"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance. **CONSTRUCTION**—Brass rotors and stators are soldered and nickel plated. The contact wiper is heavy silver plated phosphor bronze. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass. **SPECIFICATIONS**—Stral in line capacity, 90° rotation from minimum to maximum capacity position. Air gap is 0.0067" nominal. Tested at 1200 V, R.M.S., 60 cycles between rotor and each stator.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS

FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-rod dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

APC

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with 1/2" extended shaft for knob control or shaft coupling. "APC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS

FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use. **CONSTRUCTION**—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

"NZ-10" CAPACITORS

NZ-10

FEATURES The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shifting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 1400 V. at maximum capacity (minimum gap) position.

"FC" and "FNC" COUPLINGS

FEATURES—The "FC 16-S" is an insulated flexible coupling designed to provide for mechanical coupling of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone impregnated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring

temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform slotted thrust through 560° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-16-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

SPECIAL VARIABLE CAPACITORS FOR ALL NEEDS

HAMMARLUND CUSTOM ENGINEERED CAPACITORS

Hammarlund has for many years been considered the foremost designer and producer of variable capacitors for special military, scientific and precision applications. Should you have a special capacitor requirement, your engineers will find the services of our capacitor design group to be of inestimable value. Illustrated are two communications receiver multiple section tuning capacitors and a single-section frequency meter capacitor. All of these capacitors feature exceptionally precise calibration accuracy, the highest possible degree of resetability, essentially zero temperature coefficient, close tolerances on starting and running torque, high "Q" under adverse operating conditions and complete freedom from noise. To produce these and similar capacitor designs involve the techniques of metal lurgy, gearing, finishing, bearing design, ceramics, vibration and shock—to mention but a few. These techniques are possessed to a high degree here at Hammarlund.

Should you have need for facilities such as ours, we will welcome your inquiry.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"MC" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more closely approximates "Midline" units. All Hammarlund "MC" capacitors have silver-plate insulation, soldered nickel plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor. The "MCD" is a split stator panel mounted capacitor with all the "MC" features. Stators have terminal caps and are tested at 1000 V. R.M.S., 60 cycles. Wide spaced types have 0.0215" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles. Wide spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HFA" and "HFBD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher breakdown ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but other incorporating constructional features identical to the smaller "HFA". An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

ERIE HIGH VOLTAGE DISC CERAMICONS[®]

Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses

to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

TEMPERATURE COMPENSATING CERAMICONS®

Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

NPO TEMPERATURE COEFFICIENT CERAMICONS®

NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage — 600 volts D. C.

PARALLELING TC AND CAPACITIES

A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following

formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:

$$1. \frac{(\text{Capacitance in MMF}) (\text{Temp. Coef. Required})}{*750} =$$

Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)

$$2. (\text{Total Capacitance Required}) \text{ minus the value found in step 1} = \text{capacitance in MMF of the NPO unit to be used.}$$

3. The total desired capacitance and temperature coefficient are obtained by connecting the units found in steps 1 and 2 in parallel.

*If an N330 unit is to be used in parallel with an NPO unit, substitute 330 for 750 in this equation.

NEGATIVE TEMPERATURE COEFFICIENT CERAMICONS®

N330 and N750 units provide temperature compensation to eliminate drift. Positive and Negative Temperature Coefficient Ceramicons P100 through N1500 are available on special order through your distributor. See table on page 7 for other values and styles.

ERIE STAND-OFF CERAMICONS®

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R.F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

ERIE FEED-THRU CERAMICONS®

These very practical feed-thru capacitors are highly recommended for by-passing R.F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage.

ERIE CERAMICON[®] TRIMMERS

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the

amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

CORNING FUSION-SEALED FIXED CAPACITORS

It is generally recognized that the fused construction of the basic glass dielectric capacitive element used in Corning Glass Works' capacitors provides outstanding electrical performance under standard environmental conditions. To this basic element, now has been successfully added a glass encapsulation process with glass-to-metal seals at the leads. The resultant impervious unit insures reliable performance even in extremely severe environments, particularly those involving moisture or vibration.

Corning's New CYF Capacitors are guaranteed to be four times better than MIL specs require on moisture resistance.

Here are two new capacitors that are practically

indestructible.

CYF's will withstand MIL-STD 202A moisture conditions for over 1,000 hours with no sign of deterioration.

CYF10's and CYF15's do better on all counts for the specifications set forth in MIL-C-11272A.

CYF10's are available in 5-150 uuf at 500VDC and 160-240 uuf at 300VDC at 125°C.

CYF15's are available in 160-510 uuf at 500VDC and 560-1200 uuf at 300VDC at 125°C.

If you need high reliability and miniaturization, the CYF's—the only FUSION-SEALED Capacitors available—are worth looking into.

CORNING FIXED GLASS CAPACITORS...TYPE WL-4

Truly miniature fixed capacitors—

- Specially designed for printed circuits
- Stable under high temperatures, moisture, long shelf life . . .

COMPLETE RELIABILITY UNDER EXTREME CONDITIONS

Corning has developed these miniature glass dielectric capacitors for vertical mounting on printed circuit boards. These truly miniature fixed glass capacitors possess outstanding behavior characteristics that suggest use in critical applications and under high temperatures. If you're concerned with guided missile development, nuclear equipment, and other high reliability systems, these glass capacitors offer you much.

THE DIELECTRIC

A homogeneous, low-loss, uniformly produced continuous ribbon of glass; no foreign inclusions, no cracks, no imperfections to degrade the performance of the capacitor.

CONSTRUCTION

Only four simple elements: The glass dielectric; the metal foil plates; the wire terminal leads; and high temperature solder. After stacking the many layers of dielectric glass and metal foil plates, they are sealed together at a high temperature and pressure as an integral, rugged, monolithic unit. The wire leads are soldered directly to the foil plates with high temperature solder.

CHARACTERISTICS

Corning miniature fixed glass capacitors are manufactured to conform to the performance requirements of Military Specification MIL-C-11272A.

VOLTAGE RATINGS

The DC working voltage is a full 300 volts over the temperature range from -55 to +125°C.

CAPACITANCE

From 1 to 1,000 mmf.

CAPACITANCE TOLERANCE

Standard tolerance is $\pm 10\%$ or ± 0.25 uuf whichever is greater. Also available as $\pm 5\%$, $\pm 2\%$, $\pm 1\%$, but in no case less than ± 0.25 mmf.

CORNING MINIATURE FIXED CAPACITORS

Developed through Corning research, these truly miniature fixed glass capacitors possess outstanding behavior characteristics that suggest use in critical applications and under high temperatures. If you're concerned with guided missile development, nuclear equipment, and other high reliability systems, these glass capacitors offer you much.

THE DIELECTRIC

A homogeneous, low-loss, uniformly produced continuous ribbon of glass; no foreign inclusions, no cracks, no imperfections to degrade the performance of the capacitor.

THE CASE

The glass case, used only to anchor the wire leads, is of the same glass composition as the dielectric; thus, the capacitor performance is a function only of the superior dielectric properties of the glass and not of any enclosing or potting material or impregnant.

CONSTRUCTION

Only three simple elements: The glass dielectric and case of identical glass composition; the metal foil plates; the wire terminal leads. After assembly, the many layers of dielectric glass, the metal foil plates, the glass case, and the wire leads are sealed together at a high temperature and pressure as an integral, rugged, monolithic unit. Thus, the properties of the capacitor are those of the closely controlled dielectric, and are not determined by assembly method or affected by any subsequent treatment.

CHARACTERISTICS

Corning Fixed Glass Dielectric Capacitors, Types CY10, CY15, CY20, and CY30, are designed and manufactured to conform to the requirements of Military Specification MIL-C-11272A.

STABILITY

Capacitance Drift — As defined by MIL-C-11272A is less than 0.1% or 0.1 uuf whichever is greater; it is very nearly zero and is generally within the accuracy of measurements.

Temperature Coefficient — Is fixed and therefore predictable and retracable. It is within the limits of $+140 \pm 25$ ppm/°C. as defined by MIL-C-11272A from -55°C . to $+85^\circ\text{C}$. and referred to $+25^\circ\text{C}$. (See figures 1 and 2.) The difference in temperature coefficient between any units at any given temperature is less than 15 ppm/°C.

INSULATION RESISTANCE

When measured under the conditions specified in MIL-C-11272A, the insulation resistance will be found to be greater than 10^{11} ohms; that is, above the range of most standard measuring equipment.

INDUCTANCE

Because of the direct connection of the wire leads to the foil plates, the inductance is less and therefore the self-resonant frequency is higher than for other similar capacitors.

DIELECTRIC ABSORPTION

The dielectric absorption is extremely low; the percentage of charge reappearing after discharge is less than 0.1%.

MOISTURE RESISTANCE

The glass capacitor meets the temperature cycling, immersion, and 10-day moisture resistance tests which are prescribed in the military standards MIL-C-11272A for capacitors which must meet stringent environmental requirements.

VOLTAGE RATINGS

Standard ratings based on continuous operation in ambient temperatures from -55°C . to $+85^\circ\text{C}$. and from -55°C . to $+125^\circ\text{C}$. are shown in figure 2. Higher voltage ratings may be made available upon request.

CAPACITANCE

From 1 to 10,000 uuf in standard sizes as shown in figure 2. Higher capacitances in special forms available upon request.

FIGURE 1

MINIATURIZATION

The glass capacitor offers a higher degree of miniaturization than any other high quality capacitor. The volume of Type CY10 is only about 0.005 cubic inches; further reductions to as little as one-tenth of the volume of the standard wire lead types can be realized where wire lead terminals are not required. For physical dimensions see figure 1.

CAPACITANCE TOLERANCE

Standard tolerance is $\pm 5\%$ or ± 0.25 uuf whichever is greater. Also available as $\pm 10\%$, $\pm 2\%$, $\pm 1\%$, but in no case less than ± 0.25 uuf.

DIELECTRIC LOSS

Losses are extremely low. The dissipation factor at 1 kc. and 25°C . is in the order of 0.05% and is not dependent on capacitance. Losses remain relatively low at elevated temperatures.

LIFE

The shelf life change in capacitance is very small, and even at the elevated temperature of the 125°C . life test of MIL-C-11272A the recorded change in capacitance is less than 1% in 2,000 hours.

EXPOSURE TO RADIATION

These capacitors have been found to withstand high levels of X-radiation without permanent damage or degradation of electrical properties.

MINIATURE POLYSTYRENE AND MYLAR® CAPACITORS HERMETICALLY SEALED — CLOSE TOLERANCE

F-C-I miniature polystyrene and "Mylar" capacitors are furnished in metal shells hermetically sealed with metal-glass compression type seals. The capacitor elements are non-inductively wound, and wire leads are carefully soldered to the swaged, extended foils to minimize self-

inductance, power factor and noise. Characteristics of the polystyrene capacitors are given on pg. P-1156. The Mylar dielectric capacitors are characterized by high insulation resistance (10^9 megohm-microfarads at 20° C); 0.5% power factor; and a temperature coefficient of +500 PPM/° C.

The capacitors listed above are suitable for continuous operation at 125° C without derating. For 85° C operation, 100 volt series HD capacitors may be operated at 200 volts; 200 volt capacitors at 400 volts; 400 volt capacitors at 600 volts; and 600 volt capacitors at 1000 volts. To correctly designate 85° C capacitors, omit the letter "H" in the part number, and correct the single number standing for the voltage rating.

Prices listed above are for ±5% tolerance. For ±2% tolerance, add 20% and for ±1% tolerance, add 50% to these prices. These capacitors are also available in ceramic shells with epoxy resin end fill. Write for prices.

We are set up to produce these capacitors in any quantity to any odd value of capacitance at close tolerance for manufacturers of filter networks, R-C networks and the like. Write for information.

HIGH CAPACITANCE MYLAR® CAPACITORS HERMETICALLY SEALED—HIGH INSULATION RESISTANCE

F-C-I Series D-2 capacitors are Mylar dielectric capacitors which possess extremely high insulation resistance, together with good power factor and dielectric absorption. The insulation resistance runs well over 10⁶ megohm-microfarads at room temperature, even for the highest values of capacitance. The power factor and the dielectric

absorption are both on the order of 0.5%. These properties make Series D-2 capacitors extremely useful in computers of moderate precision, in timing circuits, and similar types of circuitry. Standard tolerance is ±10%, and closer tolerances are available on order. (Case sizes indicated below are in inches.) (D3 indicates bathtub case.)

Tantalytic* Capacitors for 125 C Operation

General Electric offers three types of Tantalytic capacitors: the cylindrical-case design, the standard rectangular design, and the KSR* Tantalytic unit for maximum microfarad values in minimum size and weight. These units (polar or nonpolar, with plain or etched foil) can operate from -55 C to +125 C.

This combination provides unequalled choice of ratings with up to 150 volts d-c, and microfarad values from 0.25 to 3500 (depending on type and voltage) in a single case. Capacitors are foil type with liquid electrolyte.

Lectrofilm† — B Tubular Capacitors

A new line of low-cost, high-reliability capacitors for military and commercial use, these nonmetallic-cased, polyester-film dielectric units are designed for a minimum 5-year life in a variety of electronic applications where size, weight, cost, and reliability give them an advantage over metal-clad tubulars or molded-case units. Minimum insulation resistance at 85 C is 10,000 megohms. They are rated at 100 to 600 volts d-c from -55 C to +85 C, and 50 to 400 volts d-c up to 125 C. Capacitance ranges from 0.001 to 0.68 microfarad.

"PET" and "PET-A" Aluminum Electrolytic Capacitor

Mallory's type "PET" and "PET-A" aluminum electrolytic capacitors are a new (and smaller) version of the famous Mallory FP, WP, and TC capacitors. They were designed primarily for printed circuit applications, or any electronic application where high quality and small size is essential. A new low-impedance electrolyte was developed to give the "PET" series longer shelf life in high temperatures, longer operating life, and outstanding capacitance stability.

The leads of the "PET" are securely welded to the capacitor tabs. There are two styles available, a single-ended style (PET), and an axial lead style (PET-A). The temperature range is -30° to +85° C. Both styles are enclosed in a plastic case with an epoxy end-seal.

Electrolytic Capacitors for Printed Circuits

The PFP capacitor is identical in quality and performance to the Mallory FP type, the basic difference being in the mounting arrangement. All PFP units incorporate the straight lug type printed circuit terminals.

Subminiature Aluminum Electrolytic Capacitors

Mallory's new subminiature electrolytic capacitors are outstanding in their application to the very small size portable radios, hearing aids, portable TV, test instru-

ments, and military communications equipment. Small in size, but designed to take it, they use etched plate of high purity aluminum.

"TAS" Solid Electrolyte Tantalums

Type TAS Capacitors feature an extremely small tantalum anode on which is formed a tantalum oxide film. The electrolyte is a solid, semi-conducting material that is not subject to corrosion or leakage. The "TAS" capacitors were designed to operate over a range of -80° to +125° C. The TAS meets the requirements for miniaturized or transistorized military or commercial electronic or computer equipment, battery powered radio and communications equipment, and in test instruments, hearing aids, and recorders.

Type "TNT" Tantalum Capacitor

The type TNT capacitor is a subminiature polarized tantalum electrolytic capacitor designed for use where space is at a premium yet large mfd-volt ratings are required. Although occupying only .006 cubic inches volume, it will withstand rugged environmental conditions found in both military and commercial aircraft control equipment. Other applications are in miniaturized units such as hearing aids, extremely small consumer and military radios, and printed circuit package assemblies. TNT's are mounted by their leads which are: negative lead, tinned copper wire of .0159 diameter; and positive lead, tinned nickel wire of .0126 diameter.

TANTALUM ELECTROLYTIC CAPACITORS

P. R. MALLORY & CO., INC. - INDIANAPOLIS

**XT Type
Tantalum Capacitors**

Application—Originally designed to meet the exacting requirements of geophysical, well drilling and other applications where a ruggedly constructed, hermetically sealed electrolytic capacitor was necessary. The possible applications for the present models of the Mallory tantalum capacitors are unlimited in circuit designs requiring rugged use and wide variations in temperature.

Description—The Mallory metal encased tantalum capacitor is the answer to applications calling for a capacitor designed to withstand temperatures ranging from -55°C. to +200°C. The XT type is enclosed in a hermetically sealed steel case which will withstand 100 hours of 20% salt spray at 95°F without harmful corrosion. The case is sealed with a glass-to-metal end seal.

The standard case diameter for all XT types is 5/8". The height will vary from 1/2" to 4 1/16", depending on capacity and voltage ratings.

Terminals—Provided with a wrap-around terminal for easy soldering.

Mounting—Mounting hardware is not supplied with the capacitor. The variety of applications for this capacitor is not conducive to a single means of mounting. Insulating material, such as Teflon, etc., should be used between the capacitor and mounting bracket where the cathode is not at chassis potential. **CAUTION:** Soldering to any part of the case is not recommended.

Mallory-RMC® Discaps® Ceramic Caps

Mallory-RMC Discaps are produced by the world's largest manufacturer of ceramic disc capacitors to the smallest size still maintaining top quality. They are rated at 1000 v voltage (except where otherwise indicated) and will withstand the rated voltage. Discaps are constructed of Durez phenolite vacuum wax which allows the capacitors to maintain rated capacity and leakage characteristics throughout wide ranges of temperature and humidity variations.

"ROCKETTES"

Planet ROCKETTES are impregnated and jacketed with a HARD-as-ROCK plastic which will not dry out, shrink away from the leads nor develop fissures nor cracks, thus guaranteeing against the entrance of moisture and guaranteeing good shelf life and long service life. The coiled heads of the leads are securely soldered to the foil, which is imbedded in the same plastic used as an impregnant, making it impossible for them to work loose or pull out. ROCKETTES have exceptionally high insulation resistance which is maintained proportionately over the entire temperature range of -30° to $+85^{\circ}$ C.

TAN-O-MITE® TANTALUM CAPACITORS

Tantalum electrolytic capacitors are distinguished for their extremely high capacitance and small size. They offer excellent performance under wide temperature extremes (−55°C to +125°C) and feature unusual stability in shelf life and performance. The three types available satisfy a wide range of industrial and military applications and are intended for coupling, filter and bypass applications where capacitance tolerance is not critical.

SERIES TF TANTALUM FOIL TYPE

Polar and Non-Polar Types

The only type available as a polar or non-polar unit. Non-polar units are intended for DC applications where reversals of potential occur or for AC applications at limited voltage; polar units are intended for applications where reversals of potential do not occur. However, polar units will withstand reversals up to 3.75 VDC. These foil type units have closer capacitance tolerance (±20%), better leakage and power factor characteristics than wire type units. Supplied in three case sizes. Series TF capacitors offer a capacitance range from .25 to 140 mfd. Working voltages to 150 volts are available depending upon capacity.

SERIES TW TANTALUM WIRE TYPE

Polar Type Only

The smallest subminiature electrolytic capacitors available. Axial leads are 2" long. Units are insulated with Mylar plastic sleeve. These polar type units are used in DC circuits where capacitance value can exceed nominal circuit requirements considerably (standard tolerance is −0 +100%). Wide use in hearing aids and other subminiature apparatus. Operating temperature range: −55°C to +85°C. Eight of eleven available case sizes are stocked in various ratings. For sizes and ratings not listed, consult factory.

SERIES TS TANTALUM SLUG TYPE—Polar Type Only

SERIES TS STOCK VALUES

The "slug" type of tantalum capacitor utilizes a porous anode of sintered tantalum. 1½" axial leads. For "polar applications," these capacitors offer the closest capacitance tolerance combined with lowest leakage current, lowest power factor and minimum temperature coefficient characteristics. Exceed the vibration test requirements of MIL-C-3965B, Grade 3, as well as MIL shock tests. Stocked in two shapes: Hat shaped (Styles UB and UC, 15/32" x 5/16" diameter, overall); straight-sided (Style SUB, 15/32" x 3/16" diam.). "UB" and "SUB" have operating temperature range of −55 C to +85 C; "UC" extends to +125°C. See table. One capacitance tolerance all styles: "S," −15 +20%.

New **TYPE LK** *New*
DC FILTER CAPACITORS

Type LK capacitors are an entirely new design which have been proved by rigorous testing in the laboratory and by usage in the field for several years. This is the first listing to be published.

Type LK capacitors are smaller and have a reliability factor which is unexcelled. Their primary usage is for DC filtering and DC blocking applications.

Temperature Range is \pm thus 65°C to 105°C. With full rated voltare from -65°C to 85°C.

Life 2500 hours at rated voltage at 85°C.

Case is the CP70 style term plate metal, primed and finished with a synthetic enamel.

ENVIRONMENTAL and other testing may be performed per MIL-C-25A, Characteristic E. Type LK exceeds the best characteristics of paper capacitors in a much smaller size. Comparison of sizes will show that the volume is much less than required for MIL-C-25A equivalents in Characteristic F and are better than characteristic E quality.

HV SELENIUM RECTIFIER TYPE

HV SELENIUM RECTIFIER TYPE is smaller than the HV SEALED TUBE. INPUT 118 volts 60 to 400 cycles. HV SELENIUM RECTIFIER TYPE is designed to avoid rectifier tube failures by the use of long life selenium rectifiers with an estimated life of 20,000 hours at 50°C temperature. Lower ambient temperature will increase life.

POLYSTYRENE CAPACITORS

Polystyrene Capacitors feature extremely low dielectric absorption, very high stability, ultra high resistance and low temperature coefficient. Dielectric absorption is less than 0.02% and resistance is greater than one million megohms x mfd or one million megohms for values less than one mfd. Temperature coefficient is negative 80 PPM/°C. Standard capacitance tolerance is 5% but tolerances as low as 0.1% are available in the type PA and PD and as low as .2% in the type PG, PM and PT.

Other Style containers (now shown) available are the Type PM which are tubular metal clad miniatures which are hermetically sealed and Type PT a tubular steatite style which has an epoxy end seal.

For further information write for Polystyrene Capacitor Catalog.

TYPE PG capacitors are hermetically sealed in glass tubes (providing a long leakage path) with tinplated ferrules solder - sealed to the glass.

TYPE PA capacitors are the bathtub style container, suitably protected for corrosion, hermetically sealed and the capacitor elements are extended foil (non-inductive) construction.

TYPE PD capacitors are the CP70 style containers, suitably protected for corrosion, hermetically sealed, and the capacitor elements are extended foil (non-inductive) construction.

TYPE PFB HIGH CAPACITANCE LOW-VOLTAGE ELECTROLYTIC CAPACITORS

Pyramid's PFB is the ideal electrolytic capacitor for use in applications where high-capacitance at low-voltage is required.

Designed for 85° C. operation. Assembled in hermetically sealed round plastic cases. For use in applications requiring high capacitance at low working voltages, as in motion-picture sound equipment.

TYPE DO PLUG-IN ELECTROLYTIC CAPACITORS

Designed for 85° C. operation. Hermetically sealed in round aluminum containers. Provided with four pins (Nos. 1, 3, 5, 7) on standard octal base. Plugs into standard 8-pin octal socket. Ideally suited for any application where quick capacitor changes are required. Grounding lug supplied for grounding case to chassis. (In accordance with military standards, a low variable resistance exists between pin 1 (negative) and the case; to ground pin 1, a direct ground connection must be made from the corresponding lug on the socket.)

 2. Wide temperature range: -20° C. to +85° C.
 3. Hermetically sealed aluminum can.
 4. Low leakage current.
 5. Long life, trouble free operation.
 6. Manufactured under quality controlled conditions.

From raw material to finished product, the Pyramid type TQ is manufactured under controlled conditions and constant supervision.

Capacitance, voltage and terminal identification are stamped on the aluminum cans. The capacitor is closed by a molded piece with special silver-plated terminals which are permanently identified by molded numerals.

Present day electronic equipment, telephone network systems, and industrial control systems, where a high degree of reliability is essential, require capacitors having a long life.

Pyramid Electric Company introduces type TQ, a high quality electrolytic capacitor which will meet the requirements of design engineers today and for some time to come.

TYPE TAK TANTALUM CAPACITORS

Pyramid TAK Tantalum slug capacitors are miniaturized to provide maximum space economy. Pyramid Tantalum capacitors have cylindrical cases and contain a non-corrosive electrolyte. Due to the special construction and materials used in the manufacture of Pyramid Tantalum capacitors, these units are both seep and vibration proof. In addition this type of capacitor assures long service life and corrosion resistance; made to meet MIL-C-3965 specifications, Style CL 46.

TYPE CQM COMPUTER QUALITY ELECTROLYTIC CAPACITORS

FEATURES

- High reliability, ideally suited for computer requirements.
- Highest purity aluminum used.
- Molded terminals for tight permanent seal.
- Low leakage current.
- Long shelf life.
- Low equivalent series resistance.

Computer circuits require electrolytic capacitors of the highest reliability. Pyramid type CQM capacitors, designed to operate at -20 C. to -65 C., fill this requirement. They are made with electrodes of the highest purity aluminum obtainable (99.99%) and specially formulated electrolytes.

Carefully inspected materials, coupled with controlled manufacturing methods, produce a capacitor capable of meeting the most exacting computer specification.

The capacitors are made in high purity aluminum containers hermetically sealed with molded tops held in place by rolling the can rim securely over a buna rubber gasket. The terminals are molded into the top. These terminals and the buna rubber gasketing insure a tight, permanent seal.

Two types of terminals are available: (1) a screw type terminal with tapped inserts, (CQM); (2) a lug type terminal, with anti-rotational locks, swaged to solid aluminum inserts, (CQML). Internal connections to the aluminum inserts are made with straps of the same high purity aluminum as the electrodes. This feature contributes to low leakage and long shelf life.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPES MT MTD-MTH electrolytic

SANGAMO Type MT electrolytic capacitors are especially designed for television and other electronic applications where operation at 85°C is required. They are sealed in aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Low voltage units utilize etched cathodes to maintain uniform capacity when they are subjected to combined conditions of heat and ripple currents. The MTH is provided with a mounting strap and is designed for electronic applications requiring high capacity in low voltage D.C. circuits such as cathode by pass circuits and filters for low voltage, high current power supplies.

TYPE MMT electrolytic

SANGAMO Type MMT miniature tubular electrolytic capacitors are designed for use in miniaturized equipment and are ideally suited to meet the precise operating requirements of low voltage circuits. They are small in physical size and are self supporting by means of reinforced bare tinned copper wire leads. The Type MMT capacitors are contained in drawn aluminum tubes encased in fitted cardboard insulating sleeves on which the polarity is clearly marked.

SANGAMO CAPACITORS

MICA CAPACITORS

TYPES F1-F2-F3 mica

Types F1, F2, and F3 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

TYPES G1-G2-G3-G4 mica

Type G ceramic cased capacitors are intended for service where highest voltage and R.F. Current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Terminal plates are designed to permit any usual connecting or mounting practices.

TYPE M silvered mica button capacitors

Small and light in weight SANGAMO Type M Silvered Mica button capacitors are designed particularly for application in high frequency circuits. Their high "Q" is indicative of their low loss. These units meet all requirements for V.H.F. and U.H.F. applications and are constructed to be electrically and mechanically stable. The silver plated case design performs the dual purpose

of shielding and being the low potential terminal. The high potential terminal through the center of the capacitor allows 360 degrees electrical current distribution, resulting in extremely low series inductance and more efficient performance in high frequency applications. Normally furnished in characteristic "D" in 500 working volts D.C.

TYPES 40-41-42-43 paper

SANGAMO Types 40 and 41 paper dielectric capacitors are ideal for use in high voltage filter applications. The Type 40 and 41 are impregnated with Diacel to provide an R₁₀ characteristic (±35% at 100°C) capacitance change at low temp. Type 42 and 43 are physically identical to Type 40 and 41 respectively, except mineral oil is used as an impregnant to derive an R₁₀ characteristic (±25% at 100°C) capacitance change at low temp. and the case length is larger.

TYPE 71
paper

SANGAMO Type 71 paper dielectric capacitors are impregnated with Diaclor—a specially compounded, chemically pure, chlorinated dielectric oil. SANGAMO Diaclor is a synthetic impregnant whose characteristics can be controlled with great uniformity and possesses a high dielectric constant, high resistivity, low power factor, high di-

electric strength and is non-flammable and non-explosive. The Type 71 is an excellent choice in medium and high voltage circuits where light weight per unit volume is an important factor. Each unit is finished with grey lacquer paint over a zinc chromate under coat.

MARKING ON THIS SURFACE

MONOLITHIC — REQUIRES NO HERMETIC SEAL

Only two materials go into "VITRAMON" Capacitors... porcelain enamel for the dielectric and encasing insulation... fine silver for the electrodes. Perfectly bonded, the two become, effectively, one homogenous unit...

Stable over a Wide Temperature Range.

The solid block of "quality porcelain" in which the silver electrodes are immersed makes "VITRAMON" Capacitors both

Rugged and Vaporproof

Pure materials plus perfect bonding combine to eliminate both *Loss and Noise.*

Finally... their unique construction allows for "layering" the electrodes so that much greater active dielectric area can be squeezed into the same cubic content... They're *Miniature.*

The most famous names in electronics use "VITRAMON" Capacitors in guided missiles, jet ignition, proximity fuses, and in radar, servo, guidance, fire control, telemetering and carrier telephone systems.

SPRAGUE CAPACITORS

125°C FOIL TANTALEX® CAPACITORS

- Ideal where small physical size, stable electrical characteristics, and long service and shelf life are important.
- Type 120D and 122D available marked to meet MIL-C-3965B. Order by complete military type designation.
- Capacitance remains stable at low operating temperatures—may be used where aluminum-foil electrolytics are inoperable
- Extremely low leakage current
- Standard capacitance tolerance: ±20%

- May often replace, where circuit parameters permit, aluminum electrolytics, paper capacitors, and metallized paper capacitors, resulting in substantial saving of weight and space
- Double synthetic-rubber and TFE-Fluorocarbon elastomer combination seals ensure reliable service life at 125°C
- Standard units have outer plastic insulating wrap over case. For bare metal case, end Cat. No. in "0" instead of "1"

SPRAGUE CAPACITORS

VITAMIN Q[®] SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military

electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: -55°C to $+85^{\circ}\text{C}$ and -55°C to

$+125^{\circ}\text{C}$. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next)

Listed below are the most popular insulated section (ungrounded case) capacitors. For information on other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, consult your Sprague Industrial Distributor.

NOTE: The capacitors listed in this table have a capacitance tolerance of $\pm 10\%$. For $\pm 20\%$ units, change the 4th digit following the letter 'P' in the catalog number from 9 to 0.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at

resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

MIL-C-25A CAPACITORS — TYPES CPO4 and CPO5

- Impregnation with Vitamin Q assures capacitors exceed MIL-C-25A performance requirements.
- Inserted tab construction for applications where minimum size is necessary.
- Positive hermetic closure of the metal cases assured by glass-to-metal solder-seal terminals.
- Type CPO4 has plain metal case—Type CPO5 has insulating sleeve.
- Available in Characteristic E (−55°C to +85°C) or Characteristic K (−55°C to +125°C).
- Only popular insulated section (un-grounded case) capacitors are listed. For information on grounded case units, consult your Sprague Industrial Distributor.

NOTE: The capacitors listed in this table have a capacitance tolerance of ±10%. For ±20% units, change the last letter in the catalog number from K to M.

SPRAGUE CAPACITORS

118P DIFILM[®] METALLIZED CAPACITORS

- The best of their type which it is possible to produce in the present state of the art
- Rated for operation at 125°C WITHOUT VOLTAGE DERATING

- Unique dual dielectric—a combination of metallized paper and of polyester film, impregnated with special high-temperature mineral wax
- Subjected to stringent quality control during manufacture
- Higher insulation resistance than any other metallized paper capacitors—at 125°C, minimum product of insulation resistance and capacitance is 10 megohm-microfarads for 200 V units or 40 megohm-microfarads for 400 and 600 V units

- Capacitor sections are effectively of non-inductive construction, resulting in capacitors unmatched in performance quality by any other metallized capacitors
- Hermetically sealed, with glass-to-metal solder-seal terminals
- Have unusual self-healing characteristics, in the rare event of capacitor dielectric breakdown
- May be used at extremely low voltages where metallized paper construction has previously been unsatisfactory
- For complete performance characteristics, see Engineering Bulletin 2211A
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor

SPRAGUE CAPACITORS

121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING—extremely important in military and industrial equipment where higher temperatures are encountered
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page
- High insulation resistance—at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads

- Hermetically sealed with glass-to-metal solder-seal terminals—capacitor cases are of corrosion resistant materials—similar in appearance to Type 118P
- May be operated at low voltages, unlike many other metallized capacitors
- For complete performance data, see Engineering Bulletin 2210
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor

HIGH-VOLTAGE GLASS-ENCASED TUBULARS-TYPE 205P

- Made for low capacitance, high voltage operation at high altitudes
- Used in airborne equipment to solve corona problems; also in high voltage ground equipment such as transmitter power supplies, induction heating equipment, electrostatic precipitators, as well as coupling and bypass applications in industrial control devices.

- Dual dielectric combines the best features of both polyester film and paper
- Impregnated and filled with Vitamin Q, Sprague's exclusive inert synthetic
- Long leakage path between terminals
- Smaller in size and weight than metal cased tubulars of similar ratings
- Standard capacitance tolerance: $\pm 10\%$

SPRAGUE CAPACITORS

METAL-CLAD FILM CAPACITORS

Polystyrene film dielectric capacitors have the lowest dielectric absorption of all film capacitors. The exceptionally high insulation resistance will generally exceed 10,000,000 megohm-microfarads. They have extremely low power factor, close capacitance tolerance, high capacitance stability with temperature change and high operating temperatures. The unusual properties of these capacitors make them particularly suitable for circuit applications demanding such characteristics. All capacitors listed here are hermetically sealed in metal cases

114P STYRACON® TUBULARS

Specially processed polystyrene film dielectric • Operating temperature range, -55°C to +85°C • High insulation resistance • Low dielectric absorption (under .05%) • High capacitance stability (less than ±2% drift) • Extremely low

power factor (high Q) • Units listed below have capacitance tolerance of ±5%. For ±20%, change 8th digit in catalog number from 5 to 0; For ±10% change to 9; For ±2% change to 2; For ±1% change to 1 • Units listed below have plastic insulating sleeves. For plain metal case, change last digit in catalog number from 4 to 2

- Flat-plate Construction Permits Higher Self-resonant Frequency Than Tubular Ceramic Or Molded Mica Capacitors
- Tough Moisture-proof Coating Protects Against Short-circuiting And Assures Good Performance Under Severe Conditions Of Humidity And Vibration
- Cera-mite Capacitors Easily Fit Into Tight Spaces, Even Across Subminiature Tube Sockets
- Designed For 85°C (185°F) Continuous Operation

GENERAL APPLICATION TYPES

- Excellent Where Temperature Coefficient Is Not Important, Such As By-pass and Coupling Applications
- Ideal For Replacing Older Types Of General Application Capacitors Such as Molded Micacs, Tubular Ceramics, and Paper Tubulars

FILTEROL® FILTERS

FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3—Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous producing current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4—A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

LF-1 TRANSIMULATOR®

SPEEDS DESIGN OF TRANSISTOR CIRCUITS BY ELIMINATING BREADBOARD LAYOUT

Bring transistor circuits to life in a matter of minutes with the Sprague LF-1 Transimulator. This new instrument lets you simulate any amplifier stage, a-c or direct-coupled, short of high power audio output; also multivibrator, switching, phasing, push-pull, Class A and B, and many others using cross-coupled Transimulators . . . whether the circuit is common or grounded emitter, base, or collector . . . whether the transistors are PNP, NPN, or Surface Barrier. You can simulate circuits stage-by-stage for cascade operation . . . or use a separate Transimulator for each stage to get simultaneous multi-stage operation.

Bring Circuit Diagrams To Life In Minutes

Everything you need for RC amplifier circuits is built right into the LF-1, including coupling capacitors . . . bias and load resistors . . . battery voltage supplies . . . Base Collector—Voltage Divider stabilization circuits . . . 5-way binding posts for transformer coupling and metering. Whether you're designing audio circuits or switching circuits, you'll get a true picture of operating parameters minutes after you've drawn the circuit diagram . . . without wasting valuable time with breadboard and soldering gun.

Pays For Itself In A Matter Of Weeks

An ideal laboratory instrument, Transimulators are inexpensive enough to justify several on every bench. You can even use the LF-1 to test transistors *in the circuit* . . . the only real proof of design parameters. And a complete step-by-step instruction manual makes operation fast, simple, and easy.

FEATURES OF THE LF-1 TRANSIMULATOR

- **TRANSISTORS**—PNP and NPN Junction, and Surface Barrier.
- **CIRCUITS**—Common or Grounded Emitter, Base, Collector.
- **RANGE**—Audio, up to 100 kc.
- **TRANSISTOR POWER**—Through medium power audio output.
- **BATTERY SUPPLY**—Separate bias and load. 1.5, 3, 4.5, 6 volts d-c. Polarity Reversing Switch.

Ultra Small Aluminum-Cased Electrolytics

Type LE capacitors are ultra-small, compression sealed, aluminum foil units. They are housed in aluminum containers which in turn are covered by a skin-tight, clear plastic insulating sleeve. The tinned copper pigtails are securely anchored in crimped stud terminals.

They are especially recommended for use in printed circuit assemblies, miniature radios, recorders, hearing aids, portable TV cameras and similar compact equipments.

TEMPERATURE RANGE: -20°C. to +65°C.

PHENOLIC-CASED PRINTED CIRCUIT PAPER TUBULAR

PB

- ◆ **PARALLEL LEAD WIRES:** May be plugged directly into printed circuit.
- ◆ **PRE-MOLDED PHENOLIC SHELL:** No distortion and no stresses are set up because capacitor section is not subjected to molding pressures.
- ◆ **WIDE TEMPERATURE RANGE:** Vikane impregnated units (rated at 600 WVDC) will withstand operating temperature from -55°C to $+100^{\circ}\text{C}$. Units impregnated with HT compound (rated at 400 WVDC and 200 WVDC) will with-
- stand operating temperatures from -40°C to $+90^{\circ}\text{C}$.
- ◆ **POLYKANE FILL:** Securely anchors leads, locks section in place and provides a barrier to moisture.
- ◆ **SOLID CONNECTIONS:** Leads are soldered directly to the extended foils for low resistance connections.
- ◆ **STRONG CONSTRUCTION:** Will withstand the extremes of soldering temperatures without damage to case material, moisture seal, lead connections or electrical performance.

COMPACT METALIZED-PAPER CAPACITORS

ME & MEX

MEW & MET

MEM

TOBE self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"ME" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"MEM" types are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"MEW" types are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

High Temperature Metalized-Paper Capacitors

- **RESIN-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MET tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MEX tubulars have RESIN-impregnated paper tubes, bonded securely to the RESIN fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** RESIN is a special solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

TYPE WDT

TYPE WDT

Types YDT and YDB are oil impregnated and oil filled with non-inflammable, non-oxidizable liquid. They are especially suited for use in bypass, audio frequency coupling circuits and other applications. Units are sealed in drawn metal shell containers and provided with leakproof terminals either on top or bottom of the can containers. They will meet MIL-C-25A performance and test requirements.

TEMPERATURE RANGE: -55°C to $+85^{\circ}\text{C}$.

STANDARD TOLERANCE: $\pm 20\%$, -10% .

Types WDT and WDB Capacitors are smaller size units of similar construction and electrical characteristics but only supplied in single section units with two terminals. These units are ideally suited for use in assemblies where space is limited and multiple units may be mounted close together. They will meet MIL-C-25A performance and test requirements.

TEMPERATURE RANGE: -55°C to $+85^{\circ}\text{C}$.

STANDARD TOLERANCE: $\pm 20\%$, -10% .

AIR WOUND COILS

Illumitronic Engineering has developed a complete, versatile series of air core inductors designed especially for the amateur rig, or for prototype of RF transmission equipment. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. The series consists of a standard coil type, a variable pitch type, and an indented type, in a range of diameters from 1/2 inch to 3 inches. All Air Dux® coils are constructed of the highest (silver or formvar) copper wire wound on large low loss polystyrene rods for the highest mechanical strength and lowest electrical losses.

CECO manufactures a complete line of equipment for R-F distribution of television signals, including ultra-low noise preamplifiers (UHF and VHF), cable-powered amplifiers, power supplies, wide band sweep generators, automatic level control units, and others.

CECO ULTRA LOW NOISE PREAMPLIFIERS

CECO is noted for its outstanding ability in preamplifier design. The new VHF and UHF ultra low noise preamplifiers are high quality units for ultimate reception in TV fringe areas. Model PR-(*) and Model PRU-(*)-L both utilize the G.E. ceramic planar triode tube type 7077 noted for low noise and long life. The application of this tube in special circuits developed by CECO provides ultra low noise operation and extended reliable service at low cost.

CECO preamplifiers are of weatherproof construction with an aluminum enclosure. The terminals, pilot light, test points and fuse are mounted on the bottom protected by drip shield. For maximum benefit from ultra low noise feature, units should be installed near antenna terminals. Mounting is made simple by means of two messenger clamps attached to weatherproof cover. Clamps suspend unit from messenger cable, angle irons, or from horizontal members such as cross braces or catwalks when mounted outdoors. When used indoors, preamplifier is usually mounted on vertical wall racks.

Model PR-(*) is a single channel VHF Preamplifier, available for any VHF channel. Net Price \$295.00.

Model PRU-(*)-L is a single channel UHF Preamplifier, available for any UHF channel. Net Price \$295.00.

Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Large beryllium copper compression rotor contact provides steady torque—and rotor stays "put" where set. Rotor contact and all other metal parts are nickel plated—steatite insulator is DC-200 treated. Mounting bushing threaded with 1/4-32 flats to prevent turning—mounting nut furnished. Peak voltage 1250 volts on .017" spaced units; 850 volts on 160-130 which is spaced .013". 3/16" diameter shaft* slotted for screwdriver adjustment. Available in production quantities with the following features: locking bearings; 180° stop; various shaft extensions; high torque; silver or other platings.
*instrument type tuning knob to fit 3/16" shaft available. (See page on knobs and dials.)

TYPE "L" CAPACITORS

These high quality, ceramic soldered Type "L" capacitors are an ideal choice for applications requiring extreme stability and strength. Rotor bearings and stator support rods are actually soldered directly to the heavy 3/16" thick steatite insulator, making these capacitors practically impervious to shock and vibration. Special split-sleeve tension bearing and silver-plated beryllium copper contact provide constant torque and smooth capacity variation. Heavy brass soldered plates and large diameter tie rods provide excellent rigidity. Removable chassis mounting brackets can be used to mount auxiliary equipment. Plating is heavy nickel-plate spacing .030". Peak voltage rating is 1500 volts. Also available with .020", .060", and .080" spacing as well as special platings, shaft bearings and stator terminal locations in production quantities. Bearings threaded 3/8-32", mounting nut provided. Models with 6-32 tapped mounting posts soldered to end frame also available on special order.

TUBE SOCKETS – GENERAL INFORMATION

In order to simplify the selection of sockets and to provide complete specifications for standard, industrial and military requirements, wherever applicable, all Johnson tube sockets have been categorized under a socket standardization program.

By reducing the number of variations in special socket types, it is possible to maintain stocks of military and industrial type sockets as well as standard sockets, permitting shorter delivery cycles on quantity orders. Specifications for the three variations of each socket type are listed within each section of descriptive matter.

Detailed specifications covering the complete Johnson tube socket line have been prepared for Engineering Department use – should you desire a copy of Socket Standardization Booklet 536, please make your request on company letterhead.

SOCKETS FOR 4X150A, 4X150D, 4X250B, 4CX250B, 4X250F, 7034, 7035

Designed for use with high power transmitting tubes, these sockets are available in many designs — with or without, low inductance screen grid by-pass capacitors. Basic socket is molded of low dielectric loss-factor Kel-F plastic. Control grid contact "guide" is machined for greater alignment accuracy, and tapped for 6-32 machine screw. All contacts are low-resistance silver-plated beryllium copper. Tube pin contacts are heat treated to provide positive contact pressure as well as extended life. Annealed soldering tabs may be easily bent or formed. Additional specifications and information on this group of sockets are available on Data Sheet 755.

Rugged light weight basic socket with silver-plated brass mounting saddle. Cathode terminals insulated. Four elongated .140" x .234" mounting holes to accommodate mounting circle diameters from 2 3/4" to 2 3/4". Mounts below chassis through 1 1/2" diameter hole.

INSULATORS – GENERAL INFORMATION

These high quality steatite and porcelain insulators have heavily glazed surfaces and are furnished with heavy nickel-plated brass hardware suitable for exposed applications. Types designated -2 have jack to accommodate Johnson or other standard banana plugs.

INSULATED THRU-PANEL BUSHINGS

This group of thru-panel bushing assemblies consists of a pair of identical steatite insulators along with cushion washers and hardware. The 135-55 assembly has interlocking insulators which are self-centering in mounting hole and may be used on very thin panels.

THRU-PANEL INSULATORS

Available in steatite or porcelain types, these high voltage insulators are compression mounted by means of a stud throughout the entire length of the unit. Extrusion of insulator base extends thru mounting hole, increasing the breakdown rating. Units have flat mounting surfaces and are furnished with cushion washer. Types with jacks have terminal permitting connection above, as well as below panel.

CATHODE RAY OSCILLOSCOPES

The No. 90902, No. 90903 and No. 90905 Rack Panel Oscilloscopes, for two, three and five inch tubes, respectively, are inexpensive basic units comprising power supply, brilliancy and centering controls, safety features, magnetic shielding, switches, etc. As a transmitter monitor, no additional equipment or accessories are required. The well-known trapezoidal monitoring patterns are secured by feeding modulated carrier voltage from a pickup loop directly to vertical plates of the cathode ray tube and audio modulating voltage to horizontal plates. By the addition of such units as sweeps, pulse generators, amplifiers, servo sweeps, etc., all of which can be conveniently and neatly constructed on companion rack panels, the original basic "scope unit" may be expanded to serve any conceivable industrial or laboratory application.

STANDING WAVE RATIO BRIDGE

The Millen S.W.R. bridge provides easy and inexpensive measurement of standing wave ratio on antennas using co-ax cable. As assembled the bridge is set up for 52 ohm line. A calibrated 75 ohm resistor is mounted inside the case for substitution in the circuit when 75 ohm line is used.
No. 90671

BALUNS

The No. 46672 (1 for each amateur band) wound Balun is an accurate 2 to 1 turns ratio, high Q auto transformer with the residual reactances tuned out and with very tight coupling between the two halves of the total winding. The points of series and parallel resonance are selected so that each Balun provides an accurate 4 to 1 impedance ratio over the entire band of frequencies for which it was designed. Suitable for use with the No. 90672 Antenna Bridge or medium power transmitters.
No. 46672-80/40/20/15/10

ANTENNA BRIDGE

The Millen 90672 Antenna Bridge is an accurate and sensitive bridge for measuring impedances in the range of 5 to 500 ohms (or 20 to 2000 ohms with balun) at radio frequencies up to 200 mc. The variable element is an especially designed differential variable capacitor capable of high accuracy and permanency of calibration. Readily driven by No. 90651 Grid Dipper.
No. 90672

50 WATT EXCITER-TRANSMITTER

Modern design includes features and shielding for TVI reduction, bandswitching for 4-7-14-21-28 megacycle bands, circuit metering. Conservatively rated for use either as a transmitter or exciter for high power PA stages. 3763 oscillator-buffer-multiplier and 6146 power amplifier. Rack mounted.
No. 90801, less tubes

VARIABLE FREQUENCY OSCILLATOR

The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6AG7 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive a 6146 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.
No. 90711, with tubes

HIGH VOLTAGE POWER SUPPLY

The No. 90281 high voltage power supply has a d.c. output of 700 volts, with maximum current of 235 ma. In addition, a.c. filament power of 6.3 volts at 4 amperes is also available so that this power supply is an ideal unit for use with transmitters, such as the Millen No. 90801, as well as general laboratory purposes. The power supply uses two No. 816 rectifiers. The panel is standard 8 3/4" x 19" rack mounting.

FLEXIBLE COUPLINGS

The No. 39000 series of Millen "Designed for Application" flexible coupling units include, in addition to improved versions of the conventional types, also such exclusive original designs as the No. 39001 insulated universal joint and the No. 39006 "slide-action" coupling (in both steatite and bakelite insulation).

The No. 39006 "slide-action" coupling permits longitudinal shaft motion, eccentric shaft motion and out-of-line operation, as well as angular drive without backlash.

The No. 39005 and 39005-B (high torque) are similar to the No. 39001, but are not insulated. The steatite insulated No. 39001 has a special anti-backlash pivot and socket grip feature. All of the above illustrated units are for 1/4" shaft and are standard production type units. The No. 39016 incorporates features which have long been desired in a flexible coupling. No Backlash—Higher Flexibility—Higher Breakdown Voltage—Smaller Diameter—Shorter Length—Higher Alignment Accuracy—Higher Resistance to Mechanical Shock—Solid Insulating Barrier Diaphragm—Molded as a Single Unit.

MINIATURIZED COMPONENTS

DESIGNED for APPLICATION miniaturized components developed for use in our own equipment such as the 90901 Oscilloscope, are now available for separate sale. Many of these parts are similar, in most details except size, to their equivalents in our standard component parts group. In certain devices where complete miniaturization is not paramount, a combination of standard and miniature components may possibly be used to advantage. For convenience, we have also listed on this page the extremely small sized coil forms from our standard catalog.

Delay Lines and Networks • "Designed for Application"

The James Millen Mfg. Co., Inc. has been producing continuous delay lines and lump constant delay networks since the origination of the demand for these components in pulse formation and other circuits requiring time delay. The most modern of these is the distributed constant delay line designed to comply with the most stringent electrical and mechanical requirements for military, commercial and laboratory equipment.

Distributed-constants delay line is furnished in three forms:

- 1. Bulk line
- 2. Flexible sealed completed units
- 3. Cased hermetically sealed completed units

The bulk delay line is approximately 5/16 in. diameter and is furnished in random lengths. It is priced "by the foot."

The flexible, sealed, complete lines are furnished with delay time of from 0.1 microseconds to 10 microseconds. The terminals are No. 18 tinned leads, extended through molded end caps. This form of line is particularly useful in applications where space is at a premium, as the line can be tucked around the edges of the masses, in otherwise waste space. The flexible lines are furnished with terminals on both ends for transmission use or with a dummy molded end replacing one of the terminals for pulse forming lines. Delay time is specified as time required for the transmission through one length of line only.

Care must be used not to coil line around a diameter of less than 1 1/2 in.

The cased lines are mounted in hermetically sealed metal containers with "metal to glass" terminals. Lines of this type can be furnished in values up to approximately 36 microseconds and with multiple sections, in a single case. Delay lines from 0.5 microsecond to 1.5 microseconds 1370 ohm characteristic impedance are mounted in a standard can 3/4 in. long by 1 1/4 in. high, by 1 in. thick. Delay lines from 0.1 microseconds to 0.5 microseconds are mounted in a standard e.c. 1 inch by 1 inch square and length to accommodate the particular time-delay line requirements. Delay lines 550 ohm impedance from 0.1 microseconds to 0.25 microseconds are also mounted in the standard 1 x 1 inch square can.

Case size, terminal arrangement, mounting feet or lugs, etc., can be furnished to customer's requirements.

Due to the special nature of delay line applications, we list no standard units, but solicit correspondence regarding your exact requirements.

ELECTRICAL CHARACTERISTICS:

Characteristic Impedance: 1350 ohms \pm 20% or 550 ohms \pm 20%. Special lines of any impedance between 400 ohms and 2000 ohms can be supplied.

Time Delay: Approximately 22 inches per microsecond for 1350 ohm line. Approximately 4.1 feet per microsecond for 550 ohm line.

Frequency Response: 1350 ohm line — When a 1 microsecond square pulse is applied to the line, the leading edge of the pulse after transmission through 4 microseconds of line has a time rise of not more than 0.2 microseconds and the duration of the pulse is less than 1.5 microseconds. (Line terminated by characteristic impedance.) Rise time is a function of delay.

Band Pass: A function of delay.

Attenuation: Approximately 1.9 db. per foot for one microsecond pulse. With a four microsecond delay line terminated in its characteristic impedance and a one microsecond square pulse input, the transmitted pulse height is no less than 35% of the input pulse height.

Test Voltage: 600 volts d.c. between winding and shield, between winding and case and between shield and case.

Leakage Resistance: 100 megohms or more between winding and shield and between winding and case.

Ambient Temperature Range: Minus 50 degrees centigrade to plus 85 degrees centigrade.

Thermal Drift: Less than 0.00038 microseconds per microsecond delay per degree centigrade.

Weight: Approximately 9.6 ounce per foot.

Many special applications require lumped-constant delay line. We are in a position to manufacture such lines to your specifications. The above illustrations are typical examples. Other designs including hermetically sealed units can be supplied.

Magnetic Metal Shields

The James Millen Mfg. Co., Inc. has for many years specialized in the production of magnetic metal cathode ray tube shields and bezels for the entire electronic industry, supplying magnetic metal shields to manufacturing companies, laboratories and research organizations. The study of such problems has resulted in the use of two outstanding metals for this purpose: NICOLOL and MUMETAL. It is possible by selecting the proper material, that is, Mumetal or Nicolol, or the correct combination of these materials, to reduce the effect of undesired magnetic fields.

Mumetal is generally used on equipment requiring the most thorough shielding, and where the trouble-causing field is of excessive magnitude. Nicolol is very effective in reducing fields of high flux concentration. Single Nicolol shields are satisfactory for general purpose application where the ultimate design does not necessitate too critical consideration of the effect of external fields. Where there is a combination of the requirement for optimum shielding and an abnormally high external field, the combination of Nicolol outer shield and a Mumetal inner shield is used. The Nicolol outer shield reduces the high field most effectively; and the Mumetal inner shield is then operating under the best condition whereby it reduces the interference from a low field to a minimum. For most applications, however, the single Mumetal shield is entirely adequate and to be recommended.

Both Nicolol and Mumetal obtain their effectiveness due to the correct selection of alloys on one hand, and the process of annealing so as to relieve stresses and provide the best possible molecular structure for effective shielding, on the other.

Magnetic metal shields can be furnished to meet the most stringent requirements and match the color of the equipment incorporating such shields. Due to the high alloy

content neither Nicolol or Mumetal is subject to corrosion and, in general, it is recommended that a zinc chromate primer and a high heat lacquer be used in finishing the shields. Plating is generally avoided due to the possibility that the shields might become magnetized in the plating process which necessarily is done after annealing. Care is used in the selection of materials used in conjunction with the shields for such purposes as brackets, supports, etc., so as to minimize many operations on the shields after annealing.

Gold rolled or stainless steel brackets are recommended as it is impractical to use brass which would melt under the high annealing temperature. Tube clamps must necessarily be made of spring metal which would lose its temper during annealing. In order to avoid this clamps are mounted on the shields after treatment by means of spun rivets so as to avoid any shock to the shield.

Shields and bezels have been designed to meet the stringent requirements of military, laboratory and industrial uses and still provide units which are economical and can be assembled into the complete equipment without complexity. Our standard shields and bezels are arranged to support the cathode ray tube from the front panel without addition of complicated supports and brackets.

Standard shields and bezels for the more popular tubes are available from stock for both production and research programs.

Many production programs, however, make desirable shields designed in conjunction with the specialized requirements of the basic apparatus. Our Custom Shield design and fabrication department is at the service of our customers for the development of magnetic metal shields for such specialized application.

Designed for Application Grid Dip Meters

Millen Grid Dip Meters are available to meet all various laboratory and servicing requirements.

The 90662 Industrial Grid Dip Meter hand calibrated $\pm 0.5\%$ for laboratory use with a range from 225 kc. to 300 mc. incorporates features desired for both industrial and laboratory application, including three wire grounding type power cord and suitable carrying case.

The 90661 Industrial Grid Dip Meter is similar to the 90662 except for a reduced range of 1.7 to 300 mc. It likewise incorporates the three wire grounding type cord and metal carrying case.

The 90651 Standard Grid Dip Meter is a somewhat less expensive version of the grid dip meter. The $\pm 2.0\%$ calibration is adequate for general usage. It is supplied without grounding lead and without carrying case. The range is 1.7 to 300 mc. Extra inductors available extends range to 220 kc.

The Millen Grid Dip Meter is a calibrated stable RF oscillator unit with a meter to read grid current. The frequency determining coil is plugged into the unit so that it may be used as a probe.

These instruments are complete with a built-in transformer type A.C. power supply and internal terminal board to provide connections for battery operation where it is desirable to use the unit on antenna measurements and other usages where A.C. power is not available. Compactness

has been achieved without loss of performance or convenience of usage. The incorporation of the power supply, oscillator and probe into a single unit provides a convenient device for checking all types of circuits. The indicating instrument is a standard 2 men instrument with an easy to read scale. The calibrated dial is a large 205° drum dial which provides seven direct reading scales, plus an additional universal scale, all with the same length and readability. Each range has its individual plug-in probe completely enclosed in a contour fitting poly-styrene case for assurance of permanence of calibration as well as to prevent any possibility of mechanical damage or of unintentional contact with the components of the circuit being tested.

The Grid Dip Meters may be used as:

1. A Grid Dip Oscillator
2. An Oscillating Detector
3. A Signal Generator
4. An Indicating Absorption Wavemeter

The most common usage of the Grid Dip Meter is as an oscillating frequency meter to determine the resonant frequencies of de-energized tuned circuits.

Size of Grid Dip Meter only (less probe): 7 in. x 3 3/8 in. x 3 3/8 in.

Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90604 thru 90610 are extremely small and designed primarily for engineering laboratory use where they

will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

PERMA-POWER RADIO CONTROLLED GARAGE DOOR OPENER

OPERATIONAL FEATURES

- When button is pressed, door automatically opens and turns on fixture light, illuminating garage. When button is pressed again, door automatically closes and locks securely. No conventional key lock required.
- New, exclusive, safety feature—light remains on for two minutes after door is closed to permit safe exit.
- Automatic shut-off gives extra protection. If door hits an obstacle, power shuts off instantly. When started again, door reverses, pulling away.
- Sensitive safety clutch is easily adjusted by a screw to exert just enough force to move door reliably. This vital safeguard makes door travel gentle and, consequently, easy to arrest.
- A detachable door arm permits unclutching for manual operation of the door in case of power failure.
- A push-button with wire is supplied for wall mounting in garage or other location to operate door from inside. This control circuit is only 24 volts and safely isolated from the main service line. Additional buttons may be easily installed at auxiliary points. A key-operated switch is available for outside mounting.
- The radio-control transmitter operates on an FCC authorized frequency of 27.255 mcs. It mounts under the hood and operates directly from the 6 or 12 volt car battery. When door operation from more than one car is desired, a separate transmitter is installed in each additional car.
- An exclusive, coded channel is set up in each radio control system upon installation. This allows operation free from interference with and from neighboring installations and other electrical devices.
- Concealed motor is a 1/2 HP, 117 volt, capacitor start type with ample power to operate the largest of modern, residential, garage doors. Also in the fixture is the radio receiver which turns on the motor when it gets a signal from the transmitter in the car.

Just a touch of your finger opens and closes your garage door

DOOR REQUIREMENTS—The Perma-Power Garage Door Opener will operate all one-piece tilt-up or sectional roll-up residential doors that travel on horizontal or curved roller tracks. Doors may be up to 18' wide and 8' high and of metal or wood construction. A clearance of 2" of headroom (space between high-arc of door and ceiling) in garage is adequate for installation.

INSTALLATION—Entire system was designed to make installation an easy one-man job. Simplified step-by-step instruction manual assures fast, professional results using common hand tools. Every part required is supplied, including mounting materials.

- **OPENS** garage door with a touch of the button in car or garage and turns on light.
- **CLOSES** garage door with a touch of the button in car or garage and turns off light.
- **LOCKS** garage door securely when shut.
- **GUARANTEED** fully and unconditionally for one year.
- **SAFE** because power shuts off if door hits an obstacle, and when started again, door reverses.
- **DETACHES** from garage door quickly and easily for manual operation in event of power failure.
- **NO MAINTENANCE** because moving parts are lifetime lubricated.

COMPANY OF AMERICA, INC.
OLD SAYBROOK, CONN.

NOTE: Stub E connectors meet or exceed both the "E" and "R" requirements of MIL-C-5015.

"E" Performance Per Military Specification

STUB E connectors are environmentally resistant "E" connectors fully meeting the requirements of the latest issue of MIL-C-5015. They incorporate several design improvements over standard "E" designs, providing increased reliability and economy. They are interchangeable with other MIL-C-5015 connectors.

STUB E construction: By taking advantage of every space-saving trick in the engineer's book, AMPHENOL STUB E connectors are the shortest MIL-C-5015 "E's" available. With overall length reduced, STUB E's, are also lighter than standard designs, a weight reduction that becomes significant in applications where large numbers of connectors must be employed.

The fully unitized rear sealing grommet assembly represents another superior STUB E feature. By the consolidation of the grommet, compression nut and ring into a single unit, handling of numerous components during assembly and disassembly is eliminated, providing better production and performance reliability. With these parts pre-assembled by AMPHENOL, surer sealing protection is also attained.

Solder pockets on all contacts are pre-tinned for easier wiring.

All socket contacts are tamper-proof, per resistance to test prod damage test in MIL-C-5015.

STUB E Shells are made of aluminum alloy, cadmium-plated with an olive drab finish. Contacts are bronze alloy, silver-plated. Resilient inserts are black neoprene rubber; grommets are grey neoprene rubber.

STUB E connectors are recommended for all electrical circuits calling for environmental resistance performance per MIL-C-5015. They are available in sizes 8S through 36, shell types 3100, 3101, 3102 and 3106; 49 insert arrangements are available.

"E" Requirements of MIL-C-5015. In addition to the normal requirements of this specification, "E" Class connectors are subjected to moisture testing after temperature cycling and vibration. Connectors are placed in a sealed chamber containing water. Chamber air temperature is varied each hour to cause heavy condensation on the connectors. Prior to the beginning of the test, and once each day during the 20 day test period, the insulation resistance between individual contacts and between contacts and shell are measured. The insulation resistance shall not be less than 100 megohms.

MINNIE MINIATURE CONNECTORS 67 SERIES

* Available in Hermetically Sealed Receptacles use "H" for shell design in part number for ordering in 67-04 shell type only.

AMPHENOL's 67 Series of MINNIE connectors are quick-d connect, multi-contact, miniature bayonet lock types. MINNIE Connectors are available as Plugs, Cable and Panel Receptacles and Single Hole Mounting Receptacles in four constructions, five shell sizes and 17 insert arrangements.

AMPHENOL MINNIE's are the first miniature connectors to fully meet the "E" requirements of MIL-C-5015C, the current specification governing A-N (now MS) type connectors.

Descriptive part numbering has been assigned to MINNIE's making identification easy. Shell type, construction class, size, insert number, contacts and alternate positions are all numbered.

Shell type numbers correspond to the "AN" nomenclature. Insert sizes and contact arrangements are shown below. "Z" or "S" in insert style identify pin or socket contacts. Available in alternate insert positions "W" and "X".

MINNIE OPERATING TEMPERATURES

FEATURES

- Environmentally sealed with unitized back end grommet. (Also available with provision for potting). Either grommet seal or potted seal meets moisture resistance requirement of MIL-C-5015.
- Spring-loaded coupling ring provides a positive locking action in the bayonet slot, and a constant compensating force which eliminates the effects of resilient face seal compression set.
- Stainless steel bayonet slots and pins reduce wear and friction characteristics. The three pin bayonet coupling minimizes the rocking action of the mated plug and receptacle.
- Flattened incline angle of bayonet slots reduces mating force requirement.
- Hooded contacts resist test prod damage as defined in Paragraph 4.5.14 of Amphenol Specification 340-43-2108. All contacts in sizes 12, 14 and 18 are gold-over-silver plated; contacts in sizes 20 and 22 are rhodium plated.
- Unitized grommet seal; clamp and grommet form a single unit for ease of assembly and maintenance.

- Face seal gasket with individual barriers to isolate each contact.
- Hard insert dielectric (plus resilient face seal) positively retains contacts with no possibility of contacts being pushed out of the insert.
- A visual full engagement indicator is included in the design to insure the user that he has fully engaged the connectors. The indicator is an orange line around the receptacle shell.
- Insulation resistance of "E" type following altitude-moisture resistance test is a minimum 1,000 megohms. MIL-C-5015 minimum following type "E" test is 100 megohms.
- When using mated sealed connectors, no derating for altitude is necessary at 70,000 feet.
- Test voltage 1,500 volts RMS 70,000 feet on sealed connectors.
- Vibration per Method 204 of MIL-Std-202A. 10 to 2,000 cps at 20 g's.
- Temperature cycling range per MIL-C-5015 increased to 257°F. maximum and -67°F. minimum.

SERIES C CONNECTORS

feature many electrical and mechanical improvements over the other type coaxial connectors. They are especially designed for 50 ohm cables. However, they may be used with 70 ohm cables where impedance matching is not critical. The Improved Series C connectors are intended for use up to 1,000 volts peak. An improved cable clamping mechanism provides maximum cable grip and adequate sealing with a minimum of cable indentation.

SERIES HN CONNECTORS

are weatherproofed, high voltage (5,000 V. peak) connectors of constant impedance for use with 50 ohm RF cables. Newest in the HN Series are the Captivated Contact Connectors. Often coaxial cable dielectric and/or center conductor will recede due to mechanical or environmental stresses. This causes ordinary connector contacts to pull away from each other often resulting in actual disconnects. AMPHENOL Captivated Contacts are retained within the connector body by interlocking design.

SERIES UHF CONNECTORS

are low cost, general purpose connectors of non-constant impedance. The small and large single contact types are for use with small and medium size coaxial cables in applications where line balance or increased standing wave ratio is not important. Where impedance matching is necessary Series N or Series BNC connectors should be used. The small and large twin contact types are for use with the small and medium size twin conductor cables.

PUSH-ON CONNECTORS

are designed for those applications where a quick connect and disconnect feature is mandatory. There are no threaded or bayonet-lock type coupling rings involved, just a proper interference fit between plug and receptacle permits quick and easy engagement or disengagement yet provides a sufficient amount of retention to assure trouble-free operation. Especially useful in video patch-cord applications.

Provide firm holding under extreme shock and vibration. For capacitors, resistors, relays, wires, cables, tubing, etc. Withstand vibrations of 10 to 500 cycles and 5 to 20 G's for eight hours without resonant frequencies. Structurally designed to derive maximum grip from the component itself. Made of spring steel which flexes under heavy vibration and temperature changes, automatically increasing holding power when

most needed. SPECIFICATIONS: SAE \pm 1065 tempered carbon steel, formed in the annealed state, cadmium plated, per QQ-P-416A, Class 2 Type II, able to withstand minimum 50-hour salt spray test, per AN-QQ-S-91. SIZES: 0.175 to 1.125. FILE-O-MATIC REFERENCE: section 19, page 4, for more information.

ATLEE SUBMINIATURE TUBE HOLDERS AND SHIELDS

For conditions of extreme shock and vibration, high-rate heat dissipation and minimum-space mounting. Withstand up to 20 G's at 500 cycles without resonant frequencies; average heat reduction over 50° (tests); low center design for minimum space — maximum holding power. Ultimate in convenience — no wrap-around motions in cramped spaces — just clip in or clip out. Tubes can freely be removed and replaced without loss in Holder performance. Holders available in silver alloy and silver-plated beryllium copper as well as cadmium-plated tempered carbon steel. Shields available in silver alloy and silver-plated brass. Vertical and Oval Sub-miniature Tube Holders available in tempered carbon steel. FILE-O-MATIC REFERENCE: section 19, pages 1 and 2, for more information.

This new ATLEE development for longer tube life and greater equipment reliability provides twice as much tube contact as other style inserts. Making almost 100% contact with both tube and shield, it assures quick, positive heat dissipation from nearly all the tube surface. It also acts as a tube cushion, reducing microphonics. Easily installed

in any TS or TR shield. SPECIFICATIONS: heat treated beryllium copper .002" thick per QQ-C-553; black matte finish, withstands 50-hour salt spray test; sold in strips of desired length, or in coils by the running foot; standard widths—.75", .86", 1", 1.2", 1.5"—other widths on request.

ATLEE TRANSISTOR CLIPS and HEAT SINKS

Available for all types and sizes of transistors. Can be provided coated with Durafilm to provide 500 V.D.C. insulation. Cadmium plated spring steel or silver plated beryllium copper alloy \pm 25, for horizontal or vertical mounting. Silver plated beryllium copper alloy \pm 25 with no-twist lug or solder lug. MS-E AND MS-R PLUG SERIES

MS-E (formerly called AN-E) and the new MS-R plugs are designed to operate in extreme environmental conditions... such as moisture condensation, corona formations, flashover, and vibration. This environmental sealing is accomplished with a resilient grommet at the rear of the insulator which has internal restrictions in a wire cavity acting like "O" rings around the wire. Insulators are made of resilient material to prevent damage from vibration. Resilient insulators and grommets provide a plug completely sealed from cable to cable, through the mated plugs.

MS-E Cannon Plugs are available in two types: Series ME with external cable clamp, and Series CT with shortened endbells and

internal clamping action.

The MS-R Cannon Plugs are identical to the MS-E Series CT. The only difference is the addition of an "O" ring seal about the 3106 and 3108 plug barrels which supplements the interfacial seal.

The shells, endbells, and coupling nuts are of aluminum alloy. They are cadmium plated and converted by chromate treatment to an olive drab finish as required by MIL-C-5015. Insulators and grommets are of a lightweight resilient polychloroprene.

The pin and closed entry socket contacts are machined from copper alloys of high conductivity, and are silver plated.

The MS line of Cannon Plugs is designed to meet Military Specification MIL-C-5015... the military specification covering electrical connectors. Until recently this line was designated as the "AN" line. The complete MS plug consists of two mating units... a plug assembly and receptacle assembly.

MS plugs were designed originally for aircraft but are now used widely in other fields. These plugs, although designed and approved under military specifications for use by the armed forces, are ideal for commercial and industrial applications where the same quality and dependability are desired. Industry in general has appreciated the relatively low costs, uniform quality and interchangeability as prescribed in the MIL Spec.

MS plugs are available with from 1 to 100 contacts in 15 different shell diameters ranging from .250 to 2.550 inches. Each plug meets or surpasses the latest Specification MIL-C-5015. Each insert arrangement is available with pin or socket contacts, and will mate with the MS type having the same size and layout.

Shells are high grade aluminum alloy, lightweight and non-magnetic. All metal parts other than contacts are cadmium plated with a chromate conversion finish in dull olive drab.

Contacts are made of the best conductive material commensurate with strength. Socket contacts are full-floating, have a closed entry construction to avoid distortion, and have beryllium copper springs with excellent fatigue properties.

STANDARD K AND RK PLUG SERIES

The Standard K Series of Cannon Plugs was the first complete plug series designed (in the late 30's) as airborne equipment. They are lightweight, rugged and durable, and are used extensively in many fields outside of the aviation industry.

The principal difference between MS and K types is found in the coupling thread...the K line uses acme thread and the MS line uses unified screw threads.

While K and RK are related fittings, their differences prevent mating of a K type with the RK type. Essentially the RK is a reverse coupling version of a standard K. Because of this, different insert housings

and coupling means are employed, prohibiting interconnection of the two types.

Shell parts are aluminum alloy with standard cadmium finish. Contacts are brass, silver-plated, and are machined from brass rod, with tinned solder pots.

K and RK plugs are available in 7 basic shell types having 8 insert sizes, totalling more than 220 arrangements with a variety of amperage and voltage capacities. They are available with from 1 to 110 contacts in eight size diameters ranging in size from 5/8 to 2-1/4 inches.

JUNCTION SHELL

DPD-34CL-5/8 AN
JUNCTION SHELL

DPD plugs are designed for unit plug-in applications. They are distinguished from other Cannon lines by their rectangular shape and they provide maximum space utilization on rack/panel chassis equipment. One half of the plug is mounted to a radio rack or panel, for instance, and the other half is mounted to the instrument. By this means instruments can be easily removed for inspection and repair.

The DPD is the standard of the DP (Dual Panel) line and accommodates the widest range of contacts in both style and number. They are available with from 2 to 78 contacts in 22 basic insert arrangements, plus variations. A variety of endbells for junction shells are available. The shell is chamfered to facilitate engagement.

Shell material is die-cast aluminum alloy with cadmium plate finish. Insulation is molded melamine or fabricated phenolic. Inserts are retained by insert retaining clips. Retaining clip is metallic and will ground coaxial contacts unless insulation is specified.

DPA AND DPX MINIATURE PLUGS

In response to a need for a small rectangular rack/panel plug of great strength, Cannon Electric has designed two rugged miniatures, the DPA and DPX. They are similar to the DPD plugs but occupy approximately 35% (for the DPA) and 46% (for the DPX) less area for rack/panel chassis mounting.

The DPA utilizes a one-piece shell construction. The elimination of conventional insert-retaining screws provides a maximum utilization of insert area and results in a new ease of assembly. The insert is held in place by a retaining clip at the rear of the shell.

The DPX has a two-piece split shell construction. Inserts are held in place by means of internal grooves molded into the shell. These grooves accommodate raised shoulders on the insulator, completely embracing and locking the insert assembly. An external assembly ring slips over the shell halves to hold them together. The DPX can be completely assembled without tools.

The standard insert material for the DPA and DPX is melamine. DPA insert layouts accommodate 5 amp and small coaxial contacts. DPX insert layouts accommodate 5 amp, 10 amp, and small coaxial contacts.

MC SUBMINIATURE PLUG SERIES

MC Subminiature Cannon Plugs were originally developed for the Signal Corps, who had a need for a small, cylindrical, sealed plug of exceptional sturdy construction. These plugs have been designed to withstand moderately severe handling and environmental conditions, and incorporate a shell which has maximum strength within its volume limits. Sealing has been accomplished by interfacial compression of the resilient insert, the latter affording a high degree of vibration resistance at the same time. The strong coupling nuts utilize a rugged special Acme thread to permit fast, simple engagement and disengagement.

Three sizes are available, alternate insert positions are provided for, and a total of eight plugs and receptacles can be furnished. Pin or socket inserts are available in each plug size.

K MINIATURE PLUG SERIES

The K Miniature Series of Cannon Plugs was designed for applications requiring smaller plug types in cylindrical designs with metal shells. They incorporate design features to provide high performance and maximum flexibility. Rigid standardization has been incorporated in this series, allowing interchangeability from the standpoint of usage.

Shells for plugs, receptacles, and endbells are high tensile aluminum alloy, cadmium plate finish with chromate conversion. Insert material is Zytel, except high current types which are melamine. KO8 (9") and K45 (45) endbells have removable caps for inspection and potting.

A special sealing ring in KO2 receptacle provides for pressurization when used in conjunction with potted installations. KH types, or hermetically sealed versions, are also available.

D SUBMINIATURE PLUG SERIES

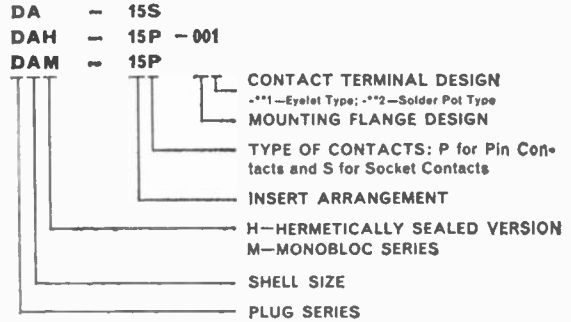

D Subminiature plugs are small, lightweight, rectangular plugs in 5 sizes, with 9, 15, 25, 37, or 50 gold-plated contacts. These compact plugs feature steel or brass shells with iridite finish, and Zytel or Diallyl insulators. They withstood a test voltage (60 cps ac rms) of 1300 volts for one minute with no evidence of breakdown. D Subminiatures are available with contact terminations for coaxial cables and taper pins. Solderless, crimp-type, snap-in contacts are supplied in addition to standard solder cup styles.

The D Subminiature "Monobloc" Series has a one-piece insulator for added strength. These "Monobloc" plugs are dimensionally and physically interchangeable with the Standard D Subminiatures with the exception of the solder pot and rear insulator extensions, which are slightly longer. The added length provides better contact stability and increased insulator strength.

Coaxial contacts are available for both the Standard D Subminiature and "Monobloc" Series. Accessories for D Subminiature plugs include: Straight Junction Shells, Straight Clamp Type Junction Shells, 90° Junction Shells, and Guide Pin Plates.

NOMENCLATURE EXPLANATION

GSO2 HERMETICALLY SEALED PLUGS

GSO2 Hermetically Sealed Plugs are used wherever instruments are required to be hermetically sealed within a partial vacuum, inert gas, or a constant or controlled pressure.

GSO2 plugs are made with standard MS insert layouts, and with a variety of mounting flanges. These plugs are also available with high-voltage, high-current, and coaxial contacts.

Shells and pin contacts are of steel. Vitreous insulation is used in a manner which creates an hermetic seal and prevents a leakage rate in excess of one micron cubic foot per hour at a pressure differential of 1 atmosphere as tested on a mass spectrometer.

SUBMINIATURE KWIK-TERM TERMINALS

Cannon Kwik-Term subminiature terminals are now available for use in conjunction with Radar, TV, HF, UHF, VHF, Microwave, and other "sophisticated" circuits.

Kwik-Terms are easily installed into an electronic chassis by simply pressing them into a pre-punched or pre-drilled hole. The TEFLON material of the insulator when pressed into a slightly smaller mounting hole tends to relieve its own stress. This causes a rivet-type action in the TEFLON which anchors and seals the terminal securely and permanently to the chassis. No nuts, washers, staking or soldering is required.

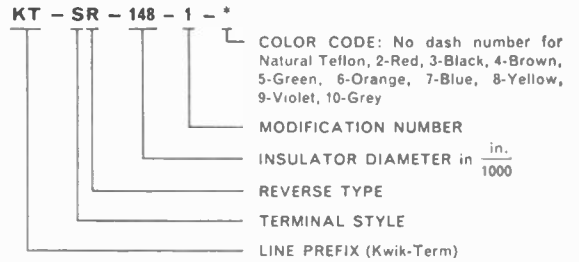

The following features illustrate the advantages of Cannon Kwik-Terms:

- Ease of assembly even in crowded installations
- Installation in seconds
- Saves weight and space—eliminates terminal boards
- Rugged—Kwik-Terms resist vibration and shock
- Wide variety of terminal configurations and pin lengths
- Kwik-Terms are heat resistant for soldering
- Wide variety of finishes, colors, and soldering lugs can be supplied to order

ALRF PLUG SERIES

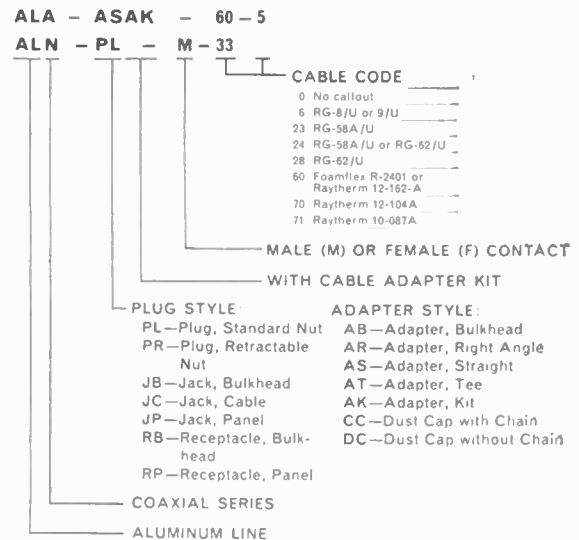

This new Cannon Plug Series of Aluminum RF Coaxial Plugs and Adapters utilize aluminum as the major portion of material in order to reduce weight. Included in this new series are aluminum variations of the standard N plugs and adapters for Foamflex and Raytherm rigid cables.

The new ALN line is 35% lighter than standard N types. Their electrical performance equals or betters that of the standard N. They have a black anodic finish for maximum corrosion resistance.

Cannon ALA Cable Adapters designed for Foamflex and Raytherm cables permit a high degree of flexibility and adaptability in RF systems. With these adapters, rigid and flexible cables can be joined and interchanged as space requirements dictate.

“400” SERIES PLUGS AND SOCKETS

(Formerly “Heavy Duty”)

General Specifications

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze “knife-switch” type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are 1/4" wide by 1/16" thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

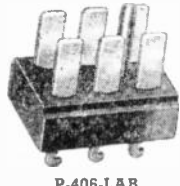

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

"2400" SERIES PLUGS AND SOCKETS

The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.

This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass 1/4"x1/8", cadmium plated.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified the following size cable entrance holes will be supplied:

2402—3/8"	2406—7/16"	2410—1/4"
2404—7/16"	2408—9/16"	2412—5/8"

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded Bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.

Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

“500” SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation, without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{1}{8}$ " x $\frac{3}{32}$ ".

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from $\frac{1}{2}$ " diameter and $1\frac{1}{4}$ " diameter in steps of $\frac{1}{8}$ ", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Eyelets and Binder Screws are of brass, nickel plated. The 3/4 W or Y terminals are of brass, hot tin finish.

HAN-D PLUGS

TWO CONDUCTOR PLUGS

1/2" diameter handle

Electrocraft's Han-D phone plug is drastically reduced in size and sturdy in construction. One piece solid brass nickel plated tip rod is pressed into tip terminal and staked to insure positive electrical contact. Terminals, high grade insulation, plug body and tip rod are mechanically interlocked to prevent turning. Plug is designed to fit all standard two conductor phone jacks. Where polarization is required, use .206" finger diameter plugs. These plugs mate with Electrocraft's 311 and 312 phone jacks.

THREE CONDUCTOR PLUGS

1/2" diameter handle

Three conductor plugs are of same design and construction as Electrocraft's two conductor plugs. Terminals are available in same varieties. Also mechanically interlocked. All terminals are hot tinned for easy soldering. Handle styles—metal, red or black plastic. Plug fits any standard three conductor phone jack. All plug parts and terminals are made of brass—suitably finished. Where polarization is required use .206" finger diameter plug. These plugs mate with 314, 323 and 333 jacks.

MICROPHONE CONNECTORS

Cord mounted types are of rugged design in nickel plated brass to withstand hard use. Handy knurl grips are provided for use in engaging coupling threads. Cup point set screw firmly locks braided cable and strain relief spring in place. Panel mounted types assemble easily in .375 hole when grounded to chassis. When insulating washers are used—mounts in 29/64" hole. Mates with 402. Panel mounted closed circuit types mount in the same manner as above. Flated brass spring actuated contact exerts constant pressure for quiet operation. Contact closes circuit with cable connector removed, thus eliminating noise. Mates with 402.

HAN-D JACKS

Electrocraft's Hand-Jacks require a minimum panel space and depth behind panel, yet make positive electrical contact with mating plug which is held firmly attached by positive spring pressure. High grade insulating washers are switched to engage both spring blades and terminals, thus providing a positive mechanical locking arrangement preventing shifting of electrical connections or changes in adjustment. Springs are special nickel silver material, insuring long spring life and maximum "solderability."

These jacks are designed to fit our standard mating plugs. Adjustment to other than standard plugs may be arranged on request.

MOLDED PLUGS and JACKS

FOR HI-FI, TUNERS, AMPLIFIERS, PRE-AMPLIFIERS, RECORDERS, SPEAKERS, SPEAKER EXTENSIONS, RECORD CHANGERS, PUBLIC ADDRESS SYSTEMS, AUDIO EQUIPMENT, RADIO AND STEREPHONIC SYSTEMS

The NEW L-T MOLDED construction, with "finger grip" grooved terminations, greatly improves the appearance of the cable, makes the connectors virtually indestructible, and provides new ease of handling. L-T's molded connectors are waterproof; there is no strain on soldered connections, and they eliminate the need for unsightly external clamps. The molded plugs and jacks are an attractive gray, to match the soft gray color of the cable. L-T cables are soldered to the connectors before molding, assuring completely

noise-free operation. L-T cable is of the highest quality, low-capacitance type, insuring minimum loss. Jacket is of smooth silver-gray, non-contaminating high temperature plastic. L-T plugs and jacks are made of highly polished brass, machined to close tolerances, then double-plated. L-T connecting cables with MOLDED terminations are individually packaged in strong, clear plastic bags or attractive boxes, with complete description and length of cable printed on the label.

COMPLETELY INSULATED ALLIGATOR CLIPS

Patent Pending

No. 63 or 63-C Clip
Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 15/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

No. 63—INSULATED ALLIGATOR CLIP (STEEL)

No. 58**

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClampPipe that cannot be found in any other make.

The ClampPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

The best ground clamp value on the market. Applicable to pipe 3/4" to 1 3/4" outside diameter.

"JACK COVERS"

"LITTEL-JAX AND "TINI-JAX"

The "Littlet-Jax" (A) features notched insulating washers mechanically interlocking springs and lugs; "A" bend in tip spring firmly "holds" mating plug; minimum space requirements, economical. Mount in single 1/4" hole, panels up to 1/2" thick, except L-11 and L-12A in panels up to 3/4" thick. No. C-11 (JJ-034) and C-12A (JJ-089) plug with No. 440 (PJ-055B) Plug; C-12B (JJ-033), S-12B and S-13B mate with No. 480 (JAN PJ-068 or W.E. No. 309) Plug. No. C-11 and C-12B have locating pins (non-turn sleeves). No. S-11 similar to No. 11 except .210" I.D. device to mate with S-250 and S-280 Plugs. C-11 (JJ-034), C-12B (JJ-033) and C-12A (JJ-089) per JAN-J-641. All others mate with standard 1/4" dia. plugs such as our No. 30, 250, etc.

The "Tini-Jax" (B) a miniature 2-conductor Jack, approximately 1/4 the size of the "Littlet-Jax", otherwise similar in construction. Mounts in 1/8" dia. hole, panels up to 1/2" thick. Mate with "Tini-Plugs" No. 710, etc. 43A has a unique spring design that requires a pear-shaped tip, such as our No. 750.

Has a "HI-LO" Impedance Switch, in "HI" position, when used as a straight amplifier (without mixer) has a 200,000 ohm input and provides a 6 db. gain and in "LO" position has a 25 db. gain with input impedance of 5,000 ohms. Compact, approximately size of package of cigarettes; completely portable, requires 9 volt battery (included).

Has standard 2-cond. Phone Jack Input and 2-cond. Phone Plug Output. Can also be used at a microphone, using cables up to 30 feet long, without serious loss of high frequencies.

Frequency response 20 to 20,000 cycles. Also ideal for Phono Pickups (Magnetic and Crystal).

SOCKET EXTENDERS

SOCKET EXTENDERS provide a replaceable unit for use in tube testers. Wear is shifted from the socket in the tester to the one in the Extender so that when it is worn out a new one can be easily inserted. Sockets have highest grade beryllium copper contacts. A screw projects thru the plug and may be used to hold the unit firmly in place if desired. Socket to plug leads are soldered and an outer shell is used.

THE ROTOPROBE

THE ROTOPROBE is a new type of test adapter to which a rotating test lead is permanently attached. Rotation of the shell causes a contact arm to move across the pins connecting the socket elements so that any position may be quickly contacted. This serves the same purpose as the usual Test Adapters but is more convenient and faster.

NATIONAL CHOKES

R-45 series, a new family of ferrite bead chokes for use as filament chokes, parasitic suppressors, and series elements of low-pass filters for frequencies from 5 to 200 mc. Insulated with an impregnated fiberglass sleeving, these chokes will handle 2 amperes of filament current with voltage drop of less than 0.02 volts, temperatures to the Curie point of 125°C.

R-40 series ferrite-core chokes . . . extremely high Q for small size. They are primarily for use in networks and filters at frequencies from 50 kc to 1500 kc, and as resonant elements in IF and RF circuits. Fungus-proof varnish impregnation per MIL-V-137A.

R-25

series MIL-inductance chokes for high frequency circuits, as filament chokes and peaking coils, inductance per MIL-C15305A, coil forms per MIL-P-14, and impregnation per MIL-V-173A.

R-33, R-50 and R-60

series RF coils are wound on molded phenolic forms per MIL-P-14 and coated with a tough, fungus-resistant varnish. R-50-10 choke is wound on a powdered-iron coil form instead of phenolic.

NATIONAL'S EXCLUSIVE "FLUSH MOUNT" CAPTIVE NUTS

Flush fit on both sides of aluminum sheet to provide permanent tapped holes.

Available in Five sizes for use in metal thickness from 1/16" up - in thread sizes from 2/56 up. No special tooling required. Drilled or Punched round hole $\pm .002$ only requirement.

MATERIAL: Stainless steel 303 as per MIL S-853A.

FINISH: Passivated as per MIL P-12011.

Four additional types also available, including one type which provides a permanent thread in thin aluminum that meets MIL SPECS P-11268, E-5400 and E-16400. A complete line of CAPTIVE STUDS is also available.

PRECISION RIGHT ANGLE AND VERNIER DRIVES

Type PRAD: Right angle drive for remote operation of low torque units. Designed for continuous low-speed operation (loads up to 50" ounces), and intermittent high speed operation (up to 500 RPM) with loads up to 100" ounces. Less than 1 1/2" backlash; drives and shafts of various lengths; various size output hubs; brass gears; stainless steel shafts, bushings and sleeves; die cast zinc housings.

Type RAD: Right angle drive. For ganging capacitors, potentiometers or other parts in heretofore inaccessible locations on chassis. Die cast zinc housing gears.

Type AN: Time-tested vernier mechanism. Designed for use with any 3/16" National knobs and others. Drive ratio: 5 to 1; drive shafts: 3/16", 1/4" or to specifications; fully insulated output shaft coupling; output hub fits 1/4" shaft; readily adaptable to many types of drives.

Type AVD: Vernier mechanism. Similar to type AN (above) except that output-shaft is non-insulated. Dimensions: over-all diameter 2-9/16", length 1-15/32".

SUB-MINIATURE TEFLON TERMINALS

NEW SUB-MINIATURE TEFLON[®] terminals provide instant mounting without any extra hardware of any kind because of the exceptional properties of Virgin Teflon[®].

Low dielectric constant, low power factor (60 cps to 50,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (1500-2000 v/mil. s.l.t.), continuous service—450 F to plus 500°F, unaffected by soldering, chemically inert, damage resistant, water repellent, voltage rating, sea level 750v r.m.s., flash-over, sea level 3000v r.m.s., flash-over, 50,000 ft. 1300 v r.m.s.

Installed permanently in seconds, in metallic or non metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Data: 1. Punch or drill the hole to a diameter that is .012" less than the diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040" or smaller), counter-sink 45° to the diameter of the insulator.

Speeds up assembly—cut production costs, no nuts, washers, staking or soldering necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, tele-metering, guided missile instrumentation and circuitry.

Variations of specifications listed below are available. Your inquiries invited.

ALL-NYLON FASTENINGS

Zytel 101 per Mil P 20693 Spec, Mil S 7742 Spec
Birnback All-Nylon Fastenings are made of Zytel
101⁺, a Polyamide plastic of the Nylon 6.6 Type.
They offer outstanding insulating properties plus
resistance to heat, shock, vibration and chemical
solvents plus lightness elasticity and superior torque
strength. In most cases, because of their high die-
lectric strength, they eliminate the need of bush-
ings, washers or other insulation. They are corrosion
resistant, non-magnetic and good torque strength thru
a wide temperature range. Continuous service tempera-
ture to 300°F (150°C). Stock color: Natural.
Additional colors available to order. Zytel 101 per
Mil. P-17019B.

Used in variety of applications, such as:
appliances, computers and business ma-
chines, chemical and food processing
equipment, electronic equipment and in-
struments, airborne equipment, etc.

CAMBION TERMINAL-SWAGING TOOLS

HAND SWAGERS: For small-volume staking, Cambion Hand Swagers are recommended. These hand swagers are machined from fine tool steel, carefully tempered for long wear. They can be used manually or in a click press, pneumatic press, or riveting machine. All tool diameters are 1/2". Hand Swager tooling is designated by the HS prefix.

PRESSURE SWAGERS: Cambion Pressure Swagers are specially designed for mounting Cambion terminals on terminal boards. These swagers are sturdy, precision-built, hand-operated, cam-action rolling tools. Designed for quick, solid, uniform swaging of solder terminals. Cambion Pressure Swagers are adjustable to a wide range of terminal board thicknesses by setting the anvil at the proper height. Terminals may be swaged in place as far as 1/8" from the board edge. Pressure is adjustable and uniform, assuring good, even bonding.

Pressure Swagers are furnished complete with one set of tooling. Refer to the terminal tables for proper PSA and PSP tooling for each type of Cambion terminal. When ordering, specify part number of terminal, as well as tool number. Additional interchangeable anvils and punches are available for Cambion Pressure Swagers.

HOPPER STAKERS: For high-volume staking, involving thousands of terminals, Cambion Hopper Stakers are recommended. The Cambion Hopper Staker is a semiautomatic device for feeding and staking Cambion solder terminals at approximately 100 terminals per minute. For additional information, consult the Factory.

RATIO DRIVES

JAN ratio drives employing precision ball bearings are used for the smooth control of components in instruments or applications where miniaturization is essential. Ruggedly built and permanently lubricated, these units render a smooth rotary control between input and output shafts which rotate in the same direction. Type RDL and RDS are supplied with "in-line" output-input shafts. Type RDLC is supplied with concentric type input-output shafts. Torque rating is 12 in. 1 lb. max.

SLIP-CLUTCH KNOBS

Cat. Nos. K-1375, K-1376, K-1475

Fixed or Retractable Spinner

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs work on the principle of a "slip-clutch," automatically disengaging and slipping when a predetermined torque is exceeded. JAN's SAFETY KNOBS are fluted to aid in sensitive adjustment and also have either a fixed or a retractable spinner for fast turning. Made from single unit construction, molded Bakelite-to-metal inserts, these knobs safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

Note: Model K-1376 is identical to Model K-1375 but has the additional feature of a retractable spinner. It has a positive toggle type action, being spring loaded in either open or closed position and thus is useful where equipment must fit into small spaces. Designed for 1/8" shafts.

K-1475 Spinner Slip Clutch Knob made of Aluminum.

SPINNER KNOBS

Cat. Nos. K-1275, K-1276

Models K-1275 and 1276 are spinner knobs having an identical appearance to K1375 and K1376 respectively and are available without the slip-clutch mechanism. Designed for 1/8" shafts, these knobs are made from single unit construction, molded black bakelite-to-brass insert. Supplied with two set screws for firm attachment to the shaft.

JACK COVERS (TRIMMER COVERS)

These sturdy Jack Covers fit jack or panel bushings and are used to keep out dust and moisture as well as to prevent inadvertent disturbance of control settings. Outer surfaces are finished in standard colors of baked enamel.

NOTE: No. J-1300 (SNAP-JACK) is made with toggle action. It snaps to open or shut position and will remain open until snapped shut. No. J-1304 is a miniaturized Jack Cover similar to a No. J-1301 but without thumb lift.

RIGHT ANGLE RATIO DRIVES

Featuring dual output shafts, at right angles to input shafts, this series of miniature drives provide an ideal type instrument control and are available with matched BEVEL or WORM-GEARS covering a wide range of ratios. JAN's WORM GEAR RIGHT ANGLE DRIVES are especially suited for handling spring or gravity loaded components since the output shaft automatically locks in any desired position and is controlled only by the input shaft which remains free for smooth drive in either direction. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless steel shafts, mounted in oilite bearings and held under constant pressure.

MAGNETIC SHIELDS FOR CATHODE RAY TUBES

JAN MAGNETIC SHIELDS are made of Mu-metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields. In addition, the use of these shields protects personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN's standard bezels as listed below. See following pages for specifications on JAN BEZEL ASSEMBLIES.

Escutcheon Plates

Jan's molded, black, shock-resistant plastic escutcheon plates are available in a wide variety of different sizes. Radically different. Provably better. And you can tell them at a glance—by their hexagonal bodies. The only connectors that can be wired and rewired in factory, lab, shop or field, without special tools. Typical advantages:

Successfully withstand pull-out strain in excess of 20 lbs.

Captivated contacts insure proper engagement of mating parts.

Clamping parts, insulators and contacts readily assembled on cable before insertion in connector body.

Gold-plated hex stock allows as-

sembly with usual pliers or small wrench.

Contacts soldered to center conductor of cable, insuring proper connections.

No distortion of cable insulation that might affect electrical characteristics.

Flexible design accepts all RG-188 U MIL cable diameters.

VECTORBOARD

Pattern A & AA

Pattern F

Pattern G

VECTORBOARD (Pre-punched terminal board) is especially useful for breadboarding as well as production because it provides an overall grid of pre-punched holes. Holes are either .093" or .062" diameter in XXXP phenolic per MIL-P-3115B or epoxy paper. Also available in Epoxy Glass grade G-10 per MIL-P-18177, Glass Silicene Grade G-7 per MIL-P-997B, and in other board sizes and hole patterns.

VECTOR PUSH-IN TERMINALS

T9.4

T9.6

TANDEM

VECTOR PUSH-IN TERMINALS simplify "breadboarding". Push them into .093 holes in 1/16" or 3/32" Vectorboard panels and they hold without staking. (May be staked if desired for maximum holding). Each terminal has serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires, small slot holds transistor leads. The T9.6 also has special slot to accommodate diodes. All types have thru-shank construction enabling riser wires to be inserted down through center of terminal, and slotted shank end for additional connections.

CABLE CONNECTOR PLUGS

These permit connecting cables to miniature and naval tube sockets. Aluminum shells are fitted to 7-pin and 9-pin plugs. In type "C" a rubber grommet (with 1/4" hole) is mounted in the side wall and a center screw holds the assembly together. In type "D" a Heyco strain relief grommet is mounted in the end of the shell and the base screws hold the shell on the plug.

These devices are designed to give high pressure spring loaded contacts. They incorporate a locking action caused by mating a depression on the male tongue with a raised pin in the female slot when the parts are engaged. Insulation is not available on the flag design.

NYLON-INSULATED CLOSED-END CONNECTORS

Material - Connector: Tin plated seamless brass.
Insulation: Natural color molded nylon.

Wire ranges shown in the table represent various cumulative totals of wire diameters that may be combined and inserted for crimping. A completely insulated splice of two, three or more wires may be quickly and cheaply made as follows:

1. Strip insulation to show 3/8" to 1/2" of bare wire.
2. Insert wires fully into cap.
3. Squeeze barrel with crimping tool.

VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. **Running Time Meters** are synchronous motor operated instruments to automatically measure service periods or service requirements.

APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. **Running Time Meters** are often used in conjunction with reed type frequency meters.

LABORATORY STANDARD CAPACITORS

ARCO Standard Capacitors are stabilized silvered mica dielectric capacitors in values up to 0.1 mfd. The capacitance values above 0.1 mfd. are fabricated using a combination of silvered mica and polystyrene dielectrics. The latter design improves the insulation resistance and dissipation factor exhibited by mica alone, and in addition enables maintenance of miniaturized enclosure.

The stability specification of $\pm 0.05\% \pm 0.1$ mmf. is derived from many years observation of long term stability of silvered mica capacitors. Units similar in construction to those employed in ARCO standards are still accurate as laboratory standards after ten years use. They remain within 0.1% of original calibration. Periodic screening of these standards yields an attrition rate of less than 1% on drift exceeding $\pm 0.05\%$ over a three year period.

The higher values which incorporate polystyrene dielectric in construction also exhibit the order of stability specified. Through specially developed electrical screening and thermal stabilization, the long term drift inherent in the polystyrene sections will match that of silvered mica construction.

The enclosure is drawn aluminum with a rugged baked hammertone finish.

The base is a non-hygroscopic thermosetting resin specifically selected for its long term resistance to humidity. To insure long operating life, the capacitive elements are moisture sealed prior to assembly. Then the entire assembly is potted to provide additional moisture protection. The result is a rugged, reliable capacitor standard which will maintain calibration accuracy for years regardless of frequency of use.

LABORATORY STANDARD CAPACITORS

ARCO Standard Capacitors are designed to provide highly precise, versatile laboratory standards at moderate prices. These components are less than half the size and weight of comparable products. As a result, use of multiples and combinations does not become unwieldy. The banana plug terminals are detachable. Their removal leaves threaded 6-32 bushings for easy substitution of terminals of another design. One terminal of ARCO Capacitor Standards is grounded to the case and is identified by the letter "G" on the label.

A four position adapter is available for simple combination of standards to obtain exact desired values. With the complete set of ARCO Standard Capacitors, any capacitance value accurate to four significant figures with a $\pm 0.1\%$ tolerance can be constructed with four capacitors plus the adapter. The adapter is calibrated for stray capacitance to maintain accuracy afforded by individual standards. In this manner, the ARCO Standard Capacitors are readily used in decade fashion, affording accuracy which is not approached by conventional capacitor decades.

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster, easier than expensive, bulky meters.

*Satisfaction
Unconditionally Guaranteed*

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The **CIRCUITRACER** is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

PRECISION

Modern Engineering . . .

EMICO panel and test meters are rugged and reliable instruments. (Available with plastic or metal face.) DC meters have the new HI-TORK magnetic movements and are accurate to well within 5%. AC meters are of the moving iron type and are also accurate to within 5%.

MOUNTING — All model NF-2C, RF-2C, and RF-2¼C with plastic front meters will fit into a 2-1/16" diameter hole and are mounted by means of a U clamp.

DESIGN — EMICO meters are designed to give satisfactory service under the most severe conditions. They are styled to add to the prestige and appearance of electrical equipment.

CALIBRATION — Since the instruments are calibrated in steel cases, their accuracy is not affected by panels made of magnetic materials of nominal thickness.

GUARANTEED — ALL EMICO instruments are guaranteed against defective material and workmanship for a period of one year after date of purchase, and will be repaired or replaced if sent to the factory postpaid with a 50¢ handling charge.

VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups — wherever constant or known frequency is important to efficient operation of equipment. More than 17 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.

CAUTION: If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

10 REEDS

Range: 48-52 and 58-62 cycles. Double window for ease of reading either range. Often specified for export, 100-130 volts; 130 ohms per volt; 1 watt power consumption. Accuracy $\pm 0.3\%$ at reference temperature. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

- 30-F, (illustrated), 48-52 and 58-62 cy., 3/4" Metal Case, \$28.50
- 30-FX, 48-52 and 58-62 cy., 3/2" Molded Case, MIL-M-6A mfg. \$27.50

(Meter operating at 60 cycles)

5 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source. Five reeds 58-62 cycles, 100-130 volts. Other characteristics same as Model 30-F. See Table of Dimensions, lines 4 and 5. (This meter also is made with 7 reeds.)

- 31-F, (illustrated), 58-62 cy., 3/4" Metal Case, \$24.65
- 31-FX, 58-62 cy., 3/2" Molded Case, MIL-M-6A mfg. \$23.65

ADVANTAGES: Guaranteed accuracy at reference temperature of 77-F is $\pm 0.3\%$ or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take tougher treatment than many instruments.

9 REEDS — 400 CY.

Used for measuring frequency of high-cycle power sources, particularly aircraft. Accuracy $\pm 0.3\%$ at reference temperature. Nine reeds 380-420 cycle range, 100-130 volts, 90 ohms per volt, 1.5 watts power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

- 33-F, (illustrated), 380-420 cy., 3/4" Metal Case, \$35.10
- 33-FX, 380-420 cy., 3/2" Molded Case, MIL-M-6A mfg. \$34.10

9 REEDS — 60 CY.

Covers a broad frequency band. Nine reeds, 56-64 cycles, or in half-cycle steps (accuracy $\pm 0.2\%$) 58-62 cycles, 100-130 volts, 110 ohms per volt, 1 watt power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

- 34-F, 56-64 cy., 3/4" Metal Case, 1-cycle steps, \$28.25
- 34-FX, (illustrated), 56-64 cy., 3/2" Molded Case, MIL-M-6A mfg. \$27.25
- 34-F-Z, 58-62 cy., 3/4" Metal Case, 1/2-cycle steps, \$29.90
- 34-FX-Z, 58-62 cy., 3/2" Molded Case, MIL-M-6A mfg. \$28.90

18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3/2" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy $\pm 0.3\%$ at reference temperature. The reed flag size is necessarily smaller than the 9-reed 400-cycle meter, such as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A revised internal construction for mounting the reeds in one clamp assures ruggedness. This instrument and its variations are particularly useful where unusually close indication of frequency throughout the band has not been available heretofore. These meters are not regularly stocked. See Table of Dimensions, line 5.

- 36-FX-21, (as illustrated), 380-420 cycles, 21 reeds, 18 volts operation, 3/2" Molded Case; 18 ohms per volt, 1.0 watts power consumption. \$51.60
- 36-FX-21-115, 380-420 cycles, 21 reeds, 100-130 volts, 10 ohms per volt, 1.5 watts power consumption. \$52.80
- 30-FX-18, (not illustrated), 46-54 and 56-64 cycles, 18 reeds in one window with two groupings, 100-130 volts, 210 ohms per volt; 0.7 watts power consumption. \$36.30

ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red, all other numerals in black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 3.5 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see revised print SK-45.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

3 1/2" SEALED METERS

FHXX TYPE sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR3c) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production. For dimensions, see Table, line 8.

ELAPSED TIME METERS; 4" AND PORTABLE FREQUENCY METERS

ELAPSED (OR RUNNING) TIME METERS — 60 Cycles

MODEL 31-EX. To record operating time of AC electrical and electronic equipment, this self-starting synchronous instrument registers in 1/10th hour steps to 9,999.9 hours, then automatically re-sets. Shows tenths in red numerals, all others in black. Black molded case matches FX, 3 1/2" frequency meters, and fully encloses all parts. This case, with centered terminals, meets type MR34 or MR35 mounting dimensions of MIL-M-6A, also JAN-1-6. Referring to line 5 of the Table of Dimensions

on the preceding page, barrel depth (B) is 2 1/4", stud height above center (G) is zero, and all other measurements are as shown. J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary widely. Popular for tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc. Types for 99,999 hours, or 50 cycles, or special voltages are available on special order.

31-EX, 60 cy., 110-125 volts \$15.95
 31-EX-200, 60 cy., 230 volts (not regularly stocked) 17.05

Model 31-ES. The black molded square case 3" x 3" is the major difference between this meter and the 31-EX. Four molded-in studs on standard 2 1/4" distances between centers provide mounting from rear of panel; meter barrel is 2 3/4" diameter. Depth behind panel is now 3 3/4" including studs. For complete details see Print SK110 Rev. C. Variations including 99,999 hours, 230 volts, matte finish, 50 cycles, or readings in minutes are quoted upon request.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours \$17.05

ELAPSED TIME METERS — Tenths of Minutes

MODEL 31-EXM, 60 cycles, 110-125 volts, reading 0-9,999.9 minutes; for short-run applications or readings at closer intervals than 31-EX. Tenths of minutes in red, minutes in black numerals, otherwise identical with 31-EX \$16.25

3 1/2" SEALED ELAPSED METERS — 60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction, with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours,

then automatically re-sets. Tenths indicator is in red, all others in black. Mount according to Print SK-85.
 31-EHXX, 60 cy., 110-125 volts \$19.75

2 1/2" SEALED ELAPSED TIME METERS

MODEL 21-EHXX. This new 2 1/2" sealed meter, with front mounting dimensions the same as type MR-26 electrical indicating instruments in MIL-M-6A, nevertheless offers a full-size counter reading 0-9,999.9 hours in 1/10th hour steps and a rugged self-starting synchronous motor. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68. A 2 1/2" 400 cycle-meter also is made on special order.
 21-EHXX, 60 cy., 110-125 volts \$24.75

SEALED ELAPSED TIME METER — 400 Cycles

MODEL 33-EHXX. Meeting a long-felt need for a stable 400-cycle elapsed time meter compact enough to fit in a 3 1/2" flanged case, with all parts enclosed, is this new 400-cycle elapsed time meter. The instrument now is being produced only in sealed construction, glass-to-metal, with separate flange, heavy-duty solder terminals and flat glass front. External appearance matches FHXX series and Model 31-EHXX sealed, 60-cycle, elapsed time meter. A slightly larger case is used per drawing SK-61.

400 CYCLE BROAD AND VERNIER INDICATORS

Model 41-FX-42 (supersedes Model 41-FX). This 2-window frequency meter is widely used for electronic and aircraft testing in commercial and military applications. The lower window shows a broad range of 300-500 cycles, with 21 reeds in 10-cycle steps. The upper window gives a vernier effect with 21 reeds indicating 380-420 cycles in 2-cycle steps. Housed in black molded case with flush front 4 1/8" wide x 4 1/8" high and 2 3/8" deep behind panel over studs, the instrument looks well with other panel meters. Made for 100-130 volt operation. Also available with 4 studs for 200-240, 115, and 30 volts as used in aircraft analyzers. Power consumption is 1 watt at 30 volts, 4.5 watts at 115 volts, 7.7 watts at 200 volts. OTHER REED PRODUCTS

Inquiries are invited on these new J-B-T products:
 1. **Reed Tachometers**—Reading rpm by resonance alone—without any electrical circuitry or complicated mechanical connections—these instruments are held or mounted against the housing of turbines, electric shavers, vacuum cleaners, sewing machines or other motor-driven products. (Ask for Bulletin MT-458.)
 2. **Reed Relays**—Reed-relays for selective frequency calling, or single-reed types for response to a single transmitted signal, such as 100 to 500 cycles, are made in plug-in cans. One type, a unique J-B-T construction with patent pending, eliminates vibrating contacts and substitutes a mechanism with exceptional efficiency which often eliminates need for further amplification. The device also can be added as a frequency-limit control on an indicating reed meter.
 3. **Oscillator Controls**—Plug-in reed-type oscillator controls to match transmitted frequencies to those picked up by vibrating reed relays can be supplied, for example, to operate in mobile or other communications equipment.

APPLIANCE TEMPERATURE TESTERS

OVEN TESTERS

MODEL 23-JP-1. This newest model indicating portable pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650 F., with 2 1/2" scale are reading is used but covered by clear plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket sized black to-grain leather case 11 1/2" x 2 7/8" x 1 1/4" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. NEW! DYNAMIC[®] OUTPUT TUBE TESTER MODEL 658

Makes more—and more accurate tests than any service tube tester ever made. Tests practically any tube the average serviceman will ever encounter. Faster, more versatile, the 658 is also ideal for laboratory and engineering applications.

DYNAMIC OUTPUT PRINCIPLE—Choice of 8 DC voltages applied to plate, screen, and VR tubes. Variable DC plus variable AC signal voltage applied to control grid. Meter reads only the AC component in the plate circuit. A much more valid test than mutual conductance because it considers the entire output curve of the tube, not just a small portion.

TESTS NEW 12-VOLT-PLATE HYBRID TUBES—Ample current capacity for even high current space charge grid tubes. The only tester made with this capability.

TRUE RECTIFIER TESTS—AC voltages are applied to diodes and rectifiers. Meter then reads rectified plate current—the true test for any rectifier. Easily handles high current rectifiers up to 250 ma.

GRID LEAKAGE TESTS—Highly sensitive test with direct leakage indication on special meter scale. Sensitivity of 15 megohms. Regular shorts test also included with three separate sensitivities to suit the type being tested.

TESTS "EYE" TUBES UNDER DYNAMIC CONDITIONS—You can open and close the eye to determine accurately its operating limits.

HEATER-CURRENT TEST FOR SERIES STRING TUBES—Actual current is read directly on meter scale.

HEATER CONTINUITY CHECK WITHOUT WARM-UP—No wasted time if the heater is open. Instant checks tells you immediately.

TEST VOLTAGE REGULATOR AND REFERENCE TUBES—Meter indication of the striking voltage and control voltage range for each type.

DYNAMIC[®] TUBE TESTER MODEL 648R

The world famous Jackson Dynamic tubes test principle exceeded in quality only by the Jackson 658 above. New, more convenient design puts all the tube sockets together, keeps roll-chart up and out of the way. Fast push-button sequence switching makes the set-up time less than the warm-up time of the tube. Completely flexible for new tubes. No panels to change, no cards to buy.

NEW TUBE SOCKET SUB-ASSEMBLY—All sockets grouped in one convenient subassembly. You can replace individual sockets or the entire subassembly easily.

ANGLED FULL-VIEW ROLL CHART—Super convenient zig-zag roll chart is now up higher, and out of the way. Complete chart assembly may be removed by taking out only one screw.

SILICON RECTIFIER—The 648R is ready the second you flip the switch.

23 SEPARATE HEATER VOLTAGES—The correct voltage for every receiving type—including series string tubes. From .75 to 100 volts.

The Model SA-40 preamp-amplifier is the first of a series of high fidelity kits from PACO. It has been designed for optimum performance and maximum flexibility in any high fidelity system...existing or contemplated.

A silicon diode low impedance power supply guarantees minimum distortion even on sustained high level reproduction. Special circuit design permits the SA-40 to be used with a wide variety of speakers and speaker systems including electrostatic types.

Front panel controls provide for: 2 dual phono inputs that permit the use of both a record changer and turntable... a switch to permit selection of remote or local speaker systems... Balance Right and

40 WATT STEREO PHONIC PREAMPLIFIER-AMPLIFIER IN KIT FORM MODEL SA-40

Balance Left Test Selector for simple, aural check on the balance of your two speakers... even facility for checking the performance of each side of your stereo cartridge, tape head, tape or record.

Both 20-watt power amplifiers may be operated together (through chassis-mounted toggle switch) for full 40-watt monophonic output. This also permits the use of the SA-40 Power Amplifier section as one high power stereo channel in conjunction with a separate power amplifier for the second channel. (One preamp is free for use with the separate external power amplifier.)

All this, packaged in a beautiful black and gold case that will be at home in any decor

INDEPENDENT SCIENTIFIC SURVEY AND LAB TESTS PROVE PRECISE MODEL 111 "BEST COMMERCIAL TUBE TESTER AT ANY PRICE."

ENGINEERING DESIGN CONSIDERATION: To understand the Model 111 Mutual Conductance and Emission Tube Tester, it is perhaps best to spend a moment with the original design considerations. Basically we recognize the fact that:

1. A GM or Emission type tube tester actually read a goodly percentage of tube troubles—BUT each alone missed a great many. We could not say with any degree of assurance which type of tube test was the best. Certain applications required GM, while others required Emission. PRECISE Solution: The Model 111 checks Gm and Emission separately. It indicates on the roll chart the most important single test for normal applications. It is, of course, desirable to make both tests.
2. In series T.V. filament arrangements, which are daily enjoying greater popularity, the "Voltage Sapper" (a tube which developed too much filament voltage as compared to the other tubes) was a constant trouble. PRECISE Solution: The Model 111 allows the filament current to be measured directly on the meter.
3. A whole series of different test voltages (sweeping from zero voltage up) was required. PRECISE Solution: The Model 111 sweeps from 0 through the normal testing range when making measurements. This gives an average evaluation for the tube over an extended range of operation.
4. Short tests usually require elaborate switch manipulation. PRECISE Solution: The Model 111 uses a single rotary switch which checks each element against every other element. No conversion chart is required to ascertain which pins are shorted. This test may be made at any time hot or cold without changing any other switches.
5. The instrument would have to be rugged to stand the "trunk of a car" type of abuse. PRECISE Solution: In the Model 111 a heavy wooden cabinet houses the entire unit. The panel is deeply etched aluminum.
6. Tube Bias, being an important consideration, should actually be measured on the meter. PRECISE Solution: The Model 111 measures tube bias directly on the indicating meter.
7. The instrument should be simple to operate. PRECISE Solution: The Model 111 uses a no-blacklash roll chart, and a sectionalized design setting off each section.
8. There should be a provision for new tubes. PRECISE Solution: The Model 111 is one of the simplest type tube testers to set up for new tubes. The pin connections and function positions may be taken directly from the tube manual. The instrument already includes provisions for testing many color tubes.
9. It should check all modern tubes. PRECISE Solution: The Model 111 is provided with sockets for testing the following type bases. Large 4 prong, large 5 prong, large 6 prong, large 7 prong, medium 7 prong, miniature 7 prong, in-line 7 prong (sub-miniature), Octal, Noval, sub-miniature 8 prong, CRT and Localtals. Weight 24 lbs. Size 14" x 16" x 6".
10. The instrument should check Cathode Ray Tubes. PRECISE Solution: The Model 111 also checks cathode ray tubes with CRT adaptor. Model PTA-K \$2.95, PTA-W \$4.25.

TEST 5 TUBES in 4 SECONDS each ... ACCURATELY

• NEW PRECISE MODEL 116
Em & Gm ULTRAFAST TUBE & TRANSISTOR TESTER

Servicemen know the Precise Model 111 (the winner in an independent survey) easily rates "the finest tube tester in the field" at any price, BUT FOR AN ON THE JOB QUICK-TEST ... the fastest, most accurate is the PRECISE MODEL 116. What's more you test tubes the foolproof method inherent in the famous Precise Model 111.

Did you ever wish you could plug in 5 of the same type tubes at once and check each one individually by rotating a switch? YOU CAN WITH THE PRECISE MODEL 116—Plug in 5 IF tubes and let them heat up at once and then check each one separately by rotating the TUBE BANK switch. ACTUALLY CHECK 5 TUBES IN 20 SECONDS, 4 SECONDS PER TUBE.

The Precise Model 111 taught the lesson that IF amplifier tubes (like the 6BC5 or 6AU6) should be tested for GM (mutual transconductance) while the power amplifiers (like the 6L6) should be tested for Em (emission). The Model 116 test checks each section of each tube separately ... by rotating the FUNCTION SWITCH ... each triode of a dual triode is checked individually ... each diode and the triode of a duo-diode-triode is separately tested and not lumped as in other testers ... and a pentode is tested as a pentode—not a diode. TRANSISTORS, SHORTS, GAS, LIFE, Em Gm etcetera can be tested with the PRECISE Model 116.

You can inexpensively extend the Precise Model 116 to test filament current, etc. The Model 116 gives an accurate, ultra-fast (3 basic knobs for testing) check of television tubes!

Vo Surplus—An etched panel—beautiful Moleskin covered wood carrying case and cover and specially simplified instructions makes the PRECISE MODEL 116 THE FINEST FAST-CHECK TUBE TESTER AND DOLLAR EARNING TRAVELING COMPANION A TV SERVICEMAN EVER HAD.

• **NEW PRECISE MODEL UPA-IN AND UPA-IP ULTRA PREAMPLIFIER**

The PRECISE Model UPA-1 preamplifier is an ultra-modern presentation of true high fidelity, set off in a beautiful rich brushed brass colored panel, designed to enhance a living area. • It embodies the most modern circuitry with separate controls for Bass Boost, Treble Boost and Roll-off, Volume Record Compensation which also includes the latest AES curves (this year), a main Selector switch which connects to Phono, Microphone, Radio Television and an auxiliary position (4 separate input jacks are mounted on the rear chassis), a separate On-Off switch also operates the Convenience outlet at the rear of the instrument. • The instrument is designed so that it is completely self-contained or, if desired, it may be mounted directly into a console panel. In the latter case, no additional hardware is required because of a unique cabinet and chassis design. The cabinet dimensions are 12 x 4 x 4 and it weighs approximately six pounds. • The input gain and amplifier latitude is more than ample for Reluctance or Crystal inputs. Long lines may be used with the cathode-follower input

The UPA-1 is available in two circuits: UPA-IP has its own transformer supply and is operated directly from the 110 volt AC line.

REVOLUTIONARY DESIGN ADDS METER VERSATILITY

PDC CUSTOM METERS are INTERCHANGEABLE. All Precise Custom Meters are interchangeable. Special interchangeable slip-on scales, and companion snap-in shunts and multipliers, add to the ranges that may be covered from one basic custom meter.

Here's How It Works. Let's say you have a 15-volt, 20,000 ohms-per-volt PDC custom meter, and you need a 2.5 volt, 20,000 ohms-per-volt meter for another application. With the PRECISE PDC revolutionary design, you don't have to buy another separate meter. All you need do is to take the same 15-volt, 20,000 ohms per volt meter, open the case, slip out the interchangeable scale face, pull out the resistor in the rear... and then slip on a 2.5 scale face, snap in its companion multiplier into the lock-type jaws in the rear... and when you snap the cover back in place...

In Less Than a Minute You Have a New Custom Meter. That's how simple it is to have a professionally accurate, perfectly calibrated custom meter with a special lithographed scale face, and scale identification... **WITHOUT BUYING ANOTHER CUSTOM METER.**

Precise PDC Custom Meters are comparably priced with custom meters currently being sold today. Now you can have many custom meters from just one... PRECISE'S revolutionary design adds meter versatility to save you money.

Basic meters for replacement, as well as scale faces, shunts or multipliers are available from local electronic distributors.

Instruments IN KIT & WIRED FORM . . . **precise** above all else

In the 904, you can tilt the meter left, or right, or up or down — or even straight ahead — so that it follows the user correcting for parallax all the way. Another Precise first is the "Lead Magician Switch" — which allows your leads to remain in any circuit while you "short" the VTVM for proper Zero Adjust and "Open" the leads for Infinite Adjust, — all this without changing leads. Since three leads are provided, you can leave the 904 connected to both an AC and a DC voltage and take both measurements by rotating the FUNCTION switch and the Lead Magician Switch.

The 904 is fully B- and B- regulated to maintain readings. An etched circuit board is natural for fast and simple construction. CERAMIC precision resistors; JAN type switches; Amphenol DC Connector.

HANDY AC-DC LINE VOLTAGE TESTER

Stock 5406-LT—Here's how to use this highly popular line tester: push in the plug and read line voltage, then plug in the TV set, ironer, toaster, washer, air-conditioner, or other appliance and note the new reading. Find (and demonstrate) voltage drop or inadequate wiring as a major source of service problems with this compact, sturdily-built device. Cord is permanently attached to metal-cased meter which tests single outlets without accessories. Range 0-150 Volts A.C. Standard package of 6 individually boxed meters includes attractive counter display at no extra charge. Per meter **\$3.95**

Fixed meters includes attractive counter display at no extra charge. Per meter **\$3.95**

IMPORTANT — HOW TO ORDER

For all standard models, give (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS (Z) For DC meters, zero adjusters are available on Models 550, 950 and 850. For AC meters, zero adjusters are available only on Model 850. When ordering, zero adjuster, add Z to stock number. Example: Model 550-DC voltmeter, 0-1 volt range without zero adjuster is 5101. With zero adjuster, it is 5101Z. Add 35c to price.

PANEL CALIBRATION (S) Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S.

VISCOSITY DAMPING Careful application of new silicone compound on bearing surfaces damps pointer overtravel.

SEE YOUR DISTRIBUTOR Besides carrying most types, and remaining able to obtain your other needs promptly, your authorized Shurite distributor of electronic parts is qualified to suggest the right meter for your need.

Converts Your 260* VOM into 7 Testers

Think of it! A small investment turns your 260 VOM into a whole array of testers — equipment with a quality that is found only in individual pieces of test equipment at much higher prices. The secret lies in combining an adapter with the *top-notch meter and circuitry* of your 260.

Each combination of Add-A-Tester unit and 260 is self-contained, self-powered. Each adapter goes on

and off in a jiffy. No gadgets, no complicated connections. Furthermore, Add-A-Tester units require only 1/2 to 1/3 the storage space of individual testers. By reducing bench clutter, this compactness makes jobs go faster, raises shop efficiency. Make your 260 do double duty. See your Electronic Parts Distributor and get all the facts soon.

HORIZONTAL SYSTEM ANALYZER, Model 382

Model 382 is the world's most complete "testing package" for analyzing TV horizontal deflection systems. With this one instrument, you can:

- (1) Check any winding in the horizontal system (transformer or yoke) for **shorts** and **opens**. Even one shorted turn is clearly indicated on a large 4½" meter. Uses reliable, time-proven Q-type test.
- (2) Check flyback and yoke system **IN-CIRCUIT** (disconnect only plate cap of output tube). High-Q systems are checked on a quick-reading, Good-Bad scale (most present day sets use the High-Q system); Low-Q systems on comparative logging scale.
- (3) Measure capacitance value (and check for open capacitors) — direct-reading scales indicate from 10 mmf to 0.1 mfd — no bridge to balance. Measures capacitance to better than 10%.
- (4) Make continuity checks of any wire-wound component, such as width coils, linearity coils, oscillator transformers; check capacitors for direct shorts. Can check many other components for Q, also.

VARIDOT

WHITE DOT GENERATOR

MODEL 434A

VARIABLE DOT SIZE . . . VARIABLE DOT NUMBER

The NEW Simpson Model 434A provides white dot patterns with variable dot size (from 1 to 8 scanning lines, with corresponding dot widths), and variable dot number, from 6 to 11 horizontal dots, and 6 to 12 vertical dots.

Very high modulation provides bright, clear dots.

With the Model 434A White Dot Generator, you make linearity adjustment of black and white TV and linearity and convergence adjustments on color TV receivers with confidence. Adjustable dot size provides a check of receiver transient response.

Horizontal and vertical sync pulses are provided, with adjustable vertical sync which can be operated at line frequency or off line frequency. This also operates as a hum-check control for both color and black and white receivers. This feature is rarely found in test equipment offered at this price. Vertical and horizontal synchronization assures you of correct aspect ratio . . . ample attenuation . . . 300 ohm RF output.

Positive or negative video output . . . excellent for accuracy and fast checking transient response of video amplifiers is available.

Modulated RF output is available, operating on fundamentals from Channel 2 to Channel 6. Line Voltage: 117 Volts, 50-60 cycles, 45 watts.

CAPACOHMETER

Model 383A

World's First
IN-CIRCUIT

Capacitor Leakage Tester

The "Capacohmmeter" combines in "one package" the flexibility to: (a) Measure leakage of defective paper, mica, or ceramic capacitors in ohms; (b) indicate directly the capacitance of good paper, mica, or ceramic capacitors over a range of 10.0 micromicrofarads to 10.0 microfarads; (c) detects many marginal capacitors by means of a pulse technique. All tests are read directly on a 4½" instrument. No adjusting of a bridge circuit and balancing controls. All measurements made under load conditions. Borderline capacitors which cause costly "call backs" are immediately "knocked out" with the "pulse test." Many tests are made right "in circuit."

TO-5 TEL-OHMIKE® CAPACITOR ANALYZER

Modern service shops find the TEL-OHMIKE a must. The TO-5 is a moderately priced instrument with laboratory quality and accuracy — the highest accuracy of any instrument of its type available to the service trade!

MODEL TO-5RM FOR RACK MOUNTING

Electrically identical with the standard instrument, Model TO-5RM has a standard 19" wide x 10½" high panel so that it can be mounted in standard relay racks.
Model TO-5RM .. \$93.90 net

- **CAPACITANCE BRIDGE** measures up to 2000 mfm in five overlapping ranges. The special 1 mfm to 100 mfm range is exclusive with the Tel-Ohmike.

LF-1 TRANSIMULATOR®

SPEEDS DESIGN OF TRANSISTOR CIRCUITS BY ELIMINATING BREADBOARD LAYOUT

Bring transistor circuits to life in a matter of minutes with the Sprague LF-1 Transimulator. This new instrument lets you simulate any amplifier stage, a-c or direct-coupled, short of high power audio output; also multivibrator, switching, phasing, push-pull, Class A and B, and many others using cross-coupled Transimulators . . . whether the circuit is common or grounded emitter, base, or collector . . . whether the transistors are PNP, NPN, or Surface Barrier. You can simulate circuits stage-by-stage for cascade operation . . . or use a separate Transimulator for each stage to get simultaneous multi-stage operation.

Bring Circuit Diagrams To Life In Minutes

Everything you need for RC amplifier circuits is built right into the LF-1, including coupling capacitors . . . bias and load resistors . . . battery voltage supplies . . . Base Collector—Voltage Divider stabilization circuits . . . 5-way binding posts for transformer coupling and metering. Whether you're designing audio circuits or switching circuits, you'll get a true picture of operating parameters minutes after you've drawn the circuit diagram . . . without wasting valuable time with breadboard and soldering gun.

Pays For Itself In A Matter Of Weeks

An ideal laboratory instrument, Transimulators are inexpensive enough to justify several on every bench. You can even use the LF-1 to test transistors *in the circuit* . . . the only real proof of design parameters. And a complete step-by-step instruction manual makes operation fast, simple, and easy.

FEATURES OF THE LF-1 TRANSIMULATOR

VACUUM TUBE VOLTMETER WITH NEW 6" FULL-VIEW METER

Compare it to any peak-to-peak V. T. V. M. made by any other manufacturer at any price!

• Uses new improved SICO printed circuitry. • Employs a 12AU7 as D.C. amplifier and two 9006's as peak-to-peak voltage rectifiers to assure maximum stability. • Meter is isolated from the measuring circuit by a balanced push-pull amplifier. • Uses selected 1% zero temperature coefficient resistors as multipliers.

AS A DC VOLTMETER: The Model 77 is indispensable in Hi-Fi Amplifier servicing and a must for Black and White and color TV Receiver servicing where circuit loading cannot be tolerated.

AS AN ELECTRONIC OHMMETER: Because of its wide range of measurement leaky capacitors show up clearly. Because of its sensitivity and low loading, intermittents are easily found, isolated and repaired.

The Model 79 represents 20 years of continuous experience in the design and production of SUPER-METERS, an exclusive SICO development. It includes not only every circuit improvement perfected in 20 years of specialization but, in addition includes those services which are "musts" for properly servicing the ever-increasing number of new components used in all phases of today's elec-

tronic production. For example with the Model 79 SUPER-METER you can measure the quality of selenium and silicon rectifiers and all types of diodes—components which have come into common use only within the past five years, and because this latest SUPER-METER necessarily required extra meter scale, SICO used its new full-view 6-inch meter.

SPECIFICATIONS:

• D.C. VOLTS: 0 to 7.5/15/75/150/750/1,500. • A.C. VOLTS: 0 to 15/30/150/300/1,500/3,000. • D.C. CURRENT: 0 to 1.5/15/150 Ma. test potentials. SUPERIOR TEST EQUIPMENT

SUPERIOR'S NEW MODEL TW-11 STANDARD PROFESSIONAL TUBE TESTER

- * Tests all tubes, including 1, 5, 6, 7, Octal, Lock-in, Hearing Aid, Thyatron, Miniatures, Sub-miniatures, Novals, Sub-minars, Proximity fuse types, etc.
- * Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapered filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TW-11 as any of the pins may be placed in the neutral position when necessary.
- * The Model TW-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- * Free-moving built-in roll chart provides complete data for all tubes. All tube listings printed in large easy-to-read type.

NOISE TEST: Plug jack on front panel for plugging in either phones or external amplifier. Will detect microphonic tubes or noise due to faulty elements and loose inter-connection.

EXTRAORDINARY FEATURE

SEPARATE SCALE FOR LOW-CURRENT TUBES: Previously, an emission-type tube tester has been standard practice to use one scale for all tubes. As a result, the calibration for low-current types has been restricted to a small portion of this scale. The extra scale used here greatly simplifies testing of low-current types.

The Model TW-11 operates on 105-130 Volt 60 Cycles A.C. Com2, housed in a beautiful hand-rubbed oak cabinet complete with portable cover.

SUPERIOR'S NEW MODEL 83

C.R.T. TESTER

Tests and Rejuvenates ALL PICTURE TUBES

ALL BLACK AND WHITE TUBES
From 50 degree to 110 degree types — from 8" to 30" types.

ALL COLOR TUBES

Test ALL picture tubes—in the carton—out of the carton—in the set!

- Model 83 is not simply a rebalanced black and white C.R.T. Tester with a color adapter added. Model 83 employs a new improved circuit designed specifically to test the older type black and white tubes, the newer type black and white tubes, and all color picture tubes.
- Model 83 provides separate filament operating voltages for the older 6.3 types and the 2.5, 5.0, 8.1 types.
- Model 83 employs a 1 1/2" air-lamped meter with quality and calibrated scales.
- Model 83 properly tests the red, green and blue sections of color tubes individually — for each section of a color tube contains its own filament, plate grid and a coil.
- Model 83 will detect tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition, contrast and focus. To test for such malfunction, you simply press the test switch of Model 83. If the tube is weakening, the meter reading will indicate this condition.
- Rejuvenation of picture tubes is not simply a matter of applying a high voltage to the filament. Such voltages, improperly applied can strip the cathode of the over-coating essential for proper emission. The Model 83 applies a selective low voltage uniformly to assure increased life with no danger of cathode damage.

Model 83 comes housed in handsome portable Saddle-Stitcher Texon case — complete with sockets for all black and white tubes and all color tubes. Only

TRIPLET

INSTRUMENTS

RUGGEDIZED INSTRUMENTS

A complete line of 2 1/2" and 3 1/2" ruggedized and scaled instruments designed to meet government specification MIL-M-10301A. Triplett ruggedized instruments employ the unique and exclusive bar ring construction so well adapted to ruggedization, that the addition of spring loaded jewels and an internal rubber mount (both designed for jewel protection) constitute the essential difference between the commercial and ruggedized movements. The bar-ring construction is inherently self-shielding so that the heavy steel case does not affect instrument calibration nor does mounting in a steel panel of any thickness. The unusually strong housing consists of a drawn steel case with heavy die cast window bezel. The bezel seals the window to the case with a simple gasket and screws. A tough plastic window is used instead of glass. Husky gasket sealed studs are used for electrical connections to provide additional protection over delicate glass sealed types. Most catalog ranges of DC, MV, Volts, Amp, Ma, Amp and AC rectifier type can be supplied. Regular dials in accordance with MIL-M-10301A are supplied although special dials of all descriptions can be made up for special applications.

MINIATURE EDGEWISE PANEL METERS

If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area - yet give you the readability, performance and reliability you expect from the conventional 2 1/2" size. Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands. Accuracy—D.C. 2% of full scale, A.C. Rectifier type 5% of full scale. Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque exceeding 1000 Ft. and accurate. Mounting—Horizontal, zero at left and barrel down is standard. Vertical mounting or other special adaptations in quantity orders. Panel Hole Required—Only 9/16" x 1 1/16".

WESTON INSTRUMENTS

The newly expanded CROWN SERIES distinguished by handsome, functional design

Weston's Crown Line represents the ultimate in meter design, performance and readability. The series now includes a 4.5-inch group of D.C. instruments... both A.C. and D.C. types in the 2.5-inch group. Their striking cases will enhance the most modern panels or electronic equipment.

Scales are exceptionally long for the case diameters: 5.3 inches for the 4.5-inch models, up to 2.5 inches for the 2.5-inch models. Ballistic characteristics are greatly improved.

Clear plastic covers and exceptionally long scales afford unmatched readability, with excellent natural illumination from top, front and sides. Confusing shadows are eliminated. In poorly lighted areas, one bulb mounted above the instrument furnishes adequate illumination. The neutral tone of the multi-prism front is designed to complement test equipment or panels of any color. CORMAG[®] mechanisms eliminate the need for external shielding; they can be closely grouped on magnetic or nonmagnetic panels without special adjustments or danger of intereffects.

WESTON INSTRUMENTS

201/301

PANEL INSTRUMENT SERIES

The Weston 301 Line—famous and trusted throughout industry for many years—has undergone important changes. The 3 1/2-inch instruments look different, are more versatile, work better and longer. And now a sister line of 2 1/2-inch instruments has been introduced—the 201 Group—matching the 301 instruments in appearance and incorporating the same new features. The renowned Weston CORMAG[®] mechanism is now standard equipment... permits mounting on magnetic or nonmagnetic panels, close to other instruments, without special adjustments. It makes the "301" and "201" immune to the effects of stray magnetic fields. Ballistic characteristics are improved; even critical damping can be obtained. New, modernistically styled Bakelite cases—round or rectangular—are standard. These cases are interchangeable for A.C. and D.C. models.

MARK II ANALYZER

The new thin-line Mark II is a highly sensitive and extremely rugged volt-ohm-milliammeter designed for a wide range of accurate test measurements in the electronic field.

Famous CORMAG[®] mechanism protects the instrument against false readings due to magnetic disturbances. Electrostatic shielding assures accu-

rate measurements at high d-c voltages. Fuses in the low ohmmeter circuits prevent burnout if voltages are mistakenly applied. Interchangeable parts eliminate all need for parts selection in the event replacements are ever necessary. The break-proof case will withstand dropping and thus eliminate the major source of repair and maintenance costs.

FEATURES

- Modern Thin-Line Design
- Spring Back Jewels for Maximum Shock Resistance
- Fused Resistance Ranges
- Transit Switch Position to Dampen Movement During Transportation
- Fully Insulated Craakproof Case
- Single Selector Knob for all Functions and Ranges
- Wide Angle Scale for Maximum Visibility
- Precision Components—No Parts Selection Required
- Single Board Etched Wiring Circuit for Easy Maintenance
- Static Shielded for Accurate High Voltage Measurement
- 4-Way Combination Tilt Stand and Protective Cover Available

WESTON INSTRUMENTS

MODEL 1477 ELECTRONIC MILLI-VOLT/AMMETER

This versatile Electronic Milli-Volt/Ammeter provides in a single, compact, light-weight unit measurement and amplification of a wide span of d-c current and voltage ranges. The Weston Model 1477 uses a unique electronic servo-amplifier whose extreme high gain, coupled with full feedback, provides accuracy and stability without the adverse affects resulting from variations of line voltage or frequency, condition of amplifier tubes or other variables.

No mechanical switches or choppers are used. The device is a true d-c meter with zero-drift comparable to a typical permanent magnet moving coil instrument. It offers the advantage of essentially zero power-drain from the source being measured, and combines this with power-gain sufficient to supply 1 ma output to drive its own indicating meter, and any external load of 5000 ohms or less. The power output is available at terminals in the back of the unit.

The indicating instrument, incorporating the famous Weston self-shielded CORMAG II mechanism which permits its use in close proximity to magnetic fields without affecting accuracy, knife-edge pointer and mirror scale, all combine to provide dependable performance and unmatched visibility.

- Calibration is dependent only on precision resistors in the range standard.
- No tube selection is necessary when replacements are needed.
- Neither input or output need be grounded, but if grounding is desired, either side or some intermediate point can be grounded. Output polarity may be selected at will.
- Since zero-drift is dependent only on position of galvanometer coil, long-time drift can be maintained to less than 2 microvolts after a few minutes warm-up time.
- Gain stability and output linearity are both within 0.1% at ranges above 1 mv or 200 μ a.
- Resolution capability is within 2 microvolts or .02 microamperes.
- Adjustable to zero-left or zero-center.

WESTON MODEL 981 PROPORTIONAL MUTUAL CONDUCTANCE TUBE CHECKER

FEATURES

- METER MEASUREMENT OF HIGH LEAKAGE RESISTANCE:** Provides an accurate meter measurement of leakage resistance as high as 5 megohms between tube elements, thus being particularly useful for TV servicing and TV line production assembly.
- MULTIPLE SWITCHING FACILITIES:** Protection against obsolescence is assured through the use of nine single circuit, twelve position, selector switches.
- TWIN SECTION TUBES:** Three toggle switches make it possible to rapidly check and compare the respective sections of twin section tubes at only one setting of the selector switches.
- SINGLE SOCKET FOR EACH TUBE BASE REGARDLESS OF TUBE CONNECTION:** Eliminates the possibility of plugging a tube into the wrong socket.
- Gm MEASUREMENTS:** Gm measurements are made more accurately by using filtered d-c plate, screen grid and control grid potentials. A precision voltage divider network and selector switch allows a proportionate value of signal voltage to be chosen for testing tubes having transconductances up to 30,000 micromhos. Signal voltages of 5.2, 2.6, 1.3, and 0.65 volts peak-to-peak having a frequency of 5000 cycles are provided.
- ROLL INDEX CHART—**A complete listing of tube test data is available at the flick of a finger by means of an easy-to-read, built-in roll chart.
- LEAKAGE TEST:** The leakage tests are performed at a d-c potential of 125 volts. For each numbered position of the LEAKAGE TEST switch, a specific tube element is isolated and connected into a series ohmmeter circuit consisting of the isolated element, the 125 volt d-c potential, a current limiting resistor, a milliammeter, and all other elements of the tube.
- VOLTAGE REGULATOR TUBES:** A selenium rectifier supply furnishes 200 volts d-c for testing of voltage regulator tubes.
- SUBMINIATURE TYPE TUBES:** A 45 volt potential source facilitates testing of subminiature tubes.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

ERIE TEFLON* STAND-OFF INSULATORS

TE-400 SERIES

These Insulators are designed for low-loss, high frequency service in radar, television and other electronic equipment, as completely insulated tie-points in circuit wiring — unaffected by a wide range in ambient temperatures, pressure, altitudes, humidity, and mechanical shock and vibration.

*duPont Trademark

TE-405 SERIES

These Miniature Stand-Off Insulators are compressed into mounting holes, are self-fastening, requiring no additional hardware. Hand tool for mounting available. High heat resistance permits soldering without damage to insulators. Excellent electrical characteristics adapt them to miniaturization and high frequency, high temperature, high voltage circuits.

ERIE TEFLON FEED-THRU INSULATORS

CF-405 SERIES

Series CF-405 Feed-Thru Insulators have a hollow threaded metal body which fits through the bed plate and is secured by a hex nut.

The terminal, which passes through the hollow body, is spaced by a force-fitted Teflon plug.

These Feed-Thru Insulators combine the unsurpassed insulating properties of Teflon for high frequency, high temperature, high voltage service with mechanical ruggedness unusual in miniature insulator design.

CF-408 SERIES

Teflon Miniature Feed-Thru Insulators, compression type, are force-fitted into mounting holes, are self-fastening and self-sealing. No additional hardware is required for assembly. The resiliency of the Teflon bodies insures against breakage in assembly and transit, and offers shock-proof and vibration-proof durability in service. Hand tool for mounting available. Teflon's unexcelled electrical properties for high frequency, high temperature and high voltage use, unaffected by a wide range in ambient temperatures, pressure, altitudes and humidity, recommend them for critical circuits.
