USING THIS COMPLETE BUYING GUIDE

This Official Reference Book and Buying Guide of Radio, TV, and Electronic Equipment is the Most Complete Catalog of its kind available! It contains the manufacturers' illustrations, descriptions, and specifications of practically ALL the nationally advertised and universally accepted products in the electronic field, for new and replacement use. All parts and equipment are manufactured in accordance with RMA and NEMA standards, rated at safety factors in excess of those required for normal operation.

INDEXES: Beginning on page Index-3, there is an alphabetical listing of all manufacturers represented in the book. Immediately following, on pages Index-6, 7, and 8, there is an index covering the general classification of products contained herein. An additional directory (page Index-9, in back of the book), is a comprehensive alphabetical listing of BOTH Specific Items and Manufacturers' names.

COMPLETE STOCK: Our huge warehouse space enables us to carry practically all the products listed in this book. However, due to the tremendous variety of items, and rapid movement of merchandise, it is impossible to have everything in stock at all times. When we are temporarily out of an item, you can be sure that every effort will be made to expedite delivery at the earliest possible moment. Your orders for unlisted items will receive the same prompt attention, with delivery assured at the Lowest Possible Cost!

DISCOUNTS: All Prices Shown are List Prices! Trade Discounts are printed at the bottom center of most pages. These numerals indicate your percentage of discount from list prices. Where the word "NET" appears, no discount applies.

INDUSTRIAL DIVISION: Our Industrial Sales Division is specially geared and equipped to provide unparalleled service for your special requirements. When you need something special, in an extra special hurry, call our Industrial Division, and watch them perform miracles for you.

DEALERS AND SERVICEMEN: Use this book to good advantage! For increased sales and profits, use it to show your customers the completeness of the lines you carry.

MAIL ORDERS: We have built a world-wide reputation for speed and efficiency in filling mail orders. Please specify manufacturer's name, part number; section and page on which the item you order is listed. This will help speed delivery.

PRICES: Prices in this book are current at the time of publication. Where prices are increased, we will notify you before shipment. Where prices are reduced, you will receive immediate benefit. Overpayments are promptly refunded.

GUARANTEE: All items are guaranteed to be as represented. In the event of necessary repairs or replacement during the standard RMA warranty period, please request WRIT-TEN AUTHORIZATION before returning any merchandise.

CETRON ELECTRONIC TUBES

Engineered and Manufactured by Continental Electric Co.

CETRON PHOTOTUBES

CETRON phototubes are either of the gas-filled or of the vacuum type. With the gas-filled type, greater effective response is obtained, particularly in low impedance circuits, while the vacuum type is recommended where maximum stability is desired.

CETRON phototubes are selected as to their sensitivity and priced accordingly. Phototubes of the Super Class A/B or Q are generally used for experimental purpose where very high sensitivities are required; Class C or R mostly for motion picture equipment; Class D for relay work, etc.

CETRON RED SENSITIVE PHOTOTUBES

CETRON red sensitive phototubes are available in three sensitivity classes, A/B, C and D. The CETRON gas-filled red sensitive tubes comprise the most complete line of phototubes designed for sound reproduction. For complete engineering specifications, write for our PC 8/9.

CETRON BLUE SENSITIVE PHOTOTUBES

CETRON blue sensitive phototubes are available in two sensitivity classes, Q and R. The gas-filled CETRON blue sensitive tubes comprise a most complete line for sound reproduction work from dye recorded film. For complete engineering specifications, write for our PC 8/9.

CETRON LEAD SULFIDE PHOTOCELLS

CETRON lead sulfide photo conductive cells are made in a variety of miniature types. They are also available in a variety of sensitive areas and resistances. CETRON lead sulfide photocells are available in three sensitivity classes, A, C and D. For complete engineering specifications, write for our lead sulfide literature.

Continental Electric also manufactures a complete line of special purpose photocells, such as the CE-5, CE-7, CE-8, CE-10, CE-12, CE-15, CE-18, CE-26, etc. We will be happy to work with you on design and development problems, also on any special phototubes your application may require. Full data, price, etc. on special phototubes will be forthcoming upon request.

** Max. C.C.S. ratings in Class C oscillator service.

★ Two filament strands in series with large post at neutral junction; operate in series at 22 volts or two phase with 11 volts per strand.

★★ This rating applies only with forced air cooling.

° Per unit, heater can be arranged to operate from either a 6.3 or 12.6 volt supply.

‡ Six filament strands connected from each post to floating neutral. See individual data sheets for connections.

† Three filament terminals Y-connected in 3 phase. Values are per phase.

‡ Three filament terminals Y-connected in 3 phase with neutral center terminal. Values are per phase.

* or R Indicates forced air-cooled radiator.

DUMONT

TELETRONS

Du Mont Teletrons are available in all popular sizes. They offer the user several distinct advantages. The Du Mont bent-gun assembly makes possible sharper focusing over the entire screen area, which is very important in modern large screen sizes. Long-life screen materials assure the user of the longest service life.

All-Glass Rectangular TELETRONS

Type 14CP4 — 14" picture tube; gray-filter face plate; Du Mont Bent-Gun; 70-degree deflection; external conductive coating.

Type 16TP4 — 16" picture tube; gray-filter face plate; Du Mont Bent-Gun; 70-degree deflection; external conductive coating.

Type 17BP4A — 17" picture tube; gray-filter face plate; Du Mont Bent-Gun; 70-degree deflection; external conductive coating.

Type 20CP4 — 20" picture tube; gray-filter face plate; Du Mont Bent-Gun; 70-degree deflection.

Type 20CP4A — 20" picture tube; gray-filter face plate; Du Mont Bent-Gun; 70-degree deflection; external conductive coating.

METAL-GLASS ROUND TELETRONS

Type 19AP4A — 19" picture tube; gray-filter face plate; Du Mont Bent-Gun.

Type 19AP4 — 19" picture tube; clear-glass face plate; Du Mont Bent-Gun.

ALL-GLASS ROUND TELETRONS

Type 12JP4 — For replacement see Type 12QP4A.

Type 12LP4A — 12½" picture tube; gray-filter face plate; Du Mont Bent-Gun; external conductive coating.

Type 12QP4A — 12½" picture tube; may be used readily to replace Types 12JP4 and 12RP4; no electrical changes, except that an ion-trap magnet (single-field) must be obtained when replacing the Type 12JP4. Mechanical differences, in most cases, are compensated for by the special rectangular 12" mask listed below.

Type 12RP4 — For best replacement see Type 12QP4A.

Type 15DP4 — For replacement see B1014P4A.

Type B1014P4A — 15" picture tube; gray-filter face plate; Du Mont Bent-Gun; identical to the Type 15DP4 except for anode contact. Anode connector must be changed to fit cavity type contact when replacing 15DP4 with B1014P4A.

Type 16FP4 — 16", all-glass, picture tube; Du Mont Bent-Gun; 60-degree deflection.

12" RECTANGULAR MASK

12" RECTANGULAR MASK — Used when installing the Type 12QP4A as a replacement for the Types 12JP4 and 12RP4.

*Advanced Engineering Features of *S-T
picture tubes in both glass and metal.*

- HIGH CONTRAST**—This is achieved by a special treatment of the interior surface of the tube in both glass and metal types and also by high transconductance of the electron gun.
- LONG USEFUL LIFE**—One of the many reasons for this is the unusually high vacuum attained and controlled by measuring the degree of vacuum with ionization gauges. This method requires reading ion currents of one billionth of an ampere.
- TRUE REPRODUCTION**—Engineering design of bulb neck and gun focusing provides excellent reproduction in corners as well as in the center of the picture achieving true life gamma.
- HIGH BRIGHTNESS**—Better efficiency of the electron gun design plus advanced chemical technique in phosphor application insures a more uniform and bright picture.
- HIGH SCREEN VOLTAGE**—By approximately joining the second anode electrode to the fluorescent screen in both the metal and glass type tubes assurance is provided the screen potential will be the same as the second anode voltage.
- LOW TUBE NOISE**—Assures freedom from snow scintillations and other disturbances arising from insufficient resistance between picture tube electrodes.

Model 3728-M

- Astatic AB-8M Mobile Pickup.
- Circuit Breaker Protection on 6 volts.
- Bass Boost and Treble Compensators.
- Power Economizer Switch.
- Three Input Channels.
- Heavy Duty Dual Vibrator.

One of the most completely satisfying mobile Amplifiers ever offered for general use. The "Moto-Master" combines a 30-watt amplifier of tone and quality, with a phono pickup of new design, that plays all 12" and smaller records. Market research proves it's capacity is more than ample for the majority of needs.

This high gain unit operates on either a 6 volt DC storage battery or 117 volt 60 cycle AC line current. Conversion from one type of current to another is achieved by simply removing one plug and inserting the other. Current consumption on battery is reduced by a power economizer switch. High fidelity; improved wide range tone controls; beam power output tubes; and two microphones inputs and one phono input, each with separate volume controls are features of the "Moto-Master".

Turntable speed of 78 r.p.m. New type crystal pickup stays "in the groove."

BRITAIN'S BEST AUDIO AMPLIFIER DISTORTION: 0.1%

REMOTE CONTROL PRE-AMPLIFIER RC/PA

TL/12 12W. TRIPLE LOOP POWER AMPLIFIER

all valves replaceable with
standard U. S. Tubes

For use only with LEAK amplifiers.

An original feedback tone-control circuit.
No resonant circuits employed.

- Will operate from any cartridge made, including Audak, G.E. or Pickering Cartridges; from any moving coil microphone; from any radio unit.
- Equalization circuit: Proper equalization positions for LP records, Foreign or American recordings of all speeds.
- Switching for Pick-up, Microphone and Radio, with automatic alteration of tone-control characteristics.
- Controls: Input Selector; Bass Gain and Loss; Treble Gain and Loss; Volume.

Output Impedance: 0-30,000Ω at 20 kc.p.s.
The unit will mount on motor-board through a cutout of 10 1/8 x 3 1/8 in., or it can be bolted to the power amplifier, when, with a top cover, the whole assembly becomes portable.

- Push-pull triode output stage. 400 V. on anodes.
- No H.T. electrolytic smoothing or decoupling condensers.
- Impregnated transformers; tropically finished components.
- H.T. and L.T. supplies for pre-amp, and radio units.
- Distortion: at 1,000 c/s and 10 W. output, 0.1%; at 60 c/s and 10 W. output, 0.19%; at 40 c/s and 10 W. output 0.21%.
- Hum and Noise: -72 to -80 db on 10 W.
- Frequency response: ±0.1 db, 20 c/s-20 kc/s.
- Sensitivity: 160 mV.
- Damping Factor: 20. Input impedance: 1 Meg.
- Output impedances: 2Ω; 7-9Ω; 15-20Ω; 28-36Ω.
- Phase margin 20° ± 10°; Gain margin 10 db + 6 db.

The Leak triple Loop feedback circuit (the main loop giving 26 db feedback over 3 stages and the output transformer) results in the following major advantage:

In the TL/12 amplifier the hum and noise levels fall within -80 db and -72 db relative to 10 watts. This amount of power, as hum and noise, is inaudible from the most efficient loudspeakers. Notice particularly that feedback is taken from the low side of the output transformer. Many circuits show it as taken from the anode side, which will result in higher hum levels than without feedback.

In this amplifier, due to magnitude of feedback, there can be no rise of voltage to cause "boom" in the loudspeaker at the frequency of bass resonance, and the capability of a loudspeaker to reproduce transients, especially low-frequency transients, is astonishingly improved.

MA-60 60 WATT AMPLIFIER • PUSH-PULL 807 TUBES

FEATURES: Full electronic mixing of all channels • Individual bass and treble equalizers • Sixty watts of undistorted power • Peak Power output 80 watts • Negative feedback • Fully fused • Special high impedance jack for driving MB-60 booster amplifier (0 db. level) • U/L Approved.

The Models MA-60 and MA-60R are powerful wide-range amplifiers that deliver better than 60 watts of usable power. Multi-tapped line and voice coil impedances match any speaker, or speaker groups and lines. The model MA-60R is designed to permit remote control of two microphone channels by means of the RCB Remote Control Box.

APPLICATION: It is suitable for rack mounting and heavy-duty service, and is successfully used for the larger auditoriums, theatre reinforcement, indoor and outdoor rinks, stadia, and the like, wherever numerous speakers are required. It is excellent for church chime applications. With suitable speakers

and horns, the power can be concentrated where needed at points of high noise level, as at the starting line of an auto race, or in steel mills. Other speaker arrangements permit uniform coverage of large areas, such as football fields or circuses. Ideal as the basic unit for paging and fire-alarm systems in hotels.

Adaptable for either line or bridging. These boosters are designed to operate with the Models MA-60 and MA-60R described above when additional power is required or may be driven by the MA-8N amplifier shown on page B-16. Chassis finished in blue and gray Hammetone. The booster may be used either in or out of a rack. The master gain control is especially desirable when more than one booster is in the circuit. Illustration of a Master-to-Master-to-Remote Inter-Mixed Installation

The above is an inter-mixed system using both Masters and Remotes. Masters may call selectively or to all masters and remotes in the circuit. Master stations can originate calls to any remote at will. Remotes can answer any master from a distance but cannot originate calls nor talk to other remotes. Remotes can originate calls to any master in the circuit, but cannot talk with other remotes. Model JS-6 Remote may originate a call to only one master. Model JS-6 Remote may originate a call to as many as six masters. Remotes with switch can be installed for private or non-private use.

Each master can have his own private hook-up of remotes. The remotes may or may not originate calls to the individual master. Masters can call each other regardless of whether master being called has its power on or off.

Illustration shows less than the maximum number of units possible in installation.

A JMP-6 Master may be connected to a total of six other units and a JMP-12 Master to a total of twelve other units. These units may be other masters or the JL, JS, and JS-6 Remotes, or the MB-8N Booster Amplifier. All of these units may be mixed.

Perfect for the home, office, farm, store, etc.—wherever two-way communication is needed between two points. Consists of one Master unit and one Sub-Station. System can be used either "Privately" or "Non-Privately." If "Non-Privately," the Talk-Listen control is not required to be used by persons at Sub-Station, and they are permitted to answer from distances even up to forty feet. Ideal for the nursery—you can keep tuned to baby's slightest move—no more getting up to see if baby is all right. Smartly styled matching cabinets of molded walnut Bakelite. Operates **universally** on 110-115 volts, AC or DC. The Sub-Station does not consume current and can be installed most anywhere. Cabinets measure 8 1/4" x 6 1/4" x 7 1/2". Weight packed, 12 lbs.

LM-5; LM-10 MASTER SELECTIVE SYSTEMS

Consists of one Master Unit which can be connected with one or more (up to ten) Sub-Stations. The Master Station can talk to any one of the Sub-Stations or to all at one time. Sub-Stations can be connected "privately" or "non-privately". Has the TALK-A-PHONE "Silent Feature". Sub-Stations, whether connected "privately" or "non-privately", can originate calls to the Master Station. The Sub-Stations can be at considerable distances from the Master unit. Once a conversation has been initiated, with a "non-private" system, persons at Sub-Station locations need operate no controls and can reply from a distance. The Sub-Stations do not consume electric current and can be installed most anywhere. Cabinets measure 8 1/4" x 6 1/4" x 7 1/2". Weight packed — Master, 8 lbs., Sub-Stations, 5 lbs. Master Station operates universally on 110-115 volts, AC-DC.

LS-5; LS-10 SUPER SELECTIVE SYSTEMS

Consists of all Master units. Extreme flexibility of inter-communication whereby any station in the system can call any other and carry on a two-way conversation. You can begin with two Masters and add up to a total of five in the case of the LS-5 units, or up to a total of ten in the case of the LS-10 units. As many as five private two-way conversations can be held at the same time with ten LS-10 Masters. Two private two-way conversations can be accommodated at the same time with the LS-5 system. All Master Stations are private. Stations cannot listen in on each other, nor can a third unit listen in on a conversation of two others. Variable volume, adjustable at each unit, provides for the incoming voice to be adjusted from a bare whisper to full volume that can be heard easily at a considerable distance. Stations can be located even 1000 or 2000 feet apart. Six-conductor cable providing for a total of five units is used with the LS-5 system and is run from the first unit to the second only, from the second to the third only, etc., until the last unit in the system is reached. Similarly, an eleven-conductor cable, providing for a total of ten units, is used for inter-connecting the LS-10 system. It is not necessary to run cable between the first and last units in the system. Cabinets measure 8 1/4" x 6 1/4" x 7 1/2". Weight packed, 8 lbs. Operates Universally on 110-115 volts, AC-DC.

Known wherever inter-communication is used as the World's finest system, TALK-A-PHONE is designed, developed, and precision-engineered by the leader in its field, with more than a quarter-century experience in electronics. TALK-A-PHONE stations are designed to withstand continuous day and night use; and are built to give you years of dependable service. The Armed Forces; Governmental Agencies; America's giant industrial firms, with highly complex and elaborate intercom needs depend on TALK-A-PHONE.

ONE MODEL DOES EVERYTHING

TALK-A-PHONE's patented, exclusive "DYNASONIC" features gives you one model that "Does Everything." The same unit can be used for every type of application, whether it be as all Master Stations, or a Master and Staff Stations, or a number of Masters inter-mixed with Staff Stations. The Master Stations may talk with any other Master in the system as well as with all Staff Stations. Six, twelve, twenty and thirty capacity Master Stations can be used within the same system. The Staff Station may answer Master Stations and originate calls to one, two or six Master Stations, depending on its capacity. Staff Stations converse with Master Stations only. Staff Stations are not connected to electrical outlet.

Through its "DIFFERENTIAL STAFF" feature, TALK-A-PHONE permits any Staff Station to be used as either "Private" or "Non-Private", and also permits some Staff Stations to be "Private" and others "Non-Private" in the same system. "Private" Staff Stations have complete privacy, and no other station can "listen-in". Persons at "Non-Private" Staff Stations can answer from a distance up to 50 feet from the unit without leaving work. All Master and Staff Stations are assured of privacy, except where by choice, Staff Stations are designated as "Non-Private", in which case the Master Station can "listen-in" on the "Non-Private" Staff Stations.

Now . . . Talk-A-Phone brings you REDI-POWER, The Master Station that automatically supplies the right amount of power needed (up to a full 10 watts) at any time, for any Station in the system. This prevents any volume weakness where a number of Stations are being called simultaneously, or where a high noise level exists. REDI-POWER, which does away with the need for special boosters in many cases, is available in 12 and 20 Station capacity.

BEAUTIFULLY STYLED: The Bakelite, walnut cabinet of the "CHIEF FORTY-NINER" is unsurpassed in simplicity of design and appearance.

TRANSLUCENT LIGHTING further enhances its beauty as well as indicating whether the unit is "on" or "off."

MULTI-MAGIC SELECTOR: A patented exclusive TALK-A-PHONE feature. Twelve, twenty, thirty station capacity in SAME BEAUTIFUL CABINET with only TWELVE PUSH BUTTONS. Six-station Master has six push buttons.

HOLD-A-MATIC CONFERENCE CONTROL: TALK-A-PHONE "HOLD-A-MATIC" feature ALLOWS CONFERENCE between THREE or a GROUP OF STATIONS by merely selecting desired buttons.

UNI-TRANS: Gives you "DICTATION CONTROL."

VOICE RANGE POWER: The powerful, rugged amplifier gives you amazing, brilliant "voice range" power. Stations may be up to 3000 feet apart.

DEPENDABILITY: PROVED IN BILLIONS OF HOURS OF ACTUAL USE.

PRIVACY EARPHONE: Optional equipment on Master Stations. Provides listening privacy; and conversation with other Masters without continuous operation of touch bar.

CRADLE PHONE: Optional equipment to provide completely private conversations.

HOW TO DETERMINE CABLE REQUIREMENTS: To interconnect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., and total. For C-4920 use two lengths of 6224 Cable, and for C-4930 use three lengths of 6224 Cable. To connect C-41 Staff Station, measure from Staff Station to the one Master to which Staff Station originates calls. To connect C-42 and C-46 Staff Stations, measure a separate length of cable from Staff Station to each Master Station to which Staff Station originates calls (for each C-42 or C-46, follow same procedure).

GENERAL ELECTRIC

ALNICO 5 PM LOUDSPEAKERS

All component parts of the new Alnico 5 Loudspeakers are made to the rigid specifications of G-E quality control. This feature, in addition to highly efficient manufacturing skill, combined with the "know-how" of G-E engineers, has made these new superb speakers possible — unsurpassed in fidelity, dependability and durability.

4"

GENERAL ELECTRIC'S new 4-inch speakers are the result of years of intensive engineering research to produce units of reduced size with maximum efficiency for use in small portable and table model receivers. In addition to having the "stay-bright" finish and the aluminum foil base voice coil, the new 4-inch speakers are considerably lighter in weight and more compact. This reduction in weight and space has been accomplished through the use of Alnico 5 magnet material, all-weld construction, and smaller yoke assembly.

5 1/4"

GENERAL ELECTRIC'S 5 1/4-IN. PM speakers have all been designed and developed to provide full, true, low notes and excellent high frequency definition for voice or music reproduction. Skillful designing has been applied to all details to assure the best possible results.

6 1/2"

GENERAL ELECTRIC 6 1/2-inch loudspeakers are the result of years of persistent development to improve performance. Never were ideas introduced and combined with better quality materials. Greater sensitivity and power capacity in more compact space was achieved by these methods.

The NEW ALNICO 5 PERMANENT MAGNET material was chiefly responsible for maintaining the excellent performance of the G-E 8-inch speakers and still keeping the overall size smaller. The speakers are capable of handling full audio power with very little distortion. These speakers are recommended for quality in design and faithful reproducing characteristics.

8"

The NEW ALNICO 5 PERMANENT MAGNET material was chiefly responsible for maintaining the excellent performance of the G-E 8-inch speakers and still keeping the overall size smaller.

10"

GENERAL ELECTRIC'S new 10-inch P.M. speakers are the result of application of latest developments in scientific laboratory tone reproduction. Especially designed for brilliant reproduction of voice and music. They represent a perfect balance in relative factors of performance ability, cost, and appearance.

12"

GENERAL ELECTRIC'S powerful 12-inch permanent magnet loudspeakers are designed to provide faithful tone reproduction at high levels. They equal or surpass the performance of electro-dynamic speakers of the same size. All weld construction has minimized distortion at maximum operation levels by eliminating vibration.

G-E LOUDSPEAKER FEATURES

ALNICO 5 MAGNET MATERIAL is one of the great wartime engineering developments. Its energy per unit volume — approximately three times as great as other magnets—has enabled G-E engineers to design a new line of smaller speakers with better performance characteristics.

ALL WELD CONSTRUCTION of the newly designed G-E Alnico 5 Loudspeakers not only reduces the weight and size but also increases the rigidity necessary for perfect alignment of all parts. It also eliminates the possibility of dust and moisture accumulation and simplifies the replacement of damaged cones.

ALUMINUM FOIL BASE VOICE COILS only are used in all G-E permanent magnet speakers. Exact concentric location with the collar of the spider assembly insures excellent alignment. Humidity or excessive temperature variations do not affect the aluminum foil voice coils, making this type of speaker ideal for receivers designed for use in export markets.

QUAM U SHAPED COIL POT

A patented feature used throughout the QUAM replacement line, provides an unbroken flux path of sufficient cross section to carry the full energy of the magnetic field.

Standard Series speakers, although moderately priced, are exceptionally good in performance and are highly recommended for use in radio and television receivers, recorders, public address equipment, intercommunication systems and similar applications. Models listed on this page have been completely redesigned in every detail. Magnetic structures have been designed to achieve maximum gap energy, cones selected for uniformity of response, and all speakers are completely dust-proof. Models listed are standard fidelity response only. Standard Series speakers are finished in aluminum.

ALNICO 5 PM MODELS

These PM speakers embody the highly efficient Alnico 5 magnets which insure long life and highest efficiency. Because Alnico 5 magnets are many times more powerful, ounce for ounce, than their predecessors, speakers so equipped offer obvious advantages: lighter weight, for savings in shipping costs; and smaller size, for savings in space in cabinet installations.

JENSEN Customode

CUSTOMODE is the JENSEN "building-block" solution for the problem of housing the custom home entertainment system. Shown is only one of countless combinations which may be assembled from a few basic units. Ask for descriptive folder.

Instead of the former practice of stating frequency limits of loudspeakers in cycles, the relation between the minimum useful limit for music and maximum limit for hearing has been divided into eight steps, each of which is just distinguishable from the next as an audible difference for music. The rating of a speaker is determined from the highest interval in which loudness is maintained at a significantly high percentage of normal. The table at left relates the ratings to hearing and typical applications.

JENSEN HYPEX PROJECTORS

Because of the Hypex formula (Patent 2,338,262) giving wider sound distribution and greatly improved acoustical performance, JENSEN Hypex projectors are superior to the usual "exponential" type horns. The Alnico 5 unit is entirely enclosed within the one-piece rigid horn yet easily removed and replaced. Stainless steel and other corrosion-resistant materials and specially treated steel parts insure against weather exposure. Models VH-24, VH-20 and VH-15 have mounting brackets with clutch-type heavy "U" trunnions which afford complete flexibility of adjustment with positive locking into desired position. Weatherproof terminal boxes provide easy, solderless connections with no exposed terminals. Model VH-91 has a universal mounting bracket which permits pointing in any direction and secure locking by a single wing nut.

HYPEX "Three-sixty" PROJECTORS

Designed for the reproduction of speech and music signals at high efficiency where high noise levels exist. The Hypex formula, made famous by JENSEN Hypex projectors, is incorporated in their design giving greatly improved acoustical performance. With the sound distributed over a circle, they are especially suitable for installations where coverage of relatively large areas and suspension from the ceiling are desired. Model VR-11 is recommended for speech reproduction while Model VR-241, of larger size, is intended for speech and music reinforcement. Driver unit has phenolic diaphragm; VR-241 uses same diaphragm as VH-24 and VH-20; VR-11 uses same diaphragm as VH-15 and VH-91. VR-241 is equipped with weatherproof terminal box with connecting cable passing through rubber grommet and leads attached to screw terminals provided. VR-11 has two-conductor rubber-covered cable for connections. Both equipped with heavy eyebolt at top for suspension.

THE "HYPEX" HORN FORMULA

— An Exclusive Jensen Feature

"Hypex" comes from the mathematical term "hyperbolic exponential," which describes the important difference between Jensen projectors and those based on the simple exponential theory. Jensen research discovered a better, more efficient horn formula which maintains effective acoustic loading right down to acoustic cut-off and all Jensen Hypex* Projectors have this exclusive feature for better performance. For the facts on this development and a complete description of horn behavior, write for Technical Monograph No. 5, "Horn-Type Loudspeakers."

Price 25c.

IMPEDANCE MATCHING TRANSFORMERS

Loudspeakers are relatively low-impedance devices with voice coil impedance values ranging from 3 to 50 ohms. Vacuum tube power output stages on the other hand, are high-impedance devices with impedance load rated anywhere from 1,000 to 14,000 ohms. To reconcile these widely differing impedances, output or impedance matching transformers must be inserted between the signal output and the loudspeaker voice coil. To determine which transformer is to be used in any given case, first of all find out the impedance of the loudspeaker in question and then locate for that speaker the

transformer which will match nearest the impedance of the signal source. Differences of the order of 10% are usually of no importance but if a close match cannot be obtained, it is best to select an impedance value which will present a higher rather than lower-than-rated impedance to the output tubes. Thus where a 5,000-to-16 ohm transformer is needed, it would be better to select a 6,000-to-16 ohm unit than a 4,000-to-16 ohm unit. For full and complete treatise on impedance matching, consult Jensen Technical Monograph No. 2. (Price 25c).

ADJUSTABLE IMPEDANCE

RE-ENTRANT TRUMPETS
RADIAL HORNS and SPEAKERS
PM DRIVER UNITS

Re-Entrant Trumpets, Radial Horns and Speakers

RE-35 RE-50 RE-60

RACON re-entrant horns and speakers are designed to deliver highly concentrated sound with great efficiency over long distances. This is due to true exponential design throughout and the elimination of all vibratory members and sound dissipating devices. The base and inside tone arms are husky aluminum castings and bell is a heavy gauge aluminum spinning. The

RE-35, RE-50 and RE-60 incorporate reflectors made of patented RACON ACOUSTIC MATERIAL to prevent resonant effects. All models are supplied with "U"-bracket mounting (ratchet swivel type on request). Finish is in weatherproof hard baked gray hammertone. RE-60 & RE-50 recommended for maximum low frequency music reproduction. RE-35 and RE-25 best suited for incidental music and high speech intelligibility.

The SR-35R and SR-60R are weatherproof radial re-entrant horns designed to project sound over an area of 360 degrees. The centre reflectors are of patented RACON ACOUSTIC MATERIAL and the deflectors are aluminum spinnings covered with this same non-vibratory material. Standard "U" bracket supplied. Thread size is 1 3/8"-18, permitting the use of any driver unit listed below. The SR-60R is ideal for church tower sound installations and the SR-35 for incidental music and speech.

SR-35R SR-60R

SR-15R SR-12R

The SR-15R and SR-12R are rated at 20 and 10 watts respectively and are supplied complete with built-in 15 ohm* driver units. These models are intended primarily for speech in paging and "talk back" systems and are completely weatherproof. Supplied with cast swivel ratchet and wall bracket.

Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these five new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve

for overload peaks up to 100%, maximum conversion efficiency, response ranges suitable for every type sound system, and waterproof construction.

These five units employ Alnico V magnets and Armeo magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied with aluminum wound voice coils to increase efficiency. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

STRAIGHT EXPONENTIAL TRUMPETS

Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type because it lacks the attenuation inherent in all re-entrant horns. "Stormproof" Trumpets are made of non-vibratory RACON ACOUSTIC CLOTH. Weather-treated for indoor or outdoor use. "All Aluminum" Trumpets are made of

heavy gauge aluminum spinnings with rolled beaded edge and cast aluminum throat sections. "Unbreakable" Trumpets are made of heavy gauge aluminum spinnings reinforced and damped with Patented RACON ACOUSTIC MATERIAL. Large sizes are useful for church chime systems, C-D systems, airports and stadiums, parks, playgrounds, music festivals, for both speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

MODEL LH

REFLEX LOUDSPEAKERS

The reflex horns pioneered by University represent the most efficient method of converting electrical power into acoustic energy. When used with University driver units, they are capable of conversion efficiencies up to 50% and in addition, provide compactness and weather protection without any sacrifice in performance.

Heavy gauge metal and corrosion resistant finishes on horn and hardware are assurance of trouble-free performance regardless of changes in temperature and humidity. Adjustable UNIVERSITY "U" bracket mounting simplifies installation and holds the speaker firmly locked in any position.

Four models cover every public address requirement. Model LH has the longest air column and is ideal for the reproduction of symphonic music. The model LH with a higher cutoff is designed as a general purpose speaker and is recommended for music transmission where economy without sacrifice of quality is essential. In installations where a smaller horn is required, the Model PH will render excellent service for both speech and music. The Model SMH will find its widest application in the reproduction of speech where clarity and a high degree of intelligibility are necessary. Accessories include Model PMA adapter and 2YC connector.

BREAKDOWN PROOF DRIVER UNITS

University driver units are breakdown proof and guaranteed for one year. Ratings are conservative and operation over long periods is assured. They are of the PM dynamic type, incorporate highest quality Alnico magnets and one-piece molded phenolic diaphragms. Unique "rim centering" construction eliminates aligning pins and permanently centers the voice coil and head assembly in a much closer magnetic gap. This results in a higher conversion efficiency and misalignment due to shock or vibration is virtually eliminated. Hermetically sealed housings provide complete protection from out-

door exposure and corrosive fumes.

The PA-30 has a 30-watt built-in line matching transformer. Transformer terminals provide 16, 165, 250, 500, 1000, 2000-ohm taps for constant impedance systems and 2½, 5, 10, 20 and 30-watt taps for 70-volt constant voltage systems. Use the PA-30 or SA-HF for high power installations or where occasional overload is a problem. Model MA-25 represents the best "watts per dollar" value of any driver unit made. It combines efficiency, waterproof construction and economy.

PAGING AND INTERCOM SPEAKERS

These speakers are reflex air column horns with built-in hermetically sealed driver units. Models CR, IBS, and MIL are directional and model IBR has a radial deflector for uniform 360° dispersion. They are capable of continuous use for intercommunication and paging on shipboard, docks, loading platforms, terminals and industrial plants.

Model CR can handle 18 watts of input power continuously, making it useful for high power alarm or announcing systems. Models IBS and IBR have a continuous power handling capacity of 12 watts, which recommends them for paging or announcing in noisy industrial

areas. The models MIL and MIS with a 3 watt continuous power capacity are efficient intercommunication speakers. The model MIS is a small unit designed for flush panel mounting.

Though capable of producing adequate volume with low power, these speakers can handle more power than any other speaker of comparable size and weight. Modernization of old sound systems is easily accomplished by replacement of obsolete speakers with any of these models. Standard voice coil impedances permit installation without changes in the existing line or amplifier.

RADIAL REFLEX PROJECTORS

Re-entrant horns with radial deflectors for uniform 360° sound distribution cover large areas and override high noise-levels, without blasting. The long air column of the RSH and its low frequency cutoff make it well suited for music and general applications. The smaller model RPH, with a somewhat higher cutoff, will serve for both music and speech. The RSH finds wide application for high clarity reproduction of speech. Shipped complete with hardware but less driver unit.

SUPER POWER SPEAKERS

UNIVERSITY super power speakers are the answer to every public address installation where tremendous amounts of concentrated power must be transmitted over long distances.

The Model 4A4 incorporates 4 PM driver units mounted on the back of a heavy cast mounting plate. Each driver opens into a reflexed air column on the front of the mounting plate. The four air columns feed into a common bell. Compactness makes them ideally suited for aeroplane broadcasting and use in Church towers, stadiums, etc.

In the Models B-6 and B-12, the PM driver units are mounted circumferentially on a rugged "tone chamber" casting which provides individual acoustic paths from each driver unit to a mixing chamber at the center of the casting. The patented design of the mixing chamber and the acoustic paths minimizes high frequency cancellation.

All speakers are completely waterproof and characterized by their ruggedness. Power ratings are conservative and projection ranges are often exceeded in actual operation. Speakers of this type were recently heard 15 miles in a carillon installation at the Empire State Building in New York City. "U" brackets permit a vertical swing of approximately 120° and locking in any position. Models B-6 and B-12 are supplied with horns suitable for voice reproduction essentially as standard equipment. For music, order substitute TYPE C HORN capable of response down to 100 cps. NOTE: Model 4A4 is sold and shipped less driver units. Standard driver units Model SA-11F or MA-25 may be used.

RAILROAD AND MARINE TYPES

UNIVERSITY marine and railroad type speakers are submergence, shock and vibration proof and are unaffected by live steam. Their reflex air columns are built of rugged castings and are equipped with Alnico V PM dynamic units. Speakers may be made blastproof on order.

Models MSR, MM-2TC, MM-2 and MM-2F have hermetically sealed housings and built-in driver units. Models MSR and MM-2TC have space for volume control and line matching transformer. Tapped

holes provide access to volume control and for receiving a conduit. Both are designed for bulkhead or wall mounting — the Model MM-2F may be flush mounted and the MM-2 has a swivel mounting bracket.

These speakers will operate efficiently under the most arduous conditions — on ships, docks, in railroad yards or locomotive cabs, — in mines, laundries and mills — wherever dirt, salt spray, humidity, tungus, dusts and vapors constitute a hazard.

UL APPROVED EXPLOSION-PROOF SPEAKERS

- * MODEL 7101 APPROVED FOR CLASS I, GROUPS C, D
- MODEL 7102 APPROVED FOR CLASS II, GROUPS E, F, G

Introduction of Models 7101 and 7102 Explosion-Proof Speakers now makes it possible to install loudspeaker systems in locations where flammable liquids, gases, dust and other combustibles are present. Approved by Underwriters' Laboratories for Class I and II locations, Models 7101 and 7102 permit industries heretofore denied the advantages of sound, paging and intercom facilities, to proceed immediately with 100% safe installations. In addition to approved explosion-proof construction, these speakers represent the last word in rugged design.

Features of this speaker include a 2½-ft. air column, re-entrant type trumpet, a heavy duty driver unit with "W" shaped Alnico V magnet, response to 10,000 cps and continuous power capacity of 25 watts integrated program material. Voice coil impedance is 16 ohms, and a husky line matching transformer is included and built into the driver unit housing, tapped for 45, 500, 1000, 1500 and 2000-ohm inputs. Dispersion angle is 95°. Cable entrance is threaded for ½" conduit. "U" type mounting bracket permits over 180° variation of mounting angle.

*Refers to classes of service as described by Underwriters' Laboratories for which this speaker is approved. For complete data write for free bulletin.

UNIVERSITY POWRMIKE SOUND SYSTEM

COMPLETE • PORTABLE • NO TUBES • NO AMPLIFIER • NO A.C.

UNIVERSITY Powrmike features a microphone of completely new design that makes possible an effective, voice-amplified system without vacuum tube amplifier. It operates from any 6-volt D.C. source, wet or dry cell type batteries or vehicle ignition systems. Powrmike is completely portable, low in cost and requires no service or installation. Instant operation by depressing the switch bar on the microphone. Articulation and intelligibility are excellent. Sound output is ample to cover small crowds and provides good sound projection to over 100 feet. Under favorable conditions, this range is increased considerably. Powrmike is not intended to supplant conventional tube amplifying systems where higher power or music distribution is desired. But for applications needing only small area coverage and efficient voice reproduction, Powrmike is ideal. Powrmike is unconditionally guaranteed for one year.

WEATHERPROOF AND INDOOR LINE MATCHING TRANSFORMERS

MODEL CTR-20

The new UNIVERSITY line of matching transformers is designed for use with UNIVERSITY loudspeakers in indoor and outdoor installations.

Since most UNIVERSITY loudspeakers are capable of frequency response to 10,000 cps. and beyond, these transformers have been designed to assure perfect performance throughout the range of the speakers with which they are used. Only the highest grade metal is employed. Grade A fine gauge silicon laminations. Insulation withstands 1000-volt breakdown tests between windings and case. Efficiency is exceptionally high.

Model CTR-20 houses the Model 5420 transformer in a heavy DIE CAST case. Mounting may be made to a wall or other flat surface by means of screws using the bracket which is an integral part of the one-piece casting. A strap bar is also supplied for mounting the CTR-20 to trumpet

"U" brackets; and for the UNIVERSITY Paging Speakers the CTR 20 cover plate accommodates the three mounting holes of the triangular mounting bracket. This makes the case a combination mounting support for both the transformer

Itself and the speaker. Gland nut cable entrances assure watertight protection against corrosive agents.

Model 5414 is a heavy duty transformer with taps especially selected for use on both constant impedance and constant voltage systems without need for further calculations. Frequency response characteristics are exceptionally good, making it ideal for use with high Fidelity equipment capable of response to beyond 15,000 cps. Heavy core enables very low frequencies to be handled with high efficiency.

No matter what the application or the impedance required, one of these new versatile UNIVERSITY line matching transformers can be used to do a dependable job.

MODEL 6201 COAXIAL SPEAKER

RESPONSE 45-15,000 CPS.
CONT. POWER 25 WATTS
SOURCE IMPED. 8 OHMS
DIMENSIONS 1 1/4" DIA., 8 1/4" DEEP
NET WEIGHT 7 LBS.

LIST PRICE \$75.00

The exciting realism and tingling sense of "presence" when listening to the University Model 6201 is due, in part, to use of the same dual range principle employed in expensive theatre systems. Program material is divided into two bands. The low notes are handled by the large one-piece molded cone of the "woofer" section, and the treble tones by the highly efficient "tweeter" driver unit and horn. The result is uniform, balanced response and full range reproduction, free from distortion.

A built-in inductance-capacitance-resistance 2000-cycle crossover network assures optimum operation of the woofer and tweeter. The high frequency control, supplied completely wired to the speaker, permits variable adjustment of the "balance" between high and low frequency acoustic output. Another important feature is the coaxially mounted University "Cobra" shaped tweeter horn which provides a high frequency area that blends with the low frequency output of the cone to form a uniform area of sound 80 wide, without the customary loss of "highs" when listening at angles considerably off speaker axis. Model 6201 can be installed quickly and easily. The mounting bolt circle is RMA standard for complete interchangeability with other 12" speakers. Tweeter horn is flush with woofer rim and entirely self-supporting. Capable of handling 25 watts of integrated program material continuously, Model 6201 is perfect for public address—monitoring—general sound reinforcement in theatres, churches, auditoriums, concert halls—and anywhere else a rugged, high power, weather resistant high fidelity speaker is required.

W SHAPED MAGNET of gold dot Alnico V is another engineering feat responsible for the exceptional performance of these speakers. Horototore, in ring and slug type magnets, field structures were heavy assemblies requiring "keep" cups or "U" forms which were also a part of the magnetic return path and which had to be secured in place by bolts, cement, or welded joints. The powerful University W shaped alnico magnet eliminates the necessity for a return keeper and there are no welded or cemented joints in the magnetic path, since the complete magnet structure is the magnet itself.

WIDE RANGE WEATHERPROOF COAXIAL SPEAKERS

The Model WLC is a HIGH FIDELITY coaxial speaker with a response range essentially flat from 50-15,000 cycles. It includes a weatherproof 12" cone speaker, a unit-driven tweeter and a built-in crossover network. Corrosion-resistant, all metal construction permits constant exposure regardless of temperature and humidity. Ideally suited for concert bandshells, drive-in theatres and all indoor or outdoor installations where high quality reproduction of music and voice are essential. A sturdy mounting bracket facilitates installation and permits tilting and locking the speaker in any desired position.

Model 6200 answers the need for a top quality but moderately priced high fidelity speaker. A 3" dia. duralumin dome at the apex of a specially curved one-piece molded cone reinforces the high frequency response, extending it to well beyond 10,000 cps. Like the 6201 Coaxial speaker, the model 6200 cone is also given a special rim treatment which minimizes the possibility of diaphragm distortion and serves to add to the life of the cone by preserving its flexible member.

The rugged University W Magnet assembly, an oversized voice coil wound on dural form, and a unique method of dissipating heat generated within the speaker mechanism by utilizing filtered air circulated by the back pressure of the speaker diaphragm are factors contributing to the high efficiency of model 6200. Construction of this speaker is typical of University high standards. The Hi Freq. dome is especially treated against fungus and corrosive agents, all close tolerance parts and hardware are both cadmium-plated and irridated, and the speaker finished with the finest hard-baked enamel on two coats of anti-rust and corrosion treatments.

Model 6200 is a versatile 30-watt powerhouse suitable for both high and low level applications where price is an important factor but quality of construction and reproduction must not be compromised.

The W principle avoids reluctance which is present at the joints of other types, and results in a considerable reduction of stray magnetic fields and surface leakage. Greater concentration of the magnetic energy in the voice coil gap results, and flux density is thus considerably higher than in conventionally designed units. The oversized voice coil is wound on a 2-inch duralumin support for greater power handling capacity and efficiency, and set in an air gap which is independent of the actual magnet position, due to the unique design of the top plate and magnet assemblies. This assures permanent voice coil concentricity with the gap inner and outer circumferences.

HIGH FREQUENCY TWEETER SPEAKERS

UNIVERSITY Tweeter are designed for use with any cone speaker to provide a dual-speaker combination having extended frequency response up to the limits of audibility. Since the average cone speaker seldom reproduces effectively above 6500 cycles, while even low priced amplifiers far exceed this range, these tweeters offer great opportunity to attain quality reproduction at very low cost. They can be connected to the voice coil of any PM or field excited cone speaker through a simple, economical, high-pass filter network. The various models shown offer ample diversity to meet the requirements of any installation.

MODEL 4407 COAXIAL TWEETER ADAPTER fits any standard 12" cone speaker. It can be installed with minimum effort. Response is essentially flat from 2000 to 15,000 cycles which adds the brilliant "highs" so frequently carried through all stages of amplification only to be lost in the bottleneck of a single element reproducer. It is a perfect answer in every wide range application where performance, ease of installation and economy are important factors.

MODEL 4401 SINGLE TWEETER mounts readily in any cabinet and is recommended for use with 8" to 15" cone speakers with amplifiers rated up to 15-20 watts. Cone speaker acts as woofer reproducing low frequencies, tweeter takes over at 2000 cycles and above. Features unusually wide horizontal dispersion.

MODEL 4402 DUAL TWEETER is generally similar to Model 4401 except horizontal angle of dispersion is greater. The dual driver units permit variation of impedance (2-6 ohms in parallel; 14-18 ohms in series) and provide double power capacity—with woofer, 10 to 50 watts.

MODELS 4408 and 4409 TWEETERS are new models with lower cut-off frequency. Recommended for use with larger diameter cone speak-

ers for a crossover frequency down to as much as 600 cycles. Their ability to handle reproduction of a greater portion of the audio range is advantageous because of the superior efficiency of the University driver unit and horn transducer, which avoids operating the woofer in the range of cone break-up. The exclusive University "Cobra" formula horn shape combines unusually wide horizontal dispersion with optimum vertical projection.

MODEL 4405

MODEL 4405 HIGH PASS FILTER — affords an economical means of preventing low frequencies from entering the tweeter circuit. All frequencies above 2000 cycles are routed to the tweeter. Frequencies below 2000 cycles are shunted to the cone speaker. This inexpensive filter or its equivalent is recommended for use with 2000 cycle tweeters. Case is die-cast aluminum.

MODELS 4410 and 4420 FILTERS — Crossover frequency of 4410 is 600 cycles, 4420 is 2000 cycles. Genuine L.C. filter effectively blocks "highs" from entering the woofer — results in cleaner reproduction. The 4410 or equivalent must be used with 4408 and 4409 tweeters and the 4420 or equivalent may be used with 4407, 4401 and 4402 tweeters to prevent damage from low frequency entry.

"DR" RE-ENTRANT — REFLEX — PROJECTORS

Non-resonant - Stormproof - Uniform Response-Rugged Construction

The modified exponential taper developed in Atlas DR projectors has proven to be most efficient for overall performance. All acoustical sound paths are smooth and flowing without steps or pockets to create conditions of turbulence, frequency cancellation and resultant signal distortion.

The costly and elaborate tooling necessary for the production of Atlas DR projectors is clearly reflected in superior performance, lasting service and consistent results.

Heavy "U" bracket is securely fastened to a main body casting which will not fail when subjected to extreme stress, strain and vibration. 1 $\frac{3}{8}$ "-18 thread.

Britain's Finest Loudspeaker Wharfedale

Built by Wharfedale Wireless Works under the direction of G. A. Briggs, world-renowned sound engineer!

Despite their modest price, all Wharfedale Speakers are fitted with cast chassis resulting in greater rigidity, less resonance and better air loading. All models have cloth suspension cones which improve the transient response by adding dissipation to the edge of the cone, with reduced reflection of the flexural waves. This type of cone suspension also reduces the bass resonances of the speaker unit, resulting in a more level impedance curve and improves the transient or decay element. Such refined quality of reproduction is only available with Wharfedale's cloth suspension.

 MOUNTING HOLES: 1 23/8"
 CONE RESONANCE: 35/45 c.p.s.
 WEIGHT: 18 1/4 lbs.
 FLUX DENSITY: 17,000 lines

Warmly received by quality enthusiasts, the Super 12/CS/AL has a remarkably level response between 30 and 18,000 cycles when adequately baffled. Cloth suspension and low cone resonance reduces transient distortion to an absolute minimum and reduces irritating "boom" associated with stiffly suspended cones. Wharfedale's exclusive cone achieves amazingly clean highs.

The high quality performance of this speaker is uniformly maintained in production since it does not rely on subsidiary diaphragm resonances.

It is copable. The cloth suspended cone of the 10/CSB has truly remarkable ability to reach maximum quality at low levels. This speaker makes an excellent tweeter in a two-way speaker system and maintains highs that are clean and brilliant without being penetrating.

This speaker has been designed especially for the average sized room where loud volume is often irritating. It requires only 3 to 4 watts to give the refined quality of which to give the refined quality of which

This cloth suspended cone has a bakelized apex for wide response and is suitable for bass reflex cabinets, or for use as a treble unit in a two-way speaker system.

The refined quality of this unit would not normally be associated with a speaker of this size.

These units give clean bass down to 25/35 cycles without frequency doubling, with reasonable air loading. Ideal speakers for two way systems. Again, low transient distortion and smooth response are made possible only by Wharfedale's exclusive cloth suspension.

TANNOY AUDIO THRU BEAM INSTRUMENTS

TANNOY DUAL CONCENTRIC LOUDSPEAKER SYSTEM

This twin Loudspeaker system consists of a direct radiator low frequency unit mounted concentrically with a horn-loaded high frequency unit. The voice coils of both Loudspeaker systems are fed through a specially designed cross-over network. The frequency response of both units is intrinsically level and the wide frequency response is not obtained by trick effects, such as cone break-up or diaphragm resonance. The design of the low frequency cone, which forms the final section of the high frequency horn, is such that even distribution of high frequencies is obtained over a wide angle and in order that the low frequency diaphragm shall move as a true piston, the body thickness has been increased and the surround is specially treated to prevent the setting up of subsidiary resonances. In the design of this Loudspeaker, great care has been taken to ensure that the entire system is truly aperiodic which, together with its wide frequency range result in really outstanding reproduction.

This Loudspeaker unit is available in two forms — a 15" version, capable of handling up to 25 watts which is particularly useful for use with high quality Sound Reinforcement systems and a 12" version capable of handling up to 15 watts, which finds its main application in high quality Phonograph and Radio reproducing systems. A suitable Cabinet design for these applications is the corner mounting Bass Reflex type of Cabinet.

There is no doubt that where the input source is of sufficiently high quality, the "TANNOY" Dual Concentric Loudspeaker system is well in advance of any type of Loud-speaker hitherto commercially available.

The above response curve relates to a 15" dual concentric, the response of a 12" unit is substantially the same in all respects.

C6 CRYSTAL MICROPHONE

EXTREME SENSITIVITY. New crystal driving lever, twice as efficient as previously used, produces twice the voltage output with equal sound pressure.

BROADER RESPONSE. Results of new construction include extension of both low and high end.

BASS END IMPROVED. Naturalness insured by improvement in low frequency response.

LONGER LINES. By increasing the voltage output the cable length may be increased proportionately. In laboratory tests regular cables 250 feet in length have been used with a net voltage sufficient to operate any standard high gain amplifier.

MECHANICAL NOISE REDUCED. Mechanical and stand noise is no longer a factor. The C6 method of crystal mounting reduces mechanical noises by 12 db.

LESS AMPLIFIER AND INDUCED NOISE. The high output of this microphone assures a very desirable signal-to-noise ratio.

SWIVEL HEAD. All angles for semidirectional and nondirectional pick-up are provided by the $\frac{5}{8}$ " x 27 (standard) mounting connector.

D9A Unidirectional MICROPHONE

GUARANTEED to produce 30% MORE VOLUME (power) than any microphone at twice the list price. UNIDIRECTIONAL, True CARDIOID pattern pickup, frequency response good to 10,000 c. p. s. Actual Tests are Convincing Arrange for Test with your Jobber

THE D9A DYNAMIC, a pressure-velocity combination microphone, with pick-up from front only, broad frequency response and high output, plus the usual dynamic microphone qualities of ruggedness, immunity to weather conditions, and circuit adaptability, should fill the majority of requirements.

The D9A Microphone is recommended for public address and general sound installations because its energy response field (cardioid of revolution) excludes extraneous pick-up and reduces feed-back by two-thirds. May be used for close talking due to the modified velocity section which also reduces wind noises to a minimum.

The above graph illustrates the average response characteristics for the D9A and D9AT. Voltage output levels, for 1 bar sound pressure (1 bar=1 dyne per sq. cm.) of the high and low impedance models. For 10 bar signal the output will be 20 db. higher.

D4T DYNAMIC MICROPHONE

A QUALITY, LOW-PRICED, MOVING-COIL MICROPHONE. For general use where clear speech and natural music reproduction is required. This new AMERICAN microphone is a very efficient instrument, having a broad range, from 60 to 7500 c.p.s., and high output of -56 db (O db=1 v/ba:). The utility value lies not only in the quality and type of response but also in mechanical features, such as light weight (approximately 10 1/2 oz.), a full 180° vertical angular setting, and positive friction lock at the swivel.

The D4T, high impedance, is equipped with a single-contact, shielded plug. The 50, 200 and 500 ohm models are equipped with a two-conductor plug and have a balanced line out.

The D4 model is of voice-coil impedance, approximately 30 ohms. Lines up to several hundred feet may be used on all models except the high impedance, where line should be restricted.

The complete assembly includes 12 1/2 feet of shielded, rubber-covered cable and shielded plug. Finished in platinum chrome. Standard mounting, 5/8" x 27 thread.

assembly into the arm—no soldering iron is required. The needle chuck design incorporates a "locked-in" feature whereby the chuck is prevented from moving when tension or pressure is applied to the needle screw. This feature also insures that the needle socket will remain centrally located in its opening in the cartridge. High needle point compliance and minimum record chatter are thereby guaranteed. The cartridge will operate satisfactorily with any conventional needles; however, its high-frequency response will vary somewhat with the type needle used. Best operation will be obtained with off-set needles using sapphire or precious metal stylii.

TELEVISION BOOSTERS

MODELS AT-1 and AT-1B

• A superior type of television booster. Ability to improve reception more effectively than ordinary boosters starts with the principle of "more tubes, stronger signal." A variable gain control knob permits reduction of signal strength to prevent picture distortion when the signal input is greater than that required. The failing of many boosters—showing a "peak" on some channels and "fall-off" on others—has been eliminated. These units provide extremely high gain, and do it throughout the television spectrum. Dual tuning controls allow separate tuning for picture and sound. Available in handsome furniture-finish mahogany or blond cabinets. The letter "B" in model numbers designates blond cabinet.

MODEL BT-1

• Never before so much ability for increasing TV signal strength—uniformly throughout the television spectrum—incorporated in such a small, simplified unit. A low-cost booster that equals the primary function of the highest price units. Quality of construction—including such features as the famous Mallory Inductuner—almost unbelievable in view of the low cost. Single tuning knob with continuous tuning through both TV and FM bands, off-on switch, selenium rectifier, single 6AK5 tube, provides for either 72 ohm or 300 ohm impedance input and output. Metal cabinet with mahogany woodgrain finish.

ASTATIC PICKUPS

FOR SLOW SPEED AND STANDARD 78 RPM RECORDS

MODEL 6D CRYSTAL TURNOVER PICKUP

- Switches from 33 $\frac{1}{2}$ or 45 RPM records to standard 78 with turnover knob at front. Plays both types of records at only eight-gram needle pressure, thus has no extra mechanism to change pressure when knob is turned, eliminating a potential source of trouble and varying reproduction quality. Employs LTD-1 Double Needle Cartridge. Mounts seven inches from turn-table center, die cast curved arm finished in dark brown Hammerlin.

MODEL 7D CRYSTAL TURNOVER PICKUP

- Newly designed cast aluminum arm employing Astatic's sensational new smooth response cartridge, the tiny turnover type ACD Crystal Cartridge. Arm design affords minimum tracking error and balanced groove sidewall pressure, resulting in reduced tracking distortion and longer record and needle life. Cartridge rotates in improved snap-action turnover mechanism. Light brown Hammerlin finish.

400-D TURNOVER PICKUP

- Turnover type transcription pickup adapted from famous Astatic Studio Master "400." Plays 33 $\frac{1}{2}$, 45 or standard 78 RPM recordings at eight-gram needle pressure. Employs ACD-2 Double-Needle Crystal Cartridge. Notable smoothness of response, tracking excellence, low needle talk. Gracefully curved, die-cast arm in light brown Hammerlin finish.

MODEL FLC-33 PICKUP

- Its U-J Crystal Cartridge for either 33 $\frac{1}{2}$ or 45 RPM records is easily, instantly replaceable with the U-78-J Cartridge for playing standard records. No adjusting of needle pressure, nothing else to be done. Cartridges slip in and out like barrel and cap of non-threaded fountain pens. Special Type "U" Taper-Lock replaceable needle has tongue and groove arrangement to hold in position, removes merely by gripping small tab at rear of needle and sliding towards rear of cartridge. Novel design at base of FLC-33 eliminates tone arm resonances, assures perfect tracking. Die-cast arm, finished in high gloss black and polished aluminum.

510 SERIES—CRYSTAL, MAGNETIC AND CERAMIC PICKUPS

- Add Astatic's new anti-resonance swivel base, and newly developed crystal, ceramic and magnetic cartridges with special one mil or All-Groove tip, precious metal or jeweled stylus, to the popular Astatic Model 510 Pickup—and you have these new slow-speed models, the finest performers in their price class. Permanently adjusted to low needle pressures, short mounting centers make them ideal for a host of long-playing applications. Outstanding characteristics are high uniform output and low needle point impedance. Die-cast arm, finished in Hammerlin opalescent grey. Specify Model 510-CAC for unit employing tiny new CAC-J Crystal Cartridge, the closest thing to perfection for the most discriminating lover of serious music. Model 510-AC has the newest miniature Astatic crystal cartridge, the sensationally smooth response AC Cartridge with type "A" Needle for slow speed records. For quality reproduction altogether out of proportion to low cost in a crystal unit, specify Model 510-LT-4AG, employing LT Cartridge with special All-Groove stylus tip for all record types. Model 510-MI-2-33 offers on slow speed records highest quality reproduction to please the most discriminating—troublefree and stable through continuous service—thanks to its improved type magnetic cartridge. Model 510-GC has Astatic's GC Ceramic Cartridge, immune to extremes of temperature and humidity, and provides truly splendid quality of reproduction on slow speed records with its one-mil replaceable needle.

MODEL 507-L-29 PICKUP

- Best price, with full professional performance standards retained. The new L-29 Crystal Cartridge employed is notable for high output, which affords excellent results in use with standard phonograph amplifiers, where other lower output cartridges are not satisfactory. Has universal, screw-type needle chuck to receive standard needles. Plays 33 $\frac{1}{2}$, 45 or 78 RPM records simply by using proper needle. Pickup is furnished without needle. Die-cast arm finished in opalescent grey Hammerlin. New, anti-friction swivel base.

FLT-33 TRANSCRIPTION PICKUP

- Never before, a pickup of such professional instrument quality and precision. Like the FLC-33, this model employs the U-J Crystal Cartridge with one mil tip-radius needle, instantly replaceable with the U-78-J for playing 78 RPM records. In addition, the U-TR Cartridge with 2.5 mil tip-radius needle may be inserted to play standard lateral broadcast transcriptions. Special ball-bearing anti-resonance base is adjustable to desired height, as is unique arm-rest. Feather-touch needle pressure of five grams is accomplished by a revolutionary hinged division of the arm, which also contributes to perfect tracking and elimination of surface noise. Die-cast arm and base look their fine instrument part, with finish in telephone black. All three "U" Series Cartridges are available with diamond stylus tips instead of the regular sapphire.

MODELS 400-CAC AND 400-MI-2-33 TRANSCRIPTION PICKUPS

- The famous Astatic Studio Master "400" conventional transcription arm, adapted for slow-speed transcriptions. Incorporates the improved base mounting assembly that eliminates arm resonances and assures perfect tracking, and the CAC-J Crystal Cartridge with sapphire stylus of one mil tip-radius. Impartial experts have singled out the CAC-J as the ultimate for long-playing transcription performance. Die-cast arm, permanently adjusted at six-gram needle pressure. Grey Hammerlin finish. Specify Model 400-MI-2-33 for the same arm, except for employment of Astatic's Magnetic Cartridge.

ASTATIC CARTRIDGES FOR SLOW SPEED AND STANDARD 78 RPM RECORDS

FOR COMPLETE SPECIFICATIONS SEE CHART ON PAGE D-11

AC SERIES CRYSTAL AND CERAMIC CARTRIDGES

● New mechanical drive system affords new low in inertia, for extraordinary smooth response, new tracking excellence, low needle talk. Miniature size belies BIG full-throated performance. Weighs approximately five grams. Has easily replaceable Type "A" Needle with one-mil sapphire tip for slow speed records or special All-Groove tip for all record types. Models available with ceramic elements, immune to severe climates, as well as crystal. Model AC-J has correct mounting brackets to fit RCA and similar 45 RPM changers as well as other slow-speed units. AC-R has special brackets to fit special RCA 45 RPM changer (replaces RCA 76257 Cartridge).

THE CAC SERIES CRYSTAL CARTRIDGES

● The tiny new unit which has won the praise of experts as the "ultimate" for slow speed records. Internally equalized to follow Columbia Records Inc. ideal frequency response for the recording characteristics of LP records. Aluminum housing with standard $\frac{1}{2}$ " mounting holes to fit most tone arms, has adapter plate to mount in RCA and similar 45 RPM changers. Uses Q-33 needle, easily replaceable without tools, and with one-mil sapphire or diamond tipped needle for slow speed records, or special All-Groove sapphire tip for all record types.

THE GC CERAMIC CARTRIDGE

● First major stride in cartridges employing ceramic elements since Astatic pioneered in this type unit. The first with replaceable needle. Takes "Type G" needle—with either one-mil sapphire tip radius or special All-Groove tip for all record types—which slips from its rubber chuck with a quarter turn sideways. Resistance to high temperatures and humidity is not the only additional advantage. Output has been increased over that of any ceramic cartridge available. Light weight and low needle pressure make it ideal for a great variety of modern applications. Fits standard $\frac{1}{2}$ " mounting and RCA 45 RPM record changers.

THE U-J CRYSTAL CARTRIDGE*

● The unparalleled performance and triple duty service of the FL Series Pickups is largely due to the U-J Crystal Cartridge. A child can slip it instantly from the pickup and slip in the U-78-J or U-TR Crystal Cartridges to switch from 33 $\frac{1}{3}$ and 45 to 78 RPM records or broadcast transcriptions. Secures it on slip-in principle, the same as barrel and cap of some modern fountain pens. No changing of needle pressure, nothing else to be done. Five-gram needle pressure. Replaceable sapphire stylus with one mil tip-radius. The U-J replaces, and is interchangeable with, the discontinued LP-33. An ideal replacement for Philco Part 45-1609, Balanced Fidelity Reproducer.

THE U-78-J CRYSTAL CARTRIDGE*

● Interchangeable with U-J Crystal Cartridge, in "FLC" and "FLT" Series Pickups, to play conventional 78 RPM Records. See above description under U-J Cartridge. Five-gram needle pressure, has replaceable sapphire stylus with three mil tip-radius. Replaces LP-78 Cartridge.

Code ASWZG List Price \$8.90
\$7.90 with FLC-33, FLT-33 or FLT-TR Pickups

THE U-TR CRYSTAL CARTRIDGE*

● Identical to U-J, except for 2.5 mil tip-radius needle for broadcast transcriptions.

Code ASXAK List Price \$8.90
* All "U" Series Cartridges are instantly interchangeable in the "FLC" and "FLT" Series Pickups

MI-2J-33 MAGNETIC CARTRIDGE

● Peak fidelity of reproduction that LASTS, even under the most consistent service or adverse climatic conditions. Troublesome, costly armature balancing problems eliminated. Mumetal housing provides increased shielding effect for maximum reduction of hum. Fixed needle with one-mil sapphire stylus tip.

THE ACD-J DOUBLE-NEEDLE CRYSTAL AND CERAMIC CARTRIDGES

● Newest Astatic double-needle, turnover cartridge — featuring smooth response, tiny size and light weight. Extraordinary performance made possible by a mechanical drive system with a new low in inertia. Total weight approximately 5 grams. Easily replaceable Type "A" Needles. Model ACD-1J replacement cartridge for ACD-2J assembly. Model ACD-2J complete with turnover assembly and knob. All are available with ceramic instead of crystal elements, for immunity to extremes of climate. (See table for details).

THE LQD DOUBLE-NEEDLE CRYSTAL CARTRIDGE

● The LQD Cartridge — for 45, 33 $\frac{1}{3}$ and 78 RPM Records — quickly became the first choice of many of the nation's largest users, on the basis of comparative listening tests, and is, today, the PROVED TOP PERFORMER for turnover type pickups. Outstanding for excellence of frequency response, particularly at low frequencies. A gentle pry with pen-knife removes ONE "Q" needle for replacement... without disturbing the other needle, without removing cartridge from tone arm. Gentle pressure snaps new needle into place. Stamped aluminum housing. Model LQD-1J, illustrated, complete with needle guards and spindle for turnover knob. Model LQD-1JB complete with entire turnover assembly and knob.

THE LT-4 DOUBLE AND SINGLE-NEEDLE CRYSTAL CARTRIDGES

● New high output, low-cost cartridge with Type "D" precious metal needles. Model LT-4M, illustrated, with single needle for slow speed records; LT-4-AG with All-Groove Needle for all records, LT-4D double-needle turnover type; LT-4D-1 same as LT-4D except equipped with needle guards and spindle for turnover knob. Stamped aluminum housing.

THE LT-5-AG CRYSTAL CARTRIDGE

● New high compliance in a low-cost cartridge. The greatly improved tracking ability allows reduced needle pressure and subsequent extension of both record and needle life. Employs D-AG Osmium Tipped All-Groove Needle for all record types. Stamped aluminum housing.

L-29 CRYSTAL CARTRIDGE

● High performance quality in a new, low-cost unit. Notably high output permits use with standard phonograph amplifiers, where other cartridges prove unsatisfactory. Universal screw type needle chuck receives any standard needle for microgroove or standard groove records. Stylus not furnished.

FOR SPECIAL APPLICATIONS CAC-W-J & CAC-78W-J CRYSTAL CARTRIDGES

● The CAC-W-J is the same cartridge as the CAC-J, except furnished with special terminals and fittings for quick installation in record changer tone arms with plug-in heads. The CAC-78W-J offers the same new quality of reproduction installed in plug-in heads for standard 78 RPM records. Available with diamond as well as sapphire stylus tip.

MULTI-IMPEDANCE DYNAMIC MICROPHONES

SHURE

NEW "SMALL UNIDYNES"

The "Small Unidynes" are the only small sized uni-directional moving coil dynamic microphones! They are completely new microphones with improved performance, yet retaining all of the highly desirable features of the world famous standard "Unidynes." The internal unit, based on the Shure-patented "Uniphase" principle, has been designed for high overall efficiency and extended peak-free frequency response. Rugged coil construction also provides greater immunity of the moving coil system to abnormal atmospheric conditions and mechanical shock.

Model "55S" and Model "556S" are considerably smaller than the standard Model "55" and Model "556" and are ideal for installations where it is desired to keep the microphone size to a minimum and still retain maximum operating efficiency.

The "Small Unidynes" are "Perfect Performers"—ideal for high quality public address, theatre-stage sound systems, recording and remote broadcasting. Because of the unusual ruggedness and reliability, Model "55S" is also recommended for fixed station use in the Police, Fire and Transportation services. For studio broadcasting and television use and similar applications where the utmost in quality is desired, Model "556S" is recommended. "Small Unidynes" reduce reflection and reverberation, decrease random noise energy pickup by approximately 67%, allow performer to stand at a distance from the microphone 75% greater than is possible with non-directional (omnidirectional) microphones, have smooth response from 40-15,000 c.p.s. at front—dead at rear. Standard $\frac{5}{8}$ "—27 thread. Both are supplied with a 20 foot high quality cable and plug assembly. Model "556S" features a Cannon connector, and it also has a special newly designed shock isolation unit.

The "Full Grip" Clutch offers an extended length clutch body, permitting a secure, full-hand grip. The clutch mechanism is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping, or sudden dropping. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated

weight is most useful. All bases include self-leveling, shock-absorbent base pads, plus three additional "anti-tip" points located between the base pads. The complete tube assemblies of all models are "super-chrome" plated, assuring "life-time" wear. All models terminate in a $\frac{3}{8}$ "-27 carefully machined thread.

NEW AUTOMATIC "Sleeve Action" MICROPHONE STAND Quiet . . . No Rasp . . . Smooth . . . No Jolt or Jar

This amazing new automatic "Sleeve Action" clutch mechanism is a fully automatic means of adjusting the height of a microphone stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered. To raise the stand, the telescoping tube can be grasped at any point and simply extended. The new "Sleeve Action" is built

for life-time use. It cannot creep or change position without a deliberate pressure on the actuating sleeve control.

The quality of materials, plating, and general specifications are identical to the "Full Grip" models described above. The "Sleeve Action" stand is available in two models; either full chrome or shrivel base.

Fairchild Recording and Playback Equipment

Turret-Head Arm

No more messy multiple pickup installations with several arms, equalizers, switches.

One arm, one equalizer do the trick—up to three cartridges in the Turret Head Arm. Equalizer with 4 NAB curves for lateral, two for vertical.

Merely turn a knob on the pickup to select proper cartridge with correct diamond tip for required record. Stylus pressure is adjusted automatically.

New viscous damping eliminates arm resonance; also greatly reduces danger of breakage in handling.

A True Moving Coil Reproducer

A cartridge for every requirement — 78 standard, 33-1/3 transcription, microgroove, vertical. Select only the ones you need.

You may be sure of close tolerances in dimensions of the diamond tip to fit the groove for maximum efficiency and minimum distortion.

Frequency response — 30-12,000 cycles.

Unusual mechanical construction allows high compliance to heavily modulated grooves.

Output unequalized — 3 millivolts. Output impedance — 80 ohms, but can be fed into any higher impedance including the grid of a tube.

Pic-Sync Tape Recorder

Each time you retake a sound track, film production costs go up. The waste of film stock and the time delay for processing increase operating cost immeasurably. You *eliminate* these extra costs with the Fairchild PIC-SYNC Tape Recorder. Play back the sound at once . . . check it . . . erase the track . . . retake the sound *before the talent, the set and crew are disbanded.*

Minimizes mechanical loading of the cutter by disk material, thus increasing high frequency response, especially at small diameters.

Invaluable for microgroove, standard 33-1/3 and 45 r.p.m. speeds.

Available for Fairchild, RCA and Presto Cutterheads. Easily installed and operated. Includes heat control and calibrated meter.

NOW USE PIC-SYNC Tape Recorders for ALL Original Sound Tracks

1. 1/4" tape costs 80% less than 16mm magnetic film.
2. 1/4" tape requires 50% less storage space.
3. 1/4" tape recorded quality practically as good as "live" for dubbing or TV broadcast purposes.
4. 1/4" tape noise level far lower than sprocket driven tape or film. This is vital in multiple dubbing operations.

PRESTO 64-A TRANSCRIPTION TURNTABLE

Presto Type 153 Reproducer extra

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . maximum speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

SPECIFICATIONS

Standard Equipment: The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. A reproducer and network is not included.

Speed Accuracy: No deviation from 33-1/3 and 78.26 rpm.

Noise Level: Mechanical noise originating in the equipment over 50 db below program level.

Power Requirements: Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

Mounting: Turntable and gear drive mounted in heavy wood cabinet with inlaid linoleum top is 24 x 24 x 33 inches (61 x 61 x 84 cm.) List Price, \$495.00

PRESTO 6-N RECORDER AND 90-B AMPLIFIER

The PRESTO 6-N Recorder and 90-B Amplifier is the ideal recording equipment for portable or stationery operation.

The 6-N Recorder is outstanding in its suitability for broadcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at addition cost.

The Presto 90-B recording amplifier contains all the facilities necessary for operation on remote assignments, but with all overall performance found only in high-fidelity studio equipment.

It consists of three preamplifiers with individual gain controls, a mixer circuit, a master gain control and recording amplifier. Provision is made for connecting the Presto 161-A automatic equalizer (radius compensator).

A five-position selector switch provides the following characteristics: 1—flat response, 30 to 15,000 ± 1 db; 2—NAB 33 1/3 rpm recording; 3—present day 78-rpm recording; 4—NAB playback, and

5—automatic equalization. The flat response can be modified by variable bass and treble controls, giving emphasis up to a maximum of 20 db at 100 and 7,500 cycles per second or 20 db de-emphasis at 7,200 cycles per second.

Noise is 55 db below recording level and distortion at maximum output is less than 1.5%.

The use of input and output selector switches makes the 90-B amplifier unusually flexible. It permits combining the signals of three microphones or of two microphones and either one of two pick-ups. By using the "Line" position, recordings can be made from an incoming program line. The output selector has three positions; playback (public address), continuous recording and simultaneous recording. While recording, the line jack provides a monitoring outlet or permits feeding a program line at the correct level.

The correct level is monitored by means of a Weston Type 30 VU indicator with illuminated scale and its closely controlled electrical and dynamic characteristics make it an ideal volume indicator for recording.

Microphone input impedance normally 250 ohms.
Output of both amplifiers 500 ohms, +20 db max.
Bridging input 20,000 ohms, unbalanced.

Weights: 900-R1—40 lbs.; 900-A2—35 lbs.

The PT-900 tape recorder has been developed for fully professional recording work and hence no compromise has been made with quality of materials and workmanship. The PT-900 has been designed especially for broadcast stations and recording studios and has found wide acceptance among colleges and universities as well.

This recorder consists of a mechanical drive system, separate erase, record, and reproduce heads and two separate amplifiers—one for recording and the other for reproducing. This arrangement permits instantaneous monitoring of the tape by using the separate record and reproduce channels simultaneously. The equipment takes standard RMA 7" reels. Continuous recording with two mechanical sections (type 900-R1) and one amplifier section (900-A2) may be done by interconnecting the units through the SA-9 change-over switch.

The PT-900 may be had on standard 19" relay rack mounting panels. Simply specify: "for rack mounting." Price same as in carrying cases.

RC-10-24 TAPE RECORDER

The RC-10-24 is an extremely high quality rack mounting tape recorder for both RMA reels and NAB hubs. Maximum tape capacity is 2400 feet (nominal). This recorder incorporates a three-motor drive system with solenoid operated brakes and capstan pressure pulley. All functions are selected by push-button switch. The recorder may be completely connected to remote controls, either directly or by using relays.

The panel measures 19" wide by 24½" high and is normally rack mounted although the recorder will operate in any position. Separate recording and reproducing heads are provided so that the tape may be monitored during recording.

The 900-A2 or the 901-A1 amplifiers are for use with the RC-10-24.

The three-motor drive system eliminates the complex mechanical arrangements which require frequent adjustment. This system also makes possible very fast speeds forward and reverse. This recorder has proven to be exceptionally reliable and trouble-free even under continuous periods of operation.

SPECIFICATIONS

Reels 7" and 10½". Standard tape speeds 7½ and 15 in./sec.

Fast Speeds, forward and reverse: 250"/sec.

Frequency response 50-15,000 cps at 15"/sec. and 50-7,500 cps at 7½"/sec.

Dynamic range 55 db.

Instantaneous speed accuracy .15% at 15"/sec.

RC-10-14 TAPE RECORDER

The RC-10-14 is similar in most respects to the RC-10-24, differing only in the panel size and the control switch arrangement. The panel is 19" x 14" and is frequently mounted in the CS-10 carrying case although the unit may be rack mounted also. The function switch is the rotary type and also mechanically operates the idler pressure pulley. The same three-motor drive and solenoid braking is used as on the RC-10-24.

The RC-10-14 recorder with the 900-A2 amplifier, in carrying cases, constitute portable equipment of the highest quality — equal in performance to the best studio recorders.

WORLD'S TWO GREATEST HI-FIDELITY PORTABLE PHONOGRAPHS

THE

Rhythmaster

THE

Recitalist

The RHYTHMASTER is equipped with the CVS-12 Continuously-Variable Speed Turntable.

The RECITALIST is equipped with the LP-743, 3-Speed Turntable.

BOTH OFFER 3 INSTRUMENTS IN ONE

★ PHONOGRAPH ★ P.A. SYSTEM ★ BROADCAST RECEIVER (used with FM Tuner)
 Indispensable for Recreation Centers, Broadcast Stations,
 Advertising Agencies, Schools, Hospitals, Record Collectors, Musicians, Etc.

THE RHYTHMASTER AND THE RECITALIST are the only full-range portable phonographs that balance the response characteristics of amplifier, speaker and speaker enclosure. By carefully compensating the natural resonances of these three components, undesirable reverberations are eliminated, and truly lifelike sound reproduction is achieved.

THE POLYPHONIC SELECTOR, an exclusive Rek-O-Kut engineering triumph, found only in the Recitalist and the Rhythmaster, maintains the proper relationship between the highs and lows when the record is played at any volume, either very softly or very loud! Thus, the high notes of the violins, chimes, triangles, cymbals, etc., are always reproduced clearly and distinctly in all their original beauty and cannot be drowned out by the loud passages of the brasses and percussion instruments.

THE RHYTHMASTER'S PATENTED CONTINUOUSLY-VARIABLE SPEED TURNTABLE plays records not only at 33 1/3, 45 and 78 R.P.M., but at ANY speed variation from 25 to 100 R.P.M. Not only will the CVS Turntable play your records back at the exact pitch and tempo they were recorded, but also at any increased or decreased tempo to fit a particular need! ★DANCING:—Set the rhythm of your folk-dance, tango, rumba to your own taste. ★PHYSICAL EDUCATION:—Set the rhythm most suitable for teaching swimming, exercises, etc. ★MUSICIANS:—(1) You can now set the pitch of your records to your own personal interpretation of any recording. (2) You can set the pitch of the record to match the pitch of your piano or other instrument for purposes of accompaniment. ★SCHOOLS:—Invaluable tool for teaching music, band instruments, languages, typing, dancing, gymnastics, etc. ★RECREATION CENTERS, CAMPS, COMMUNITY CENTERS:—Powerful amplifier and speaker afford undistorted volume to cover an assemblage of 500 people or more.

THE RHYTHMASTER AND RECITALIST ARE BOTH "FLEXIBLE" INSTRUMENTS. (1) A microphone input enables "mixing" of live music or voice simultaneously with a recording being played. (2) Can be used as a high fidelity public address system. (3) By connecting an AM or FM Tuner, these phonographs become superb broadcast receivers.

GENERAL ELECTRIC TONE ARMS FOR STANDARD AND NARROW GROOVE RECORDS WITH THE FAMOUS VARIABLE RELUCTANCE CARTRIDGES

Catalogue Nos. UPX-004 and UPX-007

These two G-E arms are designed specially to bring out the full value of the distinguished General Electric Variable Reluctance Cartridges. Use the UPX-004 for narrow groove records and the UPX-007 for standard groove records. Skillful design provides a wide range response free from undesirable resonances.

Both arms have a small hole on top through which a wire or paper clip may be inserted to push out the old stylus. Thus, stylus replacement requires only a few seconds. A special lightweight alloy and the efficient size of the

arm reduce tone arm mass to a minimum. Ball bearings insure smooth lateral movement. Spring tension is factory adjusted to 6-8 grams pressure for the narrow groove arm and 12-14 grams for the standard groove arm. Positioning of arms and arm rests is simplified by a mounting template which is supplied with the arm. Mounting requires only a 1/2" diameter hole for the arms and a 3/8" diameter hole for the tone arm rest. Finished in Navajo brown.

602 — dbm — Impedance Graph. The four variables: power (W), voltage (V), current (ma), and Impedance or Resistance (Ω) are acquainted in such a manner that given any two of these electrical quantities the other two may be graphically determined. A decibel scale in dbm (decibels below or above 1 milliwatt) parallels the power ordinate. Net price \$1.00 pad of 50 sheets.

603 — Attenuator-Design Graph. In this universal pad design chart here presented for the first time, the resistance in ohms for each branch of the pad may be determined by multiplying the values found at the lower horizontal scale by the impedance of the line into which the pad is to be inserted. It covers balanced and unbalanced T and Pi pads. Net price \$1.00 pad of 50 sheets.

604 — Semi-log, 3-cycle Graph. Designed expressly for the audio range. It has the unique virtue of starting at 20 cps. and covering three logarithmic cycles to 20,000 cps. On the vertical scale are 10 divisions per inch over 7 inches. Net price per pad 50 sheets \$1.00.

OTHER CLARKSTAN PRODUCTS

Industrial Microscope for inspection work in shops, laboratories. Rubber Hardness Gauge to measure the Shore (Durometer) hardness of all rubber and other elastomers. Accurately measures rubber hardness within any of the commercial manufacturing tolerances.

AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

Audiotape can also be supplied in any desired width, for special recording applications.

AUDIOTAPE is cut by a superior straight-line slitting process which makes it track and wind absolutely flat.

AUDIOTAPE has no curl—lies flat on the magnetic head without increased tension, giving better frequency response and more uniform motion.

AUDIOTAPE has exceptionally low surface friction—reduces wear on heads.

AUDIOTAPE has definitely superior dispersion of oxide particles—no lumps, no bumps. This can be checked with any good microscope.

AUDIOTAPE is completely free from any tendency to stick, layer to layer. Unwinds uniformly, no tendency to create wows.

AUDIOTAPE coating is specially formulated to give strong adherence of the oxide to the base.

AUDIOTAPE is designed to give maximum signal to noise ratio.

AUDIOTAPE has excellent high frequency response.

AUDIOTAPE has low distortion.

AUDIOTAPE has no low-frequency modulation noise.

AUDIOTAPE has unequalled uniformity—within the reel, and from reel to reel. No magnetic weak spots that can cause fluctuations in output.

.0036" LUBRI-LO RECORDING WIRE

THE QUIETEST MAGNETIC RECORDING WIRE EVER PRODUCED

It is a low DC noise wire. The specifications for the wire include under Noise Requirements, the following:

"The modulation noise level shall be at least 40 Db below the saturated output at the frequency of maximum response."

This improvement of 10 Db over competitive recording wires provides:

1. Modulation noise (noise behind the signal) is reduced.
2. Second harmonic distortion is lessened.
3. High background noise is decreased.
4. DC erase and bias for special applications can be employed.
5. Permanent magnet for erasing over-modulated signals can be utilized.

LUBRI-LO RECORDING WIRE

The wire is lubricated during processing at the wire mill. Lubrication of this low DC noise wire provides the following additional improvements:

1. Reduction of pull and wear on the recording head.
2. Elimination of sticking and stalling.
3. Lower background noise because of smoother passage of the wire through the head.
4. Elimination of mechanical noise, and vibration and chatter in the head.
5. Reduction of microphonic noise from the wire and audio system in playback.
6. Improvement in level winding.
7. Reduction of noise of the wire passing on and off the supply and/or take-up spools.

The combination of the new low DC noise wire and lubrication of the same is PERMO-MAGNETIC — Lubri-Lo — the quietest magnetic recording wire ever produced.

RECORDING TAPE

Permo-Magnetic Recording Tape incorporates the best in engineering, manufacturing and coating practices attained over a long period of experience. The coating of red or black oxide powders on plastic or paper base is uniform, which is essential to excellence in recording and playback performance. There are no clusters of powders or magnetic "holes" in Permo-Magnetic Recording Tape.

Photomicrograph of Permo-Magnetic Tape (above) enlarged 50 X shows uniform dispersion and smooth surface essential for low tape noise and uniform performance.

Particular attention is invited to the absence of "clusters" of particles. Above is a photomicrograph of competitive tape enlarged 50 X.

REEVES Soundcraft

FAMOUS NAME SOUND RECORDING DISCS

"THE BROADCASTING STATION STANDARD"

10 SOUNDCRAFT FEATURES

- Greater dynamic range of Soundcraft discs exceeds highest broadcasting requirements.
- Inaudible surface noise. Soundcraft microscopically filters all impurities out of coating materials and dries wet coatings with conditioned, dust-free air.
- High-frequency response to 15,000 cps. Soundcraft coating formulation combines proper physical texture with wax-like low cutting-friction.
- Dependability from batch to batch regardless of season. The Soundcraft disc plant makes its own weather, eliminates mysterious humidity troubles.
- Uniform cutting for both conventional and micro-groove recording. Soundcraft discs, to minimize minute variations in groove depth, are manufactured with the flattest, smoothest, aluminum bases obtainable.
- Long stylus-life assured. Soundcraft coating purity and low-friction reduce stylus wear and eliminate recording failures from stylus damage.
- 1,000 or more playings. Soundcraft's sealed-in lubricant for low needle-friction reduces wear to the point where dust in grooves and needle quality are chief controlling factors.
- Long storage-life, recorded or new. Under normal conditions Soundcraft discs cut and play after years of storage.
- Improved diameter effects. Soundcraft's superior coating formula minimizes high frequency loss and actually lowers surface noise as diameter decreases.
- Easy-to-pick-up thread. The Soundcraft coating is compounded with an exclusive ingredient to make thread throw toward center, and to minimize static charge.

CONSTANT OUTPUT

MAGNETIC SOUND-RECORDING TAPE

FOR ALL MAKES OF TAPE RECORDERS

- **CONSTANT OUTPUT** assured by new electronic monitoring method. The playback level of a continuously recorded tone during coating controls compensating adjustments to the coating machinery.
- **GREATER DYNAMIC RANGE**, high output with minimum background rumble results from combining the highly uniform oxide dispersion with tape surfaces specially polished in production to eliminate even microscopic irregularities.
- **HIGH FREQUENCY RESPONSE** of Soundcraft tape conforms to the standards set by the industry and, due to elaborate control methods, remains constant from one production lot to the next.
- **POLISHED SURFACE** of Soundcraft tape by a specially-developed buffing process insures maximum head life and eliminates the mechanical "squeal" caused occasionally by excessive tension of the tape on the heads.
- **HIGH OUTPUT** assured by Soundcraft's highly-engineered, uniform oxide dispersion giving maximum sensitivity.
- **LONG LIFE** for thousands of recordings and replays at high output is assured by complete erasability without special equipment and by Soundcraft's absolute adherence oxide coating.
- **LONG HEAD LIFE**. Low-friction oxide-coating vehicle covers each of the uniform-sized particles of oxide with a tough microscopic film that prevents any abrasive material from touching magnetic heads. This vehicle or binder, moreover, contains nothing that can rub off and gum head surfaces.
- **LONG STORAGE LIFE** is guaranteed by safety film type plastic and high tensile paper base materials. Under average indoor temperatures and humidities, Soundcraft tapes will not become brittle, stretch, or shrink.
- **HIGH ADHERENCE** of the coating to the base is effected by preprocessing the base material before coating. This method assures that Soundcraft oxide coating will neither flake nor rub off.
- **MECHANICAL UNIFORMITY** is assured by precision, rotary shearing of the wide stock into individual tapes and by the special coating formulation that prevents curling. Soundcraft tape tracks straight and winds flat.

3" OSCILLOSCOPE (WO-57B)

High Gain—Wide Band—DC and AC Inputs

The WO-57B is an outstanding innovation in portable oscilloscope design. Especially suited for television, this new scope is excellent for laboratory, factory or shop use . . . for viewing and measuring square waves, pulses, TV sync signals and sine waves.

Incorporating the features of far more expensive instruments . . . and with a sensitivity and response equal to that of many laboratory units . . . the WO-57B is the first inexpensive oscilloscope wholly equipped to handle every TV and Radio Service Job. Direct-coupled amplifiers are used to provide low frequency response flat down to dc. Excellent low-frequency square-wave reproduction, essential for correct sweep alignment, is thus assured. High-frequency square-wave response up to 100 kc enables the WO-57B to reproduce blanking and sync pulse wave shapes with fidelity heretofore unobtainable in moderately priced service-type oscilloscopes. Sugg'd User Price: \$145.00* includes Probes and Cables.

Check these important features!

- ✓ Sensitivity—30 millivolts per inch deflection
- ✓ Frequency Response of vertical amplifier—flat within 1.3 db from zero to 500 kc; down only 50% at 1 Mc; useful beyond 2 Mc
- ✓ Transient Response—tilt and overshoot less than 2%
- ✓ Utility—provided with frequency-compensated and calibrated step attenuator. Also has vernier control and calibrating voltage source
- ✓ 60-Cycle Sweep—with phasing control
- ✓ Input Capacitance—less than 15 μ f with WG-214 accessory probe

PLUS these outstanding extras . . .

- + Trace Expansion—two times screen diameter for sweep-alignment applications
- + Direct Coupled Vertical Amplifier—separate jacks for DC and AC signal measurements
- + Linear Sweep—range 15 to 30,000 cps, with preset fixed positions for viewing vertical and horizontal TV sync pulses and oscillator waveforms
- + Exclusive—sweep direction reversing switch—positive or negative syncing
- + Push-Pull Amplifier—produces sharper trace and reduces astigmatism

TELEVISION CALIBRATOR (WR-39C)

Now—in one compact, portable unit—the new RCA WR-39C provides crystal-controlled markers for all TV frequencies—included in this one instrument is a crystal-calibrated variable frequency oscillator, two crystal-controlled oscillator stages with three crystals supplied, a wide-band modulator stage for internally modulating the output at audio and rf frequencies, and an audio amplifier with speaker.

In addition to its function as a marker generator, the WR-39C can be used as a heterodyne frequency meter to identify unknown frequencies. The vfo, when tuned to any TV channel and modulated with the 0.25-Mc crystal oscillator, will put vertical bars on the raster; or when modulated with an external audio oscillator will put horizontal bars on the raster. Thus the instrument can be used for making linearity adjustments in the absence of a test pattern.

The WR-39C may also be modulated by the video signal from a television set, which makes it in effect a 12-channel miniature TV transmitter. Sugg'd User Price: \$242.50*

Check these important features!

- ✓ Crystal-controlled markers, 4.5 Mc removed from main marker for television if alignment
- ✓ Crystal-controlled markers, 250 kc removed from main marker for sound-discriminator alignment
- ✓ Provision for injection of external marker
- ✓ Internal audio and rf modulation of variable frequency oscillator
- ✓ Crystal-calibrated heterodyne frequency meter
- ✓ Crystal-controlled 4.5-megacycle output for alignment of TV receivers employing inter-carrier sound
- ✓ Marker oscillator operates on fundamental on all bands
- ✓ Sound and picture carriers marked on dial

TV SWEEP GENERATOR (WR-59B)

The WR-59B is a high-quality sweep generator which is used extensively for the design, manufacture and servicing of TV sets. It generates fundamental oscillator sweep-frequencies, preset on switch positions for TV channels 2 to 13. IF and video frequency coverage is produced by a separate calibrated control with continuous tuning from 300 kc to 50 Mc.

Sweep width is continuously variable, and output level is exceptionally flat in all positions. The rf output cable termination can be adjusted to match balanced or unbalanced loads; the rf output level is variable over wide limits by means of a coaxial-type piston attenuator. The unit develops a sweep signal for a scope; a phasing control is provided. An additional feature is return-trace blanking which produces a zero-reference line on the cathode-ray tube for measurement of instantaneous voltages. The unit is complete with rf and if output cables. Shipping weight, 35 lbs. Sugg'd User Price: \$274.50*

ELECTRIC INDICATING INSTRUMENTS

For Panel Mounting

Internal-pivot Direct-current

These small panel instruments are particularly suitable for use in radio and other communications equipment where compactness, especially minimum depth behind the panel, is essential. Thinness is obtained by the use of a unique single-unit, high-torque element of the permanent-magnet, moving-coil type. In this element, the pivots, instead of being secured to the outside of the armature winding, are solidly mounted on the inside of the armature shell.

G-E internal-pivot instruments are available in a variety of standard ratings to measure direct current and voltage (Type DW-71). They are of the 2½-inch classification. The behind-the-panel depth is 0.89 inch of the molded* Textolite case.

*Registered trade-mark of General Electric Co.

OTHER TYPES

Many other types of G-E indicating instruments are available for panel mounting. They include 3½ inch a-c, d-c, r-f, and rectifier types in standard round cases as well as in rectangular cases, such as the one shown below. Also 2½-inch alternating-current and rectifier-type instruments. Still other types can be supplied to meet unusual requirements.

The **LOAD-CHEK** for the first time makes it possible for every technician to utilize what is perhaps the simplest and quickest of all service methods—servicing by Power Consumption Measurements, long proven by auto-radio servicemen as a rapid method of localizing troubles in auto radios. Triplet Model 660 is the first Wattmeter to be produced at moderate cost, and with the proper ranges, to bring this short-cut method within the reach of every radio and TV serviceman.

Following are only two of many time-saving uses of this new instrument:

Locating A Short—The chassis tag may show a normal consumption of 225 Watts. Simply plug the power cord of the chassis into **LOAD-CHEK** (no loose ends to connect or be in the way). Note the reading—which should be possibly 350 Watts. By

Model 660

removing the rectifier tube you can determine at once which side of the tube the short is on. With a soldering iron and long-nosed pliers you can check through the chassis, locate and correct the trouble without having to lay down tools or to check with lead wires!

Replacing Burned-Out Resistors—With the chassis to be repaired plugged into a **LOAD-CHEK MODEL 660**, note the wattage reading with the burned out resistor circuit open. Now replace the resistor. Should the increase in watts be greater than the resistor rating, it indicates an extra load has caused the trouble which has not been cleared. **LOAD-CHEK** is

made-to-order for the busy serviceman because it's a Time-Saver; and at its moderate cost can be standard equipment on every service bench.

 pass characteristics of
 curves—simply throw the
 switch to the desired crystal
 —eliminating delays resulting from constant tuning and
 retuning required in the use of variable markers. Signals for the
 most accurate and fastest means of aligning local oscillators in
 TV receivers and many other applications. When using a 1 MC
 crystal, Model 1236 becomes a standard for checking other signal
 generators or receivers.

MODEL 260 Set Tester

World's Most Popular
High Sensitivity Set Tester
For RADIO and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260. In no other tester of its kind will you find the combination of useful ranges, accuracy, ruggedness, beauty and sensitivity developed to such a high degree of perfection.

Removal of the Model 260 from its heavy, handsome case of molded bakelite, will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible. The front panel is a thing of beauty and long life. Pin jacks are recessed so no metal parts are exposed. All figures and symbols are molded into a heavy Bakelite panel and filled with durable white for long wear and legibility.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high- μ triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

MODEL 480 FM-TV GENESCOPE

The Simpson Model 480 Genescope is the result of many months of painstaking research and it is offered as our interpretation of a modern FM and TV instrument providing all of the necessary signal sources for the proper alignment and servicing of FM and TV receivers.

In addition to a signal source, the Genescope includes a high sensitivity oscilloscope of unique advanced design, complete in every detail and equipped with a high frequency crystal probe for signal tracing.

The variable oscillator sections are mounted one on each side of the oscilloscope section and are provided with large precision vernier dials having a 20:1 ratio and 1000 division logging scales. They are easy to read and can be quickly set to an exact frequency.

Modern FM and TV development and servicing requires the use of test equipment made to exacting standards. With this in mind we offer you the Genescope with the assurance that everything possible has been done to make it the most accurate, flexible and convenient instrument available.

There are many vital component parts in the Genescope, almost all of which have been made to our exacting standards within our own modern plants. Most of these vital components have been developed and designed by us and substantial sums have been spent on modern tooling. The care we have taken to properly design and produce these parts is worthwhile assurance that the Genescope will render many years of uninterrupted service and always produce accurate results.

The center section of the Genescope contains the oscilloscope and all associated controls. The cathode ray tube of the oscilloscope is mounted vertically in the case in order to conserve bench space. The pattern on the tube is brought into view by use of a highly polished adjustable mirror at the top of the cabinet. The mirror may be quickly adjusted for any position of the operator. The tube face is placed well below the top surface of the cabinet in order to shield it from incident light thus producing a clear, sharp image unhampered by narrow angle light shields. The mirror when closed provides adequate protection for the cathode ray tube when not in use.

Direct connection to vertical and horizontal deflection plates and other internal functions are available through removable cover on the front panel.

MODEL 303 VACUUM TUBE VOLT-OHMMETER

The new Simpson 303 really is a versatile instrument. It can be used as an electronic DC voltmeter, an ohmmeter, an AC voltmeter, an AF voltmeter, an RF voltmeter (with accessory probe), an output-meter, and an FM indicator.

The 303 truly is a worthy companion of the world famous Simpson Model 260 Volt-Ohm-Milliammeter. Simpson engineers spent months of painstaking research in the laboratory, working in close co-operation with TV set manufacturers to produce the 303. This ruggedly built instrument has a dimension of only 120 cubic inches, and is 60 to 70% more compact than any similar instrument. In achieving this compactness for greater portability Simpson did not sacrifice accuracy or functional value. Its large 4½-inch meter is easy to read.

Also, the 303 has a low current consumption. Features such as low current consumption and wide voltage and resistance ranges make the 303 an extremely versatile instrument.

Like all other instruments bearing the Simpson name, the 303 is of the highest quality construction throughout, but sells at an amazingly low price.

MODEL 266 VACUUM TUBE VOLTMETER

Ideal for TV - AM - FM

Extremely accurate and packed full of important features. This fine Simpson instrument offers a 1 volt range for the full scale deflection necessary in measuring low RF voltages; a zero center switch embracing all DC voltage ranges for discriminator circuit alignment; a special probe with low input capacitance of approximately 4 micro-microfarads for checking RF voltages.

DC volt input resistance ranges from 50 to 200 megohms; AC volt input impedance at 60 cycles is approximately 10 megohms. The primary of the power transformer is well-regulated—holding close control over filament as well as plate voltage, and the DC input circuit is filtered so that the pressure of superimposed alternating currents does not affect DC measurements.

Housed in a sturdy case of attractive hardwood with lead compartment in rear of case. There is a large, clearly marked 4½" meter for quick, easy readings.

MODEL 476 MIRROSCOPE

Simpson takes pleasure in presenting the new and revolutionary Model 476 Mirroscope.

The objectives behind the design of the Model 476 were to eliminate certain inherent disadvantages found in the conventional type of oscilloscope.

By use of the Mirroscope principle the 5" cathode ray tube is mounted in a vertical position. This construction reduces bench space requirements to an area of only 9" x 8" thereby permitting better concentration of associated equipment for any type of test procedure.

The cathode ray image is reflected from a high grade mirror mounted in the adjustable cover at the top of the cabinet, thus the viewing surface is brought near eye level when the instrument is used on benches of normal height. The mirror angle is quickly and easily adjusted to any position of the operator.

The cover with integral side wings forms an effective shield against external light sources or may be closed down for protection of the tube and mirror when the instrument is not in use.

The upright construction permits location of controls and connections for maximum convenience and allows for internal cathode ray tube connections at the front of the panel instead of the rear.

These and many other advantages will be disclosed when the construction and specifications of the Model 476 Mirroscope are considered fully.

SENSITIVITY:

| | |
|----------------------|-------------------------------|
| Vertical direct | — 12 volts rms per inch. |
| Vertical amplifier | — 20 millivolts rms per inch. |
| Horizontal direct | — 14 volts rms per inch. |
| Horizontal amplifier | — 38 millivolts rms per inch. |

Horizontal trace expansion is over 4 times tube diameter. This makes it possible to examine minute portions of a response pattern for finer detail.

Linear Sweep frequency is continuously adjustable in five overlapping ranges from 15 cycles to 60,000 cycles. Internal, external or line frequency synchronization with variable amplitude is available.

Means for intensity or "Z axis" modulation is provided. Approximately 14 volts peak will blank a trace of normal intensity.

The vertical amplifier frequency response is within 3DB from 20 cycles to over 300,000 cycles and is usable to well over four megacycles. Square wave slant and overshoot is held to less than 5 per cent of amplitude. This response will be found adequate for all phases of television receiver service including observation and diagnosis of Sync. signals.

INPUT IMPEDANCE:

| | |

THE SIMPSON PATENTED "NO BACKLASH" ROLL CHART

The exclusive "No-Backlash" feature automatically takes up the slack in the paper chart and, by keeping the chart in constant tension, makes it impossible to turn the selector wheel without moving the chart. This results in precision selection at all times. The "No-Backlash" feature also prevents the paper chart from tearing, insures proper alignment, and presents at all times a neat, flat surface.

The selector wheel gear ratio makes it possible for tube selections to be obtained with a minimum of effort.

The entire Roll Chart mechanism is securely fastened to the instrument panel. Quick access to the roll chart can be obtained by removing four panel screws, so that the addition of tube data or the mounting of a new chart is a matter of a few minutes.

In addition to the neat, flat reading surface made possible by the "No-Backlash" feature, the lucite window was designed so that only two settings appear, which is especially convenient for the settings of multi-purpose tubes.

MODEL 340 SIGNAL GENERATOR

75 Kilocycles to 120 Megacycles—fundamentals to 30 Megacycles. From its lustrous black anodized panel to the big nine-inch dial and knife edge pointer that mean easy readability, the Model 340 is an instrument packed with Simpson engineering refinements for greatest utility and long-lasting accuracy.

An electron coupled circuit, using three tubes—full wave rectifier, modulator, and oscillator—and standard 30% modulation at 400 cycles, assures extreme stability and output uniformity. Close settings are permitted by a smooth vernier control.

RF coils provide range of 75-220; 200-600; 550-1700 KC; and 1.5-4.5, 4.2-14; 9-30; 36-120 megacycles. Fundamentals range to 30 MC, and the dial is direct reading to 120 MC.

Shielding in the Model 340 is complete; coils, attenuator, and signal selector being individually shielded. The oscillator and modulator are sealed in a rigidly welded, entirely closed chassis. In addition, the line cord is shielded, thus reducing leakage to a negligible point.

The signal output is controlled through a step attenuator and non-inductive potentiometer, providing smooth and complete control of the signal output. A special jack is provided in the Model 340 to obtain high output on the 120 MC band.

For 105-130 volts, 50-60 cycles.

Twenty-five separate meters at the turn of a switch. That is what you get in the new Simpson Model 221 Roto Ranger. The necessity of reading numerous scales, so common in ordinary volt-ohm-milliammeters, is forever eliminated when you own a Roto Ranger. The chances for errors in making readings are reduced to a minimum. The Model 221 provides a separate direct reading scale for each range and does it automatically. Calibrations are not cramped. Each scale is full size, the same as it would be for a separate instrument. As the selector switch on the panel is moved to the range desired, an ingenious mechanism rotates the proper range into position behind the meter window.

MODELS 240 and 230 VOLT-OHM-MILLIAMMETERS

These two "Micro-Tester" portables are famous throughout the world for their ruggedness and built-in accuracy. They exemplify the construction features and utility that distinguish the entire Simpson line shown in this section.

Both are shock-proof and incorporate the celebrated Simpson movement with its FULL BRIDGE-TYPE CONSTRUCTION AND SOFT IRON POLE PIECES. Resistors are in matched pairs to provide the greatest possible accuracy for all ranges.

Model 240 — the "Hammeter" — was designed for the additional voltage and sensitivity demanded in radio testing. With its maximum voltage range of 3000 AC or DC, it was the first self-contained pocket portable instrument built expressly to check high voltage and all the component parts of transmitters and receivers.

Model 230, with a maximum voltage of 1000 volts AC or DC, is ideal for most industrial testing. Its ranges are adequate for most line voltages, for telephone, teletype, and general purpose testing.

Both models are housed in heavily molded bakelite cases, with all numbers and symbols recessed in the panel and filled with white enamel for greatest legibility and ease of reading. Both have full size 3" meters.

MODEL 390 VOLT-AMP-WATTMETER

Ruggedly constructed for full load, continuous operation, the Simpson Model 390 is the first tester of its size ever made to give you volt, ampere and wattage readings in one compact instrument. It embraces two ranges each of voltage and current, providing four wattage ranges which cover practically all types and makes of appliances. The panel has volt-ampere combinations clearly indexed to the proper wattage range on the scale, which makes the instrument easy to use. All readings are shown on one meter. In normal position, the meter indicates volts. Ampere and watt readings are obtained by depressing button on the panel. The widely separated binding posts make it possible for the Model 390 to be used as an individual voltmeter or as an ammeter. The Model 390 has a molded bakelite case with all figures recessed in the panel, which are filled with white enamel for better legibility.

MODEL 385 TEMPERATURE INDICATOR

This is the newest addition to the Simpson Appliance Tester line. You will find this a compact instrument which is ideal for measuring temperatures from +70° F to as low as -50° F, where fast accurate temperature readings are important. The scale is designed so that the center portion is expanded, making the most widely used temperatures easy to read. The Model 385 is ideal for use in the refrigeration service field and wherever temperature readings are important, such as deep freeze units, home refrigerators, walk-in coolers and air conditioning units. The temperature readings can be taken at the end of the 15' lead which is supplied with the unit. Series CR-30 CATHODE RAY TUBE TESTER

TESTS ALL TV PICTURE TUBES
(Magnetic and Electrostatic)

OSCILLOSCOPE AND INDUSTRIAL CATHODE RAY TYPES

Series CR-30 is a complete, self-contained instrument particularly engineered for the very special needs of reliable, rapid and economical cathode ray tube testing, in the field, shop or laboratory.

Series CR-30 is indispensable to the efficient TV Service-Installation Technician, TV Service Laboratory and wherever one is called upon to answer the performance question. "Is it the cathode ray tube or is it the chassis?"

Series CR-30 incorporates a Beam Current test circuit which checks overall electron-gun performance for Proportionate Picture Brightness. Additional direct testing facilities are provided for positive check of accelerating anodes and deflection plate elements.

The Precision CR-30 should not be confused with mere adapters connecting to ordinary receiving tube testers which were never designed to meet the very specialized needs of CR tube checking. Similarly, it is not to be confused with neon lamp units or similar devices of limited technical merit and which do not check all CR tubes or all tube elements.

GENERAL AND TECHNICAL SPECIFICATIONS

- ★ **Tests All Modern Cathode Ray Tubes**—Magnetic and Electrostatic, Scope Tubes and Industrial Types without removal from carton or TV chassis.
- ★ **Tests All CR Tube Elements**—Not just a limited few.
- ★ **Absolute Free-Point 14 Lever Element Selection System**, independent of multiple base pin and floating element terminations, for Short-Check, Leakage Testing and Quality Tests. Affords maximum anti-obsolescence insurance.
- ★ **Beam Current Test Circuit** checks all CR Tubes and Electron-gun in operation. It is the Electron Beam (and NOT total cathode emission) which traces the pictures or patterns on the face of the CR tube.
Total cathode emission can be very high and yet Beam Current (and picture brightness) unacceptably low. **The CR-30 will reject such tubes** because it is a **Beam Current** tester. Conversely, total cathode emission can be low and yet Beam Current (and picture brightness) perfectly acceptable. **The CR-30 will properly pass such tubes** because it is a **Beam Current** tester. The significance of the above rests in the fact that Beam Current (and picture brightness) is primarily associated with the condition of the center of the cathode surface and not the overall cathode area. (See illustration below.)
- ★ **Voltage Regulated, Bridge Type VTVM** provides the heart of the super-sensitive, tube quality test circuit. Such high sensitivity is also required for positive check of very low current anodes and deflection plates.
- ★ **Multiple Test Sensitivities** plus selectable element test potentials permit proper accommodation of all CR tube types, Magnetic and Electrostatic.
- ★ **Micro-Line Voltage Adjustment**
Meter-monitored at filament supply.
- ★ **Accuracy** of test circuits closely maintained by use of factory adjusted internal calibrating controls; plastic insulated, telephone type cabled wiring; highest quality, conservatively rated components.
- ★ **Built-in, High Speed, Roller Tube Chart.**
- ★ **Test Circuits Transformer** isolated from power line.
- ★ **4½" Full Vision Meter** with scale-plate especially designed for CR tube testing requirements.
- ★ **Heavy Gauge Aluminum Panel**, etched and anodized.
- ★ **PLUS** many other special "PRECISION" details and features.

Burlington Improved PANEL INSTRUMENTS

Alternating Current

Direct Current

AC and DC types are accurate to within 2% of full scale value at any point on the scale.

DC instruments combine extremely light weight moving elements and powerful alnico magnets to produce a torque to weight ratio which reduces frictional error to a minimum. This high torque to weight ratio permits use of pivots with ample pivot bearing surface to overcome effects of rough handling, shock, and vibration.

AC instruments are accurate over entire range of commercial power frequencies (25 to 125 cycles). These instruments are of repulsion vane type using carefully aged and impregnated field coils and multipliers which are wound with conductors of ample size so that temperature rise of the windings may be maintained at a minimum, even though instrument is subjected to continuous use in the circuit.

Alnico magnets are used to obtain perfected damping characteristics found in no other AC instrument.

POCKET TYPE METERS

Various Shurite pocket meters using the Model 450 case are in production. Model 450 has bright plated case, with two or three terminals, depending on ranges. Ranges suitable for pre-war and post-war batteries, portable radio batteries and many other electrical applications, including polarity indication types have been made, although they are not regularly stocked.

Model 450

Stock numbers begin with 4 as the first digit. For example, the 0-3 DC. Ammeter, as illustrated, is Stock No. 4202. The bulletin, "Shurite Pocket Types", available on request, is periodically revised to indicate pocket meters which are authorized for production. Dealer net price is obtained by adding \$0.40 to the price of 550 Model meters as shown in this catalog at \$1.70 or less, or by adding \$0.30 for meters at \$1.75 or above.

A sturdy flange ring for use with any Model 550 (round) Shurite meter where a flange mount is preferred. Makes appearance similar to Model 650. Wide flange, 2 3/4" dia. Telephone black finish. Screws, lockwashers and nuts included.

Model 5-A, Net.....\$0.18

MOUNTING DETAILS

All Shurite Panel Meters have flush cases and require 2 3/8" hole. Most standard ranges have 6-32 studs, and are mounted as follows:

IMPORTANT—HOW TO ORDER:

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS (Z)

Zero Adjusters are available only on Models 550-DC and 650-DC. No zero adjuster on models using 950 case. When ordering, add Z to stock number. Example: Stock number for Model 550-DC voltmeter, 0-1 volt range — without zero adjuster is 5101. With zero adjuster, it is 5101-Z.

PANEL CALIBRATION (S)

Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S. If thickness of steel panel is not specified, meter will be supplied for .040 panel.

CHICAGO INDUSTRIAL INSTRUMENT CO.

VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards in central stations and industrial plants—wherever constant or known frequency is important to efficient operation of equipment.

PRINCIPLE OF OPERATION:

Simple in design, the J-B-T Meter consists of a case, base, dial and central mounting frame, with a series of spring steel reeds screwed to a reed mounting bar, individual driving coil surrounding each bank of reeds, permanent magnet, series resistor and terminal studs.

Each reed is adjusted to respond by resonance to but one frequency. As the alternating current (or interrupted direct current) excites the driving coil, the one reed "in tune" with the frequency in the coils will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. Frequency of the current is read on the graduated face of the instrument.

ADVANTAGES:

Some standard models are available in either half cycle or full cycle steps, as shown below on two meters indicating a frequency of 60 cycles.

Above: Models 30-F, 31-F, 33-F, 34-F; 3/4" Metal Case

Below: Models 30-FX, 31-FX, 33-FX, and 34-FX; Molded Case Meets Mounting Dimensions of JAN-I-6 and ASA C39.1-1951 and MIL-M-6A.

Guaranteed accuracy at normal operating temperatures is $\pm 0.3\%$ or better of the frequency being measured, depending on the model. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. Accuracy is not affected by wave form or external magnetic fields. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take tougher treatment than many instruments.

CAUTION:

If a meter plugged in on a 60 cycle AC power line does not indicate a frequency of exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions beyond the control of the Utility. All J-B-T Vibrating Reed Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply.

MODEL 30-F

MODEL 30-F

Range: 48-52 and 58-62 cycles. Double window for ease of reading frequency in either range. Often specified for export. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Accuracy $\pm 0.3\%$ at reference temperature. Flush panel mounting. For details, Bulletin VF-43.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

3 1/2" SEALED METER

FHXX TYPE METERS, sealed instrument, glass-to-metal construction, with solder terminals now supersede the FHX sealed meters (Print SK-24). While JAN-1-6 does not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Maximum barrel diameter 2-11 16" (2 3/4" panel mounting hole recommended); 2 7/8" overall depth behind flange, mounted by 3 flange holes for 6-32 screws on 1.58" radius; detachable flange. See Print SK-51. Standard voltage is 100-130. While not regularly stocked, these meters are in production.

INSTRUMENT AND TESTER SWITCHES (LAMINATED)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting*

SS-14-2

SS-20-2

JBT Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability—Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, nickel coated and then heavily plated with pure silver to meet 200 hour salt spray test; ball bearing action, beryllium-copper spring on SS-14; phosphor bronze on SS-20, and sharp detent assure positive indexing. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength. On special order, material of grade LTS-E-3 or better, per Government Specs. MIL-P-3114, vacuum impregnated with approved fungicide can be supplied at extra cost.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Extra decks add only 5/16".

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not

make-and-break), 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

* Standard items, but not regularly stocked; check with your distributor.

BASIC 14-POSITION: Knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown, 13 contacts per deck. One to six decks; for each additional deck (or gang) add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Adjustable Stop normally is supplied on standard cataloged switches. Panel locator positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION: Knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat on shaft, unless otherwise specified. Contact lugs and common lug positioned as shown, 19 contacts per deck, continuous rotation types. One to six decks; for each additional deck, add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Panel locator positioned as shown unless otherwise specified on bulk orders.

NEW-BUT PROVED—MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting

MS-14-2

- All moving contacts enclosed — minimizes dirt and corrosion.
- Contact lugs permanently integrated into switch assembly.
- Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft through decks for precision indexing.
- Interchangeable, electrically and mechanically, with J-B-T 14- and 20-position laminated switches, widely used by industry and Armed Services.

MS-20-1

FEATURES:

For description of rigid 3-post construction; heavy pure silver plating to meet 200-hour salt-spray test; excep-

tional compactness; .007 ohm average contact resistance; current-carrying capacity and voltage breakdown, see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2" circle for compactness. Molded end cover regularly supplied on MS-14 series. Knob included with individually boxed units — not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. One to six decks add $\frac{1}{8}$ " per deck (or gang) to depth; for seven decks and over, add $\frac{1}{2}$ " to depth for double indexing mechanism; add $\frac{3}{8}$ " to depth for adjustable stop mechanism. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. Panel locator is available on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2 $\frac{1}{8}$ " circle for compactness. Molded end cover regularly supplied. Knob included with individually boxed units — not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms and self-wiping collector ring are standard construction. One to six decks; add $\frac{1}{8}$ " per deck (or gang) to depth. Continuous rotation type supplied; on quantity orders, pre-set fixed stops are available. Panel locator available on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

APPLIANCE TEMPERATURE TESTERS

A NEW IDEA IN TESTERS — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J.B.T.'s wide experience in building field test sets for many well-known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J.B.T. testers include the principle of remote reading of temperature,—and temperature measures the real usefulness of the appliance.

MODEL 32-JP-3. A very popular oven tester with all the features of Model 32-JP-4 except that no carrying strap is included, and the thermocouple supplied is attached permanently instead of to binding posts. This model is extensively used for service work, sales demonstrations and inspection. Range

0-650° Fahrenheit; 10° divisions readable to 2½"; automatically compensated for ambient temperature. For more details, see Bulletin JP-103. Complete with attached SA-116 5½" calibrated thermocouple, clip and shield. **\$25.05**

MODEL 32-JP-4. Checks oven temperature of gas and electric ranges and other appliances. Ideal for testing and setting thermostats. Has binding posts for quick attachment of thermocouples listed below to check irons, washers, waffle-bakers, roasters, clothes dryers, etc. Exceptionally fast, continuous response; automatically compensates for ambient temperature. TEMPERATURE INDICATORS

WHERE TO USE: To check heat rise of motors, transformers and coils; for laboratory furnaces, inspection set-ups, for remote indication of infra-red and other oven temperatures; and to maintain controlled industrial processes such as heat treating and annealing. When used with selector switch, permits centralized reading of one to ten thermocouples, as in Diesel exhaust manifold applications.

MODEL 32-J

MODEL 32-J PYROMETER IN SN-3 STAND. Mounted in sloping front black metal stand, 4 1/4" high x 4 3/8" deep x 4 1/8" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2 3/8" scale, assures ruggedness and pointer stability. To retain the ±2% accuracy of the installation: use only the type and resistance of thermocouple and lead which are provided; do not cut extra lead—coil it—change in length changes calibration. A protection tube is not generally required. Many users find it convenient to keep an extra couple and lead on hand.

DYNAMIC TUBE TESTER

This tester incorporates the most important engineering advancements in 12 years of tube tester research, such as the Dynamic test method and sequence switching. The Jackson Dynamic test circuit applies separate element voltages to each tube element. Separate load circuits are also used. These voltages and loads have been carefully selected for each tube to meet most ideally the normal operating condition of the tube. The current flowing only in the plate circuit of the tube under test is indicated on the 4 inch meter in easy-to-read terms.

Sequence Switching makes possible **SIMPLIFIED OPERATION**, formerly unattainable in Dynamic test methods. There are actually only three control units to be set according to rotary chart listing for each tube. These are: Heater Voltage (upper left), Plate Control (upper right) and the Sequence Switch (center). The only other adjust-

ments are line voltage control and shorts test.

Fast, Accurate Shorts Test lamp indicates only when tube is shorted. The shorts test control moves only through 4 positions—yet completely tests each tube element for possible shorts or leakage. The tube is tested under a heated cathode condition.

Correct Test Voltage and Load Circuits protect tubes under test against damage by overload. Even low voltage battery types are provided with suitably low operating potentials. The full GOOD-BAD scale of the meter is used for each test. The meter is sufficiently sensitive that special "Low scale" readings are not required (such as for diodes, etc.).

Life-line test shows you accurate forecast of end of tube life. Reduced output caused by over-age gives reduced reading on meter. Lets you catch bad tubes before they actually go bad.

Q-METER

TYPE 160-A

Radio frequency circuit design often requires the accurate measurement of Q, inductance, and capacitance values. For this application, the 160-A Q-Meter has become the universal choice of radio and electronic engineers throughout the country.

Each component part and assembly used in the manufacture of this instrument is designed with the utmost care and exactness. Circuit tolerances are held to values attainable only in custom built instruments.

The 160-A Q-Meter is designed specifically for the accurate and rapid measurement of Q, inductance, and capacitance. The basic method of measurement consists of measuring the voltage developed across a variable air capacitor connected as an element in a series resonant circuit. Essentially the Q-Meter is comprised of an 8 range RF oscillator, a Q measuring circuit with a main and vernier section tuning condenser, a vacuum tube voltmeter of special design which reads the voltage across the tuning condenser, and a voltage injection circuit which applies an accurately known voltage to the terminals of the series resonant circuit. In operation the Q circuit is resonated by means of the variable Q tuning capacitor and the voltage developed across this capacitor is indicated by means of the vacuum tube voltmeter which is calibrated directly in terms of Q. This method of measuring Q is simple, accurate, and requires only a single operation—resonating the circuit—to measure Q. Variations of this basic method of measurement are employed to determine effective inductance and capacitance as well as the dielectric properties of insulating materials.

SPECIFICATIONS

Oscillator Frequency Range: Continuously variable from 50 kc. to 75 mc. in eight self-contained ranges. (In conjunction with an external oscillator the frequency range of the Type 160-A Q-Meter may be extended from 50 kc. to 1 kc. for coil measurements).

Oscillator Frequency Accuracy: Generally better than $\pm 1\%$, except the 50-75 mc. range which is approximately $\pm 3\%$.
Range of Q Measurements: The Q voltmeter is calibrated directly

in Q, 20-250. The "Multiply-Q-By" meter, which measures the oscillator voltage injected in the Q measuring circuit, is calibrated from $\times 1$ to $\times 2$ and also at $\times 2.5$. The reading of the Q voltmeter scale is multiplied by the setting of the "Multiply-Q-By" meter. Hence, the total range of circuit Q measurements is from 20 to 625. Condensers, dielectrics, etc., which are measured by placing these in parallel with the measuring circuit, may have Q's as high as 5,000.

Accuracy of Q Measurements: The accuracy of the direct reading measurement of circuit Q (for Q voltmeter readings between $Q=50$ and $Q=250$) is approximately 5% for all frequencies up to the region of 30 mc. and decreases with increasing frequency. Correction may be made for the error above 30 mc. as it is principally a frequency effect. The accuracy of the measurement of condensers, dielectrics, etc. is generally better than 10% for Q's below 5,000 and up to 30 mc.

Capacitance Calibration Range: Main tuning condenser 30-450 mmf. calibrated in 1 mmf. divisions from 30 to 100 mmf. and in 5 mmf. divisions from 100 to 450 mmf. Vernier condenser, plus 3 mmf., zero, minus 3 mmf., calibrated in 0.1 mmf. divisions.

Accuracy of Capacitance Calibration: Main tuning condenser, generally better than 1% or 1 mmf., whichever is the greater. Vernier tuning condenser, ± 0.1 mmf. The internal inductance of the tuning condenser at the binding posts is approximately .015 microhenry.

Voltmeter: The Q voltmeter is also calibrated in volts. A specially calibrated tube, Type BRC 105-A tube, is used. Replacements may be made without recalibration.

Power Supply: 105-120 volts, 50-60 cycles. Also 210-240 volts, 50-60 cycles. Power consumption 50 watts.

Dimensions: Height 12.5", length 20", depth 8.5".

Weight: 25 lbs.

FM SIGNAL GENERATOR

TYPE 202-B

The type 202-B FM Signal Generator has been developed to meet the needs of engineers engaged in the design of FM and television receivers for operation within the frequency range of from 54 megacycles to 216 megacycles.

This instrument has been proportioned for maximum conservation of laboratory bench space, with frequency dial, modulation and output meters positioned at eyelevel for maximum readability. The unit is finished in grey wrinkle enamel with engraved panel and is supplied complete with tubes and standard output cable.

SPECIFICATIONS

RF Range: Frequencies from 54 mc. to 216 mc. are covered in two ranges, 54-108 mc. and 108-216 mc.

Main Frequency Dial: The two RF ranges are calibrated directly in megacycles to an accuracy of within $\pm 0.5\%$. The dial is also divided in 24 equal divisions for use with the vernier frequency dial.

Vernier Frequency Dial: The vernier frequency dial is divided in 100 divisions and is geared to the main dial through a gear train having a 24:1 ratio. The approximate frequency change per vernier division is 26 kc. on the low range and 52 kc. on the high range.

Frequency Modulation (Deviation): The FM deviation is continuously variable from zero to 240 kc. The modulation meter is calibrated in three FM ranges (1) zero to 24 kc., (2) zero to 80 kc. and (3) zero to 240 kc. deviation.

Amplitude Modulation: The modulation meter is calibrated at 30% and 50% amplitude modulation. AM is continuously variable from zero to 50%.

Modulation Controls: Separate potentiometers are provided for continuous control of FM and AM levels.

Modulating Oscillator: The internal AF oscillator may be switched to provide either frequency or amplitude modulation; it may also be switched off. External binding posts permit the use of an external AF oscillator for either FM or AM. Both internal and external AF oscillators may be used simultaneously, thus providing either FM or AM at two modulation frequencies simultaneously or simultaneous FM and AM. The internal AF oscillator provides eight fixed frequencies which may be selected by a rotary type switch—50, 100, 400 cycles and 1, 5, 7.5, 10 and 15 kilocycles, accurate to within 5%. The output voltage of the internal AF oscillator is available at the external binding posts for synchronizing or other purposes.

RF Output Voltage: The RF output voltage is continuously variable over a range from 0.1 microvolt to 0.2 volts at the terminals of the output cable. The impedance at the RF output jack, looking into the instrument, is 53 ohms resistive. The output cable has a 53 ohm resistance termination at the terminal end hence the output impedance of the unit with cable attached is 26.5 ohms.

Distortion: FM distortion at 75 kc. deviation is less than 2% when modulated with the internal AF oscillator or an external AF oscillator having 0.5% distortion or less. At 50% amplitude modulation the distortion is about 5% using the internal AF oscillator and decreases as the modulation percentage is reduced. An external AF oscillator may be employed for amplitude modulation if desired.

Spurious RF Output: All spurious RF output voltages are at least 30 db. below the desired fundamental. The RF leakage is very low.

Fidelity Characteristics: The deviation sensitivity of the FM modulation system as a function of frequency is constant from dc. to over 10 kc. At 15 kc. the deviation as indicated on the modulation meter is 0.5 db. higher than the true value. The amplitude modulation system is also flat from dc. to 10 kc., and departs from nominal by 1.0 db. at 15 kilocycles.

Power Supply: The power supply is self-contained in the instrument for use on 60 cycles, 110 volts.

Accessories: 203-A Frequency Converter (Frequency range 0.4 mc. to 25 mc.).

Dimensions: Height: 17"; Width: 13 1/2"; Depth: 11 1/2".

BROWNING UNIVERSAL FM MODULATION MONITOR — MODEL MD-25A

A single instrument for monitoring the modulation of all FM transmitters operating in the communications bands from 30 to 162 mc. Provides simple and inexpensive means for checking fixed or mobile transmitters for compliance with FCC limitations on carrier frequency swing due to modulation. Maintenance of frequency swing within the FCC plus-or-minus 15 Kc limit is equally important for reduction of adjacent-channel interference. Peak flasher indicates excessive modulation.

The Browning Universal Modulation Monitor checks any communications system working on 30-40, 40-50, 72-76, and 152-162 mc., a feature of special importance to engineers responsible for supervision of several systems, since a single instrument can be used to check all transmitters operating within the above bands.

ELECTRICAL FEATURES

- An outstanding feature of Model MD-25A is its extreme simplicity of operation. The multi-range band-selector switch is set to the band to be monitored, and the unmodulated transmitter carrier is tuned in precisely. Then the carrier is modulated by voice or audio oscillator, and the frequency swing is read directly from a 4-inch panel meter calibrated to 20 kc. A calibrated discriminator is used to determine modulation swing. The meter also determines precise tuning by indicating limiter voltage or total discriminator voltage. • The meter can be read to better than 1 kc. The meter indicates peak swings of sustained sinusoidal modulation or voice modulation peaks of 0.3 seconds duration or more. • Aural monitoring is provided by means of an audio output which permits attachment of an audio amplifier or phones. Oscilloscope may be attached at the same point for analysis of demodulated signal. • Measurements may be made on signals generating less than 1 millivolt at the antenna input. If the instrument is mounted at the headquarters station, cars can be checked while they are on the road. • Tube complement: one 6AK5, four 6AU6, three 6SN7, one each 5Y3, 6C4, 6AL5, 6J6, VR-150.

MECHANICAL FEATURES

- Model MD-25A is mounted on a standard 8 $\frac{3}{4}$ " rack panel. • Supplied with a portable case 20" wide, 9" high, and 12" deep. • Weight: 40 lbs. Shipping weight: 55 lbs. • Case is readily removable for rack mounting use.

SCALE PRINTING MACHINE

Prints lettering, numbers and divisions on meter scales, dials, name plates, labels, etc. Uses standard printers type obtainable everywhere. Not intended for production work but rather for those special jobs which are one of a kind. Does a neat printed job in a jiffy. The Model 1000 Junior machine (illustrated) finds the most use where the divisions are already drawn in and the scale outlines numbers and letters. The Model 1500 Standard machine provides, in addition, division printing features. Other models are available with rotating number and letter wheels.

Contains linear sweep with unusual accuracy to 2%. Hickok iron modulator furnishes symmetrical pattern response curve for easier and more accurate readings.

THIS 1 INSTRUMENT DOES THIS

1. Visually align a television receiver to any of the 12 present-day television channels from 44 mc to 216 mc.
2. Visually align IF stages of any television receiver—including the old and current bands, and new bands. Marker range—20 to 40 mc.
3. Align all traps with a calibrated signal—modulated or unmodulated.—19.5 - 48 mc.
4. Insert a marker—accurate to .05 mc—at any point along the IF response curve. This marker frequency is directly calibrated on a dial 9 1/2 inches long.
5. Align IF or RF Sections by single stage method—with high output.
6. Attenuate the output down to a very low signal in microvolts.
7. Align a television receiver independent of any local television station. The generator is complete.
8. Align channels 5 through 13 directly by the calibrated FM Oscillator without necessity of heterodyning the oscillator against a fixed oscillator.
9. Highly stable.
10. Makes possible a crystal controlled frequency modulated or unmodulated for any frequency as low as 5 mc to the upper television channel No. 13 at 216 mc.

THIS IS ANOTHER OUTSTANDING HICKOK "FIRST" Hickok was first with Dynamic Mutual Conductance—first with the serviceman's FM sweep generator—first with the complete oscillograph including FM sweep oscillator. Now first again with the complete Television Alignment Generator—the latest in a line of fine test equipment that has lead the field for over 40 years. 40 years.

Model 650

Price: \$279.00

NEW TELEVISION VIDEOMETER

This fine new instrument is the first of its kind. Now available to rapidly and accurately solve your service problems.

The 650 has a new timer circuit which delivers video pulses of 60 cycles, 900 cycles, 15,750 cycles and 315 kc., singularly or in any combination, both positive and negative output. Pulses are all locked together and crystal controlled for greater accuracy.

Pulses can be used directly, metered in peak-to-peak volts or to modulate the self-contained RF oscillator.

RF oscillator covers all TV channels in two bands (2-6 and 7-13), all on fundamentals. RF output is metered at all times from 1 to 10,000 microvolts with calibrated attenuation and variable percentage modulation. RF can be externally modulated with video frequencies from 5 cycles to 4 MC with variable percentage modulation on all channels.

Self-contained, substitute external video amplifier, 5 cycles to 4 MC with a variable gain from 0 to 10, with high input impedance, low output impedance and metered peak-to-peak voltage output.

Includes horizontal and vertical sawtooth voltages which can be directly substituted for vertical and horizontal oscillator in a TV receiver. Both the vertical and horizontal sawtooth amplitude is sufficient to give full raster deflection and in the case of flyback type high voltage power supplies the horizontal sawtooth can be used to light up the picture tube.

The 650 also contains an AC line voltage scale for instantaneous check on line voltage fluctuation, a common source of TV trouble.

This HICKOK Videometer is truly an all-purpose video generator, and a must for the income-minded, successful and aggressive TV service technician.

FEATURES

Quickly localizes and accurately identifies trouble in any section of a TV receiver.
Provides electronically accurate bar or dot pattern on the screen of any TV receiver— independent of station operation.
R.F. output, directly calibrated in microvolts for sensitivity measurements.
Substitute Video Amplifier with gain of 0 to 10.

Crystal controlled timer for greater accuracy.
Fast, accurate, the ideal instrument for fringe area TV servicing.
Increases TV maintenance profits— allows you to trouble shoot many more installations per day.
Built only by HICKOK. Contains highest quality components throughout for lasting accuracy and dependability.

SUPERIOR TEST EQUIPMENT

The New Model TV-11

TUBE TESTER

Specifications:

- Tests all tubes including 4, 5, 6, 7, Octal, Lock-in, Peanut, Bantam, Hearing-aid, Thyatron, Miniatures, Sub-Miniatures, Novals, Sub-Minars, Proximity Fuse Types, etc.
- Tests for "shorts" and "leakages" up to 5 Megohms.
- Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TV-11 as any of the pins may be placed in the neutral position when necessary.
- The Model TV-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- Free-moving built-in roll chart provides complete data for all tubes.
- Newly designed Line Voltage Control compensates for variation of any line voltage between 105 Volts and 130 Volts.

EXTRA SERVICE

The Model TV-11 may be used as an extremely sensitive Condenser Leakage Checker. A relaxation type oscillator incorporated in this model will detect leakage even when the frequency is one per minute.

*** NOISE TEST**
Phono Jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose external connections.

The Model TV-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover. Size 11 1/4" x 13" x 6". Shipping Weight 15 lbs.

THE WATERMAN LINE-UP

HI, WIDE and HANDSOME POCKETSCOPES are characterized by small size, light weight, and outstanding electrical performance. All units have frequency compensated attenuators as well as non-frequency discriminating gain controls. All units have both periodic and trigger sweeps from $\frac{1}{2}$ cycle to 50KC. The amplifiers are direct coupled thus frequency response starts from 0 cycles. No peaking coils are used, thus, the transient response is good. Full expansion of trace, both vertical and horizontal, is built in.

Combination filter and graph screens are used for better visibility, thus traces can be observed even under high ambient light condition. Binding posts for convenience of connections, with effective shield, are used. S-14-A has sensitivity of 10 mv/inch with pass band above 200KC. S-14-B has sensitivity of 50 mv/inch with pass band above 1 megacycle. S-15-A is similar to S-14-A except that it has two independent CR Tubes for multi-trace oscilloscope work. Accessories such as carrying cases and probes are available.

POCKETSCOPES and RAKSCOPES have achieved a reputation for dependability and accuracy. The LINEAR TIME BASE can be used with the S-11-A POCKETSCOPE or with any other oscilloscope to convert the scope to trigger operation from $\frac{1}{2}$ cycle per second.

WATERMAN RAYONIC TUBE DEVELOPMENTS

3SP

Since the introduction of Waterman RAYONIC 3MP1 tube for miniaturized oscilloscopes, Waterman has developed a rectangular tube for multi-trace oscilloscopy. Identified as the Waterman RAYONIC 3SP, it is available in P1, P2, P7 and P11 screen phosphors. The face of the tube is $1\frac{1}{2}'' \times 3''$ and the over-all length is $9\frac{1}{4}''$. Its unique design permits two 3SP tubes to occupy the same space as a single $3''$ round tube, a feature which is utilized in the S-15-A TWIN-TUBE POCKETSCOPE. On a standard $19''$ relay rack, it is possible to mount up to ten 3SP tubes with sufficient clearances for rack requirements. Photographic means of recording are under development and will be available shortly.

VACUO JUNCTIONS

(THERMOCOUPLES)

GENERAL INFORMATION.

Insulation.

Vacuo Junctions are electrically insulated from the heaters, and tested to 100 volts D.C.

Resistance Tolerances.

Resistance tolerances for Heater or Thermo-Couple are plus or minus 10%.

Sensitivity Tolerances.

The nominal output of 7 millivolts is subject to a variation of plus or minus 12%.

Current Overload.

The current ratings can be exceeded by a 50% overload without risk of damage to the Thermo-Couple for continuous running. The millivolts output at any overload within this limit can be calculated by relating it to the square of the current approximately.

The Heater will withstand transient overloads of 100%, but there is a risk of burning out if this overload is maintained.

General.

Owing to the extremely fine gauges employed it is not possible to guarantee any closer tolerances.

Temperature Co-efficient.

The over-all temperature co-efficient of the Thermo-Couple does not exceed 0.2% per degree centigrade. This temperature co-efficient, generally speaking, is of no value because the Thermo-Couples, being used invariably with indicating galvanometers, it is the over-all temperature co-efficient of couple and galvanometer which is important, and this can only be ascertained experimentally, the interacting factors being too numerous for estimation or calculation.

11/16" MOUNTING HOLE

BUILT-IN RESISTOR

(Patent No. 2,421,321)

For 110 and 220 volts

NE-51

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

Equipped with BINDING SCREWS

MULTI-VUE CAP

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the right gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the clear caps shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

BUILT-IN RESISTOR

PATENTED
No. 2,421,321

External resistors will be furnished which will permit use of these pilot lights on voltages higher than 220 volts.

This series of pilot light assemblies is unique and has several exclusive features. The resistors are permanently built into the high quality DIALCO designed socket.

This socket is constructed with heavy molded bakelite insulation in which the terminals are securely anchored. The insulated socket is mounted in a threaded bushing equipped with nut and shakeproof washer for mounting on a panel of any usual thickness.

CONNECTORS FOR SINGLE CONDUCTOR CABLE FOR MICROPHONES - SPEAKERS - PICK-UPS - JACKS

(using cable shield for second conductor)

The fittings shown here are designed for use with standard metal shielded single conductor cable up to $\frac{1}{4}$ " diameter. These connectors are heavily constructed from solid brass and all exposed parts are chrome plated and highly polished.

The cable end connectors are provided with rugged wire spring protectors which prevent sharp bends at the connection. The protector is soldered to the cable sheath and secured in the connector by a set screw so that all strain is relieved from the conductor.

A FUSE WITH A LONG TIME-LAG

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% in 1 hour.

BUSS FUSE CLIPS for 1/4 inch Fuses

(SFE4, 6, 9, 14, 20, AGX, AGC, ABC, MDL, MJB, MTH fuses)

Spring bronze clips are made of Herculoy — a bronze of distinctly superior quality for spring clips. This metal gives clips great gripping strength and ability to retain spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means maximum electrical conductivity and results in cooler operation of clips and fuse.

Other standard and special fuses, fuse blocks and fuse holders

If the fuses, blocks and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

BUSS FUSE HOLDERS

Make it convenient to mount fuse on any equipment. Changing or inspection of fuse is easy and quick.

Holder has removable knob. Fuse projects beyond body of holder and is not held tight on other end when knob is removed.

Fuse and contacts are protected from dirt and fumes.

Good contact on fuse is made certain by strong coil spring pressure. Poor contact heating that often causes fuse to blow needlessly is eliminated.

Holder bodies are made of black bakelite. All current carrying parts are of brass or copper. Terminals and all contact parts are bright alloy plated.

PANEL MOUNTED HOLDERS for 1/4 inch Fuses

Holders are inserted through hole in panel and are locked in place by nut on holder. They can be used on panels up to 5/16 inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen or come off.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut (zinc plated, chromate dipped) furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

- HJM for 1/4 x 1 inch fuses (AGX, MJB, MJW, SFE 14) \$0.40
HKP for 1/4 x 1 1/4 inch fuses (ABC, AGC, SFE20, MDL, MTH) .40

IN-THE-LINE HOLDERS for 1/4 inch fuses

These holders are for mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — a pressure spring that is used under

contact in base of holder.

Holders can also be mounted in panel up to 5/16 inch thick by means of a No. 9969 Spring nut (Nut not furnished). Flat spot on holder permits it to be locked against rotation.

Normal current carrying capacity: 15 amperes.

4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

CONSTRUCTION: Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft Services for their strength and greater carrying capacity than 3 AG fuses.

BAKELITE-ENCLOSED: 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

CURRENT RATING: Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

VOLTAGE RATING: Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

VIBRATION FACTOR: Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

BAKELITE IN-LINE FUSE RETAINER

Designed to hang in the cable or mount in the chassis, the inline fuse retainer molded of high impact bakelite is primarily for low-voltage applications: car radios, heaters, spot lights, clocks, etc.

More compact, better insulated than old metal types. Spring locked, bayonet type knob opens with a push and twist of the finger tips. Double wall thicknesses of high impact bakelite at critical body angles give crack resistance strength.

Circuit breaks when knob is removed. Shock safe fuse examination and replacement. Body is tapered for ease in installing push-on nuts when mounting in panel. This permits tight locked chassis installation through panel. Simpler construction and assembly makes for greater ease and economy in installation and service.

The following engineering features are of particular interest when considering advantages of this unit at critical points:

155000 Series—For all low-voltage applications, particularly car radios, heaters, light circuits, etc.

- 155004 For 4-amp SFE and 1AG fuses
- 155006 For 6-amp SFE fuses
- 155009 For 9-amp SFE and 7AG fuses

HIGH VOLTAGE SELENIUM RECTIFIERS

Sarkes Tarzian high voltage selenium rectifiers are designed for use in photo-flash supplies, cathode ray oscilloscopes, television receivers, high potential test equipment, and electronic equipments used by military forces.

Designated as Type 0 for current ranges to 5 milliamperes and as Type 1 for current ranges to 25 milliamperes, the units are available in half wave, full wave bridge, and center tap stacks. Both types are available with voltage ratings to 4000 in a single unit and hundreds of thousands of volts by using multiple units in series. In center tap and bridge circuits the maximum allowable D.C. current is 10 MA for Type 0 and 50 MA for Type 1 assemblies.

The Type 0, in a glass enclosure is hermetically sealed for high humidity operation (Half Wave units only) and mounting is by means of silver plated ferrules. The bakelite enclosed Type 0 rectifiers are designed for normal commercial use and electrical connection is made by means of axial pigtail leads. For inverse voltage ratings to 208 volts A.C. the unit is self supporting; longer assemblies require a mounting clip.

The Type 1 rectifier is available only in square bakelite enclosures. The unit, normally supplied, is not hermetically sealed; however, it is possible to "capsulize" the Type 1 rectifier for high humidity applications.

SERIES 500 UNITS are for general applications requiring greater output current for meters, relays or other apparatus requiring more than 1 milliamperes. Recommended for all such applications at commercial and the lower audio frequencies. Will also operate up to 1,000,000 c.p.s. in special applications wherein accuracy of readings is not essential.

SERIES 160 and 160-C are for applications requiring good frequency response over the entire commercial and audio range and especially when the meter, relay or other apparatus requires less than 1 milliamperes for operation. In some special applications these units may be operated at frequencies up to 75,000,000 c.p.s. with special circuit treatment.

SPECIAL TYPES are available in both series 500 and 160-C. When requesting a quotation on a special type include a sketch of the rectifier required or a circuit dia-

gram showing source and frequency of the input voltage, resistance and kind of load, required load current and the ambient temperatures.

SERIES 500 Disc diameter .500 inch. Area each disc .15 square inch. Furnished with 3" braided, tinned copper leads. Finished in synthetic lacquer enamel.

SERIES 160 Disc diameter .160 inch. Area each disc .02 square inch. Furnished with 3" stranded, tinned thermoplastic covered copper leads. Molded phenolic case. Assembly sealed with specially developed moisture-proof compound.

SERIES 160-C Disc diameter .160 inch. Disc area, lead wire and length and moisture-proof seal are identical with Series 160. Dimensions of the case have been reduced to the most compact size. These units may be mounted in a standard midjet fuse clip.

SELETRON Selenium Rectifiers are finding use in wider and wider fields of application ranging from half wave stacks for bias supply such as 8Y1 listed at the left, to multiple assemblies capable of delivering many kilowatts. Typical examples of such SELETRON power use are installations operating elevators in more than 100 office buildings in New York and Chicago; an assembly of 48 volts, 10,000 amps for electrolysis of water, and the spectacular Eveready searchlight on New York's Great White Way.

Our exclusive vacuum process insures low cost rectifiers with uniformity of rating. Power conversion is predictable, accurate and efficient.

On any rectification application involving special problems, consult Bradley. Our engineers can quickly specify the right rectifier for your requirements.

HIGH CURRENT USES

SE11X Series
These large power stacks provide good efficiency and stability. Plate sizes up to 5" x 6". Rated up to thousands of amperes.

ELECTRONIC APPLICATIONS

BRADLEY RS MINIATURE RECTIFIERS replace most rectifier tubes in radio, television, amplifier and other DC power requirements. Rated 130 Max. RMS volts input, 380 volts peak inverse Max.

HIGH VOLTAGE USES

SE8 Series

These rectifiers are designed to provide maximum rating and efficiency with minimum size. One model — SE8L, rated 1.5 ma — is smallest completely sealed rectifier in class.

PHOTOELECTRIC CELLS

Bradley LuxtranR photocells convert light directly into electric energy to operate meters and meter relays. No external power source is required. Luxtran photocells are rugged, true to rating, and assure stability of calibration. No current drain when not in operation. Wide range of models, sizes and shapes to meet any requirements involving the use of light.

BRADLEY COPPER OXIDE RECTIFIERS

INSTRUMENT RECTIFIERS

Bradley Copper Oxide Instrument Rectifiers have vacuum-processed gold contacts for maximum efficiency and minimum temperature error. Precision made to meet the most rigid matching and balancing requirements, yet low in cost. Universal type rectifier shown for all replacements or AC meter conversions. Rated up to 12 volts AC, 5 ma DC.

HERMETICALLY SEALED RECTIFIERS

CX 23 Series. Miniature Hermetically Sealed Rectifiers. Modulators and bridges with matched sections for detecting phase differentials in AC currents and small DC potentials applied to balanced AC circuits. Maximum 2 volts continuous as modulators, 6 volts as bridges. Size 5/16" x 11/16" x 3/4".

The Sign of Successful Servicing

**RIDER MANUALS ARE THE GREATEST
DOLLAR FOR DOLLAR VALUE IN SERVICING DATA!**

It is more than coincidence that practically every successful servicing shop has a complete set of RIDER MANUALS. It is the direct result of their *profit-making, time-saving* value. Here you find data on alignment, i.f. peaks, operating voltages, parts lists and parts values, voltage ratings of condensers, wattage ratings of resistors, coil resistance data, gain data, dial drives, in fact, all information necessary to speedier, more profitable servicing.

The financial success of your service shop depends, in addition to your time and energy, on the equipment and reference information you use. When it comes to servicing data you need information to cover every receiver that comes in for repair, not just data on a few popular models. In AM-FM servicing there's only one source that is thoroughly complete, that offers the *most* for the *least*—RIDER MANUALS.

PROVEN BEST by 22 years of continuous **TEST**, RIDER AM-FM MANUALS contain this substantial amount of information in 21 volumes to date.

31,382 Pages . . . 28,341 Models . . . 14,966 Chassis

Competent, progressive servicemen prefer RIDER AM-FM MANUALS for these reasons:

GREATEST COVERAGE—Each individual volume is thoroughly up-to-date as of the period covered. Not just a smattering of material from representative producers is included, but *all* data issued during the period, by the manufacturers. This includes the pilot models and *all* production changes, which are absolutely vital to successful and profitable AM-FM servicing. You know for **SURE** you have it in RIDER MANUALS.

FACTORY-AUTHORIZED FACTS—Accurate, reliable servicing information that comes from the manufacturers themselves is included in RIDER MANUALS. The manufacturer has the final word on his own product. He is thoroughly familiar with his production runs, and as such, is the *only* authority competent to issue data for them. This assures faster, more accurate servicing, and consequently time saved, which means money to you.

LOWER COST—RIDER MANUALS deliver data at approximately a penny per receiver chassis. No other service of a similar nature can claim such economical cost. In the long run RIDER MANUALS are the *cheapest* and the *best* for the money.

SYSTEMATICALLY ORGANIZED—The rugged loose-leaf binding and accurate index assure systematic, easy access to information—and a long useful life. You don't lose material. It's where you want it when you want it. Volume published 22 years ago is still producing profits for its owners.

Every Service Technician, Set Manufacturer, Design and Research Laboratory, Component Parts Manufacturer, Public Library, Vocational School Library, High School and College Library—**SHOULD OWN** a complete set of **RIDER MANUALS**. They're "The Greatest Compilation of Radio Service Data Ever Assembled."

VHF CONDENSERS

• Shaft extension at rear for ganging purposes. Dual condensers ideal for mixer-oscillator unit. • Ball bearings front and back for smooth rotation and freedom from back-lash. • Brackets for mounting 7-pin miniature tube sockets, i.e., National XOA for very short leads from tube to condenser essential for VHF efficiency, and rigid compact unit-assembly that produces better stability. • Wide low-inductance stator strap connections raise frequency limit of condensers. Coil or strap tank can be connected directly to stator straps allowing maximum inductance in tank and a minimum of inductance between tank and stator. • Stators, rotors and stator strap connections silver-plated for best efficiency. • Rigid square construction, heavy isolantite end plates. • Spade bolts allow solid connections to chassis for extreme rigidity. • Flexible insulating coupling available to connect condenser shaft to 1/4" dial shaft. • Flexible insulating coupling available to connect two or more condensers together as ganged units. • High capacity single spaced units for general coverage. • Low capacity double spaced units for bandsread, suitable for ham use, particularly in the VHF and UHF ham bands. • Stators solder construction can be removed and replaced by strap tanks for special VHF and UHF application.

These high quality sockets for the 7 pin miniature tubes have silver plated beryllium copper contacts that correctly grip the tube pins close to the base of the tube to provide the short leads and low inductance so necessary in ultra-high frequency design.

A novel feature of these new sockets is the interchangeability of the contacts, which are easily removed for replacement. This permits the use of a mixture of axial (XOA) and radial (XOR) type contacts in the same socket to obtain the shortest possible leads, or minimum size in tight places. The above sockets all mount with two 4-40 screws on .875" centers. Chassis cutout should be 3/4" dia. Shields for use with these sockets are on page 21.

TRANSMITTER COIL FORMS

The Transmitter Coil Forms and Mounting are designed as a group, and mount conveniently on the bars of a TMA condenser. The larger coil form, Type XR-14A, (not illustrated) has a winding diameter of 5", a winding length of 3 3/4" (30 turns total) and is intended for the 80 meter band. The smaller form, Type XR-10A, has a winding length of 3 3/4" and a winding diameter of 2 1/2" (26 turns total). It is intended for the 20 and 40 meter bands.

Either coil form fits the PB-15 plug. For higher frequencies, the plug may be used with a self-supporting coil of copper tubing. The XB-15 Socket may be mounted on breadboards or chassis, as well as on the TMA Condenser.

BUFFER COIL FORMS

National Buffer Coil Forms are designed to mount directly on the tie bars of a TMC condenser using the PB-5 Plug and XB-5 Socket. Plug and Socket are of molded R-39.

The two coil forms are of steatite, left unglazed to provide a tooth for coil dope. The larger form, Type XR-13, is 1 3/4" in diameter and has a winding length of 2 3/4". The smaller form, Type XR-13A, is 1" in diameter and provides a winding length of 2 3/4". Both forms have holes for mounting and for leads.

EXCITER COILS

There is a National exciter coil for every application. AR-15 coils are mounted on 5 pin bases which fit any standard 5 contact tube socket. AR-16 coils are mounted on the well known National PB-16 plug which fits the National XB-16 socket. The AR-17 coils have 6 pin bases which fit standard 6 contact tube sockets and the link windings of this series have center taps which may be grounded for harmonic reduction. All center link models are center tapped for use in balanced circuits. Insulation polystyrene and steatite. For use where plate power input does not exceed 50 watts. Available with fixed or swinging end or center links for all amateur bands, 6 through 80 meters.

The XR-16 Coil Form (not illustrated) fits the PB-16 Plug-in Base; it has a winding length of 1 3/4", diameter 1 1/4"

COMPONENTS

TYPE AMT

A larger and sturdier model of the TMK condenser. The frame is extremely rigid, with mounting feet a part of the end plates. Heavy steatite insulation.

The solid aluminum tie bar across the top of the condenser acts as a mounting for AR-18 series coils in the double stator models.

The double stator models are available in either standard end drive (D series) or center-drive (DG series) with 1/4" dia. shaft extension.

TYPE TMA

This is a larger model of the popular TMC. The frame is extremely rigid and arranged for mounting on panel, chassis or stand-off insulators. The plates are of heavy aluminum with rounded and buffed edges. Insulation is steatite located outside of the concentrated field.

TYPE LMT

A heavy duty transmitting condenser that completely eliminates troublesome closed loops, vastly simplifying the problem of unwanted harmonics. The rotor shaft is completely insulated from the end plates. Long leakage path (higher safety factor). Plates and parts are extra heavy with highly polished rounded edges to prevent flash-over. Adjustable stator plate mounting and end bearings. Available in single-stator, double-stator, or double-stator right angle center drive models. Same capacities and prices as National TML Condenser.

TYPE TML

is a heavy duty job throughout. The frame structure (rugged aluminum castings with dural tie bars) and precision bearings assure permanent rotor alignment. All plates are extra thick with rounded and polished edges. This, plus specially treated steatite insulators and a husky self-cleaning rotor contact, provides high flashover, current and voltage ratings.

PRECISION CONDENSERS

Originally developed for the famous HRO and NC-100 receivers, National PW and NPW condensers and drive units are well known to professional and amateur radio men throughout the world. Sturdily constructed of the finest materials and carefully adjusted by skilled hands, they have become "standard specifications" for applications requiring smooth, precise control and high re-set accuracy.

The Micrometer Dial reads direct to one part in 500. Division lines are approximately 1/4" apart. The drive, at the mid-point of the rotor, is through an enclosed preloaded worm gear with 20 to 1 ratio. Each rotor is individually insulated from the frame, and each has its own individual rotor contact. Stator insulation is steatite. Plate shape is straight-line frequency when the frequency range is 2:1.

PW Condensers are available in 1, 2, 3 or 4 sections, in either 160 or 225 mmf per section. Larger capacities cannot be supplied.

MULTI-BAND TANK ASSEMBLIES

The unique MB-150 Multi-Band Tank tunes all amateur bands from 80 through 10 meters with 180° rotation of the shaft; the coils are never changed. The unit is built around a circuit which tunes to two harmonically unrelated frequencies at the same time. Thus, it becomes possible to cover a wide frequency range and yet maintain a reasonably constant L/C ratio. 3" wide x 8 1/4" high (including the GS-10 standoffs) x 9" long overall including the 1/4" dia. shaft and output terminals.

Features of the MB-150:

- (1) For use as the all-band plate tank in push-pull or single-ended stages running up to 150-watts input (1500 volts peak). It is ideal for a pair of 807s or 809s or a single 829B.
- (2) Separate link coupling coil has special clips which adjust to match impedances up to 600 ohms directly. Output couples into a higher powered amplifier, an antenna or an antenna tuning network.
- (3) Fast band changing is accomplished without handling coils, thus removing one of the danger points in the amateur station.

Hallicrafters Precision-Built Television

with the *dynamic tuner*

The Dynamic Tuner — a rotary-type tuner — uses flat tuning coils that are precision-printed by a special photo-etch process. Because wire stretches as it is wound, and because coil forms vary, NO OTHER TUNING SYSTEM can even approach the absolute accuracy of precision photo-printed coils.

The heart of the Dynamic Tuner lies in the 12 channel strips. Each strip has been prepared by photographically printing the desired pattern on copper and then

etching away the unwanted metal. Every chassis coming off the line is "hot" in sensitivity; variations in tuning alignment are practically eliminated.

Only Hallicrafters has the Dynamic Tuner, to bring you the clearest picture in television. "City Clear," even in weak signal areas.

FINE COMMUNICATIONS EQUIPMENT

RADIO MFG. ENGINEERS, INC.

Peoria 6, Illinois U. S. A.

**THE RME 84
FOR HOME—PORTABLE OR MOBILE OPERATION**

RME 84 at right, VP-2—6 volt power pack with cable attached, optional for RME 84 in center, CM-1—Carrier Level "S" Meter with cord and plug, optional for RME 84 at left.

The Coverage Is Complete .540 to 44 Megacycles
An important feature is the continuous coverage ranging from 540 kc to 41 megacycles. This coverage, in addition to providing for the regular broadcast band, takes in the 80, 40, 20, 15 and 10 meter amateur bands. The calibration is made on a 7 inch diameter scale. In addition, a smooth-running vernier dial gives band spread on any setting of the main scale. The vernier scale makes five complete revolutions for the 180 degree rotation of the tuning condenser.

Seven Tubes Have Been Chosen For The RME 84
1. A 7B7 local radio frequency amplifier is ahead of the first detector.
2. A 7S7 local is used as a first detector and radio frequency oscillator.
3. A 7B7 serves as the first IF operating at 455 kc.
4. A 7B7 second IF further amplifies the signal.
5. A 7K7 local acts as second detector and first audio amplifier.
6. Another 7K7 provides the beat frequency and acts as noise limiter.
7. The 6G4G provides the final audio frequency output.
8. A 5Y3GT is the power rectifier tube.

Portability Built Into The RME 84
Conscious of the fact that many thousands of amateurs want a receiver for portable operation, the new RME 84 is equipped with a special socket connection making possible connections to either a B battery and an A battery supply or a similar source of power such as an external vibropack. 135 volts of B and 6 volts of A battery will operate the RME 84 at full power. The drain on the B battery is only 32 milliamperes at 135 volts and the 6 volt A battery provides 1.5 amps, including the two dial lights.

The new noise limiter, of the series type, performs exceptionally well. Also made available for future use with the RME 84 is a signal strength meter to be connected through the special socket located on the rear of the chassis apron.

SENSITIVITY: The average sensitivity of the RME 84 is of the order of 2 microvolts over the entire range of the instrument.

**VHF-152A
3 BAND CONVERTER**

Reception on the new high frequencies, 50 to 54 mc. and 144 to 148 mc. bands, and better reception on the 26.95 to 29.7 mc band, using the double detection system, image free, at a cost which any amateur can afford—that is what the new VHF-152 is designed to give. . . . Every owner of a communications receiver can, with the acquisition of this new converter, do a much better job of working high frequency signals than is possible with most any higher priced, specially designed receiver.

This converter provides an order of stability at 50 mc. much higher than most communications receivers have when operating at 5 mc. New engineering design and construction make this possible.

Miniature tubes are used, a 6AK5 rf amplifier and a 6J6 mixer and oscillator complete the converter proper. The built-in power supply uses a 5Y3GT rectifier tube and a VR150 voltage regulator. The three bands are calibrated to cover the full sweep of a seven-inch diameter scale, indirectly illuminated. . . . The tuning mechanism is of the same sturdy, positive construction characteristic of all RME units. Smooth, velvety operation of the large knob makes operation a pleasure.

The sensitivity of the VHF-152 is of the order of 2 microvolts. Its output frequency is 7000 kc.

Separate connections are provided for the 10, 6 and 2 meter antennas and for the antenna used with the receiver. Each band has its own especially designed antenna input circuit of approximately 300 ohms impedance. The input of the receiver is changed from the VHF-152 output to the receiver antenna by a front panel switch. Another front panel switch selects the 10, 6 or 2 meter band for VHF-152 operation.

Interconnecting plug and cord are also furnished, which permanently connect the VHF-152 direct to the input terminals of the receiver.

The cabinet is designed to match the RME-45 and 50 communications receivers, both in streamlined appearance and in two tone gray and black crinkle finish.

Dimensions are as follows: 11" high, 12" wide, 11" deep, with hinged lid. Standard operation is for 115 volt, 50-60 cycle power source.

Complete with tubes, interconnecting plug and cord. **CODE: HAMPY, f.o.b. Peoria, Illinois, Net Selling Price \$97.00**

VARIABLE FREQUENCY OSCILLATOR
 The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6A67 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive an 807 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Close frequency setting is obtained by means of the vernier control arm at the right of the dial. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from all annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.

JOHNSON VIKING 1 150-WATT TRANSMITTER

JOHNSON VIKING 1 Transmitter

A completely self-contained, band-switching transmitter delivering full output throughout its range, consisting of the 160, 80, 40, 20, 15, and 10-meter bands, as well as adjacent frequencies.

TECHNICAL DESCRIPTION

RF section, a 6AU6 oscillator drives a 6AQ5 buffer which drives a Raytheon 4D32 final. An 829B can also be used with slightly less output. Audio section, a 6AU6 into a 6AU6 into push-pull 807 modulators. Frequency response has been limited to the range 300 to 3000 cycles. 5K4 HV rectifiers, 5Z4 LV rectifier, and 6AL5 bias rectifier complete the tube line-up. Dual power supplies for better regulation. Rotary variable inductor and variable condenser geared together give a uniform "Q" and better efficiency throughout the tuning range. Pi-section output tank will load into a wide variety of antennas and effectively reduce the harmonic content of the output.

NEW JOHNSON VFO KIT Model 122

Drives the Viking 1, with full excitation, on all amateur bands, 160 through 10 meters. These amateur bands accurately calibrated in frequency on 5" dial with 6:1 reduction for ease in setting. 6AU6 electron coupled oscillator and OA2 voltage regulator employed for very clean keying and overall stability.

Two entirely separate oscillator tanks are used, with a multiplication of only four to cover 10 meter band, resulting in calibration accuracy, minimum drift, unusually clean keying. Only two controls used on VFO: frequency control and bandswitch. Keying can be done in three ways, keying of VFO alone, keying Viking 1 alone, or keying both simultaneously for perfect break-in.

A FACTORY ENGINEERED TRANSMITTER

The JOHNSON Viking 1 is a factory-designed and engineered transmitter, not another collection of parts called a kit. Months were spent in its development by JOHNSON engineers and many of the parts were developed and manufactured especially for it. The whole job was done as though JOHNSON were going to put it in production. An elaborate instruction book was prepared, including detailed photographs and step-by-step instructions for the assembling and wiring.

WIDE FREQUENCY COVERAGE

Recognizing the fact that many of the varied activities for which the Viking 1 is suitable take place outside the amateur bands, such as MARS, emergency nets, etc., we list herewith its frequency range:

Mounting (M) dimension, on both C and D Types, 7/8" more than L dimension.

Designed as rugged, compact units for medium and low power transmitters, type E and F condensers are in a class by themselves. They have more capacity per cubic inch and occupy less panel space for their rating than any other condenser on the market. Their rapid adoption by manufacturers of high grade equipment and discriminating amateurs is ample proof of their excellence.

Points of superiority: Heavy aluminum plates, .032" thick, with rounded edges for maximum voltage rating—Heavy aluminum tie rods 1/4" diameter for frame strength and rigidity—Stearite insulation—Stator mounted above to reduce capacity to ground—heavy phosphor bronze contact springs, cadmium plated—Center contact on dual models—Chassis or panel mounting—Stainless steel shafts.

In addition to mounting foot shown, removable single hole brackets are furnished so that condenser may be inverted from position shown, or other components mounted above.

Panel space, Type E, 2 5/8" wide x 2 1/2" high; panel space, Type F, 2 1/4" wide x 2" high. Mounting (M) dimension, on both E and F Types, 7/8" more than L dimension.

MINIATURE AIR VARIABLE CONDENSERS

The smallest air variables ever built. So small that miniature tubes are large in comparison. Extremely rugged for their size, they have proved invaluable for miniaturized equipment such as pack transmitters and receivers, test instruments, TV receivers and a multitude of VHF uses. Available in single, differential and butterfly types. Single hole mounting; flats on mounting bushing prevents turning. Split-sleeve rotor bearings—no shaft wobble. Improved stator terminal. Steatite insulation treated with DG-200 for maximum moisture resistance. Nickel-plated brass plates spaced .017". Voltage breakdown is 1250 V. peak.

TYPE H CONDENSER

Two End Plates Single End Plate

The Type H condenser was designed for aircraft transmitters and combines a minimum of weight and size with simple but rugged construction. Capacities and spacings are provided for low and medium power stages. Use of steatite for end plates avoids any possibility of "short circuit loops" and permits panel mounting with both rotor and stator insulated from ground. Has aluminum plates .020" thick. End plate 1 1/2" square.

Mounting (M) dimension is 1/8" more than the L dimension.

JOHNSON TYPE "L" VARIABLES (167 Series)

Single

Dual Differential Butterfly

Perfected ceramic soldering assures absolute—and permanent—rigidity and strength, absolute—and permanent—maintenance of capacities. JOHNSON ceramic soldering leaves a bond which is stronger than the rugged end plates themselves. There are no eyelets, nuts or screws to work loose which would cause stator wobble and fluctuations in capacity.

Split sleeve tension bearing assures silent operation on highest frequencies. Ceramic end plates, 1 3/8" square with 2 mounting posts tapped for 6-32 screws on 1 3/32" centers.

Mounting (M) dimension is 1/2" more than L dimension. Two sets of stator contacts. New, corrosion resistant, bright alloy plating has lower electrical resistance. These new variables are ideal for peak efficiency even under the severest conditions of portable-mobile operation. Other capacities and spacings on special order.

TYPE N CONDENSER

Small mounting space requirements, extremely high voltage rating in proportion to size, fine adjustment with uniform voltage breakdown rating throughout the full capacity range, and low cost, make these neutralizing condensers ideal for the modern transmitter. "Plates" are aluminum cups supported on a steatite frame with cast aluminum mounting bracket. Because of the design these condensers will withstand much higher voltage than conventional flat plate condensers of the same spacing. The N375 has been improved and now features a bushing for the guide shaft for greater stability and a beaded lower cup for high voltage rating. Peak R.F. Breakdown Ratings at 2 Mc.: N125 8 500, N250 11,500, N375 14,500.

COUPLINGS

All JOHNSON insulated shaft couplings are characterized by best steatite insulation properly proportioned for electrical and mechanical strength, by accurate metal parts heavily plated, by advanced design, and by skillful manufacture.

The phosphor bronze springs of the -250 and -251 series couplings provide flexibility without backlash and adjust to minor shaft misalignments. Rigid types -252, -262 and -261 meet the requirements of accurate shaft alignment and high torque.

The -259 and -2593 are bar type couplings recommended for high voltages or very high frequencies.

The -264 is a small bakelite insulated flexible coupling for DC or low voltage RF applications.

NEW JOHNSON FARADAY SHIELD

Illustrated above is JOHNSON 500HCS40 inductor, 238-172 jack bar, and 238-179 arm with 238-303 shield, hood, and lead assembly installed.

JOHNSON Faraday shields will reduce TVI caused by capacitive coupling. Designed for JOHNSON plug-in links, they are equally effective and easily installed on other links including non-plug-in types. The screen itself is a metallic plating on polystyrene sheets and is attached to the link with polystyrene cement. Grounded hood and copper braid effectively complete the shielding. Link impedance is relatively unchanged and plug-in link flexibility unimpaired. Made in two sizes and offered as the Faraday shield only or as a complete assembly.

JOHNSON Air Wound Ham Inductors provide a degree of efficiency never before available in commercially produced coils for the amateur. This "broadcast" efficiency is possible because there is a model designed to match the impedance of each tank circuit—either high voltage low current or low voltage high current tubes.

Heavier Windings

Efficiency is further increased because coil windings are a wire-size larger than on most available inductors—resulting in less heating, lower loss and consequently higher efficiency.

JOHNSON Ham Inductors are built to give many years of efficient service. Coil windings are Formax-coated for better insulation and color preservation and JOHNSON quality is apparent in the Steatite jack and plug bars and the crystal clear polystyrene coil supports and spacers. All JOHNSON inductors are conservatively rated.

The JOHNSON Inductors and "plug-in" Link Assemblies fit all conventional inductor assemblies.

INSULATORS AND BUSHINGS

In design . . . material . . . workmanship, you'll find characteristic JOHNSON superiority in this line of quality insulators and bushings.

Each JOHNSON insulator is designed for a specific purpose. Where lowest losses are vital, glazed Steatite is used; else-where, superior grade electrical porcelain.

Proportions and contours are chosen to best balance insulating

value—creepage path, dielectric strength and electrical losses—against mechanical strength in the various sizes.

Molding is clean-cut and accurate. Hardware is high grade nickel-plated brass.

JOHNSON insulators offer more in choice of style and size; in advanced but practical design; and in mass production economy.

STAND-OFF AND CONE INSULATORS

The stand-off insulators feature heavy, breakage-resistant bases and adequate "glaze grooves" around mounting screw holes. Numbers 135-65, 135-66, 135-67 and 135-68 have unbreakable, drawn and etched aluminum bases.

The No. 500 cone insulator series are steatite for better high frequency insulation. Threads are tapped directly into the ceramic. Furnished complete with machine screws, brass and cushion washers.

THRU-PANEL INSULATORS AND BUSHINGS

In the thru-panel and bushing series special attention has been given to obtaining high mechanical strength through heavier construction and at the same time increasing the breakdown voltage. Flat mounting surfaces with cushion washers eliminate breakage. Bottom pieces have long internal and external portions for higher breakdown voltage rating, and grooved surfaces to increase leakage path. Jack types have terminals permitting connection above as well as below the panel.

JOHNSON lead-in bushings are designed to have even greater mechanical strength and long leakage path in proportion to size. Numbers 135-53 and 135-54 are supplied as single porcelain parts including cushion washers.

Nos. 135-50, -51, -52 and -55 are steatite and have a special interlocking feature which permits mounting on thin panels without extra spacing washers.

Nos. 20, 20J, 22, 22J and 24 are also steatite with heavily plated brass hardware.

NEW JOHNSON KNOBS AND DIALS

DISTINCTIVE — VERSATILE — RUGGED

Here's an entirely new series of knobs and dials designed for laboratory, test and measuring instruments, radio transmitters, studio equipment and industrial controls. Intended for the manufacturer or user who wants something better, more distinctive, yet in keeping with excellent taste, they are unexcelled for enhancing the appearance of fine quality products.

EXCELLENT GRIPPING SURFACE

They offer fresh new modern styling, yet retain and improve upon the utility of a long familiar type. Use of twelve flutes, in place of eight, improves appearance by eliminating the usual octagonal, bumpy effect. Although essentially round, they retain excellent gripping surfaces. The "feel" is comfortable, positive, without sharp ribs or edges.

Featuring greater depth of the flutes, slightly tapered sides, and gently curved front surface—depressed to protect the attractive smooth finish—these JOHNSON Knobs and Dials achieve a feeling of greater mass and ruggedness without being larger or heavier. Molded of black phenolic material walls are thick for adequate strength. All types have heavy brass inserts.

MANY STYLES AVAILABLE

Many styles are available, in the three basic standard knob diameters of 1 1/8", 1 3/8" and 2 3/8". In addition to the knob itself, they are assembled with matching black molded phenolic skirts measuring, respectively, 1 1/2", 2 1/8" and 3" diameter. Other assemblies include attractive metal dial plates in the usual diameters of 1 1/2", 2 3/4" and 4". These dials are made of nickel silver, with beautiful chromium plating in a satin etched finish for maximum visibility.

On the 1 1/2" metal dials with 1 1/8" knobs, five standard calibrations are stocked, and on the larger sizes the most common scale, 0-100 over 180°. Other markings may be supplied, in suitable quantities. Vernier scales are available for the 2 3/4" and 4" dials. A "spinner" is incorporated in the 116-286 (2 3/8") and the 116-266 (1 3/8") knobs, and is useful for tuning controls, multiturn variable inductors, resistors, etc.

OTHER TYPES ON SPECIAL ORDER

In addition to the items listed below, JOHNSON is prepared to furnish many variations on special order in quantity production lots. Modifications and other types include friction disc slow speed drives and pointer types. Extra set screws of any type, special markings on knobs or skirts, and other variations, can also be obtained.

“APC” MICRO CAPACITORS

The “APC” originated in the Laboratories of the Hammarlund Mfg. Co over twenty years ago and because it is the most widely copied Air Trimmer today, it speaks eloquently for the soundness of its engineering design.

These units feature all brass soldered construction, nickel plating, silicone treated steatite panels, and precision formed rotor contact springs, combined with Hammarlund quality, make this capacitor a necessity for peak performance in today’s rigid requirements.

| Code | Capacity |
|---------|----------|
| APC-25 | 25 mmf. |
| APC-50 | 50 mmf. |
| APC-75 | 75 mmf. |
| APC-100 | 100 mmf. |
| APC-140 | 140 mmf. |

Available in stock sizes as listed with a standard nominal air gap of .015” with a test voltage of 600 V. RMS, 60 cycles. Other air gaps available are .0195”, .025”, .030”, .045”. Modifications such as insulated adjustment head, extension shaft, lock type bearing, flats on shaft, etc., are obtainable.

| MAPC-35 | 36 mmf. |
| MAPC-50 | 49 mmf. |
| MAPC-75 | 75 mmf. |
| MAPC-100 | 99 mmf. |

The Midget “APC” capacitor or “MAPC” is a worthy mate for the “APC”. It is about one-half the size and weight of the “APC” but retains the same constructional features and quality. The “MAPC” has two isolated mounting studs 17/32” apart, shaft slotted for screw driver adjustment. Steatite base size 25/32” x 15/16”. Army, Navy, and commercial engineers find this new unit ideal for today’s trend towards minaturization.

Standard units as listed have nominal spacing of .0135”. Other spacing available are .018” and .027”. Modifications such as shaft extension, insulated adjustment head, extension shaft, and locking type bearing are also available.

“HF” MICRO CAPACITORS

| *MFD-15-X | 15 mmf. per sect. |
| *MFD-30-X | 28.5 mmf. per sect. |

The “HFD” while available as listed and having the same electrical characteristics per section as the “HF” is also one of the most flexible designs to stem from the Hammarlund Laboratories.

This unit has two heavy aluminum end brackets mounted on silicone treated steatite base for strength and stability, long sleeve front bearing and rear bearing, individual silver plated beryllium contact springs on each section for noiseless operation. An electrical shield is provided between sections. This capacitor is 1-1/2” high x 1” wide, with 1/2” long 1/4” shaft.

Modifications of basic design to include up to five sections of varying capacities are obtainable. This is truly a unit which can be tailored to the engineers individual requirements. Either single hole or base mounting are standard with all versions of this capacitor.

“MC” AND “MCX” CAPACITORS

The “MC” and “MC-X” capacitors available with SLC or midline plates are widely used in all applications for frequencies up to 60 megacycles, and are designed to satisfy the most critical and exacting requirements. Vibration proof for Aircraft, Marine and mobile use. These units are of brass soldered nickel plated construction with silicone treated steatite insulation outside of the electrostatic field to reduce dielectric losses and to insure maximum efficiency under various conditions of humidity and temperature. A beryllium copper silver plated rotor contact spring and precision sleeve bearings give noise free operation. “MC” types have a nominal .0245” air gap tested at 1000 V. RMS 60 cycles. “MC-X” types have a nominal .0715” air gap tested at 1750 V. RMS 60 cycles. The “MC” family have 1/4” shaft with rear extension for gang operation. The whole series have rotational stops which nominally permit increasing capacity with clockwise rotation of shaft. “S” types are 1-11/16” wide and 2-3/4” high. “M” types are 2-3/32” wide and 2-7/8” high. These dimensions include swing of rotor plates.

“RMC” CAPACITORS

The “RMC” was born out of the electronic industries demand for the extreme rigidity this capacitor affords. It utilizes the “MC-S” type soldered brass plate assemblies incorporated in a ruggedized frame consisting of aluminum end plates and three tie rods. A front sleeve bearing and single ball thrust rear bearing are used together with a positive rotor contact spring. The resulting unit has many applications where ruggedness is required.

| Code | Capacity |

| RMC-100-S | 105. mmf. |
| RMC-140-S | 143.5 mmf. |
| RMC-325-S | 327. mmf. |

Two removable brackets at the top of panels make for easy mounting of components or with the two tapped holes at the bottom and tapped holes in the panel permit three mounting possibilities. The same air-gaps as the “MC” are available. Dimensions are 1-13/16” wide x 1-11/16” high with 1/4” shaft.

FLEXIBLE COUPLINGS

These flexible couplings come both insulated and non insulated. The insulated “FC-46-S” employs a silicone treated steatite body and provides maximum insulation. It is 13/16” in width and 1-1/4” in diameter. The metal body of the non insulated “FNC-46-S” is 23/32” wide with a diameter of 1-1/4”. Both take 1/4” shafts and will compensate for considerable misalignment.

“HFA” AND “HFAD” CAPACITORS

The “HFA” is a high efficiency, high frequency transmitting type capacitor of unusual design. All parts are brass, soldered and nickel plated mounted on treated steatite end panel $1\frac{3}{8}$ " x $1\frac{3}{8}$ " with $\frac{1}{4}$ " shaft.

The “HFAD” is a dual unit with balanced opposed sections of the same type construction with two end panels $1\frac{3}{8}$ " square and $\frac{1}{4}$ " shaft. Both these units are ideal for low power portable transmitters and are available in 3 stock spacings: “A” .020”, “B” .030”, and “E” .070”. The “E” type also has round edge plates. Both of these units may be single hole panel or base mounted.

| Code | Capacity | Type |
|-----------|----------|--------|
| HFAD-25-B | 25 mmf. | Dual |
| HFA-100-A | 102 mmf. | Single |
| HFA-140-A | 145 mmf. | Single |

| HFA-50-B | 50 mmf. | Single |
| HFA-100-B | 100 mmf. | Single |
| HFA-15-E | 16 mmf. | Single |

“HFB” TRANSMITTING CAPACITORS “HFBD”

The “HFB” while similar in most respects to the “HFA” types have insulated $\frac{1}{4}$ " shaft extensions which permit high voltage to be applied to the rotor without danger to the operator. This allows a higher tube voltage for a given plate spacing and results in a less expensive, more compact unit.

The “HFBD” is the dual version with the same features with each section in balanced opposition. Both use $1\frac{1}{8}$ " square steatite panels and are base mounted.

| Code | Capacity |
|------------|----------|
| HFBD-50-C | 50 mmf. |
| HFBD-100-C | 105 mmf. |
| HFBD-35-E | 37 mmf. |
| HFBD-65-E | 63 mmf. |
| HFB-50-C | 48 mmf. |

“VU” UHF CAPACITOR

The “VU” Capacitors offer completely silent electrical operation made possible through the use of pyrex glass ball bearings making them adaptable in circuits up to 300 mc. These new bearings completely eliminate wiping contacts and metal sleeves. Elimination of rotor contacts by use of series stators permits a more symmetrical design of the capacitor itself and consequently allows better circuit layout. Two sets of threaded studs are provided, so that a vacuum tube may be mounted on one side and inductor on the other side of the capacitor to minimize lead inductance. The stator sections provide a low inductance path between the two sets of stud contacts. Panel size is $1\frac{1}{8}$ " x $1\frac{1}{8}$ ". Shaft size $\frac{1}{4}$ ". These units are supplied in standard sizes as listed in all brass soldered silver plated construction and may be obtained as specially calibrated precision units. Calibration table and complete description furnished on request.

| Code | Series Min. Cap. | Series Eff. Capacity |
|-------|------------------|----------------------|
| VU-20 | 3.35 | 22.5 mmf. |
| VU-30 | 3.5 | 31.5 mmf. |
| VU-45 | 3.8 | 45.0 mmf. |

BUTTERFLY CAPACITOR

The “BFC” Butterfly type of capacitor is designed to meet the demand for an opposed rotor and stator (90 degree rotation) capacitor for use in commercial VHF equipment. The rugged design of this unit lends itself to mobile use and its brass soldered construction with symmetrical design provides easy association with other components for electrical circuit symmetry. Furnished in standard sizes as listed mounted on silicone treated steatite panel $1\frac{3}{8}$ " square. Two studs on $1\frac{3}{8}$ " centers are provided for panel mounting. Shaft size is $\frac{1}{4}$ ".

| Code | MMF Cap. per Sec. | | Series Cap. | |
|--------|-------------------|------|-------------|------|
| | Max. | Min. | Max. | Min. |
| BFC-12 | 14.5 | 3.5 | 7.9 | 2.2 |
| BFC-25 | 27.5 | 5.0 | 14.5 | 3.0 |
| BFC-38 | 40.5 | 6.3 | 21.0 | 3.7 |

Modifications may be obtained and by the addition of a rear panel with special ball bearing both front and rear a unit may be obtained for continuous rotation at speeds up to 2400 R.P.M. The “BFC” is also obtainable in different plate spacings and capacities on special order.

TV POWER TRANSFORMER (R.F.)

These R.F. power supply transformers for use with television receivers and cathode ray oscilloscope make it possible to construct an inexpensive source of high voltage D.C. Two types are available, the #4525 for voltages to 4000 DC and the #4526 for voltages to 10,000 DC (or 30,000 DC in a voltage rectifier tripler circuit). Type 1B3-GT tubes are used as rectifiers and the R.F. oscillator circuit uses one or more type 6V6 or 6Y6 tubes connected in parallel. The

high frequency AC source permits use of simple and inexpensive resistive capacitive filters with low ripple content in the output. Typical circuit diagrams are supplied with each coil.

REPLACEMENT I. F. TRANSFORMERS

(Double Tuned)

These transformers are an essential part of the stock of every serviceman and dealer. In many cases they will give better performance than the original transformer. All have been pretuned and should require only slight adjustment after installation. Leads are color coded, and the transformers are assembled in aluminum shields. These transformers may be used as replacements in most makes of receivers using transformers of the same physical size. Be sure to order a transformer of the correct frequency.

A NEW LINE OF CARDWELL MIDGET CONDENSERS FOR V.H.F.

PL-6113

PL-6076

Cardwell offers a new line of 90 degree condensers with butterfly rotor plates, fulfilling a demand created by engineers and amateurs since the publication of an article "Stabilizing The 144 Megacycle Transmitter" in April, 1946 "QST." Also see pages 351 to 353 inclusive in the 1946 ARRL Radio Amateurs Handbook. PL-6113 and PL-6076 are specified in these articles. Features of these 90 degree midget condensers are as follows:

Electrical Symmetry
Low Distributed Inductance.

No Moving Contacts.

Plates easily removable to change capacity range.

Isolantite Insulation.

Single Hole Mounting.

Small Size; 1 7/16" x 1 13/32" per general outline dimensions for differential "Trim-Airs" as shown on Page 6 of Catalog No. 46.

These condensers are made to fit all standard Cardwell "Trim-Air" hardware.

Note maximum and minimum capacity values shown are measured from stator-to-stator and are effective values as used when a coil is connected stator-to-stator, with rotor floating.

TYPE "P" LIGHT HEAVY WEIGHT TRANSMITTING CAPACITORS

Designed to accommodate capacitance values up to 150 mmfd. per section in a dual section type having an airgap of .500", the "P" type construction permits higher capacity for a given airgap, and therefore a shorter frame than the "T" type construction. Typical Cardwell sturdiness is built-in, and the "P" type is probably the lightest transmitting condenser built for its size, yet completely satisfactory for heavyweight use. No single section types are catalogued; parallel or series connect for double or half single section capacity listed in table.

B & W FARADAY SHIELDED LINKS

... fit all B & W variable link air inductors

These shielded links effectively reduce harmonic or spurious signal radiations normally transferred by capacity coupling. Adaptable to all conventional link coupled circuits, the B & W Faraday Shielded Links materially aid in the reduction of TV and BC interference. They may be used with external antenna tuning units or, in conjunction with harmonic reduction filters of the low-pass or band-pass types. It is impossible to specify the exact number of link turns required because loading is affected greatly by the antenna input impedance and this is not generally known with any degree of accuracy.

On 10 and 20 meters, a one turn link is normally satisfactory for 50 ohm lines, two turns for 75 ohm lines and three turns for lines having higher impedances. For average conditions our two turn link should suffice.

B & W TVI LOW-PASS FILTERS

- Provide extreme attenuation to all harmonics above 30 mc
- Eliminate individual filters for each band
- Handle 1 kilowatt with ease
- Insertion loss less than .25 db

Three years of intensive study of TVI problems made possible the B & W Faraday Shielded Link. Its natural companion, the B & W Low Pass Filter, was developed concurrently and is now available. Properly installed in accordance with our recommendations, this filter enables you to attenuate all frequencies above 50 megacycles, approximately 75 db or more, throughout the entire television band.

The B & W Low Pass Filter consists of two "m" derived end sections and three mid-sections of constant K type. Each section is contained in a completely sealed copper compartment to prevent inductive transfer of unwanted frequencies from section to section. Complete installation instructions and recommendations to aid you in eliminating TVI are given in "Filter-Facts," packed in each unit. Individual copies of "Filter-Facts" are also available for 15 cents. Filters are supplied in hammered gray metal cabinets 2 1/2" x 2 1/2" x 12" and weigh 2 1/4 lbs.

The proper filter for the more common types of feed line systems are:

UNIVERSAL ADJUSTABLE COILS

These Adjustable - Inductance Ferrocart (iron-core) coils will replace the Broadcast band coils in practically any receiver. It is no longer necessary to order hard-to-get "exact duplicates" when an Antenna, R.F. or Oscillator coil requires replacement.

Continuously variable in inductance over a wide range, these coils will accurately "track" with the other coils in the receiver when properly adjusted. The exact inductance of the old coil is easily matched by a simple screwdriver adjustment, regardless of the value of the tuning condenser.

High "Q" iron cores used in these coils add gain and selectivity to the receiver. The oscillator coil provides complete adjustment for intermediate frequencies between 175 and 520 kc. May be used in either "cut-plate" tuning condenser or padded circuits. Available shielded or unshielded, furnished with complete instructions. 1 3/8" square by 2 1/2" high.

"PLASTIC" I. F. TRANSFORMERS

Particularly suitable for use in small receivers, where space is at a premium and yet superior performance is required, these remarkable transformers are only 1 1/4" square and 2 1/2" high! Made in a complete series of frequency ranges and positions, they will provide results second to none in any type of receiver.

The one-piece molded plastic coil-form and trimmer-base eliminates many separate parts that were required with other types of construction. The assembly is, therefore, simpler and more rigid. The iron core series are highly recommended for use in compact receivers and auto sets where only one I-F stage is permitted. It is not recommended that they be used in a two-stage system because of their high-gain which would cause instability and oscillation.

THE NEW FMX PHASE MODULATOR

The new MEISSNER FMX Phase Modulator is designed exclusively for use with the Model EX Signal Shifter, combination of the two — the FMX Modulator and EX Signal Shifter — gives the radio amateur a complete low power phone and cw transmitter at a very low price. Higher power, up to one KW, can be obtained with a power amplifier driven by the Signal Shifter.

The deviation control of the FMX Phase Modulator allows a swing of 5 to 10 KC on all amateur frequencies including the 80-meter band. Input for high impedance crystal or dynamic mike is provided. Any class C amplifier that the Signal Shifter is capable of driving becomes a phase modulated amplifier.

The FMX Modulator is installed in the position normally occupied by the power supply, the latter becoming a remotely located unit.

Plate and filament voltages for the FMX are secured from the Signal Shifter power supply.

Tubes required are 68L7, 68G7 and VR 150. The FMX Phase Modulator is another precision-built product, designed by MEISSNER for the discriminating amateur who wants only the best.

TELEVISION - I.F. - ANT. - R.F. - F.M. - OSCILLATOR COILS

TELEVISION COILS

These components when used in a properly designed circuit can provide a gain of approximately 10,000 × in the picture I.F. amplifier with overall response as illustrated. The sound I.F. system can supply a gain of approximately 7,000 × from the converter grid to the grid of the last I.F. tube and a discriminator slope sensitivity of approximately 0.08 volts/kc. with 1.0 volt signal level at the last I.F. amplifier tube grid. The overall sound I.F. and discriminator response is linear over 150 mc.

TYPE "C" CABINET RACKS—for 19" Rack Panels

These are professional type racks that have been used on many commercial installations, and make a DeLuxe job of any amateur or broadcast transmitter. The racks are of all-steel construction, welded into an integral unit, to give a lifetime of service.

All panel mounting screws are concealed by means of a full length corner trim on each side at the front. In keeping with modern design, this front trim is rounded on the vertical corners. The rear corners are finished with regular angle trim. The front of the rack is trimmed with chrome moulding top and bottom. The door has a grille at top and bottom, and is hung on sturdy loose-joint hinges; it is held closed by two flush snap-action catches. Additional ventilation is provided

by louvres at the sides. The panel mounting angle irons are 3/16" thick, with mounting holes accurately drilled and tapped 12/24 thread on multiple 1 1/4"—1/2" spacings. The rack is made from 1/16" thick cold rolled steel, rigidly braced and reinforced throughout; the bottom is 7/8" thick steel. A rectangular opening is provided in the bottom for conduits, leads, etc. A duplex receptacle and outlet box are provided in the back under the door.

FINISHES: Black ripple with corner trims finished in dull black. Slate grey ripple with corner trims finished in slate grey. Prime coat only is optional in place of ripple enamel finish at no extra cost.

RACKS WITHOUT LOUVRES: To permit racks to be set up in gangs or rows of two or more, the louvres at sides are omitted. Racks may be joined by a flat trim fastened to front of adjacent racks, overlapping both racks. Where specified, front joining trim will be substituted in place of adjacent corner trim at same price. Front joining Trims cannot be used on racks with front doors.

Roller Truck No. RT-415 may be used for all 15 1/4" deep racks. Use No. RT-418 for all 18" deep racks. Standard shelves are available for all racks listed.

NEW BUD ADD-A-RACK SERIES

It has always been necessary to buy special racks without louvers on one side to obtain a maximum of panel space with a minimum of floor space. Now, you no longer need to buy a whole new cabinet when you want additional panel space. Through our new and exclusive Add-a-Rack series, BUD not only offers additional racks at a lower cost, but provides you with a sturdier, better looking assembly.

The illustration at top shows two Add-a-Rack cabinets assembled together. The illustration below shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entire new outfit, you purchase only four parts: (1) a door (2) a top (3) a bottom and (4) an Add-a-Rack coupling-unit. The right (or left) hand side of your present relay rack is removed and replaced by the Add-a-Rack coupling-unit; next, a top and bottom is fastened into place, and the side taken from the first rack is fastened onto the second rack which has been added. Place the additional door into position and you have two racks properly and efficiently coupled together.

In the same simple way, more racks can be added at any time and every one will be in a CONTINUOUS ONE-PIECE assembly.

This series is available in two ways. (1) a double unit consisting of two racks and the Add-a-Rack coupling unit, (2) Add-a-Rack unit, consisting of a door, a top, a bottom and an Add-a-Rack coupling-unit. These units are furnished with all necessary assembling and panel mounting hardware.

BUD JUNIOR DUAL SECTION CONDENSERS

Rotor contact is made by a four-finger, plated pressure spring placed at the center of the rotor shaft between the two sections, thereby providing perfect balance and improving the high frequency characteristics.

The tie-rods are insulated at both ends with Steatite insulators to prevent inductive loops in condenser frame. All other constructional features and materials are the same as used on Junior single section condenser.

BUD GIANT TRANSMITTER CONDENSER—SINGLE SECTION

Modern design, plus precision production methods, makes BUD GIANT TRANSMITTER CONDENSERS the first choice of critical engineers for use in such applications as broadcast transmitters, high-power trans-oceanic communications equipment, and many other types of highly specialized electronic devices.

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16" thick aluminum end plates, connected by 5/8" diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064" thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.
