PHOTOCONDUCTIVE CELLS, of the cadmium sulfide and cadmium selenide types . . . developed and manufactured by the Clairex Corporation.

Behaving as variable resistors in which the resistance is controlled by light, these unique and rapidly advancing design components can transform most circuits—perhaps your circuit—into a critical function of light! Thus, by replacing a critical resistance element with a Clairex photoconductor, a circuit can be controlled with "the light touch."

Clairex offers a versatile standard line of 1/4" diameter cells. These standard cells provide an unusually wide range of design parameters including a sensitivity on the order of 1 million times that of conventional photoemissive tubes—a paramount advantage to the design engineer. Among other advantages are unusually high light to dark current ratios, linearity of voltage irrespective of polarity from microvolts to hundreds of volts, and small size for miniaturized applications.

Clairex will be happy to discuss and consider special requirements. Hundreds of diverse applications are now in use. No matter what your automation or control problem, employing a Clairex Photoconductive Cell will probably provide the solution.

New . . . NEON INDICATOR LIGHTS SUB-MINIATURE

Use tiny T-2 G.E. Glow Lamps

This series houses newly improved lamps with formed bulbs and midget flanged bases. Lamps are designated as NE-2D for the regular lamp, and as NE-2J for the high brightness type which may be operated at high current. The NE-2J has higher voltage characteristics requiring 110V. A.C. or 160V. D.C. for reliable performance . . . a resistor (or other ballast device) must be used to limit the lamp current. Since the current is never more than 3 milliamperes, the resistor may be the small 1/3 watt type . . . All assemblies have 2 terminals (Soldering or Taper-Tab); conform to applicable Mil. Specs. . . . For full details, see our Brochure L-159A.

*New HIGH BRIGHTNESS lamp.

Also ONE terminal units For use on grounded circuits

DIALCO also makes a complete line of single terminal sub-miniature pilot lights intended for use where it is desired to ground one side of circuit. Available in the

styles similar to the above. Instead of the single solder terminal, a binding screw terminal may be specified. Brochure L-157A describes these units in detail.

ORDER COMPLETE WITH LAMPS so that you will be assured of receiving the pilot lights and correct lamps at one time, ready for immediate use.

**CONNECTORS FOR SINGLE CONDUCTOR CABLE
FOR MICROPHONES - SPEAKERS - PICK-UPS - JACKS**

(using cable shield for second conductor)

The fittings shown here are designed for use with standard metal shielded single conductor cable up to 1/4" diameter. These connectors are heavily constructed from solid brass and all exposed parts are chrome plated and highly polished.

The cable end connectors are provided with rugged wire spring protectors which prevent sharp bends at the connection. The protector is soldered to the cable sheath and secured in the connector by a set screw so that all strain is relieved from the conductor.

UNIVERSAL INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorder, Television Set,

Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.

Featured cut above illustrates Model 12U-RHG.

ATR Inverters should be used only for the applications as outlined above and on the reverse side of this sheet.

"-P" models equipped with cigarette lighter card set to plug into dash receptacle.

All ATR Universal Inverters are housed in attractively finished grey-hammerclad metal cabinets.

PORTABLE – Plug-in Type INVERTERS

Specially Designed for Operating Standard A.C. Dictating Machines, Record Players, Incandescent Lamps, Electric Razors, Electronic Test Equipment, and Other Small Electrical and Electronic Devices from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Planes, Trains, and D.C. Districts.

ATR Portable Inverters are light-weight plug-in units for applications as recommended above. These Inverters feature instant starting, frequency stability, and high efficiency and reliability. Inverters have partial RF filtering which is only suitable for small insensitive type radios. For sensitive radio sets, ATR Universal Inverters, catalog sheet 657U, must be used. The 6 and 12-volt units are equipped with cigarette lighter cord set to plug into dash receptacle; whereas, the other higher input voltage units are equipped with standard two-blade plug-in cord sets. With ATR Inverters the need for special equipment is eliminated. They are designed for quiet, long-life operation. All ATR Models indicated are equipped with ATR plug-in Inverter Vibrators. Models RME and RMF come equipped with a four-point voltage regulator which makes possible the correct output voltage for minimum to maximum loads. The battery current consumption required is normally less than that drawn by one ordinary automobile headlight. The operating efficiency is approximately 75%. To figure battery current consumption see catalog sheet 657U. These Inverters are recommended only for use with loads having power factors in excess of 80% and should be used only for the applications as outlined above and on the reverse side of this sheet. These Portable Inverters are not recommended for tape recorder operation, except as specified in (2) below.

Electronic Tube PROTECTOR

Specially Designed To Protect ALL Electronic Tubes in TV or Hi-Fi Sets, Amplifiers, and Similar Electronic Equipment. Will Double or Triple Tube Life Including Picture Tubes.

EASY TO OPERATE

ATR Electronic Tube Protectors should double or triple the life of all electronic tubes including picture tube in TV or Hi-Fi Sets, Amplifiers, Electronic Organs, and other similar electronic equipment. The ATR Electronic Tube Protector utilizes a thermal cushion-action principle which also protects all other components by eliminating initial damaging surge currents. The ATR Electronic Tube Protector can be used with any electronic equipment having input wattage of 100 to 300 watts. The Electronic Tube Protector plugs into the AC wall socket; whereas, the TV or Hi-Fi Set then plugs into the tube protector receptacle. There will usually be a few seconds thermal cushion-action delay from the instant TV set is turned on to time of normal tube brilliancy due to action of Tube Protector.

OREFIELD, PA.

ELECTRONICALLY REGULATED D.C. CONSTANT VOLTAGE POWER SUPPLIES

MODEL 1
RELAY RACK MOUNTING \$52.50

Input: 105-125 volts AC, 50-60 cycles.

DC Output Voltage: Continuously variable from 200 to 325 volts DC for load currents 0 to 100 ma.

Regulation of DC Voltage: Better than 1% for loads of 0 to 100 ma. and line voltage variations from 105 to 125 volts.

Ripple Output: Less than 10 millivolts rms.

Isolated Output: Both positive and negative sides of the output are isolated from ground. Either side may be grounded or the output may be left floating.

AC Output for Filaments: An isolated AC voltage of 6.3 volts AC at 3 amperes is available at the output terminal connections.

Overload Protection: A fuse mounted on the front panel protects supply against external overloads or internal failure.

Input and Output Connections: All input and output connections are made to a single terminal strip conveniently located on the rear of the chassis.

Dimensions: Standard 19" relay rack mounting. Panel Width: 19 inches; Panel Height: 5 1/4 inches; Depth Behind Panel: 7 1/4 inches.

Cabinet and Panel Finish: Standard Black ripple enamel.

Controls: Rear Chassis—DC output voltage control. Front Panel—Pilot light, input power switch, and fuse.

Weight: Net weight is approximately 20 pounds.

High Quality Components: Only components of the highest quality are used in this equipment insuring you years of trouble-free dependable operation.

Accessibility: By removing two small screws, the front panel may be removed while the supply stays mounted on a relay rack or cabinet. This allows quick and easy inspection.

MODEL 2 SUB-CHASSIS MOUNTING \$49.50

Sub-chassis mounting type regulated power supplies are designed to save space and money. They can be mounted on a chassis along with other components and thereby save space which would be used by a relay rack mounting supply. Savings are made in the size and cost of the cabinet required for a job along with the lower cost of the sub-chassis mounting supplies.

SAME AS MODEL 1 EXCEPT

Dimensions: 9" wide, 8 3/4" long, 4 3/8" high above chassis, 1 1/2" clearance required below chassis. Size of cut-out required, 8 1/4" wide x 8" high. Location of four mounting holes: 8 3/8" wide x 8 1/4" high.

Chassis Finish: Zinc plated or equivalent.

Controls: DC output voltage control adjustable from the top side of the chassis.

MODEL 3 CABINET MOUNTING \$69.50

An ideal unit for bench work or assembly into equipment.

SAME AS MODEL 1 EXCEPT

Input Connections: A line cord at rear of cabinet.

Output Connections: 5 way binding posts.

Dimensions: 5" wide, 7" high, 16" deep.

Panel Finish: Aluminum.

Cabinet Finish: Gray enamel.

CORNELL DUBILIER

STANDARD HEAVY-DUTY SINGLE AND TANDEM VIBRATORS

CORNELL-DUBILIER HEAVY DUTY VIBRATORS are available in the above four styles for operation at 60 or 100 cycles with regular or close frequency adjustment in any of 6 standard operating voltages — 6, 12, 28, 32, 64 and 110. Although these combinations result in 96 "standard" vibrators, only those models which are generally used are listed below for Jobber distribution.

All heavy duty vibrators have separate driving circuits with provision for external suppression. Two or four sets of power contacts are brought out individually. Center reeds are common.

Precision ground ceramic spacers, micrometrically selected Swedish steel center reeds, and precision oscillographic adjustments combine to insure uniform reliable service life.

Coding of the heavy duty vibrators is meaningful. In a typical part number such as 110VB6, the prefix 110 denotes operating voltage, V denotes vibrator, B denotes the style, and 6 denotes 60 cycles with regular frequency tolerance. Close frequency adjustment as desired for television is denoted by a final H suffix. A typical close frequency vibrator is 110VB6H.

- Standard models deliver 110 volts, 60 cycle, AC power. Output watt ratings are based on continuous operation on high power factor loads. They should be reduced by the percent of power factor where inductive loads are involved.
- All models are housed in cases of similar design and appearance. The class designations signify approximate size and weight as follows:
 SP — Shaver Pack—2 1/8 x 2 1/2 x 3 7/8 2 lbs.
 LM — Light Midget—3 x 3 1/2 x 4 13/16 4 lbs.
 M — Midget—3 1/8 x 4 3/8 x 5 1/16 6 lbs.

Vibrators as produced by different manufacturers employ driving circuits which require more or less power. Such power is applied by either series or shunt driving means. Where shunt drive is employed, a given vibrator must be used at its design voltage only. Where series drive is used, an external resistor may be used to drop a higher voltage for use of a particular vibrator. These considerations apply to many 6/12 Mobile Communications equipment.

* Radiart vibrators have always used an exceptionally strong driving coil to obtain long and dependable service. When a 6 volt Radiart series drive vibrator is used for 12 volt operation in a 6/12 equipment, the usual resistor may not pass enough power to drive it properly. To avoid any dependence at all upon the coil resistor, Radiart provides similarly numbered shunt drive vibrators for use when 6/12 equipment is used on 12 volts.

In addition to insuring proper drive, the practice of using a 6 volt vibrator at 6 volts and a 12 volt vibrator on 12 volts, permits the factory to provide an adjustment and selection of contact that is best for each application.

** Where 12 volt operation only is involved, a choice of either shunt drives such as 6715 or series drive such as (6715 S) is available.

* D.C. Amperage rating is based upon measurement made with a D.C. ammeter in primary lead. Circuit must be properly designed for load being handled. Technical advice is available through Jobber Service Department.

OBSOLETE TYPES

It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring,

sockets, or other minor features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the Jobber Service Department.

NOTES ON SPECIFICATIONS

Note 1: Continuous ratings are based on operation of nameplate rating indefinitely at ambient temperatures not to exceed 100° F. with free air circulation. Intermittent ratings are based on 25% duty cycle, with on-time not in excess of 15 minutes. Up to 30 minutes operation at the intermittent maximum is not detrimental, provided it can be followed with approximately two hours of cooling time.

Note 2: Output watts ratings are based upon 70%-100% Power Factor loads.

Note 3: Classes of Models indicate case size and approximate weight as follows:

- SP—Shaver Pack 2-5/8 x 2-1/2 x 3-7/32 — 2 Lbs.
- LM—Light Midget 3-1/2 x 3 x 4-13/16 — 4 Lbs.
- M—Midget 4-5/8 x 3-15/16 x 5-5/16 — 6 Lbs.
- L—Lightweight 5-1/2 x 6-1/4 x 8 — 12 Lbs.
- S—Standard 5-1/2 x 6-1/4 x 9 — 14 Lbs.
- H—Heavy Duty 6-1/2 x 7-1/2 x 11 — 20 Lbs.
- SH—Super Heavy 8 x 9-1/2 x 13 — 35 Lbs.

Note 4: RADIART VIPOWERS contain added components required to make them universally applicable to various kinds of loads within their name-plate rating. For example, the same unit may be used for television, radio, dictating service, office machines, and even for industrial purposes. Principal uses are coded in Specifications as follows. Any model is suitable for uses coded for models of lower output rating.

- RA—Radio
- TV—Television
- DI—Dictation
- TR—Tape Recorder
- BE—Battery Eliminator
- MT—Mobile Transmitters

Note 5: Power Factor Correctors are available for use with highly inductive loads, so that they may be handled by Regular VIPOWERS. Model PF1 corrector used on 60% PF loads handles up to 100 watts; On 30% loads, to 25 watts. PF2 on 60% PF loads handles 150-300 watts; on 30% loads, 50-75 watts. PF3 on 60% loads handles 350-500 watts; on 30% loads 100-150 watts. See Engineering Bulletin EB-3007 for details.

Note: See Engineering Bulletin EB-3013 for mounting kits for all models, and for leads, master fuse kits and remote control kits for 6 or 12 volt models.

OHMITE "V.T." VARIABLE TRANSFORMERS

Toroidal core type autotransformers providing distortion-free continuously adjustable voltage from AC line. Highly advanced Ohmite design offers: Greater current capacity for equivalent size (In VT2 and VT4 sizes) **plus a sizable bonus in current in all units where output greater than line volts ("overvoltage") is not required ("N" suffix);** positive current transfer achieved with direct brush to slip spring shunt; rhodium plated brush track. **Mounting:** VT2 panel mounting by 3/4-32 bushing; VT2 tandem units by 1/4-20 bolts; all VT4 and VT8 types panel or table mounting by 1/4-20 bolts—shaft slides to brush or base side.

Adapter plate available for 4-hole mounting of single VT4, Stock No. 6512. Units not cased except where indicated. Frequency 60 to 400 cps except *50 to 400. Over-all dimensions include shaft. Suffixes "-2" and "-3" indicate number of units in tandem assembly (shipped with connection instructions). Cased units as follows: VT2E, VT4E, VT8E—fixed mounting, in-conduit-line; VT2F, VT4F, VT8F—portable with switch, outlet, fuse; VT8G—portable with overvoltage—no overvoltage switch, outlet, circuit breaker, adjustable handle (not included in dimension).

Dial normally calibrated for overvoltage. §Factory connected overvoltage output, may be also easily reconnected for no-overvoltage output. VT8G has overvoltage/overvoltage switch. ¶Overvoltage connection must not be used. **Also have taps for 120 v. input with 280 v. output for VT8H and 240 v. output for VT8HN. With use of 120 v. input the max. current rating applies up to 120 v. output but reduces to approx. 50% at max. output voltage. ††Tandem assemblies are normally furnished without interconnection between units. †††When series connected, load cannot be grounded. §§Add 1/4" for knob thickness. **Add 1" for knob thickness. *6 3/4" including handle fittings. •Case height only. †††Includes knob and dial.

SOLA Constant Voltage Transformers

for automatic, continuous voltage regulation

Manufactured by:
SOLA ELECTRIC CO.
 A Division of Basic Products Corporation

Sola Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a stabilized output voltage even though the input voltage varies over a considerable range. They have nine distinct advantages over electronic-type regulators or regulators which depend solely upon saturation of core materials for their regulating action.

1. Ultra-fast regulating action. Response time is usually 1.5 cycles or less.
2. Absence of moving or renewable parts or manual adjustments eliminates need for routine maintenance and spare parts stock.
3. Completely automatic, continuous regulation. No manual adjustments or instruction booklets are required.
4. Self-protecting against short circuits on output or load circuit.
5. Current-limiting characteristic protects load equipment from excessive fault currents.
6. Availability of transformer ratio for step-up, step-down, plate and/or filament supply permits substitution in place of conventional, non-regulating transformers.
7. Relatively compact compared to other equipment for comparable ac voltage regulation.
8. High degree of isolation between input and output circuits.
9. Negligible external field.

Design and manufacturing innovations at Sola have lowered costs and reduced size and weight of the entire line of stabilizers. Now Sola offers harmonic-free constant voltage transformers as the "standard" design—and at prices formerly charged for units without the patented Sola harmonic-neutralizing circuit. Conventional units, without harmonic neutralization, are available at a reduced level of cost that merits your new consideration in comparison with ordinary, non-regulating transformers. The following pages list the widest range of stock ratings and types offered by any manufacturer of static-magnetic voltage regulators.

Standard Sinusoidal Type

±1% regulated sine-wave output with less than 3% total rms harmonic content

SOLA

Sola Standard Sinusoidal Constant Voltage Transformers regulate voltage output within ±1% regardless of input voltage variations as great as ±15%. Their response to voltage variations is usually 1.5 cycles or less. With less

than 3% total rms harmonic content in their output voltage wave, they are particularly suitable for use with equipment having elements sensitive to power frequencies harmonically related to the fundamental.

Normal Harmonic Constant Voltage Transformers

±1% regulated voltage for electrical and electronic equipment

These units provide the same ±1% regulation as the standard sinusoidal models above. They have an average of 14% total rms harmonic content in their output voltage. Along with the sinusoidal type they offer simplicity,

reliability and freedom from maintenance. They are reliable sources of regulated voltage for filaments, relays and solenoids. This series includes those mechanical designs specially engineered for use as built-in components.

Electronic Power Type

±1% regulation for filament voltage; ±3% regulation of plate-filament supply

Sola Electronic Power Type Constant Voltage Transformers are designed for simple installation by electronic manufacturers as components for their equipment. The filament type provides 6.3 volts output, regulated within ±1% over line voltage variations as great as ±15%. The

combination plate and filament type provides voltage regulated within ±3% for line voltages varying up to ±15%. Both types operate filaments under maintained voltage levels and contribute to extended tube life and reliability.

Sola DC power supplies:

compact, regulated, for high-amp loads

This combination of a special Sola Constant Voltage Transformer, semi-conductor rectifier, and high-capacitance filter yields a dc power supply compact in size, low in weight, and with other important advantages.

1. Output regulation of ±1% or less with ±10% line voltage variations.
2. Minimum output voltage change with wide, rapid load changes.
3. Low input power, with resultant good efficiency.
4. Ability to withstand high, short-time overloads without damage to components.
5. Ripple voltage of approximately 1% (rms) or less.
6. High overall economy by eliminating overload capacity needed in other types of power supplies for certain applications.

7. Low ratio of size and weight to power output.

8. Freedom from routine adjustment and maintenance.

9. Exceedingly low output impedance.

In addition to its important function of correcting line voltage variations, the Sola CV's inherent current-limiting action permits safe, economical use of the efficient semi-conductor rectifier with its low forward voltage drop and other advantages. This same current-limiting action also permits use of high-capacitance filter sections by controlling excessive charging currents which might damage rectifier junctions. The high-capacitance filter yields very low ripple voltage without need for heavy, bulky choke components, with their substantial and often-varying load voltage drops.

NYLON BODIES ON INSULATED TYPES AVAILABLE IN SIX COLORS

DUB-L-PLUG Dual Connectors are valuable accessories for making quick electrical connections to SUPERIOR 5-WAY and similar binding posts mounted on 3/4" centers. Completely recessed integral banana plugs prevent accidental shorting. Captive black and white thumbnuts permit ready circuit and polarity identification. Wiring connections to insulated DUB-L-PLUGS can be made by clamping through center hole, spade lug, clip-lead, banana plug or looping and clamping. Ask for Data Sheet SE-L115810.

SHIELDED/INSULATED DUB-L PLUG used where protection from stray fields is desired as in high impedance testing. Supplied with sturdy die-cast chrome-plated case that can be removed if only insulated plug is needed. Has grounding banana plug that can be removed when used with 2-wire ungrounded circuits. Nylon body supplied in black only. Has one black and one white thumbnut.

INSULATED DUB-L-PLUG ideal for making rapid connections in power circuits and other electronic and electrical applications where shielding is not required. All metal parts are recessed for maximum safety of user and equipment. Design permits stacking of several DUB-L-PLUGS if desired. Nylon body supplied in red, white, blue, yellow, green or black. Has one white and one black thumbnut.

VARICELL[®] adjustable A-C/D-C power supply

- VERSATILE ... EITHER A-C OR D-C OUTPUT
- SMALL, COMPACT
- LOW COST PER KVA
- GOOD REGULATION
- LOW PERCENTAGE RIPPLE
- FULL CURRENT RATING AT ANY VOLTAGE SETTING

TYPE V4050-3

VARICELL adjustable A-C/D-C Power Supply type V4050-3 is a small, compact unit designed to provide a source of adjustable low a-c or d-c voltages from a-c power lines. It can be used independently or as an apparatus component. Essentially, VARICELL type V4050-3 consists of a 3-phase, low voltage POWER-STAT variable transformer combined with a static d-c power supply. The power supply uses highly efficient silicon rectifier cells connected for full-wave, 3-phase operation. Ask for Bulletin V359.

FLEXIFORMER packaged transformer primary

"Do-it-yourself"
TRANSFORMER

- A MULTIPLE SOURCE OF A-C VOLTAGES
- A CURRENT TRANSFORMER

TYPE TP150

This "do-it-yourself" transformer is a self-contained toroidal primary coil complete with SUPERIOR 5-WAY Binding Posts for connections. The binding posts are colored for relative polarity identification. The primary consists of a strip-wound silicon steel core having a coil of 400 turns of #24 B&S gauge copper wire. When used as a source of a-c voltage, the center opening permits hand threading the proper number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding becomes the secondary winding with the current induced by a wire passing through the center opening. Ask for Bulletin TP659.

slo-syn SYNCHRONOUS MOTORS

- INSTANT STARTING, STOPPING, REVERSING
- CAN BE USED AS A D-C STEPPING MOTOR
- 72 RPM SHAFT SPEED WITHOUT GEARS
- STARTS AT FULL 150 OUNCE-INCHES TORQUE

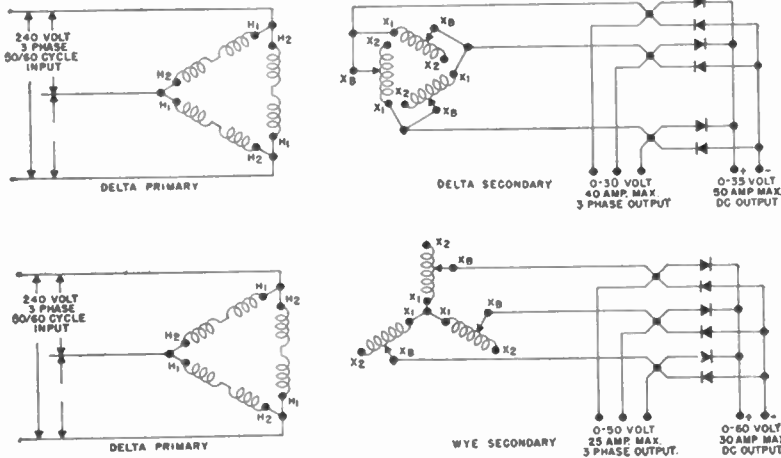

TYPE SS150

A SLO-SYN Synchronous Motor is an enclosed, permanent magnet type synchronous a-c motor adaptable for a wide variety of control applications. At 60 cycles the speed accurately remains at a constant 72 RPM without gear reduction. A single-pole, three-position switch can give instant starting, stopping and reversing control because the motor has three leads only. When used as a stepping or "inching" motor, d-c impulses are converted into either 200 or 400 precise increments of one revolution of the motor shaft. Bulletin SS459.

precision products of **THE SUPERIOR ELECTRIC COMPANY** Bristol, Connecticut

VARICELL type V4050-3 seldom requires filtering because of the low ripple content of approximately 4.2 percent and the ripple frequency of 360 cycles per second at a supply frequency of 60 cycles. The full current rating can be obtained at any voltage setting. The a-c or d-c regulation is approximately 10% at the maximum voltage setting.

VARICELL TYPE V4050-3 RATINGS

- A-C INPUT: { 240 volts, 50/60 cycles, 3-phase
(Primary delta connected)
- A-C OUTPUT: { 0-30 volts, 40 amperes, 3-phase
(Secondary delta connected)
0-50 volts, 25 amperes, 3-phase
(Secondary wye connected)
- D-C OUTPUT: { 0-35 volts, 50 amperes
(Secondary delta connected)
0-60 volts, 30 amperes
(Secondary wye connected)

The a-c and d-c outputs cannot be simultaneously loaded or externally interconnected. The a-c output can be used either single or three phase.

... AS A SOURCE OF A-C VOLTAGE

FLEXIFORMER type TP150 has an input rating of 120 volts, 50/60 cycles single phase and an output rating of 150 V.A. The voltage of the secondary is proportional to the number of turns hand wound through the center opening. The correct number of turns is determined by dividing the desired output voltage (plus approximately 25%) by 0.3 which is the volt/turn ratio of the FLEXIFORMER.

... AS A CURRENT TRANSFORMER

FLEXIFORMER type TP150 becomes the secondary winding when used as a current transformer. A current carrying conductor passing through the center opening serves as the primary. When used with a 0-1 ampere ammeter, currents up to 400 amperes can be measured with an accuracy of 1% at 60 cycles. Can be used as portable units or fastened permanently in place.

WIRING CONNECTION

A phase-shifting network must be used to operate a SLO-SYN Synchronous Motor from a single phase source. For 60 cycle service this network consists of a 3.3 microfarad ($\pm 5\%$) 330 volt a-c capacitor and a 250 ohm ($\pm 5\%$) 25 watt resistor in series. A capacitor/resistor set can be specified for exceptionally quiet motor operation at any particular frequency between 40 and 70 cycles.

SILICON RECTIFIERS

AUDIO DEVICES, INC.

Audio Devices has available a complete line of Silicon Rectifiers having DC current ratings from .5 to 200 amperes with the peak inverse voltage ranging from 100 to 400 volts (500v in the A,B series). Audio's rectifiers in the A and F series have great versatility due to the threaded-end construction which allows them to be either plugged into a fuse-type holder or screwed down in a heat sink mounting for higher current ratings. The threading also makes it possible to couple the rectifiers together in series for high voltage applications. All units of this universal line of Silicon Rectifiers are hermetically sealed and offer all-metal construction for greater efficiency, reliability and long life.

THE POWER TWINS (high current types)

Audio Devices' Power Silicon Rectifiers are available with either positive or negative base connections. These "opposite polarity" units have the same operating characteristics and mechanical dimensions. They are distinguishable by case color, model number and Jetec number. Through the use of opposite polarity units bridge circuits can be assembled with greater ease and simplicity.

Radio Receptor rectifiers, designed and tested to eliminate arc-over danger, short circuits and heating at the center contact point, have underwriters laboratories acceptance for operation at a cell temperature of 85° C. This "safe center" feature combined with long life and lower forward drop at high current densities gives you a rectifier years ahead in design.

NOTES:

Mounting brackets are available for the above types, except for the 4 x 8 cell size and larger.

*These units use one bracket; all others require two.

†Across outer legs of center tap connection.

Mounting studs are centrally located on the cell and where more than one is used the measurement is 3 1/4" between centers. A 10-32 stud is

used with cell sizes up to 2.6" square and a 3/16-18 stud is used with the larger cell sizes;

The stacks shown above are adaptable for a wide range of common applications. The ratings are for stacks mounted with cells in a vertical position with normal convection cooling, and in a maximum ambient temperature of 35° C (95° F) with a resistive or inductive load. Many other types are available for special requirements.

Where space and weight considerations are paramount, these high voltage and current rectifiers will deliver approximately twice the current output of standard selenium units. They possess high inverse voltage ratings and outstanding ability to handle temporary overloads. They feature direct adaptability to a wide range of industrial and commercial applications, and require no paralleling devices in installation for voltage division.

SCHAUER INSTRUMENT RECTIFIERS

TYPE A4A

TYPE BP2B

TYPE C4A

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "B" Rectifiers are encapsulated — fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3" leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated rectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other

than 3" can be supplied on special order.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5 MA.

"B" SIZE CELLS are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS—are for general applications requiring larger output currents and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem.

NOTE: The Schauer Mfg. Corp. is the exclusive manufacturer of replacement Westinghouse copper oxide rectifiers.

POWER CONTROL TYPES

PJ SERIES (general purpose)

This has a higher current rating than the similar-appearing PG Series. The additional rating is achieved by including a jumper between blades, which effects a single-pole design. Such construction, providing double-make double-break heavy-duty contacts, raises the relay current rating without affecting the physical size, vibration or shock characteristics.

Dimensions:
H. 1 1/8" W. 1 1/8" L. 1 1/2"
Mounting Data:
4 tapped holes 6-32 NC-2;
1/2" x 1 1/8" centers.

*Contacts rated at 115 VAC or 26.5 VDC resistive loads.

PC SERIES (1, 2, 3 & 4 pole)

These are compact and positive-acting relays for either AC or DC. They are used in air conditioning and lighting systems, small motor starting, transformers, garage door openers—wherever dependable circuit switching is necessary.

Dimensions: H. 1 1/8" W. 1 1/8"

TELEPHONE TYPES

TA, TD & TQ SERIES (miniature)

Power consumption in the two TA telephone relays listed below is minimized through the use of bifurcated blades, short armature travel, and highly efficient magnetic structure. Contacts are platinum-silver alloy.

The TQ relay occupies only .94 cu. in. of space. The conventional hinge pin is replaced by a beryllium copper retaining spring, hence no hinge pin to wear out.

The TD series uses the TA series frame and coil, but has single 5-amp contacts.

DELAY RELAYS

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are actuated by a heater... can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS: At the present time only SPST is available — normally open or normally closed.

HEATER VOLTAGES: Relays are available with heater voltages from 2.5 to 115 V. For short delays 2 to 10 seconds a low voltage heater, preferably 6.3 V. is recommended. **STANDARD HEATER VOLTAGES:** 6.3, 26 (for 22-30 V.), 115 V. Other voltages available are 2.5, 5.0, 12.6 and 50 V. For 220 V., use a 115 V. relay with a dropping resistor of 6500 Ohms—5W. in series with the heater.

MINIATURE

EFFECT OF HEATER VOLTAGE VARIATION ON DELAY

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

Figure 1

STANDARD HEATER VOLTAGES:

Amperite Delay Relays with low voltage heaters such as 2.5, 5.0, 6.3, 12.6 and 26 V. are designed with automatic voltage regulation of the heater to compensate for line voltage variation. The effect of voltage variation on a typical relay is shown in Fig. 1. Without regulation, the delay would vary as the square of the supply voltage variation. 115 V. heaters CANNOT be supplied with heater voltage regulation. **HEATER WATTAGE:** The wattage consumed by the heater is approx. 2 W. Flashers approx. 1.5 W. All Heaters may be operated continuously.

CONTACT DROP: —0.1V — Prox. at 1A.

AMBIENT TEMPERATURES: Relays are compensated for temperatures of —55° to +70°C. (Relays can be operated to 125°C without damage.) Tolerances given are 20°C. Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than high voltage heaters.

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 50% by using a resistor in series with the heater.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. Heater can be operated continuously. Heaters will not be damaged by a 50% overload in voltage for short durations (1 hour approximately).

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a DPDT Magnetic Relay as shown at left. If normally closed is required — use a normally open Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed 30 FPM with a ± 10 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

Tolerance FPM - 20°C	Standard Flashers Available		
± 10	6F30	26F30	115F30
± 12	6F45	26F45	115F45
± 15	6F60	26F60	115F60
± 15	6F75	26F75	115F75

STEPPING RELAYS

For accurate sequence selecting, pulse multiplying, pulse dividing, circuit selecting, automatic homing, remote homing, counting and latching.

CONTINUOUS ROTATION

IR-P.C.

IR-M.C.

Type IR-P.C. Constructed with micro-finished shaft and Oilite shaft bearing. Beryllium copper pawl control shutter. Selection contacts are terminated on a phenolic board, solder banded for easy soldering. Mechanical life expectancy estimated 4,000,000 steps. Will operate satisfactorily at 15% below or 10% above rated voltage. **Type IR-M.C.** is a smaller continuous operation stepper similar to the P.C. with life expectancy of 2,000,000 steps.

ELECTRICAL RESET

IR-P.E.R.

M.E.R.

Type IR-P.E.R. Constructed with micro-finished shaft and Oilite shaft bearing. Positive mechanical stops limit total number of "steps" in any single unit. Returns automatically to home or start position when reset coil is energized. **Type M.E.R.** A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second or even from its own selection contacts. Unit is capable of counting in groups up to 21, then resetting automatically. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

ADD AND SUBTRACT

IR-R.A.S.

IR-M.A.S.

Type IR-R.A.S. Non-ferrous shutters control motion of pawl to extend life of unit and prevent skipping of the ratchet. Steps one step at a time in either direction depending upon which one of two coils may be energized. **Type IR-M.A.S.** Midget Add and Subtract Stepper is similar to the R.A.S. in general operation. A zero position switch is opened at home position.

Auxiliary switches connected in series with the commutator of the selecting finger may be added to the step and/or reset magnet to increase the normal contact rating. The Guardian Series 200-M3 Contact Switch Kit may be used to add switches (except RAS stepper). Contact fingers are insulated from the shaft. Guardian Steppers are *intermittent duty units* rated at 10% duty cycle (out of each hour), maximum energization single period, 5 minutes. See chart for details.

Heater Data

Relays are available in these standard ratings: 2.5, 5.0, 6.3, 26.5, 48, 117 volts A.C., D.C. or pulsating current. Use a 115 volt Relay with a 3000 ohm 5 watt series resistance for 230 volt applications. Maximum power requirements for "Thermaline" Relays is 4 watts. Heater characteristics are such that a short time overload of 50% will not alter time setting.

Operating Time

Operating time tolerance with the designated heater voltage fixed is — 10% at 20 C.
 All "Thermaline" Relays are preset at the factory for any time delay setting covered by the following ranges:
 1/4 second to 2 seconds — 1/4 second steps
 2 seconds to 10 seconds — 1 second steps
 10 seconds to 60 seconds — 5 second steps
 60 seconds to 180 seconds — 10 second steps

Contacts

At this time only S.P.S.T., N.O. or N.C. contacts are available. Contacts are 1/8 dia. fine silver and are rated 3 amperes at 115 volts 60 cycles non-inductive.

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc. Other industrial applications may be as an overload or underload control where the relay would be used in a DC circuit in which it is desirable to obtain a signal indication when the control current increases above a predetermined maximum or drops below a predetermined minimum.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load. Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance.

ADDITIONAL RELAYS AVAILABLE

In addition to the listings of the Ohmite stock relays shown on this page, Ohmite has nine additional standard types of relays available. These can be promptly made to order. Therefore, if none of the relays shown on this page exactly suits your needs, we suggest you write to us and allow Ohmite engineers to make a recommendation designed to meet your requirements. All Ohmite relays — both standard and made-to-order — are exceptionally high quality, rugged relays designed to give the maximum in precision performance, dependability, and long life. Metal parts are plated where necessary for corrosion resistance. Springs are made of nickel-silver or phosphor-bronze and the contacts are fine silver. Special contact materials can be supplied when desired.

OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units

are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

CARBOFILM PRECISION RESISTORS

These precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments.

Carbofilm Characteristics

TEMPERATURE COEFFICIENT

Temperature coefficient of deposited carbon resistors increases with resistance value and varies from -0.00018 per °C. for lowest values to -0.0005 per °C. for the higher values over the temperature range of -55°C to +85 C.

HUMIDITY

Will meet the requirements of MIL-STD-202 Method 106.

OVERLOAD

Application of a D.C. Test potential 2½ times the rated continuous working voltage, but not exceeding twice the maximum voltage specified in MIL-R10509B for a period of 5 seconds will not cause a change in excess of .5%.

LOAD LIFE

A maximum change of 1% may be expected with operation at full rated wattage applied intermittently 1½ hours on—½ hour off for a period of 1,000 hours at 40°C., provided voltage ratings of MIL-R10509B are not exceeded.

ACCURACY

Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.).

AGING

Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

NOISE

Noise level will not exceed .2 microvolts per volt.

FREQUENCY

Because of inherently low inductance and absence of skin effects deposited carbon resistors are superior in performance at high frequencies to conventional resistors.

DERATING

Full load operation at 40°C.—Derate to zero load at 120°C.

CARBOMOLD CHARACTERISTICS

TESTING

All testing conducted in accordance with MIL-R-10509C requirements.

MOISTURE RESISTANCE . . .

After 5 complete temperature cycles there is an average change of 0.21% with a maximum change less than 0.5%.

LOW TEMPERATURE EXPOSURE . . .

When exposed to -65°C for 24 hours there is a maximum change of less than 0.5%.

TEMPERATURE COEFFICIENT . . .

Extends from approximately 200 PPM in the lower resistance ranges to not exceeding 500 PPM at the highest values specified for each type.

SHORT-TIME OVERLOAD . . .

When subjected to 2.5 times the rated voltage, but not exceeding 2 times the maximum rated voltage for 5 seconds, changes are less than 0.25% with an average change of 0.13%.

LOAD LIFE . . .

When tested for not more than 5000 hours at full load operation in 70°C ambient temperature, maximum changes are less than 1% with an average change of less than 0.5%.

ACCURACY . . .

Guaranteed tolerance of plus minus 1%.

AGING . . .

Average change in resistance for self-aging, approximately 0.2% in a year.

NOISE . . .

Noise level will not exceed .2 microvolts per volt.

DERATING . . .

Full load operation at 70°C—Derate to zero load at 150°C.

SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T pads for use in sound systems. Rated at 2 1/2 watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting. 3/8" bushing diameter, 1" shaft. This control has been developed to meet the need for a constant impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

"GREENOHM"* WIRE-WOUND RESISTORS

FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without altering resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with RETMA standards, overall tolerances are $\pm 5\%$ for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are $\pm 10\%$.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with RETMA standards, overall tolerances are $\pm 10\%$.

OHM'S LAW

Defines relationship between voltage, current and resistance (in dc circuit) or impedance (in ac circuit)

Current is directly proportional to applied voltage. Varies with changes in voltage. If voltage is increased without changing resistance, current will increase. If voltage is reduced without changing resistance, current decreases.

In applying resistors, just remember these simple formulae:

$$I = E \div R$$

$$R = E \div I$$

$$E = I \times R$$

In which I represents current (amperes), R is resistance (ohms), E is voltage.

POWER RESISTOR DECADE BOX

The Resistance Decade Box Model No. 240C allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used

throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel, 13 in. long; 8 1/2 in. deep; 5 3/4 in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

CORNING TYPE R HIGH-POWER RESISTORS TO MIL-R-11804B SPECIFICATION

Corning Type R Power Resistors have a range of 10-1,000,000 ohms, ratings of 7-115 watts, and are non-inductive. They are designed for stable long-life service under the most adverse operating conditions. Noise and frequency characteristics are exceptionally good. Moisture resistance and overload capacity are superior.

Cores — The glass tube cores are made from a PYREX brand glass insuring highest resistivity even at elevated temperatures, low expansion, and unusual resistance to chemical and mechanical attack, as well as thermal shock. The cores are impervious, and the glass has been developed to eliminate electrolysis and voltage creepage.

Resistance Film — The resistive film of metallic oxides is as rugged as the glass. It is permanently and integrally bonded to the core at red heat. Expansions are matched. The film is practically noninductive at all usable frequencies.

Terminals — Silver metallized bands are fired onto the film conductor and core. Lug-type terminals of silver-plated copper alloy strip are expansion fitted over the silver bands to insure a perfect electrical and mechanical junction.

Silicone Coating — The coating is tough, moisture and acid resistant, and a good conductor of heat. It adds to the thermal shock resistance but is not essential to overall performance.

Mounting Brackets — These are supplied with the resistors at extra charge. They are made to MIL-R-11804B requirements.

Range — Resistance range varies with size and power. It is summarized on Table I. Standard tolerance is $\pm 5\%$ for striped or spiraled units.

Ratings — Power ratings are based on 25°C. operating ambient. Maximum operating ambient may be as high as 200°C. and hot spot temperature 235°C.

Temperature Coefficient — The value of temperature coefficient in the range of 25-85°C. is less than $\pm .035\%$ per deg. C. Type R resistors meet the requirements of MIL-R-11804B.

Stability — The average change of resistance after 500 hours operation at maximum dissipation at 25°C. ambient is 4%.

Overload — A standard 5-second overload of 6.25 times the rated power causes a permanent resistance change of less than 0.5%.

Humidity — Type R resistors more than meet the specifications for maximum resistance change of MIL-R-11804B.

Voltage Coefficient — The voltage coefficient averages less than .001% per volt.

Noise — Available data show an inherent noise level of less than .1 microvolt per volt.

Frequency Characteristics — The thin film construction of R type resistors makes them inherently noninductive. Inductance is of the order of magnitude of that of the terminals. They are particularly suited to sharp pulse work.

Design Information — The power ratings in Table I are for horizontal operation. When vertically operated, the dissipation may be safely increased by about 12%. Power ratings may be increased 4 times by forced air cooling.

CORNING FIXED FILM RESISTORS — TYPE S

CORNING TYPE S RESISTORS (MIL-R-11804B SPECS) FOR RELIABLE, STABLE, ACCURATE OPERATION UP TO 200°C.

Corning has developed these fixed film Type S resistors to meet problems of small space and high ambient temperatures.

These are not ordinary film-type resistors. They are integral units made by bonding a metallic oxide film to PYREX brand glass at red heat. The rugged film is noninductive, impervious to moisture, unaffected by the heat of soldering and is more abrasion resistant than the base glass itself.

APPLICATIONS

- Miniature power units
- High-gain, low-signal amplifiers
- Computers
- Missiles where shelf-life is critical
- Aircraft instruments where weight is critical

SPECIFICATIONS

Resistance Element — An accurate, stable, metallic oxide film, fused to a PYREX brand glass core, meets the most exacting circuit needs. The film thickness ranges from 20-50 microinches. Rugged performance does not depend on encapsulation.

Protective Coating — Moisture-resistant, high temperature Silicone lacquer is baked on the resistor for extra mechanical and dirt protection. Plastic stand-off insulating sleeves over end caps available for special applications. Fungus-resistant coating per MIL-V-173A is available if desired.

Tolerance — Tolerances are 1, 2, 5, and 10%. Tolerance calibrated at 25°C. ambient.

Power Rating — Full rating at 120°C. ambient. Double rating at 40°C. ambient for miniaturized power applications.

Stability — The maximum change in resistance is guaranteed to be less than 3% when tested with DC power on 1½ hours, off ½ hour, for 1,000 hours, employing proper power per derating curve for any particular ambient.

Overload — A standard 5-second overload of 10 times rated power causes a permanent resistance change of less than 1.0%. Repeated overloads cause negligible further changes.

Voltage Coefficient — Negligible factor averaging less than 0.001% per volt.

Temperature Coefficient — For the Type S resistor, a temperature coefficient of ±0.03% per °C. can be guaranteed from -55°C. to +235°C. referenced to 25°C.

Humidity — Core and film are impervious to moisture. Corning Type S resistors more than meet the moisture-resistance tests per MIL-R-11804B.

Noise — Extremely low noise level. Some sources indicate readings 1,10 those of carbon film resistors.

Frequency Characteristics — Corning Type S resistors are noninductive up to and over 250 mc. The capacitive component varies between 0.2 to 1.0 uuf as frequency increases to 250 mc.

Shelf Life — One year aging shows less than 0.2% resistance change under the most adverse conditions.

PAPER DIELECTRIC
CUSTOM MANUFACTURED

5% and 10% TOLERANCE, 1/2, 1 and 2 WATT RATINGS

Fixed composition resistors of highest quality, feature permanent electrical characteristics, small physical size for a given wattage rating, great mechanical strength. Leads are differentially tempered—prevent sharp bends near the resistor body while still permitting easy forming to fit a particular wiring arrangement.

Resistor bodies are molded brown phenolic with coding in brilliant colors.

2W 1W 1/2W (ACTUAL SIZE)

These resistors are now supplied in attractive new containers. Three convenient sizes with pull-out sections accommodate standard quantities of 1/2, 1 and 2 watt resistors.

A G-H innovation, Gold and Silver container ends, permits instant identification of 5% or 10% tolerance units. Quantity, wattage and resistance values are also clearly printed on these ends. These attractive black and green containers with Gold and Silver ends provide a space-saving, functional shelf display.

ADJUSTABLE VITREOUS ENAMELED RESISTORS WITH MOUNTING BRACKETS

Embodying features originated by Hardwick, Hindle, Inc., resulting in a Resistor possessing the many advantages of Vitreous Enamel Construction, plus an adjustable feature.

The winding is closely and evenly spaced, assuring ample insulation between turns. Where the winding appears exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with the adjustable band.

All sizes of Adjustable Resistors listed herein are furnished complete with mounting brackets and with one adjustable contact band.

BLUE RIBBON RESISTORS

Blue Ribbon resistors differ from tubular resistors in that they are wound on an elliptical core. An aluminum bar through the center insures more even distribution of heat, avoiding hot spots.

Our gray enamel eliminates crazing which results in failure of the resistive element due to moisture penetration from humidity, salt and other severe atmospheric conditions.

Mounting studs—corrosion and rust resistant—peened to the ends of the thru-bar conduct heat to the mounting surface. You can stack two or more units. Our method of fastening the tube to the thru-bar prevents loosening. In comparison with tubular units of equivalent wattage rating these resistors offer outstanding advantages: • Higher wattage rating per unit space requirement. • Reduction in space requirement. • Simple sturdy mounting, single or stacked. • Light weight. • Lower inductance.

Designed for and manufactured in accordance with JAN-R-26A specifications.

*This rating based on a maximum temperature rise of 300 degrees C. with the Resistor mounted horizontally on a 10" x 10" x .040" steel plate supported horizontally 1/2" above a wooden surface.
When Resistors are mounted on a non-metallic base the nominal watt rating should be reduced by approximately 15%.

10 and 20 WATT FIXED VITREOUS ENAMELED RESISTORS

Designed for radio service and replacement use—conservatively rated—wound upon Stealite Tube—combination lug and pigtail terminal connections. Vitreous enamel insulation, insures proof against moisture. 10 watt and 20 watt sizes, in the range of resistance values shown.

"GRAY LINE" AXIAL-LEAD RESISTORS

The "free air" wattage ratings of these axial lead resistors are based on a hot spot temperature rise of 300° C. (540° F.) in an ambient temperature not exceeding 40° C. (104° F.). These are the finest quality vitreous enameled wire-wound resistors made with application-tested parts and employing precision assembly. Since parts have matched heat expansion, crazing and cracks are eliminated. All welded construction.

VITREOUS ENAMELED RHEOSTATS

Insulated shafts and mounting bushings

Type A-25 — Will withstand rugged treatment under the most adverse conditions. It has unusually smooth mechanical operation. The terminals, made of strong corrosion resistant alloy, are permanently welded to the winding form. The winding ring is made an integral part of the refractory base by vitreous enamel. The phosphor bronze actuating arm, with its graphite brush, gives smoothest action and excellent electrical control. Shafts are insulated. Three terminals permit either potentiometer or rheostat use; and our new high temperature gray enamel gives an added safety factor.

Types H-50, H-100, H-150 — These are our newest rheostats and they will give longer service and greater protection. They are designed for use under extremes of humidity and abnormal atmospheric conditions. The unique "buss bar" type brush automatically adjusts tension for complete, continuous contact. It eliminates backlash and prevents binding. It assures perfect contact with the entire winding surface. Our new high-temperature gray enamel bonding gives you an increased safety factor and better overall service. These improved rheostats are designed to comply with current standards of: (a) Military Specifications MIL R-22. (b) RETMA. (c) N.E.M.A. (d) "listed by Underwriters Laboratories, Inc."

- a. **High temperature enamel**—bonds the wire to core and the core to base to afford greater safety factor where overloaded conditions are demanded.
- b. **Bus-bar construction** gives minimum resistance and ample safety under maximum current requirements. Made of alloy materials to fit wire size and current requirements of various resistance values and also to give minimum wear on wire.

- c. **Constant pressure contact arm**—This patented feature is made of high carbon spring steel to insure uniform pressure of contact brush on both collector ring and winding surface and to eliminate troublesome contact resistance.
- d. **Tripod Mounting Frame**—Alloy casting designed to give greater safety factor under shock and vibration.

INSULATED RESISTORS

TYPE GBT-BT FIXED COMPOSITION CARBON RESISTORS

More IRC Filament Type GBT-BT Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC GBT-BT's are by far the leading choice of Electronic Engineers—particularly since the new GBT-½ ½ watt and GBT-1 1 watt give new appearance, new sizes . . . IRC's unsurpassed solderability has been maintained and no wax coating to gum up end equipment. For replacement, Service Technicians favor IRC GBT-BT's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

COLOR CODING AND STAMPING

Resistance values are clearly indicated by standard EIA (formerly RETMA) Color Code. All resistors in Distributor Packages, except BTR, are individually stamped with value and wattage.

TYPE BW INSULATED WIRE WOUND RESISTORS

Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Tinned, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

MICROSTAK SELENIUM DIODES

Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

Dimensions: (Type 6GA1) Length of leads — 1½". Body length — .450". Diameter — .145". (Type 9GA1) Length of leads — 1½". Body length — .500" Diameter — .210".

TYPE 6GA1

Stock No. 6GA1-2B. Minimum forward current (at 2 V.D.C.) is 0.5 M.A. and corresponding resistance, 4000 ohms. Maximum inverse current (at 20 V.D.C.) is 20 microamperes and corresponding resistance, 1 megohm. Peak inverse volts —36. Continuous inverse volts —22. Maximum A.C. input (RMS volts with resistive load only) —26. Temperature range is —55°C to +90°C. Shunt capacitance — approximately 25 mmf (measured with two plates back-to-back on 1000 cycle bridge).

Stock No. 6GA1-3C. Minimum forward current (at 2 V.D.C.) is 1 M.A. and corresponding resistance, 2000 ohms. Maximum inverse current (at 20 V.D.C.) is 10 microamperes and corresponding resistance, 2 megohms.

TYPE 9GA1

Stock No. 9GA1-3C. Characteristics are the same as the 6GA1-3C.

RADIO-TV TECHNICIANS'

TYPE Q VOLUME CONTROL

IIRC's Type Q Control is the basic control for servicing all sets. It is carefully engineered to meet most replacement requirements with a minimum stock. The quality appearance and "fashioned turn" of the Q Control assure customer satisfaction. Easier installation and dependable performance provide more profitable servicing.

KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

1/4" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

Q CONTROL ACCESSORIES

TAB MOUNT CONTROLS

Many recent TV sets use Tab Mount Controls. These are single controls without switch. They differ from standard controls in that bushing is omitted and mounting to chassis is made with two heavy twist-type mounting tabs.

IRC TAB-MOUNT KITS

Since assembly of Tab-Mount Controls is so simple, IRC supplies four 3-Part Tab-Mount Kits which will assemble with any standard plain or tapped IRC Base-Element to provide satisfactory Tab-Mount Controls. Each TM Kit includes a Tab-type Ground Plate, a control cover and a finger-knurled and screw-driver slotted shaft of appropriate length for universal replacement. Packaged with instruction sheet but without necessary Base-Element.

- TM-1 —IRC Tab-Mount Kit—Shaft $\frac{1}{4}$ " long.
- TM-2 —IRC Tab-Mount Kit—Shaft $\frac{5}{8}$ " long.
- TM-3 —IRC Tab-Mount Kit—Shaft 1" long.
- TM-4 —IRC Tab-Mount Kit—Shaft $1\frac{1}{2}$ " long.

SPECIAL PURPOSE CONTROLS

**Type QJ-3
TV ATTENUATOR**

- Reduces overloading effects on TV sets in strong signal areas.
- Diminishes interstation interference caused by nearby or powerful stations.
- Minimizes buzz due to high signal level in intercarrier systems.
- Permits easy adjustment of signal RIGHT AT SET.
- Frequently prevents mismatch of antenna load to set.

IRC's QJ-3 TV Attenuator permits ready adjustment of signal input to TV sets. In most cases, it corrects or substantially reduces such conditions as:—Adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breakover. Also useful in service work—duplicating fringe area signals when shop is near strong local station.

**Type LC-1
LOUDNESS CONTROL**

SLEEVE BUSHINGS

A continuously compensated control that boosts lows and highs as volume is decreased—maintains depth and brilliance even at whisper level. Type LC-1 replaces makeshift compensating units—tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Automatically maintains proper balance of all frequencies in the audio spectrum at any listening level. Simplicity itself—as easy to wire into an audio circuit as any standard three-terminal volume control. Complete instructions included, showing applications. Type 76-1, 76-2 or 76-4 switch can be added to this control.

- R Taper**—Right Hand Taper with approximately 15% of total resistance at 50% rotation when measured from Right Terminal to Center Terminal facing shaft end of control with terminals down.
- U Taper**—Standard Linear Taper.

Type WP (Distributors' Industrial Control)
Constructed with 3/32 x 1/4" bushing and 1/2" diameter, full round shaft 3" long from mounting face.

TYPE WPRL

A new line of IRC distributor industrial controls with short screw driver slot shaft 1/4" diameter and approximately 1/2" long from mounting face, with 1/2" locking type bushing and locking nut. 10% resistance tolerance. Linear taper.

Over 1150
Exact Duplicate Controls
for TV and Auto Radios

For those who prefer factory-assembled special controls, IRC provides an exceptionally broad line of over 1150 Exact Duplicate Controls. Each control is specified closely to manufacturers' original control specifications—required. Carbon and wire-wound elements are used for panel and rear sections as required.

The IRC Exact Duplicate Line now includes over 200 concentric dual controls for auto radios. Modern

in design, these new controls bring many unique and desirable features to provide convenience, economy and long life. The new IRC Printed-Silver Tone Switch eliminates contact fatigue—assures positive, no bump contact. Simple detent assures positive positioning independent of switch action. Control position feature of $\frac{1}{16}$ " and $\frac{1}{2}$ " bushings permits exact duplication of original. Short control depth fits most crowded locations. Power switches amply rated for both TV and Auto Radios. Consult S-012E Part Number Replacement Manual or S-020E Numerical Listing for needed controls.

IRC CONCENTRIKIT ASSEMBLES EXACT DUPLICATE CONTROLS
features quick assembly—no modification of parts.

14 Basic CONCENTRIKITS

IRC Concentrikits are the common parts to various types of Exact Duplicate Controls. When assembled with parts shown in IRC Parts Number Manual (Form S-012E), they will produce any IRC Exact Duplicate TV or Auto Radio Controls. No cutting or filing of shafts or bushings—one minute assembly.

Base-Elements and Exact Duplicate Shafts for CONCENTRIKIT assembly are listed on 3 pages following →

IRC Base-Elements are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements of many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts.

Two types of Base-Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel or rear sections.

Two Base-Elements are required for each concentric dual.

DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS

Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting

Save time—be assured of accurate fit! IRC now provides a complete line of Exact Duplicate Shafts for CONCENTRIKIT—factory-tailored for dependable mechanical fit. No filing, slotting, soldering or cutting required! Many shafts are fluted as well as slotted to provide wider replacement coverage. Each shaft is a complete assembly, including contactor. Factory-lubricated, packaged in cellophane and in individual carton.

face when installed in control (L_1 is Outer Shaft length; L_2 is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32" or 2-5/16". Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32" should be subtracted to determine shaft length.

DISTRIBUTOR CONTROLS FOR INDUSTRY

MULTISECTIONS

IIRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ, RQ or RQL Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls.

Duals assembled from IIRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 25 values, as shown in following table. Each MULTISECTION adds $\frac{1}{16}$ " to basic control.

TYPE RQL

IIRC's new line of 10% tolerance Locking Type Bushing Controls. Screw-driver slot shaft $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face, with a $\frac{3}{8}$ " split type bushing, and locking nut.

MULTISECTION DIMENSIONS

DUAL CONTROL

TRIPLE CONTROL

SINGLE CONTROLS

TYPE PQ

TYPE RQL

TYPE RQ

IIRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial controls are adaptations of the new, compact $\frac{1}{4}$ " Q Control. Power rating is $\frac{1}{2}$ watt, 500 volts maximum. Electrical rotation is the same with or without switch. $\frac{3}{8}$ " bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round $\frac{1}{4}$ " shaft, approximately $\frac{3}{4}$ " from mounting face, with $\frac{3}{8}$ " long bushing. Available in 33 stock values as shown. Regular IIRC stock numbers are used with prefix PQ.

TYPE RQ. Very short screw-driver slot shaft, $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face with $\frac{3}{8}$ " long bushing. Available in 33 values as shown. Regular IIRC stock numbers are used with prefix RQ.

NOTE: Other distributor controls for Industry—Types WP, WPRL—see page R-1255.

DUALS AND TRIPLES

IIRC Type PQ, RQ and RQL Industrial Controls are supplied as single controls. Dual Control and Triple Control combinations are available by adding IIRC MULTISECTIONS.

IRC Power Wire Wounds are designed for continuous operation at full rated power. Derating is unnecessary even for the highest stock values. IRC Power Wire Wounds are full size, thus capable of efficiently handling greater wattage. Cooler performance assures longer resistor life, and safeguards critical components mounted adjacently. Clear, permanent markings show type, size, wattage, and resistance value; markings improve in legibility with temperature rise. Terminals are tin plated for easy soldering.

PRECISION WIRE WOUND RESISTORS

RADIAL LUG TYPE

Improved ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Special winding technique, developed by IRC, eliminates shorted turns or strains in the winding.

Improved insulation provides greater humidity protection and contributes to longer trouble-free service. Improved lug and lead terminals assure perfect electrical connections without strain on the windings, and are easily soldered.

PRECISION WIRE WOUND RESISTORS

IRC Precision Wire Wound Resistors are designed and manufactured to exacting standards necessary to insure consistent accuracy in critical applications.

The unencapsulated resistor types of the former Hycor ceramic bobbin line of resistors have been added to the IRC WW series resistor line (see following page). This results in presenting a more extended line of unencapsulated precision wire wound resistors to the industry.

These resistors are made on modern equipment from specially selected materials. High reliability is assured by maintaining rigid quality control procedures throughout all manufacturing stages.

PRECISION WIRE WOUND RESISTORS

STANDARD STOCK VALUES— IRC PRECISION WIRE WOUND RESISTORS

IRC Precision Wire Wound Resistors are designed and manufactured to exacting standards necessary to insure consistent accuracy in critical applications.

The ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Insulation provides greater humidity protection and also contributes to longer trouble-free service.

Maximum temperature coefficient of .0027% per degree C is standard on all IRC Precision Wire Wound Resistors at no added cost.

IRC Precision Wire Wound Resistors have either radial lug or radial lead terminal, designed to eliminate any strain on the winding. These terminals offer excellent solderability.

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Precistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRECISTORS make them superior to many popular applications.

IRC Type DC Deposited Carbon Precistors are available in three sizes: 1/2 watt (body size 3/16" x 1/2"), 1 watt (body size 1/8" x 3/32"), and 2 watts (body size 2 1/16" x 3/32"). Accuracy ±1% (25°C).

For complete protection against scratches, jars and surface injury IRC PRECISTORS are factory packed in capped plastic tubes. This special precision packaging also safeguards these close tolerance resistors against excessive handling.

TYPE MDC

IRC's Molded Deposited Carbon Precistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded insulation provides improved load life characteristics, better insulation resistance and greater resistance to moisture effects. The Molded Deposited Carbon Precistor provides all the advantages of the ceramic solder sealed types without the hazards of seal leakage, breakage and low dielectric strength.

APPLICATIONS

Type MDC Molded Deposited Carbon Precistors are particularly suited for applications where an unmolded deposited carbon unit cannot be used due to the risk of mechanical damage to its coating, insulation breakdown and excessive moisture conditions.

SPECIFICATIONS

Wattage Rating: 1/2 watt at 70°C. ambient (per MIL-R-10509B) derated to 0 at 120°C.

Resistance Values: 100 ohms to 2.21 megohms.

Tolerance: Standard Tolerance is 1%.

Identification: Housing is distinctive red plastic. Type designation, resistance value and tolerance are stamped on each unit.

IRC

INSULATED CHOKES

IRC Insulated Chokes are available in four sizes designated as types CL $\frac{1}{2}$, CLA, CL1, and CL2. All four are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

LECTROHM IS CREATING NEW DESIGNS AND MATERIALS IN WIRE WOUND RESISTORS FOR NEW ASSEMBLY METHODS

In addition to supplying the electronics industry with superior vitreous enameled wire-wound power resistors in the familiar sizes and ratings, LECTROHM is producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power re-

sistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

MILWAUKEE RESISTOR COMPANY

MILWAUKEE 4, WISCONSIN

*A good name in the Power Wirewound Resistor field since 1943.
Our years of experience have resulted in professional know-how
in the manufacture of conventional and many special designs.*

MINIATURE OVAL RESISTORS

Designed to fill demands for use in compact assemblies . . . Aircraft . . . Missiles . . . Etc. Wound on Steatite cores . . . Coated with Silicone or Vitreous enamel . . . Comes complete with Aluminum thru-bracket equipped with spacers for mounting singly or stacking . . . Available also in same sizes but without hardware . . . Available with lugs or wire hook up leads.

REGULAR OVALS

Oval resistors shown are for use where space is a factor. Standard mounting is with aluminum brackets and spacers which allows for quicker heat dissipation. They are also designed for stack mounting for use when more than one resistor is required. Silver soldered connections between resistance wire and terminal. Vitreous enamel or silicone coating available. Standard sizes are shown — specials can be made to your specifications. Wattage ratings shown are based on resistor mounted on 10" x 10" x .040" steel plate. When resistors are not mounted on metal base the nominal wattage rating should be reduced by 15%.

RIBWOUND RESISTORS

75 to 2000 Watts — "Wattage Rating Based on Temperature Rise of 375°C"
FOR USE — when high wattage and low resistance is required.

CONSTRUCTION — edgewound with special crimped resistance ribbon on a special designed steatite core. All connections between wire and terminals are silver soldered to provide absolute security.

MOUNTING — spring clip or 1 high, 2 high, or 3 high thru bolt mounting. Other than Standard Rib-wounds can be made to your specifications.

STRIP RESISTORS

Strip Resistors are designed for high performance at low cost. Wound with high grade resistance wire on asbestos cores. Coated with high temperature cement and sand to assure rapid heat dissipation.

Tinned copper leads 1½" long. Standard tolerance is 10%.

Special tolerances and sizes available upon request.

COMBINATION FUSE RESISTOR

COMBINATION FUSE AND RESISTOR . . . a resistor with a dual purpose, U. S. PATENT NO. 2,672,542 designed to protect your expensive equipment . . . a normal purpose resistor with fuse characteristics to carry a current overload for a predetermined, closely controlled, minimum and maximum time-lapse period before fuse action occurs. No spewing of flame, No spark emission.

TYPICAL APPLICATION: 5 watt, 7.0 ohm unit to operate as resistor at .75 ampere; but, if subjected to a 3 ampere load at ambient temperature, will fuse within a fixed minimum-maximum 30 to 60 seconds time-lapse period.

YOUR SPECIFICATIONS forwarded to us will bring prompt and complete analysis from one of our competent engineers.

VITREOUS ENAMELED RHEOSTATS

CLOSE CONTROL RHEOSTATS

Underwriters' Laboratories Reexamination Service Listed

Eleven sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers a range from 12½ to 1000 watts, in ratings that meet the major portion of design, production and emergency needs. Ratings of 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure

at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MOLDED COMPOSITION POTENTIOMETERS, 1/2 and 2 WATTS

Exceptional reliability along with small size for rated wattage, is provided in Ohmite's molded composition potentiometers. Type AB units, 1 1/2" in diameter and rated two watts at 70°C ambient, are available in a number of styles and find universal application as rheostats or potentiometers in industrial, military or other high quality electronic devices. Type AS is a new Miniature Potentiometer for miniature or lightweight assemblies. Although only 1/2" in diameter, it is rated for continuous duty at 1/2 watt at 70°C ambient. Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low and units will pass ARMY-NAVY salt

spray test. Specification QQ-M-151. Single control Type AB units extend 5/8" behind panel; dual control 1 1/4".

Type AS Miniature unit extends 1/8" behind panel. A SPST switch for Type AB units is available.

AXIAL-LEAD RESISTORS**

Ohmite axial-lead, vitreous-enameled resistors are compact, wire-wound units available in three stock sizes: 3-Watt (1/8" x 1/4"), 5-Watt (1 1/8" x 1 1/2"), and 10-watt (1 1/2" x 1 3/4")... The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have 1/2" tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is ±5%.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

LITTLE DEVIL COLOR CODER

Here is a handy little device that makes it easy to determine the resistance and tolerance values of EIA color coded composition resistors.

Just turn the color wheels until the color corresponds to the color band on the resistor and read the resistance value directly in ohms in the windows.

OHMITE FUSE RESISTOR

FR-7.5
Net Price \$0.39

Designed for replacement in all television receivers, the FR-7.5 Fuse Resistor is provided with 1 1/2" tinned lead wires for easy installation directly in the TV circuit. May also be soldered to the plug-in terminal strip which is provided. 7.5 ohms.

OHMITE "LITTLE DEVIL" RESISTORS

All sizes have molded insulation except the 1/10 watt size which is coated with insulating material. Other noted advantages are great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. "Little Devils" may be used at full rated wattage at 70 C (158°F) ambient temperature.

In the 1/4, 1/2, 1 and 2 watt sizes, "Little Devils" meet stringent government requirements (MIL-R-11B) for "best quality" characteristics. They are available from stock in the standard EIA resistance values in the tolerances and resistance ranges shown in the price table below. Ratings for maximum continuous RMS voltage drop are high: 150 volts for 1/10 watt units, 250 volts for 1/4 watt, 350 volts for 1/2 watt, 500 volts for 1 watt, and 750 volts for 2 watt units.

STANDARD EIA VALUES: Figures in large, bold type are ±10% EIA values. All values listed are ±5% values. Price table lists the various sizes and indicates the tolerances and resistance ranges in which they are supplied.

WARD LEONARD

25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Type Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal or graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

GENIE®

Radio-Controlled Garage Door Operators

The first quality, low-cost, automatic garage door operator!

The Alliance Genie opens, closes, locks garage door, turns light on and off automatically! Now available in radio-controlled models (fully automatic), and key-lock switch models (semi-automatic).

The Alliance Genie operates on all standard one-piece and sectional overhead garage doors. The "Genie" radio models are activated from the car dash and by a radio transmitter installed under the car hood.

"Genie" key lock models are operated by turning

a key mounted in a lock-switch installed along the driveway.

The Alliance Genie incorporates special safety features — a safety clutch which automatically stops the door if it strikes an object while operating and which automatically reverses direction of door's travel the next time operator is activated.

Special Alliance "wobblator" assures instant stop and saves motor wear on CT and ST units.

The Alliance Genie is easily and quickly installed. Comes complete with necessary mounting brackets. Works on standard house circuits.

VIBRATION CHARACTERISTICS

To determine the vibration characteristics of BUSS and FUSETRON fuses, a costly Caladyne Vibration System has been installed.

This system permits the evaluation of the vibration characteristics of Small Dimension fuses at cycles of 5 to 2000 per second and acceleration levels up to 30g (vector) or with displacements up to $\frac{1}{2}$ inch double amplitude.

Tests with this equipment have permitted great improvement in the designing of fuses to withstand vibration.

BUSS FUSE & HOLDER COMBINATION

For voltages up to 300

Safeguard against use of wrong size and type of fuse. HLR holder takes only GLR and GMF fuses.

Fuse and knob of fuse-holder are in one piece. When fuse blows, the entire fuse-knob assembly is replaced.

Small and compact, overall length of holder with fuse is approximately 2 7/16 inches.

BUSS Add-On Fuse Blocks for $1\frac{3}{32} \times 1\frac{1}{2}$ inch Fuses

Single-pole fuse blocks and separate end barrier assemble into a unit block of one or more poles. Units lock in position. Assembled block becomes a single unit.

Each fuse can be used as a disconnect. See illustration. Raised fuse identifies open circuit and prevents confusion in getting right fuse back in circuit.

Marking strips so each circuit can be identified available.

- No. 3949 Assembly consisting of one No. 3742 End Barrier — plus specified number of No. 3743 One-Pole Blocks
- 3742 End-Barrier Only \$.25
- 3743 One-Pole Block Only 1.38
- Marking Strip in 50 inch lengths \$0.38 per length

When ordering, be sure to specify number of End Barriers and number of One-Pole Blocks desired. Only ONE End Barrier is required for each assembled fuse block of any number of poles.

Other standard and special fuses, fuse blocks, fuse clips and fuse holders

If the fuses, fuse blocks, fuse clips and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military

specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

TV ANTENNA ATTENUATOR PCH-4 SWITCH

Eliminates "tearing" of image due to high power through use of "H" pads. Proper attenuation also eliminates "ghosting" by reducing signal strength — reduces the weaker signal in a single channel. Useful in matching impedance between antennas and receivers.

Unit has six switching positions: 1 — Regular antenna. 2 — a 10 db signal loss inserted between the antenna and receiver. 3 — a 20 db loss. 4 — a 30 db loss. 5 — a 40 db loss. 6 — a 60 db loss — disconnects antenna for areas of immediate proximity to high power transmitter.

What you should know about Cutler-Hammer

Cutler-Hammer has long held the respect of the aircraft industry because this company has been part of the aircraft industry for over 35 years. Today, as for the decades past, Cutler-Hammer engineers are working closely with the aircraft industry's leaders . . . thinking ahead, planning, designing and building for the future. Here is the record:

1920 Cutler-Hammer designed and manufactured the first line of switches ever created specifically for use in aircraft.

1938 Cutler-Hammer designed and manufactured the first d-c power relays ever created specifically for use in aircraft.

1943 Cutler-Hammer designed and manufactured the first a-c power relays ever created specifically for use in aircraft.

1949 Cutler-Hammer started development of the first environment-free power relays for use in aircraft.

1953 Cutler-Hammer submitted samples and certified test reports on the first hermetically sealed power relay to WADC and Bu. Aer. Cutler-Hammer configuration was adopted as industry standard by ASG.

1955 Cutler-Hammer designed and manufactured the first one hole mounting Lever Lock aircraft switches.

SINGLE SECTION ROTARY SWITCHES

3612-01 to 3612-10

These single section rotary switches were designed to keep pace with the demand for smaller components. They are the smallest switches available to handle multi-circuit switching and are ruggedly built with heavy silver plated contacts, high grade phenolic insulators, best spring brass and steel. These switches are ideal for radio-phonos, wave band, tone control, meter and antennae switching applications, as well as many other uses in electronic equipments. All switches are supplied with one knob, mounting nut and lock washer.

MULTI-SECTION ROTARY SWITCHES

3612-11, 12, 15, 19

3612-18

The flat rivet "Wedglock" which fastens the contact to the stator is a unique feature of these switches. The small cross sectional area permits the use of sturdily designed contacts without sacrificing over-all stator size. The outstanding feature of this flat rivet is a contact assembly that will not loosen or rotate due to soldering heat. A free floating rotor assembly results in this rugged construction as the rotor blades do not support the assembly and only required rotor blades are used.

One, two and four section switches in both shorting and non-shorting types are stocked to meet applications such as meter switching, test equipment and various electronic instruments. All switches are supplied with one knob, mounting nut and lock washer.

LEVER ACTION SWITCHES

3612-20, 21, 22

Erie Lever Action Switches employ the same type stator and construction as the Multi-Section Switches assuring a high quality assembly for inter-communication and test equipment applications. Smooth, positive action and indexing, high quality phenolic insulation, heavy silver-plated contacts and best spring brass are features which make the switch ideal for replacement or new uses.

Each switch is supplied with mounting screws and knob. Packaged individually in a durable sealed plastic bag in the familiar Erie display box for maximum protection against corrosion.

GENERAL PURPOSE SWITCHES

3612-23, 24, 25

Extreme care was taken in the design of these very small compact switches to insure a very rugged and accurate construction. Again, the flat rivet is used to firmly secure the contacts against rotation in a very strong phenolic insulator. The stator assembly is attached directly to the detent plate insuring positive indexing. Heavy silver-plated contacts provide dependable and efficient operation. They may be used for simple circuit switching and wherever space is at a premium.

Each switch is supplied with one knob, mounting nut and lock washer. Packaged in individual durable sealed plastic bags and the familiar Erie display box.

LEVER ACTION SWITCHES, KITS AND SPECIAL MOLDED SWITCHES

3- and 4-Position Lever Switches — New 5-Position — Unique 6-Pole Double-throw per Deck

SS-14-1L4F-2
Two-Deck Lever-Action Switch

POSITIVE TYPE, 3- and 4-Positions. (Single-deck.)
Specified where quality is a consideration, these lever switches offer many of the design features of the J-B-T SS-14 instrument-type rotary switches. The single-deck models (not illustrated) come in the conventional three-positions and in a newer four-position. Present uses include tube checkers, inspection apparatus, communication systems, hobby equipment, consoles, and sound devices. The four-position types, interchangeable except in slot length with the standard three-position, provides the extra circuit which is often needed. Dimensions are shown on the drawing below. Variations in mounting hole sizes, lever length, and tapped mounting holes can be supplied on long runs involving set-up charges. Switches are normally individually boxed with mounting hardware and KN-17 black pointed knob as illustrated. Spacing between single decks: recommended 3/4", minimum 5/8". Also see list of available mounting plates.

Spring Return Type. Single deck 3-position switches also may be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10 (Model Suffix—R).
Two-Deck Lever Action Switches. These use the same strong parts, 3-pole suspension and double-grip collector arms as the one-deck type, but are specified where quality is the prime requirement. Spacing is 3/8" between decks, the same distance as TV twinlead wires. Non-shorting (break before make) positive action, individually boxed including KN-17 knob and hardware. Recommended spacing between decks 1 1/8"; minimum spacing 1 1/4".

ROTARY SELECTOR SWITCHES — INSTRUMENT TYPE

Laminated, 14-position — Time Saving Ring — Contact, 14- and 20-position, molded

J-B-T Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available non-shorting or shorting as 14-position in laminated type, and 14 and 20 position in molded construction — this design gives extra contacts in minimum space. One to six decks. Switches supplied through distributors are sealed in moisture-proof bags.

FEATURES:

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test. **SS-14 laminated:** Ball bearing action, beryllium-copper balanced spring, and sharp detent assure positive indexing. Springs are replaceable without disturbing soldered connections. Laminated plastic decks and rotors are selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms. **MS-14 and MS-20 Molded:** See next page.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".

SS-14-2

MS-20BR-1 Ring-Contact

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts 1,500 volts R.M.S.; between decks and ground, 2,000 volts R.M.S.

Military Variations—The following can be supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 to 20 live positions, no off, (add suffix F, as SS-14-2F); (e) common position in non-standard location.

BASIC 14-POSITION: 1 1/4" Bar knob (KN-14) supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to that of shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown below. 13 contacts per deck. One to six decks; for each additional deck (or gang) adds 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Adjustable Stop normally is supplied on standard cataloged switches. Fixed Stops can be supplied on quantity orders at moderate cost. Panel locator positioned as shown unless otherwise specified on bulk orders.

COMBINATIONS IN SS-14 SERIES: In addition to the military variations listed above, shorting and non-shorting decks can be assembled on the same switch shaft. Reference to the sketch below will be helpful in numbering decks and contacts when ordering non-standard assemblies. Specialized requirements for stainless steel shafts, no flats or double-flats on shaft, or longer projections beyond flanging also can be supplied with necessarily longer delivery time and additional cost.

SWITCH KIT (Laminated Phenolic)

Most of the 14 and 20 position laminated switches, plus special variations as needed, can be assembled quickly from the kit shown on an adjoining page. Designers, service engineers, laboratories, and industrial maintenance departments will especially appreciate the convenience, flexibility, and time saved.

NEW IDEA: RING-CONTACT SWITCHES

Both the MS-14 and MS-20 switches described on the next page now are produced with the outside edge of all contacts held together by an integral ring. The MS-20BR-1 shown above also has bonded (suffix B) construction as described on the next page, but the ring assembly is available on molded MS-14R (per print SK-88) and MS-20R (per print SK-89). Rings add 7/32" to o.d. Unique to J-B-T, the ring eliminates the need for soldering jumpers between adjacent contact positions and assures perfect connections. The ring can easily be snapped out between contacts, making this type excellent for development work. On production runs, J-B-T will supply various combinations of joined and unjoined contacts. The switches listed below are normally available. Others, such as 2 decks, 6 decks, and more, or various shorting types, can be made but require substantial lead time.

MS-14-2

- All moving contacts enclosed—minimizes dirt and corrosion—also 3-post deck suspension, double grip collector arms, and rectangular drive shaft for precision indexing.
- Interchangeable, electrically and mechanically, with present SS-14 and former SS-20 laminated switches.

MS-20-1

FEATURES: For description of rigid 3-post construction; heavy fine silver plating to meet 100-hour salt-spray test; exceptional compactness; .007 ohm average contact resistance; insulation resistance above 50,000 megohms; current-carrying capacity and voltage breakdown; see adjoining page on SS-14 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the

laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance high and low temperature and temperature shock; humidity; altitude; salt spray; vibration fungus resistance; rain, sand and dust; explosion; shock and endurance values. (Ratings for MS-20-6DTS Types differ somewhat.)

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2 1/2" circle for compactness. Molded end cover regularly supplied. 1 1/4" Bar knob (KN-14) included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. One to ten decks add 3/8" per deck (or gang) to depth; for seven decks and over, add 1/2" to depth for shaft support; add 3/8" to depth for adjustable stop mechanism. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. Panel locator is available at extra cost on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2 3/4" circle for compactness. Molded end cover regularly supplied. 2" Bar knob (KN-16) included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms and self-wiping collector ring are standard construction. One to seven decks; add 3/8" per deck (or gang) to depth. Continuous rotation type supplied; on quantity orders, pre-set fixed stops are available. Panel locator available at extra cost on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

TOGGLE SWITCHES — HEAVY DUTY — SINGLE-HOLE

GOVERNMENT-QUALITY TYPES DESIGNED FOR JAN-S-23, DDAX SERIES, AND MIL-S-21195A (Ships) AND (WITH TOGGLE SEALS AND OTHER VARIATIONS) MIL-S-6745, AN-S-20a, AND MIL-S-3950A.

REGULARLY TESTED TO MEET ADVERSE OPERATING CONDITIONS

Overload . . . Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size solid coin silver contacts and rocker arms instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at -85 F to 185 F.

Vibration and Shock . . . No momentary make or break or mechanical damage during severe shake and 75 G's drop tests.

High Humidity . . . Materials, dull finish on outside metal parts (per Armed Services specifications) and lubricant enable switches to withstand tropical climates.

Salt . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

Rugged Service . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Quality standards are maintained by in-plant production testing.

Like J-B-T. Switches in the rotary, lever-action and heavy-duty toggle switch fields, this ST12-27 Series has quality as its first objective. J-B-T controls quality by doing its own designing, actual manufacturing and in-plant testing of production samples.

Sound Electrical Characteristics . . . Stationary contacts are brass, heavily silver plated; double wiping contacts are phosphor bronze, heavily silver plated. Tested to meet 50% overload for brief periods. Contact resistance well under 0.01 ohm requirement of military specifications. High dielectric exceeds 1000 volts r.m.s., 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (- 67 F to 185 F).

High Humidity . . . Materials, plating, construction and lubricant enable switch to withstand tropical climates.

Salt . . . Meets 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum.

Vibration and Shock . . . No momentary make or break or mechanical damage during stringent shake tests and 75 G's drop test.

Specified Plating . . . Dull finish plating on outside metal parts follows requirements of applicable Government Specifications. For substantial orders, other plating will be quoted on request.

Exceptionally Rugged Construction . . . Enclosed molded body, with no unused holes for side terminals. Terminals in this series are all solder-type, hot-tin dipped, and withstand 5 pound pull test. . . . operating cycles far in excess of minimum specified as acceptable.

The LINEMASTER LEKTRO-LOK SWITCH

Small, sensitive, automatically safe

Particularly ideal for transmission equipment!

#L-2-S

Mechanical interlock allows only one circuit to function at a time—and you can depend on it! LEKTRO-LOK operates on the teeter-totter system, with selective circuits. Pressure on one side actuates one circuit, release of pressure automatically returns switch to normal "off" position. Pressure on the other side is required before second switch is actuated, independent of first. Yet LEKTRO-LOK requires only a single cord—eliminates costly harness assemblies! Rugged stamped metal housing, black crackle finish. Weight, 10 ozs. 5" long, 2 3/4" wide, 1 1/4" high. Single pole, double throw. Rating (A.C. only) 15 amps at 125 volts, 15 amps. at 250 volts. LEKTRO-LOK is available, and can be supplied to your specifications, in many electrical combinations, such as:

Single pole, single throw, A.C. only.....	10 A at 115V
Double break.....	5 A at 230V
Interiors so arranged as to simulate.....	10 A at 115V
Double pole, double throw.....	5 A at 230V

LITTELFUSE "Quicker than a Short Circuit"

AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

CONSTRUCTION: Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft services for their strength and greater carrying capacity than 3 AG fuses.

CURRENT RATING: Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

VOLTAGE RATING: Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

VIBRATION FACTOR: Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

BAKELITE-ENCLOSED: 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

LITTELFUSE

“Quicker than a Short Circuit”

THE LIMITED CURRENT (L.C.) LINE OF FUSES AND FUSE HOLDERS

TAB WIDTH VARIES WITH AMPERAGE

END STAMPING IDENTIFIES SPECIFIC FUSE AMPERAGE.

C IS REGULAR FUSE.
N IS SLO-BLO FUSE.

Here is a completely new approach to circuit protection to completely eliminate the possibility of over-fusing circuits.

This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The fuse post is made to accept only the size amperage range and type (regular or slo blo) in its range. For example: a 1 amp. slo blo fuse is 1 1/4" long with .115 to .120 width tabs. The holder used with this will only accept a slo blo fuse (N type) above 3/4 to 1 1/4 amps.

The holder is a ruggedly designed unit, molded from high strength bakelite.

It snaps into a predetermined chassis mounting hole and locks into place by means of a quick snap-in type lock washer. It can be pressed into place by hand or simple tools.

The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

Both solder connections are behind panel making the installation of the unit simple and inexpensive.

POWER TAP SWITCHES NON-SHORTING TYPE

Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

STANDARD TIN/LEAD ALLOYS

MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

NEW! COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT, one of a number of solder alloys developed for the industry by Multicore, it is entirely different—and, it is patented. SAVBIT alloy contains its own copper, and therefore will not take the copper of the soldering iron tip into the molten solution during soldering. This absorption of copper when any standard alloy is used is a basic reason for the wearing out of expensive copper tips, and the need for constant refinishing of the tip.

Comparative tests with solders having pure tin/lead alloys and the new Ersin Multicore copper-loaded SAVBIT alloy have been made on assembly lines of electronics plants. Results of these tests have proven that startling production efficiencies and economies may be realized when the wear and corrosion of copper soldering iron tips is curbed, using SAVBIT alloy. Equally as important . . . a higher standard of soldering quality is assured for a much longer period of time.

It is hardly necessary to emphasize the great economies that can be effected in soldering iron maintenance and great efficiency on the assembly line, by using this new alloy. SAVBIT alloy is available in Ersin Multicore 5-Core Solder containing non-corrosive extra fast Ersin flux in 14, 16, 18, 20 and 22 gauge. Its melting point is virtually the same as standard tin/lead alloys. There is no appreciable difference between SAVBIT and normal tin lead alloys in electrical conductivity or tensile and shear strength — in fact, the strength of SAVBIT is slightly greater.

PLASTIC HANDLES—(#2, #3, #4, #5)—are Hi-Impact Styrene 4" x 3/8" hex—won't roll off the work bench.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x 3/8" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scribe for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

WIRE BRUSH—has approx. 200 bristles of stainless steel wire .0035 in dia. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

Electric Solder Pots

This small pot is used largely for individual dipping of small parts and reaches a temperature of approximately 750°. The #12T, which has a thermostat, is adjusted normally to 400,600°. It can be adjusted to a higher temperature by the user. For higher temperatures use #36 or #60 elements.

No. 12 & 12T

This is a thermostatically controlled pot, maintaining a temperature of 400/600°. Adjustable control permits the pot to be used anywhere between these two temperatures. See table below for details.

No. 70T

This pot is used for dip soldering of bundles of lead wires. It operates at approximately 750°. The #36T has a thermostat set to 400/600°. The user, however, can adjust it for higher temperatures. The #60 element, for a hotter pot, is usable in the #36.

No. 36 & 36T

This pot is similar in operation to the #70T, but is intended for the dipping of small panels, which cannot be accommodated in a round pot. Temperature range is 400/600°. The pot is also available without a thermostat but is then catalogued as #75. Without a thermostat, the pot reaches a temperature of 850°. See table below for details.

No. 75T

This pot is used for volume tinning and operates at a temperature of 800°. On occasion where production requires greater heat drain capacity, elements of a higher wattage than the standard 325 watt have been supplied. However, we recommend the use of the #70 600W Pot for this greater heat requirement and higher temperature. The #60T has a thermostat set for 400/600°. The user can adjust the thermostat to a higher temperature. See table below for details.

No. 60 & 60T

This pot is intended for printed circuit panels and is thermostatically controlled. Temperature range is 400/-600°. The pot stands on 4 corner posts in a sand tray, which has screws for leveling. See table below for details.

No. 80

This is a high heat pot reaching a temperature of approximately 900°, and has considerable heat drain capacity. Where pots are required for 220V operation, longer element life will be secured than in the case of the #60. See table below for details.

No. 70

This is a high temperature pot intended for silver soldering, and will maintain a temperature of 1300°-1500°. See table below for details.

No. 90

This sand tray will accommodate all of the round base solder pots shown on this sheet. The tray is fitted with leveling screws. See table below for details.

1/4-inch chisel tip

3/16-inch chisel tip

3/16-inch pyramid tip

Solders easily in tight places—because the thin, 3/16-inch diameter shank gets the 1/4-inch tip into places a regular iron can't reach.

Reduces operator fatigue—Iron weighs only 8 1/2 ounces, is well balanced and has comfortable handle. **Produces uniformly strong soldered joints** because iron's quick heat recovery produces enough heat for hard, continual use.

Saves on maintenance—Fewer interruptions in production result because iron's sturdy construction and long-life ironclad tip eliminates need for frequent repairs.

Tip renewal is easy and inexpensive—Unscrew shank assembly from handle and replace it with new, low-cost assembly in seconds. New tips can be brazed to heater assembly quickly and easily.

SUBMINIATURE-PRODUCTION SOLDERING IRONS

The General Electric miniature iron was developed especially for use by electronics component and instrument manufacturers who are required to do production-line soldering of subminiature equipment, printed circuits, and instruments. The Miniature, because it has a tubular heater built into the tip, provides fast, efficient heat to produce uniform joints, with little heat loss to adjacent areas. In addition, the Miniature's 1/8-in. tip and shank will go into congested areas to solder critical points inside the equipment with minimum damage to surrounding insulation, joints, and wiring.

Improves operator efficiency — Weighs less than 1 1/2 oz, reduces operator fatigue, increases production.

Portable — Transformer integral part of cord set, plugs into any standard 115-v outlet.

IDEAL INDUSTRIES Inc.,

IDEAL Wire Strippers, both hand and production models are engineered with unique design features that speed up and simplify the stripping of ALL kinds of insulation.

FOR PRECISION WIRE STRIPPING

Removes Teflon® and other hard-to-strip insulation. New "concentric hole" stripping blades and special design of jaws prevent damage to insulation and wires. Matched sets of blades are precision drilled on watchmaker's equipment to exact wire sizes. Chucking action on insulation guides conductor through stripping hole, preventing nicks and scrapes. 3 models, wire sizes from 10 to 30.

EXTRA FEATURES (optional)

"SHORT-STOP" LATCH protects wire by limiting stroke to 5/32" — disengages without removal for full 7/8" strip.

"SEE-THRU" WIRE STOP assures uniform lengths by adjusting to strip length desired.

STANCOR ULTRA-LINEAR HIGH-FIDELITY AMPLIFIER

Now you can build an Ultra-Linear version of the famous Stancor-Williamson high fidelity amplifier, using Stancor Ultra-Linear Output Transformer A-8072. For complete construction details see Stancor Bulletin 479.

Stancor supplies a set of two completely punched and finished chassis for the Ultra-Linear Amplifier; Chassis Set WM-8, \$5.75 net. In addition to Ultra-Linear Output Transformer A-8072, \$16.60 net, this amplifier uses power transformer PCS412, \$12.55 net and filter choke C-1411, \$5.67 net. The other components used cost about \$30.00. They are all stock parts and can be readily obtained from your Stancor distributor.

The original Stancor-Williamson amplifier can be converted to Ultra-Linear operation by a few simple circuit changes and the installation of the A-8072. Conversion instructions are included in Bulletin 479.

Write for your FREE copy of Bulletin 479.

HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ± 1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. Poly-Pedance units solve that problem: three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

MULTI-PURPOSE INTERSTAGE—SPLIT SECONDARIES

May be used as a single plate to single grid, single plate to push-pull grid, or push-pull plate to push-pull grid interstate transformers. Overall ratios are 3:1, however, primaries are center-tapped and secondaries have split windings, thus providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications. † Has split secondary.

FILTER CHOKES

CHICAGO STANDARD TRANSFORMER CORPORATION

SMOOTHING CHOKES FOR D.C. POWER SUPPLIES.

Inductance varies with the amount of D.C. flowing through the coil, therefore these units have been tested under uniform conditions. They are rated at 10 volts, 60 cycles, with maximum D.C. in winding. Tolerance of plus 15% is maintained on all ratings.

SWINGING CHOKES FOR INPUT SECTION OF D.C. POWER SUPPLIES.

Inductance varies with the amount of D.C. flowing through the coil, therefore these units have been tested under uniform conditions. Swinging chokes are rated at 10 volts, 60 cycles, from maximum to 10% of maximum D.C. in windings. Tolerance of plus 15% is maintained on all ratings.

POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for

matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

*Transformers and Rectifiers will have a higher temperature rise when operating with a capacitive load as compared to a resistive or inductive load for a given load current. If this is undesirable extra ventilation should be provided or else the output current from the rectifier should be derated by approximately 20% from the values shown.

†Designates part number to be removed from next catalog. *Designed for a nominal input of 117 volts, 50-60 cycles.

These ultra-miniature wound core pulse transformers are hermetically encapsulated 3-winding units designed and built in accordance with MIL-T-27A. They feature extremely fast rise time, minimum droop and high temperature stability. The leads are arranged so that they can be soldered directly into the circuit or clipped and plugged into a standard 7-pin miniature tube socket. Oscillograph pictures of pulses for all units and other technical data obtained through use of N.B.S. Preferred circuit No. 46, as found in Navy Aeronautical Preferred Circuits Handbook are listed in Chicago Bulletin CT-45.

DETAILS OF NEW EQUIPMENT LINE MOUNTINGS

YY CASE MOUNTING—Hermetic sealing meets all MIL-T-27A specifications. Steel base cover is bonded into the case by deep-seal soldering. Terminals are hermetically sealed by unique rubber gasket—ceramic bushing construction. Units are stud mounted.

C-TYPE MOUNTING—Moisture-resistant compound surrounds coil and core. Ten-inch E.I.A. color-coded leads, ends stripped and tinned for easy soldering. Flange-mounted drawn steel cases.

S-TYPE MOUNTING—Precision-fitted steel base-covers and terminal boards, plus compound filling, keep moisture out. Solder-lug terminals are clearly identified, easy to use. Drawn steel cases are flange-mounted.

B-TYPE MOUNTING—Steel bases are bonded into the drawn steel cases by deep-seal soldering to make units completely moisture proof. Stud-mounted cases take minimum chassis space. Convenient, compact, pin-type terminals.

MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Chicago-Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in 7/8" square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1 1/4". The case has two 2-56 threaded inserts, 11/16" centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces.

PUBLIC ADDRESS RANGE TRANSFORMERS

Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers.

(16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS

HF Series

These units have a wide frequency response of 20 to 20,000 cps with ± 1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Chicago-Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

Operates out of a 15,000 ohm source, e.g., the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to -8 db. STEP-DOWN TRANSFORMERS—Primary, 50/60 cycles

CHICAGO step-down autotransformers solve the problem of operating standard 117-volt radios, amplifiers, and various electrical appliances from 220-volt power sources. They are particularly well adapted to use in Central and South American countries, where 220-volt lines are frequently found, and where the Sealed-in-Steel construction protects them against corrosion caused by excessive humidity. Input side is equipped with 8-foot, rubber-covered cord and plug. Output side has standard female receptacle.

ISOLATION TRANSFORMERS—Primary, 50/60 cycles

A rotary switch on each CHICAGO isolation transformer adjusts to either of three primary voltages, 125 115 105 volts. With the unit operating on a 115-volt line, the three-switch positions also provide varying secondary voltages, 105 115 125 volts isolated from line.

Eight-foot, rubber-covered cord and plug on primary, standard female receptacle on secondary.

BROADCAST QUALITY COMPONENTS

Modern high fidelity broadcasting and transcription equipment requires the use of "Audio" — transformers of utmost quality and reliability in performance. Freed broadcast quality components have been designed to meet these requirements. They are wide band, high fidelity components with low distortion throughout the audio range and beyond. Frequency response for most units is in the order of ± 1 DB from 20 to 20,000 cps and for high level output transformers in the order of ± 0.5 DB from 20 to 30,000 cps.

These units feature astatic construction, longitudinal balance, high efficiency, uniform response, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished through the use of hum balanced coil structures and multiple alloy shielding. Equal high fidelity response is assured on every tap of any universal impedance winding without line reflection of transverse coupling.

All broadcast quality components are thoroughly impregnated in a special non-hygroscopic varnish and fully encapsulated with a moisture proof, high melting compound.

All broadcast quality components are **hermetically sealed**.

All units are tested in accordance with and meet "EIA" standards.

Almost all units are designed with universal impedance windings to insure greatest versatility.

A full line of high Q reactors complements this series of audio transformers.

QGC HIGH Q REACTORS

QGC-Reactors are designed for low audio frequency application requiring very high Q and inductance stability. These units are impregnated with a special compound and mounted in hermetically sealed cases. A hum reducing lamination structure used in these reactors results in an extremely low pickup of extraneous stray fields. A very low temperature coefficient is achieved by a specially developed impregnation and assembly process. All QGC High Q Reactors have an extremely low voltage coefficient.

All Resistance values are nominal and can vary by ± 20%.

Inductance values are given within ± 2%.

Closer Tolerances and Inductances other than the standard Catalog items can be supplied on special orders.

Inductance Values up to 400 Henries can be supplied.

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" versus frequency was measured with voltages given by the expression:

$$V = K \frac{\sqrt{LH}}{1H} \times \frac{FKC}{1KC}$$

K—a constant listed in every chart
 LH—inductance in Henries
 FKC—frequency in kilocycles at which the measurements were made.
2. Variation of inductance versus normalized Direct Current.
 The normalized DC is given by

$$I_n = I_{dc} \sqrt{LH}$$

where I_{dc} is the dc current in MA and LH the inductance in Henries.
3. Variation of Inductance versus normalized AC voltage.
 The normalized AC voltage given by

$$V_n = \frac{V}{\sqrt{LH}} \times \frac{60 \text{ cps}}{F \text{ cps}}$$

V_n —normalized AC voltage
 V—voltage across the coil
 LH—inductance in Henries
 F—frequency of measurement in cps

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

SERIES 1950 NULL "T" FILTERS

The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of $\pm 2\%$.

All Null T Filters are hermetically sealed.

Prices on request.

FREED TRANSFORMER COMPANY, INC.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin**. Both hermetically sealed and molded units meet the latest military specification MIL-T-27A (graded 1 or 4 and 2 or 5 respectively). Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores.

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending upon the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

- SN Non-stabilized cores, maximum inductance variations $\pm 2\%$ from -55°C to $+85^{\circ}\text{C}$
- SE Temperature-stabilized cores, maximum inductance variations $\pm .1\%$ from -15°C to $+54^{\circ}\text{C}$
- SB Temperature-stabilized cores, maximum inductance variations $\pm .1\%$ from $+13^{\circ}\text{C}$ to $+35^{\circ}\text{C}$
- SD Temperature-stabilized cores, maximum inductance variations $\pm .1\%$ from -15°C to -54°C
- SW Temperature-stabilized cores, maximum inductance variations $\pm .25\%$ from -54°C to $+85^{\circ}\text{C}$
- SP Temperature stable carbonyl iron cores, maximum inductance variations $\pm .3\%$ from -55°C to $+85^{\circ}\text{C}$

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Therefore some coils may have a lower temperature coefficient than the one corresponding to the core stability characteristic. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

2. Self Resonant Frequency F_0 :

This frequency is defined as the resonant frequency of L — Inductance and C_d — distributed capacity of the winding.

3. Adjustment Accuracy $\pm 1\%$ or 1 Turn Whichever Is Greater:

All toroidal inductors are adjusted at a frequency well below the self resonant frequency " F_0 ." Since all toroids have a voltage coefficient of inductance they are adjusted with a low A.C. voltage in the region of the initial permeability of the core material.

The apparent inductance at any frequency F is given by the expression

$$L_{app} = \frac{L}{1 - \left(\frac{f}{f_0}\right)^2}$$

Where L is the nominal inductance. For frequencies " F " well below the self resonant frequency " F_0 " the fractional increase of inductance due to the self resonant frequency is

$$\frac{\Delta L}{L} = \left(\frac{f}{f_0}\right)^2 = \omega^2 LC_d$$

4. "Q":

The "Q" or quality factor of the coil is shown for every toroid type. Since the "Q" depends both upon the frequency and the A.C. voltage across the coil, the "Q" vs. frequency graphs show the "Q" variations for a given voltage applied across the coil. This voltage is defined by the expression,

$$V = K_q \sqrt{LH} \times \frac{F_{KC}}{1_{KC}}$$

FREED TRANSFORMER COMPANY, INC.

5. Variations of Inductance vs Normalized A.C. Voltage:

All toroidal inductors have an A.C. voltage coefficient. The variations of inductance vs applied A.C. voltage can be computed from the expression of normalized voltage.

$$V_{\text{norm.}} = \frac{V}{\sqrt{L_H}} \times \frac{60 \text{ cps.}}{F \text{ cps.}} \times K_v$$

V — A.C. voltage across the coil

L_H — Inductance in henries.

F — Measurement frequency in cycles.

K_v — is the voltage coefficient (a variable parameter for different coils) listed in the graph. For high frequency toroids the expression for normalized voltage is changed to,

$$V_{\text{norm.}} = \frac{V}{\sqrt{L_H}} \times \frac{1K_C}{F_{K_C}} \times K_v$$

6. Variations of Inductance vs Normalized D.C. Current:

The incremental permeability of the coil and consequently the inductance depends upon the magnetizing D.C. ampere turns. The variations of inductance vs D.C. current can be computed from the expression for the normalized D.C. current

$$I_{\text{norm.}} = I_{dc} \sqrt{L_H} \times K_i$$

Where I_{dc} — current in M.A. thru the coil

L_H — inductance in henries.

K_i — current coefficient (a variable parameter for different coils) listed in the graph

7. Maximum Current:

This is the maximum non-destructive current that a coil can tolerate without overheating and consequent failure. It is defined as

$$I_{\text{mas}} = \sqrt{I_{\text{RMS}}^2 + I_{\text{dc}}^2}$$

The maximum current is listed for each type of toroidal inductors and is computed by dividing the parameter of the numerator by the square root of the inductance in millihenries. This current will affect the inductance value and may partially or completely saturate the inductor. The inductance variations due to I_{dc} and V_{ac} must be computed from the expressions of paragraphs 5 and 6.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied upon request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED MAGNETIC AMPLIFIERS & SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing, and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of -55°C to $+75^{\circ}\text{C}$.

Vacuum tube and transistor preamplifiers can be supplied if very high impedance inputs are required.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.

FAST RESPONSE FREED MAGNETIC AMPLIFIERS

THE MAF TYPE OF FAST RESPONSE MAGNETIC AMPLIFIERS COMBINES HIGH POWER GAIN, RUGGEDNESS, AND RELIABILITY WITH A MAXIMUM 2 CYCLE RESPONSE. ALL MAF UNITS ARE PHASE-REVERSIBLE.

FREED TRANSISTOR CONVERTERS

THE MAC LINE OF HERMETICALLY SEALED DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters.

DC to DC converters in hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to DC and DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC or DC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation.

Special regulators can be supplied to compensate for this variation.

- RUGGED, QUIET, MAINTENANCE FREE, LONG LIFE OPERATION.
- HIGH POWER TO WEIGHT RATIO, ARC-FREE OPERATION.

TELEMETERING COMPONENTS

A complete line of Band Pass Filters, Low Pass Filters and Discriminators is available for multi-channel telemetering applications. These components cover the frequency range from 400 cps to 70,000 cps. The filters feature linear phase response, excellent selectivity characteristics and plug-in construction. The Discriminators, either fixed or slug tuned, have exceptional linearity, high amplification, and utmost stability.

TELEMETERING BAND PASS FILTERS

These filters cover the frequencies from 400 c.p.s. to 70KC. Narrow frequency B.P.F. have a band width of $\pm 9\frac{1}{4}\%$ of center frequency and 45 DB (minimum) points at $\pm 7\frac{1}{2}\%$ of center frequency of higher or lower adjacent channels. Wide frequency B.P.F. have a band width of $\pm 19\frac{1}{2}\%$ of center frequency and 50 DB. points at $\pm 15\%$ of center frequencies of higher or lower second adjacent channels.

FREED FILTERS

Freed Standard Filters are **Hermetically Sealed Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40 db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic impedance 10,000 ohms, in and out.

LLP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω , in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω , in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance — 10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage.)

Special filters in all six types are available for any frequency from 200 to 20,000 cycles.

MILITARY STANDARD TRANSFORMERS

The U. S. Army Signal Corps, U. S. Bureau of Ships, and the U. S. Air Force, working jointly through the Armed Services Electronic Standards Agency, and in cooperation with leading producers of military transformers, have established certain military standard transformers. These transformers bear government classification and part numbers, as shown below. Dimensions, mounting centers, terminal arrangements, and markings are all in accordance with government specifications. All these units will meet the requirements of Grade 1 and Grade 4 MIL-T-27A specifications for Class R operation. The components listed in this series have application in military communication and control equipment, whether air-borne, ship-borne, mobile or ground installed.

D. C. TO D. C. CONVERTER TRANSFORMERS

Permits conversion of low voltage direct current to high voltage for operating mobile and military electronic equipment. These miniaturized high efficiency transformers used in transistor switching circuits provide greatly improved reliability, efficiency, ruggedness, over vibrator and rotary power converters.

All transformers shown are hermetically sealed and constructed in accordance with MIL-T-27A Grade 4, Class R, 10,000 hour minimum life. Unique construction eliminates the difficulties usually experienced with high voltage random wound toroidal transformers and mechanical fragility of ferrite cores. On special order obtainable with modified electrical or mechanical specifications. Available from franchised stocking distributors.

As a Hybrid Transformer	This precise matching transf. is an excellent hybrid unit for operation from two 250 300 ohm sources. Balancing resistor of approx. 125/150 ohms required in pri. circuit. For max. attenuation from sources the exact value of resistor should be determined from measurements made in circuit where transf. is used. Correct value will yield average attenuation of 27 to 30 db with a max. attenuation of approx. 50 db at some point between 500 cps and 1,000 cps.			Total Pri.		Impedances, Ohms Pri. 1 Pri. 2	Sec. DESCRIPTIVE DATA GENERAL

Maximum rated operating level ▼ applies to frequency range 20-20,000 cps. Power rating is ½ at 15 cps. ¼ at 10 cps. Full power (60 cps) primary open circuit inductance is approximately 100 Henrys for each 1000 ohms of primary impedance. Leakage inductance, secondary referred to total primary, is approximately 1 mh per 1000 ohms of primary impedance. Leakage inductance, half primary to half primary is approximately 1 mh per 1000 ohms of primary impedance. Can be used between half and double of rated impedances. For halved impedances, power ratings are doubled. For doubled impedances, power ratings are halved. Secondary may be operated with either end, or C.T. grounded.

MODULATION TRANSFORMERS — THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

FILAMENT TRANSFORMERS — THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designed. All have 117 V. 50/60 cycle primary.

Power Transistor Outputs

These transistor output transformers have been designed to cover almost all of the power transistor applications, such as used in automobile radios, audio power amplifiers and many circuits. The TR-57 and TR-59 has been designed to cover parallel 3.2 and 8 ohm voice coil applications. These transformers may be used with such transistors as Sylvania's 2N68, 2N95, 2N141 and CBS's 2N255 and 2N256.

Transistor Power Supply Transformers

Recent developments in the power transistor field have made possible the design of circuits which are efficient and rugged converters of low voltage DC to high voltage AC or DC power. These transistorized power supplies are ideally suited for powering all kinds of battery operated equipment such as mobile communication systems, aircraft and marine navigational systems, photo-flash, ultrasonic applications and even 117 Volts 60 CPS from an automobile battery so as to operate 117V radio, television, electric shavers, etc.

These transistor power supply transformers give a wide range of voltage and power to choose from. Complete instructions supplied with each transformer. * 60 CPS

INSTRUMENT POWER

Instrument POWER SUPPLY Transformers

Intelligent design and construction of measuring instruments involves consideration of many factors normally neglected in electronic circuits. Regulation of power supply voltages, limitation of external magnetic fields by minimum flux density, multiple static shields to limit capacitive coupling, multiple filaments where tubes must operate at different potentials, all become necessary to obtain peak performance. The transformers on this page are a series of special designs which have been developed for instrument design.

CHOPPER INPUT TRANSFORMERS - 30 to 500 cycle

Triad's new Chopper Input Transformers are manufactured under the same rigid high quality control standards as the Triad Input Transformers, plus the addition of an extremely close balance between the two halves of the primary winding. One half of the primary is balanced to the other half in both inductance and "Q". Cores are specially treated to eliminate noise in the microvolt range of input signals. Adjustment is at 60 cycles and, since input impedances are kept extremely high and the windings are not tuned, the chopper frequency may be 30 to 500 cycles. Magnetic and electrostatic shielding can be varied to meet customer's requirements.

Types for tube or transistor input are available. In addition to the standard types listed below, many types are currently being supplied to customer's specifications. We invite your inquiry on your special requirements.

Triad "J" series transformers closely approach the electrical performance of the "HS" series while eliminating or modifying mechanical features which increase the cost. Careful design, taking advantage of the flexibility of the "J" series units, will result in low level amplifiers which will in every way meet broadcast quality specifications.

Combined PLATE and FILAMENT Transformers New "100" Series

Primary 115 volts 60 cycles

Triad power components are liberally designed to best meet average design specifications and to ensure maximum utility for each design. All units are beautifully finished in baked grey enamel and have all connection data permanently marked on the case.

All types are "Climatite" treated, both coil and core, for protection against moisture and for elimination of lamination chatter. Although they are small in size, the high quality materials used keep losses to a minimum. The temperature rise design is 55°C. Only copper foil static shields, grounded to the case and core, are used. Leads are of a type approved by UL for high temperature operation.

RIQAP (REDUCED INSPECTION QUALITY ASSURANCE PLAN)

All TRIAD transformers are manufactured under a Signal Corps approved plan intended to assure quality in the product. The system includes approved procedures for incoming inspection of material, process controls in the plant, and final inspection. Transformers passed are approved for shipment for military use.

RIQAP applies to all Triad transformers, military or otherwise. Why not take advantage of the exhaustive quality control at Triad and eliminate or reduce the costs of your incoming inspection.

All of the transformers listed on the preceding pages are currently available from stock at the four plants of Triad and from better distributors in all the purchasing centers of the United States.

Triad transformers are continually being revised and improved to use the best available materials. For this reason, the Triad Transformer Corporation reserves the right to modify existing mechanical construction or electrical characteristics of any catalog item without notice.

TRIAD transformer numbers are so arranged as to indicate the type of transformer and type of mounting. The prefix letter indicates the type of transformer as follows: A—Audio C—Choke D—High voltage horizontal output transformer E—High "O" Toroidal coils F—Filament G—Geformer M—Modulation N—Isolation or Stepdown autoformer NW—Yoke Networks P—Plate power transformer PL—Pulse transformer R—Power transformer, combined plate and filament S—Speaker coupling or output transformer T, TZ—Miniatures TY—Transistor transformer V—Vibrator power WC, WLC—Width and Linearity coils Y—Yokes. Hermetically sealed units bear the prefix HS and HSM; hermetically sealed "Trijets" JZ, JO and AF. Type of mounting is indicated by the suffix letter which refers to the illustrations in the catalog.

INTERSTAGE and LINE FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327 Specs.

UTC makes a wide range of specialized filters covering bands ranging from .1 cycle to 400 megacycles. A group of standardized filters have been developed covering the more common mid-range frequencies, which take

care of many filter requirements with stock units. All of these standard filters are in drawn hermetically sealed cases shielded to reduce hum pick-up. Special frequencies to order,

BTI are same as BMI but with 10,000 ohms output for transistor applications.

HMI units (High Pass) has a loss of less than 6 db at cutoff frequency, and an attenuation of 35 db at .67 cutoff frequency. Input and output 10,000 ohms.

LMI units (Low Pass) have a loss of less than 6 db at cutoff frequency, and an attenuation of 35 db at 1.5 cutoff frequency. Input and output 10,000 ohms.

HML (High Pass) and LML (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms.

BML (Band Pass) have input of 500/600 ohms, output to grid.

TELEMETERING BAND PASS FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327 Specs.

The standard group of UTC telemetering filters described below incorporates extreme miniaturization with maximum stability, a complete set of 18 filters taking a volume of approximately 19 cubic inches. Both TMN and TMW types are designed for 100K input and output impedance and have an insertion loss of less than 6 db. Four pin hermetic header matches small Winchester socket.

TMN filters are down less than 3 db at ± 7.5% of center frequency. They are down more than 18 db at ± 25% of center frequency. Attenuation is greater than 40 db beyond 1.75 F_c and .58 F_c.

MINIFILTERS / Hermetically sealed to MIL-T-27A and MIL-F-18327 Specs.

The UTC stock interstage filters on the opposite page have been an industry standard for over a decade. The new UTC miniature filters provide almost the same characteristics in an extremely miniaturized package. Attenuation of these miniature filters is only slightly less than their larger counterparts, as is operating level. Special filters can be supplied for any frequency above the minimum shown for each group, at \$48.00 net. Straight pin terminals are provided for printed or standard circuits.

BPM units (band pass) have 2:1 gain. Attenuation is approximately 2 db \pm 3% from center frequency, and 35 db per octave as shown. Input 10,000 ohms, output to grid, tapped for 10,000 ohms output to provide flexibility in transistor circuits. For tube circuits continuity is on grid side, for transistor use continuity is on input side.

HPM units (high pass) have a loss of less than 6 db at cutoff frequency, and an attenuation of 30 db at .67 cutoff frequency, 40 db at 1/6 cutoff frequency. Input and output 10,000 ohms.

LPM units (low pass) have a loss of less than 6 db at cutoff frequency, and an attenuation of 30 db at 1.5 cutoff frequency, 40 db at 1.65 cutoff frequency. Input and output 10,000 ohms.

TELEGRAPH TONE CHANNEL FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327 Specs.

UTC band pass filters for multiplex transmitting and receiving provide maximum stability in miniature sizes. Stock filters cover all standard transmit and receive bands. All units employ 7 terminal header matching subminiature 7 pin socket.

TGR (receiving) filters are 600 ohms in and out. They are down less than 3 db at \pm 42.5 cycles from center frequency and down more than

30 db at \pm 170 cycles. Attenuation is greater than 15 db at adjacent channel crossover.

TGT (transmitting) filters are 600 ohms in and out. They are down less than 3 db at \pm 42.5 cycles from center frequency and down more than 16 db at \pm 170 cycles. Attenuation is greater than 7.5 db at adjacent channel crossover.

NEW "M" TYPE TOROIDS

Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF4RX20YY

UTC Permalloy Dust Toroids have been the standard of the industry for 20 years. The MQ series of coils provide the highest Q factor in their class (see curves below) with miniaturized dimensions. All units are hermetically sealed to MIL-T-27A Specifications . . . laboratory adjusted to 1% tolerance—0 DC. Uncased and molded toroids available on production orders.

The stability is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible

through the coil (values listed below). Inductance is virtually independent of frequency, temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 db.

TQA units are similar to MQA but centertapped for oscillator applications, etc. They employ an extremely stabilized structure for wide temperature range. Q is slightly lower than MQA.

VARIDUCTORS

HVC AND TVC HERMETIC VARIDUCTORS

Variable inductors hermetically sealed to MIL-T-27A Specs., all units MIL type TF4RX20YY.

UTC Variductors have served as a simple solution to tuned circuit problems for over 15 years . . . for oscillators, equalizers, filters, etc.

HVC Inductors are hermetically sealed to MIL-T-27A and provide exceptionally wide inductance range with high Q in an extremely compact unit. HVC units are usable over a wide frequency range and have high stability with temperature and voltage change.

TVC Inductors are identical to the HVC units but provide taps at 30% and 50% of total turns. They are ideal for oscillator circuits, impedance matching, and phase inversion where high Q and adjustable inductance are required.

Inductance range is +200%, -70% of nominal value through adjusting screw on top of case. Range is covered in 90° rotation. Setting is positive. Effective Q over a wide frequency range and variation of inductance with applied AC voltage are illustrated for a typical HVC unit. Case dimensions are 1 1/8" long, 2 3/32" wide, 1 7/32" high . . . weight 2 ounces. Chassis cutout dimensions for HVC and TVC units are illustrated, 1/4" dia. holes are to clear the 4-40 stainless mounting studs.

VIC STANDARD VARIDUCTORS

UTC type VIC variable inductors offer a convenient approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +85%, -45% from mean value is obtainable. Range is covered in 600° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1 1/2" long, 1 1/4" wide and 1 1/8" high with mounting centers on terminal board side 1 3/16" by 7/32", tapped for 4-40 screw. Weight is 5 1/2 oz.

HIGH Q PRECISION INDUCTANCE DECADES

UTC DI inductance decades are invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. They set new standards of Q, stability, frequency range, and convenience. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance fre-

quency. The switch employed is a new low capacity type which lab tests have proven for low contact resistance after 100,000 operations. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base.

DI inductance decades are housed in a compact, rugged, die cast case with control on a sloping panel, ideally suiting these units to laboratory use.

MINIDUCTORS *Hermetically sealed to MIL-T-27A Specs., ... all units MIL type TF5RX20ZZ*

UTC Miniductors are ideal for transistor and printed circuit applications, providing high Q in miniature form. The ML-1 to 4 units are for medium low frequencies, adjusted to $\pm 3\%$ at 1 V, 1 KC. The ML-5 thru 10 series are for lower frequencies, adjusted to $\pm 3\%$ at 1 V, 400 cycles. The MM and MH units are for medium and high frequencies, adjusted to a tolerance of $\pm 2\%$.

Temperature stability is excellent on all Miniductors, from -55°C . to $+100^{\circ}\text{C}$. The ML units are in a Hipermalloy shield case ... the MM and MH coils are symmetrical toroids ... for high coupling attenuation and low hum pickup. The DCMA MAX. shown is for approximately 5% drop in inductance.

LOW FREQUENCY HIGH Q COILS *Hermetically sealed to MIL-T-27A Specs., ... all units MIL type TF4RX20YY*

Permalloy dust toroids are not suited to providing high Q at low frequencies. The MQL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional Q and stability. Inductance values are laboratory adjusted to 2% tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than 1% from .1 V. to 1 V, 60 cycles. Temperature stability is exceptional, total inductance swing being less than 3.5% for the wide range of -55°C to $+85^{\circ}\text{C}$. A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup ... 240 microvolts/gauss for MQL-3 series connected. Two identical windings brought out to four terminals permit series, parallel, center tapped, or transformer type connections.

Inductance test is performed at maximum military current rating.
 * Based on maximum ripple voltage across choke in choke input filter circuit, in terms of DC output voltage. Does not apply to condenser input circuits.

The multiple ratings for the "H" series of filter chokes suit these units for the complete gamut of military and industrial applications. Conservative design provides maximum reliability through low temperature rise and high insulation safety factor. MIL case dimensions on page 1406.

HERMETIC SEALED FILAMENT TRANSFORMERS

Hermetically sealed to MIL-T-27A Specs.

Primary: 105/115/210/220 volts . . . 50/60 cycles, except H-130 (115v.) and H-131 (115/220 v.) . . . Suited to 400/1000 cycle service.

The wide variety of "H" series filament transformers listed cover virtually every military and industrial need. Conservative design provides maximum reliability through low temperature rise and high insulation safety factor. MIL case dimensions on page 1406.

HERMETIC SEALED PLATE TRANSFORMERS

Hermetically sealed to MIL-T-27A Specs.

Primary: 105/115/210/220 Volts . . . 50/60 cycles.

The tapped high voltage winding on the "H" series hermetic plate transformers provide either of two secondary voltages for greatest versatility. The listing shows the DC voltage and permissible currents for a wide variety of applications in both military and industrial service. High insulation safety factor and low temperature rise provide a maximum in reliability. The first three types are in MIL cases. H-114 and above have terminals opposite mounting. MIL case dimensions on page 1406.

For twenty-five years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to MIL-T-27A specifications, which are now catalogued as UTC stock items. All units employ glass bead headers or terminals. For printed circuit use, wire terminals on glass header units can be straightened out without injury. Straight wire terminals available on production orders as well as flat (7/8 x 23/32 x 9/16) case for SM units . . . also MIL cases.

The frequency response ratings are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown. For example:

H-1, H-3, H-5, H-8 are within 2db from 30 to 20,000 cycles.

The level ratings are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible. For example, the H-3 will handle +21dbm at 400 cycles.

The Impedance ratings are listed in standard manner. Transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance reduces them. Units may also be used reversed, input to secondary.

MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF55X36ZZ

UTC miniature, wound core, pulse transformers are precision, high reliability units, hermetically sealed by vacuum molding and suited for service from -70° C. to + 130° C. Wound core structure provides excellent temperature stability (unlike ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width, as indicated on chart below. If used for coupling circuit where minimum rise time is important, use next lowest type number. Rise time will be that listed for this lower type number . . . droop will be that listed multiplied by ratio of actual pulse width to value listed for this type number. block oscillator data listed is obtained in standard test circuit shown. Coupling data was obtained with H. P. 212A generator (correlated for H-55, 56, 57) and source/load impedances shown. Three windings, 1; 1; 1.

MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF45Y40YY

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27A and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the MAGNETIC STRUCTURE is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift. (The chart values shown are approximate.)

For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages (230 volt supply data of chart) and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

OUNCER AUDIO UNITS / STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing $\frac{3}{8}$ " diameter . . . mounting opposite terminal board. Hermetic Ouncer (RC-25 case) listed on page 1408.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform within approximately 1 db

from 30 to 20,000 cycles, except for O-14, O-15, and units carrying DC which are intended for voice frequencies. Transistor transformers are good to 80 cycles at low end. Maximum level +8 dbm.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submerison proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

LINEAR STANDARD AUDIO TRANSFORMERS

The ever increasing use of wide range equipment has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

The UTC Hipermalloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hipermalloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Primary shown is maximum unbalanced.

ULTRA COMPACT AUDIO UNITS

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 db from 20 to 20,000 cycles, except where noted. Hermetic equivalents of this series (RC-50 case) are listed on page 1408.

All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level ± 15 dbm, except where noted.

COMMERCIAL GRADE COMPONENTS

The Commercial Grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in commercial grade equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures.

All audio components are linear $\pm 1\frac{1}{2}$ db from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. Parallel feed low level interstage units with 50,000 ohms and .25 mfd.; 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

.2, .4, .5, .62, 1, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5, 5, 5.5, 6, 6.25, 6.6, 1, 7.5, 8, 9, 10, 11, 12, 14, 15, 16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75 ohms.

Where speakers are to be connected in groups to one transformer, it is preferable that parallel connections be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

COMMERCIAL GRADE COMPONENTS

UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Units are tested for breakdown at twice maximum working voltage plus 1000 volts and surge tested at 250% normal voltage. All items are vacuum impregnated and sealed with special insulating compound. The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service. RC case dimensions on page 1416.

CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load.

The UTC Varimatch transformer eliminates the power loss and high distortion caused by imprecise matching of RF load to a class B modulation through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

VARIPOWER AUTO-FORMERS

Designed for line voltage control, filament control and reduced power operation. Output voltage from 0 to 130 volts, 50/60 cycles. Varipower units permit control of filament voltage at the tube socket to within 2 1/2% of desired value simultaneously with line voltage control and plate voltage control. Can be used to reduce or increase voltages on filament transformers. Taps at 25, 55, 75, 95, 100, 105, 110, 115, 120, 125 and 130 volts permit output voltages from 0 to 130 volts in 5 volt steps.

SPECIAL SERIES AUDIO & POWER COMPONENTS

UTC Special Series units are specifically designed for amateur and popular-priced PA service. They are finished in a rich, commercial type medium gray enamel. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled, recommended for ICAS use.

SUB-SUBOUNCER UNITS

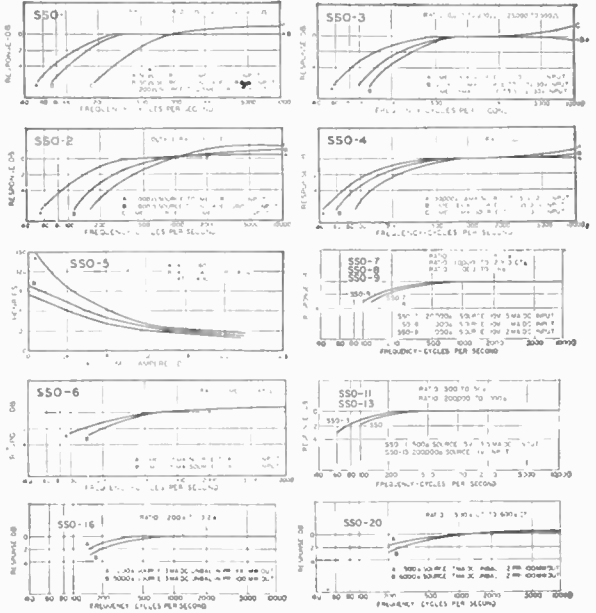

UTC Sub-subouncer units are ideal for ultra-miniaturized components having high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have superior performance and dependability characteristics. The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location, (but channel with mounting centers is available on production orders). Units are vacuum processed and double (water proof) sealed. The curves below indicate the excellent frequency response. Hermetic SSO units (SM case) listed on page 1408.

AMPERITE

REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

STANDARD

AUTOMATIC REGULATION

What It Is!

The **AMPERITE** Ballast-Regulating Tube is an automatic "rheostat" designed to keep the current in a circuit at a definite value, for example, 0.5 amps.

Should the supply voltage increase, this Ballast-Regulating Tube will automatically increase in resistance to take up the increase in supply voltage.

MINIATURE

Being a constant current device, the **AMPERITE** Ballast-Regulating Tube can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the **BALLAST TUBE** you need.

(T) = Threshold Current & Voltage

Characteristic curve of a typical Amperite. Approximate curve of any other Amperite can be obtained by multiplying or dividing the current or voltage scale by any number.

AMPERITE NEON LAMP
TYPE NE70V List \$3.00

ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 15G min.) (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation per **AMPERITE** 60w per tube (ST19 bulb). Any number of **AMPERITES** with the same voltage range can be operated in parallel. **AMPERITES** should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended	2000 Hours
If operated continuously at maximum voltage	1000 Hours
If operated continuously at 80% maximum voltage	5000 Hours
If filament is operated below glow point	5000 Hours up

In operation, the **Amperite** filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning **Amperite** on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an **Amperite** Ballast Tube depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 10% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the **AMPERITE** number approximately denotes the current—voltage threshold value. For example:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25
THRESHOLD VOLTAGE	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the **BALLAST TUBE** you need.

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

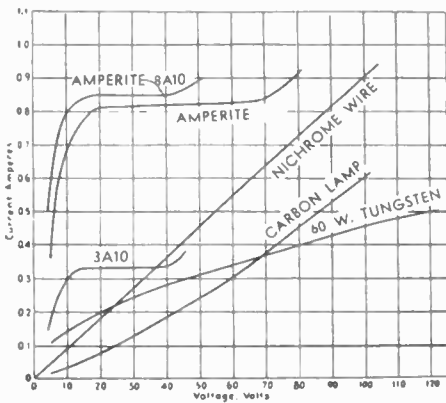

AMBIENT EFFECTS

Ambient temperature variation of -50° to $+100^{\circ}\text{C}$ will change the current value of an Amperite approximately 2% on regulating portion of curve as shown directly below. Being hermetically sealed the Amperite is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of -55° , 24° , and 85°C . The percentage change with ambient is approximately the same with all type Amperite ballasts.

This diagram illustrates far superior regulating characteristics of the Amperite Ballast-Regulating Tube.

STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of Amperites of the same voltage range can be placed in parallel to obtain proper current. The current can be kept to $\pm 1\%$. Advise voltage variation and currents desired.

A light, compact, and inexpensive method of obtaining close regulation is to use an Amperite Ballast Tube with an Amperite Neon Lamp—type NE70V. Base octal-base wiring-prongs 2-5. One NE70V is used for all loads up to 100W.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill in and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

Power Supply	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Current Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain $\pm 2\%$ regulation on load. Better regulation is obtainable by increasing the voltage across the AMPERITE. Up to a point, the higher the percent of the supply voltage taken up by the AMPERITE, the better the regulation.

Radio tube filament loads—have low cold resistance which causes a high initial surge. For such loads we recommend a bleeder of 20 to 50% prox. of load and the corresponding Amperite. e.g.

FILAMENT LOAD	USE AMPERITE	TOTAL CURRENT
0.3a	4HTF4	0.45a
0.6a	8-4	0.8a
0.7a	9-4	0.9a

On Radio tube filament loads the bleeder will also improve the regulation.

Temperature ratings:

Ambient — Pigtail Units — A, D, E & F
Case — Stud Units — B & C

*Must include switching transients.

Maximum reverse currents indicated in milliamperes (mA) are averaged over one full cycle, inductive or resistive load with rectifier operating at rated current. Where maximum reverse currents are expressed in microamperes (uA), these are

measured by the direct current voltampere method.

A. Pigtail type; diameter .375"; length 3¼" min.; lead diameter .029".

B. Stud type; length 1.25" max.; diameter .435" max.; ¼" across flats; No. 10-32 thread NF.

C. Stud type; length 1.438" max.; diameter ½"; ¼" across flats (¾" also available); No. ¼-28 thread NF.

D. Pigtail type; diameter .250"; length 3¼"; lead length 1½"; lead diameter .030".

E. Pigtail type; diameter .250"; length 3.375"; lead length 1½"; lead diameter .030".

F. Pigtail type; diameter .115"; length 2.250"; lead length 1"; lead diameter .020" copper wire.

105°C EXTRUDED PLASTIC TUBING (PVC)

■ ALPHLEX PVC-105 Plastic Tubing is designed and manufactured specifically for electronic, aircraft and electrical applications involving temperatures as high as 105° C. It conforms to Specifications MIL-I-631C, ASTM-D876, ASTM-D922 and is approved by Underwriters' Laboratories.

■ PVC-105's exceptional integration of desirable qualities endows it with excellent versatility and durability. Its dielectric strength is high and remains unaffected by increasing temperature throughout its range. It displays high resistance to the agents of heat, oil, chemicals, corrosion, fungi and even abrasion with no loss in tensile strength, non-flammability—or flexibility.

■ Under all the above adverse conditions, PVC-105 will retain its ability to hug and protect irregular-shaped objects, will "snake" beautifully, and will always be easy to handle.

■ To achieve this combination of advantages, special care is taken in the making of PVC-105. It is compounded with only first-grade quality non-migratory resinous type plasticizers. From laboratory to production line, from raw material to finished product, strict quality control prevails. Behind it are the same engineering and production know-how that have made the name Alpha famous in the electronic industry for over thirty-five years.

ELECTRONIC LACING CORDS AND TAPES

Types of Lacing Cord

flat braided tape This construction was developed to prevent the "cold flow" that often is encountered in wire having plastic or rubber insulations. It has been specifically designed to create a wider contact area with the insulation, so that it does not flow away from the contact point. It is considerably more flexible and easier on the user's hands and is recommended for all types of harness work. Flat tapes do not appreciatively increase the diameter of the cable.

round twisted cord Available in various strands and thicknesses to produce different tensile strengths. This type, while it may be used for plastic and rubber insulated wire, is particularly suited for wires having a secondary insulation or those utilizing a textile as an insulating material. Round cords are available with diameters from .017" for miniature and sub-miniature work to .050".

Materials

nylon Synthetic fiber resistant to: fungus, flame, acids, abrasion. Excellent tensile strength, light weight, small size.

dacron A synthetic fiber which retains all the above characteristics of Nylon plus: less elongation, better resistance to acids, no appreciable discoloration.

fiberglass Fiberglass is particularly suited for high temperature applications up to 500°F. Alpha Fiberglass lacing tape has a Teflon finish to increase the tensile strength of the fiberglass and provide an abrasion resistant surface.

Finishes

- ge synthetic rubber-like resin
- mw micro-crystalline wax
- am thermoplastic synthetic resin
- tf Teflon resin
- sr fungistatic synthetic rubber

alphlex[®] line of ZIPPER TUBING

Alphlex Zipper Tubing is the modern way to harness, cable and protect. Just zip to close — and zip to reopen. If you wish, it may be permanently sealed with PB-200 Special Compound Liquid Sealer. Alphlex Zipper Tubing is strong, flexible, durable, and offers new freedom in design, production and repair.

Applications:

to shield, to harness wire, to custom-cable to any length, to enclose, to encase, to identify (such as cable markers), to protect, to replace worn jackets.

Specifications:

Type ZIP-31 — fabricated from .020" polyvinyl sheet made from MIL-I-631C materials. All purpose type, for general applications to 105°C. Standard colors: Clear, Black, Yellow.

Type ZIP-31M — heavy duty construction. Similar to ZIP-31 type except nominal wall thickness of .040". Standard colors: Black, Clear.

Type ZIP-50 — "sandwich" of aluminum foil laminated between two sheets of polyvinyl. For 100% RF shielding applications to 105°C. Standard color: Silver Grey.

The zipper portion of Alphlex Zipper Tubing is common to all types. It is manufactured from a polyvinyl chloride compound and the track measures 95 mils in thickness when closed. Zipped shut, but unsealed, Alphlex Zipper Tubing has a lateral pull strength of approximately 42.7 pounds per inch at normal room temperature. Sealed, the lateral pull strength is approximately 59.8 pounds.

Type ZIP-90 — polyvinyl bonded to woven fiberglass sheet per MIL-I-3190A. For rough usage, abrasion resistance, and high temperature uses to 130°C. Standard color: Black.

Type ZIP-44 — polyvinyl sheet made from MIL-I-7444B materials. Extremely flexible; for aircraft and low-temperature uses to -67°C. Standard colors: Clear (amber), Black.

NEW THIN WALL BIRFLON T-500 TEFLON* SPAGHETTI TUBING

Birflon T-500 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components. Its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures. Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron - therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

ADDITIONAL ADVANTAGES OF BIRFLON T-500 TEFLON*

- **ELECTRICAL:** Low power factor, low dielectric constant, high volume and surface resistivity, good dielectric strength (500 to 1000 volts/MIL) constant over wide ranges of temperatures and frequencies. Dielectric constant of 2.0 and dissipation factor of 0.0002 are lowest of any solid dielectric.
- **THERMAL:** No change of electrical properties with temperature (25° C. to 250° C.) or frequency (60 CPS to 100 MC). Class C insulation - capable of continuous service at temperatures to 250° C. Has color stability.
- **TOUGHNESS AND FLEXIBILITY:** Has high impact strength. Is tough and flexible over the broad temperature range of -90° C. to 250° C. Service range -320° F. to 500° F.
- **CHEMICAL INERTNESS:** Completely inert to all chemicals and solvents except molten alkali metals and fluorine at elevated temperatures and pressures. Non-corrosive to all metals.
- **MOISTURE ABSORPTION:** Zero moisture absorption. Completely sun and weather resistant.
- **NON-FLAMMABLE**
- **FUNGI RESISTANCE:** Inert to all fungi growths.
- **SIZES:** Birflon T-500 Teflon Tubing available in sizes to fit B & S gauge wires. Thin wall available from stock, in sizes No. 32 thru 1/4" I.D. Additional sizes and wall thicknesses made to order.

Birflon T-500 is made from high molecular weight virgin "Teflon" and meets AMS 3651B, 3653 and MIL-C-17B specifications.

NOTE: When cutting Teflon Tubing, use single edge razor blade for clean unpinched cut.

PLASTIC and RUBBER MICROPHONE CABLE
MULTI-CONDUCTOR — ARMORED CABLE

PLASTIC MICROPHONE CABLE

Designed to stand up under physical abuse and is resistant to oil, moisture and aging for long life. These cables have low capacitance, high insulation resistance and low attenuation at audio frequencies. Will not stain or mark.

#1839 is used for high impedance microphone, lapel, contact, crystal, ribbon, velocity and Hi-Fi interconnecting cable.

#1840 is used for high impedance lapel microphones.

#1841 is used for crystal, ribbon and other impedance microphones.

Above recommended for Hi-Fi installations because of low loss and low capacitance.

RETRACTILE KINKLESS CORD SETS

BIRNBACH COILED RETRACTILE (KINKLESS) CORD AND CORD SETS

This series of Birnbach Coiled Kinkless Retractable Cords are permanently coiled into a spring-like shape without the use of metal springs or elastic bands. They have inherent "Recovery" properties. These Retractable cords extend approximately six times its retracted length, returning to its exact original shape and length when released. Always as long as you need them and no longer, they will not kink, tangle, trail, knot or dangle on the floor or bench and cause accidents.

BELDEN ELECTRONIC WIRES & CABLES

MICROPHONE and SHIELDED POWER SUPPLY CABLES

TYPICAL APPLICATIONS: Microphones, hi-fi connector cards, shielded interconnecting and Power Supply cables, remote control circuits, strain gauges.

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller.

RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.

BOTH TYPES HAVE: Long flex life and high tensile strength.

HOOK-UP and LEAD WIRES — MILITARY TYPES

Teflon insulated wire is a high temperature wire having a temperature range of -90 C to +200 C. Its excellent physical and electrical properties are retained over this entire temperature range. The high abrasion resistance, dielectric strength, and low dissipation factor make it ideal for use as a component lead and connecting

wire where the operating environments are most severe. Teflon has practically universal chemical inertness and is also unaffected by weathering or moisture. Because it will not shrink and is nonflammable, direct application of soldering irons causes no damage to this insulating material.

MAGNET WIRE

Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E., Class A, film-coated wires with respect to: (1) ability to withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

PERMALINE TV TRANSMISSION LINES

COLUMBIA is first to offer a television transmission line with an insulation so good that it can be **GUARANTEED IN WRITING** to give a service life far beyond the normal life of brown Polyethylene television lines. PERMALINE is a high molecular weight Polyethylene containing carbon black for maximum resistance to sunlight, which has been proven the chief factor in deterioration of ordinary television lines. The insulation value of 50 Mils of PERMALINE is equal to over 150 Mils of conventional brown Polyethylene.

Electrical characteristics of PERMALINE are very similar to Brown Polyethylene television lines but as there is no deterioration attenuation remains constant instead of increasing as is the case with brown Polyethylene, which becomes brittle and cracks. This is truly the first new development in television transmission lines in ten years.

SPECIAL CABLES WITH THE INSULATION DESCRIBED ON THIS PAGE CAN BE MADE TO SPECIFICATION.

PERMAFOAM COAXIAL CABLES

Two new coaxial cables widely used for amateur installations and multiple antenna systems. Columbia is first to introduce 52 ohm coaxial cable with a primary insulation of foamed polyethylene to reduce attenuation as much as 25% over cables with a solid dielectric over the center conductor. Both of these new cables have our super smooth non contaminating Permaline polyethylene outer jacket to provide a service life far beyond that obtained with conventional Vinyl insulated cables. Physical sizes of cables are not changed and will accommodate standard fittings.

FLEXFOAM ULTRA LOW CAPACITY MICROPHONE CABLES

Another Columbia first is a complete line of microphone cables with capacity as much as 35% lower than the best regular microphone cables available today. This drastic lowering of capacity has been made possible by the use of foamed polyethylene as the inner dielectric instead of solid polyethylene as normally used. This low capacitance means that lengths of microphone cable can be increased as much as 50%. These cables are also ideal for Hi-Fi and high quality sound work because of the extremely low attenuation, particularly at the higher audio-frequencies. The use of a special flexible vinyl as an outer jacket provides flexibility practically as good as rubber yet has much greater abrasion resistance.

POCKET PAK SPOOL DISPLAY

A very compact display in two square feet of floor space, contains 192 spools of 48 different electronic and hook-up wire items. This attractive display will constantly remind your customer of his wire needs. No need now to spend costly time measuring and pricing small quantities of wire. A complete description of each type is printed on the spool, in addition to the stock number. Full description of all spools on pages 19 and 20 of cat. 107.

PERMALINE VHF - UHF TELEVISION TRANSMISSION LINE

Since the introduction of this cable in May 1956, it has been proven beyond any doubt that this cable has no equal for reliability over the entire range of VHF and UHF channels under the most adverse conditions, such as salt spray, sunlight, extremes of heat and cold, stress cracking, chemical fumes, whipping in high winds, etc. In many areas throughout the country where other cables have failed due to salt deposits on transmission lines, this cable has given satisfactory reception at all times. Foam polyethylene tubes provide excellent low loss dielectric and require no sealing. 22 gauge solid copperweld conductors mean high tensile strength so necessary where whipping of cable is a problem. Heavy duty jacket of high molecular weight BLACK PERMALINE POLYETHYLENE is a protection against all hazards. We believe this is the finest all-purpose television transmission line available today. Impedance is 270 ohms, nominal attenuation is 3.2 D/B at 500 M/C and 4.6 D/B at 900 M/C. Cable size is approximately .295 x .402.

TELEPHONE AND COMMUNICATION CABLE

DIRECT BURIAL TYPE **FULLY COLOR CODED**

SPECIFICATIONS

Solid bare annealed copper 22 Awg. gauge conductors; thin wall, color coded, polyethylene insulation; conductors twisted to form pairs with symmetrically varying lays to minimize cross-talk; cabled (for 6 thru 50 pairs) by stranding pairs in concentric layers, or (for 75 thru 400 pairs) by stranding pairs into concentrically formed units, which are in turn cabled to form the complete assembly; non-hygroscopic binder tape furnishing high dielectric strength between shield and individual conductors; continuous copper shielding tape; high-molecular weight, polyethylene jacket.

GENERAL APPLICATION AND ADVANTAGE

APPLICATION: Communication and Telephone Cable for use in direct burial installations provides a high quality product similar to that used for aerial and duct systems, but with the addition of protective armoring. This minimizes the possibility of damage to the cable from rodents and insects and, correctly installed, reduces the dangers to the cable from sharp stones and other hazards of underground burial installations.

ADVANTAGE: The lightweight, but rugged construction of direct burial Communication and Telephone Cable permits fast and economical underground installation of communication systems with the assurance of dependable and enduring service. This is made possible through utilization of the same high quality polyethylene compounds that are used in its counterpart for aerial and duct type installations, with the added protection of copper armoring tapes and a durable, high-molecular weight, polyethylene jacket.

t-v lead-in cables

Cornish TV Lead-in Cables are furnished only in pure virgin polyethylene insulation to insure long life under severe operating conditions and are designed so that only exceptionally low losses at high frequencies are experienced. They are available with pure copper or copperweld conductors. Copperweld 300 Ohm lead-in cable has 1 1/2 times the tensile strength of copper and has approximately 2 1/2 times greater flexing life. It insures long service life in TV aerial installations requiring long runs.

"SOFT-WOUND"
Prevents
Flattening**

Conventional methods of spooling insulation sleeving frequently produce flattening of those coils close to the spool core. Both assembly time and material are wasted. Certain thin wall tubings manufactured to low-temperature specifications are most susceptible. It also occurs to a lesser degree in all other types of insulation sleeving.

The new National method eliminates this condition. It provides full-round tubing, even at the spool core. While this method is called "Soft-Wound," the tubing is spooled with the normal compactness.

TEFLON* MINIATURE COAXIAL CABLE

DESCRIPTION: Plastoid "Teflon" miniature coaxial cables are about 1/4 the outside diameter of comparable RG types, yet provide the same impedance characteristics as standard types. In three widely used impedance ranges (50, 70 and 93 ohms) these "Teflon" miniature cables exhibit stable characteristics when operated up to 200°C and can be used successfully in confined areas and where high ambient temperatures are present. These miniature coaxial cables may be applied with any desired outer coating, and will withstand temperatures up to 250°C, when supplied with an impregnated fiber glass jacket.

CONSTRUCTION: Both conductor and braid usually employ silver plated wire. Standard jacket material is "Teflon". Any desired jacketing such as Nylon, Fiberglass, Teflon Coated Fiberglass, KEL-F or other suitable jackets are available to meet unique conditions and specifications.

APPLICATIONS: Plastoid "Teflon" miniature coaxial cables are the ultimate in space conservation as compared to standard RG types. Because of their rugged construction, they are an important contribution to such varied applications as aircraft and guided missiles, plants or laboratories where instrument hook-ups are subjected to chemical corrosion or abrasive treatment.

DESIGN FEATURES: Plastoid "Teflon" miniature coaxial cables have many advantages, a few of which are: Miniature size with same impedance as comparable RG types; ability to withstand high temperature and corrosive or abrasive conditions; high voltage characteristics and excellent flexibility at temperatures as low as -65°C. The uniform OD of these light weight cables makes it possible to use the same size connector for each of the three impedance ranges.

Saxton TV TRANSMISSION WIRE & ACCESSORIES

GENERAL DESCRIPTION

Saxton lo-loss open wire transmission line is made for maximum uhf, vhf, or color reception. Signal loss under any weather conditions is the lowest of any wire made by any manufacturer. Copperweld (40% copper - 60% steel) is recommended for general use. Copper formvar covered for special conditions such as humid, coastal areas. For the few who prefer aluminum, pure copper, or pure copper formvar covered, Saxton also offers a quality product with these same specifications.

LO-LOSS OPEN WIRE GIVES MAXIMUM RECEPTION The truly all-weather, all-area transmission line.

SAXTON LIGHTNING ARRESTOR Identifying No. LA6

A highly efficient arrester and static eliminator made of glazed reinforced porcelain for UHF and VHF applications.

Positive protection is obtained by externally taping both sides of line so that the circuit is broken prior to damage. Built-in compensating inductor improves reception by maintaining constant line impedance. Resistor network drains off static impulses and prevents dangerous potentials across the set terminals.

FLOATING GUY RING Identifying No. FG

Cast aluminum, 2-piece floating guy ring (see illustration) fits masts up to 1 1/4" in diameter. Available with 3, 4, or 6 holes. Standard 4-hole units will be shipped unless otherwise specified. Individually packed, complete with set screw hardware in individual plastic bags. 50 to the master carton.

GROUND MAST CLAMP Identifying No. GMC

Brass alloy mast clamp for use in grounding masts or for effecting ground connection on cold water systems. Ridged tooth inner section makes for good, solid, effective ground. Complete with set screw. (See illustration.) 100 to carton.

SPIRAFIL CABLE

Information on Foamflex also available on request.

Spirafil is a semi-flexible, aluminum sheathed coaxial cable which is ideal for community antenna, broadcast, communications, or microwave work. A product of the Phelps Dodge Copper Products Corporation, it is impervious to migratory losses or variation of electrical value caused by chemical reaction, weather aging, or other influences commonly creating this condition. For use in underground or underwater applications, it is also obtainable with a high molecular weight polyethylene habirlene jacket which will allow such installations to be made without fear of corrosion for the life of the installation. Spirafil is made with an impedance of either 50 ohms or 70 ohms, and in either 3/8" or 1/2" diameters.

- Identifying No. SP5-A 3/8" 50 ohm spirafil
- SP50-B 1/2" 50 ohm spirafil
- SP70-3 3/8" 70 ohm spirafil
- SP70-B 1/2" 70 ohm spirafil

For habirlene covering add H - i.e., SP 50-H is 3/8" Spirafil, 50 ohms impedance, habirlene covering. Spirafil must be ordered in units of 2000'. The unique construction of Spirafil, whereby the center solid copper conductor is centered in the solid, tubular aluminum sheath by means of a spirally wound polyethylene spacer, creates some very interesting features. Some of these features are no radiation, low attenuation, excellent frequency response, uniform electrical properties over wide temperature variations, and unlimited operating life. Additional information and specifications available on request.

OPEN WIRE STAND OFF INSULATORS

A standoff which is especially designed for use with open line transmission wire installations. To take up slack in line, tighten screws in slots after pulling taut. For use as ordinary spacer—partially tighten set screws (see illustrations). This will permit free movement of wire in the slots, thereby doing away with potential wire breaks due to backward and forward motion caused by wind. Ideal also for use as anchor point or spacer for "Fence Wire" installations.

For use in 600 ohm installation, use outside two slots. Particularly good for community installations, where random spacing of open lines is desirable to avoid tuned circuits created by regular spacing. Permits inexpensive, efficient, time-saving, trouble-free installations. For use with wire gauges from No. 12 to No. 18.

Molded polystyrene standoff with proper spacing for either 300 ohm, 450 ohm, or 600 ohm installations. 100 to box. 1000 to master carton.
