JUNCTION TRANSISTORS

Foremost in the field

RAYTHEON TRANSISTORS lead the field in reliability. Over 1,000,000,000 operating hours of actual field performance in commercial equipment with only a fraction of 1% field returns. This proves their reliability to be

superior to that of vacuum tubes. Raytheon Transistors lead the field in number of units used in commercial equipment. Successful experimental, then pilot and now continuous mass production and inspection techniques are employed. Hundreds of thousands of Raytheon Transistors are in actual commercial use—many times more than all other makes combined.

FOR EFFICIENT DESIGN ...IMPROVED OPERATION

Use Sylvania Crystal Diodes and Electronic Components in your circuits!

Sylvania Crystal Diodes are lightweight, compact rugged circuit elements with low shunt capacity, no contact potential, and requiring no heater supply or mounting hardware. They have exceptional electrical stability and are strongly resistant to thermal shock. See how they will save space and improve the design and operation of your circuits.

Listed below are Sylvania's most popular crystal diodes with general descriptions and suggested re-sale prices. Also listed are Sylvania's most widely-used Electronic Components. For full details write to Dept. 4E-80 Sylvania.

TRANSISTORS

Engineering samples of germanium and silicon diodes and transistors of several types are available. Outstanding additions to the Westinghouse line are three new Germanium PNP Junction Transistors for low power, low frequency amplifier applications, the 2N54, 2N55, and 2N56. These transistors are capable of dissipating more power than other transistors of comparable size. Operation within maximum ratings will permit stable function. These new junction transistors are designed for direct wiring. They are encapsulated in thermo-setting resin which protects against deterioration due to penetration of any exterior agents.

CETRON ELECTRONIC TUBES

Engineered and Manufactured by Continental Electric Co., Geneva, Illinois
Specialists in Photo Emissive and Photo Conductive Tubes

CETRON PHOTOTUBES

CETRON phototubes are either of the gas-filled or of the vacuum type. With the gas-filled type, greater effective response is obtained, particularly in low impedance circuits, while the vacuum type is recommended where maximum stability and signal to noise ratio are desired.

CETRON phototubes are selected as to their sensitivity and priced accordingly. Phototubes of the Super Class A/B or Q are generally used for experimental purposes where very high sensitivities are required; Class C or R mostly for motion picture equipment; Class D for relay work, etc.

CETRON RED SENSITIVE PHOTOTUBES (S1 Surface)

CETRON red sensitive phototubes are available in three sensitivity classes, A/B, C and D. The CETRON gas-filled and vacuum red sensitive tubes comprise a most complete line for sound reproduction. For complete engineering specifications, write for our PC 8/9.

CETRON BLUE SENSITIVE PHOTOTUBES (S4 Surface)

CETRON blue sensitive phototubes are available in two sensitivity classes, Q and R. The CETRON gas-filled and vacuum blue sensitive tubes comprise a most complete line for sound reproduction work from dye recorded film. For complete engineering specifications, write for our PC 8/9.

CETRON LEAD SULPHIDE PHOTOCELLS (Infra-red)

CETRON lead sulfide infra-red photoconductive cells are made in a variety of miniature types. They are also available in a variety of sensitive areas and resistances. CETRON lead sulfide photocells are available in three sensitivity classes, A, C and D. For complete engineering specifications, write for our lead sulfide literature.

CETRON SPECIAL PURPOSE PHOTOTUBES

Continental Electric also manufactures a complete line of special purpose photocells, such as the CE-5, CE-7, CE-8, CE-10, CE-12, CE-15, CE-18, CE-26, etc. We will be happy to work with you on design and development problems, also on any special phototubes your application may require. Full data, price, etc. on special phototubes will be forthcoming upon request.

Public Address, Paging, Music Distribution, and Inter-communication Systems for every need—indoor, outdoor, portable or mobile—for the large factory, school, church, stadium, or the small office, auditorium, bus or store—designed and built by the country's largest manufacturer of sound systems.

Bogen amplifiers range in power from 6 watts to 125 watts and are available in a wide variety of "package" systems including different microphones and loudspeakers for different applications. In addition, if you have a special problem, the Bogen Custom Engineering Division will design and assemble a system for your particular installation, regardless of size.

The table below lists the Bogen P.A. amplifiers and package systems. All are conservatively rated in accordance with accepted engineering standards. Each has a frequency response carefully selected to insure optimum performance in the applications for which the model has been designed. Each amplifier marked with an asterisk (*) carries Underwriters' Laboratories approval. Each is finished in tasteful tones of green and buff or green and gray. All, except the mobile and phonograph top models, are available on panels for mounting in standard steel racks, if so ordered. (Panel mounting adds \$24.25 or \$30.75 to the list price, depending on the model.)

Deluxe models JX50 and JX30 incorporate the exclusive Bogen ANTI-FEEDBACK CONTROL, which permits the tuning out of acoustic feedback and hence the use of more power in the system. These models also feature separate, continuously variable bass and treble tone controls, and provision for plug-in remote volume control of two input channels. (Order remote control unit separately—SCR50 [50' cable] at \$16.75 list price, or SCR100 [100' cable] at \$21.25 list price.)

All "J" models (except JO3D) have provision for easy plug-in of low impedance input transformers, when it is desired to use low impedance microphones located at a considerable distance from the amplifier. (Order plug-in transformers separately for desired number of low impedance inputs: (T155, T156, T157, for 200, 500, 50 ohms, respectively.) In addition, models HE10, RP-1, HO125, HO50 and JO30 may be ordered as low impedance versions HEL10, RP-1L, HOL125, HOL50 and JOL30, for \$18-\$25 additional to the list price. "J" models also feature broadcast-type microphone connectors, with positive lock and quick disconnect.

For simple, rapid impedance matching between amplifier and speakers, constant voltage output taps (70 volts, 140 volts) are provided on all Bogen amplifiers where there is likely to be need for them, in addition to conventional constant impedance taps. These eliminate the involved calculations previously required to determine the necessary speaker matching transformers, if any.

All indoor systems include a microphone and two or four speakers mounted in wall baffles, with connecting cables and plugs. Outdoor systems include a microphone with cable and plug and one, two or three trumpets. Portable systems include a microphone and two speakers mounted in a carrying case (E) with cables and plugs. The case, which also carries the amplifier, divides into two speaker baffles ready for instant use.

No matter what your requirement, you cannot buy a sound system of finer performance or greater dependability than a Bogen.

THE FISHER "50" — HORN SPEAKER ENCLOSURE . . . WITH BALANCED BASS

THE FISHER "50" Horn Speaker Enclosure meets all these requirements with flying colors: a. Conspicuously fine quality and over-all balance rather than an overpowering, and therefore unnatural bass response. b. Total flexibility; use with virtually any speaker system, and in any location in the room. c. Compactness, combined with simplicity of design and good taste. And it will outperform enclosures over twice its size!

MODEL 50-HM
User's Net \$129.50

OUTSTANDING FEATURES

- 1) Smooth response to below 30 cycles per second. 2) Can be used with 12" or 15" single, coaxial, dual or triaxial speaker systems. For that reason you can change loudspeakers at any time in the future without obsoleting the speaker enclosure. 3) Does not require corner placement. Locate THE FISHER anywhere. 4) Air loading of the bass output is over four times that of an infinite baffle speaker enclosure. 5) Substantially extends the bottom bass range of any speaker. 6) Reduces the amplitude of the speaker's inherent bass resonant peak, assuring smoother bass response. 7) Special design eliminates synthetic or "tuned" bass, with its characteristic "boom" and barrel effect (particularly noticeable on the male speaking voice.) 8) There is no listener fatigue, regardless of volume level! 9) Additional tweeters, if desired, can be mounted at any time.

SERIES 50 Moving-Coil Phono Cartridge

Now, the quality of record reproduction with FISHER or other components no longer need be limited by the quality of the phonograph cartridge. THE FISHER Series 50 Moving Coil Phonograph Cartridges assure the finest reproduction of which the record is capable!

OUTSTANDING FEATURES

1. High compliance improves low frequency response, reduces record hiss and, most important of all, eliminates tracking distortion. 2. Can be used with virtually any tone arm. 3. Extremely low mass of stylus assembly (featuring a hollow aluminum stem) results in greatly reduced groove-side-wall wear, thus prolonging almost indefinitely the life of records and the stylus itself. 4. Supplied only with diamond styli—the one acceptable material for the purpose. 5. Low impedance permits use of greatly varying cable length without loss of high frequency response and without its being subject to stray magnetic fields from nearby electronic equipment. 6. Rubber damping baffle protects moving parts from dust and suppresses needle talk. 7. Stylus suspension features shock-absorbing design to prevent accidental damage to both the stylus and the record.

"Chief" Redi-Power Master Stations (Figure 2)

"Chief" Redi-Power Master Stations have all the operational features listed above, plus the additional feature of built-in extra power for use when needed. This added power (up to 20 watts), gives you the additional volume needed, for example, when calling a number of stations at one time or calling noisy locations. Return speech from called stations is received at normal volume. Needs no separate power booster which would eliminate return speech. "Chief" Redi-Power has self-compensating volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output when you call more stations at any time. One or more Redi-Power Masters can be combined with regular Chief Masters and Staff Stations in same system. 110-120 volts. AC only.

Redi-Power Master Stations are also available with the added feature of pre-selected paging for each master unit as Model C-RP-5911 Provides 11-station capacity with one selector button for paging. Each Master may page its own pre-selected stations without any external paging equipment. 110-120 volts AC only.

How to Determine Cable Requirements

To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For C-4920 and C-RP-5920, use two lengths of 6224 Cable; and for C-4930 use three lengths of 6224 Cable, etc. To connect C-41, C-20, HP 2 or HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect C-42 and C-46 Staff Stations measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each C-42 or C-46), follow same procedure.)

"Chief" Staff Stations (Figure 3)

For use with any "Chief" Master, Staff Stations may be connected "privately" or "non-privately." Connected "non-privately," persons can answer Master at a distance from the Staff without operation of any controls. Persons at "non-private" Staffs may reply to all Masters in the system (whether connected directly to them or not) and can originate calls to one, two, or up to six Masters depending upon its capacity. Connected "privately" no one can "listen-in," but any Master can call. Private Staff can originate calls and reply to 1, 2 or 6 Masters depending on its capacity. Staff Stations do not need electrical outlet. Handsomely styled in molded impact bakelite cabinets. Walnut finish. Size: 8 1/2" wide, 6 1/4" high, 7 1/2" deep.

PM DRIVER UNITS

Re-Entrant Trumpets, Radial Horns and Speakers

RE-35 RE-50 RE-60

RACON re-entrant horns and speakers are designed to deliver highly concentrated sound with great efficiency over long distances. This is due to true exponential design throughout and the elimination of all vibratory members and sound dissipating devices. The base and inside tone arms are husky aluminum castings and bell is a heavy gauge aluminum spinning. The

RE-35, RE-50 and RE-60 incorporate reflectors made of patented RACON ACOUSTIC MATERIAL to prevent resonant effects. All models are supplied with "U"-bracket mounting (ratchet swivel type on request). Finish is in weatherproof hard baked gray hammertone. RE-60 & RE-50 recommended for maximum low frequency music reproduction. RE-35 and RE-25 best suited for incidental music and high speech intelligibility.

The SR-35R and SR-60R are weatherproof radial re-entrant horns designed to project sound over an area of 360 degrees. The centre reflectors are of patented RACON ACOUSTIC MATERIAL and the deflectors are aluminum spinnings covered with this same non-vibratory material. Standard "U" bracket supplied. Thread size is 1 3/8"-18, permitting the use of any driver unit listed below. 1 1/8"-16 thread on request. The SR-60R is ideal for church tower sound installations and the SR-35R for incidental music and speech.

SR-35R SR-60R

SR-15R SR-12R

The SR-15R and SR-12R are rated at 20 and 10 watts respectively and are supplied complete with built-in 15 ohm* driver units. These models are intended primarily for speech in paging and "talk back" systems and are completely weatherproof. Supplied with cast swivel ratchet and wall bracket.

Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these four new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve

for overload peaks up to 100%, maximum conversion efficiency, response ranges suitable for every type sound system, and waterproof construction.

These four units employ Alnico V magnets and Armco magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

NEW PAGING AND TALK-BACK SPEAKERS

RE-20 — Model RE-20 has a nominal rating of 25 watts and incorporates a varnish vacuum impregnated transformer provided with a removable weatherproof aluminum spinning. Primary impedances are 625, 1250, 2500 and 5000 ohms and the secondary is tapped at 4, 8, and 16 ohms. By connecting directly to and between these terminals, the resulting impedances of 310, 625, 1250, 2500, 3650, 5000, 7300, 10000, 14,500 and 29,000 ohms are equivalent to 16, 8, 4, 2, 1.3, 1.0, 0.7, 0.5, 0.34 and 0.17 watts respectively when connected across a 70 volt line. Weatherproof construction throughout.

RE-11 — Similar to the RE-20, but has a higher cutoff and a nominal rating of 12 watts. The built-in 10 watt transformer has primary impedances of 500, 1000, 1500 and 2000 ohms and a secondary tapped at 8 and 15 ohms.

RE-18 — This is the economical answer to all paging and "talk-back" applications where low to medium power levels are necessary and where "specs" do not call for line transformers. Bell and back cover are integrally spun of aluminum to assure weatherproof performance of the 12 watt driver unit. Complete with adjustable "U" bracket.

Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type because it lacks the attenuation inherent in all re-entrant horns. "Stormproof" Trumpets are made of non-vibratory RACON ACOUSTIC CLOTH. Weather-treated for indoor or outdoor use. "All Aluminum" Trumpets are made of

heavy gauge aluminum spinnings with rolled beaded edge and cast aluminum throat sections. "Unbreakable" Trumpets are made of heavy gauge aluminum spinnings reinforced and damped with Patented RACON ACOUSTIC MATERIAL. Large sizes are useful for church chime systems, C-D systems, airports and stadiums, parks, playgrounds, music festivals, for both speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

CAST ALUMINUM HORN TWEETERS

Response is essentially flat to 12,000 cycles, with excellent usable output to 15,000 cycles. Horn design permits wide angle distribution. Designed for a 1000 and 1500 cycle crossover to assure optimum cone response. These

models must be used with a cross-over network. The networks listed below are recommended and when employed, the CHU-5 and CHU-2 may be used with amplifiers having an output rating to 25-30 watts.

NOTE: Instructions are packed with each tweeter, providing an easy method of home building a professional type 1000-cycle crossover network.

COBRA TYPE HORN

COB-11

The RACON COB-11 "cobra" type horn is designed for public address systems requiring high clarity reproduction with maximum concentration of sound in a horizontal plane. It is of "straight" horn design and exponentially flared for maximum transfer of energy. The low cutoff of 250 cycles results in crisp, highly articulate quality without a trace of boominess. The horn consists of a heavy two-piece non-vibratory aluminum casting and is provided with a two-section serrated mounting bracket. Finish is baked gray hammertone over a zinc chromate primer.

500-D DIRECT DRIVE AMPLIFIER

FINEST AMPLIFIER BUILT—NO OUTPUT TRANSFORMER

List Price \$184.00

- Frequency response $\pm 1/4$ db 20-70,000 c.p.s. • Full 20 watts of audio
 - Distortion is less than $1/2$ of one per cent • Phase shift—less than 15° at 20 c.p.s.
- (Above figures are a true picture at full output of 20 watts.)

Here's the first amplifier to successfully eliminate the output transformer. All distortion introduced by transformers is eliminated. Great clarity of tone is noticeable at once. Hum and noise are at a minimum. Frequency response is $\pm 1/4$ db 20-70,000 c.p.s., achieved with far less phase shift than can be obtained with a transformer . . . especially on the low end. Matching Stephens Tru Sonic speakers with 500 ohm v.c. impedance designed as companion units for the 500 D Amplifier are shown on adjoining page.

RELIABLE...RUGGED DRIVER UNITS with these Exclusive Built-in Features

MODEL PA-30—Recommended for reproduction of chimes, carillons, organ music. Ideal for rental work, high efficiency, maximum distance penetration. Built-in transformer with various impedances and for 70 V. systems.

MODEL SA-30 — Completely die-cast aluminum housing makes it a "must" in hazardous locations or rough service. Built-in transformer with various impedances and for 70 V. systems.

- W-shaped Alnico 5 magnet results in maximum efficiency by reducing reluctance losses and surface leakage.
- Built-in transformers provide installation flexibility to meet any impedance requirement.
- Bi-sectional mechanism with foolproof automatic "rim-centered" diaphragm voice coil assembly assures immunity to shock and vibration . . . facilitates field maintenance.
- Full selection to meet all power, frequency response, impedance and mechanical requirements.

BI-SECTIONAL MECHANISMS

Specially tapered, one-piece linen-base phenolic diaphragms are set in an exclusive aluminum acoustical booster which applies phase correction at the upper register of the spectrum. This assures exceptionally uniform overall frequency response, and enables the diaphragm/voice coil assembly to automatically center in the voice coil gap on the magnet top plate. This exclusive University "rim-centering" technique results in shock-proof permanent voice coil concentricity; means smaller magnetic gap for greater flux density and conversion efficiency.

MODEL SA-HF—Meets all PA and industrial requirements. For heavy noise areas, speech or quality music.

MODEL MA-25 — Fills low cost requirements without compromising quality. Rugged, weatherproof. Highly efficient to 6000 cycles.

For Your Added Protection . . .

There is more to University quality than meets the eye. All metals used in the manufacture of University equipment are given a number of special treatments prior to and during fabrication to insure life-long protection against destructive elements which may be present in the environment, as well as to maintain the physical and acoustical properties for which they were originally selected. These treatments—plus the baked paint finish—serve as further protection against corrosion, and as further proof of UNIVERSITY superiority.

Radial Reflex Projectors

Uniform Sound in All Directions

- More economical — reduces the total number of loudspeakers required to cover a given area.
- More efficient — driver-driven radial speakers provide as much as 500% greater output than cone speaker radials.
- Versatile — ideal for spacious areas necessitating suspension installation, such as hangers, church towers, etc. Suitable for voice and music.

A unique combination of battle-ship construction and swiss watch precision. . . . Features a pair of exponential horns having twin air columns in a single assembly—made possible for the first time through the perfection of a "dual exponential flare" design. This advance design provides wide-angle dispersion of sound, concentrating energy in the horizontal plane where it is most needed in covering wide areas efficiently and economically. Can be used with any University driver unit to meet any impedance, power or frequency response. See page C-16 for driver unit listings. Sturdy "U" bracket with serrated swivel joint permits up to 180° vertical positioning and positive locking. Clever one-piece design prevents vibrations and erratic performance by elimination of any separate parts. Heavy gauge die-castings set a new standard in rugged construction and assure freedom from resonant type vibration.

ATLAS 'DR' WEATHERPROOF DOUBLE-REENTRANT PROJECTORS

**Non-Resonant • Uniform Response • Sturdy • Stormproof
Compact • Demountable**

The modified exponential taper developed in Atlas projectors has proved most efficient for overall performance. All acoustical paths are clean and uniform. Reflex turns are smooth and flowing. These important features eliminate turbulence, frequency cancellation and resultant signal distortion. Ruggedly constructed of heavy castings, precision stampings, accurate die castings and uniform metal spinnings. All metal-to-metal surfaces insulated with non-vibratory material. Bell rim dampened and mechanically protected with formed rubber rim. All metals specially processed by chemical and electro-chemical means to impart complete weather-protection. Heavy "U" bracket mountings, securely fastened to main body casting of each model, do not fail even under extreme stress, strain or vibration. 1 3/8" - 18 thread. For greatest efficiency and low frequency response, the larger size horns are recommended. The smaller horns are excellent where space and cost limitations pertain.

PL Series Steel discs for mounting BL Series to concrete ceilings —

This type is a heavy 18 gauge steel disc with all hole locations punched for standard electrical outlet boxes.

GENERAL INFORMATION:

The BL Series Baffles are constructed of heavy gauge aluminum spinnings accurately engineered for normal ceiling sound reinforcement. Due to its perfect speaker cone loading, feed-back is held to a minimum. CONTROLLED SOUND reproduction is obtained by proper conical dispersion of diffuser. The recommended placement of speaker baffles under normal ceiling heights are usually 25 feet off center of axis in straight line placement. High frequency diffuser is supported to housing by four 1/4" aluminum studs and threaded on one end mounted to housing. A press fit to diffuser thru soft rubber grommets to prevent metallic resonance. Sound coverage of 360° is obtained with this baffle. All models are finished in brushed satin and coated with a colorless lacquer. This finish will also furnish a wonderful base coat or primer for on-the-job painting. All models are available in colored lacquers at slightly higher prices. Further information furnished on request.

Lowell AL Series speaker baffles are top quality heavy gauge satin finished aluminum spinings. Proper design assures 360° diffusion of undistorted, "ear-level" sound with minimum of echo and feedback. Conical diffuser "floats" on soft rubber grommets forming a press fit to aluminum support studs which thread to the speaker housing ring. Baffles are coated with clear lacquer which also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request. Shipped complete with hardware for mounting to Lowell Protective Speaker Enclosures illustrated.

360° Coverage Low "EAR LEVEL" Sound

Even, undistorted sound coverage is provided by Lowell speaker baffles. Recommended baffle placement is usually 25' from center of axis. Where straight line placement is impossible, triangulating the baffles in the ceiling is highly effective.

RADAX COAXIAL SPEAKERS

Discovery of the E-V RADAX Principle provides an economical and super-efficient method of utilizing two disparate coaxially mounted cones to divide the audio spectrum . . . while both operate from only a single voice coil.

Built-in mechanical crossover from the low-frequency cone to the high-frequency propagator permits design of each cone for optimum response. This provides a true coaxial two-way speaker system that assures clean, sparkling wide-range reproduction.

Frames are extra sturdy. Both speaker cones are moisture inhibited.

VOICE PENETRATION AND FULL RANGE MUSICASTING

The COMPOUND DIFFRACTION PROJECTOR* provides a loudspeaker system so advanced in concept—so efficient in performance—that there is no basis for comparison with conventional P.A. reentrant horns. The "CDP" works in the same manner as an optical slit. When the slit width is of a shorter dimension than the wave length of the sound it passes, the sound energy is highly dispersed in the direction of this short dimension. Polar response of the "CDP" is phenomenal.

An increase in efficiency of three db over multi-cellular horns is achieved with better dispersion. There is no pinpointing effect since there are no cells to beam the sound path. Elimination of multiple throats at the driver mouth permits greater high-frequency efficiency as compared to multi-cellular horns. The direct path and optimum throat dimension of the "CDP" also has these advantages over the reentrant horn resulting in a greater transfer efficiency and smooth extended high-frequency response.

The Model 848 "CDP" provides peak-free response ± 5 db to 10,000 cps—delivers $2\frac{1}{2}$ octaves more musical range than usual P.A. units of even larger size. Speech articulation index is substantially increased. Polar distribution pattern exceeds 120° . The Model 848 utilizes two coaxially mounted horns working from opposite sides of a single diaphragm. Each horn is designed for optimum reproduction within its own range. Low end response is augmented by 100 cps horn taper, which insures at least one-half octave added bass over that possible from larger conventional P.A. horns.

The "CDP" bell and diaphragm are fabricated of molded fiberglass. Other parts are die-cast zinc and steel treated against corrosion. Edgewise-wound copper ribbon voice coil puts 30% more conductor in the gap, raising the efficiency 20%. In EV tests the "CDP" driver has been subjected to months of continuous operation under 30 watts of power at 60 cycles AC without failure for any reason whatsoever. Should it become necessary, the diaphragm is easily replaced in a moment. Silver contacts eliminate the need for soldering operations.

The "CDP" with its higher sensitivity and power handling on a basis of distributed signal, provides superior coverage of the listening area with fewer units and at far lower cost. The "CDP" unit is weather-proof, splash and blast proof, and virtually indestructible. It represents something so entirely new in public address efficiency and fidelity that it is indeed hard to believe such reproduction is possible.

DIFFRACTION PRINCIPLE

COAXIAL HORNS

CDP utilizes two coaxially mounted diffraction horns working from both sides of a single diaphragm. Each horn is designed for optimum air loading and reproduction within its own range.

Uses the new acoustic application of optical slit diffraction for perfect smooth sound dispersion virtually independent of frequency.

MODEL 848 COMPOUND DIFFRACTION PROJECTOR*

Conservatively rated at 25 watts. Nominal impedance is 16 ohms. The attractive neutral gray color is molded right into the bell material, which is impervious to acids, alkalis and most solvents. Hang up bracket has two mounting positions. Projector may be installed horizontally, or vertically for augmented dispersion. Dimensions at mouth: $10\frac{1}{2}$ " wide, $20\frac{1}{2}$ " high. Overall depth 20". Shipping weight 17 lbs. **List Price**.....\$65.00

The Jim Lansing Koustical Lens is a true 14-element diffusion lens operating in accordance with the most advanced optical-acoustic theory. Sound is distributed smoothly over a solid 90° angle to all points in the listening area with equal intensity regardless of frequency. Phase interference, present in all types of horns including multi-cellular, is notably absent. The Koustical Lens is one unit in the 175DLH Assembly which includes a high-precision high frequency driver, machined pure iron phasing plug, and cast aluminum exponential horn. Nominal impedance, 16 ohms. Power input is 25 watts above 1200 cps. Field, permanent magnet. Horn throat diameter, 1". Mounting hole diameter, 5 3/8". Overall length, 11 1/2". Shipping weight, 12 lbs.

GENERAL PURPOSE

Signature Speakers

Only Jim Lansing Speakers (15" and 12") are made with 4" diameter voice coils — of edge-wound aluminum ribbon in the General Purpose models. The 4" coil stiffens the cone for true piston action. Crisp, clean bass results — a distinguishing feature immediately apparent. The 4" dural center dome is attached directly to the voice coil — as it should be — for smooth reproduction of the high frequencies. Properly housed, Jim Lansing General Purpose Speakers will reproduce verbatim every frequency recorded on the finest modern transcriptions.

DUOTONE SPEAKERS and MICROPHONES

MANUFACTURED FOR DUOTONE BY WORLD FAMOUS PHILIPS OF HOLLAND

HI-FI MASTER RANGE LOUDSPEAKERS

MODEL 9762 — is a true Hi-Fi unit that replaces complex two-speaker systems using a "woofer" for the bass and a "tweeter" for the high frequencies. These old costly dual systems caused phase distortion and parasitic oscillations. Model 9762 is a 12" speaker with a record efficiency of 14% at 400 c/s due to the use of an extra powerful Ticonal magnet. Sound diffuser ensures uniform spatial distribution of high notes. With this loudspeaker the acoustical output and the reproduction range of Hi-Fi and other equipment can be raised to a level never before achieved! Frequency range is 40 to 20,000 c/s.

MODEL 9762

TECHNICAL SPECIFICATIONS

Frequency Response 40 to 20,000 c/s
 Voice Coil impedance 8 ohms
 Power handling capacity 20 watts
 Resonance frequency 45 c/s
 Flux density 11,000 Gauss
 Total magnetic flux 140,000 Maxwell
 Cone diameter 12 inches

List Price \$94.95

MODEL 9760—12" in diameter, has a frequency range of 40 to 20,000 c/s. The reproduction curve is extremely smooth. Sound diffuser ensures uniform spatial distribution of high notes. This model is "just right" for the finest Hi-Fi equipment but is less efficient than 9762, namely efficiency of 7% at 400 c/s; Voice Coil impedance at 1000 c/s: 8 ohms.

List Price \$49.95

MODEL 9758—a 10" speaker with a 40 to 15,000 c/s frequency range. Far superior to any other speaker of this size. Copper ring fitted into deep air gap keeps Voice Coil impedance independent of the frequency. No frequency compensation needed in amplifier. Sound diffuser ensures uniform spatial distribution of high notes. Power: 10 Watts; Efficiency at 400 c/s: 6%; Voice Coil impedance at 1000 c/s: 8 ohms.

List Price \$49.95

MODEL 9750—is an 8½" speaker with frequency range of 40 to 13,500 c/s. Extremely low frequency and very regular characteristics. Sound diffuser ensures uniform spatial distribution of high notes. Twice the normal air gap depth due to "TICONAL" magnet. Power: 6 Watts; Efficiency at 400 c/s: 10%; Voice Coil impedance at 1000 c/s: 4 ohms.

List Price \$32.95

MODEL 7010 — A 5 Watt speaker, extremely low price, 8½" in diameter, 50 to 12,000 c/s frequency range that is specially constructed with magnetic system pressed into a high precision frame to avoid misalignment of the air gap, even in case of heavy shocks. Voice Coil impedance at 10,000 c/s: 4 ohms.

List Price \$16.50

HIGH FIDELITY SPEAKERS

Hi-Lo Extended Range Single Unit — Direct Radiator Loud Speakers

The Cinaudagraph Hi Lo extended range direct radiator speakers are completely new. Designed to meet the demands where fine tone quality is appreciated. Not only is a uniform frequency response obtained but a very low value of harmonic distortion has been achieved and a high rate of decay which overcomes the detrimental effects of "falls" and "hangovers." The active impedance curve of this model is also seen to be surprisingly flat over the operating frequency range, resulting in good power delivery from the output tubes of the amplifier to the voice coil. **DESIGNED RIGHT . . . SILVER SONANCE LINE

The Silver Sonance Line is divided into three parts. The first is the Universal Speaker Enclosure. There are many advantages of the Universal type of speaker housing that makes it the most outstanding unit of its type. It can be used in hospitals, schools, factories, auditoriums, stores, airports, railroad stations, stadiums and any other place where a speaker is used.

A prominent feature of this housing is the adjustability that is achieved by mounting our speaker case with an accessory known as the Bud Adjustable Mounting Bracket. Full information on this bracket is given on page C-41. When the adjustable feature is not desired, the speaker housing may be attached directly to the wall. There are two holes in the sides of the speaker housing enabling installation in this manner. The holes in the cabinet are so spaced that the housing may be mounted either to an outlet box or screwed directly to the wall.

The new BUD UNIVERSAL speaker enclosures have a bi-lateral feature which permits sound to come from both the front and the back of the speaker housing. This is an ideal feature when speakers are used for paging purposes, or when speakers are used in corridors, hallways, or other places where the intention is to have the sound travel in two directions.

There is no danger of cracking, warping, splitting, or any of the other disadvantages found when a wood speaker baffle is used. Since our speaker enclosure is made of heavy gauge steel, none of these disadvantages are present. Changes in temperature and weather conditions have absolutely no effect on this speaker case. The finish is a beautiful silver grey hammertone. The hammertone finish assures ease of cleaning, as the housing may be cleaned by wiping with a damp cloth.

A special sound-deadening compound is used to eliminate the metallic resonant sound that is present in other metal speaker cases. All screws and nuts are furnished for mounting the speaker in the enclosure. There are no holes to drill and no time will be wasted in the installation.

RECESSED CEILING and WALL ENCLOSURE

This speaker housing is suitable for an 8" speaker and reduces installation costs considerably. Adjustable brackets make the housing ideal for use in old or new construction. The depth of the box is 4", so that it can be mounted in walls where the studding is 2" x 4".

All of the features of acoustical perfection, durability and economy found in the universal type of speaker enclosure apply to the recessed enclosure as well.

This speaker housing is easily installed in a ceiling where acoustical tile has been used, since the grill plate is a 14" square. This, therefore, perfectly covers the space from which a 12" acoustical tile has been removed.

ADJUSTABLE MOUNTING BRACKET

The adjustable mounting bracket can be used with any of the universal type enclosures. This makes possible an adjustable feature by which the speaker housing can be adjusted in any angle in a horizontal plane. There is a hole in the bracket which will pass a half inch conduit, permitting the speaker housing to be suspended from the ceiling.

OUTLET BOX COVER PLATE

This unit is a cover plate for electrical outlet box enabling the adjustable bracket to be mounted directly to the outlet box. When used in conjunction with the adjustable bracket, movement in all horizontal and vertical directions is possible.

REAR SEAT SPEAKER ASSEMBLY

This unit is available in two types, as shown in the table below. The rear seat speaker grill assembly consists of the rear seat speaker grill, together with mounting screws, switch, bracket for

holding switch and sufficient wire for installation. The switch permits selection of either speaker or use of both speakers simultaneously.

The rear seat speaker grill is a finely louvered unit made from heavy gauge steel, which assures you of having a grill that will "take a beating." The finish is a beautiful silver grey hammertone, which is a fine enough finish to be attractive and yet dull enough to assure you that no glaring sun reflection will be picked up by a rear vision mirror and be a potential blinding flash to the driver.

Jensen Hypex Projectors

VH-24

Because of the Hypex formula (Patent 2,358,282) giving wider sound distribution and greatly improved acoustical performance, JENSEN Hypex projectors are superior type horns. The Alnico 6 unit is entirely enclosed within the one-piece rigid horn yet easily removed and replaced. Stainless steel and other corrosion-resistant materials and specially treated steel parts insure against weather exposure. Models VH-24, VH-20 and VH-15 have mounting brackets with clutch-type heavy "U" trunnions which afford complete flexibility of adjustment with positive locking into desired position. Weatherproof terminal boxes provide easy, solderless connections with no exposed terminals. Model VH-91 has a universal mounting bracket which permits pointing in any direction and secure locking by a single wing nut.

HYPEX "Three-sixty" PROJECTORS

VR-241

Designed for the reproduction of speech and music signals at high efficiency where high noise levels exist. The Hypex formula is incorporated in their design. With the sound distributed over a circle, they are especially suitable for installations where coverage of relatively large areas and suspension from the ceiling are desired. Model VR-11 is recommended for speech reproduction while Model VR-241, of larger size, is intended for speech and music reinforcement. Driver unit has phenolic diaphragm; VR-241 uses same diaphragm as VH-24 and VH-20; VR-11 uses same diaphragm as VH-15 and VH-91. VR-241 is equipped with weatherproof terminal box with connecting cable passing through rubber grommet and leads attached to screw terminals provided. VR-11 has two-conductor rubber-covered cable for connections. Both equipped with heavy eyebolt at top for suspension.

THE "HYPEX" HORN FORMULA —AN EXCLUSIVE JENSEN FEATURE

"Hypex" comes from the mathematical term "Hyperbolic Exponential" which describes the important difference between Jensen Projectors and those based on the simple exponential theory. Jensen research discovered a better, more efficient horn formula which maintains effective acoustic loading right down to acoustic cut-off and all Jensen Hypex* Projectors have this exclusive feature for better performance. For the facts on this development and a complete description of horn behavior, write for Technical Monograph No. 5, "Horn-type Loudspeaker". Price, 25c.

Jensen Hi-Fi Sound Reproducers

THE GREATER TRI-PLEX 3-WAY SPEAKER SYSTEM

Jensen's new greater TRI-PLEX is offered to you with the conviction that in quality of reproduction, it will outperform any comparable speaker system. Bass response has been enhanced with the new Bass-Ultraflex enclosure. The design objective has been the attainment of the full high-fidelity frequency range with extreme smoothness, precisely adjusted intra-range balance, and complete elimination of all false coloration effects. The result is a reproducer which in its outstanding listening qualities will delight the discriminating listener who seeks completely faithful music reproduction without harshness or exaggeration.

Technically, the TP-200 represents a high point in the development of the true 3-way system. Three completely independent reproducers divide the frequency range as indicated in the specifications, the combined total result being blended into a superb unity which cannot be approached with short-cut designs which simulate, but do not afford comfortable, livable listening quality. For example, both mid-frequency and high-frequency channels employ horn-loaded compression-driver units with plastic diaphragm moving systems in precision sound chambers for utmost smoothness—there are no metallic elements to introduce harsh or irritating effects. Individual controls are provided at the side of the cabinet for exact adjustment of response balance, presence and brightness to fit your surroundings and precise taste.

New cabinet styling is a natural blend of simplicity and elegance which will merge gracefully with traditional or modern decor. Woods are offered in a choice of fine selected Mahogany or satin Blonde Korina veneers with genuine solid matching hardwood trim, all finely crafted in the best furniture-making traditions.

Each TRI-PLEX is individually tested and is accompanied by a certificate and guarantee of performance meeting the high engineering standards established for the design.

New Bass—Ultraflex. Enclosure principle used in the new TRI-PLEX TP-200, 2-way LP-100 and BL-220 and BL-250 cabinets, is the latest result of Jensen's advanced research on enclosure acoustics. Precisely matching "woofer" characteristics to enclosure volume, Bass-Ultraflex gives more true, balanced bass response than previous methods employed in medium sized cabinets.

May be used either in a corner or against a sidewall with excellent results.

THE NEW Concerto 2-WAY SPEAKER SYSTEM

Here is high fidelity reproduction in a compact enclosure which fits even the crowded living space, yet embodying the smoothness balance and extreme frequency range coverage of the most expensive true coaxial speakers. There is economy too—with fine music reproduction not approached except at far greater cost.

The CT-100 is a true 2-way system with separate "woofer" and "tweeter". The low frequency unit is the new P12-NL 12-inch speaker which was especially designed for this reproducer. In combination with the Bass-Ultraflex cabinet, the system gives ample, full bass response. High frequencies above 2000 cycles are handled by the RP-102 High Frequency Unit which provides exceptional smoothness and range approaching the practical upper limits of audibility. A full 2-channel crossover network is employed. H-F Balance Control is located at the side of the cabinet.

The new cabinet design reflects fine proportions and clean sculptured appearance appropriate to fine traditional or modern interior decor. Available in your choice of selected Mahogany or Blonde Korina veneers. Reproducer is fully assembled and carefully tested at the factory. Shipping Weight 62 Lbs.

EXTENDED RANGE SINGLE-UNIT SPEAKERS DIRECT-RADIATOR TYPE

These units, ranging from 5-inch to 15-inch size classes, attain a high level of performance by proper extension of the frequency range and control of all factors which lend "presence" to reproduction.

The selection of a direct-radiator loudspeaker from this series, in size or cost appropriate to the application, insures the best quality obtainable in a "one-

way" speaker. Alternate models in the same size group differ mainly in efficiency and power rating.

JENSEN Extended Range loudspeakers are ideal as replacement-improvement units for less worthy speakers in radio, television and record playing equipment. The logical choice for better reproduction on a low budget.

GALBRAITH MARINE SPEAKERS

Galbraith Reproducers and Amplifiers, while designed primarily for installation aboard ship, are especially suitable for use on docks, in shipyards, and other locations where exposed to extremes of varying temperatures and difficult moisture conditions.

10" MEDIUM POWER MARINE TYPE REPRODUCER E-27, Alt.-1

Approved by the U. S. Coast Guard (JJ/161,004) for installation on inspected merchant vessels when used with approved loudspeaker systems. This marine reproducer is a double re-entrant type of horn approximately 10" in diameter and 8" in depth. It is constructed of special salt water corrosion-resistant aluminum alloy castings and spinings. All surfaces are alodine treated followed by zinc chromate primer and finished with a durable baked gray enamel. The high powered "Alnico V Plus" driver unit is located within a one-piece casting consisting of base plate and junction box and is held in position by the dome-shaped casting forming the horn proper. A neoprene gasket clamped between these two castings provides the seal necessary to exclude all moisture. This permits the speaker to be used in any location even on the exposed weather decks. The junction box is drilled and tapped for 1/2" I.P.S. stuffing gland. Hermetic sealed feed-through leads prevent

any entrance of moisture to the driver unit voice coil chamber. Spring type terminals on driver unit and in junction box permit easy connection. This speaker is suitable for direct bulkhead mounting as its simple design permits quick replacement of the driver unit without removing the speaker from the bulkhead or disconnecting the ship's wiring.

UNI-DIRECTIONAL RIBBON MICROPHONE

Model "333"
Concert-Line

Here is the Concert-Line "333", a new microphone created for discriminating users with the most exacting professional requirements. Here, indeed, is a major advance in microphone development and design! This small, ultra-cardioid "333" is highly recommended for movie studios, TV studios, radio stations, professional recording, and highest quality "home recording" applications. Here is performance never before achieved in such a small and slender microphone. Here is matchless beauty and striking design to appeal to those users who traditionally demand "the finest!" The "333" is uni-directional, will reduce the pickup of random noise energy by 73%—prevents the pickup of moving props, scuffling feet and moving "dollies," so common when conventional broadcast microphones are used. Following are the features that make the "333" Concert-Line so outstanding in performance, so dependable in operation: (1) patented world-famous "Uniphase" system—providing a true ultra-cardioid pickup pattern; (2) response plus or minus 2½ db, 30-15,000 c.p.s.; (3) multi-impedance switch; (4) voice music switch; (5) anti-"PFF," anti-blast filter screen; (6) high output; (7) vibration-isolation unit mounted in live rubber; (8) Cannon XL connector. All these important features, plus the striking design of the Concert-Line "333," make it ideal for critical studio applications that call for the highest possible broadcast quality, small size and matchless beauty. The "333" has two-tone "Grayje" non-reflecting finish. Dimensions: width, 1 1/8"; height, 3 9/16"; depth, 1 3/4."

BI-DIRECTIONAL GRADIENT MICROPHONE

Model "300"
Concert-Line

This rugged, high fidelity, multi-impedance microphone is widely used for television, radio broadcasting, professional recording and high-fidelity uses. The "300" reduces reverberation and the pickup of random noise by 66%. The "300" combines the best features of conventional velocity microphones with advanced acoustic design—including an anti-"PFF," anti-blast filter screen. Its bi-directional polar pattern is effective over a broad frequency range. It provides sound pickup at the front and rear of the microphone, but greatly reduces pickup at the sides. One of the outstanding features of the "300" is the fact that the microphone can be placed at a 73% greater distance from the performer than is possible with omni-directional microphones! The "300" has a non-reflecting "Grayje" finish, so it blends into the background, gives the spotlight to the performer. The "300" has a readily accessible voice-switch, special vibration-isolation unit mounted in live rubber, and a multi-impedance switch, providing low, medium and high impedance. Response plus or minus 2 1/2 db, 40-15,000 c.p.s. Dims: Ht., 6"; Wth., 1 7/16"; Depth., 1 3/32."

Like the popular Shure Cartridges, each Shure Phonograph Pickup has been designed to meet specific requirements. There is at least one model for each type of reproduction desired — standard (78 RPM), fine-groove (33 $\frac{1}{3}$ and 45 RPM), or single-needle "All Purpose" and dual-needle "Turnover" for playing all types of records. Each tone arm is scientifically curved and balanced for faithful tracking, and designed to emphasize the best qualities of the cartridge with which it is equipped.

M-20 LIPSTIK MICROPHONE SYSTEM

The Altec Lipstik Microphone System was designed to meet the demands for a smaller housing for the world-famous 21 Type Condenser Microphone. In addition to this new, compact Lipstik housing, the 21C Microphone is used. This 21C Microphone is an improved version of the 21B and has an even wider and smoother frequency response. The compact Lipstik housing allows it to be used as a lapel microphone, a hand microphone, or a stand microphone as required. The size of the P-525A Power Supply makes a very small, compact, and handy package. Frequency response 20-15,000 cycles.

Components of the M-20 Lipstik Microphone System are:

- 21C Condenser Microphone
- 165A Lipstik Base
- 166A Stand Holder
- P-525A Power Supply

NET PRICE: \$198.00

This microphone response curve is in agreement with measurements made by General Radio Company and other major acoustical laboratories.

M-11 MICROPHONE SYSTEM

The M-11 Microphone System will continue to be available to those customers who prefer the graceful shape of the 150A Base to the compactness of the Lipstik type base. The M-11 System will incorporate the new 21C Microphone as described above in the M-20 Lipstik Microphone System.

Components of the M-11 Microphone System are:
21C Condenser Microphone
150A Base
152A or 153A Cable Set
P-518A or P-519A Power Supply

The L-100 is also available with a ceramic interior at the same price. Use for P. A., recording and demonstrations. TELOP I... TELEVISION OPTICAL PROJECTOR

Telop I is one-man operated, economical and reliable. It projects low-cost, easily produced "commercials" for increased profits. The Telop completely eliminates keystone; any two photographs, glass lantern slides, or opaque cards can be projected, also small objects, with superposition, lap dissolves or fadeout. Metal slides holding either five or eight 4"x5" cards may be used for projection.

TELOP II... PROJECTOR

For smaller TV stations... one man operated... will project any combination of slides, transparencies, opaque cards or photographs. Eliminates costly film strips and live talent, yet achieves clear sharp pictures with superposition, lap dissolves and fade-out effects. Small initial investment assures greater profits because of low production and operating cost.

55A FILM CAMERA TURRET

One camera can serve up to 8 projectors with Gray camera turret. Mounted on heavy, welded steel frame, the turret revolves 360 degrees on heavy duty ball bearings with positive placement. Requires minimum space.

13A LIGHT BOX

This attachment will back-light 3 1/4" x 4" transparencies and make them part of a "commercial" along with opaque cards or other copy. The box mounts directly behind the slide holder groove in the optical channel opening of the Telop.

63A TELEJECTOR SHELF

The Gray Telojector shelf is of steel construction. Strong, sturdy, it is easy to attach to Multiplexer stand. Telojector mounts on shelf.

11B VERTICAL SCROLL DRIVE

The Vertical Scroll Drive will televise rollstock and broadcast running commentary or "commercials"—with or without sound accompaniment. Attaches to the optical openings of the Telop.

12A HORIZONTAL TAPE DRIVE

Presto Type 153 Reproducer extra

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . maximum speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

SPECIFICATIONS

Standard Equipment: The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. A reproducer and network is not included.

Speed Accuracy: No deviation from 33-1/3 and 78.26 rpm.

Noise Level: Mechanical noise originating in the equipment over 50 db below program level.

Power Requirements: Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

Mounting: Turntable and gear drive mounted in heavy wood cabinet 24 x 24 x 33 inches (61 x 61 x 84 cm.)

PRESTO 6-N RECORDER AND 90-B AMPLIFIER

The PRESTO 6-N Recorder and 90-B Amplifier is the ideal recording equipment for portable or stationary operation.

The 6-N Recorder is outstanding in its suitability for broadcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at additional cost.

The Presto 90-B recording amplifier contains all the facilities necessary for operation on remote assignments, but with an overall performance found only in high-fidelity studio equipment.

It consists of three preamplifiers with individual gain controls, a mixer circuit, a master gain control and power amplifier. Provision is made for connecting the Presto 161-A automatic equalizer (radius compensator).

A five-position selector switch provides the following characteristics: 1—flat response, 30 to 15,000 ±1 db; 2—NAB 33 1/3 rpm recording; 3—present day 78-rpm recording; 4—NAB playback, and

5—automatic equalization. The flat response can be modified by variable bass and treble controls, giving emphasis up to a maximum of 20 db at 100 and 7,500 cycles per second or 20 db de-emphasis at 7,200 cycles per second.

Noise is 55 db below recording level and distortion at maximum output is less than 1.5%.

The use of input and output selector switches makes the 90-B amplifier unusually flexible. It permits combining the signals of three microphones or of two microphones and either one of two pick-ups. By using the "Line" position, recordings can be made from an incoming program line. The output selector has three positions; playback (public address), continuous recording and simultaneous recording. While recording, the line jack provides a monitoring outlet or permits feeding a program line at the correct level.

The correct level is monitored by means of a Weston Type 30 VU indicator with illuminated scale and its closely controlled electrical and dynamic characteristics make it an ideal volume indicator for recording.

PRESTO K-10 RECORDER FOR MICROGROOVE AND REGULAR RECORDING

The PRESTO K-10 Recorder, formerly known as the K-8, the foremost machine of its kind to be used in schools for speech, voice, languages, dramatics, music, etc., is now offered for MICROGROOVE (long-playing) recording as well as the standard method

Note these features:

- Cutting pitches of 112 lines per inch Outside-in, 112 lines Inside-out, 224 lines per inch Outside-in and 224 lines per inch Inside-out.
- Standard unit is equipped for two speeds, 33 1/3 and 78 rpm. Available for three speeds, 33 1/3, 45 and 78 rpm at additional cost.
- The cutting head is equipped with an advance ball which regulates the depth of the groove more accurately than a counter spring.
- The K-10 is equipped with a turnover type cartridge having sapphire stylii for both standard and microgroove records. The cartridge is a ceramic type which has high output and is not easily affected by high temperature and humidity.
- A single control permits instant choice of recording, playback, or public address. Amplifier also contains radio and monitor jacks.

The PRESTO K-10 will, when set for MICROGROOVE, record 6 3/4 minutes on every inch of disc used. This means that a 15-minute recording with good fidelity can be put on one side of a 12" disc! And a half-hour can be put on one side of a 13 1/4" disc. Seven minutes can be recorded on one side of a 6 1/2" disc.

Net Price of K-10, less microphone and stand.....\$366.50

*\$5.00 additional for 45 rpm pulley and record adapter.

TL-10 PRESTO TAPE DRIVE

Presto offers an ingenious tape transport mechanism which can be quickly installed on any sixteen inch turntable. This mechanism derives its power from the turntable—it has no motors of its own. The present model is for tape reproduction only—no erasing or recording is included. No amplifier is provided. The equalized output of the playback head may be fed directly into standard speech input equipment.

The TL-10 Tape Drive consists of a triangular shaped cast chassis which mounts on two small posts fastened to the turntable panel. One point of the triangle carries the tape capstan and this rests directly on the center pin of the turntable to which the TL-10 is attached. A belt drive from the under side of the capstan rotates the take-up reel through a slip clutch. The reproducer head and guide pulleys are located on the upper side of the chassis and the equalizer network is placed below.

Two capstans are available for 15 or 7 1/2 inches per second tape speed based on the turntable speed of 78 rpm. Rewinding is achieved by transferring the empty reel to the take-up spindle and releasing the drag on the supply spindle. Specify type of turntable when ordering the TL-10.

The output of the head and equalizer is sufficiently high to be fed directly into a high quality preamplifier such as found in standard broadcast speech input equipment. An unusual type of capstan is employed, consisting of a wheel, relatively large in diameter, and having a rubber rim. The tape is wrapped around this capstan 180° and obtains very great traction against the rubber surface.

PRESTO RECORDING DISCS

DESCRIPTION	TYPE NUMBER	DIAM. IN INCHES	LIST PRICE
GREEN LABEL			
Presto Green Label discs are, without question, the finest for instantaneous recording—discs to be played back without processing. The extremely clean lacquer and carefully selected flat aluminum base assure perfect cuts for standard or microgroove recording. The surface noise, even after many playings, is virtually inaudible and, what is most important, the consistently high quality is the recording engineer's guarantee of perfect results. Both sides of the Green Label are warranted flawless. Packed 25 per box—a spacer between each disc—with separate envelopes—no labels. Overall thickness of disc .050 inches.	610-A	10	\$1.40
	611-A	11%	2.32
	616-A	16	4.20
BROWN LABEL			
Brown Label discs are identical to the perfect Green Label except that only one side is warranted to be flawless. They are offered to those who intend to cut on only one side of the disc. In other respects all of the superior qualities of the Green Label are present in the Brown Label disc. Packed 25 per box—a spacer between each disc—with separate envelopes—no labels. Overall thickness of disc .050 inches.	810-B	10	1.13
	811-B	11%	1.65
	816-B	16	3.28
WHITE LABEL			
The White Label disc represents a quality disc at a saving. Both surfaces are warranted to be useable without danger of breaking a sapphire cutting stylus. The White Label is perfectly suited for reference recordings, playbacks, tests and rehearsals. Packed 25 per box—a spacer between each disc, with separate envelopes—no labels. Overall thickness of disc .050 inches.	510-A	10	1.13
	511-A	11%	1.83
	516-A	16	3.28
ORANGE LABEL			
Orange Label Discs differ from other Presto types in that the aluminum base is of a lighter gauge. The fine lacquer, however, is the same as that used on all other Presto discs and is responsible for the very high quality of the Orange Label disc. It is designed specifically for educational institutions where good quality must be available at a reasonable cost. The fine surface of the Orange Label disc has made it popular also with recording studios as a "playback" where good quality at low cost is desired. Packed 50 per box in jackets of five discs each—in envelopes and with labels attached. Overall thickness of disc .040 inches.	306-A	6%	.45

	310-A	10	.96
	311-A	11%	1.35
DOUBLE SIDED MASTERS			
Double sided masters are truly the most perfect discs that can be produced for processing work. They are warranted to silver plate quickly and uniformly. Masters are packed with a spacer between each disc and individual envelopes are not included. However, envelopes when required may be had on request. Sizes 11% inches, 13% inches and 16 inches are packed 25 discs to the box. The 17% inch disc is, because of its additional thickness, packed 20 to a box. The overall thickness of the 17% inch disc is .064". Other master sizes are .050".	621-A	11%	2.88

SINGLE SIDED MASTERS			
Single sided masters are identical to double sided masters except that only one side is warranted perfect. The primary side is flawless. Single sided discs represent a definite saving since only one side of a master can be processed. In all other respects the single and double sided discs are similar.	821-B	11%	2.26

SAPPHIRE CUTTING NEEDLES			
Sapphire cutting needles—dural shank—are for use where the very best is demanded. This needle cuts sharp, clean grooves which play back with the least possible surface noise. Long shank sapphires are for use with the Presto type 1-D cutting head. Short shank sapphires are for use with all other types of cutting heads. If needles for microgroove are required, simply add the word "micro" after the regular type number. Each Presto needle is individually tested and consistently uniform results are assured. Sapphire life varies considerably but 8 to 10 hours may generally be expected. Needles are packed individually or in boxes of six individual units.	603-A	Box of 6	\$8.00 each needle

BRASS SHANK CUTTING NEEDLES			
Brass shank cutting needles are generally similar to dural shank needles except that the high frequency response is not as good due to the increased weight of the shank. For this reason they are not supplied for microgroove. Both long and short brass shank needles are available. Needles are packed individually or in boxes of six individual units.	320-A	Box of 6	6.00 each needle
	321-A	Box of 6	6.00 each needle

STELLITE NEEDLES			
Stellite needles produce a clean, quiet cut but their life is limited to 2 or 3 hours. They are useful in schools where inexperienced students might break the tips from the shanks of the more expensive sapphire needles. Also packed individually or in boxes of six.	330-A	Box of 6	1.75 each needle

Signal to noise ratio is 50 db with 2% distortion at 400 cps. Instantaneous speed variations at 15"/sec. is not more than 0.25%. Microphone input impedance normally 250 ohms. Output of amplifier 15 ohms, 10 watts. Bridging input 20,000 ohms, unbalanced. Weight: RC-7 — 40 lbs; A-920 — 35 lbs.

PT-920 TAPE RECORDER

The Presto PT-920 tape recorder has been developed for fully professional recording work and hence no compromise has been made with quality of materials and workmanship. The PT-920 has been designed especially for broadcast stations and recording studios and has found wide acceptance among colleges and universities as well.

The PT-920 is composed of the R-7 mechanism and the A-920 amplifier.

The PT-920 may be operated with the RA-1 reel adapter which allows the use of 2400-ft. reels of tape. Every normal function and all of the wide range quality of the PT-920 are retained when using the RA-1 adapter.

The R-7 consists of a three-motor drive system, separate erase, record, and reproduce heads and two separate amplifiers — one for recording and the other for monitoring. This arrangement permits instantaneous monitoring of the tape. The equipment takes standard RMA 7" reels. Continuous recording with two mechanical sections (type R-7) and one amplifier section (A-920) may be done by interconnecting the units through the SA-12 changeover switch.

The A-920 amplifier has a single microphone input plus a high impedance bridging input. In the playback position it delivers 10 watts when used with an external speaker. Two small speakers are included in the amplifier and are mounted directly behind the front panel either side of the meter. A 2-stage amplifier provides instantaneous monitoring during recording. This is for use with high impedance phones or to be fed into an outside amplifier.

R-11 TAPE RECORDER

The R-11 Recorder is an unusually fine mechanism which can be mounted in a relay rack, in the CS-10 carrying case or the CC-1 console. The main panel is a heavy aluminum casting to which all other components are attached, including the Presto CDR-200 self-contained capstan drive assembly.

The three heads of the R-11 are mounted as a group and are contained in a completely closed housing. Tape is threaded by simply dropping it into the opening made by pulling forward the front cover which also holds the tape off the heads for running the tape at fast speeds.

Indispensable for Recreation Centers, Broadcast Stations, Advertising Agencies, Schools, Hospitals, Record Collectors, Musicians, Etc.

THE RHYTHMASTER AND THE RECITALIST are the only full-range portable phonographs that balance the response characteristics of amplifier, speaker and speaker enclosure. By carefully compensating the natural resonances of these three components, undesirable reverberations are eliminated, and truly lifelike sound reproduction is achieved.

THE POLYPHONIC SELECTOR, an exclusive Rek-O-Kut engineering triumph, found only in the Recitalist and the Rhythmmaster, maintains the proper relationship between the highs and lows when the record is played at any volume, either very softly or very loud! Thus, the high notes of the violins, chimes, triangles, cymbals, etc., are always reproduced clearly and distinctly in all their original beauty and cannot be drowned out by the loud passages of the brasses and percussion instruments.

THE RHYTHMASTER'S PATENTED CONTINUOUSLY-VARIABLE SPEED TURNTABLE plays records not only at 33 1/3, 45 and 78 R.P.M., but at ANY speed variation from 25 to 100 R.P.M. Not only will the CVS Turntable play your records back at the exact pitch and tempo but at ANY speed variation from 25 to 100 R.P.M. AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

PICKERING PROFESSIONAL AUDIO COMPONENTS FOR RECORD PLAYBACK

Models D-120M, S-120M, D-140S and S-140S, with diamond or sapphire stylus, are without equal; they produce the finest quality reproduction of lateral recordings.

MODELS D-120M AND S-120M are for playing standard records and transcriptions requiring 2.5 mil stylus. MODELS D-140S AND S-140S are for long playing, microgroove records; 33 1/3 and 45 RPM.

THE PICKERING CARTRIDGE

PICKERING CARTRIDGES . . .

are the choice of audio engineers throughout the world. They are universally acclaimed because of their high output, wide range performance and low distortion. They have an output of 50 millivolts at 10 cm per second and are used wherever a fine cartridge is required in radio stations, recording studios and for purposes of quality control by leading record manufacturers.

Series 140 and 120 frequency response characteristics with various load impedance values are shown in the accompanying curves.

THE PICKERING 410 AUDIO INPUT SYSTEM

. . . is designed to provide a complete audio control center. Model 410 may be used in any high quality playback system. Three input channels are provided—one for magnetic cartridges and 2 "flat" channels for other audio circuits. A 3-position equalizer network is built into the magnetic cartridge channel and provides accurate equalization for LP, AES and 78 rpm recording characteristics. Separate bass and treble controls are also provided. These are of the step-type and permit bass and treble adjustments in 2 db increments. The tone control circuits are intended to compensate for record characteristics and for listener-environment acoustical conditions. *They are not intended to compensate for amplifier and/or loudspeaker deficiencies.* Model 410 is intended for use with the highest quality professional type playback equipment. The output of the Model 410 is fed from a cathode-follower circuit and will work into any high quality audio or line amplifier having a high impedance input. It may also be used with a transformer for the purpose of feeding a 500 ohm line. Because of its flexibility, low noise and low distortion level, it is ideally suited for bridging and monitoring purposes and for critical listening applications.

PICKERING PROFESSIONAL AUDIO COMPONENTS FOR RECORD PLAYBACK

PICKUP ARM model 190 D

THE ONLY ARM CAPABLE OF OPTIMUM PERFORMANCE ON BOTH MICROGROOVE AND STANDARD RECORDS.

Much distortion in playing records can be caused by an inadequate pickup arm, regardless of how good the cartridge. The most common causes of distortion inherent in the operation of conventional arms are poor tracking and excessive record and stylus wear. These undesirable qualities are a result of improper lateral and vertical moments of inertia and an incorrect relationship between the two. Further, many arms cause tracking error which creates needless distortion.

The Pickering 190-D Pickup Arm is designed to overcome the disadvantage of all conventional arms, the shortcomings of which have been severely accentuated by the advent of LP microgroove records. Extensive investigation by Pickering engineers disclosed that reproducer arms which perform well on 78 RPM phonograph records and standard transcriptions will not necessarily produce good results on LP microgroove records. In fact no commercially available arm was found which would meet all of the requirements for this type of service.

The 190-D Pickup Arm embodies all the features determined as significant and important to enable a high quality cartridge to meet the stringent requirements for playing LP records without distortion and free of record and stylus wear: 1—The ratio of vertical-to-lateral moment of inertia is as low as possible . . . 2—The vertical mass has been minimized in order to track any record without imposing extra vertical load on grooves. It plays

badly warped records just as well as flat ones . . . 3—There is no spurious arm resonance at any frequency . . .

4—Pivot friction is lower than 3 gram centimeters and the bearings are rugged and trouble-free . . . 5—The arm is statically balanced about the vertical axis to eliminate tendency to jump grooves when subjected to bumping or jarring . . . 6—Offset head

reduces tracking error to less than plus or minus $2\frac{1}{2}^{\circ}$. . . 7—Stylus point is protected against contact with anything but the record grooves. It cannot strike the turntable mat or center-pin. It plays all size records up to 17 $\frac{1}{4}$ " O.D. In addition to these important design considerations, the 190-D Pickup Arm features: Sensitive tracking force adjustment . . . height adjustments for turntables from $\frac{1}{2}$ " to 2" high . . . one-hole mounting and self-contained levelling screws . . . plug-in cartridge holder . . . magnetic arm rest . . . Model 190D, the new and smaller arm 14 $\frac{1}{4}$ " long, when combined with a high quality manually operated turntable, requires a 17" x 17" motor board.

Pickering Cartridges used with the Model 190-D Arm require 50% less vertical tracking force than is required when using conventional arms.

EQUALIZER model 163A

A loss-type equalizing network for use with the Model 161M Pickup. It is designed to compensate for most of the commonly encountered record characteristics. Position 1—flat high frequency response to over 15,000 cps. Low frequency rise to give full compensation from 500 to 40 cycles. Position 2—flat high frequency response. Low frequency response approximately 5 db. below position 1. Position 3—for NAB or Orthacoustic transcriptions. Position 4—Low frequencies same as position 2. High frequencies sharply attenuated to reduce surface noise. Attenuation starts at 4000 cycles. Position 5—low frequencies same as position 1. High frequencies same as position 4. 250/600 ohms output.—60 lb. Size 3 $\frac{1}{2}$ x 3 $\frac{3}{4}$ x 5 inches. Shipping weight 2 lbs.

EACH PICKERING PICKUP AND CARTRIDGE IS UNCONDITIONALLY GUARANTEED

With the exception of the stylus point, all models of the Pickering Cartridge Reproducer and Pickering reproducing equipment, are covered by an unconditional guarantee provided that the unit has not been tampered with nor subjected to extraordinary abuse. A new and revolutionary cartridge designed to provide unequalled listening enjoyment of all records, regardless of speed or groove size. Essentially two cartridges in one, the Titone Turnover represents the ultimate refinement of the needle change principle - only the tiny jewel tip itself is changed - thus permitting the design of a reproducer in which no unused but moving part can "eat up" the energy being transmitted by the needle.

Foremost among the many outstanding features of the new Turnover are:

Adaptability - Because of its small size and its standard half inch mounting centers, the new Turnover will replace and modernize most three-speed cartridge installations.

Simplicity of replacement - Since only the needle rotates, the entire needle assembly may be readily removed or replaced.

Proper groove fit - Each jewel tip is accurately polished to insure an exact fit in the appropriate groove, thereby providing perfect coupling to the record.

Superior tracking ability - The high lateral compliance not only helps reduce record wear, but permits the stylus to track even the lowest frequencies at all speeds, and at a single low needle force.

High sensitivity - The new, improved ceramic element of the Turnover provides the unusually high output of 0.95 volts on the RCA 12-5-51 microgroove test record, eliminating the need for any pre-amplification.

Outstanding response - The wide frequency range of the new Turnover is unprecedented in piezoelectric pickups.

The curves below show the average response, without equalizers of any type, of the Turnover cartridge to the two most widely used recording characteristics. This outstanding response is pointed up in striking fashion by the dotted curve, showing the response of a typical competitive turnover type cartridge.

CERAMIC—the wonder element
that reproduces electrically the exact tones
recorded on the disc, yet is impervious to
moisture and unaffected by temperature.

THE TITONE PLAYAL

SPECIFICATIONS

The most versatile single cartridge ever developed, providing the means for playing all speed records without need for changing needle or adjusting tracking force

With the introduction of the Playal ceramic cartridge and the new "truncated-cone" needle, Sonotone has produced the first truly universal cartridge, able to track all groove sizes without the distortion common to the usual "compromise" 2-mil radius needle

This new cartridge, like the Turnover, is unequalled in performance, embodying the same advanced design features that have made the name Sonotone famous.

Principal among these features are

Adaptability — Because of its standard half-inch mounting centers and small size, the Playal may be readily used to modernize most existing phono pickup installations.

Excellent Frequency Response — The curve below shows the smooth, wide range response of the Playal cartridge. The upper curve shows the response to the Columbia LP characteristic, the lower to that of the RCA Orthophonic characteristic.

Low Distortion — The extremely high lateral compliance combined with the unique "truncated-cone" needle enables the Playal to track any groove with negligible distortion, even at the very low frequencies

High Sensitivity — New advances in the development of the ceramic element have produced a cartridge with an output of approximately 1 volt on microgroove records.

Easy Replacement — The Playal needle may be replaced without even removing the cartridge from the pickup arm. If preferred, a conventional 1-mil or 3-mil sapphire-tip needle may be used instead of the "truncated-cone"

STYLUS-DISK

Trade Mark

1. Just as a fuse protects an electric circuit, the STYLUS-DISK protects your records against ruination by a worn stylus (needle). Periodic use of the STYLUS-DISK will *relieve you of all worry*.
2. The STYLUS-DISK gives VISUAL warning of ruinous stylus-wear . . . at its inception.
3. Will test any type of stylus, in any type of pickup—in a jiffy—33 $\frac{1}{3}$ -45-78.
4. Neither stylus nor the cartridge need be removed for the test.
5. The grooves may be used over and over again, until finally a defective stylus (needle) scrapes the groove-walls—(color change). Should last for years.

Pointer #39 in Weil's "ELECTRONIC PHONO FACTS" reads: "No jewel-point is permanent, be it diamond or sapphire. Therefore, periodic checking is necessary if good reproduction and the records themselves are to be preserved." *The great variation in durability of jewel-points (any jewel point) gives extreme importance to the ever present question:*

THREE-SPEED PHONOGRAPH MOTORS

DELUXE THREE-SPEED RIM DRIVE FOUR POLE MOTOR

MODEL DSS — 78, 45, 33½ R. P. M.

115 volts a.c., 60 cycles

Model DSS

Simple speed change is accomplished by shifting the idler wheel vertically to the appropriate diameter on the motor shaft for desired turntable speed. When shifting speed selector to off position, a switch turns the motor off and the idler wheel is disengaged from the motor shaft. The driving motor is of the four-pole, shaded-pole type resulting in absolute minimum of stray field radiation—ideally suited for use with all types of pickups including magnetic. Motor uses oilless bearings and motor is dynamically balanced to a fine degree.

Precision construction throughout—low friction oilless turntable bearing—radially operated shift lever—10 inch turntable.

List Price, \$24.50

Dimensions: Length 6 5/8"—Width 6 1/8"—Depth 2 3/4" below mounting plate. Furnished complete with 10 inch turntable, speed indicator dial, 45 RPM record adapter, off-on switch, and mounting plate ready for installation. Packed in individual cartons. Shipping Weight 6 1/2 lbs.

THREE SPEED TWO POLE PHONOGRAPH MOTORS

MODEL SS — 78, 45, 33½ R. P. M.

115 volts a.c., 60 cycles

Very compact, three-speed, phonograph motor using the vertical idler shifting principle. Idler wheel drives the turntable directly from the appropriate step on the motor shaft. Idler wheel is disengaged from motor shaft during non-operating periods. Precision construction throughout. Uses a ribbed main mounting plate to assure stability and proper relationship of all components. Rumble and wow are held to a minimum. Motor uses oilless bearing and dynamically balanced rotor. Turntable shaft revolves with turntable and is grooved for turntable clip. Available with 8 inch turntable. A 45 RPM record adapter and a speed indicator dial are furnished with each motor.

Model SS

List Price, \$10.95

MODEL TR — 45, 78, 33½ R. P. M.

115 volts a.c., 60 cycles

Model TR

Deluxe three-speed rim drive, 2-pole motor. Turntable speeds of 33½, 45 and 78 R.P.M. are secured through three separate pulleys running on oil-impregnated bearings and mounted on a turret plate. By means of a simple lever, the desired pulley is brought into contact with the idler wheel. The two pulleys not in contact with the idler wheel remain stationary. Symmetrical electrical and mechanical design results in minimum stray field and maximum performance. Ingenious locking device holds turret plate firmly in driving position at any of the three speeds. Available with 8" or 9" turntable. A 45 R.P.M. record adapter and speed indicator dial are furnished with each motor.

An ingenious mechanism raises and lowers the entire idler assembly, disengages the idler wheel from the two-diameter motor shaft and moves the idler wheel from one diameter to the other. At the slow speed the idler wheel engages the small diameter of the motor shaft; at the fast speed it engages the large diameter. **List Price, \$21.75**

Cross Reference

of Permo Metal, Jewel and Diamond Tipped Needles

*Know Your Needles - Know **WHY** Permo Needles
add so much to listening pleasure.*

Permo metal alloys are produced from formulas which are the result of twenty-five years of continued basic metallurgical research in our Permo laboratories. Plus knowledge and experience gained from their extensive use in all phases of the phonograph industry such as coin operated phonographs, commercial recording studios, record demonstration booths, home phonographs, high fidelity equipment and many special applications.

Variations of the basic formula are used to produce the finest metal tipped needles obtainable for each type of service.

Permolite shielded jewel tips are produced from the finest synthetic Sapphire. Synthetic Sapphire is more uniform and makes a better jewel tip for phonograph needles than natural Sapphire. In addition to the superb qualities of the jewel tip itself, each tip is uniquely mounted in metal shanks and shielded with shatter proof Permolite which is highly resistant to accidental damage.

Permo's mounting technique is unique in the needle industry and provides an overall reduction of mass and weight at the point in the moving system which is most critical.

This results in an improvement of frequency response which is extremely important—particularly to Hi-Fi fans.

This patented combination of tip material, method of mounting and process of shielding makes Permolite shielded jewel needles the outstanding leader in fine jewel needles.

Diamond tipped needles will retain their shape and surface condition much longer than any other kind.

If the condition of the surface and the shape of the tip is correct to start with, Diamonds will also give maximum record life.

However, the slightest imperfection of surface condition or shape will also do more damage to records than any other kind of needle.

Permopolished Diamond tips are finished to the most rigid shape specifications and then given a special "Permopolish" treatment which conditions the surface to produce minimum surface friction and record wear.

It is not enough to use Diamond tipped needles.

Insure the life of your records by using Permopolished Diamond Tipped Needles.

There is no substitute for Quality and Workmanship

QWIK Microphone Connectors

AMPHENOL QWIK Microphone Connectors are the newest, the most efficient and certainly the most attractive connectors ever offered for microphone use. Available in 3 or 4 contacts with either male or female plugs or receptacles, the new QWIKs are distinguished not only by their appearance but by their many unique electrical and mechanical features.

Of course it is the remarkable design of the QWIKs which first catches the eye. The plugs are bullet shaped—streamlined perfectly into the deep black cord protector. The receptacles are smaller than any corresponding types yet carry out the clean appearance and sturdy construction typified by the plugs. Both the plug and the receptacle are finished in a rich satin nickle coating. The push buttons are a bright blue accent on the QWIKs. Invisible when the connectors are engaged are the brilliant gold plated contacts and the blue dielectric.

There are many utilitarian features which serve to back up the outward beauty of the QWIKs. All shell bodies are made of high grade zinc alloy—a material much stronger than microphone use demands. The satin nickle finish has excellent resistance to corrosion and has been well proved on other AMPHENOL products. The dielectric material is the famous 1-501 blue, an AMPHENOL developed compound that is also used in military AN

connectors under government specifications. Contacts are high conductivity bronze, gold plated over silver for appearance, easy soldering and indefinite shelf life. The push buttons are made of tough tenite, the same material used for such high impact applications as hammer and chisel handles. QWIKs incorporate a positive type cable clamp to supply internal cable strain relief.

All disconnection of the QWIKs is achieved by simple thumb pressure on the button. Female plugs are released from male receptacles by sliding the button on the plug forward. Male plugs are released from the female receptacle by depressing the button on the receptacle. This method of disconnection has been deliberately designed to prevent accidental disconnect. At the same time there is no hard tugging—QWIKs don't have to be worked loose. Another feature that will be enjoyed by the users of QWIKs is that all disconnection can be easily made by one hand.

Series 75 Microphone Connectors—Single Contact

Fit almost every microphone. Standard with leading manufacturers for many years. Compact, rugged, neat. Chassis receptacles are integral parts of microphones using single conductor cable. Widely used in amplifiers, transmitters, phonoelectric devices, home recorders and similar equipment. They are also suitable for connecting various units such as PM speakers, headphones, and for theft alarms or wall type coin operated devices, etc.

In the 75 Series, plugs mate with all cable jacks and receptacles. Circuit closing contacts are the same except that they close the circuit when plug is disengaged, eliminating open circuit grid howls.

Locknut Receptacles mount in .385" holes when grounding to chassis and 1/2" holes for ungrounded 2 circuit applications.

Series 91 Microphone Connectors 3 and 4 Contacts

Some of the advantages of Amphenol Series 91 Microphone Connectors . . .

- Accidental disconnections are eliminated by a positive screw-type connection.
- Incorrect insertions are impossible because connectors are polarized.
- Pulling and twisting strain on soldered contacts is eliminated because a squeeze-type clamp grips cable securely after assembly.

Chassis receptacles mount in 27/32" chassis holes. Maximum chassis thickness for chassis receptacle is 1/8".

Mating families of connectors are listed in horizontal lines.

14-271 Tubular Twin Lead AIR-CORE

U.S. Patent No.
2543696

AMPHENOL's AIR-CORE Twin-Lead is a superior low-loss lead-in for UHF. It is also ideal for VHF installations requiring long lengths of lead-in.

The concentrated field of energy between the two conductors is largely protected by the polyethylene. This field of energy is almost entirely unaffected by exterior conditions.

The field of energy in ordinary flat twin-lead is largely outside and exposed to all weather conditions. Under adverse conditions, the loss of flat lead-in will be three times the loss of Tubular Twin-Lead under identical conditions.

UHF TELEVISION ANTENNAS

AMPHENOL makes a complete line of quality-tested UHF antennas. Each different model is designed for better performance—each performs with distinction. There are certain features common to all AMPHENOL antennas which have become accepted by dealers and servicemen as the quality values with which to judge any antenna:

high gain and fine directivity, backed up by published charts which are scrupulously honest—sturdy construction and fine materials, backed up by years of dependable service. This combination of superior electrical and mechanical characteristics has made AMPHENOL antennas the first choice in fine antennas.

CORNER REFLECTOR is a high gain, exceptionally sturdy antenna that receives all UHF channels, 14 to 83. Single, the CORNER REFLECTOR gain reaches a high of 13db, while stacked the gain high is almost 18 db! Directivity patterns reveal one strong major lobe for all channels, single and stacked. Installation of the CORNER REFLECTOR is a matter of seconds and this added to its superior performance record has made the AMPHENOL model the number one CORNER REFLECTOR type on the market.

- 114-058 CORNER REFLECTOR**..... List ea. **\$12.50**
114-067 CORNER REFLECTOR STACKING HARNESS..... List ea. **1.95**

YAGI type UHF antennas are available in 8 custom models, each assigned to a broad channel coverage. Gain is peaked for each model to an average high of 11 db, single, and 13 db, stacked. Because each AMPHENOL YAGI will receive so many channels so well it may well be described as the only **broadbanded** UHF YAGI available today. State channel or channels wanted when ordering.

- 114-054 YAGI**..... List ea. **\$5.00**
114-066 YAGI STACKING HARNESS..... List ea. **\$1.00**

BO-TY AMPHENOL UHF antenna is available single or stacked. Recently re-designed for higher gain, the BO-TY is ideal for major signal areas or fringe locations. The single BO-TY gain is as high as 8.3 db single and over 12 db stacked. Larger aluminum dipoles, better dielectric material and improved construction are all features of the re-modeled AMPHENOL BO-TY.

- 114-062 BO-TY including stacking rod**..... List ea. **\$5.75**

RHOMBIC is an antenna type that offers needle-sharp directivity and extremely-high gain. The AMPHENOL RHOMBIC also features an exclusive **cross-braced** construction that assures long years of installation life. Gain for the RHOMBIC rises to almost 14 db!

- 114-060 RHOMBIC**..... List ea. **\$13.50**

STACKED-V will receive VHF, UHF or both! The angle between the seamless aluminum elements need only be adjusted to provide for each frequency range. Gain and directivity of the AMPHENOL STACKED-V are unusually good for an all-channel antenna.

- 114-059 STACKED-V**..... List ea. **\$9.75**

TYPE AN3100A WALL MOUNTING RECEPTACLE

The Type "AN" Series is designed and made according to specific military standards. While the outstanding feature of the "AN" series is interchangeability, the quality and design features have made it widely applicable to non-military and commercial uses. The military specification "AN" finish is cadmium plate with olive drab. The recommended commercial finish is cadmium plate only. Socket contacts are of the quality closed entry type. The "AN" connectors shown in this catalog have plastic inserts. Other assemblies are available in pressurized, environment resisting, and fireproof types. This catalog lists only "AN" connectors available from jobbers. For complete information on all "AN" and associated types, write for latest "AN" bulletin.

**TYPE K
CONNECTOR
SERIES**

The Type "K" Series were developed to meet the demands for a lighter and more compact electrical circuit quick disconnect fitting for aircraft. The "K" series preceded the "AN" series, and many features of the "K" connector were incorporated into the "AN" design. Since that time, the "K" series has undergone numerous changes, improvements, and additions in both shell sizes, types and insert arrangements. K's and RK's are used on aircraft interphone wing disconnects, D.F. loops, propeller cut-out switches, transmitters, instrument panels, Geiger-Muller counters, cathode ray recorders, occillographs, fast-battery chargers, television cameras, phone recorder control circuits, power circuits, potentiometers, etc.

EQUIFLEX ALL METAL VIBRATION ISOLATORS

Equiflex Vibration Isolators consist of a double array of springs arranged to form two opposed cones, the springs serving to join the outer plate member resiliently to the inner tubular member. Within the two cones of multiple springs there is a damper consisting of two floating metal stampings held apart by an internal compression spring. The damper serves to keep the amplitude at resonance within safe limits. The mounting incorporates safety rebound washers attached to each end of the inner tubular member, thus taking care of overload and shock conditions and keeping the equipment within proper limits.

With this type of construction, vibration is controlled both vertically and horizontally at the rated load the mounting deflects 1/8" (within a tolerance of zero to 10%), whether the load is placed in the apical or the radial direction—vertically (either up or down), laterally (sideways, fore and aft, or diagonally), with the spring rate linear up to 1/8" deflection. The spring rate then stiffens slightly up to the maximum movement. The safety washers are designed to provide additional spring deflections when the mounted equipment is subjected to shock loads.

These units are made of steel finished in cadmium with a dichromate dip and will withstand a 100 hour salt spray test. Mountings will withstand 15G shocks without damage and will keep equipment captive up to 30G's. Two types of mounting are available. Square Plate Mounting and Circular Cap Mounting as illustrated.

STAND-OFF TERMINALS

These rugged Stand-Off Terminals consist of two heavily hot tinned metal caps insulated from each other by a solid Grade L-5 Ceramic Steatite spacer. One of the metal caps is shaped for riveting into a small chassis hole. The cap at the opposite end provides a junction point for solder connection of wire leads. The ceramic insulator effectively isolates the tie point from the chassis. The insulator is Dow Corning DC 200A treated to meet Military requirements.

With Stand-Offs, lead junctions can be spotted anywhere on the chassis permitting shorter, more direct wiring between component parts.

“400” SERIES PLUGS AND SOCKETS

(Formerly “Heavy Duty”)

General Specifications

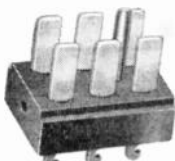

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze “knife-switch” type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are 1/4" wide by 1/8" thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

"2400" SERIES PLUGS AND SOCKETS

The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.

This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass $\frac{1}{4}$ " x $\frac{1}{8}$ ", cadmium plated.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified the following size cable entrance holes will be supplied:

2402— $\frac{3}{8}$ "	2406— $\frac{7}{8}$ "	2410— $\frac{1}{8}$ "
2404— $\frac{1}{8}$ "	2408— $\frac{1}{8}$ "	2412— $\frac{3}{8}$ "

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded Bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.

Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

“500” SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}$ " x $\frac{3}{32}$ ".

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from $\frac{1}{2}$ " diameter and $1\frac{1}{4}$ " diameter in steps of $\frac{1}{8}$ ". If no size is given, plain cap end with center punch locating center will be shipped.

No. 500-L Locks

Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Eyelets and Binder Screws are of brass, nickel plated. The $\frac{3}{4}$ W or Y terminals are of brass, hot tin finish.

BACKGROUND FOR CIRCUITRY

Vector Socket-Turrets and Plug-In units provide a unique method for mounting electronic circuit components, saving space and increasing efficiency. Catalog numbers shown in bold face type are the most popular types.

OCTAL, MINIATURE and NOVAL SOCKET-TURRETS

Sockets are standard bottom mounting with steel saddles carrying 4 ground lugs. Body is mica-filled phenolic carrying wrap-around brass contacts, cadmium plated. Terminal posts are 1/2" O.D. with 1/16" wall, made of Grade XXXP laminated tan phenolic joined to socket. Six plated brass terminals at far end of turret plus three, six or none near socket. Mounting holes required are: for Octal 1" ctr. hole, side holes spaced 1-5/16" for 0.134" saddle holes (a larger type is also available—See 'A' below); for 7 pin miniature, 3/8" ctr. hole, side holes spaced 7/8" for 1/8" saddle holes; for 9 Pin Noval, 3/4" ctr. holes, side holes spaced 1 1/8" for 1/8" saddle holes.

*Height measured from chassis to far end of turret.

For variations not always available from distributors but obtainable at the factory:

- Add 'A' to No. for large octal socket (1 1/2 Mtg. Ctrs., 1 1/8" hole).
- Add 'J' to No. for 'MFE' socket casting, beryllium contacts, silver plated, hot tin dipped.
- Add 'U' to No. for 4-40 U nuts which slip on saddle for easy mounting.
- Add 'C' to No. for impregnation of turret for moisture and fungus protection.
- Substitute 'L' for 'O' in No. if loctal socket required, (1-1/16" hole, 1-5/16" mtg. ctrs.).

Note: Letters are printed on all above turrets to indicate terminal positions. A-F inclusive appear on remote end, G-L inclusive on row near socket (H, J, L for 3 terminal rows). "A" and "C" over "1" of socket. Socket-Turrets are covered by Patent Nos. 2,604,584 & 2,624,775.

SADDLE NUTS: A 'U' type nut which slips over standard socket saddles has been especially designed to promote easy mounting on the chassis. For #4-40 machine screws. Order as #440-U nut or simply add 'U' to number of socket ordered.

TEST ADAPTERS

Vector Test Adapters are ideal for making measurements from the tube side of electronic equipment, where it is inconvenient to reach into the wiring compartment. The adapter is simply inserted between tube and socket completing the circuit and providing test tabs connecting with tube elements.

The T-789 set combines the 7-pin and 9-pin miniatures and octal in a plastic case. Or adapters may be obtained separately as follows:

Catalog No.	Tube Type	Body Dia.	Skirt Dia.	Length less Prongs	Lead Shielding

Vector PLUG-IN UNITS

FOR UNITIZED CIRCUITS

Amplifiers, counters, oscillators and the like can be readily assembled completely on Plug-Ins, permitting quick changes of circuits. Making a Plug-In unit involves little more than soldering in a few capacitors and resistors.

ECONOMICAL AND CONVENIENT

Plugs are standard mica-filled, ring mounted octal style with 8 prongs as standard, (9 or 11 prong plugs also available—see below). Sockets are standard mica-filled phenolic in octal, 7 Pin miniature or 9 Pin novel as ordered. Contacts are cadmium plated brass. Terminal turrets are Grade XXXP phenolic tubing 1/2" O.D. with 1/16" wall, carrying 12 plated brass terminals. Aluminum covers may be quickly detached by removing screws at base, making inside completely accessible. Miniature and novel types carry military type tube shield base. Main tube shield not furnished. Types in bold face are most widely used and generally preferred for distributor stock.

TEST EQUIPMENT FOR COLOR TV

COLOR-BAR GENERATOR WR-61A

The RCA WR-61A Color-Bar Generator is a compact, lightweight, portable instrument that produces with crystal-controlled accuracy 10 bars of color corresponding to R-Y, B-Y, G-Y, I and Q axes. The 10 bars are accurately spaced at 30° phase intervals. Indispensable for checking the overall operation of color receivers and for adjusting color phasing, color synchronizing, and color matrixing. The phasing of the 10 bars is inherently accurate because an "offset" crystal-controlled oscillator is used to generate the color subcarrier in addition to the use of crystal-controlled oscillators for the picture carrier (channel No. 3), sound carrier, and the horizontal sync and bar frequency. The sound carrier (unmodulated) is provided to insure precise tuning of the receiver, to check sound rejection, and to check for presence of beat interference between the color subcarrier and the sound carrier.

Luminance signals are provided at the edges of the color bars to check the "fit" or registration of the luminance and chrominance signals. A brightness signal is also available to check for possible shift of hue in the bright areas or highlights. The amplitude of the color subcarrier is adjustable in order to check the color sync lock action in the receiver.

Color signals of positive or negative polarity are provided for both low impedance (75 ohms) and high-impedance (5000 ohms) video circuits.

The WR-61A has a shipping weight of 17½ lbs. and is 9¼"h, 13½"w, 7½"d. It is supplied with a blue-gray hammered case, a satin-aluminum panel, and with separate cables for RF output and video signals.

\$247.50 (Suggested User Price)

DOT-BAR GENERATOR WR-36A

The RCA WR-36A Dot-Bar Generator is designed to provide a pattern of optimum-size rectangular dots for making all convergence adjustments in color receivers. It also provides choice of horizontal bars, vertical bars, or cross-hatch pattern for linearity adjustments in color and black-and-white receivers. The number of bars is adjustable: 8 to 15 horizontal bars; 11 to 13 vertical bars.

The WR-36A provides white dots on a black background. The dots are approximately 3/16" x 3/8", as viewed on a 15" tube. Experience has shown that, under normal room lighting conditions, the use of smaller dots creates a strong tendency to run the brightness too high, thereby causing blooming, which is definitely undesirable for correct convergence adjustments.

Both modulated-RF and video output are provided. The RF output is continuously tunable over Channels 2 to 6, with adjustable amplitude. Positive or negative video output of approximately 5 volts is provided for feeding into the video amplifier of color or black-and-white receivers. Choice of internal 60-cycle vertical sync or external sync is provided.

The WR-36A has a shipping weight of 17½ lbs. and is 9¼"h, 13½"w, 7½"d. It is supplied with a blue-grey hammered case, a satin-aluminum panel, and with separate RF cable and leads.

VIDEO MULTIMARKER WG-295A

The RCA WG-295A Video MultiMarker provides five simultaneous absorption-type markers accurately preset at the following frequencies required in marking the video response curves in color receivers:

0.5 Mc (for Q filter)	3.58 Mc (color subcarrier frequency)
1.5 Mc (for I filter)	4.5 Mc (sound-trap frequency)
2.5 Mc (for band-pass filter)	

Each of the marker frequencies in the WG-295A is definitely and quickly identified simply by touching the corresponding contact on the MultiMarker; this has the effect of reducing the amplitude of the particular marker notch. The WG-295A is connected between the IF/VF output on the sweep generator and the regular video output cable. \$24.95 (Suggested User Price)

5" OSCILLOSCOPE WO-88A

The popular WO-88A—the 'scope that will do a job for you—combines all the essential features required for TV servicing!

The WO-88A has built-in voltage calibrating facilities which permit simultaneous waveshape display and peak-to-peak voltage measurements. Frequently, the shape of the TV waveform under observation will be correct but its amplitude will be low and, consequently, cause improper operation. Therefore, a TV 'scope is complete only if it can measure the peak-to-peak voltage of the displayed waveform. Check this feature on the "88"!

On the WO-88A, sync polarity may be reversed instantly by simply clicking a front-panel switch. This feature is important because TV pulses may be either positive or negative, depending upon where the 'scope is connected. To avoid waveshape "jitter" or distortion, use a 'scope which will "lock in" readily on all types of TV waveforms. Check this feature on the "88"!

When you use the WG-216B Low-Capacitance Probe supplied with the WO-88A, the over-all input resistance is raised to 10 megohms! Because many TV circuits are extremely sensitive to resistive loading, normal circuit operation may be seriously disrupted by loading of the average 'scope. With the WG-216B Low-Capacitance Probe, however, loading problems are minimized. Check this feature on the "88"!

In addition, the WG-216B Low-Capacitance Probe decreases the over-all input capacitance to less than 10 μf ! Excessive capacitance loading can cause the horizontal oscillator to change frequency or stop oscillating. When the WO-88A is connected, the low over-all input capacitance leaves receiver operation essentially unaffected. Check this feature on the "88"!

7" OSCILLOSCOPE WO-56A

From the large 7" mu-metal-shielded CRT in a compact, space-saving cabinet to performance standards which include high sensitivity and wide frequency range—the WO-56A delivers peak performance for laboratory, factory and shop.

Identical vertical and horizontal direct-coupled, push-pull amplifiers have frequency-compensated and voltage-calibrated attenuator networks. A horizontal trace expansion of three times screen diameter with comparable vertical centering permits observation of minute trace detail. TV preset sweep facilities, retractable light shield, 60-cycle sweep and wide angle phasing control, "plus" and "minus" sync for locking-in "upright" or "inverted" wave shapes, high input impedance, peak-to-peak calibrating voltage, and many other time-saving features make this instrument one of the most desirable in the field.

CRYSTAL-CALIBRATED MARKER GENERATOR WR-89A

Featuring continuous tuning, the RCA WR-89A Crystal-Calibrated Marker Generator furnishes you with an rf carrier of crystal accuracy for use in aligning and trouble-shooting of TV and communications receivers, transmitters, and other equipment in such services as fm, aeronautical, and marine, operating in the frequency range of 19-260 Mc. Calibration of the generator may be checked at 2.5 Mc intervals throughout its tuning range by means of a built-in harmonic crystal oscillator of high accuracy.

In this one versatile instrument you not only get a multiple-marker generator, but also a very useful bar-pattern generator for checking both vertical and horizontal deflection linearity of a TV receiver. When video and sync information from an operating TV receiver is fed into the WR-89A, you can use the generator as a rebroadcast transmitter to produce a TV picture on any channel of another TV receiver.

And when an external rf signal is fed into the WR-89A, you may also use the generator as a heterodyne frequency meter for measuring the frequency of the external signal.

These and other important advantages reflect the expert engineering and functional design of the WR-89A—assuring you the dependability so essential for today's critical testing requirements.

UHF SWEEP GENERATOR WR-86A

• The RCA WR-86A UHF Sweep Generator is built around a frequency-modulated oscillator and is designed for production line and general service application on uhf receivers, converters, tuners, filters, antennas, transmission lines, and other equipment operating in the range of 300 to 950 Mc.

The Sweep oscillator employs the RCA-6AF4, a uhf oscillator triode, in a specially designed sweep circuit which results in excellent sweep linearity and a maximum amplitude variation of 0.1 db/MC combined with a large sweep width.

The oscillator compartment and its associated components are especially designed and sturdily constructed for best stability and reliable performance over extended operating periods. Critical parts are silver plated for maximum electrical efficiency. The entire oscillator section is enclosed in a special silver-plated case to minimize leakage.

A blanking circuit is included to provide a reference base line on an oscilloscope. The blanking circuit is normally in operation but may be incapacitated by a front-panel switch. The horizontal sweep frequency for the oscilloscope can be obtained from front-panel terminals.

The WR-86A has 50-ohm output and will work into a 50-ohm unbalanced or 300-ohm balanced load. For 50-ohm unbalanced circuits, the output cable is connected directly to the load. For 300-ohm balanced circuits, the cable is plugged into a specially designed shielded balun (WG-296) which provides 300-ohm balanced output. The balun is furnished with the WR-86A.

The instrument is engineered to give long trouble-free performance under severe operating conditions. Its simple tuning and directly read dial make the instrument easy to use on the production line and on the service bench.

AUDIO SIGNAL GENERATOR WA-44A

You'll find the WA-44A excellent for: amplifier frequency-response checks; use in measuring intermodulation distortion in amplifiers; frequency response checks of tone controls; running frequency response curves on phonograph equalizers; checking input and output impedances of amplifiers; use in measuring resonance frequency of loud-speakers and speed of recorder/reproducer mechanisms.

And this compact, lightweight instrument is equally useful in: tuning bass-reflex enclosures; determining unknown audio frequencies; determining inductance and capacitance; audio signal tracing; determining the resonance frequency of LC circuits; and locating cabinet resonance and rattles. The RCA WA-44A features a new RC-type oscillator having a wide frequency range, which facilitates checking response of high-fidelity amplifiers, and an agc control circuit which insures stable performance. RF SIGNAL GENERATOR WR-49A

You don't have to bother with the nuisance job of connecting dc blocking capacitors to the probe tip of the RCA WR-49A RF Signal Generator, because it has built-in dc blocking capacitors. With it, you can inject rf signals into plate circuits and other points where dc is present without placing a dc load on the circuit under test—and with protection from burn-out in both the equipment and signal generator.

The functional-design dial facilitates accurate and easy readings. And full-length shielding of the output cable minimizes radiation and hum pickup in the receiver under test or adjacent test equipment. And that's not all! The extremely stable cathode-follower output stage isolates the oscillator from effects of load reactance and resistance, thereby maintaining good output waveform, voltage regulation, and frequency stability.

Compact and lightweight, the WR-49A can be depended upon in such applications as alignment and signal tracing of am and fm radio receivers, alignment of low-frequency if amplifiers in TV receivers, and signal tracing and troubleshooting in TV receivers.

The WV-84A can be used with an external battery to measure resistance values as high as 90,000 megohms or may be used with an external resistor as a voltmeter with an input resistance of at least 100 megohms per volt.

Circuit features of the WV-84A include negligible loading of the circuit under test, meter movement electronically protected against burn-out, and a self-contained battery power supply which makes the instrument completely portable.

The WV-84A is finding increased use by research laboratories in many fields—chemistry, medicine, electro-mechanics, electronics, nucleonics—for conducting experiments involving feeble currents. Industrial users find it an excellent instrument for making current and voltage measurements in electrolysis and corrosion investigations. The WV-84A may also be used for checking currents in light meters, in ultra-violet and infra-red detectors, and in spectrophotometric devices.

The circuit provides the true proportional relationship to the Gm curve for measuring in Micromhos the tube characteristics. Diodes and low power thyratrons are tested on the GOOD-?-BAD scale.

This new tester handles the most perplexing tube testing problems in many fields—Radio Servicing, Industrial Production, Laboratory Testing, Theatre and P.A. Equipment, Communications, etc. Patented circuit for Proportional Mutual Conductance tube testing employs actual signal oscillator (4KC) for grid signal. Thus, hum and ripple, and tubes with open grids present no problem, and cannot give false readings. Signal component of output is picked off and measured by the specially designed instrument circuit. Tests all types of receiving tubes, low power transmitting tubes, rectifiers, thyratrons, voltage regulator tubes, eye tubes, subminiature, acorn, ballast tubes and pilot lamps. Continuity test circuit also may be used to check electrical appliances for shorts or open circuits. Flexible three-position lever switches for complete coverage of both present and future tube connections. Only three positions mean no guess work on settings. Speed and ease of operation makes use of the tester. 0-10 ACV (variable) available for testing low voltage tubes. Also five other voltages available. (10, 30, 70, 100 and 250). Full range filament voltage settings provides complete and accurate filament or heater voltage at tube base connections: .63, 1.4, 2.0, 2.5, 5, 6.3, 7.5, 12.6, 19.6, 25, 32, 50, 70, and 117 volts. Instrument is Model 420, 4" long scale, knife edge pointer for easy readability; adjusted to 100 microamperes at 250 millivolts for good temperature compensation. Sockets: 4 prong, 5 prong, 6 prong, 7 prong large and small with combination for pilot lights and flashlight bulbs, 8 prong octal, 8 prong loctal, 7 prong miniature, 7 pin subminiature (for hearing aid tubes), 8 pin subminiature, 9 pin subminiature. RADIO & TV SERVICING WITH LOAD-CHEK Model 660

RANGES

WATTS—A.C. or D.C.: 0-500 (50 division scale)
0-1000 (50 division scale)
VOLTS—A.C. or D.C.: 0-150 (65 division scale)

Model 660

The LOAD-CHEK for the first time makes it possible for every technician to utilize what is perhaps the simplest and quickest of all service methods—servicing by Power Consumption Measurements, long proven by auto-radio servicemen as a rapid method of localizing troubles in auto radios. Triplet Model 660 is the first Wattmeter to be produced at moderate cost, and with the proper ranges, to bring this short-cut method within the reach of every radio and TV serviceman. Following are only two of many time-saving uses of this new instrument:

LOCATING A SHORT—The chassis tag may show a normal consumption of 225 Watts. Simply plug a power cord of the chassis into LOAD-CHEK (no loose ends to connect or be in the way). Note the reading—which should be possibly 350 Watts. By removing the rectifier tube you can determine at once which side of the tube the short is on. With a soldering iron and long-nosed pliers you can check through the chassis, locate and correct the trouble without having to lay down tools or to check with lead wires!

REPLACING BURNED-OUT RESISTORS—With the chassis to be repaired plugged into a LOAD CHEK MODEL 660, note the wattage reading with the burned out resistor circuit open. Now replace the resistor. Should the increase in watts be greater than the resistor rating, it indicates an extra load has caused the trouble which has not been cleared. LOAD-CHEK is made-to-order for the busy serviceman because it's a Time Saver; and at its moderate cost can be standard equipment on every service bench.

UHF MARKER GENERATOR AND ALL-PURPOSE SIGNAL GENERATOR

UHF Continuously Variable Through Channels 14-83 on Linear Scale 13" Long — All Fundamental Readings (470-900 MC) Accuracy — 1/2% to 1%

An easy-to-use invaluable test aid as a Signal Generator or Marker Generator for: (1) Adjusting UHF TV receiver front ends and UHF converters. (2) Setting the end limits of UHF converters and receivers. (3) Pre-setting fixed channel converters, a procedure especially needed in fringe areas where the station signal may be too weak for sufficient test indication. Pre-setting can be easily accomplished with the Triplet 3436. (4) A reliable signal source to compare the gain of UHF receivers and converters, also especially needed in fringe areas. Bad crystals in the UHF section can be detected by this method. (5) Used as an alignment generator for UHF converters and TV front ends. (6) Used as a UHF Horizontal Bar Generator, the tester generates approximately 12 lines by using the modulation and feeding into the front end of the receiver. This makes possible linearity adjustment of the TV picture.

Piston-type attenuator. Adjustable modulation of RF signal at approximately 1000 cycles. Can be used as horizontal bar generator. ON-OFF switch. Also ON-OFF plate switch for pre-heating oscillator tube filament before applying plate voltage.

Heavy steel case, handsomely finished and professional in appearance, 15 1/2" x 11 1/2" x 8 3/4". Black baked-on suede enamel finish. Sturdy leather strap handle for ease in carrying; makes the generator adaptable for portable as well as test bench use. Weight: 24 lbs. net.

Panel etched heavy aluminum with red and black characters. Tubes, 6AF4, 6J5, 6K6, VR105 and 6X5. Complete with instruction books and test leads.

MODEL 260 Set Tester

World's Most Popular
High Sensitivity Set Tester
For RADIO and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260. In no other tester of its kind will you find the combination of useful ranges, accuracy, ruggedness, beauty and sensitivity developed to such a high degree of perfection.

Removal of the Model 260 from its heavy, handsome case of molded bakelite, will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible. The front panel is a thing of beauty and long life. Pin jacks are recessed so no metal parts are exposed. All figures and symbols are molded into a heavy Bakelite panel and filled with durable white for long wear and legibility.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control, diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high-mu triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

MODEL 480 FM TV GENESCOPE

Ideal For Servicing Both VHF and UHF TV Receivers . . .

In addition to providing all the required signal sources for VHF television servicing, the Model 480 Genescope also includes a high sensitivity oscilloscope with unique advanced design in every detail and equipped with a high frequency crystal probe for signal tracing. Harmonics of the FM Generator can be used to observe overall response wave forms in UHF receivers and harmonics of the AM Generator make marking of this wave form possible through most of the band.

The variable oscillator sections are mounted one on each side of the oscilloscope section and are provided with large precision vernier dials having a 20:1 ratio and 1000 division logging scales. They are easy to read and can be quickly set to an exact frequency.

Modern FM and TV development and servicing requires the use of test equipment made to exacting standards. With this in mind we offer you the Genescope with the assurance that everything possible has been done to make it the most accurate, flexible and convenient instrument available.

Multiple shielding, generous bypassing of all power leads entering oscillator enclosures and adequate line input filtering eliminates excessive leakage and oscillator interaction.

Step and continuously variable attenuators on both AM and FM sections provide minutely controlled signal levels from a few microvolts for fringe area peaking operations to a magnitude sufficient for single stage alignment.

A self contained impedance matching network is adjustable to any receiver input, balanced or unbalanced, in a matter of seconds. Values available include 300 ohm and 75 ohm termination with or without an intermediate attenuator pad and with or without an isolating condenser, open termination for maximum voltage output with or without isolating condenser and many other useful combinations.

The center section of the Genescope contains the oscilloscope and all associated controls. The cathode ray tube of the oscilloscope is mounted vertically in the case in order to conserve bench space. The pattern on the tube is brought into view by use of a highly polished adjustable mirror at the top of the cabinet. The mirror may be quickly adjusted for any position of the operator. The tube face is placed well below the top surface of the cabinet in order to shield it from incident light thus producing a clear, sharp image unhampered by narrow angle light shields. The mirror when closed provides adequate protection for the cathode ray tube when not in use.

Direct connection to vertical and horizontal deflection plates and other internal functions are available through removable cover on the front panel.

MODEL 303 VACUUM TUBE VOLT-OHMMETER

The Simpson 303 really is a versatile instrument. It can be used as an electronic DC voltmeter, an ohmmeter, an AC voltmeter, an AF voltmeter, an RF voltmeter (with accessory probe), an output-meter, and an FM indicator.

The 303 truly is a worthy companion of the world famous Simpson Model 260 Volt-Ohm-Milliammeter. Simpson engineers spent months of painstaking research in the laboratory, working in close co-operation with TV set manufacturers to produce the 303. This ruggedly built instrument has a volume of only 120 cubic inches, and is 60 to 70% more compact than any similar instrument. In achieving this compactness for greater portability Simpson did not sacrifice accuracy or functional value. Its large 4½-inch meter is easy to read. Features such as low current consumption and wide voltage and resistance ranges make the 303 an extremely versatile instrument.

Like all other instruments bearing the Simpson name, the 303 is of the highest quality construction throughout, but sells at an amazingly low price.

Twenty-five separate meters at the turn of a switch. That is what you get in the Simpson Model 221 Roto Ranger. The necessity of reading numerous scales, so common in ordinary volt-ohm-milliammeters, is forever eliminated when you own a Roto Ranger. The chances for errors in making readings are reduced to a minimum. The Model 221 provides a separate direct reading scale for each range and does it automatically. Calibrations are not cramped. Each scale is full size, the same as it would be for a separate instrument. As the selector switch on the panel is moved to the range desired, an ingenious mechanism rotates the proper range into position behind the meter window.

INSTRUMENTS THAT STAY ACCURATE

MODEL 476 MIRRORSCOPE

Simpson takes pleasure in presenting the revolutionary Model 476 Mirroscope. The objectives behind the design of the Model 476 were to eliminate certain inherent disadvantages found in the conventional type of oscilloscope.

By use of the Mirroscope principle the 5" cathode ray tube is mounted in a vertical position. This construction reduces bench space requirement to an area of only 9" x 8" thereby permitting better concentration of associated equipment for any type of test procedure.

The cathode ray image is reflected from a high grade mirror mounted in the adjustable cover at the top of the cabinet, thus the viewing surface is brought near eye level when the instrument is used on benches of normal height. The mirror angle is quickly and easily adjusted to any position of the operator.

The cover with integral side wings forms an effective shield against external light sources or may be closed down for protection of the tube and mirror when the instrument is not in use.

The upright construction permits location of controls and connections for maximum convenience and allows for internal cathode ray tube connections at the front of the panel instead of the rear.

These and many other advantages will be disclosed when the construction and specifications of the Model 476 Mirroscope are considered fully.

SENSITIVITY:

- Vertical direct — 12 volts rms per inch.
- Vertical amplifier — 20 millivolts rms per inch.
- Horizontal direct — 14 volts rms per inch.
- Horizontal amplifier — 38 millivolts rms per inch.

Horizontal trace expansion is over 4 times tube diameter. This makes it possible to examine minute portions of a response pattern for finer detail.

Linear Sweep frequency is continuously adjustable in five overlapping ranges from 15 cycles to 60,000 cycles. Internal, external or line frequency synchronization with variable amplitude is available.

Means for intensity or "Z axis" modulation is provided. Approximately 14 volts peak will blank a trace of normal intensity.

MODEL 276 OSCILLOSCOPE CALIBRATOR

The Simpson Model 276 Oscilloscope Calibrator adapts your oscilloscope for quick and accurate voltage measurements by comparative methods.

A twelve position switch provides six ranges each of RMS, Peak and Peak to Peak voltage with six alternate neutral positions for viewing the signal under observation.

Continuously variable calibrating voltage of power line frequency is supplied by the Model 276 and is indicated on a large 4 1/2 inch meter which indicates RMS values from 0.06 volt to 90 volts, peak values from 0.1 volt to 125 volts and peak to peak values from 0.2 volt to 250 volts.

When the Model 276 Oscilloscope Calibrator is connected in series between a signal source and the Oscilloscope input, a convenient switching arrangement makes it possible to make quick comparative checks between the relative amplitude of the signal and of the measured voltage source. This system is most convenient because leads do not have to be shifted around in order to calibrate the signal on the oscilloscope.

Housed in a rich black molded bakelite case identical to Models 260 and 303, this instrument will prove a worthy addition to the service dealer's equipment.

SIMPSON MODEL 1000 PLATE CONDUCTANCE TUBE TESTER

Features Accurate Shorts and Leakage Tests with Indications in Ohms!

The Simpson Model 1000 will test any receiving tube including 9 pin miniatures and subminiatures with base arrangements in a line or circle. The Model 1000 tests an extremely important factor in the tube which is plate conductance. The dial indicates percentage of rated plate conductance which is closely related to mutual conductance since amplification factor remains constant throughout the life of the tube. Testing by the Simpson plate conductance method makes testing methods simpler . . . more positive . . . more accurate. These tests are made under conditions simulating actual use in radio, television, hearing aids and other electronic circuits.

Now, you can have reliable short tests because the Simpson 1000 quickly and conveniently shows you exact ohms values for interelement leakage and tube shorts.

Handy multi-position toggle switches help you make quick adjustments to proper voltages for bias, screen and plate supply. Each tube element is individually connected to the proper potential . . . insures against tube damage during testing.

Practical Simpson Snap-Out-Snap-In transparent plastic windows are provided over the fast action roll chart. They're instantly removed. You may add information on new tubes at any time. You'll like the easy-to-read type on the roll chart . . . eliminates squinting.

Simpson's roll chart service makes a new roll chart available each year and complimentary roll chart supplements are provided at regular intervals.

Every detail—no matter how small—has been engineered to meet your satisfaction. The fuse socket is on the front panel . . . dial cover is one piece unbreakable clear plastic.

The panel of the Model 1000 is finished in non-glare grey hammerloid and you'll like the rich burgundy carrying case, too. It looks like luggage. This is the tube tester you will be proud to own. See it at your parts jobber today.

MODELS 240 and 230 VOLT-OHM-MILLIAMETERS

These two "Micro-Tester" portables are famous throughout the world for their ruggedness and built-in accuracy. They exemplify the construction features and utility that distinguish the entire Simpson line shown in this section.

Both are shock-proof and incorporate the special D'Arsonval Simpson movement which is known for its extreme accuracy. Resistors are in matched pairs to provide the greatest possible accuracy for all ranges.

Model 240 — the "Hammeter" — was designed for the additional voltage and sensitivity demanded in radio testing. With its maximum voltage range of 3000 AC or DC, it was the first self-contained pocket portable instrument built expressly to check high voltage and all the component parts of transmitters and receivers.

Model 230, with a maximum voltage of 1000 volts AC or DC, is ideal for most industrial testing. Its ranges are adequate for most line voltages, for telephone, teletype, and general purpose testing.

Both models are housed in heavily molded bakelite cases, with all numbers and symbols recessed in the panel and filled with white enamel for greatest legibility and ease of reading. Both have full size 3" meters.

MARION RUGGEDIZED METERS HERMETICALLY SEALED

New Marion ruggedized meters are an especially accurate and sensitive means for electrical measurement, even under extreme conditions of shock, vibration, mechanical stress and strain, weather conditions, and climate.

Ruggedized meters offer new freedom of application. They give faster response time, more sustained accuracy, lower bearing friction and longer life.

Ruggedized instruments meet the dimensional requirements of JAN I-6 and are completely interchangeable with existing 2 1/2" and 3 1/2" types. They are manufactured in standard 1 1/2", 2 1/2", and 3 1/2" sizes.

When you want the finest in electrical instruments you can depend upon these new Marion ruggedized meters.

NULL INDICATORS

Marion Ruggedized Hermetically Sealed Null Indicators are now available in models HS2 and HS3. They are used primarily as bridge and potentiometer balance indicators and in any application where an

instrument with very high sensitivity about the zero or balance point is desired. The sensitivity at this point is 1 microampere per mm. or higher; the meter's shaded pole face and shielded core construction gives sharply logarithmic attenuation as it departs from null point, and provides ample overload protection. This Ruggedized meter opens up new applications for Null Indicators, for it permits use of the null system for precise measurement under field conditions that have been prohibitively severe up to now.

ADVANTAGES

- Speeds soldering operations by generating heat within the work in localized area.
- Improves quality by producing cleaner work. Avoids oxidation and scaling.
- Prevents damage to surface finish. This is important in glass-to-metal applications.
- Permits soldering of an entire seam or several jig-located parts at one time.
- Provides complete control, timing or duplication of soldering processes.
- Prevents mistakes and reduces rejects.
- Provides local heat for otherwise inaccessible parts.
- Gives expert results with inexperienced operators.
- Saves time, money, effort. Draws only 775 watts and then only at full load. Only 100 watts are used on standby.
- Practically free from maintenance. No moving parts to wear out. Uses only low-priced, easily replaceable tubes. Has high safety factor.
- Offers less hazard but does a neater, cleaner, faster job. No danger of sparking or RF burns from output terminal or work coils.

MARION MULTI-RANGE METER TESTER M-2

Marion Meter Tester (Model M-2) is the only instrument of its type available today. A laboratory and production tool for the measurement of the performance of DC electrical indicating instruments, it combines in one portable package an electronically regulated self-contained power supply, stepless vacuum tube voltage control, large 8½" mirror-scale individually hand-calibrated illuminated standard instrument, a decade of .1% accurate manganin wire wound resistors, a resistance bridge, null indicator and associated switches.

The Marion Meter Tester measures current sensitivity of electrical indicating instruments in 10 steps from 25 ua full scale to 10MA full scale and from 0-100v. The resistance measurement portion of the meter tester permits measuring of the internal resistance of the meter under test without exceeding its full scale rating. Accurate measurement of the internal resistance of sensitive microammeters and other instrument types is possible over the range of 0-5000 ohms.

It may also be used as a precise production limit-bridge in the same resistance range and will permit acceptance tolerances to be set for any value from ± ½ of 1% to ± 20%.

The Marion Meter Tester is a means of high speed production inspection and calibration of electrical indicating instruments as well as a versatile laboratory instrument to assist in the maintenance of high measuring standards.

The M-2 Model can also be used for additional purposes, such as a precise source of DC current and voltage and as a precision Wheatstone bridge in the 0-5000 ohm range.

Shurite

PANEL METERS

Shurite panel meters are attractive, rugged, dependable instruments with accuracy well within 5%. All models have metal cases, telephone-black front; all require 2 3/4" hole. DC meters are polarized-vane solenoid type, or moving-magnet construction when indicated, AC meters are double-vane repulsion type with jeweled bearing. Although the jewel construction costs more to build, it pays off by providing continuing accuracy during a longer useful life. All are guaranteed.

● **Guarantee:** All Shurite meters are guaranteed to users against defective workmanship and material, and will be repaired or replaced if sent to the factory postpaid with 40¢ handling charge within one year after date of purchase.

● **All-metal Dials**—age and moisture resistant, lithographed in black on white for high visibility.

● **Sturdy Design**—with husky new coil frames designed to prevent breakage, rigidly mounted in cases with anti-turning hex head studs. Interchangeable in other respects with a popular type of instrument formerly available.

● **Modern Appearance**—with concealed coils and new raised dial design, enhancing appearance and greatly increasing readability.

● **Wide Selection**—Shurite offers the broadest line of standard meters in the economy-priced field. Distributor stocks are backed by factory inventory, another reason why Shurite is first with distributors.

TYPICAL USES: Shurite products, with their rugged design, and ability to duplicate readings, enjoy wide acceptance in the electronic and electrical fields. Applications include transmitters, receivers, TV antenna rotator controls, battery indicators, appliances, power sources, battery eliminators, electric fence controllers, and the very popular basic meters in radio test kits.

Shurite products are also specified for battery voltage indicators on emergency lighting, burglar and fire alarm systems, output meters on rectifiers (copper oxide, tungar or selenium types), rate-of-charge indicators, testers for hearing aid batteries and their chargers, ammeters for plating sets, and polarity indicators for metals analysis.

Other uses range from automotive test equipment to pin-ball circuit testers, and well-depth indicators. Shurite has long been the favorite brand for those who take their hobbies and experiments seriously.

MOUNTING DETAILS

All Shurite Panel Meters have flush cases and require 2 3/8" hole. Most standard ranges have 6-32 studs, and are mounted as follows:

DC

AC

IMPORTANT—HOW TO ORDER:

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS (Z)

Zero adjusters are available only on Models 550-DC and 650-DC. No zero adjuster on models using 950 case, except as supplied on No. 9300Z and 9332Z. When ordering, add Z to stock number. Example: Stock number for Model 550-DC voltmeter, 0-1 volt range—without zero adjuster is 5101. With zero adjuster, it is 5101Z.

PANEL CALIBRATION (S)

Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S. If thickness of steel panel is not specified, meter will be supplied for .040 panel.

VISCOSITY DAMPING (V)

Careful application of new silicone compound on bearing surfaces damps pointer overtravel. Add V to stock number, as 5406V, and 5 cents to price. Not regularly stocked; available only on quantity order.

VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. **Running Time Meters** are synchronous motor operated instruments to automatically measure service periods or service requirements.

APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. **Running Time Meters** are often used in conjunction with reed type frequency meters.

980 LINE WESTON TEST EQUIPMENT

MODEL 980 LINE — WESTON TEST EQUIPMENT

A New Simplified Approach to TV Alignment

The Weston Model 980 line provides servicemen with the most advanced, and by far the most simple and accurate method of TV receiver alignment. It comprises all of the instruments necessary for all-purpose observation of complex wave forms by the electronic industry.

With the Weston method, the output of the sweep generator is fed into the calibrator making it unnecessary to connect the calibrator to the TV set. Only two connections are necessary. This eliminates receiver oscillations ordinarily encountered with the conventional method of receiver test hook-up. Further, there is no disappearance of markers at trap resonant frequencies. Response curve is not disturbed. Annoying trimmer touch-up on trap circuits is minimized.

This simplified technique is only possible when the companion instruments — Weston Calibrator and Sweep Generator — are used with a scope having provisions for Z-axis intensity modulation. However, individual instruments in the Model 980 line can be used with available test equipment in the conventional method of alignment.

SEND FOR COMPLETE DATA ON THE NEW WESTON MODEL 983 OSCILLOSCOPE. (Wide band, Z-axis intensity modulated — ideal for color.) Accessories for all instruments described are available.

WESTON MODEL 985 CALIBRATOR

The Weston Model 985 Calibrator is a highly functional instrument for TV shop, engineering, laboratory, and industrial alignment applications. Markers are provided for waveform patterns, local tuner oscillator frequencies, and trap circuit alignment. The instrument is extremely useful for making linearity adjustments, calibrating signal generators, and determining signals of unknown frequencies.

FEATURES

SCALE CALIBRATION: The frequency calibration of each frequency setting can be checked and adjusted with crystal accuracy. Crystal calibrating points are available at 1.5 and 4.5 megacycles throughout the entire scale. A scale shift knob is provided to align properly the scale with the crystal calibrating dots. A neon type bulb is utilized to indicate visibly the crystal frequency points.

SCALE PRESENTATION: Slide rule type in which one scale is visible at a time. Ten scale range bands available . . . total scale length of 8¼ ft.

DUAL MARKERS: 4.5 mc side band markers permit simultaneous observation of video and sound carrier.

INTERNAL MARKERS: Special circuitry provides an internal marker of either a positive or negative pulse suitable for Z-axis intensity modulation of the scope pattern. This eliminates the necessity of feeding an RF calibrator signal directly into the TV receiver which can cause overload and oscillation in the TV set. The marker is visible even at the sound trap frequencies.

HETERODYNE DETECTION: With an input sensitivity of 500 microvolts, the local TV receiver-tuner channel oscillator frequency can be determined without tuner disassembly.

BAR PATTERN GENERATOR: Amplitude modulated signals of the band oscillator at 400 cycles for the horizontal linearity check and 300 KC for the vertical linearity check can be readily fed to TV antenna terminals to produce horizontal and vertical bars.

SPECIFICATIONS

FREQUENCY RANGE (with Variable Frequency Oscillator):

The Non-Ruggedized Meter incorporates all the basic features and improvements of the famous Phaostron Ruggedized and Sealed Meter—with the exception of the shock mounts necessary to produce a Ruggedized instrument to MIL-10304 specifications.

For applications not requiring these extreme exposures to shock, here is a meter that still maintains its excellent constancy of calibration with the same ruggedized movement, miniaturized moving coil assembly, R. F. shielding and aged Alnico Magnets that are featured in the Ruggedized Phaostron models.

POINTERS . . . are formed of 52 SH aluminum alloy tubing locked to the balance cross of the moving coil system. This permits extreme overload, shock and vibration without damage.

WATERPROOF-O-RING SEAL . . . meets sealing requirements of MIL-10304, and the meter can be taken apart in the field for servicing. Re-assembly of the meter does not affect the integrity of the seal.

SELF CONTAINED RUBBER SHOCK MOUNTS . . . control deflection of the instrument movement under shock. The specially developed rubber has good low temperature characteristics and high dielectric strength. It exhibits no corrosive properties even when exposed to extreme temperatures.

INSTRUMENT HOUSING . . . Furnishes magnetic and electrostatic shielding which prevents external magnetic conditions from affecting the meter calibration.

RUGGEDIZED MOVEMENT . . . is a result of a miniaturized moving coil assembly, the mass is reduced to the point that it is not affected by high shock, tumbling or vibration.

SHOCK MOUNTED JEWELS AND PIVOTS . . . Large radius pivots reduce the unit loading and are incorporated with shock mounted jewels, assuring continuous accuracy when exposed to extreme shock and vibrational environment.

HAIRSPRINGS . . . for Phaostron RUGGEDIZED meters are formed of silver-coated beryllium copper springs of the shortest length consistent with the torque desired and are unaffected by high shock, vibration and impact.

PANEL AND PORTABLE INSTRUMENTS

MODEL Nos. 600 and 607

MODEL Nos. 635 and 597

NOTE: Meters listed are standard in Flush cases. Surface cases can be supplied in No. 17/L, No. 570, No. 574, if desired—specify case on order. If "in-between" ranges are required, add 50c to price of next higher range listed. If "zero-center" ranges are required, add 50c to price of that range. For in-between ranges on moving-coil type voltmeters 300 volts and up, add \$2.00 to prices shown.

NOTE: Unless otherwise specified, all meters are calibrated on non-magnetic panels. If steel panels are used, kindly so state, giving thickness of steel and size of panel hole, and meters will be calibrated for steel panels at no extra charge. All prices are net—subject to change or withdrawal without notice.

MODEL Nos. 582 and 17/3

HOYT moving-coil Meters, both panel-mounting and portable, are built on the D'Arsonval principle. All with carefully selected jewel bearings and insulated zero adjusters. Accuracy to 2% of full scale.

Alnico Magnets with soft-iron or sintered pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT designed "cross arm" spiral wire

balance in two planes. High torque to weight ratio. Quick response and good damping under all conditions.

Either "knife-edge" or "lance" type pointers available on most models.

Small Meters (2½" x 4½") have external pivot construction—best for sensitive movements in small instruments. Larger Meters have internal pivots. A wide range of sizes in round and square cases.

HICKOK

DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER

Most Accurate Engineers' Laboratory Model

Tests Tubes Per Tube Handbooks and JAN Specifications

Model 700: For precise laboratory measurements of the most important vacuum tube characteristics, Transconductance (Mutual Conductance). With this Tube Tester it is possible to duplicate the results found in tube manuals. This instrument places a separate voltage on each element of the tube. These voltages can be varied and measured by means of separate variable rheostats and meters in each circuit. A.C. ripple has been completely filtered out of the plate, screen and grid circuits.

In addition to providing accurate measurements of Mutual Conductance, it is possible to study the behavior of various tubes when used in non-conventional and special types of circuits. Amplification Factor and Plate Resistance may be obtained from the test results.

The HICKOK Model 700 may be operated in either of two ways. First, by making use of alternating current null methods of measurement in which capacitance and resistance errors have been eliminated; and second, by direct reading on a meter. The Null Method of making measurements on the tube is the most accurate and is the one which is recommended where sufficient time for the test is available.

Complete with all leads and accessories. Attractive and sturdy case.

Model 700

Price: \$792.50

TECHNICAL FEATURES . . .

- Micromho ranges are available as follows: 600, 1500, 3000, 6000, 15,000, 30,000 and 60,000 micromhos.
- Four separate signal voltages are available, 1.0 volts, 0.5 volts, 0.1 volt and 0.05 volts.
- Plate voltage supply is continuously variable from zero to 300 volts. An individual D.C. voltmeter in the plate circuit reads plate voltage at all times.
- Screen voltage is continuously variable from 0 to 300 volts. This is metered by means of a separate D.C. Voltmeter in the screen circuit.
- The control grid voltage is continuously variable from 0 to 75 volts. This voltage is measured by means of a separate D.C. Voltmeter in the grid circuit. Provision is made to make bias either negative or positive. Suppressor can be used as control grid if desired.
- An extra negative circuit is provided for holding unused tube elements negative while test is being made on other elements.
- Provision is made for testing tubes under self-bias conditions when required by that particular tube or when such information is desired.
- Filament voltage may be applied to the tube up to 117 volts A.C. The separate A.C. Voltmeter in this circuit measures the voltage applied to the filament at all times. This voltage is continuously adjustable.
- A D.C. Milliammeter is provided for measuring plate current, screen current, or cathode current. This reads from 0 to 150 ma. and may be switched into the three circuits for this purpose.
- A separate D.C. Microammeter is mounted in the control grid circuit to read grid current, if and when it exists.
- Amplification factor can be easily calculated from values obtained from the meter readings. Other factors may be similarly calculated.
- Provision is made for testing tapped filaments either in series or in parallel.
- Provision is made for adjusting to the electrical center of filament type tubes.
- Twin tube sections may be tested either singularly or in parallel.
- Screen grid tubes can be connected as triodes or tetrodes, etc., as may be desired. Switching arrangement is provided for this purpose.
- A built-in power supply is included with the instrument providing thoroughly filtered D.C. on plate, screen, and control grid.
- A voltage adjustment with an accurate A.C. meter in the circuit is provided to insure exact signal voltage and correct phasing.
- Designed and calibrated for 60 cycles, 110 to 120 volts operation. Calibration for other frequencies and voltages available.
- Approximate size — 8" D. x 20" W. x 29" L. Approximate 70 lbs. net, 90 lbs. shipping.

Model 7001: Null Reading Apparatus is self-contained in a small case placed alongside the Model 700 tester. It consists of a voltage supply (source from the Model 700 to assure correct phasing), a sensitive A.C. Galvanometer, a calibrated resistor, and an accurate A.C. Voltmeter. It is connected directly into the plate circuit of the tube under test by binding posts on the panel of the Model 700. The grid-signal-produced-component of plate current is balanced by an equal and opposite current applied to the plate from the power supply through the calibrated resistor. The reading of the A.C. voltmeter at the bottom of the panel is proportional to the Transconductance of the tube, and is therefore calibrated in Micromhos. The effect of the Null Reading Method is to reduce resistance in series with the plate to zero, thereby assuring the highest accuracies obtainable. The A.C. Voltmeter calibrated in Micromhos is made as accurate as possible and has individually calibrated scales.

Model 7001: for obtaining bridge type null readings of 1½% accuracy. 8" D., 8" W., 13½" L.

VHF-UHF MARKER GENERATOR

Model 690: Crystal controlled. High .25 volt RF output. Provides dual markers with any TV sweep generator. Features another HICKOK First — a Non-Parallax shadow type dial. Conventional dials unless viewed at exact, right-angle introduce error, since hairline indicator is always a slight distance from the scale. The HICKOK Non-Parallax dial can be viewed from any angle without introducing error. The 45 inches of dial can be self-calibrated to within .05% accuracy with self-contained crystal calibrator. Complete RF coverage channels 2 thru 83. Also, 3.57 mc crystal (color burst frequency) is available. Leading TV manufacturer's engineers have tested this unit and comment highly on its frequency, stability and time saving features. You need the 690 for VHF or UHF black and white alignment right now.

HETERODYNED MARKER ADDER

Model 691: This unit in conjunction with the Model 695 Sweep-Alignment and Model 690 Marker provides the utmost in TV alignment technique. Takes guesswork out of alignment jobs. Eliminates errors previously introduced by overload due to markers. The 691 provides a marker visible at all times (including trap points) and will not change in amplitude or distort the response curve WHAT-SO-EVER. This feature, in addition to the accuracy and minimum leakage of the other units (690-695), will greatly simplify any alignment. The outputs of the sweep and marker generators are heterodyned and applied to a scope in such a manner that the marker signal will never pass through the receiver itself — therefore cannot cause overloading. This unit will work well with any of your present equipment that has an output of 50,000 microvolts or more.

Model 691

Price: \$79.50

OUTSTANDING FEATURES

- Input RF voltage required; 50,000 microvolts.

VHF SWEEP-ALIGNMENT GENERATOR

All Electronic Sweep

Model 695: Here is a completely new generator with ALL-ELECTRONIC sweep. It will exactly fill top requirements of the professional TV serviceman or lab. engineer. There are no moving parts to wear out. Though moderately priced, this unit features a sweep signal that is absolutely linear and without amplitude modulations. Features a high .3 volt output. Triple shielded — no leakage problem here. Signal can be attenuated from 3 to 300,000 microvolts. 0-12 volts variable bias voltage with continuous tuning allows set alignment to more sensitive for "fringe areas," or less sensitive for "prime areas" to prevent overloading. Continuous tuning and detailed, easy-to-read scales provide foolproof method of alignment. Three RF oscillators provide complete VHF coverage on fundamentals and heterodyned output IF 0 to 50 mc. This assures the strong signal necessary for aligning front ends.

Model 695

NEW UHF SWEEP-ALIGNMENT GENERATOR

- **Fundamental output on all UHF channels**
- **Linear, All-Electronic sweep**
- **Triple shielding — low leakage — better efficiency**

Model 697: An entirely new instrument developed to meet the critical requirements for UHF alignment. Previous methods of UHF alignment depended on the use of harmonics which in many cases were both confusing and erratic. Fundamental output on all channels from 14 to 83 is one reason why this instrument will speed up alignment tasks. Fundamental output and excellent linearity are provided along the entire sweep width, which is as high as 75 mc. Amplitude is constant over the entire sweep range. One of the major HICKOK achievements in the development of the 697 is ALL-ELECTRONIC sweep . . . no moving parts to wear out or lose efficiency. Triple shielding suppresses leakage to the practical level — far below other comparable equipment. This instrument is specifically designed to provide bare minimum loading effects on UHF circuits under alignment.

NEW UNIVERSAL VIDEO GENERATOR COMPATIBLE FOR COLOR OR BLACK AND WHITE RECEIVERS

Model 650C

Price: \$318.90

This fine new instrument is the first of its kind. Now available to rapidly and accurately solve your service problems. Does in minutes many of the TV servicing jobs that would require hours by other methods.

The 650C has a new timer circuit which delivers video pulses of 60 cycles, 900 cycles, 15,750 cycles and 315 kc., singularly or in any combination, both positive and negative output. Pulses are all locked together and crystal controlled for greater accuracy.

Pulses can be used directly, metered in peak-to-peak volts or to modulate the self-contained RF oscillator.

RF oscillator covers all TV channels in two bands (2-6 and 7-13), all on fundamentals. RF output is metered at all times from 1 to 10,000 microvolts with calibrated attenuation and variable percentage modulation. RF can be externally modulated with video frequencies from 5 cycles to 4 MC with variable percentage modulation on all channels.

Self-contained, substitute external video amplifier, 5 cycles to 4 MC with a variable gain from 0 to 10, with high input impedance, low output impedance and metered peak-to-peak voltage output.

Includes horizontal and vertical sawtooth voltages which can be directly substituted for vertical and horizontal oscillator in a TV receiver. Both the vertical and horizontal sawtooth amplitude is sufficient to give full raster deflection and in the case of flyback type high voltage power supplies the horizontal sawtooth can be used to light up the picture tube.

The 650C also contains an AC line voltage scale for instantaneous check on line voltage fluctuation, a common source of TV trouble.

This tester is an absolute must for accurate registration adjustment of the three color guns of color TV receivers, as well as accurate adjustment of focus, convergence, centering of individual beams, purity yoke, dynamic convergence, linearity and aspect ratio. A real time saver, you need the 650C for black and white TV servicing now.

OUTSTANDING FEATURES

Quickly localizes and accurately identifies trouble in any section of a TV receiver.
Provides electronically accurate bar or dot pattern on the screen of any TV receiver — independent of station operation.
R.F. output, directly calibrated in microvolts for sensitivity measurements.
Attractive steel portable case. 16 1/4" x 13 1/4" x 7". 29 lbs. net; 37 lbs. shipping. Test leads included.

Substitute Video Amplifier with gain of 0 to 10.
Crystal controlled timer for greater accuracy.

Fast, accurate, the ideal instrument for fringe area TV servicing.

Especially built to meet the exacting requirements of aircraft radio technicians. This one instrument provides complete coverage of the aircraft band including all the necessary IF frequencies, and covers all RF frequencies with calibrated output. Can be externally modulated from 15 to 10,000 cycles per second, and measures both input and output of units under test. This fine generator is, beyond a doubt, the best high quality oscillator available today at anywhere near its price range.

TECHNICAL FEATURES: Maintains dependable and accurate frequency calibration, is free of wave distortion, and has no spurious signals in the output system. Temperature compensation, self contained crystal oscillator reference level, and crystal controlled. Cast aluminum attenuator is especially designed to faithfully attenuate without frequency discrimination.

Doubly shielded for absolute minimum signal leakage. Model 292XAL Technical Characteristics are the same as the Model 292X listed above EXCEPTING that the 292XAL has continuous frequency coverage from 125 KC to 165 MC. However, all other features and accessories remain the same for both instruments.

Meters

For Accuracy and Dependability

3½" ROUND-250 DEGREE METER

All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments having equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.

3½" SQUARE 250 DEGREE METER SAME AS THE ROUND 250 DEGREE METER

All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments having equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.

Quick readability makes them desirable as flight instruments. Aircraft-type dial is available. Mechanism specially designed for aircraft service and will meet vibration-resistant requirements, etc.

DIRECT READING FREQUENCY METER, AIRCRAFT TYPE

These Hickok improved self-contained frequency meters can be mounted in aircraft type cases of the large AN size. These are the smallest size frequency meters. This type of case is often convenient where space is a limiting factor. Suitable for aircraft use. Movement is shockproof. Case is dust and waterproof in accordance with Army-Navy aircraft instrument specifications. Radium or fluorescent dials and pointers available.

RUGGEDIZED PANEL METERS

2½", 3½" or 4½"

The high Hickok standard of quality is now available in a ruggedized DC or rectifier type AC meter. This instrument provides the practical answer to requirements for shock proof meters with dependable accuracy. This highly efficient shock mount design permits pointer and scale divisions to be easily read when meter is under vibration. Rear panel is built with solder connections. Exceptionally thick flint hard glass withstands pressure and shock tests designated by military specifications. Designed for flush mounting. Luminous dials can be supplied. Zero adjuster is internal.

2½" MINIATURE SQUARE PANEL MOUNTING

Flush mounting, phenolic case, wide flange only; and metal cases, wide and narrow flanges. Accurate within 1½%. These miniature panel mounting instruments are of the standardized 2½" size, but have extra long scale lengths by reason of the wide angle of deflection and longer scale radius. Five types of cases are available. Lance type pointers regularly supplied, however, small spade pointers can be furnished.

3½" ROUND FLUSH MOUNTINGS

Accurate within 1½%. Large opening symmetrically designed admits a maximum of light to the dial. Thick flange eliminates danger of breakage and improves appearance. Metal dials with white background are supplied in all standard ranges. Special dial designs are supplied on quantity orders, at no extra charge. Include internal illumination.

3½" SQUARE FLUSH MOUNTINGS

Accurate within 1½%. Large opening, symmetrically designed, admit maximum light to the dial. Thick flange eliminates danger of breakage and improves appearance. Require less panel space than round flush instruments. Metal dials with white background are supplied in all standard ranges. Special dial designs supplied on quantity orders at no extra charge. Internal illumination obtainable by means of bulb inserted in a socket through the instrument base.

4" RECTANGULAR FREQUENCY METER

Frequency meters are self-contained with dimensions of 3¾" x 4" x 2". No external reactor is used. The instruments can be supplied shielded from the effect of external magnetic fields.

CHARGICATOR PANEL MOUNT

The chargicator is an electrical hydrometer which places no load on the battery and may be left permanently connected. It has advantages over a hydrometer in that the batteries need not be disturbed when the reading is made, and the readings need not be made at the battery. The chargicator gives an accurate and instant measurement of battery conditions on a highly expanded scale, suppressed zero volt-meter. Available in 2½" and 3½" sizes as well as special designs, and for special purposes.

CHARGICATOR

The newest instrument designed to improve battery servicing. This instrument measures the state of charge in a lead-acid storage battery, instantly and accurately. It's handier, cleaner, and quicker than a hydrometer and avoids acid damage to clothing. The chargicator also provides a complete test of all other factors affecting the life or condition of a battery.

4" "P" SERIES PORTABLE INSTRUMENTS

Scale lengths — AC Models P49, P49M — 3.15". DC Model P48 — 3.7". Accurate within 1½%. Dimensions: 4" x 3¾" x 2-3/16". Not shielded. These meters are manufactured in many ranges of voltmeters, millivoltmeters, ammeters, milliammeters, microammeters, volt-ammeters, and wattmeters for use on both alternating and direct currents. The movements are especially designed for use in places where vibrations are encountered.

SHUNTS

Hickok Portable Precision Shunts are of sufficient size to keep the temperature rise within the limits of N. E. M. A. standards. Shunts are accurately adjusted for 50 millivolt drop at full current value. The shunt resistance material has negligible thermo-electric effect against copper and negligible temperature coefficient within the limits of operation of the shunt. Will operate at rated capacity continuously without impairment of accuracy. Leads supplied with all shunts when ordered with ammeters.

CURRENT TRANSFORMERS

Hickok midget current transformers "Donut" design — for use with inserted primaries. SERIES 1 is primarily intended for use with ammeters, and conforms to N. E. M. A. standards ½X as to ratio only. SERIES 2 conform to N. E. M. A. standards ½X as to ratio and phase angle, and are intended for use with wattmeters, also may be used with both wattmeters and ammeters. "SERVICE ENGINEERED" TEST INSTRUMENTS

THE JACKSON ELECTRICAL INSTRUMENT CO., DAYTON 2, OHIO

THE '54 MODEL CRO-2 5" OSCILLOSCOPE VHF — UHF — COLOR

High Sensitivity — Wide Band. .018 RMS volts per inch
—Within 1 db to 4.5 MC— CORRECT COLOR RESPONSE

Wide Band Amplifier: Flat within 1 db from 20 cycles thru 4.5 MC. This feature is absolutely essential for evaluating color burst signal and the Level of the Color Chrominance signal. You can depend on the CRO-2 because Jackson is the largest and oldest manufacturer in the world of high sensitivity-wide band scopes for the television industry.

Vertical Deflection Sensitivity: Two ranges with three positions for each range. Has fully compensated attenuators. Excellent transient response. Each unit completely tested for "tilt" and "overshoot."

Sensitivity Ranges: With a band width of 20 cycles thru 100 KC, the sensitivity ranges are .018, .18, 1.8 RMS volts per inch. The wide band position 20 cycles thru 4.5 MC has sensitivity ranges of .25, 2.5, 25 RMS volts per inch.

Internal Horizontal Sync: Positive or negative signal is available to provide excellent stability due to using the best available component of the waveform, such as the leading edge of the horizontal sync. pulse of the standard TV signal. Reversing the pattern vertically will not interfere with the sync.

Horizontal Sweep Expansion: Four times screen width — up to 20 inches of equivalent width. This feature is excellent for enlarging any small portion of the total waveform. For example, the color TV sync. pulse can be spread to easily observe the 3.58 MC color

burst signal so that the individual cycles can be clearly viewed.

Horizontal Deflection Sensitivity: Push-pull horizontal amplifiers have a sensitivity for all applications of 0.40 RMS volts per inch.

Vertical Input Impedance: 1.5 megohms, shunted by 20 micromicrofarads. Direct to plates balanced 6 megohms, shunted by 11 micromicrofarads.

Horizontal Input Impedance: 1.1 megohms.

Linear Sweep Oscillator: Saw tooth wave 20 cycles thru 50 KC per second in 5 steps. Sine wave sweep of 60 cycles also available. Provision for external sweep synchronization.

Input Calibration: A standard voltage is provided for use in determining unknown voltages. Permits peak-to-peak measurement of all waveforms.

Vertical Polarity Reversal: By merely flipping a switch you can reverse the polarity of the voltage being supplied to the vertical deflection plates.

Return Trace Blanking: A new amplifier-timer combination for blanking return traces, providing a clearer, sharper image at all times. Prevents confusion in waveform analysis.

Synchronizing Input Control: Four input control positions, Internal Positive — Internal Negative — External — 60 cycle.

Deflection Plate Connections: Direct

connections thru capacitors for AC only to deflection plates of CR tube by means of terminal block at back of instrument.

Intensity Modulation: Either 60 cycle internal intensity modulation or external intensity modulation through binding posts on front panel.

Accessories: Demodulation probe, Model CR-P, available for using scope as signal tracing instrument. Low capacity Cathode follower probe, Model 10LCP, with 2 to 1 ratio and not more than 10 mmf. effective input capacitance.

Size: Same height as other Jackson TV instruments. Dimensions 13" high, 10 1/4" wide, 15 1/8" deep.

Finish: An all steel gray Ham-R-Tex cabinet.

UHF TELEVISION SIGNAL GENERATOR Model 711

The Model 711 operates on fundamental frequencies for all channels 14 thru 83. Large enclosed dial accuracy $\pm 1\%$ of indicated frequency. Vernier logging scale average accuracy 0.1% of indicated center frequency. UHF channel frequency calibrated directly opposite channel number scale. This provides a quick check in the transmission frequency of any channel.

A swept signal having a center frequency of 43.5 MC from any VHF generator (such as Jackson TVG-2) must be applied to the input. This signal and the signal from a local oscillator are fed into a crystal mixer and the difference frequency is applied to the output jack on the front panel. The local oscillator calibration appears on

the center scale marked "Oscillator Frequency."

The VHF markers are also used for checking various channels. It is not necessary to change the VHF generator once it has been set up, exactly as if it were being used to mark a VHF response curve having a center frequency of 43.5 MC.

Input impedance, 93 ohms high side to ground. **Output impedance,** 300 ohms balanced to ground. Frequency coverage, 465 MC to 905 MC. Tube complement, 1—6X4, 1—6T4 and 2—6CB6. Dimensions, 10 1/4" high x 13" wide x 8 3/4" deep. Power rating, 110-120 volts 50/60 cycles.

Shipping Weight, 17 lbs.

Finish: Gray Ham-R-Tex.

DYNAMIC® TUBE TESTER

Model 648

This tester incorporates the most important engineering advancements in 12 years of tube tester research, such as the Dynamic test method, sequence switching and automatic line voltage indication. The Jackson Dynamic test circuit applies separate element voltages to each tube element. Separate load circuits are used to test tubes under peak conditions. These voltages and loads have been carefully selected for each tube to meet most ideally the normal operating condition of the tube. The current flowing only in the plate circuit of the tube under test is indicated on the 4-inch meter in easy-to-read terms.

Sequence Switching makes possible **SIMPLIFIED OPERATION**, formerly unattainable in Dynamic test methods. There are actually only three control units to be set according to rotary chart listing for each tube. These are: Heater Voltage (upper left), Plate Control (upper right) and the Sequence Switch (center). The only other adjustments are line voltage control and shorts test. The line voltage control is calibrated to indicate actual line voltage from 100 to 125 volts. This elim-

inates the need for carrying a volt meter to check line voltage in the home.

Fast, Accurate Shorts Test lamp indicates only when tube is shorted. The shorts test control moves only through 4 positions—yet completely tests each tube element for possible shorts or leakage. The tube is tested under a heated cathode condition.

Correct Test Voltage and Load Circuits protect tubes under test against damage by overload. Even low voltage battery types are provided with suitably low operating potentials. The full GOOD-BAD scale of the meter is used for each test. The meter scale is calibrated to read in percentage of relative micromhos. The meter is sufficiently sensitive that special "Low Scale" readings are not required (such as for diodes, etc.)

Life-line test shows you accurate fore-

cast of end of tube life. Reduced output caused by over-age gives reduced reading on meter. Lets you catch bad tubes before they actually go bad.

AUDIO OSCILLATOR Model 655

The model 655 provides an audio frequency voltage DEVELOPED AT ITS FUNDAMENTAL FREQUENCY. The basic design of this instrument is entirely different from the "beat frequency" type of Audio Oscillator.

FEATURES

Resistance Capacity Tuned Circuit Design, engineered for improved operating characteristics of audio measurements.

No Zero Adjustment — Tuned Fundamental Frequency method provides permanently locked calibration.

Output Characteristics — A choice of either transformer coupled or resistive

output is available. The Model 655 meets the most exacting requirements as to **Waveform-Uniform Frequency Characteristics and Output Load Impedance Selection**. A special feature of the output system is the 10 ohm tap for low impedance circuits such as speaker voice coils, etc.

Complete Stability — The stability of frequency calibration is constant throughout the entire range. The stabilized circuit permits large changes in line voltage to occur without affecting frequency or waveform and having negligible effect on output voltage.

Simplified Operation — It is only necessary to select desired Frequency and Output. **There Are No Other**

Controls — The possibility of errors in operation is therefore eliminated.

Construction — Frequency dial is glass enclosed so that calibrations cannot become disfigured. Rugged mechanical features assure trouble free operation under service conditions.

"SERVICE ENGINEERED" TEST INSTRUMENTS

THE JACKSON ELECTRICAL INSTRUMENT CO., DAYTON 2, OHIO

DYNAMIC® CATHODE RAY TUBE ANALYZER

This is the *only* CRT analyzer that completely and accurately tests *all* TV picture tubes, including both magnetic and electrostatic deflected types. It also tests oscilloscope, radar, and other special purpose CR tubes. No need to remove any tube from chassis or carton.

Model 707

SPECIFICATIONS

Beam Current: Test is made to the *final* anode — the only anode that really counts. The meter gives you an accurate forecast of tube life.

Grid Test: The beam current may be up to par; but, if the grid does not have the ability to cut off and control it, the tube is useless. Test voltage is ample for every type tube.

Gas Test: Certain amounts of gas in a CRT will render the tube inoperative. By checking the "gas current" to the FINAL anode, the presence of harmful gases is detected. High gas content indicates that the tube should be replaced as the life of the screen and/or cathode will be very limited.

Shorts Test: All elements are isolated for individual inter-element leakage tests. A circuit of high sensitivity is

used to give indications of leakage on a neon lamp.

Roll Chart: Provided for rapid indication of proper selections.

Circuit Selector Switches: Placed on an escutcheon to make them easily accessible for every tube setup and to limit test setting confusion.

Test Voltages: Both high and low voltage power supplies are provided for the various test requirements of a cathode ray tube.

VTVM: The analyzer is designed around a highly sensitive, balanced bridge type VTVM. A continuously variable line voltage adjustment is provided to insure accurate readings.

Meter: An easy-to-read, full vision meter, designed especially for the CRT Analyzer, includes a line voltage adjust point, a "beam current" range, a "gas current" range, and a reference scale.

Case: The durable wooden airplane luggage covered carrying case is provided with ample space for storing the cable and adaptors.

Series CR-30 CATHODE RAY TUBE TESTER TESTS ALL TV PICTURE TUBES (Tri-color, Magnetic and Electrostatic) OSCILLOSCOPE AND INDUSTRIAL CATHODE RAY TYPES

SERIES CR-30 IS A COMPLETE, SELF-CONTAINED INSTRUMENT particularly engineered for the very special needs of reliable, rapid and economical cathode ray tube testing, in the field, shop or laboratory. Series CR-30 is indispensable to efficient TV Service-Installation. It provides reliable answer to the very important question, "IS IT THE CATHODE RAY TUBE OR IS IT THE TV CHASSIS?" Series CR-30 incorporates a BEAM CURRENT TEST CIRCUIT which checks overall electron-gun performance for Proportionate Picture Brightness. Additional direct testing facilities are provided for positive check of accelerating anodes and deflection plate elements.

Tri-color Picture Tube Testing Data will be made available, as soon as practical, to all owners of the Model CR-30.

The Precision CR-30 should not be confused with cable adapters connecting to ordinary receiving tube testers which were never designed to meet the very specialized needs of CR tube checking. Similarly, it is not to be confused with neon lamp units or similar devices of limited technical merit and which do not check all CR tubes or all tube elements.

GENERAL AND TECHNICAL SPECIFICATIONS

- ★ Tests All Modern Cathode Ray Tubes—Magnetic and Electrostatic without removal from carton or TV chassis.
- ★ Tests All CR Tube Elements—Not just a limited few.
- ★ Absolute Free-Point 14 Lever Element Selection System for Short-Check, Leakage Testing and Quality Tests. Independent of multiple base pin and floating element terminations.
- ★ Beam Current Test Circuit checks all CR Tubes with Electron-gun in operation. It is the Electron Beam (and NOT total cathode emission) which traces the pictures or patterns on the face of the CR tube.
- ★ Voltage Regulated, Bridge Type VTVM provides the heart of the super-sensitive, tube quality test circuit. Such high sensitivity is also required for positive check of very low current anodes and deflection plates.
- ★ Multiple Test Sensitivities plus selectable element test potentials permit proper accommodation of all CR tube types.
- ★ Meter-Monitored, Micro-Line Voltage Adjustment provides close control of operating voltages.
- ★ Accuracy of test circuits closely maintained by use of factory adjusted internal calibrating controls; plastic insulated, telephone type cabled wiring; highest quality, conservatively rated components.

APPLIANCE TEMPERATURE TESTERS

A NEW IDEA IN TESTERS — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J-B-T's wide experience in building field test sets for many well-known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J-B-T testers include the principle of remote reading of temperature, —and temperature measures the real usefulness of the appliance. Although called appliance testers, these handy portable testers have found a multitude of uses for trouble-shooting, experimenting and research in industry and in laboratories.

OVEN TESTERS

MODEL 23-JP-1. Latest addition to the widely-known family of J-B-T oven temperature testers is this modern and compact unit. Like the Models 32-JP-3 and 32-JP-4 described below, this indicating portable pyrometer is designed to save time and furnish reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. The same size of dial, 0-650°F., with 2½" scale arc reading, is used but covered by an all-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½" x 2½" x 1¼" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperatures change inside the instrument itself, and gives fool-proof direct readings. Supplied with attached SA-116 5½" calibrated thermocouple, clip, and convection shield. \$23.50

ware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperatures change inside the instrument itself, and gives fool-proof direct readings. Supplied with attached SA-116 5½" calibrated thermocouple, clip, and convection shield. \$23.50

MODEL 32-JP-3. This sturdy, fast reading portable is by far the most widely used oven tester in the country. The rigid outer carrying case 5" x 3½" x 3¾" is covered in black leatherette; the glass-covered indicator fits in a 3¼" flanged metal case. The dial shows 0-650°F. in 10° divisions readable to 2½°. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is valuable feature whether the tester is used for service work, scales demonstrations, or inspection. More details on the 32-JP-3 are available in Bulletin JP-103. Price includes attached SA-116 5½" calibrated thermocouple, clip for attaching to grill, and convection shield for steady readings. \$25.05

MODEL 32-JP-4. Companion tester to the 32-JP-3 with all the features of that tester, plus a leather carrying strap, and binding posts for quick attachment and interchanging of various thermocouples listed on this page, to check irons, washers, waffle-bakers, toasters, roasters, clothes dryers, etc. Range, 0-650°F.; black leatherette case 6" x 3⅞" x 3¾". More details on the 32-JP-4 are available in Bulletin JP-104. Price includes SA-116 5½" calibrated thermocouple, clip and convection shield. \$26.15

IRON TESTER

MODEL 32-JIT. Self-contained bench type tester; checks all makes of irons; measures thermostat temperatures; and shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12" x 5½"; scale 0-650°F., 15 amp. fuse, 6' cord, 110-volt, 50-60 cycles. \$31.85

Note: Orders for 32-JIT Iron Testers are occasionally filled with 23-JIT Iron Testers. Identical with 32-JIT illustrated, but using indicators with all-plastic front.

ALL-PURPOSE TESTER

MODEL 61-JRT. This 9 - in - 1 tester speeds accurate temperature adjustment and current analysis of ranges, refrigerators, etc. Rapidly reads four cold zones, -100° F. to +80° F. up to 14' distant; two heat zones 0-600° F. up to 5½' distant; one voltage range 0-300 AC; and with transformer, two current ranges, 0-30 and 0-60 amps, AC. Sturdy, polished walnut case 15½" x 10¼" x 4¼" with handle and slip hinges. Two-color etched metal panel. Separate switches protect bulb and ammeter circuits. Requires one standard flash-light cell, replaceable in the field. Temperature scale accuracy ±2% of full scale. Rectified AC readings ±5%. Accessories listed below may be added for testing irons, grills, roasters, washers, etc. Includes two SA-162 resistance bulbs, two SA-116 thermocouples, necessary electrical leads, and AS-TR-2 built-in transformer. \$107.25

For more details, see Bulletin JRT-349.

MODEL 61-JRT (LESS TRANSFORMER). Same unit, same scales, except does not read in amperes; AS-TR-2 transformer assembly omitted. \$93.50

VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards in central stations and industrial plants—wherever constant or known frequency is important to efficient operation of equipment. More than ten years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. The instrument consists of a case, base, dial and central mounting frame, with a series of spring steel reeds screwed to a reed mounting bar, individual driving coil surrounding each bank of reeds, permanent magnet, series resistor and terminal studs.

Each reed is adjusted to respond by resonance to but one frequency. As the alternating current (or interrupted direct current) excites the driving coil, the one reed "in tune" with the frequency in the coils will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. Frequency of the current is read on the graduated face of the instrument.

Above: Models 30-F, 31-F, 33-F, 34-F; 3/4" Metal Case

Below: Models 30-FX, 31-FX, 33-FX, and 34-FX; Molded Case Meets Mounting Dimensions of JAN-I-6; ASAC39.1-1951; and MIL-M-6A (Type MR 34 or 35)

ADVANTAGES: Guaranteed accuracy at reference temperature of 77°F is $\pm 0.3\%$ or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristic, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

CAUTION: If a meter plugged in on a 60 cycle AC power line does not indicate a frequency of exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions beyond the control of the Utility. All J-B-T Vibrating Reed Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standard frequency signals.

All FHXX Type 3 1/2" Frequency Meters; Sealed Metal Case (Type MR36 of MIL-M-6A)

NOTE ON METER VOLTAGE
 J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

3 1/2" SEALED METERS

FHXX TYPE sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR36) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production.

15-FH-5 METERS (lower photo), use the same 1 1/2" black metal case, glass-to-metal seal, and 2.094" detachable flange as the Model 15-FHAC. The 15-FH-5 series provides 5 reads in a row for 100-130 volt operation. Used where size and weight are design considerations. 100% inspected for approx. 57,000 ft. altitude by same test as FHXX Type, above. Standard meter, but not regularly stocked. See complete dimensions below.

Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction, with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters per drawing on preceding page. See print SK-53 for complete mounting data.

The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically re-sets. Tenths indicator is in red, all others in black. 31-EHXX, 60 cy., 110-125 volts\$19.75

TUBE TESTER

SPECIFICATIONS

- ★ Tests all tubes including 4, 5, 6, 7, Octal, Lock-in, Peanut, Bantam, Hearing Aid, Thyatron, Miniatures, Sub-miniatures, Novals, Sub-Minars, Proximity fuse types, etc.
- ★ Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TV-11 as any of the pins may be placed in the neutral position when necessary.
- ★ The Model TV-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- ★ Free-moving built-in roll chart provides complete data for all tubes.
- ★ Newly designed Line Voltage Control compensates for variation of any line voltage between 105 Volts and 130 Volts.

The new model 660-A — A NEW AC OPERATED

SIGNAL GENERATOR

Provides Complete Coverage for A.M.-F.M. and TV Alignment

• Generates Radio Frequencies from 100 Kilocycles to 60 Megacycles on fundamentals and from 60 Megacycles to 220 Megacycles on powerful harmonics. • Accuracy and stability are assured by the use of permeability trimmed Hi-Q coils. • R. F. available separately or modulated by the internal audio oscillator. Built in 400 cycle sine wave audio oscillator used to modulate the R. F. signal also available separately for audio testing of receivers, amplifiers, hard of hearing aids, etc. • R. F. Oscillator Circuit: A high transconductance heptode is used as an R. F. Oscillator, mixer and amplifier. Modulation is effected by electron coupling in the mixer section thus isolating the oscillator from load changes and affording high stability. • A. F. Oscillator Circuit: A high transconductance heptode connected as a high-mu triode is used as an audio oscillator in a high-C Colpitts Circuit. The output (over 1 Volt) is nearly pure sine wave • Attenuator: A 5 step ladder type of attenuator is used.

Tubes used: 1-6BE6 as R. F. Oscillator, mixer and amplifier. 1-6BE6 as Audio Oscillator. 1-6H6 as Power Rectifier.

• NEW PRECISE MODEL 111 Mutual Conductance and Emission Tube Tester

111K kit form **\$69⁹⁵**
 111W factory wired \$139.95
 Weight..... 30 lbs.
 Size..... 14" x 16" x 6"

ENGINEERING DESIGN CONSIDERATION: To understand the Model 111 Mutual Conductance and Emission Tube Tester, it is perhaps best to spend a moment with the original design considerations. Basically we recognize the fact that:

1. A GM or Emission type tube tester actually reads a goodly percentage of tube troubles—BUT each alone missed a great many. We could not say with any degree of assurance which type of tube test was the best. Certain applications required GM, while others required Emission. PRECISE Solution: The Model 111 checks Gm and Emission separately. It indicates on the roll chart the most important single test for normal applications. It is, of course, desirable to make both tests.
2. In AC-DC equipment, or series filaments arrangements, which are daily enjoying greater popularity, the "Voltage Sapper" (a tube which developed too much filament voltage as compared to the other tubes) was a constant trouble. PRECISE Solution: The Model 111 allows the filament current to be measured directly on the meter.
3. A whole series of different test voltages (sweeping from zero voltage up) was required. PRECISE Solution: The Model 111 sweeps from 0 through the normal testing range when making measurements. This gives an average evaluation for the tube over an extended range of operation.
4. Short tests usually require elaborate switch manipulation. PRECISE Solution: The Model 111 uses a single rotary switch which checks each element against every other element. No conversion chart is required to ascertain which pins are shorted. This test may be made at any time hot or cold without changing any other switches.
5. The instrument would have to be rugged to stand the "trunk of a car" type of abuse. PRECISE Solution: In the Model 111 a heavy steel cabinet houses the entire unit. The panel is deeply etched aluminum.
6. Tube Bias, being an important consideration, should actually be measured on the meter. PRECISE Solution: The Model 111 measures tube bias directly on the indicating meter.
7. The instrument should be simple to operate. PRECISE Solution: The Model 111 uses different type knobs, a no-backlash roll chart, and a sectionalized design setting off each section.
8. There should be a provision for new tubes. PRECISE Solution: The Model 111 is one of the simplest type tube testers to set up for new tubes. The pin connections and function positions may be taken directly from the tube manual. The instrument already includes provisions for testing many color tubes.
9. It should check all modern tubes. PRECISE Solution: The Model 111 is provided with sockets for testing the following type bases. Large 4 prong, large 5 prong, large 6 prong, large 7 prong, medium 7 prong, miniature 7 prong, in-line 7 prong (sub-miniature), Octal, Noval, sub-miniature 8 prong, Acorn CRT and Octalcs.
10. The instrument should check Cathode Ray Tubes. PRECISE Solution: The Model 111 also checks cathode ray tubes by an included adaptor.

FREED Test Instruments

TYPE 1030-A LOW FREQUENCY "Q" INDICATOR

USES

The Type 1030-A Low Frequency "Q" Indicator measures directly the "Q" factor of coils. The instrument can also be used to measure the inductance of coils, distributed capacity, impedances, and dielectric losses. The "Q" Indicator can be used to study the magnetic properties of iron, such as stability of iron cores in function of applied voltages, and iron losses as a function of the frequency.

FEATURES

The main and essential feature of the instrument is that the "Q" factor is read directly without any complicated computations. The possibility of measuring "Q" through the whole audio and supersonic frequency range is provided. The setting up and the measuring of the "Q" of coils is practically instantaneous. The instrument is unaffected by line voltage variations, is entirely self-contained and A.C. operated. Both meters ("multiply-by" and "Q") are protected against overloads and cannot be burned out. The frequency range for "Q" measurements is 20 to 200,000 cycles. The terminals of the variable decade condensers are available directly on the front panel of the instrument. The condensers, therefore, can be used as high quality precision variable condensers. To reduce the residual capacitance a link is provided on the front panel of the instrument which disconnects all but the 100 mmfd variable air condenser. When the link is closed five decade capacitors and the air variable are connected across the condenser

terminals. The R. C. Oscillator and variable impedance amplifier can be used as a separate low frequency generator with an output power of five watts into a 50 ohm load. The "Q" scale is calibrated from 0 to 100. A high accuracy of measurement is obtained, since "Q" variations from 0 to 100 are read on a 4 inch meter. "Q" factors of coils can be measured with up to 100 volts across the coil, and therefore makes it possible to determine the stability and the variations of the "Q" factor of coils in function of the applied voltage. The voltage fed into the series circuit is variable from 10 volts to .01 volt.

SPECIFICATIONS

Range of "Q" Measurements: The range of "Q" factors is from 0.1 to 1000 over the frequency range from 20 to 200,000 cycles with an accuracy of 5%.

Oscillator Frequency Range: Continuously variable from 20 to 200,000 cycles in four ranges.

Frequency Accuracy: 1% under normal temperature conditions. The frequency stability is better than 2% over a long period of time.

Output Impedance and Voltage: Four output impedances are available.
(a) 10 ohms impedance — 25 V Output Voltage
(b) 1 ohm impedance — 2.5 V Output Voltage

(c) .2 ohm impedance — .25 V Output Voltage
(d) .1 ohm impedance — .02 V Output Voltage
These Impedances are measured at 50,000 cy.

Variable Condenser: The variable condenser is composed of a 10 x 1 mfd., 10 x 0.1 mfd., 10 x 0.01 mfd., 10 x 0.001 mfd. and 10 x 0.0001 mfd. decade condenser and a 100 mmfd. variable air condenser.

Power Supply: The instrument is entirely self-contained and A.C. operated. Total consumption 200 watts.

Dimension: Width 19 1/2" x Depth 14 1/2" x Height 23"

Weight: 120 lbs.

FREED Test Instruments

TYPE 1020-B MEGOHMMETER

The Freed Type 1020-B Megohmmeter is a self contained and A.C. operated instrument equally useful in the laboratory or for production testing of the leakage resistance of insulation materials, condensers, cables, motors and transformer windings.

FEATURES

Resistance values indicated directly on a four inch meter protected against over-load. Rapid and safe to use, test voltage removed from terminals and capacitive component discharged to ground in all positions of multiplier switch. Low resistance in series with component under test provides very short charging time for even the very largest capacitors. Calibration position provided to check accuracy of 500 volts D.C. potential.

500 volt test supply electronically regulated.

SPECIFICATIONS

Range: 1 megohm to 2,000,000 megohms in six overlapping ranges selected by a multiplier switch.

Voltages on Unknown: The voltage applied to the unknown terminals is 500 volts D.C. and is independent (less than 1%) of the value of the unknown.

Stability: Line voltage variations from 105-125 volts will cause less than 2% variation in the meter reading.

Power Supply: 105-125 volts A.C. 50-60 cycles 30 watts.

Dimensions: 9½ x 10½ x 8 inches.

Net Weight: 18 pounds.

TYPE 1620 MEGOHMMETER

CONTROLS

1. Range selector and calibrating switch.
2. Zero adjust control for setting meter scale to infinity.
3. Push button switch for activating the relay which applies test voltage to terminals — when released, discharges capacitive component across the unknown terminals.
4. Variable D.C. adjust — for setting the D.C. test voltage at desired level.
5. A.C. on-off switch.

DESCRIPTION

The instrument is a direct-reading, precision-balanced electronic ohmmeter with a variable D.C. test potential included as part of the unit. The D.C. test potential is variable from 50 to 1000 volts and is indicated by a four inch meter.

The insulation resistance is measured in six overlapping ranges and is indicated by a four inch meter, protected against overload. A relay, operated from the front panel, disconnects the high voltage from the test terminals and eliminates all danger of shock due to exposed high potential. In the standby position (when push button is released) a resistance is connected between the chassis and the high voltage terminal, so that when measuring capacitors the danger of shock is eliminated when disconnecting the component under test.

SPECIFICATIONS

Range: .5 megohms to 4,000,000 megohms in six overlapping ranges selected by a multiplier switch.

Accuracy: Plus or minus 5%.

Voltages on Unknown: The voltage applied to the unknown terminals is continuously variable from 50 volts to 1000 volts. A 4" meter indicates the voltage applied to the unknown.

Terminals: Four terminals are provided, two for connecting the unknown, one guard and one ground.

Power Supply: 105-125 volts A.C. — 50-60 cycles.

Cabinet: 15" x 9" x 7½".

FREED Test Instruments

TYPE 1010-A COMPARISON AND LIMIT BRIDGE

USES

This instrument is a comparison and limit bridge for use in both laboratory and production testing of resistors, condensers and inductors. The manufacturer of these components can use it for production tests, the user for incoming inspection and acceptance tests. The instrument is particularly useful for laboratory work (bridge or filters) where very accurate components are required.

FEATURES

For precision and production testing, the bridge has many advantages. Power line operation and the visual indicator make the instrument completely self-contained. It can be used in noisy locations. Its small size and light weight permit the instrument to be moved easily and to be set up wherever necessary.

DESCRIPTION

The instrument is composed of an oscillator, a bridge and a selective amplifier. The oscillator output is coupled into the bridge through a shielded isolation transformer. A switch is provided which connects either a high or low impedance winding across the bridge, consisting of two fixed resistors, the unknown impedance and the standard. A variable resistor between the two fixed resistors makes it possible to read the percentage difference between the unknown and the standard on a specially calibrated dial. A high gain selective amplifier indicates the balance of the bridge. The general method of testing is the comparison of an unknown component with a standard component of the same type. Accurate percentage measurements are obtained by the use of precision components in the arms of the bridge. The use of a high gain amplifier and adequate internal shielding assures a very sharp and distinct balance.

A visual null indicator, consisting of a meter used in connection with the high gain amplifier makes it possible to use the No. 1010-A Bridge as a precision limit bridge in production testing.

SPECIFICATIONS

Frequency: Three test frequencies are available: 50 or 60 cycles, 1000 cycles and 10,000 cycles.

The 50 or 60 cycles are taken from the line. The 1000 and 10,000 cycles are generated by an oscillator and are accurate to within $\pm 2\%$.

Range: Two comparison ranges are provided. 5% and 20%. The percentage difference is read directly on a calibrated dial.

Resistor Measurements: Resistors from 1 ohm to 20 megohms may be compared at 60 cycles to an accuracy of $\pm 0.1\%$.

Condenser Measurements: Condensers from 50 mmfd to 10 mfd are measured at 1000 cycles. Condensers above 10 mfd are measured at 60 cycles. Condensers below 50 mmfd may be measured if the ground-unground switch is in the unground position.

Inductor Measurements: Inductors may be measured at 60, 1000 or 10,000 cycles depending on their value. Range: 10 microhenries to 1000 henries.

FREED Test Instruments

TYPE 1110-A INCREMENTAL INDUCTANCE BRIDGE

Frequency Range: The bridge is calibrated and adjusted at both 60 and 1000 cycles, but can be used at any frequency up to 10,000 cycles. Errors resulting from stray capacity increase with frequency. A compensated bridge with lower stray capacities is available for making more accurate inductance measurements of large inductors at higher frequencies. Order Freed Model 1110A-B.

Range of Superimposed D.C.: On multiplier switch position L X 100 the D.C. is limited to 10 ma.

USES

The Incremental Inductance Bridge is designed for measuring the inductance of Iron Core components at any frequency up to 10,000 cycles. Inductors can be measured with a superimposed direct current, therefore, the bridge will measure the incremental inductance of coils. The bridge can be used for determination of storage factor, "Q", either at a given frequency in function of the applied voltage or at a given voltage in function of the applied frequency. The bridge can be used by the manufacturers of iron core components, such as filter chokes, high Q coils, and iron core audio and supersonic frequency components. Due to its very wide inductance range the instrument can be used as a general purpose laboratory inductance bridge.

SPECIFICATIONS

Inductance Ranges: One millihenry to one thousand henries in five ranges. Inductance values are read directly from a four dial decade and a multiplier switch. The last range may be extended to 10,000 henries through the use of an external resistance.

Conductance Ranges: One micromho to one mho in five ranges, read directly from a four dial decade and a multiplier switch. This conductance represents the reciprocal of the A.C. resistance of the coil.

"Q" Range: "Q" is measured as the product of Inductance (L), Frequency (W) and Conductance (G). The range of "Q" measured on the bridge is 0.5 to 100. Measurement of inductance is independent of the values of "Q".

Accuracy: 1% through the frequency range from 60-1000 cycles 2% for frequencies from 1000 to 10,000 cycles. This accuracy is decreased for extreme positions of the multiplier. Conductance measurements 5% from 60-1000 cycles.

On the position L X 10, the D.C. is limited to 250 ma.

Inductors up to 11 Henries may be measured with 1. Amp DC through them.

Mounting: The bridge is supplied in a walnut cabinet or on special order for standard rack mounting.

Dimensions: Rack: 19" Wide x 8" Deep x 14" High.

Cabinet: 21" Wide x 8" Deep x 16 5/8" High.

Net Weight: Rack: 37 lbs. Cabinet: 48 lbs.

TYPE 1210-A NULL DETECTOR AND VACUUM TUBE VOLTMETER

USES

The Type 1210-A Null Detector and Vacuum Tube Voltmeter is primarily designed for bridge measurements. The Null Detector indicates the balance of the bridge, and the Vacuum Tube Voltmeter indicates the voltage across the unknown two terminal or four terminal network. The three selective circuits provide means for sharply tuning the instrument to audio frequencies commonly used for measurements. The Vacuum Tube Voltmeter can be used as a general purpose audio Vacuum Tube Voltmeter.

DESCRIPTION

The Type 1210-A Null Detector and Vacuum Tube Voltmeter is a combination of the Model 1140 Null Detector Amplifier, and a modified Model 1080 high input impedance Vacuum Tube Voltmeter. Both instruments are independent and feed two separate 4" meters.

FREED Test Instruments

TYPE 1040 A.C.-V.T. VOLTMETER

USES

The type 1040 Vacuum Tube Voltmeter is a high impedance wide frequency range voltmeter which can be used at audio and supersonic frequencies. It is particularly recommended for (1) vibration studies involving very low frequencies, (2) frequency characteristics and gain measurements on amplifiers, (3) transmission losses on telephone circuits: filter and carrier systems up to 250,000 cycles, and (4) acoustic measurements, such as, determination of frequency response of microphones and loudspeakers. Because of the high sensitivity of the instrument, the voltmeter can be advantageously used as a null detector in A.C. bridge measurements. In addition to its use as a voltmeter, the instrument can be used as an ammeter to measure a wide range of currents by connecting it across suitable resistors. An output jack is provided so that the instrument may be used as an amplifier.

FEATURES

Because of the low input capacity, a high value of input impedance is maintained over the five ranges of the voltmeter. A balanced rectifier, a balanced D.C. amplifier circuit, and a high amount of degeneration throughout the amplifier makes it independent of line voltage variations and changes in tube characteristics. A very important feature of the instrument is the logarithmic voltage scale of the meter. With this type of scale, the percentage accuracy of reading is uniform over the entire scale. Another advantage of the logarithmic scale is that it provides a uniform decibel scale which is a very valuable feature in sound and communication measurements. A zero adjustment and full scale adjustment are provided. These two controls serve for all ranges and no re-setting is necessary when switching from one range to another. The time constant of the instrument is adjusted in order to read very low frequencies of 7 to 10 cycles without any vibration of the needle. The circuit of the meter is arranged so that it cannot be burned out by any overload of the instrument. The vacuum tube voltmeter is small, compact, entirely self-contained, A.C. operated.

SPECIFICATIONS

Voltage Ranges: .001 volts to 100 volts in five ranges (0.01, 0.1, 1.0, 10 and 100 volts full scale).

Accuracy: 2% of full scale on all five ranges, on sinusoidal voltages.

Waveform Error: The instrument is a peak voltmeter calibrated to read RMS values. On distorted wave-forms, the percentage deviation of the reading from RMS values may be as large as the percentage of the harmonics present.

Frequency Ranges: 10 to 250,000 cycles, .1 db. variation from 20 cycles to 150,000 cycles: .50 db. variation from 10 cycles to 250,000 cycles.

Input Impedance: Equivalent to 500,000 ohm resistance in parallel with a 15 mmf. condenser.

Stability: Effect of variation in line voltage from 100 volts to 125 volts is 1%. Effect in changes of tubes is less than .5%.

Scale: Logarithmic voltage scale calibrated from 1 to 10 plus a linear decibel scale calibrated from 0 db. to 20 db.

Meter: 4" suppressed zero 1 MA meter protected against overloads.

Power Supply: The instrument is entirely self-contained and operates on 100-125 volts, 50-60 cycles. Total consumption, 40 Watts.

Dimensions: 4 3/8" x 5 5/8" x 9 3/8".

Weight: 12 pounds.

TYPE 1060 VACUUM TUBE VOLTMETER

USES

The Type 1060 Vacuum Tube Voltmeter is a high impedance, wide frequency range voltmeter which can be used at audio and supersonic frequencies. It is particularly recommended for

2. Making high impedance tuned circuit measurements where the high input resistance and low capacity of the instrument are invaluable.
3. Determining frequency characteristics and making gain measurements on amplifiers.
4. Making acoustic measurements, such as, determination of frequency response of microphones and loudspeakers.
5. Observing vibration studies involving very low frequencies.

Because of the high sensitivity of the instrument, the voltmeter can be advantageously used as a Null Detector in A.C. bridge measurements. In addition to its use as a voltmeter, the instrument can be used as an ammeter to measure a wide range of currents, by connecting it across suitable resistors.

SERIES 1950 NULL "T" FILTERS

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation of the null frequency.

The null frequency is adjusted to a tolerance of $\pm 2\%$.

TYPE 1410 DISTORTION METER

USES

The Type 1410 Distortion Meter may be used in the laboratory or in production testing of receivers, amplifiers and oscillators.

DESCRIPTION

The instrument consists of a capacitive input attenuator, a low impedance output preamplifier, a null T network and a high gain vacuum tube voltmeter.

The signal to be measured is applied to the capacitive input attenuator, which reduces it sufficiently so that it may be fed into a three stage distortionless amplifier. The output impedance of this amplifier is 1 ohm due to the high amount of inverse feed back applied. In order to prevent the amplifier from being driven into non-linearity, a monitoring circuit is included in the instrument.

The attenuated signal is fed into a null T network which completely eliminates the fundamental. The residual signal consists wholly of harmonics and noise, and this is measured by the vacuum tube voltmeter.

The null T network is now switched out of the circuit and the signal level is attenuated by a calibrated resistive divider. When the voltmeter indicates the same level as the level of harmonics, the divider reads the percentage distortion directly.

FEATURES

The high sensitivity of the instrument permits measurements to be made on signals as low as 0.2 volts to an accuracy of 0.1%. Signals as high as 1000 volts may be applied to the input terminals directly.

The frequency range of the instrument is 20 kc to 1 mc. in 10 overlapping ranges. Frequencies up to 8 mc. are passed without attenuation by the amplifier circuits, so that distortion measurements can be made on fundamental frequencies up to 1 mc.

An isolation transformer and line filter provided with the instrument prevent any feedback through the power line.

SPECIFICATIONS

Frequency Range: 20 kc to 1 mc.

Input Impedance: 500,000 ohms shunted by 70 mmfd. (plus capacity of input cable) on all ranges but the 0.1 volt range. The shunt capacity on this range is 800 mmfd.

Accuracy: Harmonic Distortion can be measured accurately to 0.1%.

Sensitivity: Distortion levels of 0.1% can be read accurately for a signal input as low as 0.2 volts. Maximum input signal is 1000 volts rms.

Elimination Characteristics: Eliminates fundamental completely while attenuating second harmonic approximately 3%.

Power Supply: 105-125 volts, 50-60 cycles.

Dimensions: 19 3/4" x 16 3/4" x 15 3/4".

Net Weight: 60 pounds.

PULSESCOPE

The Oscilloscope that Portrays the Pulse

Classic Examples of Precision Engineering...

The PULSESCOPES are cathode ray tube oscilloscopes that portray the attributes of the pulse: shape, amplitude, duration and time displacement. All PULSESCOPES have internally generated markers with the basic difference that in the SAR PULSESCOPE the markers initiate the sweep while in the others the sweep starts the markers.

BROAD

The S-6-A BROAD BAND PULSESCOPE is a PULSESCOPE in performance, POKETSCOPE in size. The instrument measures DC as well as AC signals. Unique DC calibration methods permit rapid measurements of either positive or negative, AC or DC signals. Vertical amplifier sensitivity of 0.2v rms/inch, and response to 5 mc within 3DB... pulse rise time of 0.1 μ s... internal markers from 1 to 1000 μ s... repetitive or trigger sweep from 5 cycles to 500 KC with 5X sweep expansion... sweep, marker and DC calibrating voltage available externally. Size 8 1/2 x 6 3/4 x 13 3/4 in. Weight 22 lbs. Operates from 50 to 400 cycles at 115 volts AC.

LAB

The S-5-A LAB PULSESCOPE is a JANized (Gov't Model No. OS-26) portable, AC, wide band-pass, laboratory oscilloscope ideal for pulse as well as general purpose measurements. Internal delay of 0.55 μ s permits observation of pulse leading edge. Includes precision amplitude calibration, 10X sweep expansion, internal trace intensity time markers, internal trigger generators and many other features. Video amplifier 0.1v p to p/inch... pulse rise time of .035 μ s or response to 11 mc. 1.25 to 125,000 μ s triggered or repetitive sweep... internally generated markers from 0.2 to 500 μ s... trigger generator from 50 to 5000 pps. for internal and external triggering. Operates from 50 to 400 cycles at 115 volts AC.

SAR

The S-4-C SAR PULSESCOPE is a JANized (Gov't Model No. OS-4) portable instrument (31.5 lbs.) for precision pulse measurements for radar, TV and all electronic measurements. Portrays all attributes of the pulse... internal crystal controlled markers of 10 and 50 μ s available for self-calibration... in R operation a small segment of the A sweep is expandable for detailed observation with a direct-reading calibrated dial accurate to 0.1%. Video amplifier band-pass up to 11 mc... optional video delay 0.55 μ s... pulse rise and fall time better than 0.07 μ s... R pedestal (sweep) 2.4 to 24 μ s... video sensitivity of 0.5v. p to p/inch. Easily convertible from μ s to yards. Operates from 50 to 400 cycles at 115 volts AC.

RAKSCOPE

Because the panel is only 7" high and fits any standard rack, the S-12-B RAKSCOPE admirably fills the need for a small oscilloscope of wide versatility. With all the features of the S-11-A POKETSCOPE, the RAKSCOPE is JANized (Gov't Model No. OS-11), and has many additional advantages; the sweep, from 5 cycles to 50 KC, is either repetitive or triggered... vertical and horizontal amplifiers are 50 mv rms/inch with band-pass from 0 to 200 KC... special phasing circuitry for frequency comparison.

TRANSPARENT CIRCUIT STAMPS

Provide clear sharp impressions of all the most used radio and electrical circuit symbols. Saves considerable drawing and drafting time. Provides neat looking standardized symbols on all your drawings. Used by leading manufacturers and laboratories. Stamps are made of Vinylite and are acid proof and resistant to many common substances like petroleum solvents, greases, gasoline, benzene, etc. They are crystal clear and easily lined up by looking right through them. Built-in "CROSS HAIRS" allow pin point positioning. Not to be confused with shallow die stamps, these are made on expensive master dies which are very deeply sunk in and result in stamps with razor sharp impressions and anti-clogging qualities. Outlasts rubber stamps many times because Vinylite resists abrasion and is more resilient. Available in two popular sizes. May be purchased separately or in complete set. When ordering specify stamp number and size.

100,000 VOLT TESTING TRANSFORMER

Widely used for testing of instruments, meters, resistors, insulation and wherever an AC type of voltage check is applicable. Primary is designed for the standard 115 volt 60 cycle power line and may be controlled if desired with any of the standard variable transformers. Output 0 to 100,000 volts AC. A special voltmeter winding is incorporated and by placing a 100 volt meter across this winding the high voltage output can be accurately determined. This winding is balanced for exactly 1/1000th of the output (accuracy 2%).

Model 706A... "Wide Range" Signal Generator

This new signal generator is the finest performer in its class. For equivalent performance the model 706A should be compared only with other signal generators selling from \$90 to \$125. It provides continuous coverage from 150 KC to 220 MC in 8 ranges. Six FUNDAMENTAL ranges cover up through 55 Megacycles.

ACCURACY: within 1% of calibration adjustment.

STABILITY: and constancy of calibration is assured by special electron-coupled circuit design, permeability adjusted coils and air trimmer capacitors.

MODULATION: 400 cycle sine wave audio oscillator with modulation continuously variable from 0% to 80%. Above 80% has no practical application. At this point tremendous distortion occurs in all signal generators. Unmodulated signal is available if desired.

SHIELDING: Thorough shielding of all critical circuits and components either individually or in compartment or both.

This includes oscillator tube, coil assembly, attenuator, switching circuit. Transformer is electrostatically shielded.

ATTENUATION: Ladder type step attenuator consisting of a multiplier and fine attenuator control.

AUDIO OSCILLATOR: 400 cycles at 50 ohms output impedance is available for external use — terminals on panel. Eight scales are clearly calibrated — continuous reading from 150 kilocycles to 220 megacycles. Planetary drive gives vernier tuning with no backlash. Tube complement—4BA6, 6SJ7, 6X4.

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the right gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the clear caps shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.
