TYPE 823 CERAMIC TRIMMER

A trimmer of highest quality. Medium heavy Steatite base. Numbers ending in Z are of zero temperature coefficient (NPO); those ending in N are of negative temperature coefficient. Both rotor and stator plates are of metallic silver fired to ceramic rotor and stator.

Mounting studs are set in the base, tapped 1/8" deep for 4-40 machine screws. Body size, approx. 1 1/4" x 1 1/8".

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE MT-MTD-MTH

Chieftain

SANGAMO Type MT "Chieftain" electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position. Double-thick paper spacers assure adequate breakdown characteristics and all sections are tightly held in place within the container. Multiple staking connects the terminal tabs to the electrodes and provides permanent low resistance contact throughout the life of the capacitor. Low voltage units utilize etched cathodes to maintain uniform capacity when they are subjected to combined conditions of heat and high ripple currents.

TYPE FM

Arrowhead

The SANGAMO Type FM "Arrowhead" electrolytic capacitors are similar in design to the Type MT "Chieftain" in every respect except leads. The Type FM is equipped with flexible, insulated wire leads and stud terminals eliminating the problem of crossed wires and the necessity for the use of insulating sleeves. They are much smaller than the wax-end filled types with insulated leads. The capacitors themselves are housed in round aluminum containers which are encased in heavy insulating sleeves. They are especially designed for the rugged television requirements where 85°C. operating temperatures are encountered.

TYPE MMT

MINIATURE TUBES

SANGAMO Type MMT miniature tubular electrolytic capacitors are designed for use in miniaturized equipment and are ideally suited to meet the precise operating requirements of low voltage circuits. They are small in physical size and are self supporting by means of strong bare tinned copper wire leads. The Type MMT capacitors are contained in drawn aluminum tubes encased in a fitted cardboard insulating sleeve. Polarity of all units is clearly marked on the cardboard sleeve.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE PL FOR TELEVISION AND OTHER ELECTRONIC APPLICATIONS . . .

The SANGAMO Type PL "Warrior" electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

ELECTROLYTIC CAPACITORS

TYPE BTE

Comanche

The SANGAMO Type BTE electrolytic capacitor is ideally suited for filter and bypass circuits in marine, aircraft, geophysical and many other applications.

The Type BTE cartridges are first sealed in aluminum tubes and then encased in sturdy-corrosion-resistant, hot tinned steel cases providing a complete hermetic seal under extremes of weather conditions. All units are equipped with glass-to-metal sealed terminals. Mounting flanges with 3/16" holes are provided at each end.

Designed and fabricated to conform to all physical and performance requirements of the C'E63 style capacitor of Joint Armed Services Specification JAN-C-62.

Similar design in case styles C'E61, C'E62, and C'E64 may be furnished upon request.

ELECTROLYTIC CAPACITORS

TYPE CS *Tomahawk*

The SANGAMO Type CS "Tomahawk" electrolytic capacitors are contained in wax-filled cardboard tubes with insulated leads approximately 8 inches in

length extending from both ends of the unit. Capacity, voltage and polarity of each section is clearly indicated by color of the lead wires; coding information necessary to identify the individual sections is clearly stamped on the tube. Each unit is supplied with a mounting strap to facilitate mounting to the chassis.

COLOR CODE OF WIRE LEADS FOR TYPES FM, CS, AND SL CAPACITORS

Black	Common negative
Orange	Positive, highest voltage or capacity
Red	Positive, next highest voltage or capacity
Blue	Positive, next highest voltage or capacity
Yellow	Positive, next highest voltage or capacity
Brown	Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will designate the voltage; with the same voltages and unequal capacities, the lead color will designate the capacity. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed I.R.T.M.A. Color code.

TYPE EM (MOTOR STARTING)

Trailblazer

The SANGAMO Type EM electrolytic capacitor is a standard universal replacement for all motor starter types presently in use, and its dimensions are comparable in every respect. The Type EML is provided with solder lug terminals, the Type EMS being equipped with screw types; otherwise the two units are identical in construction and operational characteristics. Insulating tubes are supplied with both types.

wet electrolytics, the Designed primarily as replacements for Type SL electrolytic capacitors are assembled in round aluminum cans with threaded necks providing easy

mounting to a chassis with the aid of a palnut which is supplied. The Type SL is completely insulated from the container, the negative connection being made to one of the insulated leads extending through the threaded neck of the can.

TYPE TS

Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a

four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base. The base pins are nickel-plated to prevent corrosion and insure good contact with the socket terminals.

Telechief

PLASTIC MOLDED TUBULAR

The SANGAMO "Telechief" is molded in Sangamo HUMIDITE to provide more stable capacity values, unsurpassed moisture resistance, excellent seal characteristics, and operation up to 85°C. temperature. Small in physical size, and rugged in construction, this tubular is especially adaptable to television, auto radio, small AC-DC set, and other uses. The leads are firmly imbedded in the hard plastic case and have been especially designed to resist breakage. The "Telechief" assures operating dependability under extremes of heat, humidity and physical stress.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 50 *Pathfinder*

The Type 50 paper capacitors are primarily intended for bypass application. They are non-inductively wound, are supplied in fractional capacity values, and will provide efficient and continuous operation in R.F. and A.F. bypass, audio frequency coupling, and other A.C. circuits.

These units are impregnated and filled with mineral oil and may be operated under severe humidity conditions at temperatures up to +85°C.

TYPE 62-64 *Scout*

The Types 62 and 64 SANGAMO non-inductively wound paper capacitors are impregnated and filled with mineral oil and are hermetically sealed in seamless drawn-steel cases. The mineral oil impregnant assures dependable service between the wide temperature limits of -55°C. and +85°C. Standard capacitors are supplied with top terminals and brackets for upright mounting. When bottom terminals and inverted mounting are required, add the letter "B" to the end of the catalog number.

TYPE 40-41 *Pueblo*

The SANGAMO Types 40 and 41 diaclor impregnated and filled paper capacitors are ideal for use in high voltage filter applications.

Enclosed in aluminum containers, they facilitate convenient mounting to the chassis, an insulating washer and spade lug being provided for this purpose. In the Type 40 one connection is provided by an insulated terminal and the other is provided by the case. In the Type 41 both terminals are completely insulated from the case.

NOTE: These units built to comply with the electrical requirements of specification JAN-C-25 Style CP-49-41.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 71 *Seminole*

SANGAMO Type 71 diactor impregnated and filled paper capacitors have the advantage of light weight, and are smaller than the case size specified by JAN-C-25. Diactor* is a specially compounded, chemically purified chlorinated dielectric oil. This synthetic impregnant, whose characteristics can be controlled with great uniformity, possesses a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is non-inflammable and non-explosive. Type A mounting brackets are supplied with each capacitor as standard equipment. If Type B or C brackets are required, they must be specified when ordering. Either composition rivet or stand-off porcelain terminals can be supplied, and the type desired should be specified.

SANGAMO CAPACITORS

NEW MOLDING COMPOUND FOR SANGAMO WIRE LEAD MICAS

All SANGAMO wire-lead micas are molded in HUMIDITITE, a new molding compound developed by Sangamo, that gives them moisture resistance characteristics far superior to any others on the market. The standard moisture resistance test described in MIL-C-5A (proposed) Specification requires mica capacitors to offer at least 100 megohms of insulation resistance after ten 24-hour cycles in a humidity chamber at 90% to 95% relative humidity. The best competitive micas barely meet this requirement . . . but Sangamo HUMIDITITE Micras, under the same conditions, all tested in excess of 50,000 megohms! For additional information about HUMIDITITE, write for Engineering Bulletin No. TS-111.

SANGAMO CAPACITORS

High Voltage "Television" Mica Capacitors

These molded mica capacitors are specially designed for the high temperatures and voltages encountered in television applications. They may also be used in power amplifiers, low power transmitters and other industrial uses. They are fabricated with India ruby mica and are carefully tested to insure maximum performance under these difficult operating conditions.

TYPE F1 MICA CAPACITORS

TYPE F1

Types F1 and F2 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

SANGAMO CAPACITORS

TYPE F2 MICA CAPACITORS

TYPE F2

Types F1 and F2 capacitors, the smallest of the Sangamo lines of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

Type G ceramic cased capacitors are intended for service where highest voltage and R.F. current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Terminal plates are designed to permit any usual connecting or mounting practices.

ERIE GENERAL PURPOSE CERAMICONS®

TYPES GP1 — GP2 — GP3

ERIE CERAMICONS are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

GP1 CERAMICONS — The performance specifications of Type GP1 Ceramicons are identical with those of temperature compensating types of Ceramicons. A GP designation does allow the capacitor manufacturer added flexibility in selecting ceramic body. These capacitors meet performance specifications of RETMA Standard No. REC-107-A, Class 1, Characteristic U2.

GP2 CERAMICONS — The capacitance of GP2 Ceramicons will not vary more than + 10% or - 35% from + 25°C. value, as the temperature is varied from - 40°C. to + 85°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Y5Y.

GP3 CERAMICONS — The capacitance of GP3 Ceramicons will not vary more than + 25% or - 50% from the 25°C. value, as the temperature is varied from + 10°C. to + 75°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Z5Z.

"GP"® GENERAL PURPOSE CERAMICONS

are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important — in other words for all receiver applications except in frequency determining circuits. Working voltage — 600 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

Note: "Ceramicon" and "GP Ceramicon" are registered trade names and refer to ceramic dielectric capacitors manufactured only by Erie Resistor Corporation.

TEMPERATURE COMPENSATING CERAMICONS®

Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must

be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

NPO TEMPERATURE COEFFICIENT CERAMICONS®

NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000

or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage—600 volts D. C. Recommended as replacements for silver-mica capacitors.

PARALLELING TC AND CAPACITIES

A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following

formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:

$$1. \text{ (Capacitance in MMF) (Temp. Coef. Required) } = \frac{\text{Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)}}{*750}$$

Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)

$$2. \text{ (Total Capacitance Required) minus the value found in step 1 } = \text{ capacitance in MMF of the NPO unit to be used.}$$

3. The total desired capacitance and temperature coefficient are obtained by connecting the units found in steps 1 and 2 in parallel.

*If an N330 unit is to be used in parallel with an NPO unit, substitute 330 for 750 in this equation.

ERIE DISC CERAMICONS[®]

Erie Disc Ceramicons consist of a flat ceramic dielectric with silver fired onto the dielectric. Lead wires are firmly soldered to the silver electrodes, and the unit is given a

protective coating of phenolic. Low series inductance assures efficient high frequency operation.

TEMPERATURE COMPENSATING DISC CERAMICONS[®]

Erie Temperature Compensating Disc Ceramicons in four sizes, 831, 801, 811, 821, offer all standard combinations of temperature coefficient and capacitance value. They are intended for circuit use requiring pronounced stability of capacitance, or exact temperature compensation, high "Q" and high insulation resistance. Each size is manu-

factured in standard coefficients P120 through N2100, providing capacitance values from 1.5 MMF to 725 MMF. These disc units are tested for conformance to Erie specifications that have applied to Tubular Ceramicons for many years. Further, they meet all requirements for RETMA REC-107A Class 1 ceramic capacitors.

ERIE HIGH VOLTAGE DISC CERAMICONS®

Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses

to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

ERIE ELECTRONIC PRINTED CIRCUITS

Erie Resistor began the development of Printed Circuits in 1940. Since then the advantages of Printed Circuits have been amply demonstrated and Erie has made important contributions in the field. By bonding the complete or partial circuit to a ceramic base plate, the work of several capacitors and resistors may be combined in one installation unit. Erie Printed Circuits have simplified design and production problems for manufacturers of radio and television receivers, hearing aids, and other electronic products.

SPECIFICATIONS
INSULATION: Thermosetting dipped phenolic.
SIZE: Dimensions shown are maximum.
MARKING: ERIE trademark, part number, and lead numbers.
LEADS: Tinned copper wire, length $2\frac{1}{2} \times \frac{1}{16}$.
CAPACITORS: 500 VDCW ... tolerance as marked.
RESISTORS: $\frac{1}{8}$ watt rated ... tolerance $\pm 20\%$.

ERIE BUTTON® SILVER-MICA CAPACITORS

STYLE CB

These are midget silver-mica capacitors, for use where compact size, minimum series inductance, and high leakage resistance are essential. They offer high stability of capacitance over the full temperature range - 55°C. to + 85°C. Erie button silver-mica capacitors are unmatched for V.H.F. and U.H.F. work. "Q" at 1 MC is not less than 1000 above 100 MMF; not less than 700 between 50 and 100 MMF; not less than 500 below 50 MMF. Type 370-CB has ring type metal shell with three soldering ears. High potential terminal at either end for feed-thru connection. Type 370-FA is fastened to chassis with 3-48 screw.

ERIE CERAMICON® TRIMMERS

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the

amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

ERIE TUBULAR TRIMMERS

These are compact, economical Tubular Trimmers that are ideal for applications calling for a low minimum capacity and a high ratio of maximum to minimum capacity. Styles 532 and 535 have molded plastic dielectric. Style: 3115-01 and 3139-01 have ceramic dielectric.

ERIE STAND-OFF CERAMICONS®

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R.F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

ERIE FEED-THRU CERAMICONS®

These very practical feed-thru capacitors are highly recommended for by-passing R.F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage. Nut supplied.

ERIE "HI-STAB" DEPOSITED CARBON RESISTORS

STYLE 155

Erie deposited carbon resistors are made by a process developed and perfected as a result of years of work in the laboratory of Erie Resistor Limited in England.

The Erie basic Style 155 resistor employs a highly stable resistance film that is applied in the form of carbon deposited at high temperature on the surface of a ceramic rod. Precise D.C. resistance values as close as 1% tolerance are produced by spiral cutting on the outside resistance film. This resistance rod then has axial leads firmly attached and the rod is encased in thermo-setting molded plastic insulation, a unique feature for resistors of this type.

Style 155 "Hi-Stab" resistor, rated at 1/2 watt, is designed to meet the requirements of Styles RN-15 and RN-20 as specified under MIL-R-10509A, and is available in resistances from 100 ohms to 470,000 ohms, tolerance of 5%, 2%, and 1%.

TYPE AEP PLUG-IN ELECTROLYTIC CAPACITORS

Quick change, hermetically sealed dry electrolytic. Plugs into standard octal socket for fast replacement or testing when continuous service is important. High capacity and ultra-compact, using etched foil in small can sizes. Non-corrosive aluminum internal construction throughout. Vented for safety.

TYPE PRS • DANDEES • TUBULAR ALUMINUM CAN ELECTROLYTICS (85°C)

• Singles • Triples
• Duals • Quads
Tubular units encased in aluminum containers especially suited for compact assemblies. Single element units have solid wire leads. Dual, triple, and quad units are supplied with stranded wire leads and safety sleeves.

The higher voltage listings meet the new radio and electronic circuit potentials, particularly in cathode-ray applications like television receivers and oscillographs.

PRS units are normally supplied with etched foil, but plain foil is available. High-purity aluminum construction. Vented for excessive gas pressures.

DURANITE MOLDED TUBULAR CAPACITORS • TYPE P-88N

Toughest capacitors ever offered for radio-electronic equipment. DURANITE capacitors are entirely new—in design, impregnant, processing, and casing. New technique glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof: operate from sub zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf.

CAPACITORS AEROVOX RESISTORS

HI-VOLTAGE • TYPE 84 • TUBULAR PAPER CAPACITORS

Hi-voltage type 84 oil impregnated, tubular capacitors are compact high-grade units. Overall wax dipped for high resistance to humidity. Units rated from 2500 VDCW and up are designed to meet the elevated peaks and transients encountered in television and other cathode-ray tube applications and to reduce the effects of corona. These high-voltage units are encased in cardboard tubes with finned wire leads, and have an improved end-seal for longer life under operating conditions to which they are subjected. Supplied with radial mounting band at no extra cost.

Immersion-proof, oil-impregnated, oil-filled units in handy, space-saving tubes. Ideal for vibrator applications, coupling and bypass functions in transmitters, high-voltage and in test equipment. Fully sealed against oil leakage or moisture penetration. Case is insulated, not connected to the capacitor section. Supplied with mounting strap and outer insulating tube.

AEROVOX HYVOLS* • TYPE JP09

Immersion-proof in sturdy rectangular metal can. High-voltage screw type pillar terminals fitted with soldering lugs. Use of "HYVOL" allows exceptionally compact size for capacity, working voltage, and safety factor. Intended for heavy-duty continuous service in transmitters, amplifiers, etc. Type MB bracket is supplied unless otherwise specified, except on units with base sizes 3 3/4" x 3-3/16" and 3 3/4" x 4-9/16" where Type MS bracket is supplied. MSB is available for all types upon request.

Compact, immersion-proof unit, of minimum size and weight. Corrosion-proof metal container. Special immersion-proof terminals for severe atmospheric and climatic conditions. Type 16CT is standard, but Type 16CB (terminals on bottom) units also available.

Standard Width 1 1/8" — Depth 1/8"

COMPACT HYVOL* CAPACITORS • TYPE JP18CB

Compact, immersion-proof unit. Different base sizes make units adaptable for duals and triples. Even on single sections, different base sizes make units fit in particular applications where Type 16's do not fit. Type 18CB is standard, but Type 18CT (terminals on top) also available.

A compact superior-grade oil-impregnated, oil-filled, drawn-metal case capacitor. Hermetically sealed, immersion-proof. Built for severe operating conditions as in aircraft, police, broadcast, public address and other types of communications equipment. The AeroVox-designed terminals are constructed with "doublerubber bakelite" insulators permanently riveted to the case, and make a sturdy, absolutely immersion-proof assembly.

Aerovox Motor-Starting Capacitors

A TYPE FOR EVERY APPLICATION

Aerovox motor capacitors are available in two general categories:

- (1) Exact-Duplicate Replacements, precisely matching the mechanical and electrical features of the original equipment; and
- (2) Universal Replacements, for a minimum stock of numbers taking care of the maximum range of motor applications.

Exact-Duplicate Replacements do the "same-as-new" service job insisted upon by critical customers. Universal Replacements mean maximum convenience with minimum investment. And, of course, Aerovox also supplies the hardware, housings, caps, mountings

INTERFERENCE FILTERS

TYPE IN-23. Especially used for neon sign fixtures. Convenient mounting bracket. One filter for each fixture. Flexible leads. Also used on small motors. Size 1 x 2 1/4 inches. List \$1.05

TYPE IN-27. Simple, inexpensive, plug-in unit where interference is slight. Size 1 3/8 x 1 1/2 inches. List \$1.50

TYPE IN-28. For use where ground is at considerable distance. Most efficient when mounted on appliance. Bracket supplied. Size: 1 3/8 x 2 inches. List \$2.00

TYPE IN-29. Effective plug-in unit for local noise sources of variable character but strong intensity. Especially suited for shavers and other vibrating devices. Size: 1 3/8 x 1.75 inches. List \$1.75

TYPE IN-30. Similar to IN-29 but with greater inductance to handle more severe noise interference. Size: 1 3/8 x 3 inches. List \$2.50

TYPE IN-31. Bracket mounted unit with high inductance. Size: 1 3/8 x 3 inches. List \$3.00

TYPE IN-42. Heavy duty unit for serious interference from power transmission lines, etc. Plugs into outlet. Appliance or radio plugs into receptacle in filter. Mounting ring provided. Rating: 110/220 v. AC; 6 amps. Size: 2 1/2" dia. x 3 3/4". List \$7.50

UHF — INTERFERENCE FILTERS

These latest filter units provide maximum attenuation from 150 KC well up into the UHF range. And they are extra-rugged, extra-compact, extra-efficient, by any comparison with previous filters.

Primary applications are in r.f. noise suppression work in military or commercial aircraft and for vehicular low-voltage d.c. applications. Also, for special applications such as battery or low-voltage d.c. filters, for shield room applications, and for critical equipment.

Available in seven standard types meeting a wide variety of applications. For extraordinary requirements, special filters can be developed and built to your order.

INTERFERENCE ANALYZER

TYPE ANL-37

The Aerovox Filter Selector eliminates the guess work in determining the proper filter to use. Plugs between interfering device and outlet. Adjust selector switch until noise is eliminated or minimized. Dial then indicates type filter (IN27 thru IN42) to be used. Unit in handsome, sturdy metal cabinet. Compartment contains necessary attachment plugs and clips. Size: 5 1/2 x 5 1/2 x 8 inches.

HEAVY DUTY INDUSTRIAL FILTERS

Heavy duty, industrial-type interference filters consisting of one or more highly efficient radio noise filter elements. Enclosed in black painted steel surface cabinet for permanent installations of power equipment. One element per line. Cabinets meet Underwriters' requirements, and have standard knockouts. Rating: 250 v. AC —25 to 60 cps. or 600 v. DC.

BUILT-IN FILTERS

High attenuation type, hermetically sealed units for use where severe interference is encountered and dependability is required. For permanently mounted applications.

Aerovox special "Pi type" construction insures efficient radio noise reduction over low frequency broadcast, shortwave, and television bands. Suitable for Army-Navy or aircraft equipment where immersion and severe humidity tests must be met.

R-F NOISE CAPACITANCE SUPPRESSORS

Type INA-116 Type INA-117 Type INA-118

These radio-noise suppression capacitors have been especially designed for use in military or commercial, aircraft and vehicular applications. Primary application is as an r-f bypass capacitor from line to ground in low voltage dc supply lines. Units are especially treated to assure extremely long, noise-free life.

Operating temperature range is minus 55 degrees C to plus 95 degrees C. For full 150 volt rating the operating temperature range is minus 55 degrees C to plus 50 degrees C. Units may be used at operating voltages up to 120 vdc over a temperature range of minus 55 degrees C to plus 71 degrees C; and 60 vdc over a range of minus 55 degrees C to plus 95 degrees C.

MOLDED-IN-BAKELITE MICA CAPACITORS**

Wide choice of designs, sizes, mountings, terminals offer the correct Aerovox unit for every application, as listed. Units built of selected mica and foil; molded bakelite casing impervious to moisture, heat, mechanical damage. Micrometer test for mica thickness maintains capacity values for long life. Capacity values indicated on units.

PORCELAIN-CASED MICA CAPACITORS

Ideal for high-frequency application. Glazed porcelain case, high temperature wax sealed. Heavy duty power terminals. Minimum power loss due to dielectric absorption. No heating at full load.

SIZE: 4" overall by 3" high; 3 1/2" between mounting holes.

HI-VOLTAGE MOLDED-IN-BAKELITE MICA CAPACITORS

Designed especially for television, low-power transmitters, and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished to meet characteristics A and B of the JAN specification. Standard tolerance characteristics A and B of the JAN specification. Standard tolerance characteristics A and B of the JAN specification. Standard tolerance characteristics A and B of the JAN specification. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

Compact, precision made mica dielectric capacitors made in accordance with JAN specification C-5. These are the smallest mica capacitors listed in the JAN C-5 specification. All capacitors are molded in low-loss bakelite, impregnated and color-coded. They are tested to meet JAN requirements for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, humidity and life test. ASES approval has been obtained and certificates of compliance can be furnished upon request.

Type 1468 and 1467 units are of the stacked mica and foil types and are made to meet the requirements of JAN characteristics A and B. Type 1469 and 1464 units are silvered-mica and are available in characteristics C, D, and E of the JAN specification.

SILVERED MICA CAPACITORS

AEROVOX silvered mica units for most critical applications where precise capacity values are required. Encased in red low-loss bakelite. Similar in external appearance to standard bakelite molded mica units.

Available with temperature coefficient and retrace characteristics as defined by characteristics A to F inclusive of REC-115 and JAN-C-5 specifications for molded capacitors. Exceptionally high "Q." Mechanically protected against physical damage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for circuits where inductance and capacity product must remain constant under all operating conditions.

HI-Q DISK CERAMIC CAPACITORS

Hi-Q ceramic disk capacitors are available in a range of capacities from 10 mmf to 30,000 used for by-passing, blocking and coupling applications. They are sturdily constructed, precision tested, and moisture-proofed against high humidities. In many instances these Hi-Q disk capacitors offer advantages over the regular capacitors through their space saving features. Multiple capacities can be fabricated on single disks affording additional savings of space and installation costs. The silver electrodes are fired directly to the ceramic dielectric to assure low noise operation. They are coated with a non-hydroscopic phenolic and are impregnated with a micro-crystalline wax which protects the units from humidity and affords a sturdy construction.

General Purpose

Hi-Q by-pass disks are fixed ceramic dielectric capacitors specifically suited for by-pass or coupling applications or for frequency discriminating circuits where Q and capacity stability are not of major importance. These disks are available in the capacities listed below, 10 mmf to 30,000 in tolerances as specified. The smallest possible standard disk has been used for each value of capacity.

HI-VOLTAGE DISK CAPACITORS

General Purpose

Hi-Q high voltage disk capacitors are available in many capacities and voltage ratings. These types offer many possible uses in TV circuits where voltages above 500 are necessary. They are the ideal units for dependable day-after-day service. Hi-Q has available numerous combinations of capacity, working voltages and physical sizes. These low cost units are manufactured to specific tolerances as listed.

HI-Q TUBULAR CERAMIC CAPACITORS

Hi-Q general purpose tubular ceramic capacitors may be used for coupling, bypassing and filtering where frequency control is not critical (not to be confused with the Hi-Q line of close tolerance temperature compensating units). Available in two types (SI and CI) small in size, rugged construction and available in a wide range of capacity values.

HI-Q TEMPERATURE COMPENSATING DISK CAPACITORS

The temperature coefficient of ceramic capacitors is an inherent characteristic of the ceramic body. By controlling this coefficient, the use of ceramics has been extended to countless applications in the electronic and communications fields. Temperature coefficient is determined by the ceramic mix and therefore certain tolerances are standardized. Following is a list of standard recommended tolerances used in this listing:

Temp. Coef.	Tolerance—PPM	Temp. Coef.	Tolerance—PPM
NPO	±30	N380	±500
N080	±30	N750	±100

The tolerances shown are maximum deviation. The actual average temperature coefficient usually runs close to nominal. Aerovox Hi-Q is the first to offer temperature compensating capacitors in both disk and tubular styles as stock items.

Hi-Q temperature compensating disks are specifically suited for resonant circuit applications or any other applications where high Q and stability of capacity are essential. They meet all specifications of RTMA Class 1 fixed ceramic dielectric capacitors. These disks are unusually suitable for limited space applications. These capacitors are available from stock in the capacity ranges and tolerances listed below.

SI-TV HI-VOLTAGE CERAMIC CAPACITORS

A recent addition to the already complete line of Aerovox Hi-Q Ceramic capacitors. Especially adapted to television applications this capacitor is available in two sizes. For capacities from 4.7 - mmf. to 22. mmf. the size is .280 x .750. For 24. mmf. to 60. mmf. the case size is .312 x 1.250. All units referred to here are 6000 Volts DCW.

HI-Q TUBULAR FEED-THRU CAPACITORS

Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements. All units are flash tested at 1250 volts D.C.

Hi-Q Eyelet Feed-Thru Ceramic Capacitors provide the ultimate in miniaturization. They can be soldered directly to the chassis and provide excellent by-pass performance where space is critical. Especially recommended for use in UHF.

HI-Q TUBULAR STAND-OFF CAPACITORS

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped for capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 8% and the installation resistance is above 7500 megohms.

PLASTICON DC RECTANGULARS

Mineral oil impregnated and filled. Hermetically sealed. Can be operated in any position, continuously at 10% over rated voltage up to +40° C. Tolerance 10%. Ambient temperature range -40° C. to +85° C. Insulators: Two ceramic type bushings for standard temperature range. Two soldered-in metallized glass insulators for extended temperature range. All DC rectangulars have 8-32 screw and hex nut terminals with removable hot-tinned solder lugs. Case: Rectangular base, lead coated steel with heavy finish of grey organic lacquer.

Same specifications as DC Rectangulars. Insulators: Two wet-process porcelain bushings on Types AOC06C, AOC01M & AOC02M. One ceramic bushing grounded on Types AOC08M, AOC05M, AOC08M and AOC010M. Case: Obround (flattened oval) cross section. Drawn or lock-seam lead coated steel with heavy finish of grey organic lacquer. Two right angle mounting foot brackets are provided as standard on all AOCO capacitors. Add 1/2" to depth to get mounting centers.

HiVolt POWER SUPPLIES

Where size and weight must
be kept to a minimum —

These hermetically-sealed, self-contained power supplies are designed for Hi Voltage low current DC for many applications. Our exclusive engineering techniques and oil-filled construction assure smaller, lighter, more flexible units.

APPLICATIONS :

- radiation counters
- spectrographic analyzers
- projection television sets
- dust and electrostatic precipitators
- oscilloscopes
- display tubes, etc.

LABORATORY GRADE PLASTICON CAPACITORS

Low dielectric absorption, .01-.02% residual. Low dissipation factor, .0002-.0003 at 1 MC. Constant Q and capacitance, from DC to 100 KC. High insulation resistance, 10¹² ohms/mfd. average. Negative temp.

coefficient, minus 400-500 ppm/°C. Rated voltage 500 V DC. Resistance and absorption readings taken at 200 V DC. 2% and 5% standard tolerances, 1% to order. Type LAG Glassmike style. Type LAC rectangular metal can.

"Glassmike" PLASTICON CAPACITORS

Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range -60°C to +85°C, extended range -60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications. All 19/32 diameter Glassmikes are supplied with piretail leads.

Plasticon dielectric is superior to the finest linen or kraft condenser paper hitherto used. Plasticon is a thin plastic film, free from metallic particles or other foreign matter. Much higher tensile strength than paper and does not become brittle with age and heat. Not porous as paper and has higher breakdown voltage.

"Glassmike" PLASTICON CAPACITORS Type LSG

LSG type capacitors have Plasticon L film-silicone fluid impregnant in Glassmike style case. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF losses, more conveniently mounted, utilize less chassis space, impervious to moisture and smaller in overall volume.

MINIMITE* TYPE MM

Miniature Metal-Cased Tubular Electrolytics

"SM" Safety Margin Construction

- Hermetically sealed aluminum-cased tubulars. Small and light. Ideal for under-chassis mounting in compact, tight assemblies.
- Designed to withstand high surge voltages and high ripple currents. Stable capacitance characteristics. Long service life.
- Exceptionally low leakage. Terminal tab connections provide permanent low-resistance contact for life of the unit.
- Outer insulating tube. Duals have centered mounting strap, and 3 leads (common negative).
- #20 bare wire leads, 3" long.
- Widely specified for original equipment and as popular replacements with quality-minded servicemen.

SINGLE MINIMITE (2 leads)

TYPE ES

Cardboard-Cased Electrolytics

- ASTRON-improved design. Long service life. Electrically and mechanically superior to similar-appearing units.
- Dual and triple-section units. Can be used in place of costlier metal-can types of equal rating in television, radio, radio-phonos and other equipment. 65°C. operation.
- Sections wrapped in plastic film. Lasting protection from moisture, humidity, severest climatic conditions. High-melting-point wax fill.
- Centered radial mounting strap. Plastic insulated wire leads, 6" long. Color coding on tubes.
- Overall wax coating for added protection against moisture and humidity.

Twist-Prong Electrolytics

"SM" Safety Margin Construction

- Widest choice of singles, and dual, triple and quadruple capacitance-voltage combinations in smallest practical aluminum can sizes.
- Ideal for replacement in television, radio and other high quality electronic equipment where high ripple and high surge voltages are encountered.
- Hermetically sealed. Designed for 85°C. operation.
- Quick, easy, firm mounting through chassis slots or slotted plates for insulated or grounded connection. Mounting prong serves as common negative terminal.
- Terminal coding clearly stamped on container.
- Individually packaged for the service trade, including metal and phenolic mounting plates.

TYPE E

Metal Screw-Base Electrolytics

"SM" Safety Margin Construction

- Popular aluminum can type with threaded neck and nut for easy, convenient mounting.
- Recommended as original units or replacements for other can-type wet or dry electrolytics using chassis hole mounting.
- Capacitor sections insulated from can. Separate positive and negative color-coded lead for each section. Section in high-voltage units (400 wdcv) are series-connected to assure long service life.
- Plastic insulated leads, 6" long. Stripped and tinned ends.
- ASTRON-improved terminal construction. Excellent protection against moisture. Suitable for use in tropical, hot, humid and other severe climates.

BLUE-POINT* TYPE BP-Molded Plastic Tubulars

85°C. Operation

ASTRON BLUE-POINT Type BP capacitors are the finest all-purpose molded plastic paper tubulars ever made.

They are designed for continuous operation at temperatures up to 85°C. without voltage derating. The famous BLUE-POINT seal makes them unsurpassed for dependability in television, radio, and a wide variety of applications where a combination of small size, excellent capacitance-temperature stability and resistance to vibration and moisture are prime requisites.

ASTRON BLUE-POINT capacitors give equally dependable and unvaried performance under all climatic conditions including tropical, hot and humid climates.

Due to solid thermosetting impregnant, BLUE POINTS show highly stable capacitance characteristics; also low power factor and high insulation resistance over the entire temperature range -55°C. to +85°C. Capacitance change at 25°C. is less than ±5% over the entire temperature range. The 400-volt and 600-volt units can be operated at 125°C. when derated to a voltage equal to 60% of their 85°C. rating.

The ASTRON-developed BLUE-POINT seal and molding process (patent pending) is completely new and revolutionary in the capacitor art.

The BLUE-POINT actually bonds itself to the plastic seal and the wire leads to form the tightest seal ever produced against moisture and humidity and the severest climatic conditions. Both the seal and shell are completely resistant to soldering iron heat.

ASTRON BLUE-POINT capacitors are identified by their distinctive yellow plastic case and are clearly marked with rated voltage, capacitance and outside foil location.

Molded Paper Tubulars
85°C. Operation

- Pressure molded units. Sealed terminal connections. Long, trouble-free service.
- Smaller than conventional paper tubular types. Better humidity and heat seal — in molded units at no extra cost.
- Ideal as original units or replacements in television, radio, radio-phonos and other commercial applications.
- Operation at temperatures up to 85°C.
- Leads 2" long. Individually tested and fully guaranteed. Attractive red label for easy identification.

TYPE ARMF Oil-Filled Metal Tubulars 85°C. Operation

- Non-inductively wound. Mineral oil impregnated and filled. Hermetically sealed.
- Excellent capacitance stability and low power factor over entire temperature range —55°C. to +85°C.
- Units listed are internally insulated from case. Also available with capacitor section grounded to case (Type ARMG) and in accordance with all Specification MIL-C-25A Styles CP25-26-27-28-29.
- Wire leads 1 1/2" long. Standard capacitance tolerance ±20%.

CAPACITOR SECTION INSULATED FROM CASE:

ARMF (MIL Style CP25): Sizes and list prices as shown.

ARMFP (MIL Style CP26): Basic ARMF with plastic outer sleeve (P) for insulated body. Add 3/8" to length and 3/8" to diameter. Add 15¢ to ARMF list prices.

Bathtub Paper Capacitors 85°C. Operation

- Non-inductively wound. Mineral oil impregnated and filled. Hermetically sealed.
- Operating temperature range —55°C. to +85°C.
- Built to comply with strict requirements of MIL-C-25A. Silicone rubber compression-seal lug terminals. Completely immersion-proof.

- Single units have two terminals; duals have three terminals (one common); triple units have three terminals (case common).
- Standard position of Type ADM terminals is on side (MIL-C-25A Style CP53). Available also with terminals on top (ASTRON Type ADMT or MIL Style CP54) and bottom terminals (ASTRON Type ADMB or MIL Style CP55).
- Cap. Tolerance: ±20%.

METEOR* TYPE ADZ Bathtub Capacitors

125°C. Operation

- Designed for operation at temperatures up to 125°C. without voltage derating.
- Excellent capacitance stability, less than 5% change over entire range —65°C. to +125°C. achieved by use of ASTRON-developed X-250* impregnant.
- Temperature characteristics exceed MIL specifications for Characteristic K.
- Compact sizes in handy, easy-mounting bathtub cases. Glass-to-metal sealed lug-type terminals. Positive immersion proof seal.
- Standard position of terminals is on side (ASTRON Type ADZ or MIL Style CP53). Available also with terminals on top (ASTRON Type ADZT or MIL Style CP54); bottom terminals (ASTRON Type ADZB or MIL Style CP55).

ASTRON CORPORATION

255 GRANT AVENUE, E. NEWARK, NEW JERSEY

METEOR* SUBMINIATURE PAPER CAPACITORS

For 125°C. Operation without voltage derating

- Amazingly small sizes, compact and light weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability, less than 5% change, over entire temperature range of -65°C. to +125°C. due to use of ASTRON-developed high-temperature impregnant X-250*.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25A for Styles CP04-05-08-09-10-11 (ASTRON Types AQ, TQF, and variations); and Styles CP53-54-55, Characteristic K (ASTRON Type ADZ, bathtub).
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

METEOR* TYPE AQ Glass-to-Metal Sealed SUBMINIATURE TUBULARS

- No voltage derating necessary over entire operating temperature range —65°C. to +125°C.
- Extended foil, non-inductively wound construction offers extremely small size and lowest possible resonant losses in low and high voltage applications.
- Excellent capacitance-temperature stability, long life.
- Available in a variety of construction styles to meet your specific needs, as follows:

CAPACITOR SECTION GROUND TO CASE. (Glass-to-Metal terminal at one end):

AQ (MIL Style CP08): Basic unit. Sizes and list prices as shown. Uninsulated body.

AQP (MIL Style CP09): Basic AQ unit with plastic outer sleeve (P) for insulated body. Add $\frac{1}{8}$ " to diameter and length of AQ sizes listed. Add 15¢ to AQ list prices.

AQ-A: Basic AQ unit with soldered-on tangential mounting bracket "A" on uninsulated body. Case sizes as listed for AQ. Add 40¢ to AQ list prices.

AQ-B: Basic AQ unit with soldered on L-type bracket "B" on uninsulated body. Case sizes as listed for AQ. Add 40¢ to AQ list prices.

AQS: Screw neck mounting type. Uninsulated body. Available in same ratings as AQ. Minimum case diameter .400". Add 80¢ to AQ list prices.

AQV: Stud base mounting type. Uninsulated body. Available in same ratings and case sizes as AQ. Add 80¢ to AQ list prices.

CAPACITOR SECTION INSULATED FROM CASE (Glass-to-Metal terminal both ends):

AQF (MIL Style CP08): Basic unit in "floating" construction. Add $\frac{1}{8}$ " to length of AQ sizes listed. Uninsulated body. Add \$1.00 to AQ list prices.

AQFP (MIL Style CP09): Basic AQF unit with plastic outer sleeve (P) for insulated body. Add $\frac{1}{8}$ " to diameter and $\frac{1}{8}$ " to length of AQ sizes listed. Add \$1.15 to AQ list prices.

AQF-A: Basic AQF unit with soldered-on tangential mounting bracket "A" on uninsulated body. Add $\frac{1}{8}$ " to length of AQ sizes listed. Add \$1.40 to AQ list prices.

AQF-B: Basic AQF unit with soldered-on L-type bracket "B" on uninsulated body. Add $\frac{1}{8}$ " to length of AQ sizes listed. Add \$1.40 to AQ list prices.

AQFS: Screw neck mounting type. Uninsulated body. Available in same ratings as AQ. Minimum case diameter is .400". Add $\frac{1}{8}$ " to case length of AQ sizes listed. Add \$1.80 to AQ list prices.

METEOR* TYPE TQF

125°C. Operation

Glass-to-Metal Sealed
SUBMINIATURE TUBULARS

- Inserted tab construction provides smallest paper-foil capacitors available. Ideal where resonant losses are secondary to small size.
- No voltage derating necessary over entire operating temperature range —65°C. to +125°C.
- Excellent capacitance stability over entire temperature range.
- Available in a variety of construction styles to meet your specific needs, as follows:

CAPACITOR SECTION INSULATED FROM CASE (Glass-to-Metal terminal both ends):

TQF (MIL Style CP04): Basic unit in "floating" construction. Sizes and list prices as shown. Uninsulated body.

TQFP (MIL Style CP05): Basic TQF unit with plastic outer sleeve (P) for insulated body. Add $\frac{1}{8}$ " to diameter and length of TQF sizes listed. Add 15¢ to list price.

TQF-A (MIL Style CP10): Basic TQF unit with soldered-on tangential mounting bracket "A" on uninsulated body. Case sizes as listed for TQF. Add 10¢ to TQF list prices.

TQF-B: Basic TQF unit with soldered-on L-type mounting bracket "B" on uninsulated body. Case sizes as listed for TQF. Add 40¢ to TQF list prices.

TQFS (MIL Style CP11): Screw neck mounting type. Uninsulated body. Available in same ratings as TQF. Minimum case diameter is .300". Add 80¢ to TQF list prices.

CAPACITOR SECTION GROUNDED TO CASE (Glass-to-Metal terminal at one end):

TQ (MIL Style CP04): Basic grounded unit. Deduct $\frac{1}{8}$ " from length of TQF sizes listed. Uninsulated body. Deduct \$1.00 from TQF list prices.

TQP (MIL Style CP05): Basic TQ unit with plastic outer sleeve (P) for insulated body. Add $\frac{1}{8}$ " to diameter of TQF sizes listed. Deduct 85¢ from TQF list prices.

TQ-A (MIL Style CP10): Basic TQ unit with soldered-on tangential mounting bracket "A" on uninsulated body. Deduct $\frac{1}{8}$ " from length of TQF sizes listed. Deduct 60¢ from TQF list prices.

TQ-B: Basic TQ unit with soldered-on L-type bracket "B" on uninsulated body. Deduct $\frac{1}{8}$ " from length of TQF sizes listed. Deduct 60¢ from TQF list prices.

TQFS (MIL Style CP11): Screw neck mounting type. Uninsulated body. Available in same ratings as TQF listed. Minimum case diameter .400". Deduct $\frac{1}{8}$ " from length of TQF sizes listed. Deduct 20¢ from TQF list prices.

TQV: Stud base mounting type. Uninsulated body. Available in same ratings as TQF listed. Deduct $\frac{1}{8}$ " from TQF sizes. Deduct 40¢ from TQF list prices.

METALITE®

Metallized Paper Capacitors for 65°C. and 85°C. Operation

METALITE CAPACITORS

Feature:

- Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.
- As much as 75% reduction in size over conventional paper-foil capacitors.
- Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.
- Temperature Range (Metal cased units) -65°C. to +85°C.; (cardboard cased Type ML) -55°C. to +65°C.
- Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.
- Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

METALITE® TYPE MQC

85°C. Operation

Glass-to-Metal Sealed SUBMINIATURE TUBULARS

- Smallest paper capacitor type available.
- Temperature Range —65°C. to +85°C.
- Non-inductively wound. Mineral wax impregnated and filled. Tinned, non-ferrous metal cases.
- Capacitor section grounded to case (Type MQC) with glass-to-metal terminal at one end. Available also with capacitor section insulated from case (Type MQCF) with glass-to-metal terminal at each end.
- Lead length 1 1/2" minimum. Standard capacitance tolerance: ±20%.

CAPACITOR SECTION GROUNDED TO CASE (Glass-to-metal terminal at one end):

MQC: Basic unit. Uninsulated body. Sizes and list prices as shown.

MQCF: Basic MQC unit with plastic outer sleeve (P) for insulated body. Add 1/8" to diameter and length of MQC sizes listed. Add 15¢ to MQC list prices.

MQC-A: Basic MQC unit with soldered-on tangential mounting bracket "A" on un-insulated body. Case sizes as listed for MQC. Add 10¢ to MQC list prices.

MQC-B: Basic MQC unit with soldered-on L-type bracket "B" on un-insulated body. Case sizes as listed for MQC. Add 40¢ to MQC list prices.

MQCS: Screw neck mounting type. Uninsulated body. Available in same ratings as MQC. Minimum case diameter .400". Add 50¢ to MQC list prices.

MQV: Stud base mounting type. Uninsulated body. Available in same ratings and case sizes as MQC. Add 60¢ to MQC list prices.

CAPACITOR SECTION INSULATED FROM CASE (Glass-to-metal terminal each end):

MQCF: Basic unit in "floating" construction. Add 1/8" to length of MQC sizes listed. Un-insulated body. Add 50¢ to MQC list prices.

MQCF-P: Basic MQCF unit with plastic outer sleeve (P) for insulated body. Add 1/8" to diameter and 1/4" to length of MQC sizes listed. Add 65¢ to MQC list prices.

MQCF-A: Basic MQCF unit with soldered-on tangential mounting bracket "A" on un-insulated body. Add 1/8" to length of MQC sizes listed. Add 90¢ to MQC list prices.

MQCF-B: Basic MQCF unit with soldered-on L-type bracket "B" on un-insulated body. Add 1/8" to length of MQC sizes listed. Add 90¢ to MQC list prices.

MQCF-S: Screw neck mounting type. Uninsulated body. Available in same ratings as MQC. Minimum case diameter .400". Add 1/8" to case length of MQC sizes listed. Add \$1.00 to MQC list prices.

METALITE® TYPE ML

Cardboard Tubulars

65°C. Operation

- Temperature Range —55°C. to +65°C.
- Microcrystalline hydrocarbon wax impregnated.
- Sturdy, wax-impregnated cardboard tubes. Strong terminal connections, metal end caps. Units can be point-to-point connected and supported by own leads.
- Wire leads 1 1/2" long.
- Overall mineral wax coating for added protection against moisture and humidity.
- Standard capacitance tolerance: —20% +30%.

METALITE® TYPE MRF

Metal Cased Tubulars
85°C. Operation

- Temperature Range —65°C. to +85°C.
- Mineral wax impregnated and filled.
- Hermetically sealed. Neoprene-phenolic end discs.
- Type MRF supplied with capacitor section insulated from case. Also available with section grounded to case (Type MRG).
- Lead length 1 1/2" minimum.
- Standard capacitance tolerance: ±20%.

CAPACITOR SECTION INSULATED FROM CASE:

MRF: Basic unit. Sizes and list prices as shown.
MRF-P: Basic MRF unit with plastic outer sleeve (P). Add 1/8" to length and 1/8" to diameter of MRF listed. Add 15¢ to MRF list prices.
MRF-Y: Basic MRF unit with riveted radial mounting strap "Y". Case sizes as listed for MRF. Add 10¢ to MRF list prices.
MRF-Y: Basic MRF unit with riveted radial mounting strap "Y" over plastic insulating sleeve (P). Add 1/8" to length and 1/8" to diameter of MRF listed. Add 25¢ to MRF list prices.

CAPACITOR SECTION GROUNDED TO CASE:

MRG: Basic style in grounded construction. Deduct 1/8" from MRF sizes listed. Same list prices as MRF.
MRG-P: Basic MRG unit with plastic outer sleeve (P). Add 1/8" to length and 1/8" to diameter of MRF units listed. Add 15¢ to MRF list prices.

MRG-Y: Basic MRG unit with riveted radial mounting strap "Y". Deduct 1/8" from MRF sizes listed. Add 10¢ to MRF list prices.

MRG-Y: Basic MRG unit with riveted radial mounting strap "Y" over plastic insulating sleeve (P). Add 1/8" to length and 1/8" to diameter of MRF listed. Add 25¢ to MRF list prices.

MRG-A: Basic MRG unit with tangential soldered-on mounting bracket "A". Deduct 1/8" from length of MRF sizes listed. Add 40¢ to MRF list prices.

Standard capacitance tolerance: ±20%.
Other tolerances are available.

- Units meet MIL tests for moisture resistance, thermal cycle immersion and vibration.
- Single units have two terminals; dual units have three terminals, one terminal common negative.
- Standard position of terminals on side. Also available with terminals on top (Type MDT) or bottom (Type MDB).
- Standard capacitance tolerance: ±20%.

- Compact sizes. Light weight. Up to 75% reduction in sizes over conventional paper-foil capacitors.
- Temperature Range —65°C. to +85°C.
- Space-saving metallized paper dielectric makes possible wider choice of high capacitance ratings than ever before obtainable in bathtub cases.
- Hermetically sealed. Silicone rubber compression seal lug terminals.

- Most extensive range of capacitance ratings ever offered in Style CP70 cases.
- Temperature range —65°C. to +85°C. Mineral wax impregnated and filled.
- Hermetically sealed. Silicone rubber compression seal lug terminals. Units meet MIL tests for moisture resistance, thermal cycle immersion and vibration.
- Spade bolt "J" brackets supplied with each unit for convenient, rigid mounting.
- Standard capacitance tolerance: ±20%.

METALITE[®] HY-MET*

High Temperature Metallized Paper Capacitors
for 100°C. and 125°C. Operation

HY-MET CAPACITORS

Feature:

- Temperature Range (Metal cased units) -65°C. to +125°C.; (cardboard cased Type MLL) -55°C. to +100°C.
- Exceptionally small, ultra-compact sizes and light weight for given ratings. As much as 75% reduction in size over conventional paper-foil types.
- Self-healing; ability to withstand high dielectric stresses. HY-MET capacitors can be subjected to momentary over-voltages and surges over and over again without danger of permanent failure.
- Extremely low RF impedance due to small size and short current path. Excellent RF characteristics.
- Solid thermosetting impregnant provides high dielectric strength, improved insulation resistance over conventional metallized paper capacitors and permits high temperature operation.
- Hermetically sealed cases. Glass-to-metal sealed terminals (except cardboard tubular Type MLL).
- Wide variety of applications in communications equipment, instruments, noise suppression filters and systems where small size, light weight, self-healing feature and high temperature operation are prerequisites.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

METALITE[®] HY-MET* TYPE MLL Cardboard Tubulars 85°C. Operation

- Sturdy cardboard cased units. Temperature Range -55° to +100°C. Solid thermosetting impregnant.
- Exceptional strength. Metal end caps. Units can be point-to-point connected and supported by own leads. Leads 1½" minimum length.
- Overall mineral wax coat provides added protection against moisture and humidity.
- Standard capacitance tolerance: -20% +30%.

METALITE[®] HY-MET* TYPE MQL 125°C. Operation

Glass-to-Metal Sealed SUBMINIATURE TUBULARS

- Smallest paper capacitors available for the given ratings.
- Solid thermosetting impregnant. Temperature Range -65°C. to +125°C.
- Tinned, non-ferrous metal cases. Hermetically sealed.
- Non-inductively wound. Capacitor section grounded to case, glass-to-metal seal terminal at one end. Available also with section insulated from case with glass-to-metal terminal at each end (Type MQLF).

CAPACITOR SECTION GROUNDED TO CASE (Glass-to-metal terminal at one end):

MQL: Basic unit. Uninsulated body. Sizes and list prices as shown.

MQLP: Basic MQL unit with plastic outer sleeve (P) for insulated body. Add 1/8" to diameter and length of MQL sizes listed. Add 15¢ to MQL list prices.

MQL-A: Basic MQL unit with soldered on tangential mounting bracket "A" on uninsulated body. Case sizes as listed for MQL. Add 10¢ to MQL list prices.

MQL-B: Basic MQL unit with soldered-on L-type bracket "B" on uninsulated body. Case sizes as listed for MQL. Add 10¢ to MQL list prices.

MQLS: Screw neck mounting type. Uninsulated body. Available in same ratings as MQL. Minimum case diameter .400". Add 50¢ to MQL list prices.

MQLV: Stud base mounting type. Uninsulated body. Same ratings and case sizes as MQL. Add 60¢ to MQL list prices.

CAPACITOR SECTION INSULATED FROM CASE (Glass-to-metal terminal each end):

MQLF: Basic unit in "floating" construction. Add 1/8" to length of MQL sizes listed. Uninsulated body. Add 50¢ to MQL list prices.

MQLFP: Basic MQLF unit with plastic outer sleeve (P) for insulated body. Add 1/8" to diameter and 1/8" to length of MQL sizes listed. Add 65¢ to MQL list prices.

MQLF-A: Basic MQLF unit with soldered-on tangential mounting bracket "A" on uninsulated body. Add 1/8" to length of MQL sizes listed. Add 90¢ to MQL list prices.

MQLF-B: Basic MQLF unit with soldered-on L-type bracket "B" on uninsulated body. Add 1/8" to length of MQL sizes listed. Add 90¢ to MQL list prices.

MQLFS: Screw neck mounting type. Uninsulated body. Same ratings as MQL. Minimum case diameter .400". Add 1/8" to case length of MQL sizes listed. Add \$1.00 to MQL list prices.

METALITE® HY-MET* TYPE MTL

Subminiature Bathhtub Capacitors

- Popular, handy bathtub case in tiny 1 1/8" x 1" base size and minimum case heights.
- Solid thermosetting impregnant enables operation up to 125°C. Temperature Range —65°C. to +125°C.
- Excellent RF characteristics due to non-inductive extended foil construction and extremely small capacitor sections.
- Ideal for all types of miniaturized equipment and tight assemblies to meet extreme minimum weight and size, long life, and high temperature operation requirements.
- Hermetically sealed. Glass-to-metal sealed lug terminals.
- Capacitance tolerance: ±20%.

Electronic Fabricators, Inc.

Electronic Fabricators, Inc. manufactures EFCON Capacitors in standard production with tolerances of $\pm 5\%$, $\pm 2\%$, and $\pm 1\%$!

Type MH (Metal Case, Hermetically Sealed) and Type MC (Cardboard Tube) are EFCON Capacitors using DuPont Company's moisture-proof "Mylar" polyester film. The use of "Mylar" results in high stability over an extended temperature range (-60°C to $+125^{\circ}\text{C}$) without de-

rating and provides high insulation resistance together with low dielectric absorption.

EFCON, Type MH Capacitors are hermetically sealed with glass-to-metal, solder-sealed terminals. Both Type MH and Type MC are production tested to withstand a D.C. voltage of 250% of rated voltage at 25°C between terminals. Type MH is also tested between terminal and case.

Electronic Fabricators, Inc. also manufactures EFCON, Type S, molded silvered mica capacitors.

Round Shaft Midgetrols

Compact, 1/2" diameter carbon element control. Used in industrial electronic equipment; also, in control circuits of television sets, home radios, auto radios and audio amplifiers. AC-DC power switches are available which may be attached quickly and permanently. Has 2 1/4" long, 1/4" round brass shaft. 2 shaft-end knob adaptors for knurled, push-on knobs, and one hex nut furnished. List Price \$1.25 each.

Dual Midgetrol Volume Controls and Accessories

Mallory Midgetrol Volume Control Parts and Accessories enable the serviceman to duplicate the physical and electrical characteristics of hundreds of Concentric Shaft Dual Carbon Controls, Single Shaft Dual Carbon Controls and Concentric Shaft Dual Wire-Wound Carbon control combinations for fast replacement in TV, home and auto radio sets. Supplied as separate front and rear control sections, these parts are easy to assemble, practical and economical, and eliminate delays while waiting delivery of manufacturer's original controls. UF is 1/16" diameter carbon front section; UR is 1/16" carbon rear section; WF is wire-wound front section. A kit of standard assembly parts is supplied with each front section. For accessory fittings and switches, see page 2, Mallory Resistors and Controls Section, this catalog. Average mounting depth behind panel for a carbon dual is 1 1/2"; with switch, is 1 3/4".

Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

TV Focus Controls

These $1\frac{1}{8}$ " diameter units are designed especially for focus control replacement in TV sets. They are 4 watt, wire-wound, and have a special taper. One control, plus accessories and complete instructions per display carton.

Two Watt Wire-Wound Potentiometers and Rheostats

1 5/16" diameter. 1/4" diameter by 1/2" long shaft with screw driver slot. For use in test and special instruments, bias control and bridge circuits. Has grounded contact arm. Rheostat has "open" or "off" position—all have linear No. 4 taper (see Explanation of Mallory Tapers, page 2, Mallory Resistors and Controls section, this catalog).

For Dial plate 393, see page 5, Mallory Resistors and Controls Section, this catalog.

Four Watt Wire-Wound Potentiometers and Rheostats

Four-watt, wire-wound controls designed especially for low voltage TV, test equipment, industrial and electronic applications. These controls are supplied with a 3/4" long bushing and have 1/4" round knurled screw driver slotted shafts 3/8" long. Overall case diameter is 1 1/8". Mounting radius, including solder lugs, is 1 1/4" and mounting depth is 5/8". Rheostat styles have "off" position. All have linear resistance change and insulated shaft. For Dial Plate No. 395, see page 4, Mallory Resistors and Controls Section, this catalog.

P. R. MALLORY & CO., INC. · INDIANAPOLIS

Type "K" Vitreous Wire-Wound Power Rheostats and Potentiometers

Mallory Power Rheostats and Potentiometers are used with Battery Chargers, Blue Print Machines, Dental and Medical Equipment, Fans, Film Printers, Generators, Motion Picture Projectors, Motors and other applications where it is desired to vary a stable current. Mallory Power Rheostats and Potentiometers are constructed by uniformly winding resistance wire into position and applying a protective coating of vitreous enamel. The element contact arm is hinged and under constant pressure to insure proper contact with the element at all times. Wattage ratings of 75, 225 and 500 are available, in addition to those below. A knob and dial plate are supplied with each rheostat.

Mercury "A" Batteries

Provide up to 4 times energy-volume ratio of other types of batteries. Ideal for use in portable electronic equipment, etc. Perform under wide range of adverse weather and humidity conditions. No need for rotation or rest periods. Uniform and optimum discharge voltage throughout long service life. 1.34 volts. Button height .058".

Types HS and DC Deposited Carbon Resistors

(Resistors illustrated are approximately 3/4 actual size)

Type DC ± 1% Deposited Carbon Precision Resistors

Mallory Deposited Carbon Precision Resistors are designed primarily as low-cost replacements for expensive wire-wound resistors in high-quality laboratory instruments. Their unique operating characteristics also make them ideal for replacement or substitution in all radio, television, electronic, or electric circuitry where stability, close tolerance, low-noise, and low inductance are desired. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

These resistors are formed of pure, crystalline-carbon particles deposited on specially compounded ceramic. Each Mallory Deposited Carbon Resistor is equipped with 1/2" tinned copper, axially-placed leads rigidly attached to silver plated brass end-caps. Baked moisture-resistant insulation is incorporated in construction for protection against humidity. Each resistor is calibrated at a nominal temperature of 25°C. and each has a negative temperature coefficient range of approximately .03% for low resistance values, through .08% for resistances exceeding 1 megohm.

Each unit is inspected according to requirements of accepted government specifications, and each is marked with resistance value, type and tolerance, except the smaller types which have a separate label.

All DC Types are packaged in this dust-free plastic tube, assuring adequate physical protection.

Type HS Hi-Stability Deposited Carbon Resistors

For the first time the well-known advantages of high-stability, low inductance, and small size of Mallory Deposited Carbon Resistors are available at moderate cost for use in many commercial applications where accuracy of resistance is of less importance than the consistency of operation over long periods of time and through many changes of temperature. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

Television servicemen, laboratory technicians, and model shop engineers, in particular, will find these resistors ideal for critical television and other oscillator circuits where constancy of resistance is of utmost importance. The electrical and mechanical characteristics of HS types are exactly the same as similar DC types, with exception of the resistance tolerance which has been increased to ± 10% of the nominal value. The same quality and temperature coefficient, as featured in the DC types, is maintained throughout.

Cat. No.	Wattage	Working Volts	Size (in inches) Dia. Length	Standard Value Resistance Range	List Price

SPECIAL ORDERS

— Made to Your Specifications

Mallory Deposited Carbon Precision Resistors are also available in DC types made to exact customer specifications requiring a wider range of resistance values from 2 ohms to 50 megohms. DC type resistors are also available in hermetically sealed types and with special coatings or sleeves.

INSULATED RESISTORS

TYPE BT FIXED COMPOSITION CARBON RESISTORS

More IRC Filament Type BT Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC BT's are by far the leading choice of Electronic Engineers. For replacement, Service Technicians favor IRC BT's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

COLOR CODING AND STAMPING

Resistance values are clearly indicated by standard RETMA Color Code. All resistors in Distributor Packages, except BTR, are individually stamped with value and wattage.

TYPE BW INSULATED WIRE WOUND RESISTORS

INSULATED RESISTORS

Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Tinned, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

TYPE Q VOLUME CONTROL CABINET

Stocked with 18 new Type Q Controls plus switches and special shafts—for handling over 90% of all AM, FM and TV Single Carbon Control replacements. Individually marked compartments contain controls—3 special drawers hold shafts, switches and spare parts. Everything neat, protected, there when you want it. No charge for sturdy metal cabinet; you pay only for its contents.

CONTENTS—Contains one each of the following Q Controls: Q11-116, Q11-123, Q13-123, Q11-128, Q13-128, Q11-130, Q13-130, Q13-130X, Q11-133, Q13-133X, Q11-137, Q13-137, Q13-137X, Q13-139, Q13-139X, Q18-139X; and two type Q13-133 controls. Also included are six 76-1 Switches and five Special Shafts.

LIST PRICE \$30.90

CONCENTRIKIT STOCK CABINET ASSORTMENT #14

Wide-coverage, low cost dealer stock of CONCENTRIKIT parts. Provides coverage of 404 concentric dual listings (equivalent of 188 different concentric duals)—TV coverage which would require dealer investment of \$403.44 in factory-assembled controls.

CONTENTS—Contains 30 selected Base-Elements, 34 Exact Duplicate Shafts, 4 K-2 CONCENTRIKITS and 3 Switches. Provides "less-than-a-minute" assembly without shaft modification.

Assortment #14 is contained in sturdy IRC four-drawer all-metal stock cabinet. 28 compartments are prominently labeled as to contents. Cabinet stacks with IRC Resist-O-Cabinets. Full replacement data on stock coverage is included.

COVERAGE — Supplies replacement coverage among 77 Trade Names including RCA, Emerson, Admiral, Philco, Crosley, G.E. and many other widely sold makes.

LIST PRICE \$44.60

REPLACEMENT CONTROL KITS

IRC CONCENTRIPAKS

IRC CONCENTRIPAKS are practical assortments of IRC CONCENTRIKITS, Base Elements, Exact Duplicate Shafts and Switches selected from the concentric dual requirements of specific brands of TV sets. CONCENTRIPAKS afford wide coverage of replacement needs at a fraction of the cost of factory-assembled controls.

Contained in an extra heavy plastic stock box with 11 compartments and sturdy hinged top, each CONCENTRIPAK includes complete replacement data for the parts included, showing manufacturer's part and stock numbers. IRC parts required for control assembly, pricing guide. List of contents is in easy-to-use chart form. CONCENTRIKIT parts included feature "less-than-a-minute" assembly without filing, slotting, soldering or cutting of shafts.

CONCENTRIPAK—KC-1 FOR PHILCO

Replaces any one of 13 Philco concentric duals plus 21 specific controls of 18 other widely sold makes — TV coverage which would require dealer investment of \$25.62 in factory-assembled controls.

Contains both K-2 and K-3 CONCENTRIKITS, 9 selected Base Elements, 18 Exact Duplicate Shafts and Switch, and replacement data.

LIST PRICE \$17.00

CONCENTRIPAK—KC-2 FOR RCA

Replaces any one of 14 RCA concentric dual controls plus 38 part number listings among 17 other makes—coverage which would require dealer investment of \$30.36 in factory-assembled controls.

Contains K-2 CONCENTRIKIT, 10 selected Base-Elements, 8 special Replacement Shafts and Switch, and complete replacement data.

LIST PRICE \$12.40

CONCENTRIPAK—KC-3 FOR ADMIRAL

Replaces any one of 14 Admiral concentric dual controls plus additional controls for Packard Bell, Sparton and Stromberg-Carlson — TV coverage which would require dealer investment of \$20.00 in factory-assembled controls.

Contains K-2 CONCENTRIKIT, 10 selected Base-Elements, 8 Special Replacement Shafts, and 2 Switches. Replacement data included.

LIST PRICE \$13.00

TYPE Q VOLUME CONTROLS

RADIO-TV TECHNICIANS'

TYPE Q VOLUME CONTROL

IRC's Type Q Control is the basic control for all set servicing. It is carefully engineered to meet most replacement requirements with a minimum stock.

The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction. Easier installation and dependable performance provide more profitable servicing.

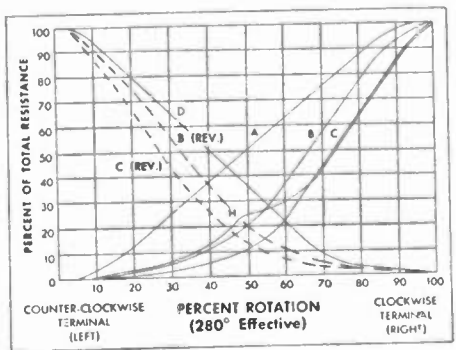

KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

1/4" LONG BUSHING

Shorter bushing and compact 1/8" design suit Q Controls to all small sets, yet handle large set needs as well.

7 STANDARD TAPERS FOR Q CONTROLS

- A — For potentiometer or rheostat where uniform resistance change is required.
- B — Semi-logarithmic curve for tone control or audio circuit control.
- B Reverse — Semi-logarithmic curve — reverse taper for use in contrast and picture control circuits in television.
- C — Logarithmic curve for audio circuit control or antenna shunt control.
- C Reverse — Semi-logarithmic curve — reverse taper for use in contrast and picture control circuits in television.
- D — Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is important in controlling volume.
- H — Tapped logarithmic curve for audio level control for automatic bass compensation.

TAB MOUNT CONTROLS

Many recent TV sets use Tab Mount Controls. These are single controls without switch. They differ from standard controls in that bushing is omitted and mounting to chassis is made with two heavy twist-type mounting tabs.

IRC TAB-MOUNT KITS

Since assembly of Tab-Mount Controls is so simple, IRC supplies three 3-Part Tab-Mount Kits which will assemble with any standard plain or tapped IRC Base-Element to provide satisfactory Tab-Mount Controls. Each TM Kit includes a Tab-type Ground Plate, a control cover and a finger-knurled and screw-driver slotted shaft of appropriate length for universal replacement. Packaged with instruction sheet but without necessary Base-Element.

TM-1—IRC Tab-Mount Kit—Shaft $\frac{1}{4}$ " long. List Price \$0.60

TM-2—IRC Tab-Mount Kit—Shaft $\frac{5}{8}$ " long. List Price \$0.60

TM-3—IRC Tab-Mount Kit—Shaft 1" long. List Price \$0.60

Q CONTROL ACCESSORIES

IRC SWITCHES

The Type 76 Switch is designed and produced by IRC. It is supplied in two types: 76-1 Single Pole Single Throw, and 76-2 Double Pole Single Throw. Switch is specially engineered for the Q Control with matching blue Bakelite enclosure. It attaches easily and quickly, and for added convenience, the one-piece terminals have elongated holes. List Price \$0.60

16 INTERCHANGEABLE FIXED SHAFTS FOR Q CONTROLS

AQ

Knob Master Shaft. Same as supplied in Type Q Controls. Flatted, grooved and knurled. 3" long. List Price \$0.50

BQ

Slotted or tongued. For remote control cables. Includes $\frac{7}{8}$ " and 1 $\frac{1}{2}$ " guide funnels and tongue. Approximately 3 $\frac{1}{2}$ " long from mounting face. $\frac{1}{4}$ " diameter. List Price \$0.45

GQ

Specially slotted with hole in bottom. For Philco sets. Slot $\frac{1}{2}$ " x $\frac{1}{8}$ " deep. Approximately 1 $\frac{1}{8}$ " long from mounting face when installed in control. $\frac{1}{4}$ " diameter. List Price \$0.30

HQ

Flatted, with groove for dial plate. For Delco, RCA, Sears-Roebuck and Westinghouse sets. $\frac{3}{8}$ " deep flat. $\frac{1}{4}$ " deep groove. Approximately 1 $\frac{1}{8}$ " long from mounting face. $\frac{1}{4}$ " diameter. List Price \$0.30

JQ

$\frac{1}{4}$ " diameter with .105" flat. For Zenith models where shaft must operate inside another shaft. Approximately 4 $\frac{1}{8}$ " long from mounting face. List Price \$0.45

KQ

Special $\frac{1}{4}$ " round with two concentric holes in end. For Motorola sets. Approximately 1 $\frac{1}{2}$ " long from mounting face. List Price \$0.30

LQ

Short flat with groove and threaded hole in end. For Belmont and Montgomery-Ward sets. $\frac{3}{8}$ " deep flat. $\frac{3}{8}$ " deep groove. Approximately 1" long from mounting face. $\frac{1}{4}$ " diameter. List Price \$0.35

MQ

Special double-flat, threaded for $\frac{3}{8}$ " on end. For Belmont, Montgomery-Ward and Wells-Gardner sets. Has two concentric holes in end, the smaller being threaded. Approximately 1 $\frac{1}{2}$ " long from mounting face. List Price \$0.45

NQ

Universal $\frac{7}{8}$ " flatted and slotted shaft. Slot milled entire length of shaft except for thin web. Approximately 4" long from mounting face. List Price \$0.45

PQ

Universal $\frac{1}{4}$ " full-round shaft approximately 3" long from mounting face. For $\frac{1}{4}$ " or $\frac{3}{8}$ " bushings. $\frac{3}{8}$ " bushing included. List Price \$0.35

RQ

Very short screw-driver slot shaft. Slot, $\frac{1}{8}$ " x $\frac{1}{8}$ ". Approximately $\frac{1}{2}$ " long from mounting face. $\frac{1}{4}$ " diameter. For $\frac{3}{8}$ " bushing only. Bushing included. List Price \$0.35

SQ

Combination finger knurl and screw-driver slot. Shaft knurled at end for $\frac{1}{8}$ ". Screw-driver slot in end, $\frac{3}{8}$ " x $\frac{1}{8}$ ". $\frac{1}{4}$ " diameter. Approximately $\frac{3}{4}$ " long from mounting face. List Price \$0.30

TQ

Insulated shaft for use in television. Drive arm and shaft of insulating material. Used without retainer ring. 3" long from mounting face. Easily cut to required length. $\frac{1}{4}$ " diameter. CANNOT BE USED WITH SWITCH. List Price \$0.60

UQ

Identical with BQ Shaft except for addition of friction clutch-drive arm. Used for remote control as in auto radios. List Price \$0.60

VQ

Special tongued shaft—1" long from mounting face, tongue $\frac{1}{8}$ " wide, $\frac{1}{8}$ " long, .054" thick. For Magnavox TV Receivers. List Price \$0.35

WQ

Special tongued shaft— $\frac{11}{8}$ " long from mounting face, tongue $\frac{1}{8}$ " wide, $\frac{1}{8}$ " long, .062" thick. For Zenith TV Receivers. List Price \$0.35

FOR QUICK, EASY CONVERSION TO "SPECIALS" WITH FIXED SHAFT SECURITY

This feature adapts the Q Control to a "special" in 6 easy steps. (1) Remove control cover by bending up tabs. (2) Remove Resilient Retainer Ring with knife or pointed tool. (3) Remove standard shaft from control base. (4) Insert special shaft in base. (5) Roll new Ring into shaft groove. (6) Replace cover (or add switch).

IRC INTERCHANGEABLE FIXED SHAFTS ARE INDIVIDUALLY PACKAGED with complete instructions and extra Resilient Retainer Ring.

Q CONTROL ACCESSORIES

ASSEMBLE YOUR OWN STANDARD OR SPECIAL IRC Q CONTROLS

For those who would like to use their IRC Base-Element stock for assembly of standard controls, the component parts are available. Plain Q Control assemblies with 1-Base-Element, 1-Interchangeable Fixed Shaft, 1-QCB Bushing and 1-QCC Cover. Switch type Q control assemblies with 1-Base-Element, 1-Interchangeable Fixed Shaft, 1-QCB Bushing and 1 of either 76-1 or 76-2 Switch.

QCB-BUSHING— $\frac{3}{8}$ "-32 thread. $\frac{1}{4}$ " long. Pkg. of 5. List Price \$0.30

QCC-COVER—For plain or tapped controls. Pkg. of 5. List Price \$0.45

IRC VOLUME CONTROL GROUNDING LUG—Same as supplied with IRC Type Q Controls. Fits $\frac{3}{8}$ " bushing. Lug length from hole center— $1\frac{7}{8}$ ". Type QCL Grounding Lugs. Pkg. of 5. List Price \$0.17

Type QCL Grounding Lug

STANDARD Q CONTROL LOCKNUT—Hex nut for $\frac{3}{8}$ "-32 thread. $\frac{7}{8}$ " across flats. Type QCN. Pkg. of 10. List Price \$0.25

EXTENSION SHAFTS

These attach to regular shafts, thus extending length to any needed size. They frequently make it possible to use standard controls for "special" jobs.

PLAIN OR INSULATED SHAFT COUPLERS

For use with standard controls to meet special shaft requirements. Two set screws give rigid connection.

TYPE C2—Insulated coupler for use with square type shaft used by Motorola.

TYPE C3—Plain coupler to couple $\frac{1}{4}$ " shafts; insert allows coupling of $\frac{1}{4}$ " shaft to $\frac{3}{8}$ " shaft. List Price \$0.30

SLEEVE BUSHINGS

TYPE S1—For use with standard controls. List Price \$0.45

TYPE S2—To provide bearing for switching mechanism. List Price \$0.30

TYPE S5—For use with standard controls to provide $\frac{1}{2}$ " dia. bushing. $2\frac{1}{4}$ "- $\frac{1}{2}$ "—28 thd. full length—.437 flat. List Price \$0.60

SPECIAL PURPOSE CONTROLS

Type QJ-3 TV ATTENUATOR

- Reduces overloading effects on TV sets in strong signal areas.
- Diminishes interstation interference caused by nearby or powerful stations.
- Minimizes buzz due to high signal level in intercarrier systems.
- Permits easy adjustment of signal RIGHT AT SET.
- Frequently prevents mismatch of antenna load to set.

IRC's QJ-3 TV Attenuator permits ready adjustment of signal input to TV sets. In most cases, it corrects or substantially reduces such conditions as:—Adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breakerover. Also useful in service work—duplicating fringe area signals when shop is near strong local station. List Price \$3.30

Type LC-1 LOUDNESS CONTROL

A continuously compensated control that boosts lows and highs as volume is decreased—maintains depth and brilliance even at whisper level. Type LC-1 replaces makeshift compensating units—tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Automatically maintains proper balance of all frequencies in the audio spectrum at any listening level. Simplicity itself—as easy to wire into an audio circuit as any standard three-terminal volume control. Complete instructions included, showing applications. Type 76-1 or 76-2 switch can be added to this control. List Price \$9.95

4 WATT WIRE WOUNDS

TYPE 4WK—A husky, universal 4-watt wire-wound control specially designed for TV replacements. Equipped with IRC Knob Master Shaft—knurled, flatted and grooved to fit most knob requirements without modification except for cutting to length. Diameter 1 3/4", depth behind panel 1 1/2", bushing 1/4", shaft length 3".

TYPE 4WS—Identical to Type 4WK except equipped with short, knurled and slotted shaft. Designed for replacement without shaft alteration of TV controls mounted at chassis rear or under front panel concealment. Dimensions same as Type 4WK except 5/8" shaft length.

HIGH VOLTAGE CONTROLS

TYPE HV—A two-watt carbon element high voltage control for use in television receivers using picture tubes requiring electrostatic focus. Equipped with Knob Master Shaft. Diameter 2 1/2", depth behind panel 3/8", bushing 1/4", shaft length 3".

FACTORY-ASSEMBLED EXACT DUPLICATE CONCENTRIC DUALS

For Service Technicians who prefer factory-assembled controls, IRC provides a complete line of over 500 Factory-Assembled Exact Duplicate TV Concentric Duals. Both Carbon and Wire Wound Element types are included to meet the needs of over 5500 TV sets.

PART NUMBER MANUAL (Form S012C) provides complete cross-reference from manufacturers' Part or Stock Numbers.

**MECHANICAL FIT
AND ELECTRICAL OPERATION
DOUBLE-MONEY-BACK GUARANTEED!**

IRC TV Concentric Duals—both Factory-Assembled Exact Duplicates and Universal Concentrikits — are double-money back GUARANTEED! Mechanical and electrical specifications are all based on set manufacturers' procurement prints. Resistance values are matched; tapers are closely followed; shaft lengths are never less than manufacturers' nominal, never more than $\frac{3}{32}$ " longer.

NEW, SIMPLIFIED IRC CONCENTRIKITS AND EXACT DUPLICATE SHAFTS

GIVE "LESS-THAN-A-MINUTE" ASSEMBLY OF TV CONCENTRIC DUAL CONTROLS

Here's the outstanding development in TV Concentric Dual replacements—a universal stock of parts which assemble into Exact Duplicate Controls in less-than-a-minute! Makes practical wide coverage of special TV Controls with a low cost stock of parts. Reduces obsolescence. Permits faster, more efficient and more profitable servicing.

FOUR NEW IRC CONCENTRIKITS of simplified, improved design plus new IRC Exact Duplicate Shafts and a greatly expanded selection of Base-Elements provide exceptionally wide coverage, including wire-wound-carbon combinations.

NO FILING OR CUTTING OF SHAFTS. IRC Exact Duplicate Shafts are ready for assembly into completed concentric duals. No alterations are required! No special tools needed!

PARTS NEEDED FOR ASSEMBLY. Each control requires only 2 base elements, a pair of shafts and a switch (when needed), in addition to CONCENTRIKIT. IRC's PART NUMBER MANUAL (Form S012—15¢ Net) supplies complete listing of parts needed for each manufacturer's part number.

K-2 CONCENTRIKIT. For assembly of concentric duals having 2 carbon sections. Contain 4 parts: Panel Cover, Rear Cover, Bushing and Mounting Nut. Assembly instructions included. Requires following additional parts, depending upon specification desired:

- 2—Base-Elements (Type B)
- 1—Outer Shaft (Types P1 or P2)
- 1—Inner Shaft (Types R1, R2, R3 or R4)
- 1—Switch—when needed (Types 76-1 or 76-2)

KS-2 Universal Shaft Kit may be used with K-2 CONCENTRIKIT in place of Exact Duplicate Outer and Inner Shafts.

List Price \$0.80

K-3 CONCENTRIKIT. For assembly of concentric duals having wire-wound panel section and carbon rear section. Contains 4 parts: Panel Cover, Rear Cover, Ground Plate and Mounting Nut. Assembly instructions included. Requires additional parts, depending upon specification desired, as follows:

- 1—Panel Base-Element (Type W)
- 1—Rear Base-Element (Type B)
- 1—Outer Shaft (Types P3 or P4)
- 1—Inner Shaft (Types R1, R2, R3 or R4)
- 1—Switch—when needed (Types 76-1 or 76-2)

KS-3 Universal Shaft Kit may be used with K-3 CONCENTRIKIT in place of Exact Duplicate Outer and Inner Shafts.

List Price \$0.80

K-4 CONCENTRIKIT. For assembly of concentric duals having 2 carbon sections. Contains 4 parts: Panel Cover, Rear Cover, SPECIAL BUSHING FOR MOTOROLA, and Mounting Nut. Assembly instructions included. Requires same additional parts, depending upon specification desired, as listed for K-2 Concentrikits.

List Price \$0.90

K-5 CONCENTRIKIT. Use, contents and additional parts required are the same as listed for K-2 Concentrikits, except SPECIAL $\frac{1}{4}$ " LONG BUSHING FOR HALLICRAFTERS is included.

List Price \$0.80

IRC Base-Elements are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements of many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts.

Two types of Base-Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel sections.

Two Base-Elements are required for each concentric dual.

CONCENTRIKIT EXACT DUPLICATE SHAFTS

Save time—be assured of accurate fit! IRC now provides a complete line of Exact Duplicate Shafts for CONCENTRIKIT—factory-tailored for dependable mechanical fit. No filing, slotting, soldering or cutting required!

Many shafts are flatted as well as slotted to provide wider replacement coverage. Each shaft is a complete assembly, including contactor. Factory-lubricated, packaged in cellophane and in individual carton.

DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS

Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting face

when installed in control (L_1 is Outer Shaft length; L_2 is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32" or 2-5/16". Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32" should be subtracted to determine shaft length.

SINGLE CONTROLS

TYPE PQ

TYPE RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact $\frac{1}{4}$ " Q Control. Power rating is $\frac{1}{2}$ watt, 500 volts maximum. Electrical rotation is the same with or without switch. $\frac{3}{8}$ " bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round $\frac{1}{4}$ " shaft, approximately 3" from mounting face, with $\frac{3}{8}$ " long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

LIST \$1.25

TYPE RQ. Very short screw-driver slot shaft, $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face with $\frac{3}{8}$ " long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ.

DISTRIBUTOR CONTROLS FOR INDUSTRY

DUALS AND TRIPLES

IRC Type PQ and RQ Industrial Controls are supplied as single controls. Dual Control and Triple Control combinations are available by adding IRC MULTISECTIONS.

MULTISECTIONS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ or RQ Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 22 values, as shown in following table. Each MULTISECTION adds $\frac{1}{16}$ " to base control.

FIXED POWER WIRE WOUND RESISTORS

IRC Power Wire Wounds are rugged resistors specially engineered for dependable heavy-duty performance. They are supplied in a variety of power ratings, resistance values, sizes and terminal types. In addition to the conventional tubular types, IRC also supplies: 4 watt completely insulated Type PW-4 with axial leads, and two new high temperature resistors rated at 7 and 10 watts. Type PW-7 and PW-10 are fully insulated in rectangular ceramic cases and have axial leads.

IRC Power Wire Wounds are designed for continuous operation at full rated power. Derating is unnecessary even for the highest stock values. IRC Power Wire Wounds are full size, thus capable of efficiently handling greater wattage. Cooler performance assures longer resistor life, and safeguards critical components mounted adjacently. Clear, permanent markings show type, size, wattage, and resistance value; markings improve in legibility with temperature rise. Terminals are tin plated for easy soldering.

PRECISION WIRE WOUND RESISTORS

IRC Precision Wire Wound Resistors surpass MIL-R-93A Specifications. MIL and JAN Style equivalents are shown below.

Improved ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Improved winding technique, developed by IRC, eliminates shorted turns or strains in the winding. Improved insulation provides greater humidity protection and contributes to longer trouble-free service. Improved lug and lead terminals assure perfect electrical connections without strain on the windings, and are easily soldered.

IRC offers a complete line of redesigned Precision Wire Wound Resistors. These improved units are fully interchangeable with earlier types, while providing higher standards of performance plus new sizes and terminals.

All IRC Precisions, except Type WW10J, are furnished with rugged lug terminals for soldered connections. Type WW10J has wire lead terminals 2" long.

All Types except WW8J and WW10J are wound with adjacent sections in opposite directions. This provides windings of low residual inductance, and windings that have little coupling effect from other parts of the circuit. Type WW8J, with single section, is wound non-inductively. Type WW10J has a single section winding, but inductance is minimized by the comparatively small size of this unit.

CLOSE TOLERANCE PRECISTORS

TYPE DC DEPOSITED CARBON RESISTORS

1% ACCURACY
PRECISION PACKAGED

1/2, 1 and 2 WATTS

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Precision Resistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRECISTORS make them superior for many popular applications.

IRC Type DC Deposited Carbon Precision Resistors are available in three sizes: 1/2 watt (body size 1/16" x 3/32"), 1 watt (body size 1/8" x 3/16"), and 2 watts (body size 1/4" x 3/16"). Accuracy ±1% (25°C).

For complete protection against scratches, jars and surface injury IRC PRECISTORS are factory packed in capped plastic tubes. This special precision packaging also safeguards these close tolerance resistors against excessive handling.

TYPE MBC

IRC's Molded Boron-Carbon Precistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded plastic housing provides complete mechanical protection, and minimizes the effect of moisture. Because of its greater heat dissipating capacity, load life characteristics for the Type MBC are improved over those of either boron or deposited carbon unmolded units.

APPLICATIONS

Type MBC Molded Boron-Carbons are particularly suited for applications where unmolded boron or deposited carbon units cannot be used due to the risk of mechanical damage to their coating, insulation breakdown, or high moisture change.

SPECIFICATIONS

WATTAGE RATING: 1/2 watt at 40°C. ambient (per MIL-R-10509A), derated to 0 at 120°C.

RESISTANCE VALUES: 10 ohms to 510K ohms.

TOLERANCE: Standard tolerance is 1%.

IDENTIFICATION: Housing is distinctive green plastic. Type designation, resistance value and tolerance are stamped on each unit.

GERMANIUM & SELENIUM DIODES

GERMANIUM DIODES

IRC Germanium Diodes are point contact crystal rectifiers designed and assembled in such a manner as to give a low cost unit of dependable service and long life. The units are protected against humidity by the molded housing and an electrically inert material which fills the entire cavity, sealing out moisture and protecting against severe mechanical shock.

Hot tin dipped mounting pins and leads make it ideal for either clip or solder mounting. Polarity is indicated by the tapered shape which shows the direction of current flow at a glance.

MICROSTAK SELENIUM DIODES

Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

IRC Insulated Chokes are available in two sizes designated as types CLA and CL-1. Both types are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

These "Pick-A-Shaft" and "Ad-A-Switch" controls will take any of the shafts listed on page R-30 including High Voltage Coupler and insulated shaft. Your choice of any one of the 12 shafts listed, (this does not include insulated shaft) with each control. "AT" controls use "SWA" Switches and "A47F" controls use "SWE" Switches, both shown on page R-30. "AM" controls use "SWA" switches while "A47" controls use "SWE" switches, both shown on page R-30. Tolerances for these controls are in accordance with RETMA standards; Overall resistance tolerance of plus/minus 20% for all values up to and including 100K ohms; Plus/minus 30% for all values above 100K ohms.

Graph Explanation:

- Taper S—Straight or uniform resistance change with rotation.
- Taper T—Right-hand 30% resistance at 50% of C.C.W. rotation.
- Taper U—Left-hand 1% resistance at 33 1/3% of C.W. rotation.
- Taper V—Right-hand 20% resistance at 50% of C.C.W. rotation.

POWER RHEOSTATS

Clarostat Power Rheostats maintain their full power rating at settings, as low as, one third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 19%. Closer tolerances are available upon special order.

The metal cored winding is embedded in a cold-setting, inorganic cement and is thereby bonded to the ceramic body. Unit mounts through a single hole. A locking pin is provided for rear panel mounting.

SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2 1/2 watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, 3/8" bushing diameter, 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

Any combination of ohmages within range specified may be obtained on order. PRICE: Due to the special nature of these units, prices and specific information will be sent upon request.

WIRE-WOUND — SERIES 49

Wire-wound controls with a power rating of 1.5 watts. 3/8" diameter low-loss phenolic housing. Linear taper resistance through 300° mechanical and electrical rotation. Breakdown between metal mounting surface and element or terminal, greater than 1,000 Volts AC.

Bushing 1/4" x 32 NEF-2, 1/4" long. 1/8" diameter round shaft, 1/2" long. Hexagon mounting nut 1/8" thick x 1/8" across flat.

Also available as Series 49-9 incorporating screwdriver slotted shaft with split-locking bushing. Split bushing 1/4" x 32 NEF-2, 3/8" long. Shaft length of 1/8".

Dual combinations available as Series D49. Any combination of ohmages within range specified below may be obtained on order.

C-LINE CONTROLS

A new line of composition-element and wire-wound controls designed specifically for industrial, laboratory, and other semi-critical applications. The new "C-line" controls are deluxe versions, mechanically and electrically, of the popular Clarostat Series 37, composition element; Series 43, wire-wound; Series 58, wire-wound; Series 10, wire-wound controls.

All exposed metal parts of the "C-line" controls have corrosion-resistant finishes. Terminals have suitable finish for ease of soldering. Covers are close-fitting with no cut-outs, resulting in practically a dust-proof, moisture-proof control. Units are in sealed dustproof plastic bags, packaged in the standard Clarostat cartons. In this manner, controls retain factory fresh appearance and performance even through an extended shelf-life.

Designated as the "C-line" Controls, these latest additions to the Clarostat line are of factory-assembled, fixed-shaft type. They are available with either a 1/8" round, nickel plated shaft, or a 1/8" screwdriver slot-type shaft with split locking bushing.

The C1 designation indicates a 1/8" round shaft beyond bushing; 3/8" long bushing with 3/32-NEF-2 thread. The C2 designation is a 1/8" screwdriver slotted shaft with a 1/2" split locking bushing. One nickel plated machined hexagon mounting nut and one internal lock washer supplied with all units. All C2 units are supplied with one nickel plated machined hexagon locking nut.

All "C-line" controls are available as follows on special order:

- (1) Switches available for all "C-line" controls.
- (2) Other ohmage not listed as standard catalog numbers.
- (3) Other tapers not listed as standard catalog numbers.
- (4) Other bushings and shaft lengths not listed as standard catalog items.
- (5) As dual combinations. Prices and delivery information on request.

SERIES "37C1" and "37C2" 1-WATT CONTROLS

Electrical tolerances are plus/minus 10% for all values up to and including 100,000 ohms, and plus/minus 20% for values above 100,000 ohms up to 10 megohms. All controls rated 1 watt.

"GREENOHM"* FIXED WIRE-WOUND RESISTORS

Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without changes in resistance values or appearance. Wire windings on high-grade ceramic and coated with special

inorganic cement. In accordance with RETMA standards; overall tolerances are $\pm 5\%$ for resistors of 50 Ω and higher. For resistors of 49.9 Ω and lower, overall tolerances are $\pm 10\%$.

SERIES PR-5-F—Rated 5 watts. $\frac{1}{8}$ " dia. by 1" long. Lead wires and tinned lugs. Standard Packing—10 per carton.

SERIES AC-10-F—Rated 10 watts. $\frac{1}{8}$ " dia. by 1 $\frac{1}{2}$ " long. Lead wires and tinned lugs. Standard Packing—10 per carton.

SERIES AC-20-K—Rated 20 watts. $\frac{3}{16}$ " dia. by 2" long. Lead wires and tinned lugs. Standard Packing—5 per carton.

SERIES A-25-K—Rated 25 watts. $\frac{3}{16}$ " dia. by 2 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

SERIES K-40-N—Rated 40 watts. $\frac{3}{8}$ " dia. by 3 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

SERIES K-50-N—Rated 50 watts. $\frac{3}{8}$ " dia. by 4 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

SERIES K-80-N—Rated 80 watts. $\frac{3}{8}$ " dia. by 6 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

"GREENOHM JR." SERIES C4GJ—Inexpensive ceramic-case resistors. Wire-wound on spun glass fiber core. Cement-filled ceramic case. Rated 5 watts. $\frac{1}{8}$ " dia. by 1" long. 1 $\frac{1}{2}$ " axial pigtail leads. Standard Pack.—10 per carton.

"GREENOHM JR." SERIES C7GJ—Same construction as Series C4GJ. Rated 10 watts. $\frac{1}{8}$ " dia. by 1 $\frac{1}{4}$ " long. Standard Packing—10 per carton.

SERIES K-100-W—Rated 100 watts. 1 $\frac{1}{8}$ " dia. by 6 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

SERIES K-160-W—Rated 160 watts. 1 $\frac{1}{8}$ " dia. by 8 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

SERIES K-200-W—Rated 200 watts. 1 $\frac{1}{8}$ " dia. by 10 $\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed.

"GREENOHM"* ADJUSTABLE WIRE-WOUND RESISTORS

Same electrical and mechanical construction as "Greenohm" fixed resistors. Incorporates sliding band for tapping any desired resistance. Slider band tightened by means of screw at desired setting. In accordance with RETMA standards, overall tolerances are $\pm 10\%$.

SERIES AC-10-FA—Rated 10 watts. $\frac{3}{8}$ " dia. by $1\frac{1}{2}$ " long. Lead wires and tinned lugs. Standard Packing—10 per carton. Extra Slider Band: \$0.10 each.

SERIES A-25-KA—Rated 25 watts. $\frac{3}{8}$ " dia. by $2\frac{1}{2}$ " long. Tinned lugs. Supplied with mounting brackets. Standard Packing—Individually Boxed. Extra Slider Band: \$0.25 each.

SERIES K-50-NA—Rated 50 watts. $\frac{3}{4}$ " dia. by $4\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed. Extra Slider Band: \$0.25 each.

SERIES K-80-NA—Rated 80 watts. $\frac{3}{4}$ " dia. by $6\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed. Extra Slider Band: \$0.25 each.

SERIES K-100-WA—Rated 100 watts. $1\frac{1}{8}$ " dia. by $6\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed. Extra Slider Band: \$0.25 each.

SERIES K-160-WA—Rated 160 watts. $1\frac{1}{4}$ " dia. by $8\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed. Extra Slider Band: \$0.25 each.

SERIES K-200-WA—Rated 200 watts. $1\frac{1}{4}$ " dia. by $10\frac{1}{2}$ " long. Supplied with mounting brackets. Standard Packing—Individually Boxed. Extra Slider Band: \$0.25 each.

"GREENOHM"* RESISTOR KIT

Wall Card holding 20 most popular sized 10-watt "Greenohm" resistors. As units are removed, value appears on card for reordering. Metal clips afford easy mounting of units replaced. Dimensions: 10 1/2" x 12".

Wall card contains Wire-Wound Fixed Power Resistors as follows:

POWER RESISTOR DECADE BOX

The Resistance Decade Box Model No. 240B allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used

throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. 13 in. long; 8 1/2 in. deep; 5 1/2 in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Type Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

100-Watt — 150-Watt

The Ward Leonard 100-watt (Type 100R) and 150-watt (Type 150R) Ring Type Rheostats are of sturdy construction for electrical applications, such as control of fractional h.p. motors, rectifiers, voltage regulators, and some electronic circuits, such as filament and battery control.

CONTROLS

BLUE SHAFT RADIOHMS®

The most widely accepted line of 15/16" diameter carbon-type controls, constructed to meet exacting

radio, television, and industrial standards. Switch types are tested to assure instant, smooth, positive operation. Blue, anodized aluminum shafts, 3" long with universal mill. Rating 1/2 watt. Type BSK units have 2 1/8" brass split-knurl shafts. Switches are universal DPST, easily wired for SPST or 3-wire use.

TYPE "AB" ADASHAFT RADIOHMS®

SELECT THE CONTROL

ADD-A-SHAFT TO MEET YOUR NEEDS

Adashaft Controls are now built in the popular Model "B"—15/16" construction. The basic control unit is constructed with a patented stub shaft . . . usable just this way in many cases as a short, screwdriver slotted unit. A selection of nine basic shaft types are available, ranging from 3/8" to 10" in length, including auto types, insulating nylon and many others. This original, patented Centralab construction permits instant locking . . . resulting in a solid, integral, well aligned unit. There is no price premium on Adashaft . . . you pay for exactly what you need. After adding the required shaft, the units may be

converted to switch type with the new "Fastatch"† type KB line switches. All "AB" characteristics same as Model B. Packaged—singly including all data.

STANDARD RESISTANCE TAPERS

SNAP-TITE* REPLACEMENT CONTROL For speed-servicing or "hidden" volume controls

The revolutionary new Centralab control with amazing time-saving features:

- SNAP-TITE is installed by just pushing it into the chassis mounting hole. It holds itself in place.
- No tools needed for mounting; no nuts, lockwashers, or any other hardware. A clean, fast replacement.
- Six spring clips grip the panel for positive, non-twist mounting. Replaces any standard control type. (One or two locating lugs.)
- Shaft is molded, high-strength polystyrene, fingertip knurled and slotted for screwdriver adjustment. Extends 1/2" from face of mounting surface.

The ten values below will replace 75% of current rear-end or "hidden" television controls:

**NEW FASTATCH*
DUAL CONCENTRIC CONTROL SYSTEM**

No tools needed . . .

Centralab's new system of dual concentric control replacement saves stocking and availability "headaches" for radio, black-and-white and color television controls. The unit is ideal also for manufacturers and laboratories that need special dual concentric controls. Nothing to bend, no tools required for assembly. Built with extremely popular, patented "Fastatch" construction, these controls are completely guaranteed by Centralab against defects in workmanship.

- Fastatch Duals are completely assembled, tested, and guaranteed front and rear units, not "put-together" controls. You don't do the manufacturer's work.
- No extra tools needed — the units snap together.
- Closely held tolerances, some more critical than original manufacturers' specifications, insure perfect fit and operation of front to rear, inner to outer shafts.
- Precision made front and rear controls are stocked separately. Instead of 400 units, just 126 cover all current and FUTURE dual concentric specifications.
- By checking popularity listings of Fastatch Duals, a small stock of controls for popular sets in your area can be maintained. With a minimum investment, you can have the correct dual control for any replacement needed.

FASTATCH DUAL FRONT UNIT

Outer shaft is 3-5/16" long from mounting surface, with double-fluted mill . . . brass for quick cutting to proper length. Use for single or double flat or round shaft. Scores make cutting for single or double slot easy.

FASTATCH DUAL — REAR UNIT

Distinctive blue aluminum inner shaft is 3 3/4" long from mounting surface. Easily cut to proper length. Diameter, 3/16" with .156" flat. Fits .187" or .202" flat shaft knob — spring adapter furnished for other knob types convert to switch type with type KB switches listed on page R-40. Front and rear units.

NOBLELOY RESISTORS

"Nobleloy" METAL FILM RESISTORS

Trade Mark Reg

NF—Continental "Nobleloy" type NF is a metal film miniature precision resistor. Metallic resistance element is deposited on a low loss ceramic carrier. A layer of vitreous enamel protects metal film against unusual atmosphere conditions. Axial leads are firmly fastened to silver contact bands. Initial accuracy and high stability make these resistors best suited for critical applications. Primarily designed to meet MIL-R-10509A specifications. Color coded to RETMA standard values.

X—Continental "Nobleloy" type X metal film resistors have radial leads firmly affixed to extremely low resistance metal contact films to reduce contact resistance. This type of design with hollow center permits greater heat radiation to withstand overloads, and possesses excellent resistance stability under adverse operating conditions. Resistance and tolerance are marked on each unit. Coated with a gray colored enamel.

PX—Continental "Nobleloy" type PX metal film resistors are constructed the same as type X. A different improved alloy resistance film is employed to allow for better temperature coefficient. Resistance and tolerance are marked on each unit. Coated with an orange colored enamel.

COMPOSITION AND WIRE WOUND RESISTORS

"CARBOMITE" TYPE M COMPOSITION RESISTORS

Trade Mark Reg.

(Actual size as illustrated)

Meet JAN-R-11 Specifications

Low Noise Level Small Size Insulated

Continental's "CARBOMITE" type M resistors are manufactured by the most exacting standards to produce a stable and rugged resistor capable of operating at maximum efficiency in any circuit. All resistors are marked with resistance in addition to the RETMA code. Standard packages are 10 and 50 per item in all three sizes. They are also available in the NEW "RESIST-O-FILE" package consisting of five resistors of a value and size mounted on a 3 x 5 indexed file card. These resistors mounted on a card are coded as MR. They are available in standard boxes of 10 cards per value.

Type	Wattage	Size		Resistance Range	List Prices	
		L	D		5% Tol.	10% Tol.
M $\frac{1}{2}$ or MR $\frac{1}{2}$	$\frac{1}{2}$ Watt	$\frac{3}{8}$	$9/64$	10 ohms to 22 megohms	\$0.33	\$0.17
M1 or MR1	1 Watt	$9/16$	$7/32$	2.7 ohms to 22 megohms	.50	.25
M2 or MR2	2 Watt	$11/16$	$5/16$	10 ohms to 22 megohms	.66	.33

RESIST-O-FILE CABINETS

Resist-O-File type MR (carded resistors) are available in a handy assortment contained in a 3 x 5 card cabinet. Each cabinet contains the most popular resistance values used.

CODE MC $\frac{1}{2}$, $\frac{1}{2}$ Watt, (200 resistors) 1 card each of: 10 ohms, 15, 22, 33, 47, 68, 100, 150, 220, 330, 470, 680, 1000, 1500, 2200, 3300, 4700, 6800, 10K, 15K, 22K, 33K, 47K, 68K, 150K, 220K, 330K, 680K, 1.5 Meg, 2.2 Meg, 3.3 Meg, 4.7 Meg, 6.8 Meg, and 10 Meg. 2 cards each of 100K, 470K and 1 Meg.

CODE MC1, 1 Watt, (200 resistors) same values and quantities as code MC $\frac{1}{2}$ assortment.

"WM" TYPE WIRE WOUND RESISTORS

Resistance Wire Molded in Bakelite Axial Leads
Soldered Connections RETMA Color Coded

Continental type WM resistors are wound evenly to prevent shorting of turns. A minimum of .0015 inch wire is used for the winding. The terminals are securely and permanently connected to the winding. They are resistant to moisture. The WM resistor is recommended for circuits requiring very low resistance which is not ordinarily available in the carbon style. Packaged in boxes of 10 or 50 each.

AUTO RADIO SUPPRESSORS

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor — yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

The S-19, S-21 and S-23 Suppressors are equipped with a removable terminal nut for spade type mountings.

VITREOUS ENAMELED RESISTORS Fixed Wire-Wound Types

LECTROHM Resistors are manufactured from the highest quality materials obtainable and are rated according to RTMA standards. They are rugged, dependable, accurate—quality components that will give long, trouble-free service. Mounting brackets available for 10, 20, 50, 80, 100, 160 and 200 watt units.

TYPE 1½L—5-WATT

DIMENSIONS..... ½" x ½" x 1½"
TERMINALS..... Pig Tail

LECTROHM

INCORPORATED • 5560 NORTHWEST HIGHWAY, CHICAGO 30, ILLINOIS

LECTROHM IS CREATING NEW DESIGNS AND MATERIALS IN WIRE WOUND RESISTORS FOR NEW ASSEMBLY METHODS

In addition to supplying the electronics industry with a superior vitreous enameled wire-wound power resistors in the familiar sizes and ratings, LECTROHM is producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power re-

sistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

TYPICAL LECTROHMS FOR PRINTED CIRCUITS

Other styles quickly designed for your individual space limitations.

3 to 25 watts. 10 to 25,000 Ohms.

LECTROHM AXIAL LEAD WIREWOUNDS

For added convenience in mounting in many types of assembly.

1 to 10 watts. 10 to 25,000 Ohms.

LECTROHM ABOVE CHASSIS TYPE

More efficient use of space designed to eliminate heat beneath the chassis. Lectrohm engineers will create resistors to fit your available space.

5 to 25 watts. 10 to 15,000 Ohms.

NEW LECTROHMS FOR UTMOST ECONOMY

Competing in price with sand coated types, but offering a new standard of moisture resistance and long life performance.

5 to 20 watts. 10 to 15,000 Ohms.

RIB-ON-EDGE LECTROHM (STANDARD SIZES AND VALUES)

155 to 420 watts. .06 to 22 Ohms.

VITREOUS ENAMELED LECTROHM-FERRULE TYPE (STANDARD SIZES AND VALUES)

13 to 190 watts. To 100,000 Ohms.

UNMOUNTED DECADE RESISTANCES

In response to a demand from engineers, manufacturers and physicists who design and construct their own electrical measuring instruments, we have made the Shallcross Unmounted Decade Resistances available. They are of the same construction as those used in the popular Shallcross Resistance Decades described above and consist of ten Shallcross Resistors mounted on a ceramic instrument switch.

SPECIFICATIONS

APPLICATIONS—Measures resistance from 1 ohm to 1 megohm. Locates grounds, crosses, opens, and shorts by Murray, Varley, Hilborn, or Fisher Loop and Capacitance tests.

ACCURACY—Overall— $\pm 0.1\% + 0.01$ ohm; Ratio resistors— $\pm 0.05\%$; All others— $\pm 0.1\%$.

RHEOSTAT ARM—Four decades. 10,110 ohms in 1 ohm steps. Can also be used as a resistance box.

GALVANOMETER—Rugged Shallcross galvanometer is built-in. Sensitivity 1 micro-amp. per mm scale division.

SWITCHES—Shallcross molded phenolic instrument switches. Pure nickel contacts, beryllium copper brushes.

CASE—Light weight aluminum carrying-type case with battery compartment and removal lid.

DIMENSIONS—Length $8\frac{1}{2}$ ", width $7\frac{3}{4}$ ", height $5\frac{1}{4}$ ".

WEIGHT—Approx. 8 lbs. PRICE—\$175.00.

- ✓ Types and sizes engineered for all needs. Attenuation accuracies of 1%, resistor accuracies of 0.1%, on special order.

Shallcross Audio Attenuators are available in either variable or fixed units, the former often being referred to as a "control" and the latter, as a "pad".

Controls are available with as few as 5 steps or as many as 52 steps with an attenuation as small as 0.1 db per step. The total attenuation for a single control does not exceed 125 db since such high attenuation approaches the noise level of the switching mechanism.

The complete story of Shallcross attenuators may be found in Shallcross Engineering Bulletin #4, copies of which are available on request. Specifications and prices are given below for a few of the most popular variable attenuators.

IMPEDANCE: 150, 500, 250/500, 600 ohms, except potentiometers, which are 100,000 and 250,000 ohms.

RESISTORS: All non-inductively wirewound, $\pm 5\%$ tolerance, except types preceded with "C", which are composition selected to $\pm 5\%$.

ATTENUATION: Increases for counter-clockwise rotation of knob end of shaft.

FREQUENCY RESPONSE: Flat over entire audio range.

SWITCH MECHANISM: Multi-leaf wiper arms, collector rings and contacts available in tarnish resistant silver alloy or brass. Noise level -130 db.

DETENT: Indexing mechanism available on any unit for \$0.75 list. Back of panel depth is then increased $\frac{3}{16}$ ".

DIALS: \$1.50 list each additional.

KNOBS (VA-16906): \$0.60 list each additional.

Underwriters' Laboratories Reexamination Service Listed

For many years the Ohmite line of ten wirewound, vitreous enameled rheostats, ranging from 25 to 1000 watts in size, has been the most extensive available to industry. Six of the most popular sizes have been carried in stock by Ohmite Distributors and at our factory. Now, the other four sizes, the Model G, 75 watts; Model P, 225 watts; Model T, 750 watts; and the Model U, 1000 watts are available from stock, thus making the entire line of ten sizes quickly obtainable for design and production needs and for emergencies.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure

at the contact and at the center lead are independent. The construction is patented under U. S. Patent No. 1,942,495 and Re-issue 19607; other patents pending. Ohmite Rheostat Models H, J, K, L, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

OHMITE "LITTLE DEVIL"® RESISTORS

Ohmite "Little Devils" are full ½ Watt, 1 Watt and 2 Watt Insulated Composition Resistors and can be used at their full wattage ratings at 70° C. (158° F.) ambient temperature. They meet requirements of specification JAN-R-11.

"LITTLE DEVILS" are available from stock in ½, 1 and 2 watt sizes with ±5% or ±10% tolerance. The standard RMA values, 10 ohms to 22 megohms can be furnished. In the 1 watt size, ±10% tolerance values as low as 2.7 ohms are available from stock.

Stocked in RETMA Values ±5% or ±10% Tolerance

(Figures in bold type are ±10% RETMA values. All values except (*) available in ±5% tolerance.)

WITH WELDED TERMINALS

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. These all-welded construction units have welded high-strength alloy terminals. For perfect electrical connection, the resistance wire is welded to the terminal. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads.

These all-welded construction resistors have welded high-strength alloy terminals. For perfect electrical connection, the resistance wire is welded to the terminal. Units are wire-wound on ceramic cores and protected by Ohmite Vitreous Enamel. Furnished with mounting brackets and on DIVID-OHM with one adjustable lug.

OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units

are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

2 WATT MOLDED COMPOSITION POTENTIOMETER — TYPE AB

The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The single unit is 1-1/16" diameter and extends 9/16" behind the panel. The dual unit extends 1-3/16" behind the panel. The 2" long round shaft (including the 3/8" long mounting bushing) is available from stock on potentiometers with all three resistance tapers and on the dual unit. The screw-driver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

LITTLE DEVIL® RESISTOR ASSORTMENTS FOR SERVICE USE

Serviceman's assortments of 150 Ohmite "Little Devil," 1/2-watt, or 125, 1-watt or 2-watt insulated composition resistors, in the 40 values (10 ohms to 10 megohms) most frequently used by servicemen. The assortment is offered at the price of the resistors alone—the cabinet is furnished without extra cost! Cabinet is only 9" long, 4 3/4" high, and 5 1/4" deep.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

SPRAGUE RESISTORS

KOOLOHM[®] WIRE-WOUND RESISTORS

- Wound with wire which is insulated before winding with a flexible ceramic coating. This coating is impervious to heat as high as 1000°C.
- Each resistor is "tropicalized" by a glazed ceramic outer coating and new type end seals which offer complete protection against moisture or any other climatic conditions
- May be mounted anywhere—even flat against chassis or grounded parts
- Extremely high insulation resistance—10,000 volts from surface of ceramic jacket to inner resistance elements
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes for each wattage rating
- Insulated wire permits true "non-inductive" wound designs

NOTE: ALL NIT TYPES ARE NON-INDUCTIVE

Miniature POWER RESISTORS

Carefully designed and skillfully made for electronic and allied industries, these miniature power resistors are completely welded from terminal to terminal. They are coated with a special Silicone material, embedded in an anodized aluminum housing designed for maximum heat dissipation, and are impervious to moisture. They are ruggedly built for long life service under the most adverse operating conditions.

DIMENSIONS OF RH AND B TYPES

Power Resistors are the answer to that space problem because it is true POWER in MIN-IATURE. Carefully crafted in every respect, DAL-OHM Miniature Power Resistors are designed to give trouble-free performance under all conditions.

- Tolerances from 0.05% to 10%.
- RH and RS Types made in accordance to applicable JAN and MIL Specifications.
- Resistance ranges up to 55,000 ohms.
- T.C. 0.00002/ Deg. C.

Packed and sealed in plastic tubes for your protection.

HERMETIC SEAL — RUGGEDIZED DEPOSITED CARBON PRECISION RESISTORS

The ultimate in precision under ALL conditions

- Completely sealed.
- Fully insulated.
- Non-Hydroscopic.
- Thermal Shock Proof.
- Ultra-high-frequency.
- Ruggedized construction.

DALOHM hermetic sealed ruggedized precision resistors are produced under most exacting methods of quality control. They are completely solder sealed in a newly developed envelope of non-hydroscopic ceramic. Ideally suited for use in U.H.F. equipment where only the optimum of quality may be tolerated. Ruggedized for incorporation into "snap-in" component clips. Production tested for resistance to thermal shock, salt-water immersion and humidity.

DEPOSITED CARBON RESISTORS

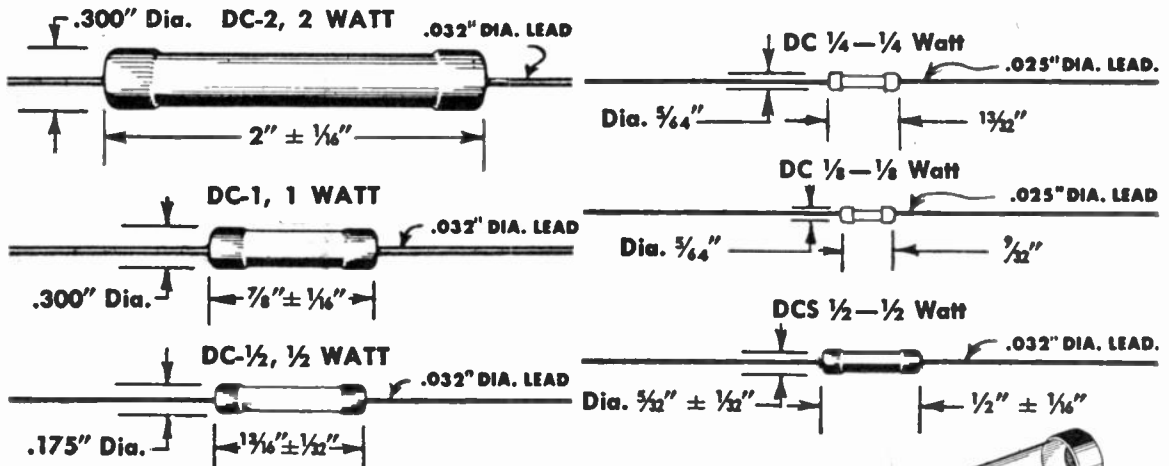

FOR EXCEPTIONAL ACCURACY IN ANY LOW-HIGH RESISTANCE RANGE

Dalohm deposited carbon resistors are manufactured under a licensed agreement with Western Electric. The matchless stability and accuracy of these precision resistors are the result of years of intensive research and development. Dalohm deposited carbon resistors are manufactured by depositing pure carbon in crystalline form which is bonded to a selected ceramic core. They are intended for circuits calling for the accuracy and stability of wire wound resistors such as instrumentation, advanced electronics and critical television circuits but with the marked economy of carbon resistors.

Dalohm deposited carbon resistors are sealed from moisture by special silicone coating material having a high dielectric strength, excellent thermal conductivity, and offer high resistance to abrasion.

Made to withstand the utmost in SHOCK conditions

RSE-Type Miniature POWER RESISTORS

DALOHM "Ruggedized" Precision Power Resistors not only answer the space problem, but the shock problem. They are designed for trouble-free performance under the most exacting and demanding conditions.

RSE-Type resistors are sealed in Silicone and housed in black metal tubing. (Suggested mounting clip: Atlas E-E Corp.) RSE-Type resistors have same tolerances and T.C. as RS Types.

DIMENSIONS OF RSE-TYPE RESISTORS

EPOXY ENCAPSULATED LIGHT WEIGHT WIRE WOUND PRECISION RESISTORS exceed applicable JAN and MIL specifications

STANDARD TOLERANCE $\pm 1\%$.

TOLERANCES AS LOW AS $\pm .05\%$ CAN BE HAD ON SPECIAL ORDER.

TEMP. COEF. $0.00002 / ^\circ C$.

Dale engineers and chemists have compounded a chemically inert material making possible these light weight precision resistors that surpass the requirements of applicable JAN and MIL specifications.

In addition to these resistors being completely impervious to the penetrating effects of salt ions, humidity, moisture, and corrosive gases and vapors, this new material in which the Dalohm precision wire wound resistors are encased has very high dielectric strength and due to its coefficient of expansion matching that of wire itself, it eliminates the possibility of distorted windings and shorted turns which are quite common in other types of resistors.

The superior quality of Dalohm precision wire wound resistors is assured through thorough testing, temperature cycling, salt water immersion, humidity, and overload tests. These are without a doubt the precision resistors for dependable and long life operation under the most adverse conditions.

VITREOUS ENAMELED RHEOSTATS

Insulated shafts and mounting bushings

Type A-25 — Will withstand rugged treatment under the most adverse conditions. It has unusually smooth mechanical operation. The terminals, made of strong corrosion resistant alloy, are permanently welded to the winding form. The wound ring is made an integral part of the refractory base by vitreous enamel. The phosphor bronze actuating arm, with its graphite brush, gives smoothest action and excellent electrical control. Shafts are insulated. Three terminals permit either potentiometer or rheostat use; and our new high temperature gray enamel gives an added safety factor.

Types H-50, H-100, H-150 — These are our newest rheostats and they will give longer service and greater protection. They are designed for use under extremes of humidity and abnormal atmospheric conditions. The unique "buss bar" type brush automatically adjusts tension for complete, continuous contact. It eliminates backlash and prevents binding. It assures perfect contact with the entire winding surface. Our new high-temperature gray enamel bonding gives you an increased safety factor and better overall service. These improved rheostats are designed to comply with current standards of: (a) Military Specifications JAN-R-22. (b) R.T.M.A. (c) N.E.M.A. (d) "listed by Underwriters Laboratories, Inc."

Blue Ribbon resistors differ from tubular resistors in that they are wound on an elliptical core. An aluminum bar through the center insures more even distribution of heat, avoiding hot spots.

Our gray enamel eliminates crazing which results in failure of the resistive element due to moisture penetration from humidity, salt and other severe atmospheric conditions.

Mounting studs—corrosion and rust resistant—peened to the ends of the thru-bar conduct heat to the mounting surface. You can stack two or more units. Our method of fastening the tube to the thru-bar prevents loosening.

In comparison with tubular units of equivalent wattage rating these resistors offer outstanding advantages: • Higher wattage rating per unit space requirement. • Reduction in space requirement. • Simple sturdy mounting, single or stacked. • Light weight. • Lower inductance.

Designed for and manufactured in accordance with JAN-R-26A specifications.

*This rating based on a maximum temperature rise of 300 degrees C. with the Resistor mounted horizontally on a 10" x 10" x .040" steel plate supported horizontally 1/2" above a wooden surface.

When Resistors are mounted on a non-metallic base the nominal watt rating should be reduced by approximately 15%.

10 and 20 WATT FIXED VITREOUS ENAMELED RESISTORS

Designed for radio service and replacement use—conservatively rated—wound upon Steatite Tube—combination lug and pigtail terminal connections. Vitreous

enamel insulation, insures proof against moisture. 10 watt and 20 watt sizes, in the range of resistance values shown.

GIRARD - HOPKINS RESISTORS - CAPACITORS

HIGH QUALITY, FIXED
COMPOSITION RESISTORS

CUSTOM MANUFACTURED
PAPER DIELECTRIC CAPACITORS

5% AND 10% TOLERANCE — 1/2 - 1 - 2 WATT RATINGS

G-H fixed composition resistors are of the highest quality and combine the desirable features of great mechanical strength, permanent electrical characteristics and minimum physical size for a given wattage rating. Leads are differentially tempered to prevent sharp bends near the resistor body while still permitting ready forming to fit a particular arrangement.

G-H resistors are supplied in convenient packages having a perforated top section which permits the tops to hinge, (as shown in the illustration) or to be removed entirely. Since each resistor is held in an upright position by a honeycomb section within the lower portion of the box, the leads of all resistors remaining within a given container are exposed to view. Resistance value and tolerance indication are clearly marked on sides and top cover of the container. These features greatly facilitate stock location and stock control checking.

G-H maintains a complete stock of 5% and 10% tolerance resistors in all wattage ratings to insure rapid delivery on all orders.

CONSTRUCTION

The TRU-OHM power rheostat will provide smooth variation of resistance under the most severe operating conditions. The all ceramic-metal construction insures dependable service even at extreme operating temperatures. An extra deep core, on which the resistance wire is toroidally wound, means a more conservative power rating.

Types R-50, 75, 100 and 150 have an exclusive torsion spring assembly which provides uniform pressure of the contact brush against the winding at all times. Current flows from the brush through a flexible shunt wire to a large size slip ring. Positive, low-wear contact is maintained against the center terminal by an adequate compression spring. Back lash in the rotating assembly is reduced to a minimum by means of the design. A positive stop is provided at the extremes of rotation entirely independent at the contact arm assembly.

SPECIAL FEATURES

TRU-OHM rheostats are available with many extras such as off positions, screw driver control, shaft assemblies for special mounting conditions, etc. Prompt engineering service is available for all special requirements. Knobs furnished upon request.

SLIDEOHM WIRE-WOUND VITREOUS-ENAMELED ADJUSTABLE RESISTORS

Slideohm Resistors are for use in any application where it is necessary or desirable to have one or more intermediate resistance values; or in circuits that need to be changed from time to time to meet varying electrical conditions. Slideohm Resistors are built of the highest grade low temperature coefficient materials, and are coated with tough crazeless Vitreous Enamel.

Adjustable resistors combining adjustment to any resistance value within unit's range, with positive, permanent, non-fluctuating qualities of wire-wound resistor. Each Slideohm Resistor is provided with horizontal mounting brackets and one adjustable contact slider.

WATT RATINGS

Nominal Watt ratings for Slideohm Resistors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approximately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Slideohm Resistors.

Price of resistor includes brackets and one adjustable band.

WIRE-WOUND VITREOUS ENAMELED FIXED RESISTORS

TYPES 931-933

Compact genuine wire-wound, vitreous-enamel. Correctly designed, highest quality materials used throughout. Note these features:

1. Crack-proof refractory tubing for the support. Adequate heat dissipation.
2. Quality resistance wire precisely spaced, tension wound.
3. Copper terminal band clamped to tubing. Wire ends wrapped and brazed around raised ear.
4. Heavy vitreous-enamel coating for permanent seal against moisture, oxidation and mechanical damage.
5. Pig-tail of stiff wire 2 in. long soldered to terminal band for positive, non-breakable connection.

INSULATED MOLDED CARBON RESISTORS

TYPES 1097-1098

Small, noiseless, vibration-proof. Crack-proof molded casing around molded carbon resistance element. Tinned copper pig-tail leads 2 in. long. Resists humidity effects. Ideal for AVC circuits, high-gain amplifiers. RTMA color-coded; stamped with resistance value. Precision tested. Standard tolerance $\pm 10\%$.

AEROVOX Carbofilm RESISTORS

PRECISION RESISTORS MADE WITH MATCHLESS ACCURACY

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments. All in all, Carbofilm resistors meet the requirements of accuracy, stability and economy.

The Carbofilm resistors are a carbon deposit type and are available in the following standard or jobber stock sizes with the resistance value shown in the listing.

Packed and sealed in plastic tubes for your protection.

STANDARD NUMBERS

Carbofilm Resistors are available in the following standard or jobber-stocked sizes, and in the resistance values shown in the listings:

WIRE WOUND ADJUSTABLE RESISTORS

WIRT Adjustable Resistors are space wound on low loss ceramic tubes to which the resistance wire is bonded, resulting in dependability and long life. Protection of the windings is afforded by the PHENOCOTE covering which is described fully on the preceding page. One adjustable Slider Band, screw driver type, is furnished as standard. Bakelite knob type bands can be furnished on special order at slightly higher prices as shown below.

These bands are made with small contact buttons located on the inside of the band so that a number of taps may be made without shorting out excessive resistance.

WIRE WOUND FIXED RESISTORS

To satisfy the most exacting needs of the Radio and Electronic Industries, Wirt Fixed Wire-wound Resistors are regularly furnished in PHENOCOTE protective coatings, developed and steadily improved over a period of many years in the Wirt Laboratories. The resistor wire is space wound on low loss ceramic tubes. The PHENOCOTE covering is an exclusive organic cement coating offering maximum protection to the resistance winding against the detrimental effects of moisture, humidity and electrolysis. Absolutely inert chemically, it will not effect the most delicate windings. It is particularly recommended for fine wire sizes and all applications where the maximum temperature of the unit will not exceed 300° F. These Resistors are universally used in the Radio, Electronic, Instrument, Public Address and Test Equipment fields.

AUTOMATIC REGULATION

WHAT IT IS! **AMPERITE** is an automatic "rheostat" designed to keep the current in a circuit at a definite value, e.g., 0.5 amps. Should the supply voltage increase, the **AMPERITE** will automatically increase in resistance to take up the increase in supply voltage. Since **AMPERITE** is a constant current device, it can only be used on a fixed load.

SIZES:

- T-6 1/2 L, Miniature. O.D. 1 1/8"; seated height, 2 3/4".
- T-9, Octal base. O.D. 1 1/8"; seated height, 3".

Ⓧ = Threshold Current & Voltage

CHARACTERISTIC CURVE

Characteristic curve of a typical Amperite. Approximate curve of any other Amperite can be obtained by multiplying or dividing the current or voltage scale by any number.

We strongly recommend that you send us your specifications on special problems, and let us recommend the **BALLAST TUBE** you need.

AMPERITE NUMBERING SYSTEM

In general, the **AMPERITE** number approximately denotes the current—voltage threshold value:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25
THRESHOLD VOLTAGE	4.0	4.0	7.0	11.0	11.0

ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 10G min.) . . . Hermetically Sealed (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation per **AMPERITE** 50w per tube (ST19 bulb). Any number of **AMPERITES** with the same voltage range can be operated in parallel. **AMPERITES** should not be used in series.

AMBIENT EFFECTS

Variations of -50° to +70° C. will change the current of an **AMPERITE** approximately ±2% on the regulating portion of the curve.

LIFE EXPECTANCY

Average life 2000 hours prox.; if **AMPERITE** filament is operated at black temperature—average life 5000 hours prox., depending on use.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable **AMPERITE**.

Power Supply	Dry Cells	6 Volts	12 Volts	26 Volts	115-Volts
Supply					
Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on					
AMPERITE Current	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain 2% regulation on load. Better regulation is obtainable by increasing the voltage across the **AMPERITE**. In general, the higher the percent of the supply voltage taken by the **AMPERITE**, the better the regulation.

Two conductors 22-16/34 flexible stranded tinned copper, polyethylene insulation, color coded, conductors twisted, cushioned with fillers, cotton wrap, braided tinned copper shield, plastic jacket overall.

For alternate put-ups use code: Q=100 ft., D=250 ft., F=1000 ft.

PLASTIC INTER-COMMUNICATION CABLE

4 CONDUCTORS (2 Shielded—2 Unshielded)

GENERAL PURPOSE: This cable is designed for general wiring from station to station where a shielded twisted pair is essential to eliminate cross talk.

No.	Cond.	Size	Strand	O.D.	Standard Put-up	Alternate Put-up
1243/4	4	22	7/30	.315"	500'	1000'

Construction: Four conductors 22-7/30 tinned copper, vinyl plastic insulation, color coded; tinned copper shield over two conductors, two conductors unshielded; plastic jacket overall.

3 CONDUCTORS (1 Shielded—2 Unshielded)

GENERAL PURPOSE: This cable is designed for general wiring from station to station where a shielded single conductor is essential to eliminate cross talk.

No.	Cond.	Size	Strand	O.D.	Standard Put-up	Alternate Put-up
1242	3	22	7/30	.170"	500'	1000'
1243	3	22	7/30	.215"	500'	1000'

Construction: Three conductors 22-7/30 tinned copper, vinyl plastic insulation, color coded; tinned copper shield over one conductor, two conductors unshielded; cotton braid overall (No. 1242), or plastic jacket overall (No. 1243).

For alternate put-up use code: F=1000 ft.

SHIELDED TWISTED PAIR CABLE

GENERAL PURPOSE: Where small diameter is required for sound recording, photo electric cell circuits, public address systems, etc.

No.	Cond.	Size	Strand	O.D.	Standard Put-up
1261	2	24	16/36	.115"	1000'

Construction: Two conductors 24-16/36 extra flexible tinned copper, 1/64" vinyl insulation, color coded, conductors twisted, very fine tinned copper shield overall.

ARMORED DUPLEX SPEAKER CABLE

GENERAL PURPOSE: For P.A. systems, oil burner installations, automotive wiring, etc.

No.	Cond.	Size	Strand	O.D.	Standard Put-up	Alternate Put-up
1272	2	18	16/30	.132" x .182"	500'	1000'

Construction: Two conductors parallel, 18-16/30 stranded tinned copper, rubber insulated, color coded, lacquered cotton braid, galvanized steel armor overall.

For alternate put-up use code: F=1000 ft.

SHIELDED PHONO AND GRID WIRE

GENERAL PURPOSE: Extreme flexibility and limpness make this an ideal wire for phonograph pick-up arm cable and grid wire.

No.	Cond.	Size	Strand	Insulation	O.D.	Standard Put-up	Alternate Put-up
1200	1	24	16/36	.010"	.080"	1000'	100'

1202	2	24	16/36	.010"	.115"	1000'	—

Construction: No. 1200—Single conductor 24-16/36 extra flexible stranded tinned copper, vinyl plastic insulation, fine close tinned copper shield overall.
 No. 1201 same as No. 1200 plus cotton braid over shield.
 No. 1202 same as No. 1200 except two conductors with shield overall.

For alternate put-ups use code: Q=100 ft.

ALPHA WIRE CORPORATION

Construction:

Each conductor 22 AWG tinned copper, plastic insulation, conductors color coded, twisted into pairs, plastic jacket overall.

For alternate put-up use code: Q=100 ft.

PLASTIC COMMUNICATION CABLE

(TWISTED PAIRS)

GENERAL PURPOSE: For use in connecting intercommunication systems, annunciators, telephones and wherever a multiple circuit hook-up is required.

Construction:

Each conductor 20-10/30 stranded tinned copper, 1/64" thermo-plastic insulation, color coded, conductors twisted, brown cotton braid overall.

Alternate put-up use code:

D=250 ft., E=500 ft., F=1000 ft.

MULTI-CONDUCTOR FLEXIBLE CABLE

(COTTON BRAID)

GENERAL PURPOSE: For connecting speakers, analyzers, remote control units, P.A. systems or wherever a multiple circuit hook-up is required.

No.	Cond.	Size	Strand	O.D.	Standard Put-up	Alternate Put-up
1182	2	20	10/30	.135"	100'	250' 500' 1000'

1192	12	20	10/30	.340"	100'	250' 500' 1000'

Construction:

Each conductor 18 AWG solid bare copper wire, thermoplastic insulation, color coded, conductors twisted, waxed cotton braid overall.

INTER-COMMUNICATION CABLE

(BRAIDED)

GENERAL PURPOSE: Designed for interior use for connecting inter-communication systems, annunciators, thermostat controls of oil burners, air conditioners, etc.

No.	Cond.	Size	O.D.	Standard Put-up
1274	2	18 Solid	.150"	500'
1275	3	18 Solid	.165"	500'

1275/5	5	18 Solid	.200"	500'
1275/6	6	18 Solid	.220"	500'

Construction:

Nos. 1279, 1280: Each conductor 19 AWG solid tinned copper, 1/64" telephone compound rubber, heavy cotton braid (ridged for polarity) with specially treated compound to make it weather-proof for resistance against rain, snow, hail and cold.

Nos. 1279V, 1280V: Each conductor 19 AWG solid tinned copper, .024" plastic insulation (ridged for polarity), conductors twisted.

OUTDOOR INTER-COMMUNICATION WIRE

GENERAL PURPOSE: For outdoor and indoor use or in any damp location, for connecting communication systems, telephones, etc.

No.	Cond.	Size	O.D.	Standard Put-up
1279	2	19 Solid	.255"	500'
1279V	2	19 Solid	.165"	500'

1277/50	51	102	22 Solid	.650"	1000'	—

Construction: Each conductor 22 AWG solid tinned copper wire, two reverse serves paraffined, color coded, conductors twisted into pairs, then covered with an impregnated double paper wrap, and overall a cotton braid saturated with a moisture-proof, flame retarding, rodent-proof compound.

For alternate put-up use code: Q=100 ft.

LEAD-COVERED COMMUNICATION CABLE

(TWISTED PAIRS)

GENERAL PURPOSE: For use indoors, outdoors, underground and in pipes for connecting inter-communication systems, annunciators, telephones, etc.

No.	Pairs	Cond.	Size	O.D.	Standard Put-up
1289	6	12	22 Solid	.375"	1000'
1291	10	20	22 Solid	.450"	1000'
1293	16	32	22 Solid	.510"	1000'
1295	26	52	22 Solid	.560"	1000'

Construction: Similar to Braided Communication Cable above, but with lead antimony sheath instead of cotton braid over the twisted pairs.

LEAD SHEATHED CABLE

GENERAL PURPOSE: For P.A. systems, communications, traffic control, mines, railroads and many other uses where severe moisture conditions are encountered. For all outdoor use including underground and underwater.

No.	Cond.	Size	O.D.	Standard Put-up
1271	2	19 Solid	.325"	1000'

Construction:

Two conductors 19 AWG solid tinned copper, 1/32" "Hi-Tension" rubber, color coded, conductors twisted, pure lead sheath overall.

PLASTIC INTER-COMMUNICATION WIRE

GENERAL PURPOSE: For connecting sound and inter-communication systems, general audio hook-up, etc.

No.	Cond.	Size	O.D.	Standard Put-up	Alternate Put-up
1793	2	22 Solid	.125"	500'	1000'
1794	3	22 Solid	.130"	500'	1000'

Construction:

Conductors 22 AWG solid tinned copper, plastic insulation, color coded, conductors twisted, plastic jacket overall.

For alternate put-up use code: F=1000 ft.

INDOOR INTER-COMMUNICATION WIRE

GENERAL PURPOSE: For connecting sound and communication systems, telephones, etc.

No.	Cond.	Size	O.D.	Standard Put-up
1269	2	22 Solid	.115"	500'
1270	3	22 Solid	.125"	500'

Construction:

Conductors 22 AWG solid copper, plastic insulated, color coded, conductors twisted.

ALPHA WIRE CORPORATION

MULTI-CONDUCTOR FLEXIBLE CABLE (RUBBER JACKETED)

GENERAL PURPOSE: For indoor and outdoor speakers, permanent or portable P.A. systems, sound recording and auto radios.

Construction:
Each conductor 20-26/34 extra flexible stranded tinned copper, cotton wrap, 1/32" "Hi-Tension" rubber, color coded, conductors twisted, cushioned with cotton fillers, cotton wrap, tough black rubber jacket overall.
For alternate put-ups use code:
D=250 ft., E=500 ft., F=1000 ft.

1247/8	8	20	26/34	.395"	100'	500'	1000'

RUBBER SHEATHED SERVICE CORD (UNDERWRITERS APPROVED)

GENERAL PURPOSE: For amplifiers, sound systems, speakers, vacuum cleaners, electric tools, washing machines, refrigerators, appliances, trouble lights, garage lamps or wherever a rough usage power line is required.

Construction:
Each conductor stranded bare copper, cotton separator, 1/32" rubber, color coded, conductors twisted, cushioned with jute fillers, 40% tough rubber jacket overall.

No.	Cond.	Size	Type	Current Carrying Capacity	Voltage Rating	O.D.	Standard Put-up

1958	2	10	S	25 amps	600	.640"	250'

Available with Additional Conductors. Also other sizes.

E-Z STRIP LAMP CORD—TYPE POSJ (UNDERWRITERS APPROVED)

GENERAL PURPOSE: For line cord on radios, lamps, electric clocks, food mixers and other small instruments and appliances.

Construction:
Two conductors parallel, 18-41/34 extra flexible bare copper, color coded, cotton serve, 40% tough rubber jacket overall. Slit in jacket to permit "E-Z" separation.

No.	Cond.	Size	Strand	O.D.	Standard Put-up
1966	2	18	41/34	.235" x .130"	100'
1967	2	18	41/34	.235" x .130"	250'

TWISTED PAIR TRANSMISSION LINE (WEATHERPROOF BRAID)

GENERAL PURPOSE: For inter-com hook-up. Also suitable for low loss coupling between antenna and receiver as doublet style twisted lead-in.

Construction:
Two conductors stranded tinned copper, "Hi-Tension" rubber, color coded, conductors twisted, cotton braid overall, saturated weather-proof finish.

No.	Cond.	Size	Strand	O.D.	Standard Put-up

For alternate put-up use code: F=1000 ft.

Construction:

Single conductor 20-10/30 stranded tinned copper, special polyethylene insulation.

For alternate put-ups use code:
E=500 ft., F=1000 ft.

Construction:

Single conductor 14-104/34 copper, paper serve, 3/64" ASTM performance grade rubber, double cotton braid, .040" oil resistant neoprene rubber jacket.

Construction:

Single conductor, polyethylene insulation, braided copper shield, plastic jacket overall.

LACQUERED HOOK-UP AND LEAD-IN WIRE

GENERAL PURPOSE: For point to point soldering connections on transformers, amplifiers, panel hook-up, etc., where a low loss dielectric is required. It is not a pushback wire but will strip easily.

ELECTRONIC WIRES & CABLES

microphone cables

plastic microphone cable

Performance and long service life are the outstanding features of Belden Microphone Cables. They are resistant to physical abuse, aging, and moisture. In addition, Belden Microphone Cables have low capacitance, high insulation resistance, and low attenuation at audio frequencies.

multiple conductor cables

rubber-jacketed portable cord

Belden multiple conductor cables are developed for long service life, excellent mechanical and electrical characteristics, and uniform quality. These cables are used for a multitude of applications, including power and interconnecting cords on radio receivers, electronic devices, speakers, analyzer test equipment, remote control circuits, and press-to-talk microphone circuits.

hook-up and lead wires

high-voltage and cathode-ray tube lead cable

Designed for high-voltage leads to cathode-ray tubes in television receivers and oscilloscopes. Also as high voltage in power supplies and other applications where a high-voltage cable is required. High dielectric strength, corona resistance, and minimum surface leakage are very important features of these cables.

magnet wire

Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E., Class A, film-coated wires

with respect to: (1) ability to withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

Other types of Belden Magnet Wires available are Beldenamel, Single Cotenam, and Single Nyltex.

**SPECIAL PURPOSE
INSULATED WIRE**

THE WILLIAM

AND CO., INC., WILLIMANTIC, CONN.

MINIATURIZATION WIRE

Specially developed for use in electronic equipment within the range of -55°C to +105°C, and maximum operating voltage of 600 volts rms. This wire is ideal for use in miniaturized equipment as both hook-up wire and lead wire for transformers, chokes and other components, where space is at a premium and operating temperatures are high. Available in both standard and flexible . . . in solid colors or candy striped with 1, 2 or 3 tracers

The primary insulation is Turbo 540, an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalies and fungus. Over the primary insulation there is an extruded jacket of nylon to give added mechanical protection and abrasion resistance.

TRANSMISSION LINES AND CABLES

Efficient TV and FM Reception depends on the right cable lead-in. With every installation of a TV or FM set and antenna make sure that you are selling trouble-free, efficient transmission lines. It's the *important link* that insures customer satisfaction. TURBO BRAND Transmission Lines and Cables are furnished in three basic types to fit every specific installation need. Tops in transmission insures tops in reception.

TURBO TUBULAR TWIN LEAD 300 OHM (Cat. #1010)

Turbo Tubular Twin Lead is suitable for connecting UHF and VHF Antennae to TV and FM receivers. Its tubular construction contains and protects the concentrated field of energy. It reduces signal losses to a minimum. Sun-proof, brown colored insulation. Highly effective against conditions of high humidity.

TURBO RIBBON-TYPE TWIN LEAD 300 OHM OVAL TYPE (Cat. #1004)

Specially recommended for VHF reception in strong signal areas. For outdoor use, it is furnished with 7/28 conductor and .065" web thickness to resist rain, snow, dirt or salt deposits, minimizing impedance and preserving electrical efficiency.

300 OHM DUMBBELL TYPE (Cat. #1002)

Made especially for use in indoor antennae and for wiring inside the chassis of TV and FM receivers. It is flat with the twin conductors on either edge, and is extremely flexible. This cable uses a 7/30 conductor and a .040" web thickness. Inside the chassis short lengths are used to conduct the signal between circuits.

TURBO COAXIAL LINES

The use of Coaxial Lines for carrying signals from the antenna to the TV receiver has the distinct advantage that this type of lead-in is not affected by atmospheric conditions at any time.

ROTATOR CABLE (Cat. #1014)

4 conductor ribbon cable for antenna rotator use is also available from stock on 1,000 ft. put-ups — specify Turbo #1014. A complete line of multi-conductor jacketed cables for intercommunication and control circuits are available.

BRAND

AND CO., INC., WILLIMANTIC, CONN.

TURBOTHERM "60" Radio and Instrument Hook-Up Wire to Specification JAN-C-76

The conductor can be furnished in either solid or stranded tinned copper wire. The primary insulation is an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalis and fungus. This wire has excellent electrical properties.

Type WL wire is designed for general purpose applications at 600 Volts rms or less. It is normally furnished with an extruded nylon jacket over the primary insulation.

Type SRIR is designed for general purpose applications at 1000 Volts rms or less. It is normally furnished without an outer covering.

Type SRHV is designed for general purpose applications at 2500 Volts rms or less. It is normally furnished without an outer covering.

These wires can be furnished in all solid colors of vinyl insulation or up to 3 colored spiral tracers on a white background. Other colors with spiral tracers can be furnished but their use is not recommended.

HIGH VOLTAGE & CATHODE-RAY TUBE LEAD CABLE

This High Voltage and Cathode-Ray Tube Lead Wire is approved for 10,000, 20,000, and 40,000 volt applications. It is made of RULAX (flame retarding type Polyethylene) which is high heat resistant and moisture resistant. Approved by A.S.T.M. It has a dielectric constant of 2.7 and a power factor of .002. Available in white.

BIRNBACH BIRACO TUBING

(Extruded Vinyl)
Synthetic plastic tubing especially designed for electronic and electrical insulation work. Extremely flexible and high resistance to abrasion. Has high dielectric strength, average 10,000 volts and high tensile strength. Will not support combustion, soften up to 257°F. or crack at -75°F. Its dielectric strength: 1100 volts per mil at room temperature when dry and 1000 volts per mil when wet. Impervious to water, oil, alkalis, alcohol, solvents, etc. Meets all ASTM specs.

BIRNBACH STEATITE BUTTON

This specially designed steatite button is intended for use to simplify wiring and to be used as a binding post or a binding post insulator, or as a standoff insulator. Attention is called to the uniqueness of the design which prevents either section of the insulator from turning in respect to the special screw. The specially designed screw locks both sections.

"LUCITE" FEEDTHRU INSULATORS

These feedthru insulators are ideal for bringing high frequency leads thru a panel. They are made of genuine DuPont Lucite. Because of its low loss at high frequency, it is well adapted to insulated elements of high frequency circuits. The 1/2" dia. insulators have brass nickel plated 6-32 hardware and the 3/4" dia. insulators, 10-32 hardware.

AC-DC RESISTANCE CORDS

Consists of a line cord into which a third element has been incorporated. The voltage dropping resistor reduces the voltage to that needed for the filament of the tubes. The 135, 160, 180 and 200-ohm cords can also be used for single light 20 and 15-watt fluorescent fixtures. All 6-ft. long, color coded with tinned leads and all rubber plugs. All individually boxed.

Cat. No.	Cord Rating	Sets Having Following Tubes:
35	135 ohm	25Z5-43-4 (6.3 volt tubes)
38	160 ohm	25Z5-43-3 (6.3 volt tubes)
34	180 ohm	12Z3-43-4 (6.3 volt tubes)
49	200 ohm	25Z5-43-2 (6.3 volt tubes)
37	220 ohm	12Z3-43-3 (6.3 volt tubes)
41	250 ohm	12Z3-43-2 (6.3 volt tubes)
38	290 ohm	25Z5 -3 (6.3 volt tubes)
45	300 ohm	12Z3 -3 (6.3 volt tubes)
39	330 ohm	-4 (6.3 volt tubes)
40	350 ohm	12Z3 -1 (6.3 volt tubes)
47	390 ohm	-2 (6.3 volt tubes)
58	560 ohm	For 3-way portables, A-C-DC battery sets
59	960 ohm	Wherever 4523 rectifier is used (All pocket type radios)
125	230-110 volt.	Step down reducing cords with Continental Plug

HEADSET PHONE CORDS

These cords are closely woven and are very durable and strong. Standard cords listed match practically all headsets manufactured.

ANACONDA FOAM POLYETHYLENE TRANSMISSION LINE

The finest all-purpose VHF-UHF line in use today. Actual results under the most adverse conditions have proven beyond doubt that this line will withstand salt air, moisture, extremes of heat and cold and other factors that cause rapid deterioration and signal loss in other types of transmission lines. No sealing is necessary with this foam-line as moisture cannot penetrate the cellular construction of this cable. High strength 22 Ga. solid copper-weld conductors are imbedded deep in the insulation concentrating the field of energy **INSIDE THE CABLE**. Cable is very light, 100 feet weighing slightly over 2 lbs. Developed through the combined efforts of Anaconda and RCA, acknowledged leaders in television cable research and development. Cable size is approximately .450 x .350.

MICROPHONE CABLE

Single and multi-conductor microphone cables for crystal and ribbon microphones, photo-electric cells, public address systems etc. All cable made with low loss compounds and extra flexible copper conductors. Closely woven T/C shield under tough wear resistant jacket. Low capacitance between shield and conductor.

MULTI PAIRED INTERCOM CABLES

For use in Intercom Systems as station to station wiring, the cables listed below will handle most installations. Each conductor is 22 ga. solid soft drawn copper and has an .010 wall of durable color coded plastic. Each pair is individually twisted and pairs are covered overall with an adequate plastic jacket.

HOOKUP WIRE ASSORTMENT

Here is an unusual item sure to be appreciated by every serviceman. No need now to have odd lengths of hookup wire scattered all over the service bench. Six 100 foot individual spools of 300 volt plastic insulated hookup wire are held rigidly on a metal shaft enabling the serviceman or experimenter to mount all six spools directly over or anywhere on a bench. Six different colors in each assortment. Available in 22, 20 and 18 Ga. —both solid and stranded.

Rome Synthinol A ROME CABLE PRODUCT

THERMOPLASTIC INSULATED HOOK-UP WIRE

Rome Synthinol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalies, moisture and flame, and possessing unusually high dielectric strength. Colors are of gem-like permanency. Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthinol.

Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.

In order to provide maximum flexibility and prevent unraveling of the strands, a short lay stranding is used as follows:

No. 22 Awg. .33" max. No. 30 Awg. .50" max.
Insulation: Rome Synthinol—Approved by and conforming to Underwriters' requirements and the performance specifications of A.S.T.M. D 734. Available in solid colors or with a surface applied contrasting colored spiral stripe.

Typical Test Results

Breakdown Voltage:
1/64" Synthinol over 10000 volts
1/32" Synthinol over 18000 volts
Insulation Resistance:
1/32" Synthinol over 5000 megohms feet

Rome Synthinol is specially designed for the chassis and sub-chassis wiring of radio and television receivers and transmitters as well as all other types of electronic equipment. It has physical and electrical characteristics of unusual permanency.

Rome Hi-Temp A ROME CABLE PRODUCT

RUBBER INSULATED HOOK-UP WIRE

The result of extensive laboratory development and proved by a decade of service—Rome Hi-Temp is offered for radio and electronic circuits where resistance to moisture and heat is required.

SPECIFICATIONS

Conductors: Annealed tinned, solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.

In order to provide maximum flexibility and prevent unraveling of the strands a short lay stranding is used as follows:

No. 22 Awg. .33 inch max.
No. 20 Awg. .50 inch max.

Insulation: Rome Hi-Temp—a high quality, free-stripping heat-resistant rubber insulation approved by Underwriters' Laboratories.

Typical Test Results

Breakdown Voltage (1/32" Hi-Temp) 10500 volts
Insulation Resistance Over 10000 megohms feet
*Only factory length reels are furnished with U/L's labels.

**RESISTANCE LINE CORDS
for
AC-DC Radio Sets**

The cords have a wide market for replacement on AC-DC radios with worn out cords; also on those formerly having hot resistance. Consists of a 6 foot cord with red and black rubber covered line cord wires and an asbestos covered resistance having separate terminal braid. Consolidated cords have an exclusive tinned copper terminal on the resistance cord that can be soldered. Colored cotton tracer designates ohmage.

VOLTAGE DATA

The table and example below indicate tube voltages and how to determine proper cord. Check the voltages of each tube in the voltage table. Add all voltages together, allowing 10% variation, plus or minus.

TUBE VOLTAGES

**EXAMPLE:
Radio Contains**

6.3 volt tubes: 36, 37, 38, 39, 77,	1 77 tube—voltage	6.3
78, 6B7, KR1, 6D6, 6C8, 6A7,	1 78 tube—voltage	6.3
6F7.	1 43 tube—voltage	25.
	1 25Z5 tube—voltage	25.

12 volt tubes: 12Z3, 12A5.
25 volt tubes: 25Z5, 43.
Total voltage 62.6
Radio uses 160 ohm cord.

**VOLTAGE REDUCER
CORD SETS**

No. 2451

The Consolidated Voltage Reducer Cord Set can be used anywhere that it is necessary to reduce line voltage from 220 volts to 110 volts for radios, electric clocks, household appliances, electric dry shavers, etc. It has a special built-in resistor which reduces 220 volts AC or DC to 110 volts without any additional devices. It comes as a 6 foot cord with dark brown glazed cotton covering. Packed in attractive two-color box.

Radio & TV Wire Products

microphone cables

Cornish Microphone Cables are available in plastic and rubber insulations. Plastic cables utilize polyethylene insulation on the conductor with outer vinyl plastic jacket. They are designed for low capacitance, high insulation resistance, low attenuation; and withstand severe service under all operating conditions.

t-v lead-in cables

Cornish TV Lead-in Cables are furnished only in pure virgin polyethylene insulation to insure long life under severe operating conditions and are designed so that only exceptionally low losses at high frequencies are experienced. They are available with pure copper or copperweld conductors. Copperweld 300 Ohm lead-in cable has 1 1/2 times the tensile strength of copper and has approximately 2 1/2 times greater flexing life. It insures long service life in TV aerial installations requiring long runs.

RG/U coaxial transmission cables

Cornish RG/U Coaxial Transmission Cables are available in two basic constructions, namely RG-11/U, Catalog No. 522 and RG-59/U, Catalog No. 521. They are designed for use as communication cables and television antenna lead-in cable. These cables are available, normally, from factory stock. Other special RG/U constructions can be furnished to special order providing quantities required constitute an economical manufacturing run.

PROVED DEPENDABILITY

Copperweld TRADE MARK NON-RUSTING

GROUND RODS and CLAMPS

FOR RADIO AND TELEVISION

Copperweld Ground Rods and Clamps provide the reliable grounding protection necessary for successful performance, elimination of interference and safe operation of radio and television equipment. The rugged steel core gives the stiffness you need for easy driving. High conductance and lasting protection against corrosion are provided by the heavy molten-welded copper covering.

Millions of Copperweld Ground Rods are rendering permanent grounding protection. You're **SAFE** when you use Copperweld—the only Molten-Welded Ground Rods. They give you **PROVED** dependability — **PROVED** economy — **PROVED** longer service.

CONVENIENT CONTAINER-PACKAGE

Easily opened by cutting the heavy fiber tube. This creates a bin for the rods and a convenient container for the clamps

COPPERWELD GUY STRAND

Ideal for guying radio and television antenna masts and towers. It provides greater safety, permanent high strength and rust proof construction for the life of the antenna. Furnished in two sizes, 3 No. 18 (breaking strength 550 Lbs.) and 3 No. 14 (breaking strength 1000 Lbs.). Lengths of 100', 200', 250', 500' and 1000' are available.

COPPERWELD GROUNDING WIRE

COPPERWELD ANTENNA WIRE

Preferred for many years by professionals and amateurs. Because of its high strength, it maintains a fixed length. Furnished in 4 sizes, No. 10 Awg, No. 12 Awg, No. 14 Awg, and No. 18 Awg, in coil lengths of 100, 250, 500, 1000 and 3000 feet — bare and insulated. Sizes 10, 12 and 14 available with Polyvinylchloride (PVC) Insulation.

Used to connect antenna mast to ground rod. Annealed for easy handling. Available in two sizes, No. 8 Awg and No. 10 Awg. Coils are furnished in various lengths ranging from 50 to 500 ft.

Copperweld is also used for television twin-lead wire, coaxial cable, resistor and condenser pigtaills, radio tube parts and various allied components manufactured and sold by other companies.

TV Lead-in Cables by *Federal*

Transmission Lines for Every Television Application — by America's Leading Manufacturer of Solid Dielectric HF Cables

TV-1185 All-Channel Tubular TV Line — 300 ohms

"Pipeline" of the Air

For the Finest VHF, UHF

The new TV-1185 is more durable, more flexible, more efficient. Smaller in O.D.—it fits all stand-off brackets and lightning arrestors, holds its shape going around sharp angle edges. TV-1185, with its

"silver" polyethylene insulation, is highly resistant to sunlight, heat, moisture, salt spray, and other deposits. The energy field stays within the sheath . . . for very low loss . . . more constant impedance.

Federal's "BIG 5" of Community TV

K-14 Ultra Low-Loss 72-Ohm Cable

Shielded cable for use as main transmission line in community TV and other distribution systems. Outstanding for lowest line loss, long cable runs and fewer amplifiers required.

RG-11/U Coaxial 75-Ohm Low-Loss TV Lead-In Cable

Community system secondary lead-in. Also used with unbalanced input TV receivers in low signal strength areas.

Community system tap-off lead-in. Also used with unbalanced input TV receivers where top-quality installation is essential.

Non-radiating TV Cables (Used with K-14)

K-125 Coaxial 72-Ohm TV Lead-In Cable (Formerly SP-75)

Double-shielded and double-jacketed to protect community TV systems from signal leakage. Where radiation exists, Federal's K-125 alternates for Federal's RG-11/U as secondary lead-in.

K-126 Coaxial 73-Ohm TV Lead-In Cable (Formerly SP-76)

Double-shielded and double-jacketed. Where radiation exists, K-126 alternates for Federal's RG-59/U as tap-off lead-in.

TV-1182 "Silver" Heavy-Duty TV Line 300-Ohms

Insulated with Federal's "Silver" polyethylene — the revolutionary development that provides greater resistance to weather, heat and sunlight. Unchanging electrical and physical characteristics assure long, trouble-free service.

K-111 Shielded 300-Ohm TV Lead-In

Shielded and balanced TV lead-in that minimizes "snow," "ghosts" and electrical noise due to transmission line pick-up. For use in high signal strength, high noise level areas.

RG-8/U Coaxial 52-Ohm TV Lead-In Cable

Characteristics and quality proved in every installation where this type low-loss cable is indicated. For special applications and experimental work.

ADAPHONE

At last . . . a precision instrument that brings radio and TV listening pleasure to the hard of hearing without raising the normal loudspeaker volume. And perfect for normal hearing folks who want to watch TV or listen to radio without any sound to disturb others.

ADAPHONE is easily attached to any TV or radio set. List Price is \$19.95 complete. Literature and counter displays available. Sold through jobbers only. Write today for details.

FENTUBE-AIRSPACED*

300-OHM OVAL TUBULAR LINE

Better because NO dielectric between conductors, nor contact between conductors and wall. Performance not affected by outside atmospheric changes.

TWISTUBE*

300-OHM ROUND TRANPOSED SEMI-AIRSPACED TUBULAR LINE

Better because besides being airspaced, it is the *only* transposed transmission line created to reduce interference pickup.

JAN-C-76 — MIL — ANJ-C-48A

TYPE SRIR HOOK-UP WIRE

Construction: Tinned copper-stranded or solid. Nominal insulation thickness, .015" Thermoplastic. Rating 1000 VOLTS (working). Temperatures $-40C$ to $+60C$.

Sizes: 28 to 6. Colors: all NEMA standard colors. Tracers on solid colors also available. Catalog No. 100.

TYPE SRIR GLASS BRAID

Construction: Tinned copper with thermoplastic insulation and braided glass and flame resisting lacquer finish over all. Temperature rating, $-40C$ to $+60C$.

Sizes: 28 to 6. All standard NEMA color coding and also available with tracers on solid colors. Catalog No. 101.

TYPE WL — NYLON — HOOK-UP WIRE

Construction: Tinned copper stranded or solid. Nominal insulation thickness .010" Thermoplastic with .005" extruded nylon. Rating 600 VOLTS (working). Temperature rating $-40C$ to $+60C$.

Sizes: 28 to 6. Colors: bright standard NEMA colors, also tracers on solid colors. Catalog No. 102.

TYPE SRHV HOOK-UP WIRE

Construction: Tinned copper, stranded or solid. Nominal insulation .031" Thermoplastic. Rating 2500 VOLTS (working). Temperature rating, $-40C$ to $+60C$.

Sizes: 28 to 6. Colors: all standard NEMA colors, also available tracers on solid colors. Catalog No. 103.

ABOUT INSULITE

Insulite, commercial and specification grade Vinyl tubing is manufactured from only the highest quality materials. Extreme care in preparing the compound formulations assures product uniformity. The most modern of plants, complete with compounding facilities and controlled extrusion techniques, together with modern inspection equipment provides rigid physical and visual inspection on each length of tubing, assuring a finished product fully guaranteed against defective workmanship and materials. A product development laboratory is engaged in constant research to provide you with the finest in tubing.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

Porcelain Product's TELEVISION & RADIO INSULATORS

TV-FM LEAD-IN TUBES

Provide essential insulation and neatness of appearance for lead-ins going through walls, partitions, etc.

Type #890 Tubes —

Handles the conventional $\frac{3}{8}$ " wide 300 Ohm common flat lead-ins. Outside diameter $\frac{1}{2}$ " use a $\frac{3}{4}$ " drill.

Type #891 Tubes —

UHF Tubes with the round holes, two slots or key-ways, for Amphenol Cable #14-271 or equivalent. Outside diameter $\frac{1}{2}$ " use a $\frac{3}{4}$ " drill.

Type #895 Tubes —

For the round (but hollow) UHF cable equivalent to Federal's Rand Tubular UHF. Outside diameter $\frac{1}{2}$ " use a $\frac{3}{4}$ " drill.

Type #896 Tubes —

For oval UHF cable made under many trade names and numbers. Examples: Belden #8235. The wide oval hole requires a larger outside diameter. Outside diameter $\frac{3}{4}$ " use $\frac{1}{2}$ " drill.

K8X-TV

Has "Hi-V" reflector. All elements are hardware factory mounted and captivated. Combines hurricane design and high-speed-assembly. Solid rod elements insure low wind resistance and long life. Has cylindrical dipole reflector.

DESCRIPTIVE NOTES

Has "Hi-V" reflector. Specify whether solid or doweled tubular elements preferred. Eight plug-in rods and two stubs per bay permit multiplicity of radiator and reflector configurations. Quality of workmanship and rugged construction is second to none—finest Conical-V Beam built. "If the K8X-TV does not provide a usable signal, TV reception is impossible or impractical."

ME-2X

With "Hi-V" reflector. Specify whether solid or doweled tubular elements preferred. Shipped with 8 plug-in rods per multi-arrangement bay. This, and completely aluminum construction, makes the "Universal" an outstanding value.

U4X-TV

Receive all channels. Same antenna as "Universal" except center elements cut to peak at any channel specified, without destroying the antenna's broad band characteristics. Has "Hi-V" reflector.

U4X-TVC

4X-TVS

Solid or doweled tubular elements. Supplied with 6 elements (or 8, for the 2X-8). Has straight dipole reflector. Offers Conical-V-Beam performance at very low cost.

Special 1/2-wave stacking and other design details gives this antenna optimum performance on Channels 2 to 6. Eight solid or doweled tubular elements. All-aluminum construction on both "Metro" and the "DeLuxe." "DeLuxe" has hurricane design.

VU2X-8

CH4X-16

Requires no rotator to pick up signal from front or back. Transposition bar stacking gives vertically narrow, noise-free reception lobes. Tough closed loops yield lightly in high winds, but have no tendency to snap off.

7/32" D. solid duraluminum rod, or doweled tubular elements. Six supplied in the 2X-6 type; eight elements, in the 2X-8 type. Both types feature "Universal" style "butterfly" element brackets, at each end of the crossarm, facilitating several radiator and reflector arrangements.

CLV

"Conical-V-Beams" are produced under re-issue Pat. No. 23,346, and Canadian Pat. No. 500436 and in England Pat. No. 691485.

DESCRIPTIVE NOTES

UHF-VHF at same cone apex. No filter losses. Electronic and mechanical excellence equal to the "Meteor Duo-Band." Solid or tubular elements, with famous Telrex plug-in design. All aluminum.

Single lead-in. Practical Channel 2 to 83 performance at lowest cost. Solid or tubular elements. All aluminum.

Sensational UHF - VHF gain and directivity. Solid rod elements. "E-Z rig" construction combines super-strength with speedy-assembly. All aluminum. Finest DUO-BAND "Conical-V-Beam."

#320

#410

Adds exceptional UHF pickup, converting all Conical-V-Beams to "Duo-Bands." VHF performance completely unimpaired by addition of UHF.

BW-1

Top-of-set. "Conical - V - Beam" type wings are adjustable so that their forward tilt gives maximum signal. Excellent for UHF, too.

Superior performance of Telrex Bow-Ties is due to their forward, "Conical-V-Beam"-type, tilt. Has pre-assembled spline reflector for maximum signal pick-up.

Lightweight, ruggedized construction . . . withstands gale winds. This series has solid rod spline reflector elements permanently mounted by means of a special clamping process which eliminates screws and nuts.

Ultra sensitive stacked array with excellent directivity for clean, snowfree, ghost-free reception.

Compacted, lightweight unit covers full UHF range at highest signal-to-noise ratio! — AT LOW COST!

Tuned spline parabolic reflector assures maximum gain and reflector action for ghost-free, reflection-free reception and minimum wind resistance.

Powerful stacked parabolic UHF array, with #84 as its nucleus. Also includes two #810 parabolic reflectors, increasing energy by approximately 30%.

Designed for all channel UHF reception. Precision built—yet reasonable in price. Provides high gain, sharp directivity, easy installation, excellent over-all performance.

Telrex "Beamed Power-Perfect Match" Arrays are fully integrated units combining really practical structures with built-in performance that assures "Top man on the frequency" results at your site . . . without endless "cut and try" hacksaw engineering.

Every Telrex 2, 6, 10, 15, 20, and 40 meter Array is a professionally designed, precision manufactured communications array which is accurately tuned, then calibrated for optimum gain, perfect match and a balanced uni-lobe pattern that puts your signal out in front where you want it!

A feature of every Telrex "Beamed Power" Array is the Telrex designed coaxial balun and "T" transformer which permits optimum coaxial line coupling and insures a broad band resistive match, and a completely cold transmission line for pattern symmetry, highest s/n and signal to interference ratios, and minimum TVI.

WARD TV Antennas

WARD'S DYMON-VANE CONICAL

**Model
TV-310**

Pat. Pend.

WARD'S Dymon-vane is one of the new WARD Tele-vane TV Antennas. Tele-vanes, the newest concept in TV antennas, are designed to add beauty to the housetop and to make any owner proud to own one. With its black wrought iron appearance, the Dymon-vane has a weather-vane look that enhances the appearance of any home.

The Dymon-vane is an 8 element conical for VHF channels 2 through 13 in metropolitan areas, cross-

arm 1" O.D. Permatube with flat black finish. Both models are new fold-up design with parabolic principle reflector and preassembled for easier installation.

Model TV-310—Single Bay. Individually packed. Shipping wgt. 15 lbs. ea. 6 units standard quantity.

Model TV-315—Double Bay. Individually packed. Shipping wgt. 28 lbs. ea. 3 units standard quantity.

Model TV-77—Stacking Kit for stacking 2 two-bay units into 4-bay unit.

WARD'S CIRCLE-VANE YAGI

**Model
TV-300** Pat. Pend.

Another of the Tele-vane TV Antennas designed to add beauty to the home is Ward's Circle-vane Yagi. The Circle-vane is a 10 element double driven VHF antenna for use on channels 2 through 6 in areas where gain and directivity pattern are important. Crossarm is 1 1/4" O.D. Permatube with flat black

finish with elements of 1/2" aluminum. Antenna comes with 3 major sub-assemblies with elements attached and folded for easy assembly.

Model TV-300—Individually packed. Shipping wgt. 35 lbs. ea. 3 units standard quantity.

WARD'S PARA-CON

Combines parabolic and conical principles to assure maximum picture clarity and concentration of weak signals. Rugged aluminum elements. . . . heavy duty cross arm . . . molded plastic insulators.

WARD'S UHF Indoor Can-Can

An attractive item in either black wrought iron and bronze finish, or all bronze finish with brown base, the Indoor Can-Can is equivalent to stacked bow ties electrically. Ideal for auxiliary antenna wherever UHF has been added. Completely preassembled with lead.

Model TV-215—Black and Bronze finish . . . individually packed . . . shipping wgt. 3½ lbs. ea. . . . 6 units standard quantity.

Model TV-216—Bronze finish with brown base . . . individually packed . . . shipping wgt. 3½ lbs. ea. . . . 6 units standard quantity.

Model TV-202

WARD'S CAN-CAN

For either new UHF installation or as an auxiliary UHF antenna, the Can-Can is designed for reception for the entire UHF band. Compact, sturdy all-aluminum construction. . . . Completely preassembled. Individually packed . . . shipping wgt. 2 lbs. ea. . . . 6 units standard quantity.

WARD'S Corner Reflector

Designed for suburban and semi-fringe areas, the Corner Reflector is ruggedly constructed to eliminate picture flutter, ghosts and vibration. Completely preassembled. Individually packed . . . shipping wgt. 4 lbs. ea. . . . 6 units standard quantity.

Model TV-203

WARD'S UHF Bow Tie Antenna

The only bow tie antenna with adjustable screen, easily spaced to favor stations in any area, for best possible local reception. Insulators have been eliminated and "free space" terminals incorporated to provide higher gain and flatter response across the UHF band — all possibility of picture deterioration and antenna shorting eliminated.

All Aluminum Construction . . . Completely preassembled . . . Rugged Design.

by WARD BUILT FOR RIGOROUS SERVICE

UNIVERSAL SWIVEL MOUNTS

Antennas built for the hardest mobile use. Separate components may be combined to meet any requirements. These rear-mounting Transmitting Antennas are designed for the 25-45 mc. services. Base mounts in such a way as to allow the whip rod to be held vertically regardless of contour of vehicle body.

← SPP-3B

SINGLE ROD

Special Alloy Whip Rod of maximum resilience and durability. 84" Single rod for use in the range of 30 to 45 mcs. Non-Corrodng, stainless steel tapered for proper stress distribution. Base Adapter threaded $\frac{3}{8}$ -24 to permit mounting on SPP-3 Base or SPP-3A Spring.

Individually packed. Approx. wt.: 2½ lbs.

SPP-12 →

ADJUSTABLE 2-SECTION ROD

Adjustable Rod. Telescopes from 85" to 103" and is equipped with a locking device that permits removal of the whip rod and replacement at the exact previous length. Heavy wall, hard drawn brass tubing — threaded $\frac{3}{8}$ -24 to fit either SPP-3 Base or SPP-3A Spring. See SPP-3B for Rod description.

Ind. packed. Approx. weight: 2 lbs. 10 oz.

SPP-3

SWIVEL BASE

Swivel base for mounting at any desired point. Half balls of cast aluminum tapped $\frac{3}{8}$ -24 to accept whip rods and shock springs. Insulator of black bakelite — rubber gaskets — steel back-up plate. All screws are Allen Head type with wrenches supplied.

Individually packed. Approx. wt.: 1 lb. 10 oz.

SPP-3A

SHOCK MOUNTING SPRING

This sturdy spring is used to lessen damage to the whip rod. A flexible lead through the center of the spring maintains constant electrical impedance through the spring assembly. $\frac{3}{8}$ -24 stud on one end — $\frac{3}{8}$ -24 tapped hole on opposite end — approximately 6" in height — made of oil tempered wire.

Individually packed. Approx. wt.: 2 lbs. 3 oz.

NEW 10 METER MOBILE TRANSMITTING ANTENNA NEEDS BUT 1 HOLE FOR INSTALLATION!

Ward's SPP-143 transmitting antenna can be installed on cowl, fender or flat rear deck of any automobile without the necessity of drilling a series of unsightly holes. It is developed to use one $1\frac{5}{16}$ " hole, that can easily be plugged or used to mount a Ward 8-Ball standard broadcast antenna. The short, standard $5\frac{1}{2}$ " rod reduces damage from overhead constructions.

MODEL SPP-143

NEW POLICE TRANSMITTING ANTENNA → GIVES COMPLETE DISGUISE TO DETECTIVE CARS

To any criminal a long whip antenna is a police car giveaway. To achieve complete disguise, Ward engineered a standard automotive aerial to withstand transmitting currents and permanently fix the rod length.

MODEL SPPB-71

MOTORCYCLE MOUNTS

These Antennas are designed for use on motorcycles and are built to withstand the rugged service and high vibration of vehicle. Rod is electrically short but can be used on all frequencies. 40" rod of same material as SPP-3B — $\frac{1}{4}$ -20 mounting stud in insulator for mounting to motorcycle. Flexible base of rubber to allow movement when rod is bent — Model SPP-6 with safety ring tip — Model SPP-6A with stainless steel ball tip — no lead supplied. Individually packed. Approx. weight: 1 lb. 5 oz.

Model SPP-6—Ring Tip (Illustrated)

Model SPP-6A—Ball Tip (Not Shown)

← ROOF TOP MOUNT

Developed for roof top mountings in 30 to 45 Megacycle range. Advantages of this type of antenna are that directional effects caused by car body shielding of antenna are avoided. Base is designed to be used with the SPP-3B rod which is sold separately. This unit consists of all components of Universal Swivel Mounts except that half-balls are replaced by SPP-3A Spring fastened permanently to insulator. No lead supplied.

Individually packed. Approximate weight: 3 lbs.

Model SPP-26 Base

ROOF TOP ANTENNA →

This model is designed for taxicabs, police services, and others using the 140 to 165 Megacycles frequencies. Installed entirely from the outside of vehicle — 12 ft. length of RG-58/U coaxial cable attached permanently to antenna. Whip rod is replaceable.

Individually packed. Approximate weight: 1 lb.

BROAD-BAND VHF TRAPPER

TRAPPER CO-LINEAR YAGI—Cat. No. 1880

The most revolutionary antenna introduced in years. This one antenna model meets all VHF reception needs in primary, medium, medium-fringe and fringe areas plus UHF in primary areas. Exclusive Taco trapper wave-trap design makes possible a high-gain, yet neat, stream lined antenna. No larger than ordinary 5-element antenna. Packed 2 to a carton for convenience.

ALSO AVAILABLE Catalog No. 1882—Two stacked kit.
Catalog No. 1884—Four stacked kit.

HIGH-GAIN VHF TELEVISION ANTENNAS

LOW-BAND SINGLE CHANNEL

TEN-ELEMENT TWO-DIAMETER YAGI—Cat. No. 1310 ()

Eight directors and one reflector provide excellent front-to-back ratio and directivity for noise rejection. Two-diameter driven dipole matches 300-ohm transmission line for maximum energy transfer. May be stacked for increased performance. Cat. No. 1312 () 2-bay stacking lines also available.

5-ELEMENT YAGI—Cat. No. 1325 ()

An economical antenna for use in medium to medium-fringe installations. Two-diameter driven element provides 300-ohm terminal impedance. Cat. No. 1327 () 2-bay stacking lines also available.

10-ELEMENT TWIN-DRIVEN YAGI—Cat. No. 1800 ()

Features the patented Taco twin-driven principle whereby two folded dipoles are driven in parallel for higher gain and improved terminal impedance. Extremely high front-to-back ratio and sharp directivity for outstanding signal-to-noise ratio. Cat. No. 1802 () 2-bay stacking lines also available.

HIGH-BAND SINGLE CHANNEL

10-ELEMENT YAGI—Cat. No. 1350 ()

Provides extra gain for fringe area installations on selected high-band channel. Excellent directivity and front-to-back ratio. Two-diameter driven element provides optimum match for 300-ohm transmission line. Ideal for use with Taco Supercharger. Also available as stacked array, Cat. No. 1351 ().

5-ELEMENT YAGI—Cat. No. 1350 ()

Designed for high-band single channel reception in medium and fringe areas. Provides the basic advantages of the yagi design along with low cost. Used extensively in metropolitan areas where noise rejection is desired. Also available is Cat. No. 1351 stacked array.

LOW-BAND MULTI-CHANNEL

BAZOOKA-TUNED YAGI—Cat. No. 1410 (—)

Used where high gain is desired on two low-band channels. (Available in following combinations: (2 and 6); (3 and 6); (4 and 5); (4 and 6). Bazooka tuning device maintains sharp tuning necessary for high gain.

TRIPLE-DRIVEN BROAD-BAND YAGI—Cat. No. 1836

Designed to meet the needs for a high-gain antenna in areas where channels 3 through 6 are operating. Triple-Driven feature provides high-gain and sharp directivity. Terminal impedance matches 300-ohm transmission line. Stacking Kit, No. 1842, for 2 stack installations.

TRIPLE-DRIVEN BROAD-BAND YAGI—Cat. No. 1840

Receives all low-band channels from 2 through 6. Perfect mechanical balance plus extreme ruggedness lends this antenna to areas receiving stations from many directions through use of mechanical rotor. Good front-to-back ratio minimizes adjacent and co-channel interference. Stacking Kit, No. 1842 for two stack installations.

HIGH-BAND MULTI-CHANNEL

BAZOOKA-TUNED HIGH-BAND YAGI—Cat. No. 1860

Bazooka-tuning element broad-bands the basic ten-element yagi design providing excellent gain and directivity on high-band channels 7 through 13. Designed for use in fringe area installations. May be used in combination with Taco low-band antennas to a single transmission line by the use of Taco Hi-Lo Magi-Mix unit described on opposite page. Cat. No. 1862 () 2-bay stacking lines also available.

TECHNICAL APPLIANCE CORPORATION • SHERBURNE, NEW YORK

HIGH-GAIN UHF TELEVISION ANTENNAS

BROAD-BAND, BOW-TIE, CHANNELS 14 THRU 83

For complete coverage of the entire UHF band, the open bow-tie developed by Taco has no rival. Proved in every demonstration to outperform all others by wide margins. Open design minimizes vibration. Multiple stacking, coupled by factory designed phasing lines, provide excellent gain. Screen-type reflector and large frontal area of this four stack Bow-Tie saves time in hunting for touchy "hot spots." Kralastic insulators assure top dielectric quality and mechanical strength.

Cat. No. 3006C is designed to mount on top of existing mast or below VHF antenna by clamping to mast section.

Cat. No. 3034A is designed for mounting to existing mast. Light weight and ease of assembly are salient features.

Cat. No. 3035 Horizontal Stacking Kit for either 8006C or 8084A antenna provides improved pick-up.
Cat. No. 3032 Dual Bow-Tie with Screen Grid Reflector.

3032

3034

BROAD-BAND UHF YAGIS

UHF GRID YAGI—Cat. No. 3015

The first television antenna to be offered to the trade that is an all-aluminum, all-welded assembly. No assembled parts to corrode or loosen. Perfect electrical and mechanical union for life of installation. Grid Reflector plus 8 directors provide sharp directivity and high front-to-back ratio. Choice of single, double, or four-stacked arrays make this model ideal for use in any UHF installation. Available in five models covering the following channels: (14-29); (21-26); (30-50); (41-63); (56-83). Special models are available for any local needs.

3015

SELECTRONIC SWITCH

Cat. No. 873

Cat. No. 873 — Double-pole, triple throw switch. Ideal for use in switching antennas at receiver. Extremely low-loss. Matches 300-ohm impedance. May also be used in audio systems, or for store TV demonstrations.

MAGI-MIX COUPLERS

Magi-Mix coupling devices incorporating low loss high "Q" coils and mounted in weatherproof, easy to attach plastic housings, are available in various types . . .

- to couple VHF high-band and VHF low-band to a single down lead.
- for coupling UHF and VHF antennas to a single transmission line.
- a triple duty unit for coupling high-band VHF, low-band VHF and UHF antennas into a single transmission line.
- a UHF model for coupling two UHF antennas (channels 14 thru 42) and (58 thru 83) into a single UHF transmission line.

MULTI-SET COUPLERS

Cat. Nos. 820-2, 3, and 4—Two or more television receivers may be operated from a single antenna installation through use of these couplers. Available in two, three and four set models, all employ the low loss high "Q" design inherent in Taco Magi-Mix Couplers, etc.

SPECIALIZED ANTENNA SYSTEMS

Technical Appliance Corporation maintains the most complete antenna engineering staff, laboratory and testing grounds in the country. As a result, Taco has been called upon to design, develop and manufacture the most critical antennas for both the military and civilian markets for specialized applications.

Technical Appliance Corporation enjoys the distinction of being the oldest television and radio antenna manufacturer in the United States. The experience gained over the years in practical antenna engineering is apparent in all Taco designs. In addition to experience, the Taco laboratory is equipped with the latest antenna testing instruments and facilities. The engineering department is constantly growing as young engineers are added to the staff, bringing with them new ideas that are combined with the unparalleled experience of the older engineers in the laboratory.

Production-wise, Taco offers equipment not usually found in an ordinary television antenna manufacturing setup. Such equipment includes high-precision machine tools, a fully equipped tool and die shop, aluminum welding equipment and a complete metal-finishing department. Whatever your antenna requirements—Taco is your best choice.

MOBILE ANTENNAS and Accessories

WEBSTER (WEB-WIP) *Band-spanner* MOBILE ANTENNA

The Webster "Band-spanner" is essentially an effective, Center-loaded Antenna with the loading inductor wound directly on the upper portion of the fiber glass support column. This inductor has sufficient turns to permit resonance at the lowest frequency band. (75 meters) with the particular top whip used. A unique Webster design allows a portion of each coil turn to be internally exposed. A top whip of fixed length is arranged to push down or pull up from the inside of the loading section. This whip has a circular contactor affixed to its lower end and this contact establishes positive electrical connection between the bottom end of the whip and the internally-exposed loading coil turns. The whip may, by merely raising or lowering it plunger-fashion, be "Topped" on any desired portion of the loading inductor. This type of continuous adjustment of the loading inductor permits exact antenna resonance to be achieved anywhere within a given band, minimizes loading problems, assures most efficient operation. The contact arrangement is self-cleaning and tends to firmly hold the whip at any pre-set position. The overall effect is neat, streamlined, mechanically sound and sturdy.

Suggested resale price 29.50

EXTENSION COLUMNS

Extension columns to increase the height of Band-spanner or WEB-WIP single frequency antennas are available. Consists of a fiber glass support column (with interior conductor), 36" in length provided with standard 3/8-24 SAE thread fittings on top and bottom. Two or more such columns may be combined if desired.

Suggested resale price..... 9.40 ea.

WEB-DUCTOR

A variable inductor arranged to fit between antenna column and mount. Sturdy, wound on phenolic material with weatherproof plastic coil covering. Ideal for base loading adjustments or antenna coupling to coax line. Standard 3/8-24 threads, female top, male bottom.

Suggested resale price.....\$12.00

COMMERCIAL-TYPE WEB-WIPS

Commercial-type, high quality whips with extreme flexibility yet will not fatigue or take permanent set under extreme flexure. Bonded-on fiber glass covering . . . insulated . . . weather-proof. Standard lengths are listed but these whips can be provided in any practical length on special order.

STANDARD LENGTHS—60", 72", 78", 90", 96". Suggested resale price.....\$12.00

MOTORCYCLE RECEIVING ANTENNA—30". Suggested resale price.....\$8.00

WEBSTER-"TIARE" ANTENNA

A center-loaded antenna for use in marine or other fixed or mobile services where a full length quarter wave vertical antenna is not feasible. The "Tiare" is time-tried-and-proven with thousands of units giving outstanding performance on boats of many different types. The antenna has an overall height of 24 feet and the construction throughout will stand up under motion of the craft as well as heavy weather. The antenna is completely waterproof! Bottom support column is heavy-wall, water resistant aircraft aluminum, anodized and sealed with a most durable plastic coating. Upper loading section is also completely sealed and is watertight. Top whip has a highly flexible, bonded-on fiber glass covering and the whip design is such that it can be subjected to extreme flexure without fatigue or permanent set. Antenna comes with rugged, insulating mounts of die-cast, high impact bakelite. Holding bolts and wing nuts are bronze. Marine model covers 2-3 mcs. Models in other ranges are available on special order.

Suggested resale price\$54.50

Webster also manufactures other antenna models suitable for motorboats, yachts, etc. . . Full information upon request.

WEB-WIP SINGLE FREQUENCY MOBILE ANTENNA

The WEB-WIP single frequency antenna is designed specifically for vehicular mounting or for small boats or aircraft. This antenna incorporates numerous mechanical features found only in the well-known WEBSTER "TIARE" marine antenna. Notable in this regard is the overall weatherproof construction and the thorough and complete protection of all metallic parts. The lower support column of the WEB-WIP center-loaded mobile antenna is an extremely sturdy but light-weight fiber glass tube. This column permits ample flexure to take up shock but prevents excessive sway at high vehicular speeds. The center loading section is wound directly on the upper portion of the fiber glass column and is protected by an external plastic covering. The top whip secures to the upper end of the loading section by a standard screw thread fitting and may be removed readily. This top whip incorporates many of the design features of the WEB high quality, military and commercial whips. It is flexible enough to bend into a complete half circle yet is sufficiently rigid to prevent excessive sway while the vehicle is in motion. A bonded-on, highly flexible fiber glass jacket provides complete protection against weather. Both whip and support column have chrome plated brass fittings and the standard 3/8 thread utilized permits mounting on any standard type of base mount.

The WEB-WIP antenna is available for any spot frequency from 1500 kcs to 30 mcs. Prices and further information upon request.

NOTE: The best impedance match requires a somewhat shorter "Wonderod" antennae than is required with solid steel.

POSITIVE "WONDEROD" ADVANTAGES:

- Will not corrode — excellent weathering properties
 - Will not take a set
 - Light weight, reduces bumping on spring-mount
 - Exceptionally high flexural strength
 - High impact strength
 - Excellent insulation even at high frequencies
- Reduces hazard of operating under live wires, around sub-stations, etc.

The Super 60 is the general purpose model for conditions prevailing in most communities today. Within a short time 15 to 20 UHF-VHF stations will be on the air within a 60 mile radius of every fair sized community. With the installation of the Super 60, you are improving your present reception in all directions and you are ready for the future.

The Suburban 40 has been developed for suburban areas where the stations are closer and trouble with distance is less of a problem — but the advantage of all direction all channel reception is necessary. A low priced high quality antenna for the present and the future.

Yes, we said YOUR area. With the FCC allocating over 2,000 new TV Stations covering 12 VHF and 70 UHF channels, your area is due to change and you will require an antenna able to receive both UHF and VHF channels from all directions. All Channel Antenna Corp. has just the antenna to fill your needs and money back guaranteed to positively bring you at your location, clearer, sharper, pictures than any combination of present day antennas using expensive rotor motors, boosters, etc. With a flick of the 9 position electronic beam selector switch, any station in any area is instantly brought in on any TV set clearer and sharper.

ANTENNA ROTATOR

A PROVEN TOP PERFORMER

CHECK THE NEW, EXCLUSIVE FEATURES!

Gears—Brass and steel machine cut gears set to within .002". Final gear is 3" in diameter and $\frac{3}{16}$ " thick, has own roller ball thrust bearing.

Housing — Reinforced — High strength aluminum casting, not affected by extreme temperature changes.

Brake — Automatic brake releases only when motor is energized. Prevents coasting and windmilling. Permits use of a spur gear drive which increases delivered torque.

Terminals — Readily accessible. Standard terminal screws permit 4 wire hook-up to be made with screw driver only.

Bearing—Built in roller ball thrust bearing. 175 pounds weight capacity without additional accessories.

Direction Indicator—A tele-metering indication system. A complete unit within itself, hermetically sealed. Not a rheostat device.

Motor—Lifetime lubricated capacitor motor.

CROWN COMPASS INDICATOR

Constant Indication — No need to rotate antenna to obtain a reading. Needle does not fluctuate . . . stays steady and accurate. Is easily observed and accurately read.

Automatic Voltage Compensation — Line voltage variations do not interfere with the indicating accuracy. No need to calibrate or adjust.

Finger Tip Switch — One switch controls antenna in either direction.

Dial — Compass indicating type. Illuminated for easy reading.

Control Box — Beautiful mahogany Bakelite.

Off and On Switch—Located next to dial. Electrically safe, push button type.

CROWN Roller-Bearing GUY RING

- Cast aluminum construction. Alloy used has extra high corrosion resistance rating.
- Weather-proof . . . no danger of freeze-ups due to unique outside casting design.
- Roller-bearing equipped for easy turning.
- Stand-off insulator furnished as standard equipment . . . tapped hole for fast installation, can be used with maximum of 6 guy wires.

- Fits any mast up to 1 $\frac{3}{4}$ " O.D. Furnished complete with 6 bolts, 12 locking nuts, and 3 guy wire thimbles.
- Shipping weight approximately 2 pounds.
- Bearing lubrication will not freeze at 50°F. below zero or melt at 200°F.
- Can be used with the Crown Antenna Rotator where the rotator is mounted at the base of the antenna mast.

Features...

1. Excellent for fringe area and DX receiving and broad band receiving and high gain on all channels — 2 through 13.
 2. Ghost problems reduced or eliminated due to excellent pattern.
 3. Clearer pictures up to 125 miles or more from the station.
 4. Provides 10 DB or more gain on high channels where gain is most needed.
 5. Has excellent front to back ratio on all channels. Eliminates co-channel interference.
 6. Minimizes interference: Airplane Flutter — Diathermy and Ignition — F.M. — Neon Signs — X-Ray — Industrial — Etc.
 7. Eliminates double stacked arrays, and out-performs 2 bay yagis on low band and 4 bay yagis on high channels.
 8. Only one transmission line necessary.
 9. No worry over possible channel changes on either high or low channels.
 10. It can be tipped without tilting the mast — to take advantage of the horizontal wave lengths.
 11. Can be used with an Antenna Rotor.
- SUMMARIZING THE PERFORMANCE CHARACTERISTICS:** The excellent gain pattern and line match are outstanding on all of the high channels and very good on all of the low channels.

PACKED: One to a corrugated shipping carton.

SHIPPING WEIGHT: 12 lbs. Complete with Assembly Instructions.

WALDOM Electronic

Duo-Tenna

NEW . . . SENSATIONAL TV DISTRIBUTION AMPLIFIER

Permits operation of TWO TV receivers from ONE antenna at same time. (VHF-UHF).

WITH BOOST IN SIGNAL STRENGTH

THE *Duo-Tenna* as an electronic amplifier, also gives you booster effect, improving picture quality in "fringe" as well as metropolitan areas.

- A stronger signal to both sets than if each set were connected separately to its own antenna.
- Boost in signal strength improves noise and "snow" conditions which may exist in TV receivers. Amplification and isolation design of Duo-tenna insures against radiation interference between sets.
- Exclusive UHF distribution input. Immediately converts two sets to UHF reception with a single UHF converter.
- Exceptionally broad band width of Duo-tenna makes it ideal for reception of color telecasts.
- Eliminates unsightly addition of a second antenna. Saves expense of second antenna, accessories and installation labor.
- Easy to install. Complete instructions included.
- Factory guaranteed for complete satisfaction.

WALDOM Electronic Duo-tenna is the perfect answer to two-television set homes. You save cost and installation of second antenna, and gain in signal strength and performance.

The Duo-tenna features a new, unique circuit design which actually provides two separate and independent broad-band amplifiers (one for each TV set). In effect, it combines two broad-band boosters into one inexpensive unit. Should one amplifier fail, the other will continue, completely unaffected by failure of the first.

SPECIFICATIONS

SIZE: 8" x 5 $\frac{1}{2}$ " x 2 $\frac{3}{4}$ ". Attractive gray hammetone metal cabinet. Mount on back of one set, or place wherever convenient to both sets.

TUBES: Two 6BK7A.

GAIN: Between 1 db. and 5 db. (as function of channel) with less than 1 db. variation over any one channel.

PERFORMANCE: Signal delivered to each set is an average of 3 db. better than the signal available from the average antenna. A theoretically Ideal non-electronic coupler introduces a loss of 3 db. at each set (if both are tuned to the same channel). The Duo-tenna performs an average of 3 db. better than separate antennae. It does a minimum of 6 db. better than a non-electronic coupling device.

INPUTS: VHF Antenna, 300 ohms. UHF Converter (Channel 5 or 6), 300 ohms.

OUTPUTS: Two 300 ohm twin-lead connections to TV sets.

POWER CONSUMPTION: 110-120 Volts, AC only, 20 Watts.

Complete with tubes and full instructions

the CHAMPION

Extraordinary power on VHF and UHF!

- 2-Bay array gives:
- 11-13 db High Band gain on VHF
 - 6 1/2-7 1/2 db Low Band gain on VHF
 - Excellent performance on UHF

Channel Master's CHAMPION is the first antenna to employ the "Tri-Pole," a unique new Broad Band dipole system, in which the Low Band dipole provides exceptional Low Band gain, and also functions as THREE half-wave dipoles tied together, in phase, on the Low Band. The result: spectacular gain on VHF, excellent performance on UHF.

Model No.	Description
325	Single-Bay
325-2	2-Bay
325-4	4-Bay

the SUPER CHAMP

model no. 325-6

- Features wide-spaced "Tri-Pole" assemblies, and new connecting harness.
- Gives from 1 1/2 to 3 db MORE Low Band gain, and 1 db MORE High Band gain than the stacked CHAMPION, model no. 325-2.
- Provides extraordinary VHF-UHF reception at GREATER DISTANCES than has ever before been possible.

Conversion Kit

THE WORLD'S LARGEST MANUFACTURER OF TV ANTENNAS

Blaco ADJUSTABLE GROUND CLAMPS

TV OR FM INSTALLATION ACCESSORIES

The exclusive "Original Adjustable Idea" intermediate tightening screw draws up slack as it chafes the pipe—bores through rust, dirt and scale, and at the same time contracts band around pipe or ground rod. The band around the pipe is a means of support for the screw and is not a part of the circuit. OVER 41,000,000 BLACO GROUND CLAMPS HAVE BEEN MANUFACTURED BY US SINCE 1904.

Use low amperage clamps for grounding telephones, lightning protectors, radios, alarm systems, electric fences, signaling devices, appliances, TV and FM antennas, and similar circuits. Use high amperage clamps for grounding electrical equipment, conduits, armored cable, metal surface wiring raceways, alarm systems, communications equipment, and similar circuits. Not for grounding neutral of wiring systems.

Part A-1E is same as Part A-1 except shield is furnished. A-1 equal to Signal Corps Clamp TM-106, Part 6Z1906, Navy G-17-C-9612. B-1 equal to Navy G-17-C-9610, and AT&T AT-6751. T-1 equal to Signal Corps 5B3350, and AT&T AT-6751. May also be used on $\frac{3}{8}$ " and $\frac{1}{2}$ " ground rod by cutting off band at soldered nut and between pin. Put tightening screw through hole in band. Two or more low amperage type clamps may be linked together to encircle all sizes of pipe.

B-1 and T-1—For all telephone, radio and signal circuit station grounds. The design principles of this clamp are field-proven to maintain high pressure contact and maximum conductivity to joint. Clamps are adjustable for grounding to iron or copper pipe. Sometimes called a Station Ground Clamp. Made only of copper and brass materials. When installed shield fits between tightening screw and pipe. Furnished with $\frac{3}{8}$ " hex brass tightening screw and $\frac{1}{8}$ " hex brass lock nut. A socket wrench is available from the manufacturer for installing B-1 or T-1.

3SL, 4SL, 5SL, 6SL Clamps consist of a flexible perforated pure copper band, which encircles the pipe. A boss raised on the flat end of the removable solderless connector fits into band holes to give a clean and smooth contact surface. Tightening screw with lock nut is threaded through the boss and assures a perfect ground. All parts are identical in design and construction, the only difference is the thickness of copper band, and size of outside dia. (or I.P.S.) a clamp will fit. Solderless connector takes ground wire up to No. 4 AWG. Pure copper band $\frac{3}{4}$ " wide is properly tempered making it easy to wrap around the pipe.

STAND-OFF STRAPS—Strap has all the physical features of our BLACO A-1, B-1 and T-1 ground clamps. They are made from copper or plated steel. Illustrated at right, less hardware (screw, nut, washer). Stand-off is used to tighten band around pipe.

REA APPROVAL—Blaco Parts B-1, T-1, O, and A-1E (A-1 with shield added) are REA approved and are listed in the "Suggested List of Materials Suitable for Use on REA Borrowers' Telephone Systems."

BLACO GROUND CLAMPS GIVE YOU THESE ADVANTAGES AND HIDDEN VALUES:

- * Sizes for $\frac{3}{8}$ " - 3" Pipe (I.P.S.)
- * Positive Contact
- * Simple Design and Construction
- * Vibration Proof
- * Sizes for $\frac{5}{8}$ " - 3 $\frac{1}{4}$ " O.D.

CIVIL DEFENSE, PUBLIC SERVICE, FIRE, POLICE ANTENNAS 100 TO 162 MEGACYCLES

FCDA is insisting on adequate communications in Civil Defense and cities everywhere are installing RACES equipment that calls for outstanding ground plane and UHF Antennas. Premax meets this need with several profitable numbers to cover this new market.

GROUND PLANE ANTENNAS

For point-to-point installations, Premax has two VHF Antennas: The Style GP-3 which has elements of heavily-plated spring steel with skirt wires that can be bent down to any angle to match coax cable. Mounting is within a water-proof housing that fits standard 1/2" pipe. Cable carries down thru pipe.

Style GP-314 for 144 Mc. For 2 meter and CD.
Style GP-312 for 108 to 120 Mc. For aircraft and CAP.
Style GP-315 for 152 to 162 Mc. For police and taxi.

ADJUSTABLE GROUND PLANE ANTENNAS

Another low-cost type Ground Plane Antenna is adjustable from 20 to 40 mc. or 40 to 60 mc. Standing wave ratio matching to 52-ohm line is 1.07 to 1.13 and to 72-ohm line is 1.27 to 1.33 depending on type of transformer cable. All-aluminum construction employing adjustable tubular elements.
Style GP-430—Adjustable 20 to 40 Mc.
Style GP-450—Adjustable 40 to 60 Mc.

CAR-TOP OR MOBILE ANTENNAS

Premax Mobile or Car-Top Antennas are made of heavily-plated, highly-tempered spring steel wire in elements of precise diameters and lengths. Mountings are well insulated and so designed that one man can install them through a single small hole in a car roof.

STYLE CD-114 for 144 mc. For 2-meter amateur and CD. Porcelain insulator. One man installation thru 3/4" rooftop hole.

STYLE CD-112 for 108 to 120 mc. For aircraft and CAP. Similar to CD-114.

STYLE CD-115 for 152 to 162 mc. For police and taxi. Similar to CD-114.

EMERGENCY TYPE

STYLE CD-214 for 144 mc. Emergency type with rubber suction cup base. No hole required. Can be installed in matter of seconds. Ideal for CD.

STYLE CD-215 for 152 to 162 mc. For police and taxi. Similar to CD-214.

STYLE CD-212 for 108 to 120 mc. For aircraft and CAP. Similar to CD-214.

MALLORY MODEL 88 UHF CONVERTER

The Mallory Model 88 UHF Converter expands the receiving capability of any conventional VHF television set to include reception of all UHF stations located within the signal range.

Designed for continuous tuning, this UHF converter insures a compatible balance of inductance and capacitance over the entire, tuning spectrum from 470 to 890 megacycles with a single control.

The smooth and easy operation of the Model 88 Converter is the result of many years of Mallory research in the field of variable inductance tuning devices. This program has resulted in the successful combination of modern circuit techniques required for converting conventional UHF signals to intermediate channels. The Model 88 will result in added television entertainment, through wider program selection, from the conventional television receiver.

The Model 88 Converter is equipped with a built-in UHF antenna which permits installation without the need for special tools or technical skills.

To simplify the operation of this unit even further, a 3-position, "master control" switch is located on the panel to assure rapid selection of:

- (a) UHF station tuning.
- (b) Normal operation of the VHF set.
- (c) Switching VHF set and converter off and on.

Complete installation and operating instructions and warranty are included with each unit.

DETAILED SPECIFICATIONS

Tuning Range: The tuning range of the Model 88 extends from 470 to 890 megacycles in a continuous, unbroken sweep of the tuning dial. This permits accurate tuning of all UHF TV channels without the addition of strips, coils, or band switches. The Mallory Converter is constantly tuned for operation in all areas of television reception.

Tube Complement: 6AF4/6T4 Oscillator; 6CB6 I.F. Amplifier; Selenium Rectifier; and a 1N72 UHF Diode Detector.

Circuitry: Three tuned circuits are employed in the UHF range to provide antenna pre-selection as well as the oscillator-mixer tuning function. These circuits are controlled manually by means of a single shaft actuated from the front panel of the converter. A 6CB6 amplifier, operating at a mean of 82 megacycles, is part of the Model 88. It provides additional amplification at the converter I.F. (either VHF channel 5 or 6). A combination change-over and AC on-off switch is provided to permit quick selection of either VHF or UHF stations from the front panel of the instrument.

Antenna Input Impedance: 300 ohms nominal.

Output Impedance: 300 ohms.

Stability: Oscillator drift and instability in the Model 88 are reduced to a negligible factor by the omission of all mechanically unstable parts, such as; air-tuned condensers, long leads, switches, and coil strips. Thermal sensitive parts are mounted away from heat producing components such as the I.F. and power supply tubes. The Model 88 stabilizes after approximately 1 minute when used with inter-carrier VHF TV sets, and after 3 to 5 minutes when employed with split-circuit sets.

Dial Mechanism: The dial is a slide-rule type, calibrated in TV channels 14 through 82. Full coverage of the entire tuning range is accomplished with approximately 7.5 turns of the tuning knob. Numerals indicating calibration are in gold on glass, and extend approximately 4" across the face of the instrument.

Power Supply: The Model 88 is designed for 117 volt, 60 cycle operation. The power supply consists of a transformer, a selenium rectifier, and a resistance-capacitance filter. Approximately 25 watts of power are required for operation.

Cabinet: Cabinet is attractive and of compact modern design. Measures 7½" wide, 4¼" deep, and 5¾" high. Bottom of cabinet has felt pads to prevent marring of furniture.

Weight: Approximately 3¼ lbs.

THE MALLORY UHF INDUCTUNER*

The Mallory UHF Inductuner, the result of years of research by P. R. Mallory & Co. Inc. in variable-inductance tuning of resonant circuits, is a compact assembly of variable inductances available in three sections. It will tune continuously the UHF range of television channels from 470 to 890 megacycles when used with proper circuitry.

Features of the UHF Inductuner include: reduction in overall capacitance while maintaining the same compact case as used for the Spiral Tuner; complete shielding between sections; shaping of the various sections for oscillator tracking at an I.F. of 82 Mc.; rugged contacts, and positive, uni-control coverage in 270° of rotation.

Additional information is available on request.

Mallory Spiral Inductuner*

The two, three and four gang Spiral Inductuners* are variable inductance tuning devices designed to provide efficient front-end tuning in deluxe television and FM receivers and boosters.

When used in conjunction with suitable tubes and a minimum of circuit wiring, these Inductuners assure accurate, noise-free and continuous tuning of the entire frequency spectrum from 52 through 216 megacycles. The Inductuner eliminates the need for band switches, plug-in coils, turret coil assemblies or complicated circuit wiring when used for this purpose.

Tuning is accomplished in all models by means of a single 1/4" shaft to vary the inductance of each of the inductors simultaneously from the front of the equipment using the Inductuner. Automatic stops at the maximum and minimum inductance positions are provided to prevent damage to the inductors.

The individual coils have a maximum inductance of .985 uh and a minimum inductance of .025 uh. Total shaft turns are 5.925 ± .060-.000. Each Inductuner has a 2 1/2" shaft—1/4" diameter.

Model 8302 is ideal for use in a TV booster (see schematic diagram below). Models 8303 or 8304 are suitable for TV front-end service.

Other patents applied for.

Grid Bias Cells

Mallory Grid Bias Cells are small acorn-shaped, self-contained devices. The metal container or cup is the negative electrode. The black disc is the positive electrode.

The principal use of Mallory Grid Bias Cells is in the biasing of the first audio amplifier tube in modern high-gain receivers. The bias cell does not need to be by-passed to ground.

The no-current potential of the cells is within plus or minus 10% of their rated voltage. The cells are strictly potential or voltage cells for biasing class "A" amplifier tubes and should not be used for biasing power tubes or oscillators, or for any circuit where direct current may flow through, or be drawn from, the cells.

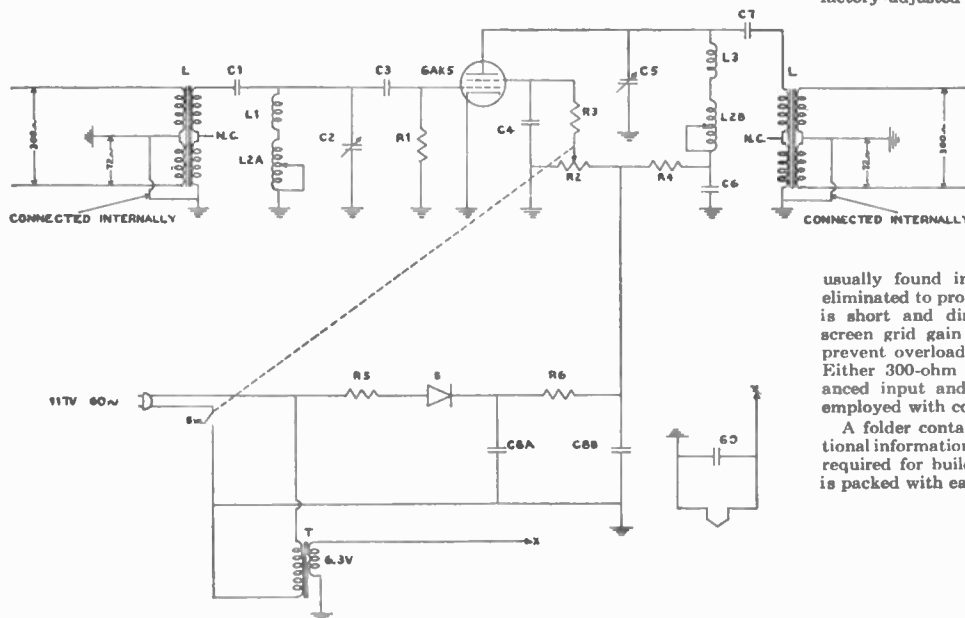

The cells may be used at temperatures from 0°F to 140°F. The voltage of the cells remains reasonably constant throughout this wide temperature range. Whenever possible, place the bias cells in the coolest location. The cells exhibit no change in characteristics when exposed to a relative humidity of 90% at 120°F.

Mallory Grid Bias Cells are non-reactive at audio frequencies. The DC resistance of the cell ranges between 10,000 and 40,000 ohms. The cells do not cause noise.

Two-Gang Spiral Inductuner Booster for TV, FM and General Purpose Tuning

Continuous Range: 54 to 216 Mc.

At the left is a schematic diagram of a full-coverage, TV booster employing the Mallory No. 8302 2-gang Spiral Inductuner. This TV booster is entirely practical and suitable for home-shop construction by the average technician. The Inductuner supplies all the essentials required for tuning in one, compact, factory-adjusted unit, thus providing simplified construction. No tuning condensers, band switches or plug-in coils are needed. Possible errors usually attendant with hand-wound coils and unknown tolerances of tuning condensers are completely avoided.

The proven efficiency and high gain of a 6AK5 tube has been utilized to the fullest extent. The antenna changeover switch usually found in booster circuits has been eliminated to provide vital R.F. wiring, which is short and direct. An infinitely variable screen grid gain control has been added to prevent overloading by strong, local signals. Either 300-ohm balanced or 72-ohm unbalanced input and output feed lines may be employed with comparable results.

A folder containing detailed and constructional information, plus a listing of components required for building an Inductuner booster, is packed with each No. 8302 Inductuner.

TENNA-TOP

ANTENNA-MOUNTED TV BOOSTER

Low Noise • All Channel • Self-tuning • Permits Long Lead-ins

Mounts at antenna, ahead of lead-in. Amplifies only wanted TV signals, NOT local noise picked up by lead-in. Completely automatic, fully electronic. NO manual tuning necessary. Exclusive EV broadband circuit assures uniform high gain across entire band width. Tapped power transformer in junction box permits satisfactory operation with long lead-ins. Use of high quality wire allows lengths up to 3000'. Extremely stable, no signal drift, no limiting peaks. Easy to install. Single lead-in carries power up, brings amplified TV signal down. Uses all-band or separate hi and low channel antennas. Amplifier unit is rugged, weather-proof, trouble-free. Easily mounted on mast. Junction control box easily hidden in TV set.

Model 3010 SUPER-TENNA TOP. Uses four tubes for two separate high and low band 2-stage amplifiers. Input and output 150-300 ohms. Booster unit 7 $\frac{1}{4}$ " x 7 $\frac{1}{4}$ " x 6" in rugged, moisture-proofed housing. Junction control box 6 $\frac{3}{4}$ " x 3 $\frac{1}{8}$ " x 4 $\frac{1}{2}$ " finished in gray hammertone. For 105-125 volts, 50-60 cycles AC. Complete with four 6J6 tubes, mounting brackets, and plug-in cord. Shipping weight 11 lbs.

MODEL 3400 UHF TV BOOSTER

High Gain • Increased Sensitivity • Micrometer Type Tuning

Again EV creative engineering contributes a major advance in ultra high frequency electronic research with the production of the Model 3400 UHF TV Booster. If you are located in a UHF fringe area the Model 3400 will enable UHF reception equal to that in primary areas. The use of a special push-pull grounded grid circuit provides a substantial increase in sensitivity, improved signal-to-noise ratio and reduced "off frequency" interference. Exclusive micrometer type tuning system permits smooth, precision tuning over the entire UHF range, channels 14 through 83. As a result of careful, thorough UHF engineering, the performance, stability and ease of tuning of the Model 3400 UHF Booster compares favorably with the finest VHF boosters.

Model 3400 UHF BOOSTER. Employs two 6AJ4 RF amplifiers in a push-pull grounded grid circuit with silver plated, distributed constant resonant system. Frequency range, 470 mc to 890 mc. 300-ohm input and output impedance. For 105-125 volt, 60 cycle AC. 19 watts power consumption. Attractive metal cabinet finished in rich, warm brown. 7 $\frac{3}{8}$ " wide, 5 $\frac{1}{8}$ " high, 6 $\frac{1}{4}$ " deep. Shipping weight 5 $\frac{1}{2}$ lbs.

MODEL 3005 FM BOOSTER

Fully Automatic • High Gain • Broadband

The lasting pleasure of fine FM music under all conditions is made possible with the Model 3005 FM Booster. No more "lost programs" in difficult city locations or in outlying low-signal areas. Utilizing a special design high-gain circuit, this all-electronic broadband booster takes full advantage of all FM features without compromise. Extends the useful range of FM reception; clearly brings in stations not possible before. Increases signal strength over 10 times (20 db) uniformly throughout the entire FM spectrum from 98 to 108 mc. Thermal relay permits FM booster to be turned "on" and "off" by the receiver without any circuit modifications. Completely automatic, no tuning or adjustment required; simple to install.

Model 3005 FM BOOSTER. Uses two dual triode tubes in a highly developed, low internal noise circuit. 300-ohm input and output. For 105-125 volt, 60 cycles AC. Automatic switch actuated by sets consuming between 40 and 250 watts. Sturdy metal two-tone gray case. Vertical mounting brackets included; rubber feet. 5 $\frac{1}{2}$ " x 4" x 5 $\frac{3}{8}$ ". Complete with tubes and plug-in cord. Shipping weight 3 lbs.

"AMB-1" Broad Band Antenna Mounted Booster

A two-unit automatic booster. The AMPLIFIER mounts to the antenna quickly, easily and positively with the Bogen "strap-mount." The four tube cascade circuit provides an average 16 db gain increase for all channels. The CONTROL UNIT mounts at the rear of or inside the television receiver and turns on and off automatically with the set. It is equipped with a tapped transformer to compensate for different lengths of twin lead. Power is fed to the amplifier and the amplified signal is returned to the set over the same twin lead.

COAXIAL TUNING • PRESELECTION • AMPLIFICATION

The superior performance of Granco UHF converters and tuners is due to these Granco features . . .

COAXIAL TUNING: Most efficient UHF tuning system known. Extreme mechanical and electrical precision. No wiper contacts. Continuous tuning over entire UHF band. Highest stability.

FINE TUNING: No "on-again off-again" tuning with Granco. No slipping past desired channel, especially with weak signals. Instead, fine tuning is simple and positive with high-ratio tuning knob. "On-the-button" tuning assured without need for "safecracker's touch."

PRESELECTION: Rejects unwanted signals and spurious interference. Only the desired signal tuned in. A "must" in areas with two or more channels, either UHF or VHF.

AMPLIFICATION: Low-loss tuning and associated circuitry, plus high-gain amplification of tuned-in channel, means cleaner, brighter, more enjoyable pictures.

WORKS WITH ANY TV SET: The Granco UHF Converter feeds a 300-ohm input to any VHF television set tuned to Channel 5 or 6. Selector switch instantly provides for UHF or VHF reception.

FITS THE REQUIREMENTS: With four models to choose from, Granco meets the requirements of every purse and purpose. No need to pay more than necessary for entirely satisfactory results in any area or location.

"CHALLENGER" Series SLU

- More converter, less cost
- All-channel continuous tuning
- Two-cavity coaxial tuner
- Smart styling for modern decor
- Fine tuning; preselection; stability

No other UHF converter in this price class — or other makes costing up to \$10 more — can match the performance of the "Challenger." Works with indoor antenna in usual locations. Smart modern styling — plastic cabinet, large gilt-center tuning knob, semi-circular tuning dial, easily-read channel designations, selector-switch knob. Positively — and ready to meet any challenge — the SLU "Challenger" stands for most converter for least cost.

MODEL SLU "CHALLENGER": Complete with tubes (6AF4 oscillator, 6CB6 I.F. amplifier, IN72 crystal mixer). Individually packaged in corrugated carton, with instructions. **LIST PRICE:** Mahogany, \$24.95; sand, \$27.95.

"SUPER" Series MTU

- Greatest gain for weakest signals
- Three-cavity coaxial continuous tuner
- High-ratio tuning knob
- Cascode amplification
- High-power two-unit chassis

Combining outstanding performance with smartest styling. Meets esthetic requirements of the fastidious housewife, while performance meets the rigid demands of the advanced TV fan. The logical converter in areas where signal strength is low and where distance is great. Model MTU will work where other converters do not perform at all. Two-unit chassis, with complete power supply including vacuum-tube rectifier and three-cavity coaxial tuner. Exceptionally smart appearance — metal cabinet in simulated mahogany (or blond at slightly higher price) set off by gold-framed panel with quadrilled upper half. Large gilt-center tuning indicator, and smaller concentric knob for precision tuning and selector-switch.

MODEL MTU "SUPER": Complete with tubes (6BQ7A cascode amplifier, IN82 low-noise silicon diode, 6X4 vacuum-tube rectifier, 6AF4 oscillator). Individually packaged in corrugated carton, with instructions. **LIST PRICE:** Mahogany, \$39.95; blond, \$42.95.

"STAR" Series LCU

- Greater gain for weaker signals
- Two-cavity coaxial tuner
- All-wave continuous tuning
- Conservative-styled cabinet
- Fine tuning; preselection; stability

A further refined and restyled "Star" (Model LCU) of which tens of thousands are in daily use. Ideal in weaker-signal areas or locations where greater gain is desirable. The best performer of any UHF converter in its class. Smartly styled cabinet in mottled mahogany plastic (blond optional at slightly higher price).

MODEL LCU "STAR": Complete with tubes (6AF4 oscillator, 6CB6 I.F. amplifier, IN72 crystal mixer). Individually packaged in corrugated carton, with instructions. **LIST PRICE:** Mahogany, \$29.95; blond, \$32.95.

"DELUXE" Series DUC

- Finest wood cabinet
- In mahogany or blond
- High-power two-unit chassis
- Cascode amplification
- Three-cavity coaxial tuner
- Superlative sensitivity, selectivity, gain

The ultimate in performance and rich appearance. Housed in handsome wood cabinet finished in mahogany or blond. Gold-finished corrugated-motif shadow-box frame for recessed slide-rule dial. Two gilt-center dials for tuning and selector-switch. Styling in such excellent taste that it "belongs" with the most elaborate TV console. Two-unit high-power chassis, with power supply including vacuum-tube rectifier, and three-cavity continuous all-wave coaxial tuner. Superlative sensitivity, selectivity and gain.

MODEL DUC "DELUXE": Complete with tubes (6BQ7A cascode amplifier, IN82 low-noise silicon diode, 6X4 vacuum-tube rectifier, 6AF4 oscillator). Individually packaged in corrugated carton, with instructions. **LIST PRICE:** Mahogany, \$49.95; blonde, \$52.95.

GRANCO UHF HIDEAWAY TUNERS *

- Complete UHF converter in metal casing
- Mounts at rear or on top of TV cabinet
- Provides continuous coverage of UHF band
- Two-cavity coaxial tuning
- Preselection for clean interference-free pictures
- High sensitivity
- High signal-to-noise ratio

*Patent applied for.

Easiest, cheapest, neatest concealed UHF conversion job. Installed without pulling out heavy chassis; without fussing with turret tuner; without realignment bothers; without getting interference from adjacent channels.

Yet the Hideaway provides continuous high-ratio tuning over entire UHF band; high signal-to-noise ratio; preselection for clean interference-free pictures; high sensitivity.

Neat metal cabinet mounts at rear right of TV cabinet, with slide-rule dial showing, and with tuning knob and selector switch at right of cabinet. So small, it attaches to any TV set (mounting brackets supplied). So simple, it works on indoor antenna in most localities. So inexpensive, that even the oldest traders rate this UHF conversion. So necessary, that even the brand new TV set needs it when UHF stations come along. Also, it can be used as a top-of-cabinet converter.

Available in three different models for three different operating requirements and in corresponding price ranges:

MODEL HT-1 — The price leader. Yet a complete coaxial tuned UHF converter. Takes minimum power from TV set, with simple socket connections. Ample sensitivity in most UHF areas. Preselection means clean pictures with minimum "snow." Cuts out interference in areas with two or more VHF or UHF stations. On-the-button tuning. LIST: \$15.95

MODEL HT-2 — Self-powered. Otherwise same fine features as HT-1. No need to make any power connections inside the TV set. Just connect with TV set and antenna. LIST: \$18.95

MODEL HT-3 — Self-powered, plus additional low-noise amplification. Ideal in weak signal areas. A wonderful buy for those who want superior UHF performance. LIST: \$21.95

GRANCO UHF SIGNAL-GAIN GENERATOR

Type SU-200 Granco UHF Signal-Gain Generator, is a new type of instrument for UHF television areas,

with more versatility and usefulness than any other similar instrument within at least twice the price.

THE SU-200 FEATURES...

- Coaxial tuning elements
- Accurate tuning over entire UHF band
- Calibration in both frequency and channel numbers
- Balanced detector meter circuit and gain control
- Simple operation for quick measurements

APPLICATIONS...

1. Measures gain, tracking, calibration accuracy and range of UHF tuners, converters, antennas, strips, boosters, and receivers.
2. Acts as a signal power source for various types of measuring equipment, such as VHF bridges and slotted line.
3. Ideally suited for development, production, and communication testing.

SPECIFICATIONS...

Frequency Range: 440-910 mc $\pm 2\%$ in a single direct-reading tuning range.

Output: CW

Spurious Frequency: None

Leakage: Negligible

Output Voltage: 2 volts available across 50-ohm unbalanced or 300-ohm balanced termination.

- Cables:
1. 3-foot cable with 300-ohm balanced pad termination.
 2. 3-foot cable with 50-ohm unbalanced termination.
 3. 3-foot twin lead cable.

VHF Input Impedance: 300 ohms balanced.

VHF Detector Sensitivity: 200 MV with VHF gain control set at .5 and meter pointer at midscale.

UHF Output Terminal: BNC Panel Jack type UG 291/U.

VHF Input Terminal: 300-ohm twin lead receptable.

Controls: Meter switch — UHF output — VHF input UHF output control — varies from 0 to 2 volts.

VHF gain control — measures gain in db and voltage -6 db to +12 db -5 to 5.

Dimensions: 10 $\frac{1}{4}$ " high x 8 $\frac{1}{8}$ " wide x 8" deep.

Weight: 5 pounds.

AC Input: 117 volts 60 cycles 30 watts.

Price: \$99.50 (Dealer's Net).

OAK AUXILIARY SPEAKER SWITCH

ESSENTIAL IN CARS or with REMOTE TV or JUKEBOX SPEAKERS

Sold in Boxes of 12 and 36

Does all that the old style 3 way rear seat speaker switch could do . . . Plus: the advantage of the best impedance match to the radio at any volume setting used . . . Plus: sound distribution as you want it.

Either speaker can be made the louder, by the flip of a switch, while both continue to play together.

ALLIANCE TENNA-ROTOR

The Alliance Tenna-Rotor, available in three models illustrated below, is a TV or FM antenna rotator. Designed to rotate all conventional type antennas. It consists of a fully enclosed electrically driven rotor into which the antenna center-post is clamped. Four-conductor "zip" cable connects rotator with plastic control case placed near receiver, which plugs into any 60 cycle 110-volt AC house circuit. A selector switch controls rotation clockwise or counter-clockwise to point antenna in any direction for optimum reception.

Alliance Tenna-Rotor reduces interference, improves quality of picture, eliminates ghosts, aids fringe reception. It is especially useful in multi-station areas and wherever there are signals from the more critical UHF stations. Will add distance to your reception.

Rotator on the Market*

Model U-83 Automatic

List Price\$34.95

FULLY AUTOMATIC MODEL U-83

"SET IT AND FORGET IT"

This deluxe Model U-83 is the only fully automatic rotator on the market.

BEAUTIFUL NEW STYLING

Simply set the pointer — antenna automatically turns by itself and stops at the direction shown on the indicator dial. New styling plus the exclusive automatic feature makes Model U-83 the ultimate in rotators!

Model T-10

List Price\$29.95

MODEL T-10

This finger-tip electrically controlled Alliance Tenna-Rotor is noted for extreme accuracy, compactness and smart styling. Pressing attractive tilt bar controls rotator and a pointer on the control case dial shows compass direction to which antenna is pointed.

Both new Model Alliance Tenna-Rotors, the U-83 automatic, and the T-10, have increased speed of rotation and incorporate features that make for faster installation, trouble-free operation and unsurpassed performance. The new rotator unit has double-action magnetic anti-drift brake plus smoother synchronization with control units. Alliance Tenna-Rotors are pre-sold through TV advertising!

MODEL F-4

Model F-4 has a three-position selector switch to control the rotator. Throwing switch to right or left rotates rotor shaft clockwise or counter-clockwise through a complete 360 degree arc. Center OFF position enables operator to select exact position for "peak" reception! A screen illuminates to tell when limit of travel in either direction is reached.

More Than 2,000,000 Alliance Tenna-Rotors Are In Use!

Model BY-90
List Price\$29.95

ALLIANCE UHF CONVERTER

Alliance UHF Converter, a proved, dependable, quality Converter that's built to last!

Model BY-90, the Alliance UHF Converter, covers all channels — both UHF and VHF, when connected with any VHF receiver. Requires only a few minutes to install without the need for special tools or technical skill. A three-position "master-control" switch on panel assures UHF station tuning — normal operation of the VHF set — on-off switching of Converter and set. This Converter is noted for outstanding selectivity and gain to provide superior picture quality. An excellent performer in fringe areas or where a UHF signal strength is weak.

ALLIANCE CASCAMATIC AUTOMATIC TV BOOSTER

Model BB-2 Alliance Cascamatic is a fully automatic television booster, is pre-tuned to all VHF channels and features the "California" circuit. The Cascamatic mounts out of sight on back of the set and requires no manual control because it turns on and off automatically, with the set. Equipped with three tubes. Affords excellent high gain reception — especially useful in fringe areas. Quickly installed.

Model BB-2
Alliance Cascamatic Booster
List Price\$29.95

ALLIANCE TENNA-SCOPE TV BOOSTER

Model BB-1 Alliance Tenna-Scope is a popular TV Booster for all VHF channels. Manually controlled, it permits critical tuning to each channel. Features an automatic "on-off" switch so that set may be used with or without the booster in the circuit, has unusual high channel reception characteristics — amplifies picture and sound uniformly — is an excellent performer in TV fringe and suburban areas.

ALLIANCE THRUST BEARING BRACKET

The Alliance Thrust Bearing Bracket, accessory to Alliance Tenna-Rotor, is made to provide added support for all heavier conventional type antennas. Used with Alliance Tenna-Rotor, it makes an ideal installation. Especially suited for multibay and stacked array an-

tenna types. The Thrust Bearing takes the weight off the rotor unit and transfers it to the ground. It assures extra rigid support and maximum resistance to high winds.

The MOSLEY Transmission Line Accessories listed on this, and preceding pages, are designed to fulfill the exacting requirements of present day television installations. Materials used include only those possessing low loss characteristics while careful engineering attention

assures that the line impedance be maintained wherever MOSLEY Accessories are used.

Convenience of facility and attractive appearance combine to make MOSLEY TV Accessories completely acceptable to all television set owners.

The NEW MOSLEY "ORIENTOR"

For Fast, Accurate Orientation of Any UHF/VHF Television Antenna

The Mosley "Orientor" is an isolation device that enables the installer on the roof to utilize the television transmission line to bring the video signal back up to him where it can be read in relative value by means of an ordinary volt-ohmmeter. When using the Orientor, it is not necessary that an extra man be stationed at the TV set to relay information to the installer adjusting the antenna.

Other advantages include:

- Eliminates need of expensive instruments!
- Use with any inexpensive, portable VOM!
- Requires no power!
- Pocket size — easy to carry
- No special tools needed!
- Sturdy-made for years of service!

Catalog 903 "Orientor" complete with set of leads, less meter.

2. Snap open Antenna.

4. Simply attach lead-in line to terminals of driven element.

CR-88

An improved corner reflector designed to cut installation time in half and to end 99% of future maintenance problems.

Better than three extra hands when making installations on windy rooftops . . . Just zip out the sturdy, light-weight pre-assembled unit from carton . . . snap open reflector . . . tighten three U bolts on mast . . . attach feed line . . . and there you have it!

Imagine freedom of both hands without the acrobatics generally needed in the installation of other antennas. PENN TELEVISION PRODUCTS' CORNER REFLECTOR is balanced so perfectly that the weight of ice loads will always be evenly distributed. There are absolutely NO loosely packed parts to lose since everything is COMPLETE on the one unit.

These superior features have made PENN TELEVISION PRODUCTS COMPANY justly proud of their newest and finest achievement in the U.H.F. field.

NEW BUD FILTERS TO REDUCE OR ELIMINATE TELEVISION INTERFERENCE

The sources of television interference are most often short wave broadcasting stations, amateur radio transmitting stations, diathermy equipment, X-ray equipment, automotive ignition noises

or similar sources. The basic problem of eliminating this interference is that of rejection of the signals received from these sources.

LF-601 LOW PASS FILTER

Interference to television receiver reception caused by transmissions from an amateur station can be caused by harmonics or by shock from the transmitter. The shock from the transmitter fundamental can be cured at the television receiver with a Bud HF-600 high pass filter. Harmonics can be greatly reduced or eliminated at the transmitter by use of a Bud LF-601 low pass filter.

The LF-601 high attenuation low pass filter has the following characteristics:

1. Minimum attenuation of 85 decibels on all frequencies above 54 megacycles and a minimum of 93 decibels above 70 megacycles.
2. Maximum rejection is adjustable from 55 to 90 megacycles. This tunable feature provides two slots at least 100 decibels down.
3. The cut-off frequency is 42 megacycles.
4. The unit will easily handle a full kilowatt modulated on a reasonably flat line.
5. The insertion loss is less than one DB.
6. Since the design of this filter provides an adjustable feature, the unit can be used with either 52 ohm or 72 ohm coax.
7. Each inductance is in an individually shielded compartment.
8. All capacitors used are variable.

WIRELESS PHONO OSCILLATOR WO-6A

This compact unit is designed to enable any standard record player to be easily converted to wireless operation. Record reproduction is then possible through a regular radio receiver without the necessity of cumbersome inter-connecting wires. Installation is simple according to the complete instructions furnished with each unit.

The circuit incorporated in the Wireless Oscillator is of such design that faithful reproduction is assured. The unit comes completely wired and tested including tubes and is finished in black enamel. Operates from 115 volts AC or DC. Frequency range is approximately 1100-2150 K.C. Actual weight 1 lb.

HF-600 HIGH PASS FILTER

The HF-600 high pass filter is designed to have a cut off frequency at 42 megacycles, thus this filter rejects signals from 0 to 42 megacycles. It is within this range that the majority of signals causing interference would be received. Since there is no attenuation above 42 megacycles, picture strength or quality is not affected.

This unit is easily installed and complete installation instructions are included. The filter is housed in an attractive aluminum case 3 1/4" x 2 1/4" x 1 1/4".

ADJUSTABLE CHIMNEY MOUNTS

Very easy to install on any size chimney without use of special tools. The NEW BUD STRAP CLAMP simplifies and speeds up installation. A rugged antenna installation is assured.

The Twin Mounts design allows unlimited spacing between the brackets, thus providing maximum strength. AM-86—Heavy Duty Chimney Mounts —Made from 1/2" steel — 2 1/2" wide enabling the overlapping of more than one brick and can be used to support any size antenna mast from 3/8" to 1 1/2" diameter.

AM-88 — Economy Model Chimney Mount — Construction and design same as AM-86 except for the width of the bracket which is 1 1/4". Also made from 1/2" steel and will support mast up to 1-5/16" in diameter. These chimney mounts are supplied complete with 24 feet of strapping, and all necessary hardware. The brackets are finished by painting with a black rust-resisting paint and all hardware is plated, assuring a long lasting installation.

COMBINATION ANTENNA MOUNT

This new Combination Mount is the latest addition to Bud's complete line of television antenna mounts for every location . . . to meet any condition.

Made of two sheets of extra heavy gauge, tough steel, the upright portion is welded together for a permanent bond. Spread portion is accurately formed for peak or wall installation. Sturdy construction guarantees permanent, trouble-free mast installation.

The Combination Mount has a baked, black enamel finish to prevent rust. Furnished complete with plated mounting hardware. Will accommodate up to 1 1/4" mast.

HEAVY DUTY WALL MOUNTING BRACKET

For an installation requiring maximum strength and weather resistance. The 16" spacing on the wall allows lag bolts to enter 2 x 4 joists under the wall siding, making a solid support for the antenna. Made of 3/4" steel 2" wide. Painted with a black rust-resisting paint. A steel brace is furnished for use as a brace on the upper bracket and permits the supporting of heavy television antenna. Brackets are adjustable to accommodate masts 1 1/2" in diameter. The AM-60 will allow a 12" space between the mast and the wall. The AM-89 will separate the mast from the wall by a space of 16". Supplied complete with lag screws and all other hardware.

OVENS FOR TEMPERATURE CONTROLLED CRYSTAL UNITS

MONITOR manufactures a wide variety of ovens for temperature-controlled crystal units. Two typical examples are illustrated above. Units are available which will accommodate one or more of a large number of holder types. Heaters are normally furnished for either 6, 12 or 24 volt operation, but special values can be furnished.

MONITOR ovens feature an hermetically-sealed thermostat and will maintain very close temperature control over a wide range of ambient temperatures.

Write or call for specific data.

Quartz Crystals

TYPE VR6

Hermetically sealed in compact metal case, 1500 Kc to 75.0 Mc frequency range. (Jan type HC-6/u) Pin is .050" diameter, spaced .486".

TYPE CM1

Fixed air gap, 850 to 20,000 Kc frequency range. Available in standard 3/4" and G.R. 3/4", 5/8" 7/8" or .850" spaced pins.

TYPE CBC-0

Frequency range 60 to 10,000 Kc. Available with 6, 8, or 10 volts, $\pm 1/2$ degree C. temperature stability. Standard 5-prong socket.

TYPE VD5

Frequency range 1,000 to 6,000 Kc. Single or dual crystals. Mounts in special 3-prong socket, pin diameter .562", spaced .500" x .8125"

TYPE XL100

Exact 100 Kc., used extensively in frequency standards. Mounts in 3/4" crystal socket or standard 5-prong socket.

TYPE CM5

Frequency range 1,500 to 30,000 Kc. Fixed air gap, standard .486" x .093" or standard octal socket.

TYPE DFS

Features separate 100 and 1,000 Kc. crystals in one mounting, with accuracy $\pm .005\%$ over range of -10°C to $+60^{\circ}\text{C}$ when used in recommended circuits.

TYPE VDO

Frequency range 1,000 to 10,000 Kc. Single or dual crystals with 6 volt oven $\pm 1/2$ degree temperature stability. Mounts in standard 5-prong socket.

ELECTRIC SOLDERING IRONS

Embodied in these Electric Soldering Irons are features of construction and design that specialized experience—since 1894—has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops; Army and Navy Services; in telephone, telegraph, radio and TV stations. Because of their proven efficiency and durability, they are preferred by those who measure the value of a tool by the service it renders.

No. 3138 Designed primarily for production and maintenance in radio, telephone, telegraph, ignition, switchboard and telephone installation work and similar industrial applications.

No. 3158 For the same purpose as the No. 3138 but for work requiring an iron of greater capacity.

No. 3178 For use on still heavier work; for light commutators, service and production work. A very useful iron for general purposes.

No. 3198 For heavy work of all kinds. Supplies a large volume of heat at high temperature. Used by manufacturers in many different lines; for shop, service, production work, etc.

No. 3128-A

No. 3128A A companion iron to No. 3128—the angle shape permits easy application to soldering operations difficult to accomplish with the conventional straight No. 3128.

No. 3128 For servicing TV, electronic and radio equipment and similar light work.

American Beauty COPPER TIPS

American Beauty Copper Tips are made from commercially pure, drawn bar copper rod and are heavily nicked to resist corrosion and oxidation. Tips are available from 1/8" to 1 1/8" in diameter. Standard shaped tips with which various models are equipped are shown in illustration but pyramidal, instead of chisel type, and vice versa can be supplied when so specified without additional charge. For No. 3138 a special long, semi-chisel shaped tip (No. 3738-S) can be supplied for telephone, switchboard, television and radio work. All tips shown at right can be supplied either iron-plated or eternalloy-plated—for extra long life—at additional cost. For iron-plate add the suffix "IP" to catalog numbers indicated or "EP" for eternalloy-plate.

American Beauty TEMPERATURE REGULATING STAND

For use on (AC) Alternating Current Only

This is a thermostatically controlled device for the regulation of the temperature of an Electric Soldering Iron while at rest. Through an adjustment on bottom of stand the thermostat may be set for maintenance of any desired heat—from very low, or warm, to full working temperature. It is designed for use with Electric Soldering Irons from 80 to 660 watts input and on circuits up to 240 volts. Not recommended for Nos. 3118, 3120, 3128, 3128A, 3438, and 3438E,P.

PLUG TIP IRONS

No. P-25A—Smallest Full-fledged Industrial Iron. Weight (less cord) only 3 oz. Length only 8". For extremely light soldering on finest wires, delicate instruments, jewelry, etc. Can also be furnished in higher wattages. 25 Watts. Tip dia., $\frac{1}{8}$ ". Ship wt., $\frac{1}{2}$ lb. Price \$5.00

No. P-26—Same size and for same work as P-25A, but where larger tip is required. Can be furnished in higher wattages. 30 Watts. Tip dia., $\frac{3}{16}$ ". Ship wt., $\frac{1}{2}$ lb. Price \$5.00

No. P-30—Very light soldering on fine wire and delicate instruments. Extra $\frac{1}{8}$ " dia. tip furnished with each iron. Also available in 50 or 60 watts. Specify watts when ordering. 40 Watts. Tip dia., $\frac{1}{4}$ ". Ship. wt., $\frac{3}{8}$ lb. Price \$5.25

No. P-70—Medium light soldering on telephone and radio apparatus. 80 Watts. Tip dia., $\frac{3}{8}$ ". Ship wt., 1 $\frac{1}{8}$ lb. Price \$7.50

No. P-100—A high speed tool for telephone, radio. Also home use. 100 Watts. Tip dia., $\frac{3}{8}$ ". Ship wt., 1 $\frac{1}{8}$ lbs. Price \$8.25

No. P-125—Light tinware, toys, typewriter type bars, small cans. 180 Watts. Tip dia., $\frac{5}{8}$ ". Ship wt., 1 $\frac{1}{8}$ lbs. Price \$9.75

No. P-150—Extra high speed iron for TV production, etc. 150 Watts. Tip dia., $\frac{5}{8}$ ". Ship wt., 1 $\frac{1}{2}$ lbs. Price \$9.00

No. P-151—Same use as No. P-150, but where larger tip is required. 175 Watts. Tip dia., $\frac{1}{2}$ ". Ship wt., 1 $\frac{1}{8}$ lbs. Price \$9.50

No. P-200—Medium tinware, small cans, small motors, organ pipes. 200 Watts. Tip dia., $\frac{3}{4}$ ". Ship wt., 2 $\frac{3}{8}$ lbs. Price \$10.00

No. P-250—Same use as No. P-200, but where greater speed is required. 250 Watts. Tip dia., $\frac{3}{4}$ ". Ship wt., 2 $\frac{3}{8}$ lbs. Price \$11.50

No. P-300—Large cans, roofs, auto radiators, gutters, refrigerators. 300 Watts. Tip dia., $\frac{3}{4}$ ". Ship wt., 3 lbs. Price \$13.25

No. P-550—Auto bodies, roofs, heavy armatures, tinsmiths. 550 Watts. Tip dia., 1 $\frac{1}{4}$ ". Ship wt., 4 $\frac{3}{8}$ lbs. Price \$17.50

SCREW TIP IRONS

No. 50—Light soldering on radio, telephone and electrical apparatus. 50 Watts. Tip dia., $\frac{1}{8}$ ". Ship wt., 1 lb. Price \$5.25

No. 60—Medium light soldering on telephone and radio apparatus. 60 Watts. Tip dia., $\frac{1}{4}$ ". Ship wt., 1 $\frac{1}{8}$ lbs. Price \$7.50

No. 85—Average soldering on telephone and radio. For home use. 90 Watts. Tip dia., $\frac{1}{2}$ ". Ship wt., 1 $\frac{1}{8}$ lbs. Price \$8.25

No. 120—A high speed iron. Light tinware, toys, typewriter type bars. 120 Watts. Tip dia., $\frac{5}{8}$ ". Ship wt., 1 $\frac{1}{8}$ lb. Price \$9.00

No. 130—Same use as No. 120, but where larger tip is required. 130 Watts. Tip dia., $\frac{3}{4}$ ". Ship wt., 1 $\frac{1}{2}$ lbs. Price \$10.00

No. 170—Medium tinware, small cans, small motors, organ pipes. 175 Watts. Tip dia., 1". Ship wt., 2 $\frac{1}{2}$ lbs. Price \$11.25

No. 225—Medium tinware, large cans, auto repairs, metal patterns. 250 Watts. Tip dia., 1 $\frac{1}{4}$ ". Ship wt., 2 $\frac{3}{8}$ lbs. Price \$13.25

No. 350—Large cans, roofs, auto radiators, gutters, refrigerators. 350 Watts. Tip dia., 1 $\frac{3}{8}$ ". Ship wt., 3 $\frac{1}{2}$ lbs. Price \$15.00

No. 500—Auto bodies, roofs, heavy armatures, tinsmiths. 500 Watts. Tip dia. 1 $\frac{3}{4}$ ". Ship wt., 4 $\frac{3}{8}$ lbs. Price \$17.00

No. 700—Continuous extra heavy duty soldering of very large armatures, etc. Where more heat is required use two irons alternately. 700 Watts. Tip dia., 1 $\frac{3}{4}$ ". Ship wt., 5 $\frac{1}{2}$ lbs. Price \$32.00

QUICK-HEATING BATTERY IRON

CONNECT THIS IRON TO EITHER 6 OR 12 VOLTS
Developed as a Standard Battery Iron for Armed Forces

No. 612—200 Watts. Tip dia., $\frac{7}{16}$ ". Price \$17.60
Length, 12 $\frac{1}{2}$ ". Wt. (less cord) 1 lb. Ship wt., 2 $\frac{3}{8}$ lbs.

For: Planes • Trucks • Cars • Tractors • Boats • Steam Shovels • etc.

Ready to Use in 20 Seconds.

Also for remote places in industrial plants where battery equipment is available. Will do three times heavier work than the size indicates because element is embedded in tip, yet tip is small enough for finest soldering. Switch in handle controls heat.

See Bulletin No. 612 for Further Details

SPECIAL-PURPOSE FAST-PRODUCTION-LINE SOLDERING IRONS

Types Listed Below Have Been Developed Specifically for Soldering of TV Sets, Electronics and Communication Equipment Instruments, etc.—and Are Popular on Production Lines of Leading Producers (Both Conveyor Belt Lines and Sub-assemblies).

SUPER-POWERED IRONS HIGHER SPEED WITH SMALLER TIPS

Tip Dia.	Watts	Cat. No.	Ship Wt.	Price
1/4"	100	P-114	1 1/2 lbs.	\$ 8.25
3/8"	150	P-154 (shown)	1 1/2 lbs.	\$ 9.00
1/2"	200	P-214 (shown)	2 1/4 lbs.	\$10.00
5/8"	200	P-238	2 1/4 lbs.	\$10.00
3/4"	200	P-212	2 1/4 lbs.	\$10.00
3/4"	300	P-338A	2 3/4 lbs.	\$13.25

SOLDER FASTER WITH LOWER TIP COST! For example, Cat. P-214 has more speed than conventional 200 watt iron, but takes 1/4" tip instead of 3/8" (only 1/3 the copper). Widely used on production-line-soldering of TV sets, etc., where small-diameter, high-powered tips get into close quarters, and extra-fast-soldering prevents burning of insulation.

See Bulletin No. P-154 for Further Details

HATCHET TYPE IRONS

PERFECT BALANCE—LESS FATIGUE—BETTER SOLDERED JOINTS FOR INACCESSIBLE PLACES

One of the most popular production line soldering irons. For same use as Plug Tip irons of equal wattage shown on opposite page. Replaceable elements and tips.

INSTRUMENT SOLDERING IRONS

**FOR FAST SOLDERING OF SMALL CONNECTIONS
EFFORTLESS TO USE — OUTPERFORM LARGER IRONS**

Three distinct styles to choose from—SUPER-PENCIL, BANTAMWEIGHT HATCHET or PIN-POINT. All three types have same soldering efficiency and capacity and differ only in method of holding.

More powerful than wattage rating indicates. Tiny tips outperform irons with larger tips and higher wattage. Light weight reduces operator fatigue. Nickel-chromium mica-wound elements. Element, tip and housing all made of special alloys to increase efficiency. Engineered for maximum performance. **No transformer or other cumbersome and expensive equipment required.**

For constant duty precision soldering of instruments, sub-assemblies, small electronic devices, jewelry and all light or intricate electrical connections.

SUPER-PENCIL IRONS

HOT TIP — COOL HANDLE

Length 7 3/4"		25* Watts	3/8" Tip	Ship Wt., 1/4 lb. Price \$5.00
Length 7 3/4"		30* Watts	3/16" Tip	Ship Wt., 1/4 lb. Price \$5.00

*Can also be furnished in higher wattages.

All the advantages of a soldering pencil but a full-fledged industrial soldering iron with tip and element as separate parts and both individually replaceable. Cool, comfortable handle. Tiny tips outperform irons with larger tips and higher wattages. Weighs only 2 oz. See Bulletin 25S for Further Details.

BANTAMWEIGHT HATCHET IRONS

PERFECT BALANCE—LESS FATIGUE—BETTER SOLDERED JOINTS FOR INACCESSIBLE PLACES

	No. 25H Price \$5.50 25* Watts 1/2" Tip Ship Wt., 1/2 lb.		No. 26H Price \$5.50 30* Watts 3/16" Tip Ship Wt., 1/2 lb.
--	--	--	---

*Can also be furnished in higher wattages.

The same iron as Super-Pencil except in hatchet type—the same tiny tips out-perform larger tips and irons with higher wattages. Weighs only 3 oz. See Bulletin 25H for Further Details

PIN-POINT SOLDERING IRONS

FOR PIN-POINT ACCURACY ON PRECISION SOLDERING

(These two items also listed on page 2)

Ship Wt., 1/2 lb. Length 8"		25* Watts	1/8" Tip	Price \$5.00
Ship Wt., 1/2 lb. Length 8"		30 Watts	3/16" Tip	Price \$5.00

*Can also be furnished in higher wattages.

The same iron as Super-Pencil except with conventional handle and longer case for soldering in tight places. The same tiny tips out-perform irons with larger tips and higher wattages. Weighs only 3 oz.

See Bulletin P-25 for Further Details

FEATHERWEIGHT HATCHET IRON

So light its weight is hardly noticeable (5 1/2 ozs. less cord), but more powerful than the wattage rating indicates. Hatchet makes iron effortless to use. No transformer or other cumbersome and expensive equipment required. At 60 Watts has successfully replaced irons up to 100 Watts in many instances.

	No. 30H.....Price \$5.75
Pat. Pending	40, 50, or 60 Watts (Specify watts). Both 1/8" and 1/4" dia. tips furnished with each iron. Ship Weight: 1/2 lb.

See Bulletin No. 30H for Further Details

FOR FASTER SOLDERING... LONGER IRON LIFE

MAINTAINS DESIRED IRON TEMPERATURE BETWEEN JOBS • PREVENTS OVERHEATING
SAVES ELECTRIC CURRENT • ADJUSTABLE TO ANY SIZE IRON
SAVES TIME • NO LONG WARM-UP PERIOD

A practical, time and money saving device which accurately regulates and maintains soldering iron temperature between jobs. Lengthens iron life by reducing tip oxidation and amalgamation of tip with solder which increases with over-heating.

When placed on stand, iron rests in a copper cradle which conducts heat of iron and actuates a bimetal to open or close a switch. Temperature is easily regulated by an adjusting slide at bottom of stand. As iron is removed from stand, full current is instantly supplied. Stem rest adjustable to accommodate various lengths of irons. Stand is a heavy gray iron casting—stays firmly fixed without being fastened.

● SOLDERING POTS

Ruggedly constructed, cast iron pots for production work. Elements are easily replaced even while pots are hot.

● SPOT SOLDERING MACHINE

Model "F" is a treadle operated machine which feeds solder forward as the iron moves away from the work. Suitable for spot soldering where a mechanical connection has first been made. Net price\$16.50

Model "N" is a treadle operated machine for the advancement of the iron, but without a solder feed attachment. Net price.....\$8.25

● GLUE POTS

The catalogue No. 700 Glue Pot is of two quart capacity. It is the water jacket type and has a gasket sealed element and thermostat completely protected from moisture. Thermostat is normally set at 150 degrees for use with glue, but can be set at various temperatures for use with wax, etc. Net price\$20.35

- **HIGH-SPEED SOLDERING.** You can solder as fast and continuously as the nature of the work will allow.
- **UNIFORM PERFORMANCE.** Operating characteristics remain constant day after day. No appreciable decrease in efficiency even after months of service.
- **EASY, LOW-COST REPAIR.** Assembling and disassembling are easy.
- **LONG LIFE AND LOW MAINTENANCE.** Life is lengthened, and over-all costs are kept low because sturdy construction obviates need of frequent repairs.
- **THEY NEED NOT BE RETURNED TO THE FACTORY FOR REPAIR.** Irons can be repaired on the job without special tools or skill.

MIDGET SOLDERING IRONS

APPLICATION

This 8-inch, 1 $\frac{3}{4}$ -ounce featherweight iron for close-quarter soldering with pin-point precision is used where conventional irons might cause damage . . . be clumsy to handle . . . be more expensive to operate. The Midget literally goes places with greater efficiency and less power . . . with no sacrifice in heat or speed. With its fingertip operation, this iron will help make an expert out of any solderer in a short time.

The Midget has Ironclad copper tips either $\frac{1}{4}$ -, $\frac{3}{16}$ - or $\frac{1}{8}$ -inch diameter, as desired.

THIS MIDGET DOES A BIG JOB IN

- Boosting Production Rates
- Increasing Operator Efficiency
- Cutting Down Employee Fatigue
- Saving on Repair and Maintenance
- Reducing Rejects
- Manufacturing and Repairing:
 - Radios and other electronic equipment
 - Meters
 - Instruments
 - Jewelry
 - Appliances

. . . and many other products requiring precision soldering

SPECIAL TRANSFORMERS (OPTIONAL) FOR G-E MIDGET SOLDERING IRONS

Single-tap, Cat. No. 6A362

Four-tap, Cat. No. 6A364

Specially designed 115-volt transformers are available as optional equipment in two types:

1. Single-tap 115/6 volts—for use where only one soldering heat is required
2. Four-tap 115/6.3/6/5.7/5.4 volts — gives wide range of heats (from 25 to 35 watts) for close temperature control of tips

Transformers are small, lightweight, but sturdy. Their 6-foot extension cords can be plugged in any 115-volt a-c circuit.

THE MIDGET OFFERS MAJOR ADVANTAGES

Low-cost soldering—Solders more efficiently, using only approximately one-fourth wattage normally used.

Fingertip operation—Only 8 inches long, weighs but 1 $\frac{3}{4}$ ounces. Styled for 'fingertip grip.

Quick, continuous heat—Famous G-E Calrod heater built into Ironclad copper tip for rapid heat transfer.

Easy renewal—Ironclad tip and heater assembly can be replaced as a unit merely by unscrewing from handle.

Long life, low maintenance—Low voltage permits use of heavy, long-lasting nickel-chromium resistance wire. Less maintenance is required with long-lasting Ironclad copper tip.

CHECK THESE ADVANTAGES

KWIKHEAT JR. has been designed to meet the demand by the electronics industry for a lighter and smaller **PRODUCTION** tool. The element is readily replaced in the field by use of screwdriver, pliers, and small punch or nail.

CORROSION RESISTANT
Core assembly and outer shell are made of **STAINLESS STEEL**.

HOT IN 80 SECONDS

The watt density of the heating element is very high and completely controlled by the thermostat.

TEMPERATURE

While the thermostat is preset at the factory, two standard temperatures are available—Standby Irons, used for intermittent bench work, servicing, and engineering, set at 700°F; **PRODUCTION** Irons, used for constant high speed soldering, set at 800°F.

TIPS

Tips, plunger type ¾" x ¼" diameter x 4" long, plated to reduce corrosion. It is advisable to keep tips inserted completely in the cavity of the element for complete temperature control.

#20 ANTIFREEZE COMPOUND

A lubricant for all soldering iron tips. Prevent sticking, increases conductivity between tip and core.

Please contact your jobber for trade discounts.

TEMPERATURE

The Kwikheat Element can be set at the factory to any desired tip temperature between 275° and 875° F. Additional charges for this service:

1 to 49 \$1.00 ea.
50 to 9950 ea.
100 or more standard price

CORROSION RESISTANT

Tips and core are forged of tellurium copper alloy and plated for resistance to corrosion.

HOT IN 90 SECONDS

Kwikheat Thermostatically controlled soldering irons are the only irons containing built-in thermostats, allowing a much greater watt density with less radiation of heat.

TEMPERATURES ARE PRE-SET

The use of recently developed alloys have permitted the increase of thermostat temperatures with reduced creep.

Ungar DOES A BETTER JOB

the world's most versatile line of **ELECTRIC SOLDERING TOOLS**

On the job, doing a better job, you'll find this famed family of versatile soldering tools everywhere... on production lines and in home workshops... in service organizations and testing labs.

The Ungar Electric Pencil Handle with its series of interchangeable Soldering Tips has been deliberately designed to reach into those hard-to-get-at soldering points, speed soldering production and to replace the big, bulky soldering irons that promote fatigue and add costly man hours to overhead. No wonder the industry calls them "Ungar's Little Angels".

NO. 776 UNGAR PENCIL HANDLE

for use with all Ungar thread-in tips

Feather-light, less than 5-inches long. Extra length brass shell firmly engages all threads, keeps heating unit tight; spring action rivet assures positive contact; extra flexible cord protected with molded rubber sleeve prevents wear; cooler handle of durable molded plastic, perfectly balanced; form-fit cork grip keeps handle tilted at 10 degree angle, eliminates need for extra handle-rest, keeps hot tip point up, away from bench surface; ceramic insulation for double safety. Underwriters' listed (110-120V., 37½ Watts).

TECHNICAL ADVANTAGES

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

**ONLY SOLDER MADE WITH
NON-CORROSIVE, EXTRA-ACTIVE
ERSIN FLUX!**

MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

"GENALEX"
Finest Audio Tubes
Ever Made

"GENALEX"
2729 TUBE
A low hum, low microphonic, voltage amplifying Audio Pentode, expressly designed for use in high quality, high gain audio preamplifier and equalizer stages. Fits standard 9 pin miniature socket.

The KT66 is a versatile power tetrode with a number of useful applications. It may be used in the output stage of an audio-frequency power amplifier, either tetrode-connected for maximum sensitivity and power output or triode-connected for high quality working. In transmitting circuits using frequencies up to 30 Mc/s it may also be used as an oscillator or as a radio frequency amplifier.

A high slope, indirectly heated beam tetrode, the KT66 is suitable for either single or push-pull audio operation and may be employed as a beam tetrode with aligned grids.

"EXPAMET"
Expanded Aluminum

An extremely versatile material with uses for industrial, decorative and general applications. Wide array of colors, from silver and gold through the spectrum to red and black. Will not peel, chip, tarnish, or rust.

May be formed to Loudspeaker Grilles for radio and television sets, Machinery Guards, Window Display Backgrounds and Figures, Chair Seats and Hampers, Truck Bodies, Fire Screens, Lockers, Air Filters, Walkways, Flying Trays, and many other items, as well as Air Conditioner Grilles, Ventilator Grilles, Shelves, Trays, Storage Bins, and Home Accessories

"Expamet" may be cut, formed and shaped easily without use of special tools. American aluminum specification 2S. It has also been manufactured from sheets conforming to 3S and 52S. Twelve standard sizes of mesh from 1/8" to 6" shortway of mesh.

24 Popular Styles from Which to Choose

Short Needle Nose Plier with Cutter

This plier is intended for general use where a short nose is desired for getting into difficult places

Long Needle Nose Plier with Cutter

An exceptional handy and useful plier, well proportioned with long thin nose, designed for reaching into tight places

Curved Needle Nose Plier

A long, bent, thin nose plier. The angle is arranged to give full clearance and prevent skinning of knuckles.

Long Nose Plier

Newly designed long nose plier suitable for working in confined places.

Long Reach Needle Nose Plier

Has long, thin, sure-grip jaws to reach into places where fingers and ordinary pliers will not go.

Diagonal Cutting Plier

No. 8201 4 1/2" No. 8203 6"
No. 8202 5" No. 8204 7 1/2"
Specially designed for electricians, radio and TV service men and automotive mechanics. Powerful jaws cut close and quickly.

Heavy Duty Diagonal Cutting Plier

One of the most powerful diagonal pliers made. Long handles give a 20 to 1 ratio of leverage to cut with minimum effort.

Heavy Duty Linemen's Side Cutting Plier

No. 8302 7 1/2" No. 8303 8 3/4"
One of the most popular pliers in use today. Has extra powerful leverage and reinforced cutting knives.

Heavy Duty Slip Joint Plier

A top quality slip joint combination plier. Has all the quality features of higher priced cutting pliers at modest cost.

Heavy Duty Slip Joint Plier with Cutter

This plier incorporates the best features of a regular side cutter with the versatility of a slip joint combination plier.

Long Flat Nose Plier with Cutter

Extra long, wide, flat nose makes this an especially useful tool. Plier is tempered so jaw will not spring under pressure.

Long Flat Nose Plier

Same as No. 8501 except supplied without cutter.

Long Reach Flat Nose Plier

Fitted with duckbill type jaws wider and heavier than those of the ordinary flat nose for firmer gripping service.

VACGRUV Adjustable Ignition Plier Wrench, Chrome Plated

Especially designed 3-position jaws accommodate small to medium large nuts, bolts, etc. Fine for delicate radio and TV work.

VACGRUV Adjustable Plier Wrench, Chrome Plated

Built to provide an especially secure grip on medium to large bolts, nuts, pipes, etc. 3-position jaws open to 3/8", 1/4", respectively.

VACGRUV Adjustable Plier Wrench, Chrome Plated

A general purpose, heavy duty tool with 5-position jaws that open to 1 1/8". Doubles as pipe wrench, gripping plier and hand vise.

LYNN *Lightning* Solderless Terminals by VACO

Wide Assortment of Solderless Terminals for General Use, Radio and TV

No. 2195 Service Kit

A GENERAL PURPOSE ELECTRICAL, RADIO AND TV KIT containing everything needed for making clean, fast, trouble-free electrical connections. No soldering! No fuss or muss! Kit includes . . . No. 1900 Crimping Tool and Terminals Nos. 2300, 2301, 2302, 2400, 2401, 2402, 2600, 2601, 2602, and 3300 . . . all in a clear plastic box with tight-fitting lid. Individual bins marked with terminal stock number cards.

No. 1900 Crimping Tool

No solder . . . no iron . . . no heating . . . a perfect connection every time with this tool and Lynn Lightning Solderless Terminals by Vaco! Crimping tool has wire cutters, indenting die, wire-stripping die, shock-proof, slip-proof plastic handle sleeves. For No. 22 to No. 10 gauge wire.

Only 3 SIMPLE STEPS and Terminal Is On

1. Cut Wire. Use the wire cutter built into the crimping tool to cut wire proper length.

2. Strip Wire. Insert end of wire into proper wire stripping opening, close jaws, rotate tool one-half turn, then pull insulation off wire.

3. Crimp Terminal. Insert stripped portion of wire into terminal barrel, place barrel in proper crimping nest with seam directly opposite crimping tooth and close tool like pliers.

Extra long barrel on terminal provides easy crimp and perfect contact. Only ONE crimp necessary. Barrel always remains round.

THE *Moody Kit* CIRCUIT

*A five stage set designed to **DETECT** troubles to **MODULATE** the temper of the technician and considerably **AMPLIFY** his efficiency.*

THE PA-5 MOODY KIT SET Contains No. 0 and No. 1 Phillips drivers, No. 4, No. 6 and No. 8 Allen type wrenches. These fit interchangeably into swivel top, chuck type handle with torque hole to set fastenings up tight. List \$2.50 each.

THE BW-5 MOODY KIT Contains five tiny socket wrenches sizes $\frac{3}{16}$ " hex., $\frac{1}{8}$ " hex., $\frac{3}{32}$ " hex., $\frac{1}{16}$ " hex., $\frac{1}{32}$ " hex. The handle of set is magnetized so it will hold tiny nuts, thus nuts may be easily removed from or inserted into recessed hard-to-get-at places. List \$3.95 each.

THE SC-5 MOODY KIT Tiny screw driver set; blade sizes .040", .055", .070", .080", .100", all properly heat treated; perfect for getting at those recessed small screws in electrical work. List \$1.79 each.

THE SH-2 SCREW HOLDING MOODY KIT — screw driver contains two lengths of No. 100 blades. Each blade can take the spring steel clip that holds tiny screws better than fingers. Can be used on all delicate instruments that might otherwise be affected by magnetic screw drivers. List \$1.25 each.

THE MS-2 MOODY DOUBLE-END SCRIBER

The **RIGHT** tool for marking metal for close tolerance cutting or drilling. It's a must in every electrical technician's set of tools. List 40c each.

Get to know this line of tiny tools. Stock them — they hold a terrific profit potential for you. Ask your jobber to get a Moody catalog for you.

KNOCKOUT PUNCHES AND CUTTERS

Greenlee Tool Co., Rockford, Illinois

NO. 735 KNOCKOUT PUNCH SET

Designed primarily for the electrical trade to permit fast, easy enlarging of knockouts and cutting of holes for conduit in metal boxes and cabinets. Also excellent for automobile work where holes are needed for heater pipes and other accessories. Simply insert the tool in a knockout or small drilled hole and give the screw a few turns with an ordinary wrench. No. 735 set has four punches for cutting $\frac{7}{8}$, $1\frac{1}{8}$, $1\frac{1}{4}$, $1\frac{1}{2}$ -inch holes for $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$ -inch conduit. Set is neatly packed in leather case illustrated. The $\frac{1}{2}$ -inch punch will cut a $\frac{7}{8}$ -inch hole for $\frac{1}{2}$ -inch conduit where no standard knockout is provided when a $\frac{7}{8}$ -inch hole is drilled.

Heavy Duty Drive for $\frac{1}{2}$ " Punch

To increase length of service of the $\frac{1}{2}$ -inch Knockout Punch in cutting $\frac{3}{8}$ -inch holes in heavier-gauge sheet metals, the No. KR5 Drive Screw with No. KR4 Drive Nut illustrated is recommended.

NO. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of only two punches for cutting holes to accommodate $1\frac{1}{2}$ " and 2" conduit. Packed in leather case.

NOS. 738 AND 739 KNOCKOUT PUNCHES

For cutting holes to accommodate $2\frac{1}{2}$ " and 3" conduit. Design is similar to that of smaller GREENLEE Knockout Punches: insert in a knockout or drilled hole and turn drive nut with an ordinary wrench. Packed and sold individually.

NOS. 741 AND 742 KNOCKOUT PUNCHES

For quickly making smooth openings for $3\frac{1}{2}$ " and 4" conduit. Hole is clean, no filing of burrs necessary. Operation is similar to that of other GREENLEE Knockout Punches. Simply insert in hole for 1" conduit and turn drive nut with an ordinary wrench.

No. 740 Knockout Cutter

Companion tool to GREENLEE Knockout Punches. Enlarges knockouts to take $1\frac{1}{2}$, 2, $2\frac{1}{2}$ and 3-inch conduit. Operation is simple since an ordinary wrench drives the tool. Cutting is done by the drive action of two wheel cutters. Special discs

can be furnished for cutting odd sizes of holes from $1\frac{1}{8}$ to $3\frac{1}{2}$ -inch diameter. Packed in leather case.

NO. 7646 HYDRAULIC KNOCKOUT PUNCH DRIVER

A powerful portable hydraulic unit for driving all GREENLEE Knockout Punches. Also drives GREENLEE Radio Chassis Punches using $\frac{3}{8}$ " or larger drive screws. Quickly, easily cuts holes in 10-gauge metal. Excellent for use in tight places. Packed in metal case. List price complete, \$96.00. Weight, 20 lbs.

Each drawer is furnished with 8 dividers, providing for 24 adjustable compartments. Adding extra dividers makes possible a total of 56 compartments per unit. There's nothing like it on the market. Check the list of features below:

Most efficient drawer ever conceived for tiny parts storage

Use individually, stack, or insert in shelving.

8 adjustable, flush fitting dividers furnished with each drawer. 16 additional dividers may be used providing 28 adjustable compartments per drawer.

Tab anchors units securely in place, whether assembled in stacks or inserted in shelving.

Drawer stop prevents accidentally pulling drawer out of unit.

No seams, slots, or holes to catch or damage parts.

Curved front of compartment speeds removal of parts.

Label holders on every compartment permit quick identification of parts.

3/4" overhang at rear of each compartment prevents mix-up of parts when drawer is jerked open or slammed shut.

Wherever the need arises for extra outlets for power and light, there is a *Pierceway Packaged Wire System* to fill that need. Designed for quick, easy installation, and safe, dependable performance, *Pierceway* systems are available in either the handsome and durable rigid duct type, or the simple-to-install *Pierceway, Jr.* system.

FLEXIBLE PLASTIC WIRING SYSTEMS

All you need is a hammer to install this electric outlet system at a new low cost per outlet. Each system comes complete in its own package, and includes plastic-topped upholsterer's tacks. Can be quickly removed and re-used in another location.

Pierceway, Jr. comes in two sizes:

6-ft. with 3 duplex outlets and 1 cord cap; 12-ft. system has 3 lamp-holders, 1 duplex outlet and 1 cord cap.

Pierceway Jr.

Pierceway

PLASTIC DUCT WIRING SYSTEMS

Packaged in three lengths: 4-foot system with 6 outlets; 6-foot, 8-inch system with 10 outlets; 9-foot, 4-inch system with 14 outlets. With relatively few parts, this *Pierceway* rigid duct system, can easily be taken apart and quickly reassembled to meet any change in requirements. *Pierceway Packaged Wire Systems* are made in both 2-wire and 3-wire systems, with a choice of end-feed or back-feed connection. Complete and ready to install, with copper conductors built in as an integral part of each section.

INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt, if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt. If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread. It will be our "circumference around pulleys." In measuring belts always remember that the circumference around pulleys is not the same as stretched out or cut length. A belt when cut, develops approximately 1/8" extra length when stretched out, depending on thickness of belt.

WALSCO

walSCO quality earned its reputation

1. WALSCO "LUBRIPLATE"

Grease-type, protective, super-lubricant. Increases mechanical efficiency by reducing friction loss. Increases service life by reducing wear and preventing rust and corrosion. Spreads itself over entire bearing surface to form a coherent film that stays put. Has just the right weight and viscosity for electronic work. Comes in large tube with handy applicator tip.

Cat. No. 23-A—2 oz. tube List Price \$0.65

2. WALSCOLUB-B

Electrically neutral lubricant that prevents corrosion. Walscolub-B clings to metal surfaces and effectively seals them against oxidation and corrosion. Packaged in generous size, easy-to-use applicator tube.

Cat. No. 22—1 3/4 oz. tube List Price \$0.65
Available also in 1 lb., 5 lb., and 25 lb. containers for industrial users. Prices on request.

3. WALSCO "TUNERLUB"

Assures quiet operation of television tuners. Purity—freedom from zinc and other harmful metal oxides—is the secret of the outstanding performance of Walsco "Tunerlub." Forms a strong film to give lasting protection to high frequency switch contacts.

Cat. No. 26—1 7/8 oz. tube List Price \$0.75

CONTROLLED TORQUE KNOBS
 with the built-in SAFETY FACTOR

Model K1375

Model K1376

JAN CONTROLLED TORQUE KNOBS are designed to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops. Designed for multi-turn devices such as variable capacitors, inductors, potentiometers, etc., the knobs work on the principle of the slip clutch, automatically disengaging and slipping when a predetermined torque is exceeded. The knobs which are fluted to aid in sensitive adjustment also have spinners for fast turning. Featuring distinctive styling, the knobs measure 1 7/8" O.D. & 15/16" thick. They fit standard 1/4" diameter shafts.

Model K1376 is the same as the model K1375 with the additional feature of a retractable spinner. The retractable feature is useful when equipment must fit into small storage spaces or where there is danger of inadvertent movement of protruding controls. It has a positive toggle type action, being spring loaded either open or closed.

"JOLTA" SHOCK TESTER

Model No. 1001

This new shock tester for meters and small mechanisms provides for rapid and precise testing of the ability of components to withstand shock stresses. Designed for laboratory testing of instruments such as relays, electric meters, clocks and other electrical and electronic devices, it is accurately calibrated for direct readings in accord with specifications now required in most military and commercial contracts. Known as "JOLTA," the tester is a sturdily built bench model machine capable of accommodating all shapes and sizes of specimens up to a weight of 4 pounds and measuring up to 5" x 5" x 5". Mechanisms may be tested while in actual operation and under electrical load. Computation charts are supplied.

Designed to comply with specifications JAN-S-44 and MIL-STD-202; Method 202.

INSULATED UNIVERSAL COUPLINGS $\pm 30^{\circ}$

ELIMINATES BACKLASH AND COSTLY FLEXIBLE SHAFTS!

This versatile and extremely durable nylon coupling makes it possible to join two parallel drive shafts offset from each other plus or minus 30 degrees in any direction and separations greater than 3 inches.

- Secures firmly to the drive shaft thru a nickel plated brass insert and 2 set screws.
- Used with 1/4" coupling shaft of any length (not furnished).
- Shaft is keyed to the coupler by zinc plated steel pins supplied by JAN.
- Eliminates backlash and replaces costly flexible shafts.
- Provides for insulation and coupling from front panel to remote control such as potentiometer, selector switch and other devices (rotating).

Cat. No. AP15299

BEZEL ASSEMBLIES

JAN BEZEL ASSEMBLIES consist of cast aluminum alloy bezels finished in smooth dull or wrinkle black enamel paint, Buna-S rubber shock mounts, scale calibrated light filters and mounting hardware. JAN EDGE-LIT BEZELS have engraved calibration scales on the window and accommodate pilot bulbs for edge lighting. All JAN BEZELS are designed for universal application and are specifically adaptable to JAN'S MAGNETIC SHIELDS.

MAGNETIC SHIELDS FOR CATHODE RAY TUBES

JAN MAGNETIC SHIELDS are made of the highest grade of magnetic metals and are carefully annealed by a special process to assure optimum orientation of the specific grain structure of the alloy. JAN SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields and protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for #6-32 screw.

All cathode ray tubes with curved faces are underlined. Bezels with designations (—1) are used with these tubes only. All others not underlined are flat faced tubes which are used with bezels designated as (—2). See inside page for specifications on JAN BEZEL ASSEMBLIES.

LUCITE FEEDER SPREADERS

Designed for all average feeder requirements. A 600 ohm line can be made with any size wire from No. 12 to No. 18 by using one of the spreaders listed below. The spreader used for this application depends on the wire size. Further data on this subject is available in any antenna handbook. These spreaders are furnished

with locking screws to clamp the wire in place. All spreaders are $\frac{3}{8}$ " in diameter.

“VISE-GRIP” TEST PRODS

No longer is it necessary to use a soldering iron or screw-driver to replace a broken or worn lead on a test prod or plug. To install a wire in this unique, patented prod, merely insert end of wire in hole, screw down handle to finger tightness and a positive contact is assured. By far the fastest, most efficient way of doing this job.

AS EASY AS A-B-C

cup shape opening holds wire firmly. no solder necessary—change as often as you need.

SMALL JACKS

These panel mounting jacks are desirable for control panels and similar applications where space is at a premium. Parts are accurately machined, with cadmium plated finish and contacts are formed from spring brass. Each jack comes complete with insulating washers and will accommodate standard plugs. Overall length 1 1/4".

DUTCH BRAND PRODUCTS for Radio and TV use

① VINYL COLOR TAPE

Our newest. Vinyl plastic tapes in eight colors and three widths . . . 1/2", 3/4", 1 1/2" . . . 108" long. For use wherever color can help in wiring, indexing, coding, etc. Conforms to irregular surfaces. High dielectric resistance . . . up to 1000 V. per mil of thickness. UL listed. Packed in colorful self-service carton.

Also available in large size rolls in four widths, 3/4", 1/2", 3/4", 1" . . . 36 yds. long. Ideal for the industrial user.

② PLASTIC ELECTRICAL TAPE

Plastic Electrical Tape Master Shop Package. This tape is thin and is used in places where space is limited. It has 150% stretch, high dielectric resistance, resists weather, water, oils, acids and corrosive chemicals. It conforms readily to irregular surfaces. Package contains 5 rolls 3/4 inch by 44 feet each.

③ .010 PLASTIC has the general characteristics of regular Plastic except it is heavier for heavy duty work such as winding heavy cables, heavy electrical harness and for use in tape winding machines.

④ Plastic Electrical Tape Counter Display Carton. DUTCH BRAND Plastic is also available in an attractive point-of-sale display carton containing two dozen consumer size rolls 1/2 inch by 150 inches. A convenient size for small repair jobs.

⑤ Plastic Tape "Tool Kit" Rolls. Convenient size roll for the home workshop or repair trade. DUTCH BRAND Plastic Tape has many uses around the home and is widely used for professional work. Rolls are 3/4 inch by 20 feet long. Packaged both in Counter Display Carton of 18 rolls and Junior Shop Package of 5 rolls.

⑥ FRICTION TAPE

DUTCH BRAND Friction Tape—This tape has long life, extra strength for easy use. One layer resists up to 2000 volts. Combined

with DUTCH BRAND Rubber Insulating Tape it produces highest dielectric resistance. Individually boxed and packed in attractive display carton. Each No. 8 roll contains 68 ft. of tape.

⑦ Narrow Width Friction Tape. The handy size for radio and electrical appliance repair shops, electrical contractors, industrial users. The tape comes in a convenient 3/8 inch width roll, handy for small work.

Special Width Friction Tape—Available in special widths for special uses . . . comes in widths 1/2, 1, 1 1/4, 1 1/2, 2, 3, 4 inches and wider.

⑧ RUBBER TAPE

For perfect insulation it fuses instantly without heat. Has extra high dielectric strength—resists up to 18000 volts through a single thickness. Strong, durable and non-corrosive to electrical conductors. Assures positive insulation for high tension lines where highest dielectric resistance is needed.

⑨ "DB" WIRE CONNECTORS

Solderless. Vibration Proof. Weather Proof. Long Skirt. "DB" Wire Connectors are now available for the convenience of the many customers who buy and use the well known DUTCH BRAND Electrical Tapes. Those who use wire connectors for many installations will find that "DB's" are a quality product.

Available in four standard sizes to meet all needs. They resist pull-out and vibration . . . are weatherproof and are molded with the necessary length to give full insulation protection. U.L. listed.

⑩ CAULKING & SEALING COMPOUND

Here is a light colored, non-staining plastic material that will not crack or dry out. It comes in 3/8" cords, easy to press in place by hand. It is used to caulk antenna lead-ins . . . stops leaks and keeps out dust and cold drafts. It adheres to any dry surface.

WIDE SELECTION OF SHAPES AND SIZES

Shown above, are but a few of the many Rogan plastic knobs available to you from our regular stock molds. These are supplied without tool charge, resulting in considerable savings in cost, faster delivery. Choice of a wide selection of sizes, shapes and colors. Molded of phenolic or urea thermosetting materials, which will not soften, warp, or scratch easily. Heat resisting materials can be used so knobs can withstand 350-400° F. continuous heat. Most knobs supplied with 1/4" shaft hole and set screws. Special shaft hole sizes and means of fastening can be supplied to specifications at nominal cost.

KNOBS CAN BE BRANDED, AS REQUIRED

Rogan's famous "deep relief" branding process, applied after molding, provides sharp perfect marking at low cost. Any type marking, graduations or numerals can be branded on blank knobs to fit your requirements. Rogan knobs are available in black, brown or walnut, when molded of phenolic materials; and in all light pastel colors when molded of urea materials. Whatever your knob requirements may be, Rogan is equipped to supply you faster, better, more economically. The complete line of Rogan knobs with specifications is shown in the new Rogan catalog. PRECISION TUNING WAND

High-grade phenolic handle ($4\frac{3}{4}$ " L. x $\frac{1}{4}$ " D.) has precision molded powdered iron core in one end (permeability tolerance $\pm 2\%$; "Q" tolerance $\pm 10\%$); silver-plated brass core in other end — both securely threaded and cemented into shaft. Increases or decreases inductance. Designed specifically for ARC-27, the high-grade properties of this wand make it an excellent tool for general servicing.

No. 6249 Dealer Cost \$.90

RF AND SIGNAL TRACER PROBE

Germanium Crystal Circuit. Assures accurate analysis of circuit defects. May be used with audio amplifier for audible tracing or with V.T.V.M. for RF and AF measurements. Low input capacitance. The ideal probe for the audio section of television circuits. The sturdy bakelite barrel has sealed tenite ends with solderless phone tip and includes 48" RG59/U coaxial cable with phone plug and 18" rubber covered ground lead with alligator clip.

No. 4310 Dealer Cost \$3.75

"KILOVOLTER" MULTIPLIER PROBE

Equipped with 15 K.V. range multiplier that provides full range PLUS existing meter voltage. For example, use of the ICA probe will increase the range of a 5,000 volt range voltmeter to 20,000 volts full scale.

The three (3) built-in 1% resistors (totaling 6 watts dissipation) are coaxially mounted, providing air-spacing to further assure heat dissipation and a completely insulated probe.

Highest grade components include sturdy thermo-plastic barrel with safety finger guard and sealed ends. Overall length: $8\frac{1}{2}$ ". Supplied with 5-ft. heavy duty lead with insulated phone tip.

No.	Dealer Cost

NOTE: Probe of special resistance values up to 2000 megohms are available on order to quantity users.

NEW 30-KV PROBE

Similar to the Insuline "Kilovolt" No. 6167 above, for 20,000 ohm per volt, 50 micro amp. meters only. A precision instrument . . . 600 megohms 2% high voltage multiplier

No. 6220 Dealer Cost \$6.50

THE INSULINE "100 X" MULTIPLIER PROBE

A new 30KV to 50KV Multiplier Probe (Internal resistance 1090 megohms). For ALL 10 to 11 megohm input instruments.

This VTVM probe will multiply existing meter ranges by a factor of 100; thus, if the top range of the instrument is 300 volts, meter will read 30,000 volts with probe. If top range is 500 volts, meter with probe will read 50,000 volts.

A few of the most popular VTVM's with which this probe may be used follows:

BAKELITE AND FENOLINE TUBING

ICA tubing is strong mechanically, has extremely low electrical absorption and is highly resistant to moisture. Absolute perfection in winding of coils is assured by the use of ICA tubing—thus affording relief from complaints or failure in performance.

Finished in Natural and Black Colors
Small sizes up to one inch in Black only.
3/8" Wall Thickness, Full Lengths.
Approximately 30 to 48"

IMPROVED ICA DELUXE SIGNA-TONE

AUDIO OSCILLATOR — CODE PRACTICE SET — KEYING MONITOR

The ICA Signature is a perfected Audio Oscillator, having 3 different output frequencies and a continuously variable volume control. The Audio notes are similar to those of high quality commercial CW stations.

1. **CODE PRACTICE SET**—A number of phones and keys may be connected for intercommunication or for classroom or radio club instruction in code.

2. **KEYING MONITOR**—An invaluable aid in improving any ham's "fat." Will follow the "bug" at all speeds. No well-equipped station should be without this keying monitor. (A double pole keying relay is required for this function—one set of contacts for keying transmitter; other set for monitor.)

3. **MODULATION SIGNAL**—The steady note of the Signature is ideal for adjusting both the Modulator and modulated stages of your transmitter for 100% modulation.

4. **SIGNAL TRACER**—By feeding the output of the Signatone into each stage of your modulator and listening to the output of that stage, defects and "bugs" can easily be located. Complete with 50B5 and 35W4 tubes and self-contained speaker for 110 V AC-DC.
