The Elmenco Fused Plug is like any standard plug, is light in weight, but easier to handle because of finger grips. However, it contains 2 small fuses which provides complete protection against damage to the appliance and to the main line. The blown fuse is easy to remove and simple to replace. Fits any standard wall outlet.

BUSS FUSE CLIPS for 1/4 inch Fuses

(SFE 4, 6, 9, 14, 20, AGX, AGC, ABC, MDL, MDX, MJB, MJW, MTH fuses)

Spring bronze clips are made of Herculey — a bronze of distinctly superior quality for spring clips. This metal gives clips great gripping strength and ability to retain spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means maximum electrical conductivity and results in cooler operation of clips and fuse.

Size of mounting hole; .130 to .135 inch.
Center of hole to back-stop; .125 to .135 inch.

Other standard and special fuses, fuse blocks and fuse holders

If the fuses, blocks and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

BUSS FUSE HOLDERS

Make it convenient to mount fuse on any equipment. Changing or inspection of fuse is easy and quick. Holder has removable knob. Fuse projects beyond body of holder and is not held tight on other end when knob is removed.

Fuse and contacts are protected from dirt and fumes. Good contact on fuse is made certain by strong coil spring pressure. Poor contact heating that often causes fuse to blow needlessly is eliminated.

Holder bodies are made of black bakelite. All current carrying parts are of brass or copper. Terminals and all contact parts are bright alloy plated.

PANEL MOUNTED HOLDERS for 1/4 inch Fuses

Holders are inserted through hole in panel and are locked in place by nut on holder. They can be used on panels up to 3/16 inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen or come off.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut (zinc plated, chromate dipped) furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

HJM for 1/4 x 1 inch fuses (AGX, MJB, MJW, SFE 14) \$0.40
HKP for 1/4 x 1 1/4 inch fuses (ABC, AGC, SFE 20, MDL, MDX, MTH) .40

IN-THE-LINE HOLDERS for 1/4 inch fuses

These holders are for mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — a pressure spring that is used under contact in base of holder.

Holders can also be mounted in panel up to 3/16 inch thick by means of a No. 9969 Spring nut (Nut not furnished). Flat spot on holder permits it to be locked against rotation.

Normal current carrying capacity: 15 amperes.

HDI for 1/4 x 1 inch fuses (AGX, MJB, MJW, SFE 14) \$0.20

HDJ-A for 1/4 x 1 1/4 inch fuses (ABC, AGC, MDL, MDX, MTH, SFE 20) .20

HDJ-B for 1/4 x 1 1/4 inch fuses (as above) .20

No. 9969 Spring nut for panel mounting above holders. .04

Holder-and-Fuse Assemblies

Assembly consists of holder, fuse and 19 inch loop of No. 14 wire already staked and soldered to terminals.

Offer simplest way to install protection. Wire can be cut to give leads of desired length. A spring nut, furnished with holder, can be used to mount holder on panel up to 3/32 inch thick.

LONG TIME-LAG OR SLOW BLOWING TYPE

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

CONSTRUCTION: Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft services for their strength and greater carrying capacity than 3 AG fuses.

BAKELITE-ENCLOSED: 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

CURRENT RATING: Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

VOLTAGE RATING: Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

VIBRATION FACTOR: Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

SELENIUM RECTIFIERS

General Electric manufactures selenium rectifiers for every type of electronic and industrial application. The G-E selenium cells are produced by a unique "evaporation" process which produces exceptionally high electrical characteristics.

Long Life—Because of their low forward voltage drop and low backward leakage, G-E selenium stacks age more slowly. They offer the design engineer a quality, nonexpendable component which will last in service. The characteristics do not vary from stack to stack, affording better performance of the end equipment.

Stability and Reliability are two other important features of G-E selenium rectifiers. They have excellent initial characteristics and deteriorate very little with time and use.

Sizes and Ratings are available to meet practically any requirement. They have been used successfully from a few microamperes at 500,000 volts to over 100,000 amperes at 9 volts. Whenever direct current is required, their application should be considered. The three basic types of construction used in G-E selenium rectifiers are shown in the illustrations.

Applications—There are many electronic applications for selenium rectifiers. General Electric selenium rectifiers are ideal for voltage doubler circuits, voltage tripler circuits, clipping or slicing operations in electronic applications, or wherever rectification or d-c blocking is required. G-E miniature selenium rectifiers

MINIATURE SELENIUM RECTIFIERS are available in standard ratings of 50 ma and below at 26 volts to 5200 volts RMS. Stacks are available either in Textolite* tubes or metal-clad casings to meet government specifications for environmental protection. Either lead or bracket mountings can be furnished.

are used for blocking, electronic computer, magnetic amplifier, communication and signal circuits. Other applications include supplying power to operate d-c relays in control circuits, and as components in electronic equipment.

For Complete Information on G-E metallic rectifiers, consult your nearest General Electric Apparatus Sales Office, or write to Section 640-381, General Electric Company, Schenectady 5, New York.

STANDARD CONSTRUCTION of a typical G-E selenium stack consists of cells mounted on a metal stud, separated by spacers and spring contacts. Any rectifier circuit or combination of circuits can be assembled in a single stack. Various mounting and screw-terminals connections are available.

PHENOLIC TUBE CONSTRUCTION is used when a less expensive and lighter-weight rectifier stack is desired. Good strength can be attained up to 10 cells on a single assembly.

SCHAUER INSTRUMENT RECTIFIERS

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "AA," "A" and "B" Rectifiers are encapsulated—fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3" leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated rectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other than 3" can be supplied on special order.

"AA" SIZE CELLS are $\frac{1}{8}$ " dia. cells for low capacitance and high frequency response. Maximum rating is 2 volts D.C. at 1 MA in a full wave bridge.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1 MA or less for operation. Can be used for other applications requiring up to 5 MA.

"B" SIZE CELLS are for meter, relay and other applications requiring 1 MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS are for general applications requiring larger output currents and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem.

Standard rectifiers are connected internally according to one of the five circuit diagrams shown.

Series 500, 160 and 160-C are the well known standard line of instrument rectifiers and are constructed to the highest standards of quality. Construction is conventional.

TUA (tubular, axial leads) and TUR (tubular, radial leads) construction is desirable especially in rectifiers designed for high voltage operation. Total enclosure of the stack however limits heat radiation necessitating derating of cells.

ERM (external resilient member) construction insures maintenance of optimum stack pressures regardless of ambient or operating temperatures. Rectifiers in ERM construction are smaller, lighter and cheaper.

HIGH VOLTAGE SELENIUM RECTIFIERS

Sarkes Tarzian high voltage selenium rectifiers are designed for use in photo-flash supplies, cathode ray oscilloscopes, television receivers, high potential test equipment, and electronic equipments used by military forces.

Designated as Type 0 for current ranges to 5 milliamperes and as Type 1 for current ranges to 25 milliamperes, the units are available in half wave, full wave bridge, and center tap stacks. Both types are available with voltage ratings to 4000 in a single unit and hundreds of thousands of volts by using multiple units in series. In center tap and bridge circuits the maximum allowable D.C. current is 10 MA for Type 0 and 50 MA for Type 1 assemblies.

The Type 0, in a glass enclosure is hermetically sealed for high humidity operation (Half Wave units only) and mounting is by means of silver plated ferrules. The bakelite enclosed Type 0 rectifiers are designed for normal commercial use and electrical connection is made by means of axial pigtail leads. For inverse voltage ratings to 208 volts A.C. the unit is self supporting; longer assemblies require a mounting clip.

The Type 1 rectifier is available only in square bakelite enclosures. The unit, normally supplied, is not hermetically sealed; however, it is possible to "capsulize" the Type 1 rectifier for high humidity applications.

GERMANIUM DIODES

The Germanium Diodes produced by International Rectifier embody a completely new and superior design. Excellent shock and vibration resistant characteristics are obtained by the use of non-skid germanium crystal surface, double housing, precision formed whisker, and thermo-setting plastic end seals. Retention of whisker adjustment is maintained by welded anchor pins. Kits of 10 diodes are also available.

These subminiature selenium diodes have been developed for use in electronic equipment where space is at a premium and ambient temperature is high. They are designed for stable operation in ambient temperatures from minus 50° C to plus 100° C. Small and compact in size each unit is provided with pigtail leads to facilitate wiring into a crowded chassis. Potting within a thermostetting compound affords protection against corrosive atmosphere, moisture, fungus, and salt spray. Kits of 18 diodes are available.

Types: PRS 65, 75, 100, 150, 250, 300, 350, 400, 500
from 65-500 Ma.

Greatly improved due to the use of high quality plates of matched characteristics. This insures long life, dependability and maintenance free operation.

NEW RECTISEL

Miniature Selenium Rectifiers

The NEW RECTISEL Line of miniature electronic selenium rectifiers was expressly designed for urgently needed applications in the following fields: RADIO and TELEVISION as voltage suppliers; VOLTAGE REGULATORS; MULTIPLIERS; BIAS SUPPLY and FILAMENT SUPPLY; TELEGRAPH, TELEPHONE and TELETYPE MACHINES. For Power: DC VALVES; ARC SUPPRESSORS; FREQUENCY MULTIPLIERS; VENDING MACHINES; RELAYS; BUSINESS MACHINES; SIGNAL CIRCUITS; CHOKES (especially for phonographs), etc., etc.

No center mounting therefore no center pressure and no center hot spots, due to the unique construction plates cannot loosen and turn. Light in weight. Better voltage regulation because the initial forward resistance is much lower and RATINGS FROM 25 25-100 MA. LONG LIFE are fully guaranteed.

NEW PLASTISEL

Miniature Selenium Rectifiers

In all ratings through 200 Ma. NEW-PLASTISEL rectifiers are molded into plastic, which gives them the appearance of small molded condensers. These sealed in units have the following advantages.

They fit ideally into miniaturization programs and printed circuit applications because they can be mounted against chassis or in contact with other complements.

Shock hazard in small contact chassis is completely eliminated when NEW-PLASTISEL units are used.

No wiring need be run to rigid terminals as every NEW-PLASTISEL unit has pig tail leads.

Aids in heat dissipation.

COMPLETELY INSULATED AVOIDING ACCIDENTAL SHORTS. NOTHING TO MELT OR SOFTEN. NON-INFLAMMABLE.

TONE REMOTE CONTROL EQUIPMENT

Robert Dollar Co. can supply Remote Tone Control equipment which can be used to perform various control functions at a remote location. The basic control equipment consists of two units: (1)—a tone generator which supplies two sequential audio tones of predetermined frequency. (2)—a receiver with frequency selective circuits tuned to respond only to the frequency of the transmitted tones and suitable circuitry to enable these tone pulses to actuate control relays. Typically, one transmitted tone may latch in a "Start" relay, a second tone may release the same relay. Various stop-go or start-stop functions are thus possible. Radio or land wire circuits may be utilized in the transmission of these control tones from one location to another. This type of equipment is being used successfully for the remote control of pumps, transmitters or receivers and many other devices which may be controlled by relays.

Complete radio equipment for installation at control and remote locations is also available. This equipment is designed for operation on 27-255 mcs. in conformity with existing regulations covering Citizens Band radio for remote control purposes. Transmitters and receivers are quartz crystal controlled and can be supplied for operation from 115V AC or from storage battery power.

Full information on individual units, or on a complete remote control package, will be supplied upon request.

TUBE SOCKETS DESIGNED FOR APPLICATION

MODERN SOCKETS for MODERN TUBES! Long Flashover path to chassis permits use with transmitting tubes, 866 rectifiers, etc. Long leakage path between contacts. Contacts are type proven by hundreds of millions already in government, commercial and broadcast service, to be extremely dependable. Sockets may be mounted either with or without metal flange. Mounts in standard size chassis hole. All types have barrier between contacts and chassis. All but octal and crystal sockets also have barriers between individual contacts in addition.

The No. 33888 shield is for use with the 33008 octal socket. By its use, the electrostatic isolation of the grid and plate circuits of single-ended metal tubes can be increased to secure greater stability and gain.

The 33087 tube clamp is easy to use, easy to install, effective in function. Available in special sizes for all types of tubes. Single hole mounting. Spring steel, cadmium plated.

Cavity Socket Contact Discs, 33446 are for use with the "Lighthouse" ultra high frequency tube. This set consists of three different size unhardened beryllium copper multifinger contact discs. Heat treating instructions forwarded with each kit for hardening after spinning or forming to frequency requirements.

FLEXIBLE COUPLINGS

The No. 39000 series of Millen "Designed for Application" flexible coupling units include, in addition to improved versions of the conventional types, also such exclusive original designs as the No. 39001 Insulated universal joint and the No. 39006 "slide-action" coupling (in both steelite and bakelite insulation).

The No. 39006 "slide-action" coupling permits longitudinal shaft motion, eccentric shaft motion and out-of-line operation, as well as angular drive without backlash.

The No. 39005 is similar to the No. 39001, but is not insulated and is designed for applications where relatively high torque is required. The steelite insulated No. 39001 has a special anti-backlash pivot and socket grip feature. All of the above illustrated units are for 1/4" shaft and are standard production type units. The No. 39016 incorporates features which have long been desired in a flexible coupling. The Oscilloscopes and the Amplifier Sweep

The oscilloscopes in their packaged form are entirely adequate for many laboratory as well as industrial and communication uses. As a transmitter modulation monitor, no additional equipment or accessories are required. By the addition of such units as sweeps, pulse generators, amplifiers, servo sweeps, etc., all of which can be conveniently and neatly constructed on companion rack panels, the original basic scope unit can be expanded to serve any conceivable application.

Here again the research engineer is freed of the drudgery of time consuming mechanical construction and other such details of the basic scope before being able to proceed with his specialized work.

The oscilloscopes are designed for standard rack mounting and incorporate mumetal shielding and power supply as well as functional controls.

LABORATORY DELAY LINE STANDARDS

The Millen delay line kit effectively provides a means for the development and design engineer to check the affect of various delays in their actual developmental setups without the time loss and expense of producing separate lines for each trial. Increased requirement for time delay circuits in radar, color television and other modern electronic applications has presented a problem to the design and development engineer as it has been both time consuming and expensive to obtain delay lines for developmental work as each line was necessarily cut to the estimated delay and any change in requirements necessitated the fabrication of a new delay line. The Millen delay line kit is designed to provide a ready means of obtaining various delays from .10 microseconds through 2 microseconds in increments of .05 microseconds except at the extreme ends of this range. The lines may be used repeatedly without deterioration as they are hermetically sealed, the smaller lines in glass tubes, the 1 microsecond line in a metal container.

Each set consists of:

NOMINAL DELAY	TOL.	CALIBRATION TOLERANCE
2—0.10 μ s.	$\pm 0.01 \mu$ s.	$\pm 0.002 \mu$ s.
2—0.25 μ s.	$\pm 0.025 \mu$ s.	$\pm 0.002 \mu$ s.
1—0.30 μ s.	$\pm 0.03 \mu$ s.	$\pm 0.002 \mu$ s.
1—1.00 μ s.	$\pm 0.05 \mu$ s.	$\pm 0.01 \mu$ s.

Actual delay as measured by phase shift method are marked on each delay line. The laboratory calibration of each delay line is accurate to ± 0.002 microseconds on all of the .10 microsecond, .25 microsecond and .03 microsecond lines and ± 0.01 microsecond on the 1 microsecond line. Combination of delay lines supplied makes possible the following delays:

0.10 μ s.	0.55 μ s.	1.10 μ s.	1.55 μ s.
0.20	0.60	1.20	1.60
0.25	0.65	1.25	1.65
0.30	0.70	1.30	1.70
0.35	0.75	1.35	1.75
0.40	0.80	1.40	1.80
0.45	0.90	1.45	1.90
0.50	1.00	1.50	2.00

Characteristic impedance — 1350 ohms $\pm 20\%$.

PHYSICAL DIMENSIONS:

0.1 μ s.— $1\frac{1}{2}$ " dia. x $4\frac{1}{2}$ " long
 0.25 μ s.— $1\frac{1}{2}$ " dia. x $7\frac{1}{2}$ " long
 0.30 μ s.— $1\frac{1}{2}$ " dia. x $7\frac{1}{2}$ " long
 1.00 μ s.— $4\frac{1}{2}$ " x $4\frac{1}{2}$ " x 1"

All seven lines are mounted in a metal case $9\frac{1}{2}$ " x 5" x $1\frac{1}{4}$ " for convenience in storing and safety in handling.

Delay Lines and Networks

The James Millen Mfg. Co., Inc. has been producing continuous delay lines and lump constant delay networks since the origination of the demand for these components in pulse formation and other circuits requiring time delay. The most modern of these is the distributed constant delay line designed to comply with the most stringent electrical and mechanical requirements for military, commercial and laboratory equipment.

Millen distributed constant line is available as bulk line for laboratory use and in either flexible or metallic hermetically sealed units adjusted to exact time delay for use in production equipment. Lump constant delay networks may be preferred for some specialized applications and can be furnished in open or hermetically sealed construction. The above illustrates several typical lines of both types. Our engineers are available to assist you in your delay line problems.

Mu Metal Shields

The James Millen Mfg. Co. Inc. has for many years specialized in the production of magnetic metal cathode ray tube shields for the entire electronics industry, supplying magnetic metal shields to manufacturing companies, laboratories and research organizations. Stock shields are immediately available for all of the more popular sizes and types of cathode ray tubes as well as bezels for 2", 3" and 5" size tubes.

Many production problems, however, make desirable special shields designed in conjunction with the specialized requirement of the basic apparatus. Herewith, are illustrated a number of such custom built shields. Our custom design and fabrication department is at the service of our customers for the development and manufacture of magnetic metal shields of either nicoloi or mumetal for such specialized applications.

Grid Dip Meters

Millen Grid Dip Meters are available to meet all various laboratory and servicing requirements.

The 90662 Industrial Grid Dip Meter completely calibrated for laboratory use with a range from 225 kc. to 300 mc. incorporates features desired for both industrial and laboratory application, including three wire grounding type power cord and suitable carrying case.

The 90661 Industrial Grid Dip Meter is similar to the 90662 except for a reduced range of 1.7 to 300 mc. It likewise incorporates the three wire grounding type cord and metal carrying case.

The 90651 Standard Grid Dip Meter is a somewhat less expensive version of the grid dip meter. The calibration while adequate for general usage is not as complete as in the case of the industrial model. It is supplied without grounding lead and without carrying case. The range is 1.7 to 300 mc. Extra inductors available extends range to 220 kc.

The Millen Grid Dip Meter is a calibrated stable RF oscillator unit with a meter to read grid current. The frequency determining coil is plugged into the unit so that it may be used as a probe.

These instruments are complete with a built-in transformer type A.C. power supply and interterminal terminal board to provide connections for battery operation where it is desirable to use the unit on antenna measurements and other usages where A.C. power is

not available. Compactness has been achieved without loss of performance or convenience of usage. The incorporation of the power supply, oscillator and probe into a single unit provides a convenient device for checking all types of circuits. The indicating instrument is a standard 2 inch General Electric instrument with an easy to read scale. The calibrated dial is a large 205° drum dial which provides seven direct reading scales, plus an additional universal scale, all with the same length and readability. Each range has its individual plug-in probe completely enclosed in a contour fitting polystyrene case for assurance of permanence of calibration as well as to prevent any possibility of mechanical damage or of unintentional contact with the components of the circuit being tested.

The Grid Dip Meters may be used as:

1. A Grid Dip Oscillator
2. An Oscillating Detector
3. A Signal Generator
4. An Indicating Absorption Wavemeter

The most common usage of the Grid Dip Meter is as an oscillating frequency meter to determine the resonant frequencies of de-energized tuned circuits.

Size of Grid Dip Meter only (less probe): 7 in. x 3 $\frac{3}{8}$ in. x 3 $\frac{3}{8}$ in.

Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90605 thru 90609 are extremely small and designed primarily for engineering laboratory use where they

will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

HAMMARLUND

DATA TRANSMISSION • SELECTIVE CALLING AND SUPERVISORY CONTROL EQUIPMENT

POINT TO POINT SIGNALING

The Hammarlund Standard Duplex Signaling Unit consists of a tone generator and receiver designed to operate over wire lines, telephone or power line carrier, and radio or microwave communications circuits for signaling, dialing, slow speed telemetering, supervisory controls or other information. Transmitters and receivers are available for 36 frequency channels between 2000 and 6475 cps. This equipment is being used by military and governmental agencies, pipeline and power companies, railroads and other groups requiring remote on-off switching, continuous indication of operating conditions, and automatic detection of wire line or power source failures along their systems.

PROTECTION THROUGH SUPERVISORY CONTROL

The Hammarlund "Multi-Gate" Remote Supervisory and Control System is engineered to provide highly efficient, fully reliable operational controls of important remote equipment such as used by refineries, pipelines, utilities, railroads, civil defense and other commercial, as well as military, groups. Because of a unique design by which a single tone activates a receiver, which in turn will then accept a second tone to operate a relay, this equipment can be used where disturbances on connecting wire or radio circuits make ordinary tone-operated remote controls impractical. Up to 21 individual on-off functions can be handled over a single circuit employing only 7 audio signaling tones.

SELECTIVE CALLING OR SIGNALING

Hammarlund Selective Calling equipment, added to 2-way radio systems used to control large fleets of vehicles, or distant fixed stations, adds privacy, speed, safety, quietness and convenience to day-in-day-out operations. By the push of a button the dispatcher within 0.8 of a second selects the station which he wants to contact. Only the selected operator or group of operators can receive the call. If the operator of the car or station being called doesn't answer, an indicator lamp remains lighted to show he was called. This simple equipment can be added to any present installation, or incorporated in any type of installation now projected.

COMMUNICATIONS RECEIVERS

The New "HQ-140-X"

The "HQ-140-X" is a new superheterodyne type receiver that provides amateurs and other short wave listeners with all the advantages of modern professional design and circuitry. In addition, it incorporates those outstanding features that have made Hammarlund "HQ's" famous for quality and performance. This receiver retains the high degree of sensitivity and selectivity of the "HQ-129-X," and in addition features notably improved frequency stability and image ratio. It covers a continuous range of frequencies from 540 kc to 31 mc, or from 555 meters to 9.7 meters, in six bands.

Band spread tuning is supplied on the four higher frequency bands, with actual calibration in the 80, 40, 20, 15, and 10 meter amateur bands. Many types of noise and other interference have been substantially reduced by the outstanding noise limiter and the special Hammarlund patented crystal filter.

FEATURES

TUNING RANGES: .54—1.32 mc, 1.32—3.2 mc, 3.2—5.7 mc, 5.7—10 mc, 10—18 mc, and 18—31 mc.

CALIBRATED BAND SPREAD: 3.5—4 mc, 7—7.3 mc, 14—14.4 mc, 20.9—21.6 mc, and 28—30 mc.

TUBE LINE-UP: 6C4 Oscillator, 6BA6 RF Amplifier, 6BE6 Mixer, 6BA6 1st IF Amplifier, 6BA6 2nd IF Amplifier, 6BA6 3rd IF Amplifier, 6AL5 combination detector, AVC and noise limiter, 12AU7 1st AF Amplifier and BFO, 6V6GT/G Audio Power Output, OC3/VR105 Voltage Regulator and 5U4G Full Wave Rectifier.

The "SP-600-JX"

The "SP-600-JX" communications receiver, now also available to hams, is a masterpiece of receiver design and already is world-known for its outstanding construction and performance. This professional receiver, with its six bands covering the frequency spectrum from 540 kc to 54 mc, is being used in large quantities by the military and governmental agencies, as well as by commercial services, for both single and diversity reception.

This magnificent receiver is a 20 tube dual conversion superheterodyne. The power supply is an integral part of the receiver chassis. Operation on any of six crystal controlled fixed frequency channels within the range of the receiver is immediately available. This designates it as the perfect receiver for point-to-point and network operations. Pre-arranged day and night fixed frequencies. With crystal control you can select your desired channels immediately.

Stability is .001 to .01 percent depending on frequency to which receiver is tuned, image rejection is 80 db to 120 db down, and spurious responses are at least 100 db down. Sensitivity is 1 microvolt CW and 2 microvolts AM, while selectivity for the three calibrated crystal and three non-crystal ranges is from 200 cycles to 13 kc. Radiation is negligible with no cross-talk in multi-receiver installations.

“FC” and “FNC” COUPLINGS

FEATURES—The “FC-46-S” is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flash-over voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The “FNC-46-S” is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

“APC” CAPACITORS

FEATURES—The “APC” trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Hexagonal collar on slotted shaft permits rotor adjustments to be made with wrench or screwdriver. Air Gap is 0.015” nominal. Tested at 600 V. R.M.S., 60 cycles.

“MAPC” CAPACITORS

FEATURES—The “MAPC” capacitor is representative of Hammarlund’s efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular “APC” with everything reduced except the quality and performance characteristics. For example, an “MAPC” is about half the size and weight of an “APC.” Lower minimum capacities and low inductance make the “MAPC” suitable for VHF use.

CONSTRUCTION—The standard “APC” construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

“NZ-10” CAPACITORS

FEATURES—The “NZ-10” is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor-bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitor, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver-plated beryllium-copper wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting.

D—Split stator

X—Wide-Spaced

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

"HFA" and "HFBD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal soldered to the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but otherwise incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

"MC" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give a choice of mountings, connections and capacity characteristics. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. The "MCD" is a split-stator panel-mounted capacitor.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver-plated beryllium-copper spring wiping against a wide disc on the rotor.

SPECIFICATIONS—Straight line capacity. Air gap is 0.0245" nominal.

"VU" CAPACITORS

FEATURES—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance.

RELAY RACKS

DELUXE RELAY RACKS

These relay racks are made of 16 gauge steel with 1/4" panel mounting supports. The panel mounting supports are recessed so that no edges of the panel will be exposed.

The front and back of the top, the two sides and the door are well louvered to provide adequate ventilation. The door is hung on sturdy, loose joint hinges; it is held closed by two attractive aluminum die cast plunger type snap action catches. A streamlined appearance is achieved by the use of rounded corners and red lined chrome trim. This relay rack is shipped knocked down and complete with all necessary hardware for assembly. All standard 19" panels will fit these racks.

A SPECIAL FEATURE IS THE USE OF FOUR STURDY SUPPORTS IN THE BOTTOM, SO THAT CASTERS CAN BE FASTENED DIRECTLY TO THE BASE, THEREBY ACHIEVING READY MOBILITY.

Bud RC-7756 casters will fit this unit. The casters are not included in the price of the cabinet. These relay racks are supplied in either black or grey wrinkle finish, or light grey hammered finish. Use suffix letter "B" for black wrinkle finish. Use suffix letter "G" for grey wrinkle finish. Use suffix letters "HG" for light grey hammered finish.

SUPER DELUXE RACKS 2 DOOR

This relay rack is an entirely new model that consists of a relay rack made of 16 gauge steel with 1/4" panel mounting supports. The panel mounting supports are recessed so that no edges of the panel will be exposed. IN ADDITION, THEY ARE ADJUSTABLE FROM FRONT TO BACK IN VARIOUS STOPPING POINTS. THIS ENABLES YOU TO USE THE SPACE IN FRONT AND BEHIND THE PANEL TO ANY DEGREE THAT YOU MAY FIND NECESSARY. Adjustable points are at 1" intervals up to a point 6" behind the front panelling. These racks are fitted with both front and rear doors. The rear door is to cover any of the equipment behind the panel and at the same time provide easy accessibility to it. The front door is to provide a means of concealing dials, knobs, etc., that may be in front of the panel.

The exclusive Bud feature of supports on the bottom so the casters may be fixed directly to the base, eliminating the need and expense of dollies, is also present in this series of racks. Bud RC-7756 casters will fit these units. The casters are not included in the price of the cabinet.

If black wrinkle finish is desired, specify same by suffix letter "B." If grey wrinkle finish is desired, specify by use of suffix letter "G." If light grey hammered finish is desired, specify by use of suffix "HG."

ADD-A-RACK SERIES

It always has been necessary to buy special racks without louvers on one side to obtain maximum interior space with a minimum of floor space. Now, you no longer need to buy an entire new cabinet when you want additional space. When multiple rack units are required, we not only offer additional racks at a lower cost, but provide a sturdier, better looking assembly. Only Add-A-Rack series can accomplish this savings.

Illustration A shows the two Add-A-Rack cabinets assembled together. Illustration B shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entirely new outfit, you purchase, as a unit, four parts: 1. The door, 2. the top, 3. the bottom, 4. an Add-A-Rack Coupling Unit. The right or left side of your present relay rack is removed and replaced by the Add-A-Rack Coupling Unit. Next, the top and bottom are fastened into place. The side taken from the first rack is then fastened onto the second rack. Place the additional door into position and you now have two racks, properly and efficiently coupled together. In the same simple way, more racks can be added at any time. Every one will be in a continuous one piece assembly.

A

B

This series is available in two ways. The first is a double unit consisting of a rack and a rack coupling unit. The second is an Add-A-Rack unit consisting of a door, a top, a bottom and an Add-A-Rack coupling unit. These units are furnished with all necessary assembly and panel mounting hardware. The same fine feature of the sturdy supports on the bottom for direct affixing of casters is present on the model.

DELUXE CABINET RACKS

These cabinet racks are so made that a professional appearance is given. They are ideal for commercial broadcast stations, for amateur transmitters, for sound equipment or test equipment.

The five larger sizes have a hinged rear door, while the smaller sizes have the welded panel in the rear.

No other manufacturer has the wide variety of sizes that are included in the Bud line of deluxe cabinet racks.

Adequate ventilation is assured by means of louvered sides and a 2" opening in the bottom of the back, which extends the entire width of the cabinet. "No scratch" extended metal feet are embossed on the bottom to minimize marring of the table top or any other equipment that this is placed on.

Specify a suffix "B" when black wrinkle is desired, the suffix "G" when grey wrinkle is desired, or the suffix "HG" when light grey hammered is desired.

ALUMINUM CHASSIS

The construction and design of these chassis are exactly the same as that of our steel chassis bases. The aluminum chassis are welded on Government approved spot welders that are the same as

those used in the welding of aluminum aircraft parts. As a result, you can depend on Bud Aluminum Chassis to do a perfect job and to stand up under all conditions.

Please note that the gauges shown in the table are aluminum gauges. These chassis are supplied in an etched aluminum finish.

SPECIAL SHEET METAL FABRICATION

Now, Bud Radio, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added; departments have been modernized and streamlined, and new methods have been developed.

We make over four hundred different sheet metal products as stock items, which are illustrated elsewhere in this catalog. Often a slight change in one of our standard items will eliminate the necessity of special tools and dies, thereby reducing costs greatly. Since we produce thousands of sheet metal products, every month, for ourselves and for leading firms throughout the country, we are able to

effect economies in production which mean lower prices and faster delivery.

Our expanded facilities, expert workmanship, years of experience and manufacturing "know how" assure high quality products. In addition, our Engineering Staff is always available for consultation and advice. We suggest that you send us your blueprints for estimate.

Whether the quantity be one, ten, one hundred, one thousand or many thousands, we are interested in the opportunity to be of service to you.

Illustrated on this page are a few examples of specially fabricated sheet metal products.

BUD GIANT TRANSMITTER CONDENSER—Single Section

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16" thick aluminum end plates, connected by 1/2" diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064" thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

BUD MASTER TRANSMITTING CONDENSERS—Dual Section

All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

BUD NEUTRALIZING AND HIGH FREQUENCY TUNING CONDENSERS

This line of condensers will fill every neutralizing and high frequency tuning requirement that modern circuits pose. The two-pillar construction makes this unit unusually sturdy and eliminates any possibility of capacity variation due to vibration. The movable plate is adjusted by means of the threaded shaft to which it is attached, and it is permanently locked in any position by the lock-nut provided. Any loose thread is taken up by a special nut and locked

to give smooth operation. Plates have rounded edges. Steatite insulation is used.

BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS

In circuits utilizing tubes with the grid lead terminated in the base a feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated is feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 890 and No. 852 are ideal neutralizers for popular low power beam tubes. No. 890 condenser is base mounted only.

TRANSMITTING CHOKES

Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot.

All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies.

Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3 3/4".

IRON CORE R. F. CHOKES

The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 1/2" x 1-7/16".

HEAT RADIATING PLATE AND GRID TUBE CONNECTORS

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

BUD INSULATED FLEXIBLE COUPLINGS

Tandem operation of two or more units is readily accomplished through the use of these couplers. Direct shaft alignment is not essential, and all couplers are made to fit 1/4" shafts.

BUD HIGH VOLTAGE FLEXIBLE COUPLINGS

A new type spring construction in these couplings permits a wide gap between shaft connections, freedom from back-lash, and unusual flexibility. The springs are attached to glazed Steatite discs 1 1/2" in diameter and 3/16" thick, and the overall diameter of the finished coupling is 1-15/16". Coupling accommodates standard 1/4" shaft. Springs are also attached to Bakelite discs 1 1/4" in diam.

ULTRA HIGH FREQUENCY R. F. CHOKES

These chokes were designed to meet the requirements of builders of high frequency receivers and transmitters. Consists of ceramic rod with a single layer winding terminated with strap leads at each end. Particularly suitable for use on 2 or 6 meters. CH-570 is supplied with a mounting foot and is sometimes used as a filament choke in certain types of high frequency oscillator and amplifier circuits.

PIE WOUND R. F. CHOKES

Each choke has a continuous winding of silk covered enameled copper wire and the pies constituting this winding are wound on a 1/4" diameter ceramic core. Chokes are made with both strap and wire leads. The CH-876 is a heavy duty choke intended for circuits, such as transmitter plate circuits, where high currents are present. All chokes in this series have an overall length of 1 1/2".

Ferrite Rod Loop Antenna

The electrical characteristics of this newly developed type Ferrite Rod Loop Antenna make possible a general replacement loop that offers outstanding performance. Reception of distant stations will be improved to the extent that no antenna or ground will be required, and on local stations much better reception will be insured. The Loop Rod Antenna has an adjustable inductance which makes it possible to peak the antenna stage by merely sliding the coil along the ferrite rod; this also enables it to be used with a variety of tuning condensers.

Burnell TOROIDAL DECADE INDUCTORS

One basic set of four decade units will provide inductance values in decade steps of 1 to 10. This is accomplished by the use of the 1, 2, 3, 4, system. To further simplify and minimize the number of units employed for a given inductance, we have added an eight unit coil. By including this coil in the basic set it becomes unnecessary to employ more than two coils for any decade value up to twelve and extends the total possible range for all five coils up to eighteen.

B.I.F. (BAND INTERSTAGE FILTERS)

This new series of interstage band pass filters will be of interest to project and design engineers to whom the time required for specially designed filters is prohibitive. A stock supply will be maintained for most commonly used center frequencies between 60 cycles and 50,000 cycles. The filter is designed to operate between the triode plate and the grid of a tube and provides a voltage gain of approximately 6DB. Filters are hermetically sealed. Small size permits use in compact or even miniaturized equipment. Dimensions are 1-3/16 x 1-11/16 x 2-1/4" high. When ordering specify BIF___ Cycles.

VIKING "RANGER" TRANSMITTER/EXCITER KIT

BUILT-IN VFO—TVI SUPPRESSED

Extremely compact (only 15"x11 $\frac{1}{2}$ "x9"), the unit is designed throughout for easy assembly by the novice or experienced amateur. Wiring harness, punched chassis, all parts hardware and connectors are furnished along with complete step-by-step assembly Instructions, pictorial diagrams and operating directions.

Cat. No. 240-161 Viking Ranger Kit, less tubes, crystal, key and mike.....\$179.50 Amateur Net
Cat. No. 240-161-2 wired and tested. See your distributor for details.

Designed as a completely self-contained, compact transmitter which can also be used as a flexible exciter unit without modification, the new Viking Ranger offers more features than any transmitter-exciter ever built for amateurs.

As a transmitter, the Ranger is a compact, self-contained 75 watt CW or 65 watt Phone unit with 100% AM modulation and antenna load matching from 50 to 500 ohms. Operating on 160-80-40-20-15-11 and 10 meters crystal or VFO, it features high gain audio with communications speech range and complete TVI shielding and filtering.

As an Exciter, the Ranger will drive any of the popular kilowatt level tubes and provides a high quality speech driver system for high powered modulators. Its design also enables basic control functions for the high powered stage to be handled right at the exciter. No internal changes are necessary to change from transmitter to exciter operation.

The built in VFO has exceptional stability—accurate within 1 KC—dial calibrated in 10 KC increments. A smooth running planetary drive and a large edge-light excited plexiglass dial with ruled plexiglass pointer assures tuning accuracy without parallax. Easy to tune, the Ranger's basic tuning controls are located on the VFO Dial escutcheon. QSY within the phone or CW portion of a band is usually possible by merely changing the VFO frequency setting. For larger frequency excursions, simply touch up the grid (buffer) tuning, adjust loading and dip the final. Simple as A B C. Other controls, used for initial tuning up, changing bands or changing mode of transmission, are as follows: Off-Tune-Phone-Standby-CW switch, Bandswitch, Crystal 1-Crystal 2-VFO-VFO Zero switch, Meter Off-Osc.-Buffer-Grid-Plate-Mod. switch, Audio Gain, RF Drive, Coupling and Auxiliary Coupling. The VFO frequency control, Final Plate tuning and Buffer tuning dials are on the VFO dial escutcheon.

A nine pin receptacle on the rear of the transmitter brings out TVI filtered control and audio leads for exciter operation. This plug also permits the Ranger to be used as a filament and plate power source and a modulator for operating auxiliary equipment such as a VHF transmitter. Available at the output plug are 6.3 VAC at 5.5 Amp., 500 VDC at up to 210 MA and 300 VDC at up to 50 MA along with the full 33 watts output of the modulator.

The Viking Ranger tube lineup is as follows: 6AU6 VFO—OA2 voltage reg., 6CL6 crystal osc., 6CL6 buffer, 6146 final amplifier, 6AQ5 clamper, 12AX7 dual triode speech amp., 12AU7 dual triode audio driver, 2-1614 push pull modulators, 6AX5 low voltage rectifier and 5R4 high voltage rectifier.

SWINGING LINK INDUCTORS

Swinging link inductors for amateur bands 160 thru 6 meters; 150, 500 and 1000 watt sizes. Two inductance values for each band permit choice of appropriate L/C ratio dictated by amplifier plate voltage and plate current. Polystyrene insulation, steatite bases and heavy wire sizes insure highest efficiency. HCS-Inductors match high voltage, low current tubes. LCS-Inductors match low voltage, high current tubes. Complete assembly includes Inductors for bands desired, one Jack Bar, one Link Arm Assembly and one or more Plug-in Links required for matching to line or antenna coupler.

MINIATURE AIR VARIABLES

TYPE "M" SINGLE

TYPE "M" BUTTERFLY

TYPE "M" DIFFERENTIAL

TYPE "M" CAPACITORS

Requiring a panel area just $\frac{3}{8}$ " wide by $\frac{3}{4}$ " high, these diminutive capacitors provide the perfect answer to problems encountered in the design of compact radio frequency equipment. Designed and constructed to provide peak performance throughout the VHF range, JOHNSON Miniature Capacitors are ideal for compact aircraft and mobile equipment. Small in size, their low inertia mass and sturdy soldered construction assure reliability and long service life under the most rigorous conditions.

FEATURES

Bridge type stator terminal provides extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Relatively large beryllium copper compression spring rotor contact provides steady torque—rotor stays "put" where set. Rotor contact silver plated for low noise level at high frequencies—all other metal parts nickel plated. Steatite end frames DC-200 treated to maintain high insulation resistance.

GENERAL SPECIFICATIONS

Mounting bushing threaded $\frac{1}{8}$ "-32 with flats to prevent turning—mounting nut furnished. Peak voltage 1250 volts on .017" spaced units—850 volts on 160-130 which is spaced .013"— $\frac{3}{16}$ " diameter shaft* slotted for screwdriver adjustment.

*Instrument type tuning knob to fit $\frac{3}{16}$ " shaft available. (See knob and dial section of this catalog.)

SPECIALS

JOHNSON Miniature Air Variables are available in production quantities with the following features: 1. Locking bearing. 2. 180° stop. 3. Various shaft extensions. 4. High torque. On your special requirements—we will be happy to furnish quotations.

EXPLANATION OF TYPE NUMBERS

The first portion of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter D indicates a two-section type. The final number multiplied by 100 is the approximate peak breakdown voltage.

Stated maximum and minimum values of capacitors are nominal, subject to plus or minus tolerances. Guaranteed values, or "lowest maximum, highest minimum" if necessary should be requested from the factory.

TYPE "L" CAPACITORS

A superior quality general purpose capacitor by JOHNSON embodying important advances in design and construction. The rotor bearings, stator support rods and mounting posts are actually soldered directly to the ceramic (steatite) end frames making the capacitor virtually vibration proof. This exclusive ceramic solder feature makes the "L" a perfect choice for portable, mobile and aircraft applications where vibration might cause failure of standard types.

FEATURES

Rugged in electrical and mechanical design throughout, a special split sleeve tension bearing and silver plated beryllium copper contact provide constant torque and smooth, silent capacity variation. Heavy brass soldered plates and large diameter tie rods provide great rigidity to withstand extreme acceleration and deceleration forces. Plating is new "bright alloy", which is much more corrosion resistant and has higher conductivity than standard platings.

GENERAL SPECIFICATIONS

Shaft diameter $\frac{1}{8}$ " with $\frac{1}{8}$ "-32 threaded bearing and 6-32 tapped mounting studs on $1\frac{1}{4}$ " centers. Removable chassis mounting brackets provided, can be used to mount auxiliary equipment. Plate spacing .030".

VERNIER DIAL

COUNTER DIAL

JOHNSON KNOBS AND DIALS

A distinctive line of matching knobs and dials suitable for the finest electronic equipment. All types are derived from a new basic knob design, the first in years. Knobs have twelve well defined flutes and present an essentially round appearance.

Tough, scratch resistant black phenolic is used for all molded parts. Metal dial scales have an etched satin chrome finish. This contrasts greatly with deeply etched and filled engraving, provides maximum legibility under poor lighting conditions. All types have accurately centered brass inserts for 1/8" shafts.

In addition to the items listed, JOHNSON is prepared to supply variations (in production quantities) such as, special shaft sizes, scales, set screws or indicators.

SHAFT COUPLINGS

All JOHNSON shaft couplings are manufactured with high quality, low loss insulation, accurately machined and suitably finished metal parts. Each is capable of many thousands of operating cycles without failure due to fatigue. DC "breakdown" ratings derated in accordance with good engineering practice. The phosphor bronze springs of the -250 and -251 series shaft couplings provide flexibility without backlash and adjust to minor shaft misalignments. Rigid types -252 and -262 meet the requirements of accurate shaft alignment and high torque. The -259 is a bar type shaft coupling recommended for high voltages or very high frequencies. The -264 is a small bakelite insulated flexible shaft coupling for DC or low voltage RF applications.

TYPE "C" DELUXE CABINET RACKS

FOR 19" WIDE PANELS — 18" and 24" DEEP

Since 1927, PAR-METAL has been a pioneer in the design and creation of superior metal equipment for the radio and communications industries. This experience in combination with skilled craftsmen and high quality material, have made PAR-METAL PRODUCTS the standard of the industry.

The beauty of these new enclosed type racks should prove a welcome addition to our line. It will appeal to those who wish to combine the rugged construction of our standard Type "C" racks with modern styling and improved design.

The vertical trims which conceal the panel mounting screws are fastened by means of two "Cowl type" fasteners on each side, which permits the trims to be removed quickly and easily by a half-turn on the screw heads.

The design of the vertical posts permits these racks to be installed in rows or "gangs," without the use of front joining strips between the racks. This provides a greater flexibility in their installation, particularly in broadcast stations.

SPECIFICATIONS FOR THESE DELUXE TYPE RACKS

CABINET: Entire cabinet is welded together into one integral unit. Body of cabinet is made from $\frac{1}{8}$ " thick cold rolled sheet steel; top of cabinet is made from $\frac{5}{64}$ " thick steel; bottom is made from $\frac{7}{64}$ " thick steel.

PANEL MOUNTING: Angle irons are $\frac{3}{8}$ " thick structural steel, holes are accurately drilled and tapped $\frac{12}{24}$ thread on standard $1\frac{1}{4}$ "- $\frac{1}{2}$ " spacings.

DOOR: Doors are of a new type with vastly improved construction features. They are stamped from one piece of steel into a rigid unit. Door edges are folded to provide a smooth double thick edge. There are no "patch" type braces, etc., used for reinforcement.

HARDWARE: Doors are equipped with die-cast "automobile" type sturdy handles. Hinges are of the "slip-joint" type so that doors may be easily removed. Screws for mounting panels are supplied. Front of rack is trimmed with chrome plated trims at top and bottom.

OUTLETS: A duplex receptacle and outlet box are provided in the back under the door. A rectangular opening is provided in the bottom for conduits, leads, etc.

CORNER TRIMS: All racks have quick detachable corner trims, which are fastened to the rack by means of two "Cowl Type" fasteners on each trim.

PANELS: Panels 19" wide to fit these racks are described on Page J-96.

TYPE "C" UNIVERSAL CABINET RACKS

FOR 19" and 24" WIDE PANELS

WITH REAR DOOR ONLY

WITH FRONT & REAR DOOR

No. PX-6718

No. FX-6718

These universal racks are similar in construction to our Type "C" standard racks listed on Page J-91, except that the design has been modified to facilitate the location and mounting of chassis supports, shelves, standard sliding devices, and sliding shelves.

Specifications are the same as those applying to CABINET, PANEL MOUNTING, DOOR, HARDWARE and OUTLETS on Page J-90.

The front vertical corners of the rack are regular cabinet design, so that panels may be recessed without exposed edges. New "narrow type" vertical corner trims maintain the attractive conventional design of similar racks, even though panel mounting screws are visible. Sliding shelves or drawers may be freely operated, or rack panel assemblies removed, without disturbing the trims.

The "narrow type" corner trims are standard equipment on all series "FX" racks. On series "PX" racks, regular trims to cover the panel mounting screws are standard, but "narrow type" trims are optional where so specified.

Advantages of universal type racks may be summarized as follows:

1. The panel mounting angles are fully adjustable, and may be positioned from front to back.
2. Racks will accommodate all standard panels up to 7/16" thick.
3. Either regular or "narrow type" trims are available on Series "PX" racks, and are interchangeable.
4. Vertical side supports (listed on Page J-93) may be installed without drilling or fitting.
5. Side brackets, with or without shelves, may be attached to vertical side supports without drilling or fitting.
6. Various types of standard sliding devices in general use may be installed on the vertical side supports.
7. Racks with or without front doors, for either 19" or 24" wide panels, intermixed, may be "ganged" in continuous rows.

CORNER TRIMS: "PX Series racks: Regular corner trims to cover panel screws are standard. "Narrow Type" trims will be supplied if so specified on your order. "Narrow Type" trims are standard on "FX" Series racks. Front joining trims may be substituted without extra charge.

FINISH: Black wrinkle enamel is standard. Grey wrinkle enamel or prime coat only is optional at same price.

ROLLER TRUCKS: (listed on Page J-95) Specify No. RT-418 for all racks with 19" panels. Specify No. RT-427 for all racks with 24" wide panels.

PANELS: Panels 19" or 24" wide to fit these racks are listed on Page J-96.

WHEN ORDERING, PLEASE GIVE FOLLOWING INFORMATION: Catalog number, FINISH (if other than black). Specify if "narrow type" trims are required on Series "PX" racks, otherwise regular type trims will be supplied.

UTILITY DESK ASSEMBLIES

Standardized Units Adaptable to Individual Requirements

SINGLE UNIT ASSEMBLY

The combination of a control cabinet mounted on a table, desk or similar support has been in general use in the electronics industry for some time. Due to the various functions for which it may be employed, such equipment has assumed various forms, arrangements and sizes, requiring costly, custom-built construction to achieve their purpose.

While it is obvious that no particular fixed design can serve every demand, we have devised a group of *standardized units*, the combination of which is readily adaptable for control stations, testing apparatus, sound distribution systems, and similar applications.

The sizes and specifications of the various units are catalogued on the following page. There are several features which warrant your consideration, particularly the pedestal. Note that all doors of the pedestal are easily removable, allowing complete access to the interior *from all sides*. (See illustration at left.) Each side of the four supporting posts has also been drilled and tapped on "universal" centers, making it possible to mount standard rack panels or doors on any or all sides, at your preference. Each door is equipped with a "push-button" spring catch, plus a lock with interchangeable keys. The use of the lock is optional.

Another time-saving aid is the method of supporting apparatus in the interior of the pedestal. Universal brackets are easily attached to any of the four sides by utilizing the tapped panel mounting holes. The brackets are slotted, so that almost continual vertical adjustment may be made. They may be used to support regular 17" wide chassis, or standard shelves. The shelves are suitable for mounting amplifiers, power supplies, record changers, etc.

All table-tops have screw type studs, which are inserted in matching holes already drilled in the pedestals. The desk cabinets have necessary mounting holes, but they have been omitted from the table top to permit a flexible assembly of similar cabinets, or other equipment.

The above will illustrate how brackets are mounted. They are used for mounting chassis, standard shelves, or drawers. With all sides open, easy access saves considerable time in assembly.

SPECIFICATIONS: The Desk Panel Cabinets, Table Tops and Pedestals are constructed of 1/16" thick furniture steel. They are rigidly braced and reinforced wherever necessary, and substantially welded into integral units. No holes have been drilled in the table tops for desk cabinets, to permit cabinets to be located wherever desired.

FINISH: Unless otherwise specified, the standard finish for all items on Pages J-98 and J-99 is light grey enamel. Black wrinkle, slate grey wrinkle, grey hammertone, or prime coat only is available at same price. Samples of above finishes will be mailed upon request.

Mandl's Television Servicing

EASY TO USE

A complete Master Trouble Index, listing 100 trouble symptoms in picture and sound with their possible causes and references to the pages on which directions for servicing are given, makes it easy for you to locate the source of trouble and correct it in minimum time. Detailed trouble-shooting procedures tell you just what to do. Simple, clear explanations show how each unit in the TV receiver functions, with lists of the flaws that may occur in it, what points in the circuitry cause these flaws, how they affect other components, and how they show up on the TV screen. Whether you want specific servicing instructions or further information about any part of the set, you can easily and quickly find it here.

THE PRACTICAL DETAILS YOU WANT

All the faults likely to occur, including those hard-to-find troubles, are dealt with. And you won't be confused by unnecessary theory. Only the essentials actually needed for practical servicing are given. You'll learn many practical time-saving methods:—simple signal-tracing procedures; how to improve reception in fringe areas; how to trouble-shoot keyed A.G.C. and synchroguide circuits; align I.F. stages; how to use the oscilloscope and other test equipment, and many trade tricks for diagnosing trouble quickly.

HUNDREDS OF HELPFUL ILLUSTRATIONS

Original photographs, especially made for this book, show you what appears on the screen test patterns when there is a defective picture tube, diathermy interference, and scores of other causes of imperfect pictures. 50 scope patterns give you handy checks for signal tracing and analysis of circuit performance.

Hundreds of large, clear schematics, many from the major manufacturers, show you each circuit in each part of the TV receiver, and helpful block diagrams show you the arrangement of the various parts in the set as a whole.

The basic information needed to insure success with movies for televising. Clear, simple explanations of TV principles that govern the telecasting of movies. Full details on construction, operation, and comparative costs of cameras, projectors, kinescope recordings, sound and lighting equipment, equipment for animation, editing, making titles and special effects. Practical do's and don't's of making newsreels, commercials, and features on film for telecasting.

Introduction to Practical Radio

by D. J. Tucker

One of the best "fundamentals" books ever published—all the basic how's and why's of radio in terms you can EASILY understand. The necessary math is explained at the points where it is used. Each principle is illustrated by many examples of its use in the construction and operation of radio apparatus. Hundreds of practical problems for training.

Elementary Mathematics for Radio, TV, and Electronics

by Bernhard Fischer and Herbert Jacobs

If you've ever hesitated to use a time-saving equation because you were not quite sure how to set it up, or had moments of doubt about decimals and percentages, or wanted a quick check on your figures—this is the book for you! It makes crystal clear each step in the reasoning and each procedure in the arithmetic, geometry, and algebra needed by radio and TV technicians. You'll see how the simple, basic calculations are used in more complex problems. You'll find it easy to work our frequency resolutions, voltage drops, inductive reactances, decibels, and the many other problems in radio, television, and electronics in which accurate mathematics is essential. Hundreds of sample problems, both in the math itself and in its radio and TV applications, give you ample practice.

Radio and Television Mathematics

by Bernhard Fischer

A handbook of step-by-step solutions for every question requiring math in the FCC Study Guide and for hundreds of other circuit problems in radio, television, and electronics. Conveniently arranged under radio topics such as antenna power, plate-to-plate voltage, and 400 others, you'll find the formulas to use, the numerical values to substitute, and the step-by-step solutions to typical problems. "By far the best book for preparing for FCC exams," says one radio man; and Radio-Electronics recommends it "for the place of honor beside its natural partner, the slide rule."

SMALL SWITCHES, LIMIT SWITCHES, AND MAGNETIC RELAYS

SMALL SNAP-ACTION SWITCH, G-E SWITCHETTE CR1070

This new, lightweight switch mechanism lends itself especially to applications where space is limited and long life is required.

The Switchette is operated by movement of the spring-return button located in the housing. This button can be actuated by a lever, bellows, or other means. Snap-action, double-break-contact construction gives the G-E Switchette a high current rating and makes it suitable for applications where the vibration is severe.

FEATURES AND ADVANTAGES

1. Small (approximately 1¼ in. by ½ in. by ½ in.) and weighs only 9 grams (0.02 lb.).
2. Resists vibration and corrosion.
3. Phenolic-resin operating button provides better protection from live parts during operation.
4. Contact tips are 99.95 per cent pure silver.
5. Particularly suited to electronic applications because of negligible amount of contact bounce.
6. Five terminal arrangements are available, including the two shown above.
7. Wide variety of forms available; for example, three basic contact arrangements: single-circuit, normally open; single-circuit, normally closed; and two-circuit, normally open and normally closed. Also many special forms.

Switchettes are available in ratings up to 10 amperes at 115 or 230 volts a-c. Write for Bulletin GEC-796.

Switchettes showing two terminal arrangements

LIMIT SWITCH, CR1070-D112

This sturdy, open-type limit switch is operated by a plunger which provides ½-inch overtravel. The contact mechanism of this device is the G-E Switchette, which can be wired to control one normally open circuit and one normally closed circuit. Rated 10 amperes at 230 volts a-c. Write your nearest G-E Apparatus Sales Office for Bulletin GEC-197.

Open-type limit switch with push-rod operation

GENERAL-PURPOSE RELAY, CR2790-E

The CR2790 relay is a compact, attractively finished device for use either as a motor starter or a relaying unit. Available in either an open form or enclosed in a general-purpose or explosion-proof housing. Three contact arrangements available: single-pole, single-throw; double-pole, single-throw; and double-pole, double-throw. In the open form, all three contact arrangements use the same base, which facilitates mounting. In the enclosed form, the U-shaped cover makes wiring and servicing convenient. Rated 10 amp continuous, 110/120 volts a-c.

Applications

Control of pilot circuits in response to remote control switch or thermostat, or for direct control of small motors which have built-in thermal overload protection.

As a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits, and signal systems. Bulletin GEC-257.

LEVER ACTION SWITCHES, KITS AND SPECIAL SWITCHES

3- and 4-Position Lever Switches — New 5-Position — Unique 6-Pole Double-throw per Deck

SS-14-1L4F-2
Two-Deck Lever-Action Switch

POSITIVE TYPE, 3- and 4-Positions. (Single-deck.) Specified where quality is a consideration, these lever switches offer many of the design features of the J-B-T SS-14 instrument-type rotary switches. The single-deck models (not illustrated) come in the conventional three-positions and in a newer four-position. Present uses include tube checkers, inspection apparatus, communication systems, hobby equipment, consoles, and sound devices. The four-position types, interchangeable except in slot length with the standard three-position, provide the extra circuit which is often needed. Dimensions are shown on the

drawing below. Variations in mounting hole sizes, lever length, and tapped mounting holes can be supplied on long runs involving set-up charges. Switches are normally individually boxed with mounting hardware and KN-17 black pointed knob instead of the knob illustrated. Spacing between single decks: recommended $\frac{3}{4}$ ", minimum $\frac{7}{8}$ ". Also see list of available mounting plates.

Spring Return Type. Single deck 3-position switches also may be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10 (Model Suffix—R).

Two-Deck Lever Action Switches. These use the same strong parts, 3-pole suspension and double-grip collector arms as the one-deck type, but are specified where quality is the prime requirement. Spacing is $\frac{3}{8}$ " between decks, the same distance as TV twinlead wires. Non-shortening (break before make) positive action, individually boxed including KN-17 knob and hardware. Recommended spacing between decks $\frac{1}{2}$ "; minimum spacing $\frac{3}{8}$ ".

5-Position Lever Switch

MODEL MS-20-1L5A-1. For the first time designers and servicemen have available 5 live positions, two circuits per deck in a fully enclosed, lustrous black molded construction. Adapted from the MS-20 series of instrument-quality switches shown on a preceding page and having similar electrical characteristics, this positive action lever switch made an instant hit for sound systems. Now that it is released for general use, control, inspection, test and experimental circuits can be simplified by its use. Shipped individually boxed with hardware and threaded black molded knob. Series ST-50, ST-52

Smaller, lower capacity toggle switches such as ST-12, -13, ST-22, -23, -26 and -27, also designed for JAN-S-23, are being tooled for production. Inquiries invited.

Heat and Cold . . . Specialized aircraft lubricant facilities operation at both low and high temperatures (—67°F to 185°F.)

High Humidity . . . Materials, plating, construction and lubricant enable switches to withstand tropical climates.

Salt . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum.

Vibration and Shock . . . No momentary make or break or mechanical damage during stringent shake tests and 75 Gs drop test.

Overload . . . Tested to make and break at 50% overload for brief periods because of ample size solid coin silver contacts and rocker arms instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 900 volts r.m.s. at 60 cycles.

Rugged Service . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Springs are stainless steel. Quality standards are maintained by in-plant testing of production samples.

Made of lifetime Duraluminum with no clips or mechanical parts to go out of order. Can be used as a separate unit or mounted as part of the tape recorder itself. Approximate overall dimensions—6 1/2" long x 1" wide x 3/8" high. Furnished with drilled and countersunk holes for easy mounting.

TYPE 850 PRECISION ATTENUATOR

With the increased demand for precision in laboratory measurement of volume levels, transmission losses, gains of amplifiers, etc., the older methods and standards have become obsolete. The present units are a complete redesign of our older precision attenuators and will serve as laboratory standards. These precision units are now furnished with jack terminals and are completely shielded. They are flat for all frequencies in the audio range and reasonably flat to 200 kc. up to 70 db. They are furnished with either rack or box mounting in gray finish.

SPECIFICATIONS:

- Mounting:** Type 850-AT and 850-AH, standard rack panels, 3 1/8" x 19" x 1/8". Type 850-B furnished with dust cover.
- Switches:** Multiple leaf, silver alloy blades with silver contacts. Ball type detent.
- Terminals:** Telephone type jacks are used for input and output connections. Solder terminals are provided on rear panels for permanent connections. Insertion of plugs into twin-jacks lifts rear terminal connections.
- Type of Resistors:** All resistors are non-inductively wound. Negligible phase angle.
- Accuracy of Resistors:** All windings are adjusted to within 0.1% of the calculated value except on very low resistance values which are adjusted to within 0.25%.
- Frequency Characteristics:** For "T" configuration, the frequency error is negligible up to 80 db. loss, below 50 kilocycles. Balanced "H" configuration should be used where measurements above 50 kilocycles are necessary.

LEKTRO-LOK SWITCH

Small, sensitive,
automatically safe!

Particularly ideal for
transmission equipment!

Mechanical Interlock allows only one circuit to function at a time—and you can depend on it! LEKTRO-LOK operates on the teeter-totter system, with selective circuits. Pressure on one side actuates one circuit; release of pressure automatically returns switch to normal "off" position. Pressure on the other side is required before second switch is actuated, independent of first. Yet LEKTRO-LOK requires only a single cord—eliminates costly harness assemblies! Rugged stamped metal housing, black crackle finish. Weight, 10 ozs., 5" long, 2 3/4" wide, 1 1/4" high. Single pole, double throw. Rating (A.C. only) 15 amps. at 125 volts, 15 amps. at 250 volts.*

SINGLE SECTION ROTARY SWITCHES

3612-01 to 3612-10

These single section rotary switches were designed to keep pace with the demand for smaller components. They are the smallest switches available to handle multi-circuit switching and are ruggedly built with heavy silver plated contacts, high grade phenolic insulators, best spring brass and steel. These switches are ideal for radio-phono, wave band, tone control, meter and antennae switching applications, as well as many other uses in electronic equipments. All switches are supplied with one knob, mounting nut and lock washer.

MULTI-SECTION ROTARY SWITCHES

3612-11, 12, 15, 19

3612-18

The flat rivet "Wedglock" which fastens the contact to the stator is a unique feature of these switches. The small cross sectional area permits the use of sturdily designed contacts without sacrificing over-all stator size. The outstanding feature of this flat rivet is a contact assembly that will not loosen or rotate due to soldering heat. A free floating rotor assembly results in this rugged construction as the rotor blades do not support the assembly and only required rotor blades are used. One, two and four section switches in both shorting and non-shorting types are stocked to meet applications such as meter switching, test equipment and various electronic instruments. All switches are supplied with one knob, mounting nut and lock washer.

LEVER ACTION SWITCHES

3612-20, 21, 22

Erie Lever Action Switches employ the same type stator and construction as the Multi-Section Switches assuring a high quality assembly for inter-communication and test equipment applications. Smooth, positive action and indexing, high quality phenolic insulation, heavy silver-plated contacts and best spring brass are features which make the switch ideal for replacement or new uses. Each switch is supplied with mounting screws and knob. Packaged individually in a durable sealed plastic bag in the familiar Erie display box for maximum protection against corrosion.

GENERAL PURPOSE SWITCHES

3612-23, 24, 25

Extreme care was taken in the design of these very small compact switches to insure a very rugged and accurate construction. Again, the flat rivet is used to firmly secure the contacts against rotation in a very strong phenolic insulator. The stator assembly is attached directly to the detent plate insuring positive indexing. Heavy silver-plated contacts provide dependable and efficient operation. They may be used for simple circuit switching and wherever space is at a premium. Each switch is supplied with one knob, mounting nut and lock washer. Packaged in individual durable sealed plastic bags and the familiar Erie display box.

SPECIFICATIONS

CONTACTS: Silver-zinc alloy is standard. Coin silver, fine silver and others can also be supplied in production quantities.

BUSHING: Plain brass is standard. Available with nickel-plate when specified.

SPRINGS: Finest grade nickel silver with soldering terminals hot tinned for easy soldering.

INSULATION: Spacers made of high grade laminated phenolic.

FRAME: Frame and face plate cadmium plated steel. Frame and face plate are electrically brazed to form one integral unit. This provides outstanding strength and superior ability to "stand the gaff." Where paramount quality and ruggedness is desired this telephone jack is recommended.

Carter "Imp" Telephone Jacks can be supplied in many circuit combinations to suit your requirements. They are ideal for use in telephone, broadcast studio and audio equipment.

CARTER'S "Imp" PLUNGER SWITCH

- Wiping-Rotating Action
- Minimum Arcing
- No Impact Load on Plunger
- Longer Life
- No Corroding Carbides or Oxides
- Silver Plated Contactor and Terminals

Electrical Specifications and Types Available: Carter's "Imp" Plunger switch is available in a variety of mountings to meet most demands for this type of a switch.

Electrical Specs: "Imp" plunger switch is designed to handle $\frac{3}{4}$ Amperes at 100-125 Volts, $\frac{1}{4}$ Amperes at 250 Volts.

CIRCUITS: Normally closed.

LONG AND SHORT FRAME JACKS

LONG JACKS . . . The original long jacks were adapted from the telephone switchboard jacks. Long rugged, phosphor-bronze springs parallel to the plug axis give precise action. These jacks take minimum panel mounting space, less than the short jacks. Supplied with nickel-plated Palnut.

SHORT JACKS . . . Carter short jacks are small and compact, but do a full-sized job. Depth behind the panel is cut down by placing the tempered nickel-silver springs parallel to the panel. High quality sheet phenolic and tubular ebonite insulators are used throughout—no paper or fibre used in Carter Jacks. Supplied with nickel-plated Palnut.

Short and long jacks mount in single $\frac{3}{8}$ " hole in panels up to $\frac{1}{8}$ " thick. Fit of the plug in the jack is not affected by the thickness of the panel. Fit all standard plugs in two and three conductor types. Cadmium plated steel frame. All contacts between springs are fine silver, giving minimum contact resistance.

(D and E) Two-Conductor Portable Jacks—Used on end of extension cord. Fits 2-conductor plugs. Screw terminals take one pair phone tips, terminals or wires. Shield handles have tubular insulator to prevent short circuits. Ideal for use in connecting audio and recording equipment. (J-80 and J-82).

"Imp" PUSHBUTTON SWITCHES

These switches are similar in general construction to the widely popular Carter "Imp" Short Jacks. Finest nickel-silver springs with integral contacts. High grade phenolic insulation. Body, nuts and washers bright nickel-plated. Red or black Catalin 1-piece shaft and button. Springs fully insulated from the mounting bushing and shaft.

Made in three circuit arrangements:

- IS-10 Series: "Make" contact, single circuit, normally open
- IS-20 Series: "Break" contact, single circuit, normally closed
- IS-30 Series: "Break-Make" contacts, single circuit, double throw

POWER TAP SWITCHES NON-SHORTING TYPE

Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, 5 taps, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

RELAYS

FOR AMATEUR AND INDUSTRIAL USES

MINIATURE RELAYS

These units are very compact and are especially designed for plate circuit and general purpose control application. Overall dimensions: MR 1 3/8" x 1 3/8" x 7/8"—MRD 1 7/8" x 1 3/8" x 1 1/4". Contacts are fine silver rated 5 amps at 115 V. All AC relays are free from hum and AC chatter. The MR-2 and MRD-2 have 2500 ohm

MRD

coil, will pick up at 6 ma. and 12 ma. respectively. The MR-5 and MRD-5 have 5000 ohm coils, will pick up at 8 ma. and 7.5 ma. respectively. The drop out value of these relays is approximately 50% of the pick up value.

Type	A.C.	D.C.	Contacts	Net Prices
MR-2		Plate Circuit	SPDT	\$2.10
MR-5		Plate Circuit	SPDT	2.40
MR-6		6 V.	SPDT	2.10
MR-7	6 V.		SPDT	2.19

MRD-7	6 V.		DPDT	3.69
MRD-11	110 V.		DPDT	3.69

OVERLOAD RELAYS

Adjustable overload relays provide accurate and positive protection against current surges and continuous overloads. Contact arrangements SPDT using 3/16" fine silver contacts. This allows the use of either audible or visual signal to advise of overload. All models are of the electrical reset type which allows remote control resetting of the relay. Size—3 3/4" x 2" x 1 1/2".

Type	Current Range	Reset Coil	Net Prices
OA-2	250-500 ma.	110 V. A.C.	\$5.40

OD-2	250-500 ma.	6 V. D.C.	5.40
OD-5	500-1000 ma.	6 V. D.C.	5.40

LATCHING RELAYS

These relays are employed where it is not desirable to have current continuously on the coil. The latching arrangement is such that when the relay coil is energized the armature closes and locks in a closed position by mechanical latching. An electrical impulse on the reset coil releases the armature from the latch and allows the relay to assume its initial position. 3/16" fine silver contacts. Bakelite Base. Size—3 3/4" x 2" x 3/4".

COMMUNICATION RELAYS

Ideally suited for use in telephone, remote control, signaling, communications circuits etc. High speed operation plus high sensitivity with high contact pressure. Contacts will handle 4 amps at 115 V. non-inductive load. Each relay has one make and one break contact sets. Size—3 3/4" x 1 1/2" x 1 1/8".

SUNSWITCH LIGHT CONTROL

The SUNSWITCH uses an amplifier and phototube that responds to the foot candle value of daylight. When illumination falls below a predetermined value, the lights are turned on. When the illumination has increased to the correct value, the lights are automatically turned off. Applications for the SUNSWITCH are numerous—Radio & TV Towers, Signs, Factories, Construction Work, Airports, Railroads, Street Lights, etc. Mounted in standard weather-proof watt-hour meter case. Available in various models, carrying loads up to 60 Amps.

ELECTRONIC RELAYS AND SWITCHES

Engineered for exceptional reliability, long life with minimum maintenance. These Relays are highly sensitive and utilize no coaxial cable. Designed for applications needing a very short or medium impulse . . . as short as .0005 seconds, and will furnish pulse to operate a reset, lock or predetermined counter. The Ripley Phototube Relays have countless uses such as starting and stopping lighted displays, drinking fountains and machinery. Controls automatic paint sprays, announces the entrance and passing of customers.

FOTOLECTRIC COMBUSTION SUPERVISOR

A three-piece set consisting of Exciter Lamp, Photo-cell Receiver and a choice of three Electronically Operated Relay units. Operates on the smoke detection principle. Dependably sets into operation the controls that maintain combustion efficiency. Fotolectric units are mounted opposite each other on the boiler breeching, so that the beam of light traverses the flow of smoke. A predetermined increase in density of smoke operates whatever alarm or automatic control equipment is used.

Electronically Operated Relay and Control Cabinets available in three models:

MODEL No. 71A — For use where no time delay is necessary. Usually used as an alarm device, and to actuate automatic combustion control equipment.

MODEL No. 71B — Equipped with input time delay circuit to prevent needless operation of control equipment from voltage drop or short puffs of smoke.

MODEL No. 71C — Same as Model 71B plus additional time delay holding circuit to continue operation of combustion control equipment for a predetermined period of time. Prevents cycling of equipment.

FOTOLECTRIC FIRE PROTECTION

The Worner Fan Motor Stop installed on ventilating ducts detects smoke, gives alarm, stops fan to prevent fan-driven fire to a succession of outbreaks. Approved by Underwriters Laboratories. For full details, write for Bulletin 650.

PHOTOELECTRIC RELAYS AND ACCESSORIES

CR7505-K100G3 Relay

The CR7505-K100G3 photoelectric relay and accessories provide a complete line of inexpensive, but thoroughly reliable, apparatus for general-purpose indoor applications which include counting, diverting, controlling, signaling, limiting, and protecting. Underwriters Laboratories approved.

The CR7505-K100G3 includes phototube and thyatron, has a contact rating of 10 amp a-c, may be used to start 1-hp motors directly, and can operate all motor starters up to and including NEMA Size 4.

Accessories for Use with -K100G3

Cat. No. 716620 light-source transformer, rated 115 volts, 50/60 cycles, primary; 4.8 volts secondary; lens-barrel assembly CR7505-B207G1, 3 in. in diameter, for mounting directly on relay; two light sources, -C201G1 with

1½-in. lens and -C203G1 with 3-in. lens; two phototube holders with six feet of special phototube cable and a plug for connecting to tube socket in the relay, -P211G1 with 1½-in. lens, and the -P212G1 with 3-in. lens. With 1½-in. lens, maximum operating distance is 12 ft.; with 3-in. lens, maximum operating distance is 30 ft. Sensitivity of -K100G3 may be increased five times by use of B207G1 lens-barrel assembly.

CR7505-K201G1, -K202G1 Relays

These photoelectric relays will perform the same type of functions as the -K100 with greater speed and sensitivity. These relays operate on either light increase or decrease, depending on connections. The relays will operate from light flashes on interruption of 1/15 second between impulses, with not less than 1/15 second between flashes. The d-c phototube circuit permits remote location of phototube with no loss in sensitivity.

CR7505-K108G15 Relay

This device has a dust-tight, weather-resistant enclosing case for outdoor use, operates from either a 115-volt d-c or a 25-cycle supply with a power requirement of 20 volt-amperes. The cover of the enclosing case has a 3-in. lens and aperture for admission of light to the phototube. A metal visor minimizes the effects of slanting sun rays and general daylight illumination. Maximum light-source distance from phototube is approximately 35 ft. A minimum illumination of 3 foot-candles is necessary for satisfactory operation.

CR7505-N210, -N211, -N212 Relays

These three relays are similar in circuit design and are especially adapted for photoelectric applications where a device must respond to rapid light changes or high operating rates.

A time delay feature, adjustable up to ½ second by means of a potentiometer dial, is provided to delay the dropout of the magnetic relay in cases where the relay would be energized for such a short time that the period would not be sufficient to perform the external control operation desired.

The relays will respond to light changes as small as ½ foot-candle, providing there is sufficient light on the phototube.

Separate phototube holders are required for these units.

PHOTOELECTRIC RELAYS AND DEVICES

Photoelectric Accessories for Use with -K201 and -N210 Series

1. The CR7505-C200G1 light source is for general indoor application.
2. The following light sources are of die-cast aluminum construction. The -C201G1 light source has a 1½-in. lens, focusable from 2 feet to infinity. The -C202G1 has a double lens for short focus, for a concentrated spot approximately ¼ in. in diameter at a distance of 2½ - 4 in. in front of the lens. The -C203G1 light source has a 3-in. lens, with high-intensity beam for long-distance operation. The -C201G2, -C202G2, and -C203G2 are identical

in operation with the G1 group, but have rubber gaskets between the front and back covers which makes them weather-resistant and dust-tight in accordance with NEMA Standards.

4.8 volts is required for all the above light sources and the following transformers are recommended:

Light-source transformers. The 9TY51A1 is enclosed in a conduit box with knockouts for conduit connections. It is rated 115/230 volts, 50/60 cycles. The 9TM321A1 is of open-type construction, but has same rating as 9TY51A1. The 92G34 for 25/50/60 cycles is of weather-resistant construction; except for size and type of construction, rating is identical with 9TY51A1.

3. The -C208 light source is explosion-proof and can be made watertight by applying a rubber gasket which is furnished. It has a 3-in. lens and a self-contained step-down transformer for 115/230-volt operation.
4. The phototube holders are similar in construction to the light sources. The -P202G2 has a 1½-in. lens and the -P203G2 has a 3-in. lens. Both come with a 9-ft. phototube cable with spade terminals.

CR7504-A142 Electronic Timer

CR7504-A142 Electronic Timer

The -A142 timer is for timing applications of short time duration (-A142G1, 0.06 to 1.2 sec.; -A142G2, 0.6 to 12 sec.; and -A142G3, 6 to 120 sec.) where long life, low maintenance, and high repetitive accuracy is required.

The -A142 has double-pole, double-throw contacts; can be used to start f-hp motors directly. Time-range dials read directly in seconds.

Two different types of operation available; immediate-start for timing operations or delayed-start for providing a time delay. Power supply, 115/230 volts, 50/60 cycles; power consumption, 15 watts.

For complete information, consult your nearest G-E Apparatus Sales Office or Distributor, or write direct to Section 640-381, General Electric Company, Schenectady 5, New York.

CR7511-A126 Resistance-sensitive Relay

This relay is used to obtain a reliable contact from the touch of two conductors through which only small currents flow. It will operate motors, lights, contactors, and solenoids whenever there is sufficient change in the resistance of a circuit, including liquid-level-control applications. In this way, large amounts of power can be controlled from a low-current high-resistance input.

It has 10 amp a-c contact rating, two single-pole, double-throw contacts for controlling two independent circuits. Enclosure is weather-resistant and dust-tight.

CR7505-R201G1 Smoke-density Indicator

This control and associated equipment can be used to indicate smoke density, gas density, or the density of any fluid where density is directly related to the light transmission through the fluid. It can be used to warn furnace operators of excessive smoke conditions, to turn on blowers or relevant equipment at any smoke-density level, and when used with a suitable recorder, a continuous permanent record of smoke density is always available.

The indicator has a semi-dust-tight enclosure (NEMA Type 1A) and an industrial-type relay, 45 amp make-break and 10 amp carry, at 115 or 230 volts, a-c. Simple calibration adjustments are made with four locking-type knobs on the panel, while indicating lights and a smoke-density instrument are on the front cover of a panel.

CR7505-B100 Photoelectric Relay and -C105 Light Source

The CR7505-B100 incorporates a tuned circuit which allows the relay to be responsive only to a light beam modulated at approximately 900 cycles per second. Hence, it is insensitive to changes of natural or artificial light.

The CR7505-C105 contains a light-source lamp, a transformer, and a motor-driven slotted disk which "chops," or modulates, the light beam at approximately 900 cycles per second.

When operating at distances of 1000 ft. or less, this equipment in general has sufficient sensitivity so that the light from the source must be reduced twenty times before the relay will drop out. This helps reduce false operation caused by adverse weather conditions. Both units are mounted in outdoor enclosures.

The units operate on 115/230 volts, 60 cycles, a-c. Contacts are rated 10 volts, 115/230 volts, a-c. The relay is provided with a sensitivity control for adjustment for particular light path distance.

GENERAL

DRY BATTERIES

GENERAL dry batteries contain many outstanding advancements such as extra heavy seamless extruded zinc cups, the famous paper thin separator permitting more mix and more active zinc area by utilization of the cell bottom, the curled rim lock seal which seals each cell individually. These features, found only in Generals, assure long shelf life as well as the maximum in dry battery performance.

GENERAL A & B RADIO FARM PACKS

General A-B packs are made with L size cells: in the A section. These cells are 40% longer than the largest conventional 1 1/4" diameter cell. This construction assures the perfect balance between these "A" and "B" sections for current drains established by the Radio Industry.

CLAMPIPE GROUND CLAMP

No. 58

The best ground clamp value on the market. Applicable to pipe 3/8" to 1 1/2" outside diameter.

Packed 10 in a box
EACH NET \$0.16 LOTS OF 10 \$0.11

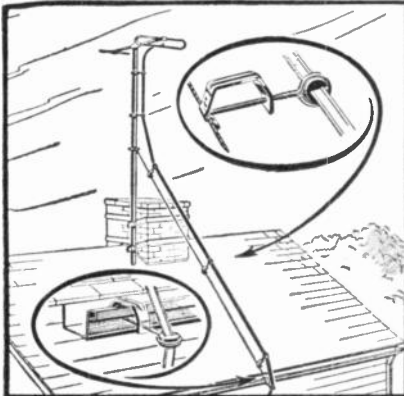

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClamPipe that cannot be found in any other make.

The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

THE "TENNA-CLAMP"

A New 3-in-1 Stand-off Insulator Clamp!

Supports TV and FM Lead-ins on MASTS, PIPES, GUTTERS and GUY-WIRES

Has same general features and specifications as Tenna-ClampPipe described above except different type clamp channeled on end to take standard guy-wire in addition to pipes.

HAS THESE USEFUL FEATURES —

- One standard size solves many lead-in problems — far more useful than straps or wire bands.
- Brings lead-in to edge of roof — right where you want it — no more "draping" of wire across the roof.
- On those high jobs, come right down a guy-wire — and get around the gutter in the clear.

TAPE RECORDER INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorders, Wire Recorders, Dictating Machines, Radios, Public Address Systems, Amplifiers, Electric Razors, Record Players, Mix-masters, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, and Planes. Ideal for Emergency Lighting.

This group of ATR Inverters is especially recommended for use with standard A.C. operated tape or wire recorders, dictating machines, radios, amplifiers, and similar electronic equipment, being exceptionally well filtered to insure interference free radio reception. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Tape Recorder Inverters are recommended only for use with loads having power factors in excess of 70%. ATR Inverters should be used only for the applications as outlined above.

GERMICIDAL LAMP INVERTERS

Specially Designed for Operating Standard A.C. Germicidal Lamps from Storage Battery Voltages in Trucks, Buses, Boats, Trains, and Planes.

This group of ATR Inverters is especially recommended for use with standard A.C. operated germicidal lamps providing protection against bacteria and mold spores in perishable food areas or hospital-like areas in trucks, boats, planes, and trains. Bacteria and mold spores cause losses of millions of dollars each year through spoilage, contamination, and added maintenance costs. Effective control of air-borne germs, bacteria and mold spores by use of germicidal lamps is widely used in processing and packaging of fresh food products. This same protection against contamination during delivery is now possible using germicidal lamps operating from an ATR Inverter connected to D.C. Storage Battery Power. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet long-life operation. These rugged, efficient, little power houses are self-maintaining — require no warm-up. They change your D.C. battery power to 110 volt A.C. (household type) power instantly and quietly. ATR Inverters are fully protected and are big enough to do a proper job and small enough to fit most anywhere. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters (except Model LIG) also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads, and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. The battery current consumption required is normally less than that drawn by ordinary automobile headlight(s). These ATR Inverters should be used only for the application as outlined above.

SHAV-PAKS

Specially Designed for Operating Standard A.C. Electric Shavers in Automobiles, Buses, Trucks, Boats, and Planes.

ATR SHAV-PAKS are miniature DC-AC Inverters designed especially for the operation of standard A.C. electric shavers from 6 or 12-volt storage batteries in automobiles, buses, trucks, boats, and planes. They are ideally suitable for traveling salesmen, executives, sportsmen, and all owners of electric shavers. The ATR SHAV-PAK very simply plugs into the cigarette lighter receptacle on the dash and changes the D.C. battery power to standard 110-volt A.C. electricity for the operation of electric shavers anywhere! The ATR SHAV-PAK may also be used for operating other small A.C. devices having a wattage requirement of not more than 15 watts such as flea power timing motors. ATR SHAV-PAKS are equipped with ATR plug-in type vibrators which will give many years of satisfactory and dependable service.

**Line Voltage Adjuster and
Isolation Transformer**

Capacitor-Resistor Tester

The Mallory Line Voltage Adjuster and Isolation Transformer is designed for electric and electronic applications requiring line voltage adjustment, line isolation or low voltage, heavy current output. It is a versatile and worthwhile accessory for use in radio-TV shops, laboratories and industrial service shops.

Completely enclosed in an enamelled metal case, the LVA-2 provides: infinitely variable AC-line adjustment from 90-130 volts @ 1200 watts; an electrostatically-shielded, isolated, infinitely variable low voltage AC from 0 to 40 volts @ 4 amperes in the isolation position, and 0 to 40 volts @ 8 amperes in the common line position; and an electrostatically-shielded, isolated, infinitely variable, 90-volt to 130-volt AC output @ 350 watts. The unit is designed to operate from 105 to 125 volts, 60 cycles, single-phase. The infinitely variable common line and isolation outputs are selected in "common line-isolation" switch, and are fed to two standard AC outlets. Accurate output-voltage adjustment is afforded by the two-inch, 130 volt, AC meter. Overall case dimensions are: height-7½"; depth-5¾"; width-6½".

The CRT-1 Capacitor-Resistor Tester is a practical analyser for laboratories and production lines. It provides checking of extended resistor and capacitor ranges in addition to power factor and leakage measurements of capacitors. Inductances may be checked by the substitution method.

The CRT-1 measures resistances from 1/10 ohm to 50 megohms; capacitances from 10 mmfda. to 5000 mfd.; electrolytic capacitor power factors from 0 to 50%; paper, mica or ceramic capacitor leakage factors from .2 to 18 micro-amperes; electrolytic capacitor leakages from 1/10 to 10 milliamperes; and insulation resistances to more than 2000 megohms. Provision is also made for direct comparison of inductances such as unknown values of speaker coils, transformers, or choke coils against like units of known values. Capacitors up to 450 WVDC may be checked at their rated voltages.

Fully AC operated from 110-120 volts, 60 cycles, the CRT-1 has a built-in power supply. It comes complete with tubes. Dimensions are: 6¾" high; 5½" deep; and 10¾" wide.

Mallory 6RS25 Heavy Duty Six Volt DC Power Supply

The Mallory 6RS25 6 volt, 25 ampere rectifier type power supply is designed to replace storage battery-charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 6RS25 operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Three capacitors totaling 30,000 mfd. filter the output to less than 1 volt ripple and suppress RF and power line interference. A 0-10 volt DC voltmeter and a 0-40 ampere DC ammeter are included.

Conduction cooling of the full-wave Selenium Rectifier Cells, automatic overloading protection, and a self resetting circuit breaker insure long life.

Mallory 12RS6D Bench Power Supply

The Mallory 12RS6D is a dual purpose bench power supply designed for use on the radio service bench for operating conventional 6 and 12 volt automobile and truck radio sets. Fully AC-operated from the 115V/60 cycle line, the 12RS6D supplies rectified and filtered DC in either of 2 ranges. Range "A" supplies 0 to 16 volts at 6 amperes continuously, or 12 amperes intermittently. Range "B" supplies 0 to 8 volts at 10 amperes; or 20 amperes intermittently. Both ranges are infinitely variable from zero to maximum output to permit precise adjustment of bench test voltages. The 12RS6D is equipped with a DC voltmeter, a DC ammeter, infinitely variable voltage control, a range switch, an on-off toggle switch, automatic overload protection, primary fuse and rubber-covered line cord and plug. The rectifying system employs a full-wave metallic rectifier. The cabinet is sheet steel finished in blue enamel and measures 6¾" high, 10¾" wide and 5½" deep. Shipping weight approximately 8 lbs. Catalog No. 12RS6D \$39.95 Net

Mallory Service Bench Rectopower Supplies

Models 12RS14D and 28RS15D are designed to operate from 110-120 volts, 60-cycles, and are equipped with accurate reading DC voltmeters and ammeters, self-reclosing overload circuit breakers in the DC circuit, fuse protection in the AC circuit and an "on-off" switch. Both models are equipped with a continuously adjustable transformer-tap system to provide precise adjustment of the output voltage to any value from 0 to rated output voltage. Both models are filtered by high-capacity electrolytic capacitors.

These models are also equipped with a new, simplified automatic voltage regulating system (no relays) which keeps the output voltage relatively constant as the load changes from no-load to full load. Model 12RS14D will supply 0-8VDC @ 25A or 0-16VDC @ 14A. Model 28RS15D will supply 0-16VDC @ 30A or 0-32VDC @ 15A. Model 12RS14D \$99.50 Net. Model 28RS15D \$199.50 Net.

Mallory Vibrator Testers

The Mallory Vibrator Testers have been designed as companion units to the famous Mallory Service Bench Rectopower® Supplies 6RS10, 6RS25-1, 12RS5, 12RS6D or 12RS14D (acting as variable power supplies) to test directly, without adapters, most of the popular vibrators and all of the 6 volt passenger car radio vibrators used since 1940. Either 6X5 or 0Z4 rectifier tubes may be plugged into the front panel, thus permitting interrupter vibrators to be tested in conjunction with the rectifier tube with which they normally work in the equipment. Defective vibrators or rectifiers can readily be determined by the substitution method. Self rectifying vibrators are tested by removing the rectifier tube. Either shunt or separate drive vibrators can be tested of any frequency from 100 to 250 cycles. The condition of the vibrator being tested may be read directly from the "good-bad" meter scale. Shipping weight approximately 8 lbs.

NOW — with the RADIART SEAL VENT, the vibrator is sealed BEFORE it is used — and VENTED after it is put into use. The RED SEAL rubber-faced bakelite plug prevents formation of an insulating film on the contacts. Heat generated when the vibrator is put into service melts the wax out of the sealed vent-hole and permits air circulation . . . FOR LONGER LIFE AND EVEN GREATER PERFORMANCE!

DYNAMOTOR

**Operates 6 v. Radios
 from 12 v. Batteries**

It is now possible to operate 6 v. Two-Way radio equipment from 12 v. systems without rewiring or modifications with the New Carter Change-A-Volt Dynamotor.

Designed for long life, this dynamotor comes complete with all necessary fuses, hookup wire and relay to directly convert a 12 v. battery to a 6 v. radio supply. Model B615V for 30 watt transmitters delivers 15 amperes continuously for receive and 45 amperes for transmit. Also available in 24, 28, 32, 48 and 64 volt inputs to change directly to 6 or 12 volt and can be furnished less the fuse block, relay, switch and wiring.

Change-A-Volt can also be used as a battery equalizer when used with a double pole switch or relay for operating low volt equipment on several cells of higher voltage battery systems.

 Trade mark
GENEMOTORS

**Operates from either
 6 or 12 v. Battery Power**

The six volt storage battery, has been replaced by a 12 volt battery in many of the new automobiles. This has created a need for a dual-voltage power supply for operating mobile radio equipment . . . a genemotor unit that will operate efficiently either on 6 or 12 volts.

DUOVOLT powered mobile radio equipment may be transferred from one car to another, regardless of battery voltage, without the slightest impairment of transmitting or receiving quality, without replacement of the genemotor, and without modification of the wiring hook-up.

The 6/12 v. Carter DUOVOLT Genemotor incorporates two separate 6 volt input windings, each having its own field. Six or twelve volt operation is obtained simply by connecting the four input leads in parallel or in series. You get full efficiency at either 6 or 12 volt operation.

The DUOVOLT is the same size as standard Carter Genemotors, except for 7/8" longer length. It will fit in almost any space accommodating the standard unit, a great advantage to set manufacturers.

For NEW radio installations, specify the Carter DUOVOLT when the equipment is purchased.

**FREQUENCY CONTROLLED CUSTOM
FOR PROFESSIONAL AND
BROADCAST TAPE RECORDING**

The new Custom Converter with manual frequency control has been developed to provide a portable DC to AC power source for professional and broadcast tape recorders, heavy duty electronic measuring devices, and Tape recorder-AC motor driven camera combinations. Now for the first time, sufficient frequency constant AC power is available to operate this type of equipment from DC lines or battery source.

The rheostat control and the frequency meter are mounted in the attractive aluminum housing. A noise filter is also available in the same housing, although it is not usually necessary for operating recorders, amplifiers or other audio devices. Filtering is required when radios or other RF circuits are operated from the converter.

Convenient recessed DC male plug is furnished for 32, 64, 115 and 230 volt DC input models. 12, 24 and 28 models are equipped with heavy stranded input leads for battery connections, as shown. A flush AC mounted receptacle is supplied on all models for quick AC connections. The sturdy carrying handle allows the converter to be moved immediately after its operation, a life-saver for taping remote broadcasts.

Each model must be designed to properly match the power factor, voltage, frequency, and load requirements. Any of the Custom models can be furnished with frequency control. Model listed below has been laboratory tested and is matched to provide perfect operation. Kindly send your special requirement to the factory for prompt and careful consideration.

Carter Custom-Matched Converters for Popular Wire and Tape Recorders - Sound Projectors - Phono Motors - Television

Whenever DC to AC Rotary Converters are used to power wire and tape recorders or other similar recording equipment, the Converter AC output frequency and Converter Power Factor must be perfectly matched to the recorder load to assure proper recording and play back performance. Most wire and tape recorders are of medium Power Factor design, approximately 70%. Standard high power factor (85 to 100%) Rotary Converters therefore *will not operate* the recorders properly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load. It is imperative therefore, only factory-tested and recommended Converters be selected for wire and tape recorder operation. The equipment listed below has been laboratory-tested and the correct Carter Converter recommended for each model. Use this chart for your recorder Converter requirements. If the equipment is not listed on the chart, please write to the factory and information will be supplied, if available.

MINIATURE PULSE TRANSFORMERS For Blocking Oscillator Use

These hermetically sealed, MIL-T-27 type pulse transformers are designed for universal blocking oscillator use at repetition rates from 50 to 5000 pps.

UX-7307A and UX-7350A are identical in electrical characteristics, having two windings for 1000 ohms impedance and two windings to

match 250 ohms. To cover a wider variety of applications, the windings are arranged differently in the two transformers.

These units are also available in octal type tube bases as UX-7307 and UX-7350. Bulletin DL-K-320 gives complete information including typical circuits. Write for it.

*These units are supplied with an "L" terminal which allows connecting in the field to limit the output voltage to the applied voltage. If "L" type connection is required on other models, the "L" must be included in the type number when ordering.
†When these POWERSTATS are "L" connected so that the output voltage does not exceed the applied voltage, the frequency range is 50/60 cycles.

One Source for Voltage Control Equipment

VARIABLE TRANSFORMERS adjustable source of a-c voltage to 100 KVA

efficient • accurate • dependable

POWERSTAT variable transformers are autotransformers of toroidal core design with a movable brush tap which is rotated to deliver any desired output voltage from zero to, or above, line voltage. Glass smooth commutator surfaces and advanced winding techniques assure smooth operation and permit adjustment to a fraction of a volt. Other important features include: excellent regulation, high efficiency, conservative ratings, zero waveform distortion and rugged mechanical construction.

A wide range of standard POWERSTAT variable transformers are available for 120, 240 and 480 volt, single and three phase operation. Both manually-operated and motor-driven types are offered. The rating chart lists some of the most-called-for standard POWERSTATS. Others — specifically designed to customer requirements—are available to fulfill each application. Consult us about your specific needs.

standard types for varied applications

POWERSTAT VARIABLE TRANSFORMERS for

OIL-COOLED OPERATION

TYPE O-1126

By immersing a POWERSTAT in transformer oil, the rating above normal air operation is increased and duty in a corrosive atmosphere is possible. A standard line is offered in various ratings and sizes.

EXPLOSIVE ATMOSPHERES

TYPE X-1126

To provide safe operation in hazardous areas where a small arc or spark could cause an explosion, explosion-proof POWERSTATS are available. Standard models are approved by Underwriters' Laboratories for Class I, Group D service.

HIGH CURRENT NEEDS LIMITED OUTPUT RANGE

TYPE 2106LC

Relatively large amounts of power can be controlled by a small POWERSTAT when used in conjunction with a fixed-ratio transformer. This combination is known as a POWERSTAT Line Corrector. It can be used to correct line voltage variations to maintain a specified output voltage and to supply a limited output voltage range. A multitude of ratings are available.

STABILINE automatic voltage regulators to maintain constant output voltage made in 2 distinct types to meet each need

TYPE IE (INSTANTANEOUS ELECTRONIC)

for the most exacting control

Type IE is completely electronic in operation with no moving parts. Providing instantaneous correction, it is ideal for laboratories, test lines, as a component of other equipment . . . and everywhere that the most exacting voltage control is required. At no load, full load or any intermediate stage, constant output voltage is maintained regardless of line fluctuations. The output voltage is held to within ± 0.1 volts of nominal for wide line variations and within ± 0.15 volts of nominal for any load current or load power factor change from .5 lagging to .9 leading. Waveform distortion never exceeds 3%. Standard types are listed below. Consult us about your specific requirements.

TYPE IE51002R

TYPE IE5101R

TYPE EM (ELECTRO MECHANICAL)

for large industrial loads . . . for applications requiring zero waveform distortion and high efficiency

Type EM is an electro-mechanical device with a very sensitive detector controlling a motor-driven POWERSTAT variable transformer and auxiliary transformer. While not instantaneous, Type EM corrects faster than most other automatic voltage regulators. Highly efficient in operation, it finds widest application in controlling large industrial loads and also in electronic equipment where zero waveform distortion is essential. Features include: complete insensitivity to the magnitude and power factor of the load, no effect on system power factor, no critical adjustments and adjustable output voltage. Standard types listed below.

SO LA *Constant Voltage* TRANSFORMERS

SOLA Electric Co. • Chicago 50, Ill.

Automatic Instantaneous Voltage Regulation

SOLA Constant Voltage Transformers are static magnetic voltage regulators. They are designed to provide a constant output voltage which is unaffected by changes in input voltage. You will find, listed in the following pages, the widest range of ratings and types available from stock offered by any manufacturer.

In addition, CUSTOM DESIGNED UNITS can be manufactured in capacities from 1 V.A. to 25,000 V.A., to suit your individual specifications. When ordered in substantial quantities, they cost only slightly more than standard units of the same general size. Often, time and money can be saved by direct use or modification of a regulator from the several hundred special designs on file. Custom designs can include: SPECIAL VOLTAGE RATIOS, SPECIAL FREQUENCIES, COMPENSATION FOR FREQUENCY VARIATION, MULTIPLE OUTPUT VOLTAGES, THREE-PHASE SERVICE, and MILITARY SPECIFICATIONS.

SOLA Constant Voltage Transformers have eight distinct advantages over regulators which depend solely upon saturation of core materials for their regulating action, or electronic type regulators:

1. Response time, 1.5 cycles or less.
2. No moving or renewable parts . . . no manual adjustments.
3. Completely automatic continuous regulation.
4. Self-protecting against short circuits.
5. Current limiting characteristic protects load equipment from excessive fault currents.
6. Can often be substituted for conventional non-regulating transformers.
7. Relatively compact.
8. Provide isolation between input and output circuits.

DEFLECTION YOKES

All Stancor deflection yokes have ferrite cores and cosine distributed windings for anti-astigmatic focusing. All units with an "A" suffix have networks and extra long leads.

The networks have a capacitor across each half of the horizontal coils. There will

always be a capacitor across the "high" half of the yoke—regardless of circuit variations. Network rewiring is virtually eliminated.

All yokes have molded coil forms that automatically orient the coils to provide a minimum of "crosstalk." Shipping weight 1.0 lbs.

HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ±1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. *Poly-Pedance* units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

MULTI-PURPOSE INTERSTAGE—SPLIT SECONDARIES

May be used as a single plate to single grid, single plate to push-pull grid, or push-pull plate to push-pull grid interstate transformers. Overall ratios are 3:1, however, primaries are center-tapped and secondaries have split windings, thus providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications. †Has split secondary.

FILTER CHOKES

CHICAGO STANDARD TRANSFORMER CORPORATION

SMOOTHING CHOKES FOR D.C. POWER SUPPLIES.

Inductance varies with the amount of D.C. flowing through the coil, therefore these units have been tested under uniform conditions. They are rated at 10 volts, 60 cycles, with maximum D.C. in winding. Tolerance of plus 15% is maintained on all ratings.

SWINGING CHOKES FOR INPUT SECTION OF D.C. POWER SUPPLIES.

Inductance varies with the amount of D.C. flowing through the coil, therefore these units have been tested under uniform conditions. Swinging chokes are rated at 10 volts, 60 cycles, from maximum to 10% of maximum D.C. in windings. Tolerance of plus 15% is maintained on all ratings.

POLY-IMPEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for

matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

Testing Autoformer—Designed especially for various service and test application. Incorporates a convenient tap switch to permit variable voltages from 90 to 150 volts. It may be used to apply an overload voltage to amplifiers, radio receivers, or other electronic

devices being serviced, which will indicate and cause suspected parts to break down. Primary equipped with 6 ft. approved cord and plug. Secondary connected to female receptacle.

LINE ADJUSTING AUTOFORMERS

Stancor Line Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for altering a 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means

of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale.

TRIAD TRANSFORMER CORP.

HERMETICALLY SEALED TRANSFORMERS

LOW LEVEL AUDIO Transformers

TRIAD low-level audio transformers have been adopted as standard by many manufacturers of the finest in audio equipment. No other transformers offer such wide frequency range and such effective magnetic shielding in such small size. Shielding up to 95 db. is attained by multiple "Trialloy" cases interleaved with heavy copper

shading rings. These transformers are solidly constructed, rigidly mounted with welded stainless steel studs, and hermetically sealed to MIL-T-27 specifications. Beautiful appearance, unmatched performance, long life, minimum size, are outstanding features of these quality transformers.

TRIAD TRANSFORMER CORP.

POWER COMPONENTS HERMETICALLY SEALED

TRIAD "HS" series power components are designed to meet the most stringent operating conditions in military and commercial service. They are hermetically sealed in heavy deep-drawn MIL standard cases, rigidly mounted with brazed stainless steel studs, liberally designed with highest quality materials, and beautifully finished in baked grey enamel. Both 50-60 cycle and 380-1500 cycle designs

meet all the requirements of the MIL-T-27 specification for Grade I, Class A service. Among the qualification requirements are: 40°C maximum temperature rise, 10000 megohm insulation resistance, 10 day humidity and vibration cycle, alternate plus 85°C and minus 55°C temperature cycling. These are the finest transformers available!

Avoid redesign—Use Triad HS and HSM transformers in military prototypes.

Since Triad HS and HSM series transformers use MIL-T-27 standard sizes, plus electrical and mechanical design to meet all MIL-T-27 requirements, equipment using these transformers need not be redesigned to submit for military approval. The basically good design factors which are necessary to meet MIL-T-27 standards for performance ensure longest life in any class of service.

These transformers are permanently marked with electrical and test data as specified in MIL-T-27. All are "Climate" treated, use sturdy TRIAD terminals and are beautifully finished in grey enamel.

TRIAD TRANSFORMER CORP.

TOROIDS

TOROID COILS for WAVE FILTERS

The nearest practical approach to the perfect inductor of no resistance, no capacity, and infinite "Q," is made by winding on a pressed molybdenum-permalloy dust core of toroidal shape. Depending on size and composition of core materials, TRIAD Toroids will develop "Q"'s of greater than 200, inductance values up to 25 Henries and stability with level, temperature and humidity almost beyond belief. Standard inductance tolerance is plus or minus 1%. Values of DC indicated as permissible will not reduce inductance values by more than 5%.

TRIAD Toroids are ordinarily encapsulated in translucent plastic material, but may be obtained in a hermetically sealed case if desired. When ordering Toroids to be hermetically sealed, they will be furnished in the cases shown in the margin. List prices shown are to be added to the list price of the uncased types. When ordering hermetically sealed Toroids, order by the uncased number, followed by the letters HS. Example: EA-1000-HS. Special inductors, made to your specifications as to inductance and "Q," may be ordered from the factory. Prices on request.

These miniature blocking oscillator transformers are now in quantity production for manufacturers in a number of applications and with outstanding results. Their multiple winding construction makes them available for a variety of circuits and their fast rise time (.05 microseconds) makes them exceptionally useful. Positive hermetic sealing prevents deterioration of performance with time (absolutely necessary for long shelf life).

TRIAD TRANSFORMER CORP.

HIGH FIDELITY OUTPUT TRANSFORMERS

Hermetically Sealed HIGH LEVEL OUTPUT

TRIAD "HS" Series Output Transformers represent the application of the most modern grain techniques in the design of fine audio equipment. Use of annealed grain-oriented core materials, combined with multiple interleaved coil structures, have resulted in an open circuit inductance to leakage inductance ratio of 10,000, representing a frequency

response range of better than 13 octaves. These transformers will deliver full rated power output within 1 db. from 7-50000 cycles. Full DC plate current can be carried through the primary windings, but every effort should be made to balance the two plates in push-pull circuits to obtain optimum results at the extreme low frequencies.

AMPLIFIER KITS

For High Fidelity Reproduction

HF-3—Preamplifier and Equalizer

A power amplifier such as our HF-18 or HF-40 will deliver outstanding reproduction when supplied with one volt or more of input, as from an AM or FM tuner. From a magnetic head additional gain is needed. In addition, frequency correction is necessary to equalize various recording styles and to correct for inherent deficiencies of the room and reproducer combination.

Features of the HF-3 are:

Adequate gain to drive an HF-40 or HF-18 from any commercial pickup or microphone.
 Nine separate compensation networks to cover all standard recording systems now in use.
 Equalization of low and high frequency gain up to 22 db., either of emphasis or of attenuation. (New type of tone control circuit.)
 Completely self powered, with DC filament supply to insure minimum hum and noise background.
 Aluminum chassis limits magnetic field distribution through chassis.

HF-3 Kit

Includes complete punched sectional aluminum chassis and complete assembly instructions, plus R-56A, A-75J and two C-1X transformers.
 Net Weight, 5 pounds.

List Price \$32.80

HF-12—10 Watt Power Amplifier Kit

The HF-12 is a complete amplifier with built-in preamplifier to accommodate all crystal and magnetic cartridges. It employs a new reactance type of tone control and a complete 9 point switch to afford compensation for all types of records in common use. This kit is an improvement and elaboration of the original TRIAD HF-10 kit of which there are many thousands in use today and giving outstanding service.

This kit is a revision of the amplifier described in the article which appeared in the October 1953 issue of Radio and Television News, entitled "Improved Kappler Amplifier," by Charles P. Boegli.

Features of the HF-12 are:

Full 10 watts output from 20 cycles to 35,000 cycles.
 Frequency response linear within 1 db. from 13 to 50,000 cycles.
 Complete preamplifier tone control and record compensation for all standard recordings, on a single 8 x 12 chassis.
 DC filament supply for preamplifier tubes.
 Aluminum chassis limits magnetic field distribution through chassis.
 Noise and hum level down 68 db. below maximum full power output.

HF-12 Kit

The HF-12 kit includes a completely punched sectional aluminum chassis and complete assembly instructions, plus R-14A, C-13X, A-75J and S-31A transformers.
 Net weight, 14½ pounds.

HF18—"Williamson Type" All Triode Amplifier

The "Williamson Type" amplifier has a deserved reputation for quality of performance among high fidelity enthusiasts. Its quality is superb and its performance outstanding with extended frequency range and exceptionally low distortion.

With TRIAD transformers, the "Williamson" shows even wider frequency range with lower distortion. This unit is ideal where higher power is needed.

The output tubes may be operated as pentodes and the screens fed from taps on the output transformer. This will increase the output power to 22 watts with very little increase in distortion. The S-148-A, HSM-189 and HSM-190 transformers have the proper screen taps for this type of operation.

Features of the HF-18 are:

Full power output of 16.5 watts for triode operation or 20 watts for pentode operation from 12 to 60,000 cycles.
 Frequency response linear from 7 cycles to 80 kc. within 0.2 db.
 Distortion under ½% from 20 cycles to 45 kc.
 Aluminum chassis limits magnetic field distribution through chassis.
 Noise and hum approximately 80 db. down from maximum level.

HF-40—40 Watt Auditorium Amplifier

Improved amplifier techniques as exemplified in the HF-12 and HF-18 have seldom been applied to higher power units. However, peak powers in ordinary home listening often exceed the capacity of these amplifiers for short periods of time and increased power is desirable for those who desire the utmost in fidelity.

At least two manufacturers of "Stereophonic" sound for theatres have adapted this amplifier as standard for theater installation where the extreme stability made possible by the regulated power supply is of great value.

Features of the HF-40 are:

Regulated screen voltage and fixed bias voltage permit unchanged performance under wide variations in line voltage and loading.
 Full power output of 40 watts from 20 to 40,000 cycles. Peak power of 55 watts available.
 Frequency response 10 to 40,000 cycles within one db.
 Distortion under 1% from 18 to 40,000 cycles at full power output.
 Aluminum chassis limits magnetic field distribution through chassis.
 Noise and hum down 75 db.
 Net Weight, 35½ pounds.

TRIAD power components are liberally designed to best meet average design specifications and to ensure maximum utility for each design. All units are beautifully finished in baked grey enamel and have all connection data permanently marked on the case.

All types are "Climatite" treated, both coil and core, for p-tection against moisture and for elimination of lamination chatter. Although they are small in size, the high quality materials used keep losses to a minimum and hold temperature rise below 55° C. Only copper foil static shields, grounded to the case and core, are used. Leads are of a type approved by UL for high temperature operation.

AUDIO COMPONENTS

This series of medium-priced audio components is designed to fill demands in public-address, amateur and replacement equipment. All items are designed to give an absolute maximum of performance possible in the size allowed. Workmanship and manufacturing techniques are identical with those used in the most expensive TRIAD transformers and only "Climatite" vacuum impregnation is used.

MODULATION TRANSFORMERS—THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

PLATE TRANSFORMERS—THE "SEVEN" SERIES

All SNC plate transformers have dual secondary ratings. Most units available in either air cooled or compound filled cases. All units contain electrostatic shields between primary and high voltage windings.

FILAMENT TRANSFORMERS—THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

K-241-D ⊕	Frequency response, ±1 db: 10-30,000 cps. Primary balanced to attenuate longitudinal currents in excess of 50 db. Sec. may be used single ended or in P-P. Has 2 sec. windings with bal. cap. to grd. Electrostatic shield is provided between pri. and sec. Has 90 db electromagnetic shielding. Insertion loss 1 1/4 db. Transformer will operate into open circuit or resistive load. Frequency resp. down less than 1 db at 15 KC, when operated into resistive load shunted with 120 MMFD, cap. S-217-D ⊕ Line Level	Frequency response: ±1 db: 5-65,000 cps. Pri. may be used single ended or P-P. Sec. windings have bal. cap. to grd. Has C.T. tertiary of 24.5 ohms which may be used for feedback or grnded. for electrostatic shield. Parallel feed is required. Astatic balance and electromagnetic shield provide approx. 50 db of shielding. Insertion loss 0.5 db. Transf. may be used as excellent input transf. to either single or P-P grids. When used this way, balanced low impedance winding provides excellent line termination.	+20 dbm	12,500 3125	600-300 150-75 Tert—See Data	25	0	3 3/8	1 1/2	2	1 1/4	\$56.50

As a Hybrid Transformer	This precise matching transf. is an excellent hybrid unit for operation from two 250/300 ohm sources. Balancing resistor of approx. 125/150 ohms required in pri. circuit. For max. attenuation between sources the exact value of resistor should be determined from measurements made in circuit where transf. is used. Correct value will yield average attenuation of 27 to 30 db with a max. attenuation of approx. 50 db at some point between 500 cps and 1,000 cps. Over-voltage connection (0 to 17% above line voltage) or line voltage connection is available to the user by the type of connections made, however, line voltage connection on Types 1500B and 1520B must be specified.

† Ganged units of these types when connected for over-voltage operate from 60 cycle service only.

‡ Output current reduces to approx. 44% at full voltage.

STACO Transformers are compact and modern in design. Only the highest quality silicon lamination steel is used which assures cool operating transformers. Each coil is layer wound with the best quality enameled wires, each layer is insulated with heavy insulating material, each coil is varnished impregnated and high temperature baked. High Voltage Breakdown Test is performed on each coil and transformer in accordance with existing RMA Specs. This combination of high quality materials plus the finest workmanship is assurance of better and lasting performance at highest operating efficiency, yet costs no more than average.

Finishes: Mount type #1, Black baked enamel, Mount type #2, Black baked enamel, Mount type #3, Natural Buffed Aluminum, Mount type #4, Black Wrinkle baked enamel.

Modern high fidelity broadcasting and transcription apparatus require the utmost performance and reliability in the audio transformers used in their circuitry. The Freed "Quality Grade" audio transformers are wide band, high fidelity components featuring astatic construction, longitudinal balance, low harmonic distortion, uniform response, high efficiency, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished by use of humbalanced coil structures and multiple alloy shielding. High fidelity is achieved on every tap of universal impedance winding without line reflection of transverse coupling.

All Quality Grade Components are thoroughly impregnated in a special non-hygroscopic varnish, and fully encapsulated in a moisture proof, high-melting point compound.

Ask your Freed distributor or write for bulletin No. 5402. This bulletin contains detailed construction and performance characteristics of this unique amplifier.

FREED FILTERS

Freed Standard Filters are Hermetically Sealed miniature high performance components designed for both production and laboratory apparatus in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics.

Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters. The standard filters are available in Low Pass, High Pass and Band Pass Filters.

LOW PASS FILTERS: The attenuation characteristics of Low Pass Filters are 6 db at cut-off frequency, 35 db at 1.5 cut-off frequency and 40 db at 2 cut-off frequency.

ILP—Interstage Low Pass Filter. Characteristic impedance 10,000 ohms.

LLP—Line Low Pass Filter. Characteristic Impedance 10,000 ohms.

HIGH PASS FILTERS: The attenuation characteristics of High Pass Filters are 6 db at cut-off frequency, 35 db and 40 db at 0.67 and 0.5 cut-off frequency.

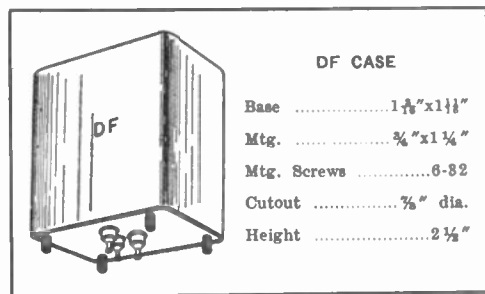

IHP—Interstage High Pass Filter. Characteristic Impedance 10,000 ohms.

LHP—Line High Pass Filter. Characteristic Impedance 500-600 ohms.

BAND PASS FILTERS: The attenuation characteristics of Band Pass Filters are 2 db at plus or minus 3% of center frequency, 40 db at 0.5 and 2 center frequency. Special filters in all six types are available for any frequency from 300 to 20,000 cycles.

IBP—Interstage Band Pass Filter. Nominal input impedance —10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1.

LBP—Line Band Pass Filter. Nominal input impedance 500-600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage gain 9:1.

DETAILS OF NEW EQUIPMENT LINE MOUNTINGS

H-TYPE MOUNTING—Hermetic sealing meets all MIL-T-27 specifications. Steel base cover is bonded into the case by deep-seal soldering. Terminals are hermetically sealed by unique rubber gasket—ceramic bushing construction. Units are stud mounted.

C-TYPE MOUNTING—Moisture-resistant compound surrounds coil and core. Ten-inch, RMA-color-coded leads, ends stripped and tinned for easy soldering. Flange-mounted drawn steel cases.

S-TYPE MOUNTING—Precision-fitted steel base-covers and terminal boards, plus compound filling, keep moisture out. Solder-lug terminals are clearly identified, easy to use. Drawn steel cases are flange-mounted.

B-TYPE MOUNTING—Steel bases are bonded into the drawn steel cases by deep-seal soldering to make units completely moisture proof. Stud-mounted cases take minimum chassis space. Convenient, compact, pin-type terminals.

NEW EQUIPMENT AUDIO TRANSFORMERS

CHICAGO STANDARD TRANSFORMER CORPORATION

TRANSISTOR TRANSFORMERS

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power. Write for Bulletin 462 showing typical circuit application.

These transformers are designed primarily for transistor audio application but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations. Mounting style is coil and iron only, type UM.

SPECIAL Chicago-Stancor ultra-miniature transistor transformers, designed and built to your requirements, can be supplied in quantities of five or more. Send your specifications for information on price and delivery.

MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Chicago-Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in 1/8" square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1 1/4". The case has two 2-56 threaded inserts, 1/16" centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces.

PUBLIC ADDRESS RANGE TRANSFORMERS

Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers.

(16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS

HF Series

These units have a wide frequency response of 20 to 20,000 cps with ± 1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Chicago-Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

Low Pass Filter No. LPF-1

For attenuating frequencies above 3,000 cycles in low level speech amplifiers. Operates out of a 15,000 ohm source, e.g., the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to -8 db. Complete with operating instructions. S type mtg. Case size 13. (See pg. N-54).

ISOLATION TRANSFORMERS

CHICAGO Isolation Transformers are designed for a dual purpose: (1) To supply 115 volts isolated from a line of above/below normal, or normal, voltage—primary switch sets for 125/115/105 volts, 50/60 cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground (particularly important on "hot" AC-DC television sets). Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

LINEAR STANDARD AUDIO TRANSFORMERS

LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leakage reactance.

UTC LINEAR STANDARD transformers are the **ONLY** audio units with a **GUARANTEED** uniform response . . . ± 1 DB from 20 to 20,000 cycles.

MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semi-toroidal, coil structure which affords maximum neutralization of external fields. In addition, all units employ high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in X employ multiple alloy shielding, making possible a transformer with extremely low inductive pickup.

NEGLECTIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching, minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortions at 30 to 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value, generally 7 cycles to 50,000 cycles (see page N-101).

MULTIPLE TAP WINDINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of .1% . . . perfect balance of inductance and capacity . . . exact impedance reflection.

DEPENDABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole will clear all terminals. Coils are vacuum baked and impregnated. **Semi-hermetic sealing** is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

LS OUTPUT TRANSFORMERS THE FINEST

While the UTC Linear Standard line is generally designed for a flat response from 20 cycles to 20 Kc., a much wider response is required for output transformers. As is noted in the first curve below, typical UTC output transformers are down less than 1 dB at 10 cycles and less than 1 dB at 40 to 60 Kc. Because of this, a fine power output curve is possible. (Second curve.) The third figure below illustrates square waves obtained with the LS-63 transformer in a "Williamson" Amplifier Circuit. Of particular interest is the short rise time, which is far superior for UTC transformers than any standard make which we have measured.

In choosing power components for broadcast and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise, 40°, and high insulation safety factors. Only the finest of materials and workmanship are used throughout.

The low power components of the Linear Standard series are housed in the familiar rectangular LS case with top or bottom mounting facilities. High power components are housed in end castings which completely protect the winding, while directly exposing the laminations for maximum heat transfer.

All units have a deep grey finish to obtain the highest heat radiation coefficient. Large components (up to 250 KVA) are housed in oil tanks.

HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

ULTRA COMPACT AUDIO UNITS

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing-coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level $+7$ DB.

OUNCER AUDIO UNITS

STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing $\frac{7}{8}$ " diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform within approximately 1 DB from 30 to 20,000 cycles, except for O-14, O-15, and units carrying DC which are intended for voice frequencies. Maximum level 0 DB.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

This transformer provides very low hum pickup . . . employs two heavy gauge hypermalloy shields plus orientable mounting. Primary centertap is balanced to 1%. Can be used for 150, 200, 250, 500, or 600 ohm sources . . . 200:1 impedance ratio.

MICROPHONE CABLE TRANSFORMERS

UTC Cable transformers are designed to be inserted in the cable circuit, and are ruggedly constructed to withstand mechanical abuse. The cable connections (supplied less cable) are made through spring strain relief to terminal boards inside the end caps. $1\frac{1}{2}$ " diameter . . . $2\frac{1}{2}$ " long . . . $\frac{1}{2}$ lb.

Type MC-1—primary tapped 30/50 and 200/250 ohms, secondary to grid, standard fidelity.
Type MC-2—primary tapped 30/50 and 200/250 ohms, secondary to grid, high fidelity.

HERMETICALLY SEALED COMPONENTS

For over fifteen years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to latest military specifications, which are now catalogued as UTC stock items.

Terminals on items H-20 through H-24 are neoprene-ceramic assemblies. All other units employ glass bead headers, but can be supplied with neoprene-ceramic terminals where required. For printed circuit use, wire terminals on glass header units can be straightened out without injury. Straight wire terminals available on production orders.

The frequency response ratings are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown.

The level ratings are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible.

The impedance ratings are listed in standard manner. Obviously, a transformer with a 15,000 ohm primary impedance can operate from a tube representing a source impedance of 7700 ohms, etc. In addition, transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce frequency range and level rating.

HERMETICALLY SEALED PULSE TRANSFORMERS

Because of the wide variety of blocking oscillator, interstage, and modulator pulse applications, the bulk of UTC pulse transformers are designed to customer's specifications. Through versatile design, however, the stock pulse transformers listed below take care of most low level applications. The units are hermetically sealed and tested to MIL-T-27 Specifications. Wide ranges of pulse duration, loading, and level are obtainable by variations in the manner of connecting the balanced coil structure windings. An engineering sheet accompanies each unit, providing data for typical applications.

The H-40 and H-41 units employ identical windings suitable for different applications because of the manner in which the windings are brought out to the terminals. These units have two windings for 250 ohm impedance, and two windings for 1,000 ohm impedance. Pulse widths from .1 to 5 microseconds are realized with excellent fidelity. At 5 microsecond operation the maximum working voltages for the H-40 and H-41 are 175 volts peak for 250 ohms . . . 350 volts for 1,000 ohms. These voltages can be increased at lower pulse widths.

H-42 and H-43 are highly miniaturized hermetically sealed . . . MIL-T-27 units. They incorporate three equal windings capable of being inter-connected for wide versatility in blocking oscillator, interstage, and impedance matching service. The wound Hipermalloy core is uncut to effect maximum efficiency. Peak working voltage is 175 volts per winding.

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27 and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as a 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the MAGNETIC STRUCTURE is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift. (The chart values shown are approximate.)

For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

NEW "M" TYPE TOROIDS

**MAXIMUM Q
MINIMUM SIZE**

UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The MQ series of coils provide the highest Q factor in their class (see curves below), with miniaturized dimensions. All units are hermetically sealed to MIL-T-27 Specifications

The stability is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

Other values of inductance than those listed are available on special order at the price of the next higher listed value.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +85%, -45% from mean value is obtainable. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1 1/2" long, 1 1/4" wide and 1 1/4" high with mounting centers on terminal board side 1 3/8" by 2 3/8". Weight is 5 1/2 oz.

UTC variable inductors have served as the ideal solution to many filter, oscillator, equalizer, and tuned amplifier problems—for over a decade. Extended development has now made possible the new HVC series of inductors with improved characteristics. They are hermetically sealed to MIL-T-27 specs... extremely compact... wider inductance range... higher Q's... lower and higher frequencies... superior voltage and temperature stability.

Adjustment of set screw in top of case permits changing inductance +300% +0 -70% of nominal value shown. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical HVC unit. Case dimensions are 1 1/2" long, 2 3/8" wide 1 3/8" high. The two terminals and two 4/40 mounting studs are on opposite diagonals—1 3/8" spacing.

LOW FREQUENCY HIGH Q COILS

Permalloy dust toroids are not suited to providing high Q at low frequencies. The MQL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional Q and stability. Inductance values are laboratory adjusted to 2% tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than 1% from .1 V. to 1 V. 60 cycles. Temperature stability is exceptional, total inductance swing being less than 3.5% for the wide range of -55°C to $+85^{\circ}\text{C}$. A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup . . . 240 microvolts/gauss for MQL-3 series connected. Two identical windings brought out to four terminals permit series, parallel, center tapped, or transformer type connections.

HIGH Q PRECISION INDUCTANCE DECADES

UTC DI inductance decades are invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. They set new standards of Q, stability, frequency range, and convenience. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The switch employed is a new low capacity type which lab tests have proven for low contact resistance after 100,000 operations. The inductance values are laboratory adjusted to better than 1% precision.

DI inductance decades are housed in a compact, rugged, die cast case with control on a sloping panel, ideally suiting these units to laboratory use. Ganging panels are available for mounting two, three, or four decades together. It is merely necessary to unscrew the four rubber feet at bottom of decade to attach to panel.

UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simultaneously with their frequency discrimination.

BMI units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attenuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid.

HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms.

LMI units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency. Input and output 10,000 ohms.

HML (High Pass), and LML (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms. BML (Band Pass) have input of 500/600 ohms, output to grid.

All of the standard filters are housed in hermetically sealed cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.

In addition to the stock filters listed, any of the six types are available as special units for any frequency from 100 to 12,000 cycles. Order by type followed by frequency, as LMI-2500, designating low pass interstage filter—2500 cycles cutoff frequency. These special units are priced at \$35.00 net.

BROADCAST AND RECORDING EQUALIZERS AND FILTERS

500/600 ohms

3AX UNIVERSAL EQUALIZER

The universal characteristics of the UTC 3AX equalizer have made it the most popular item for broadcast and recording equalization. This unique unit, with which most communications engineers are already familiar, is an accurately calibrated, quickly adjustable, combined low and high frequency equalizer. The low frequency controls include a switch for adjusting the maximum equalization frequency to 25, 50, or 100 cycles and a calibrated T-pad for exact adjustment of the amount of equalization. The high frequency portion of this unit includes a switch to set maximum equalization point at 4000, 6000, 8000, 10,000 or 15,000 cycles, and a similar calibrated control reading directly in DB. Equalization up to 25 DB available at any frequency selected.

Through a unique arrangement of compensating pads, changes in adjustment of the 3AX equalizer do not affect the apparent aural level. This permits changes in tone color, with negligible change in volume. Where rapid changeover is required in service from one line to another, or from recording to play back, it is merely necessary to predetermine the required setting. The actual adjustment of the controls can be taken care of almost instantaneously. The construction is of the depressed chassis, etched panel, rack mount type. Thoroughly shielded against inductive pickup with UTC Trialloy Shielding. Dimensions of panel 3 1/2" x 19". Depth 7 1/2". Weight 15 lbs.

TYPICAL CURVES OBTAINABLE WITH 3A OR 3AX EQUALIZER

3A UNIVERSAL EQUALIZER

The 3A equalizer is identical to the 3AX described above, except that it does not incorporate the compensating pads for constant insertion loss. The insertion loss is roughly proportional to the amount of equalization employed. All other characteristics identical with the 3AX unit, this item weighs 10 lbs.

4C SOUND EFFECTS FILTER

The use of filters to obtain unusual sound effects is now finding wide application in broadcast technique. The Model 4C Filter was originally developed for one of the large broadcasting chains, and is now used extensively by most broadcast stations. Two controls are provided by the 5 1/4" x 19" panel, which is similar in appearance to the 3AX unit. The weight of the 4C unit is 20 lbs.

The low pass switch can be set for cutoff frequencies of 100, 250, 500, 1000, 2000, 3000, 4000, or 5000 cycles. The high pass switch has identical frequency points. The great number of cutoff frequencies provides for a wide latitude of tone control. If desired, though not normally necessary, external potentiometers may be inserted in the circuit for attenuation control.

COMMERCIAL GRADE COMPONENTS

The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. Type numbers are identical with the PA units except for the prefix "CG."

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear, $\pm 1\frac{1}{2}$ DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

NEW UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest developments in design and manufacture, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency controls permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium-mu triode stage will provide both proper gain and source impedance. The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

2, 4, 5, 6, 12, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5, 5, 5.5, 6, 6.25, 6.6, 7, 7.5, 8, 9, 10, 11, 12, 14, 15, 16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75

Where speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

CG VARIMATCH LINE AUTOFORMERS

COMMERCIAL GRADE COMPONENTS

CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load. The ever increasing number of vacuum tubes available for audio and RF applications has increased the difficulty of obtaining transformers suitable for matching to the various correct tube loads. If a standard transformer having a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is inevitable. While a 20% mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflected to the tubes. The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Designs provide temperature rise less than 55 degrees C. Units are tested for breakdown at twice maximum working voltage plus 1000 volts. Plate transformers are given a surge test of 250% normal voltage at 200 cycles. All items are vacuum impregnated and sealed with special insulating compound. The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service.

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, GG or LS grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

REPLACEMENT TYPE COMPONENTS

UTC replacement type transformers (Pri. 117 V. 50/60 cycles) represent the culmination of years of development in this field. All units are low temperature rise, vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel.

SIGNALLING AND CONTROL TRANSFORMERS

Primary 119-120 volts, 50/60 cycles—Secondary 4, 8, 12, 16, 20, 24 volts

High power transformers suitable for operating relays, sirens, horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

SUBOUNCER UNITS

FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

UTC Sub-Ouncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

SUB-SUBOUNCER UNITS

FOR HEARING AIDS AND ULTRA-MINIATURE EQUIPMENT

UTC Sub-SubOuncer units have exceptionally high efficiency and frequency range in their ultra-miniature size. This has been effected through the use of specially selected Hiperm-Alloy core material and special winding methods. The constructional details are identical to those of the Sub-Ouncer units described above. The curves below show actual characteristics under typical conditions of application.

REVOLUTIONARY LINEAR STANDARD AMPLIFIER

NEW HEIGHT OF FIDELITY 20 WATTS...KIT FORM

The Linear Standard amplifier climaxes a project assigned to our audio engineering group a year ago. The problem was, why does a Williamson circuit amplifier which tests beautifully in the laboratory seem to have considerable distortion in actual use? It took a year to fully determine the nature and cause of these distortions and the positive corrective measures. This new amplifier not only provides for full frequency response over the audio range but, in addition, sets a new standard for minimum transient dirtortion.

An inherent weakness of the Williamson circuit lies in the fact that its negative feedback becomes positive at subsonic and supersonic frequencies. The resultant instability in use lends to parasitic oscillation at the high end and large subaudio cone excursions both of which produce substantial distortions. The Linear Standard Amplifier uses Multiple Loop Feedback and network stabilization to completely eliminate these instabilities. The oscillograms below show comparative performance. The flat frequency response and extremely low intermodulation distortion provided by 36 db feedback, are self evident from the curves shown.

In addition to providing an ideal amplifier electrically, considerable thought was given to its physical form. A number of points were considered extremely important: (1) Size should be minimum (power and audio on one chassis). (2) Each kit must have identical characteristics to lab model. (3) Rugged, reliable, structure is essential.

This resulted in a rather unique construction employing a printed circuit panel as large as the chassis with virtually all components pre-assembled and wired. The result is that each kit, which comes complete, including tubes and cover, can be fully pretested before shipment. Additional wiring involves only the connection of 17 leads to screw terminals for completion.

TINYFORMERS

"The Most Efficient of All"

OPEN TYPE TINYFORMERS

Part numbers M1 thru M10

Preferred and specified as standard equipment by leading manufacturers of miniature electronic devices. Available in 7 types, each heat sealed in a cellulose acetate envelope, contained in fibreglass box with Chart Sheet that gives frequency in cycles, response in decibels and complete details.

MU-METAL SHIELDED TINYFORMERS

Part numbers M1-S thru M7-S

Mu-Metal Shielded Tinyformers are for use in closely coupled or high gain circuits. Hum level can be reduced 18 to 20 db. Tiny size, extreme lightweight (104 per pound) are made possible by fine wire, precise nylon coil forms and high-nickel alloy high-Q cores. Supplied in satin finish with flexible color coded leads. The Mu-Metal Shielded Tinyformer is potted in a non-hygroscopic compound for excellent moisture and humidity-proof construction.

HERMETICALLY SEALED TINYFORMERS

Part numbers M1-H thru M7-H

Hermetically sealed to Mil-T-27, Grade 1, Class A. Glass sealed 1/8" high terminal construction.

Tinyformer is encased and sealed in metal container with a black satin finish. Mounts with one #3-48 stud, 3/16" long and is supplied with lock washer and nickel plated hex nut.

GRAMER TINYFORMER

transformers are designed for highest efficiency in transistor circuits. Tiny size and extreme lightweight are made possible by fine wires, precise nylon coil forms and high-nickel alloy high-Q cores. They are attractively packaged for quick sales.

Fixed Ceramic Capacitors

Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temperature change can be tolerated. ZT is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from -55°C to 85°C. NT is negative temperature type with a negative coefficient of 750 parts/million/degrees C. These capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radially placed bare, tinned-copper leads approximately 1 1/4" long.

Voltage Rating—600VDC.

Instructions for use of RETMA Color Code

Hold capacitor with arrow pointing to right. From left to right, the first dot shall always be white to indicate standard RETMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.

Example shown above = 1300 mmfd. ±2%, 500 V.W.

The key to color significance is as follows:

Color	Sig. Fig.	Mult.	Tol.	Class.*
Black	0	1	±20%	A
Brown	1	10		B
Red	2	100	± 2%	C
Orange	3	1000	± 3%	D
Yellow	4	10000		
Green	5		± 5%	
Blue	6			
Violet	7			
Gray	8			I
White	9			J
Gold		0.1		
Silver		0.01	±10%	

* Denotes various electrical characteristics.
Voltage ratings vary with capacitance as shown in RMA Specification—April, 1946.

METAL-CLAD AND TANTALYTIC CAPACITORS

SUBMINIATURE METAL-CLAD TUBULAR CAPACITORS

Subminiature metal-clad tubular capacitors are available with Permafil solid dielectric for operation from -55°C to $+125^{\circ}\text{C}$, or with Pyranol* liquid dielectric for operation from -55°C to $+85^{\circ}\text{C}$, without derating. Silicone end seals of all-welded construction provide maximum resistance to thermal and physical shock and permit soldering up to the bushing without danger of seal damage. Butt-welded leads can be supplied either axially or at right angles. Permafil units combine small size and no liquid leakage with high insulation resistance and ability to withstand extreme temperature cycling. Pyranol units are 20 per cent smaller than comparable oil-filled capacitors.

Both types meet performance requirements of MIL-C-25A and can be supplied in standard case sizes in either tab or extended foil designs. Ratings range from .001 to $1.0\ \mu\text{f}$ in voltages of 100, 200, 300, 400, and 600 dc working.

Write for Bulletin GEC-987.

TANTALYTIC CAPACITORS FOR LOW-VOLTAGE USE

The Tantalum capacitor is designed for certain direct-current applications up to 150 WVDC where aluminum electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior characteristics and ultimate size reduction in the high quality electrolytic field are of prime importance.

This capacitor is a tantalum-electrode, electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but smaller in size because of the characteristics of the tantalum. The Tantalum capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (-55°C to $+85^{\circ}\text{C}$), without derating, than the conventional aluminum electrolytic capacitor. Tantalum capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

MICRO-MINIATURE TANTALYTIC CAPACITORS

Micro-miniature Tantalum capacitors are designed for low-voltage d-c applications where long shelf life, electrical stability, and ultimate size reduction are of prime importance. Widely used in hearing aids and other subminiature assemblies employing transistors, micro-miniatures are rated as high as 4 volts, $8\ \mu\text{f}$ in the $\frac{1}{16}$ -inch case; higher ratings can be achieved in the $\frac{1}{8}$ -inch case. Capacitance tolerance for all units is $-0\% +100\%$.

The micro-miniature employs a tantalum anode enclosed in a silver case and impregnated with a nonacid electrolyte. A synthetic plug is roll-pressed into the end of the case and a solderable tin-coated nickel lead is lap-welded to the projecting tantalum anode lead. This permits connection up to the bushing. The case itself is the cathode and is equipped with a tin-coated nickel lead soldered to the case. The unit is of the polarized type.

CAPACITORS TO MEET MILITARY SPECIFICATION MIL-C-25A 100 to 12,500 Volts D-c — 0.01 to 15 Microfarads

CP 53, 54—Bathtub style CP 70—Large Rectangular
CP 61, 63, 65, 67, 69—Miniature Rectangular

Intended primarily for feeder, by-pass, and blocking purposes, these units are qualified for applications where the alternating-current component of the impressed voltage is small with respect to the direct-current rating.

All case styles are available in Characteristics *D*, *E* and *F*. Single-section units are supplied with a capacitance tolerance of ± 10 per cent (K), and two- and three-section units with a capacitance tolerance of ± 20 per cent, -10 per cent (V). Spade-lug and footed mounting brackets are available for use with capacitors on which the mounting bracket is not an integral part.

In addition to their regular applications, these units may also be used at higher temperatures, with higher voltages for short-life applications, and with a-c voltages.

CAPACITOR NETWORKS

These capacitor networks are designed for radar and industrial equipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required.

General Electric pioneered in the development of mineral-oil-treated paper dielectric capacitor networks for air, sea, and land radar, and is a prime supplier for the government services. The products supplied vary from the miniature types in use with aircraft and guided missiles to the large designs for land-based radar.

STANDARD COMMERCIAL TYPES

For A-c and D-c Applications — Fixed Paper-dielectric Capacitors

A-c/d-c dual-rated Pyranol capacitors for motors, controls, luminous-tube transformers, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol, its use as a treating material has made possible a capacitor which is much smaller in size, and far superior to those formerly available.

Design Advantages

- (1) Units are small and compact, because of the use of Pyranol.
- (2) A wide range of ratings is available in rectangular, cylindrical, and oval cases.
- (3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

Case Style 70

Case Style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed paper-dielectric capacitors in Case Style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-capacity construction, with a capacitance tolerance of ± 10 per cent. Cases are isolated and the two bushings are brought out through the cover. Units in 600-, 1000-, and 1500-volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar-

Case Style 60

These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Removable-type mounting lugs are of very sturdy construction.

These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

The metallic containers are hermetically sealed, and of deep drawn construction.

Case Style 60 units have no brackets, but removable brackets of either the footed or spade-lug type can be supplied.

CAPACITORS FOR OSCILLATOR TANK CIRCUITS

This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance (0.01 μ f) for high-frequency units, yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

features

- Hermetically sealed in metallic cases.
- Single-bushing construction for minimum size.
- Removable mounting brackets.
- Internal lead connections arranged for minimum inductance.

CUP CERAMICS

These precision capacitors are widely used in high stability r-f oscillators where frequency control is important. Tolerance on capacitance can be held to ± 1%, and on temperature coefficient to ± 10 ppm. Hermetically sealed construction and low self inductance are noteworthy as are high Q, capacitance stability, and retrace characteristics.

Available in 500, 1000, 1500 volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details.

PRECISION TUBULARS

For exacting circuitry in electronic instrumentation and high stability oscillators. The same stacked disc construction as metal cup ceramics but with higher capacitance range.

Hermetically sealed in plated metal tubes for moisture protection. Rated for -55° C to +85° C operation as are cup ceramics.

Available in ± 1% capacitance tolerances! Available in 500, 1000, 1500 volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details.

CERAMIC TRIMMERS

Widely used in precision circuitry where maximum stability is required. Unlike ordinary low cost trimmers, the special construction of these top-quality units prevents corrosion, permits mounting against chassis, and guarantees long, trouble-free life.

Write on letterhead for complete details.

TV YOKE CAPACITOR REPLACEMENT KIT

- Capacitance in yoke applications is critical. Incorrect value produces distortion which only proper rating can correct.
- "Trial and error" method is often necessary to choose proper capacitor. This selection gives complete coverage of required fractional values between 33 and 82 mmf.

INTERFERENCE FILTERS

FILTEROL® TYPES

- Suppress Man-made Radio and TV Interference
- Small, Completely Self-contained
- Quickly, Easily Installed

Filterol Types 1, 2, and 3—Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4—A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

Cat. No.	Amps.	Volts AC or DC	Size	List

IF TYPES

IF-15—TRIPLE-SECTION FILTER for all small motor-operated devices such as food and drink mixers, vacuum cleaners, fans, drills, etc. Especially designed to prevent accidental shocks from discharge of filter capacitors.

IF-11—DUAL HIGH-CAPACITY FILTER with completely enclosed safety construction. Designed for use on motors over 1 horsepower and up to 220 volts AC or DC. Also used on high-current arcing or sparking devices.

IF-21—COMPACT DUAL FILTER for use across brushes of fractional horsepower motors with the can grounded to motor frame. May also be used across line terminals of motors.

IF-S1—SINGLE SECTION 2-LEAD FILTER with can completely insulated. For use across make-and-break contacts, such as thermostats, circuit breakers, door-bells, buzzers, relays, etc.

IF-37—3-SECTION DELTA-CONNECTED FILTER especially designed for fluorescent fixtures. Only one IF-37 required for each offending fixture. Also effective on make-and-break governor-type motors. *Underwriters' Laboratories approved.*

TO-4 TEL-OHMIKE® CAPACITOR-RESISTOR ANALYZER

PRICED SO YOU CAN AFFORD IT!

The handiest instrument you can buy! Modern service shops find it a must. Although moderately priced for radio and television repair shops, it offers you the quality and the accuracy required by the nation's outstanding laboratories.

The TO-4 comes complete with step-by-step instruction manual and capacitor guide.

- **CAPACITANCE BRIDGE** measures up to 2000 mf in five overlapping ranges. The special 1 mmf to 100 mmf range is exclusive with the Sprague Tel-Ohmike.
- **INSULATION RESISTANCE** directly read on large meter up to 20,000 megohms for paper, ceramic, and mica capacitors. No guessing with neon lamps.
- **LEAKAGE CURRENT** of electrolytics measured directly on meter, with exact rated voltage up to 600v. applied from continuously adjustable power supply. Two ranges: 0-6-60 ma. No guessing on eye-width or counting lamp blinks when you use a TO-4!
- **POWER FACTOR** of electrolytic capacitors measured by Wien Bridge up to 55% in three ranges.
- **RESISTANCE BRIDGE** measures from 2.5 ohms to 25 megohms at line frequency.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance, power factor, and resistance measurements.
- **PUSH-BUTTONS** for instant range selection, also discharge capacitors for safety automatically upon release.
- **MODERN CASE** finished in two-tone gray; measures 8 $\frac{3}{8}$ " high, 14 $\frac{3}{8}$ " wide, 6 $\frac{1}{8}$ " deep. Weight only 12 $\frac{1}{2}$ pounds.

KT-1 KWIK-TEST® CAPACITOR CHECKER

An IDEAL supplement to the TO-4 Tel-Ohmike. With 75 to 100 capacitors in each set, here's a quick, easy way to check them all in a jiffy, for the KT-1 tests capacitors while they're wired in a set. NO NEED TO REMOVE THEM FROM THE CIRCUIT! The KT-1 instantly tells you whether or not a capacitor is open, shorted, or intermittent. This is the hottest thing we've ever offered to the service trade!

- Simply press a button and magic eye tube tells you if a capacitor is open, shorted, or intermittent.
- Checks by-pass, blocking, and coupling capacitors from 30 mmf to 2000 mmf, even when capacitor under test is wired in parallel with a resistance as low as 60 ohms. Capacitors between .1 mf and 2000 mf may be tested even when in parallel with resistance as low as 2 ohms.
- Sturdy steel case with medium gray wrinkle finish. Light gray front panel with clear black markings.
- Overall size of the KT-1 is 9" high x 6" wide x 5 $\frac{1}{4}$ " deep —Net weight, 6 lbs.

Known the world over for their reliability under all operating conditions, EL-MENCO CAPACITORS are chosen by manufacturers who want successful performance and long life from their products.

EL-MENCO fixed mica dielectric capacitors are compact, precision made. Manufactured in accordance with American military standards to meet Army and Navy MIL-C-5A Specifications. All impregnated and MIL or RMA color coded. Standard specifications limits are shown.

Moulded in low loss bakelite, tested at double the working voltage. Tests for dielectric strength, insulation resistance, temperature co-efficient and capacitance drift, humidity and life tests according to MIL and RMA STANDARDS. All units are wax dipped for salt water immersion seal.

All the above are silver mica only. (Characteristic "E"). Standard Tolerance: $\pm 5\%$. Closest Tolerance: $\pm .5$ mmfd.

For low voltage circuitry, higher capacities are available at 100 VDCW rating.

TELEVISION • TRANSMITTING • INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS Molded in CM-20, CM-35 and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

PAPER TUBULAR CAPACITORS CP TYPE

EL-MENCO CP type paper tubular capacitors are sealed into STEATITE TUBES which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with MINERAL OIL, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The NON-INDUCTIVELY wound paper and foil units are sealed in the CERAMIC TUBES by means of baked SYNTHETIC RESIN END FILLS which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to in the insert. Leads are of tinned copper 2 1/4" long.

Many of the large TELEVISION, TRANSMITTER and HIGH VOLTAGE AMPLIFIER manufacturers have found these capacitors to be of highest quality. Breakdown tests have exceeded the required standards.

TRIMMERS

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs are bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

EL-MENCO TRIMMING CONDENSERS are treated for resistance to humidity and for permanence of capacity setting.

Trimmers shown here are standard sizes and capacities.

El-Menco CP type paper tubular capacitors are sealed in impervious steatite ceramic tubes through use of synthetic resin end fills which are waterproof and will not melt at any conceivable operating temperature. The non-inductively wound paper and foil inserts are mineral oil impregnated. This combination of fine quality material and construction insures long life at high ambient temperatures, indefinite shelf-life and trouble-free operation under the most adverse conditions.

El-Menco High Voltage Capacitors are manufactured in accordance with MIL and RMA specifications for molded mica capacitors and are additionally designed to operate at higher voltages than normally expected of units of this size. They are ideally suited for use in high voltage, low power circuits, particularly where space requirements are an important factor. Axial wire leads provide simplicity of wiring through elimination of added mounting devices. All units are molded in low-loss phenolic cases and are wax-dipped for protection against salt-water immersion.

TYPES "GA" and "HA" OIL FILLED

Full information, including data on Pyroteen filled capacitors, available in Catalog 1134.

Types "GA" and "HA" are INDCO Oil "A" impregnated and filled. These capacitors fill a definite need where chassis space and ease of mounting are prime factors. Standard capacity tolerance +20% -10%.

Moulded mounting neck is locked in the capacitor case and gasketed so that capacitor is hermetically sealed. Unless otherwise specified, capacitor case is insulated from terminals. Capacitors are supplied with solid nuts and lock washers for mounting. Addition of the 8 mfd. (600 vdc.), dual 4 mfd. (600 vdc.), 4 mfd. (1000 vdc.), and similar units of the same case size, makes this series one of the most extensive in its class.

ET SERIES ELECTROLYTIC CAPACITORS

Full information available in Catalog 1083A

"ET" series capacitors have been designed for ease in installation and reliability. They are constructed to withstand the most severe operating conditions encountered in industrial and electronic equipment. Especially controlled manufacturing processes insure that the equipment in which these capacitors are used will function without interruption. Capacitors can be supplied for operation at temperatures ranging from minus 40 to plus 85 degrees Centigrade. Mounting is effected by inserting the capacitor through the slots in either the chassis or mounting plate, and twisting the mounting prongs 90 degrees.

STABELEX "D" CAPACITORS

Technical Information Available in Catalog 1117A

Stabelex Capacitors represent a new series of capacitors being made available to industry for the first time.

Advancements in science and industry have created the need for capacitors having characteristics far superior to either laboratory type or commercial capacitors now available.

Advanced designs in equipment which have not been possible because of the unavailability of suitable capacitors have now become practical.

The Stabelex family of capacitors has been developed after a long period of research and has been made for special applications for quite some time. However, it is only now that these capacitors became available to industry.

Other Stabelex capacitors will be announced from time to time, each having its own special characteristics for use in applications for which they are most suited.

Suggested Applications

- | | |
|---------------------|--------------------------|
| Input Capacitors | Computers |
| Coupling Capacitors | Filter Networks |
| RC Circuits | Radio Frequency Circuits |
| Meter Damping | Etc. |

Many variations and special characteristics are possible with Stabelex capacitors that are not possible with any other type and it is, therefore, to the interest of the user to indicate, where possible, the application to which these capacitors will be put.

MIGHTY MIDGET METAL TUBULAR TYPE "MM" CAPACITORS

Full information available in Catalog 1083A

Type MM

An extremely popular type of condenser due to its exceptional high quality and midget size. Hermetically sealed in a small metal case and scientifically vented, to protect against adverse operating conditions of voltage, temperature and humidity. Container is insulated by a high grade tube which is spun over the ends of the can to eliminate shorts when wires are bent close to container. Easily mounted by their rigid wire leads.

Type SM

Type "SM" units are embedded in a high temperature wax and then sealed in a thoroughly impregnated cardboard tube, affording complete immunity to moisture penetration. New high voltage formation gives complete protection against surges and high peak voltages. The addition of the strap mounting bracket has proved favorable in its use due to its wide application in AC-DC and portable sets in the replacement field. The strap can be moved to the best mounting position and then bolted or soldered. Supplied with color-coded, Underwriters' Approved, rubber covered leads.

HIGH-CAPACITY LOW-VOLTAGE ELECTROLYTICS

BRH compact tubular electrolytic capacitors are widely employed in portable radio power rectifying circuits, electric fence devices, telephone and D.C. timing circuits. Hermetically sealed in pure aluminum cans with an external cardboard insulating sleeve, these units are provided with metal mounting strap and bare wire leads for convenient wiring into any circuit assembly.

Type FB capacitors in round cardboard sleeved aluminum cans are designed for high capacity, low voltage applications, and are especially popular as replacements in motion picture sound equipment, and other low voltage circuits.

TEMPERATURE RANGE to +85°C.

UP, UPT & UPE TWIST-PRONG BASE ELECTROLYTICS

TYPES UP, UPT AND UPE

Types **UP** and **UPT** capacitors are small, conveniently-mounted, round can-type electrolytic units furnished with bakelite and metal mounting washers. Terminals are tinned for soldering. They are dependable in operation over wide temperature variations with minimum capacity change.

Units are especially designed for use in television, radio, amplifier and other equipment where extremely high temperatures, voltage surges and ripple currents are encountered. They are particularly popular as replacement capacitors for all standard television receivers.

Type **UPE** units are designed for use in selenium rectifier circuits. When using selenium rectifiers in television, radio or other equipment, care must be taken to employ **ONLY** this type electrolytic capacitor and protective resistor—See page 10.

SELENIUM RECTIFIER CAPACITORS

Type UPE are etched anode and cathode units especially engineered to prevent capacity drop due to high ripple and surge currents normally encountered in selenium rectifier circuits. A protective series-resistor of approximately 50 ohms for a 100 ma. load, and at least 10 ohms for a 250 ma. load, should always be used to protect both the rectifier and filter capacitors. Use only type UPE in selenium rectifier circuits.

CORNELL DUBILIER

MOLDED TUBULAR CAPACITORS

"The CUB"

A New Champion!

tops in the field of molded tubular capacitors

The Cornell-Dubilier "CUB" is an *outstandingly superior* molded capacitor unequaled by any molded tubular heretofore developed. The "CUB" possesses characteristics that will meet the wide and demanding applications found in critical industrial, military and experimental electronic equipment.

This is the unit recommended for general replacement service.† Sold exclusively through C-D electronic parts Distributors. The "CUB" is molded in extra hard, non-inflammable bakelite—tough, durable and exceptionally resistant to moisture, high temperature and shock.

The unit is processed by special vacuum—temperature—cycling impregnation—the 200 and 400 volt series are impregnated with HT compound and the 600 volt and up series are impregnated with oil (Dykanol "C").

In countless production test runs, the "CUB" has survived an average of 30 cycles of the punishing JAN and MIL Temperature and Immersion Cycling Test.

The "CUB" is dry assembly processed and sealed immediately after impregnation. This technique results in life long high insulation resistance, low power factor, and exceptional capacitance stability. Each unit is tested at several times its rated voltage to insure high dielectric strength.

At least a 50% greater resistance to humidity and a 15%-25% greater voltage breakdown over comparable molded tubulars, is built into the C-D "CUB".

Extra strong copper-weld leads eliminate breakage during assembly and throughout service life. The leads are solder sealed securely to the unit.

TEMP. RANGE: HT Compound —40°C to +90°C
Dykanol "C" —55°C to +100°C

MOLDED MYLAR* TUBULARS

MYLAR* Polyester Film MOLDED TUBULAR CAPACITORS

Cornell-Dubilier's new PM SERIES of molded tubular capacitors are designed to meet the need for a rugged, high-temperature MOLDED unit. These are fabricated with the Du Pont Company's latest new dielectric material, "MYLAR" which maintains excellent electrical characteristics at temperatures up to +130°C. Over the temperature range of from -55°C to +100°C full rated voltage can be applied, and to +130°C voltage is derated only to 75%. Insulation resistance values are exceptionally high at any operating temperature and capacitance variation with thermal change is relatively small. The dielectric absorption and the power factor of the new capacitors is unusually low.

Non-inductive construction is employed with lead wires securely soldered to the extended foils, insuring low resistance connections and low radio frequency impedance. The durable thermo-setting plastic case† construction holds copperweld lead wires and sections firmly in place to withstand extremes of handling, soldering temperatures, vibration and shock.

Standard sizes in 400, 600, 1000 and 1600 VDC ranges are listed in the accompanying table.

*DU PONT trade mark.
†For metal-cased MYLAR tubulars—See Type TWM—Page 17.

"MINIROC"

MYLAR* Polyester Film

MINIATURE STEATITE-CASED CAPACITORS

(Identical in appearance to BUDROC — Illus. Page 15)

Cornell-Dubilier "MINIROC" type STM series capacitors are high quality tubular units in non-metallic (steatite) cases. They have exceptionally HIGH INSULATION RESISTANCE and are fully protected against moisture. Operating temperature ranges from -55°C. to 130°C. with no voltage derating required. These unusually fine characteristics are due to the use of MYLAR* Polyester Film dielectric, finest quality steatite cases, Polykane end-fill and C-D's painstaking processing. The C-D Polykane end-fill tightly bonds to the lead wires and steatite tubes preventing the entry of any moisture while at the same time locking the capacitor section and lead wires in place. Polykane will not soften, melt or flow at any operating temperature.

*DU PONT trade mark.

Temperature Range: -55°C to +130°C.

MINIATURE METAL-CASED TUBULARS "DEMICONs"

The Cornell-Dubilier series of "DEMICON" capacitors offer miniaturized tubular metal-cased units designed and processed to meet rigid and severe operating requirements particularly where space limitations are an important factor.

Unique and improved manufacturing processes have contributed to a product of unusual stability, dependability, and longevity, as attested to by field-test proven service over a long period of time.

Cornell-Dubilier DEMICONs are hermetically sealed in metal cases, with glass-to-metal seal terminals and are available in a wide variety of mounting styles, impregnants, tolerances, and internal construction. See Bulletins NB-147 and NB-151.

All Cornell-Dubilier DEMICONs will comply with applicable parts of Specifications JAN C-25 and MIL-C-25A.

COMPACT METALIZED-PAPER CAPACITORS

Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4 and NB-152.

TEMPERATURE RANGE: -40°C to $+60^{\circ}\text{C}$.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- POLYKANE-IMPREGNATED:** This impregnation insures excellent electrical properties over long service life.
- MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

"Super MICADON"

ENCAPSULATED Molded-Case MIDGET MICA CAPACITORS

Cornell-Dubilier "SUPER MICADONS" represent an entirely new conception in Midget Mica Capacitor construction. The vastly improved design and construction of the new "SUPER MICADONS" (Types 1A and 5A) now makes it possible to produce miniature units of greatly increased capacitance and superior quality over conventional units of the same case size. SEE ENG. BULL. 155 FOR DETAILED DATA AND COMPLETE LISTINGS.

MOLDED MIDGET "SILVER-MIKE" CAPACITORS

TYPE 1R - X - 4" THICK
TYPE 1DR - X - 4" THICK
TYPE 1R & 1DR

TYPE 5R

HIGH-STABILITY "SILVER-MIKE" UNITS

Type 22R miniature "Silver-Mike" capacitors are especially adapted for use in circuits where accuracy and stability of capacity is of prime importance. They are rated at 500 volts D.C.W. and tested at 1,000 volts D.C., molded in low-loss red plastic and fully protected against physical damage or changes in characteristics due to varying atmospheric conditions.

STANDARD TOLERANCE ±5%, but in no instance less than ±1mmf. For capacity Tolerance of: 20% deduct 10% from List; 10% deduct 5% from List; 3% add 10% to List; 2% add 15% to List; 1% add 25% to List.

Types 1R, 1DR, and 5R "Silver-Mike" silvered mica capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. They are ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, push-button tuning circuits and other similar applications. Standard units are molded in low-loss red plastic.

UNIVERSAL "MITYMIKE" HIGH VOLTAGE CERAMIC CAPACITORS

FEATURES OF "MITYMIKE" HIGH VOLTAGE CERAMIC CAPACITORS

- New, superior design and construction.
- High insulation resistance, low power factor.
- Generous factor of safety permits use at FULL rated voltage.
- Choice of terminal styles to meet all TV assembly requirements.

The C-D Universal Type MMU "MITYMIKE" is an entirely new and superior quality unit developed from extensive field experience over a long period. Weaknesses heretofore found in this type capacitor have been eliminated by C-D processing techniques.

Thus, the special quality encasing material forms a complete homogeneous bond between all elements and the ceramic dielectric. The permanent bond between the casing material and the ceramic element prevents formation of corona, hence preventing deterioration of the capacitor.

High purity silver electrodes are heat-bonded to the dielectric

STANDARD TOLERANCE: +50%, -20%

A 10,000 VDCW (MMU 10T5) unit is available on special order.

— and the silver-plated terminal studs in turn, firmly soldered direct to the electrodes.

A high degree of operating stability in service and extended life can be expected of the C-D MMU.

Six selected terminal styles are furnished with each body, permitting many combinations of terminals to cover a wide range of installation designs.

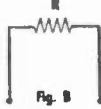

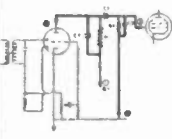

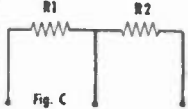

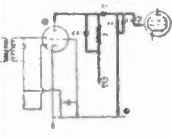

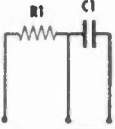

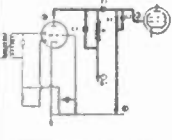

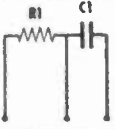

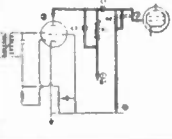

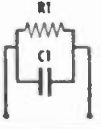

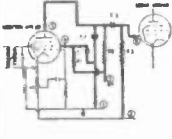

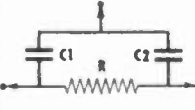

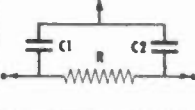

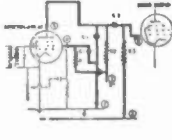

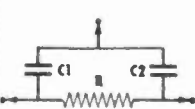

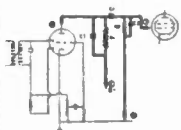

Because of the superior materials and quality construction of the MMU, a generous factor of safety is built into the "MITYMIKE", allowing operation at FULL RATED VOLTAGE.

PRINTED ELECTRONIC CIRCUITS (P.E.C.)®

The term, "printed circuit," has come to be a catch-phrase to describe anything from a piece of tinfoil cemented on a plastic plate to a carbon-backed piece of adhesive tape. As the pioneer and leader in the field, we designate the true Printed ELECTRONIC Circuit as a complete circuit element . . . wiring, capacitors, and resistors. Centralab Printed ELECTRONIC Circuits offer a combination of resistors and

capacitors of ultra-compactness and permanence. No other modern development in electronic circuitry offers so many advantages in low-powered applications, such as small size, low assembly cost, and utmost reliability. There are 36,000,000 P.E.C.'s now in use — proof-positive that Centralab is the unquestioned leader in Printed Electronic Circuits.

TV ATTENUATOR SWITCH CAT. No. PCH-4
PRINTED ELECTRONIC CIRCUIT H PADS

The Centralab PCH-4 Television Attenuator Switch is designed as a service tool to determine the amount of attenuation required to secure best TV reception. It is also valuable for permanent installation in receivers. The switch incorporates Centralab's exclusive Printed Circuit TV H-Pads.

ADVANTAGES OF SWITCH

The switching arrangement makes it possible to attenuate each station as much or as little as necessary depending on daily conditions such as weather or existing interference, and allows for proper attenuation to balance two or more stations. Switching also eliminates the "hit-or-miss" method of installing H-Pads. Switch is installed in series with 300 ohm—twin-lead. PCH-4.

FOR PRINTED ELECTRONIC CIRCUIT
GUIDE NO. 3

A practical working manual that saves you time and money. Shows circuit schematics that guide you in using P.E.C.'s to replace standard components. Gives other useful information.

STEATITE

Centralab has been producing fine ceramics since 1928 . . . primarily for its own use in fixed resistors, ceramic capacitors, switches, and more recently, printed electronic circuits. Often called upon by other manufacturers to produce many "standard" and custom designs, some very intricate. Centralab is the only ceramic manufacturer capable of producing many of these in quantity. All items listed are Grade L-5 Steatite, approved without limitation for Army and Navy use. Characteristics: Uniform, white appearance, high dielectric strength, exceedingly low loss at high frequencies, and strong mechanically. Impervious to moisture and common acids, will not warp, withstands high temperatures; harder than hardest quartz.

CERAMIC CAPACITORS

MOLDED DISC CERAMIC HI-KAPS®

For Bypass, Coupling and General Applications

Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance. "MD's" can be placed directly

against a chassis, or adjacent to high voltage leads without danger of flashover or breakdown. Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating: 1,000 V.D.C.W. to 5,000 mmf, 600 V.D.C.W. over 5,000 mmf. Maintain high capacity and stand up under +85° C. operation. Insulation — Molded Centrathene†. 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption .005%. Power factor of molding .02%. Fungus resistant. Unaffected by ozone, salt water, any known acid, or solvent at room temperature. Will not become brittle at -55° C. Leads — No. 22 tinned copper 1½" long. All units one size — 11/16" diameter, 3/16" thick, maximum. Packaged — 5 units per polyethylene bag. 5 bags (25 units) per carton.

CERAMIC CAPACITORS (Cont'd)

TC TEMPERATURE COMPENSATING TUBULARS

Designed especially to limit frequency drift in r.f. circuits where temperature variations are prevalent. These capacitors are constructed with a ceramic body which changes capacities as the temperature varies. Use Centralab TC Hi-Kaps when servicing superhet receivers—replace older types in oscillator and detector circuits in TV, AM and FM receivers. 1,200 volts D.C. test; 600 volts D.C. working.

TCZ TUBULAR HI-KAP®

All TC Hi-Kaps conform to JAN-C-20A specifications. NPO Units (JAN-CH-CJ-CK) which show zero capacitance change over temperature range -20° C. to +85° C.

**INTERMEDIATE TC TUBULARS
TYPES TCA AND TCL**

The addition of Negative 330 and Negative 1500 TC Tubular Capacitors to the Centralab line increases the already complete selection and makes the CRL TC list the most useful and flexible of any stock manufacturer. Values most carefully selected from the most popular types in manufacturing usage. All units meet JAN specifications for military use. Color coded in compliance with RETMA and JAN specs. Intermediate values allow additional TC values without combining two or more standard capacitors. Packaged one per envelope with complete data, five envelopes per display carton.

**CERAMIC FEED-THRU HI-KAPS®
TYPES FT AND MFT**

Type FT Feed-Thru or bushing mounted capacitor has been specifically designed and widely used in high frequency circuits where, in addition to feed thru, a capacity ground to either chassis or shield is desired. Lead inductance is virtually eliminated. Type MFT MINIATURE Eyelet Feed-Thru is a condensed version of the above units required in many low ultra-high frequency applications where space is at a premium. VOLTAGES—Both styles—500 V.D.C.W., 1,000 V.D.C. Test.
