## MALLORY REPLACEMENT VIBRATOR GUIDE

- Bigger and better than ever before, this Vibrator Guide lists replacements for all prewar auto radios and is sectionalized for quick reference. It includes a new section on buffer capacitor circuits . . . another section on servicing old radios that need obsolete or discontinued types of vibrators . . . even information on vibrator power supplies. No charge.

RECOMMENDED SUBSTITUTIONS FOR DISCONTINUED VIBRATORS

| Discontinued Type | Recommended Replacement | Discontinued Type | Recommended Replacement |
| :---: | :---: | :---: | :---: |
| 220B | See Note 2 | 299 | 298 |
| F220C | See Note 2 | 500P | 507P |
| 221 | 292 | 5018 | 853 |

| 296 | 298 | 951 P | 246 |
| 297 | 298 |  |  |

NOTE 1. To make this substitution certain wiring changes are necessary. See instruction sheet packed with vibrator or installation note in the Mallory Vibrator Guide and the 5th Edition Radio Service Encyclopedia.
NOTE 2. An exact duplicate is no longer available. Every effort is being exerted to determine a satisfactory substitute. If a substitute can be made available, your Mallory Distributor will be advised.

## These Mallory Vibrators Meet $\mathbf{9 0 \%}$ of Your Replacement Needs

- The 12 basic vibrator types listed at right cover $90 \%$ of your replacement needs. The entire line of Mallory Vibrators has been simplified so that replacements can be made easily and quickly. By effecting substitutions, Mallory is materially reducing the number of vibrators needed to meet your requirements.

This Mallory standardization program means that your distributor will stock fewer vibrator types and more units of each-thus delivery will be tremendously speeded up.

The vibrator replacement problem is being simplified but Mallory quality remains the same. Mallory precision
vibrators, backed by years of outstanding performance; still offer the dependability, the long life and the trouble; free service that you and your customers expect. It pays to insist on Mallory Approved Precision Products.

| Type No. | Volt | Type | Base <br> Dia. | Size | List Price |

## REGGFIERS DRY-DISC TYPE

- Low voltage, direct current--from a watt to kilowattsis easy and economical to obtain with Mallory MagnesiumCopper Sulphide Rectifiers.
For battery charging, electroplating, energizing magnetic chucks, there is no substitute for direct current. There are countless other applications where it does a better job than alternating current. They range from operating train models to powering motion picture arc lights. High gain speech amplifiers, for instance, can be made more hum-free by operating the tube heaters from DC Solenoids and electromagnets operate smoothly and without chattering when powered by direct current.

Full details are incorporated in Form R-615A, available without charge from your Mallory distributor or from the factory. Inquiries from manufacturers whose products employ dry-disc rectifiers are also invited.

## IBAR•IB8R <br> ULTRA-COMPACT RECTIFIERS

- These midget rectifiers, measuring 9/6-inch in diameter and $7 / 8$-inch overall height including terminals, have been widely used during recent years in battery eliminators, power packs and similar equipment. For complete electrical specifications of their use on specific types of loads-inductive, resistive, capacitive and taper charging-refer to Booklet R-615A.
No. IB4R. Replaces similar rectifier supplying filament power in packs (GTC Porta-Power, Electro Battery Eliminators, etc.) for conversion of $11 / 2$-volt portable or farm radios, of 4,5 or 6 tubes, to 105-125 volt 50-60 cycle lines. List price each. . . . . . . . . . . . . . . . $\$ 1.75$ No. IB8R. Similar to IB4R but with eight rectifying junctions instead of four. Maximum AC volts ( 115 volt line or equivalent), 7.2 at no load, 6.44 operating. Maximum intermittent DC amps., 5. List price each. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 2.40$

## BATTERY CHARGERS

- Mallory Chargers and Boosters are designed primarily for charging automobile storage batteries. For this purpose they are provided with clamp-on dash receptacle and plug for easy attachment to any automobile, truck, bus, taxi-cab or trailer, They offer a simple, economical and dependable method of keeping the battery charged to give prompt starting on cold mornings and to provide an abundance of current for lights, radio, heater and other accessories.

Mallory Chargers and Boosters are also ideal for charging storage batteries used in small boats, farm radios, laboratories, and aircraft. They are designed to operate from 115 volts, 50.60 cycles, and to automatically provide a tapering charge; that is, a high charging rate into a discharged battery, the rate gradually decreasing as the battery becomes charged and a safe charging rate when the battery is fully charged. Mallory Chargers and Boosters are equipped with an automotive type fuse which protects the charger from improper connection to the battery and from serious overloads. The fuse is located on the front of the box for accessibility and convenience in replacing.

Although designed especially for battery charging, Mallory Chargers and Boosters may be used as a direct current power supply for: electroplating, toy and model train operation, operating loud speaker fields, coin machines, relays, solenoids, scientific apparatus, small generator and alternator fields and other applications requiring a low voltage direct current.

TYPE 3C BOOSTER

$\dagger$ For charging 12 -volt storage batteries in aircraft, boats, buses and fire trucks. Types 3C, 5535B and 107 are for charging batteries of 6 volts or less. All chargers are equipped with one No. 652 dash receptacle.
No. 652-Extra dash receptacle and plug for Mallory 3C,
No. 5535A, No. 5535B and 107 charger . . . . . . . . . . . $\$ 1.80$

## REGTOPOWER**

- A compact, heavy-duty Mallory Dry Disc Rectifier that furnishes constant and adequate DC power. The unit is particularly suited for testing and repairing electrical communications and electronic equipment in all applications employing voltage within specified ranges.
May also be used for the economical and efficient taper charging of batteries.
Requires no special foundation; may be quickly and easily mounted on wall or bench for the most convenient location.
Featuring a variable voltage output to simulate actual operation under different conditions, the power supply has low ripple characteristics- $3 \%$ at full load, lower at light load. Send for catalog sheet R-659-A.

$\dagger \dagger$ Prices, F.O.B. Indianapolis.

## RECTOPOWER ${ }^{*}$ portable types

- The portable rectopower requires no special foundation, but may be rolled easily about the laboratory or assembly floor to the exact spots where it can be used most conveniently. Radio transmitters and receivers, and other electric and electronic equipment, may be tested while in the process of manufacture or after being installed.
Rectopowers have variable voltage output to simulate actual operation under different conditions, good regulation, and low ripple characteristics- $3 \%$ at full load, lower at light loads. Circuits are arranged to deliver both 12 and 24 volts simultaneously. A DC contactor prevents discharge of battery if AC starting switch is open when unit is used as a battery charger or in parallel with a battery for precision regulation.

## BATTERY CHARGERS Avation TYPES

- Mallory aviation rectifier battery chargers have been designed and developed to answer the need for a practical and economical unit to charge 12 and 24 -volt aircraft batteries and battery carts.
Featuring a tapering charge, these units supply a high charging rate for a discharged battery with a gradually decreasing rate as the battery becomes charged.
Mallory aircraft battery chargers employ the tried and proven Mallory magnesium-copper sulfide dry disc method of rectification. This method eliminates all moving parts and assures long life and dependability.

## Model 23HAB4

500 watt, 115 -volt, 60 -cycle, AC KATOLIGHT plant powered with a 1 h.p., single cylinder, 4 cycle, aircooled engine. Approximately $25^{\prime \prime}$ Iong x $11^{\prime \prime}$ wide x $20^{\prime \prime}$ high, net wt. 135 Ibs., shipping wt. 170 lbs. As a special feature this model is furnished with start and stop button right on the generator, with cutout, D.C. ammeter, charge control resistor and battery cables.

## Model 28HAB4

1500 watt, 115 -volt, 60 -cycle, A.C. KATOLIGHT plant powered with Briggs \& Stratton 4 h.p., 1 cylinder, 4 cycles, aircooled engine. (Illustrated with $40-\mathrm{ft}$. Remote Control. Standard models are firnished with manual cranking arrangement.) $31^{\prime \prime}$ long $\times 40^{\prime \prime}$ high x $21^{\prime \prime}$ wide, net wt. approximately 350 Ibs., shipping wt. 410 lbs.

## MODEL 55MPK6

25,000 watt, $127 / 220$ volt, three phase, 60 cycle, 4 wire, 1200 r.p.m., A.C. revolving field type Katolight generator powered with Chrysler Industrial engine. This type unit suitable for continuous duty or for standby service. Net wt. approximately 3300 lbs.

## CONTINUOUS DUTY - ECONOMICAL RUGGEDLY CONSTRUCTED - PORTABLE

Designed for sound trucks, homes, cottages, trailers, farms or any place where plant is desired for running many hours daily and expected to give years of trouble-free service.

KATOLIGHT PLANTS are the result of actual experience in the light plant field; the result of much laboratory and actual field tests. The engine that will give the best performance is selected for each model. Engine manufacturers are known internationally and maintain service stations in key cities in U. S., Canada and foreign countries. The user is assured of service and parts from authorized service stations.

KATOLIGHT PLANTS are already to go by simply adding a little gasoline and oil and connecting to the lines; complete with engine, generator, base, fuel tank, instruction manual, hand crank.

# MOTRON 

## ELECTRONIC SERVOMECHANISM

may be YOUR answer

The MOTRON (MOTor-electRON, TM, Reg.) Servo Model OIA is a packaged continuous-balance control system of practical infinite sensitivity that can be applied to the automatic control or regulation of a large variety of practical problems to eliminate the need of human supervision. Several miniature vacuum tubes directly control (without circuit-breaking contactors) the speed and direction of a standard 1/15 horsepower induction motor, (according to the setting of the input-dial), which can be used to control other larger power sources.

The input-dial is mounted on selected precision instrument ball bearings and may be rotated by extremely small forces, such as electrical meter movements, pressure gages, flow gages, nylon or silk filaments, precision weighing balances, miniature motors and repeaters, synchronous electric clocks, wet paper fibres, air vanes, metal bellows and magnetic compass needles.

The input-dial controls either the velocity or position of the motor to very accurate limits. The velocity in either direction may be limited from zero to maximum independent of input-dial setting, so that hunting instability can never occur. The motor may
actuate any device or mechanism (with $33-75 \mathrm{in}-\mathrm{lb}$. torque, $0-29 \mathrm{RPM}$ ) that controls the process, state, or condition that is measured on the input-dial, thus controlling and regulating the process. Alternately the motor may act as a torque amplifier or remote positioning agent. Since the motor velocity (not torque) is controlled, load change or complete loss of load cannot cause instability.

The 61 A Servo is designed for short time-constant systems and is usually capable of great sensitivity, 15/100 of one percent to $3 / 100$ of one percent. Electronic components are in a replaceable plug-in can for instant servicing.

## Suggested uses:

Air velocity controller to within as close as 25 or 50 FPM or .01 inch of water for separation of food products from chaff or sizing coal or other granular material; Vehicle steering or cam following; Tracer controlled mechanisms such as oxy-acetelyne cutting or lathe duplicators; Automatic weighing; Antenna positioning; Tensioning, guiding and winding paper, cloth, thread, wire, etc.

TYPE 3

Constant Voltage Transformers are designed to provide a constant output voltage which is unaffected by changes in input voltage. Stabilization is instantaneous and automatic and there are no moving parts. Constant Voltage Transformers also provide isolation between input and output circuits. Low output voltage wave distortion and small size make these transformers especially attractive for use with all types of electronic equipment.

# The SUPERIOR ELECTRIC CO. <br> 613 LAUREL STREET • BRISTOL, CONN., U.S.A. 

The POWERSTAT is a variable auto-transformer used in applications requiring a smooth continuously adjustable output voltage from a-c power lines. Essentially this device consists of a single layer toroidal winding on a silicon-steel core with a set
of brushes contacting a bared portion of each turn. By rotating these brushes on the bared part of the winding, any voltage can be "picked-off" from zero to above line.

TYPE 20
Input: 115 volts, $50 / 60$ cycles, 1 phase Output: $0-135$ volts, 3.0 amps., 405 va

## THE $1 / 2$ KVA SERIES

For applications that require a small compact variable transformer of relatively low electrical capacity, there is no greater value than type 20. Ruggedly constructed yet requiring a space of only $31 / 2$ by $33 / 4$ inches, this unit delivers a variable output of $0-115$ or $0-135$ volts (depending upon terminals employed) from a 115 volt single phase line.

## THE 1 KVA SERIES

TYPE 116U
Input: 115 volts, $50 / 60$ cycles, 1 phase. Output: $0.115 / 135$ volts, 7.5 amps .

THE 5 KVA SERIES

## With high output current capacities, the 5 KVA POWER-

 STATS find wide application for large power requirements. Both the 115 volt (1156) and the 230 volt (1256) units are readily adaptable to gang mounting to supply a continuously adjustable output from 115,230 , or 440 volt single or poly phase lines. Standard types are offered in capacities up to 100 KVA.Input: 230/115 volts, $50 / 60$ cycles, 1 phase
Output: 0.270 volts, 28 amps., 7.5 KVA

TYPE 116
Input: 115 volts 50/60 cycles, 1 phase. Output: 0-135 volts $7.5 \mathrm{amps} ., 1 \mathrm{KVA}$

TYPE 1256

SEND FOR BULLETIN MRI

## THE 2 KVA SERIES

To suit each need-in the laboratory or in the shop-the 2 KVA POWERSTATS are obtainable in a variety of models for single or poly phase duty. Different types feature . . . exposed terminals . . . fuse protection with bakelite terminal cover . . . or enclosed aluminum terminal box with output receptacle, fuse protection, and input cordplug. Type 2PF1126 can be furnished for either 2 or 3 wire service as can the 230 volt units.

Input: 115 volts, $50 / 60$ cycles, 1 phase $\operatorname{lnput}: 230 / 115$ volts, $50 / 60$ cycles 1 phase output: $0-135$ volts, 15 amps., 2.0 KVA Output: $0-270$ volts, 9.0 amps., 2.4 KVA

# MOTOR-DRIVEN <br> POWERSTATS <br> FOR PUSH BUTTON OR AUTOMATIC CONTROL 

#### Abstract

Where it is necessary to locate the POWERSTAT away from the control station or it is desirable to automatically control the source of variable voltage . . FIOWERSTATS can be equipped with motor-drives. This arrangement enables the operator to remotely control kilowatts of power in a safe and convenient manner. A smooth continuously adjustable output voltage is at the finger-tips and with a push of the control button, any voltage from zero to above line is obtainable.

## SINGLE PHASE UNITS

For operation from 115,230 , or 440 volt single phase lines, POWERSTATS with motor-drives are offered in ratings up to 50 KVA . The driving motor is a reversible, highly damped, rapid starting, synchronous type of low fundamental speed. It is a three wire ball-bearing mounted unit that operates from a 115 volt single phase source. Since the motor-driven POWERSTAT has the same fine adjustment of voltage as found in manually-operated units, it is ideal for numerous applications requiring efficient, quick, convenient and continuous control of a-c power.

Although the motor used to drive the POWERSTAT is physically small, the torque delivered is sufficient to drive even the largest tandem mounted 5 KVA units. As with the single phase POWERSTATS, all manually-operated two and three phase units can be motor driven. It is recommended that an investigation be made of POWERSTAT variable transformers where a selfcontained piece of apparatus is required for rapidly controlling 115,230 , or 440 volt two or three phase power lines. Already this equipment has found wide use in radio transmitters, electrical testing, induction heating, electric furnace temperature control, and automatic
 voltage regulators. Perhaps it is the solution to your voltage control problem.

## The SUPERIOR ELECTRIC CO. 613 LAUREL STREET - BRISTOL, CONN., U.S.A.

## SECO <br> AUTOMATIC VOLTAGE REGULATORS

TYPE SVR4101-H

For automatic control of a-c power lines, the SECO Automatic Voltage Regulator has no equal. Regardless of variations in input voltage or output load current, it always maintains a constant output voltage. In additionthere is no waveform distortion-no internal mechanical adjustments -operation is not affected by changes in power factor of the system.

## SINGLE PHASE UNITS

The many advantages offered by SECO Automatic Voltage Regulators, not found in other types of voltage stabilizers, is the result of combining a motor-driven POWERSTAT variable transformer with a special electronic detector circuit. When the detector circuit notes a variation from the nominal output voltage (set by means of knob on the panel) it authorizes the motor controlling the POWERSTAT to rotate in the required direction. This bucks or boosts the incoming line to the pre-determined output voltage value. When this value is reached, the detector circuit calls for no further correction until the incoming line again fluctuates.

No matter what the requirements of a particular voltage control application, there is a SECO Automatic Voltage Regulator to fulfill the need. Standard single phase SECO regulators are available in ratings from 1 to 28 KVA in 115, 230, and 440 volt models. Most units will correct line variations of approximately $15 \%$ from the nominal voltage. The self-contained cabinet type SVR4101-H illustrated above is representative of the entire line of SECO Regulators. It shows the combination quick-trip circuit-breaker and "on-off" switch, pilot light, and easily read voltmeter all housed in a compact black wrinkle-finish cabinet. Whereas the SVR4101-H is designed for table or wall mounting, its companion the SVR4101-R is for relay rack mounting as a component part of existing equipment.

TYPE SVR4101-R

In capacities ranging up to 75 KVA , the three phase SECO Automatic Voltage Regulators are indispensable for many factory and laboratory requirements. All equipment on a power line can be controlled by one SECO regulator. An installation will insure proper operation of motors, electric furnaces, heater units and other equipment that is critical of line voltage. Standard models are wye connected for use on 230 or 440 volt three phase lines. The three phase

SECO Automatic Voltage Regulators possess all the characteristics inherent in single phase types. Some features not mentioned previously are . . . efficiency runs as high as 98 percent or better at full load... low exciting current . . . low cost per KVA . . . built-in circuit protection on all units . . . and although not instantaneous, the SECO regulator is extremely rapid in correcting line voltage variations.

# The SUPERIOR ELECTRIC CO. 613 LAUREL STREET • BRISTOL, CONN., U.S.A. 

TYPE U-1000
Input: 115 volts,
60 cycles, 1 phase.
7.5 amps., 1 KVA.

For the laboratory, assembly line, and maintenance shop, the VOLTBOX $a-c$ power supply offers a compact portable source of variable a-c voltage. Unregulated and automatically regulated models are available. The unregulated VOLTBOX consists of a strong, light weight, steel enclosure with a POWERSTAT variable transformer to supply any voltage from zero to above line, a $1 \%$ voltmeter, high speed circuit protection, pilot light, binding post inserts and input cord-plug. In addition to the type U-1000 tabulated to the left, a companion 230 volt model is available as are 2 KVA 115 or 230 volt units. The regulated type, the R-500, has all the components of type U-1000 plus a voltage stabilizer. Its rating is tabulated under the photograph.

TYPE R-500
Input: 95-125 volts, 60 cycles 1 phase. Output: $0-135$ volts,
4.0 amps.

SECO REMOTE POSITIONER -- This instrument affords a method of remotely controlling a POWERSTAT variable transformer with a high degree of accuracy. Servo-operation is achieved by turning the dial of the remote controller causing the motordriven POWERSTAT to follow in accordance with the dial position. Control wires between the Remote Positioner and the POWERSTAT act as an "electrical flexible shaft."

SECO D-C POWER SUPPLIES-In addition to its line of superior a-c voltage control apparatus, SECO offers d-c power supplies. Both regulated and unregulated models can be designed and built to specific requirements. Capacities range up to 3000 volts, 2 KVA for regulated types and up to 5000 volts, 5 KVA for unregulated. Inquiries are invited.

SECO FIXED-RATIO TRANSFORMERS - For
those who desire fixed-ratio transformers of the same high quality as found in POWERSTAT variable transformers and other SECO manufactured equipment, it is recommended that the SECO engineers be consulted on requirements of 500 va and larger. A request for information will receive immediate attention.

SECO SATURABLE REACTORS—At times the use of POWERSTAT variable transformers for unusually large current requirements is not feasible. Other times, definite requirements necessitate the employment of saturable reactors. To meet these needs, SECO has engineers who will be most pleased to cooperate in supplying a saturable reactor to rigid specifications.

TYPE 0-1226
Input: 230/115 volts
$50 / 60$ cycles, 1 phase
Output: 0-270 volts,
18.0 amps, 4.9 KVA.

## OIL-COOLED POWERSTATS

By mounting any air-cooled POWERSTAT variable transformer in a sufficient quantity of transformer oil, its rating can be increased up to 100 percent above normal air operation. For a high continuous output from a variable transformer of small physical size, SECO offers the standard 1, 2, and 5 KVA POWERSTATS in a compact, castaluminum oil-container. Not only do these units allow increased output currents but immersion in oil permits their use in hazardous or humid atmospheres and where high momentary overloads are occasioned. Standard oil-cooled POWERSTATS can be obtained for 115 , or $230^{\circ}$ volt single phase duty in capacities up to approximately 10 KVA.

SEND FOR BULLETIN MRI

## Hermetically Sealed Units

Compound-filled and hermetically sealed against the entrance of moisture. Designed to meet U. S. Navy salt water immersion tests. Standard hermetic case types range from very small up to units approximately 200 volt-amperes physical size. Special construction is employed for larger units.

Conventional compound-flled units

## Core-and-coil Units

Usually applied where moisture resistance is not a factor, and where size and weight must be kept to the minimum. Standard core laminations are utilized in core-and-coil units 15 kva and smaller (physical size). Larger units are built up from special parts and ratings above 15 kva require special laminations.

Three general types of transformers and a complete line of reactors assembled from standard unit parts to meet specified requirements: power-with plate, and plate-and-flament units; filament-both conventional types and high-voltage units; audio-frequency-include microphone, input, interstage (or grid), modulation, and output types.

The line of reactors contains microphone, plate,

Hermetically sealed units

## Conventional Compound-filled Units

Not hermetically sealed. Moisture resistant, but not immersion-proof. Wide application in the Frequency-Modulation field. Top or bottom mounting for open or underdeck wiring. Standard case types include units up to 250 volt-amperes physical size. Larger units employ special construction.

Coro-and-coil units
filter (conventional or swinging), and modulation units.

No standard ratings are listed as being in stock, but standard parts are available for manufacturing to speciflcations. This method of production enables every transformer to be specially designed for its given application.

Write for Bulletin GEA-4280

## TRANSFORMERS

Altec Lansing has developed a complete line of trans formers which have the necessary frequency range, power carrying capacity, low insertion loss, low phase shift, and ample electro-magnetic and electrostatic shielding, good balance of windings for push pull operation, and proper impregnation and treatment so that heat and moisture will not adversely affect their continued operation. Ability to handle the rated power at low frequencies insures that intermodulation products will be very low.
The use of negative feedback in amplifiers requires that the frequency range of the amplifier must be made much broader than the actual amplification characteristic needed. The required frequency range
over which the transmission characteristics of the feedback loop must be controlled is surprisingly high and represents the price that must be paid in order to obtain the benefits of negative feedback.

Altec Lansing transformers, unless otherwise specified, have a transmission range of $20-20,000$ cycles ( $\pm 1 \mathrm{db}$ ) and this condition will hold over a range of 60 db in power. In most cases the transformers will have good transmission up to 50 KC so that it is not necessary to use special compensation in the feedback path when the transformer is part of it. The same is true at the very low frequencies since in general the transformers will not be down over 3 db at 10 cycles.

## KHNYON "T" LINE TRANSEOBMMRS

FILAMENT TRANSFORMERS

## TELESCOPIC SHIELDED HUMBUCKING TRANSFORMERS

The core type, humbucking, construction employed in these transformers tends to minimize hum pick-up. In addition, they are mounted in multiple electromagnetic shields of high permeability alloy steel which are annealed after corrplete construction to remove shearing and bending strains thus assuring maximum permeability upon which depends the efficiency of shielding.

MERIT presents a line of replacement transformers specially designed to supply the jobber with a simplified, compact line which will meet $90 \%$ of customers' requirements and eliminate carrying an excessive stock.

Embodying new developments, Merit Transformers have demonstrated dependable service under the most difficult conditions, and will be recognized and welcomed by thousands of customers. Conforming to the latest and most rigid specifications, Merit Transformers are now standard equipment witl. many leading radio manufacturers.

OUTPUT TRANSFORMERS
Receiver Replacement Type
To couple the plate or plates of the output stage to the speaker voice coil. Sec. impedance - 3.5 ohms.

## Power <br> Tramsformers <br> New Universal Type

Stancor's Universal Power Transformers represent the former construcient transformer construction, they
are designed for compactness without sacrificing efficiency.
Four universal brackets permit their being mounted in either vertical or horizontal position. Special
studs* provide underwrit. studs* provide underwrit. ers type mounting: Transformers equipped with $8^{\prime \prime}$ flexible RMA color coded leads and static shields.

## Interstage Transformers

Designed primarily as radio replacements, this group of transformers has a multiplicity of applications because of the wide range of sizes and types. Listed are units in channel frames, ranging from the smallest to the largest in common usage, a universal bracket former, large core heavy duty units for higher fidelity push-pull and universal interstage transformers and
a fine grouping of drivers. Size for size, unit for unit, these transformers represent the finest offering by any manufacturer -
they're so easy to use.

May be used as plate to grid; push pull input or push-pull interstage replacement transformers. Have $3: 1$ over all ratio, tapped and secondary has split winding, thus permitting ratios of $1: 1,3: 1$ and 6:1. Transformers may be 6:1. Transformers may be used in either step-up
step-down applications.

## Universal Interstage Transformers (Split <br> Secondaries)

## Microphone, Pichup or Line to Grid

## Microphone or Line to Line Transformer

## Lime to Voice Coil Transformers

## Mnput Transformer <br> Inter communication

Transceiver Transformers

## Tone Contrel Unit

The necessary components for a dual tone control circuit to provide both bass and treble attentuation when used in conjunction with two dual 250,000 ohm potentiometers. Contained in Hi-Fi-type W-1 cast case for
shielding against hum pickup and provided with $12^{*}$ Flexible Coded Leads for direct connection in the cir-
 with complete instructions for installation and use.
$\qquad$

## Variable Line <br> Autoformers

These transformers designed so that the associated a specific input voltage regardless of line voltage. Line regulating transformers continuously variable in 5 volt steps from 85. 125 volts.
Special
Autoformer
This Autoformer will de-
liver full output wattage at
any secondary voltage spe-
cified below or can be used
to supply any voltage in 5
volt steps from zero to 130
volts for special experi- mental applications.

## Testing <br> Autoformer

Inccorporates a convenient
tap switch to permit variable voltages from 90 to 150 volts. Primary equipped and plug. Secondary concle, Locking screw mounted on switch.

## Step-Down Autoformer

These transformers are excellent units to be used with standard apparatus on also be wired to step up 110.125 volts to $220-250$ volts for test purposes or other applications.

## Isolation <br> Transformers

These transformers are designed with an electrostatic shield to isolate line noises and interference from the apparatus being used. They are suitable for screen test booths, elecmedical instruments, beauty parlor equipment, electric furnaces, amateur transmitters, etc. Each unit complete with a 6 ft . cord and plug and a female receptacle. Primary tapped for 105,115 , and 125 volts, $50-60$ cycles. Secondary rated at 115 volts. Tap switch controls primary voltage, except on Nos. P-6123 and P-6125.

## Fence Controller

## Transformers

## Universal

## Spealier Field

## Substitute Cholse

Designed for the service department, to take the place of the speaker field on the test bench. Packed complete with full instructions.

*Mounted in special can and equipped with cord, plug and receptacle.

## Filter Cholses

 (REPLACEMENT TYPES) These chokes include aII commonly used ratinys for units of their type. Since inductance varies with the nductance varies with the amount of D.C. flowing through the coil these units have been tested under uniorm conditions. Futer chokes are rated at 10 Yols 60 Cycles with maximum D.C. in winding, Swinging chokes are rated at 10 Volts 60 Cycles from maximum to $10 \%$ of maximum D.C. in windings. Audio clokes are rated at 2 Volts 200 Cycles with maximum D.C. in winding. Tolerance of plus $15 \%$ is maintained on all ratings.Filter Chokes (HEAVY DUTY TYPES)

Swinging Chokes
A.C.-D.C. Chofes

Output Choles

## Plate <br> Transformers

This group of transformers is designed primarily to deliver the rated D.C. voltage and current outputs when used with full-wave mercury vapor rectifier tubes in conjunction with a two section filter employing choke input and two 2 mid. condensers working into a resistive load. Generous coil and core design result in a transformer with above average regulation and efficiency. Phenolic terminal boards and heavy duty ceramic insulators assure protection from voltage breakdown.

Above plate and bias transformers are for listed voltage 60 cycle operation.
Other voltage and frequency combinations available on special order. Write for quotations.

## Volt Adjusters

STANCOR'S volt-adjuster is the answer to the fluctuating voltage problem. It is a compact unit containing a ruggediy constructed
step-up; step down auto-step-up; step down auto-
former.
The primary winding accommodates various voltages in 10 volt steps. A 10 position tap switch with an
off position permits changing of the primary winding when a voltage shift occurs, and through this switch the output may be
changed and kept at 115 changed and kept at 115
or 230 volts. A meter with or 230 volts. A meter with
0.150 or 0.250
volt range $0-150$ or $0-250$ volt range
indicates the output at all times. The nominal output is indicated on the meter face by a red line. Unit is wrinkle finish case.

## Filament

## Transformers

 Single Secondary This group of filament transformers represents a complete listing of all commonly used electrical and physical specifications for units of this type. All transformers except those especially indicated have cen ter taps. They are designed to provide accurate voltage output at rated loads with good regulation. Generous nsulation provides a safety factor over and above the test voltage as indicated. Each group of transformers by voltage ratings is avail able in several convenient mounting styles which lend themselves to most applications.Multiple
Secondary
*Windings not center tapped. Other voltage and frequency combinations available on special order. Write for quotations.

## Cathode Modulation Transformers

## Plate Modulation <br> <br> Transformers

 <br> <br> Transformers}Listings cover two distinct groups of transformers, universal or Poly-pedance and specific types. The latter group covers the most frequently used ratios, core sizes and mounting styles. They should be used in permanent installations whenever possible since their design permits the best efficiency and fidelity for units of this type. Poly-pedance transformers are ideally suited for use in experimental or temporary equiporatories, etc., since they oratories, etc., since they number of taps to permit the user to secure the widest practical range of imest practical range of impepresent outstanding values.

## Poly-Pedance Lime Driver Transformers

## Driver

## Transformers

Two distinct groups of driver transformers are shown. Tapped or Polypedance and specific or fixed ratio types. Poly-pedance units are especially designed for experimental and laboratory work where it is desirable to change the turns ratio to optimum value. Two power rating one of which is applicable to circuits employing inverse feedback and two line drivers are available. Specific types are listed in the most frequently used ratios, core sizes and mounting styles. They should be used wherever possible in permanent installations because their de sign permits the best efficiency and fidelity for units of this type.

## DIMENSIONAL DATA PAGE FOR SNC PRODUCTS...

SNC Products have back of them years of engineering experience and manufacturing skill plus the use of only finest quality raw materials throughout.

## From out of the west . . America's finest transformers...

L Case Type

A Case Type
with low current and flux densities, contribute to the engineering superiority which results in small physical size and low temperature rise of Thermador power transformers. All power transformers have static shields which are grounded to the case and core.

## Thermatite treated to withstand heat and humidity

Thermador transformers are Thermatite treated, which is a well tested and approved form of vacuum impregnation. This treatment, proved on thousands of transformers under severe climatic conditions, gives these units the resistance to withstand extreme conditions of humidity and heat.

## Specifications

For further information about Thermador transformers, write Dept. TT.

All prices subject to change without notice. F.O.B. Factory. Freight allowed on shipments in U.S.A. $\$ 100.00$ net or over.

## THORDARSON TRANSFORMERS

## NEW STREAMLINED SERIES

This is the new Thordarson post-war series of Transformers and Chokes. Every unit has been designed for utmost and Chokes. Every unit has been designed for utmost production advancements developed by Thordarson during production advancements developed by

The new lamination alloys and insulating material, incorThe new lamination alloys and insulating material, incorporated in this series, results in superior performance and a greater factor of safety without an increase in size or weight.
Consequently, some types are smaller and more compact
without sacrificing efficiency or performance.
Finished in baked grey enamel and fitted with matched mounting styles, the units present a uniform appearance This is especially desirable where several Transformers and This is especially desirable where several
Types for Radio Receiver Replacement, Amateur Radio, Sound Systems and allied applications, can be selected from this listing.

$t$ Can be used in reverse-i.e., High impedance source to line.

* Frequency response -250 to 10,000 c.p.s.
§ Frequency response- 60 to 10,000 c.p.s.
- Used for converting high impedance input of amplifier to accommodate low impedance microphones-Frequency response within $1 / 2$ Db 30 to 15,000 c.p.s.-High permeability shield for reduction of hum-Fitted with 2 -prong connector for balanced mic cable and single contact connector for fitting to amplifier input.

It is essential that the class C R．F．load be properly matched to the class B modulator tubes for a maximum transfer of speech energy with low distortion．Thordarson Multi－Match modulation transformers have sufficient flexibility to enable the engineer or amateur to adjust the impedance ratio of primary to secondary，to meet any practical condition of operation．This feature forestalls the possibility of the modu－
lation transformer becoming obsolete due to changing the modulator or class $C$ tubes．The use of new tubes or a change in class $C$ voltage and current will not necessitate the need of a new modulation transformer，providing the power capacity is adequate．Complete charts and instructions for proper matching are supplied with each unit．

## CHOKES-REACTORS

## Universal Types-Swinging and Smoothing

Thordarson Universal Chokes are designed for use both in the input and smoothing positions. Where the current taken from the power supply is essentially constant (not varying more than a ew percent) the chokes should be selected so as considerably, as is the case where the power supply furnishes a class $B$ modulator stage, the chokes should be selected so as not to exceed the rated D.C.-M.A. rating under the steady

state of operation, and not to exceed the Max. D.C.-M.A. rating when the modulator stage is fully excited.

These are truly universal chokes suitable for use in power supplies requiring either input, swinging or smoothing types.
The tapped Splatter Chokes are used between the modulator and Class $C$ stage for eliminating objectionable side band splatter. Full instructions and circuit diagrams are supplied with each unit.

Furnished with primary cord and secondary receptacle

## THORDARSON LITERATURE

[^25]transformers, filters, line equalizers, filament transformers, filter reactors, plate transformers, and modulation reactors and transreactors, plate transformers, and modulation reactors and trans-
formers. Highest quality units that satisfy the requirements of discriminating engineers, broadcast stations and laboratories. Catalog 500 -Free.
AMATEUR RADIO: Carefully prepared and edited to make learning of Radio, by all beginners, easy and interesting. Presents fundamental theory and instructions for making code practice oscillators, receivers and transmitters. Has 160 pages and over wirlustrations and drawings. Heavy book cover, finished in wear-resistant blue cloth and imprinted with gold lettering

STANDARD AUDIO TRANSFORMERS

The ever increasing use of wide range equipment for broadcast service has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

## LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leakage reactance.

UTC LINEAR STANDARD transformers are the ONLY cudio units with a GUARANTEED uniform response $\ldots \pm 1.3 \mathrm{DB}$ from 20 to 20,000 cycles.

MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semitoroidal, coil structure which affords moximum neutralization of external fields. In addition, all low level units employ an internal high permeability alloy case as well as the high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in X employ quadruple alloy shielding, making possible a transtormer with the lowest inductive pickup commercially available.
NEGLIGIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching. minimum phase shift, and low flux densify. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortion at 30 and 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value in some instances up to 50,000 cycles.

MULTIPLE TAP WINDINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of $.1 \%$. . . perfect balance of inductance and capacity . . . exact impedance reflection. For all practical uses, 500 ohm termination may be used for 600 ohm requirements. For maximum efficiency and balance, 250 ohm lines are recommended to be connected to 200 ohm terminations.

DEPENDABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are carranged in a circular layout so that a round chassis hole will clear all

## SPECIAL LOW LEVEL LINEAR STANDARD UNITS

Where unusual impedance or frequency ranges are required, UTC can supply units to specific customer requirements.
For example, one special design, for bolometer service, has following characteristics:
Frequency Range
1 cycle to 20 cycles
Secondary lnductance
250,000 Hys.
Primary Impedance.... 10 ohms Impedance Ratio ...._._._._75,000:1 Shlelding...for 100 DB operation

## OUTPUT TRANSFORMERS

Linear Standard output and matching transformers employ large cores of high permeability steel and precisely balanced, highly interleaved coil structures. The frequency response and harmonic distortion are unequalled in commercially available material.
The mulfiple top windings afford a wide range of impedances for every application. The impedance values given are for one load. Where it is desired to feed two loads simultaneously, with equal power, it is necessary to connect the loads to terminations of half the impedance value. For example, if it is desired to split the output between a 500 ohm line and a 15 ohm voice coil, connect the the 500 ohm line to 250 ohm termination and the 15 ohm specker to the 7.5 ohm termination. If the bulk of the output is desired in one of the loads, connect this load to its correct termination and the other load to a termination of $20 \%$ rating or less. For example, if in the above case, the speaker were used solely for monitoring, connect 500 ohm line to 500 ohm termination and 15 ohm voice coil to 2.5 ohm termination.

In choosing power components for broadcast and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise $40^{\circ}$, and high insulation safety factors. Only the finest of materials and workmanship are used throughout.
The low power components of the Linear Standard series are housed in the familiar rectangular LS case with top or bottom mounting facilities. High power components are housed in end castings which completely protect the -inding, while directly exposing the laminations for maximum heat transfer.
nits have a deep grey finish to obtain the highest heat radiation co-effirge components (up to 250 KVA ) are housed in oil tanks.

## UTC VRRIRBLE INDUA

UTC type VIC variable inductors offer a revolutionary approach to th lem of tuned audio circuits. By adjusting a set screw in the side of th an inductance valve of $+90 \%$, - $50 \%$ from mean value is obtaincable. : is positive. Effective Q for $\alpha$ wide frequency range and variation of induct with applied AC voltage are shown on the illustrated curves, for a typic VIC unit.
The VIC inductor is housed in a rugged die cast case $111 / 2^{\prime \prime}$ long, $11 / 4^{\prime \prime}$ wide and $17 / 6^{\prime \prime}$ high with mounting centers on terminal board side ${ }^{13 / 16 " ~ b y ~}{ }^{29} / 22^{\prime \prime}$ Weight is $51 / 2$ oz.

N-42

There are many applications in the audio, carrier, and supersonic field requiring inductors of high $Q$ and great stability. The $H Q$ series of units developed for these applications have remarkable characteristics as illustrated below. HQA coils have high $Q$ ( 100 at 5000 cycles) and are available in inductances from 5 MHY to 2 henrys: HQB coils have very high $Q$ ( 200 at 4000 cycles) and are available in inductances from 5 MHY to 12 henrys:

HUM PICKUP is low due to the toroidal winding structure, 70 and 140 microvolts per gauss respectively for the HQA and HQB at 60 cycles.
Stability is excellent. For the 14 Hy . HQA i illustrated, inductance change is less than 'rr applied voltages from . 1 to 25 volts eles. For the .45 Hy . HQB coil illusinductance change is less than $1 \%$ 'tages from 1 to 50 volts 1000 ? variation from - 55 to plus ade is less than $1 / 3 \%$. due to $D C$ current is MA linearly for the $3 / 4 \%$ for the HQB. s sealed.
$y$ type followed by ine a 250 MHY type HQB iered as HQB-250 MHY. ace tolerance is $2 \%$. For $1 \%$ crease is $10 \%$.

## , INTERSTAGE FILTERS

Je filters lend themselves to effecting gain simultaneousiy with their frequency ination. UTC monufactures three basic types of filters for such application with a nal impedance of 10,000 ohms to be used in a circuit as illustrated.
Type BPI (band pass), LPI (low pass), and HPI (high pass) interstage filters are not carried in stock, but are available from standardized designs and components. They are available for any frequency from 200 to 10,000 cycles. Order by type followed by frequency as: LPI-2500, which designates a low pass filter-2500 cycles cutoff frequency For low impedance circuits (500/600 ohms), order as BPL, LPL or HPL in similar manner

All interstage filters are housed in hermetically sealed cases identical in dimensions to HQB , but cutout is $5 / 8 \times 2$ inches. Dual alloy shielding reduces hum pickup to 150 MV per gauss at 60 cycles.

BPI units have $2: 1$ gain. They are sharply peaked, having approximately 2 DB atienuation at plus or minus $3 \%$ from mean frequency and attenuatipns of approximately 40 DB per octave. They are adjusted to zero phase shift at mean frequency
HPI units have loss of less than 6 DB at cufoff frequency. At .67 cutoff frequency the attenuation is 35 DB and at .5 cutoff frequency, 40 DB

LPI units have loss of less than 6 DB at cutoff frequency At 1.5 cutaff frequency the attenuation is 35 DB and at twice cutoff frequency, 40 DB

## (2y) <br> EQUALIZERS and FILTERS

## 3AX UNIVERSAL EQURLIZER*

The universal characteristics of the UTC $3 A X$ equalizer have made it the most popular item for broadcast and recording equalization. This unique unit, with which most communications engineers are already familiar, is am accurately calibrated, quickly adjustable, combined low and high frequency equalizer. The low frequency controls include a switch for adjusting the moximum equalization frequency to 25,50 , or 100 cycles and a calibrated T-pad for exact adjustment of the amount of equalization. The high frequency portion of this unit includes a switch to set maximum equalization point at $4000,6000,8000,10,000$ or 15,000 cycles, and a similar calibrated control reading directly in DB. Equalization up to 25 DB available at any frequency selected.
Through a unique arrangement of compensating pads, changes in adjustment of the $3 A X$ equalizer do not affect the insertion loss (50 DB). This permits rapid changes in tone color, with negligible change in volume. Where rapid change-over is required in service from one line to another, or from recording to play back, it is merely necessary to predetermir the required setfing. The actual adjusiment of the controls can be taken care of alr instantaneously. The construction is of the depressed chassis, etched panel, rack type. Thoroughly shielded against inductive pickup with UTC Trialloy Shielding. Di of pomel $31 / 2^{\prime \prime} \times 19^{\prime \prime}$ Depth $71 / 2^{\prime \prime}$. Weight 15 lbs.

## 3A UNIVERSAL EQUALIZER*

The $3 A$ equalizer is identical to the $3 A X$ described above, excer porate the compensating pads for constant insertion loss. The proportional to the amount of equalization employed. All other char the $3 A X$ unit, this item weighs 10 Ibs.

## 4C SOUND EFFECTS FILTER*

Chabactibitics obtamabli with 4 C fitter

UTC VARITRANCONTROEUNIT
For controlling: Rectitier output . . . motors . . . heaters . . . lights . . . line volta

The UTC Varitran is a simple autotransformer whose turns are arranged on one layer with the insulation removed so that every exposed furn may be used as a tap of the winding. A special non-fusing contact can be moved to any position on the winding, permitting the exact voltage desired to be obtained. The regulation and efficiency are excellent and no distortion of wave form occurs. The output voltage is independent of load. In addition to its many laboratory uses, the Varitran is widely employed for controlling electric ovens, fans, soldering irons, furnaces and heaters, for photographic and enlarging lighting control. for life tests of lamps and for dimming illumination.

## VAritran ratings

Standard Varitrans are designed for 115 or 230 volt service. The respective output voltages are 0-130 and 0-260 volts The Varitran autotransformer current and wattage rating is based at 115 volts ( 115 V models) As the voltage is reduced, the wattage output is reduced correspondingly The maximum current can be taken at any point from 0 to 20 volts and from 95 to 130 volts. Between 20 and 95 volts the current capacity tapers off from the two ends to approximately $60 \%$ of the rated maximum current at the 65 volt point. The mounting facilities are at both top and bottom of each unit to assure ease of mounting on panel, chassis or for laboratory bench service.

# (ulucsut hiperm hlloy transformers 

The UTC Hiperm alloy cudio and power transformers are specifically designed for portable and compact service. While light in weight and small in dimensions, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 eycles. These units are similar in general design and characteristics to the Linear Standard audio units, incorporating a Hiperm-alloy nickel iron core and a thum balomced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, ar ranged for mounting with the terminals either up or down.

## UTC MICROPHONE CABLE TRANSFORMERS

Type MC-1-primary tapped $30 / 50$ and $200 / 250$ ohms, secondary to grid stcmdard fidelity.
Type MC 2-primary tapped 30/50 and 200/250 ohms, secondary to grid, high fidelity,

## ULTRA COMPACT AUDIO UNITS

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being $\pm 2 \mathrm{DB}$ from 30 to 20,000 cycles.
All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast (Type A) case provides for top or bottom mounting. Maximum operating level +10 DB .

| $\begin{aligned} & \text { Type } \\ & \text { No. } \end{aligned}$ | Applieation | Primary Impedance | Secondary Impedance | $\pm 2 \mathrm{db}$ fromt |

## TYPE A CASE

## OUNCER AND PLUG-IN AUDIO UNITS

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing $7 / \mathrm{g}^{n}$ diameter . . . mounting opposite terminal board.
Ouncer iterns are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform from 40 to 15,000 cycles, except for 0-14, 0-15, and units carrying DC which are intended for voice frequencies from 150 to 4,000 cycles. Maximum operating level ODB.
"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug in base to fit standard octal socket. While of submersion proof design. these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets, even when used upside down in portable equipment.

UTC Sub-Ouncer units weigh only $1 / 3$ ounce. Through unique construction, however, these miniature units have performance and dependability characteristics far superior to ony other comparable items. The coil is uniform laryer wound of Formex wire . . . On a molded nylon bobbin. . insulation is of cellulose acetate . . . leads mechanically anchored . . . . core material Hiperm-alloy . entire unit triple (waterproof) sealed.

# OTUC)UTC COMMERCIAL GRADE COMPONEMTS 

The commercial grade series of transformers incorporate cońservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. The CG line was developed to replace our very popular PA series in a more rugged construction, with professional appearance. Type numbers are identical with the PA units except for the prefix " CG ".
CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components ore linear. $\pm 11 / 2$ DB from 60 to 8,500 cycles (no unbalanced D.C.). Parallel feed low level interstage units with 50,000 ohms and .25 mfd .200 ohm windings on input transformers are balanced and may be used for 250 ohm circuits.

## INPUT, INTERSTAGE, MIXING AND LOW LEVEL OUTPUT TRANSFORMERS

( 200 ohm windings are balanced and can be used for 250 ohms)

## UNIVERSAL INTERSTAGE EQUALIZER

This new UTC unit is the ideal device for any application requiring frequency response correction. Designed to be connected between two triode audio sto
CG
The CGE-l equalizer is not a simple R-C tone control, but employs resonant circuits to permit low or high end equalization without effecting mid-frequencies. With controls in'center, no equalization is effected. Movcontrol to left increases highs; to rigs; to right, drops bass, Moving, other dent so that bass may be rased and highs dropped simultaneously, etc Amount of equalization is continuously cadustable, up to 15 DB . The insertion loss effected is equal to the combined low frequency and high frequency settings plus $6 \mathrm{DB}^{\text {or }}$ or maximum of 36 DB . Untess existen gain of equipment whe which CGE-1 is adaed is high an add stage may be required.
This unit comes complete so that controls with etched panel (calibrated in DB) can be mounted on a chassis ( $21 / 2$ inch minimum) or a panel with CGE-I Fanel Dim. 23/8 x4. Wt. 2 Ib.

## CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice
coil or group of voice coils to a 500 ohm line. More than 50 voice coil coil or group of voice coils to a 500 ohm

$$
\begin{aligned}
& 2,4,5,62,1,1.25,1.5,2,2.5,3,3.3,3.8,4,4.5, \\
& 5,5.5,6,6.25,6.6,7,7.5,8,9,10,11,12,14,15 ; \\
& 16,18,20,25,28,30,31,40,47,50,63,69,75 .
\end{aligned}
$$

Where speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. It connected in series, the higher impedance speaker will develop greater
power. power.

| CVL-3 | 75 | 500 ohms | .2 to 75 ohms | RC- 150 |

## CG VARIMATCH LINE AUTOFORMERS

CGI Varimatch Line Autotormer will match one to ten 500 ohm lines or CGL windings to the 500 ohm output of an audio amplifier. The CGA-10
to 12 autoformers have impedances of $500,250,167,125,100,83,71,62$.

## COMMERCILL GRADE COMPONENTS

UTC CG power Iranstormers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Designs provide temperature rise less than 55 degrees $C$ Units are tested for breakdown at twice maximum working voltage plus 1000 volts. Plate transformers are given a surge test of $250 \%$ normal voltage at 200 cycles. All items are vacuum impregnated and sealed with special insulating compound.
The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service.

## CG VARIMATCH MODULATION UNITS

Win match any modulator tubes to any RF load
The ever increasing number of vacuum tubes available for cudio and RF applications has increased the difficulty of obtaining transtormers suitable for matching to the various correct tube loads. If a standard transtormer having a limited impedance range is purchased and used for a specific inevitable. While a $20 \%$ mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflecfed to the tubes The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped windings aftoraing an extremely wide range in impedance maiching. Designs provide that to any load impedance employed, full class $C$ plate current can be carrie by secondary winding

Primary impedances from 500 to 20,000 ohms

UTC Special Series transformers are specifically designed for amateur and populcr-priced PA service. The Special units are, finished in $\alpha$ rich, commercial type medium gray enomel. A re-' cessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any $R F$ load within the power rating of the transformer. Large components are housed in formed cases with top or botiom mounting. All units are vacuum impregnated - compound filled.

## TYPICAL MODULATOR COMBINATIONS

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for intermittent service. For commercial applications, CG or LS grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transtormer to be used win many circuits and types of tubes.

## FILTER AND AUDIO CHOKES

CHANNEL FRAME FLLAMENT TRANSFORMERS
Pri. 115 V. 50/60 Cycles-I500 V. Breakdowa

The UTC replacement type transformers represent the culmination of years of development in this field All units are vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel
The UTC shells and universal brackets employed make possible a latitude in mounting dimensions never approached heretofore Using Varitap coil construction a minimum number of transformers hove been developed to cover any requirement in the replacement field.

Through unique construction the five UTC Varitap Duplicate replacement tronsformers will service as many types of radio receivers as the 15 or 20 units more customarily employed for such service. The universal feet may be used for upright or horizontal mounting, or eliminated for flush mounting.

UTC flush type transformers are husky units designed for low temperature rise and good regulation. By employing a Varitan universal coil structure, the five units described are universal in application. The rugged solder terminals permit ease of circuit change for the experimenter.

UTC vertical power transformers are unusually attractive in appearance, having smooth. drawn cases finished in high lusfre black enamel. The Varitap coil structure assures flexibility of application.

Chonnel frame chokes and audios are conservatively dosigned. Standard black enomel mounting channels are employed. Coils are tropic-sealed by vacuum-pressure method.

Varitap Duplicate audio units are extremely attractive，the double shells and universal mounting brackets being finished in high lustre black enacket．This bracket makes possible four hole horizontal or vertical mounting and two hole． channel type，horizontal or vertical mounting．The coils of these units，in addition to efficient design and mechanical shielding，are vacuum impreg－ nated and sealed with a special compound to matic condítions．

## Shielded universal mounting hudio transformers and filter chokes

| $\begin{aligned} & \text { Type } \\ & \text { No. } \end{aligned}$ | Applicatien | Description | Fig． | Wgt. |

minder with loss in low frenuencies．

## STEP DOWN AUTO－TRANSFORMERS

## With 6 foot cord and female receptacle 220.240 to 110.120 Volts $-50 / 60$ Cycles

| $\begin{aligned} & \text { Type } \\ & \text { Ho. } \end{aligned}$ | Application | wot. Lhs. |
| :---: | :---: | :---: |
| R－41 | 85 watt capacity | 4 |
| R－42 | 125 watt capacity | 5 |
| 6－43 | 175 watt canactty | $51 / 2$ |
| R－44 | 250 watt capacity | 61／2 |
| 8－45 | 500 watt capacity | 12 |
| R－46 | 1200 watt capacity | 18 |
| R． 64 | 2500 watts．no cord | 30 |

Ideal for isolating line noise，AC－DG sets，etc：Excellent electrostatic shielding． 2000 volt breakdown test．Six foot cord and female receptacle．

Primary $110: 120$ volts， $50 / 60$ cyelog－Secondary 110－120 volts

| Type | Hating | Wgt． |
| :---: | :---: | :---: |
| No | His． |  |
| R－73 | 100 watts | 6 |
| B－74 | 250 watts | 12 |
| R－75 | 600 watts | 20 |
| B－76 | 1200 watts | 30 |
| R－77 | 3500 watts <br> （no cord） | 70 |

## EXPORT VOLTAGE ADAPTER

Complete with cord and plug and special locking switch providing for line voltages of $105,115,125,135,150,210,230,250$ volts； 42 to 60 cycles．Output voltage 115.

| Type <br> No． | Rating | Wat． <br> L68． |
| :--- | :--- | :--- |
| R－47 | 85 watts | $41 / 2$ |
| R 48 | 150 watts | $51 / 2$ |

## LINE VOLTAGE ADJUSTERS WITH METER

The perfect answer to abnormal or fluctuating line voltage．Adjust switch so that meter reads at red line and you know that your，equipment is working at correct voltage．
These units combine a tapped cuto－transformer with a switch and meter in a compart，rugged assembly．

The nine tap switch provides for line voltages of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output wodels． All units are designed for $50 / 60$ cycle service and come compieta with 6 foot input cord and plug．and outlet receptacle．

| $\begin{aligned} & \text { Ty口⿰亻 } \\ & \text { foo. } \end{aligned}$ | Primary Voltagot | Sec． Volte | Watts | wt． <br> Lbs． |

## PHOTC FLASH TRANSEORMERS

Can be used for either standard（Arnglo type）or trigger（Sylvania type）multiple flash bulbs．Circuit details included with transformer．
Pr－1 Primary for 115 volts，50／60 cycles． Secondaries for power supply delivering 2200 volts DC to condenser up to 100 Mfd ． （ 30 Mfd．charges in 4 Sec ．）Compound sealed in G－3 case $21 / 8 \times 23 / 4 \times 21 / 2$ inches high．Weight 2 Lbs．
PF－2 For portable photoflash service．Pri－ mary tapped for 4 volt or 6 volt battery （full wave vibrator）．Secondary for power supply delivering 2200 volts DC to con－ denser up to 60 Mid ．（ 30 Mid ．charges in 8 sec ．with 6 volts or 14 Sec ．with 4 volts）． Compound sealed is G－3 case．Weight 2 Lbs．

PF＿3 Trigger Trapsformer $15 K V$ peak

## TELEVISION TRAMSFORMERS

These components are quality designs，vacuum impregnated and fully compound sealed in beavy steel cases affording a high degree of shielding：

PARALLEL FEED AUDIO REACTORS

Designed to eliminate the direct current component in the primary of audio transformers to be used as plote coupling reactor where the use of a high resistance is objectionable. Low distributed copacity insures excellent high frequency response.

## HI "Q" REACTORS

To be used in filters or tuned circuits.
Standard values range from 10 millihenries to 50 henries

| Freed <br> No. | Application |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

The mounting dimension $15 / 8$ is given between centers across corners.

## THE FREED MULTICHANNEL FILTER

The unit is a five channel interstage type narrow bandpass filter designed for frequency selective remote control applications. The five inputs are connected in parallel, the five outputs are available separately. The frequency characteristic of each individual filter is $\pm 1.5 \mathrm{DB}$ for $\pm 10 \%$ of the nominal frequency. The attenuation per octave ranges from 35 to 40 DB . Each individual filter provides a step up ratio of 6 DB . The units are designed for a 10,000 ohms input impedance. Filters of this type can be supplied for frequencies from 300 to $10,000 \mathrm{cps}$.

UNIYERSAL OUTPUT TRANSFORMERS

Covering most applications. Correct matching for the various conditions can be obtained by the wide range of plate or line and voice call impedanees.

## FREED TRANSFORMER CO., INC. OUTPUT TRANSFORMERS H. O. T. Series

Designed for delivering the maximum audio frequency power from an amplifier to a load (voice coil or line). Good frequency response and low harmonic distortion are the quality factors of the H.O.T. output transformers. Fully enclosed shielded type with leads. All H.O.T. series transformers have multiple secondary impedances.

The 500 ohms secondary is designed in such a way that it can be used with a 600 ohm line.

## FREED BAND PASS FILTER

This unit is designed for use in communication equipment to transmit speech frequencies only. The highly selective property of the filter makes possible the increase of power in the frequency band necessary for special communication work and eliminates undesirable frequency components in the high and low end of the audio spectrum.

## THE FILTER HAS THE FOLLOWING CHARACTERISTICS:

10,000 ohms or 8000 ohms impedance
Low frequency cut-off of 300 cps
High frequency cut-off at 3000 cps
2.5 DB ottenuation at the cut-off frequencies
7.5 DB Insertion Loss 40 DB attenuation af 100 cps Working level - 0 DB
Maximum Level - $\pm 10 \mathrm{DB}$.

## FREED TRANSFORMER CO., INC.

## RECEIVER AUDIO TRANSFORMERS

Designed for use in receiver audio circuits where a reasonably good frequency response is required. To be used for Class A applications, i.e., where no great current is drawn.

## FREED TRANSFORMER CO., Inc.

ing features of the C Series Audio Transformers.
Low level input and output transformers have a balanced hum bucking coil construction. The frequency response of all these units is flat within $\pm 2 \mathrm{db}$ fram 60 to $10,000 \mathrm{cps}$.

A quality line of transformers used in Public Address amplifiers and transmitters. Uniform case design, universal maunting, conservative ratings, vacuum impregnation of coils and moisture proof sealing of all these transfarmers is one of the outstand-

## HERMETICALLY SEALED UNITS AVAILABLE

Made to customer's specifications
where temperature and humidity are factors. For performance under most adverse conditions.

UPRIGHT OR INVERTED MOUNTING CAPACITORS

## TYPE E

These units are widely used in highest-quality radio, communicaions, electronic and similar types apparatus. Type $E$ capacitors are hermetically-sealed. Ring-type clamp provides rigid and conveniant method of mounting unit in vetted or upright beneath, on or through mounting surface. Avail. able with single or multiple alements. Single unit has two terminls, dual unit has three terminals, and triple unit has four terminals. Cathode connections made through one terminal in cover.

TYPE E single Section

# DANDEES <br> <br> Minature Tubular Aluminum Can <br> <br> Minature Tubular Aluminum Can DRY ELECTROLYTICS 

 DRY ELECTROLYTICS}

## TWIST-PRONG BASE CAPACITORS*

## TYPE AF

These capacitors are tirhtly sealed round aluminum can units. They are mounted by means of prongs which extend through the mounting surface and are twisted to hold the unit in place. These are high +quality units especially suitable in compact assemblies where space is limited. All connections, except the cathode, are made through terminals in the cover. The cathode is connected to the container. Base prongs slip into fibre or metal elliptic washer that is riveted or eyeletted on chassis, and are bent over. Fibre washer provides insulated can; metal elliptic washer, grounded can. Metal or fibre washer supplied at 5c each net. The terminal lugs slip through holes in washers for soldered connections.

Tightly sealed aluminum-can dry electrolytics for use where moneyand space-saving considerations are paramount. Smallest proportions consistent with full-rated capacity and voltage, operating under nor-mal-duty conditions.
Excellent for crowded assembliés. DANDEES are favorites for use in midget sets, AC-DC sets, autoradios, etc. Also many servicing jobs where low cost is important. ${ }_{\text {tive) }}$

## PAPER-WOUND REPLACEMENTS FOR ELECTROLYTICS <br>  <br> TYPE PWP

High-grade paper sections in standard inverted screw mounting aluminum can (PWC) or cardboard case (PWP) similar in appearance to electrolytics. Used as replacements for standard electrolytics indicated; applications subjected to ticularly in first stage of fiter parcicularly in frst stage of filter cirencountered. No polarity to ses are served Actual capacity indicated in each Acta capacity indicated eatrolytic bing replaced but will be found bequ repiaced but will de cuis adequate in most filte circuits since filtering capacity in euetroytics is more than gener ous. PWP has cardboard mounting langes; PWC similar to the in verted dry electrolytic types.

## SILVERED MICA CAPACITORS

For most critical applications where precise capacity values must be attained and maintained, AEROVox silvered mica units are generally available. Encased in red molded XM bakelite. Similar in external qppearance to standard bakelite molded mica units.

Unique construction. Only plus . 0022 per degree F.-a remarkably low temperature coefficient. Excellent retrace characteristics. Practically no capacity drift with time. Exceptionally high " $Q$ ". Mechanically protected against physical damage and changes in electrical characteristice due to varying atmospheric conditions. Wax impregnated externally. Ideal for use in circuits where inductance and capacity product must remain constant under all operating conditions. Specifcally designed for use in push-button tuning, oscillator padding circuits, fixed tuned circuits, and as capacitance standards, etc., where accuracy and stability are of prime importance.
Standard tolerance $\pm 5 \%$. For $\pm 20 \%$ deduct $10 \%$ from price. For $\pm 10 \%$ deduct $5 \%$. For $\pm 3 \%$ add $10 \%$. For $\pm 2 \%$ add $15 \%$. For $\pm 1 \%$ add $25 \%$.

## Commercial Grade <br> mica transmitting CAPACITORS

Extra-heavy-duty Capacitors for

- Commercial Communication Com panies
- Broadcasters
- Builders of Quality Radio and Electronic Equipment
- Amateurs, Experimenters

With these capacitors Aerovox is contributing its share towards narrowing still more the small remaining gap between professional and amateur radio practices.

Due to the normally limited demand for these extra-heavy-duty mica capacitors, as well as the considerable number of capacitance and voltage ratings in which they are made, this line is made to special order. However, your Authorized Aerovox Jobber is now oble to order these commercial-grade capacitors for you.

Consult your Aerovox Jobber for specificatians and quotations.

## MICA CAPACITOR COLOR CODES

## AEROVOX TYpe IN-23

For elimination of interference caused by lieon lamps or fractors. Mounting bracket tors. Mountrg bracket for attaching to neon fixture (one eliminator needed for each fix-
ture) or for attaching ture) or for attaching Flexible leads for connecting across motors such as in hairdriers, fans, mixers, etc. $.5-.5 \mathrm{mfd}$. $1 \times 21 / 8 \mathrm{in}$.

TYPE 1N-23
List Price $\$ 1.50 \quad$ Net Price $\$ 0.90$

## AEROVOX Type IN-27

Simple, inexpensive noise filter. Inserted between set and outlet between set and outlet slight. Also used with appliance causing lowapphance causing low-
intensity interference. Keeps troublesome noises out of house wiring and power line. Size $13 / 8 \times 1 \frac{1 / 2}{}$ inches.

## TYPE IN-27

List Price $\$ 1.50 \quad$ Net Price $\$ 0.90$

## AEROVOX

Type IN-28
Intended for cases where ground is considerable dis* tance from point of application. Most efficient when mounted directly on ivierfering device by bracket. size $13 / 8 \times 2$ inches. TYPE IN-28
List Price $\$ 2.00 \quad$ Net Price $\$ 1.20$

## AEROVOX Type IN-29

Provides additional fiItering action buer IN27 and IN-28, Espe-
cially effective for local sources of interference of variable character but strong intensity. Very effective for electric razor and other vibrating devices. Plugs between
device and Iine. Size device and line. Size $13 / 8 \times 3$ inches.
TYPE IN-29
List Prices $\$ 1.75 \quad$ Net Price $\$ 1.05$

## TYPE ANL. 37

Plugs between interfering device and outlet. Selector switch adjusted until noise is eliminated or minimized. Dial indicates which type filter to use. Handsome, sturdy metal cabinet. Compartment contains necessary test leads and attachment plugs and clips. Size $51 / 2 \times 51 / 2 \times$ 8 inches.

TYPE ANL-37
Dealers Net Price............ $\$ 17.50$

## AEROVOX TYpe IN-30

Similar to IN-29 but with additional inductance. Handles more severe interference. Plugs between set and outlet, or preferably between noisy appliance and outlet. Size $13 / 8 \times 3$ inches.

TYPE IN- 30
List Price $\$ 2.50 \quad$ Net Price $\$ 1.50$
AEROVOX Type IN-31

Plugs in between attachment cord and electric outlet, either of set or preferably at appliance. Additional inductance for better filtering. Works best mounted by bracket directly appliance. Size $13 \times 3$ inches.

TYPE IN-3i
List Price $\$ 3.00 \quad$ Net Price $\$ 1.80$

## AEROVOX Type IN-42

Designed for use in the more serious cases of radio interference from power lines and appliances. Provided with inductance as well as capacitance for thorough filtering action. Plugs into clectric outlet. Radio set or interfering device plugs into receptacle of the filter. Recommended for use between in. terfering device and power line. Size $21 / 2^{\prime \prime} \times 33 / 4$ ". Provided with mounting ring. Rated at 6 amps . for $110-220 \mathrm{v}$. A.C..

TYPE IN-42
List Price $\$ 7.5$

MIDGET TUBULAR METAL-CASED "HYYOL" CAPACITORS Type 38

These units are hermetically-sealed and are exceptionally compact. Or iginally designed as alternates for mica capacitors but have since become a standard item in the Aerovox ail-filled capacitor line. Not only used as replacements in exist ing equipment, but are especially suitable for newly-designed equipment particularly where allowable weight of the finished assembly and allotted space is at a mini. mum. Despite unusual ultra-smal size for oil-impregnated, oil-filled capacitors, constructional and elecrical characteristics meet many molded-in-bakelite mica to which molded-in-bakelite mica capacitors are normally subjected. Type 38 units are normally supplied with
case insulated, and are provided with outer insulating tube.

# AEROVOX "HYYOL" 

OIL-IMPREGNATED OIL-FILLED CAPACITORS

In Rectangular Metal Cans
Type 09

Type 09 (Basic)

OIL-IMPREGNATED

AEROVOX "HYYOL"

## OIL-FILLED

## CAPACITORS

In Round Aluminum Cans -Inverted Mounting

## Type 10

This is an improved design, replacing the former single terminal type. This new design is physically interchangeable with the old. Ideal for crowded assemblies; a logical choice in filter circuits of power supplies, high-gain highfidelity amplifiers, and ${ }^{2}$ small transmitters. Hermetically-sealed. Has mitters- Hermetically-sealed. Has assembly. Both terminal lugs are insulated from container.

Type 610-600v. D.C.W. $\begin{array}{lll}\text { Cap. Size-Ins. } & \text { List } \\ \text { Mfds. } & \text { Dia.-Hgt. } & \text { Price } \\ \text { Mrice }\end{array}$ $\begin{array}{cccc}\text { Mfds. } & \text { Dia.-Hgt. } & \text { Price } & \text { Price } \\ 2 & 11 / 2 \times 31 / 2 & \$ 4.15 & \$ 2.49 \\ 4 & 11 / 2 \times 5 \times 1 / 4 & 5.70 & 3.42\end{array}$

AEROVOX "HYYOL"
VErtical Mounting HIGH-VOLTAGE
CAPACITORS
DIL-IMPREGNATED OIL-FILLED

## Type 12

This is an im mersion - proof capacitor de-
signed to meet bigh - voltage operating requirements. Suitable for such high - voltage circuit applica tions as in television, cathoderay tube power supplies, high voltage rectifipass or, as a high - voltage by-pass capacitor. Recommended where long leakage path between terminals is required. Barrier in bakelite top increases insulation and creepage path between terminals. For certain applications, the ceramic insulators may be removed if desired. Supplied with adjustable mounting ring for vertical mounting.

These capacitors meet the exacting requirements of radio trans－ mitter service and other applications requiring high－voltage，heavy－ duty，transmitter－type oil capacitors．Available in ratings from 6000 volts to 50,000 volts D．C．working．These are single－section or par－ allel－section capacitors．Type 20 units are critically checked to close standards of physical and electrical perfection．Capacitor sections con－ sist of multi－layered capacitor tissues and high－purity aluminum foil， uniformly and accurately wound under critically－controlled tension， then vacuum－impregnated with Aerovox Hyvol to insure stability of full－rated capacitance，even at zero temperatures．Welded steel con－ tainers finished in non－corrosive，dark grey lacquer．Heavy－duty por－ celain insulator assembly is cork－gasketed and pressure sealed to pre－ vent leakage of oil or entrance of moisture at the terminals．Single－ section units rated at 30 KV or less are normally supplied with capaci－ tor section insulated from ground．Additional information on Type 20 units rated at 37,500 volts and 50,000 volts，as well as voltage－ doubler units rated at 25,000 volts output is available on application．
All Type 20 units are built to special order－not carried in stock． Submit full application information when ordering．

HERMETICALLY－SEALED OIL－IMPREGNATED，OIL－FILLED ＂HYYOL＂CAPACITORS

## Type 18B

（Terminals on Bottom）

Compact，oil－filled，hermetically－ sealed units．Type 18 is smaller in height and depth than Type 16 ． However，greater width makes Type 18 adaptable for applications where small－sized dual－and triple－section capacitors with three terminals are required 0therwise similar to Type 16 with respet to construction and with respectication．

## "PYROHM JUNIOR"

Wire-Wound Vitreous-Enameled FIXED RESISTORS
Types 931 and 933

Compact, genuine wire-wound wnits. Covered with vitreous-enamel. Highest quality materials used throughout. Correctly designed. Note these features:

1. Orack-proof refractory tubing for the support. Adequate heat dissipation.
2. Quality resistance wire precisely space wound under tension.
3. Copper terminal band clamped to tubing. Wire ends wrapped about raised ear and brazed to same.
4. Heavy vitreous-enamel coating for permanent seal against moisture, oxidation and mechanical damage.
5. Pig-tail of stiff wire 2 in . long soldered to terminal band for positive, zon-breakable connection.

Type 931-10 Watts
Size-Ins. $\frac{5}{5} \times 13 / 4$
Ranges
$1-10,000$
......... List
2,000-50,000 …..... $.65 \quad \$ 0.35$
30,000 to 50,000 ohms, rated at 5 watts.

## INSULATED MOLDED CARBON RESISTORS

Types 1097 and 1098

Small, noiseless, vibration-proof. Crack-proof molded casing around molded carbon resistance element. Tinned copper pig-tail leads 2 in . long. Resists humidity effects. Ideal for AVC circuits, highogain amplifiers. RMA color - coded; stamped with resistance value. Precision tested. Standard tolerance $10 \%$. These types may come thru for some time in slightly larger sizes until complete changeover is achieved.

## AEROVOX CAPACITANCE AND RESISTANCE BRIDGE

AEROVOX MODEL 76 Resistance Capacitance Bridge is the new postwar general. utility instrument combining simplicity of operation, remarkable degree of ac-
Extreme ruggedness makes it equally suitable out on the job, in the shop, or in the laboratory

Sloping panel $10^{\prime \prime} \times 6^{\prime \prime}$. Aluminum, etched and anodized. Steel cabinet, black crackle finish. All readings taken from main $4^{\prime \prime}$ dial. Same calibrated scale eliminates trouble and chances for errors in reading. Linear scale, also an exclusive feature, means no crowding at high end to make readings difficult and inaccurate. Both the resistance and the capacitance readings are covered by six overlapping ranges, as against two or three in usual service instru, ments, for maximum sensitivity and accuracy. Positive "magic eye" indicator.

Here is what Model 76 bridge does: (1) Measures capacitance from 100 mmf . to 200 mid . in six ranges. (2) Measures resistance from 10 ohms to 20 megohms in six ranges. (3) Measures power factor from 0 to $50 \%$. (4) Provides D.C. polarizing potential for leakage measurements, from 0 to 600 V. D.C., continuously variable and calibrated in volts. (5) Checks leakage or insulation resistance.
Instrument is provided with shockproof, color-coded test leads fitted with banana plugs for panel jacks, and with clips. Instructions. Measures $10^{\prime \prime} \times 73^{\prime \prime} \times 81 / 4^{\prime \prime}$. Weight 8 lbs .3 oz .

## AEROVOX MOTOR-STARTING CAPACITOR SELECTOR

* Determine the necessary capacitance to replace the wornout motor-starting capacitor, at the mere Hip of a switch or two! That's the idea of the Aerovox Motor-Starting Capacitor Selector. In the absence of label, nameplate or other identification means of the original equipment being serviced, this simple, inexpensive, handy instrument provides the immediate answer.

The Capacitor Selector, by throwing a series of toggle switches, provides a choice of capacitance ratings: $171 / 2,35,521 / 2,65,70$, $821 / 2,100,1171 / 2,135$ and $1521 / 2 \mathrm{mfd}$. A voltmeter indicates the maintenance of safe starting voltage. The instrument is merely clipped to the motor in place of the defective capacitor. Capacitance eadings are made from the total of open switches directy from the selector. The 0.150 v AO voltmeter can be used independently.

Complete Kit, ModeJ No. 87, comprising
Capacitor Selector and two Emergency
Capacitors. Dealer's, servicemen's net cost $\$ 20.95$
Capacitor Selector, Model No. 85........... $\$ 11.64$
Emergency Capacitor, Model No. 86, each $\$ 4.65$

## EMERGENCY CAPACITORS

$\star$ The RIGHT capacity value is determined by the Capacitor Selector in a jiffy. That's half the job.
The other half is to have that RIGHT capacity immediately available. And that's where the Aerovox Emergency Capacitors come in to round out this Aerovox "diffy Way" of handling motor-starting capacitor jobs.

The Aerovox Emergency Capacitors are truly universal Units. Each provides any capacity value from $171 / 2$ to $1521 / 2$ mfd., simply by cutting in one or more sections. The unit then clips on to the motor. The refrigerator gets going without delay. Later, at the serviceman's convenience, the usual replacement is installed.

Emergency Capacitor, Model No. 86, $\$ 4.65$ Net, each

## AEROVOX L-C CHECKER

$\star$ This exclusive Aerovox development has no counterpart, much less an equal. Basically, it determines the effectiveness of any capacitance or inductance while actually connected in its circuit. Testing efficiency is greatly increased. Components may be tested singly or in combinations whereby to determine resonant frequency and effectiveness of given circuits. Circuit or systems may be adjusted by this checking means for proper operating efficiency. Certainly a "must" instrument for the radio worker.

HERE'S A PARTIAL LISTING OF WHAT THE AEROVOX L-C CHECKER DOES:
It checks capacitance of capacitors at radio frequencies without removing them from circuit. - It checks alignment of r.f. circuits; also tracking of super-het. oscillator. - It checks alignment of broad or narrow band i.f. amplifers. - It checks the tuning of wave traps and of image-rejection circīits; frequency ranges of receivers; frequency ranges of signal generators; calibration of wave meters. - Identifies harmonics of frequency standard in precision frequency calibration of radio equipment - It checks natural resonant points of r.f. chokes making sure they are beyond operating range. - It traces resonant absorption trouble in "all-wave" receiver circuits-locating dead spots, etc. - It locates resonant points in shorted windinge (unused coils) in multi-range oscillators, etc. - Locates resonant frequency of r.f. coupling chokes, making certain of placement to secure enough gain balance over tuning range of r.f. stage - It checks natural period of antennae and transmission lines in order to have resonant peaks at certain frequencies. - It checks quartz crystals for frequency, false frequency, operation at harmonics, and for activity. - Checks FM i.f. transformers. - Checks alignment of FM i.f. channels. - Checks Leakage of paper capacitors. And it checks many other functions when used with auxiliary equipment. This cheeker operates from AC or from DO 120 volts source. It has a frequency range from 100 KO to 44 MC as follows:

Range: $\mathrm{A}-75-225 \mathrm{KC} \mid \mathrm{D}-1.5-5 \mathrm{MC}$

$$
\begin{aligned}
& \mathrm{B}-200-600 \mathrm{KC} \\
& \mathrm{C}-550-1650 \mathrm{KC} \\
& \mathrm{~F}-4.5-14.5 \mathrm{MC} \\
& \mathrm{~F}-13-44 \mathrm{MC}
\end{aligned}
$$

Capacitance Range: . $00025 \mathrm{mfds} .-1 \mathrm{mfd}$.
Inductance Range: $0-500 \mathrm{MH}$
Tube Complement: 6J5G, 25Z5, 6E5, VR105
Accuracy: Capacitance and Inductance $\pm 10 \%$
Frequency Ranges $A, B, C: \pm 1 \%$
Other ranges: $\pm 2.5 \%$
Dimensions: $101 / 2 \times 71 / 2 \times 51 / 2$
This new model L-C Checker has provisions for determining the insulation resistance of capacitors in addition to the measurements described in bulletin 995A.
Weight: (shipping) 6 lbs .

Watch for the announcement of the new model Aerovox L-C Checker!

## Standard Universal Electrolytic Motor-Starting Replacement Capacitors

Many of these Standard Universal replacements are also Exact Duplicate replacements. They have the same AEROVOX catalog numbers shown in the special Motor-Starting Capacitor Catalog devoted to the AEROVOX complete line. This list is intended to simplify the selection of required capacitor when manufacturer's part number and AEROVOX catalog number are not known. Information given: capacity range, voltage rating, dimensions and type of container may help dete

## Standard Universal Electrolytic Motor-Starting Replacement Capacitors

Many of these Standard Universal replacements are also Exact Duplicate replacements. They have the same AEROVOX catalog numbers shown in the special Motor-Starting Capacitor Catalog devoted to the AEROVOX complete line. This list is intended to simplify the selection of required capacitor when manufacturer's part number and AEROVOX catalog number are nat known. Information given: capacity range, voltage rating, dimensions and type of container may help determine capacitor required in absence of original unit or name-plate data. This listing also ideal for use with the AEROVOX Capacitor Selector.

## Standard Universal Replacement Oil Capacitors

The following Universal Replacement Oil Capacitors are arranged according to types of containers, and capacitance and voltage ratings. The listing is intended to simplify the selection of required capacitors when manufacturers' part numbers and Aerovox catalog numbers are not known. The required standard Aerovox capacitor may be determined from the information given below.

## Standard Universal Electrolytic Mołor-Starting Replacement Capacitors

Many of these Standard Universal replacements are also Exact Duplicate replacements. They have the same AEROVOX catalod numbers shown in the special Motor-Starting Capacitor Catalog devoted to the AEROVOX complete line. This list is intended to simplify the selection of required capacitor when manufacturer's part number and AEROVOX catalog number are not known. Information given: capacity range, voltage rating, dimensions and type of container may help determine capacitor required in absence of original unit or name-plate data. This listing also ideal for use with the AEROVOX Capacitor Selector.

# Aerovox Special-duty Capacitors <br> IF IT'S MARKED "AEROVOX'" IT'S A QUALITY CAPACITOR 

## P <br> - This is a postscript. This page contains several new Aerovox products recently introduced and not as yet cataloged. These special-duty capacitors are of particular interest to advanced radio workers, builders of special equipment, experimenters and engineers. <br> Other new products are being announced from

time to time. Aerovox engineering is keeping abreast of the rapid advances of the radio-electronic art. Therefore, if you do not see what you need in these pages, tell us about your unusual needs. Aerovox either has a type already developed and in production, or will consider an entirely new type if warranted by the anticipated demand.

## LOW-INDUCTANCE MICA CAPACITOR

AEROVOX SERIES 1690 is a molded-inbakelite mica capacitor destgned for exceptionally low loss operation at ultra high frequencies: External evidence of its efficiency is offered by the rounded hardware-round nuts, round wash ers and spherical lock nuts eliminating sharp edges and corners that cause corona losses. The use of fine threads for the terminal studs insures maximum contact and minimum r.f. resistance, Silver plating of all conducting members minimizes skin resistance. The body is of XM or yellow low-loss bakelite. Internally, the mica stack is designed for a straight-ijne path for high frequencies.
This type is several times larger than the conventional molded-in-bakelite transmitting
micas. Body dimensions are $27 /{ }^{\prime \prime}$ wide $\times 2-3 / 16^{\prime \prime}$ deep I 1 $3 / 8^{\prime \prime}$ high, and $43 / 4$ " overall between rounded terminal tips.
Units are avallable in ratings up to 20,000 volts D.C. Test or 10,000 volts operating, and in capacitance values up to .001 mfd, at the highest voltage rating.
This type has been developed specifically for lower r.f. resistance and impedance, thereby providing increased KVA ratings for given size. Such units can be advantageously applied as blocking capacitors in transmission lines, as tank capacitors for high-frequency oscillators, as by-pass capacitors for ultra-high-frequency energy, and as coupling or by-pass capacitors in induction-heating circuits.

## WATER-COOLED MICA CAPACITOR

AEROVOX SERIES 1780 water-cooled mica erpacitor is available for extra-heavy daty service such as high-power transmitters and induction furnaces. The watercooling feature boosts the KVA rating by a factor of five or more, or conversely, greatly reduces the buik for given rating.

The higher KYA ratings are obtained in two ways: First, by exceptional design such as critical arrangement and location of miea sections; critical selection of materials; specially-plated parts; large crosssection of eonductors; attention to details. Second, by the use of a water-cooling system so designed as to provide maximum heat transfer from capacitor to cooling coils.

The mica stacks are in an oil bath. Cooling coils in the oil bath provide for the efficient transfer of heat. What this cooling eystem means may be judged from the fact that a unit handing 200 KVA for
air-cooled operations steps up to 1000 KVA with water-cooling.

The series-paralfel mica stack is designed for uniform current distribution throughout. There is a large factor of safety. Silver-plated hardware minimizes skin resistance. Terminals are furnished with large radii of curvature to minimize and even eliminate corona. The steatite insulator is shaped to hold gradients below corona limits.

Heavy non-ferrous weided metal case, hermetically-sealed and grounded. Sidemounted nipples for connecting watercooling hose. Sturdy mounting flanges. Provisions for making connections with high-current-capacity conductors. Fourstud terminal for low-loss connections.

Available in ratings up to 25,000 volts A.C. Test, and in capacitances up to .01 mfd .

## ULTRA-HIGH-FREQUENCY CAPACITORS

AEROVOX SERIES 1860 and 1865 are engineered and especially recommended for use in ultra-high-frequency radio equipment such as television and FM transmitter, as well as other miscellaneous applications in the u.h.f. field. In such applications they are readily adaptable for use as fixed-tuning capacitors, bypass, blocking, coupling, neutralizing and antenna-series capacitors.

Losses are extremely low, due to the highly refined sulphur dielectric. Corona losses are avoided by the unique construction design, the grounded case and the terminal on each type.

Series 1860 (not illustrated) is the smaller unit in an aluminum can, intended more for the radio amateur and experimenter, and for low-cost assemblies. It has a suitably plated brass terminal mounted on a mica insulating plate. Available in four types: .0001 mfd ., $10,000 \mathrm{v} .$. ; $.000025 \mathrm{mfd} ., 10,000 \mathrm{v} . ;$. 00005,5000 v.; . $00005,10,000$ v. Voltage is Peak Working Volts.

Series 1865 (illustrated) is the larger unit, in a cast aluminum case with steatite insulator supporting the higher-voltage terminal. Available in capacitances from . 00002 to .000125 mfd , at 10 , 000 v .

## AMCON PAPER CAPACITORS

There is a standard type of Amcon Paper Capacitor to fill practically all commonly encountered requirements-a wide range of capacities, voltages, dimensions, casings and terminals. All are built to AMCON'S highest precision standards. For special capacitor problems, AMCON'S competent engineering staff is always available and inquiries for specific needs are invited.

Type PPLL

Type PPL
Encased in gleaming plastic with inverted one nut mounting permitting use on top or side of chassis. Condenser unit is oil cooled and molded in oil proof wax. Permanently sealed, moisture proof, wide temperature range.
Working Voltage 600 V.D.C.-Test Voltage 1800 V.D.C.

| Cat. No. | Cap. Mid. | Size | List |
| :--- | :---: | :---: | ---: |
| PPL62 | 2 | $13 / 8 \times 31 / 2$ | $\$ 2.15$ |
| PPLL62. | 2 | $13 / 8 \times 31 / 2$ | 2.50 |

TYPE US UNCASED SECTIONS
IDEAL FOR REPLACEMENT WORK

Designed for reliability rather than for appearance. Wound of chemically pure paper and foil, carefully impregnated and sealed with high melting point wax. Long, securely anchored leads. Working Voltage 600 V.D.C.-Test Voltage 1800 V.D.C.

## TUBULAR PAPER CAPACITORS

Non-inductively wound with highest quality paper and tinfoil. Pigtail leads hot soldered to sections. Vacuum sealed in thoroughly impregnated cardboard tubes and fully protected against moisture.

WOREING VOLTAGE 600 V.D.C.

## TYPE GC GENERATOR CONDENSER

For heavy-duty automotive service. Leads hot soldered and swedged to the condenser section and to the can. Thoroughly impregnated and sealed. .5 Generator Condenser

## TYPE AHB-PAPER DIELECTRIC (BATH-TUB) CAPACITORS

Units are non-inductively wound, wax impregnated, oil cooled, wax sealed and encased in drawn metal container, well tinned to prevent corrosion. Exclusive AMCON Terminals (combination one-piece bushing) give high voltage rating between terminals and can. Tested at three times rated voltage.

## TYPE KT CAPACITORS

Kraft tube unit with center mounting bracket for use in assemblies where space is limited. $41 / 2^{\prime \prime}$ insulated wire leads. Dual units made with four or three leads and common negative. Other capacity combi-
 nations available on request.

## THREE LEADS - COMMON NEGATIVE

Working Volts 150 D.C. - Peak V. 200 D.C.

## TYPE CB ELECTROLYTIC

In Cardboard Containers
These dry electrolytics are available in a wide variety of capacities and voltages. Furnished with six inch leads and solder lug mountings. Triple sealed for long unfailing service.

WORKING VOLTAGE 450 V.D.C.-PE

## AMCON TELEPHONE CONDENSERS Type AHT <br> hermetically sealed in metal containers

Each unit receives full minute test at flash-test rating-is fully guaranteed as to capacity, insulation and breakdown tests. Heavy-duty, water-tight, all-metal containers, enamel dipped. Minus 10, plus 30 tolerance, standard; others on special order.

Type 50 Dual Padders provide two variable trimmers mounted on a single base. This unit is designed as a tuning component for I. F. transformers; and as such, may be snap-in mounted along with the transformer coil in any size shield having dimensions exceeding $1-1 / 16^{\prime \prime} \times 1-1 / 16^{\prime \prime}$.

El-Menco Padding Condensers have been acclaimed by engineers as the finest development in adjustable mica condensers.
The construction is such as to completely enclose and protect the delicate edges of the mica films, made of the finest quality clear India ruby mica.
The phosphor bronze adjusting plates assure permanent resilience and freedom from mechanical fatigue. All parts are heavily plated to resist corrosion.
The adjustable screw advances $1 / 64$ inch for one complete rotation thus insuring accurate adjustment of the capacity setting.

## EL-MENCOCAPACITORS

## TYPE 46 MICA TRIMMER CONDENSER

'The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.
The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.
El Menco trimmer condensers are treated for resistance to hu midity and for permanence of capacity setting.
Trimmers shown here are standard sizes and capacities.

## EL MENCO PUSED PLUG

They're all saying again, "It's a wonder no one thought of it before." Here's a plug that carries its own fuses.

It attaches to the cord just as any standard plug, looks pretty much the same, light-weight, but easier to handle because of finger grips. However, it contains two small fuses, which provide complete protection against damage to the appliance and to the main line.
Blown fuses are easily removable; replacements are available up to 10 amperes.

# PLASTICON CPCACITORS 

## TYPE A PLASTICONS

## DIELECTRIC

PLASTICON A is a transparent, thin plastic film. Made to our specifications, it is chemically pure, and has extremely uniform characteristics. Superior to the finest linen or kraft condenser paper hitherto used, Plasticon A film is free from metallic particles or other foreign matter. It has a much higher tensile strength than paper and does not become brittle with age and heat. It is not porous in the same sense as paper and has a higher breakdown voltage ( 4000 to 4500 v.p.m. as against 700 to 1000 v.p.m. for paper).

## PROCESSING

Plasticon A film is carefully processed to remove all traces of moisture. The capacitor sections are cased in various types of containers and impregnated through small vents and then solder sealed. With a uniform film as a foundation, this process guarantees uniformity in production.

## IMPREGNANTS

The three impregnants used in Plastican A capacitors are chemically neutral to the film. They are carefully processed to remave residual meisture and entrapped gases.
PLASTICON AO . . . Mineral oil impregnated Plasticon A capacitor winding. Properly processed mineral oil is one of the finest electrical insulating mediums.
PLASTICON AS . . . Silicone fluid impregnated Plasticon A winding. Silicones are Hydrocarbon-Silicon-Oxygen compounds of great thermal, chemical, and electrical stability. The silicone fluid used in Plasticon AS units will not deteriorate ai $250^{\circ} \mathrm{C}$. It has a dielectric constant of 3 and a p.f. of .0002. For aliquid it has an extremely high dielectric strength (about 2000 v.p.m.)
PLASTICON AW . . . Petroleum-Wax impregnated Plasticon A capacitor winding. Used at rated valtage and femperature Plasticon AW capacitors have a fine performance record on less severe applications where size and cost are a factor.

## PLASTICON CPCAPATORS

## DC CAPACITORS for the following applications

TRANSMITTERS, RADIO AND TELEVISION
AIRCRAFT ELECTRONIC EQUIPMENT
AMPLIFIERS
CAPACITANCE TESTERS
OSCILLOSCOPES

## DCOVALS

## SPECIFICATIONS:

Mineral ail impregnated and filled. Hermetically sealed; can be operated in any position.
Canservatively rated; can be operated continuously at 10\% over rated voltage.
Capacitance Tolerance-Standard plus or minus $10 \%$.
Ambient Temperature Range-minus $40^{\circ} \mathrm{C}$ to plus $85^{\circ} \mathrm{C}$. If required, Plasticon AOCO capacitars can be made for $105^{\circ} \mathrm{C}$ operation.
Insulators--Two wet-process porcelain bushings on Types AOCO6C, AOCO1M and AOCO2M. One soldered-in metallized glass standoff, can grounded on Types $A O C O 3 M, A O C O 5 M, ~ A O C O 8 M$ and AOCOIOM.
Terminals-All DC Ovals have 8-32 screw and hex nuts with removable hot-tinned solder lugs.
Case-Obround (flatiened oval) cross section. Drawn or lock-seam lead coated steel with heavy finish of gray organic lacquer.
Brackets-Two right angle maunting foot brackets are provided as standard on all AOCO capacitors. Add $1 / 2^{\prime \prime}$ to $C$ to get maunting centers. Universal mounting strap or spade-screw bracket can be furnished on request.

# PLASTICON CAPACLIORS 

## GLASSMIKES

TELEVISION AND OSCILLOSCOPE CIRCUITS VIBRATOR BUFFER AND ARC ELIMINATION AF AND RF COUPLING AND BYPASS USES GEIGER COUNTER AND INSTRUMENT CAPACITORS HIGH TEMPERATURE AC AND DC APPLICATIONS, Etc.

Modern functionally designed capacifors. Metal ferrules are soldered to silver bands fused to each end of heavy-walled glass tubes. This vacuum tight assembly is fungus-proof and passes Signal Corp, Air Corp, and Navy thermal cycle and immersion tests. Ample flashover spacing is provided between silver bands for sea level operation. Submit specifications for high altitude applications.

## Specifications:

Mounting: $2^{\prime \prime}$ tinned copper wire pigtails are provided on all Glassmikes 19/32 OD and under. 8-32 screw terminals, and removable solder lugs on all other Glassmikes. Glassmikes can aiso be mounted in fuse clips.
$A C$ and RF operation: Glassmikes can be operated af low and medium power. Submit specifications, including frequency and ambient temperature.

Temperature range: PLASTICON ASG: from $60^{\circ} \mathrm{C}$ to plus $125^{\circ} \mathrm{C}$. PLASTICON AOG: from minus $40^{\circ} \mathrm{C}$ to plus $105^{\circ} \mathrm{C}$.

Capacitance tolerance: Plus or minus $10 \%$.

TUBULAR CAN-TYPE DRY ELECTROLYTIC CAPACITORS

## TYPES BR AND BRD "BLUE BEAVER'** CAPACITORS

Types BR and BRD "Blue Beavers" are the most popular electrolytic capacitors employed for all applications where units are required for convenient mounting in small spaces beneath a chassis or connected directly in the wiring assembly. They are small in physical size and selt-supporting by means of strong, bare tinned-copper wire leads, while the larger sizes may be mounted with a metal strap or any other arrangement which may be found suitable.
Type BR capacitors employ seamless, drawn aluminum can construction encased in a tightly fitted insulated cardboard tube sleeve. A bare tinned-copper wire lead is riveted to the bottom of the can for negative connection while the positive terminal lead is riveted in the center of an insulated disc cover at the opposite end. Polarity of all units is clearly indicated on the cardboard tube casing.

Type BRD, dual section units, in the small size (BRD202A), are furnished in an aluminum tube which is closed at both ends with an insulated disc, each disc supporting a positive wire lead. Common negative connection to the unit is made to a metal mounting strap around the middle of the tube. No cardboard tube sleeve is of course supplied on this unit. All other BRD capacitors are furnished with positive leads riveted on an insulated disc cover at one end of a drawn aluminum can and provided with a cardboard tube sleeve.

All BR and BRD units are hermetically sealed and are suited for operation under conditions of relatively high humidity. The range of capacities and voltage ratings available cover practically all uses as replacements in radio service work. Two and more of these small size capacitors may be strapped together in a unit in order to obtain a wide variety of capacity combinations employed in various circuits of standard receivers.

## PRONG-BASE DRY ELECTROLYTIC CAPACITORS

## TYPE UP CYLINDRICAL CAN UNITS

Type UP capacitors are the smallest can-type electrolytic units available. They are hermetically sealed in aluminum cans with positive terminal lugs on a bakelite insulating cover, the can being the common negative terminal.

Projecting tongues provide facilities for mounting in a vertical position on metal chassis bodies or on metal or bakelite mounting washer. Bakelite and metal washers are furnished with each unit. The projecting tongues have small wire holes and are tinned for convenient soldering to common negative connections. All solder lugs are mechanically strong, being made of cold rolled steel, although nothing other than pure aluminum comes in contact with the electrolyte within the container to cause galvanic corrosion. Electrically, these Type UP units possess excellent characteristics, having exceptionally low leakage and power factor, and are especially dependable in operation over wide temperature variations with minimum capacity change.

TYPE KR CYLINDRICAL CAN UNITS
Types KR and KRC single-hole mounting units are compact etched foil type dry electrolytic capacitors furnished in cylindrical (inverted mounting) aluminum cans. Available in single, dual and triple sections with color-coded leads. Made in all popular voltage ratings for use in A.C.D.C. or voltage-doubler midgets and A.C. operated sets.

## TYPE WR REPLACEMENTS FOR WET ELECTROLYTIC CAPACITORS

These dry electrolytic capacitors furnished in cylindrica aluminum cans are offered as substitutes for replacement of wet electrolytic units which have been discontinued in manufacture during the war. The limited range of capacities listed below cover practically all applications in standard radio receivers and other equipment in which wet type electrolytic capacitors were originally employed.

TYPE WR-500-Volt D.C. Replacements

| Cat. No. | Cap. Mid. | Replacement for | $\begin{aligned} & \text { Size-Ins. } \\ & \text { Dia. x Lih. } \end{aligned}$ | $\begin{aligned} & \text { Lint } \\ & \text { Price } \end{aligned}$ | Not Price |
| :---: | :---: | :---: | :---: | :---: | :---: |
| WR 10 | 10 | 4 to 12 mid . | 13/1 $\times 214$ | \$1.45 | $\$ 0.87$ |
| WR 20 | 20 | 16 to 20 mfd . | 13\% $511 /{ }^{1}$ | 2.25 | 1.35 |
| VRR 30 | 30 | 20 to 30 mid . | 18/83\% | 2.60 | 1.56 |
| WR 40 | 40 | 30 to 40 mfd . | 1313 | 2.90 | 1.74 |

For one-inch diameter can wet electrolytic replacements we recommend employing C-D Type KR capacitors in one-inch diameter cans of equivalent zapacity and voltage ratings.

## TYPE EB REPLACEMENT CAPACITORS

Type EB electrolytic capacitors are especially suited for replacement purposes in radio receivers to replace units of larger physical sizes. They are identical in mounting hole dimensions and general construction to Type WR capacitors except they are provided with insulated colorcoded wire leads brought through the threaded neck of the unit instead of a lug terminal.

| E88800 | 8-8 | $11 / 2 \times 43$ | 2.70 | 1.62 |

#  

## TYPE BRR HIGH-CAPACITY LOW-VOLTAGE UNITS

These compact C-D etched foil electrolytic capacitors have been especially designed for all applications requiring high sapacity units operating in low voltage D.C. circuits. They are widely employed in portable radio power rectifying circuits, electric fence devices, telephone and D.C. timing circuits. Units are available in standard capacities and voltage ratings for all uses.
Hermetically sealed in pure aluminum cans with an external cardboard insulating sleeve, these units are provided with metal mounting strap and bare wire leads for convenient wiring into any circuit assembly. They are constructed identically the same as Type BR "Blue Beavers" except all units are provided with a mounting strap.

## TYPE FA HIGH-CAPACITY LOW-VOLTAGE UNITS

Type FA capacitors in round aluminum cans are designed for high capacity, low voltage applications, and are especially popular as replacements in motion picture sound equipment, " $A$ " battery power supplies and other low voltage circuits where hum-free operation is essential. All units are provided with lug terminals on a moulded bakelite cover and furnished with an external cardboard insulating sleeve for protection against short circuits.

## 

## CARDBOARD TUBE DRY ELECTROLYTIC CAPACITORS

## TYPE EZ UNIVERSAL-MOUNTING UNITS

Type EZ capacitors are especially popular for radio servicing where low cost replacements are required. They are designed with mounting feet for upright mounting to replace inverted can-type units, spade-lug units, or may be mounted beneath the chassis by means of the mounting strap provided around the center of the cardboard tube casing. In any instance, the unused mountings may easily be cut off.
These units are without doubt the most practical all-around replacement capacitors available and incorporate C.D etched foil features in design and construction. They are completely sealed in moisture-proof cardboard tube casing, tilled with special wax compound, and provided with insulated wire leads eight inches long. All units are clearly stamped with capacities, voltages and color code designation of leads.

COLOR CODING OF WIRE LEADS ON TYPE EZ CAPACITORS
BLACK - Common negative lead.
RED -Positive, highest voltage or capacity.
BLUE -Positive, next highest voltage or capacity.
GREEN -Positive, next highest voltage or capacity-
YELLOW-Positive, next highest voltage or capacity, or negative in units where two separate negative terminals are required.
BROWN -Negative, in units where three separate negaive terminals are required.

"ELECTROLYTIC CAPACITORS"

## By PAUL McK. DEELEY

This instructive book supplie the reader with specific infor mation concerning the man: factors involved in the theory design and construction 0 electrolytics. It is profusel illustrated and describes al applications of electrolyti capacitors. 300 pages, siz $51 / 2^{\prime \prime} \times 77 / 8^{\prime \prime}$, cloth boun hard cover. Every page is gold mine of facts and datá

## CARDBOARD TUBE DRY ELECTROLYTIC CAPACITORS

## TYPE BRL CARDBOARD TUBE UNITS

Type BRL Capacitors are dual and triple common negative units in cardboard tube containers with wax-filled ends. Capacities, voltages and polarity of the leads are clearly defined by color coding stamped on the cardboard tube casing. Units are provided with insulated wire leads brought out at both ends of the unit. A mounting strap around the center of the cardboard tube casing enables mounting the unit with one screw under the chassis assembly.

## TUBULAR PAPER CAPACITORS

TYPES DT AND MD TUBULAR UNITS
Type DT, "Dwarf Tiger" capacitors are non-inductively wound, wax impregnated units in specially treated cardboard tubes with high melting point wax filled ends. They have tinned-copper wire leads $21 / 2^{\prime \prime}$ long.
Type MD "Blue Tiger" capacitors are impregnated with Dykanol " $D$ ", which provides longer lite under more severe conditions of humidity and temperature.

## dRAWN METAL SHELL PAPER CAPACITORS

## TYPE DYR DYKANOL "G" FILLED UNITS

Type DYR Dykanol Bypass Capacitors are non-inductively wound and meet the need for dependable capacitors of Iractional capacities that will operate efficiently in R.F. and A.F. bypass, audio frequency coupling and A.C. circuits under all humidity conditions and at temperatures up to approximately $85^{\circ} \mathrm{C}$. ( $185^{\circ} \mathrm{F}$.). They are built to stand an immersion test in hot water and have been specially designed to fill the severe requirements of aircraft, submarine, marine and tropical applications for maximum capacity and voltage in minimum space, where quality and reliability are of paramount importance. They are impregnated and filled with Dykanol " G " and sealed in non-corrosive cases with leakproof riveted terminals.

## TYPES DA, DB \& DC WAX FILCED UNITS

Types DA to DC capacitors are non-inductively wound and wax-potted in drawn metal shell containers. They are available in a large variety of ratings for radio frequency bypass, audio frequency coupling and bypass functions. Lug terminals are amply insulated. Integral with casing, the mounting feet allow ease of assembly.
In the single and dual section capacitor units, the terminals are insulated from the container. The duals have three terminals, the common lug being on the left. In the triple and quadruple section capacitors, the common terminal connection is grounded to the metal case.

All units are wound with the highest grade pure aluminum foil and multi-laminated Kraft tissue, thoroughly dried under vacuum pressure, impregnated in the finest grade wax compound, oil-cooled, and potted in a special wax compound. Conservative D. C. ratings of these capacitors by triple testing assure dependable service in operation.

## DRAWN METAL SHELK PAPER CAPACITORS

## TYPE YAB AND YAT DYKANOL CAPACITORS

Types YAT and YAB are impregnated and filled with Dy－ kanol＂$G$＂（chlorinated diphenyl）a synthetic，non－inflam－ mable，non－oxidizable liquid compound which is unaffected by wide latitude of temperature changes or voltage stresses． They are especially suited for use in bypass，audio fre－ quency coupling circuits and other applications where conditions of high humidity and temperatures are en－ countered．

Units are sealed in drawn metal shell containers and pro－ vided with leakproof terminals either on top or bottom of the can containers，designated as Types YAT and YAB accordingly．All units are provided with rugged metal mounting brackets which provide rigid mountings．Two or more units may be mounted close together in an assembly
Single section units are provided with two terminals while dual and triple section units have three terminals．In sincle and dual section units terminals are insulated from the metal container．The third terminal of dual section units is the common terminal and marked for identification．In triple section units the common terminal connection is grounded to the metal case．
Types WAT and WAB Capacitors are smaller size units cf similar construction and electrical characteristics but only supplied in single section units with two terminals．These units are ideally suited for use in assemblies where space is limited and multiple units may be mounted close together for compactness．

## REPLACEMENT PAPER CAPACITORS

## TYPE RM UNCASED PAPER CAPACITORS

Type RM uncased capacitors are made available to repair paper dielectric filter blocks which were used in the early models of A.C. operated radio sets. Also useful in the elimination of electrical interference caused by pushbuttons, bells, buzzers, and similar applications in radio, electronic and electrical devices.

Special capacitor units can be made up and potied into suitable containers by servicemen to fulfill many requirements.

High Speed
Stroboscopic
Photography

List Price $\$ 41.01$

## TYPE PECH AND PEB REPLACEMENT UNITS

Paper Replacement Capacitors that simulate electrolytics in appearance; these types fulfill many service requirements. Their actual capacity is from $1 / 3$ to $1 / 2$ of the usual value employed when using electrolytics. They afford a high voltage breakdown which an electrolytic does not offer. There is no polarity to observe when using these capacitors. Mounting flanges are provided on all cardboard box units. Dual section units have separate leads.

## DYKANOL TRANSMITTING CAPACITORS

TYPES T, TJH, TJL AND TJU DYKANOL CAPACITORS

Type T-series Dykanol transmitting capacitors are the finest and most dependable units obtainable for use in all amateur, broadcast and commercial equipment. Units are provided with well insulated terminals, and mountings desired as shown in the accompanying illustrations. These units are standard in thousands of broadcast and government stations all over the world, and also employed in all types of sound equipment, television receivers and transmitters, and other electronic apparatus.
Type $T$ capacitors are thoroughly impregnated and filled with Dykanol " $G$ " (chlorinated diphenyl), a non-inflammable, fireproof, non-oxidizable liquid compound which provides a high factor of safety and exceptionally long life at high temperatures.

In the past, organic oils, resins, and waxes were used as paper impregnants in electrical insulation. Because of the variation of these natural materials, uniformity of results could be desired only and not attained. The concentrated attention of chemists and electrical engineers was turned toward the development of non-organic, synthetic substitutes and new substances, the properties of which could be controlled and moditied as desired. The chlorinated diphenyls were recognized as outstanding among the rapidly increasing number of synthetics available. Of these compounds, continued research pointed to one narrow group, that known as Dykanol " $G$," the characteristics of which were particularly suited to the capacitor art. This material, having the lowest power factor compatible with the highest dielectric constant, is used as the impregnant in Type T capacitors.
For the dielectric separator in Type T capacitors, only the highest grade of kraft paper is used, ranging in thickness
from .0003 to .001 of an inch for a single sheet. Three or more layers of paper dielectric as a separator between foil members are always used. The higher voltage units use as many as six or more layers. This multiple lamination builds a high safety factor into Type T capacitors.

All paper is manufactured to meet rigid specifications and is subjected to a series of tests at the C-D laboratories before acceptance for use in these capacitors. The paper must be of exceptionally high quality to pass the tests. In order to determine its many characteristics, tests are made for porosity, tensile strength, effect of heating, conducting particles, dielectric strength, ash content and ash analysis, acidity or alkalinity, soluble impurities, general appearance, and mechanical considerations such as yield, thickness, width, etc.

Due to the use of Dykanol " $G$ " and multi-layer kraft capacitor tissue in these units, many outstanding advantages are thus gained, i.e., small size, light weight, low dielectric stress and long life at higher operating temperatures. The size is reduced due to the high dielectric constant of Dykanol " $G$ " which also affords reduction in weight. $\AA$ low dielectric stress is obtained as the result of efficient use of container volume, and the high specific inductive capacity of the impregnant. And since the dielectric stress is low, the life of the unit in operation is greatly increased. The synthetic liquid impregnant employed in these capacitors does not oxidize or deteriorate like commonly used organic oils.

For higher voltage units, ranging from 6000 to 25,000 v.d.c., write for data and prices on Type TK capacitors.

## DYKANOL TRANSMITTING CAPACITORS

## TYPE TQ DYKANOL CAPACITORS

Corneil-Dubilier, Type TQ Dykanol Capacitors, in cylindrical aluminum containers are provided with two insulated terminals and universal mounting rings for mounting the unit in any position with terminals either above or below a subpanel assembly. These units are designed primarily for filter circuits in amateur, low-power broadcast and commercial transmitters. They are also adapted for high-power, high-fidelity public address systems and portable power amplifiers.

P. 44

## TYPE TLA DYKANOL CAPACITORS

For compact high-voltage filter applications in high-fidelity P.A. amplifiers, power supplies for short-wave portable transmitters and transceivers, type TLA Dykanol filter units in cylindrical aluminum containers are ideal in every respect. One terminal is well insulated, the other being the metal can itself. Insulating washers, as well as a large spade lug, are provided so that the metal container may be insulated from the chassis.

Type TLA capacitors are thoroughly impregnated and filled with Dykanol "G" (chlorinated diphenyl), a non-inflammable, fireproof, non-oxidizable liquid compound which provides a high factor of safety and exceptionally long life at high temperatures.

Type TLAD Capacitors are similar in construction except that the capacitor section is insulated from the metal container and furnished with two soldering lug terminals instead of one.

Moulded Bakelite Capacitors, Types 1W, 1D, and 5W are suitable for numerous electronic uses and are specially adapted to serve many important functions in low-voltage radio circuits. Standard units are furnished in brown bakelite and also available in low-loss yellow bakelite on special order. They are individually tested for accuracy of capacity and voltage breakdown and designed to give dependable service where small size units are required.

## Notes on Ordering Special Capacitors

The listing at the left gives the range of capacities available from stock. Intermediate capacities, not exceeding the maximum as listed for each type, can also be furnished upon request.

STANDARD CAPACITY TOLERANCE is plus or minus $20 \%$. Also available, on order, in plus or minus $10 \%, 5 \%$, $3 \%$ and $2 \%$ tolerance ratings (or within 1 mmfd.whichever is greater). For capacity tolerance of: $10 \%$ add $10 \%$ to list prices; $5 \%$ add $20 \%$ to list prices; $3 \%$ add $40 \%$ to list prices; $2 \%$ add $75 \%$ to list prices.
"L" MOULDED IN LOW-LOSS BAKELITE available on order-add "L" to Cat. No. (examples: 5WL; 1DL; 1WL). For types 1WL, IDL and 5WL add 10c to list prices.

Types 1R, 1DR, 2R and 5R "Silver-Mike" Silvered Mica Capacitors are designed for use in high $Q$ electronic circuits where frequency stability and minimum loss must be maintained. They are ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, pushbutton tuning circuits and other similar applications. Standard units are moulded in low-loss red bakelite and furnished with tinned brass wire leads. All units are rated at 500 volts D.C. working and tested at 1000 volts D.C.

## Notes on Ordering Special Capacitors

The listing at the left gives range of capacities which are available from stock. Intermediate capacities, not exceeding the maximum as listed for each type, can also be furnished upon request.

STANDARD CAPACITY TOLERANCE is 5\%. Also available, on special order, in tolerance ratings of plus or minus $3 \%, 2 \%$ and $1 \%$ (or within 1 mmfd.-whichever is greater). All types can also be supplied in plus or minus $10 \%$ and $20 \%$ tolerances at lower prices.

TEST VOLTAGE-All Types $1 R, 1 D R, 2 R$ and 5 R are tested at 1000 volts D.C. - 500 volts D C. working. Higher capacities in the latter are tested at 600 volts D.C.- 300 volts D.C. working.

## MOULDED MICA TRANSMITTING CAPACITORS

TYPES 4, 4E AND 9 MICA CAPACITORS

C-D Mica Capacitors Types 4 and 9 are designed to meet the requirements of power amplifiers and low-power transmifters. They are principally employed for grid and plate blocking purposes and for r. f. by-pass functions.

## BAKELITE CASED MICA TRANSMITTING CAPACITORS

TYPES 6, 15L AND 30B BAKELITE CASED MICA CAPACITORS

Types 6, 15L and 30B Mica Capacitors in moulded bakelite cases are designed for a wide variety of radio frequency applications where size and weight are at a premium, such as in aircraft, portable equipment, low-power transmitters and the earlier stages of high-power transmitters. They are specially suited for use as grid, plate, coupling, tank and by-pass functions. These units are among the smallest types employing the patented series-stack construction permitting their use on higher r.f. voltages.

## Notes on Ordering Special Capacitors

Type 15L units are available only in low-loss Bakelite (BM-262 or equivalent) cases. Types 6 and 30 B may be had in either standard (brown) or low-loss (yellow) Bakelite may be hhen erdering low-loss (brown) or 1ow-loss (yellow) Bakelite cases. When ordering low-loss list price for Type 6. Add $\$ 1.50$ to list price for Type 30 B . STANDARD CAPACITY TOLERANCES--Plus or minus $5 \%$. Tolerance of $2 \%$ can be furnished on special order Add $\$ 1.50$ to list price for
 Types 6 and $15 L$ Add $\$ 200$ to list price for Tyne ${ }^{30}{ }^{3}{ }^{\circ}$. OPERATHNG AMBIENT TEMPERATURE-Up to $60^{\circ}$ C. maximum.

"H/"TYPE These units have been developed for use where excellent retrace and low temperature coefficient are required. Over a range of retrace and low temperature coefficient are required. Over a range of
$-40^{\circ} \mathrm{C}$, to $+70^{\circ} \mathrm{C}$. the capacity temperature coefficient is approximately,$+ 003 \%$ per degree C. A limited range of capacity and voltage mately, $003 \%$ per degree C. A limited range of capacity and voltage ratings is available. Made only in low-loss Bakelite and sealed for ${ }^{2}$ mmersion test. To order, add 1 to Cat. No (example: $61,15 \mathrm{H}$, 30 BH ). Add to list: $\$ 4.00$ for Type 6. Add to list: $\$ 2.00$ for Type 15L Add to list: $\$ 500$ for Type 30B
TYPE $6 \mathbb{K}$ - This unit is a still further refinement being a compensated unit which can be made with a positive, zero or negative coefficien within the limits of $+.003 \%$ to - $.005 \%$ per degree C . over a tern. perature range of from - 40 C. to 10 . Iype $6 K$ is available in a limited range of low capacities and voltage ratings. " $K$ " Type includes low-loss Bakelite and immersion seal. When ordering Type 6K, temperature coefficient must be specified. (Type 6 only) Add to list Price: for plus or minus $5 \%-\$ 12.00$; for plus or minus $3 \%-\$ 13.00$; for plus or minus $2 \%-\$ 14.00$; for plus or minus $1 \%-\$ 18.00$.

## ELECTROLYTIC MOTOR STARTING CAPACITORS

TYPES JDS, ETN AND ETNCB MOTOR STARTING CAPACITOR REPLACEMENTS

Types ETN and JDS Electrolytic Motor-Starting Capacitors are universal replacement units for use in standard makes of oil-burners, refrigerators and other motor driven equipment. The list of units below simplifies the selection of the capacitor required when the capacity, voltage rating, and size are known.
In many cases where a round can-type unit is to be replaced a smaller size capacitor of the same capacity and voltage rating may be selected as a replacement. The smaller size unit may be wrapped tightly with ordinary corrugated paper and fitted into the capacitor housing on the motor. While only the most widely used range of capacities are listed below, Type ETN 110 V.A.C. capacitors can be supplied in intermediate capacities from 10 mfds. to 498 mfds.

TYPE JDS - 110 VOLTS A.C. 50-60 CYCLES

| Cat. No. | Cap. Mfd. | $\begin{gathered} \text { Dimensions-Ins. } \\ \text { L. } \times \text { W. } \times \text { T. } \end{gathered}$ | $\begin{aligned} & \text { List } \\ & \text { Price } \end{aligned}$ | $\begin{aligned} & \text { Net } \\ & \text { Price } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| JDS-10 | 10 | 31/2x $31 / 2 \times 2$ |  | \$2.03 |

| JDS-90 | 90 | 31/2x3y2x | 3.21 | 2.25 |
| JDS-100 | 100 |  |  | 2.34 2.34 |
| JDS-115 | 115 | 31/2x $31 / 2 \times 2$ | 3.34 3.79 | 2.65 |

All units are furnished with tightly fitted insulating cardboard tube or paper box casings with screw terminals on Type ETN or with terminal board on Type JDS capacitors. Type ETN units are available with black lacquered steel end caps, designated as Type ETNC, or with both end caps and black lacquered steel mounting bracket designated as Type ETNCB (see illustration above). Units must be designated accordingly upon ordering. (See note below.)

## CAPACITOR TEST INSTRUMENTS

## C-D CAPACITOR ANALYZER

The Model BF-50 Capacitor Analyzer quickly and accurately measures all important characteristics of all types of capacitors. It offers the most accurate and thorough capacitor test of any instrument of its type, and may be operated on any 110 -volt, $50-60$ cycle power line.
The analyzer will determine the true condition of all paper, mica and electrolytic capacitors, including A.C. motor starting types. It is the only instrument of its type which provides a complete test for all capacitors, with amplifier for adequate sensitivity, easy reading linear scales, pushbutton switches for simplicity of adjustments, D.C. voltage supply and visual eye leakage indicator.

## Features of C-D Analyzer

1. Measures Capacity-Accurately measures capacity of paper, mica, air, electrolytic and motor-starting capacitors from 00001 to 240. mid.
2. Measures Power Factor-Measurements of power factor from zero to 50 percent on all types of electrolytic capacitors including motor-starting types.
3. Employs Wien Bridge-Assures permanent accuracy of capacity and power factor measurements. Readings not affected by line voltage variations
4. Indicates lnsulation Resistance-Insulation resistance measurements of paper and mica capacitors up to 1500 megohms. Also measures many types of insulation.
5. Indicates Leakage-Measurements of leakage of electrolytic capacitors by means of built-in direct current power supply.
6. Visual Eye Leakage Indicator-Provides simplified and reliable leakage tests on all types of capacitors. Enables measurements to be made rapidly
7. Detects Defective Capacitors-Character measurements, such as leaky, shorted, open, high and low capacity, and high power leaky, shorted, open,
8. High Sensitivity on All Measurements-Amplifier for capacity, power factor and leakage tests provides sharp and accurate readings. Amplifier builtin Analyzer
9. Balance Sensitivity Control-Provides sharp or broad balances for quick and accurate readings. All readings are made simply and directly.
10. Direct Reading Linear Scale Calibration-Provides simplified measurements All scales on panel uniformly spaced, easy to read, thus avoiding possible errors in using multipliers or charts.
11. Push-Button Switching-For convenient and simplified adjustments, all tests and circuit changes are made by means of modern push-button switches.
12. Visual Eye Bridge Balance--Visual detector gives positive indication of bridge balance for convenient, simplified and accurate capacity and power factor measurements.
13. Six Color-Coded Scales-Accurately calibrated, six color-coded scales. Uniformly spaced over total spacing of sixty inches. Easy to read. No "blind" spots.
14. General Purpose Instrument-May be used to check continuity capacity between circuits, insulation of transformer windings and other types of coils, etc
15. Sell-Contained-Portable-An instrument complete in itself, requiring no external standard, headphones, meters or acces sories. A portable unit, for 110 volt, $50-60$ cycle operation, supplied in walnut cabinet, removable cover, with carrying handie. Size, $61 / 2 \times 12 \times 93 / 4$ inches. Weight, 9 pounds.
MODEL BF-5O CAPACITOR ANALYZER
Net Price.
$\$ 39.80$

## C-D CAPACITOR BRIDGE

## Features of C-D Capacitor Bridge

1. Measures Capacity-Accurately measures capacity ot paper mica electrolytic and air capacitors from .00001 mfd. to 50 mids.
2. Indicates Power Factor-Power factor of electrolytic capacitox indicated by means of visual eye detector tube.
3. Detects Defective Capacitors-Detects many types of defective capacitors, open and short circuited, high and low capacity, and high power factor.
4. Checks Circuit Continuity-May be used on continuity meter. A handy instrument for checking circuits, coils, transformers and many other uses.
5. Employs Wien Bridge-Employs Wien Bridge circuit for all measurements. Accuracy independent of line voltage variations
6. Visual Eye Bridge Balance-Dual type visual bridge balance for accurate measurements facilitates quick tests on service jobs.
7. Direct Reading Scale-Direct reading ranges with all scale markings directly in microfarads. Clear reading dial scale. All capacity calibrations marked on panel. No charts or multipliers required.
B. Self-Contained-The Capacitor Bridge is complete in itself and requires no headphones, standards, external meters or similax accessories.
8. Extremely Compact-The unusually small size of this, bridge makes it particularly handy for portable use- $35 / 8^{\prime \prime} \times 5^{\prime \prime} \times 3^{\prime \prime}$ weight 2 pounds.
9. Attractive Supplied in attractive walnut Bakelite case complete with detachable test leads and useful instruction booklet. MODEL BN CAPACITOR BRIDGE

For operation on 110 volts, 60 cycles. Net Price.

## C-D CAPACITOR DECADES

C-D Capacitor Decades provide accurate standards over a wide range of capacity May be used in groups of the three decades, shown above or used individually tor maximum flexibility Each decade is turnished with calibration chart giving exact capacity values for all scale markings extending use to more precise measurements.

Rated Voliage- 600 D. C.- 220 A. C.

# QUIETONE INTERFERENCE FILTERS 

Top row-Types IF-18; IF-21; IF-11 \& 12; IF-7A, 15 \& 16, and IF-14
Bottom row-Types IF-19; IF-4 \& 5; IF-6; IF-22; IF-20; IF-24; IF-25; IF-26; IF-27, 28 \& 29

## RADIO AND APPLIANCE OUIETONES

Most satisfactory results are obtained when Quietones are installed at the source of the interference. A Quietone installed in connection with an offending appliance corrects the noise caused by that appliance.

Where source of interference cannot be located a Quietone connected in the electric supply line of the radio receiver will alleviate, if not fully correct, the condition. When a Quietone is installed, interference will be greatly reduced. Remaining interference usually enters receiver through the antenna system.

## Quietones for Use at the Radio Receiver

TYPE IF-4-For use on small radio receivers, such as A.C.-D.C. midget eets, etc., where noise level is not too severe. Connects in power line eets, etc., where noise level is not too severe. Connects in power line V.A.C.-D.C. 5 amps. Colors-Furnished in ivory, walnut, or green finish.

List Price $\$ 1.10$ Net Price $\$ 0.66$
TYPE IF-18-For use in connection with all radio receivers where noise level is severe. Furnished in Bakelite case (see colors). Employs highly effective all-wave capacitive-inductive type filter. Ratings: 110 V.A.C.-D.C. 5 amps. Colozs-Furnished in ivory or walnut Bakelite. List Price $\$ 8.35$ Net Price $\$ 5.01$

## Quietones for Use at Appliances

TYPE IF-5-For small electrical appliances such as food mixers, hair dryers, etc., where radio interlerence is of low intensity. Plug type filter. Convenient to install. Rating 110 V.A.C.-D.C. 5 amps. ColorsFurnished in ivory, walnut or green finish

List Price $\$ 1.10 \quad$ Net Price $\$ 0.86$
TYPE IF-6-For all types of home electrical appliances where interfer ence is of moderately low intensity Installed between appliance and power supply line with short return lead which reduces radiation. power supply line with short return 110 V.A.C.D.C. 5 amps. Colors-Furnished in ivory, walnut or groen tinish. List Price $\$ 1.75$ Net Price $\$ 1.05$ TYPE IF-18-An efficient all-wave capacitive-inductive sectiona, band type filter for use in connection with all types of electrical appliances where interference conditions are severe. Provided with frame connection for reduction of radiation. Furnished in Bakelite case (see colors). List Price $\$ 8.35$ Net Price $\$ 5.01$
TXPE IT-19-Capacitive-inducted type filter for use where interference is severe. Frame connection provided. Furnished in Bakelite case Hating: 110 V.A.C.-D.C. 5 amps. Colors-Bakelite case, Ivorr or walnut finish. List Price $\$ 7.00$ Net Price $\$ 4.20$ TYPE IF-20-For use on small electrical appliances where interference is very lov.. Simply connected to cord plug of appliance and plugged into wall receptacle. Rating: 110 V.A.C.-D.C. 5 amps. Colors-Bakelite case. Ivory or walnut finish. List Prics $\$ 0.75$ Net Price $\$ 0.45$ TYPE IF-21-All-wave capacitive-inductive type filter for use on appliances where return lead to the frame of appliance cannot be made, such as shaver, barber clippers, etc. Furnished in Bakelite case. Rating: 110 V.A.C.-D.C. 1.6 amps. Colors-Bakelite case. Ivory or walnut finish.

List Price $\$ 4.00$ Net Price $\$ 2.40$
TYPE IF-22-For use in connection with electric shavers of all standard types. Line cord and plug provided with Schick and Packard type adapters which fit practically all type shavers. (Specify type desired when ordering.) Type IF-22A for Schick, Knapp Monarch, and similar type shavers. Type IF-22B for Packard, Zophyr, Remington-Rand and Ronson type shavers. Rating: 110 V.A.C. 5 amps. Colors-Bakelite case. Ivory or black finish.

List frice $\$ 2.15$ iver Price $\$ 1.65$

## INDUSTRIAL QUIETONES

The development of radio receiving and broadcasting equipment has been perfected to a degree where complete enjoyment of programs is within the reach of all. However, only too frequently is radio reception marred by disturbing noises commonly referred to as "man-made static. This condition does not have to be endured. At is unnecessary to tolerate the majority of these offending noises. Quietone Filters enable you to enjoy quiet, noise-free reception.
Although atmospheric disturbances in many instances cause radio noises, this condition is not chronically annoying. With the average radio receiver, noise is generally caused by the operation of electrica appliances or apparatus which create high frequency oscillations. Many types of equipment cause minute sparks as a result of a change in electrical conditions within the device, which are essential to its operation. In effect these appliances act as miniature radio trans mitters, setting up a disturbance which may affect radio receivers a a considerable distance.
It is highly desirable to correct noise conditions at the source as one filter properly installed at this point may eliminate the noise in a number of radio receivers. Where it is impossible to locate the equipment which is causing the interference a Quietone installed at the receiver will correct the noise in that receiver.
The Quietones listed below will correct radio noise conditions caused by motors, generators, elevators, stokers and many other types of industrial electrical apparatus. They are designed for convenien mounting, and contain highest quality capacitors, with lowest possible impedance internal connections. There are no current limitations for (CP) Capacitive Quietones.

## Capacitive (CP) Quietones

| Type | Voits A.C. D.C. | Connections | Housing | $\begin{aligned} & \text { List } \\ & \text { Price } \end{aligned}$ | $\begin{aligned} & \text { Nef } \\ & \text { Price } \end{aligned}$ |

| TF-14** | 110-220 | BX | Cutout Box | 22.50 | 13.50 |

** All Quietones listed above with exception of IF-14 are for single phase circuits. IF-14 is for 2 or 3 phase or 3 -wire circuits.

* Dual unit for use on fluorescent lighting fixtures.

The Quietones listed below are for the more severe radio noise conditions caused by motors, generators, elevators, diathermy, oil burners, etc. They are designed for convenient mounting and quick connection to these machines. They consist of low-loss coils and highest quality capacitors with correct noise conditions in both broadcast and short wave receivers. They are the most efficient filters available for heavy duty application. All capacitive-inductive (CI) Quietones are for singls phase circuits.

## Capacitive-Inductive (CI) Quietones

| Type | Volts A.C. <br> D.C. | Max <br> Amps | Connections | Housing | List <br> Price | Net <br> Price |

## DUMONT MIDEET PAPER <br> CAPACITORS

## FEATURES:

ENDS SEALED IN BAKELITE RESINOID P1-P2 for USE AT 95 R.N.
PIN-P2N for USE UP TO 100 R.N.
NON-INDUCTIVE-BRASS OR COPPER WIRE

WILL NOT MELT AT 100 C .
GOOD LEAKAGE RESISTANCE
LEADS WILL NOT PULL OUT WHEN HOT

# DUMONT <br> MIDGET PAPER <br> CAPACITORS 

## A WAR TIME DEVELOPMENT NOW RELEASED FOR PUBLIC USE

FEATURES:

1. HEAT-PROOF . . . CANNOT MELT OUT.
2. MOISTURE-PROOF . . . 100 R.H.
3. ANCHORED LEAD WIRES.
4. MUCH LONGER LIFE.
5. SMALLER . . . LESS ROOM.
6. NOT AFFECTED BY MOISTURE.
7. VACUUM SEALED.

BAKELITE RESINOID CANNOT MELT.

TYPE
P 6

Available in 1-2-5\% additional costs.

## DUMONT pALER CAPACITORS

Pats. Pending

-
DUMONT 1000 V .

- OIL mpregnated units
- BAKEITE TREATED TUBES
- BAKELITE RESINOID END SEALED
- OpERATES-60 $0^{\circ}$ TO $125^{\circ} \mathrm{C}$

Suitable for $A C$ and DC Operation

IMPORTANT
Will not leak oil at 100 C. Continuous.

# PYRANOL' CAPACITORS For Amateur Radio Equipment 

## A COMPLETE LINE Outstanding Characteristics

## Continuous operation at 10 per cent above rating

## Long life, for low cost per service-year

## Small size-means easy portability

Upright or inverted mounting

## Round or rectangular cases

## Hermetically sealed for permanence

G-E Pyranol capacitors for d-c communications equipment are filled and treated with Pyranol, a non-inflammable dielectric developed and patented by General Electric. Pyranol has extraordinary dielectric qualities, and its use makes possible an unusually small and compact unit for all transmitter-capacitor ratings. Compare the size with that of a capacitor of conventional design.

The cases are hermetically sealed, assuring permanence of the characteristics of the capacitors, as contamination from air and moisture is impossible. Long life and ability to withstand temperatures as high as 75 C make these capacitors outstanding in their field.

The high quality of General Electric Pyranol transmitter capacitors is the result not only of extensive research into the design and manufacture of capacitors, but also of wide application experience. Thousands of units are in service in broadcasting stations, in commercial transmitters on shipboard, on airplanes-all over the world. Materials closely controlled as to quality, manufacturing processes under careful engineering and laboratory supervision, years of tested application experience-all these combine to give the amateur an unexcelled capacitor-the same high-quality capacitor as those used in the largest General Electric transmitters.
*Trade-mark reg. U. S. Pat. Off.

## FOR AMATEUR RADIO EQUIPMENT

"ILLINI HYCAPS" are now manufactured in a new and modern plant designed especially for the manufacture of capacitors. Our thorough engineering, plus old manufacturing skills and a rigid policy of quality control enables us to produce a product that is of unexcelled quality.
"ILLINI HYCAPS" are again available, and you will agree after using them that they meet every requirement a superior condenser should have for long life and dependable service.
> "HLLINi HYCAPS" are guaranteed unconditionally for a period of one year, from dafe of purchase.

1. Short proof-ample separation of foils by highest purity cellulose separator plus tough anodic film-will withstand the highest surge voltages.
2. Condenser hermetically sealed and anchored in an cluminum shell. Completely resistant to changes due to temperature and humidity. Built to withstand all kinds of vibrations and shocks.
3. Attractive kraft tube spun over condenser ends ... prevents shorting of pig tail leads to condenser or other components. Aluminum lock-washers hold leads securely in place, will not loosen or break off. 4. Low power factor, low leakage, excellent shelf life.
4. Extremely longer life-due to our use of C. P. chemicals and highest purity foils and insulation materials availabie. A balanced non-corrosive electrolyte contributes to quiet stable operation.

TIME TESTED QUALITY

## Clamp Mounting Tubulars

## "ILLINI-HYCAPS"

Through careful selection of high temperature sealing compounds and superior engineering design, these completely hermetically sealed, compact tubular electrolytic condensers are the acme of dependability. They operate efficiently under high temperatures and will give long life under all climatic conditions.

The small size and convenient mounting features of our type IHC "ILLINI-HYCAPS" make them popular in both manufacturing and replacement work.

Leads are color coded and securely anchored in the hard wax seal. Dual units have four leads for universal replacement work and are completely insulated.
Clamp may be moved to any position on tube

## TYPE LN <br> Inverted Screw Mounting ALUMINUM CAN CONDENSERS

Type LN aluminum can condensers are manufactured to operate satisfactorily under the severest conditions. Units are completely sealed in an inner impregnated tube then resealed. Correct design has allowed for maximum heat dissipation with resultant ability of the condensers to operate at higher temper-
atures and higher voltage surges.
Separate negative and positive leads for each section for universal replacement work. Pal Nut furnished with each condenser. Individually packaged in attractive, varnished outer box. These units are ideal for long life and continuous service.

THE INDUSTRIAL CONDENSER CORP. was formed in 1940 in order to answer a definite need for a midwestern manufacturer of oil, wax, electrolytic and motor starting capacitors. Since this time INDUSTRIAL has grown to a leading place in the industry.

In addition to the standard types of paper and electrolytic capacitors covered in these pages (see Bulletin 1031A for complete line) and carried in distributors' stocks throughout the country, a wide variety of other types are available on special order.

The display shown at the left is on the counter of every INDUSTRIAL distributor. Reference to this will be of assistance in selecting the proper unit for each application.

## Built to U. S. Signal Corps and Navy Specifications

## DRY ELECTROLYTICS

Type "BE" electrolytic capacitor is the first commercially available unit of this type with the reliability of the total submersion type, oil filled capacitors.

Wound with the highest purity aluminum foil and cellulose separators available; impregnated in electrolyte having excellent temperature characteristics, these units will outlive their associated equipment.

## TYPE "BA" OIL FILLED

1. INCCO OIL "A" permits efficient operation of these compact units over the widest range of temperature.
2. The use of the HIGHEST GRADE CONDENSER TISSUE insures greater safety factor and longer life.
3. Specially PROCESSED RIVETED TERIMINALS are designed to withstand total submersion in salt water and changes in temperature from $50^{\circ}$ below zero Centigrade to $90^{\circ}$ above zero Centigrade without loosening or losing their integrity.
4. CONDENSER MOUNTINGS form an integral part of these drawn shell containers insuring permanent and rigid fastenings.
5. All units are NON-INDUCTIVELY WOUND providing efficient operation over the widest range of frequencies.
6. HERMETICALLY SEALED, they are unaffected by time, temperature or humidity.
7. CONSERVATIVELY RATED for safe and continuous uninterrupted operation at $10 \%$ above rated voltage for the lifetime of associated equipment.
8 . Tested at twice the rated voltage between terminals and twice the rated voltage plus 1000 from each terminal to case.

## TYPE "SA" OIL FILLED

1. INCCO OIL "A" IMPREGNATED AND FILLEDpermitting efficient operation over widest range of temperatures.
2. HERMETICALLY SEALED CASE-is unaffected by time, humidity, or operating temperatures.
3. Use of HIGHEST GRADE CONDENSER TISSUES insures a long uninterrupted life.
4. HIGH-GLAZE PORCELAIN INSULATORS-insure low moisture absorption and high terminal to case flash over.
5. CONSERVATIVELY RATED-SAFE FOR CONTINUOUS OPERATION AT 10 PER CENT OVERLOAD.
6. Use of "SPACE SAVER" UNIVERSAL MOUNTING BRACKET provides adjustable capacitor heights.
7. LEAD COATED STEEL CASE-IS NON-CORROSIVE and lacquer finished.
8. TESTED FOUR TIMES BEFORE SHIPMENTguarantees a 100 per cent perfect product electrically and mechanically.
If riveted terminal construction is wanted in place of porcelain stand-off insulators add " $R$ '" to catalog number. For example, 6SA50 changes to 6SAR50. Submersion proof terminal construction to meet Army and Navy specifications is optional; specify on order. Standard capacity tolerance plus or minus 10 per cent. Mounting brackets supplied in accordance with following catalog designations: TYPE SA-No mounting brackets. TYPE SAU--'Space Saver'' universal bracket. TYPE SAJ--Soldered vertical mounting bracket.
Type SAL-Reversible mounting foot bracket. TYPE SAH-Re-

versible spade bolt bracket.
For example: The 8 mfd. 600 V . type with "Space Saver" bracket has catalog number 6SAU800.
NOTE: To facilitate delivery we have standardized on container heights. In many cases units can be supplicd in shorter containers if required.

The case is a one-piece metal extrusion with a "locked-in" molded neck. This construction mects and surpasses the Army and Navy requircments for a submersion-proof capacitor

Type "GA", is available in the seven standard rating listed below, but can also be supplied in other capacities and/or voltages to manufacturers' specifications.

In the standard "GA" and "HA" types the container is insulated. A grounding lug can be supplied for connecting one terminal to the case. Fiber washer for insulating contaner from chassis, when case is grounded, and insulating cover for insulating the container from adjacent equipment, can also be supplied on special order.

Type "HA" differs from "GA" in container and mounting neck size, and also in the fact that it has three inculated terminals. Primarily, type "HA" is supplied to manufacturers specifications, to meet special requirements of multiple-section and multipleterminal capacitors, with either insulated or grounded container. terminal capacitors, with either Case

## TYPES "GA" and "HA" OIL FILLED

These inverted mounting capacitors fill a definite need where chassis space is the prime factor.

## CAPACITORS TO 250,000 V.D.C.W.

INCCO OIL "A" IMPREGNATED AND FILLED assures smaller size, low power factor, and widest range of operating temperatures.
ELECTRIC ARC WELDED HEAVY GAUGE HOT TINNED STELCL CASES are non-corrosive-finished in durable lacquer.
GLAZED WET-PROCESS PORCELAIN INSULA-TORS-low moisture absorption and high terminal to case flash over.
WOUND WITH HIGHEST GRADE CONDENSER TISSUES-insures a long, uninterrupted life.
CONSERVATIVELY RATED-Safe for continuous operation at 10 per cent overload.
HERMETICALLY SEALED STEEL CASE - unaffected by time, humidity or operating temperatures.
AVAILABLE TO MEET U. S. SIGNAL CORPS AND NAVY SALT WATER SUBMERSION REQUIREME'NTS.

## TYPE "WA" - HIGH VOLTAGE OIL FILLED CAPACITORS

## MOTOR STARTING CONDENSERS

These motor starting condensers are all heary duty three second start. Built of the finest materials obtainable, these capacitors are engineered to the Nth degree of perfection. They are used by all the leading manufacturers of high quality motors.

The listings shown will taka care of $90 \%$ of all youn replacement requirements.

# INDISTRIRI <br> CONDENSER CORPORATION <br> CONDENSER 

## DIRECT REPLACEMENT

For Either Dry or Wet Types
No Drilling - No Changes
The "IL" type capacitor is a dry electrolytic assembled in an aluminum container having a threaded mounting neck which is an integral part of the container.
Our "IL" type capacitors may be used as replacements for the old type wet or dry electrolytic capacitors and will mount in the same mounting hole as the part replaced, eliminating the use of adaptors or auxiliary workmanship. Electrically and mechanically this condenser is designed for heavy duty service. It incorporates the exclusive INDUSTRIAL etched foil process of construction.
Although these capacitors are not hermetically sealed, they are highly superior to the paper type units generally used for this kind of replacement.

These units are supplied with Underwriters Approved $75^{\circ} \mathrm{C}$ rubber covered leads.
Individually boxed in attractive carton with instructions.

To replace $13 / 8^{\prime \prime}$ diameter screw neck type

An extremely popular type of con denser due to its exceptional high quality and midget size. Hermetic ally sealed in a small metal case and scientifically vented, to protect against adverse operating conditions of voltage, temperature and humidity. Container is insulated by a high grade tube which is spun over the ends of the can to elimi nate shorts when wires are bent close to container. Easily mounted by their rigid wire leads.

All Type " MM " units are available with mounting strap. Recommended in cases of extreme vibration or when advisable to have unit solidly anchored. When ordering add the letter $S$ before the catalog number.

Each unit is completely embedded in a high grade wax and then sealed in an impregnated carton to insure efficient operation under the most adverse conditions. New, high voltage formation, gives complete protection against surges and high peak voltages. Supplied with color coded, Underwriters' Approved, rubber covered leads. Universal lugs permit easy mounting in any position.

Type "C" is similar to type "MC" above. It is designated, however, for older type sets where space is not limited.

Spade bolt type "SB" of mounting has been very popular due to its wide use in many radio sets. Each unit is embedded in a high temperature wax and then sealed in a thoroughly impregnated cardboard tube, affording complete immunity to moisture penetration. New high voltage formation gives complete protection against surges and high peak voltages.

Type "SM" has identical characteristics as " SB ". The addition of the strap mounting bracket has proved favorable in its use due to its wide application in AC-DC and portable sets in the replacement field. The strap can be moved to the best mounting position and then bolted or soldered.

Supplied with color-coded, Underwriters' Approved, rubber covered leads.

## MALLORY DRY ELECTROLYTIC CAPACITORS

TCSINGLE TUBULAR CAPACITORS (Aluminum Encased)

- These compact hermetically sealed tubulars are ideal for under-chassis mounting and all applications where space is at a premium.

Furnished in aluminum tubes with external insulating covers, they are smaller than cardboard tubulars of equivalent rating.

Completely dependable under all climatic conditions, they assure many years of satisfactory performance.

Types TC-82 and TC-92 are especially designed for high working and surge voltage applications which may be continuously applied within the limits shown in the chart.

All TC units are supplied with $3^{\prime \prime}$ bare wire leads and are available in the ratings listed below.

See page 5 for mounting hardware.

Tf. Tf DUAL TUBULAR CAPACITORS

- These are aluminum encased dual tubulars similar in construction to the type TC single units.

Type TCD tubulars are the common negative type with three terminals.

Type TCS tubulars are the separate section type with four terminals. They may be used to replace either common negative, common positive or separate section capacitors by proper use of the four terminals.

Both types are extremely compact, as shown by the dimensions below, and all electrical characteristics are equal or superior to those of other types.

Cutting and stripping of covered leads has been eliminated through the use of solder lug terminals which may also be used as convenient anchor points for other wires.

A Mallory type TH mounting clip, described on page 5 , is supplied with each unit.

DUAL COMMON NEGATIVE TCD

## MÄLLORY DRY ELECTROLYTIC CAPACITORS

FP

## STANDARD CAPACITORS

Accepted as the industry standard for vertical mounting, these low cost, compact capacitors are available in the ratings shown.

Originally designed to mount directly to the chassis by twisting the mounting ears provided, they may also be mounted through the use of several types of hardware described on page 5.
Available in single, dual, triple and quad arrangements, all types utilize the mounting ears as the negative terminal. A separate positive terminal is provided for each section. Since the case is grounded to the negative terminal, it is necessary to use some external means to insulate the unit from the chassis in circuits where the negative is not at chassis potential. Such cases are infrequent but may be handled by the use of the proper hardware available for this purpose.

Any $1^{\nu}$ or $13 / 8^{\prime \prime}$ diameter FP capacitor may be used as a plug-in type by employing the Mallory type PS sockets described on page 5. In such cases the blank mounting ear on the FP capacitor should be removed with diagonal cutting pliers in order to polarize the unit with respect to the socket.
In making replacements it is not necessary to use exactly the same ratings as the original capacitor. Higher capacity or voltage ratings are perfectly satisfactory and the electrical characteristics are not affected in such cases.

The wide variety of ratings originally used makes it impractical to stock all ratings for replacement. It is suggested, therefore, that the following system be considered where exact replacements are not at hand.

1. Use higher capacity or voltage ratings as explained above.
2. Use parallel connections on multiple units, (i.e., use dual 10 mfd . for 20 mfd . or triple 10 mfd . for a $20-10$ mfd. etc.)
3. Leave some section unused. (i.e., use two sections of a triple 10 mfd . to replace a dual 10 mfd .)
4. Use high voltage sections to replace bypass units. (i.e., a triple 10 mfd .150 volt unit can satisfactorily replace a unit rated $10-10-20 \mathrm{mfd}$. $150-150-25$ volts. The 10 mfd. 150 volt section has approximately the same impedance as a 20 mfd .25 volt section and impedance, not capacity, is determining factor.)
Type FP capacitors are supplied with one type BP mounting wafer. In replacement work this wafer is usually not required since the original equipment has the proper mounting facilities. This wafer may be used, however, for either insulated or grounded mounting where necessary. For grounded mounting simply connect one mounting ear to the chassis.
Note: Type FP capacitors are made with Mallory fabricated plate anodes. Type WP is made with etched plate anodes.

## SURGE VOLTAGE DATA

- Due to the many multiple section listings on FP capacitors, it is not practical to show surge voltage ratings without consuming considerable space in the chart. The surge voltage ratings are, therefore, given separately in the small chart.

| Wkg. VDC. | Surge Volts |
| :---: | :---: |
| 6 | 10 |
| 10 | 15 |
| 15 | 20 |
| 25 | 40 |

| 200 | 275 |
| 250 | 325 |
| 300 | 375 |
| 350 | 425 |
| $400-450$ | 525 |

# MALLORY DRY ELECTROLYTIC CAPACITORS 

## $2 N \cdot 2 S \cdot 3 N \cdot 3 S \cdot 4 S \cdot S T \cdot T N \cdot U R$

## CARDBOARD TUBULAR CAPACITORS

－These capacitors are supplied in waxed cardboard tubes in the ratings shown in the chart．All units are furnished with an adjustable strap（type MS－1）for hori－ zontal mounting except TN111 and UR182－193．

Those types marked（＊）have leads out both ends and are intended for horizontal mounting only．

Other types have all leads out one end and are pro－ vided with mounting feet for vertical mounting in addi－ tion to the strap for horizontal mounting．

UR182－193 has 3 separate sections in one tube and replaces the former rectangular types UR182 and UR193．

Mallory type TH clips may also be used for mounting where the diameter falls within the TH clip range．See page 5 for hardware．

| 8－8，10－10 | 450－25 | 1\％89259 | $4 S 718$ | 3.03 |

NOTE－Triple and Quad Separate Section units have first section separate，others common negative．

## RS•RM•HD•HS•SR

## THREADED NECK CAPACITORS

－This type is supplied in aluminum threaded neck type containers．Type RS is single section while type RM is multiple separate section．

Type HS is for high voltage applications．
Type HD684 is now designed to replace former types HD684，SR643 and SR644 and special hardware is in－ cluded to fit all original mounting means．

Type SR638 and SR645 have $7 / 8^{\prime \prime}$ threaded neeks and lug terminals．SR 645 has one terminal common anode， one negative terminal and the other negative to container．

All are supplied with special hardware permitting their use in replacing original units regardless of diameter．

See page 5 for hardware．

## MAILORY DRY ELECTROLYTIC CAPACITORS

## HC•NP <br> HIGH CAPACITY-LOW VOLTAGE and NON-POLARIZED CAPACITORS

- Type HC capacitors are high capacity low voltage units for use in filtering dry disc rectifiers, electric fence equipment, talking picture equipment and other low voltage applications. (See page 1 for additional TC tubular types.)
Type HC1060A is a special design for electric fence controller replacement.
Type NP capacitors are non-polarized for use where polarity may be applied in either direction but are not for use on continuous AC applications. They are useful for welding and control equipment where capacitor is employed as a stored energy device. The non-polarized feature prevents loss of capacity due to reverse voltage encountered in this service.

Both HC and NP units are supplied in moisture-proof plastic containers and require no external insulation.

A type VR bracket for vertical mounting is supplied with each unit. See page 5 for description of VR and other available hardware.

## WP • FP

SPECIAL TELEVISION CAPACITORS

- The frequencies encountered in television applications require special capacitor ratings. The units listed below are similar to the standard FP or WP types except for special impedance ratings designed for television frequencies.
Type WP520 may be used for bypassing in the audio, and synchronnizing amplifier stages, and also for bypassing the deflecting amplifier cathodes.
Type FP550 is suggested for filtering the low voltage power supply. Note that the 10 mff . 450 volt section is designed as the input and the 80 mfd .400 volt section as the output.
Type WP505 is designed for the Video amplifier cathode bypass. Type WP510 is for the horizontal centering control bypass.
Type WP540 is intended for bypassing the vertical centering control.

| Capacity or Impedance | Wkg. Volts | Max. <br> Surge <br> Voltage | Size | Mallory <br> Cat. No. | $\underset{\text { Price }}{\text { List }}$ |

## BS <br> BATH-TUB CAPACITORS

- These are ideal for marine, aircraft, geophysical and other applications where extreme operating conditions are encountered.
Type BS81 and BS91, rated 500 and 600 working volts respectively, are excellent for power amplifier and other high voltage applications.

Capacitor cartridges are first sealed in aluminum tubes and then encased in sturdy corrosion-resistant hot-tinned steel cases. All units are internally insulated from case.

| Cap. <br> Mfd. | $\begin{gathered} \text { DC Wkg } \\ \text { Volts } \end{gathered}$ | Max. <br> Surge Voltage | $$ | Mallory <br> Cat. No | List <br> Price |

## MAlLORY CAPACITOR HARDWARE

- While hardware is included in the display carton with certain capacitors, as explained, the list below covers all types currently available.

TYPE MP-Metal plates for grounded mounting of FP and WP capacitors.
TYPE BP-Bakelite plates for insulated mounting of FP and WP capacitors.
TYPE PS-Molded plastic sockets for plug-in mounting FP or WP capacitors. (Blank ear on capacitor should be removed to permit polarization with respect to socket.)
TYPE MW-100-Special wrench for twisting mounting ears on FP or WP capacitors.

| Cat. No. | Description | Size | List Price |
| :---: | :---: | :---: | :---: |
| MP-2 | Metal mounting wafer for FP. | $3 / 4$ | \$0.06 |
| MP-4 | Metal mounting wafer for FP. | 1 | . 06 |
| MP-6 | Metal mounting wafer for FP. | 13/4 | . 06 |
| BP-2 | Bakelite mounting wafers for FPI | 3/4 | . 06 |
| BP-4 | Bakelite mounting wafers for FP | 1 | . 06 |
| BP-6 | Bakelite mounting wafers for FP | 13/3 | . 06 |
| PS-4 | Plug-in socket for FP. | 1 | .75 |
| PS-6 | Plug-in socket for FP | 13/6 | . 94 |
| MW-100 | Mounting wrench for FP | Var. | 1.13 |

TYPE MS-1—Adjustable metal strap for horizontal mounting tubular types up to $13 / 8^{\prime \prime}$ diameter.
TYPE A-016-Terminal connector or anchor strap for general use where required.
TYPE 015-1-Washer for RS type $5 / 8^{\prime \prime}$ neck when used in over-size chassis hole.
TYPE 015-2-W Washer for use with RS, RM or HS units where chassis hole is too large for regular mounting. Use two washers, one above and one below chassis.
TYPE A-017-Special washer with turned over edge for ring clamp mounting $1^{\prime \prime}$ RS type in $13 / 8^{\prime \prime}$ ring clamp.

| Cat. No. | Description | Size | List Price |
| :---: | :---: | :---: | :---: |
| 015-1 | Washer for $588^{\prime \prime}$ neek in 7/8 ${ }^{\prime \prime}$ hole. | Var. | \$0.06 |
| 015-2 | Washer for $3 / 4^{\prime \prime}$ neck in $1^{\prime \prime}$ hole. | Var. | . 06 |
| MS-1 | Adjustable mounting strip. | Var. | . 06 |
| A-016 | Terminal connector. . . . . | Var. | . 06 |
| A-017 | Washer for clamp mounting neck cans. | Var. | . 06 |

TYPE PL-Plastic end cap to protect terminals on HC or NP units when desired.
TYPE HB-Horizontal bracket for mounting HC and NP units complete with end cap type PL.

| Cat. No. | Description | Size | List Price |
| :---: | :---: | :---: | :---: |
| PL-3 | Plastic end cap. | 17/16 | $\mathbf{\$ 0 . 1 8}$ |
| PL-6 | Plastic end cap. | $1^{13 / 16}$ | . 18 |
| PL-8 | Plastic end cap. | 21/16 | . 25 |
| HB-4 | Horizontal bracket (Plastic Cases) | $33 / 8$ | . 31 |
| HB-8 | Horizontal bracket (Plastic Cases) | 43\% | .31 |

TYPE TH-Special clips for horizontal mounting of any tubular or FP unit within the diameter range shown. Designed primarily to mount without tools under special chassis lances in original equipment, they may also be attached to chassis with $5-32$ screw and nut in any $1 / 8^{\prime \prime}$ hole.
TYPE VR-Brackets for vertical mounting round units.
TYPE 104-1-Special bracket with spade bolt for mounting RS and RM units where spade bolt mounting was used.

| Cat. No. | Description | Size | List Price |
| :---: | :---: | :---: | :---: |
| TH-13 | Spring clip for TC. | 3/8 to 7/6 | \$0.06 |
| TH-15 | Spring clip for TC | 1/2 to 9/6 | . 06 |
| TH-17 | Spring clip for TC. | 5 50 $^{11 / 16}$ | . 06 |
| TH-19 | Spring clip for 'TC and FP. . | $3 / 4$ to ${ }^{11 / 16}$ | . 06 |
| TH-21 | Spring clip for TC. . . . . . . | 7/8 to $13 / 16$ | . 06 |
| TH-23 | Spring clip for TC and FP. . | 1 to $11 / 18$ | . 06 |
| TH-25 | Spring clip for TC and FP.. | $13 / 8$ to $17 / 18$ | . 06 |
| VR-1 | Clamps for vertical mounting | 1 to $11 / 16$ | . 12 |
| VR-3 | Clamps for vertical mounting | $13 / 8$ to $1^{7 / 16}$ | .12 |
| VR-4 | Clamps for vertical mounting | $11 / 2$ to $19 / 16$ | . 18 |
| VR-6 | Clamps for vertical mounting | $13 / 4$ to $1^{13 / 16}$ | . 25 |
| VR.8 | Clamps for vertical mounting | 2 to $2^{1 / 16}$ | . 25 |
| 104-1 | Spade bolt mounting for neck type cans. | Var. | . 18 |

## OE AND CE INSULATING SLEEVES

| Cat. No. | Description ${ }^{\text {a }}$ | Size | List Price |
| :---: | :---: | :---: | :---: |
| OE-1 | Open end FP insulating sleeves. | $3 / 4 \times 2$ | \$0.06 |
| OE-3 | Open end FP insulating sleeves. | $1 \times 2$ | . 06 |
| OE-4 | Open end FP insulating sleeves. | $1 \times 3$ | . 06 |
| OE-5 | Open end FP insulating sleeves. | 13/8 $\times 2$ | . 06 |
| OE-6 | Open end FP insulating sleeves. | 13/8 $\times 3$ | . 06 |
| CE-1 | Closed end FP insulating sleeve. | 34 $\times 2$ | .12 |
| CE-3 | Closed end FP insulating sleeve. | $1 \times 2$ | . 12 |
| CE-4 | Closed end FP insulating sleeve. | $1 \times 3$ | .12 |

| CE-6 | Closed end FP insulating sleeve. | 13/8 $\times 3$ | . 12 |

# MA゙LLORY AC MOTOR STARTING CAPACITORS 

## MSF . MSG rectangular cased ac capacitors

- Although the rectangular cased electrolytic motor-starting capacitor is seldom used in new motor production, there is sufficient demand for replacement to continue listing this type.

Original rectangular units were supplied in three styles, i.e., flexible leads, solder lugs and stud type. All Mallory units listed are of the universal type and can be used to replace all three types. This is possible due to the complete set of hardware included, as pictured, with each capacitor.

Complete instructions are supplied with each capacitor regarding the use of this special hardware.

All units are equipped with four terminals. The unmarked and $L$ terminal are the capacitor terminals, the two others being dummies for additional connections where required. Terminal $T$ is for the thermostat lead and is usually used as an anchor point for one side of the starting and running windings. TL is the anchor point for the other thermostat lead and one side of the line. The other line and running winding are connected to L . The unmarked terminal goes to the starting switch. If the original capacitor had only two terminals, then do not use $T$ and $T L$. The relative location of these terminals to the original is unimportant.

Note that the minimum capacity will be used rather than the minimum-maximum capacity rating formerly employed.

## P : MSI RoUnd cased ac capacinors

- Type P capacitors are furnished in the new Mallory perfected plastic case. These are interchangeable with former types of same size and are superior from a moisture resistant standpoint.

Type $P$ may also be used with the new end cap and bracket shown, where required.

Type MSU's are the same as type $P$ but furnished in aluminum containers with insulating covers.

All units are now marked with minimum capacity only.

## MAILORY TRANSMITTING CAPACITORS

## IZ

ROUND
TRANSMITTING CAPACITORS

- Type TZ capacitors are designed for low-power transmitting, industrial, television and power amplifier applications. They may be mounted upright or inverted by means of the ring clamp supplied with each unit. All units are internally insulated from case.

## TX

 RECTANGULAR TRANSMITTING CAPACITORS- These Mallory transmitting capacitors are compact in size and conservatively rated. Type TX capacitors are heavy duty general purpose units ideal for commercial, amateur, broadcast, industrial and television applications. Latest type insulated, leakproof terminal construction is employed throughout. Ratings from 600 to 6000 volts DC are carried in stock as listed below. Mounting hardware is included in all cases.

## TD WAX IMPREGNATED CARDBOARD TUBULARS

- Mallory type TP capacitors are wax impregnated and furnished in thoroughly waxed cardboard tubes. The substantial wax seal at each end and the type of wax used overall provide maximum protection from atmospheric conditions for this type of capacitor.
These tubular capacitors are attractively labelled and have as small physical dimensions as possible without sacrificing quality.
The chart below lists the wide assortment of ratings considered standard and available from stock.

The 200 volt ratings formerly listed have been dropped, since price and size differentials were small and the demand was of little consequence. The dual TP units formerly listed have also been dropped due to the lack of demand.

## OIL IMPREGNATED WAX FILLED TUBULARS

- These cardboard tubulars are oil impregnated and wax sealed. They provide an extra safety factor for voltage applications higher than recommended for regular wax impreg. nated units.

## MAllory miscellaneous oill-flled paper capacitors

## AG•AS AUTO NOISE

- Type AG capacitors are designed for suppressing radio interference eminating from auto generators, oil and gas gauges, etc.

Type AS capacitors are for similar applications but embody the latest noise suppression technique developed during the war. These are extremely rugged units and are ideal for all suppression applications.

## $\mathrm{AM} \cdot \mathrm{FM} \cdot \mathrm{DL} \cdot \mathrm{RF} \cdot \mathrm{CA}$

## NOISE SUPPRESSION CAPACITORS

- These units are also intended for radio noise suppression. Type AM is designed for use on ammeters. Type FM is for Ford generators. Type DL is for domelight filtering. Type RF is designed for low RF impedance and is ideal for general vibrator hash suppression. Type CA275X is bath-tub type for general suppression work in aircraft and marine applications.

## CR OIL-FILLED <br> Ub CASED BYPASS CAPACITORS

- Mallory cased bypass type CB capacitors are oil-filled leak-proof units of extremely rugged construction. While seldom used in ordinary radio broadcast receivers, they are ideal for all applications where the finest quality is desired.
Industrial electronic, geophysical equipment and other special requirements provide frequent need for this type.

Completely sealed in heavy hot-tinned steel cases, they assure long trouble-free service under such adverse atmospheric conditions as may be encountered in aircraft and marine applications.
Type CB should not be confused with the former unsealed wax-impregnated types.

## VB • VD • VD Vibrator buffer capacitors

- Types VB and VD are specially designed for high voltage vibrator buffer applications. Type VO is useful in hash suppression in low voltage vibrator and other circuits.

## MALLORY RADIO NOISE FILTER CAPACITORS

## GENERAL NOISE ELIMINATION INFORMATION

- All radio noise suppression devices should be applied at the source of the noise. Filters inserted in radio receiver cords are usually ineffective.

The filters described on this page are, therefore, designed for insertion at the offending device. They incorporate many improvements accomplished through the extensive research and war production experieuce of the P. R. Mallory Company. While there will be some exceptions, most of the types of interference found in the home can be effectively reduced by the Mallory filters described. Unusual cases should be referred to the Mallory Engineering Department for advice.

Each filter is supplied with a complete instruction sheet for proper installation.

## Y. 7 PLUG TYPE NOISE FILTERS

Type X1 is for relatively slight interference. Use at radio or appliance cord plug. Size $13 / 8^{\prime \prime} \times 13 / 4^{\prime \prime}$, rated 110 volts, 5 amps.
List Price each.
$\$ 0.75$
Type $X 3$ is a capacitor type filter having greater efficiency than Type X1. Use at radio or appliance cord plug. Size $13 / 8^{\prime \prime} \times 21 / 4^{\prime \prime}$, rated $110-220$ volts, 5 amps .
List Price each.
$\$ 1.13$
Type X5 is a triple capacity filter with provision for return lead to appliance. Special safety feature prevents possibility of shock and makes this unit ideal for use with vacuum cleaners, food mixers, etc. Size $13 / 8^{\prime \prime} \times 21 / 8^{\prime \prime}$, rated $110-220$ volts, 5 amps ., and equipped with binding post for connection to appliance or motor frame.
List Price each.
\$1.89
Type Z2 is a capacitor-inductance filter for medium interference. Use with electric razor, radio or appliance cord plugs. Most effective on grounded line systems where reversal of plug will affect operation. Size $13 / 8^{\prime \prime} \times 23 / 4^{\prime \prime}$, rated $110-220$ volts, 3 amps.
List Price each.
$\$ 1.77$
Type Z4 is a dual inductance-capacity filter for severe interference on appliances where a return lead from the filter is inconvenient. Ideal for electric razor, vibrators and household appliances. Use at radio or appliance cord plug. Size $13 / 8^{\prime \prime} \times 3^{\prime \prime}$, rated $110-220$ volts, 3 amps.
List Price each.
$\$ 2.08$
Type Z6 is a dual inductance-capacity filter with provision for return lead to ground. Recommended for suppressing severe interference. Use at radio cord plug or motor and appliance plugs. Size $11 / 8^{\prime \prime} \times 33 / 8^{\prime \prime}$. Rated 110-220 volts, 3 amps.
List Price each.
$\$ 2.65$
Type Z8 is same as Z 6 but with provision for return wire connection to motor or appliance frame rather than ground. An efficient filter equivalent to box type within 3 amp . rating. List Price each. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ \mathbf{\$ 2 . 6 5}$

- These Mallory capacity type filters, while primarily designed for installation on motor brushes, may be used wherever permanent connection to the appliance is desired.
All type W filters are designed to automatically ground the common connection, via the filter case, to the motor or appliance frame. Where a shock hazard may exist type $W$ followed by the letters SP should be specified as shown below. Type $W$ has no ampere limit.
Type W7 115-220 Volts AC-DC
for Light interference-List Price.
$\$ 1.13$
Type W9 115-220 Volts AC-DC
for Medium interference-List Price. . . . . . . . . . . $\$ 1.51$
Type Wll 115-220 Volts AC-DC
for Severe interference-List Price . . . . . . . . . . . . . . $\$ 1.89$
Type W7SP 115-220 Volts AC-DC
for Light intereference-List Price . . . . . . . . . . . . . . $\$ 1.13$
Type W9SP 115-220 Volts AC-DC
for Medium interference-List Price . $\$ 1.51$
Type Z8A 115-220 Volts AC.DC3 Amperes
for Fluorescent Lights-List Price. $\$ 3.03$

## LC5 • LC10 <br> HEAVY DUTY APPLIANCE FILTERS

- Type LC filters are chokecapacity types for line insertion as pictured. They have provision for return lead to motor or appliance frame.

They are recommended
 for use where severe noise is encountered and a portable filter is desired.
Type LC5 rated 115-220 Volts AC-DC
5 Amperes-List Price
$\$ 7.59$
Type LC10 rated 115-220 Volts AC-DC
10 Amperes-List Price. .
$\$ 12.15$

## LB <br> HEAVY DUTY PERMANENT INSTALLATION FILTERS

- These are heavy duty filters for permanent installation at house meter board or permanently installed motors. Supplied in standard type cut-out boxes as
 listed below

| Type | Rating | Size | List Price |
| :---: | :---: | :---: | :---: |
| LB-10 | $220 \mathrm{~V}-10 \mathrm{Amp}$. | $6^{\prime \prime} \times 6^{\prime \prime} \times 4^{\prime \prime}$ | $\$ 18.23$ |
| LB-20 | $220 \mathrm{~V}-20 \mathrm{Amp}$ | $1^{\prime \prime} \times 10^{\prime \prime} \times 6^{\prime \prime}$ | 42.41 |
| LB-40 | $220 \mathrm{~V}-40 \mathrm{Amp}$. | $12^{\prime \prime} \times 10^{\prime \prime} \times 6^{\prime \prime}$ | $\mathbf{5 2 . 7 4}$ |

## MALLORY MICA CAPACITORS

## MC <br> MICA CAPACITORS

- Mallory type MC mica capacitors are furnished in standard brown bakelite cases.
Designed primarily for radio receiving applications, they may be used in television and other electronic circuits within their voltage ratings.

The standard mica type has a capacity tolerance of $\pm 20 \%$.
The silver mica type may be secured in $\pm 10 \%$ or $\pm 2 \%$ as shown in the chart. Molded in low loss bakelite, these units are ideal for circuits where extreme stability is required.
High quality bakelite case material and carefully selected mica are used throughout.

For color code identification see illustration at right.
Available in standard packages of 10 units.

## RMA COLOR CODE

- The RMA color code, shown below, permits positive identification of the mica capacitors listed.

Reading in the direction of the arrow, top line first:1st dot -First significant capacity figure in micro-microfarads
2nd dot-Second significant capacity figure in micromicrofarads
3rd dot --'Third significant capacity figure in micromicrofarads
The figure thus derived is now multiplied by the decimal multiplier indicated by the fourth dot. This gives capacity in micro-microfarads. (Divide by $1,000,000$ for microfarads, if desired.)
5th dot -Capacity tolerance in percent
6th dot -Working voltage rating.

Example Shown Above $=1320 \mathrm{mmfd} . \pm 2 \%, 500 \mathrm{~V}$. W.

Case Size - $7 / 16^{\prime \prime} x^{25} / 32^{\prime \prime} \times 7 / 32^{\prime \prime}$ With $1^{1 / 8 "}$ Wire Leads •Voltage Rating $=500$ VDC Working - 1000 VDC Test

## MAILORY MICA CAPACITORS

MH

## TR ANSMITTING CAPACITORS

- Mallory type MH capacitors, molded in standard bakelite, are available for circuit voltages higher than permitted for type MC.

Transmitting and power amplifier equipment represent applications where they may be used to advantage in addition to the usual blocking and RF bypass requirements.

Furnished in the capacity and voltage ratings shown below, they have a capacity tolerance of $\pm 20 \%$.

Column T in the chart designates the case thickness, the only variable dimension.

The design of the type MH case permits permanent insulated mounting of the unit.

India mica of gauged thickness gives higher voltage breakdown and low power factor.

Type MH capacitors are
 strong mechanically, well insulated, provided with short, heavy terminals for minimum RF and contact resistance.

## MY TRANSMITTING CAPACITORS

- Mallory type MX mica capacitors are furnished in attractive porcelain cases in voltages from 2000 to 12,500 DC test as shown.

Ideal for amateur transmitting equipment, they may also be used in coupling, tank and bypass circuits at radio frequencies within their current ratings.

Note that the maximum amperes for several radio frequencies are given in the chart. The operating current should be kept within these limits.

## TYPE F-1

Capacitive-Inductive
Radio-Noise Filter

- High-quality, highly efficient
- Effective with radios or appliances
- Sturdy, attractively-finished container
- Individually packaged

Rated voltage: 110 Volts AC-DC
Maximum current: 5 amperes
List price: $\$ 8.00$

# "LONG-LIFE" CAPACITORS <br> PYRAMID 

## "TWIST-MOUNT" TYPE TM

D.C. dry electrolytic capacitors in grounded aluminum containers with lug terminals and mounting ears. . . . Popular ultra-compact replacement type. . . . Excellent electrical characteristics. . . . Legible terminal coding. ... Each unit supplied with metal and bakelite mounting plates. Individually packaged.

## SANGAMO CAPACITORS

# TYPE 30 PLastic moloed PAPER TUBULAR CAPACITORS 

## "Molded Like Micas"

Here is an entirely new concept in paper tubular construction: capacitors which are molded in plastic-just like micas! The immediate results are obvious: more stable capacity values, excellent seal characteristics, and application at higher ambient temperatures. In the long run, too, the result is obvious: a new standard of permanence. Halowax impregnation, identified by tan coloring of the molded plastic, is suitable for operation in ambient temperature ranges from - $55^{\circ} \mathrm{C}$. to $+55^{\circ} \mathrm{C}$. Diaclor impregnated capacitors, identified by a red plastic case, are recom-

[^31]mended for operation at higher voltages or temperatures. A chlorinated dielectric, diaclor possesses a high dielectric constant, dielectric strength, volume resistivity and low power factor. The great chemical stability of diaclor permits prolonged operation at elevated temperatures with little change in capacity, breakdown characteristics or other properties. For 1000 or 1600 volt applications or for temperatures as high as $85^{\circ} \mathrm{C}$., diaclor is definitely superior to wax as a capacitor impregnant.

## TYPES 20 AND 21 metal CaSEd MINERAL OIL PAPER CAPACITORS

TYPES 20 AND 21
Designed tor wy-pass and coupling applications, types 20 and 21 are non-inductively wound paper capacitors impregnated in mineral oil of greatest stability and housed in metal tubes. Type 21, having terminals insulated from the case, is covered with a cardboard sleeve. Type 20, having one terminal grounded to the case, is similarly covered unless specified without sleeve in which case for all ratings the diameter and length are reduced by $1 / 16$ and $3 / 16$ inches respectively. The Type 20 is the same price as the Type 21.
Type 21

## TYPES 50 AND 59 bypass PAPER CAPACITORS

Types 50 and 59 paper capacitors are non-inductively wound paper dielectric sections sealed in seamless containers. Primarily intended for bypass applications, their characteristics are excellent for R.F. and A.F. bypass, audio frequency coupling and A.C. circuits. The Type 50 capacitors are vacuum impregnated and filled with the finest mineral oil available for use; the Type 59 capacitors are vacuum impregnated and filled with diaclor; a chlorinated dielectric providing maximum capacity and voltage in minimum space.

Inquiries should be directed to the factory for capacities and voltages other than those listed above.

# SANGAMO CAPACITORS 

## TYPE 71 daclor impregnated TRAHSMITTIMG CAPACITORS

Sangamo Diaclor impregnated capacitors have the advantage of longer life, lighter weight, and smaller size. Diaclor is a specially compounded, chemically purified chlorinated liquid dielectric. This synthetic impregnant, whose characteristics can be controlled with great uniformity, assures a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is noninflammable and non-explosive.
Type 71 Diaclor impregnated capacitors are supplied with Type A universal bracket, Type B footed bracket, or Type C spade lug bracket. Mounting dimensions of these brackets are given from center to center, in inches, in column "F" below. Terminals: composition rivet or screw; pyrex glass; or, stand-off porcelain.

# SANGAMO CAPACITORS 

## TYPE 75 diaclor impregnated A．C．CAPACITOR

TYPE 75

Type 75 Sangamo Diaclor Impregnated Capacitors are designed for continuous A．C．duty in ambient tempera－ tures up to 75 degrees centigrade．These capacitors are recommended for use with capacitor motors－as power factor correction capacitors－and other similar A．C．applications．They are supplied with either the composition rivet or screw terminal，with pyrex glass terminals，or with stand－off porcelain terminal．Type mounting bracket desired should be specified when ordering．

## TYPES FI AND F2 mica capacitors

F2 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

Type $G$ ceramic cased capacicors are intended for service where highest voltage and $R . F$. current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Terminal plates are designed to permit any usual connecting or mounting practices.

## "MINICAP" DRY ELECTROLYTICS

These high-quality compact capacitors are hermetically sealed in aluminum tubes, covered with kraftboard insulating jackets. All units have tinned copper leads for easy soldering. Dual capacitors have common negative. Assembled radia! mounting strap furnished on high-capacitance low voltage capacitors and on all dual units. Individually packaged.

## SOLAR

## TYPE DH "UNIVERSAL REPLACEMENT" DRYS

These popular service-type cardboard tubular dry electrolytics have an exceptionally long life because of the Solar-pioneered plastic-film inner wrap. The stud-dise mounting arrangement is ideal for replacement of ring-clamp, spade-foot, screw-base, and twist-prong mounting capacitors. A metal strap is also provided for horizontal mounting. Individually packaged.

## SOLAR (som CAPACITORS

## "SEALDTITE" WAX-MOLDED PAPER CAPACITORS

These famous paper fubulars are actually sealed tight against moisture by a distinctive Solar wax-molding process. The solid, squeezeproof molded housing over the Halowax-impregnated section is the mark of uniformly reliable capacitors in all climotes. Non-inductive windings give Sealdtite capacitors excellent r-f characteristics. Tinned leods make for easy soidering.

tDiameter $x$ Length in inches. Leads $\mathbf{2}^{\prime \prime}$ long minimum.
*Capacitors marked * are supplied in Duravolt construction in wax-impregnated Kraft tubes with wax end-seals. These units are given a final over-all wax coating for extra protection.

## TYPE TM "SEALDTEMP" PAPER CAPACITORS

Protected against moisture by a resin end-fill and a heavy varnish coating, these mineral-oil impregnated paper tubulars are intended for use as buffer capacitors in automobile radios and for use in similar high-voltage, high-temperature applications in other types of electronic equipment.
The resin end-seals not only bond to the Krafiboard housings to keep out moisture, but also make for virtually pull-proof leads. The varnish coating on the tubes does away with dripping coating wax as on conventional tubulars.

## SOLAR

## SUPPRESSOR TYPES

These units are specially designed for suppressor applications on vehicular and industrial electrical equipment. All of these types are built to exacting standards, and are capable of withstanding severe conditions of vibration.

## TYPE SHH "HASH" FILTERS

These capacitors are intended for "hash" suppression in portable and automobile radios using vibrator-type power supplies. Type SHH-1 has radial wire leads. Types SHH-2 and 3 have flat strap leads to minimize effects of lead inductance and to reduce r-f resistance.

| Catalog <br> Number | Mf | Size | List <br> Price | Dealer <br> Net Price |

## TYPE XTIMWPS OIL-FILLED PAPER CAPACITORS

Hermetically sealed in metal tubes with cardboard outer sleeves and assembled mounting strap, these non-inductively wound capacitors are both impregnated and filled with mineral oil to insure constancy of their superior electrical characteristics under all operating temperatures. Capacitor sections are insulated from the metal housings. Leads are hot-tinned for easy soldering. Individually packaged.

## "DOMINO" MOLDED PAPER CAPACITORS

Molded in thermosetting phenolic plastic, Type MPH "Domino" capacitors meet Underwriters' Laboratories requirements for units with a nori-combustible housing. These Halowax-section units are widely used as line bypass capacitors up to 250 volts $a-c$, in instruments, electric fuel pumps, etc.

## TYPE QAIM MINIATURE METAL TUBULARS

Housed in hermetically-sealed $1 / 4$ " diameter metal tubes, Solar Type QAIM capacitors are of ultra-compact multi-paper and fail construction. They are useful in a wide variety of applications ranging from hearing aids to firing devices. Non-inductive windings are insulated from container.

## OTHER SOLAR CAPACITORS

The capacitors and radio interference filters shown on these pages include only the types in relatively popular usage in the radio and electronic industry and do not represent the limit of Solar production.
Many other types are regularly cataloged for specialty use in the electronic and electrical industries, while a large volume of capacitors are manufactured strictly ta purchaser's specifications.
Where any question may arise concerning the carrect standard types or new designs to meet unusual requirements, Solar's Engineering Department will gladly provide capacitor users with advice concerning proper choice of units for dependable service.
The right is reserved to change standard Solar designs or canstructional details withaut natice.

## SOLAR DEPENDABILITY

It is the unqualified Solar guarantee that all of the products shown in this cotalog are manufactured of high-quality, carefully tested materials, under most rigid and exacting engineering control, with the sole purpose of achieving quality which is "Reliable in Every Climate." Solar capacitars are used in commercial and military electronic equipment throughout the world. This extensive acceptance of Solar products is the best testimonial of Solar dependability.

## TYPE QLX SUPEREX SPEEDFLASH CAPACITORS

These hermetically-sealed discharge capacitors are rated for dependability in pulsed lighting service. Units are especially constructed to minimize discharge stresses, have heavy internal leads, low inherent inductance, and an excellent energy-storage to weight ratio. Furnished with hook-on brackets.

## RECTANGULAR-CASE SUPEREX CAPACITORS

The Type XLXP series of Superex-treated paper-dielectric capacitors is conservatively designed to meet the exacting requirements of industrial electronic equipment and commercial radio apparatus. The synthetic, non-flammable Superex impregnant and fill assures long life, small size, high insulation resistance, low power factor, and stability of electrical characteristics at elevated temperatures.
Capacitors are furnished in gray-lacquered hermetically-sealed fabricated terneplate containers with high-voltage porcelain terminal bushings.
Type XLXPL units are supplied with hook-on flat-flange mounting brackets; Type XLXPJ units are supplied with hook-on spade-bolt brackets; and Type XLXPU capacitors have wraparound universal mounting brackets.

## SOLAR

## TYPE XSB MICA TRANSMITTER CAPACITORS

Used where electrical requirements require larger units than Type XR capacitors, these potted mica capacitors have high insulation resistance and low r-f losses. Stable operation is assured by careful testing, including heat runs at 300 Kc and rated current. Individually packaged.

## TYPE XHB MICA TRANSMITTER CAPACITORS

Largest of the low-loss phenolic-potted mica capacitors, Type XHB units are designed for exacting applications requiring both high breakdown voltage and high r-f current ratings. Long-cycle vacuum impregnation of the carefully constructed mica stacks and reliable sealing are followed by an r-f heat test at 300 Kc . Individually packaged.

Standard Capacitance Tolerance: $\pm 5 \%$.
Dimensions: $3^{\prime \prime} \times 23 / 8^{\prime \prime} \times 27 / 8^{\prime \prime}$ long. Mounting base $4^{\prime \prime}$ long, with $17 / 64^{\prime \prime}$ holes on $39 / 16^{\prime \prime}$ centers. Holes in each flange spaced $13 / 16^{\prime \prime}$ apart. Terminals are No. 14-24 threaded studs $1^{"}$ high.

## SOLAR <br> FILTERS

## ELIM-O-STATS FOR FLUORESCENT LAMPS

ELIM-O-5TAT Most effective of all radio frequency interTYPE EF 100 ference filters over the wide range of frequencies from 150 kilocycles to 150 megacycles used for audio and videa entertainment and communications, the EF-100 is the Elim-O-Stat for fixtures in laboratories, radio salesrooms, rural homes, and wherever else sensitive receivers are used ar station signal strengths are weak. Of carefully engineered symmetrical twin-pi construction, the EF-100 Elim-O-Stat is designed to be installed in series with the line leads within the fixture at the point where the power leads enter. Only one unit is needed per fixture."Filter is securely housed in a light-gray metal container. Rated Voltage: 125 volts A-C. Maximum Current: 2.7 Amperes. Will handle up to six $40-\mathrm{watt}$ tubes. Underwriters' Approved.

List Price: $\$ 3.80 \quad$ Dealer Net Price: $\$ 2.28$

#### Abstract

ELIM-O-5TAT This Elim-O-Stat, electrically a delta-capaciTYPE EF 101 tive network, is about $90 \%$ as effective as the Type EF-100 Elim-O-Stat. Its small size and low cost make it the overwhelming choice for the great majority of applications. EF-101 Elim-O-Stats are furnished in a standard light-gray metal "bath-tub" container. They are designed to be connected across 125 -volt A-C or D-C lines as they enter fluorescent fixtures or lamps of any type or wattage rating. Only one Elim-O-Stat is needed per fixture. Underwriters' Approved.

List Price: $\$ 1.25 \quad$ Dealer Net Price: $\$ .75$

[^37]

## TYPE RP "ELIM-O-STAT"

This Elim-O-Stat is ideal for use with electric razors, small appliances, or midget radios with a maximum power consumption of approximately 125 watts. Suitable for suppression of interference on standard and short-wave broadcast bands and the new television channels. Furnished with 7 -foot line cord. Rated voltage: 125 volts AC or DC. 1 Amp. Max.

List Price: $\$ 4.50$
Dealer Net Price: $\$ 2.70$

## JUMBO "ELIM-O-STAT"

This Elim-O-Stat is an effective capacitive-inductive type in large attractive container. It is popular as a merchandising leader. Designed for attachment ta radio set or medium-sized appliances. Will effectively attenuate interference on the new television frequencies as well as on the regular and short-wave broadcast bands. Underwriters' Approved. Rated voltage: 125 volts AC-DC. Maximum current: 1.5 amperes.

List Price: $\$ 6.98 \quad$ Dealer Net Price: $\$ 4.19$

## TYPE RN "ELIM-O-STAT"

A capacitive-inductive Elim-O-Stat af high efficiency. It is of sectional band-suppression construction. Designed to be effective over standard and shart-wave broadcast bands, as well os the new television frequencies. Also useful with appliances. Rated voltage: 125 volts AC-DC. 5 Amps. Max.

List Price: $\$ 8.38 \quad$ Dealer Net Price: $\$ 5.03$

## SOLAR <br> SOLAR <br> ANALYZERS

## MODEL CF EXAM-ETER WITH "QUICK-CHECK"

Most comprehensive of all capacitor analyzers, this sturdy, reliable instrument is designed to simplify electronic servicing.

- Has exclusive, patented "Quick-Check" circuit for qualitative tests and intermittent checks without unsoldering capacitor leads
- Capacitance range- 10 mmf to 2000 mf by Wien Bridge
- Power Factor range- 0 to 50 percent
- Insulation Resistance range- 3 to 10,000 megohms
- Leakage Current-Reads electrolytic leakage current directly on large recessed $4 \frac{1}{2}$ " meter
- Continuously Adjustable 0-550 volt D-C power supply for electrolytic tests
- $0-600$ volt, 3 -range D-C vacuum-tube voltmeter
- 5-50 volt, A-C vacuum-tube voltmeter
- 100 ohm to 7.5 megohm A-C resistance bridge
- JAN Quality Components for Long, Trouble-free Service
- Neat and attractive. Gray metal case with etched panel
- Size: $12 \frac{3}{4}$ " high by $10^{\prime \prime}$ wide by $5 \frac{1}{2}$ " deep
- Weight: Only $12 \frac{3}{4}$ lbs. for CF-1-60
- Clear step-by-step, 20-page printed Technical Manual

## MODEL CF CAPACITOR EXAM-ETER

Complete with tubes and test leads-Ready to operate

| Catalog Number | For use on | Dealer Net Price |
| :--- | :--- | ---: | ---: |
| CF-1-60 | 115 volts a-c, $50-60$ cycles | $\$ 59.70 \dagger$ |
| CF-2-U | $115-230$ volts a-c, $25-60$ cycles | $70.45 \dagger$ |

## REPLACEMENT PARTS

TEST LEADS for Model CF Capacitor Exam-eters are especially adjusted for use with the balanced "Quick-Check" oscillator circuit. Use of non-standard leads will result in faulty operation.

| Part Number |  | Dealer Net Price |
| :--- | :--- | ---: |
| QC-465 | Quick-Check Test Leads | $\$ .75$ |
| CF-27 | Bridge Test Leads | .75 |

## "QUICK AS A WINK" MODEL CBB ANALYZER

An up-to-the-minute version of the famous Solar Model CB, long-time standard analyzer of the radio service industry.

- "Magic-Eye" tube for "Quick As A Wink" bridge balance indication
- Capacitance range- 10 mmf to 800 mf by Wien Bridge method
- Power Factor range- 0 to 55 percent
- Simplifred Neon-Lamp circuit for visual check of insulation resistance and electrolytic leakage
- Resistance Bridge- 50 ohms to 2 megohm range
- Easy-to-read color-coded scales
- Self-contained and compact

Size: $9 \frac{1}{2} " \times 7 \frac{1}{8} \times \times 6 \frac{1}{4}$ ". Weight: 7 lbs . for CBB-1-60

- Portable case with detachable cover has hand-rubbed finish
- Reliable components for operation in humid climate

## MODEL•CBB ANALYZERS

Complete with tubes and test leads-Ready to operate

| Catalog Number | For use on | Dealer Net Price |

| CBB-2-U | $115-230$ volts a-c, 25-60 cycles | $46.90 \dagger$ |

## TYPE RT-3 RAPID TEST FIXTURE

Adjustable rapid test fixture facilitates making capacitance and resistance measurements on axiallead capacitors and resistors. It is an invaluable aid when checking "stock." Just slip part leads between spring clips for test. Standard $\frac{3}{4}$ " spacing of banana plugs permits use on all standard test equipment.

## SPRAGUE ATOMS

THE UNIVERSAL MIDGET DRYELECTROLYTICS

Sprague Atom Capacitors-"Mightiest Midgets of All"-are the answer to $90 \%$ or more of all radio service requirements for replacement dry elctrolytic units. A small stuck of diferent capacines and practically every job.

Sprague atoms will fit anywhere. The smaller units can be mounted by means of their sturdy, timned-copper leads. Metal mounting straps are provided with all dual units and are available for the larger single units. (See Hardware page P-123.) Or if desired, you can mount them by any other Atoms will last longer and stand fur more punishment than much larger, old-style dry electrolytics.

Atoms are guaranteed to have low leakage, to withstand high surge voltages, and to have exceptionally long shelf life. Thoy are fully scaled against moisture and blow-ups by an exclusive Sprague

process.

SPRAGUELMUNIVERSAL MOUNTING REPLACEMENTS
Sprague Type $I M$ are the handiest, most convenient dry electrolytics yet developed for vertical chassis mounting. Mount them in any position to replace inverted can or spade-lug capacitors, or any other type. Their special mounting arrangements are designed to replace screw type can mounting and will fit any chassis hole from $\frac{3}{18}$ " to $7 / 8$ diameter. All Type IM units have separate positive and separate negative leads which can be connected together to get common positive or negative sections. They are particularly recommended to replace old common positive capacitors since they eliminate all possibility of section to section electrolysis, which causes common positive sec-
tions to fail. Units are of famous Sprague etched foil construction completely sealed and moisture-proofed.

factor. These units are of fundamentally new engineering design and construction. The outstanding humidity performance which these capacitors exhibit is a result of this new construction.

## SPRAGUE UHC high-capacity, low-voltage tubulars

These miniature high-capacity, low-voltage tubular dry electrolytics are specifically constructed for use as cathode by-pass capacitors and as smoothing filers for low-voltage, high-current power supplies. Whereas ordinary high-capacity, dry electrolytics have high leakage current and relatively high power factor, Type UHC provides exceptionally low leakage current and low power factor.

without the introduction of shunt resistance across low-resistance bias units, and it is particularly important in controlled feedback amplifiers.

| LS-88 | 8-8 | 450 | 525 | $18 / 8$ | $2 \frac{15}{16}$ | 2.75 |

Type PIS Capacitors can be used with complete dependability on applications where much larger, old-style can-type dry electrolytics were previously necessary. Their exceptional quality and dependability in minimum size are made possible by the exclusive Sprague etched foil process which permits high capacity with very small leakage currents and low power factor. Aluminum cans have threaded bushing and locknut at one end for mounting. Cans are completely insulated from the capacitor sections.
Special ring clamps are available for upright mounting. (See Hardware, page P-123.)

## (WITH CAN AS NEGATIVE TERMINAL)

Can type dry electrolyties especially designed for the exacting continuous duty requirements of public address and power amplifier work. High surge voltage rating provides extra safety in highcurrent power supplies where high peaks often occur. Unexcelled for "extra tough" service replacement uses. Provided with threaded bushing for standard mounting in any position. Can is the negative terminal in all units. Positive terminal is lug connection. Supplied with mounting nut, and insulating washer to insulate can from chassis. Special ring clamps are available for upright mounting. (See Hardware, page P-123.)

CONTINUOUS WORKING VOLTAGE 475 VOLTS MAXIMUM SURGE VOLTAGE 600 VOLTS

SPRAGUECLINVERTEDSCREW CAN MOUNTINGTYPE, 475 C
 (WITH CAN INSULATED FROM SECTIONS)

These can-type dry electrolytics are similar to Type SC Capacitors except that the can is insulated from the filter sections. Separate positive and negative terminal leads for each section. Especially recommended for high gain, high power amoplifiers where minimum inter-stage coupling through power supply is desired. Special ring clamps are available for upright mounting. (See Hardware, p. P-123.) CONTINUOUS WORKING VOLTAGE 475 VOLTS MAXIMUM SURGE VOLTAGE 600 VOLTS

SPRAGUEAP HIGHEVOLTAGE CAN TYPES, 600 V

## sprague Wr <br> Wet electrolytic replacements

Sprague Type WR Capacitors are NOT SUBSTITUTES. Instead they are dry electrolytics of very high voltage formation specifically designed for use wherever wet electrolytic capacitors may have been used in the past. Not only will they stand high peak voltages, but they'll handle a-c ripples that might cause ordinary 450 volt drys to break down. Diameter is the same as standard wet drys to break
mounting holes.

## SPRAGUETC tUBULARS, 600V "NOT A FAILURE IN A MILLION"

Under Sprague engineering leadership, cartridge by-pass tubular capacitors have reached their highest state of perfection. Of all that have been used in all parts of the world, the slogan "Not a failure in a Million" is far more than a boast. It is a fact proved by long experience under the most diffeult conditions of use.

TC By-Pass Ca-
pacitors consist of
non inductively
wound, tubular
sections impregnat-
ed by a special proc-
ess and assembled
in wax-impregnat-
ed tubes with wax
end seals. Tinned
wire leads are $21 / 2$
inches long, and are
firmiy anchored so
that they will not
pull out. Tubes are
clearly marked to
indicate polarity.

## SPRAGUETR high - voltage PAPER TUBULARS, 1600 V

Oil-impregnated and wax-filled in cardboard tubes, Sprague TR Tubulars are especialiy designed for use as buffers and other highvoltage applications such as automobile er supplies, etc. They are constructed throughout for long life under extreme cunditions of treme condion and heat. Fibullon and heat Full capacity ings.

## SPRAGUEPX <br> HERMETICALIY-SEALED OIL-IMPREGNATED METAL TUBULARS, 600V AND 1000 V DC

Here is your answer to every need calling for higher-voltage tubular capacitors in the smallest possible size for real dependability under difficult operating conditions. Sprague Type PX Capacitors consist of specially wound sections, impregnated with an exclusive Sprague oil and hermetically sealed in metal containers for long trouble-free service. Each unit is supplied with an external sleeve to insulate it from the chassis and other metal parts. Mounting may be made by means of the tinned copper leads $21 / 2$ " long, or by standard Sprague Mounting straps (see Hardware P-123).

## OIL-FILLED TRANSMITTING CAPACITORS

Filled with

(KILO-VOLT-OHL - The Sprague wartime research oil development)

## SPRAGUECR

## (With Universal

## Mounting Feature)

An oil-filled transmitting capacitor is no better than the oil with which it is filled-and Sprague brings you the best! KVO*-Kilo Volt Oil-is the result of extensive laboratory research and engineering tests and has proved its excellence throughout the world during the war in capacitors used on practically every type of equipment. KVO retains its dielectric efficiency at low tempera. tures to a greater extent than any other type of oil in common use. High insulation resistance and low power factor are maintained over a very broad range of operating temperatures. Oil-filled capacitors are es sential for high-voltage use, and you can rely upon Sprague KVo units under all conditions. Terminals are insulated from the cans for AT LEAST TWICE the work ing voltage. Capacitor sections are hermetically sealed in sturdy rectangular metal cans which can be automatically grounded through the mounting clamps.

For special industrial applications, where extremely high insulation resistance requirements must be met, Sprague can supply special dielectric materials.

CR Capacitors are of convenient rectangular shape and have handy adjustable universal flanges for mounting in any position. Each unit is labelled with operating information based on A.R.R.L. standards and, in accordance with Sprague custom, ALL RATINGS ARE CONSERVATIVE. No need to "play safe" by buying most costly, higher-voltage transmitting capacitors than you actually need.

Unconditionally guaranteed against breakdown when used as specified.
*Trademark applied for.

## FREE! LIFEGUARD PROTECTIVE CAPS

Don't run any chance of getting hold of a "hot one!" Each Sprague Type Kyo Capacitor comes to you equipped with the famous Sprague 'Lifeguard' Protective Insulating Caps at no extra charge. They afford maximum protection at all times.

Long a favorite with amateurs, broadcasters, etc., teurs, broadcasters, etc., pregnated and filled with pregnated and form with tube and circuit design with tube and circments. As with other requirements. As with other Sprague high-voltage transmitting types, each unit is equipped with ceramic terminals and IIFEGCARD
Satety Caps. Mounting clamp Satety Caps. Mounting clamp
is provided. Unconditionally is provided. Unconditionally
guaranteed when used as specified.
*Trademark applied for.

## SPRAGUEPC inverted round screw can

 TRANSMITTING TYPES, 600V TO 1500 VThese popular Sprague TYPE PO inverted round screw can capacitors are filled (NOT just impregnated) with $\mathrm{KVO}^{*}$, the famous Sprague $500^{\circ} \mathrm{F}$. flash protection oil that has the added advantage of retaining its dielectric efficiency at low temperatures. The PC Capactors find a wide field of usefulness in such applications as public address systems, medium-voltage transmitters, television and high gain amplifiers. THEY ARE RATED CONSERVATIVELY and labelled according to A.R.R.L. standards. Ample safety factor is assured. Units include spade washer and insulating lug to insulate the round metal can containers from the chassis. Ring clamp is available for upright mounting. (See page P-123.)

The Ford Type has a special mounting bracket to accommodate cars of this make. All units are conservatively rated, and designed to withstand high surge voltages. Full capacity-true voltage ratings.

## SPRAGUE SPECIAL automobile TYPES

Designed for special automobile services as indicated in the table, the following Sprague capacitors are equipped with suitable mounting features.

Sprague Type UC cardboard cased capacitors cost only about one-third the price of convertional high-voltage units-and you can count on
them fully for tip-top service them fully for tip-top service for practically any transmitting or similar use up to
1000 volts as rated. They 1000 volts as rated. They
are equally popular with beare equally popuar with inners as well as old-time ginners as well as old-time money on their rigs without interfering with efficiency. These capacitors are oil imprernated, wax filled, fuliy cased and sealed in durable cardboard containers. Handy mounting flanges may be cut ditionally guaranteed when used at rated voltages.

## SPRAGUE CAN - ENCASED PAPER DIELECTRIC TYPE, 600V (FOR DRY ELECTROLYTIC REPLACEMENTS)

The steady demand for Paper Dielectric Capacitors of the same sizes and shapes as Dry Electrolytics to serve as replacements for Dry Electrolytics has prompted us to bring you this line of capacitors. The actual capacity is one-third to one-half that of a Dry
Electrolytic in the same size container. The leakage and power factor are extremely low. No polarity has been observed.
Ideal for replacements in high-voltage public address systems, power amplifiers and high-voltage filter circuits.

## SPRAGUE

 CAB，CAT，CNB \＆CNT WITH CHANNEL BRACKET MOUNTINGS

These bil－impregnated paper dielectric Capacitors meet many special needs where the call is for sturdy，small－size units to withstand severe operating conditions．Extreme care is exercised to assure hermetic sealing of the metal containers．Channel bracket mountings， hermetic sealing of the metal containers．Channel bracket inou
These units are specifically designed for chassis and relay rack mounting，and are mechanically constructed to withstand severe vibration in automotive，aircraft，or industrial use．

The capacitors sections are oil impregnated and the units are oil filled with specially processed KVO＊．All units are flash tested at twice rated voltage，and ground tested from terminals to container at twice rated voltage．Standard capacity tolerance for single and dual units is $-10 \%,+20 \%$ ，and for triple units is $\pm 20 \%$ ．

## SPRAGUEMICACAPACITORS

## Twice Tested for R－F Characteristics

Sprague Mica Capacitors provide maximum quality for R－F applications where exacting requirements involving low－power factor and high－insulation resistance at high frequencies must be met．The line includes types for every requirement ranging from the tiny＂tooth－ pick＂1FM types to the giant ceramic－jacketed types 4CO．Each type incorporates outstand－ ing developments based on far－reaching Sprague wartime engineering．
Mica units are perhaps the most critical of all capacitor types to produce properly－ and it is in the handling of these essential details that Sprague engineering and production excels．Beginning with selection and handling of the mica itself，extreme care is taken in every operation to assure completed units which，although they look like conventional unjts every operation to assure comples far surpass ordinary mica capacitors in actual service．
on the surface，will far surpass ordinary mica capacitors in actual service．
Stocks of raw mica are carefully selected．So critical are Sprague requirements that far more mica is rejected than is actually selected for use．The selected mica is then hand split and each piece electrically graded by exclusive Sprague methods．

Particular care is excroised in the interleaving of section foils and in connecting them to terminals through specially designed low－resistance R－F bonds．Perhaps most important of all is the fact that each and every Sprapue Mica Capacitor section receives a painstaking radio frequency test before being encased in its mold．After this test，each section is carefully impregnated and moisture－proofed
Upon completion，all Sprague Mica Capacitors required to carry large $\mathrm{R}-\mathrm{F}$ currents are actually R－F current tested with thorough testing before molding assures the serviceman，amateur，experi－ menter or industrial user of units of ut－ most dependability for any application or any condition of use．

## SPRAGUEHARDWARE

## THE RESISTORS WITH THE CERAMIC-COATED WIRE INSULATIOH

Sprague Koolohm Wire-Wound Resistors are wound with wire that is insulated before it is wound with a flexible, ceramic coating that is impervious to heat as high as $1000^{\circ} \mathrm{C}$. In addition, each resistor is doubly protected by a glazed ceramic coating and new type of end seals which guard it effectively against any moisture or other climatic conditions. Ordinary resistors may be designed to provide some degree of "tropicalized" protection at extra cost. STANDARD Koolohms give FULL protection at regular prices!

## No Other Resistors Have These Features

Because of the complete protection afforded by both their wire insulation and outer ceramic shells, Koolohms may be mounted anywhere, even flat against a chassis or against grounded parts. They can safely be used at full wattage ratings, even on the high-resistance values because of the excellent insulation at high temperatures. No danger of shorts

STANDARD RESISTANCE TOLERANGE $\pm 5 \%$
or current leakage! Thanks to their ceramic wire insulation, Koolohms can be wound in layers. This means higher ratings in much smaller physical sizes. Even more important, larger, sturdier wire sizes can be used. Actually, the wire sizes in Koolohm Resistors average $2 \frac{1}{4}$ times greater in cross-sectional area than those in ordinary resistors of the same size!

## High Insulation Resistance

Also standard Koolohms have the high insulation resistance to ground required for television and other high-voltage uses- 10,000 volts from the surface of their sturdy ceramic jackets to their resistance elements!

The following listings include only the Sprague Koolohm Wire-Wound Resistor types commonly supplied for radio repair service and amateur radio applications. Various other types are also regularly produced in large quantities and to the most exacting standard or special applications. All have been thoroughly proved and tested for the most exacting military, naval and aircraft applications.

Other types not listed in this catalog include:
Hermetically-Sealed, Ferrule Terminal, Power Wire-Wound Resistors, with power ratings of 15,20 , $40,50,90,120$ and 150 watts. These are the famous Sprague Koolohm "Grade 1, Class 1" resistors that are impervious to salt water, thermal shock, and corrosive atmospheres.

Precision Meter Multiplier Resistors, Wire-Wound, Hermetically-Sealed. Resistance values up to 7.5 megohms per unit. Three types, MFA, MFB, and MFC. Resistance tolerances of $\pm 0.5 \%$ and stability of $\pm 0.1 \%$. The most rugged meter multipliers in the world!

Voltage Divider Resistors. Wire-wound power resistors with ratings of 10,15 , and 25 watts. Designed for through bolt mounting as individual units, or in multiple sections of any size to provide tapped voltage dividers.
*MEGOMAX, High-resistance, High-Voltage, Resistors. Ferrule terminal, hermetically-sealed, composition resistors of pressed and sintered ring construction, capable of high-temperature operation to $150^{\circ} \mathrm{C}$. Three types with resistance values to 1000 megohms; power ratings of 6,12 and 22 watts and voltages up to 20,000 volts.

BOBBIN Wire-Wound, Semi-Precision Resistors. Wound with ceramic-insulated wire on high-temperature plastic forms. Five high stability types with
power ratings of $1,2,2.5,3$ and 5 watts, and resistance values to 500,000 ohms. Resistance tolerance down to $\pm 0.5 \%$.

Complete details on the above and other new types are contained in the Sprague Koolohm Industrial Resistor Catalog No. 100 E , copy of which will gladly be sent on request by industrial users. Sprague engineers welcome the opportunity to be of assistance regarding industrial resistor applications.

[^38]

## INTERFERENCE FILTERS

Sprague +FILTEROL Radio Interference Filters are a direct outgrowth of highly successful Sprague wartime engineering research, and offer for civilian use a war-tested, practical filter that suppresses man-made radio noises and television "scrambles" on practically any application. They are small, completely self-containcd, and easily installed. Applicable to any electrical device within their current and voltage ratings, they provide maximum noise euppression on radio broadeast bands. A study of the Attenuation Curve (available on request) illustrating typical FILTEROL noise suppression performance will show that this surpasses anything normally available in the past.

SPRAGUE FILTEROL TYPES 1,2 and 3 are designed for connection in series with power supply lines to interference-producins devices. Their basic circuit is a special three-terminal network of which the can is one terminal. The filter selected should have a rating higher than the continuous running current of the device. A single FILTEROL connected in one side of the line is usually suffcient. However, in severe interference cases a FILTEROL in each power line may be necessary. For three-or-four wire systems, a FILTEROL in each wire is necestary.

FILTEROL TYPE 4 is a new, exclusive Sprague invention incorporating a Sprague *HYPASS capacitor and provides exceptionally high attenuation at frequencies ahove 5 MC . It is effective up to 150 MC or more. Intended for anl small devices with continuous current ratings up to 20 amperes. Applied by mounting directly
on the frame of the device to be filtered, and connecting the power on the frame of the device to he filtered, and connecting the power
supply line in series through the filter. In severe cases, a FILTEROL supply line in series througb the filter.
may be necessary in each line wire.

## SPRAGUE IF TYPES

IF-15-A TRIPLE-SECTION FIITER for all small motor-operated devices. Especially designed to prevent accidental shocks from discharge of Alter capacitors.

IF-21-OOMPAOT DUAL METAL-ENCASED TUBULAR FILTER for use across brushes of fractional horsepower motors with can grounded to motor frame. Also across line terminals of motors.

IF-Il-A DUAL HIGH-CAPACITY FIITER with completely enclosed safety construction. Designed for motors over 1 horsepower and up to 220 volts AC or DC. Also used on F-SI-Sich-current arcing or sparking decices
F-SI-SINGLE 2-LEAD FTLTER SECTION with can completely F-37-3SECTION DEETA CONNEGTED TITMER Oniy
required for each fluorescent lamp fixtare.
Also effective on make-and-break governor-type motors.
*Trademark Reg. U.S. Pat. Off.
$\dagger$ Trademark applied for.

SPRAGUETO-3
DELUXE
TEL-OHMIKE

Universal Capacitance and Resistor Analyzer with Ruilt-in DC Volt-milliammeter

This fast, simplified operation is the keynote of the new TO-3 De Luxe Tel-ohmike. "Speedy check" tocates open, intermittent, or shorted condensers WITHOUT REMOVING THEM FROM THE CIRCUIT. One pair of plainly marked binding posts and a total of only five controls assure quick, effective operation on all tests. Dia is of direct-reading, calibrated type, color coded to correspond to selector switch. It is easy to see, easy to read. In addition to all of its uses in radio work, Tel-ohmike checks motor-starting condensers, and measures insulation resistance of motors, transformers, etc.

SPECIFICATIONS
Capacity: .00001-2,000 MFD. in 4 ranges.
Power Factor: $0.50 \%$ at 60 cycles.
Insulation Resistance: 0-2500 Megohms (Direct reading on the meter).
Electrolytic Leakage: Measured in M.A. at rated D.C. voltage. Capacity and power factor of electrolytic condensers
measured with rated polariz. ing voltage applied.
Resistance: 2.5 Ohms-25 Megs. in 3 ranges.
D.C. Meter Range: $0-15,150$, 750 volts - 0-1.5, 15, 75 M.A.
Size: $131 / 4^{\prime \prime}$ wide, $101 / 8^{\prime \prime}$ high, - $5^{\prime \prime}$ deep.

Power: 35 watts at 115 volts - 60 cycle.

Shipping Weight: 15 lbs.

## ATLAS HEAVY-DUTY IRON-OXIDE COATED NON-INDUCTIVE transmitting bleeder resistors with center tap

4 or 8 Sections
Ruggedly built, accurately made and procurable in a practical non-inductive winding. Atlas high voltage bleeder resistors are designed to improve the performance of your transmitter by functioning quietly and effectively.
A most important feature found only in Atlas heavy duty bleeder resistors is the non-inductive winding. Each side of the center tap has two to four oppositely wound sections of equal resistance. Therefore should only one section be used, that section will be purely non-inductive as well.

# ATLAS RESISTORS 

## Atlas Fixed Resistors

## 5-10-20-25-50-75-100-160-200 WATT RATINGS

Atlas Pack-Wound Heavy-Duty Iron-Oxide Coated Resistors are the very best for Ship Instruments, Meters, Laboratory equipment, Transmitting and Radio Receivers or any requirement where dependable resistors are essential.
Every mechanical and electrical construction to produce the highest efficiency possible is represented in these specially designed types.

- A QUALITY PRODUCT
- NON-POROUS
- ACCURATE
- $5 \%$ TOLERANCE

## 110 Volts-A.C.Sets

AMPERITE ISTA REAL REG-ULATOR-Its resistance automatically varies to compensate for supply voltage variations. It should not be confused with ordinaryurresistors.

For110-V. A.C. Sets-The proper Amperite is determined by the line current. A set drawing 0.7 A requires Amperite $7 \mathrm{~A} 10,1.2 \mathrm{~A}$ requires Amperite 12A10, etc. Depending upon the line voltage, the voltage drop across an Amperite of - Alo series will vary from 8 to 30 volts and will control line voltages of 100 to 140 volts.

| HOW TO DETERMINE PROPER AMPERITE FOR A.C. SETS |  |  |
| :---: | :---: | :---: |
| Line Voltage | 110 V | 220 V |
| No. of Tubes in Set | Use Amperite No. | Use Amperite No. |
| 4 or 5 | 5-A. 5 | 2H.5 |
| 6 or 7 | 7.A. 5 | $3 \mathrm{H}-5$ |
| 8.9 or 10 | 9.A-5 | 4H.5 |
| 11 or 12 | 11-A-5 | 5 H 5 |

The line current drain of most 110 Volt A.C. Sets - except those using 6 L 6 or ' 50 tubes-average approximately 0.1 amp . per tube. A 7 -tube set will draw 0.7A-use Amperite 7A10, ete. 220 Volt A.C sets have half the current drain of similar 110 A.C. sets. For proper Amperite see Chart at left.

## A. C. - D. C. SETS

 o-called ballasts or resistors used in AC.-D.C. sets. No extra resistor equired.
Pilot Lights-None, one or two of either 0.150 A or 0.250 A can be used with same Amperite. Should a pilot light burn out, the set will continue to operate properly without any damage to the Ampprite, tubes or other parts. The patented starting resistor in the Arrperite prevent overloading and premature burning-out of tubes and pilot lights. In some sets the ballast socket is purposely wired in such a way that the Pilot Jight Resistors of standard ballasts would be burned out is inserted. In such sets special Amperites are required, as shown in table. Avoid burnouts-use proper Amperite.

BASE WIRING OF AMMPERITES FOR A.C.-D.C. SETS

## AMPERITES

## FOR 2-VOLT BATTERY SETS

Two-volt tube filaments are delicate and easily overloaded, Keeping the tube filaments at their proper voltage with a real regulator like Amperite invariably results in considerably more battery and tube life. The same Amperite can be used for dry cell, air cell, or 2 volt storage battery operation. The proper Amperite is determined by the total flament-current drain of the set. e.g.-for 0.5A use Amperite 5E1. ete

For A.C.-D.C. Sets The Amperite Regulators 0.3 designed to pass only ments. Filament voltage will be kept within $\pm 5 \%$ with line voltare variations of 85 to 140 volts. Due to the fact that Amperite is a real regulator, 2 types of Amperite with four prong and 2 with octal bases will . 50 A or 0.250 A can be

## SERIES "M" COMPOSITION-ELEMENT CONTROLS

$\star$ Compactness-yet without sacrificing operating efficiency and long service life. Only $11 / \mathbf{s}^{\prime \prime}$ dia. by $\frac{9}{16}{ }^{\prime \prime}$ deep (with switch, $7 / 8^{\prime \prime}$ deep).

Utilizes the exclusive Clarostat stabilized element, insuring the control's constancy in all weather and in all climates. Many years of painstaking research and experience are incorporated into the design of Clarostat Series " M " controls, assuring the user of the best results at all times.

The original Clarostat "Ad-A-Switch" feature makes it possible to adapt any of the Series "A" switches quickly to any of the " $W$ " controls. Furthermore, for high-voltage television, oscillograph or other electronic circuits, the new Clarostat Series 55-110 HighVoltage Coupling Unit can be attached to all Clarostat controls (illustrated below) to assure safety at clevated voltages. The cost of this added feature is quite moderate. High-voltage couplers are installed at factory only. List price 3000 v . $\$ 1.25 ; 10000 \mathrm{v} . \$ 1.85$.

LIST PRICE $\$ 1.25$ (Standard Packing-10 (ten) per carton.)

High-voltage coupler fitted to any Clarostat control at the factory, on special order.

## THE ORIGINAL "AD-A-SWITCH" FEATURE FOR SERIES "M", "AM", "T" "AT" CONTROLS

| Cat. No. | Wiring | $\begin{aligned} & \text { List } \\ & \text { Price } \end{aligned}$ |
| :---: | :---: | :---: |
| SW-A | Single-Pole Single-Throw | \$0.60 |
| SW-A1 | Three-Way. No "Off" position S.P.D.T. | . 60 |
| SW-A2 | Double-Pole Single-Throw | . 60 |
| SW-A4 | Four-wire (to control $\mathrm{A}, \mathrm{B}$ and C voltages). | . 60 |
| SW-A5 | S.P.S.T. (closes at full clockwise rotation). | . 75 |
| SW-A6 | S.P.S.T. with dummy lug | . 75 |

Ad-A-Switch is used in place of usual dust-protection cover, and lugs bent over to hold it in place.

## POWER RESISTOR DECADE BOX

* A "Must" for Every Laboratory. Power resistance measurements under actual load conditions are made possible by this welcome new addition to the Clarostat line.

Just imagine being able to obtain ANY VALUE OF RESISTANCE from 1 ohm to 999,999 ohms IN STEPS OF ONE OHM, and at a POWER RATING OF 225 WATTS using a maximum of 1000 volts DC ( 660 volts AC)!

Intended primarily for laboratory use and development engineering, this instrument simplifies and expedites the selection of correct resistance values for given circuits and functions. Many of these instruments are already in daily use in
laboratories, engineering offices, plants, maintenance and service departments, and in schools.

Finish: The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-andaluminum front panel.

Dimensions: 13 in. long; $8^{1 / 2}$ in. deep; $53 / 4$ in. high. Weight, 11 lbs .
Suggested Uses: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters.

Providing any desired ohmage as a universal power resistor.

- NET PRICE . . . \$90.00*

## SERIES "T" TAPPED CONTROLS <br> (Formerly Series TCP) <br> With the Original Ad-A-Switch Feature

$\star$ There are many circuits in which the use of a tapped control affords special functional operation not possible or attainable with any other type of control. These standard units listed herewith permit replacement of tapped units with the assurance that the total overall resistance value as well as the taps satisfactorily substitute for the original.

| Cat. No. | Ohms | Tap No. 1 | Tap No. 2 | Tap No. 3 |

## Rotary Switches

Compact, positive contact, bakelite molded Underwriter's approved. Rated 1 Amp. 250 volt., 3 Amp. 125 volt. The physical dimensions of the switch are as follows:
Diameter $1 \frac{3}{32}$ ", body depth $\frac{9}{16}{ }^{\prime \prime}$, lug protrusion $1 / 4^{\prime \prime}$, locking projection on a $\frac{1}{3} \frac{7^{\prime \prime}}{}$ radius, rotation for actuation 30 degrees.

All standard stock numbers have $3 / 8$ " bushing, $11 / 2^{\prime \prime}$ length shaft, and one locking projection.

Individual Packing 10 (ten) per carton.

## SERIES 43 MIDGET WIRE-WOUND CONTROLS

$\star$ A space-saving control of the wire-wonnd type. Similar in mechanical details and dimensions to the composition-element Series $M$ control (page R-6). Pre-cision-wound alloy wire on bakelite strip. Rotor sweeps over inside face of winding. Special lubricant for minimized frictional drag and wear. Molded bakelite casing-higlı resistance to leakage. Protective metal cover (as shown in illustration). Only $11 / 8^{\prime \prime}$ dia. Body Depth, $\frac{9}{16}{ }^{\prime \prime} ; 7 / 8^{\prime \prime}$ deep with switch. $3 / 8^{\prime \prime}$ bushing. Shaft $11 / 2^{\prime \prime}$ long.

SERIES "AM" AND 'AT' UNIVERSAL AD-A-SHAFT CONTROLS

## Standard and Tapped for Every Service Need

* These universal controls are built to the same exacting specifications as Scries "M" and '" $T$ ". However, instead of having the usual integral shaft, these controls include the Clarostat "Ad-A-Shaft" feature whereby a choice of shafts may be used with any of these controls. This ingenious feature eliminates the stocking of special-shaft units. Instead, the Series "AM" or Series "AT" (tapped unit) takes the particular type of shaft desired by merely inserting such a shaft and holding it permanently and firmly in place with a C-washer supplied for the purpose.

## Choice of AD-A.Shafts

$\star$ A choice of four types of Ad-A-Shafts covers all requirements, as follows:

| Cat. No. | Description | $\begin{gathered} \text { List } \\ \text { Price } \end{gathered}$ |
| :---: | :---: | :---: |
| FS-3 | Flatted shaft, $3^{\prime \prime}$ long | \$0.30 |
| RS-2 | Round shaft $2^{\prime \prime}$ long | . 30 |
| RS-3 | Round shaft $3^{\text {rr }}$ long | . 30 |
| KSS-3 | Knurled, split shaft $3^{\prime \prime}$ Iong.. | . 30 |
| DFS-1/2 | Philco shaft 1/2" long...... | . 30 |

One selected shaft furnished FREE with each Ad-A-Shaft control.

Standard packing-10 (ten) per carton.
*These units are $1^{\prime \prime}$ in depth and are the. Clarostat Series 10.

Series CIT-58 T-pads are connected as here shown.

## CONSTANT IMPEDANCE CONTROLS

$\star$ To provide for the highest quality of sound reproduction, whether in broadcast transmission, sound recording, or public address systems in which a multiplicity of loudspeakers are employed, it is essential that the proper type of self-compensating volume controls or attenuators be used in eliminating the distortion that would arise from the mismatching of impedances.

Thercfore, volume controls or attenuators for this purpose must be of the socalled "constant-impedance" type. By the of these " $T$ " and " $L$ " pads it is possible to keep the input or output impedance of associated equipment in a
circuit within the limits of a constant required value.

Safety rated at a maximum power dissipation of 2.5 watts, these " T " and " L " pads have a continuous range from 0.5 to 30 decibels attenuation in $90 \%$ of rotation, the last $10 \%$ affording infinite attenuation. Employable at either the source or the load in a circuit, these units are readily mounted by a one-hole mounting, and afford a wide range of use as mixers, faders, multiple-speaker controls, etc. Such controls can be used as individual volume controls for multiple speakers without affecting or changing the source impedance.

Series CIL-58 L-pads are connected as here shown.

| SERIES CIL |  |  |
| :--- | ---: | ---: |
|  | Wire-Wound L-Pads |  |

db steps are $3,6,9$, $12,15,18,21,24$ and 30. Absolutely noiseless and distortionless in operation.

## CONSTANT IMPEDANCE OUTPUT ATTENUATORS

$\star$ Developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss, Series CIB attenuators provide linear attenuation with ample power-handling capacity. Compact. Safely dissipate 10 watts at any dial setting. Recommended as output level control for power
amplifiers or as an input attenuator for loudspeakers in P-A system. Unit furnished in black baked•enamel metal casing $2^{\prime \prime}$ in dia. by $23 / 4{ }^{\prime \prime}$ long, equipped with dial plate and bar knob. Not available with power switch. One-hole mounting. $3 / 8$ " dia. bushing. Shaft $1^{\prime \prime}$ long.

## POWER RHEOSTATS

$\star$ Exceptionally rugged. Troublefree design. Withstand severe overloading without smoking, burning, charring. Element imbedded in cold-setting cement. Resistance winding supported on insulated metal core for maximum heat conduction and radiation, even at partial rotation settings. Singlehole mounting. Adjustable locking pin firmly anchors unit against bodily rotation. Shaft and bushing insulated from current-carrying arm for safety. 25 and 50 watt sizes.

\$ Clarostat developed and pioneered the tubetype resistor for voltage-reducing purposes, as used in AC-DC radios. Strictly non-flammable. Resist ance element wound on mica form encased in metal tube and connected with base prongs.

Clarostat has selected the most popular values for so-called Universal numbers. Also
the most popular types of Standard units.

Prefixes: K denotes 6.3 volt 150 ma. No. 40 pilot lamp; L, 6.3 volt 250 ma . No. $46 ; \mathrm{M}, 6.3$ volt 200 ma . No. 51 . Numeral indicates total voltage drop across resistor tube. Suffixes: A, no pilot lamp taps;

B, 1 pilot lamp tap; C, 1 pilot lamp tap for 2 lamps; $D, 2$ pilot lamp taps for 2 lamps; E , 3 pilot lamp taps for 3 lamps; E1, I pilot lamp tap for 3 lamps; $F, 1$ pilot lamp tap for 1 lamp; $G, 1$ pilot lamp tap for 2 pilot lamps (tapped sections isolated from main reducing body). $\mathrm{H}, 2$ pilot lamp taps for 2 pilot lamps (tapped sections isolated from main reducing body).

Letter " $J$ " following any suffixes denotes shorted any sufbefween two prongs of tube; i.e., t is locate between Nos. 3 and 4 prongs.

## Glass-Insulated Flexible Resistors

$\star$ This is a new development in resistors which has found instant acceptance in widespread applications.
Glasohms consist of a wire winding on a fibreglass core, with a covering of braided fibre-glass, Each strand of glass is no thicker than usual cotton thread and just as flexible, so that the complete units can be bent or twisted and even knotted without breakage or weakening. Clarostat is the only manufacturer of Glasohms. These units are ideal for resistance boxes, attenuators, voltage-dividers, multipliers, step-bystep rheostats, and for use in point-to-point wiring jobs. Handy, inexpensive and very durable, these units can withstand heavy overloads without damage. There is nothing in them to burn or char. Glasohms are also suitable for use as miniature heating elements serving in hair curlers, immersion heaters, soldering irons, electrically-heated ovens for crystal oscillators, etc., especially in longer lengths obtained on special orders.
*Registered trade-mark.

## AUTOMATIC LINE VOLTAGE REGULATORS

* To maintain constant line voltage and thus prevent burning out the tubes of a radio receiver or other tube-using device, this handy unit, operating effectively on 110 -volt A.C. or D.C. by simply plugging into the usual socket or outlet, safeguards against line voltage surges or increases even up to 140 volts. At the normal 110 -volt, the resistance of the unit is low and the voltage drop across it is negligible. However, as the line voltage increases the resistance of the unit increases proportionately, with a constant increase in voltage drop across it. This automatic voltage control or ballast action insures a steady, practically constant and always safe operating potential.

# CONTINENTAL M-Type Insulated Composition Resistors 

M2-2 WATT

MI-1 WATT

M1/4-1/4 WATT

- Labeled or Stamped with Value
- Color Coded
- High Insulation

The M-Type resistor with axial leads consists of a solid molded carbon core with molded-in leads. An outer insulating shell surrounds the carbon core and is impregnated with a waterproofing compound to seal the unit against humidity. These resistors, being well insulated, can be mounted side by side or against any metal surface without shorting or grounding. They are recommended where space limits and insulating quality require a rugged reliable and small resistor capable of withstanding severe service. All sizes made in the standard stock values.

## PRECISION RESISTORS

## "Nobleloy" x-Type Resistors

## - A new Continental Development!

- Not Wire Wound
- Not carbon!

## - Stability of Wire Wound and Equivalent

After several years of research work CONTINENTAL engineers have developed a new resistor involving the metal film principle, having the accuracy of a wire wound unit. Absolutely no carbon whatever is used in the fabrication of these resistors. The metallic resistance film is formed on the surface of a low loss ceramic tube using a patented pyrochemic process.

The metal film thus formed is hermetically sealed by a layer of vitreous enamel specially developed and patented by CONTINENTAL. The ceramic tube with its associated film is then spiralled to give a long resistance path and to accurately calibrate the unit to value.

Since the ceramic tubes are hollow they allow a larger surface for heat radiation, thus permitting the resistor to withstand overloads of $200 \%$ or better.

The copper-tinned lead terminals are soldered to extremely low resistance metal contact films which in turn are integral with the resistance film, thereby reducing contact resistance to a minimum. This type of construction produces a resistor unit having not only excellent resistance stability but also a negligible noise characteristic.

## ELECTRICAL CHARACTERISTICS OF CONTINENTAL "NOBLELOY X" TYPE RESISTORS

## VOLTAGE

The recommended voltage rating of Continental "NOBLELOY X" type resistors is the maximum r.m.s. voltage which the resistor is expected to withstand in continuous use and is determined from the formula $\mathrm{E}=\mathrm{V}$ PR Where $\mathrm{E}=$ rated D.C. or r.m.s. A. C. Voltage $\mathrm{P}=$ watts rating, $\mathrm{R}=$ resistance.

In no case shall the D.C. or r.m.s. A.C. voltage be greater than the maximum voltage shown in the table.

## LOAD CHARACTERISTICS

Irrespective of value, Continental "NOBLELOY X" type resistors will not change more than $5.0 \%$ when the load is increased from $2 \%$ of rated wattage to $200 \%$ of rated wattage, and on cooling to room temperature returns to the original value. This is practically the temperature coefficient effect.

## Voltage characteristics

The voltage coefficient is so low that it is negligable.
NORMAL LOAD LIFE CHARACTERISTICS
(All Values)
The permanent change in resistance will not be more than $1.0 \%$ when the resistor is subjected to a normal life test of 1000 hours.

| Type | Wattage | Size |
| :--- | :--- | :--- |
| X-1/2 | $1 / 2$ Watt | $\frac{9}{3 \prime \prime} \times 5 /{ }^{\prime \prime}$ |
| X-1 | 1 Watt | $\frac{3}{32} \times 1^{\prime \prime}$ |
| X-2 | 2 Watt | $\frac{9}{32} \times 13 / 4^{\prime \prime}$ |
| X-5 | 5 Watt | $1 / 2^{\prime \prime} \times 2^{\prime \prime}$ |

OVERLOAD LIFE CHARACTERISTICS (All Values)
The permanent change in resistance will not be more than $2.0 \%$ when the resistor is subject to $200 \%$ or rated wattage for a period of 1000 hours.
TEMPERATURE COEFFICIENT (All Values)
The tomperature coefficient of resistance will not exceed 0.0005 negative.
HUMIDITY CHARACTERISTICS (All Values 1.0 Ohm to 15 Megohms )
Continental "NOBLELOY X" type resistors will not change more than $1.5 \%$ when conditioned in an atmosphere of $100 \%$ relative humidity at $40^{\circ} \mathrm{C}$. ambient, for a period of 1000 hours.
SHELF LIfE
When stored under normal conditions, the resistance will not change more than $0.1 \%$ during a period of 2000 hours. This is a negligable change.
NOISE CHARACTERISTIC
When tested for noise according to standard R.M.A. procedure, the inherent noise level will not exceed $1 / 4$ microvolt per volt, irrespective of resistance value. This level is equal to wire wounds.
FINISH
All "X" type resistors possess a smooth, uniform coating of a special rubberized enamel capable of resisting deterioration up to and including $400^{\circ} \mathrm{F}$.

No. 18 tinned copper leads $11 / 2^{\prime \prime}$ long.

## Condensers

## CONTINENTAL D-TYPE <br> - Heavy Duty Carbon <br> - Operate safely on overloads <br> - Non-inductive

The D-Type resistor with radial leads is made with solid molded carbon rods, copper sprayed on the ends to which are soldered No. 18 copper tinned leads. The soldered contact construction gives a resistor noisefree and stable. They are known as the heavy duty type units because of their size-having a larger radiating area they operate safely on overloads. $\Lambda$ baked-on insulation is a protection against shorts to subpanel and wiring.

|  |  | List Price |  |  |
| :--- | :---: | :---: | ---: | ---: |
|  |  |  | -Tolerance- |  |
| Type | Wattage | Size | $\pm 5 \%$ | $\pm 10 \%$ |
| D3 | 3 Watt | $2^{\prime \prime} \times 3 / 8^{\prime \prime}$ | $\$ 0.50$ | $\$ 0.30$ |
| D5 | 5 Watt | $3^{\prime \prime} \times \frac{9 " \prime}{16}$ | .75 | .50 |
| D 5ST2* | 5 Watt | $3^{\prime \prime} \times \frac{9}{16}$ | 1.25 | 1.00 |

*D5ST2 units have heavy copper eyeletted and soldered strap terminals $3 / /^{\prime \prime}$ wide with hnles of $29{ }^{9} 1{ }^{\prime \prime}$ spacing. The outer holes can be used with either $6-32$ screw mounting or solder wire loops, while the inner holes are for 8-32 screw mounting. The outer section of the terminal can be cut off or bent to any angle desired.

## CONTINENTAL Paper Condensers

EE TYPE
CONTINENTAL Carbon Model E condensers are high quality, paper dielectric capacitors built in shapes and sizes equivalent to elec-

IE TYPE trolytic eapacitors commonly found in radio receivers. They are flash iested at 3 bimes their do working voltage and have the ativanture of low power factor at 60 cycles. They are mon-irductive, mon-polarized, and are of permanent capacity. No active chemicals are used which could cause corrosinn of the foil or leakage. The tabulations at right show the actual capacity in microfarads and the rated sizes of electrolytio condensers oceupying the same dimensions. Recommended for use on d.c. and rectified a.c. only. Model le, d•c working volts, 600 ; peak volts, 1000.

Types $A 1$ and $A 1 / 2-$ Tolerance $\pm 5 \%$
. 30

A new type of carbon resistor, impregnated, hermetically sealed in glass, impervious to moisture, of the utmost stability. The A Type sets a new high standard of perfection for precision applications. Suitable for any 1-watt or $1 / 2$-watt application, the A type is particularly recommended for high resistance voltmeter multipliers; critical photo-electric circuits which must be extremely stable, and in military and naval applications where the dependability of each component is most vital.

## FILTERNOYS FILTERNOYS

For Elimination of Electrical Radio Interference

Filternoys units reduce or eliminate man-made static! With the development of ultra sensitive receivers, the problem of interference elimination has become a major factor in the sale and servicing of these radios. Vacuum sweepers, electric refrigerators, cake mixers, and other kitchen gadgets, electric shavers, sewing machines, and a host of other items all contribute their share to spoiling good reception. Every buzz, snap, or crackle heard on a new radio lessens the chances of a sale, but these same disturbances open the path for the alert dealer to sell
"noise elimination service" along with the radioand at a profit!
The offices of doctors, lawyers, dentists, and professional men-where radio provides entertainment and relaxation for waiting clientele-offer a lucrative market to radio servicemen who have the ability to locate man-made radio interference and quiet it with CONTINENTAL CARBON Filternoys devices. Filternoys are simple to install and profitable to sell. Never be without them in stock.

Filternoys F01DH
 Universal Plug-in Type for Radios and Electric Razors

Handy plug-in type suppressor with two r-f chokes and two condensers for use on electrical devices of 300 watts or less, creating interference of intermittent or temporary character, such as a sewing machine motor, small electric washing machines, electric shavers, drink mixers, cash registers, adding machines, or electric typewriters. Size $25 / 8^{\prime \prime}$ by $13 / 8^{\prime \prime}$ diameter. 300 Watt capacity on 120 volts, a.c. or d.c.

## Filternoys G01DH Suppression Type

A wire-in suppressor with

GOlDH dual chokes and two condensers with a grounded frame. Suitable for equipment having grounded frame or a connection to metal BX wiring conduit. For diathermy and dental machines where the G01DH unit may be mounted within the interfering device and for small motors of exhaust fans, pumps, and compressors. Size $21 / 4 /{ }^{\prime \prime}$ by $11 / 4^{\prime \prime}$ diameter, 6 -inch leads, 300 watts, a.c. or d.c., $110-130 \mathrm{v}$.

Filternoys G01DH
List Price $\$ 1.40$

## Filternoys GO1D and G14T

## Designed to Be Mounted Directly on Small Electrica! Devices

Filternoys Diverter G01D-Dual capacitors In a grounded container for any size electric motor operating on 120 v . or less. Through making use of the field coils as chokes, this is a most effective method to silence a noisy a.c. or d.c. motor. Size $21 / 8^{\prime \prime}$ by $3 / 4^{\prime \prime}$ diameter. G01D

List Price $\$ 0.60$

Filternoys Diverter G14T-Triple capacitors in a circuit which permits its use with all hand-operated motor driven devices without dariger of shock. Particularly applicable to vacuum cleaners, flat-irons, etc. Size $11 / 2^{\prime \prime}$ by $5 / 8^{\prime \prime}$. Flexible leads for direct connection.
G14T.
List Price $\$ 0.60$

## Oil Burner Suppressor

Filternoys Suppressor OB15, carbon element type, intended for use only with the high tension spark ignition of oil or gas burning heating systems. Must be connected in series with each line to the spark gap. Size of the suppressor $31 / 2^{\prime \prime} \mathbf{x} \frac{13{ }^{\prime \prime}}{16}$ diameter. Universal connections at botlo ends for solderless contact.

OB15. $\qquad$ List Price $\$ 1.80$

## FILTERNOYS F18

Filternoys Diverter F 18 is a compact 0.1 mfd capacitor in a conveniently small bakelite plug-in coupler for use across domestic power lines in which
 the neutral wire is grounded. The capacitor diverts interference from the high potential side of the power line to the grounded neutral side. Use on floor or table lamps, cigarette lighters, and the radio.

F18 $\qquad$ List Price $\$ 0.70$

## AUTO-RADIO SUPPRESSORS AND FILTER UNITS

CONTINENTAL Suppressors have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension dis-tributor-yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value has been scientifically determined and is not changed after years of the most adverse conditions. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

## SPARK PLUG SUPPRESSORS

Code S-23 Spark Plug Suppressor -Flexo-Terminal type. Can be bent to any angle, snaps on to spark plug.

Each-List Price \$0.30 vised.

Code S-27 Suppressor -Thread will fit all spark plugs. Most universal type yet de-

Code S-19 Spark Plug Suppressor - Snaps on to spark plug. Vertical mounting.

Code S-20A Spark Plug Suppressor-For Buick, Packard and Chrysler cars. Takes place of terminal on ignition cable.

## DISTRIBUTOR SUPPRESSORS

Code T-24 Distributor SuppressorIs an angle type with screw in cable. The spring brass insert has two rolled bosses, one to hold suppressor rigid and the other to snap into the groove of the distributor well.

## Each-List Price $\$ 0.30$

Code C-11 Cable SuppressorMeets requirements where it is necessary to cut ignition cable.

## DISTRIBUTOR SUPPRESSORS

Code T-20 Distributor SuppressorCable clip snaps into suppressor. Not necessary to remove clip on cable and therefore suppressor can be quickly removed for ignition testing purposes.

## FORD DISTRIBUTOR SUPPRESSOR

Brush

Sleeve

CODE T-17: Brush and Sleeve Supplied Together
Distributor Brush Suppressor of the right resistance to suppress interference from the spark at the rotor.
Universal Type: the brush can be inserted in the bakelite sleeve to fit models using the larger size brush.

THIS LINE OF EQUIPMENT HAS BEEN SPECIALLY DESIGNED TO GIVE THE SERVICEMAN A MEANS OF EASILY ELIMINATING EVERY CAUSE OF NOISE INTERFERENCE IN AUTO-RADIO INSTALLATION -AT THE ACTUAL SOURCE OF INTERFERENCE.

## BASIC KIT

Designed to meet your day-to-day resistor requirements, the IRC Basic Kit provides a wide variety stock in carefully selected values. Assortments are so arranged that a shortage of stock in one range can usually be compensated for by using two other ranges in series or parallel. Additional adjustable bands are included for use in making up bleeder sections.
The Basic Kit is sturdily constructed of heavy-gauge steel, and beautifully finished in blue and yellow. Hung on your wall or set on your service bench, the Basic Kit saves countless trips for supplies and provides your shop with a neat, carefully selected general purpose resistor stock.
The IRC Basic Kit is factory-packed with the following wide-variety resistor stock:
BTS -10 each- $-1,000,2,200,4,700,10,000,15,000,22,000$, $27,000,47,000,75,000$ ohm; 0.1 mes., 0.22 meg., 0.47 meg., 1.0 meg., 2.2 meg., 10.0 meg., 15.0 meg.
BTA - 5 each- $470,1,000,1,500,2,200,3,600,4,700,22,000$, $36,000,75,000 \mathrm{chm}$.

Net Price: $\$ 47.89$

## Keep Your Resisfors in Order!

The sturdy, IRC Resist-0-Cabinet is specifeally designed to hold resistors systematically and safely without the bending of leads, It puts an end to "cigar box confusion!" Its four "non-spill" drawers have seven ample-sized compartments in each which readily accommodate resistor sizes from $1 / 2$ to 10 watts.

Attractively finished in blue, yellow and silver. Ohm's Law formulas neatiy and permanently lithographed on top of cabinet for handy reference. Cabinet measures $11^{\prime \prime}$ long, $51 / 2^{\prime \prime}$ high and $51 / 2^{\prime \prime}$ deep. Bases of Resisto-0-Cabinets are arranged for stacking so that several cabinets may be used to increase stock capacity. This handy Resist-0-Cabinet is FREE with the purchase of any of the three well-balanced IRC resistor asscrtments listed. (Cabinet is not sold separately.)

## ASSORTMENT No. I-59 Resistors

Type BTS-One each $1,000,4,700,10,000,27,000,47,000$ ohms: $0.1 \mathrm{meg}, 0.27,0.47 \mathrm{meg}$.

## Check this fast-selling stock!

The IRC Volume Control Cabinet is factory-packed with the following 18 Type D All-Purpose Controls, switches and special shafts.

# IRC VOLUME CONTROL CABINET 

For the Modern Service Shop

This handy stock of IRC Type D Universal Controls, quickly attached switches and easily installed shafts is factory-packed in an attractive all-metal cabinet. Proved by IRC Service Records to be a selection of the most popular controls-you can actually service over $87 \%$ of all replacements right from this cabinet. Here is your answer to speedier, more efficient ser-vicing-reduction of costly exact-duplicate inventories -and modern appearance for your shop.

Cabinet measures $141 / 2^{\prime \prime}$ long, $73 / 8^{\prime \prime}$ high and $41 / 2^{\prime \prime}$ wide. It is handsomely finished in yellow, blue and silver and provides separate compartments for controls and three handy drawers for switches, special shafts and spare parts. Each compartment and drawer is individually marked for identification. The hinged front cover snaps securely shut. The cabinet is furnished at no extra charge when factory- packed with the IRC controls, switches and shafts listed on the left. It is not sold separately.

## NEW IRC "JUNIOR" YOLUME CONTROL CABINET

IRC's latest volume control cabinet, popularly known as the "Jr." Control Cabinet, is a selection of the 9 "most-used" $1 / 2,1$ and 2 meg. Type D Controls, plus 4 switches and 4 additional shafts. Put this assortment of "hot-numbers" right to work on your bench-you'll use it every day.

The following IRC Type D Controls, Tap-In Shafts and Switches come factory-packed in the "Jr." Control Cabinet:

| IRC Control |  |  |  |
| :--- | :--- | :--- | :--- |
|  | Type No. | Resistance | P.urpose |
| 5 | D13-133 | 500,000 | A |
| 1 | D13-133X | 500,000 | B |
| I | D13-137 | 1.0 | A |
| 1 | D13-137X | 1.0 | B |
| I | D13-139 | 2.0 | A. |

Purpose: A-Tone or Audio Cir. cuit control; B-Tapped for tone compensation.

## SWITCHES

\#41 S.P.S.T. \#42 D.P.S.T.

## SHAFTS

1 Type "A" double-flatted tap-in shaft is included with each con-trol-plus:
3 Type "E" with universal knurl for special type push-on knobs. I Type "H" with universal groove for many Delco, RCA, Sears-Roebuck and Westinghouse models.

Sturdy cardboard cabinet measures $7 \% /{ }^{\prime \prime} \times 73 / 4^{\prime \prime} \times 41 / 2^{\prime \prime}$. It is attractively finished in yellow, blue and silver, and provides 4 drawers with 12 compartments individually identified for controls, shafts
 and switches.

Cabinet furnished at no extra cost.
List Price: $\$ 16.20$
Net Price: $\$ 9.72$

## THE IRC ''CENTURY'" LINE 113 IRC CONTROLS THAT SOLVE 90\% OF YOUR REPLACEMENT PROBLEMS

For miscellaneous service needs, 70 all-purpose controls are available for use with the popular IRC tap-in shafts. An A shaft is included with each control and shafts $\mathbf{B}, \mathrm{E}, \mathrm{F}, \mathrm{G}, \mathbf{H}, \mathrm{J}, \mathrm{K}, \mathrm{L}, \mathrm{M}$ and $N$ may be had at slight extra cost.
Each D Control accommodates any of the eleven Tap-in Shaft types shown. Shaft flats may be located in any position. A few extra shafts greatly increase the utility of your D Control stock at a small investment. Of unusual convenience is the "Double-Flatted" A shaft, included with each D Control. Accommodates popular push-on knobs
requiring either $\frac{1}{32}{ }^{\prime \prime}$ or $\frac{3}{32}$ " flats and all set-screw knobs without filing of shaft or use of inserts. Dimensions: $11 /{ }^{32}$ " $\frac{17}{}{ }^{3}$ ". ## 9 TYPE J CONTROLS FOR SPECIAL APPLICATIONS

For a wide variety of sets with specific requirements, you'll find these nine numbers extremely useful. To play safe your stock should include at least one of each.

## 8 DUAL CONTROLS

Eight popular Dual Cor. trols are included in TRC's a small but carefully selected group of "duals" that will speed many an important repair job! Standard No. 20 series switches can be attached. $11 / 4^{\prime \prime} \times 1^{1 / 4 \prime \prime}$.
Iist price $\$ 3.10$ each, Net $\$ 1.86$ each

- SILENT SPIRAL CONNECTOR--a positive con nection between contactor and its terminal.
- STEEL COIL SPRING THRUST WASHER eliminates shaft wobble and end-play.

## 8 CLUTCH-TYPE DC CONTROLS

## With Fixed Shafts

Practical for auto radio use and many other applications. Controls have friction clutch drive-arm and are equipped with a special shaft for use where either a slotted or tongued type shaft is required. Instructions tell how to cut shaft for elther application. Switches cannot be used with friction clutch controis. Size same as Type D.

List Price $\$ 1.85$ each, Net $\$ 1.11$ each

## 8 STANDARD TAPERS

A-Used as potentiom. eter or rheostat in any circuit where uniform resistance change is required.
B-A semi - logarithmic curve used as tone control or audio circuit control.
Control. logarithmic curve. Used as audio circuit control or antenna shunt control
D-Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is of prime importance in controlling volume.
E-Used as a rheostat in cathode circuit to control grid bias. F-Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is essential in controlling volume. Generally used where the control changes the

grid bias of only one or two tubes. Must not be used with heavy currents.
G-A logarithmic curve with very gradual change in resistance from left terminal. Used as audio circuit control or antenna shunt control.
H-A tapped logarithmic curve used as audio level control for automatic bass compensation.

\section*{TYPE W WIRE WOUND CONTROLS <br>  <br> A dependable wire wound control of uniform resistance change for power requirements up to 2 watts. Tight, uniform windings assure utmost accuracy. ## "PREFERRED FOR PERFORMANCE"

Not only do these famous resistors excel electrically, but their "ch-mate-proofed" cement coating provides the most dependable protection yet devised for resistors for heavy duty work. Both fixed and adjustable types are available. Mounting Brackets are packed with all resistors from 25 watts and up. One Adjustable Band is furnished with each adjustable resistor. The new Type $X$ Band (deacribed below) is included as atandard on units of 25 watts and above. Extra bands supplied at prices indicated.

## PRECISION Wire Wound RESISTORS

IRC Precision Wire Wound Resistors are scientifically designed and con* structed of highest quality materials to combine the utmost in accuracy with dependability Winding forms are of a non-hygroscopic ceramic having of a non-hygroscopic ceramic having high insulation qualities, high mechanical strength and low-coefficient of expansion. Because of the special sectional construction which permits the winding of adjacent sections in opposite directions, a noninductive winding is made possible. This insures constant resistance at all fre* quencies up to 50,000 cycles.

These units are used by the leading instrument manufacturers for depend. able precision meter multipliers and shunts, decade boxes and calibrated
 gain controls 1 \% accuracy is standard. Closer tolerances available at slightly higher prices as follows: for $1 / 2 \%$ tolerance, add $10 \%$; for $1 / 4 \%$ accuracy, add $15 \%$; and for $1 / 10$ of $1 \%$, add $25 \%$ to list prices.

## ALL-METAL RHEOSTATS

PR-25 (25 Watts) 1 ${ }_{3}^{2}{ }^{\prime \prime}$ diam. Depth behind panel, $\frac{31}{31}$ "

PR-50 (50 Watts) $23 /{ }^{\prime \prime}$ diam. Depth behind panel, $13 / 8{ }^{\prime \prime}$

Operating temperatures are cut almost in half by the unique, all-metal aluminum construction of these new IRC Rheostats. They dissipate heat more rapidly-give ample safety factor. Ratjugs based on hottest spot temp. rise of only 140 degrees C. with max. load distributed over entire element. Witt full load applied to as little as $25 \%$ ot element, rise is only 160 degrees $C$. Exclusive IRC Spiral Connector gives positive contact between rotor amm sud center terminal.

## Type NAB Parasitic Suppressors

IRC Type NAB Non-Inductive Wire Wound Resistors are designed for use, one in each grid of audio driver or power amplifier tubes when paralleled, to prevent parasitic oscillations. 10 watts.

Type NAB- 50 ohms.
List \$1.17 each........................................................Net \$0.70 each

## Bleeder Resistor

Type M-1034-25,000 ohms, overall resistance, tapped at $7,500,10,000$, 12,500 and 15,000 ohms. 18 watts rating attached flat to chassis, 9 watts
 free air rating. Used as bleeder in any power supply up to 500 volts. Sealed in bakelite and insulated for 1,000 volts to ground. Bracket supplied.
M. 1034 -IRC Bleeder Resistor. List $\$ 1.25$ each. Nat 750 each.

## Center Tap Insulated Wire Wounds

Completely enclosed in molded bakelite and capable of standing hirh temperatures Due to high power ratine these resistors may be used in
 ing, these resistors may be used in balancing airtith recivers or transmitters. They will carry up to flve watts if mounted on chassis, using the detachable mounting bracket and heat-dissipating metal strip; or two and ore-half watts if mounted in open air. May be mounted anywhere without danger to units from heat or grounding. Dimensions: Length of molded unit $2^{\prime \prime}$. With bracket mounting centers $21 / 2^{\prime \prime}$. Six standard ranges: 10 ohms, 20 ohms, 50 ohms, 75 ohms, 100 ohms and 200 ohms.
Type MW-2J-Center Tap Resistors. List 35乞 each. Net 21 c each.

## Type MC and MCB Suppressors

IRC Suppressors are designed for the elimination of ignition noise in automoblle and motorboat radio installa-tions-and oil burner interference in home receivers.

Either Type: List 304 Net 18e

MCB Elbow Type

## GENERAL (96) DLECTRIC

## COMPOSITION RESISTORS

##  <br> ½ WATT <br> 1 WATT <br> 2 WATTS

Meeting the rigid BF characteristics (most exacting requirements) of the joint Army-Navy Specification JAN-R-11, these Resistors will add that extra "plus" to any electronic equipment.
The allowance of a generous safety factor, a combination of small size, sturdy construction, excellent stability, high resistance to humidity, and more than ample insulation, make these resistors first choice on any list.

Specially engineered pigtail leads are constructed to increase their resistance to breakage, at the point where they enter the resistor body. Secure anchoring
and heavy tinning of the leads, permits easy soldering. G-E Composition Resistors may be operated at full rating in ambient temperatures up to $70^{\circ}\left(158^{\circ} \mathrm{F}\right)$. 350 volts RMS may be applied continuously to the $1 / 2$ watt unit, 500 volts RMS to the 1 watt unit, and 1000 volts RMS to the 2 watt unit, provided the wattage is not exceeded.
A part of the G-E Line of Electronic Parts, these resistors have met the G-E standards that have made G-E the first and greatest name in Electronics.

All resistance values are $\pm 10 \%$ and in accordance with R.M.A. standard progression.

Mounting brackets and one band are furnished with all adjustable types.

# LECIMOHV Enameled 

Quality-Accuracy-Dependobility-Long Life WIRE WOUND-FIXED TYPES
LECTROHM Resistors are manufactured from the highest quality materials obtainable and are rated according to R.M.A. standards. LECTROHM Resistors are rugged-dependable - accurate - quality components that will give long trouble-free service.
(Mounting brackets available for $20,50,80$, 100,160 and 200 watt units.)

# MAllor $Y$ UNIVERSAL MIDGET CONTROLS AND SWITCHES 

## MR <br> MIDGET CONTROLS WITH FIXED SHAFTS

- Type MR's are midget replacement controls with fixed shaft, and are for use where special shafts and couplings are unnecessary. Channel shaft and insert fits all type knobs. Midget switches, listed at right are easily attached. Two No. 232 nuts, one No. 227 washer, and a ground terminal are included.

## MALLORY UNIVERSAL MIDGET CONTROLS AND PLUG-IN SHAFTS

MIDGET CONTROLS
WITH PLUG-IN SHAFT

- Type UM's offer a great advance in volume control servicing. Their usefulness is multiplied many times by a single set of the Plug-In Shafts shown at the right. One Type SS-1 shaft is packed with each control, along with two No. 232 nuts, one No. 227 washer, and a ground terminal. See page 14 for attachable switches.

$\S$ External adjustable resistor included.
tRight hand switch action.

All Mallory plug-in shafts are now made with a small ring as shown in the drawing above. That's why they can't wobble or work loose-why they fit as securely as a fixed shaft.

Universal and Special Plug-In Shafts
for Use with Types UM, TM, and DTM Controls

## STANDAPD CARBON CONTROLS

- Mallory standard (11/2-inch diameter) controls have detachable end cover plates, 3-inch channel shaft which may be easily cut to desired length, and knob adapter. In common with other Mallory controls, they have the features that assure satisfaction:
 quiet, smooth operation . . . gradual attenuation and long life . . . easy installation. Supplied with two No. 232 nuts, one No. 227 washer, and ground terminal.

## EXPLANATION OF TAPERS

- Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire wound type. This taper should always be used in shunt circuits as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.
Taper Number 3 is a combination left and right hand taper. Has a limited use in circuits where the control must perform both as a shunt and as a series circuit control as in combination antenna shunt plus bias circuits. This is the most common use for such a taper.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage is proportional to the degree of rotation.

Taper Number 4A is a modification of the regular linear taper Number 4.
Taper Number 7 is made only in the wire wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

## Attachable Switches (Standard)

For use with standard Universal Controls, Carbon and Wire Wound types, TRP Tapped Controls, and Universal Dual Controls.

## MALLLORY UNIVERSAL WIRE-WOUND • DUAL • TAPPED CONTROLS

## STANDARD wire-wound controls

- Mallory wire-wound controls have a nominal rating of 4 watts. Rugged resistance strip and contactor assemblies are completely enclosed in a dust-proof case. They have Universal channel shaft and insert to fit all types of knobs. Supplied with two No. 232 nuts, one No. 227 washer, and a ground terminal. See page 16 for attachable switches. Use Mallory dial plate No. 396 (Page 20) which compensates for rotation shorted out for switch action.

\$Have exclusive Mallory adjustable bias feature, providing 500 ohms in 100 ohm steps in all values over 1.000 ohms.

UNIVERSAL

## DUAL CONTROLS

## (Carbon and Wire Wound Types)

- Mallory Universal Dual Controls consist of 2 single controls assembled together and driven by a single shaft. Shaft and insert fit all type knobs. Two No. 232 nuts, one No. 227 washer, and a ground terminal are included. Prices do not include switch or accessories. See Page 16 for attachable switches.

## DTM • TRP pougie faped

- Type DTM's are midget ( $11 / 8$-inch diameter) controls with double tap and slotted shaft for use with the proper Type SS Plug-In Shaft for the individual application. One SS-1 shaft packed with each control. Two No. 232 nuts, one No. 227 washer, and a ground terminal are also included. See pages 14 and 15 for plug-in shafts and attachable switches.
Type TRP's listed below are standard ( $11 / 2$-inch diameter) controls with double tap and fixed channel shaft and insert to fit all knobs. Same hardware included as with DTM's. See page 16 for attachable switches.

$\ddagger$ No provision for switch.

NOTE: Controls on this page having taper numbers 1,2 and 7 are intended primarily for replacement in radio receivers. Be sure to check the taper curve and its effect (see chart at left) before ordering for other uses. See pages 21 and 22 for industrial potentiometers and rheostats.

## MÄLLORY MIDGET AND STANDARD TAPPED CONTROLS

TMMIDGET CONTROLS WITH SINGLE TAP (Plug-In Shaft)

- Type TM's are universal single tapped midget controls ( $11 / 8$-inch diameter) with slotted shafts to take the proper SS Plug-In shafts (shown on page 15) selected for the individual application. One SS-1 shaft is included with each TM, as well as two No. 232 nuts, one No. 227 washer and a ground terminal. See page 14 for attachable switches.

## MRT <br> MIDGET CONTROLS WITH SINGLE TAP (Fixed Shafi)

Type MRT's are midget ( $11 / 8$-inch diameter) controls with single tap and fixed shaft for use in home radio receiver applications. Easy-to-cut channel shaft and insert fits all types of knobs. Midget switches listed on page 14 are easily attached. Two No. 232 nuts, one No. 227 washer and a ground terminal are included.

## TRP STANDARD CONTROLS $\underset{\text { RICE }}{\text { LIST }} \$ 85$

Type TRP's are universal standard ( $11 / 2$-inch diameter) controls with single tap and fixed shaft. Where required shaft lengths are three inches or less, the TRP replaces large original controls using set screw or spring type knobs. Two No. 232 nuts, one No. 227 washer and a ground terminal are included. Attachable switches are shown on page 16.

Type M's are precision wire-wound potentiometers and rheostats with a normal rating of 4 watts, widely used in instruments where reliability is paramount. Ruggedly con-structed-terminals are clamped under a live spring pressure of 600 lbs ; resistance wire welded to terminals; silver-to-silver contact in time-tested design. Rheostats feature "off" position (no connection) type of construction which saves cost of switch. All Type M's have insulated contact arm, $294^{\circ}$ rotation, $279^{\circ}$ effective electrical rotation. One No. 232 nut included. See page 20 for No. 395 dial plate.

## E WIRE-WOUND TYPE <br> POTENTIOMETERS

- Type E potentiometers, supplied with grounded contact arm, are particularly suitable for precision instruments such as resistance bridges, in addition to their usefulness as a medium current or voltage control. Dissipate 7 watts. $310^{\circ}$ total rotation; $299^{\circ}$ effective electrical rotation. Prices include one No. 232 nut. Type E's use No. 399 dial plate. See page 20.

## ATTENUATORS

- Specially designed to provide a convenient and simple method of controlling the level of low impedance audio circuits, and for volume control of microphones, electrical phonographs, talking picture amplifiers, and many varied sound amplifying and audio distribution systems.

These attenuators have a continuous DC dissipation rating of 4 watts in any position. They may be used with audio amplifiers having a peak audio rating of 15 watts.

Individually cartoned complete with No. 366 Bar Knob, No. 395 Dial Plate with matched rotation, two No. 232 Mounting Nuts, and one No. 227 W asher. Round shafts notched at $3 / 8$-inch intervals for easy cutting.

- Long considered standard by the industry, Mallory Vitreous Enamel Resistors in both the fixed and variable types are improved by war-born developments that mean even greater reliability, better appearance, greater accuracyat no increase in price. Wound with an accuracy of $\pm 5 \%$ ( $\pm 10 \%$ for values of 50 ohms and less), these distinctive blue-coated resistors are capable of withstanding severe salt spray tests. Provided with a true vitreous enamel coatinga glossy covering that is impervious alike to the effects of moisture, fumes and heat. Baked at a temperature of $1200^{\circ} \mathrm{F}$ during manufacture.

## MEPCO TRU-TOLERANCE PRECISION RESISTORS

WM 2
Mepco resistors are wound on highest qualify non-hygroscopic forms, assuring high insulation value, low coefficient of expansion, high mechanical strength. Wire used is specially enameled to meet most rigid tesis. A special feature of Mepco resistors is the insulation of all crossover wires on bobbin types to prevent shorts between down leads and windings. Two coats of special baking varnish to im-

WM 1
prove insulation and operafing efficiency is another Mepco exclusive. This process not only resists heat better than wax, but also withstands humidity and salt water excepionally well. Tropicalized resistors available on request. Standard tolerance is $1 \%$. Add $10 \%$ to list for $1 / 2 \%$ accuracy, $15 \%$ for $1 / 4 \%$ accuracy, $25 \%$ for $1 / 10$ of $1 \%$ accuracy.

## 而 OHMITE

## OHMITE RHEOSTATS

## All-Porcelain - Vitreous-Enameled

The design and construction of these sturdy, compact Ohmite Rheostats insure permanently smooth, gradual, close control. The wire is wound over a porcelain core, bonded to porcelain base, and permanently locked in place by special Ohmite Vitreous Enamel. Nothing to smoke, char, shrink, or shift. Dissipates heat rapidly. Insulated shafts and bushings. Copper graphite contacts. Ratings are for "free air" use. Time-proved through long trouble-free service in countless installations the world over. Underwriters' Laboratories Listed.

## OTHER OHMITE RHEOSTATS

Ohmite Rheostats are also available in Model G, 75 Watt; Model P, 225 Watt; Model R, 500 Watt; Model T, 750 Watt; and Model U, 1,000 Watt units, in many resistance values. Special Rheostats with tapered windings, etc., can be supplied; also Special Rheostats for Model Train Control. Cages and other accessories also available.

For more complete information on OHMITE PRODUCTS, ask for Ohmite Stock Catalog.

## BE RIGHT WITH OHMITE

OHMITE DIVIDOHM RESISTORS

All-Porcelain

## Vitreous-Enameled

You can adjust the resistance or secure odd resistance values quickly with these Dividohms; eaisly put on more taps where needed. Ideal voltage dividers. With one adjustable Iug and with mounting brackels.

Ohms

Rxtra-sturdy, wire-wound, all-porcelain resistors with the permanent protection of Ohmite Vitreous Enamel. Wilely used for heavy duty applications to assure contimuous trouble-free service. With mounting brackets.

## Popular OHMITE "BROWN DEVIL" RESISTORS

High quality, small size, wire wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, allporcelain, vitreous enameled. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free servicetheir wide use in all climates of the world -prove their complete reliability and economy. All units have $11 / 2^{\prime \prime}$ tinned wire leads.

## NEW OHMITE "LITTLE DEVIL" RESISTORS

## INDIVIDUALLY MARKED

Ohmite Little Devils are full $1 / 2$ Watt, 1 Watt and 2 Watt Insulated Composition Resistors and can be used at their full wattage ratings at $70^{\circ} \mathrm{C}$ $\left(158^{\circ} \mathrm{F}\right)$ ambient temperature. They meet requirements of specification JAN-R-11. All units are color coded. Each resistor is marked with the resistance value, wattage rating and the Ohmite trade mark. AVAILABLE ONLY FROM OHMITE DISTRIBUTORS.

Stocked in RMA Values $\pm 10 \%$ ToI.

## PARASITIC SUPPRESSOR

Designed to prevent unwanted ultra-high-frequency parasitic oscillations which occur in the plate and grid leads of push-pull and parallel tube circuits. The parasitics are suppressed without loss of driving power.

The $\mathrm{P}-300$ is a non-inductive, vitre-ous-enameled resistor combined with a choke into one small integral unit. Only $13 / 4^{\prime \prime}$ long overall and $5 / 8^{\prime \prime}$ diameter.
Model P-300. List Price. . . . . . $\$ 1.95$

## OHMITE "WIREWATT" RESISTORS <br> 1 Watt wire-wound Resistor

Wire-wound on porcelain and insulated with low temperature enamel. Ends of the wire are mechanically locked and then brazed to terminal lugs to insure freedom from noise. $11 / 2^{\prime \prime}$ tinned wire leads. RMA color coded, and labeled with the resistance. Size $13 / 4^{\prime \prime} \times 1 / 4^{\prime \prime}$.

## OHMITE DUMMY ANTENNA <br> To Check R.F. Power and Tune Up to Peak Efficiency

A compact, high-wattage resistor suitable for high radio-frequency measurements. Non-inductive, noncapacitive, constant in resistance. Used to determine transmission line losses-to check line to antenna impedance match-to keep signal off the air while tuning up-to eliminate unnecessary interference-and generally useful as a non-inductive resistor in other R. F. Circuits.

Space-wound resistance element of unusual design, mounted in a glass bulb, evacuated and gas filled. Four-prong steatite standard tube base.
Model D-100. 100 Watt rating. In popular 73 ohm and 600 ohm resistance values. Also in $13,18,34,64,100$, $146,219,300,400,500$ ohm values. Diameter $31 / 8^{\prime \prime}$. Height (from bottom of base) $4 \frac{1 / 8}{\prime \prime}$.
List Price
$\$ 8.45$
Model D-250. 250 Watt rating. In 73 ohm and 600 ohm stock resistances. Diameter of bulb $2^{1 / 2^{\prime \prime}}$. Height $9 \frac{1}{16^{\prime \prime}}$ (from bottom of base).
List Price.
$\$ 16.90$
Non-Inductive Vitreous-Enameled Resistors also available. See Ohmite Stock Catalog.

## NEW OHM'S LAW CALCULATOR Pocket Size

Solves Ohm's Law problems with only one setting of the slide. No decimal points to cause confusionall values are direct reading. Requires no slide rule knowledge.
Ohmite Ohm's Law Calculator....NET Price $\$ 0.25$

OHMITE R.F. PLATE CHOKES Built to Carry 1,000 M.A.

High frequency solenoid chokes designed to avoid fundamental or harmonic resonance in the amateur bands. Single-layer wound on low power factor steatite core -insulated and protected by moisture-proof coating. No portion can resonate independently of any other portion. Designed also to prohibit breakdown from high R. F. potentials. Ample space allowed at the ends to prevent flashover to ground. Non-magnetic mounting brackets furnished with the three larger sizes. Rated at 1,000 milliamperes. May be used in diathermy and therapeutic equipment as well as in radio transmitters.

## OHMITE POWER LINE CHOKES <br> 

Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. Used as a filter in connection with two grounding condensers of 0.1 microfarad capacity each. The $\mathrm{Z}-20$ Choke is also used at radio receivers to keep out interference. All chokes consist of two single-layer windings on a single ceramic core-insulated and protected by moisture-proof coating. Recommended for use in suppressing radio (not audio) frequency interference.

TYPES 183 AND 193- $\pm 1 \%$ IN COMMON VALUES-IN STOCK

In addition to the popular standard types listed here, ShaHcross Akra-Ohm Resistors are made in a complete line of standard and special designs for precise electronic equipment demanding great stability and long life even under difficult conditions of temperature even under dity.
Shallcross achievements include the devel-
opment of really practical hermetically-sealed
units; BX processed resistors "tropicalized" against moisture and fungus; the use of spun glass insulated wire for applications where considerable power must be dissipated; bifilar wound resistors, 1000 ohms or less, for exacting instrument use; heavy-duty surge resistors; accurate heavy-duty power resistors, and various others. Write for the Shallcross "Engineering Data" wall and file Chart.

# SHALLCROSS MANUFACTURING CO. COLLINGDALE, PENNSYLVANIA 

SHALLCROSS D-C BRIDGES

Resistance range 0.0001 ohm to 11.11 megohms

## SPECIFICATIONS

ACCURACY- $0.3 \%$ between 1.0 ohm and 11.11 megohms. Below 0.1 ohm, $3 \%$.

GALVANOMETER-Built-in-sensitivity 0.25 micro-ampere per millimeter division.
RIIEOSTAT ARM-Four deoades- 1.0 ohm steps in Wheatstone and 1.0 micro-ohm steps in Kelvin ranges.
RESISTANCE BOX-Binding posts allow using rheostat as Resistance Box.
SEPARATE KEYS-Provided for battery and galvanometer circuits. CASE-Carrying type with removable cover (not illustrated) and cons partment for $41 / 2$ volt battery (not supplied) for Wheatstone runge measurements.
DIMENSIONS-Length $1214^{\prime \prime}$, width $101 / 8^{\prime \prime}$, height 61/2".
WEIGHT-Approx. 9 lbs. Price: $\$ 160.00$

No. 637
KELVIN

## WHEATSTONE

BRIDGE

Resistance range 0.001 ohm to 11.1 megohms
SPECIFICATIONS-Same as No. 638-2 except:
ACCURACY-1.0\% between 1.0 ohm and 1.0 megohm; $2.0 \%$ above 1.0 megohm; and $3.0 \%$ below 0.1 ohm.

GALVANOMETER-Sensitivity 1.0 micro-ampere per millimeter division. Built-in.
RHEOSTAT ARM-Three decades- 10 ohm steps in Wheatstoneand 10 micro-ohm steps in Kelvin ranges.
CANNOT be used as Resistance Box.
DIMENSIONS--Length $10^{\prime \prime}$, width $984^{\prime \prime}$, beight $5 \frac{1}{4} 4^{\prime \prime}$.
WEIGHT-Approx. 7 Ihs. Price $\$ 105,00$

## No. 630 WHEATSTONE BRIDGE

Resistanoe range from 0.1 ohm to 11.1 megohms

## SPECIFICA TIONS

ACCURACY- $1.0 \%$ between 10 ohins and 1.0 megohm- $2 \%$ over 1 megohm.
COMPONENT RESISTORS-0. $0.1 \%$ accurate except 1 ohm, which are $0.25 \%$.
RHEOSTAT ARM-Three decades-variable in 10.0 ohm steps. RESISTANCE BOX-Binding posts allow using rheostat as Resistance Box.
CAM SWITCH-Provided for battery and galvanometer circuits. CASE-Carrying type with removable cover and compartment for batleries and leads (not supplied).
DIMENSIONS Length $10^{\prime \prime}$, width $93 / 4^{\prime \prime}$, height $51 / 4^{\prime \prime}$.
WEIGIIT-Approx. 6 lbs . Price $\$ 80.00$

Resistance range 0.1 ohm to 11.11 megohms

## SPECIFICATIONS

ACCURACY-COMPONENT RESISTORS- $0.1 \%$ accurate except 1.0 ohm, which are $0.25 \%$.

## UNMOUNTED DECADE RESISTANCES

In response to a demand from engineers, manufacturers and physicists who design and construct their own electrical measuring instruments, we have made the Shallcross Unmounted Decade Resistances available. They are of the same construction as those used in the popular Shallcross Resistance Decades described above and consist of ten Shalleross Resistors mounted on a ceramic instrument switch.

| $\begin{aligned} & \text { Type } \\ & \text { No. } \end{aligned}$ | Total <br> Resistance <br> Ohms | Unit Resistance Ohms | Switch No. | Accuracy | Price |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 435 | 1.0 | 1 | 536 | 1.0\% | \$8.00 |
| 436 | 10 | 1.0 | 531 | 0.25\% | 8.00 |
| 437 | 100 | 10 | 531 | 0.1 | 8.00 |
| 438 | 1,000 | 100 | 531 | 0.1 | 8.00 |
| 439 | 10,000 | 1,000 | 531 | 0.1 | 9.50 |
| 440 | 100,000 | 10,000 | 531 | 0.1 | 12.00 |
| 441 | 1 Meg . | 100,000 | 531 | 0.1 | 20.00 |
| 442 | 10 Mog . | 1 Meg . | 531 | 0.1 | 35.00 |

Mounting: Single $3^{3 / 8}$ Hole Mounting—Panels Up to $3 / 16^{\prime \prime}$ Thick.
Any of the above may be obtained with aluminum dust cover and shield at $\$ 1.50$ additional cost.

## SHALLCROSS ROTARY SELECTOR SWITCHES

Like other Shalleross instrument cornponents, these Rotary Selector Switches are designed to cover a very wide field of application in both shorting and nonshorting types, and can be modified to control a variety of circuits. Details on any type for practically any application on request. Suffixes $B$ and $S$ denote Brass and Silver contacts and contact arms.

## SHALLCROSS VARIATEN CONTROLS

 AND FIXED PADSShalleross Yariaten (variable attenuuator) controls are characterized by their smooth quict action, low noise level, trouble free service, and long life. Zero temperature coefficient resistance alloy non-inductively wire-wound resistors are used in all Shallcross Variaten controls. Variaten controls can be used

Type 0411 (with detent) up to 30 kc . with no leakage. The resistance networks are completely impregnated in a special compound protecting the unit against moisture and shock.

The Variaten controls listed in the table below are a very few of the wide variety of standard and special attenuators manufactured by Shallcross. Other standard types not listed include turntable faders, loudspeaker controls, matching attenuators, VI and VU meter range extenders, balanced $H$ attenuators, and carbon and wire-wound potentiometers.

| Type |  | $\begin{gathered} \text { No. } \\ \text { of } \\ \text { Steps } \end{gathered}$ | Db. per Step | Description and Circuit | List Price |

[^42] are also available in a wide variety of other circuits on request.

## VITROHM RING TYPE RHEOSTATS

The core and base of Ward Leonard Ring Type Rheostats are made of the highest grade ceramic materials. The resistance wire is wound toroidally on the core, and is coated with a tough, heat resistant, acid resistant, crazeless vitreous enamel.
The contact is a special alloy and is of large area to avoid sticking, pitting, local heating, or oxidation when setting remains fixed for a long period of time.

## Watt Ratings

Based on continuous operation in free air with a temperature rise not to exceed $300^{\circ} \mathrm{C}$, which is within the limits specified by Underwriters' Laboratories and NEMA.

Dimensions

Number of Steps
Each turn of resistance wire on the core of a Vitrohm Ring Type Rheostat constitutes a step of change in the resistance value.

Vitrohm Ring Type Rheostats are made with three terminals with no "off" position, and can be used as potentiometers or rheostats, as desired. Rheostats with an "off" position can be furnished on special order.

## Heavy Duty Rheostats

Pressed steel plate type.
300 watts -1 to 2500 ohms, 20 steps, $6^{\prime \prime}$ diameter. 500 watts - 1 to 5000 ohms, 33 steps, $8^{\prime \prime}$ diameter.

## VITROHM PLAQUE RESISTORS

Vitrohm Plaque Resistors are flat in form. The resistance wire is arranged on a rectangular ceramic base to give the lowest obtainable values of inductance and distributed capacitance. Inductance at frequencies up to 1000 kilocycles and distributed capacitance up to 5 megacycles are so low in value that they are negligible.
Vitrohm Plaque Resistors are rated 20,40 , and 125 watts with full ventilation. Since full ventilation is usually impossible to attain, the watt rating should be decreased to compensate for the reduction in ventilation. A single plaque resistor mounted on a panel should operate safely about $80 \%$ of the full watt rating.

## ADJUSTABLE RESISTORS -- ADJUSTOHMS

Adjustohm Resistors are for use in any application where it is necessary or desirable to have one or more intermediate resistance values; or in circuits that need to be changed from time to time to meet varying electrical conditions.

Adjustohm Resistors are built of the highest grade low temperature coefficient materials, and are coated with Ward Leonard's tough crazeless Vitreous Enamel.

Nominal watt ratings for Adjustohm Resistors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approximately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Adiustohm Resistors, except the 10 -watt size, Type 10A.

Price of resistor includes brackets and one adiustable band.

| 200 Watts | 507-690 | . 20 | 507-695 | . 33 |

Discohms are flat refractory discs having resistance wire arranged to minimize the values of inductance and distributed capacitance.
Discohm Resistors are especially useful in equipments where space is limited and where a power resistor having low value of inductance and distributed capacitance is requirc ${ }^{*}$.
They are mounted by means of No. 8 wood screw or bolt through the countersank hole cast in the refractory base. Two or more units can be mounted together to obtain various resistance values and watt ratings.
Discohm Resistors are rated at 18 watts with free ventilation. A single Resistor mounted on a panel should operate safely at $80 \%$ of the full watt rating or $90 \%$ of the full current rating.

## VITROHM STRIP RESISTORS

Vitrohm Strip Resistors lend themselves readily to applications where space is limited, such as aircraft control circuits, radio instruments, and similar apparatus.
Vitrohm Strip Resistors are built on a strong flat reinforced core that has no sharp angular surfaces, providing a smooth continuous form of the resistance winding. The resistors are vitreous enamel coated.
Each unit is fitted with

| LENGTH (Inches) |  | RESISTANCE |  | WattRating |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { Resistor } \\ \text { Body } \end{gathered}$ | Mounting Holes | Min. Ohms | Max. Ohms |  |

| 6 | $63 / 4$ | 1.40 | 66,000 | 75 | a self - sustained mounting bracket and spacer, the end pieces being riveted to a metal strip that passes through the core and serves as a conductor for the internal heat generated while the resistor is in service.

## FLUORESCENT LAMP RESISTORS

Ward Leonard Fluorescent Lamp Resistors are designed for use in buorescent lamps operating on direct current. They meet the requirements of lamp and fixture manufacturers and are listed as standard by the Underwriters' Laboratories, Inc., and by the New York City Department of Water Supply, Gas and Electricity.
Ward Leonard Fluorescent Lamp Resistors are mounted in well-ventilated metal enclosures for installation on standard fixtures. They are made for use on 115 -volt, 120 -volt and 220 -volt circuits and in various resistance values to meet the requirements of the lamps with which they are to be used.

Long, flexible asbestos covered leads facilitate connections.

## Plug-In Type

For Portable Fixtures
Ward Leonard also provides a Fluorescent Lamp Resistor in a me-
 tal enclosure for use with portable lamps operating on 120 -volt circuits. It is fitted with a plug on one end for inserting into the line receptacle and a receptacle on the other end into which the plug on the figure is placed.

The Plug-In Resistor is made for use on 15 -watt and 20 -watt lamp fixtures.

## LINE VOLTAGE REDUCERS

Ward Leonard Line Voltage Reducers protect radio sets, soldering irons, Christmas tree lamp strings, and other electrical appliances within the ratings of the Reducers, from high line voltage.
Line Voltage Reducers consist of a resistor network encased in a perforated metal enclosure provided with standard parallel prongs on one end and a standard receptacle on the other. Connection is made by plugging the Reducer into a receptacle and then inserting the plug on the appliance in the receptacle on the enclosure.

## WIRT war wown FIXED RESISTORS

## WIRE WOUND FIXED RESISTORS

To satisfy the most exacting needs of the Radio and Electronic Industries, Wirt Fixed Wire-wound Resistors are regularly furnished in PHENOCOTE protective coatings, developed and steadily improved over a period of many years in the Wirt Laboratories. The resistor wire is space wound on low loss ceramic tubes. The PHENOCOTE covering is an exclusive organic cement coating offering maximum protection to the resistance winding against the detrimental effects of
 moisture, humidity and electrolysis. Absolutely inert chemically, it will not effect the most delicate windings. It is particularly recommended for fine wire sizes and all applications where the maximum temperature of the unit will not exceed $300^{\circ} \mathrm{F}$. These Resistors are universally used in the Radio, Electronic, Instrument, Public Address and Test Equipment fields.

## WIRT

## WIRE WOUND ADJUSTABLE RESISTORS

WIRT Adjustable Resistors are space wound on low loss ceramic tubes to which the resistance wire is bonded, resulting in dependability and long life. Protection of the windings is afforded by the PHENOCOTE covering which is described fully on the preceeding page. One adjustable Slider Band, screw driver type, is furnished as standard. Bakelite knob type bands can be furnished on special order at slightly higher prices as shown below. These bands are made with small contact buttons located on the inside of the band so that a number of taps may be made without shorting out excessive resistance.

TABLE OF SPECIFICATIONS OF ADJUSTABLE RESISTORS

# WIRT 

miniature rheostats and POTENTIOMETERS

## MINIATURE RHEOSTATS AND POTENTIOMETERS

General: WIRT Metal Housed Rheostats and Potentiometers are rugged and compact affording high quality and dependability in operation. Due to size and construction these controls are moderately priced. Housings are made of tinplated steel. Highest quality resistance wire is space wound on specially treated laminated phenolic strips. The Phosphor Bronze contact-arm is grounded to the metal casing and all terminals are silver plated. Switches cannot be furnished. These Rheostats and Potentiometers are adaptable to a wide variety of uses in the Radio Instrument, Electronic and Test Equipment fields. The types available are listed below:
Cat. No. WC801-Two Terminal Rheostat, 2 Watt rating. Resistance Range: 5 ohms to 10,000 ohms with linear winding and standard tolerance of $\pm 15 \%$. Diameter is $11 / 8^{\prime \prime}$ and thickness $1 / 2^{\prime \prime}$. Shaft is Cadmium plated steel, grounded to housing. $5 / 32^{\prime \prime}$ from end of bushing and slotted for screw driver adjustment. Brass mounting bushings, $3 / 8^{\prime \prime}-32 \times 1 / 4^{\prime \prime}$ long are standard. Each control is equipped with one $9 / 16^{\prime \prime}$ hex mounting nut. List Price.
$\$ 0.90$ Each
Cat. No. WC802-Three Terminal Potentiometer. 2 Watt rating. Resistance Range: 5 ohms to 10,000 ohms with linear winding and standard tolerance $\pm 15 \%$. All other specifications are the same as those listed under the WC801 control shown above. List Price
\$1.25 Each
Cat. No. WC803-Sensitivity Control, 2 Watt rating. Resistance Range: 5 ohms to 12,000 ohms with linear winding and standard tolerance of $\pm 15 \%$. Diameter is $11 / 8^{\prime \prime}$ and thickness is $1 / 2^{\prime \prime}$. A slot is provided in the Rotor mechanism allowing for screw driver adjustment from front only. List Price.
$\$ 0.50$ Each
Cat. No. WC804-Sensitivity Control. Identical with WC803 Control, except provided with an opening in back of control to permit screw driver adjustment from either front or back. List Price
$\$ 0.55$ Each
Cat. No. WC807-Miniature Sensitivity Control, 1.5 Watt rating. Resistance Range: 5 ohms to 3000 ohms with uniform winding and standard tolerance of $\pm 15 \%$. A slot is provided in the Rotor mechanism allowing for screw driver adjustment from either front or back. List Price.
$\$ 0.50$ Each
Cat. No. WCB507-Insulating Bushing for $3 / 8{ }^{\prime \prime}$ Brass bushing and used with
Cat. Nos. WC801 and WC802 Controls. List Price.
$\$ .095$ Each
Cat. No. WCW508-Insulating Washer for $3 / 8$ " Brass bushing and used with Cat. Nos. WC801 and WC802 Controls. List Price.................................... $\$ 0.75$ Each

VARIABLE VOLTAGE REGULATOR
Cat. No. 211 - Variable Voltage Regulator is wound with high quality alloy wire on an insulated metal core with the winding encased in Di-El-Ite. It can be used as a Radio Voltage Regulator where the Receiver draws not more than 65 watts. For industrial use it can be wound up to 600 ohms maximum and will dissipate up to 8 watts. It is adjustable to 5 positions.
List Price
$\$ 3.00$ Each
Cat. No. 211-B-Regulator has air-cooling features which promote rapid heat dissipation. When used as a Radio Voltage Regulator the Receiver must not draw more than 150 watts. In industrial use for control of voltage and to regulate speed or heat it can be wound with a maximum resistance of 300 ohms and can dissipate up to 20 watts with maximum resistance setting. It is adjustable to 8 positions. List..... $\$ 5.00$ Each

UTILITY CABINET
Cat. No. UC-Utility Cabinet is constructed of bass wood with corners dadoed and glued for strength; varnished and rubbed to give a beautiful finish. It has six drawers, each one having three removable partitions. The upper five drawers are $1^{\prime \prime}$ deep and the lower one is $11^{\prime \prime}$ deep. Overall dimensions of the cabinet are $7^{\prime \prime}$ wide by $55 / 8^{\prime \prime}$ deep by $9^{\prime \prime}$ high. Drawer guides, bottom and partitions are made of three ply laminated wood to prevent warping. Knobs are of wood and securely fastened. It is ideal for the storage of such parts as resistors, condensers, bolts, nuts, washers, small tools, etc. List......... $\$ 8.00$ Each

# WIRT SUPPRESSORS and SWITCHES 

## AUTO RADIO IGNITION SUPPRESSORS

Wirt Suppressors are made with moulded black bakelite housings. All metal parts are made of rugged unfinished brass. Terminals are securely fastened to casings and sealed with special moisture and heat resisting dielectric cement. Resistor pills are sprayed with zinc and then double impregnated with a special moistureproofing compound. Resistance value of all standard types is 10000 ohms $\pm 20 \%$; for FV8 types 50000 ohms $\pm 20 \%$. The distributed capacity is less than 1.5 mmf . Resistance values will not change more than $7 \%$ after being submerged in water for 100 hours. Test by sparking 1800 times per minute at 10,000 volts for 100 hours produces resistance change of not more than $3 \%$. Wirt Suppressors are impervious to heat, oil, moisture and mild acids, and will not change in resistance more than $10 \%$ in 50,000 miles of operation.

## WIRT ROTARY AND SLIDE SWITCHES

## Rotary Switches

General: Wirt Rotary Switches are of the quick break type, have positive contact, are rugged and neat in appearance. They are constructed with tin plated steel housings. The outside diameter of the switch is $11 / 8^{\prime \prime}$ and thickness $1 / 2^{\prime \prime}$. Standard bushings are of brass, $3 / 8^{\prime \prime}-32 \times 3 / 8^{\prime \prime}$ long. Steel shafts are $5 / 8^{\prime \prime}$ from end of bushing, and made with a flat. Wiping contacts and terminals are silver plated. Terminals are securely fastened in place. Activating spring is positive in action. One $9 / 16^{\prime \prime}$ hex. nut is furnished. These switches are successfully used in conjunction with Radio, Phonograph, Signal and Instrument Circuits.
Cat. No. Type List Price
SW711 -SPST Rotary Switch, 3A-125V-AC-DC 2 Terminals $\$ 0.50$ Each SW711A-SPDT Rotary Switch, 3A-125V-AC-DC 3 Terminals . 55 Each

## Slide Switches

General: All Wirt Slide Switches are compact and sturdy. Housings are made of steel and are cadmium plated. The physical dimensions of the switches have been standardized, width $35 / 64^{\prime \prime}$, length $1-13 / 32^{\prime \prime}$ and mounting centers $11 / 8^{\prime \prime}$. Standard buttons are of black bakelite. All contacts and terminals are silver plated. Switches SW723 and SW725 are supplied with a dot which indicates the "On" position. These switches are used in the Radio, Signal, Phonograph and Instrument industries.

16-14-Stranded and Solid Colors: Black and Red.

## SHIELDED LEAD-IN AND GROUND WIRE

GENERAL PURPOSE: Eliminates interference caused by motors, high tension vires, X-Ray machines or other apparatus that radiate electrical impulses. Can also be used for grid and plate leads.
CONSTRUCTION: Stranded tinned conductor, free strip rubber, braided tinned copper shield overall. Frequency: 3000 K.C.

## BRAIDED SHIELDING

GENERAL PURPOSE: For shielding speaker leads, lead-ins, amplifier wires, auto radio installations. Also for bonding
CONSTRUCTION: Composed of very fine soft annealed copper wires
braided and rolled flat.

FLEXIBLE VARNISHEDTUBING

( ATHARADIO TUBING-(Spaghetti). A sleeving with a heavy coat of varnish, in high
gloss vivid colors. Average delectric gloss vivid colors.
strength: 5,000 voits.
SATURATED SLEEVING-A fibre yarn Gleeving saturated with high grade insulating varnish. Cuts clean and has a smooth interior wall. Average dielectric strength: 1,200 volts.
MAGNETO TUBING-The production of this type of tubing is under rigid control so as to insure a maximum in quality: insulating value. It is resistant to heat, oll, gas and acids. Colors are bright and vipid. Average dielectrfe strength:
7,000 volts. 7.000 volts.

Note: Sizes follow the $B$ \& \& System of gauging wires. For instance, a \#10 tubing will fit over a \#lo bare wire or any $\# 10 \mathrm{~B} \& \mathrm{~S} \mathrm{~S}$ gauge. If in doubt. it is best to submitt a sample of the wire or product to be covered.

## SUPER "HI-TENSION" TEST LEADS

Can readily be connected for testing circuit defects and all devices such as meters, batteries, transformers, etc. An insulation of Alpha "Super HiIension heary rubber is over an extremely flexible tinned copper wire (Alpha $\# 1635$ Test Prod Wire). Constructed to withstand rough usage and repeated bendings. Handles are of sturdy fibre Overan length $50^{\prime \prime}$. Red and Black leads for easy identiflcation.
$\mathbf{1}$ - Needle Point Prods with Spade Terminals ....
3 - Needle Point Prods with Alligator Clips.
5 - Solderless Prods with Spade Terminais.

- Solderless Prods with Phone Tip Terminais

## TYPE POSJ

## E-Z STRIP LAMP CORD

(UNDERWRITERS APPROVED)

GENERAL PURPOSE: For line cord on radios, lamps, electric clocks, food misers and other small devices.
CONSTRUCTION: Two conductors parallel, each conductor \#18-42/34 extra flexible bare copper, color coded cotton serve, $40 \%$ tough rubber jacket overall Slit in jacket to permit "E-Z'" separation.

| Ne. | Spool | O.D. | List |

## Belden FM antenna systems

Trade
Number $\dagger$ Pkg. Description Contents

## FM DIPOLE ANTENNA

The Belden FM Dipole Antenna System is scientifically engineered and may be used on all FM radios. It can be used for Standard Broadcast as well as FM reception. Its performance has been proven in laboratory and field service tests. Careful electrical design has resulted in excel. lent response over the entire FM band. Maximum signal and troublefree reception are assured.

1-Instruction sheet

## FM REFLECTOR

For greater radio signal strength, use the Belden FM Reflector with the
8321 1K array The den FM Dipole Antenna to form an antennae reflector installation addition of a reflector improves FM reception for any installation and is necessary in locations where the radio signal is weak, for example, due to its distance from radio stations or its location among buildings. Also, a reduction in interference may be effected to the rear or reflector side of the antenna.
*Complete installation instructions accompany each Belden System.

## Belden microphone cables

Performance and appearance are the outstanding features built into Belden microphone cables. Polyethylene insulation is used for outstanding dielectric properties and vinyl plastic jackets for protection.

Dielectrically, Belden microphone cables have low capacitance, high insulation resistance and low attenuation at audio frequencies. In addition, they provide resistance to physical abuse, aging and moisture.

multiple conductor cables
RUBBER-JACKETED PORTABLE CORD-SHIELDED

Belden multiple conductor cables are developed for long service life, excellent mechanical and electrical characteristics and uniform qualityThese cables are used for a multitude of applications including power and interconnecting cords on radio receivers, electronic devices, speakers, analyzer test equipment, remote control circuits and press-to-talk microphone circuits.

## Belden transmission line cables

Belden transmission cables are available for every receiving and low power transmitting antenna application. Coaxial, twisted pair and parallel type lines are represented. These cables are designed to meet exacting electrical requirements and are mechanically strong, weather re-
sistant and give long service life. Cables constructed with polyethylene insulation are especially suitable for very high frequency (VHF) and ultra high (UHF) ranges where the losses in ordinary types of transmission line cables are excessive.

## - Specify the Belden trade number for genuine Belden wire

## Belden hook-up wire assortments

Popular combinations of Belden Hook-up Wires are provided in standard convenient assortments. They consist of $25-\mathrm{ft}$. rolls in individual cartons, packed 6 rolls in display carton.

Specify the Belden trade number for genuine Belden wire
photoelectric cell cable
Used for various photo-cell circuit applications where lowcapacitance, maximum shiold coverage, fexibility, and resistance to aging are important requirements.

phonograph pick-up arm cable
Especially designed for use as phonograph pick-up arm cable. Extreme flexibility and limpness with small diameter are very important features of this cable.

test prod wire
High-voltage lead wire for use with portable testing equipment, instruments, and other radio units where excellent dielectric prop erties of the insulation and extreme flexibility and limpness of the cable are essential considerations. Furnished in either red or black.

## Belden auto and aircraft radio wires and shielding

Belden supplies a complete line of auto radio wires and shielding to handle every wire requirement in installation and servicing.

In installations of this type, the use of the correct wire is particularly important. Applications are indicated in the listings below.

## Belden soldering irons - cords • terminals • magnet wire

## ULTRA HIGH <br> FREQUENCY ANTENNAS

 (VERTICAL RODS) They are constructed of hard drawn gether and adjusted by forcing down with a turning motion a specially designed brass nickei-plated taper lock bushing. They cover all requirements for stationsry or portable use. Two types of mountings are available: stand-off mounting having $1 / 4-20$ threaded bushing on No. 154 and $10-32$threaded bushing on No. 157 , and binding post mounting consisting of a reinforced flattened end with two holes drilled $1^{\prime \prime}$ between centers. The irequency range listod is for $3 / 4$ wavelength antenna.
telofision reception. Consist of corrosion proof aluminum anloy tubes adjustable to all frequencies between 80 zacs. and 40 mics. mounted on high grade low ebsorption glazed porcelain standor insulators which maintains its efficiency under all weather conditions. Strong wooden supports. Ansus ware and the signal strength. There are two types available: No. I40 Doublet and the No. 142 Doublet with refloctor to eliminate interference. Complete

## ADJUSTABLE DIPOLE ANTENNA For Television or Frequency Modulation <br> 

An adjustable antenna that can be used as a vertical or horizontal doublet. Can be rotated to any angle for any degree of polariza. tion. Impedance at center 72 ohms , matched by EO1 Cable. Aluminum alloy tubing permits outdoor mountings. Special tapered lock bushings hold each section in place simply by turning and pushing down. The center mounting insulator is $41 / 2^{\prime \prime}$ high.

#### Abstract

 This cable has a surge impedance of 72 ohms which aceurately matches the impedance at the center of the half wave Hertz Antenna. It is constructed of 2 No. 12 Bare Copper conductors having a psper wrap. A special high frequency rubber insulates each side of the line and accurately maintains tbe impedance. It has a special weatherproofed cotton braid overall with a mica finish.    $954-500$ Reel.. $.75 .00 \quad 40$ Mes..... 73.7..... 73.9 953-1000 Coil … 150.00 

No. 12 Solid Twisted Frequency Modulation

Designed for use with television and Frequency Modulation (FM) receivers. It is constructed of 2 No. 12 hare conductors insulated with a paper wrap with a special grade of rubber insulation helps maintain the correct impedance. Over this is placed a cotton braid impregnated with a weatherproof finish.

## BIRACO TUBING (Extruded)

It is an extruded tubing made of the new synthetic plastic material. Extremely flexible and when stretched returns to its original form. Withstands the "ffiects of
heat and will not support combustion. Will only soften at $300^{\circ} \mathrm{F}$ and will not flow at $425^{\circ} \mathrm{F}$. Its dielectric strength:- 750 volts per mil. when dry and 350 volts when wet. It is not affected by oil and is resistant to most coal tar solvents and petroletum solrents. Tesists aciils, aikalies in concentrations up to $30 \%$ by weight. 10,000 roits.

## STEATITE AIRPLANE INSULATORS

A very small compression type insulator with small wind resistance. It is $11 / 2 "$ long and $1 /{ }^{\prime \prime}$ dia.
No. 463 -Std. Pkg. 25, List Price $\$ .30$ ea.

## TURE CLAMPS

These tube clips will be found extremely desirable when mounting resonant lines or elements of directive beam antennas. They are made of hard drawn aluminum and are avaiiable for $1^{-5} 6^{\prime \prime}, 3 / 8^{\prime \prime}, 1 / 2^{\prime \prime}, 3 / 4^{\prime \prime}$ and $1^{\prime \prime}$ dia. tubes. The $\frac{5}{16}$ " $163 /{ }^{\prime \prime}$, and $1 / 2^{\prime \prime}$ have a clearance hole for No. 10 screw and the $94^{\frac{1}{16}}$ " and $1^{\prime \prime}$ dia. clamps have holes for $1 / 4^{\prime \prime}$ bolts.

| Cat. No | To Fit Tube | List Price |  |

## FLEXIBLE SHAFTS

At times there is difficulty getting the controls to the proper position on the panel. With couplings and these flexible shafts, locations can be made with ease on an offset and angles up to 90 degrees. The flexible shafts are made of phosphor bronze and fitted into $1 / 4^{\prime \prime}$ dia. hubs. Cat. No.

List Price
553-Flexible Shaft, $3^{\prime \prime}$ long .each $\$ 0.45$
554-Flexible Shaft, $6^{\prime \prime}$ long
each . 60

## TRANSMITTING TUBE SOCKETS

Improved design and additional features of the Birnbach transmitting sockets has increased their popularity and are accepted as standard. The 50 watt socket las extra heayy side-wininc phosphor bronze contact spring with the filament bpring having tact spule whact to safely carry the having a double contact to safely carry the heavy current. The tube base is supported by the highly polished nickel-plated brass shell set in a highly vitrified low absorption porcelain base which is ground flat to prevent breakage. All brass nickel-plated screw and milled nuts are used.

Cat. No.
List Price
434 - 50 Watt Socket
each $\$ 1.40$

## BROADCAST ANTENNA KITS

These are popular priced broadcast kits of the "L" type. Each kit contains the necessary parts for the installation of the complete antenna. They are furnished in an attractive two-color box.

## KIT No. 7 "THE BRIGADIER"

## FLEXIBLE CORDS

(Fixture Wires-Lamp Cords) - Fixture wires often used as all-purpose radio and lead-in wire. Lamp cords used for power supply and extension cords. Colors: Brown, Black, Ivory.

[^45]
## RADIO HOOK-UP WIRE

"CORLAC" HOOK-UP WIRE

For the discriminating service man who knows the importance of voltage break down and insulation resistance. Special under-insulation makes this hook-up wire moisture-proof and gives voltage break-down of 3100 volts (as per certified report of Electrical Testing Laboratory, N. Y. C.). Excellent push-back in waxed finish. Tinned copper conductors.

## INTERCOMMUNICATION WIRE

2 and 3 conductor twisted communication wire. Made by Columbia for all intercommunication and transmission purposes. Consists of color coded twisted wires with geon
 plastic insulation, insuring high resistance to dirt, oil, water, flame and many other normally destructive factors. Solid and stranded tinned copper conductors.

## leronic

A modern antenna devised to bring you the full benefits of to-day's perfected radio transmission.

It covers domestic broadcast, overseas short-wave and high fidelity FM channels.
$\bullet$
It will supply more efficient and clearer reception over wider frequency bands.

Its design combines good appearance with ingeniously simple methods for quick installation.

The AERONICS antenna is the result of extensive laboratory and field investigation by qualified men experienced in the theoretical and practical requisites of antennas.

The electrical ciruits used are based on fundamental principles incorporated in established patents under which this product is licensed.
-

> AERONICS, INC. NEW YORK 7, N. Y.

1. Maximum "signal-to-noise" ratio.
2. Three frequency ranges: $A M-S W$ - FM. No switching!
3. Three separate matched circuits in both antenna and receiver transformer units.
4. Inductively-coupled, capacitively-isolated circuits employed.
5. Newly developed iron-dust cored transformers.
6. Built-in static surge drain for both aerial and transmission line.
7. A highly effective supplement to the built-in aerial.
8. A balanced combination of corrosionproofed metals, ceramics and plastics selected for the best characteristics of each.
9. Licensed under recognized patents for your protection.
10. Completely assembled. Factory tested to insure optimum performance.
11. Contains all necessary harware for a neat, quick installation.

GROUND CLAMP

The performance of even the finest receiver is limited by the amount of noise accompanying a desired program. It is no longer necessary to tolerate the buzzing, hissing, crackling background which mars radio reception. The AERONICS A-1 anfenna overcomes this.
The receiver encounters noise chiefly of man-made origin. Noise fields may be radiated in the vicinity of the receiver by defective appliances, electric signs, auto ignition, faulty electric wiring, sparking motors, etc. Most frequently such noise is carried over surprisingly long distances via power lines which normally supply the radio receiver. These noise currents find their way into the receiver input circuit in defiance of even the best "line filters" or so-called static eliminator devices.
The AERONICS antenna minimizes such interference by "isolating" the receiver from the antenna-ground signal pickup circuit. The most modern type of irondust core radio-frequency transformers are used in a tandem arrangement of inductively-coupled,
capacitively-isolated antenna and receiver units. Such a double isolation method blocks out power line conducted noise currents from affecting the receiver input circuit. Three separate circuits are used, one for each band (BC - SW - FM) peaked and matched for maximum signal. Low loss transmission line is used. It can pass through noise areas wishout affecting the signal within the antenna sys$t \in m$. Thus the clean signal picked up in the quiet arec of the elevated cierial wire is virtually "piped" into the receiver.

The AERONICS antenna will aid in FM reception! Wide band frequency modulation is inherently noise-reducing. However the signal-to-noise ratio af the radio set must be great enough so that the FM principle may be fully operative in its noise suppressing action. In distant areas or in buildings which are effectively shielded, signal strength can fall below a prevailing noise level with the result that the benefits of FM will not be enjoyed. The AERONICS antenna offers a solution to this problem.

AERONICS, INC. NEW YORK 7, N. Y.

## BETTER F-M AND TELEVISION RECEPTION WITH AMPHENOL DIPOLE ANTENNAS

Amphenol F-M and Television Antennas are engineered to provide satisfactory reception in zones of low signal strength. Directional array helps eliminate interfering signals and builds up desired signal.

- High gain that assures improved reception in the F-M and Television bands.
- Swivel feature on mounting bracket and mast head allows polarization adjustment in two planes.
- Innovation in parallel low-loss transmission line for antenna to receiver connection.

## PACKAGED FOR UNIT SALE

Convenient, self-contained Amphenol kits include all necessary parts for assembling the complete antenna, except the guy wires. Amphenol Antennas ars easily put together with a minimum of time and experience. Packaged in five different combinations.

THE IDEAL LEAD-IN WIRE TWIN LEAD EXTRUDED WITH POLYETHYLENE DIELECTRIC

This is Amphenol's latest development - a highly efficient, low-loss, transmission line that is inexpensive, weather-resistant and rugged in service. Twin-Lead carries signals from antenna to F-M and Television receivers with minimum loss.

AMPHENOL 300 OHM TWIN-LEAD TRANSMISSION LINE provides best match of impedance to F-M receivers. It is further recommended by RMA for television, being most efficient over broadband operation. 14-056 - Per 1000 Feet. $\qquad$ . $\$ 48.50$ list

AMPHENOL 150 OHM TWIN-LEAD also supplied to those who desire it for particular applications and experimental work.
14-079 - Per 1000 Feet.
$\$ 40.37$ list
ANPHENOL 75 OHM TWIN-LEAD was especially designed for amateurs who are going to operate in very narrow bands of frequency or one particular frequency. Suitable for dipoles that bave a nominal impedance of 72 ohms at the frequency for which they are cut. 14-080 - Per 1000 Feet.

## TO COWL AND TOP FENDER MOUNT

A brand new innovation in auto antenna design. This Cameo model fills a great need for a top cowl and top fender mount antenna for the modern auto.
Sturdily constructed to stand plenty of "rough" treatment and guaranteed to give maximum performance. Easily adjusted to fit body curvature. Antenna can be swiveled and locked permanently in any desired position. 3 section extends from 22 to $56^{\prime \prime}$.

Cat. No. FC-563
List Price
$\$ 5.95$

Camco antennas are rattle proof, rustproof and precisely engineered to prevent moisture and dirt from entering tubes.

Tested for perfect mechanical performance.

## SIDE COWL MOUNT

Insulators-Bakelite and Brass Chromed Combination. Individual in design.

Low Loss Lead-Last word in science and plastics. Vinylite jacketed moisure and corrosion proof. Aircraft type fittings insuring positive ground of lead, shield prevents shorts to car body. Installation simplified.

Conversion Kit-Adaptor supplied for curved cowls.

Construction-Rattle Proof. Swaged part of tube prevents entry of dust and moisture.

Cat No. List
C-663-3 Section Extends from $26^{\prime \prime}$ to $66^{\prime \prime} . \$ 5.45$

## AUTOMATIC SELECTING • NOISE REDUCING • ALL WAVE RECEIVING ANTENNAS

Models 80,100 , and 500 shown below are furnished with multiwinding *patented transformer couplers which automatically tune the antenna to the same frequency as the receiver. The antenna coupler is mounted in a porcelain transformer housing which acts as the center insulator of the doublet antenna. The radio energy is picked up by the antenna, passed through the antenna trans-
former and down the transmission line, through the receiver coupler to the receiver. This balanced 2 wire isolated transmission system reduces noise pickup to a minimum. Each antenna is furnished complete with tested transformer couplers, antensa wire, transmission line, nail it knobs antenna insulators, lead strips and easy to understand instructions.
*Model 100 ALL WAVE. Covers Standard Broadeast Band and Shortwave Bands. Freq. Range 540 kc . to 20 Mc . Consists of 2-30 ft. coils $7 / 22$ antenna wire- 50 ft . Twimnax transmission linem-2 transformer couplers.

List Price $\$ 10.00$
*Model 80 ALL WAVE Amateur Oommunications. Freq. Range 540 kc . to 30 Mc . Consists of $2-30 \mathrm{ft}$. coils $7 / 22$ antenna wire- 60 ft . twinnax transmission line. The transformer coupIers in this kit are designed to work into a communications type receiver.

List Price $\$ 13.50$
*Model 500 ALL WAVE Covers Broadcast band-ShortwaveFrequency Modulation Band. Uses 7/22 copper wire for an. tenna and twinnax high frequency low loss transmission line for maximum efficiency. Furnished with 2 transformer couplers plus specially designed frequency dividing network for FM reception.

List Price $\$ 14.00$
Model 1000 All wave doublet-Covers broadcast and shortwave. Consists of $2-30 \mathrm{ft}$. coils $7 / 24$ copper antenna wire- 50 ft . twisted pair transmission line-For use in noise free locations.

List Price $\$ 3.50$

## VERTICAL WHIP ANTENNAS <br> Noise Reducing - ALL Wave - Builł Like an Auto Antenna

A tapered aluminum alloy mast with a bakelite rotor mounted on an alumitum ewivel base. Mounts in 3 inches of space-Ideal for window mounting.

Designed for standard broadcast and shortwave receivers.
Frequency range 500 kc . to $30 \mathrm{Mc}-600$ to 10 meters. Furnished with or without balanced transformers and special low loss twin transmission line.
*Model 9X An all wave-automatic frequency selecting-noise reducing antenna using a 9 ft . 3 section mast. Provided with an upper unit transformer which matches the vertical mast to the low loss twinnax tranemission line. Another lower unit transformer matches the transmizsion line to the receiver. This gives a balanced=asolated tranamission system which
reduce noise to a minimum. The transiormers are mounted in hakelite shells and thoroughly impregnated. Furnished complete with 35 ft . high frequency low loss twinnax transmibsion line- 2 lead strips, 2 porcelain nail it knobs, mounting hardware and instructions.
Model 9 A 9 ft . 3 section mast. Furnished complete with 15 ft . lead in wire, window lead in strip, mounting hardware and instructions.

List Price $\$ 5.00$
Model 12 Similar to Model 9 except the vertical mast is made in 4 sections and is 12 ft . Iong.

List Price $\$ 6.50$
*Model 12X Has the same noise reducing features as the Model 9 X but uses the 12 ft . vertical mast. List Price $\$ 16.50$

## AMATEUR BEAM ANTENNAS

## Model 400 Series

The 400 Series of antennas are deagned for the amateur 1.0 meter band. They are rigidiy constructed of $3 / 4^{\prime \prime}$ aluminum tubing telescoping to $5 / 8^{\prime \prime}$. The elements are mounted on $1^{\prime \prime}$ almminum angle and supported by $21 / 2^{\prime \prime}$ steatite standoff insulators. Elements are adjustable over a range of several feet.
Model 400-RA 3 element 10 meter beam using . 1 wavelength spacing for the director and 15 wavelength spacing for the reffector. Designed to be fed with 300 ohm twinnax. Furnished complete with all aluminum ladder. Elements are $3 / 4$ " aluminum tubing telesooping to $5 / 8^{\prime \prime}$. Adjustable from 14 to 18 ft . Weight 15 lbs . List Price $\$ 45.00$
Model 400-EA 3 element 10 meter beam with folded di-pole driven element. Uses. 1 wavelength epacing for the director and .15 wavelength spacing for the reflector. Furnished complete with aluminum ladder. The folded di-pole gives a much broader response than the regular single di-pole beams and allowe this beam to be fed directiy with 50 ohm coaxial cable. Weight 17 lbs. List Price $\$ 52.00$
Model 400 -BA 2 clement 10 meter beam with 2 wavelength spacing, Furnished complete with 7 ft . aluminum ladder. Designed to be fed directly with 50 ohm coaxial cable, RG8/U or equivalent. Weight 12 lbs. List Price $\$ 34.00$
Model 400-AA 10 meter di-pole with adjustable elements. All aluminum with steatite insulators. List Price $\$ 13.00$
Model 405-CA 10 meter folded di-pole- 5 inch spacing. Aluminum supporting angle and adjustable elements. Designed to be fed directly with 300 Ohm twinnax line. Weight 5 lbs .

List Price $\$ 22.00$
Model 401-AA Set of 10 meter director and reflector elements with aluminum supporting angles. Elements are adjustable

MODEL 400EA
over a range of several feet. Can be used with either the $405-\mathrm{CA}$ or the $400-\mathrm{AA}$ to make up a 3 element beam. Ideal for the ham who wants to build his own ladder. List Price $\$ 22.00$

Model 200-EA Five element beam for the amateur 2 meter band, with folded di-pole driven clement-3 directors and 1 reflector. with folded di-pole driven element-3 directors and 1 reflector. Constructed entirely of aluminum with steatite standoff insu-
lators. Designed to be fed with low impedance coaxial cable.

List Price $\$ 14.00$

## TELEVISION AND FM ANTENNAS

*Model 250 Combination FM and Television Antenna. A multielement array using 2 folded di-poles coupled together by frequency dividing networks which automatically select the desired band of frequencies.
Prices slightly higher in the far west.

We also manufacture a full line of FM and Television antennas consisting of single, folded, fan type and cone type di-poles both with and without reflectors. Literature available on request.

For satisfactory operation under the most critical conditions found in marine installations and other commercial uses where high strength and unusual resistance to corrosion are prime considerations, Premax has developed special Monel and Aluminum Antennas which successfully resist the action of sea air, salt spray and other corrosive agents. These Antennas have satisfactorily stood up under the most severe wind and shock strains, and found extensive military application on the PT Boats and other craft of the Navy and Coast Guard in World War II.

## Aluminum Radiators

Premax Adjustable Type Aluminum Antennas were first introduced to provide lightweight combined with corrosion resistance and adequate strength to meet the most exacting conditions. During World War II improvements were made in their design and versatility until today they are generally accepted in standard designs for marine and mobile installations where lightweight, convenience in erection and dependable performance are important considerations.

They are ideally adapted for use in radio telephone installations on fresh water craft and for commercial installations where convenience in exterding and collapsing and attractive appearance are important considerations. Other popular uses are for police, fire, forestry, public utility and similar services, as well as for home receiving sets. Amateurs have discovered the excellent performance of thesc Antennas and they have a wide acceptance among the "hams" for both transmitting and reciving on any and all radio frequency bands.
The tubing is special drawn bright finish seamless tempered aluminum with diameters, gauges and temper engineered to withstand wind velocities up to 60 miles per hour. The locking device is simple in operation and provides efficient low-resistance contact between sections. Six units are available, all fully telescoping excepting the tapered top section.

HEAVY-DUTY NON-ADJUSTABLE MASTS
For special installations under extraordinarily trying conditions, the Heavy-Duty, Non-Adjustable Aluminum Anterna is recommended. In either the $171 / 2$-foot or the 35 -foot lengths this special heat-treated aluminum alloy antenna is designed to withstand wind velocities up to 100 miles per hour. The tubing is graduated in steps from a base diameter of two inches to a top of one-half inch on the 35 -foot mast and a base diameter of $31 / 32$-inch to a top of one-half inch on the $171 / 2$. foot mast. The antenna has a smooth, polished finish to resist corrosion. The 35 -foot mast is in two sections, with closely-machined joint, secured by two cross bolts.

## Monel

 RadiatorsMonel has proven to be the most practical material for radio antennas as it is far more resistant to corrosion than either the nickels or coppers which enter into the formulation of the monel. Its properties enable it to withstand weather conditions in the Tropics as well as above the Arctic Circle. Its mechanical properties enable it to satisfactorily resist shocks as its toughness and fatigue strength far exceed the limits of mild steel or all brasses and bronzes. This means freedom from internal structural failures, season cracking and other weaknesses which, in ordinary metal, result in poor contacts, increased resistance or mechanical breakdown. Rigid tests by both Government and private agencies have shown Premax Monel Antennas to be the most dependable units available for high efficiency and satisfactory service under all conditions.

Premax Monel Antennas are built up of multiple sections of hard-drawn monel tubing of a tensile strength exceeding 100,000 pounds per square inch and represent a cooperative development of Premax engineers and the Superior Tube Company of Norristown, Pennsylvania. Their rich, highly. polished, chrome-plated finish conforms perfectly with the equipment of even the finest craft, yet their cost is not excessive for the more modest installations when their long life and operating efficiency are considered.

Premax Monel Antennas are available in five standard units, fully telescoping and adjustable. The special knurled thimble and friction clutch sleeve locking device secure the sections firmly at any desired height and also provide perfect electrica: contacts.

Various types of recommended mounting: and supports are shown on page $\mathrm{S}-38 \mathrm{o}$ : of this Catalog.

SpECIFICATIONS

## PREMAX TELESCOPING VERTICALS AND ELEMENTS

Premax Tubular Steel Antennas and Elements have been known to the radio field for a long period of years and have shown exceptionally efficient, dependable performance under most severe conditions. The low initial cost of these Antennas has put Premax equipment within the budget requirements for amateur, commercial and municipal installations of all types.

## Steel Radiators

Premax Tubular Steel Antennas are made of high-tensile, copper-nickel steel tubing of carefully engineered diameters and wall thicknesses, heavily electro-plated and highly resistant to corrosion. These Antennas will withstand all ordinary stresses without guying, but should be supported by guys or standoff insulators against abnormal winds or extreme conditions.

Standard Premax Tubular Steel Antennas are available in two, three, four, five and six-section adjustable models, ranging from about twelve feet minimum to about thirty-four feet maximum height as shown in specifications below. While these Antennas possess unusual tensile strength, they are light in weight, easily handled and readily portable.

All units are fully telescoping and adjustable within the limits shown below. The locking device is simple in operation, positive in action and provides a secure, efficient contact between the sections.

Cadmium-plated Steel Antennas are NOT recommended for marine use on salt water.

## AVAILABLE IN FIVE STANDARD LENGTHS

The adaptability of Premax Tubular Steel Antennas is almost universal because of the five standard lengths available. By selecting the proper approximate helght, the Antenna may be adjusted or tuned to the proper frequency by raising or lowering at one or more section locks. Because of their extreme durability and excellent performance, hundreds of amateur, public and commercial users are recommending them as dependable, low-cost equipment for a wide variety of radio services.

There are many practical and commonly used methods of mounting these Antennas, of which the most popular is the Heavy Duty Insulator Base, available in several styles. Special insulators are designed for use where installations are made through a roof or deck and others for offset or wall bracket mountings. Complete details of Premax Base Mountings and Insulators will be found on page S-38 of this Catalog.

## Corulite Elements

Premax Corulite Elements have been designed to meet the need for light-weight but sturdy elements for use in horizontal arrays and similar applications. They are exceptionally light in weight and their special design provides the necessary strength and rigidity so essential in horizontal types of installations —and at an extremely low cost.

The walls of Premax Corulite Elements range from twelve thousandths of an inch to twenty-two thousandths of an inch in thickness. The special steel tubing used in the construction of these Elements is a development of Premax Engineers to secure unusual stiffness and strength. All parts are heavily electro-plated to provide corrosion resistance and high electrical conductivity.

A positive clamp, spot-welded to the tubing, permits adjustment to any desired length and also assures rigid joints and positive electrical contact between the telescoping sections of the Elements.

Corulite Elements are available in one, two, three and four-section units, fully telescoping one within the other and adjustable between the limits shown in the table below. These Elements meet all requirements for various five to twenty-meter arrays in general use and are also ideal for combinations in the amateur, commercial, FM or television band. Ease of adjustment between the two halves of each complete element is provided by the Premax "Hairpin" Tuning Bar. By its use it is possible to have all of the elements set at a single physical length and the variation in their electrical length may be accomplished by the "Hairpin." Premax Corulite Rlements are conveniently mounted on Premax Standoff Insulatore shown on page S-38 of this Catalog or by special Premax Mounting Clips on any standard Standoff.

# PREMAX POLICE ANTENNA - Receiving and Sending 

## Antenna Rods for Mobile Installations

Premax Engincers have developed many highly successful types of Police and Mobile Antennas which are finding wide use in Municipal and Commercial service because of their rugged strength and practical design. The solid rod or "whip" types, styles A and B, are designed of steel of an extremely high carbon content, heat-treated and oil-tempered to carefully develop physical properties. Rods of varying diameters, cold-drawn to rigidly-held tolerances, are joined securely and permanently into a single graduated length which provides high flexibility, minimum wind resistance and long life. Where ordinary antennas bencl or break under steess of striking tree branches, bridges, garage doors and similar obstructions, Premax Antennas merely flex under the strain and immediately return to normal position when the obstacle is cleared. This eliminates the usual replacement costs and insures long and useful life for every Premax Antenna.

While Premax Antennas are heavily plated to give protection against corrosion in all ordinary atmospheres, the same designs in polished, hard-drawn stainless steel are available where corrosive conditions are extreme. Premax Police Antennas are available in two styles of bases: Style A with a plain quarter-inch end and Style B which has a $7 / 16$-inch threaded stud complete with hexagon nuts and lock washers
Style A will fit the following Mountings: Styles K, L, TA, NA, R, S and SA. Style B Rods will fit only Style $G$ or $N$ Mountings.

For the larger mobile units, standard Premax Antennas in steel, aluminum and monel as described on the preceeding pages are employed. Their collapsing feature permits even a 35 -foot radiator to be mounted on a truck, using the standard Premax Mounts. These radiators have a surprisingly long range and are widely used by state police, forestry and commercial mobile units.

## ONE-PIECE MONEL TAPERED TUBULAR ROD

In order to provide a "whip" type Antenna of unusually light weight, extreme flexibility and the ability to withstand severe climatic and corrosive conditions, Premax has developed a one-piece tulular, tapered Monel Rod.
This consists of cold-drawn monel tubing with four graduations... the base section being from $36^{\prime \prime}$ to $48^{\prime \prime}$ long by $1 / 4^{\prime \prime}$ in diameter; the second portion $16^{\prime \prime}$ long by $13 / 64^{\prime \prime}$ diameter; the third portion $16^{\prime \prime}$ long by $5 / 32^{\prime \prime}$ diameter and top portion $16^{\prime \prime}$ long by $7 / 64^{\prime \prime}$ diameter. The finish is polished clirome plate which gives added protection. Will fit all standard type Premax Mounting except Type C or N .

Amateur and commercial users will find these Antennas admirably suited for use as Dipoles where corrosion resistance is important.

## MOBILE TYPE MOUNTS

Type 5 tempered steel, mounting screws.

Premax Mountings for Police and other mobile type antenna installations have been designed to meet the need for sturdy, dependable, low-cost mountings that will withstand the shocks and jolts which are unavoidahle in any installation of a mobile character. These Mountings are particularly adapted to use with "whip" antennas on police cars, utility and service vehicles where the shock of rough terrain demands the utmost in flexibility of the antenna.
TYPE S-Spring Mounting is primarily designed for auto roof-top installation or for use on any other flat surface. A special plastic insulating stallation or for use on any other flat surface. A special plastic insulating
dise is part of the base of the Mounting. This is held to the flat surdise is part of the base of the Mounting. This is held to the flat sur-
face by means of four bolts and a leak-proof insulation is secured by face by means of four bolts and a leak-proof insulation is secured by
use of a rubber gasket and steel backing plate. A lug is attached to use of a rubber gasket and steel backing plate. A lug is attached to
the $7 / 16^{\prime \prime}$ lead-in stud for wire connection. This Mounting will take
tempered steel, electroplated for weather-resistance. insulator dise of Mounting is about $5^{\prime \prime}$; diameter of gasket, steel backplate, lead-in Iug and necessary

TYPE SA-Spring Adapter Mounting is similar in all details to Type S above, except that in place of the insulator dise it is equipped with an adapter stud and tapped base plug to fit any Premax Type K, L, NA, $\mathbf{R}$ or TA Mounting. These types of standard mountings may thus be quickly converted to a spring type by removing the clamping nut at the top and replac-
ing with the Type SA Spring Mounting which is the $7 / 16^{\prime \prime}$ lead-in stud for wire conn
any Premax Type A Antenna. A reany Premax Type A Antenna. A reing lock the antenna securely in the top socket and yet permit easy removal when necessary. The fittings are of solid brass, electroplated and will not corrode. The spring is of heavy mounting tube to give extra strength and support at the threaded end. The Type SA Mounting will take any Premax Style A Antenna. The overall height is about $43 / 4^{\prime \prime}$ and the base diameter of the spring is about $15 /{ }^{\prime \prime}$.
TYPE TA for attaching Style A Rod to trunk or car body. Lower support is solid brass rod securely joined to $12^{\prime \prime}$ brass tube carrying antenna. Upper mounting assemblies to fit contour. Insulators are high-tension, white-glazed ceramic cones. Antenna tube provides maximum $10^{\prime \prime}$ adjustment in antenna height. All metal parts heavily plated.

Type NA

Type N

Type G

Type R

TYPE R Universal Mount; attaches to any surface and adjustable to any angle. Solid brass, black baked finish. Split sleeve antenna locking clamp. Fits Style A Rods. Complete with insulator disc, rubber gasket, steel backplate and necessary mounting screws.

TYPE NA Adjustable Bumper Mount, same as Type $N$ except locking nut and split sleeve permits removal of antenna. Fits Style A Rod.

TYPE $N$ Bumper Mount; cadmium plated steel with high tension ceramic cones. Fits Style B Rod.

TYPE L Adjustable Bumper Mount; similar to Type $K$ in adjusting feature. Has $6^{\prime \prime}$ spacing between insulators giving extra base support. Fits Style $A$ Rod.

TYPE K Adjustable Bumper Mount; similar in design to Type NA but with longer socket tube which permits $10^{\prime \prime}$ adjustment in height of Style A Rod.

TYPE G Grounded Bumper Mount; designed for Style B Rod.

Type 4

Type K

## (IREMAX) INSULATORS AND ACCESSORIES

BASE INSULATOR, TYPE 1-Heavy-duty type, employing wet-process, brown-glazed porcelain cones, held in compression for maximum strength. A Lapp design with compression rating up to 10,000 pounds. Height to top of cone 7 .'. BoIt circle $51 /$. Weight about 7 lbs. Complete with mounting bolts and nuts. In galvanized malleable iron or chrome-plated bronze.

PREMAX PRODUCTS, DIVISION CHISHOLM-RYDER CO., INC., NIAGARA FALLS, N. Y.

## (PREMAX) TELE AND FM ANTENNAS

## Premax FM and Television Antenna No. FMT-150

## Extended " $V$ " Type with Dividers

Excellent response for all television and FM bands, old and new. Patented feature provides the equivalent of two dipoles in ono structure.
Novel " $V$ " type design allows proper impedance matching to 300 . ohm line.
Sturdy mechanical construction makes it easy to erect for home or apartment house use.
Simple design with pleasing appearance.
Requires less horizontal space than any other conventional dipole for the same frequency response.
For proper reception of both television and FM, a simple dipole will not suffice. Theoretically at least two dipoles should be used This will require a more complicated stmicture and its higher cost may frighten the prospective purchaser of moderate means. It is for this reason that the Premax Antenna Extended " $V$ " type Modek FMT-150, was designed. Structurally, it looks like a single dipole, but electrically it is the equivalent of two dipoles. Again, its great simplicity of construction and its neat appearance, combined with its remarkable electrical characteristics, will appeal strongly to every owner desiring the utmost performance from his FM and Television instrument.

The Premax Model FMT-150 has two dipole arms, each onequarter wave length long for the mean frequency in the lower television band. In each arm an ingenious patented device called a "dipole divider" is inserted to breals up the electrical continuity of the dipole for certain frequency bands. These dividers are so designed that the dipole will function with its full arm length for the 44.88 mc. television band and the 88.108 mc . FM band, but will be restricted in length for the upper television band of $174-216$ mc. due to the action of the dividers. Consequently, we have two dipoles combined in a single physical structure.

These "dividers" contain carefully designed electrical circuits (made under A.A.\&K. patent No. 2282292) which are anti-resonant for 195 me. and thus of "infinite" impedance at that frequency. In practice the impedance is well above 15,000 ohms at 195 mc . and several thousand ohms at ary frequency within the $174-216 \mathrm{mc}$ band. The action of the dividers, therefore, is to effectively cut off for the 174-216 mc. vand, all that portion of the dipole arm beyond the divider and bence there is no reduction in signal strength as compared with a simple dipole of about 14 -inch arms designed solely for that band.

At the same time, for the lower television band of 44.88 mc , the reactance of the dividers is low compared with the impedance of the dipole and, therefore, they act as small inductances in series with the arms which makes it possible to use somewhat shorter

arm lengths than would be calculated from theoretical considerations. For FM reception, the entire arm length is utilized; By this design, with the further advantage gained from the " $V$ "; arrangement of the elements (as explained in the description of Model FM-130), Model FMT-150 provides excellent response on both old and new FM bands. This feature will be recognized as an importan consideration during the present transition period when both oId and new FM frequencies will be utilized in many sections of the country and often provided for in the same receiver.

## FEATURES

Dipole elements of seamless heat-treated aluminum tubing. Assembly fittings and connections are solid aluminum castings.

Support mast and cross arm, staaight-grained, hardwood, varnished finish. Universal Mounting Bracket included. If installed on side wall or gable end without guying, two brackets are required. Packed partially assembled. Final assembly consists of a few simple operations in mounting elements and fittings to the support structure. Dipole Divider Coils furnished assembled in element arms as shown by diagram. These coils are electrically weatherproof and require no replacement. Entire assembly strongly constructed, well braced and compactly proportioned. Easy to install on any type of building and will adequately resist normal wind strains and ther stresses. Should be guyed, unless mounted on side wall or chimney with double brackets or supports.

Shipped complete in single carton. Weight, each $41 / 2 \mathrm{lbs}$.
also ask about model No. fMt-254, without dividers

## Premax FM Universal Dipole Antenna Model No. FM-130

## Adiustable "V" Type

Designed for maximum response for FM bands. Each dipole arm adjustable for any angle. Simple, lightweight design with pleasing appearance. Provides better FM reception than single dipole in congested city areas where signals are reflected from high buildings. Simple to erect and install. May be used with 100 to 300 -ohm transmission line.

Where the FM reception band is the only object of the antenna design, a well-engineered simple dipole type may be found very effective. Premax Products has developed a novel dipole that can be very easily installed, and possesses the valuable feature that the two arms of the antenna can be set at any desired angle with respect to the horizontal, by means of a clamp nut, thereby affording an adjustment of the plane of polarization of the dipole for different angles of polarization of the electro-magnetic waves.

Television and FM transmitters emit horizontally polarized waves. However, near the receiving antenna, duc to reflections from buildings and; other structures, especially in large metropolitan areas, there is "bound to be a vertical component in the incoming waves which, when combined with the horizontal component, will raise the angle of polarization somewhat above the horizontal plane. Therefore, the receiving dipole may have to be tilted at an angle for best reception. The simplicity of the Premax " V " dipole antenna, Model No. FM-130, its low cost and all-around efficiency will, therefore, be appreciated by every owner of an FM receiver.

## FEATURES

$30^{\prime \prime}$ dipole arms of heat-treated aluminum solidly mounted in black phenolic insulator discs. Wire terminals provided for lead-in connections. Supplied witl 50 -inch tubular steel support mast finished in baked aluminum enamel, anc universal mounting bracket. Dipole arms pivoted on support mast, permitting any desired angular adjustment. Arms may be securely locked, in horizonta plane, or at any angle against accidental loosening due to vibration or winc strains. Adjustment to an angle from 35 to 45 degrees above horizontal plan will generally be found most responsive setting.

Packed complete in single cartons. Weight, each $31 / 2 \mathrm{lhs}$.

THE ALL ALUMINUM TELEVISION AND FM ANTENNAE
 bottom to permit threading into a mounting flange or into an extension upright. Boxed singly with instr.-Less trans. line.

# OAK RIDGE ANTENNA CO., <br> 717 Second Avenue, N. Y. C. 16, 

# RADIART <br> "DELUXE V" 

Vertical Mount

Vertical mount for top of cowl or fender.
Specially designed insulator permit easy fitting to body curvature. When collapsed extends $19^{\prime \prime}$ above mounting surface. Complete with 40" Radiart "Plasti-loom" waterproof lead, Radiart Deluxe Aerial Rod and "Static Muffler Ball." 10" extension lead LA-19 available as accessory for special installations requiring extra-long lead.
Special Model 358V2 (not illustrated) for Chevrolet and other small General Motors Bodies-a "natural" for replacement of automatic or manual original equipment aerials. Furnished with 36 " Radiant "Plastiloom" lead.

## "DELUXE CF"

Two Insulator Mount
Popular two-stanchion model for cowl or fender mounting will fit most surfaces-curved or straightwith insulators and wedge adapter furnished. Available as accessory for special installations-long $5^{\circ}$ insulator and eyebolt-SA-68 for 3 -section and SA-72 for 4 -section aerial.
Complete with 40" Radiart "Plastiloom" lead, Radiart Deluxe Aerial Rod and "Static Muffler Ball.". 10 " extension lead LA-19 or 50" waterproof lead LA-21 available as accessories.

## "B"

## Underhood Brackeł Mounł

Popular underhood mounting caerial. Requires no holes in finished surface of the car body. Furnished with two brackets enabling mounting on most cars with either side or front opening hoods. Also available as accessories are AHP-35 bracket for Ford, Mercury and certain General Motors bodies, and AHP-36 for certain late-model cars requiring an off-set bracket. Complete with $36^{\prime \prime}$ Radiart "Plastic-loom" lead, Radiart DeLuxe Aerial Rod and "Static Muffler Ball."

## Adjusłable Angle Single Insulator Mounł

Fits either cowl or side of fender. Simplified one-man installation. Easily adjusted to all angles without tools.
Complete with 40" Radiart "Plasti - loom" waterproof lead, Radiart Deluxe Aerial Rod and "Static Muffler Ball." Available as accessories for special installations requiring ex-tra-long leads . . . 50" waterproof lead LA-21 or $10^{\prime \prime}$ extension lead LA-19.

# RADIART <br> ( <br> AERIALS 

## OUTSTANDING FEATURES OF RADIART "Standard of Comparison" AERIALS

## RADIART "STATIC MUFFLER BALL"

A pre-war advantage featured only by Radiart. Designed specifically to minimize disturbing static noises caused by corona discharge on the tip of the rod.

## RADIART DELUXE AERIAL ROD

The finest auto aerial rod assembly ever offered by anyone. Top rod of stainless steel. Tubing of extra heavy wall thickness "ANTIMONIAL ADMIRALTY BRASS." Admiralty Brass, first introduced by Radiart, has maximum load limit consistent with extremes in flexibilty, BUT ONLY if heavy wall thickness is maintained. With ANTIMONY added, permanent nonpeeling plating is assured, and the inner tube surface is protected against corrosion by high humidity and salt air. All tubing sections are protected by the famous pre-war Radiart plating consisting of copper, then nickel and finally a heavy coating of chromium. Just another reason why Radiart Aerials are "The Standard of Comparison."

## RADIART PERMANENT <br> "ALL METAL ANTI-RATTLER"

Another famous Radiart patented feature. Carefully preformed phosphor bronze anti-rattler strips securely anchored by means of high-frequency welding reduces mechanical rattle to a minimum. It also contributes to high conductivity between sections and provides for smooth and quiet operation. This anti-rattler eliminates grease packinginsures operation during temperature extremes while maintaining lowest possible contact resist-ance-and prevents any danger of soiling hands or clothing.

## RADIART "PLASTI-LOOM" LEAD

# SHUR-ANTEMNA-MOUNT, INC. SEACLIFF, N. Y. 

## *INTERCEPTOR

## FM-Television-Amateur

Here is the ideal FM, television, and high frequency amateur antenna, which makes possible good induced signal voltage under the most undesirable conditions. Shur engineers have developed the Interceptor with all tunable factors easily and simply adjustable. Each model is marked for the middle of its band and may be tuned with simple screw adjustments. Director, polarization, orientation, front-to-back ratio, reception pattern; in short all factors are adjustable. Shipped completely knocked down in compact container, with full instructions, complete with 6 ft . weather treated and wind tested wood mast. Wood will not affect line impedance. Can be used as a transmitting antenna. Easily mounted anywhere with the MC Mount shown below.
Model I-98-FM. Model 1-52-6-meter Amateur. Model 1-62-Television. Model 1-146-2-meter Amateur.

## FOLDED INTERCEPTOR

 A Broad Response AntennaGives good gain and essentially flat response over the entire band. This antenna is desirable when signals can be recelved from opposite directions as it is bi-directional. It is simple, light, and easy to install. Insulated with low loss Synthane. Has dural elements. Simple screw adjustments for tuning elements. Excellent match for 300 ohm line. Compactly packed with 6 ft . treated wood mast and full instructions. Use MC Mount for installing.

Model Fl-98-FM.
Model Fl-52-6-meter Amateur. Model Fl-62-Television. Model Fl -146-2-meter Amateur.

## DIPOLE

This dipole antenna is easily tunable with its unique screw lead-in connectors and its low loss Synthane insulators. The light weight non-sagging elements are of dural. Lead-in connectors are marked so that they may readily be set to the middle of the band. Assembly and adjustments can be made before the dipole is taken to the roof. The whole assembly is light and easy to handle. The 6 ft . mast is hardwood, birch or maple, and will not affect line impedance. The mast is fully weather treated and wind tunnel tested. Compactly packed with complete instructions, less transmission line. Use the MC Mount for easy installation anywhere.
Model D-98-FM.
Model D-62-Television.
Model D-52-6-meter Amateur.

## ANTENNA MOUNT Universal-Cast Aluminum

The Shur-Antenna-Mount can be installed on any roof surface of any pitch, can straddle the peak of any roof, or can be mounted on any vertical or flat surface. Three typical installations are shown here. It weighs only $13 / 4$ lbs., being cast aluminum, and will sustain the weight of any fixed standard FM or television antenna. Furnished with complete set of hardware to take care of any style of installation. Will accommodate $11 / 4$ inch or $11 / 8$ inch mast. This is an exceptionally convenient and permanent mount. Packed with full instructions. Model MC

## BETTER ANTENNAE for BETTER RADIOS

TACO antenna systems provide the most favorable signal-to-noise ratios The selection of any one of the several types depends on these considerations. (I) If standard broadcast and shortwave are to be received; (2) If combination of standard broadeast AM and FM must be received; (3) If the location is quiet; and (4) If the lucation is noisy.
for condition (1), any one of the kits listed
For condition (1), any one of the kits listed is recommended. For (2) or AM-MM reception, kits Nos. 220-V-FM. 220-FM or 228-FAI. how quiet the location may be, the TACO noise-reducing antenna systess
due to its impedance-matching transformers, will always improve signal-tonoise ratio.
TACO transformers match recommended standards for receiving set input circuits. Such standards are 2000 -ohm impedance, with tap for 50 ohms, which is a common input where external antenna replaces or supplements the loop. For FM, the input impedance is 300 ohms.
All TACO kits are attractively packaged and include all components, insulators, antcnna wire, downlead cable, and complete instructions.

## NOISE-REDUCING ANTENNA SYSTEMS

$\mathbf{\$} .35$.
*CAT. No. 220-V-FM. Covers standard broadcast AM and FM bands, and shortwave. Noisereducing in all bands. Automatic frequency selection, Doublet antenna rig, high-frequency ransmission line, antenna and set transformers
*CAT. No. 220-V-L. Same as foregoing but less set transformer Used with communication receivers having $100-200$ ohm input. Shpg. Wt. 5 lbs. List Prite $\$ 9.20$.
*CAT. No. 220-FM. Balanced doublet covering broadcast, shortwave and FM. Set transformer has FM terminals; also high and low all bands. Shpg. Wt. 4 lbs List Price $\$ 1130$
*CAT. No. 220. Doublet. Same as foregoing
but for broadcast and shortwave only. Shpg. Wt . List Price $\$ 9.00$.
CAT. No. 85. Farm special. Built to a price. Recommended for rural instaliations where noise evel is low. Antenna wire, lead-in wire, ors.

CAT. No. 85-L. Same as foregoing but without lightning arrester. List Price

ANTENNA AND SET TRANSFORMERS Unless system includes both antenna and set transformers, it cannot be true noise-reducing system. Therefore these components are mado arailable separately for addition to any system. for $\$ 2.00$ to $\$ 3.50$. Als for concentric cable lines.

## TACO MASTER ANTENNA SYSTEM

For apartment houses, hotels, radio stores and other installations calling for simultaneous operation of sereral sets on single aerial. Because of wartime developments, the TACO postwar system now attains a high degree of noise reduction and covers a frequency range hereto. fore not belicyed possible in the standard broadcast, shortware and FM bands.
System consists of roof kit, transmission line, and a coupler for each connected radio. Single antenna and transmissoion line can feed I5 to 20 radios, depending on height of antenna and reception conditions.
Installation guide furnished with each roof kit. TACO engineers are ready to provide engineering aid for any particular dayout.

## ROOF KIT

*CAT. No. 345. Basic kit for Master Antenna System. Takes care of aerial or roof installation. To this antenna transformer (left) should be connected one or several transmission lines depending on layout of building to be vired. The Underwriters' Labs. approved lightning arrester built into transformer shell requires grounding of the ground wire connected to the transformer. Kit comprises 15 ft . transmission line, 25 ft . ground wire, 80 ft . aerial wire, 2 heavy-duty insuiators. Shpg. Wt. 10 lbs. List Price $\$ 9.10$.

## Other Components

*CAT. No. 346. Master Antenna Transformer as used in roof kit. Shpg. Wt. 2 Ibs. List Price $\$ 4.20$.
*CAT. No. 347. Master Coupler (left) covering standard broadcast, shortwave and FM bands List Price $\$ 3.00$.
*CAT. No. 348. Master Coupler (right) covering broadeast and shortwave only. List Prite $\$ 2.50$,
For other needs, see Accessories and

[^47]
## FM ANTENNA

## FOLDED DIPOLE ANTENNA

Single unit is directional both front and rear--breadside to transmitter. Ideal for areas of low signal strength. Extremely rugged. Easy to face in desired direction. May also be used for AM reception with Type 625 transformer (see Accessories). For use in Iow-signal-strength areas, the antenna-reflector combination (shown at left) is recommended. Its fat characteristics-standing wave ratio less than 3 over entire FM bandmake it ideal where uni-directional reception is desired, since the reflector eliminates both interference nolses and signals from the reflector direction.

CAT. No. 621. FOLDED-DIPOLE ANTENNA. Consists of 1 folded dipole with terminal block; $160-\mathrm{ft}$. coil of TACO high-frequency $300-\mathrm{ohm}$ transmission line; $15-\mathrm{ft}$. wood mast; 2 mounting strads and screws for mast; 3 special screweyes for high-frequency transmission line; complete instructions. Shpg. Wt. $61 / 2 \mathrm{Lbs}$. List Price $\$ 9.00$.
CAT. No. 622. REFLECTOR. Consists of 2 aluminum reflector rods (one with mounting coupling attached); 1 cross-arm with mast clamp attached (heavily enameled steel) ; miscellaneous hardware. Shpg. Wt. 3 bs. List Price $\$ 4.00$.

## FM DOUBLE-V ANTENNA

An extremely brosd band receptor. Nearly flat frequency response from 40 to 110 MC . For this reason it is especially recommneded for localities where it is desirable to receive both the old and the new FM bands. In the $88-108 \mathrm{MC}$ band the frequency response is well below a standing wave ratio of 2 , which is equivalent to a variation of approximately $1 / 2$ DE Durable construction of hoavily-entälieled steel. Rod support has a permanently attached mast clamp. Polystyrene insulation for terminals to insuro low-loss performance.

CAT. No. 655. DOUBLE-V ANTENNA. Consisting of 4 aluminum dipole rods; 1 rod mounting assembly; 60 ft . of TACO high-frequency transmission line; 5 - ft . wood mast; mounting and assembly hardware; 3 special screweyes; complete instructions. Shpg. Wt. $81 / 2$ Ibs. List Price $\$ 11.50$.
CAT. No. 656. REFLECTOR................................... List Price $\$ 4.75$

## DOUBLET ANTENNA

 mounting straps with harciware; 3 special sereweyes; instructions. Shpg. Wt. $81 / 2$ lbs. List Price $\mathbf{\$ 9 . 5 0}$
 ${ }^{\text {attached. Heavily }}$ nameled steel assembly. Shpg. Wt. $\ddagger$ Ibs. List Price 54.00.

## FM ANTENNA SELECTION

Due to wide range of frequencies- 88 to 108 MC -in which channeis FM stations now operate, it is essential that the an tenna be of the broad-band type with signal response reasonably flat over entire bend. This ean be achieved with several designs depending upon flatness required, price range, and preference for one type or another. In general, for low-signal-strength areas, the Folded Dipole (Type 621) or the Double-V (Type 655) the Single Dipole (Type 51) is satisfactory. All TACO FM antennae come complete with 5 -ft. mast, low-loss transmission line, standoft insulators, mounting hardware, and instalation instructions.

*Lcensed A.A.K., Inc., Pats.

## ACCESSORIES and SUPPLIES

*CAT. No. 625. FM-AM SET TRANSFORMER. Provides both FM and AM reception with usual FM antenna. Normally, this is impractical lince most FM-AM receivers have separate terminals for both bands. With this transformer both bands are automatically available to the receiver. Shpg. Wt. 11/2 lbs. List Price $\$ 3.25$.

GAT. No. 627. AM EXTENDER. Used with FM antenna when same is also used for $A M$, in areas with low AM signal strength. Simply a $30-\mathrm{ft}$. length of antenna wire terminated in a choke conl. Increases AM signal pickup about five times, but does not upset the delicate balance of FM dipoles. Shpg. Wh $/ / 4 \mathrm{lb}$. List Price $\$ 2.25$.

CAT. No. 100. LINE FILTEA. Thoroughly engineered unit comprising r. f. choke coil with by-passing capacitors to ground. Most effectlve between set and
outlet. Also used between noise-producing equipment and line. Shpg. Wt. 4 lbs. List Price $\$ 9.00$.

CAT. No. 185. TWO-SECTION MAST. 10 ft . high. Sections held tgoether by mast coupler. Upper section can be rotated. List Price $\$ 3.50$.
CAT. No. 189, MAST COUPLING. Joins together two sections of $1-5 / 16^{\prime \prime}$ dia, List Price $\$ 1.00$.
CAT. No. I90. MAST BRACKETS (shown at left). For mounting $1-5 / 16^{\prime \prime}$ dia. mast on side of house or parapet, where clearance is not over $7^{\prime \prime}$. Heavy stcel, enameled. Pair. List Price $\$ 2.50$.
CAT. No. 309. LIGHTNING ARRESTER. Carbonpile type Double-pole, Underwriters' Labs, approved. List Price $\$ 0.75$.
GAT. No. 383. G.TYPE GROUND GLAMP. FOR pipes from $34^{\prime \prime}$ to $11 / z^{\prime \prime}$ dia. Hard screw point makes positive contact. Cadmium-plated to resist corrosion. List Price $\$ 14.50$ per $C$.

Price will be those in effect at date of shipment,

## TELEVISION ANTENNA

## DOUBLE-V ANTENNA

Same construction as No. 655 listed in FM Antenna section except that dipole rods are of a different length to favor the tolevision bands. Nearly flat response from 40 to 110 MC . In the $50-88 \mathrm{MC}$ bands, the frequency response is well below a standing wave ratio of 2 , or equivalent to a variation of approximately $1 / 2 \mathrm{DB}$. Durable steel construction, heavily enameled. Rod support has a permanentiy-attached mast clamp. Polystyrene insulation for terminals, insuring low-loss performance.
CAT. No. 457. DOUBLE-V TELEVISION ANTENNA. COnsisting of 4 aluminum dipole rods: 1 rod mounting assembly; 60 ft . of TACO highfrequency transmission line; 5 - ft . sectional mast; mounting and assembly hardware; 3 special screweyes for transmission line. Complete instructions. Shpg. Wt. 8 lbs. List Prise $\$ 12.00$.
CAT. No. 458. REFLECTOR. Consisting of 4 dipoles with connectors; 1 cross-arm: 1 spacer post; mounting hardware. Shpg. Wt. 5 Ibs. List Price $\mathbf{\$ 4 . 7 5}$.

## H-TYPE ANTENNA

Single H-type (not shown) receives in both directions, broadside. Due to double-decked design, this type provides additional gain in the horizontal plane and greatly diminishes reflections from ground. This discrimination
gives a cleaner picture than is possible with a single dipole antenna. To gives a cleaner picture than is possible with a single dipole antenna. To
provide
rigidity,
the antenna support is buitit of steel Covers the two television bands in adiltion, both old and new FM lands, with a frequency response that is tlat, within less than 3 DB. Single H-type reeom-
mended for areas of average signal strength (say within $15-20$ miles of mended for areas of average signal strength (say within $15-20$ miles of typical television transmitter). Beyond, the antenua-reflector combination (illustrated) shouid be used.

CAT. No. 436. H.TYPE ANTENNA. Consists of 4 aluminum dipole rods: 2 rod supports with terminals and neoprene grommets; a spacer post with mounting clamps for mast; 60 ft . of 300 -ohm high-frequency transmission line; 2 jumpers with terminal screws; 5 -ft. sectionsl wood mast: 10 spectal standoffs; mounting hardware; complete instructions. Shpg. Wt. -AT. NO. 437.
CAT. No. 437. H-TYPE REFLECTOR. Consists of 4 dipole rods with connectors; 1 crossarm (heavily enameled steel); i spacer post; mounting hardware. Shpg. Wt. 5 lbs. List Price $\$ 7.50$.

## DIPOLE ANTENNA

Matched to 300 -ohm transmission line by special matching derice. Single dipole type (not illustrated) is recommended in areas of high signal strength or when only one or two stations are desired on adjaeent frequency bands. This type antenna is not as broad as the $V$ and $H$ types. Rugged streamlined construction makes it a favorite among television set ofners. Not recommended, howeyer, in areas with low signal strength.
CAT. No. 453. SINGLE DIPOLE ANTENNA. Consists of 2 aluminum dipole rods; 1 dipole support assembly with mast clamp; 60 ft . of TACO high-irequency transmission line; $15-\mathrm{ft}$. wood mast with mounting hardware; 3 special standoff insulators; complete instruetions. Shpg. Wt. 81/2 lbs. List Price \$9.50.
CAT. No. 454, DIPOLE REFLECTOR. Consists of I steel crossarm; 2 dipole rods (one with coupling attached): assembly hardware; complete instructions. Shpg. Wt. 5 lbs. List Priee $\$ 4.75$.

CAT. No. B5I. RIBBON TRANSMISSION LINE. Especialiy for $F M$ and television use. 300 -ohm surge impedance. Two stranded conductors insulated with polyethylene ribbon between. 500 ft . coil. List Price \$48.50.

CAT. No. 853. HIGH-FREQUENCY SPLICING TAPE. Indispensable for splfeing high-frequency transmission Ines. Ordinary tape may actually short-circuit such conductors. 12 " length in enpelope. List Prite \$0.35.

CAT. No. 850. TWISTED-PAIR TRANSMISSION LINE. Two No. 22 stranded twisted-pair conductors. Surge impedance 100 ohms. List Price $\$ 35.00 / \mathrm{m}$ f.t

CAT. No. 305. BUFF TRANSMISSION LINE. Two No. 18 stranded conductors, twisted. Surge impedance 100 ohms. List Price $\$ 47.50 / \mathrm{m} \mathrm{ft}$.

CAT. No. 306. black transmission line. Same as No. 305 but with black braid for use against dark walls. List Price $\$ 47.50 / \mathrm{m}$ t.

CAT. No. 392. STANDOFF FOR RIBBON TYPE LINES. (Iliustrated). Sloted low-loss rubber insulator with metal screweye. List Price $\$ 16.00 / \mathrm{c}$.

CAT. No. 393. BASEBOARD STANDOFF. (Illustrated). Fibre. Nalled to support. Ribbon snaps in place. Minimized leakage. List Price

CAT. No. 3B9. FEED.THROUGH INSULATOR. For passing antenna downlead through panel or well. Low-loss bakelite. $114^{\prime \prime}$ dia. $\times 3 / 4^{\prime \prime}$ h. List Price $\$ 0,90$.

CAT. No. 384. SINGLE WINDOW-STRIP LEAD-IN. Readily bends to accommodate closed mindow. Fully insulated. List Price $\$ 0.10$.

CAT. No. 377. SGREW-EYE 3". List Price \$0.12.

CAT. No. 394. DIPOLE RODS. For replacement use. Supplied in pairs for any antenna replacemont. Speclfy antenna type. List Prite $\$ 1.50$.

## bullders of nolse reducing receiving antenva for the home

The VERTROD Antenna is the most perfect scientific development approaching complete freedom from man-made static yet evolved - at the same time providing greatest efficiency on all frequencies. No single Antenna Kit is packed before it has been laboratory tested for perfection.

- For Communications, Broadeast and Short Wave Receivers - Broadcast and Long Distance Forsign Reception WITHOUT NOISE!
- Can be used on AC or AC.DC Receivers.
- Frequency Range 500 KC to 30 MC ( 600 to 10 Meters).
- No Line Filters necessary - so perfectly Bolanced.
- No Lightning Arrestor required.
- Can be mounted on Wall, Window or Roof.
- Only 4 inches of space needed to mount VERTROD.
- Only a screwdriver neccessary to mount VERTROD.
- Matched Transformers and Transmission System balanced against NOISE at all frequencies.
- Greatest Noise-Excluding Anfenna yet developed in a Laboratory.
- Transmission Cable length may be increased without upsetting the Transformer Balance.
- Patented VERTROD Base which smoothly rotates in an are of $180^{\circ}$ to mount on any surface.
- VERTRODS are built 9, 12, 15 and 18 feef tall.
- Special Heavy Duty Rotary Base used for the tall models.
- Hard Aluminum Alloy Rod Elements.
- No Poles-No Insulators-No Climbing -No Hanging Aerial Wires.

This VERTROD consists of a Hard Aluminum Alloy mast mounted on a sturdy patented Rotary Base. The Base rotates smoothly in 2 mounting brackets to decribe an are of $180^{\circ}$, permitting VERTROD to be mounted erect on any surface having 4 inches of space. Inside the Base of the Matched Transformer group is hermetically sealed an Antenna Transformer to match the impedance of the rod to the Transmission Cable. The Radio Set Coupler, another transformer sealed in a plastic shell, matches the impedance of the Transmission Cable to that of the Radio Set in-put. This electrical combination forms a completely balanced Transmission. System capable of piping Noise-Free Radio Frequency signals of frequencies 500 KC to 30 MC ( 600 to 10 meters) from Rod to the Radio Set in-put. Each VERTROD is laboratory tested for perfection.

# FW and TELEVISION Antennae 

 Continental Adjustable Dipole and Dipole-Reflector Types For usewestern continent

FM and television combination MODELS
Frequency Range 44.106 MC Model 332-Continental Single Dipole
Model 333-Continental Single Dipole with $75^{\circ}$ of VERTROD DUMB.BELL 300.0 Lead.in

VERTROD dipole aerials are noted for their fine electrical and mechanical design and beauty. They consist of hard aluminum alloy dipole elements, each of which is clearly marked and calibrated in megacycles, adjustable with a set screw, so that no matter where you are, you get any frequency you want in the FM and TV bands by just the twist of the screw. Just by the twist of the screw, this precision scientifically built combinotion FM Television aerial becomes a custom built job to suit your own individual taste. The adjustable dipole elements are supported by a patented waterrepellont porcelain insulater. It is properly fitted and held snugly on a five foot steel mast. The steel mast is heavily enameled as a weatherproofing precoution and provided with plated steel guy wire brackets and universal base mounting brackets permitting flat, angular or vertical mounting. These new VERTROD Continental models come with or without VERTROD'S 300-D polyethylene covered lead-in wire and with or without reflector assembly, depending upon your needs. All models completely packed in individual kit form containing all necessary hardware and instructions. They are adjustable for use anywhere on the western continent.
U. S. Patent 2259628

Both F-M and felevision require components of the highest quality if the ultimate possibilities of each system are to be realized. This is particularly true in television where a band width of 6 megacycles should be transmitted with equal amplitude and with as liftle as possible phase distortion, delay and reflections. For a given receiver in a given area, the sensitivity developed by the receiver is a function of the antenna transmission line taken as a unit. A well-designed antenna with the proper transmission line should supply adequate signal strength at the receiver over the frequency bands acceptable by the receiver. But even more than this is required. Reflections at impedance discontinuities all along the system must be minimized, since the picture quality will suffer if such reflec-
R.M.A. has standardized on 300 -ohm transmission lines. A 300 -ohm line using high grade dielectric generally provides signal passage with very low attenuation. In addition, the use of polyethylene insulation and relatively large conductors has made the VERTROD 300 -ohm line outstanding in performance. A copper area of 1118.6 circular mils is provided for each conductor and fogether with the low loss insulation (having a power factor of less than $.03 \%$ at 100 megacycles) the attenuations of our 300 -ohm lines are well below the 1 db per 100 feet at 100 megacycles.
VERTROD 300-D, a dumb-bell shoped line, comes closest to the theoretically perfect line consisting of two bare conductors spaced a correct amount ond having only air as support. Such a perfect line would have a theoretical velocity of propagation of almost $100 \%$. The VERTROD 300-D has a velocity of $79 \%$ to $83 \%$.

## WORLD'S FINEST FOR CAR AND HOME

## "AN" and "97" CONNECTORS

Amphenol electrical connectors provide a means of quickly connecting and disconnecting one or many electrical circuits. Such provisions were a "must" in war time equipment used in the air, sea and land. The far-reaching application of these electrical connectors represents a great stride in the advancement of electrical equipment design.

To win the war, development work advanced along all lines and production had to go on at top speed. The war equipment had to be made of precision built interchangeable components for many sub-assembly operations. The war machines had to lend themselves to rapid plant and field inspection and testing. They had to lend themselves to quick servicing, maintenance, and installation of replacement units. The war equipment also had to be dependable under the most adverse conditions.

Amphenol "AN" and "97" Connectors and Fittings played their part in making the above features possible. The "AN" types of connectors have been and are now being built to Army-Navy specifications. The Amphenol "97" Series connectors are built under the same general specifications designed primarily to supplement the "AN" connectors.

The features required in war equipment are highly desirable in many electrical and electrically controlled equipments designed not for survival of man but the comforts of man. "AN" and "97" Connectors are NOW AVAILABLE for all applications, offering the advantages of more economical production and testing; and by employing the use of electrical connectors in an electrical device a selling point is added. The device will lend itself to rapid economical servicing. When replacements are needed, replacement units can be supplied and easily installed.

The eight shell types illustrated are representative of the most popular types, although Amphenol builds these same connectors and others to special requirements such as explosion-proof, light-proof, pressure-proof, weather-proof and tropicalized - all in accordance with the high quality specifications of the Army and Navy.

For the benefit of the many who are acquainting themselves with the possibility of using Amphenol connectors on the electrical equipment they manufacture, the plugs are supplied with either male or female contacts. The same is true of receptacles. Receptacles are usually mounted rigidly. Because of this they are designed with a solid base for mounting on a panel, bulkhead, wall and the like. The plugs are usually used on the end of a flexible conduit or cable. Receptacles have external threads and plugs have coupling rings with internal threads. A complete electrical connection requires a receptacle and plug. In completing the circuits, on an average, three fittings are needed-see following page.

Amphenol connectors are produced in a great variety of combinations of shells and inserts, dielectric materials and finishes. The contacts range in size from No. 20 to No. 0 and in number, from 1 to 47 contacts. A catalog of the entire line will be sent to you upon request.

LOW-LOSS 83 SERIES CONNECTORS - U.H.F.
This complete line of low-loss connectors and adapters for use with RG type cables serves all practical applications and they are made in both small and large sizes for coax and twinax cables. They are a very rugged construction, die cast zinc and machined brass shells, heavily silver plated. Low-loss inserts are of mica filled bakelite and polystyrene, and their construction provides for easy assembly and positive connection. Fully Army-Navy approved for usa with U.H.F. cables.

## HIGH FREQUENCY CABLES

AMPHENOL COAX AND TWINAX RG CABLES are fully approved and produced in accordance with Army-Navy specifications (JAN-C-17). These specifications utilize the very fine dielectric properties of polyethylene, proven most efficient as a lowloss flexible mechanically stable dielectric. The outer jacket in most of Amphenol's approved types is a tough resistant vinyl protective, nonhygroscopic, and impervious to exposure of acids, alkalis, oils and gasoline. Polyethylene is also used as outer jacket for some of the types listed.
Polyethylene is processed in strict accordance with Bureau of Ships Specification RE-9172. It should be emphasized that unusually strict standards are applied to every processing operation of Amphenol's RG cable types. They are produced for "quality plus." Rigid laboratory tests and other process checking, plus Amphenol's "O.K." certification and notarized affidavit on every unit shipment, is final assurance of extra quality and dependability.
Also illustrated, but not approved for military use without specific authorization, are two of Amphenol's beaded type cables. This polystyrene and mica filled bakelite type of beaded cable is one of Amphenol's early developments in U.F.F. ceables and for specific uses, is still in popular demand. The beads, too, may be ordered in bulk and are illustrated and priced on the Synthetics page.

> Chart below represents the characteristics of all types of RG cable approved for manufacture by Amphenol. Further specifications and prices upon request.

## No. 54-7P-MINIATURE POLYSTYRENE SOCKET

- An ultra low-loss socket to take full advantage of the newly developed seven prong miniature tubes. Molded from Amphenol 912-A polystyrene.
54-7P - 7-Contact Miniature Socket
. . 42c list
U.H.F. TIP JACK OR BUSHING - Contact accommodates . $080^{\prime \prime}$ phone tip but eontact may be removed and the transparent Amphenol " $912-\mathrm{A}$ " body used as a high frequency thru-panel bushing as well. Mounts in a plain round $5 / 8^{\prime \prime}$ hole, and is held in place with No. 2-9 retainer ring included.
54-1H - U.H.F. Tip Jack
.30 c list

CRYSTAL HOLDER SOCKET- Same as 33-2 below except molded of ultra low-loss Amphenol " 912 -A" polystyrene. Contacts are of phosphor bronze, silver plated to keep resistance at a minimum. Contacts may be removed and the polystyrene body used as a two bole foed thru bushing. Center to center contact $3 / 4^{\prime \prime}$.
54-2 Crystal Holder Socket. $\qquad$

## STANDARD CRYSTAL HOLDER SOCKET-

Of black or mica filled bakelite for crystal holders having two prongs on $3 / 4$ " centers. Easily mounted and hequires two prongs on $3 / 4$ centers. Easily mounted and requires minimum area on chassis or panel Used extensively for crystal phasing in receivers, crystal control of transmitters and test equipment. May be used as dual tip jack on test panels. Cadmium plated contacts.

33-2 - For $1 / 8^{\prime \prime}$ Diameter Prongs (Black Bakelite). 10 c
33-2T - For ${ }^{1 / 3}{ }^{\prime \prime}$ Diameter Prongs (Mica Filled Bakelite) $.10 c$ 33-3T - For S's $^{\prime \prime}$ Diameter Prongs (Mica Filied Bakelite) 17 c

MIP MOLDED-IN-PLATE SOCKETS-World strongest socket. Sturdy steel mounting plate moulded directly into bakelite body, cannot come loose or vibrate. $11 / 2^{\prime \prime}$ Mounting centers. Mounts in $15 /{ }^{\prime \prime}{ }^{\prime \prime}$ hole (MIP7L and MIP20 in $1 \% 3^{\prime \prime}$ hole). Molded from high

MIP LOKTAL - Molded-in-plate socket for loktal tubes. Identical to standard MIP sockets but is smaller in size and has $15 / 16^{17}$ mounting centers. Mounts 88-8X - Laktal Socket.
.21c list
MIDGET OCTAL - Has all the features of the standard MIP sookets, but is emaller in size. For building compact radios and as the companion socket for the above loktal. Mounting centers, $13 / 16^{\prime \prime}$. Mounts in 11/15" hole.
88-8 - Midget Octal.
.14 c I-1

STEATITE SOCKETS-Recommended for high frequency work where high temperatures are encountered such as in transmitters amplifiers having high output and for cxtensive replacement service nse. Plates have slotted mounting holes to fit riveting centers from $11 / 2^{\prime \prime}$ to $1^{7 / 88^{\prime \prime}}$.

FLOATING OCTAL SOCKETS - Completely cushioned. Has enlarged mounting holes in the plate into which live rubber grommets are placed for cushioning the socket to obtain vibration free operation. Eliminates most tube microphonics. Mounts in a $152^{\prime \prime}$ hole with two $1 / 4^{\prime \prime}$ screw holes on $11 / 2^{\prime \prime}$ centers. Complete with socket, four rubber grommets, two mounting screws, nuts and washers. MIP8-FK - Socket With Kit.
.39c list
REPLACEMENT SOCKETS - Regular " S " sockets and "CP" plugs (listed to the left, above) assembled with No. 4 retainer ring to nickelplated steel mounting plate with slotted mounting holes to fit riveting centers from $112^{\prime \prime \prime}$ to $17 / 8^{\prime \prime}$. Extensively used by servicemen as replacements.

## MICA FILLED BAKELITE SOCKETS

All bakelite sockets and plugs on this page are also available molded from Low-loss mica filled bakelite. To order, add letter "T" to catalog number and 7e to list price. Espeeially desirable for high frequency applications as mica filled bakelite has lower power factor and better dielectric constant.

# (4)HEND <br> CHICAGO.5O, ILLINOIS <br> In Canada - Amphenol Limited - Toronto 

LOW-LOSS COAXIAL CABLE CONNECTORS-for cables up to ${ }^{13} /{ }^{\prime \prime} \prime \prime$ O.D. May be reamed out for cable up to 3/1" O.D. Shell machincd from soind brass, plated in heavy polisled chrome. Connector elements made of for-A Amphenol low-loss polystyrene. Male shells have threaded locking rings for tight connection. CHASSIS UNIT mounts in ${ }^{13 / 66^{\prime \prime}}$ hole and has soldering lug, lock washer and nut. List
93-M - Male Cable Connector.
93-F1 - Female Cable Connector
93-F - Female Cable Connector
s3-m1 - Male Cable Cannector.
93-C - Female Chassis Connector
1.51

HEAVY DUTY POWER CONNECTORS - Has four, flat, heavy brass blades in the male molded bakelite unit for connection with set-back contacts of phosphor bronze in the
 molded bakelite female unit. Frequent use is possible over long periods without damage even with heavy current toads of 15 amperes at 125 volts or 10 amperes at 250 volts. Full, body-tight heavy brass shell - bright cadmium plate. Polarized with shell keys and keyways. Terminals of bakelite units are numbered for guick Firing. Strain is taken up by a strong cable clamp grip. Grounding screw in body for safe wiring. Threaded locking ring keeps connections tight.

# COAXIAL CABLES AND CONNECTORS - INDUSTRIAL CONNECTORS, FITTINGS AND 

 CONDUIT • ANTENNAS • RADIO COMPONENTS • PLASTICS FOR ELECTRONICS

PREFOCUSED LAMP RECEPTACLE - For mediumbase prefocused lamps as used in movie projectors. Also adaptable for using prefocused lamps in floodlights, beacons, searchlights, etc. and for experimental work. Molded from special igh heat resisting bakelite to withstand temperatures to $450^{\circ} \mathrm{F}$. Special air cooled design. Conservatively rated at 1000 watts, 110-250 volts. Listed by Underwriters Laboratories. Heavy brass contacts assure minimumresistance for maximum lightintensity. Can be installed in most movie projectors without drinigg included with receptacle alone, not needed with cap.
Insulating eap for receptacle available for use when socket is suspended or to add $1 / 2^{\prime \prime}$ to height of socket or to insulate wire terminals rom panel.

BLANK SOCKET - " B " type socket as listed on another page for mounting in the standard $116{ }^{\prime \prime}$ " " 5 " type socket hole. Used primarily as a dummy or sparesocket on tube checkers and analyzers so a new " S " type socket can easily be added when a socket for new type tubes is required. May be used as a bakelite bushing by drilling a bole in the center.
78B Blank Socket.
.7c list
SINGLE CONTACT SOCKETS-Of molded bakelite for mounting in $3 / 8^{\prime \prime}$ hole - held firmly in place by Amphenol Retainer Ring No. 2-11. Contacts recessed approximately $1 / 8^{\prime \prime}$ below the top of the tip jacks prevent a,cidental shorts from contact to chassis. The bakelite body may be used as a feed thru bushing by removing the contact. Seven colors and 4-prong diameters for quick wiring dentification.

Red, green, blue, yellow, gray, walnut or black. If no color is specified, black will be furnished.

78-1P - For 080" Phone Tip
78-1S - For $3 / x^{\prime \prime}$ Plug.
78-1
9c .9 c
78-1L - For 5 万2" Plug. .9 c

SINGLE PRONG PLUGS - A small but extremely usefu! plug in colors, for connection with sockets listed above.
Red, green, blue, yellow, gray, walnut or black. If no color is specified, black will be furnished.
71-1S - For $3 / 12^{\prime \prime}$ Socket.
Lis?
71-1 M - For $1 / 8^{\prime \prime}$ Socket
6 c
$.6 c$

MINIATURE SOCKETS
78-7P RCA - For 7-prong miniature tube series. Metal shell in socket center for grounding to chassis. Mounts firmly in place in $\delta / 8^{\prime}$ bole with No. 2-9 retainer ring.
78-7P - 7-Gontact
Miniature Socket
.21c list For socket as above but molded inU.H.F. polystyrene , ee listing on another page.

78-5P RAYTHEON - For 5-prong miniature tubes of the Raytheon hearing aid tube types. Mounts firmly in $1 / 2^{\prime \prime}$ hole with No. 2-10 retainer ring.
78-5P-5-Contact
Miniature Socket: 21e list

78-5H BANTAM JR. - For 5prong Hytron Bantam $\mathrm{J}_{\mathrm{r}}$. miniature tube types with $33^{\prime \prime}$ diameter prongs. Also in 6-prong types for coil forms and plug connections.
$78-5 \mathrm{H}-5$-Contact.
$78-6 \mathrm{H}-6$-Contact.
List
.210
78-6H - 6-Contact.................21e
For socket as above but molded in U. H. F. polystyrene see listing on another page.

78-S35 PHOTOCELL - With contact spacing for practically all three prong miniature photocells firmly in $5 / 8^{\prime \prime}$ hole with No. $2-9$ retainer ring.
78-S3S - 3-Gontact
. 12 c list

## miniature plugs

CABLE TYPE - Extremely compact plugs, used extensively for speaker connections in compact midgets. Also ideal for all plug-in connections where space is
limited. Plated brass prongs are limited. Plated brass prongs are moided pockets, preventing shorts due to insulation pulling back. With molded finger grip. Fit miniature sockcts a bove.
CHASSIS TYPE -
Mounts in a plain round hole $5 / 8^{\prime \prime}$ in diameter. No Chassis Plug and Fing screws or rivets required. Heid firmly in place by the No. 2-9 tempered steel retainer ring. Use with female miniature connectors (MPF types) on preceding page.
Chassis $86-\mathrm{CP}-35$ 86-CP-4S $86-C P-5 S$
$86-C P-6 S$

ONE PIECE MOLDED SPEAKER PIUGS - Have proings êéurely wokded inio
 one piece body. Each prong is decply set into individually molded pookets eliminating the possibility of shorts in case of wire insulation pull-back. Extensively used as speaker plugs, for intercommumication systems public address, remote control ete. Fit standard tube sockets.

## ACCESSORIES FOR CABLE CONNECTORS

## CABLE CLAMP.

- Designed primar
ily for cable strain rclicf. Used with 78 PF and $86-\mathrm{PM}$ connectors and 60 and 61 series. Simply remove rubber grommet or connector and slip this grip into place. Relieves soldered connections of strain. Also used on panels and chassis, to anchor cables firmly in place. Slips easily into any shape hole from $7 / 6^{\prime \prime}$ to $5 / 8^{\prime \prime}$. No screws or rivets required.
79-cc-4 Cable clamp. . . . . . . . . . . . . 12 c list

## RECEPTACLES AND PLUGS 110-250 VOLT

Compact receptacles. Molded from high diclectric black bakelite. Rated at 15 amperes, 110 volts, or 10 amperes, 250 volts. Female type has both soldering lugs and binding screws;
male has binding screws. 2 -Pole type accepts any standard male has binding screws.
electric plug. Mounts in $1^{3} / \sqrt[2]{\prime \prime}$ hole.

## mica filled bakelite sockets

All bakelite sockets and plugs on this page are also available molded from low-loss mica filled bakelite. To order, add letter " $T$ " to catalog number and 7e to list price. Especially desirable for high frequency applications as mica filled bakelite has lower power factor and better dielectric constant.

[^51]

SINGLE CONTACT MICROPHONE CONNECTORS SHIELDED CABLE TYPE - Unbreakable machined brass shell chrome-plated: with coupling ring for tight connections. Spring cord protectors accommodate cables to $1 / 4^{\prime \prime}$ diameter.

## 75-MC1F - Female 75-MC1M - Male

.44 c

SIDE CABLE OUTLET --Designed to be placed between a microphone and stand having $5 / 8^{\prime \prime}$ 7 standard threads. Its purpose is to provide an uired to run it through the stand trein is not de cable grip relieves strain. Heavy metal castings cable grip relieves strain. Heavy metal castings, finished in polished chrome.

CHASSIS UNIT - Use in holes $385^{\prime \prime}$ to ground to chassis or $1 / 2^{\prime \prime}$ for 2 independent circuits. Has extruded fibre washer, flat fibre washer, flat solder lug washer and locking nut. Use MC1F or MC1F-A cable connector.
75-PCIM - 1-Contact. . . . . . . . . 33c list
PRESSURE CABLE CONNECTOR-Like MC1M listed above but center insulated contact is enforced by a heavy coil spring at the back for positive comnection. Used for any unit fitting MClM. Supplied with spring ord protector for cables to $1 / 4^{\prime}$
75-SP-MC1M - Pressure Connector. . . . . . . . . . 55c list
.82 clist

ANGLE CONNECTOR
UNIT - For"eable connection at right angles to chas sis. Used on amplifiers, transmitters, and other apparatus with PClM, SPPCIM or CL-PCIM. No need for long bends in cable with this unit which pre vents breakage of cable shields and center conductors. Shell portion, polished chrome. With spring cord protector for cables to $1 / 4^{\prime \prime}$. 75-MC1F-A - Female Angle Connector . . . . . . . . . . . 66c list

PLUG ADAPTER For MClF and MC1F-A connectors and any standard phone jack - no soldering or wiring 75-MC1P - Phone Plug . . . . . . 49c list

## CLOSED CIRCUIT CONNECTOR

Same as PC1M but circuit closes when cable conncetor is removed, eliminating open circuit grid howls. Same thread and hardware supphed as on PClM. or MCIF-A as the cable connector.
75-CL-PC1M - Closed Circuit.
44c list
PRESSURE CHASSIS UNIT - Like PCIM Chassis Unit, but heavy coil spring enforecs center contact. Fits same connectors as PC1M.
75-SP-PC1M.
.44 c

MICROPHONE SWITCHCompact, unbreakable microphone witch. M1F and MC1FA. Coupling ring fits any. other 15 Scred connector having coupling threads. No tools or wiring required. May be connected directly to any mike which has the PC1M installed, also between amplifier and mike cable, or between two cables connected with MC1M and MC1F. PUSH-
 TO-TALK, and release the button for stand-by; or SLIDE SWITCH forward for permanent connection. Switch short-circuits mike. Shell machincd from solid brass, chrome plated.
75-MC1S - Switch. .$\$ 1.10$ list

## STAND CONNECTOR-

Screws in to top of any standard microphone stand. Female thread is $5 / 8^{\prime \prime}-27$. Finished in polished chrome brass. Permits easy removal of mike.
91-SC3F - 3-Contact Female

## AMPHENOL POLYWELD "912" (Coil Dope) FOR R.F., U.H.F \& V.H.F, APPLICATIONS

Amphenol POLYWELD " 912 " is pure Polystyrene in solution with " 916 " thinner. It is designed for "doping," coating, impregnating and sealing in most Radio Frequency applications in the Ultra-High and $V e r y$-High frequency ranges.

POLYWELD is moisture-repellent because it is nonhygroscopic and will not normally support fungus growth. It may therefore be used where these conditions are encountered with a resultant improvement in the performance of radio equipment.

## FAST-DRYING • STRONG-ADHERING - LOW-LOSS - UNIFORM IN APPLICATION •

Wherever critical components (coils, coil forms, capacitors, ceramics, bakelite, connectors, etc.) must be coated or sealed, Amphenol POLYWELD " 912 " can be accepted as the standard to obtain high dielectric functioning together with moisture-repellent qualities which will give excellent service within the temperature range of $-70^{\circ} \mathrm{F}$. to $160^{\circ} \mathrm{F}$. In addition, the low power factor of POLYWELD " 912 " is a distinct asset wherever it is used in radio frequency circuits.

## AMPHENOL CEMENTS

The following were developed especially for use with Amphenol polystyrene and other Amphenol transparent materials. The cements contain solvents of the material with which they are to be used, so that the joint is actually welded instead of merely glued.

FOR AMPHENOL "912-8"
For cementing the sheet stock, rods and tubing.
List

No. 53-901-4 - 4-01. bottle "901"" cement. ................................. . . . 65
No. 53-901-G -In bulk, price per gal. ................................... . . . 13.35
No. 53-901-2T - 2-oz. hottle "901" thinner . . . . . . . . . . . . . . . . . . . . . . . . . . . . 25
No. 53-901-GT — Bulk thinner, price per gal. .............................. . 2.00

## FOR AMPHENOL THIN SHEETS

For cementing the thin sheet stock (from $.015^{\prime \prime}$ to $.050^{\prime \prime}$ )

Will Not Harm Silk, Celanese, Enamel or Cotion Coverings
POLYWELD " 912 " has high density and a relatively heavy body with low viscosity which creates a substance easy to apply in both thin and thick coatings. Usually only a thin coating is required. It is heavily bodied and may be diluted 25 to $30 \%$ with No. 916 Thinner, thus making the use of POLYWELD extremely economical. It has high resistance and minimum surface leakage at Ultra-High and Very-High frequencies and can be used for almost all radio frequency applications. Its high potential breakdown makes it substantially puncture-proof while its unusual flexibility develops an ideal material for use in high-voltage R.F. circuits.
The use of POLYWELD "912" will not affect the electrical characteristics of coils within most frequency ranges.

## AMPHENOL POLYWELD "912" (Liquid Coil Dope) and AMPHENOL ACRYWELD "go1" CEMENTS \& THINNERS

Non-Returnable Containers-Net Wt. per Gal. 7.85 Lbs.—Gross Wt. 1-Gal. Can: 8.75 Lbs.-5-GaI. Can: 41.75 Lbs.-30-Gal. Drum: 265 Lbs.
Number
List Price
53-912-2 2-oz. Bottle Polyweld. . . . . . . . . . . . . . \$ . 50
53-912-4 4-oz. Bottle Polyweld. . . . . . . . . . . . . . . . . 65
53-912-P Pint Container Polyweld................... 2.25
53-912-Q Quart Container Polyweld . . . . . . . . . . 4.00
53-912-G 1-Gallon Can Polyweld................ 13.35
53-912-5G 5-Gallon Drum Polyweld............... gal. 12.26 53-912-30G 30-Gallon Drum Polyweld*...per gal. 11.31 53-916-2T 2-oz. Bottle Thinner. . . . . . . . . . . . . . . . 25 53-916-GT 1-Gallon Can Thinner. . . . . . . . . . . . . . . . . . 2.00 * For spigot use.
Add " 901 " in place of "912" and " 916 " in the above numbers for ACRYWELD " 901 " Cement and ACRYWELD Cement Thinner for quantities indicated at same list prices.

POLYWELD "912" as a cement is for use with "912-A" Polystyrene products, and ACRYWELD "901" (cement only) is for use with "912-B"' Acrylic products (each being specially designed for use with these materials), will actually "weld" the parts together so as to create a homogeneous unit.

A- PLUG-IN COIL FORMS - Amphenol "912-A" polystyrene superior coil forms with prongs molded in. Prong spacing fits standard tube sockets. Diameter of coil $11 / 4^{\prime \prime}$; Iength of body $21 / 4$. Impregnate pound coils with Liquid "912".
24-4P-4-Prong
24-5P - 5-Prong
24-6P - 6-Prong
61 Aminiature PLug-IN TYPES (Prongs Molded In) - Small plug-in coil forms of Amphenol $912-A^{\prime \prime}$ polystyrene. Only $3 / 4{ }^{*}$ in diameter. For transceivers, low-power transmitters and
 24-6H-6-Prong

C - MINIATURE COIL FORM - Of Amphenol "912-A" polystyrene. Raised hole in eenter of base for self-tapping screw. $3 / 4^{s}$ O.D., $1^{9} / /_{5}{ }^{\prime \prime}$ long.
24-Goil Form.
. 18 c list
D - COMPLETE UNIVERSAL INSULATOR - Of Amphenol "912-A" polystyrene with fittings. binding screws and soldering lugs. Overall height of insulator is $31 / 8^{\circ}$. With assembled hardware, $4^{4}$. Mounting holes on $1 \frac{1}{2} 2^{\prime \prime}$ centers. 66-60.
$\$ 1.21$ list
E-UNIVERSAL INSULATOR "D" AS STAND-OFF - FEED-THRU - LEAD-IN -
Section construction for assembling insulators below or above surface. With additional insulating tubes, Section construction for assembling insulators beow or
ued as aerial lead-in thru walls for antenna feeders.

## UNIVERSAL INSULATOR HARDWARE AND PARTS

66-167 - Center Rod $5 / 8$ long, for stub insulator
66-168 - Center Rod $25 / 8^{\prime \prime}$ long, for standard insulator with 1 tube
66-169 - Center Rod 45 $8^{\circ}$ I ong, for insulator with 2 tubes.

66-165-Top Brass Bushing with screw and solder-lug.
66-166 - Bottom Hex. Fitting with screw and eolder-lug
List

66-60T-J-I Hex. TuLe wis " $912-A$ " as feed-thru for $H . F$. and high voltage lines tond as form and cemented with Liquid coils. Overall length $21^{\prime \prime}$, diameter is $1 / 2^{\prime \prime}$ for $2^{\prime \prime}$ of the length and $3 / 8^{\prime \prime}$ for the remaining
86-698- $\mathbf{H}^{1 / 2}$ - Has $1 / 4$ hole thru center voltages. Used with tubes " J " and hardware lators. Overall length $1^{\text {² }}$.

F-STUB INSULATOR - Similar to " $D$ " No. 66-60 but length of insulator is onty 1 ". For mounting coils, condensers, and other parts carrying H.F. or high voltage currents. Overalllength, $1^{7 / 8^{n}}$. 66-61

G-K- LARGE AND SMALL STAND-OFF U.H.F. INSULATORS - Of Amphenol " $912-\mathrm{A}$ " polystyrene. For indoor or outdoor use. Nonhygroscopic. Large type $3 / 4$ in diameter. Small type $1 / 2^{\nu}$ in diameter, Wire held in place by screw or solder-lug. Hex screw for binding wire in place.

| Number | Length | Diameter | List |
| :---: | :---: | :---: | :---: |
| 66-1 - Small | .138 | $1 / 2$ | 61 |
| 66-2 - Small | 27\% | " | 73 |
| 66-3-Large | 27 |  | 1.32 |
| 66-4 - Large | 47/8 |  | 1.63 |
| 66-5 - Large |  |  | 1.80 |

5/16" POLYSTYRENE BEADS - Widely used Amphenol insulating beads can be strung on wires up to No. 12 solid or No. 14 stranded. Hole diameter is $080^{\circ}$; length $1 / 2^{\prime \prime}$; overall diameter is ${ }^{5}$ /ie $0^{\prime \prime}$. When stringing cables figure 28 beads to the foot. 73-102 - Box of 250 Beads. . . . . . . $\mathbf{\$ 2 . 5 0}$ per hox list

3/16" POLYSTYRENE INSULATING BEADS A small bead for use in small transmission lines on wires up to No. 22 atranded or No. 20 solid wires.
Hole diameter, $.040^{*}$; length $3 / 8^{\prime \prime}$; overall diameter ${ }^{3} / 10^{\circ}$. When stringing cables figure 35 beads to the foot. 73-012 - Box of 500 Beads

TWO-WIRE POLYSTYRENE BEADS - A two hole bead for making balanced lines strung on wires up to No. 18 solid. Hole diameters, $.050^{\prime \prime}$; length, $12^{\prime \prime}$; overall diameter is ${ }^{11} / 2^{\prime \prime}$. When stringing cables figure 27 beads to the foot.
$\$ 3.25$ per hax list
5/16" HIGH TEMPERATURE BEADS - Like No. 73 listed above but of mica-filled bakelite for use up to temperatures of $285^{\circ} \mathrm{F}$. 73-103 - Box of 250 Beads . ....................................................... 55.00 per box list
$3 / 16^{\prime \prime}$ HIGH TEMPERATURE BEADS - Like No. 73-1 beads above but of mica-filled bakelite for use ud to temperatures of $285^{\circ} \mathrm{F}$. 73-013 - Box of 500 Beads
.58 .50 per box list
Amphenol "POLYWELD" is the proven efficient coil dope and plastic cement and sealer-completely listed on page 29.

U.H.F. ALIGNMENT TOOL -

Made of pure polystyrene Amphenol "912-A". Has no capacity effect when aligning critioal circuits. A neeessary tool for servicemen,

laboratory technicians, amateurs and anyone who must make adjustments on high and ultra-high frequency and critical circuits.

# ANDREW • COAXIAL CABLE 

## COAXIAL CABLE

Coaxial cable is used wherever high frequency current must be conducted from one point to another as in transmitting and receiving installations, police and amateur communications, phase sampling lines, induction heating, and testing circuits.

Gas-filled coax offers extremely high efficiency, low loss, and complete shielding, together with durability, weatherproof operation, and trouble-free service.

WE CAN SUPPLY ALL OTHER AGCESSORIES NEEDED
ALSO: Tower lighting equipment, Antenna coupling, phasing equipment and monitors, Communications Antennas, Consulting Engineering Service. Information on request.

ANDREW soft-temper cable is easy to install, eliminating junction boxes and expansion worries. Available in 100 -foot coils or factory-spliced lengths to order.

Larger ANDREW hard-temper cable, for high-power transmission, has exceptionally low loss and is supplied in 20 -foot lengths.

```

## ANDREW TERMINALS

GLASS.TO-METAL SEAL

Absolutely gas-tight, less bulky than ceramic assemblies, with very low shunt capacity, these terminals are available for all sizes of cable. See table at left.

For supplying dehydrated air under pressure to coaxial cable or to any other apparatus requiring the exclusion of moisture. The air is forced through moisture-absorbing silica gel, which when saturated may be replaced or reactivated by heating. Gel changes color to indicate saturation.

TYPE 878 Manually operated dry air pump, with lucite window for observing color changes in gel....................Price, $\$ 35.00$

TYPE H-1800-A Automatic dehydrator, with motor driven compressor. Fully automatic, maintains constant pressure, self reactivating

Price, $\$ 275.00$

| Product | Construction | Characteristics | Sizes |
| :---: | :---: | :---: | :---: |
| TURBOTUF <br> VARNISHED TUBING | Braided from selected Cotton Yarns impregnated with flexible insulating varnish. | Thoroughly impregnated. Flexible, high tensile strength. Non-peeling, non-cracking, moisture, oil, and acid resistant, slow burning. | ID range from No. 24 (. 020 inch) to 1 inch. Standard strand length 42 ". |
| TURBOTUF SATURATED SLEEVING | Braided in the round from Selected Cotton Yarns . . . impregnated with varnish. | All purpose insulation for lower dielectric ranges. Other properties as above. | ID range from No. 20 (.034) to $11 / 2$ inch. |
| TURBO EXTRUDED SLEEVING | Extruded from three grades of standard Vinylite resin plastics. | Desirable electrical characteristics . . . low moisture, high dielectric, good oil and acid resistant factor. 5 colors and transparent. | ID range from No. 20 (. 034 inch) to $11 / 2$ incl. |
| TURBO GLASS FIBER TUBING | Closely woven from fibrous glass yarn. | Outstanding dielectric and high heat risistance features. | ID range from No. 20 (. 034 inch) to $3 / 8$ inch. |
| TURBOTHERM EXTRUDED INSULATED WIRE | Plastic insulation over solid or stranded conductor. | Desirable electrical characteristics. <br> Resists soldering heats up to $550^{\circ} \mathrm{F}$. | Fine gauges - Nos. 18 to 30. |

## CTCSTANDARDIZED DESIGNS

## SPEED DEVELOPMENT and PRODUCTION

1. CTC Turret Terminal Lugs for speedy assembly by swaging. Quick soldering and firm holding. Of heavily-silvered brass, these lugs heat quickly, assuring neat, positive wiring. Stocked to fit $1 / 22^{\prime \prime}, 1 / 16^{\prime \prime}, 3 / 32^{\prime \prime}, 1 / 3^{\prime \prime}, 3 / 16^{\prime \prime}$ and $1 / 4^{\prime \prime}$ boards. Available with single or double soldering spaces. Also in midget sizes for extremely compact units.
2. CTC Split Terminal Lugs. A $050^{\prime \prime \prime}$ hole through the lugs permits wiring from top or bottom without drilling. Ideal for transformers and other potted units requiring soldering offer potting. Knurled base pre'vents twisting. Brass, heovily silver plated, stocked to fit $3 / 32^{\prime \prime}$ and $5 / 32^{\prime \prime}$ terminal boards.
3. Cfc Terminal Boards. All-Sef Terminat Boards stocked in 4 widths: $1 / 2^{\prime \prime}$, with single row of lugs; $2^{\prime \prime}$, with double row of lugs $11 / 2^{\prime \prime}$. apart; $21 / 2^{\prime \prime}$, with double row of lugs 2 " apart, and $3^{\prime \prime}$, with double row of lugs $21 / 2^{\prime \prime}$ apart. Three board thicknesses available, $3 / 32^{\prime \prime}, 1 / 8^{\prime \prime}$ and $3 / 66^{\prime \prime}$. Designed to properly mount, standard types of resistors and capacitors. Special boards can also be made to your specifications using any type of CTC lug.

4. CTC Double -End Terminal Lugs. Two terminal posts in one swaging operation. : Neat, positive wiring from top ar bottom of board. Brass, heavily silver plated. Stocked to fit $3 / 52^{\prime \prime}$ and $5 / 52^{\prime \prime}$ boards. Also in midget - sizes for extremely compact units.
5. CTC Slug Tuned Inductors. Eosy-tomount LS3 slug tuned coils ore available in five windings, covering from $1 / 2 \mathrm{mc}$ to 184 mc . The unit is extremely small and compact only $11 / 8^{\prime \prime}$ high when mounted. Coils of practically any shape and size are also available to your specifications.
6. Mathomatically Dimensioned Crystais. This now CTC development assures consistent performance, guarantees high activity and long life in every CTC Crystal. But one of 21 steps and checks that protect quality of CTC Crystals.

7. Special Coils. Units pictured ore but a few of the special Coils designed and manufactured to customer's specifications. CTC can design and manufacture coils of practically any size with any style winding, and varnished or impregnated to meet the most rigid requirements.

8. CTC Pressure and Hand Swagers. Quickly and surely swage all CIC standard lugs to terminal boards.

Pressure Swager fits all board thicknesses and swages lugs up to $1 / \mathrm{s}^{\prime \prime}$ from edge of board. Additional anvils and punches to fit all Standard Lugs supplied on request.

Hand Swager base is gripped in a vise and the rolling fool struck with a hammer.

In design, this series of connectors differs from the majority of Cannon Connectors. Type DP Fittings are rectangular in shape, and polarization is affected by the arrangement of the contacts within the connectors. A wide variety of contact orrangements is available with contacts ranging from 10 -amp. to 40 -amp. capacity and with low impedence Coaxial contacts of 10 -amp. capacity providing for continuous shielding available in some types. Standard shells are aluminum

## TYPE "DPD" RECEPTACLES (With Socket Insert)

Mounting flange is $33 / 8^{\prime \prime} x$ $1 \frac{11}{16}{ }^{\prime \prime}$ and shell extends ${ }^{2} 3^{\prime \prime}$ $f \mathrm{rom} t \mathrm{~h}^{2} \mathrm{e}$ mounting surface forward Coaxial con-
数" $^{\prime \prime}$ to the rear from the mounting surface. Shells provide for mounting with four No. 6 oval head machine screws. Material is aluminum, may be furnished in zinc if specified. Weights in aluminum and zinc.

# CANNON CONREGTORS 

CANNON ELECTRIC DEVELOPMENT COMPANY - 3209 HUMBOLDT STREET, 105 ANGELES 31, CALIFORNIA

The cutaway view of Type DP plug and receptacle, both mounted, illustrates the method of application in rack equipment for radios and general instrument equipment. The use of this type of connector makes it possible to easily and quickly remave the rack portion without losing time in disconnecting all the wires. Although coaxials are not ayailable in panel-type connectors now tooled, the design is adaptable to their use.
"DPR" Rack Type-Complete Unit

Rack type fittings are used where large numbers of contacts must be repeatediy coupled and unconpled, the coupling and unconpling being performed by means of a geared movement operated by a bail type handle. The dimensions over all measure $\sigma_{25}^{2} \times 3^{\prime \prime} \times 22^{\prime \prime}$ (ineluding swing of bail). Has four holes for No. 8 Nounting Serews.

TYPE "DP-12-34" PLUG

## TyPE XITTINGS

CANNON "TYPE X" PLUGS AND RE-CEPTACLES-The "Type X" Series of small connectors offers inexpensive fittings of reliable quality for sound service radio public address systems and geophysical research. In addition to compactness, many exclusive Cannon features are embodied in this series, such as full floating contacts in all sacket inserts. Solder pot cable connections are easily accessible. Cable glands are removable. Contacts are so positive that no latching device is needed for ordinary uses.

The arrow shows spring clip on tullHoating socket contact which gives a positive pressure fit connection.

TYPE "X-11" CORD PLUG (With Socket Insert)

Sturdily built for dependable sery. ice. Light int weight. Shell is diecast ztnc, nickel finish. Will take $\frac{3}{16}$ to $\frac{9}{32}{ }^{\prime \prime}$ able. Used in conjunction with the following: X-14 Wal Receptacle, X-12 Straight Cord Plug, and X-42 Microphone Receptacle X-44L Receptacle.

## TYPE XL FITTINGS

The new Cannon Electric Type "XL" Connector combines various features found in other Cannon types into a small fitting comparable only in size to the Type "X" for low level sound transmission circuits. Among the leading features are the following: (1) convenient latchlock device to hold connector tight. (2) lightweight. (3) polarizing means (4) compression gland with relief spring or integral clamp, if desired. (5) streamlined design. (6) topped metal for insert retaining screw. (7) provision for special grounding contact. Contacts are 15-amp. for No. 14 BES stranded wire. Shell is zinc or steel, with various finishes available, bright nickle being standard. Satin-chrome finish available on steel shells. Min. Flashover voltage, 1500 ( 250 working voltage). Packed in boxes of 10 identical fittings.

## TYPE "XL" CONNECTORS

'XL-3-14N" Receptacle and "XL-3-11"' Pluo in engaging position. Compare small size of plug with hond.

## TYPE "XL-12'’ STRAIGHT CORD PLUG (Pin Insert)

Type XL-12 piug has alignment rib in ad dition to polarizing groove. Cable accom modation is $\frac{9}{3}$. Insert is removable for soldering or inspection. ## TYPE P ititings

CANNON "TYPE P" FITTINGS. Universally used in sound and allied applications. "Type p" Fittings include o size and type for every requirement, all of a high standard of quality. All $90^{\circ}$ Plugs, Pins and Sockets have split-shell construction for quick, easy access for wiring or inspection. Splashproof, but not weather-proof. Plug and receptacle dust caps are available for use under severe dust conditions. Laboratory tests show an average voltagedrop of not more than 10 millivolts, with current flowing at the rated capacity. Insulating material is black pherolic shich has a $0.7 \%$ absorption in 24 hours of immersion in water and a dielectric strength of 550 volts per mil at 60 cycles. P2-CG-11, P3-CG-12 and P3-CG-12 are furnished with rubber reducer bushing to accommodate 9/32" cable.
Revised P \& O Bulletin avoilable upon request.

GK
 types K \& RK PLUGS for AIRCRAFT

## RWK

The Type " $K$ " Series was designed especially for use in the aircraft geld and is used almost universaliy for aircraft radio, instrument and electrical circuits. Although light in weight, units are rugged and durable. The " $K$ " Series is made in 3 basic types: (1) Straight Type. (2) $90^{\circ}$ Type. (3) Wall Mounting Unit, for which either straight or right angle junction shells are provided. Inserts of laminated and molded phenolic are removable.

The cable entry is regularly threaded for various sizes of aircraft flexible conduit, but there are fittings also available with cable clamp for special applications. The " K " Series is comprised of 8 diameters, with a great variety of contact arrangements covering a range of from 1 to 82 contacts, depending, of course, upon the diameter. 188 insert arrangements.

A key and groove arrangement makes it possible to connect fittings easily and quickly without the necessity of fumbling to match pins and sockets. This eliminates any possibility of forcing together in improner elignment and
thus bending or breaking pins. Large contacts may be thus bending or breaking pins. Large contacts may be removed for soldering, thereby eliminating thamaging the insert with excessive heat.

Quick, easy access to solder pots at back of contact is made possible simply by removing either 3 or 4 Shakeproof Sems, depending upon the size of the fitting. Since these screws are equidistant, the barrel and insert may be rotated to accommodate 3 or 4 different positions. This is also true of the flanges on wall mounting units, making it easy to rotate these fittings to facilitate cable installation and avoid sharb bends in conduit.
Plugs and receptacles are locked together by means of a quick-acting threaded nut which holds both members firmly together and prevents shaking or accidentally pulling them apart. 10 to 250 -amp. contacts.
NOTE: Defailed Catalog Bulletin and Wall Chart for $K$ Connectors available on request.

MORE THAN 200 INSERT ARRANGEMENTS AVAILABLE

CANNON "Type AN" Series of plugs and receptacles was designed especially to meet ArmyNavy Specifications for aircraft electrical connecNavy Specifications for aircraft electrical connectors. While the AN Series retains all the basic fea-
tures of the Type K Series-features which have tures of the Type K Series-features which have
established conclusive proof of their effectiveness as applied to aircraft-numerous changes in design and construction have been made to conform to latest Army-Navy Specifications.

Type AN Plugs are made in three basic shapes or styles. These are: 1. Straight cord connectors. 2. Right angle or $90^{\circ}$ cord connectors. 3. Flanged connectors for wall mounting. An almost unlimited combination of circuits and current capacities can be handled with AN connectors and their interchangeable inserts.
Removable and interchangeable inserts make it possible to change it possible to change any fitting from a pin o a socket, or vice versa, and also to change

CONTACT CAPACITIES
5 to 200-amp.

AN3108 Plug
handled through any fitting provided the inserts are of the same diameter. The split shell, a feature pioneered by Cannon, makes it easy to install wiring or to solder contacts.
An important feature of the Type AN Series is the means provided for coupling the members together. This consists of a coupling nut which serves to draw the parts together and to release them while it also prevents plugs and receptacies from being jarred apart by excessive vibration. No special tools are required to lock or unlock plugs and receptacles, to separate split shells or to remove inserts. This feature is invaluable, since it eliminates delay in servicing in the field and also because there are so many combinations possible with Type AN Series.

## HOWARD B. JONES

## " 300 " srars pugas and socrsts <br> General Specifications

2 Contacts to 33 Contacts. All plugs and sockets are polarized. 2 Contact Plugs and Sockets are round, others rectangular.
Plugs of one size cannot tit into sockets of another size. Phosphor bronze "knife-switch" type socket contacts engage both sides of flat plug contacts-double contact area.
Molded Bakelite insulation.
Formed metal caps. Formed tibre linings in caps.
Small size, with good separation between contacts.
Plug or socket for panel mounting.
Plug or socket with cap.
Simple, fool-proof assembly.
Finish on caps-Black Crystal
Plug prongs- $\frac{5}{32}{ }^{\prime \prime}$ wide by $\frac{3}{62}{ }^{\prime \prime}$ thick.
We suggest using the 300 series in circuits not exceeding 45 Volts and 5 Amps., although circuit characteristics may permit higher ratings.

# "500" <br> SERIES PLUGS AND SOCKETS <br> For Complete Listing of 500 SERIES, Write for No. 500 Catalog 

Designed for 5,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.
Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-prooted). Plug and socket blocks are interchangeable in caps and brackets.
All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.
Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}{ }^{\prime \prime} \mathrm{x} \frac{3}{32}{ }^{\prime \prime}$.
IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

(Socket with Deep Bracket)

## LOCKS FOR 500 SERIES PLUGS AND SOCKETS

Locks shown above are used in con. nection with any DEEP BRACKET and cap combination.

The locks securely hold the units sogether, but they can be released instantly.
The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.
No. 500-I Locks..................Per pair $\$ 0.90$

S-506-CE (Socket with Cap)

P.506-DB
(Plug with Deep Bracket)

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard $B X$ clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from $1 / 2^{\prime \prime}$ diameter and $11 / 4^{\prime \prime}$ diameter in steps of $1 / 8^{\prime \prime}$, if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

## SERIES 101 PLUGS

The entire No. 101 Series of Plugs are identical with the exception of the cable ferrule which is furnished in four sizes as listed below. All metal parts are of brass. These Plugs fit all of the No. 101 Series Sockets. Assembly meets Navy
 Specifications. A low loss Plug and Socket ideal for high frequency connections.

## SERIES 101 SOCKETS

The No. 101 Series Sockets are furnished in three types as shown below. Base is of Brass, Nickel Plated with Chrome Flash. Brass contact is Silver Plated. Inmulation of low loss natural color XXX Bakelite. Meets Navy Specifications. The S-101-D is similar to the S-101 axcept that the Bakelite is recessed in the base. S-101-D Mod. is the same as S-101-D except that two sides of the base are milled as shown: Mounting Holes No. 101 -No. 41 drill on $11, "$ centers. Mounting holes No. 101-D and 101-D Mod. No. 30 drill on $\frac{73}{16}{ }^{\prime \prime}$ centers.

Price Each-\$0.46 Price Each-\$0.69 Price Each-\$0.69

## SERIES 201

## PLUGS

The No. 201 Series Plugs are of the same design as the No. 101 but are of heavier stock and larger. Made in one size only with $3 / 8^{\prime \prime}$ ferrule. All metal parts are of Brass, same linish as No. 101 Series and Wax Impregnated Ceramic insulation. Overall length $1 \frac{9}{16}$ ". Prong diameter $\frac{5^{\prime}}{32^{\prime \prime}}$. Fits only the 201 Socket.

## SERIES 202

## PLUGS

SOCKETS
The 202 Series Plugs and Sockets are made in two contacts only. Metal parts are of Brass with burnished Cadmium Plate. Insulation is of Molded Bakelite. Phosphor Bronze "Knife Switch" type Socket Contacts engage both sides of flat Plug Contacts-double contact area. Formed Fibre linings in caps. Polarized. Knurled nut has $3 / 4^{\prime \prime}-27$ thread.
Socket Mounting Holes. No. 30 drill on 1" centers.

[^54]
## 1400 SERIES PLUGS AND SOCKETS

This series of "disconnect" plugs and sockets has the distinct advantage of low cost for a separate unit handling many circuits. Due to exposed metal parts, it is recommended for use when the complete unit is within a housing.
Reduces costs of servicing units. Advantageous in shipping when it is desirable to pack units separately. Polarized-assures

correct coupling. Spring temper brass sockets assure perfect contact. Standard units are listed below from 5 to 16 contacts. However we can supply units having as many as 30 or more contacts.
On No. 1420 or larger we recommend the plug be divided into two or more units, as a single long plug is not mechanically two or The socket will be made in one assembly.

For units with more than 16 contacts, add $5 c$ to the No. 1416 price for each additional contact

## BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated.

The base is molded Bakelite. The Terminals and Binder Screws are of brass, nickel plated. Marker Strips may be ordered and imprinted to supply terminal designations. These Marker Strips mount beneath Terminal Strips and also afford insulation from metal mounting surface.

| :---: | :---: | :---: |
| No. 88 | $7 / 4^{\prime 2} 212^{n \prime}$ | $\$ .28$ |

No. 89

The No. 89 fuse mount provides screw terminals on the same side of panel as fuse clips. Serewrs are mounted so that they face the side of panel. Mounting holes are on 7/8" centers. $\begin{array}{ccc}\text { Code } & \text { Panel Size } & \text { Price Firch } \\ \text { No, } 85 & 74^{\prime \prime} x^{2} 1 / 2 \% & \$ .38\end{array}$

No. 1200 SERIES MULTIPLE FUSE MOUNT PANELS
The No. 1200 series presents a very conventent fuse panel arrangement for multiple clrcuits. One side of all the fuse mounts is common, making it convenient for wiring. Screw terminals are prowided on the same side of panel as fuse clips. Mounts No. 3-AG fuses. Each panel coniaina a pair of clips for mounting a spare fuse. The whole assembly has a bakelite insulating plate attached so that it can be mounted directly on metal.

# S.S.WHITE fLeXIBLE SHAFTS for RADIO and ELECTRONIC applications 

As basic mechanical elements for the transmission of power and for remote control, S.S. White flexible shafts are widely used in the Radio and Electronic fields. Applications take millions of feet annually. These include aircraft radio and direction finding equipment; automobile, broadcasting and home radios; radar; television, etc. Quality products in every sense of the word, S.S.White shafts have earned through the years, a reputation for efficient, dependable performance.

## QUICK FACTS ABOUT S.S.WHITE FLEXIBLE SHAFTS

They are made in two classes as follows:
POWER DRIVE -For transmitting rotational power as in driving instruments and other mechanisms from small motors or other power sources. Power Drive shafts are available in diameters from $.043^{11}$ to $.750^{\prime \prime}$ with a wide selection of physical characteristics.

REMOTE CONTROL-For control of radio and electronic elements requiring rotary adjustment or manipulation from a remote point.
Remote Control shafts are specially engineered for (1) Minimum torsional deflection(2) Approximately equal deflection for either direction of rotation-(3) Low internal friction. This explains the smooth, easy, sensitive control they provide. Remote Control shafts are available in diameters from .117" to $.437^{\prime \prime}$.
S.S.WHITE FLEXIBLE CASINGS-A casing is needed with practically every flexible shaft to serve as a runway, to prevent "helixing," to protect the shaft and to retain lubricant. S.S. White's line of metallic, fabriccovered and rubber-covered casings fits every shaft need and service condition.
S.S.WHITE END FITTINGS-Fittings for con-
necting shafts and casings are available in designs suited to the needs of most applications. It is economical to use these standard fittings where practicable.

## ENGINEERING COOPERATION

S. S. White engineers have cooperated in working out hundreds of radio and electronic applications. This cooperation is available to all engineers and designers to answer any questions about flexible shafts and to help work out any problem involving the use of flexible shafts. No obligation is entailed and all information is held in strictest confidence.

## S.S.WHITE SHAFT AND CAS. ING COMBINATIONS - Complete

 combinations of shaft, casing and end fittings are made up to user's specifications. They can be supplied in any required length.
## BULLETIN FOR ENGINEERS

This bulletin gives the basic information and technical date about S.S.White power drive and remote control flexible shafts and their application. Copy mailed on request. Ask for Bulletin 4501.

## S.S.WHITE

 FLEXIBLE SHAFTS for RADIO and ELECTRONIC applicationsUse of S.S.White mex ible shafts for "enageling" variable eltment to control knobs er dity gives complete fextiom
 wherever desirabie in conserve space mant te simplify and fautivite wiring, assembly ams servicing. Likewises, permits controls te ibin placed for converimat operation and hewewter ous appearance. Preat cast transmitter at ritht is an example.

Use of short pieces of shafting to couple external control shafts to variable ele-ments-as in the radio receiver at right-damps vibration and eliminates need for precise mounting and olign-ment--gives complete freedom in locating the controlled elements.

## $\leftarrow$

Gearing is frequently used with flexible shafts to reduce load on the shaft in the case of power drives and to reduce deflection in the case of remote control shofts, particularly where long shafts are called for. At left is the simple geared connection of remote control shafts to an aircraft radio compass loop.

## S.S.WHITE

## PLASTIC PRODUCTS

ASSEMBLY SCREWS-for use where non-metallic screws are desirable. Shown at rightNo. $6-32 \times 1 / 2^{\prime \prime}$ oval head plastic screws.
HEX. SOCKET HEAD CAP SCREWS-with or without nuts.
DUMMY THREADED PLUGS AND CAPS-for shipping, handling, storage.
BOX TRAYS-Transparent, stackable parts containers. Bulletins on any of above products mailed on request.

## CONTRACT PLASTICS MOLDING

S.S.White offers the most modern facilities plus an experienced organization for INJECTION and COMPRESSION molding and EXTRUDING. Inquiries are invited on specific requirements.

## S.S.WHITE

MOLDED RESISTORS—THE "All-Weather" RESISTORS
Noiseless in operation-Strong and Durable-Good performance in all climates.

STANDARD RANGE
1000 ohms to 10 megohms

## high values

15 to 1,000,000 megohms
For full details write for Bulletin 4505.

## NOISE TESTED

At slight additional cost, resistors in the Standard Range are supplied with each resisfor noise tested to the following standard: "For the complete audio frequency range, resistor shall have less noise than corresponds to change of resistance of I part in $1,000,000$."

## MICROPHONE PLUGS • JACKS • CONNECTORS

that will eliminate noise, shorts, and leakage in your Public Address systems.

M-140 Y connector - 2 male and I remale-for uise where more than one mike or speaker from single cirruit. ...

M-150 Gap und criain assenbiy. Eim. inate dust and noise by keening open chassis unins sealed.

M-181 Stubly Plone plag with nickel plated brass shell for shielding purposes. Especially switable for Public Address Systems, Portable Radios, Tclephone work, etc. $S_{p}$ cial sure grip connecting lugs.

## KINGS CO-AXIAL CABLE CONNECTORS

Kings is one of the largest manufacturers of co-axial connectors in the country. We carry most types in stock for immediate delivery, but we welcome your inquiries on any and all types.

A comprehensive chart listing our coaxial connectors is available on request. Write for your copy today.

## KINGS REMOTE CONTROLLED TELEVISION ANTENNA

Now you can have pin-paint selectivity for your television set. A flip of the switch at your set turns your antenna to the station you want. You're assured the best type reception to make your television receiver function at its best.
Kings manufactures three other models of fixed television and FMantennas. Catalogs and complete details on request.

## KINGS VARIABLE CONDEASER

HODEL 200
452 M. H./F. D. GAPACEFY

Kings engineering skill gives you this precisionmade variable condenser. Prices and delivery available upon request. Write for details.

WHATEVER YOUR PROBLEM. . . bring it to KINGS. Our engineering department is always af your service with complete details and data. Please feel free to consult with us at any time.

KINGS ELECTRONICS • 372 CLASSON AVENUE • BROOKLYN 5, NEW YORK MICROPHONE PLUGS AND JACKS - CO-AXIAL CONNECTORS
manufactsrers of
TELEVISION ANTENNA . VARIABLE CONDENSERS . WAYE GUIDES - WAVE TRAPS radar assemblies and special equipment

Embodied in these Electric Soldering Irons are those features of construction and design that specialized experience - since 1894-has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops; Army and Navy Services; in telephone, telegraph and radio stations. Because of their proven efficiency and durability, they are preferred by those who measure the value of a tool by the service it renders.

## RELATIYE SIZES AND SPECIFICATIONS

No. 3138 -Primarily adapted for light work-radio, telenhone, telegraph, ignition, factory and production work of a light nature; for telephone installation and switchboard work, etc.
No. 3158 -For the same purposes as No. 3138 and for work of a heavier nature. Used by electric starter and ignition manufacturers for repair work and other purposes where more heat is needed.
No. 3178-For use on still heavier work; for light commutators and service and production work. A very useful iron for general purposes. No. 3198-For heavy work of all linds. Supplies a very large volume of heat at high temperature. Used by manufacturers in many different lines; for shop, service, production work, etc.
Each iron is equipped with a baffle plate, at the shank, to prevent free conduction of heat to handle.
Made in all standard voltages and for 32 volts. No. 3138 also made for 12 and 24 volts. All can be equipped with three-conductor cord, one wire grounded, at slight additional charge.
Separate heat-insulating stand supplied with each iron.
No. S-76-A special, light, compact iron designed for light
 work. It heats up quickly and consumes only 50 watts. Its construction is somewhat different from that of the standard irons, having a specially treated copper core, with light metal head, on which the tip screws with taper fit. An efficient and serviceable tool that will give satisfaction when used on the light work for which it is intended. Made in all standard voltages.

## American Beauty coppertips

These copper tips are made of commercially pure, drawn bar, copper rod. Each tip is designed to fit into and to the full length of core of heating unit of the particular iron for which it is intended. Maximum area of contact between tip and heating unit is thus assured. Tips are of uniform diameter throughout their entire length and are not made with enlarged heads because this does not increase the capacity of a soldering iron. Tip is held in place in core of heating unit by a recessed set-screw. Removal for cleaning or replacement is therefore easy. Standard shaped tips with which the various models are equipped are shown in illustration but pyramidal, instead of chisel type, and vice versa can be supplied when so specified without additional charge. For No. 3138 a
 special, long, semi-chisel shaped tip can also be supplied for telephone and switchboard work.

## American Beauty

## TEMPERATURE REGULATING STANDS

## For use on (AC) Alternating Current Only

 This is a thermostatically controlled device for the regulation of the temperature of an electric soldering iron while at rest. When placed on this stand, soldering iron is maintained at working temperature, ready for instant use or, if desired, at a lower temperature. Through an adjustment on bottom of the stand, thermostat may be set for the maintenance of any desired temperature-from very low, or warm, to full working temperature. Body of stand is of molded plastic. Soldering iron cradle proper is of metal. Stand is equipped with cord and attachment plug-cap for connection to current and with a receptacle for connection of the electric soldering iron. It is designed for use with electric soldering irons up to 660 watts capacity and on circuits up to 240 volts.| Cat. No. | Net Weight | List Price | Net Price |

TAPERED, ADDS HEAT RESERVOIR

HEAVY-THREADED for MAXIMUM HEAT TRANSFER WITHIN CORE ALL TIP STYLES INTERCHANGE

A solid core of corrosion-resistant copper alloy distinguishes KOPPERKORE . . . a handsome, versatile soldering tool . . . the perfect industrial type, light weight ( $13^{1 / 2}$ oz.), well balanced, durable. Rigid specifications govern the quality of materials used in KOPPERKORE . . . damage-proof steel case with gun-metal finish, element is fine nichrome heater wire wound on tellurium copper alloy, mica and glass insulated (easily replaced by user). The handle is cool and comfortable, molded of long-lasting Bakelite. 6-foot length of flexible high quality heater cord joined to pull-proof connector and spring protected (Underwriter Laboratories approved) is standard equipment. KOPPERKORE'S ample heat reservoir maintains heat level of maximum efficiency without building up excessive temperatures. 100 watts power for use on $110 / 120$ volt AC or DC. Ideal for use by manufacturers, maintenance men and repair shops. Intended for light work on radio, telephone and day-long production lines. 100 Watt $-131 / 2$ oz. $-13^{\prime \prime}$ long 110/120 volt AC-DC any cycle.

List Price. . . Iron with \#1 Tip and Rest Stand__ \$7.25

## SIX INTERCHANGEABLE TIP STYLES FIT A KOPPERKORE

\#O LIGHT A1 MEDIUM

\#2 MEDIUM
\#5 MELTING CUP-1.OZ.

KOPPERKORE, junior companion to the now famous Kwikheat Thermostatic Iron, has the same choice of six tip styles for adapting it to a wide variety of soldering jobs. KOPPERKORE tips are of forged tellurium copper alloy (cor-rosion-resistant) with heavy threaded ends for best heat transference from within the core of the same material. Tapered shape is most desirable . . . adds an extra heat reservoir.

# ALPHA SOLDERS FOR RADIO AND ELECTRICAL WORK - 363 HUDSON AVE,, BROOKIYN T, N. Y. ROSIN CORE SOLDR * TRI-CORE SOLDER * ACID CORE SOLDER 

## TRI-CORE ROSIN FILLED SOLDER WIRE

The unique, improved solder for Radio, Electrical and Automotive work. Bigger volume, better profits for dealers.
Faster, more uniform fluxing: Because the cores are located close to the surface, heat penetrates rapidly to the flux. Result-a continuous, free flow of high-grade, non-corrosive pure rosin flux goes on the work before the solder melts.
Confinuity of flux: TRI-CORE'S arrangement of three independently filled cores eliminates the risk of empty flux sections in the core.
More Economical: Because TRI-CORE'S solder walls are thinner, the solder melts faster-giving the results expected of a higher tin content alloy.
TRI-CORE . . . The Modern Solder . . . is especially rec-
ommended for Radio, Electrical, Telephone, Telegraph, Ignition applications, including HF and UHF circuits, Terminals, Coil and socket lugs, Relays, Condensers and similar components.
Manufactured of Virgin tin and lead, TRI-CORE solder mixtures are certified to meet ASTM (Class A) specifications.
Grade 40/60, Diam. .081. Stocked all gauges- $1 / 4^{\prime \prime}$ and heavier, down to $.020^{\prime \prime}$ and finer. Available in 1 $\mathrm{lb} ., 5 \mathrm{lb}$., and 20 lb . spools. Quick Selling Counter Display Carton Offers 12 Handy Size Spools.

## ALPHA ACID CORE SOLDER

Quick acting Alpha Solder makes a secure, tight bond. Alpha gives you a permanent bond, avoids waste, and completes more soldering jobs per spool. Pure Virgin metals and a correct flux assures uniform, superior soldering results.

## ALPHA ROSIN CORE SOLDER

High-grade, non-corrosive plasticized rosin is the reason for this Alpha product being widely favored on Electrical, Automotive electrical, Radio, Radar, and similar jobs. It makes cleaner, stronger joints without toxic or offensive odors.

## ALPHA SOLID SOLDER WIRE

Alpha manufacturing methods insure a homogeneous solder wire that is perfectly smooth and accurate in gauge through its entire length. Its smooth flow gives you a solid, permanent joint. Available in any specified composition and size.

## ALPHA PREFORMS

Include washers, cut shapes, drops and pellets, solder foil and other special forms used extensively in repetitive manual and automatic soldering proc-
esses. Increased production, savings of materials and labor, plus accurate control, can be effected where shapes cut to the particular application are employed.

## STANDARD ALLOYS

TRI-CORE and ALPHA SOLDERS 40/60. Also available in 25/75-30/70-35/65 45/55-50/50-55/45 60/40.
ALPHA SOLID SOLDER WIRE: All alloy ratios available to order.

## STANDARD DIAMETERS

TRI-CORE: . 081.
ALPHA: (Rosin) .093
(Acid) .125
ALPHA SOLID: . 125.
Also available on special order in the following diameters: .093, .081, .072, .062, .050, .045, .040, . 032 .

## ALPHA <br> Serves You Right

Our specialized soldering knowledge and skills are teamed with efficient, modern facilities for castings, stamping and the economical conversion of lead, tin and related alloys into any shape and form, and for any purpose. We can offer you invaluable help in developing new items and hurdling technical obstacles.

## ERSNO MLUENCORE SOLDEB

SEVEN POUND REELS

ONE POUND CARTONS

BRSIN MuIricont
The solder concaining 3 cores of extra active nan-corrasive flux giving high speed
soldertng.

Our claim is a simple one: We believe that ERSIN MULTICORE is the finest cored solder in the World!

Ersin Multicore is solder in the form of wire containing three cores of non-corrosive Ersin Resin Flux. No extra flux is required. The use of Ersin Multicore guarantees that the correct proportion of flux to solder is used and maximum fluxing action occurs at the correct melting point of the solder. Only by using solder wire with three cores of flux is it possible to be sure the flux is always present--that there will not be lengths of wire without flux which result in "dry" or highresistance joints.
In addition to this advantage, Ersin Multicore is the only cored solder in the world containing ERSIN, an extra-active non-corrosive flux. It is high grade rosin homogeneously activated by a process which confers on the rosin the vigorous fluxing action characteristic of the more active fluxes.
You enjoy speedy and a consistently high precision standard of soldering and attain just that extra rapidity which guarantees economy of operation. Ersin Flux not only removes surface oxides prior to soldering, but prevents formation during the soldering period. You can satisfactorily solder components which are highly oxi-
dized-ones on which it would be necessary to undertake additional mechanical or chemical cleansing processes when using any other type of flux.
In Ersin Flux, the protective qualities of the original rosin are preserved. Joints made with Ersin Multicore Solder will not corrode even after prolonged exposure to any degree of humidity. The flux residue is impervious to moisture. It is hard and not sticky. It avoids accumulation of dirt and impurities on the joint.
Every reel or carton of Ersin Multicore is clearly marked both as to Gauge and Alloy, showing the actual content of Tin and Lead. You know exactly what you are getting when you buy Ersin Multicore Solder: Multicore costs a fraction more initially, but is unquestionably most economical in the long run.

Ersin Multicore Solder is available in all Tin/Lead alloys and in standard wire gauge from 10 to 22 . ( 14,16 and 18 s.w.g. are most popular.)

Ersin Multicore is the only solder which offers you these two fundamental advantages: (1) Multicore construction, providing three cores which assure perfect joints; (2) Ersin Flux, our exclusive fast non-corrosive flux.
Ersin Multicore is the answer for those who seek the finest Cored Solder in the World!

## BRITISH INDUSTRIES CORP.

## "GRIPTITE" COMBINATION PLIERS

The finest quality combination pliers. Designed for heavy duty. Slightly tapered nose, sharp deep milled teeth and grooved jaws for gripping cotter pins and wire. Knurled handles. The $8^{\prime \prime}$ and $10^{\prime \prime}$ sizes have three slip joint adjustments which give a wide range of parallel grips.

| No. | Length | Finish | Wt. per doz. | Each |

| 643 | 5 | in. | Blue Temper | 1 | lb. |
| $\$ 1.35$ |  |  |  |  |  |

## SHORT CHAIN NEEDLE NOSE PLIERS

Short tapered jaws for bending and looping wire. The short nose gives these pliers extra leverage and gripping strength. Used for wiring switches and other open electric work.

|  |  |  | Price |  |
| :--- | :---: | :---: | :---: | ---: |
| No. | Length | Finish | Wt. per doz. | Each |
| 1641 | 5 in. | Blue Temper | $23 / 4 \mathrm{lbs}$. | $\$ 1.85$ |
| 1643 | Same without Cutter | $23 / 4 \mathrm{lbs}$. | 1.50 |  |

## LONG CHAIN NEEDLE NOSE PLIERS

Long tapered jaws and needle nose. Used extensively in all industries . . . from switchboard, electric fixture and appliance wiring . . . to motor ignition, aviation and general manufacturing work.

Price

| No. | Length | Finish | Wt. per doz. | Each |
| :--- | :---: | :---: | :---: | ---: |
| 1661 | $6 \quad$ in. | Blue Temper | $31 / 2 \mathrm{lbs}$. | $\$ 1.95$ |
| 1671 | Same without Cutter | $31 / 2 \mathrm{lbs}$. | 1.60 |  |

## EXTRA LONG CHAIN NOSE PLIERS

Extra long tapered jaws with narrow pointed nose. Used extensively in automotive . . . electric . . . aviation and general production and repair work. Length of jaw $23 / 4 \mathrm{in}$.

Price

| No. | Length | Finish | Wt. per doz. Each |  |
| :--- | :---: | :---: | ---: | ---: |
| 1781 | 7 in. | Blue Temper | $33 / 4$ lbs. | $\$ 2.35$ |
| 1771 | Same without Cutter | $33 / 4 \mathrm{lbs}$. | 2.15 |  |

## LONG FLAT NOSE PLIERS

Adaptable to many uses where a tool with long fat sturdy jaws is required. Jaws are scored to give a good gripping and holding surface.

Price

| No. | Length | Finish | Wt. per Coz. | Each |  |
| :--- | :---: | :---: | :---: | :---: | ---: |
| 1751 | 6 in. | Blue Temper | 3 | lbs. | $\$ 2.15$ |
| 1741 | Same without Cutter | 3 | lbs. | 1.90 |  |

## LONG NEEDLE OR SNIPE NOSE PLIERS

Especially designed for difficult and awkward jobs where no other tool will serve. The long slender jaws make it adaptable to many uses. A very popular plier for fine work.
$2 \frac{3}{32}$ in. Jaw

| No. Length Finish | Wt. per doz. Each |  |  |
| :--- | :---: | :---: | :---: |
| 1621 | 6 in | Blue Temper | $21 / 1 b s$. |

## CURVED NEEDLE OR SNIPE NOSE PLIERS

To reach that place down in under or around an obstruction. Very useful where greater visibility is required in holding small objects at an angle.

Price

| No. | Length | $\quad$ Finish | Wt. per doz. Each |

| $\$ 2.25$ |  |  |  |

## dIAGONAL "OBLIQUE" CUTTING PLIERS

Made especially for close cutting. Used extensively in electrical work, radio manufacturing, telephone and automotive ignition work.

## SHORT NOSE DIAGONAL CUTTING PLIERS

An excellent cotter pin tool. Specially designed with short nose. Very popular with aviation and automotive mechanics.

This type diagonal plier has the joint very close to the end of the cutter to give added leverage which makes cutting easy. A well balanced tool adaptable to the work in many trades.

| No. | Length | Finish | Wt. per doz. | Price |
| :--- | :---: | :---: | :---: | :---: |
| 4610 | 7 in | Blue Temper | $53 / 4 \mathrm{lbs}$. | $\$ 2.10$ |

## WIRE STRIPPING DIAGONAL CUTTING PLIERS

Narrow head and notched cutters for stripping fine wire .062 diameter. The spring in the handle makes this a very fast cutting tool. Used by manufacturers of electric fixtures, appliances, radio and radio taubes.

|  |  |  | Price |  |

No. 41 - Electricians' Diagonal Pliers-
Hordened and tempered in oil. Special narrow nose for radio and electrical work.

No. 41
5 inches and 6 inches
Can be furnished with insulation stripper.

## No. 654 - Utica Long Needle Nose Side Cutting Plier

This is a long, fine, spring-tempered nose side cutting plier, drop forged and with hand-honed cutting knives.
Utica Finish Size $\qquad$

## No. 1033 - Utica Long Chain Needle Nose Plier

This is a long needle nose type of plier without a side cutter. It has a spring-tempered needle nose with a fine balance for delicate work.

Utica Finish Size
6 inches

## No. 622 - Utica Short Chain Nose Mechanic's Plier

This plier is a Short Chain Nose Side Cutting Plier, hand-honed cutting knives. It makes an all around Electrical Mechanic's plier.

Utica Finish Size $\qquad$ 5 inches

## No. 44S-Special Diagonal Pliers with Spring

A slim nose cutting plier designed especially for radio and electrical work. Extra fine hand honed edges permit nearly flush cuts.
Utica Finish Size.
5 inches

## No. 50 - Utica Standard Side Cutting Plier

An ideal tool for electrical work. Drop forged and skillfully tempered. Its cutting qualities are unsurpassed by any side cutting plier.
Utica Finish Size
$5,6,7,8$ inches

## No. 777 - Utica Long Needle <br> Nose Plier

This plier has a long, half-round, spring-tempered nose for very fine work in assembling small electrical apparatus.
Utica Finish Size
6 inches

## No. 888 - Curved Needle Nose Pliers-

This is a long curved spring-tempered Needle Nose Pleir for use in deep and narrow places. It may be used without turning or twisting the hand in the assembling of small fixtures, electrical apparatus, etc.
Utica Finish Size $\qquad$ .6 inches

No. 22 Utica Chain
Nose Plier
This is a Short Chain Nose Plier forged from a fine quality of steel with fine points particularly adapted for the use of Jewelers, Opticians, Telephone Installers, Electricians and Radio Assemblers.

Utica Finish Size
4, $4 \frac{1}{2}, 5,6$ inches

## No. 82 Utica Chain Nose Wiring Plier

This is a special Radio Repair man's plier, new in design, having a chain nose for those who prefer this type of construction.

Utica Finish Size
8 inches

## No. 31 - Utica Duck Bill Wiring Pliers

This is the standard type of plier used by all Typewriter Repairmen as well as Assemblers. Forged from high grade steel.
Utica Finish Size 8 inches

## No. 91 - Thin Adjustable $221 / 2^{\circ}$ Angle Wrenches, Alloy Steel

Both the handle and jaw are drop forged from $\alpha$ high grade Alloy Steel, hardened and tempered in oil. Will not break or wear in the gear teeth and allow play in the wrench, permitting the jaw to slip off the nut.
It will give better service and last longer than any other wrench.
Size $\qquad$ $4,6,8,10,12$ inch

No. 895

## Utica Radio Plier

This is a General Radio Repair Man's Plier. It has a center cutter and flat scored nose for looping and bending.
Utica Finish Size
6 inches

## No. 517 Utica Ignition Plier

This ignition Plier with its unique design will fit all ignition units, spring tempered. A great little tool for the hard to get at adjustments.
No. 517

## No. 65 - Utica Jeweler's End Cutting Nipper

This Nipper is forged from a fine grade of steel, carefully tempered. A light, strong End Cutting Nipper, used by Electricians and Machinists. The keen cutting edges and "Perfect Fit" handles make this a very popular tool.

## XceLife NUT DRIVERS

READY FOR
QUICK WORK
Here's how to arrango Xcelite Nut Drivers-
up side down-in tho up side down-in the convenicuce and efficiency.

DELUXE SET IN HANDY HOLDER .
Handles of Different colors to Indicate Size. (Pat. App'd For).

- $A$ great set of tools-and a great time-saver. Each nut driver has a diferent colored hande to show at a flance its size--no fumbling -ho squinting to read printed sizes. Landles are made of special sochets of high earbon stecl, case hardened by goecial proeess insuring extreme depth of case. Sochets are precision formed, deep enough to handle two nuts.

Attractive, green finished, metal tool holder (Pat. App'd For) has two screw holes for attaching, and lock bar which covers the nut holders (and the attachment serews) and has eyelets for padlock.
 list, complete set with holder.

## HOLLOW SHAFT NUT DRIVERS

(Fire Resistant Handles)
This unique, time-saving tool was especially designed for general electrical and radio work. In radio, it is primarily useful in installing and removing volume control and other panel equipment. The nut is readily lightened or loosened without damage to the panel. On telephone or power switchboards, the Hollow Shaft Nut Driver is especially useful where nuts must be installed or removed over long protruding bolts or studs - made with or without insulated shafts. The former for use with high voltage work. Shafts insulated for protection up to 1000 volts; handles to 5000 volts.

STUBBY TYPE

## 6" XCEL Adjustable SOCKET WRENCH (with Attachments)

A whole set of tools in one! Fits any size nut, hexagon or square, round or odd shaped, from $1 / 8^{\prime \prime}$ to $1^{\prime \prime}$.

List Price,

Individually boxed, packed 6 to a selfselling display carton.

## XCELITE "Combination Dełachable" SCREWDRIVER

Here's convenience - and saving - combined in a mighty unique and useful tool. The XCELITE Combination Detachable Screwdriver has a genuine XceLite Shockless Handle, hollow to receive the dualblade screwdriver units listed below. With this practical XceLite handle and, for example, a No. 2 Phillips blade on one end and a $1 / 4^{\prime \prime}$ XceLite blade on the other, you have two screwdrivers for just about the price of one! What's more, you can buy blades of other sizes to fit the same handle. Note the unique ball fastener on the blade. This holds the screwdriver unit securely in place-yet readily slips out when desired.

## SPECIFICATIONS

- Free speed 1000 r.p.m.
- Normal load speed 600 R.P.M.
- 1/4" capacity snap release chuck.
- 6 ft . flexible lead cord and plug.
- High-torque SpeedWay motor 110-120 valts AC-DC.
Net weight of toot $21 / 4$ lbs. Packed in standard pack age of 8 , shipping weight
25 lbs.

Its very high speed (20,000 r.p.m.) gets efficient work out of small stones and cutting burrs. Fits the hand in practical working positions. Equipped with both $1 / 8 / 7$ and $\frac{33^{\prime \prime}}{32}$ collets to take all standard accessories mounted on shanks of this size. Motor is air cooled 110. 120 volts AC-DC and is more powerful than most hand grinders. Comes complete with thumb switch, ruhber cord and plug. Net welght of grinder $1 / 4$ lbs. Packed in standard package of 20 , shipping weight 17 lbs.

## For Croftsman, Mechanic or Handyman

Completely seli-contained portable electric bench grinder is safe, handy and powerful. This unit is powercd by a new and rugged Speedway motor, a distinct post-war development, which pours out 50 watts. Will do hundreds of grinding jobs from cutter bit to pocket knife and do them well. Comes equipped with 2 grinding wheels ( 1 coarse, 1 fine), adjustable tool rests, cartying handle, toggle switch, and rubber covered cord and unbreakable plug. Encased in streamlined cast housing and has rubber feet that prevent marring of finely finished surfaces.

No. 117-PORTABLE BENCH GRINDER \$14.95

LIST PRIGE
Available in $210-120$ volts 60 cycle AC only; net weight of grińtder 13 lbs . Packed in standard package of 6 , shipping weight

## RADIO CHASSIS PUNCHES

KNOCKOUT PUNCHES AND CUTTERS

## No. 730 RADIO CHASSIS PUNCH

Quickly cuts clean, accurate holes in radio chassis for sockets, plugs, and other receptacles. Operates simply with ordinary wrench for drive power. Just insert the punch in a $3 / 8$-inch or 132 -inch drilled hole and turn the drive nut. No reaming or filing-hole is smooth, perfect. Each size tool consists of the punch for cutting the metal, the die for supporting the metal, and the cap screw for providing the drive action. All parts are of highgrade tool steel carefully heattreated and ground for clearance. Individually packed in a tube container and furnished complete with operating instructions. Oddsize holes for meters can be made with other punches and
 cutters listed at right.

For fast, easy cutting of holes in metal up to $1 / 8$-inch or 10 -gauge thickness. Insert in small opening and drive with an ordinary wrench. Speeds radio set work, cuts cleanly, no reaming and filing. Set includes four punches for making $7 / 8,132,1 \frac{1}{32}, 1 \frac{11}{16}$ inch holes. Packed in leather case.

## No. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of two punches . . . for cutting holes $1 \frac{1}{15}$ and $23 / 8$ inch diameter. Packed in leather case.

Nos. 738 and 739 KNOCKOUTS PUNCHES

For cutting holes $27 / 8$ inch diameter (No. 738) and $31 / 2$ inch diameter (No. 739) in metal up to $1 / 8$ inch or 10 gauge thickness. Similar in design and operation to that of smaller GREENLEE Knockout Punches. Packed and sold individually.

## No. 740 KNOCKOUT CUTTER

Excellent tool for making meter openings and other latge holes needed in radio work. Quickly cuts holes $1 \frac{15}{16}, 23 / 8,27 / 8,31 / 2$-diameter. Operation is simple . . . driven with ordinary wrench. Special discs can be furnished for cutting odd-size holes from $1 \frac{15}{16}$ to $31 / 2$-inch diameter. Packed in leather case.

## REINER "15000" VOLT HEAVY DUTY TEST LEADS

## Invaluable for all Engineers working on High Tension Circuits

"HIGHVOLTAGE SAfETY FIRSt"

Reiner "Scientific" High Voltage Test Leads are designed and manufactured for use up to 15000 volts with a good safety factor. Attractive in appearance, with the highest quality of materials and construction. Combination thumb rests and long path leakage barriers. Pair consists of black lead with black handles and red lead with red handles. Special construction prevents wire from pulling out through prod handlels.

## Other features include

- Heavy Duty Kinkless Leads - Heavy Duty Hardened Steel
- Negligible Voltage Drop
- $7^{\prime \prime}$ Prod Length-Heavy Duty Type
- Insulated Handles on Tips No. 910 Individually Package, 25 prs. List price per pair
$\$ 4.95$
No. 920 -Signal Tracing Type Probe with built-in resistor; otherwise identical to No. 910. List Price each.
$\$ 6.00$

## REINER SCIENTIFIC PENCIL TYPE TEST LEADS

All Reiner "Scientific" Test Leads have attractive $51 / 2^{\prime \prime}$ pencil-type prod liandles which permit entering into tight places. These prod handles are of the finest quality material with extremely high voltage insulation, low moisture absorption, low power factor and surface leakage. The handles are scived to permit a secure finger grip and minimize slippage.

Prod points are made of hardened steel. They will
not become dull or wear out easily. A hardened steel point prevents bending which so frequently occurs with brass points.

Test lead wires are extra heavy kinkless multistrand flexible wires insulated for 6000 volts-one red wire lead and one black, with uniform good color quality.

No. 904-"De Luxe" Scientific Test Leads have red and black handles with the sciving filled in white. Length $72^{\prime \prime}$. Insulated tip handles at the tip end. Threaded brass prod sleeves and brass tip pins.
No. 903-Scientific Test Leads are $54^{\prime \prime}$ long; no white filling at the sciving; otherwise identical to No. 904.
No. 901-Scientific Test Leads are $48^{\prime \prime}$ long; plain insulated tips; otherwise identical to No. 903.

## INSULATED SOLDERLESS

 PHONE TIP PLUG

A standard insulated solderless phone tip plug which fits our parts 101, 106, 108 and 109 phone tip jacks. Metal parts are nickel plated brass. Overall length $2-3 / 16^{11}$. The high lustre insulated handle is ${ }^{1 "}$ long. Available in red, black, green and yellow.
No. 202
LIST PRICE 18c

## SOLDERLESS PHONE TIP PLUG

A standard solderless
 phone tip plug. Idenabave, to No except for insulated handle.
No. 203
LIST PRICE 10c

## INSULATED SOLDERLESS JR. PHONE TIP PLUG

A standard insulated solderless junior phone tip plug made to fit our parts \# 101 and 106 phone tip jacks. Metal parts are nickel plated brass. The high lustre insulated handle is ${ }^{11}$ long. Available in black, red green and yellow. Overall length 17/3'.
No. 204
LIST PRICE 18e

## SOLDERLESS JR.

PHONE TIP PLUG

A standard solderiess iunior phone fip plug identical to No. 204 above except for in sulated handle.
No. 205
LIST PRICE 10 c

## Insulated Solderless SPRING BANANA PLUG

This insulated non-collapsible solderless spring banana plug is designed to give the greatest area of contact. Connection is made by a side set screw.
Metal parts are nickel plated brass except the four leaf banana spring which is nickel plated phosphor bronze. The high lustre insulated handle is 1" long. Available in red, black, green and yellaw. Overall length 1-11/16'.
No. 208
LIST PRICE 20c

Giant Banana Plug \& Jack

Designed to handle heavy high frequency currents. Made of nickel plated spring brass.
$\qquad$ 225-Jack
226-Plug with threaded shank
Made to fit all standphone plugs. Contact spring made of nickel plated phospho, bronze and body made of nickel plated brass. Highest quality insulating material used. Fits $3 / 8^{\prime \prime}$ hole in panels up to 3/16' thick. Supplied with one metal washet.

LIST PRICE 30c available in red, black, green and yellow. No. 108 LIST PRICE 20c

## STANDARD PHONE TIP

A standard phone
 tip made of nickel plated brass. Used extensively for connections on head
phone cords.
No. 220
LIST PRICE 2c

## SPRING BANANA PLUG INSULATED

In this spring banana plug no metal parts are exposed around the insulated handle. Connection is made by soldering to special type tubular lug which is an integral part of metal body. Non-collapsible four leaf banana spring gives maximum leaf banana spring Mives maximurn area of contact. Meral parts are nickel plated brass except banana phor which is asket plated phos phor bronze. ine high lustre insuin red, black, green and yellow.

No. 209
LIST PRICE 20c

## INSULATED SOLDERLESS SPRING BANANA PLUG <br> (INTERNAL SOLDERLESS FȦSTENER)

An insulated spring banana plug identical in appearance to our part No. 209 except that connection is made to an internal solderless fastener. The high lustre insulated handle is available in red, black, green and yellow.

No. 210
LIST PRICE 25c

## Insulated Phone Tip Jack

An insulated phane tip jack which makes very positive contact. Contact springs are made of phosphor bronze. Metol parts are nickel plated brass. is $3 / 11$ in diameter. Available is $3 / 6$ in diameter. Available in red, black, green and yellow.
Fits $1 / 4^{\prime \prime}$ hole in panels up to Supplied.
ingplied with nut and insulating washer.

No. 101
LIST PRICE 15 c

## . PHONE TIP JACK

A phone tip iack identical to our part No. 101 above except that it has a non-insulated 5/16' hex head. Metal parts are nickel plated brass.
Fits $1 / 4^{\prime \prime}$ hole in panels up to 3/8" thick.

No. 106
LIST PRICE 10c

## Open Circuit Phone Jack

SPRING BANANA PLUG
This spring banana plug is used extensively for plug-in coils, etc. Greater surface contact gives low RF resistance. Threaded shank is $6-32$ thread. $3 / 8^{\prime \prime}$ long. Overall length $1-3 / 16^{\prime \prime}$. All metal parts are nickel plated brass except the four leaf banana spring which is nickel plated phosphor bronze. Supplied with soldering lug.

## G.C RADIO PUSH-ON-KNOB SPRINGS

## INSTRUCTIONS - FOR MEASURING BELTS

To determine size of belt. if the old belt is available, cut the belt and measure for siretched out length. This will be "cut length" of belt.
If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread, it will be our "circumference around pulleys." In measuring belts always remember that the depending on thickness of belt.

## FILTERVOLT NOISE FILTER

An efficient filter for disturbances caused by
 electrical applana. For use with any allwave or broadcast receivers.
Rated conservatively at 250 watts for 32,110 and 220 volt AC or DC circuits. Can be installed either at the radio or at the source of disturbance.
Contains heavy duty R.F. chokes, large filter capacitor, and has a "PI" Filter circuit arrangement.
No. 338
Net $\$ 4.50$

## FILTERVOLT

Eliminates extreme ly noisy radio reception due to interruptions in power line caused by electrical appli ances, lights, etc No. 394
Net $\$ 2.70$
DUPLEX FILTERVOLT
Eliminates Radio Noises Caused By-

- Electric Shavers
- Refrigerators
- Fans - Elevators
- Motors, etc.

Unit is equipped with Dual outlet, both sides being filtered for noise elimination.
Packed 25 to a standard carton with attractive Counter Display Card.
No. 90
Net $\$ .90$

## UNIVERSAL VOLTAGE REGULATOR

 Voltage fluctuation often occurs not gradually but suddeny, thus bringing a trentendous strain on the tubes. This regulator protects tubes through scientitic regulation of current fluctuations. Housing body and end rings are neatly constructed and of perforated japanned metal. For all Radio Sets, AC DC or Battery operated.

No. 92
Net $\$ .90$
ICA 3-IN-I RADIO TUNER

Functions as either an Antenna Tuner, Wave Trap, or Aerial Eliminator. Operates on any make or model radio set.
As an Antenna Tuner, it will improve the reception of a weak station. As a Wave Trap, it will separate interfering stations and improve selectivity. As an Aerial Eliminator, it makes unnecessary the outdoor aerial. Easily installed within a few minutes.

50 to a standard package
No. 93-Complete with instructions Net $\$ .60$

## ICA DELUXE SIGNA-TONE

AUDIO OSCILLATOR - CODE PRACTICE SET - KEYING MONITOR
The ICA Signatone is a perfected Audio Oscillator, having 3 different output frequencies and a continuously variabie volume control. The Audio notes are similar to those of high quality commercial CW stations.

1. CODE PRACTICE SET-A number of phones and keys may be connected for intercommunication or for classroom or radio club instruction in code.
2. KEYING MONITOR-An invaluable aid in improving any ham's "fist". Will follow the "bug" at all speeds. No well-equipped station

No. 4300 should be without this keying monitor.
3. MODULATION SIGNAL-The steady note of the Signatone is ideal for adjusting both the Modulator and modulated stages of your transmitter for a maximum modulation percentage of not over 100 .
4. SIGNAL TRACER-By feeding the output of the Signatone into each stage of your modulator and listening to the output of that stage, defects and "bugs" can easily be located. Complete with tube and self-contained speaker, for 110 V AC-DC.
No. 4300-*Dealer Net Cost

## WALSCO STAPLE DRIVER

PATENT No. 2285384
PAYS FOR ITSELF ON THE FIRST JOB

- trigger control feed
- CAN BE REGULATED FOR DRIVING DEPTH
- STAPLES COLORED TO MATCH WIRE
- RELOADS IN 10 SECONDS
- FOR USE BY RADIOMEN, SOUND.

MEN, TELEPHONE AND BURGLAR ALARM COMPANIES, ELECTRICIANS AND FOR GENERAL STAPLING.

A real time and trouble-saving tool for stapling wire into cornets, into moldings, behind pipes, and on to hard surfaces, such as plaster, cement, and even soft concrete. For Radio, Public Address, and Inter-Communication installation and service. Useful also for general stapling, sign-posting, refrigeration gasket work, etc. The WALSCO Staple driver has met the teat in the fer and itself a real aid to maintenance men. This handy device automatically positions the staple-then one or two strokes with the palm of the hand and the staple is driven home neatly, quickly, and accurately. A small trikger regulates the feeding mechanism to enable the operator to strike the handie on hard surfaces as often as necessary before a second staple leaves the magazine. Staples come in strips, can be loaded in a few seconds and are large enough for cables and wires up to $1 / 4$ " diameter. An adjustable regulator controls the depth to which the staple is driven into surface, thus preventing damage to the insulation of the wire.
Cat. No. 500

## WALSCO ALIGNMENT TOOLS

$I$
These tools have won wide acceptance among radio men everywhere. They are precision made of the highest quality materials. Indispensable for work bench or tool kit. With a set of these tools the radio technician has the proper instruments to align almost any set.

Most of the tools are available either in sturdy bone fibre or in special Polystyrene plastic. The fibre tools are tougher than the plastic tools and are recommended for alignment of broadcast and intermediate band circuits, whereas the Polystyrene tools are for adjustments on high and ultra-high frequency circuits. Polystyrene is recognized by the radio profession as one of the finest low-loss insulating materials available today. Definitely needed on FM and television sets.
WALSCO $1 / 4^{* \prime}$ HEX 1. D. NEUTRALIZING WRENCH. This tool is very durable and can be cut if corners become rounded from wear as the internal hex shape extends through the entire length. Overall length- $71 / 2^{\prime \prime}$, O. D.— $3 / 8$ " round.

## WALSCO RADIO CEMENT Vibration-Proof Heat Resisting Unsurpassed Adhesive Power

An elastic cement especially made for the manufacture and repairing of speakers and for general radio work. Unaffected by vioration, dries fast and will never become brittle with age. - The latest developments in synthetic resins and gums are incorporated in Walsco Radio Cement.

- In addition to its use for speaker repair, Walsco Radio Cement can be used for repairing cabinets, loose tube bases, grid caps, etc. It will provide a strong bond between almost any materials and is not affected by high temperature, moisture or oil. All bottles come with builtin brush and have an evaporation-proof cap liner.

## WALSCO PLASTIC CEMENT

## (Formerly "Multi-Use Cement")

Especially made to repair broken plastic cabinet knobs, grid caps, etc. Waterproof, heat-resisting, and heavier in substance than Walsco Radio Cement. Unexcelled as "Household Cement," "Model Airplane Cement," etc. Cements Plastics, Metal, Wood, Glass, etc. Dries fast and forms an exceedingly strong bond. Cat. No.

List Price
41-1 $3 / 4$ oz. tube $\qquad$ . $\$ 0.45$

42--2 oz. bottle
44-4 oz. bottle 48--8 oz. bottle

## WALSCO VINYLITE CEMENT

This adhesive uses the new Vinylite plastic resin as a base and has remarkable properties such as high tackiness, extreme flexibility when dry and excellent adhesion to metals, plastics, leather, cardboard and paper. Fast drying. Also an excellent themoplastic cement for joining nonporous materials (e.g. metals). In this case the cement is applied to both surfaces and dried after which the parts are pressed together and bond established by heating with flatiron, soldering iron, etc.

## Cat. No.

25-2 oz. bottle

## WALSCO RUBBER CEMENT

For cementing rubber parts to metal or wood, rubber mounts to chassis, rubber cushions to lids, etc.-gives an especially strong bond. A Radio Serviceman should always have a bottle on his work bench. Cat. No.

## WALSCOLUB - B

A recently-developed chemical compound in thin paste form. WALSCOLUB-B counteracts oxidation, prevents corrosion of metals and eliminates noise on band switches, push buttons, tuners, volume and other controls, as well as airexposed electrical contacts, attenuators, etc. WALSCOLUB-B will not change electrical properties. It is superior to any graphite compound or liquid dope for this purpose. Ideal on metal surfaces to prevent rust. Servicemen: Its use will save you both time and money. Once you have tried it, you will never be without it! Large, handy applicator tube.

Available also in I-lb., $5-1 \mathrm{~b}$. and $25-1 \mathrm{~b}$. containers for industrial users. Prices on request.

## WALSCO CONTACTENE

## New Improved "Contact Cleaning Fluid"

- Cleans contacts and controls.
- Keeps controls and contacts noise-free.
- Lubricates and reduces friction.

A fast-evaporating combination of special solvents affording greatest cleaning power without affecting insulating materials. Contains liquified Walscolub B, which after evaporation of the solvents, forms a thin film that protects the contacts. Contactene is highly recommended for treating volume controls, band switches, tuning condensers, springs, etc., to eliminate noisy operation. Bottles come with built-in brushes.

## A WORD ABOUT WALSCO REFINISHING AND REPAIR KITS

These are the only kits on the market with all lacquers, stains and enamels specially prepared, ready mixed and soluble in alcohol. They have four outstanding advantages.

1. Drying time is reduced to approximately one-half.
2. The original finish of the cabinet cannot be lifted, as in the case of improperly applied ordinary lacquers.
3. An unsatisfactory patch can be washed off and the work started again.
4. No special thinners are required. Thinning, washing out brushes, etc., can be done with alcohol readily obtainable anywhere.

## WALSCO FLOCK FINISH SPRAY OUTFIT

A beautiful felt flock finish can be obtained without any skill by using this new kit containing the patented WALSCO Felt Flock Spray Gun. Any novice can turn out a professional appearing job. The finish is velvet-like, colorful, durable and inexpensive. For use on radio cabinets, phonograph turntables, speaker grilles, phonograph record cases, instrument boxes and for hundreds of other novelty items and hobby uses. Artistic patterns including initials and designs can easily be obtained by using stencils, masking tape or paper patterns. The kit contains spray gun, ivory and brown felt flock, undercoats to match, thinner, brush, instructions. Cat. ## WALSCO INSULATING TUBING (SPAGHETTI)

WALSCO offers two of the finest types of insulating tubing for the electrical and electronic field. The use of "RAYOFLEX" is advantageous wherever heat is present at the time of application or during operation (e.g. where soldering is performed near the tubing or where heat is generated by resistors, etc) "FLEXITUBE" is superior in all electric and many mechanical respects but is not recommended for use where temperatures exceed $185^{\circ} \mathrm{F}\left(85^{\circ} \mathrm{C}\right)$. This tubing is impervious to water, grease, alcohol, hydro-carbons, alkalis and acids

## WALSCO RAYOFLEX

A new type spaghetti tubing" made of heavily laequered rayon braid. Much more flexible than the conventional varnished tubing, good dielectric strength ( 4,000 to 5,000 volts). The materials used in the manufacture of this tubing are the latest developments in plastic lacquers and the new rayon braid gives RAYOFLEX a smooth and tough surface inside and out. Meets ASTM and VTA Specifications \#B2. Sizes up to \#6 are packed in handy boxes.

The pilot light lamp installer makes installation of pilot lights at hard to get places a very simple task. Will accommodate miniature screw base, miniature bayonet base, candelabra 110 volt type and neon bulb. No. 1937.

## INSULATED PHONE TIP JACK

Will accommodate all standard phone tip plugs, of the insulated and non insulated types. Recommended for use with our Nos. 200 and 201 phone tip plugs. Insulated head $3 / 81$ dia. available in Black and Red colors. Mounts in a $1 / 4$ " hole. Supplied complete with insulating shoulder washer and nut. Specify color.
No. 202
$\$ 15.00$ per $C$

## INSULATED BANANA JACK

Will accommodate all standard banana type plugs. Mounts in a $1 / 4^{\prime \prime}$ hole in panels up to $3 / 8$ " thick. Insulated head $3 / 8^{\prime \prime}$ dia. available in Black and Red colors. Supplied complete with insulated shoulder washer, soldering lug, and nut. Specify color.
No. $205 \quad \$ 15.00$ per $C$

## INSULATED COMBINATION JACK

This combination jack will accommodate all standard plugs, of the phone tip type or banana type construction. Mounts in a $1 / 4$ " hole in panels up to $1 / 2$ " thick. Overall length $13 / 8^{\prime \prime}$. Supplied complete with insulating shoulder washer and nut. Insulated head available in Black and Red colors. Specify color.
No. 206
$\$ 20.00$ per $\mathbf{C}$
ALLIGATOR CLIP PHONE TIP JACH

Insulated phone tip jack with No. 300 alligator clip. The jack portion will accommodate all standard phone tip plugs. Insulated handle $1^{\prime \prime}$ long available in Black and Red colors. Overall length $23 / 8$. Specify color.
No. 304
$\$ 45.00$ per C

## ALLIGATOR CLIP COMBINATION JACK

The insulated jack portion will accommodate all standard phone tip or banana type plugs. Insulated handle $11 / 4^{\prime \prime}$ Iong available in Black and Red colors. Overall length $21 / 2^{\prime \prime}$. Specify color.
No. 305.
$\$ 50.00$ per $C$

## banana plug and phone tip Jack COMBINATION

Insulated banana type plug of the spring type construction will fit all standard banana type jacks, and the top of the insulated sleeve of the plug will accommodate all standard phone tips. Insulated handle $1^{\prime \prime}$ long. Available in Black and Red colors. Specify color.

No. 214
$\$ 45.00$ per $C$

INSULATED SOLDERLESS PHONE TIP PLUGS

Insulated sleeve $3 / 4^{\prime \prime}$ long, and available in Black and Red colors. Will fit all standard phone tip jacks and specially recommended for use with our No. 202 insulated jack. The wire fits through the sleeve of plug, and is wrapped around the screw portion, and then tightened with the knurled nut provided, making soldering unnecessary. Specify color.

| No. | Type |  |
| :---: | :---: | ---: |
| 200 | Plug with No. 105 Tip | Per C |
| 201 | Plug with No. 106 Tip | 17.00 |

## INSULATED BANANA PLUG

Will fit all standard banana type jacks. A set screw is provided in the side of the plug to secure the wire to the plug without soldering. Insulated sleeve $7 / 8^{\prime \prime}$ long available in Black and Red colors. Overall length $15 / 8$. Specify color.

No. 204
$\$ 20.00$ per $C$

## INSULATED SOLDERLESS BANANA PLUGS

Spring type construction, and will fit all standard banana jacks. Tapped hole is provided in rear of plug and small screw machine stud is provided so that wire can be wrapped around and tightened without the need of soldering. Insulated handle is $3 / 4$ " long and available in Biack and Red colors. Specify color.
No. 211
. $\$ 20.00$ per $C$
This plug constructed the same as No. 211 described above, but the plug portion is made of hexagon brass. Plug is also supplied with screw machine stud. Insulated handle 3/4" long and available in Black and Red colors. Specify color.
No. 212
$\$ 25.00$ per r

## INSULATED BINDING POSTS

Insulated head posts available in $3 / 8^{\prime \prime}$ and $1 / 2^{\prime \prime}$ diameter in Black and Red colors. Each binding post complete with screw and lockwasher.

| No. | Head Dia. | Per C |
| :--- | :---: | ---: |
| 207 | $3 / 8^{\prime \prime}$ | $\$ 15.00$ |
| 203 | $1 / 2^{\prime \prime}$ | 15.00 |

## INSULATED BINDING POST HEADS

The insulated heads are knurled and are the same as used on our Nos. 207-208 Binding Post. Knurled insulated head is threaded, eliminating the necessity for using a brass bushing. Available in Black and Red colors. Specify colors.

210

| Head Dia. | Per C |
| :---: | ---: |
| $3 / 8^{\prime \prime}$ | $\$ 6.50$ |

## BANANA TYPE PLUG

This plug is hexed brass, nickel plated. The spring is made of phosphor bronze assuring positive and lasting contact. Plug is constructed with a 6-32 female thread inside and is supplied with a $6-32$ screw and soldering lug. No. 100 $\qquad$ $\$ 12.00$ per $C$

## SPLIT TYPE BANANA PLUG

Made of hexed brass, heavily nickel plated overall. Will fit all standard banana type jacks. Overall length 11/4". Threaded portion 6-32 $\times 1 / 2^{\prime \prime}$ long. Supplied with two 6-32 hexagon nuts.
No. 104
. 12.00 per $C$

## BANANA TYPE PLUG Spring Type

Plug and spring are made of brass, nickel plated. The spring type of construction assures positive and lasting contact. Plug is threaded $6-32$ and the threaded portion is $1 / 2^{\prime \prime}$ long. Supplied with two $6-32$ hexagon nuts. No. 103................. $\$ 12.00$ per C

## ALLIGATOR CLIP

Clips are made so that the jaws match accurately, permitting them to grip all sizes wire securely. The barrel of clip will accommodate all standard banana type plugs. Made of steel, cadmium plated. Overall length $2^{\prime \prime}$.
No. 300............................. $\$ 10.00$ per C

## INSULATED ALLIGATOR CLIP

Embodies our No. 300 Alligator Clip. Insulated handle $3 / 4$ " long and will accommodate all standard banana type plugs. Insulated handle available in Black and Red Colors. Specify color required
No. 301...
$\$ 20.00$ per C.

## BANANA PLUG JACK

Recommended as the mate for the No. 100 Banana type plug, but will accommodate all standard banana type plugs. Jack is made of brass, heavily nickel plated overall. Mounts in a $1 / 4^{\prime \prime}$ hole and will fit in panels up to $\frac{7}{16}$ thick. Jack is furnished with $1 / 4.32$ nut and soldering lug.
No. 101
. $\$ 12.00$ per C

## BANANA PLUG JACK

Will accommodate all standard banana type plugs and specially recommended as the mate for Nos. 103 and 104 banana plugs. Made of brass nickel plated, and mounts in $14^{\prime \prime}$ hole in panels up to $3 / 8^{\prime \prime}$ thick. Supplied with nut and soldering lug.
No. 109 $\qquad$ $\$ 10.00$ per C

## METAL BINDING POST

Made of brass, heavily nickel plated overall. Supplied complete with screw and lockwasher.

No. 110
$\$ 25.00$ per C

## INS. SHORT PHONE TIP

Will fit all standard phone tip jacks of the insulated or non-insulated types. Insulated sleeve $3 / 4{ }^{\prime \prime}$ long, and available in Black and Red colors. Specify color desired.

No. 203............. $\$ 15.00$ per C

## Split Type <br> INSULATED BANANA PLUG

The banana plug is of the split type construction. Insulated handle $7 / 8^{\prime \prime}$ long. A set screw is provided in the side of the plug, to secure the wire to the plug without soldering. Available in Black and Red colors. Specify color desired.

No. 213 $\qquad$ $\$ 20.00$ per C

## SOLDERLESS PHONE TIPS

These tips are constructed so that the wire fits through the body of the tip, and is wrapped around the screw portion, and tightened with the knurled nut provided, making soldering unnecessary.

| No. | Length | Per C |
| :---: | :---: | ---: |
| 105 | $15 / 8^{\prime \prime}$ | $\$ 10.00$ |
| 106 | $11 / 8^{\prime \prime}$ | 10.00 |

## SOLDER TYPE PHONE TIPS

Made of brass, nickel plated. Overall length $1^{\prime \prime}$. Dia. of tip will fit all standard phone tip jacks.
No. 108 $\qquad$ . $\$ 20.00$ per M

## MIDGET PHONE JACK

Signal Corps type
 $J$ 670-Single open circuit midget phone jack. Mounts in $3 / 8^{\prime \prime}$ hole in panels up to $1 / 4$ " thick. Bushing is brass, nickel plated. Springs made of phosphor bronze, and the springs are insulated from the frame by heavy duty bakelite washers.
No. 122.
. $\$ 35.00$ per $\mathbf{C}$
MIDGET PLUGS AND JACKS Banana Type

Midget banana type plugs and jacks, for use where a minimum amount of space is available. Both plugs and jacks made of brass, nickel plated. A hexagon nut is provided with each plug and jack.
No. Item PerC
111 Plug \$9.00
112 Jack 14.00

## PHONE TIP JACK

Will accommodate all
 standard phone tip plugs of insulated and non-insulated types. Made of brass, nickel plated. Mounts in a $1 / 4^{\prime \prime}$ dia. hole in panels up to $3 / 8^{\prime \prime}$ thick, and is supplied with hexagon nut. No. 107........ $\$ 10.00$ per C

|  | 502 | S P D T | $\frac{15}{32}$ | . 60 |
|  | 503 | S P D T | $1{ }^{\prime \prime}$ | . 70 |
|  | 504 | D P S T | $\frac{15}{33^{\prime \prime}}$ | . 90 |
|  | 505 | D PST | 1 ' | 1.00 |
|  | 506 | D P D T | $\frac{15}{32^{\prime \prime}}$ | 1.00 |
|  | 507 | D P D T | $1^{\prime \prime}$ | 1.10 |
|  | 508 | On and Off Name Plate |  | . 05 |

## BAT HANDLE TOGGLE SWITCHES

These switches are the same as described above with bat shaped handle. Shaft length $\frac{15}{32}$ ".

## SLIDE LEVER SWITCHES

Rated $11 / 2$ Amps. 110 Volts. Size $13 / 8{ }^{\prime \prime} \times 1 / 2{ }^{\prime \prime}$. Mounting centers 1/1/8".

| No. | Type | Each |
| :--- | :--- | ---: |
| 515 | S P S T | $\$ 0.35$ |
| 516 | S P D T | .45 |
| 517 | D P S T | .50 |
| 518 | D P D T | .50 |

## MOTOROLA TYPE PLUG

Attachment plug for all Motorola auto radio receivers and many other types of auto radios.

No. 1200.
. $\$ 10.00$ per C

PHONO ADAPTER ATTACHMENT PLUG

Phonograph pick-up and auto radio connection plug.

No. 1201
$\$ 10 . \mathrm{n}_{0}$ per C

## PHONO JACK

Mate for the No. 1201 plug. Jack mounted on bakelite and metal back supplied for use with phonograph attachment.

No. 1203
\$15.00 per C

## ANTENNA CONNECTOR

For use as connection of auto
 radio antenna lead-in to auto radio receiver

No. 1300
$\$ 10.00$ per C

## FUSE RETAINER

Recommended for use in auto radio power supply cables.
No. 1301................................................................. $\$ 15.00$ per C

## Parts for Connector and Retainer

| No. | Item | Per C |
| ---: | :--- | ---: |
| 1305 | Male Cap for No. 1300 and No. 1301 | $\$ 1.50$ |
| 1306 | Female Shell for No. 1300 | 1.50 |
| 1307 | Contact for No. 1300 and No. 1301 | 2.00 |
| 1308 | Spring for No. 1300 and No. 1301 | .50 |
| 1309 | Washer for No. 1300 and No. 1301 | .40 |
| 1310 | Insulating Tube for No. 1301 | . .60 |
| 1311 | Female Shell for No. 1301 | 2.50 |
|  |  |  |

## FUSE MOUNTING BASES

Black bakelite, panel mount type. Will accommodate the 3 A G Auto type cartridge fuse.

| No. | Type | Each |
| :--- | :---: | ---: |
| 530 | Single | $\$ 0.20$ |
| 531 | Double | .30 |

## FUSE CLIPS

Clips made of spring brass, nickel plated. Will accommodate the 3 A G Auto type cartridge fuse. Clips $1 / 4^{\prime \prime}$ wide $\times 3 / 8{ }^{\prime \prime}$ high. No. 532 . $\$ 1.75$ per C

## FAHNESTOCK SPRING BATTERY CLIPS

Clips are made of brass, nickel plated and are available in the single and double clip types.

| No. | Type | Length |  | Per C |
| :---: | :---: | :---: | :---: | :---: |
| 533 | Single | $3 / 4$ " | Will take \#14 B \& S wire | \$1.65 |
| 534 | Single | 1 " | Will take \#10 B \& S wire | 2.00 |
| 535 | Double | 11/2" | Wlil take \#10 B \& S wire | 9.00 |
| 536 | Double | $2 \frac{1}{16}{ }^{\prime \prime}$ | Will take \#10 B \& S wire | 10.00 |

## GRID CAP SHIELD

Shield is slotted on the side, for passage of the grid lead wire. The shield fits snugly over the grid cap of the tube, completely shielding same. Shield is cadmium plated finish.

No. 537.................................. $\$ 10.00$ per C

| 1483 | $15 / 16^{\prime \prime}$ |  | 7.50 |

## TERMINAL LUGS AND SCREWS

Recommended for heavy duty terminal strips. Lugs are tapped with screw inserted. No. 1478 lug, brass cadmium plated and No. 1479 lug, brass hot tinned.
No. 1478....................... $\$ 3.50$ per C
No. $1479 \ldots \ldots \ldots \ldots \ldots \ldots . . . . . . . . . . . . . . .6 .00$ per $C$

BRASS AND STEEL ANGLES

## CABLE CLAMPS

No. 1470 --Steel Cadmium plated. $\quad$ Per C
No. 8 hole, length $3 / 4^{\prime \prime}$, width $3 / 8^{\prime \prime}$
Will fit over $1 / 4^{\prime \prime}$ cable. ....................... $\$ 1.25$
No. 1471-Steel Cadmium plated.
No. 8 hole, length $5 / 8^{\prime \prime}$, width $3 / 8 "$ 。
Will fit over $1 / 8 \prime$ to $1 / 4^{\prime \prime}$ cable.
$\$ 1.25$
No. 1472-Steel Cadmium plated.
No. 8 hole, length $1^{\prime \prime}$, width $3 / 8$ ".
Will fit over $1 / 2^{\prime \prime}$ cable.
$\$ 1.50$

## TAPPED ANGLE BRACKET

Made of steel cadmium plated. Size $1 / 2^{\prime \prime} \times 1 / 2 \prime$, with one $8 / 32$ tapped hole and one plain .165 hole.

No. 1473.
$\$ 4.50$ per $C$

## RUBBER GROMMETS

## STEEL SPADE BOLTS

Steel cadmium plated finish, threaded 6-32, thread length $\frac{5}{16}$ ", length overall $3 / 4$ ".

No. 1500 $\qquad$ $\$ 6.50$ per M

## MICROPHONE CONNECTOR

## Single Contact Male

A completely shielded single contact connector. Made of brass and heavily shrome plated. Mate for No. 116 female connector. No. 115. $\$ 0.40$ each

## MICROPHONE CONNECTOR

## Single Contact Female

Mate for our No. 115 male connector. This connector is used extensively for making connections from microphone to amplifier. Comes equipped with coupling ring. All metal parts are made of brass, heavily chrome plated, except the spring.

No. 116 $\qquad$ $\$ 0.50$ each

## CHASSIS CONNECTOR

## Single Contact Male

This type connector is recommended for use on the chassis or in the microphone. Made of brass, heavily nickel plated. Threaded $3 / 8^{\prime \prime}-27$, and mounts in a $8 / 8^{\prime \prime}$ hole. Supplied complete with washers, soldering lug and nut.
No. 117.
$\$ 0.30$ each

## CAP AND CHAIN

Made of brass, heavily nickel plated. The cap seals open end units against dust, eliminating noisy connections. Used with any threaded one or two conductor chassis unit.
No. 118 $\qquad$ $\$ 0.50$ each

## BEARING FOR PANEL ASSEMBLY

Made of brass, and fits in $1 / 2^{\prime \prime}$ diameter hole in panels up to $\frac{5}{16}{ }^{\prime \prime}$ thick. Bearing is made to accommodate $1 / 4$ " shafts.

No. 119
$\$ 0.20$ each

## BRASS COUPLING

Made of brass $1 / 2^{\prime \prime}$ outside diameter with $1 / 4^{\prime \prime}$ hole drilled all the way through to accommodate $1 / 4^{\prime \prime}$ shafts. Overall length $3 / 4 \prime$. Two screws are provided in coupling for tightening to shaft.
No. 120
$\$ 0.20$ each

## Harry Davies Molding Co.

 L. Molders of Plastics
## 1428 NORTH WELLS STREET $Q$ CHICAGO 10 , III.

STANDARD COLORS FOR DAVIES KNOBS: Black, Walnut, Red or Ivory. Others to order. Quality radio knobs for standard $1 / 4$ " shaft. Set screw, spring, or knurled hole mounting, or $1 / 4^{\prime \prime}$ brass bushing.

No. 2150
Streamlined bar knob. Length $11 / 4^{"}$.

No. 2250
Streamlined bar knob.
Length $21 / 4^{\prime \prime}$. Molded hole, set screw mounting.

TAPPED 4 TERMINAL AC-DC RESISTANCE CORDS

#### Abstract

Pilot light resistor shunt built into the line cord. Used on Fmerson, Zenith, Sparton, R. C. A., General Electric, Wells-Gardner, Sears Roebuck, Fada, Admiral, Air King, Detrola, Grosley, Garod, and others.

No.
2176-160 OHMS-TAPPED AT 24 OHMS
For sets using tubes having a voltage drop of approximately 69 volts as $2-25$ volt tubes and $3-6.3$ volt tubes plus single pilot light or similar combination

2195-165 OHMS-TAPPED AT 30 OHMS
There is a large demand for this tapped line cord

2177-180 OHMS_TAPPED AT 25 OHMS
For sets using tubes having a voltage drop of approximately 63 volts as $2-25$ volt tubes and $2-6.3$ volt tubes plus a single pilot light or similar combination

2378-200 OHMS——TAPPED AT 25 OHMS
For sets using tubes having a voltage drop of approximately 57 volts as 1.25 volt tube, $1-12$ volt tube and $3 \cdot 6.3$ volt tubes and a single pilot light. May also be used for sets using tubes having a voltage drop of 63 volts, ( 2.25 volt and $2 \cdot 6.3$ volt tubes) if high line voltage ( 125 volts) is encountered....

## 2179-200 OHMS-TAPPED AT 40 OHMS

For sets using tubes having a voltage drop of approximately 57 volts as $1-25$ volt tube, $1-12$ volt tube and $3 \cdot 6.3$ volt tubes and two pilot lights in series

List, Ea.
$\left\lvert\, \begin{aligned} & \text { No. } \\ & 2174-280 \text { OHMS-TAPPED AT } 40^{\mathrm{Li}}\end{aligned}\right.$ OHMS
For sets using tubes having a voltage drop of approximately 32 volts as 2.12 volt tubes and 1.6 .3 volt tube or $5-6.3$ volt tubes or similar combinations using 2. pilot light in series

2164-360 OHMS—TAPPED AT 80 OHMS
Used in Garod Model BP-20. See No. 2196 for specifications.............

2166-430 OHMS-TAPPED AT 80 OHMS
For Farnsworth Model CD59. See
No. 2196 for specifications ..........
2156-510 OHMS-TAPPED AT 80 OHMS
For Fada. See No. 2196 for specifcastions

2196- 560 OHMS-TAPPED AT 80 OHMS
Tapped at 80 ohms for plate of rectifier. Designed with voltage dropping resistor to plate of rectifier. Avoids necessity of using B+ resistor. This cord used extensively
2158-960 OHMS-TAPPED AT 80 OHMS
For G. E. Model L622. See No. 2196 for specifications

2165-1950 OHMS——TAPPED AT 360 OHMS
Used extensively in sets such as Crosley Model 27BD, Admiral Model 28-G-5, and other sets with similar circuits

HIGH RESISTANCE CORDS

No.
2197 For 3 -way portable radios. AC-DO battery. New high resistance type cord, has 560 ohms resistance. many thousands of sets using this identical cord are now in use. This popular replacement cord should be stocked by every serviceman! Individually packaged ..................

## 2157-For AC-DC Sets.

This cord has 960 ohms resistance, and is used wherever 45 Z 3 rectifier tube is amployed. (For pocket type radios, such as: Admiral, Fada Sentinel, Sonora, Motorola, Detrola. Farnsworth, etc.) Individually ${ }^{\text {pack- }}$ aged

## REPLACEMENT LINE CORD FOR MOTOROLA SETS

No.

## List

Price
2198-8 ft. cord containing 2 resistance elements- 1100 and 280 ohms. Has 4 terminals. Essential replacement for all Motorola portables. Nos. $41 \mathrm{D}, 51 \mathrm{D}, 52 \mathrm{D}, 41 \mathrm{H} . \$ 2.06$

## COMBINATION ANTENNA WIRE and STRAIGHT AC CORD

No.
$\underset{\text { Price }}{\text { List }}$
2168-3-wire cord with special female socket to fit sets which have three prong male plug, used in Sentirrel, Admiral, Belmont, Sonora, etc. Individually packaged $\qquad$
UNIVERSAL AC-DC RESISTANCE LINE CORDS

No.
2175-This line cord replaces AC-DC cords from 220 ohms to 300 ohms. Can be used for either standard three terminal or tapped cord........

## UTERDDO DAL BELT KTS

JFD DIAL BELTS FOR SERVICEMEN
JFD offers you the choice of three kit assortments containing 25,50 or 100 of the most popular belts-in a sturdy metal index cabinet. Included with each kit are 1 MEASUREMENT CHART, a CONVERSION CHART and a 64 -page BELT BOOKLET covering all types of belts for more than 1,500 radio models. BETTER GRIP: Maximum friction on the inside surface, nonslip grip.
THREE PLY CONSTRUCTION: Three layers of woven fabric impregnated with high-grade synthetic rubber.
EXACT FIT: Precision-made to correct length, guarantees accurate tuning. Easy to install, no adjustments necessary. USE JFD BELTS ALWAYS.

USE THE BELT THE MANUFACTURERS USE

Cat. No. 8-1
$3 \frac{3}{16}{ }^{\prime \prime}$ overall length from tip to tip. Polished bronze, clear lacquered dial pointer. $1 / 4^{\prime \prime}$ bushing, can be snipped off to any desired length. Decorative modernistic square........List Price $\$ 0.35$ Cat. No. 8-2
$31 / 8^{\prime \prime}$ overall length from tip to tip. Polished bronze, clear lacquered dial pointer. $1 / 4^{\prime \prime}$ bushing, can be snipped off to any desired length. Modernistic curved motif... Cat. No. 8-3
Single arm. Measures $31 / 2^{\prime \prime}$ from center to end. Polished bronze, clear lacquered dial pointer. $1 / 8 \prime$ bushing. Can be snipped off to any desired length. Modernistic design... $\qquad$ . List $\$ 0.35$ Cat. No. 8-4
$3^{1 / 4 \prime \prime}$ overall length tip to tip. Polished bronze, clear lacquered dial pointer. $1 / 8^{\prime \prime}$ bushing. Can be snipped off to any desired length. Modernistic design................................................List \$0.35 Cat. No. 8-5
Slide scale dial pointers. $41 / 2^{\prime \prime}$ overall length. White enamel finish. Can be snipped off to any length desired.. $\qquad$ .List $\$ 0.25$ Cat. No. 8-6
Slide scale dial pointer, $2 \frac{9}{6 / 6}$ " overall length. White enamel finish. Can be snipped off to any desired length. $1 / 2 " \times 1 / 4$ " slide slank.

Cat. No. 8-7
List $\$ 0.25$
Slide scale dial pointer. Red plastic indicator. $21 / s^{\prime \prime}$ overall length. Can be snipped off to any length. $1 / 2^{\prime \prime} \times 1 / 4 \prime$ slide shank.

Cat. No. 8-10
Popular servicemen's assortment of 10 assorted dial pointers containing all the numbers at left. Comes in attractive plastic container which keeps pointers in perfect condition...... List Price $\$ 2.90$

## JFD SERVICEMEN'S COMBINATIONKIT

An assortment of all these little things
that the Serviceman will find so convenient to have with him on the job.

# JFD PRECISION MADE <br> DIAL DRIVE NYLON CORD and CABLE 

## HANDY SPOOL FOR DIAL CABLE AND CORDS

The finest line of nylon dial cables and cords on the market, put up and packaged in a truly modern manner. All length spools come on metal spools, housed in transparent plastic containers which permit simplicity of

handling, renders cable weather-proof, prevents cable from rotting, becoming brittle, or losing its original strength or color.

Empty Plastic Container Makes A Handy All-purpose Kit for Small Parts, Washers, etc.

## JFD 42 STRAND PHOS PHOR BRONZE CABLE

42 Strand Phosphor Bronze Cable with a linen thread center. This is the best flexible bronze cable obtainable. Wound on metal spool.
No. Spools List

SHIELDED LEAD-IN WIRE
(Single Cond.)
Single conductor shielded wire, stranded, timed, 22 gauge, durable cotton braid covered.
$911-\mathrm{H}$

## SHIELDED LEAD-IN WIRE (Two Cond.)

Two conductor shielded wire, stranded, timned, 22 gauge, durable cotton braid covered. 912-H

## TEST LEAD WIRE

Kinkless flexible soft rubber covered test lead wire, 18 gange, red or black.
2170--26 ft. havis
$2172-600 \mathrm{ft}$ hank
2173-1000 ft. spool

## JFD INTER-COMMUNICATION CABLE, BRAIDED TYPE

GENERAL PURPOSE: Designed for interior use for connecting intercommanication sysCONSTRUCTION: Each conductor stranded copper wire, two rayon reverse serves paraffined, color coded.

Sturdy 2 conductor, 18 gauge, POSJ (Zip), 6 foot power supply cord, with moulded unbreakalle rubber plug.
2199-Z
U. I. Approved

Similar to 2199-Z above, but with bakelite male attachment plug. 2199.Y

Sturdy 2 conductor, 18 gauge, 6 foot power supply cord. Covered with durable cotton overall braid, with moulded "unbreakable rubber plur. Pigtail leads stripped and tinned, ready to attach.

## THE NEW IMPROVED JFD REMOTE-O-CABLE REPLACER

The Most Efficient Auto Radio Tuning CableServicing Machine in Use Today!
Completely redesigned to meet MODERN Servicing requirements, the NEW JFD REMOTE-O-CABLE REPLACER is a vital necessity in the workshop of every auto-radio serviceman.

1. SWEDGES SHAFTING TO PRE. VENT UNRAVELLING.
2. CUTS SHAFTING TO EXACT LENGTH.
3. REPLACES OLD FITTINGS ON NEW SHAFTING.
4. CASING GROOVE MAKES CUTTING EASY.

ANY JOB PROMPTLY DONE AND DELIVERED-The Remote-OCable Replacer +50 feet of shafting and casing + an assortment of fittings and you are fully equipped.
USE OLD FITTINGS ON NEW SHAFTING-No need to wait for special lengths or odd fittings.
NO DELAY-shafting of any length immediatety available.

SERVICEMEN'S NET COST $\$ 67.52$

SIze: Length, $101 \mathbf{2}^{12}$. Width, 41/4". Height, 13". Weight, 291/4 lbs.
NO LOSS OF HEADS OR SHAFTING--Shaiting of any make radio immediately changed to fit any dashboard head.
FRONT-REAR-ANYWHERE-Radio control in any part of the car.
EXACT LENGTH OF SHAFTING DOES IT-Maximum tuning efficiency.

 <br> <br> Auto Antennas}

## JFD CUSTOM BUILT DELUXE STAR AUTO RADIO ANTENNAS

The JFD Star and Standard Antennas are built of antimonial-admiralty brass tubing, stainless steel type rods, of high tension flexible strength-rattle-proof construction-heavily chrome plated.

By direct comparison, the JFD STAR antenna is actually $50 \%$ heavier than other makes, with proportionately greater signal capacity and rigidity.

Every JFD Star and Standard Antenna is equipped with a full length of Q.H.F. low-loss Polyethylene air-gap type shielded cable to prevent noise pickup, together with necessary mounting brackets designed to give a custom-built appearance. All antennas come individually packed-10 to the master carton.

JFD ANTENNA FEATURES

## JFD AUTO MOTOR SPARK NOISE SUPPRESSORS AND CONDENSERS

Maximum efficiency for both radio and motor is insured by the use of JFD Suppressors. They are designed with long resistors, minimum capacity and have the best possible ratio of RF to DO resistance. Adequate noise suppression is given by a resistance of only 10,000 ohms and with this low DC resistance, full motor efficiency is assured. Very strong mechanically, they will withstand high voltage, vibration, heat and every weather condition.
With the exception of the Ford special, which has a resistance of 200,000 ohms, the standard resistance is 10,000 ohms.

# dFD Feather-Touch Playback Needles 

MADE Long Lite - Fine Tone - Fill Record Protection

JFD FEATHER-TOUCH PHONOGRAPH NEEDLES will give you COMPLETE satisfaction. The JFD FEATHER-TOUCH NEEDLES possess fine tone, long life, and full record protection. There is nothing more that a fine needle can offer!

The sale of good needles is profitable. Each year more and more phonographs, records, discs, and needles are sold. Last year's sales reached an all-time high, with more than $200,000,000$ rec-
ords and discs being sold. The sale of needles has increased to astounding proportions; the new JFD needles should greatly stimulate these sales.
ALL JFD FEATHER-TOUCH PHONO NEEDLES are shadowgraphed and mounted on attractive, colorful, self-seliing displays. Each individual reedle is mounted on an attractive card, individually wrapped in cellophane.

PN-060 This feather-touch needle is guaranteed for a minimum of 2000 playings. It has excellent tone, unusual in the low class field. It will outplay, and give finer performance than any needle on the market in its class. The PN-060 is shadow-graphed, made of fine alloy metals, with precious metal point.
PN-060-Each $\$ 0.60$ list. 24 individually wrapped needles on beautiful display card.
$\$ 14.40$ List

PN-100 This feather-touch needle is guaranteed for a minimum of 4000 playings. It is truly a de-luxe needle, containing a long life highly polished precious metal poht, cushioned shaft, clear bell shank to produce balanced tone. For record performance and protection, this needle is tops in its field: Each needle is shadow-graphed and moonted on an attractive three-color card, individually wrapped in cellophane.
PN-100—Each $\$ 1.00$ list. 12 individually wrapped needles on beautiful display card.
$\$ 12.00$ List

$$
--1
$$

PN- 150 This JFD feather-touch needle is guaranteed for a minimum of 6000 playings. Will not scratch or scrape records and will produce fine tone quality. The clarity of this needle is due to its highly polished curved shank construction and bell-like precious metal alloy tip. Each needle is carefully shadow-graphed and mounted on a beautiful three-color display card, individually wrapped in cellophane.
PN-150-Each $\$ 1.50$ List. 12 individually wrapped needles on beautiful display card.
$\$ 18.00$ Lisi

CN-060 The JFD feather-touch recording stylus is guaranteed for a minimum of 300 cuttings on 6 inch dises. This sturdy, precious metal, alloy tipped needle, cuts a V bottom groove. It is highly polished, long wearing and a producer of best in recording. Unusual for its price, this shadow-graphed cutting needle is especially recommended for amateur use. Each needle is individually wrapped in cellophane and mounted on a striking three-color display card.

6. Comes in convenient index envelope.
7. Two playing faces on each disc.
8. Light in weight.
9. Flexible-will not crack or break.
10. Will not dry out or deteriorate.
11. Shavings are flame-proof.
12. Non-peeling surface.
13. Low in cost.

## JFD BEARING LUBRICANT

To lengthen the life and improve the performance of any recording machine. Just the thing for turntable spindles, phonograph motors, recording mechanisms. Non-acid. Will not dry out, thin or run.

No. ST722
$\$ 0.50$ List-2 oz.
No. ST724
\$0.65 List -4 oz.

## STROBOSCOPE DISC

Accurately calibrated stroboscope for adjusting both phono playback and record making speeds. 78 and $331 / 3$ RPM. $6^{\prime \prime}$ Diameter. Complete instructions on face.
No. STI88.

JFD RECORD LUBRICANT

Makes records last longer. Reduces surface noises and lessens wear on records. When used as a lubricant before recording, it makes a better recording - and one that will last longer.

No. ST712

# JFD <br> PRECISION <br> MADE AC-DC Adjustable Ballasts 

Just
3 Adjustable Ballasts Replace Over 3000 Exact Duplicate AC-DCResistance Tabes!

No. 770-SERVICEMEN'S KIT
contains 5 Ballasts: 2 Type A, 2 Type B, 1 Type $\mathbf{C}$ Ballasts together with listing of over 2500 replacements and complete instructions.............................List Price $\$ 7.50$

## JFD IMPROVED AIR-COOLED ADJUSTABLE AC-DC BALLASTS HAVE THESE IMPROVEMENTS:

1. Air-Cooled Perforated Shell
2. Larger Insulating Surface
3. Longer Life, Heavier Resistance Wire 4. Exact Adjustments made

## $\underset{\text { PRICE }}{\text { LIST }}$ \#. 50

ea.

Over 3,000,000 JFD Adjustable Ballasts have been sold since 1934 - practically every one still in use, giving service and satisfaction.

## "FREE" - AC-DC <br> BALLAST <br> MANUAL. <br> ASK YOUR JOBBER FOR IT.

Gives information on how to adapt adjustable ballasts to all service
 jobs.

SELF ADJUSTING REPLACEMENT BALLASTS

\$2.25 ea.

These ballasts have the general characteristics of the originals. Wound with a special alloy wire having a very high temperature coefficient of resistance which results in excellent self regulation. Packed in attractive Individual cartons.

STEP-DOWN FROM 220 VOLTS TO 110 VOLTS

JFO STEPDOWN BALAST

Use JFD voltage reducing ballasts on 220 volt current supply if you want to operate 110 volt appliances. Excellent for radios, floor lamps, clocks, therapeutic lamps, electric blankets, etc.

FOR PHONO-RADIO COMBINATIONS

## 59 we HANSTOR BIMASIS for Tuarescers पIFHTINE FHTURES

Fluorescent wall fixtures, ceiling fixtures, and desk lamps designed for operation on AC may be used on DC of equivalent voltage by using one of these ballasts. Ballast has a receptacle at one end and a standard two-prong plug at the other.

These ballasts are designed for domestic and foreign use, and operate on 25 to 60 cycles $A C$, or DC.

## JFD "GLOVE FIT" TUBE SHIELDS-New ST-12 Bulb Series

A new, improved type of tube shield assembly that fits the tube "like a glove." The body of the shield is composed of two identical half shields which slightly overlap to insure complete enclosure. When the two half shields are fitted to the tube, they can easily be slipped into the base. The half shields are then pressed together near the top and the cap snapped on. The shoulder of the bulb acts as a pivot and the halves are forced outward at the bottom, tightening the shield in the base. This insures positive contact between shield and base, and also tends to hold tube tightly in socket. Especially desirable for auto and portable radios. Caps, bodies and bases can be used interchangeably.

## For Tubes with Short ST-12 Body

Assembly consists of four pieces as illustrated at left: two identical half-shields each $3 \frac{5}{16}^{\prime \prime}$ long, together with high cap for tubes with top grid, plus base for wafer sockets, having slotted mounting holes I $1 / 2$ to $1 \frac{2 T^{\prime \prime}}{}$ center to center. Suitable for following tubes:

| 1 A 4 | 2A6 | 6A8G | 6K5G | 85 |
| :---: | :---: | :---: | :---: | :---: |
| 1 A 6 | 2 A 7 | 6B8G | 6K7G | 6Q7G |
| $1 \mathrm{B4}$ | 2B7 | 6D8G | 6L7G | 6R7G |
| 1 C 6 | 6 67 | 6F5G | 55 | 6S7G |
| 1D5G | 6B7 | 6J7G | 75 | 6T7G |
| IE5G | 6 F 7 | 38 | 77 | etc. |
| 1 F 6 | 15 | 39 | 78 |  |
| 1F7G | 36 | 44 | 79 |  |

No. 3554-Four-piece tube shield assembly as described........................................List Price $\$ 0.55$

For Tubes with Long ST-12 Body
Assembly comprises four sections as illustrated at right: two identical half-shields each $35 / 3^{\prime \prime}$ long, together with one low cap, for tubes requiring no top grip cap shielding, plus one base for wafer
type sockets having $11 / 2^{\prime \prime}$ to $1 \frac{27}{32}$ ' mounting centers. Suitable for following type tubes:

| $1 \mathrm{E7G}$ | $6 J 5 \mathrm{G}$ | 606 |
| :--- | :--- | :--- |
| 1 H 4 G | 6 K 6 G | 6 D 6 |
| 1 H 6 G | 6 L 5 G | 57 |
| 1 J 6 G | 6 X 5 G | 58 |
| 6 H 6 G | 25 Z 6 G | etc. |

No. 3555-Four-piece tube shield assembly as described.

List Price $\$ 0.55$

## RADIO TUBE DEALERS' \& SERVICEMEN'S PACKAGE 100 Complete Tube Shield Assemblies and 40 Extra Accessories

An essential for every radio tube dealer and serviceman! This package contains 100 fast-moving assorted tube shields and 40 accessories. A convenient way of carrying a complete tube shield stock to meet the ever-growing demand:
No. TS 100-Servicemen's assortment of one hundred tube shields and accessories. $\qquad$ List Price $\$ \mathbf{2 5 . 0 0}$

# JID MADE 

## JFD ''T-9 SERIES' FOR T-9 BULB BATTERY TUBES (having . 050 amp fil.) FOUR-PIECE "HIGH COVER" ASSEMBLY <br>  <br> For the new Bantam type battery tubes, where comole shielding including crid cap is required Shield fits snugly over base of tube, and groundne lug automatically rounds shield to pround pin of tube. Oyerall lenerth of shield with rrid cap cover is $33 / 4$ ". For use with following tubes: <br> 1A7G 1H5G 1N5GT 1P5GT 1A7GT 1H5GT 1P5G ETC.

No. 3545-complete assembly (illustrated). List Price \$0.25

## FOUR-PIECE

 "LOW COVER" ASSEMBLY For new battery type bantam tubes having "T-9"
5

## 弯

 bulb, same as above, except has low cover. Overall length with cover, 3it. Can be used with battery type bantam tubes having grid cap, where shielding of cap is not necessary (1A7G, 1 H 5 G, IN5GT, ctc.) or with battery tubesfaving no top cap, such having no top cap, sue
as $1 \mathrm{E} 4 \mathrm{G}, 1 \mathrm{G} 4 \mathrm{G}$, etc.

No. 3544-N-complete assembly (illustrated) List Price $\$ 0.25$

## THREE-PIECE

 "COVERLESS" ASSEMBLY

For Battery type ban tam "T-9" tubes, without grid cap. Length of shield is $2 \frac{15}{1 \prime}$. Fits nugly aronnd base of snugly around base of tube. Grounding clip is provided, to permit connecting shield to round pin of tube as ring included affords ring included afford ight fit for severe vibration service. Suit able for following tubes:

| $1 E 4 G$ | $1 G 4 G T$ | ETC. |
| :--- | :--- | :--- |
| $1 G 4 G$ | $1 G 4 G T / G$ |  |

No. 3550 complete assembly (illustrated List Price $\$ 0.20$

## TUB FOR GT/G AND GT TUBES

SHIELDS

ONE-PIECE TUBE SHIELD
For Metal Base Tubes
One-piece tube shield for " $\mathrm{T}-9$ " GT and GT/G tubes having METAL BASE. Shicld fits snugly around base, automatically grounding. Overall length of shield $2 \frac{353}{3}{ }^{\prime \prime}$. Can be used with
following tubes:
A7GT $6 J 7 \mathrm{GT}$ $1 \mathrm{H} 5 \mathrm{GT} \quad 6 \mathrm{~K} 7 \mathrm{GT} \quad 12 \mathrm{Q} 7 \mathrm{GT}$ 6O5GT/G 6Q7GT 6H6GT/G 12 K 7 GT No, 3551-Tube Shield $\qquad$ List Price $\$ 0.13$

## THREE-PIECE ASSEMBLY

## For Bakelite Base Tubes

For GT and GT/G tubes with "T-9" bulbs, having 3AKELITE I3ASE, Overal length of shield $2 \frac{25^{\prime \prime}}{2^{\prime \prime}}$. Shield fits snugly around base of tube and additional tightness is secured by means of clamping ring. Grounding clip auto ground pin of tube. For use with:

1 A 5 GT
105 GT
6H4GT
6B6GT/G
6J5GT/G 12F5GT $6 \mathrm{~K} 5 \mathrm{GT} \quad 25 A 6 \mathrm{GT} / \mathrm{G}$ $6 \mathrm{~K} 6 \mathrm{GT} / \mathrm{G} \quad$ ETC. 1G4GT/G 6F5GT $6 \$ A 7 G T / G$
No. 3552--Complete assembly.
List Price $\$ 0.20$

## ONE-PIECE TUBE SHIELD FOR LOKTAL TUBES

One piece tube shield, for all Loktal Tubes. Tube shield fits tightly around tube and grounds to metal base which is connected internally to ground pin. Length of shield $2 \frac{7}{16}{ }^{\prime \prime}$. For use
 with following tubes:

| 1LA4 | 1LN5 | 7B5 |
| :--- | :--- | :--- |
| 1LA6 | 7A4 | 7B6 |
| 1LH4 | $7 \mathrm{A5}$ | 7C5 |

No. 3553-One-piece shield.

MINIATURE TUBE SHIELDS
New two-piece shield for all miniature size tubes. Permits easy installation. Overall length $17 / \mathrm{s}^{\prime \prime}$ high. Can be used with all miniature tubes.

No. 3565 . ..List Price $\$ 0.25$

## JFD "SINGLE SHELL SERIES" TUBE SHIELDS

## FOR GT/G - GT LOKTAL TUBES

 HAVING METAL BASES
## Open Top Shields

## Attractive new one-piece

 shields. Vertical grooves provide flexible positive fit. Shield automatically grounds to metal base of tube, eliminating any necessity for additional comnector. Overall length 2 rg". Has open top for grid cap lead. Suitable for following tubes:| $1 A 7 G T$ | $6 Q 7 G T$ | $12 \mathrm{K7GT}$ |
| :--- | :--- | :--- |
| $6 \mathrm{K7GT}$ | 12 G 7 GT | $12 J 7 \mathrm{GT}$ |
| 1 H 5 GT | 6 J 7 GT | ETC. |

No. $3546-$ Small base open top shield. For GT/G tubes with $1.165^{\prime \prime}$ diameter base. List Price $\$ 0.12$

No. 3548-Large base open top shield. For GT tubes with 1.218" diameter base List Price $\$ 0.12$

## Closed Top Shields

New one-piece shield, similar to shield above. Shield fits tightly over metal base of tube, thus automatically grounding and eliminating need for additional connector. Overall length $2 \frac{1}{1 / 6}$. Has closed top. Suitable for following tubes:

## ACCESSORIES FOR

No. 3558-Low Cap, for tubes without grid cap, or where shielding of grid cap is not considered necessary. Height $\frac{s_{2}^{\prime \prime}}{32}$. Hole in top, ID $7 /{ }^{\prime \prime}$.

## List Price $\$ 0.06$

No. 3559-Clamping Ring for any above type "T.9" tube shield.

JFD TUBE SHIELDS

No. 3560 Ground Clip Base, for above type "T-9" tube shields. Has slotted holes for mounting on wafer sockets with $11 / 2$ " to $1 \frac{21}{3} \frac{1}{2}^{\prime \prime}$ mounting centers.

List Price $\$ 0.10$
No. 3561-Single Ground clip for wafer type sockets, with $1^{1 / 2 "}$ mounting centera.
$1 / 2$ List Price $\$ 0.05$
No. 3562 -Ground Clip for sockets with $1 \frac{\text { s.t }}{16}$ mounting centers.

No.
3563

## No. 3564

No. 3563-Base for all "T.9" series tube shields listed above. For sockets with mounting centers of $11 / 2^{\prime \prime}$ to $1 \frac{1 z^{\prime \prime}}{}{ }^{\prime \prime}$.

List Price $\$ 0.10$
No. 3564-Grounding clip, fite over octal key and ground pin of bakelite base octal tubes, and makes contact with tube $\underset{\text { shield. }}{ }$

List Price $\$ 0.05$

No. 3557-Grid Cap Cover same as above, except has clearance hole in top for Grid Cap Clip. List Price $\$ 0.08$

JFD TOGGLE SWITCHES

Popular switches for radio construction and re placement, for mall motor and appliances, etc. Made especially for
JFD by H\&H plat nicke plated or Stat ary bronze finish. Rated at 3 amps. at 125 v., these switches are Underwriter approved. Solder connections are heavy, will not break off.

## JID Adapter Harnesses and Battery Plugs

 For Portable and Farm BATTERY OPERATED RADIO SETSa successiful Solution
Jo an Urgent Problem!
More than 750,000 Harnesses Sold

Combination "AB" Battery Packs are still difficult to obtain-but SEPA RATE, standard " $A$ " and " $B$ " Batteries. ARE available, and are in tact now being produced for the portable and farm radio market.
In practically every case, a radio set designed to use a combination "AB" pack can now be adapted to use separate " $A$ " and " $B$ " batteries by means of one of the JFD ADAPTER HARNESSES listed in these pages.
Simply atfach the JFD Adapter harness to the battery cable in the radio set - "then attach separate " $A$ " and " $B$ " batteries to the plugs at the other end of the harness - that's all there is to it! No soldering - No cutting Just plug in!

* IT'S MORE ECONOMRCAL to zeplace separate " A " or " $B$ " batteries as required, rather than to replace an entire "AB" pack when only one section of it. is oxhcurtod.
* IT'S EASIER to get separate "A" and "R" batteries. Battery manulacturers are nove making them in increasing 4uandiies, to supply the important portable and form-radio market.
* ITS MORE PROFITABLE to battery dealers, because it simplifies the battery stock problem. Two types of " A " batteries and three types of "B" batteries take care of practically all battery radio sets. in coniunction with JFD ADAPTER HARNESSES. To do the same iob with combination "AB" rgeks, at lecst 25 different types would be required.

## JFD "PHILCO" HARNESS

with 7-prong socket
This harness has a standard 7-prong socket, to fit plug from radio set. Other end of harness has five plugs for $3-45 \mathrm{~V}$ " B " and $2-4 \frac{1}{2} \mathrm{~V}$ " C " batteries.
For use in replacing power pack in Philco models 37-33, 37-38, 38-33, and $38-38$ with standard separate " $B$ " and " $C$ " batteries. This means a real saving to the user, since it permits replacement of only the individual batteries as needed instead of the entire pack. Harness is sufficiently long to allow placing batteries on floor near set, if necessary.
No. 513 $\qquad$ List Price ea. $\$ 2.74$

ADAPTER HARNEES
For sets Using 9V "A" \& 90V "B" With this harness you can now use separate standard " $A$ " and " $B$ " radio batteries in portable radio sets which employ the following "AB" packs:

## Burgess G6B60

Usalite AB-677
Zenith Z-985
This harness has standard 4-prong plug which fits receptacle on radio battery cable. At the other end of the adapter harness are two 3-prong male " B " plugs and two 2-prong male "A" plugs, for use with: 245 V " $\mathrm{B}^{\prime}$ " bat. (Eveready 482, etc.) $241 / 2 \mathrm{~V}$ " $\mathrm{A}^{\prime}$ bat. (Eveready 746, etc.)
No. 502.

ADAPTER HARNESSES
For Portable Radio Batteries
no soldering - no cutting - just plug in!

ADAPTER HARNESS
For Sets Using 6V " $A^{\prime \prime} \& 75 V$ " $\mathrm{B}^{\prime}$
This harness permits use of separate standard " $A$ " and " $B$ " radio batteries in portable radios which use the following "AB" packs:

Burgess G4B50
General Z50B4H4
Montgomery Ward 5045
Usclite AB-670
Zenith Z-675
This harness has a 4 -prong plug which fits into female receptacle on the end of the radio set cable. At the other end of the adapter harness are two 3-prong male "B" plugs and one 2-prong male "A" plug for use with: 245 V "B" bat. (Eveready 482, etc.) 1 6V "A" bat. (Eveready 747, etc.) No. 501... ..List Price ea. $\$ 1.37$

For Sets Using $11 / 2 \mathrm{~V}$ " A " \& 90V " $\mathrm{B}^{\prime}$
This adapter harness can be used with separate batteries in place of these packs:
Acme 460-15 Montgomery Ward
Acme 460-145 (Airline) 5003
Advance 411
Bond 0528
Bright Star 61-05

NOTE A-This is for a candid size radio. Use of a No. 950 Eveready Flashlite Cell and No. 467 Eveready "B" battery, or equivalent, is recommended.

NOTE B-Original "B" Voltage for this set is approximately 75V. However, goV "B" voltage can be used without difficulty.
NOTE C-No. 504-A harness is for use with one $71 / 2$-volt "A"
battery (and two 45 -volt "B" batterles). Where no $71 / 2$-volt
battery is available, use No. 504 harness which employs two $41 / 2$-volt " $A$ " batteries, to accomplish same result.
NOTE D-These packs are for $11 / 2$ volt Farm Radios, not portable type sets; thersfore, use of larger (standard) batteries is recommended.
NOTE E—These packs employ three separate sockots. Sets using this type of pack already have three separate battery connection loads, and require no adapter harness.

JFD COATED SLEEYING

Dielectric strength is 2,000 volts. Flexible-less expensive than regular spaghetti, reors: Black, Brown, Red, Green, Yellow.

 <br> <br> DIAL BELT MANUAL}

## BELT SPECIFICATIONS－NUMERICALLISTING

## INSTRUCTIONS FOR MEASURING BELTS

In order to determine the size of a belt，if the old belt is available， cut this belt and measure its length when stretched out．This will give you the＂Length When Open＂．

If the old belt is not available or cannot be measured because of its worn condition，stretch a thin thread around the belt pulleys within the set．The measurement of this thread will give you the＂INSIDE PULLEY CIRCUMFERENCE＂．This is not to be confused with the ＂LENGTH WHEN OPEN＂．The belt when cut will be approximately $3 / 16^{\prime \prime}$ longer when stretched out．

JFD AERIAL WIRE

7 Strand 24 gauge -bare copper aerial wire. High tensile strength - no stretching, no sagging.
937............ 50 ft. coil 938.......... 100 ft. coil 939........ 1000 ft. metal spool
Heavy duty antenna wire -7 strand 24 gauge bare copper. High tensile strength - no stretching, no sagging.
970. $\qquad$ 50 ft. coil

JFD LEAD-IN WIRE

Stranded, rubber-covered No. 18 lead-in wire. Will withstand excessive weather conditions. 922............................................... 50 ft. coil 923............................................. 100 ft. coil 924................................ 1000 ft. metal spool

JFD NAIL-IT KNOB

Two piece glazed porcelain knob. Heavy nail insures security.

67-3
List Price
$\$ 0.10$

## JFD PORCELAIN INSULATOR

Made to withstand greatest strain. Finest grade of glazed porcelain. Will not crack or absorb moisture.

No. 67.4
List Price
$\$ 0.15$

## JFD LEAD-IN STRIP

Fully insulated-covered with a heavily varnished braid covering to keep weatherproof. Fahnestock clips are firmly soldered to ends of strip.
No. 67-5. $\qquad$ List Price $\$ 0.15$

JFD STANDARD ANTENNA KIT

Contains everything needed for aerial installation. Contains:
50 ft . of 7 strand, 24 gauge bare copper aerial wire.
50 ft . \#18 rubber-covered lead-in wire. 10 ft . ground wire. 1 Ground Clamp. 2 Porcelain insulators.
2 Nail-it Knobs. I Lead-in Strip.
All packed in beautiful box.
No. 67-10. $\qquad$ List Price $\$ 1.75$

## JFD DELUXE ANTENNA KIT

Finest materials in a kit that contains everything needed for complete antema installation. Consists of:
75 ft . of 7 strand, 22 gauge heavy duty bare copper aerial wire.
$75 \mathrm{ft} . \# 18$ rubber-covered lead-in wire.
$\frac{1}{1}$ Three-pole lightning arrester.
10 ft . of ground wire.
2 Porcelain insulators.
2 Nail-it knobs.
1 Lead-in strip.
1 Ground clamp.
All packed in a beautiful box.
67-20.. $\qquad$

## JFD "HAMDY-HANK" WIRE SPECIALTIES

Here is JFD's answer to your everyday, hard-to-handle wire problems! The JFD HANDY-HANK prevents tangling, kinking and waste. The most popular types of wire are put up for the serviceman in neat, compact, easy-to-handle packages.

## A WORD ABOUT JFD FM AND TELEVISION ANTENNAS . . .

JFD Antennas are made for easy installation by the average persen. These antennas will give maximum reception efficiency for the band for which it is intended. They are, in our opinion, the finest antennas that modern radio engineering has devised.

FEATURES OF ALL JFD FM and TELEVISION ANTENNAS:

1. Elements are of $3 / 8^{\prime \prime}$ diameter rigid aluminum tubing.
2. Elements are supported by stand-aff bakelite insulators to prevent sagging.
3. Light-weight and strong.
4. Lacquer impregnated hardwood poles.
5. Solid cast aluminum joint brackets.
6. Well built and all-around sturdy construction to withstand all weather conditions.
7. Correct and up-to-date engineering design.
8. All come complete with all necessary insulators, hardware, and instructions.

## JFD STANDARD DIPOLE WITH REFLECTOR

Combination dipole and reffector assembly for difficult locations where signal strength is low. Consists of:

1. Four $3 / 8^{\prime \prime}$ gauge aluminum dipole rods.
2. Four lacquer impregnated hardwood poles.
3. Aluminum angle joint brackets.
4. All necessary insulators, hardware, and instructions. ADJUSTABLE ANGLE JOINT BRACKETS PERMIT TILTING OF DIPOLE IN VERTICAL PLANE, FOR MAXIMUM RECEPTION OF BOTH VERTICAL AND HORIZONTAL POLARIZED SIGNALS. No. TA-3-Standard dipole assembly with reflector, as illustrated,
complete with all necessary accessories........ List Price $\$ 15.00$ No. TA-3L-Same as above with 75 ft . twin-lead wire.

List Price $\$ 18.50$

## JFD DOUBLE DIPOLE WITH DOUBLE REFLECTORS

F-M and Television Antenna Recommended for locations where serious problems of interference or multipath images are encountered. The arrangement of double collectors, as illustrated, results in greatly improved reception from one direction and a decrease in noise and reflection from opposite direction. ADJUSTABLE ALUMINUM BRACKETS PERMIT TILTING TO OBTAIN MAXIMUM RESULTS ON VER'TICAL AS WELL AS HORIZONTAL POLARIZED SIGNALS. Consists of:

1. Eight $3 / \mathbf{g}^{\prime \prime}$ gauge aluminum dipole rods. 2. Six lacquer impregnated hardwood poles. 3. Aluminum angle loint brackets.
2. All necessary insulators, hardware, and instructions.

No. TA-22-Double Dipole Antenna with Double Reflectors, complete as illustrated. ....................................List Price $\$ 35.00$ No. TA-22L-Same as above with 75 ft . of twin-lead wire.

List Price $\$ 38.50$

## JFD STANDARD DIPOLE

F-M and Television Antenna
Here is an excellent popu-lar-priced dipole antenna for average installations where reflectors are unnecessary. Consists of: 1. Two $3 / 8$ " gauge aluminum dipole rods.
2. Two sturdy lacquer impregnated hard. wood poles.
3. Solid cast aluminum joint brackets. 4. All necessary insulators, hardware, and instructions.
No. TA-2—Standard Dipole Assembly as illustrated, complete with all necessary accessories $\qquad$ List Price $\$ 9.50$
No. TA-2L—Same as above with 75 ft . Twin-lead wire.
List Price $\$ 13.00$

## JFD "ROTO-FLEX" DIPOLE

## F-M and Television

## Antenna

OBTAINS MAXIMUM DIREC. TIONAL EFFECT!
Here is one antenna that may be turned to any position horizontally, diagonally, vertically. Dipole assembly may be as a horizontal plane, so that hest possible position can be selected. Brackets can then be
securely locked. Particularly securely locked. Particulariy valuable in congested areas where tall buildings create problems of interference, reflection,
etc. The JFD "ROTO-FLEX" etc. The JFD "ROTO-FLEX"
solves these problems simply, solves these problems simply,
efficiently, and economically! Consists of :

1. Two $3 / 8^{\prime \prime}$ gauge aluminum dipole rods.
2. Two sturdy lacquer impregnated hardwood poles.
3. Solid cast aluminum brackets.
4. All necessary insulators, hardware and instructions.

No. TA-25-Complete "ROTO-FLEX" assembly, as illustrated.
List Price $\$ 12.50$
No. TA-25L—Same as above with 75 ft . of twin-lead wire.
List Price $\$ 16.00$

## JFD DELUXE 3 ELEMENT ANTENNA <br> F-M and Television <br> Antenna

Recommended by leading manufacturers of F-M and Television Receivers for use with their equipment. This 3 -element assembly, consisting of director, collector and reflector elements, will afford the highest possible signal pick-up in any location. Particularly recommended for extremely difficult installations, where low signal strength and reflection prevail. Dipole assembly may be adjusted vertically and horizontally for maximum efficiency. Consists of:

1. Six $3 / /^{\prime \prime}$ gauge aluminum dipole rods.
2. Five lacquer impregnated hardwood poles.
3. Three sets of aluminum right angle joint castings.
4. All necessary insulators, hardware and instructions.

No. TA-4-DeLuxe Three-element Antenna complete, as illustrated.
List Price $\$ 25.00$
No. TA-4L-Same as above with 75 ft . of twin-lead wire.
List Price $\$ 28.50$

## JFD MULTI-POSITION BRACKET

Here is an FM and Television Antenna bracket that takes care of all mounting problems. With this bracket, Antennas can be mounted any-where-on wall, on window sill, on angular gable roof, on flat parapet, etc. Made of cast alumi-num-light weight. Very simple to install. Will take $11 / 2^{\prime \prime}$ pole. Dimensions: Height 7"; length $6^{\prime \prime}$; width $4^{\prime \prime}$.

Cat. No. BR-8
List Price $\$ 10.00$

ADJUSTABLE ALUMINUM RIGHT ANGLE POLE JOINTS
With Supporting Lips for Dipole Insulator Assembly Exclusive JFD design permits mounting of wooden poles or iron pipes at right angle. Extended lips afford rigid support for dipole insulator assembly. Complete bracket kit consists of two identical half brackets, which fit snugly around pipe or pole, and eight sets of machine screws, nuts, and lockwashers, individually packaged.

No. 405-Pair of Brackets and Hardware.
List Price $\qquad$
STANDARD ALUMINUM RIGHT ANGLE POLE JOINTS
Similar to No. 405, but without supporting lips. An exclusive JFD design. Consists of two identical half brackets, designed to hold two poles or pipes rigidly at right angles. Extremely strong and durable. Complete with seven sets of machine screws,
 lockwashers, and nuts, individually packed.
No. 406-Pair of Brackets and Hardware.
List Price
.$\$ 4.25$
angle steel mounting bracket

Easily mounted on roof, wall, corner or chimney. Very strong trussed and welded construction.

DOUBLE MOUNTING ASSEMBLY

A convenient and sturdy mounting designed to be installed on wall or inside parapet. May be adjusted from 6 to 12 inches wall.

No. BR7 List Price per pair $\$ 14.00$

WOODEN POLE SLEEVE CONNECTOR

For joining mounting poles or for fastening guy wires to top of pole. Heavy steel, aluminum plated.
No. BR23.
.List Price $\$ 1.25$

## WOODEN MOUNTING POLE

For increasing the height of the standard where necessary. Made of hard wood lac quered. $11 /{ }^{\prime \prime}$ thick.
No. BR19-4 feet................List Price $\$ 0.60$ No. BR20-6 feet.................List Price $\quad .90$

## MOUNTING STRAP

Mor mounting pole on vent pipe. 18 inches long.
No. BR9 $\qquad$ ...List Price $\$ 0.20$

Will be found useful in fastening poles on wall, roof, chimney, inside of parapet or elsewhere.
No. BRIg.

JFD WALL INSULATOR Exclusive JFD design. Securely locks television tape in place in all adverse weathe. Made of pastic-screw is countersu
ing. Wi-100.

List Price $\$ 0.15$
JFD TWIN-LEAD TRANSMISSION LINE

Extruded parallel ribbon type lead-in wire. Insulated with polyethylene- 300 OHM surge impedance. Highly recommended for F-M and Television receivers. Made to conform with exacting requirements and will withstand severest conditions of weather and use. No. TW-I- $1000^{\prime}$ coils...... List Price $\$ 48.00$

## JFD TRANSMISSION WIRE

Two conductor transmission wire, 20 gauge, cotton Eraided, weatherproof impregnated. In 1000 foot mill length spools.
No. 945-C-1000' spool.

## RG59U CABLE

Coaxial cable recommended for use where automobile ignition interferes. Increases signal gain over parallel open pairs. The copper braid is used on one side of the line. Therefore it is advisable to try reversing the lead at the receiver for best operation.
No. TW-2............ List Price $\$ 0.181 / 2$ per foot (Mill reel 1000 feet)

JFD DOUBLET LIGHTNING ARRESTER

Specially designed to match JFD Home Antennas, as well as all other makes. Has builtin condenser. Three-pole connection.
No. 403.
List Price Ea. $\$ 0.75$ PULSING DRIVE. ... ACCURATELY CONTROLS MOTION OF

ROTATING the control knob makes and breaks the circuit, sending very short (adiustable) electrical pulses that accurately control the amount and direction of rotation in small steps of any $A C$ motor, (DC on request). Rapid rotation of the knob applies continuous power to the motor. Switching confacts rated at 5 amp 115 volts AC or 3 amp 230 volts $A C$ non-inductive load. Handles full motor current up to $1 / 20 \mathrm{HP}$. For larger sizes, usable in parallel with, or instead of, push buttons of magnetic starters up to Nema size 2. Obtainable without housing for panel mounting. Available for immediate delivery.
PULSING DRIVE is ideal for setting up Machine Tools, Industrial Equipment, Radio Tuning, Motor Operated Valves, Power Operated Adjustments on Machinery, etc., etc.

EXAMPLE: PULSING DRIVE'S single knob provides fine vernier control or swift travel across tuning range of radios.

## SYNCHRO-LINK....

SYNCHRO-LINK is a remote control system that will quickly, accurately, and easily position a distant motor. It is based on a self balancing electric bridge, and consists of a control knob, controller box, and a controlled positioning motor that duplicates the control knob setting, for a wide variety of applications. Its standard inferchangeable components can identically control a number of slave positioners from a single knob.
SYNCHRO-LINK utilizes any standard motor now used by you. Finger tip ease effortlessly controls any size and torque motor over any distance. SYNCHRO-LINK accuracy is better than $1 \%$ of the full range travel regardless of torque. Can be manually or automatically controlled. Uses very little power since it is a control circuit and carries only contral currents thru three light gage conductors. Self-
 synchronous, it reproduces set position even after a power shut-off. SPEED-Adjustable for motors covering the range from 2 sec . up. RATING-Up to $1 / 20 \mathrm{HP}$-larger size on request.

## YARDENY SPECIALIZED REMOTE CONTROL ENGINEERING

Yardeny Laboratories developed and manufactured many Remote Controls under their world wide patents for the armed services. These may be the ready-made answers to your problems. Our staft of highly trained engineers stands ready to solve your problems. We can DEVELOP, MANUFACTURE, or LICENSE that vital part of yaur product. Write us now.

    $\$ 1.00$

[^57]:    ADJUST TIP TO JOB - CAN'T OVERHEAT

[^58]:    THIS IS ONLY A PARTIAL LISTING OF KRAEUTER TOOLS
    SEND FOR CATALOG

[^59]:    WALSCO BELT SIZE FINDER is a unique device to actually measure the length around the dial pulleys, thereby providing the most accurate means for determining the proper belt lengths. Also contains a complete reference chart for lengths, circumferences and catalog numbers of all belts plus a listing of all popular radio sets by make and model numbers, showing the required replacement belts. Free at all radio parts jobbers. Another original WALSCO Service. WALSCO BELT-D-TECTOR works like a slide rule. Gives at a glance the exact part number and specification of any belt quickly and accuratcly. A most original and valuable aid for the radioman. Furnished free with all belt assortments or in exchange for 50 coupons, one of which is included with
    each belt.
    

[^60]:    Two sizes replace original idler or drive pulleys.
