielectric absorption and low losses.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately.

SPECIFICATIONS

Accuracy: Individual capacitors are adjusted to an accuracy of $\pm 1\%$ when measured at 1kc. The capacitance at the terminals, less the zero capacitance, is within $\pm 1\%$ of indicated dial setting. The zero capacitance of the decade boxes is supplied with each unit. Single decade units have a zero terminal capacity of approximately 8 mmfd. except Type 1419, which is compensated for true terminal capacity.

Dissipation Factor: The dissipation factor of the polystyrene units when measured at 1kc is less than 0.0002, the 1 mfd. per step decade (Mylar) is less than 0.005.

Maximum Voltage: The maximum voltage that may be applied to these decades is 500 DC or peak.

Note: Individual capacitors can be supplied to better than $\pm 1\%$ Tolerance. Write for complete information.

DECADE INDUCTORS

DESCRIPTION

Each unit is an assembly of four Toroids wound on a stabilized Molybdenum permalloy dust core protected against moisture. Four coils (nominal inductance values 1, 2, 3, 4) are connected in series, the inductance is varied from 0-10 by use of an 11 position law loss switch. A positive detent mechanism allows the switch to be set accurately.

USES

The Freed Toroidal Decade Inductors are available in single units from 1 Millihenry per step to 10 henries per step or in various combinations of assembled decade. They are especially useful in the design of filters and equalizers at audio and supersonic frequencies where the variable feature allows adjustments for optimum circuit performance.

SPECIAL FEATURES

- High stability of inductance value.
- Small variation of inductance with frequency (high self resonant frequency).
- Small variation of inductance with AC and DC currents.
- High Q in the operating frequency range.
- Low temperature coefficient.
- True astatic construction.

PANEL METERS

THE BIG LOOK IN SMALL PANEL METERS

2½-inch design
Type DW-91 Voltmeter

3½-inch design
Type AO-91 Ammeter

4½-inch design
Type DO-92 Ammeter

General Electric's BIG LOOK panel meters offer such added values as distinctive appearance, excellent readability, completely sealed cases and self-shielded d-c core-magnet mechanisms. And you get full-line selectivity with 2½-, 3½-, or 4½-inch models . . . a-c, d-c, or Rectifier types.

Distinctive Appearance

BIG LOOK panel meters are designed specifically to meet industry's increasing demands for panel components that contribute to end-product eye appeal. BIG LOOK panel meters—with their distinctive and modern, but not radical design—offer an important added value by complementing the appearance of the finest equipment.

Excellent Readability

Big, clear, easy-to-read numerals are positioned above the scale divisions so that they cannot be obscured by the pointer. The absence of arc-lines and use of a slim, tapered pointer facilitates quick accurate readings. Functional cover design eliminates confusing shadows by admitting natural light from all sides.

Completely Sealed Cases on 2½- and 3½-inch Designs

General Electric quality is built in to stay. Gasketed construction on 2½- and 3½-in. models protect internal parts from dirt, dust, and water and helps assure extra-long, reliable life.

Snap-on, Snap-off Covers on 4½-inch Designs

Snap-on, snap-off covers are supplied on all 4½-in. BIG LOOK panel meters. Covers can be easily removed and replaced while meter remains in normal mounted position.

Electroluminescent Scale Plate

For illuminated instrument applications, an electroluminescent scale plate is now available for all 4½-inch a-c and d-c Big Look panel meters. Excited by a-c voltage, they give a soft, even, green light over entire surface of scale plate.

Mirror-backed Scale

Also available on the 4½-inch meter exclusively are mirror-backed scales (with knife-edge pointers, if desired) for more precise, antiparallax reading.

As this size comparison shows, the new design appears to look much bigger, but will actually fit into the same usable panel space as older style meter.

D-C PANEL METERS

Shelf-shielded D-C Mechanism

Core-magnet mechanisms with inherent self-shielding are used for all d-c ratings. This permits mounting on magnetic or non-magnetic panels without special calibration and cluster-mounting bezel-to-bezel without interaction.

Self-shielding also minimizes effects of stray magnetic fields. Weight is reduced,

too. Because of these important added values, the core-magnetic mechanism has gained industry-wide acceptance. (General Electric pioneered in the development of the core-magnet mechanism.) The superior operating characteristics of BIG LOOK meters—excellent damping, a high torque-to-weight ratio and minimum burden—are the result of continuous progress in development and use of high-quality, modern materials.

(E) IN AND OUT OF CIRCUIT TRANSISTOR TESTER

—Test all common NPN, PNP transistors and provide an indication of collector to emitter shorts, collector to base shorts, the condition of the collector junction and the DC current gain. Indicates the condition of diodes and rectifiers. Provides an "In-Circuit" test to determine the transistor's ability to oscillate as a blocking oscillator. This test is often most expedient in Isolating troubles — The in-circuit check is not a gain test but only indicate whether or not the transistor is operative.

HOYT moving-coil Meters are built on the D'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers. Full 100° movements standard on most models.

INSTRUMENTS & TESTERS

J-B-T INSTRUMENTS, INC., NEW HAVEN 8, CONN.

VIBRATING REED FREQUENCY METERS (PATENTED)

• **USES** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups—wherever constant or known frequency is important to efficient operation of equipment. More than 20 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — These patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 1000 cycle reed.

• **ADVANTAGES** — Guaranteed accuracy at reference temperatures of 77°F is $\pm 0.3\%$ or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

3 1/2" SEALED FREQUENCY METERS

FHXX TYPE Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing and electrical requirements including 3000 volt breakdown. Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Every meter is tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. For dimensions, see Table, Line 8, and Print SK-51 Rev. D. Standard voltage is 100-130. Meters marked * are normally stocked; others are produced on order.

RUGGEDIZED METERS

Model with "RUG"—Sealed vibrating reed frequency meters and sealed elapsed time meters are available, when so ordered, to the intent of MIL-M-10304B, which covers ruggedization of other kinds of meters. This feature usually is specified only for extra-severe shock and vibration.

400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

Among the non-cataloged variations which J-B-T produces on special order, are 21-reed, 390-410 cycles in 3 1/2" case; and 11-reed 780-820 cycles with 5-cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

ELAPSED TIME METERS; FREQUENCY-TIME METERS; REED RELAYS AND OSCILLATOR CONTROLS

• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

New WIDE-NUMERAL ELAPSED TIME METERS

MODEL 31-EXW. The latest J-B-T elapsed time meter is Model 31-EXW, illustrated. Easily-read, wide 6-digit numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in black on white, and units in white on black. The 3 1/2" black molded case is interchangeable with Model 31-EX and FX types of frequency meters. Print SK-125 gives mounting information.

Model 31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts. \$16.95

MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. F showing standard rear mounting 2 1/4" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. \$17.05

ELAPSED TIME METERS — Tenths of Minutes

MODEL 31-EXM, 60 cycles, 110-125 volts, reading 0-9,999.9 minutes; for short-run applications or readings at closer intervals than 31-EX. Tenths of minutes in red on white, minutes in white on black numerals, otherwise identical with 31-EX. **\$16.25**

3 1/2" SEALED ELAPSED TIME METERS — 60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts \$19.75

3 1/2" SEALED ELAPSED TIME METERS — 400 Cycles

MODEL 31-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3 1/2" flanged case, glass-to-metal sealed construction with separable flange; heavy-duty solder terminals; flat glass front. 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

31-EHXX, 400 cy., 0-9,999.9 hours, 1/10 hour steps, 110-125 volts \$58.00

2 1/2" SEALED ELAPSED TIME METERS

MODEL 21-EHXX. A full size counter reading 9,999.9 hours in 1/10 hour steps and a rugged self-starting synchronous motor are built into this 2 1/2" sealed meter. Its front mounting dimensions are the same as Type MR2E electrical indicating instruments in MIL-M-6B. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68, Rev. G. ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines elapsed time or running time meter with frequency reads. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see print SK-45, Rev. C.

31-FE, 3 1/4" metal case 4-19/32" deep. \$33.00

RESONANT — REED RELAYS AND OSCILLATOR CONTROLS

RELAY RR-A11A-124.0

OSCILLATOR CONTROL RO-B10B-188.0

J-B-T's many years of experience in the manufacture of resonant reed products is being utilized to produce, on a custom basis, frequency-sensitive electro-mechanical control devices of two types. The **contact type** makes use of a resonant reed in conjunction with a highly reliable control system. Typical are Series RR-A- and RR-B-plug-in relays (sometimes known as decoders) which respond to a signal of predetermined frequency in the range of 50 to 1000 cps. **Oscillator controls** (sometimes known as tone generators or encoders) are made in octal and 7-prong plug-in types, double or single reeds, in frequencies corresponding to the relays. Typical in Series RO-B, of which a 188.0 cycle cut-away model is illustrated. For further information, see Bulletin 162R. The **contactless type** is a new, patented device evolved from combining resonant reed and photoelectric principles. The reed acts as a shutter in the light beam from light source to a photo-sensor. For further details, please request reprint of technical paper on Photoreeds. For quotations, please describe application as fully as possible.

APPLIANCE TEMPERATURE TESTERS AND ACCESSORIES
LABORATORY TEMPERATURE INDICATORS; ACCESSORIES

OVEN TESTERS

MODEL 23-JP-1. This popular portable indicating pyrometer; saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F., with 2 $\frac{3}{8}$ " scale arc reading, is used but covered by clear-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4 $\frac{1}{2}$ " x 2 $\frac{3}{8}$ " x 4 $\frac{1}{4}$ " over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperature changes inside the instrument itself, and gives foolproof direct readings. Supplied with attached SA-116, 5 $\frac{1}{2}$ ' calibrated thermocouple, clip, and convection shield **\$26.00**

MODEL 32-JP-3. This time-tested model uses a rigid outer carrying case 6" x 3 $\frac{3}{8}$ " x 3 $\frac{3}{4}$ ", covered in black leatherette. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2 $\frac{1}{2}$ " on a 2 $\frac{3}{8}$ " scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5 $\frac{1}{2}$ ' thermocouple, clip for attaching to grill and convection shield included **\$28.00**

NEWEST MODEL 32-JP-7. Most versatile, and easiest to read of J-B-T oven temperature testers, Model 32-JP-7 offers a 650°F scale more than 4" long. Automatic compensation for ambient temperature change is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5 $\frac{1}{2}$ ' thermocouple with attachment clip, convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., appropriate accessory thermocouples are suggested. Tester price includes stitched Ever-ready case, 5" wide x 5 $\frac{1}{2}$ " high x 2 $\frac{3}{4}$ " deep, of sturdy, scuff resistant black vinyl. **\$29.50**

IRON TESTER

MODEL 32-JIT. Self-contained bench-type tester; checks all makes of irons; measures thermostat temperatures; shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12 x 5 $\frac{1}{2}$ ", scale 0-650°F, 15 amp fuse, 6' cord, 110 volt, 50-60 cycles. **\$34.50**

ALL-PURPOSE TESTER

MODEL 61-JRT. A 9-in-1 tester to speed accurate temperature adjustment and electrical analysis of ranges, refrigerators, etc. Rapidly reads four cold zones 100°F, +80°F, up to 14' distant; two heat zones 0-600°F. up to 5 $\frac{1}{2}$ ' distant; one voltage range 0-300 AC and, with transformer, two current ranges, 0-30 and 0-60 amps, AC. Sturdy, polished walnut case, 15 $\frac{1}{2}$ " x 10 3/16" x 4 $\frac{3}{4}$ ". Two color etched metal panel. Separate switches protect bulb and ammeter circuits. Requires one standard flashlight cell, replaceable in the field. Temperature accuracy $\pm 2\%$ of full scale; rectified AC readings $\pm 5\%$. Accessories as listed may be added for testing appliances. Includes two SA-162 resistance bulbs, two SA-116 thermocouples, electrical leads, and AS-TR-2 built-in transformer **\$124.00**

Same unit, same scales except no reading in amperes; AS-TR-2 transformer omitted. **\$110.00**

HEAT INDICATORS

MODEL 32-J PYROMETER IN SN-7 STAND. Mounted in sloping front black metal stand, 4 $\frac{1}{4}$ " high x 4 $\frac{3}{8}$ " deep x 4 $\frac{1}{8}$ " wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2 $\frac{3}{8}$ " scale, assures ruggedness and pointer stability. For $\pm 2\%$ accuracy, use only the type and resistance of thermocouple and lead provided; if extra length, coil it to maintain calibration. A protection tube usually is not required. WR-64A COLOR-BAR/DOT/CROSSHATCH GENERATOR

\$189.50*

Complete with RF output cable, cable-carrying bracket attachment and instruction booklet.

**User Price (Optional)*

For checking over-all operation of Color-TV receivers. A "must" for adjusting and trouble-shooting color phasing and matrixing circuits. Generates signals for producing ten bars of different colors simultaneously. Also provides extremely stable fine-line crosshatch and dot patterns free from "jitter" and "crawl". Simpson VT meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VT for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service.

4 1/2" METER RELAY — FRONT ADJUSTABLE — MODEL 29XA

General: Model 29XA Relays are of the D'Arsonval Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

Calibration: Accuracies $\pm 2\%$ of full scale.

Contacts: Platinum Alloy. For use @ 15 volts DC @ 10 milliamperes maximum on resistive or diode protected inductive loads.

Contact Adjustment: Contacts are externally adjustable over 95° of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

Contact Differential: Normally, contacts will close within 2% of full scale value and break within 10% of full scale value.

Insulation: Breakdown 300 volts AC from Relay contacts to meter circuit. 3 KV AC from Relay terminals to mounting panel. (All Tests at 60 cycles.)

RUGGEDIZED INSTRUMENTS

A complete line of 2½" and 3½" ruggedized and sealed instruments designed to meet government specification MIL-M-10304A.

Triplet ruggedized instruments employ the unique and exclusive bar-ring construction so well adapted to ruggedization, that the addition of spring loaded jewels and an internal rubber mount (both designed for jewel protection) constitute the essential difference between the commercial and ruggedized movements.

The bar-ring construction is inherently self-shielding, so that the heavy steel case does not affect instrument calibration nor does mounting in a steel panel of any thickness.

The unusually strong housing consists of a drawn steel case with heavy die cast window bezel. The bezel seals the window to the case with a simple gasket and screws. A tough plastic window is used instead of glass.

Husky gasket-sealed studs are used for electrical connections to provide additional protection over delicate glass sealed types.

Most catalog ranges of DC: MV, Volts, Mic, Ma, Amp and AC rectifier type can be supplied. Regular dials in accordance with MIL-M-10304A are supplied although special dials of all descriptions can be made up for special applications.

MINIATURE EDGEWISE PANEL INSTRUMENTS

If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area—yet give you the readability, performance and reliability you expect from the conventional 2½" sizes.

Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands.

Accuracy—DC 2% of full scale; AC Rectifier type 5% of full scale.

Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque, exceedingly rugged and accurate.

Mounting—Horizontal, zero at left and barrel down is standard.

Vertical mounting or other special adaptations in quantity orders.

Panel Hole Required—Only ⅞" x 1⅛".

LOW COST Outstanding performance is provided in a low cost instrument providing digital readout. Small (5½" x 7" x 8") and weighing only 7 lbs., unit is conveniently designed for either lab or production use.

RESOLUTION and REPEATABILITY The warranted accuracy is 2 digits for all ranges. This covers all thermal effects and reference circuit errors. The instrument can be easily read and is sensitive to small voltage changes. For short term observation, under stabilized ambient conditions, unit will repeat to ½ digit or .05%. Thus, for many applications, the instrument can be used to a comparative accuracy of .05%.

READABILITY Presentation is readable upon application of slowly changing voltages. Thus, input voltage drift can be continuously observed.

READING SPEED Instrument comes to reading balance quickly and without annoying creep. Average reading time is 2 seconds. Numerals are illuminated.

CALIBRATION EASE High input impedance permits direct calibration from a standard cell. Under normal usage, recalibration is required only at 6 month intervals.

RELIABILITY High reliability is achieved by a completely transistorized amplifier and the absence of stepping switches and relays. Normal overloads or incorrect polarity will not damage instrument.

LOW POWER CONSUMPTION The efficient circuit requires only 28 watts maximum, thus minimizing heat rise and attending problems.

OTHER USES By use of compatible DC transducers, the Digitec 200 can be used to display readings of current, pressure, speed, position, flow, angle or any parameter.

READING RETENTION A jack is available on the rear of the case to permit holding of a displayed voltage by means of an external switch. Suitable switches complete with cord and plug are available as optional accessories.

CARRYING HANDLE A convenient carrying handle also serves as a means for setting the viewing angle for optimum readability.

WESTON INSTRUMENTS

1900 PANEL INSTRUMENT SERIES

GENERAL

The 1900 Series is an integrated line of a-c and d-c panel instruments, providing a carefully selected choice of sizes, case styles, accuracies, pointers, scales and ranges. Particular attention has been paid to designing instruments that will present an overall appearance of harmony, even when random sizes are mounted side by side. Mounting bezels provide three types of mounting—recess, flush and conventional.

One of the many features of this new Weston series is the method of construction which provides quick interchangeability of fronts and easy access for adjustment or service, if ever required. From their spring-backed jewels to their unique fastening clips, the 1900 Series incorporate the fine workmanship and quality that has always been associated with Weston.

WESTON 1900 T SERIES WITH TAUT BAND MECHANISMS

Available in Bakelite or static-free clear plastic cases in sizes from 3 1/2" through 7 1/2".

Taut-Band instruments are slightly higher in price than the 1900 Series with conventional pivot and jewel movements, but are completely interchangeable.

Taut-Band mechanisms are free from friction and inertia. They offer outstanding sensitivity, reliability and uniformity from zero to full scale.
