ALLIANCE TENNA-ROTORS

ALLIANCE TENNA-ROTOR

The Alliance Tenna-Rotor, available in three models illustrated below, is a TV or FM antenna rotator. Designed to rotate all conventional type antennas. It consists of a fully enclosed electrically driven rotor into which the antenna center-post is clamped. Four-conductor "zip" cable connects rotator with plastic control case placed near receiver, which plugs into any 60 cycle 110-volt AC house circuit. A selector switch controls rotation clockwise or counter-clockwise to point antenna in any direction for optimum reception.

"3-BANDER" SERIES, 2 and 3 ELEMENT BEAMS for operation on 3-bands

2-element beam, #3219....

Gonset 3-Banders are 2 and 3 element full length beams for high gain and superior performance on 3-bands, 10, 15 and 20 meters. Exclusive, multiple sleeve concentric elements give top 3-band performance, eliminate coils completely.

Beam assembly is simple, rapid. All elements are factory cut to correct length. 20 meters requires no tuning. Tuning for 10 and 15 meter driven elements and 15 meter parasitics is accomplished by simple adjustment of tuning sleeves, 10 meter parasitic elements are factory cut to correct length.

Highest grade silicone rubber "Boots" seal off the open-ended concentric elements from dust and moisture. These "Boots" have very low losses, do not absorb moisture, will not become brittle under exposure to sun and weather.

Forward gain, (3-band average)
3-element: More than 8 db.
2-element: 4.9 to 5.3 db.

Typical VSWR: 1.4 to 1. (at heights over 35')
Feed: Single RG8/U cable.
Weights: 3-element 65#, 2-element 35#.

MARINE ANTENNAS

SEAGOING MODEL 2380

The model 2380 is a new streamlined center loaded antenna using a re-enforced fiber-glass top section. The special fiber-glass top section has a wide aluminum ribbon conductor molded in its entire length.

This new antenna also features a new, longer space wound loading coil. The entire coil is sealed in fiber-glass to insure moisture proof operation. The model 2380 is a high output type antenna which in some cases, will more than double your radiated output.

All metal parts from the antenna connection to the tip of the antenna are of aluminum, thus eliminating undue corrosion due to dissimilar metals.

The double hinged base and latch clamp insulator allow the antenna to be easily lowered for passing under bridges. All hardware is furnished and is chrome plated brass or bronze.

Specifications:

Lower section	1½" diam.	12 ft. long
Top section	tapered rod	8 ft. 1 in. long
Loading coil	1¾" diam.	33½ in. long
Total length 23 ft. — Including hardware.		

SEAGOING MODEL CL-22

This center loaded antenna has been designed after many years of research and development in the manufacture of antennas. The CL-22 will operate with any radiotelephone in the marine band 2000-2830KC.

The radiated output of the CL-22 antenna is much greater due to the additional overall length and the lower distributed capacity of the long space wound coil of larger diameter for greater efficiency. The larger radiating surface of the top section (5/8" diameter) also contributes to the excellent performance of this antenna.

Complete with all hardware.

Specifications:

Lower section	1½" diam.	12 ft. long
Top section	5/8" diam.	9 ft. long
Loading coil	2" diam.	2 ft. long
Total length 23 ft. — Including hardware.

DESCRIPTION

The JERROLD Home System is a completely new innovation in supplying exceptional quality television and FM signals to a number of receivers located anywhere in the home. This is the first truly engineered, amplified system designed especially for the home.

The Home System consists of a low-noise, high output amplifier that permits clear reception of VHF television and FM radio signals in both fringe and metropolitan areas. AM reception is included by utilizing one side of the distribution wiring as an efficient AM antenna. The amplifier distributes the TV and FM signals throughout the house over regular twin-lead. Connection to the twin-lead is made by a special tap unit. A quick disconnect press-on plug is supplied for connecting the antenna terminals of each receiver to any of the tap units. This feature allows any receiver to be moved from room-to-room . . . receivers are no longer tied down.

LOW LOSS MULTI-SET COUPLERS

Jerrold Multi-Set Couplers provide the best method of connecting 2, 3 or 4 television receivers to a common antenna array. Units feature positive matching, extremely low loss and high isolation. Couplers can be used in reverse to mix antennas.

INDOOR MOUNTING — on the baseboard for a neat and attractive appearance, with connectors concealed and protected. For attic or basement use, the unit mounts with terminals exposed for ease of servicing.

OUTDOOR MOUNTING — a bracket is supplied utilizing keyhole perforation for screw heads, or for strapping to antenna mast. The unit is weather resistant.

THREE MODELS AVAILABLE

***M-2 TWO SET COUPLER FOR STRONG SIGNAL AREAS** — inductively compensated with emphasis on positive matching for reduction of ghosting and smear. Color: blue grey. List \$3.50.

MF-2 TWO SET COUPLER FOR FRINGE AREAS — for use wherever extremely low forward losses are mandatory. Featuring a highly efficient transformer design and positive matching. Provides complete isolation between receivers. Color: ivory. List \$4.50

MF-4 FOUR SET COUPLER FOR ALL AREAS — designed with the same basic circuit as MF-2, but for use in feeding 3 or 4 sets from one antenna. Color: ivory. List \$5.75

Precision Industrial Antennas

by **SCALA**

Why you get better performance with Scala Antennas —

* PROPER STRUCTURAL DESIGN

A machined casting, webbed for extra strength and structural support is used to hold parasitic elements in the ground plane antenna. Set screws and lock nuts provide simple assembly and easy installation.

* BUILT-IN BALUN

(pat. pending)

Provides a balanced feed system assuring equal distribution of current to the driven element, greater electrical and mechanical stability. The balun allows the driven element to be supported by metal and eliminates the necessity of using the insulator as a mechanical support.

* BUILT-IN HEATER

Most of the antennas described below can be obtained with a 24 volt heating system for maximum weather protection and assured winter operation.

* TESTING AND INSPECTION

Each antenna is tested twice for impedance match — once during manufacture and again prior to dis-assembly for shipment. New models are field-tested for one year before released for production.

**Shipped complete—all U-bolt mounting clamps and brackets are included. Unit is ready for installation.*

* RUGGED CONSTRUCTION

Elements are supported by machined castings providing a larger support area, damping vibrations and reducing the concentration of stress and metal fatigue. Mechanical splices are never used. All units are available in metals other than aluminum if desired.

1. YAGI—VHF The Scala Model CA5-150 is a 52-ohm 5 element yagi. Nine db gain on the major lobe is assured by careful design and Scala's exclusive feed system which eliminates radiation from the feed line and provides equal distribution of current to the driven element. The VSWR is less than 1.3 to 1. For complete weatherproofing and year-around operation, the boom can be provided with a 24 v heater. The unit is anodized and dichromate sealed.

2. YAGI—UHF The Scala Model CA5-450 general communications antenna is a product of years of extensive research. Its construction is possible only because of developments in foam plastics and Teflon insulated cable. A Teflon insulated balun is located within a chamber filled with a special foam plastic for complete moisture and corrosion protection. High strength 7/16" solid aluminum rod is used for the parasitic elements. VSWR is less than 1.3 to 1. Gain is 10 db. Two units may be mounted in an array for an increase in gain up to 3 db and greater directivity. Shipped completely assembled, the unit is anodized and dichromate sealed.

3. GROUND-PLANE—40-170 MC The Scala Model GPC-150 ground-plane antenna is ideal for non-directional, all weather communications. It is the first ground-plane antenna that can be

obtained with 24 v heaters throughout—including the radial elements, providing a completely weatherproof and safe year-round operating antenna. Another version of this unit comes equipped with a reflector and provides a cardioid radiation pattern with increased gain. In all cases the VSWR is less than 1.3 to 1. The unit is anodized and dichromate sealed.

4. CORNER REFLECTOR—140-170 MC The Scala Model CR-150 corner reflector uses Scala's unique built-in balun to convert the unbalanced coaxial feed to the balanced load of the radiating dipole. This provides an excellent match and assures proper distribution of energy to the feed point. Featuring extreme ruggedness and ease of installation, the unit can be assembled in less than two minutes.

5. PARAFLECTOR®—350-1000 MC The Scala Model PR-450 Paraflector® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 mc range. Essentially, a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

EXACTING DESIGN — TESTED MATERIALS — PRECISION MANUFACTURE

In addition to the antennas described above, and other standard communications, telemetering and community systems, Scala maintains a complete engineering service to design and manufacture special antennas to your specific requirements.

Broad-band gain and impedance characteristics make these beams ideal where extremely high fidelity, high-sensitivity antennas are required. All models of this series provide an excellent match to a 300 ohm characteristic impedance line (common TV lead).

"CLOVER-V-BEAM" SERIES

Requires no rotator to pick up signal from front or back. Transposition bar stacking gives vertically narrow, noise-free reception lobes. Tough closed loops yield lightly in high winds, but have no tendency to snap off.

BT 25 MOBILE P.A. AMPLIFIER

BT 25

A product of Bogen research . . . the BT25 is the first commercially available fully transistorized public address amplifier offering 25 watts of power from a 12-volt battery. So versatile it will serve scores of P.A. applications, the amplifier is so small it will fit in the glove compartment of your car.

The BT25 is perfect for use in cars, trucks and busses for regular public address or emergency use. Its hefty 25 watts of power make it ideal for fire department or police use, for disaster work and civil disturbances. It is also recommended for ships, carnivals, electioneering . . . wherever a small, high-powered, reliable P.A. amplifier is needed. Bogen's unique, fully transistorized circuit provides maximum power with minimum battery drain. When operated from a 12-volt battery, the drain is approximately 3 amperes at full output—85% lower than comparable vacuum tube amplifiers. When operated from a 6-volt battery, current drain is only 1.4 amperes at full output. The inputs of the BT25 are individually controllable, permitting mixing. A transistorized circuit insures ruggedness and long, trouble-free service not possible with conventional amplifiers (Bogen guarantees the BT25 for a full year). There are no tubes to burn out, no vibrators to replace. It is completely hum-free.

PORTABLE TRANSCRIPTION AND RECORD PLAYERS - POWER MEGAPHONE - HIGH POWER INTERCOM-PAGING SYSTEM

VP17 SERIES—TRANSCRIPTION PLAYER WITH 10-WATT PREAMPLIFIER

MODELS VP17X AND VP17—These two outstanding portables are complete high fidelity phonographs featuring variable speed control from 29 through 86 rpm, with instant selection of 16, 33 $\frac{1}{2}$, 45 or 78 rpm speeds. Especially suitable for dance or language instruction, square dancing, calisthenics and all other applications requiring these four speeds and variations from them. Both models incorporate a heavy-duty 4-pole motor, weighted (3 $\frac{1}{2}$ lbs.), and rubber-padded turntable, 10-watt high-fidelity amplifier and 12-inch speaker, all carefully matched and housed in an attractive, compact carrying case. Frequency Response: 40-12,000 cps. + 1 $\frac{1}{2}$ db. The VP17X and VP17 will play all records up to 16" in diameter, with splendid sound quality and minimum record wear. Speed variation is accomplished through a precision cone drive, regulated by a single lever with lock-in positions for instantaneous selection of the four standard speeds. The motor velocity remains constant regardless of changes in turntable speed or line voltage. The superb combination of motor and turntable reduces wow, hum and rumble to negligible values. Pick-up arm has "Feather Drop" action to protect record and stylus. Separate bass and treble controls are provided, as well as an effective scratch filter. A microphone input with its own volume control enables either model to serve also as a portable 10-watt PA system. Case is constructed of $\frac{3}{4}$ " plywood, shock-mounted, and measures VP17 (5): 5Y3GT; 6SC7; 6SL7GT; 2-6V6GT. VP17X (6): Same as VP17 plus one 6SJ7. Both 117 volts, 60 cycles

NEW TQ SERIES BOGEN-PHONES

Reach anyone you need, instantly, without leaving your desk, yet keep your outside telephone service free for incoming calls. Bogen-Phones provide simple, push-button intercommunication that is ideal for office, plant, store or home. They save you time and energy, give you the confidential replies of a telephone.

THE IDEAL LOW-COST INTERNAL TELEPHONE SYSTEM

To make a call you simply lift your receiver and press the button (or buttons, for a conference call) of the station(s) you wish to reach. A buzzer sounds at the station you have called. When that station's receiver is lifted you are in communication. Your regular telephone is free for outside calls, and you have not used the switchboard.

Model "TQ" Bogen-Phones have selective ringing with a common talk line (permits conference calls, but only one conversation at a time). They are handsomely styled in gray plastic, and may be used on desk or counter, or wall mounted. Handset, with base, is 9 1/2" x 3 1/2" x 3 1/2" in size, weighs 5 lbs. They are supplied with 4-ft. snarlproof cord. Each system requires one PRS-1 power supply (below).

STEREO DUAL AMP-PREAMP HF81

KIT \$69.95 WIRED \$109.95

Selects, amplifies and controls any stereo source—tape, discs, broadcasts—and feeds it thru self-contained dual 14W amplifiers to a pair of speakers. Monophonically: 28 watts for your speakers; complete stereo preamplifier. "Service Selector" switch permits you to drive both internal power amplifiers of the HF 81 from one of the preamp-control sections while the other preamp-control section is left free to drive an existing external amplifier. Ganged level controls, separate focus (balance) control, independent full-range bass and treble controls for each channel. Identical Williamson type, push-pull EL84 power amplifiers with high quality output transformers. Attractive "low silhouette" construction permits you to dispense with cabinetry if desired.

Output Power: 28 watts (two 14 watt channels) continuous; 56 watts peak. **IM Distortion (60 & 6000 cps at 4:1):** 2% at 28 watts (14 watts each channel); 0.5% at 10 watts (5 watts each channel). **Frequency Response:** 2W (1W each channel) ± 0.5 db 10 cps to 100 kc. **Harmonic Distortion:** 16W (8W each channel) less than 1% from 30 cps to 10 kc; 20W (10W each channel) less than 1% from 40 cps to 10 kc; 28W (14W each channel) less than 1% from 50 cps to 5 kc. **Sensitivity (input for 14W):** mag. phono—4mv; tape head—2 mv; mic.—6mv; tuners, auxiliaries—0.5V. **Hum & Noise Level (below 14W):** mag. phono—60 db; tape head—51 db; mic.—57 db; tuners, auxiliaries—75 db. **Tone Control Range:** ± 15 db at 50 c and 10 kc. **Speaker Connections:** 4, 8, and 16 ohms. **Tubes:** 4-ECC83/12AX7, 2-ECC82/12AU7, 4-EL84, 2-EZ81. HIGH FIDELITY STEREO DUAL AMPLIFIER-PREAMPLIFIER AF-4

KIT: \$38.95 WIRED: \$64.95

Provides clean 4W per channel or 8W total output. Inputs for ceramic/crystal stereo pick-ups, AM-FM stereo, FM-multi stereo, 6-position stereo/mono selector. Clutch-concentric level & tone controls. Use with a pair of HFS-5 Speaker Systems for good quality, low-cost stereo.

STEREO DUAL PREAMP HF85

KIT \$39.95 WIRED \$64.95

Offers practically every control and switching facility anyone could want in a physical design adaptable to any type of installation. With it, you can select, preampify and control accurately, any stereophonic source—tape, discs or broadcasts. Extremely low distortion, bordering on the unmeasurable (even at high output levels), precludes any degradation of quality from the best modern program sources. Self-powered, utilizing a full-wave rectifier tube power supply. Works in conjunction with any two high quality power amplifiers, such as the EICO HF14, HF22, HF30, HF35, HF50 and HF60. Separate low level input in each channel for mag. phono, tape head, and microphone. Separate high level inputs for AM tuner, FM tuner, and FM Multiplex. Also two

auxiliary A inputs (one in each channel) and two auxiliary B inputs (one in each channel). Independent level controls that may be operated together with built-in clutch. Independent full-range bass and treble tone controls in each channel, may be operated together with built-in clutch.

Switch permits hearing each stereo channel individually, also use of unit for stereo or monophonic play. Stereo channels may be reversed. On monophonic record playback, channels are mixed for rumble cancellation. 30 db feedback amplifier pair reduces tone control distortion to unmeasurable levels in each section. Low impedance output to tape recorder, useful on all inputs. New "low-silhouette" construction matches EICO tuner. Very attractive when placed on a shelf or out in the open, yet permits easy console installation with full shielding and adaptability to any panel thickness.

Frequency response: ± 0.3 db 5-200,000 cps at any level up to 3V RMS out. **Sensitivity (input for 2V RMS output at 1000 cps):** Mag. **No matter what price level . . .
if it's a NEWCOMB,
it's DEPENDABLE!**

Sound installations vary greatly in their needs of complexity as well as requirements of cost. Yet, one important feature is required of all—dependability. No matter how complex, or how simple and inexpensive your needs may be . . . you can enjoy utmost dependability by insisting on a Newcomb amplifier for your sound system. No product bears the name Newcomb unless it is inherently dependable, no matter on what price level you find it. Under the Newcomb name there is only one standard for quality . . . the best! Newcomb amplifiers vary in their complexity, but never in dependability. Quality of parts, materials or workmanship are never sacrificed here to gain lower price. Lower cost of one Newcomb model as compared to another is always entirely the result of greater simplicity.

CENTRUM FEATURES NEWEST ADVANCES IN INTERCOMS

Centrum is a complete line of high quality intercommunication systems which offer new and exclusive features. Centrum intercoms are probably easiest to install and easiest to maintain. Yet Centrum systems achieve high level efficiency and are extremely simple to operate.

Centrum systems exceed conventional intercommunications equipment in styling too. Functional slim-line design makes each master station a very handsome, unobtrusive desk unit. There is a Centrum system which can efficiently meet virtually every business requirement.

Centrum Transistor Systems

Centrum Transistor intercoms are highly compact. To operate you just push a button and you contact the person you want immediately. No waiting for a signal to be answered, no need for your party to operate buttons on his set. There are three different Centrum Transistor systems from which to select: T-4A, T-4-HA and T-10A. List prices are quoted.

CENTRUM TRANSISTOR T-4A

A small intercom and a simple communications set-up everyone can use—at home, in the office, stores, etc. This system may be extended further by adding three sub-stations. The master station can call the sub-stations. A sub-station can call the master station but not communicate with other sub-stations. The standard set consists of one master station, one sub-station and a 60 foot, 4 cord interconnecting cable. Additional 4 conductor cable, color coded, plastic-jacketed.

Standard set \$79.50
 Additional 4 conductor cable, color coded, plastic-jacketed \$7.05 per C

CENTRUM TRANSISTOR T-4-HA With the masters T-4-HA, you can build up a system of up to 5 masters, all interconnected. All 5 master stations can call each other. There is a privacy switch on each station, and an indicator shows immediately when the system is engaged.

3-position master stations with privacy switch \$67.50
 8-conductor cable, color-coded for use in a 5 master to master station \$12.00 per C

CENTRUM TRANSISTOR T-10A The T-10A master will control up to nine sub-stations. A master station can call all the sub stations and all the sub stations can call the master station but cannot communicate with each other.

10 station master \$83.50
 6-conductor cable used with T-10A and 9 remotes \$9.30 per C

SUB-STATION TR-D'S The wide range of reception enables speech to be transmitted from any place in the room where the unit is installed. The sub-stations can call the master of T-4A and T-10A at any time and they are fitted with a privacy switch to avoid eavesdropping.

Each remote station \$15.00

INSTALLATION—All you need to install a Centrum Intercom is a hammer and a screwdriver. Each of the stations, T-4A, T-4-HA and T-10A has a battery-powered transistor amplifier. The terminal board in each station has a color code which corresponds to the colors of the conductors. There is no main connection. Two 4.5 volt flash-lamp batteries (or one 9 volt transistor battery) will power the system for about one year.

The mini-amplifiers used for Centrum Transistor Intercoms enable strong, clear communications. Where noise is excessive such as in factory rooms and workshops powerful Centrum horn speakers are available. (Information on request) Horn Speaker H-5-159 \$37.78 ea. Model 266, EVEREADY TRANSISTOR BATTERY \$1.98

CENTRUM GB SIMPLEX AND DUPLEX SYSTEMS

Design efficiency of Centrum GB equipment results in high quality compact units that can be installed easier and at lower cost. Centrum GB intercoms are classified as "Duplex" or "simplex" systems. The basic difference is in the operating function. The Duplex features an electronic voice-switching system which takes over the talk/listen operation. The Simplex is operated manually by merely pushing or releasing the "talk" button.

GB Simplex Duplex Systems are relay operated. A "feather touch" on the station button is enough to initiate a call. A number of stations can be called simultaneously. Every station has its own selector relay box. You can, therefore, easily extend the installation without changing the central equipment. Installation charges are approximately 50% lower than comparable intercom systems on the market.

- Dependable relay operation
- Full privacy
- Busy signal
- Vocal Hi-Fi sound
- Double call signal
- Priority circuit

CENTRUM GB SIMPLEX OPERATION

The GB Simplex system has a combined loud-speaker microphone. To talk you simply push the talk listen button and keep it down as long as you talk. After releasing it you will immediately hear the answer. To answer a call is very simple—you just give the reply from where you are without touching your station. You can even be many yards away from the station. A red lamp lights up on all masters when the system is busy. This saves you from trying to make a call when it is not possible to do so. With the privacy button in the center of the master you can temporarily disconnect your own station if for some reason you do not wish to be disturbed. If anybody calls you, you will hear only a low distorted sound, but the caller will not be able to hear you.

OPERATING PRINCIPLES

When you push the talk button, your station will be connected as a microphone and at the same time the called station will be connected as a loudspeaker. When you release the talk button, a reverse procedure will take place—the called station will be connected as a microphone whereas at the same time yours will function as a loudspeaker. In all Simplex systems a manual operation of the calling station is thus, required for maintaining a conversation.

The GB Simplex may have between 2-22 stations. Master stations are available with 6, 14, or 22 line buttons. The relays, which are used for connecting the desired station, are de-centralized, meaning that the input and output relay belonging to each master station are incorporated in a wall box situated at and connected to every master station (the connecting procedure

takes place in the wall relay box of the called station). Also sub stations can be used in a GB Simplex system. They have no call facility but can, of course reply to a call. A sub station consists of (a) a microphone loudspeaker and (b) a relay box with an input relay. Also a second type sub station is available having two buttons for calling one or two

master stations. All the stations are connected to (1) an amplifier, (2) a signal relay box, and (3) a power supply box connected to the A.C. mains which supplies 24 V D.C. for the operation of the relays.

CENTRUM GB DUPLEX OPERATION

The great feature of the GB Duplex system is the automatic voice-switching which takes over the talk listen operation. All the time the caller's hands are free to light a cigarette, make notes, etc. The reply comes through a separate loudspeaker, which may be placed either on the wall or on the desk. It is possible to increase the volume of the voice when the calling office or the receiving office is noisy. One need simply to switch off the electronic voice-switching and use the manual talk listen button.

In Simplex as well as in Duplex, one or more stations may be given priority, e.g. the manager's office and the switchboard. Such stations are able to interrupt any other call when necessary.

The buttons have a magnifying lens making it easy to read the names. The design of the set gives the best possible acoustics and it fits harmoniously into any office.

OPERATING PRINCIPLES

The exchange of the conversation is controlled by the voice, which actuates the particular amplifier channel connected to the microphone to which you speak. When two stations A and B are communicating in a Duplex system, the amplifier channel belonging to B will be almost closed when A speaks, whereas A's amplifier channel will stay open. At the very moment when A stops talking, both amplifier channels will be almost closed. When B replies, his amplifier channel will be opened whereas A's amplifier channel will remain closed.

The opening and closing of the two amplifier channels in a Duplex amplifier follows electronically. Thus, the Duplex system is described as an electronic voice-switching system. The called person does not have to operate his station but always has free hands (this refers both to Simplex and Duplex). GB Duplex stations are also available with 6, 14 and 22 line buttons. The chassis is different to that of Simplex GB stations and special master and sub stations therefore have to be used in a Duplex system.

How to Determine Cable Requirements. To inter-connect Master Stations measure from first Master to second Master only, from second to third Master only, etc. until the last unit in the system is reached, and total. For T-C-4906 and T-C-RP-5920, use two lengths of 6226 Cable; and for T-C-4930 use three lengths of 6226 Cable. To connect T-C-41, T-C-20, T-C-42 or T-HP-3 Staff Stations measure from Staff Station to the one Master to which Staff Station originates calls. To connect the T-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each T-C-41 or T-C-42, follow same procedure).

AUTOMATION IN INTERCOM

The TALK-A-PHONE SUPER CHIEF System offers you fully automatic performance. No longer is it necessary to manually operate a Talk-Listen Control during conversation; yet you have "private" and "selective" communication. Write today for details.

NEW TALK-A-PHONE WIRELESS AND HOME INTERCOM SYSTEMS

TWO NEW WIRELESS SYSTEMS

Two NEW, high-quality wireless intercoms, featuring the exclusive TALK-A-PHONE "SONIC GATE" circuit. Provides dependable communication where permanent, wired systems are not practical. Ideal for use in offices, factories, stores, homes, apartments, nurseries, farms, etc. Distinctively styled cabinets combine the look and feel of fine grained leather with the strength and rigidity of steel. Beautifully finished in charcoal gray with brushed chrome side panels. Each station has a translucent indicator which illuminates when "On." All stations must be connected to outlets on the same electric company service transformer. Built-in Ground Adapter provides greater sensitivity where electrical wiring is routed over long paths. U.L. Approved.

NEW TALK-A-PHONE 6-STATION SELECTIVE WIRELESS* SYSTEM

- 3 Separate 2-Way Conversations Simultaneously with 6 Master Stations
- Selective Paging with Reply

Featuring the TALK-A-PHONE "SONIC-GATE"

Your Voice Goes Through... Noise and Hum are Screened Out...

The Sonic Gate circuit effectively suppresses line noises and hum by 30 db while system is in actual operation, as well as when in Stand-By position.

- No Installation
- No Wiring
- No Cables
- Just Plug-in and Talk

Provides selective communication. Each Master is equipped with a 6-channel selector, can converse with any other station selectively, can receive calls on any channel Master elects to use. As many as 3 separate conversations may be held simultaneously, with 6 Masters. Masters can talk with any station in system, can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired - to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system. . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this

purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master), they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 6 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 6 stations are used, channels must be shared, stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

Cletrun Stereo Kits, Speakers

CATHEDRAL HIGH FIDELITY KITS MODEL C-33812 MATCHED SET

Features the Cletrun 12" Flex-Edge woofer with ceramic Indox magnet for over one million Maxwell lines. May be used in either stereophonic or monophonic sound systems. The new development Flex-Edge cone is specifically designed for easier linear movement and has an unusually heavy body to prevent break-up of bass mid-tones common to other woofers. High compliance, 16 cps to 4000 cps. Full one-inch excursion of cone, with aluminum voice coil form, at 16 cps with only four watts input. Handles 25 watts continuously and 35 watts peak power. Operates efficiently at only five watts. Efficiently cuts out before 4000 cps. Kit includes Model C-SMFR mid-range speaker for 1000-6000 cps, with an axial sensitivity of 95 db (± 5 db). Has aluminum form voice coil. Features solid basket construction, eliminating the interaction effect when used in the same cavity as the woofer. Upper range is accommodated by the use of two Model C-3CT quality three-inch tweeters with a range of 1800-18,500 cps, completing the audio spectrum. Tweeters are designed primarily for multiple speaker systems where two tweeters are used. L-C network Model C-1220 matched for perfect operation has remote control for fine-tuning the mid-range output to suit individual tastes.

Electro-Voice BC-TV-RECORDING MICROPHONES

BROADCAST—TV—RECORDING DYNAMICS

CARDIOID UNIDIRECTIONAL MICROPHONES

Model 666 Super Cardioid Microphone—Totally new concept in directional microphone design uses Variable D principle. High discrimination against sounds from back hemisphere. Highly resistant to mechanical shock. Model 666 affords another octave of uniform HF response over that found in conventional broadcast cardioids. Permits close talking with no bass accentuation. Increases working distance over pressure microphones by factor of 1.7:1 due to polar pattern. Designed for operation on boom, stand or in hand. Uses only one moving element with exclusive, rugged Acoustalloy diaphragm. Response range, typical 30-16,000 cps; output -55 db. Impedance changed on internal terminal board. Wired for 150 ohms, taps at 50 and 250 ohms. Aluminum cast case finished in TV gray. Built-in Cannon UA-3 connector. Clamp-on stand mount included with $\frac{3}{8}$ "-27 thread and $\frac{1}{2}$ " pipe thread adapter. 20' cable. Size, $7\frac{1}{2}$ " long, $1\frac{3}{4}$ " diameter. Net Weight, 11 oz. List Price... **\$255.00**

Model 666R Rising Response Cardioid—Similar to Model 666 above but has a frequency response which rises 4 $\frac{1}{2}$ db from 100 cps to 2000 cps. This characteristic, combined with an excellent polar response, reduces pickup of low-frequency room reverberations, thereby reducing room "rattle" and prop noise. The Model 666R is particularly suited to boom operation because of its increased sensitivity. Output is -50 $\frac{1}{2}$ db; other specifications are similar to Model 666. List Price... **\$255.00**

Model 667 Variable Response Cardioid—This all-purpose microphone fulfills requirements of wide-range reproduction under a great variety of acoustic conditions. The 667 combines the same excellent cardioid operations of the Model 666, listed above, with an in-line transistor preamplifier, with bass, treble and presence controls providing 40 distinct frequency response characteristics. Maximum output level: 50 ohms, -30 db; 150 ohms, -32 db; 250 ohms, -33 db. Microphone specifications, accessories, similar to Model 666 except response: 35-16,000 cps; finish brown and gold. Preamplifier noise level -123 db referred to input. Controls: Bass (4-position: +3 db, flat, -5 db, -9 db at 100 cps); Treble (5-position: +9 db, +6 db, +3 db, flat, -6 db at 10 kc); Gain (4-position); Power On-Off switch. Electro-Voice

GENERAL PURPOSE MICROPHONES

UNIDIRECTIONAL LINE MICROPHONE

Model 644 Sound Spot—Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening, making it the most directional microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.

Cancellation from the rear and sides exceeds 20 db giving practically complete rejection of unwanted sound. This feature gives the most rejection of random noise in any microphone commercially available. Reverberation and feedback are vastly lower than any other microphone, allowing much greater leeway in loudspeaker placement.

The effective front acceptance angle is 45° each side of center giving best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than all other microphones.

Frequency response is smooth from 40 to 12,000 cps, high output -52 db, dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure diecast zinc with ¼" aluminum tube. Rear diameter 2 3/8", length 16". Cable is 18'. Weight, 2 lbs. 9 oz. List Price.....**\$110.00**

Electro-Voice PUBLIC ADDRESS HORNS AND DRIVERS

PROJECTOR HORNS

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

Exclusive compound horns permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area for uniform coverage. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

Model FC100—Similar to the famous CDP, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn, or concentrating high-frequency horn (HC1000) can be substituted for small diffraction horn. Large horn is of fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 cps. Mouth size, 10 1/2" x 20 1/2"; depth (less driver), 20". Net Wt. (less driver), 10 1/2 lbs. Shpg. Wt., 12 1/2 lbs. List Price **\$47.50**

Model AC100—Concentrating version of CDP. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Diffraction high-frequency horn (HD1000) can be substituted for concentrating horn for flexible coverage control. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 54"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 cps. Diameter, 21"; depth (less driver), 16". Net Wt. (less driver), 11 lbs. 6 oz. Shpg. Wt., 13 1/2 lbs. List Price **\$44.50**

Complete—List Price **\$75.00**

Model 848LT-45—With 45-ohm voice coil. List Price **\$78.50**

New reentrant horns provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high frequency losses of open ended horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die cast mounting plate plus precision die cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1 1/2"-18 threads.

Model FR150—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1 1/2"-18 thread. Specifications: Low-frequency cut-off, 150 cps; taper, 150 cps; air column length, 45"; sound distribution, 70° x 100°; mouth size, 10 1/2" x 20 1/2"; depth (less driver), 21"; Net Wt. (less driver), 9 1/2 lbs. Shpg. Wt., 12 lbs. List Price **\$37.00**

Model AR150—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber-edge damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1 1/2"-18 thread. Specifications: Low-frequency horn—cut-off, 150 cps; taper, 150 cps; air column length, 47"; sound distribution, 85°; diameter, 21"; depth (less driver), 17". Net Weight (less driver), 6 1/2 lbs. Shipping Weight, 8 lbs. List Price **\$31.00**

VERSATILE CONVERTIBLE DRIVERS

Now, for the first time, here are drivers that can be used interchangeably in compound or reentrant horns. Used on either type of horn, the new Electro-Voice Convertible Drivers feature highest efficiency available. Increased power handling plus extra increased efficiency make the 40 and 50-watt drivers uniquely useful where high power at minimum cost is essential. The high efficiency of all E-V Convertible Drivers is achieved without resorting to "peaked" response which may increase loudness, but does reduce intelligibility. The smooth response of these drivers insures most natural reproduction of voice and music for more satisfying quality with vastly reduced feedback problems and greatly increased tonal range. Double flux ceramic magnets provide long-lasting high efficiency in entirely new low-loss magnetic circuits. Edgewise-wound ribbon voice coils give 18% more energy. The drivers are rugged and weatherproof; conversion to either reentrant or compound use can be made instantly in the field. Voice coils are also field replaceable, thus reducing repair costs to a minimum. E-V Convertible Drivers are available with 16 or 45-ohm voice coils or with built-in 70.7-volt line constant voltage transformers. This entirely new design concept gives better performance at minimum cost, making E-V Drivers your best buy.

Electro-Voice PA SPEAKERS AND ACCESSORIES

PAGING SPEAKERS

Effective paging systems require not only efficient loudspeakers, but also natural sound quality free from peaks that cause listening fatigue and acoustic feedback. No better speakers for clear natural voice paging are available than the new Electro-Voice Model 844 and the improved Model 847 CDP.

Model 844—Low-cost paging speaker for medium-angle sound distribution. Features smoothest response in its class with better lows to reduce natural, pleasing paging without feedback. Handles twice the power—30 watts—to reduce costs. Rugged diecast horn plus field-replaceable voice coil keeps service costs at a minimum. Precision manufacturing assures long-lasting reliability under the toughest conditions.
 Specifications: Frequency response, 250-13,000 cps; power handling capacity, 30 watts; nominal impedance, 8 ohms; dispersion, 90°; EIA sensitivity rating, 51 db; sound pressure level, 120 db; dimensions, 9 3/4" diameter x 8 3/8" deep; Net Weight, 5 lbs. 10 oz.; Shipping Weight, 8 1/2 lbs. List Price **\$34.50**

Model 844-45—Same as standard 844, but with 45-ohm voice coil for simple installation in intercom systems. List Price **\$36.00**

Model 847—Utilizing the famous CDP Principle—this newly improved wide-angle speaker provides higher articulation without annoying "peaked" response over a uniform 120° x 90° area. Extremely low distortion results from the use of T.W.O. diffraction horns—each covering only half of the voice range. 25-watt power handling capacity means more volume from fewer speakers. Fiberglass horn has Moss Tan color molded in.
 Specifications: Frequency response, 250-10,000 cps; power handling capacity, 25 watts; sound pressure level, 118 db; dispersion, 90° x 120°; impedance, 16 ohms; dimensions, 11 1/4" x 7 3/4" x 10 3/8". Net Weight, 6 1/2 lbs.; Shipping Weight, 10 lbs. List Price **\$46.33**

Model 847-45—Same as standard 847, but with 45-ohm voice coil for simple installation in intercom systems. List Price **\$47.83**

U-47 (U-48) "Studio Standard"

Microphone System

This microphone has become the standard of the American recording, broadcasting and film industries, and is the only condenser microphone in its price range featuring an electronically switchable directional characteristic.

Complete microphone system consists of microphone, power supply (type NG), inter-connect cable (type UC-3), with Z-37 full elastic suspension, AC power cable, U. S. fuse holder, pilot light, power connector, and XLR output receptacle with mating cable connector.

Field Pattern:
 U-47 System Switchable non-directional—cardioid
 U-48 System Switchable bi-directional—cardioid

NEUMANN

KM-54a/KM-53a

The KM-54a is a super cardioid miniature microphone that has been designed with tv and film in mind. This 7/8" diameter by 5" long, 3 1/2 ounce marvel, when mounted in the Z-38 full elastic suspension, can be aimed at the sound and provide more than 25db rejection of extraneous sounds in the studio.

The KM-53a is identical in size but omnidirectional in pattern. It is recommended for the recording of pop-orchestra and jazz sessions where close-up technique is employed.

Complete microphone system consists of microphone, power supply (type NKM), inter-connect cable (type KC-1) with Z-38 full elastic suspension, A. C. power cable, U. S. fuse holder, pilot light, power connector, and XLR output receptacle, with mating cable connector.

NEUMANN

KM-56 Miniature Condenser

Microphone System

This miniature condenser microphone is one of the latest to join the precision Neumann line. Its quality is in every way similar to the U-47 series, but dimensions are amazingly miniaturized.

Complete microphone system consists of microphone, power supply (type NKM), inter-connect cable (type KC-1), with Z-38 full elastic suspension, A. C. power cable, U. S. fuse holder, pilot light, power connector, and XLR output receptacle, with mating cable connector.

COMPLETE TECHNICAL SPECIFICATIONS WILL BE PROMPTLY FURNISHED UPON PROFESSIONAL REQUEST.

NEUMANN

M-49b Continuously Electronically Variable Directional Pattern

Microphone System

This microphone permits remote control of the directional characteristic. A smooth, continuous fader-control selects any of the basic directional patterns (non-directional, bi-directional, and cardioid) and any intermediate pattern. Wide frequency response with extremely low distortion — 0.6% 40-15 kc up to 110 db absolute.

Complete microphone system consists of microphone, power supply (type NN-48), inter-connect cable (type C-26), A.C. power cable, XLR output connector, and MZ-49 swivel mounting harness.

WHY?

NEUMANN Type SM-2 Miniature Stereo Microphone System

This latest addition to the condenser microphone field comprises two separate and complete condenser microphones and their respective preamplifiers in the same miniature housing. The two condenser capsules are mounted one above the other, the top one being rotatable to achieve the M-S stereo recording technique (also known as intensity stereo). Each of the two microphone systems can be individually switched to any pattern (non-directional, bi-directional, and cardioid) or to any one of six intermediate patterns. Specifications are identical to KM-56 microphone with addition of extreme balance between systems, and numerous intermediate directional patterns.

Complete microphone system consists of microphone, power supply (type NSM), inter-connect cable (type SC-1), with Z-42 full elastic suspension, A.C. power cable, XLR Cannon output connectors, U. S. standard pilot light, fuse holder, A.C. receptacle.

Dimensions: Microphone: 1 1/8" dia., 8" length
Power Supply: 8 1/2" x 4" x 4 3/4"
Weight: Microphone: 9 1/2 oz.
Power Supply: 5 lbs., 12 oz.

NEW HYPEX® LIFETIME DRIVER UNITS

The new Jensen Hypex® Lifetime Driver Units have many new features which contribute to increased performance and reliability. Frequency range is based on achieving substantially higher conversion efficiency, higher power ratings and improved reliability over comparable units previously available, while affording good fidelity in the reproduction of speech and music. Lower cutoff frequency is somewhat below those of the horns with which they will be used; the specifications show the maximum upper limiting frequencies, but response has been shaped to give emphasis to the 3-5 kc region, which is extremely important in high efficiency sound projection. As a result of these design choices and special research on ruggedization, the D-30 can be rated at 30 watts speech and music, D-40 at 40 watts, and a Lifetime Guarantee extended against failure under normal conditions of use! The DD-100 100-watt Superpower Driver Unit, similarly guaranteed, is the first double acting integrated sound chamber driver unit ever to be offered; it is also the first 100 watt unit available,

achieving a higher power input rating to a single projector or an array, than has ever been possible before. Magnetic structures are the most efficient that research has been able to develop, yielding the highest magnetic energy from the generous sized Alnico V magnets which scientific proportioning of magnet material and soft iron structure can provide, specially shaped reinforced plastic diaphragms combine ruggedness with excellent acoustic properties and freedom from "breakup". Voice coils are varnish wound, baked and aged on treated, heat and moisture resistant bobbins, resulting in a rigid assembly that is indestructible in normal service. Beryllium copper leads are indefinitely fatigue-resistant. Models D-40 and DD-100 have precision self-centering moving system assemblies which are added insurance for dependability under severe operating conditions. External leads connect to heavy binder screw terminals; added reliability for wiring is provided by strain reliefs on all units. All units are threaded 1 1/8"-18.

JENSEN COMPLETE HYPEX® PROJECTORS

HF-100 WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty "N" "woofer" feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit. Horn's outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester. In matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

SPECIFICATIONS: HF-100 PROJECTOR

Jensen VH-91A and VR-11 Hypex® projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico V magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

MODEL VH-91A HYPEX® PROJECTOR

Equipped with new universal mounting bracket for adjustment in any direction and secure locking with a single wing nut. Extremely rigid vibration-proof clamping allows three hole flange mounting on flat surface, single hole mounting with 3/4" tag or machine screw through center, or mounting on top of standard 1/2" pipe.

MODEL VR-11 HYPEX® RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves out-

ward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3". Fits all Jensen driver units and horns.

NEW JENSEN HYPEX* PROJECTOR HORNS

These new projector horns are acoustically coordinated in design for best performance with HypeX* Driver Units D-30, D-40 and DD-100, any one of which may be used on any of the horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant baked tan enamel finish. Horns are threaded 1 1/4" x 1/8" and may be used with any driver units with this thread. Sturdy steel mounting 3/16" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunion clutches.

(See separate description and specifications on RT-20 Rectangular Horn).

R-242

MODEL RT-20 RECTANGULAR HORN

These versatile new horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 57 9/16". Horizontal coverage, fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°

Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees, at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength, glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

TWO-WAY AND THREE-WAY UNITARY HIGH FIDELITY LOUSPEAKERS

These outstanding unitary two-way and three-way loudspeakers have been especially designed for institutional, industrial and commercial sound systems where high fidelity music and realistic voice reproduction are essential. They may be mounted in procession arch or underneath a canopy; flush or in small enclosures on walls; in large or small cabinets. In enclosures they may stand on floor or be suspended overhead for large audience coverage. In wide angle coverage of entire frequency range and in sound quality, they are markedly superior to projector type speakers. Ideal for school rooms, auditoriums, arenas and the like.

Moving systems and other parts have been moisture-proofed so that they are highly satisfactory for protected outdoor service where not directly exposed to rain, sleet or snow. Durable finishes and materials are used throughout. Construction is rugged to insure trouble-free performance indefinitely. Terminals are provided for insertion of fixed or adjustable pads if desired (not furnished—see control listings) in the "tweeter" circuits. All units have full dividing networks (mounted on housing in H-525C and H-225C). Input terminals are screwdriver type. Housing finish is baked tan enamel, borax, etc., and the front of the units are finished in black enamel for minimum visibility through grill or cloth. All units are thoroughly dust-proofed.

These units incorporate Alnico 5 magnets in highly efficient conservatively designed magnetic structures. Table shows loudness efficiency relative to Model H-225C.

G-615C 15" THREE-WAY LOUSPEAKER

The TRIAXIAL, a unitary three-way loudspeaker, has three electrically and acoustically independent speaker elements, each handling a portion of the frequency range. Separate three-way 600 and 4000 cycle crossover network with provision for easily adding m-f and l-f balance controls (not supplied—see separate listing). Heavy duty curvilinear l-f diaphragm and compression horn-type m-f and h-f units in exclusive Jensen design. Excellent damping and high conversion efficiency. Power rating 40 watts, impedance 16 ohms. Recommended baffle opening 13 1/4" dia.; OD 15 1/4"; depth 10 1/4"; net weight 29 lbs.; shipping weight 48 lbs.

EXTENDED RANGE HIGH FIDELITY LOUSPEAKERS

Here is a complete line of loudspeakers of latest designs especially for commercial and general purpose applications, all field tested for the exacting and rigorous requirements of professional service. There is a loudspeaker for every need—ruggedly dependable units which have enjoyed the position of "world's quality standard" for many years in the professional field.

These heavy duty loudspeakers are of the extended range high fidelity type with performance suitable for applications where two-way and three-way speakers are not needed. High efficiency is assured with carefully designed magnetic structures using Alnico 5 magnets and ample soft iron circuits. Moisture-resistant cones and other materials contribute to long life expectancy. The units are especially suitable for protected outdoor locations not directly exposed to rain, sleet and snow, as well as for indoor use.

Extended h-f range insures excellent music reproduction. The l-f range will depend on the enclosure size and design. Commonly used in small enclosures or ceiling baffles. Models P8-SC and P12-SC are practically standard in the industry for inferior low level music distribution systems.

Sizes from 4" to 15" offer the best performance possible in each size and cost class. Choices as to efficiency and power ratings are available in some sizes. Relative loudness efficiency is shown in the table referred to the P4-VC. A speaker with relative loudness efficiency of +3 db will be noticeably louder than the P4-VC for the same power; only one-half the power will be required to be equally as loud as the P4-VC.

Shipped complete with hardware and instructions for mounting to Lowell Protective Speaker Enclosures illustrated.

These new, unusual additions to the Lowell line of speaker baffles are top quality heavy 18 gauge spun aluminum in a buffed satin finish. From architecture to acoustics, Lowell STL series meets every requirement — in ultra-modern design . . . for even, undistorted low-level sound distribution throughout 360°. Recommended baffle placement is usually 25' from center to axis. Where straight line placement is impossible, triangulating the baffles in the ceiling is highly effective.

This patented QUAM feature is your added assurance of trouble-free operation. In other speakers the spider is cemented in place with no means of accurate adjustment. The Adjust-a-Cone suspension permits precision centering of the voice coil as a final production operation.

QUAM U-SHAPED COIL POT

Another QUAM exclusive, this patented U-shaped coil pot construction, used throughout the QUAM replacement line, provides an unbroken flux path of sufficient cross-section to carry the full energy of the magnetic field.

PARAFLEX SPEAKERS BY AUDAX

15 INCH MODELS

The 15-inch series cover 3 models, representing the optimum in overall performance. The cone, because of its large diameter and long excursion, will move a large volume of air which is essential for very low frequencies with uniform sound output. The outer magnetic keeper is a chemically pure, annealed casting which surrounds the central-pole magnet. The magnetic structure weighs 18 pounds. Fundamental resonance falls between 24-28 CPS. Large diameter voice coils for heat dissipation and high power operation. Impedance—8 ohms.

MODEL A-150X: COAXIAL An integrated tri-cone, using coaxially mounted tweeter. A small mid-range propagator cone is attached at the apex of the woofer cone, and functions by mechanical crossover action. This controls the output between 2000-5000 cycles. The tweeter with built-in network extends the range to 18,000 cycles.

MODEL A-150D: DUAL-CONE A dual-cone, single extended range speaker, same as Model A-150X, except tweeter is eliminated. It delivers bass equal to A-150X, but does not offer "highs" to the limit of audibility.

MODEL A-150W: WOOFER Probably the best high compliance woofer on the market today. Although capable of undistorted reproduction to 2 cycles per second, no effort is made to mechanically attenuate inherent high frequencies. This accounts for the cleanness and realism of transient signals which are usually low frequency pulses with large harmonic content. This woofer reproduces both the fundamental and full range of harmonics accompanying such pulses. Excellent for direct-radiator or horn type enclosures.

18 INCH WOOFER

MODEL A-180W This is the highest professional quality available in a woofer. It is capable of peak to peak excursion of 1". Central, cylindrical magnet of Alnico 5 weighs 5 pounds, surrounded by cast iron keeper giving a weight of 27 pounds to the magnetic structure. The supporting frame or basket is a massive aluminum sand casting affording strength and rigidity to assure that the voice coil concentricity will always be maintained. Fundamental resonance falls between 19-22 CPS. Impedance: 8 Ohms.

12 INCH MODELS

(Cast Frame Type)

These three models incorporate all the outstanding features of the 15" models, but with smaller cone and lighter magnet. All include high compliance foam suspension, "Styrofoam" cone reinforcing, glass voice coil form and curvilinear cone. Fundamental resonance falls between 35-40 CPS. The basket is rugged cast aluminum, built to highest standards for 12-inch diameter speaker. Impedance: 8 Ohms.

MODEL A-120X: CO-AXIAL This is a tri-cone with coaxially mounted tweeter of the direct radiator type. Mid-range propagator is mechanically coupled at 2000 cycles and operates to 5000 cycles. Tweeter extends range to 17,000 cycles

MODEL A-120D: DUAL CONE Similar to A-120X except minus tweeter. Apex propagator and dural center dome cap extend range to at least 12,000 cycles.

MODEL A-120W: WOOFER This is the woofer of the 12-inch cast frame series. Exhibits same clean bass quality of all Audax Paraflex models.

MODEL A-80D A wide range, dual-cone speaker 8" in diameter for use in small enclosures, or as an additional speaker for stereo or remote locations. The high compliance foam suspension permits installation in compact enclosures of the bookshelf type. A bass-reflex cabinet having an internal volume as low as 1.15 cubic feet with a port of 14 square inches may be used. Generally as large a volume as space will permit should be employed in order to bring out the maximum bass response. Magnet wt. is 10 ounces, made of Alnico 5, oriented grain. Voice coil diameter is 1/4". Utilizes stamped steel basket.

MODEL A-100D A 10-inch, wide range dual-cone speaker. Because of its larger cone diameter it will deliver somewhat more bass than the A-80D (8" size). It is recommended where a moderate size enclosure can be used. It will deliver excellent bass in a small floor console or table top cabinet of the bass-reflex type having an internal volume as low as 2 to 3 feet.

MODEL A-12D A popular-priced version of our deluxe A-120D. It utilizes a stamped steel basket instead of the cast aluminum. The foam rubber suspension and high-compliance characteristics are preserved in this model. Voice coil diameter is 1/4". Magnet is Alnico 5-D G, wt. 10 ounces.

MODEL A-60M: MID RANGE SPEAKER

This is a unique speaker specifically engineered to complement our woofers with equivalent efficiency and freedom from distortion. The output of 300-6000 cycles is rigidly smooth. This is not a run-of-the-mill cone speaker. It utilizes a bakelite diaphragm, and felt inserts as acoustic dampers to eliminate all traces of peaks and dips. There is nothing like it on the market. The 6" diameter basket is cast aluminum. The bakelite cone incorporates Paraflex foam suspension.

AUDAX SPEAKER SYSTEMS

AUDAX SPEAKER SYSTEMS In these incomparable systems, Audax Paraflex speakers are housed in completely new type of enclosures reflecting both engineering and style advancements achieved by no other units today! The enclosure operates on a new principle wherein the speakers are located symmetrically on either side of a ducted-slot. The bass output is aided by this mutually loaded slot. The configuration of the slot is such as to present air viscosity to the rear pressures, resulting in damping and suppression of resonance peaks. This method of venting results in smart, clean bass without a trace of boom or unnatural heaviness. These enclosures are specifically designed to bring out the depth and striking realism of the Paraflex high-compliance speaker units. Patent has been applied for. **Output impedance: 8 ohms.**

Styled by GEORGE NELSON...SIMPLE, STRIKING BEAUTY
In both Audax systems, George Nelson, one of America's great industrial designers, has wrought truly exciting furniture.

- The 2-dimensional dyne! 'Acoustiscreen" (grille) is removable and washable.
- Enclosures are finished on all sides in finely-grained oiled walnut.
- Each enclosure can be fitted with easily attachable legs, available from Audax.

BI-DIRECTIONAL GRADIENT MICROPHONE

Model "300"
Studio Gradient

This rugged, high fidelity, multi-impedance microphone is widely used for television, radio broadcasting, professional recording and high-fidelity uses. The "300" reduces reverberation and the pickup of random noise by 66°. The "300" combines the best features of conventional velocity microphones with advanced acoustic design—including an anti-"PFF" filter screen. Its bi-directional polar pattern is effective over a broad frequency range. It provides sound pickup at the front and rear of the microphone, but greatly reduces pickup at the sides. One of the outstanding features of the "300" is the fact that the microphone can be placed at a 73° greater distance from the performer than is possible with omni-directional microphones! The "300" has a non-reflecting "Baked Bronze" finish, so it blends into the background, gives the spotlight to the performer. The "300" has a readily accessible Voice-Music switch, vibration-isolation unit mounted in live rubber, and a multi-impedance switch, providing low medium and high impedance. Extended response, production uniformity guaranteed to plus or minus 2½ db, 40-15,000 c.p.s. GENERAL PURPOSE MICROPHONES

OMNI-DIRECTIONAL DYNAMIC MICROPHONES

The new Slendyne 535 is the most versatile fine quality probe microphone ever developed — actually five microphones in one because of its practical design and useful accessories! The "535" is a moving-coil dynamic microphone built to provide wide range reproduction of music and voice. It can be used for indoor or outdoor applications in the following manner: (1) in the hand, (2) on a floor stand, (3) on a desk stand, (4) hung around the neck on a lavalier cord.* Add to these factors an on-off switch adapter and a dual-impedance switch and you have the most completely versatile fine quality probe ever developed. Frequency response is 60 to 13,500 c.p.s..

The Slendyne 535 is ideal for high quality public address, theater-stage sound systems, and all recording applications where an omni-directional microphone is desired. The microphone is ruggedly built to withstand hard usage, and is unaffected by temperature and humidity variations. The 18-foot, high quality, shielded, two-conductor cable is supplied with a microphone plug equivalent to the Amphenol 91-MC3M plug. The "535" meets the requirements for maximum quality and minimum size. It is finished in rich satin chrome. A self-adjusting swivel adapter is supplied with the microphone, and permits it to be tilted from 90° from vertical to horizontal, making it possible to tilt the microphone at the source of sound. Also includes on-off switch adapter.

The "535" is specially recommended for "interview-type" use where the "hand-a-bility" is important. Of special interest to P.A. technicians and recording enthusiasts is the quick-disengaging feature that permits the microphone to be instantaneously removed from the stand swivel adapter, for use as a hand microphone during audience participation shows, interviews, and for home recording sessions.

The Model 530 Slendyne is the deluxe broadcast Slendyne, finished in an attractive black and gold anodized finish. It has a frequency range of 50 to 15,000 c.p.s., and is furnished with a 20-foot, high quality, two-conductor shielded cable with a Cannon XL-3-11 cable connector. Furnished with swivel adaptor, deluxe lavalier cord and belt clip, on-off switch adaptor.

BI-DIRECTIONAL GRADIENT¹ MICROPHONE

This rugged high fidelity multi-impedance microphone is recommended for fine quality general purpose uses. It features a frequency response of 50 to 12,000 cps—will reproduce voice and music in a clear, natural tonal quality, which makes it ideal for use in auditoriums, night clubs, schools and churches. The "315" is similar in features and design to the Studio Model 300. It is ideal for those numerous public address applications where its streamlined design and striking beauty lend dignity and prestige to any setting in which it is used. This gradient microphone is a favorite of professional performers and educators because it provides unusual freedom of motion on the platform — making it possible for the user to stand at a 73% greater distance from the microphone than is possible with omni-directional microphones. Its bi-directional "Fig. 8" pickup pattern extends over a broad frequency range — and it permits the sound system to be operated at a level almost 6 db higher than is possible with non-directional (omni-directional) microphones! The "315" picks up voices and music from front to back — is "dead" at the sides, reduces reverberation and the pickup of random noises by 66%. This feature means the "315" can be used in those critical installations where feedback makes it impossible or impracticable to use conventional microphones. It is "PFF"-proof — filters out the "PFF"-type noises often heard over conventional microphones. Here again is another fine quality Shure microphone made under scientific control conditions, which are your guarantee that it can be used month after month without deviation from its original standards. Dimensions: height 6"; width 1 7/16"; depth 1 3/32". The "315" is furnished with an 18-foot, high quality, two conductor, shielded cable, supplied with the equivalent of the Amphenol 91-MC3M plug.

Model A86A is a high-quality, cable-type transformer which makes it convenient to run a long microphone line from a low impedance microphone to a high impedance amplifier. It is housed in a compact, sturdy and magnetically-shielded case. Connection terminals are easily accessible, and compression fittings crimp the microphone and amplifier inputs. The A86A matches 35-50 ohm and 150-250 ohm microphones to high impedance amplifier inputs. 2-SPEED DISC RECORDER... THE 66-H BY PRESTO

The 66-H is the simplest type of very high quality gear driven recording equipment. It is an ideal unit for broadcast station or recording studio, where quality must be maintained. The Presto dual motor direct gear drive gives 100% perfect program timing. The 1-D cutting head has flat response between 50 and 12,000 cycles per second, plus ample output to assure an excellent signal-to-noise ratio. Accessories such as pickups, equalizers, and microscopes can be added to the 66-H if desired. Engineers appreciate the 66-H design because of the minimum amount of maintenance needed and perfect speed regulation. Presto A93 (below) is recommended.

The Presto 64-B transcription turntable is designed especially for broadcast station transcription and record reproduction. Its drive mechanism is unique in that it is directly gear driven at both 33 $\frac{1}{3}$ and 45 rpm. A separate motor is employed for each speed and there is no mechanical speed shift whatsoever. This type of construction produces a mechanism which always operates at the correct speed and requires no adjustment of any sort. The mechanical construction is very rugged, insuring unusually long life under continuous operation.

Now, just one machine to do ALL your recording. The Presto 850 is the one tape recorder that will be the workhorse of your studio, for it can do everything any other tape recorder can do . . . and then some! A minute of your time and it's changed from a half inch machine to a quarter inch machine, or from a quarter inch to a half inch machine. The 850 professional is certainly your best buy . . . best in performance, most economical (one does everything). Its three fabulous Presto A903 amplifiers are stacked on a single easy-to-work-at console . . . you can see them, and operate them with ease. The use-proved design of the 850 is based on the success of the 800 . . . your assurance of top performance. Available in rack, portable or console models. For further information, see your Presto representative or write Bogen-Presto, Paramus, N. J.

800 SERIES PROFESSIONAL FOR MONOPHONIC OR STEREOHONIC USE

The 800's flexible control panel allows absolute control of tape handling. Five color-coded illuminated push buttons provide interlocked relay control of the five basic modes—Record, Play, Stop, Rewind and Fast Forward. A unique interlock protects the Record circuit from accidental operation without the need for mechanical covers or physical separation—safe tape handling with optimum speed is assured.

Three "fast" speeds are push-button selected. Separate tape reel-size switches provide correct tape tension even when small and large reel sizes are mixed. Capstan motor switch allows machine to remain in "standby" with capstan motor off . . . and you get slow starts when you want them. Operator error is virtually eliminated, thanks to the unique 800 feature that automatically switches recording equalization when tape speed is changed. Cue push buttons switch recording equalization when tape speed is changed. Cue push button allows hand winding and cueing of tape without having to hit brakes. Low torque motor AC voltage eliminates tape spillage. Exclusive Edit micro-switch permits easy one-hand runoff of tape during editing and assembly of master tapes. Remote control unit plugs in for control of five basic modes.

Tape Used: 1 1/2" width (1 1/2" on model 850). **Tape Speed:** 7 1/2 and 15 ips or 3 1/4 and 7 1/2 ips, or 15 and 60 ips (equalization automatically switched with speed change). **Speed Accuracy:** ± 3 sec per 30 minutes. **Rewind or Fast Forward Time (at max. speed):** 7" dia. reel Approximately 30 seconds. 10 1/2" dia. reel Approximately 1 minute. **Starting Time:** Instantaneous. (Less than 1 second from stop to full speed). **Stopping Time:** At 15 ips, less than 2 inches of tape travel after depressing stop button. **Flutter:** At 15 ips—well below 10%. At 7 1/2 ips—well below .15%. **Frequency Response:** At 15 ips—± 2 db, 30 to 20,000 cps. At 7 1/2 ips—± 2 db, 40 to 12,000 cps (on Model 850)—at 15 ips—± 2 db, 40 to 15,000 cps. At 7 1/2 ips—± 2 db, 40 to 10,000 cps). **Signal-to-Noise Ratio:** 60 db at 2% distortion. (Model 850—55db at 2% distortion). **Adjacent channel Crosstalk:** 50 db at 2% distortion. **Playback Amplifier Distortion:** Less than 1% (harmonic) at +20 dbm from 25 to 20,000 cps. **Power Requirements:** Transport—117 VAC, 60 cycles, 260 watts. Power Supply and Amplifier: 60 watts. Export, 220-240 VAC: 50 cycles.

CAPPS RESHARPENING SERVICE

Most CAPPS MADE styli can be resharpened upwards of five times depending on whether they are simply dull or badly chipped (Thermo styli cannot be resharpened this many times because of the wiring which limits the available area of sapphire.) CAPPS "RESHARPS" are given the same exacting care and attention as CAPPS new styli and are returned to the sender promptly.

HOT STYLUS UNIT

The CAPPS HOT STYLUS UNIT is used for applying heat to disk recording styli, softening the disk material at the point of contact thereby producing smoother more accurate grooves. This results in a substantial reduction in surface noise, especially at the inner diameter and minimizes the mechanical load on the cutting head increasing its efficiency and frequency response.

When ordering specify make and model number of cutter head and stylus requirements.

SUB-FRACTIONAL H.P. LOW HEAT RISE HYSTERESIS MOTOR

The DALOHM HYSTERESIS MOTOR is a split-capacitor type; sub-fractional horsepower, from 1/20th to 1/300th. Totally enclosed it has a new space-saving pancake design giving great rigidity. It is ideally suited for such applications as facsimile machines, Hi-Fi turntables, tape recorders, tele-metering and many other types of equipment where constant synchronous speed is essential.

An outstanding feature is the exceptionally low heat rise. This removes the basic objection common in most hysteresis motors. It also has extremely low noise and no vibration or magnetic strays. It is absolutely synchronous, will reach synchronization within one revolution, maintains synchronous speed at rated load and will synchronize any load it can accelerate, regardless of inertia.

- Voltage: 115 V., 60 c.p.s.
- Speed: 1800 R P M.*
- Shaft rotation: clockwise or counter-clockwise and easily reversed.
- Running torque from 1.9 inch-ounces to 28 inch-ounces.
- Extremely low heat rise of only 20° C. to 38° C., depending on horsepower rating.
- Exceptionally low cost.

*The DALOHM hysteresis motor will operate on any frequency up to 120 c.p.s., giving a selection of speeds up to 3600 RPM.

NEWCOMB

PROFESSIONAL STEREOPHONIC TAPE
RECORD/PLAYBACK MACHINE

STEREO TAPE RECORDER model SM-310
CYBERNETICALLY ENGINEERED FOR INTUITIVE OPERATION

Cybernetically engineered for intuitive operation, the Newcomb Model SM-310 is the simplest machine to operate you have ever used. Easiest on tape. Transport control is centered in a single lever "joy stick" that gives fluid smooth, positive, effortless tape handling. Records or plays back magnetic tape either stereophonically or monophonically. Plays or records either or both channels in same direction. Operates vertically or horizontally, takes 3" to 10 1/2" reels, has two tape speeds — 7 1/2" or 3 3/4" ips, die cast aluminum spindles, oversize brakes de-

signed to last for life of machine, separate mixing controls — mike and "line" — for each channel. Only the STANTON Stereo-FLUXVALVE has the parallel reproducing element contained in the "T-GUARD"

Model 371 STANTON Stereo-FLUXVALVE Cartridge—Of truly miniature design, it will fit into all tone arms with standard 1/2" mounting centers...ideal for "going stereo," or for installation into new systems. Fully compatible, the Model 371 will perform equally well with all microgroove records, monophonic or stereophonic. Traditional Pickering quality of design assures the finest performance—a response flat within 2 db over the entire stereo recording range with complete absence of spurious resonance. This obviates any possibility of groove-wall breakdown which eventually results in both record and stylus wear...and, the "mint" condition of both record and stylus is prolonged. Supplied with a .7 mil precision-polished diamond of the very finest quality mounted in Pickering's exclusive "T-GUARD" stylus assembly. For record changers, players and transcription tone arms using a stylus force from 2-5 gms and 3-7 gms, see below. The STANTON Stereo-FLUXVALVE has two balanced signal outputs for connection to the low mag inputs of a

stereo-preamplifier (they may be connected in parallel for use with a conventional single-channel preamplifier.) Output level is sufficient for all preamplifiers and there is no need to employ a transformer or other "gain" stage device. Exclusive "magnetic-discriminator" provides inter-channel isolation with negligible cross-talk.

The Gyropoise® 800 airborne Stereotable™

*The first really new idea
in turntable design
in 75 years!*

The Gyropoise was *invented* by Pickering & Company out of the *necessity* to provide a turntable with *complete absence of distortion*, for playing the newer stereophonic phonograph records.

NO RUMBLE!... horizontal or vertical... turntable floats on a bearing of air — in magnetic suspension

The Gyropoise Stereotable is simple to install. Integrated baseplate mounts over the simplest of cutouts... no complicated patterns to cut, no special saws required... just a few simple cutouts and four holes.

Built-in precision level for precise visual adjustment of turntable base.

Exclusive PICKERING spring mounting... an extra measure of "cushion".

Predrilled opening for pickup arm. Unimount feature of UNIPOISE Arm permits installation in minutes.

Exclusive "free-floating" idler of live omni-compliant rubber. Sure-grip feature eliminates any possibility of slippage

Single, simplified electro-mechanical control... precise single (33 1/3 rpm) speed... constant accuracy with synchronous motor

With conventional LP records, rumble, a form of distortion caused by mechanical vibration in a turntable mechanism, is a minor problem. The motion of a conventional stylus is lateral and a conventional cartridge is designed to generate a signal voltage only when activated by lateral motion without responding to any vertical movement of the stylus. With the stereo cartridge the motion of the stylus is complex... it is lateral, vertical and a combination of both lateral and vertical, depending upon the recorded material. Therefore, vertical vibration is a serious problem when playing stereo records... this vibration is picked up by the cartridge and is heard as a distortion that sounds exactly as the name implies — *rumble!*

Regarded by engineers as a major handicap in stereo record reproduction, *vertical rumble* is not a problem with the Gyropoise 800 Stereotable. Only the Gyropoise revolves with precise accuracy in magnetic suspension, on a bearing-of-air void of stiff mechanical linkage inherent in conventional turntables.

Designed specifically for microgroove records... monophonic and stereophonic... the Gyropoise 800 Stereotable is single speed at 33 1/3 rpm and employs a built-in precision leveling adjustment with indicator. The Stereotable which embodies a unique magnetic suspension, is an exclusive invention of Pickering & Company (patents are pending and all rights are reserved). Vertical period of spring suspension is below 5 cps; compound vertical rumble attenuation is 12 db per octave below resonance; noise is 65 db below reference level; speed accuracy is ±0.2% total variation. Weight: 9 lbs. less Tray; 11 lbs. with Tray; 13 lbs. with Complete Base. Measures 13 1/2" x 13 1/2" — 1 1/8" above and 3" below the 5/32" thick base plate. Overall dimensions on complete base: 14 3/4" x 14 3/4" x 5 3/8" high.

Model 196 STANTON UNIPOISE arm with integrated Stereo-FLUXVALVE pickup. The finest pickup ever made...the Model 196 employs a Stereo-FLUXVALVE pickup of the same exacting design and specifications as the Model 371 Stereo-FLUXVALVE cartridge. In the design and manufacture of the UNIPOISE tone arm, Pickering & Co. has achieved the highest standards of engineering and craftsmanship. A precision instrument, the UNIPOISE employs a single friction-free pivot bearing for almost-infinite compliance to trace precisely the delicate more-difficult-to-track groove of a stereo record. The complete assembly...tone arm and pickup...is only a fraction of the weight of conventional tone arms. Introduced for conventional records only a short time ago, the UNIPOISE was originally designed to make precise and reproducible record measurements in calibrating recording channels and record masters...

an exclusive feature that is tailor-made and ideally suited for the new and exciting stereo records. This advanced mechanical design and functional styling combine to provide the finest phonograph reproducer ever made...for all microgroove records...monophonic and stereophonic! For use with all high quality transcription turntables, its practical size permits installation into areas only slightly larger than that required for record changers...it will mount on a motorboard measuring only 15½" x 15½". Simple Uni-mount installation, employs a single thumbscrew and bolt. Exclusive arm rest with soft sable brush to keep the stylus tip free of dust at all times. Convenient stylus force adjustment.

THERE'S AN
Irish
TAPE
FOR EVERY
RECORDING
REQUIREMENT

Whatever the application—professional sound recording...broadcasting...hi-fi in the home...school or office use...science and industry—there is an **Irish** tape that meets every requirement in quality, dependability and value.

A mirror smooth surface tape An exclusive **Irish** development The *ferro-sheen* process offers five major benefits over conventional magnetic tapes

1. **ULTIMATE IN HIGH FREQUENCY RESPONSE.** Due to intimacy of contact between tape and heads, frequency response is ultimate in first play. Conventional tapes must be "worn-in" by usage to approach *ferro-sheen* performance.

2. **MINIMUM HEAD WEAR.** The mirror smooth surface of **Irish** tape reduces head wear considerably below that of ordinary rough surface tapes.

3. **FREEDOM FROM HEAD CONTAMINATION.** **Irish** tape has the most homogeneously bonded oxide of any magnetic tape. NO external lubricant is needed as ample lubricant is built into the oxide. This right combination of the right ingredients reduces oxide and lubricant build-up on heads to an absolute minimum.

4. **LOWEST MODULATION NOISE.** The ultra smooth *ferro-sheen* magnetic surface of **Irish** tape assures significantly lower modulation noise.

5. **MINIMUM DROP-OUTS.** The remarkable *ferro-sheen* process produces a superior tape with maximum freedom from drop-outs. **Irish ferro-sheen** tape is the *best engineered* tape in the world.

16" PRECISION TURNTABLE

The MODEL B-16H 3 Speeds

Offers the broadcaster and recording studio the finest professional performance at the lowest cost. The turntable itself is precision lathe-turned, non-magnetic, cast aluminum — dynamically balanced — and with an extra-heavy rim for effective flywheel action. Turntable diameter is standardized at 15 3/4 inches to allow a 1/4-inch overhang for cueing. It is internally rim-driven by means of neoprene compound idlers. All inter-moving parts are case-hardened and ground to a micro finish. Rotates on a single-ball pivot which takes the entire thrust of the turntable shaft.

Extremely low distortion has been achieved through effective acoustical damping — through special attention to motor bearings, motor suspension, idler design, concentricity of pulleys and all the other elements essential to smoothness, quiet and overall quality of performance. Rumble, wow and flutter and speed regulation are well within NARTB standards. Requiring no more than routine maintenance, all parts are readily and easily accessible.

SPECIFICATIONS:

- SPEEDS:** 33 1/3, 45 and 78 rpm.
- SPEED SELECTION:** Mastermatic, self-locking, instantaneous shift. Engages either idler without stopping turntable or removing disc.
- STARTING:** From standing start to operating speed —
 - at 78 rpm 3/4 turn
 - at 33 1/3 and 45 rpm 1/4 turn
- MOTOR:** Self-lubricating, custom-built HYSTERESIS SYNCHRONOUS.
- NOISE LEVEL:** 50 db below average recording level.
- 45 RPM HUB:** Built-in — retractable — requires no external adapter.
- STROBE DISC:** Permanently affixed — permits instantaneous checking of all speeds.
- CHASSIS DECK:** Radial-ribbed aluminum casting. Designed for push mounting in rectangular cut-out. PRE-DRIILLED for ready mounting of Rek-O-Kut Turntable Arm Model S 160.
- DIMENSIONS:** 18 3/4" x 26". Fits existing consoles and cabinets with slight modification.
- CLEARANCE REQUIRED:** Above Deck — 1 1/2". Below deck — 6 1/2".

GIBSON GIRL TAPE SPLICERS AND TAPE ACCESSORIES

Robins Gibson Girl tape splicers are the accepted standard of the professional and industrial users of recording tape. They have gained this reputation because of their ease and reliability of operation, high standards of workmanship. They are the only splicers which actually cut a diagonal lap joint in the tape and trim the splicing tape and tape edges with an indented trim cut, making THE SPLICE WITH THE GIBSON GIRL SHAPE.

The slight "waists" formed in the tape prevent adhesive from contacting critical parts of the recording mechanism and prevent layer to layer adhesion. Adhesive deposited on tape guides, etc. is a frequent cause of wow, flutter, and erratic performance. Gibson Girl Tape Splicers Are Available In Six Models.

GIBSON GIRL "TS4A" SERIES PROFESSIONAL SPLICES IN SECONDS!

stereo and does not have stereo erase — the Robins 99 does the job quickly and efficiently and eliminates sending the tape through the single-track erase head twice. Easy to operate, one can demagnetize tape up to 1/2 wide. Accepts any reel up to 10". Operation: 110-120 volts, 50-60 cycle AC. Draws 6 amps. List \$33.00.

7. HEAD DEMAGNETIZER For Tape Recording Heads — ● Removes Permanent Magnetization ● Improves Signal To Noise Ratio ● Reduces Noise Level ● Listed by Underwriters' Laboratories, Inc. ● Reduces Harmonic Distortion when caused by head magnetization. Robins head demagnetizer, when properly used, removes any residual permanent magnetism from the heads. It consists of an alternating current electromagnet with an extended pole piece designed for easy access to the recording heads of most tape recorders. When energized, contact of the demagnetizer pole piece with the pole tips of the recording head causes the head to be saturated by an alternating magnetic field. Gradual removal of the head from this saturating field neutralizes any residual permanent (DC) magnetism in the recording head. HD-6 — List \$10.00.

8. TAPE CLIPS — Keeps Tapes from Unwinding from Full or Half Empty Reels. As important to the tape recordist as the diaper pin is to the baby nurse. 1. GRAMPIAN

DYNAMIC MICROPHONE — TYPE DP4
Uniform, Wide-Range Frequency Response

General Description

The Grampian DP4 dynamic microphone meets the requirements of public address, wire, tape and disc recording, call systems and communication equipment. The microphone is slender and unobtrusive in appearance and will not detract attention from the user. DP4's light weight, a little under 1/2 lb., makes it ideal for the person who wishes to use it as a hand microphone. This high output pressure type dynamic microphone has a uniform, wide range, frequency response which extends from 50 c/s to 15,000 c/s, and therefore reaches the high performance level of all Grampian equipment. 25 ohm, 600 ohm and 50,000 ohm impedance models are available.

Adaptability

The microphone is supplied with an easy to use holder suitable for use with floor, table or desk stands. The holder allows easy removal of the microphone, and 18 feet of lead (supplied) allows the user reasonable mobility. A model with push button or slide switch mounted to the base is available, and provides a microphone ideally suited for call systems. A special switch assembly is also available for use with the microphone when mounted on a floor or table stand.

Grampian Cutterheads for Highest Quality Disc Recordings

Grampian Feedback Cutterhead — Type B 1/D

The Grampian B 1/D Feedback Cutterhead, made in London, England is an improved version of the well-known BBC system. This superb cutterhead embodies an internal feedback winding which reduces distortion, flattens frequency response, and stabilizes operation over long periods of time and widely varying environmental conditions. Because it is damped through use of silicone damping fluid (Dow-Corning 200) with a leak-proof seal, temperature and age will not affect it, thus assuring constant performance.

Quality Construction

The Cutter is of the iron vane, balanced armature type. Simplicity of construction makes it a rugged device; there are no springs nor balances to get out of adjustment. A cutaway view is included to show the essential parts of the head.

The ends of the armature "A" (shown separately in the cutaway view) are clamped between two U-shaped steel yokes "B", within which lie two Ticonal magnets "C" and the laminated pole-pieces "D", with their brass clamping blocks "E". The metal at the bottom of the slots at either end of the armature is shaped to form torsion bars which support the active center portion of the armature in the gap between the pole pieces.

To avoid trouble with non-axial deflections, these torsion bars are made as short as possible, consistent with reasonable stress at maximum excursion. Through the center of one of the torsion bars passes the long plain shank of the cutter clamping screw "F"; the thread is carried in an external block "G". The shank has a high torsional compliance so that the presence of the clamping screw does not add appreciably to the mechanical impedance of the armature. The coil "H" lies in the slots in the faces of the pole-pieces, and within the main winding is a second coil which connects to the cathodes of the second stage of a recording amplifier to provide negative feedback. The method of damping the mechanical resonance of the armature (around 10 KC) is to introduce a Silicone Damping Fluid into the air gaps between the armature "A" and the pole-pieces "D". Silicone is unique in that it alone has

the property of maintaining a constant viscosity over a wide temperature variation and length of service. Tests conducted with the cutter proved that the change in level covering a temperature range of 60°F. to 110°F. is no more than 1 db. Heating up of the drive coil, as well as heat transmission from a Thermo-Stylus assembly, had little or no effect. The head will fit any standard lathe and is lightweight to reduce cutter bounce (marbled effect on discs). The front plate cover is tapped to accommodate an adapter for use with heated stylus (sold as necessary) and the chuck fits standard short-shank styli.

Grampian Feedback Cutter System

The Grampian B 1/D cutterhead is incorporated in the Grampian Feedback Recording System which produces the highest quality disc recordings known to date. Complete in every detail of equalization, pre-emphasis, and level correction for all three speeds, this unique system comes ready for instant mounting, turn-on, and operation without the necessity of recalibration, experimentation, etc. To operate the system requires only the sound source on one end and the lathe on the other. Grampian Magnetic Cutterhead — Type C (Non-feedback)

Grampian Type C cutterheads are a development from our feedback cutterhead and have similar mechanical and electrical constants but are operated from a single winding. They may be used in conjunction

with any high grade power amplifier.

Quality Construction

The cutterheads are of the balanced armature type, the resonant frequency of the armature being about 9 Kc. This high resonance is achieved by using an armature of pivotless design, the usual pivots being replaced by hollow torsion bars. Since the resonance is so high, the frequency response is fairly flat between 500 c/s to 4,000 c/s, thus making the sensitivity independent of acetate loading, especially when using "hot" stylus technique. The main resonance of the system is damped by the use of Silicone fluid. Contrary to rubber or plastic damping materials, Silicone fluid remains virtually unaffected by changes of temperature.

The price paid for the advantages of the high resonance condition is the increase in the stiffness of the system thus requiring more power to drive it. However, present day techniques make it relatively simple to achieve high power outputs from audio amplifiers with low distortion, and it is recommended that the cutterhead be used in conjunction with an amplifier capable of providing at least 25W output at low distortion.

While normal recording levels may be obtained with an input of 6 watts approx., a much higher peak power is required to deal with transient sounds and the rising frequency response necessary with present day recording characteristics.

An average peak level of 7 volts is required for normal 78 r.p.m. recordings and 3-4 volts for L.P. recordings. Grampian non-feedback cutterheads are available for vertical or horizontal mounting.

TECHNICAL DATA

SENSITIVITY—3 volts input for 1 cm/sec. at 78 R.P.M.

Stereo Dynetic

high fidelity "integrated" tone arm and cartridge

... FOR STEREO PERFECTIONISTS
... FOR CRITICAL BROADCAST
AND RECORDING APPLICATIONS

The overwhelming first choice of perfectionists who appreciate the full importance of "integrated" tone-arm and cartridge to optimum stereo performance. Tracks at incredibly light $1\frac{1}{2}$ - $2\frac{1}{2}$ grams—with unparalleled fidelity... absolutely minimizes record wear, and CANNOT scratch records! We urge you to make listening tests of this unit before buying any stereo cartridge or arm—you'll hear the difference.

The Studio Stereo Dynetic has a special advantage for those music lovers who like to "index". The cartridge stylus is placed far in front, making it extremely easy for you to position the stylus on the exact spot of the record you want to play.

Still another feature of the Studio Stereo Dynetic is the fact that the stylus can be changed in the home without tools—within ten seconds.

SPECIAL FEATURES

- 1. MINIMIZES RECORD AND NEEDLE WEAR**
Incredibly light tracking— $1\frac{1}{2}$ to $2\frac{1}{2}$ gms.—reduces record and needle wear to absolute minimum.
- 2. DYNETIC PRINCIPLE**
Moving magnet within stationary coils. High permeability shield and hum-bucking arrangement of coils prevent pickup of hum.
- 3. FRICTION FREE SUSPENSION**
Jewel bearings throughout. Cartridge is pivoted on sleeve and cap jeweled bearings. Arm pivot is a ruby thrust bearing.
- 4. SAFETY CONTROL**
Provides for remote retraction of the cartridge and stylus without danger or damage to record and stylus from careless handling.
- 5. DYNAMIC DAMPING**
Arm counterbalance floats on a damped suspension bar. This system provides critical damping (even in the subsonic range) without impeding normal motions of the arm.
- 6. GEOMETRIC CONFIGURATION**
Arm is reinforced, tapered channel of durable aluminum. Dynetic principle permits off-setting the stylus to provide proper tracking angle.
- 7. 10-SECOND STYLUS REPLACEMENT**
Stylus replacement is exceptionally simple and fast—requires no special skill or tools. Unique design assures correct positioning.
- 8. EASE OF INSTALLATION**
The Stereo Studio Dynetic can be used with any high quality transcription type turntable. Arm can be installed on all conventional mounting boards with exceptional ease.
- 9. UNEQUALLED COMPATIBILITY**
Both models M216 and M212 give true high fidelity response whether playing stereo discs stereophonically, monophonic discs monophonically or stereo discs monophonically.
- 10. PRECISION PRODUCTION**
Stereo Studio Dynetic "Integrated" tone arms and cartridges are manufactured under critical tolerances in all performance characteristics and are individually tested electrically, acoustically and mechanically. Each unit must meet or exceed all specifications and standards before it is approved for packaging and shipment.

TD-124 . . . World's finest turntable for home-music systems

Unique design, and an unparalleled combination of features make the TD-124 unbeatable for true-to-life stereophonic sound. No other turntable is quite like the TD-124; and no other can equal its performance.

Actual comparative tests of the TD-124 and six leading competitive turntables, four of which cost up to \$30 more, showed that the TD-124 has 3db less rumble than the best of these. Examine the mirror-finished precision machining under the TD-124's table — particularly the shaft and bearing — compare these to other tables and you'll see why.

TD-124

\$99.75 Net
Optional base \$9.00
Full one-year guarantee

FEATURES

Twelve-inch, 11½ pound table (outweighs 16" aluminum tables) for lowest wow and flutter. Precision-machined, 4-speed, Thorens Roto-Drive, is adjustable (±3%) for exact musical pitch. Attains full speed within ½ rev., despite weight of main table, because of exclusive Thorens clutch. Clutch also allows starts with stylus resting on record for long noise-free record life. Main table of cast iron provides magnetic shielding against hum for pickup, and light aluminum cover table, plus attractively styled rubber mat, prevents attraction of magnetic pickups. Built-in illuminated strobe allows setting to exact speed while record is playing. Built-in level-bubble and easily accessible leveling device make it easy to keep table level.

Precision 4-pole motor with extra compliant belt-plus-idler provide complete motor vibration isolation. Provision for changing arms

without leaving unsightly marks — just replace low-cost mounting board, available for either 12" or 16" arms in various finishes. After mounting, arm becomes an integral part of the turntable and is automatically leveled when unit is leveled.

Easy to install: The TD-124 requires only 2½" clearance below top of mounting board. Dimensions: 15½" wide x 12½" deep with 12" arm-mounting board. Furnished with line cord and solderplate. Operates on 50- or 60-cycle ac, any voltage from 100 to 250 volts.

TDK-101 . . . a "TD" turntable in kit form

Here's top value, plus top turntable performance, for the music lover who likes to put things together. The TDK-101 is a precision-crafted Thorens transcription turntable in kit form, can be quickly assembled using only common household tools. Yet you get the same fabulous machining you get on the higher priced Thorens TD units. Just compare the main turntable shaft machining on the Thorens with that of any other make and you'll see why the Thorens runs quieter, has less wow, rumble, and flutter.

FEATURES

Same basic drive as on more expensive TD units, but single speed, 33 $\frac{1}{3}$ rpm; ultra-compliant belt, plus extra-large idler, provides complete motor isolation and constant-speed operation. Mirror-finish machining on all critical working parts — particularly the main bearing shaft — and single ball-thrust bearing (retained so it can't get lost) insure lowest wow, rumble and flutter. Adjustable speed ($\pm 3\%$, a total of about one musical semitone) while record is playing. Built-in strobe disc allows setting to exact speed. Idler automatically disengaged when unit is switched off. Drive mecha-

nism is completely enclosed; there are no external "string" belts or belt shields. Operates on 115-volt, 60-cycle ac. (50-cycle adapter available.)

TD-184 is a four speed turntable with integral arm, wired for stereo. It features same basic precision-machined, adjustable speed drive as the TD-124 transcription turntable. Semi-automatic operation.

Our dialing motion selects 7", 10" or 12" record size, starts table, and arm literally floats down on air into the first record groove. Adjustable air-damping piston controls lowering speed of arm. Absolutely no connection between arm and table during playing. Featherweight position-trip shuts off player at end of record, idler is automatically disengaged, and arm lifts. Manual-reject control permits shut-off, interruption to playing (with resumption at same point if desired) or completely manual operation. Turntable floats on nylon-seated ball thrust-bearing for absolute minimum wow, rumble and flutter. 2-gm arm tracking and resonance under 17cps equals or exceeds performance of much higher-priced separate arms; five pronged plug-in adapter accommodates all standard stereo or monaural cartridges. Dimensions: 15" wide by 12" deep; extends only 2 $\frac{1}{2}$ " below panel, 3" above. The tone-arm does not extend beyond the base-plate at either back or side, making this unit an ideal replacement where space is at a premium. Operates on 50- or 60-cycle ac, any voltage from 100 to 250. Furnished with line cord and two shielded pickup cables.

RELAY RACKS

ADD-A-RACK SERIES

It always has been necessary to buy special racks without louvres on one side to obtain maximum interior space with a minimum of floor space. Now, you no longer need to buy an entire new cabinet when you want additional space. When multiple rack units are required, we not only offer additional racks at a lower cost, but provide a sturdier, better looking assembly. Only Add-A-Rack series can accomplish this savings.

Illustration A shows the two Add-A-Rack cabinets assembled together. Illustration B shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entirely new outfit, you purchase, as a unit, four parts: 1. The door, 2. the top, 3. the bottom, 4. an Add-A-Rack Coupling Unit. The right or left side of your present relay rack is removed and replaced by the Add-A-Rack Coupling Unit. Next, the top and bottom are fastened into place. The side taken from the first

rack is then fastened onto the second rack. Place the additional door into position and you now have two racks, properly and efficiently coupled together. In the same simple way, more racks can be added at any time. Every one will be in a continuous one piece assembly.

PRESTIGE RELAY RACKS

Beautiful and practical housings for permanent or mobile instrumentation

NOW WITH ADJUSTABLE PANEL MOUNTING RAILS WHICH CAN BE MOVED FROM FRONT TO BACK IN ONE INCH INCREMENTS.

A standard Prestige Relay Rack consists of the framework, top, bottom, two ball cornered sides and a ball cornered door. Shipped knocked-down with necessary assembly hardware.

Interior servicing is easily accomplished without tearing down rack since sides are attached to frame by means of tongue and slot arrangement at bottom and two screws at top, thus sides are quickly removed.

Drilled and tapped panel mounting rails on all four vertical members of the frame. Standard 19" panels can, if desired, be mounted on all four sides of the rack.

Doors may be mounted to open either from left or right side. Extra doors may be purchased so that doors may be placed on any of four sides.

Panel rails will support 200 lbs. suspended between rails at any vertical position.

Bottom will support 500 lbs.

The base is slotted to accept ball cornered side panels on any of the four sides of the rack.

Clearance of ball cornered door and side panels is sufficient to permit their installation over panels without damage to knobs or instrument controls.

Casters may be attached to base to achieve mobility if desired. Base is so designed that casters are recessed and do not detract from appearance of rack.

Knockout holes are provided in the sides of the rack so that two or more may be joined together in series.

Racks will accommodate Bud SD-1717 Sliding Drawer Assembly (shown on Bud Page 18), Bud Console Drawer CD-2210 (shown on Bud Page 21) or "Prestige" Supporting Angles (shown on Bud Page 11).

Finished in grey hammertone.

HEAVY DUTY CABINET RACKS

These Cabinet Racks are designed for installation where increased depth of cabinet is required. The cabinet racks are shipped knocked down with all necessary hardware for quick assembly.

All units have a hinged removable rear door. Adequate ventilation is assured by louvered sides and 2 1/2" x 17 1/2" opening in the bottom of the back. The top and bottom are similar to those furnished with our DeLuxe Relay Rack to provide additional sturdiness when the rack is assembled. Made from 16 gauge steel throughout.

The panel mounting rails are an integral part of the sides thereby facilitating the assembly of the cabinet since less parts are required.

These Heavy Duty Cabinet Racks are furnished in Grey Hammertone only. An additional charge of 10% will be made if Black or Grey Wrinkle Finish is ordered.

For the first time BUD RADIO, INC. is providing Add-A-Rack type mounting for a Cabinet Rack model. Listed in the table shown below are Add-A-Cabs for use with our Heavy Duty Cabinet Rack series. The construction is the same as our Add-A-Rack series except that the panel mounting rails are an integral part of the sides.

Overall Depth is 17 1/8".

"PRESTIGE" VERSA-CABINETS

MODERN STYLING . . . VERSATILE USAGE . . . QUICK ACCESSIBILITY

A standard Prestige Versa-Cabinet consists of the framework, two ball cornered sides, perforated metal back, solid bottom plate and two supporting channels.

The front, back, top, bottom may be quickly removed for access to interior for easy servicing.

Standard 19" panels may be attached to the top, bottom, front or back of cabinet to provide complete closure.

An opening is provided across bottom of back for cable leads, controls or knobs. Size of opening is 1-3/4" x 19". Bud Steel Panel PS-1250 (shown on Bud Page 12) or Aluminum Panel PA-1101 (shown on Bud Page 12) may be used to close opening if desired. Perforated back may be removed and a standard steel or aluminum panel may be used to close back opening entirely.

Sides are attached by means of holding flanges on the bottom of the frame and nut at top.

Handles may be fastened to sides. When the unit is carried by handles, the design of the flange mounting distributes the weight properly for safe carrying. Flange design eliminates possibility of sides becoming accidentally detached while equipment is being carried. Cabinets may be fastened side-to-side in batteries of two or more or may be stacked one on another. Proper provision is made for fastening cabinets together either vertically or horizontally by means of four holes on each side and four holes in top and bottom of frame.

Four rubber feet are regularly supplied to prevent marring of the surface upon which cabinet may be placed.

Finished in grey hammertone.

PANEL SUPPORTS-MINIBOXES

DUAL-VIEW PANEL SUPPORTS

Designed for installation on a rack where an oblique view of an instrument panel is desired. ENGINEERED SO THAT THE ENTIRE ASSEMBLY OCCUPIES NO MORE SPACE THAN THE SIZE OF THE SUPPORTED PANEL. For instance, IP-1120 supports a 7" panel and requires only 7" of rack panel space while the IP-1121 supports a 10½" panel and requires only 10½" of rack panel space. An additional feature is the panel support cover which can be removed for easy servicing or installation of instruments.

The Dual-View Panel Support is made of heavy gauge steel. It has attractive contoured edges. Furnished knocked-down with necessary assembly hardware. No panel furnished. Bud panels to fit these supports are PS-1253 (steel) and PA-1101 (aluminum) for IP-1120. PS-1255 (steel) and PA-1106 (aluminum) for IP-1121. Choice of Gray Wrinkle, Black Wrinkle or Gray Hammertone finish. Please specify when ordering.

MINIBOXES with SELECTIVE FASTENING

For the first time—a minibox with both snap-lock and screw-type fastening at no extra charge.

A multipurpose aluminum box for use in the fields of communications and electronics. The design permits the installation of more components than is possible in other conventionally designed boxes of the same size.

Two-piece construction, each piece forming three sides. The two sections are held together by the engagement of four circular projections into four matching holes.

A unique mechanical principle enables these projections to be easily and quickly knocked out if screw type assembly is desired.

Flanges assure proper shielding. Four self-tapping screws furnished. Made of .031 aluminum. Available in natural finish or light gray hammertone.

"SURFACE-SHIELD" ALUMINUM PANELS

Now . . . naturally bright aluminum panels with blemish-free mill finish.

Each panel is covered on both sides with sturdy self-stick paper to protect against damage. The paper provides an excellent

surface for indicating size and position of drilling or milling. These operations may then be done while the paper is still in place thus minimizing the possibility of surface damage and elimination or surface soil. Paper is not removed until the panel is ready for installation.

Panels available in both 1/8" and 3/16" thicknesses, have standard notching and are 19" wide. Individually wrapped in heavy Kraft-backed cellulose wadding for protection in shipment or storage.

SPECIAL SHEET METAL FABRICATION

Bud Radio, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added, departments have been modernized and streamlined, and new methods have been developed.

We make over four hundred different sheet metal products as stock items, which are illustrated elsewhere in this section. Often a slight change in one of our standard items will eliminate the necessity of special tools and dies, thereby reducing costs greatly. Since we produce thousands of sheet metal products, every month, for ourselves and for leading firms throughout the country, we are able to effect economies in production

which mean lower prices and faster delivery. Our expanded facilities, expert workmanship, years of experience and manufacturing "know how" assure high quality products. In addition, our Engineering Staff is always available for consultation and advice. We suggest that you send us your blueprints for estimate or consult your nearest Bud Distributor.

Whether the quantity be one, ten, one hundred, one thousand or many thousands, we are interested in the opportunity to be of service to you.

Illustrated on this page are a few examples of specially fabricated sheet metal products.

CABINET RACKS

These racks are made entirely of 16 gauge steel except for the heavy steel panel supports. They have universal spacing, the holes being tapped for 10/32" screws. Panels fit into a recess so that the edges do not show. Mounting plate on bottom of rack permits casters to be fastened directly to base for easy mobility. Casters are not included in price of rack but may be ordered separately. No. TC-10.

All standard 19" panels RETMA, Western Electric or Amateur will fit these racks. Double rows of louvers side and rear give ample ventilation.

Finish is black wrinkle, gray wrinkle or silver hammertone. Black will be furnished unless specified otherwise.

SOLID WELDED RACKS

These neat all welded solid racks are constructed entirely of 16 gauge steel.

Panel mounting strips are 1/8" steel punched to accept all standard panels and tapped for 10-32 screws.

Panel mounting screws are concealed by swinging rounded corner trims. These can be removed but normally are pulled forward and swung out to give access to the panel mounting screws. This eliminates usual assembly and disassembly problems encountered. Entire bottom of the unit is flush with the floor.

Below rear door are three 7/8" diameter knockouts to accept 1/2" conduit.

CIRCUIT ASSEMBLER

"Breadboarding" is a key phase of circuit and system designing. With SEEZAK Circuit Assembler, systemized layout without restrictions is accomplished easily. Components can be mounted on individual modules, then easily fastened down, and just as easily removed for layout changes. Same precision and exacting aluminum component design exists in SEEZAK Circuit Assembler as in SEEZAK Chassis. Nomenclature and part number of components are:

TYPE "C" UNIVERSAL CABINET RACKS

SERIES "PX" & "FX" RACKS WITH SOLID SIDE WALLS FOR 19"-24"-30" WIDE PANELS - 18" & 24" DEEP FOR SINGLE OR MULTIPLE UNIT ASSEMBLY

WITH REAR DOOR ONLY

No. PX-6718

In this group are shown our standard "PX" type racks, 24" deep. The racks at the end positions are for 24" wide panels, and 19" wide panels are used on the two center racks. Regular width vertical trim strips covering the panel mounting screws are used in this arrangement.

Similar groupings could be made using "PX" racks of the same height in 18" or 24" deep racks, using 19" or 24" wide panels. All of the racks in this group have solid sides.

For over two decades, we have made various types of enclosed relay racks, differing in styling, specifications, and sizes. In presenting our **UNIVERSAL CABINET RACKS**, we offer a line with a complete range of sizes; one which combines all the advantages of racks previously listed; and which introduces new features of design providing greater flexibility and economy in assembly.

The advantages of **UNIVERSAL CABINET RACKS** may be summarized as follows:

DIMENSIONS: Racks are available for 19", 24", or 30" wide panels. Cabinet heights are 42 $\frac{7}{8}$ ", 48 $\frac{1}{4}$ ", 67 $\frac{3}{8}$ ", 76 $\frac{1}{8}$ ", and 83 $\frac{1}{2}$ "; depths available are 18" or 24".

DESIGN: Racks described on *PAR METAL* pages 2 and 3 are of conventional solid side wall construction. A description of racks with open side walls and detachable side panels is given on *PAR METAL* pages 4 and 5.

DOORS: All sizes may be ordered with rear doors only; or with matching front and rear doors.

GROUPING: All racks of the same height may be set up in "gangs" or rows; racks with 19", 24" or 30" wide panels may be intermixed; racks with or without front doors may also be intermixed.

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

VERTICAL SIDE SUPPORTS: These supports provide a new method for supporting chassis and other equipment in the racks. Installing brackets or shelves is now a simple procedure; the means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical slide supports also facilitate the installation of special sliding devices obtainable from slide manufacturers.

SLIDING SHELVES AND DRAWERS: Several models are listed on *PAR METAL* page 7. These are constructed for mounting on the front of the racks the same as regular panels.

FINISHES: All racks may be obtained in any of the following standard finishes: **GREY RIPPLE ENAMEL, BLACK RIPPLE ENAMEL, GREY HAMMERTONE ENAMEL, GREY METALLIC ENAMEL, and PRIMER COAT ONLY.** It is essential that the finish required be specified on your order to avoid subsequent inquiry and delay.

TYPE "C" UNIVERSAL CABINET RACKS

**SERIES "PR" & "FR" RACKS WITH OPEN SIDE WALLS
FOR 19"-24"-30" WIDE PANELS - 18" & 24" DEEP
FOR SINGLE OR MULTIPLE UNIT ASSEMBLY**

WITH REAR DOOR ONLY

No. PR-6718

WITH FRONT & REAR DOORS

This Cabinet has Detachable Side Panels mounted.

No. FR-6718

Series "FR" cabinet shown above is equipped with detachable side panels. **Universal Cabinet Racks** illustrated on this page are similar to those on the preceding pages except for construction with **OPEN SIDES** and **DETACHABLE SIDE PANELS**. Illustrations at left and right show these racks with side panels removed.

In the price list on the opposite right-hand page, you will note the last two columns list the matching detachable side panels; prices are **per pair**. The illustrations below are typical assemblies of multiple installations; many others are possible.

UNIVERSAL CABINET RACKS facilitate the location and mounting of chassis supports, shelves, sliding shelves, and standard sliding devices. Panel mounting angles may be positioned at the sides of the racks at any location from front to back.

Advantages of "UNIVERSAL" Type Racks may be summarized as follows:

1. A complete line of racks to provide unit row type assembly, or for use as single racks.
2. Racks with or without front doors, for either 19", 24" or 30" wide panels may be used singly, in rows, or intermixed.
3. The panel mounting angles on ALL racks are fully adjustable, and may be set at any position from front to back.
4. Vertical Side Supports (see PAR METAL, Page 6) for attaching chassis brackets, shelves, slides, etc., may be installed without drilling or fitting.
5. Either regular or "Narrow Type" vertical corner trims are available without additional cost.
6. A simplified method is provided for installing standard or custom-built slides.
7. Available finishes are black or grey ripple enamel, primer coat only, grey hammer-tone or grey metallic enamel.

This typical group consists of racks with open sides, using types "PR" and "FR" racks intermixed. Narrow trim strips are used throughout, because racks with front doors are in the assembly.

If "PR" racks (with rear doors only) were in the group exclusively, either regular width or "narrow" type trims could be installed at your option. Detachable side panels are installed on the end racks.

In this group, types "PR" and "FR" racks are intermixed.

Racks for 24" wide panels are used on the ends, whereas the three center racks are for 19" wide panels. Three of the racks have front as well as rear doors. The position of the racks can be interchanged as desired.

Similar groupings can be made with our Solid Sides Cabinets illustrated on PAR METAL Page 2.

PLEASE SPECIFY FINISH DESIRED WITH YOUR ORDER. THANK YOU.

UNIVERSAL CABINET RACK ACCESSORIES

VERTICAL SIDE SUPPORTS

These vertical side supports are supplied in sets of four uprights to fit type "PX," "PR," "FX" and "FR" racks listed on PAR METAL, Pages 2 thru 5. (Cut shows side mounting brackets in place which are sold separately — see listing below).

Uprights are fastened to grooved bolt retainers which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are drilled and tapped vertically on "universal centers" to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices made for electronic equipment.

When installed in racks for 19" wide panels, the clearance between uprights (from right to left) is 17 3/4". On 24" wide panel racks, the clearance is 22 3/4"; on 30" wide panel racks, the clearance is 28 3/4". Uprights are 2 5/8" wide and 1 1/2" deep.

Uprights are made from 1 1/8" steel, finished in aluminum enamel. Each set is supplied with necessary bolts for rack mounting.

RACK TYPE SLIDE ASSEMBLIES

All the sliding shelf units listed on the following page are a new improved design, and supercede all previously listed units. The slide carriers on all models are in a vertical position to permit the full load capacity of the slide mechanism. Additional models with higher load capacities are now available.

All sliding shelf units and phono drawer assemblies are now made to accommodate chassis up to 17" wide, eliminating the need for two types of assemblies previously listed. The forward movement of the shelves has been greatly increased, and the full depth of the shelf may now be extended from the rack.

All models are screw mounted to the front panel mounting angles of relay racks, the same as regular panels. Additional holes are provided in the side brackets of the shelf assembly for mounting to our standard vertical side supports. Either method will provide a rigid support; both may be used together where desirable.

CATALOG LISTINGS ARE ON OPPOSITE PAGE.

PANEL MOUNTING ANGLES

These panel mounting angles (or strips) are the same as used in all Universal type racks, and will fit in either PX, FX, PR or FR series racks (see PAR METAL, Pages 2 thru 5). They are supplied with necessary bolts to fit into the grooved retainers which hold the pair of panel mounting angles regularly supplied with each rack.

It is often desirable to use an additional pair of panel mounting angles for mounting chassis, terminal strips, etc. They may be adjusted to any depth within the rack from front to back.

DE LUXE TYPE CHANNEL RELAY RACKS

No. RR-197

OUR NEW DELUXE CHANNEL TYPE RELAY RACK extends the utility and applicability of the standard channel relay rack.

The panel space has been changed to 77"x19", to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. Edges of panels are not exposed.

The rack is drilled and tapped for 10-32 screws at both front and back permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The full space of 77"x19" is available on the back, the same as the front.

The clear distance between panel mounting flanges (from front to back) is 6 3/4". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on PAR METAL Page 17. When such chassis are mounted at back, the addition of standard or hinged type panels (see PAR METAL Page 15) will make a rack enclosure with a clear depth of 6 3/4". Top cross-brace is provided with a grille for ventilation where needed.

Top brace and vertical channel members are securely welded together. Base and rear braces are shipped knocked down, with all necessary

bolts for assembly. Panel mounting screws are also supplied.

DE LUXE UTILITY DESK ASSEMBLIES

General Description

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

While it is obvious that no particular fixed design can serve every requirement, *we have devised a group of standard units*, the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. Our previous models have been functionally redesigned and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.

The *versatile pedestal racks* are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our type "PR" cabinet racks listed on PAR METAL page 5. This would include panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are *solidly built* to withstand heavy strains *whether in a laboratory or a moving vehicle*.

SINGLE UNIT ASSEMBLY

The *new side panels* are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws — no metal screws or clips are used.

Our standard finish is a combination of light and dark gray hammertone enamel. Your desk requirements are easily selected from the group charts on the next page. For the turret, you may choose from four types of control cabinets listed on PAR METAL pages 21 and 22.

Other standard finishes including primer coat only are optional without additional cost.

COMPONENT GROUP CHECK LISTS

The group charts below list all necessary and alternate components for single, double, and triple unit assemblies, and also provides a check list to determine your exact requirements.

You will note that there are two types of table tops available. You may obtain them with a full depth tabletop (from front to back), or with a short depth tabletop for use with either control or sloping panel mounted on top. For simplicity, these cabinets have been omitted from illustrations on this page; they are full described and listed on PAR METAL pages 21 and 22.

RACK PEDESTALS

The rack pedestal is the principal component used in all single and multiple unit assemblies. It combines the essential features of our *type "PR" racks* listed on PAR METAL page 5, and is attractively styled for any environment.

The corner posts, the top, the bottom, and the step base are made from 7/64" thick steel. All parts are substantially welded to insure the extra strength and stability needed for trouble-free installations, wherever located.

Panel space at front and back is 21" x 19". Panel mounting angles (or "strips") may be located at any position from front to back, and have tapped holes for mounting standard rack panels, sliding shelves, phono drawers, or storage drawers. Additional tapped holes are available at the sides for mounting chassis supports and shelves.

ELECTROLYTICS

TYPE AFH (85°C) Twist-Prong Electrolytic Capacitors

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong electrolytic capacitors with the very latest refinements . . . 85°C operation; improved hermetic sealing; special Types AFHS and PWHS for high ripple current circuits; high-purity aluminum foil construction throughout; either etched or composite-plate depending on electrical requirements. Types PWH and PWHS are special construction for printed wiring.

For use over a wide temperature range with minimum change in capacitance. Designed for filter audio bypass applications in radio-TV and amplifier equipment.

While AFH electrolytics enjoy a tremendous popularity as replacement capacitors for TV receivers, they are rapidly gaining acceptance in many industrial applications.

Capacity tolerances and surge voltage are as listed in EIA Specification No. RS-154.

TYPE PR Wax-Filled Tubular Capacitors

Wax-filled electrolytic tubulars in wax-impregnated cardboard tubes. Sections manufactured to same high standards as more expensive metal-cased units. These units are made for exact duplicate replacements in television receivers and antenna rotating devices. Tolerances meet RETMA standards and are manufactured for operating temperatures of 0-65°C. PR numbers designate replacements for Television Receivers, XA numbers designate replacements for Rotators.

Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP-PRS) for replacement use in cross-over networks and color TV receivers. Also listed are Types PRSB — separate section, dual units for use in specialized applications.

Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.

Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 3/16" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.

Tolerance and surge voltage are in accordance with EIA Specification RS-154.

TYPE B C D UPRIGHT MOUNTING BAKELITE CASED ELECTROLYTICS

Bakelite cased, epoxy end-filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Bakelite case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a +(plus) mark on case. Lead space varies with diameter.

† "AUTOPASS" Type P-151N Vertical Mounting Bakelite-Cased Paper Capacitors

Aerovox Type P151N capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space.

Aerolene impregnated and assembled into a molded phenolic case, Type P151N capacitors are then sealed with a thermo-setting end-seal. The end-seal surface is below the outside edges of the plastic case, permitting the capacitor to be mounted flush against the mounting surface. The leads of these capacitors are stiff, and critical spacing is closely held to facilitate their use in mechanized assemblies. Outside foil is identified by wire lead nearest to edge of case or by a paint stripe on the case nearest the outside foil.

AEROFILM (MYLAR*) CAPACITORS

V84C Aerofilm† Tubular Capacitors are high quality units in dense steatite cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85 C. These excellent characteristics are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%.

R-F NOISE CAPACITANCE SUPPRESSORS

BYPASS
INA-116, INA-117, INA-118

These radio-noise suppression capacitors have been especially designed for use in aircraft, vehicular and industrial electric and electronic fields.

Primary application of the INA-116, INA-117, and INA-118, is as r-f bypass capacitors from line to ground in low voltage DC supply lines. These units are rated at full 150 VDC over temperature range of -55°C. to +71°C. and 60 VDC from -55°C. to +95°C.

Types INA-218, INA-219, INA-220 and INA-221 are feed-thru capacitors in which the effective section inductance is minimized by the so-called "duct-type" design. Significant reductions can often be realized in size, weight and in some instances, overall cost by the use of feed-thru capacitors as compared to the conventional r-f suppression filter designs. The feed-thru capacitors listed below may be used with good characteristics to 1000 megacycles. Operating temperature range is -55°C. to +85°C.

UHF-INTERFERENCE FILTERS

These latest filter units provide maximum attenuation from 150 KC well up into the UHF range. And they are extra-rugged, extra-compact, extra-efficient, by any comparison with previous filters.

Primary applications are in r.f. noise suppression work in military or commercial aircraft and for vehicular low-voltage DC applications. Also, for special applications such as battery or low-voltage DC filters, for shield room applications, and for critical equipment.

Available in seven standard types meeting a wide variety of applications. For extraordinary requirements, special filters can be developed and built to your order.

BUILT-IN FILTERS

High attenuation type, hermetically sealed units for use where severe interference is encountered and dependability is required. For permanently mounted applications. Aerovox special "Pi type" construction insures efficient radio noise reduction over low frequency broadcast shortwave, and television bands. Suitable for Army-Navy or aircraft equipment where immersion and severe humidity tests must be met.

For single wire unbalanced applications. For two filtering use one filter in each line. Filter case must be securely bonded to the filter appliance and ground for maximum efficiency. These filters when used on high voltage AC should be used only on permanently grounded equipment.

IN 110	250 VAC	5	2" x 2" x 1"
IN 111	250 VAC	10	2" x 2" x 1 1/4"
IN 112	250 VAC	30	3 1/4" x 2 3/8" x 2 7/8"

SCREEN ROOM FILTERS

Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for 3/4" and 1" conduit.

1 1/4" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

PAPER SUB-MINIATURES

Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case for a one-minute period. Ambient temperature shall be plus 25°C, plus or minus 10°C, during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Types P123S and P123SX are rated for operation over a temperature range of -65°C. to +100°C. Types P323S and P323SX are rigidly processed to assure operation over the temperature range of -65°C. to +125°C. The capacitor sections on types P123S and P323S utilize an inserted tab construction to obtain minimum size. Types P123SX and P323SX utilize extended foil construction for those applications where operation is required at very low AC voltages.

All values are available in ±10% or ±20%.

** RIGHT ANGLE TUBE SOCKETS

Type A Type AX Type B Type BX
Ordering Example: RA7A = (Type A 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-fatiguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thickness.

Type A — for general purpose applications.
Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
Type B — same as Type A except tube shield shell added.
Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket. RA 9 — 9 pin right angle tube socket

** MODULIZED STANDARD CIRCUITS

Modules are comprised of uniformly standard, stacked seatite wafers combining the required resistive, capacity and inductive components to form a completely reliable, ruggedly compact electronic circuit.

Based on a study conducted by the National Bureau of Standards, the modules listed below were chosen as representative of circuits appearing in both military and commercial equipment. In all cases, similar functional circuits have been in use for at least 10 years without major improvement. Accessories, such as the twelve position bread board*, the individual module mounting socket† and mounting socket and banana plugs are available to facilitate the inter-connecting of standard circuit modules to form complete electronic sub-assemblies.

AEROVOX

CAPACITORS RESISTORS

CERAMICS

Hi-Q CAPACITORS

Ceramic disc and tubular capacitors may be roughly divided into two main categories; namely, General Purpose (including By-pass and Coupling) and Temperature Compensating. The Aerovox line furnishes both tubular and disc-type ceramics in both categories as well as many special purpose types, including Stand-off, Feed-thru, High-voltage Cartwheels and Plate Assemblies.

All general purpose units are marked with Aerovox name or trademark, capacity and voltage, if other than standard.

All temperature compensating units are color-coded in accordance with RETMA Specifications REC107A.

Bypass Coupling Capacitors (BPD) are furnished in GMV (Guaranteed Minimum Value) capacity tolerance since in applications such as in screen grid bypassing, capacity is not a critical characteristic. Due to this fact, Hi-K (Hi Dielectric constant) bodies are used, resulting in the smallest size body for a given capacity.

General purpose capacitors (DI-SI-CI), on the other hand, are recommended for circuits where capacity is more critical such as RC networks, etc. Since capacity tolerance in these cases is $\pm 20\%$ or less, Hi-K bodies cannot be used. Therefore, sizes of this type of unit are larger than the bypass coupling type.

Temperature compensating units (NPO, N750 in discs and tubular) are for use in critical applications where capacity must not change appreciably with changes in temperature; for example, resonant

circuits or any other application where stability of capacity is necessary.

Since the temperature coefficient is determined by the ceramic mix, all temperature compensating units are manufactured to standard tolerance

Unless otherwise specified, the tolerance on the temperature coefficient is as follows:

Temp. Coef.	Tolerance PPM
NPO	$\pm 30\%$
N080	$\pm 30\%$
N330	$\pm 500\%$
N750	$\pm 100\%$

It should be noted that this is the tolerance of the temperature coefficient and not on the capacity value

All ceramic capacitors are made by firing the silver electrodes directly to the ceramic dielectric to assure low noise operation. Units are coated with a non-Hygroscopic Phenolic or sealed in Steatite tubes and then impregnated with micro-crystalline wax which helps protect the units from humidity.

The special items such as feed-thru, stand-off, high-voltage cartwheels and printed assemblies are manufactured to complete a full line of ceramic capacitors for replacement as well as industrial use.

Hi-Q TUBULAR STAND-OFF CAPACITORS

TYPE MCS

TYPE CS

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped with capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 3% and the insulation resistance is above 7500 megohms.

TYPES 1468LS-HV and 1467LS-HV

Designed especially for television, low power transmitters and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished to meet characteristic B of the Mil specification. Standard Tolerance is plus and minus 20% and they are tested to meet EIA standards. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

Ceramic mounting insulators (specify "M") available. 1650-54 series furnished with 6-32 tapped holes for screw mounting.

TYPES 1550L, 1570L and 1590L Potted Transmitting Capacitors

These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite case mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

TYPES 1940, 1950, 1960, 1970 and 1980 Stack-Mounting Transmitting Capacitors

These stack-mounting transmitting mica capacitors are especially intended for various applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installations. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

DIPPED, SILVERED MICA CAPACITORS TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5A Test Standards for molded mica capacitors these unique dipped-mica units offer the following outstanding features:

- High operating temperatures —55°C to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5A. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 megohms at 125°C.

Capacitors will be marked with capacity and tolerance. In addition voltage rating will be marked on all units other than 500 volts rating.

TYPE WT WIRE TANTALUM

Type WT capacitors are lead mounted, wire tantalum units manufactured in polarized type only. These units are designed for use where the AC voltage is small with respect to the DC polarizing voltage.

The capacitor consists of a high-purity tantalum anode and a fine silver cathode with specially-selected electrolyte, seal and spacer materials. The case and attached lead form the cathode terminal and are uninsulated. The anode tantalum wire extends through a bushing and is attached to a solderable lead with a welded connection. A thermosetting resin embedment encases the welded joint to provide maximum protection.

AEROVOX L-C CHECKER—MODEL 97

The Aerovox Model 97 L-C Checker is a highly versatile test instrument capable of testing capacitance in circuit **without removing either lead of the capacitor from the circuit.**

The new Model 97 has been completely redesigned and engineered according to the latest design theories and utilizes the newest techniques of printed-circuitry to achieve the most efficient instrumentation available today to servicemen and technicians. The L-C Checker represents the ultimate in versatility and adaptability in a test instrument.

Some of the features of the Model 97 L-C Checker include: extended frequency range from a minimum of 74 kc to a maximum of 44 megacycles; a recessed front panel with an extra-large, easy-to-read dial with magnifying indicator. Finished in an attractive smooth grey, the instrument weighs only 8½ pounds and measures 13" x 8½" x 6" deep and comes furnished with all necessary test cords and probes.

A partial listing of the applications of the Model 97 L-C Checker includes:

1. Checking capacitors in circuit for values of capacitance and relative Q at radio frequency.
2. Checking capacitor insulation resistance (leakage).
3. Checking alignment of radio frequency and intermediate frequency circuits of domestic, marine, and short-wave receivers.
4. Tracking super-het oscillators.
5. Checking alignment of FM-I.F. channels and independent alignment of FM-I.F. transformers.
6. Checking resonant absorption troubles in "all wave" receiver circuits, locating dead spots, etc.
7. Location of resonant points in shorted windings (unused coils) in multi-range oscillators, etc.
8. Checking natural resonant points of r.f. chokes to make sure they are beyond circuit operating range.
9. Checking natural period of antennae and transmission lines.
10. Checking quartz crystals for true or false frequency, operation at harmonics and activity.
11. Checking transmitter buffer, amplifier and tank circuits for parasitic current loops with power off for safety.
12. Tuning of wave traps and filters for harmonic suppression.

*E-Z-CODE JUNIOR

Revolutionary New!

MORSE
CODE
TEACHER

This new instrument is not a record, not a tape, not a punched card . . . but a combination of modern printed wiring circuitry, an electric pencil and a completely new technique for learning code.

The radio-telegraph code is printed on a pre-nolic base by the etched copper process and then plated for added durability. Each letter of the code appears in vertical slots with wide and narrow bars of printed wiring acting as the dashes and dots respectively. Each dot and dash of the code is wired to the buzzer in the plastic housing. As the user draws the electric pencil down each slot, the electrical circuit is completed, sounding the dots and dashes of that particular letter.

Connecting two "E-Z-Code Junior" instruments will permit users to "send" to each other over a considerable distance. Connections are simply made with hookup wire to the two connecting clips. A "hide-away" telegraph key is mounted on a hinged flap which folds out of sight when not in use. The set can also be adapted for transmission through oscillators in ham receivers.

Each unit individually packed in attractive, multi-color display carton.

All ELMENCO Dur-Mica capacitors can be obtained with either straight or crimped leads as per line drawings above. The dimension from the bottom of the crimp to the coated portion of the lead is approximately 5/32 in all case sizes. Minimum length of crimped leads is 1/4". Lead sizes for both straight and crimped leads are identical except for the DM-15. Crimped lead DM-15 capacitors have #20 gage wire.

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to RMA Standards. All units are wax-dipped for protection against salt water immersion.

The new ELMENDO Mylar*-Paper Capacitors represent a double break-through in capacitor design. A level of reliability which meets computer and missile requirements has been achieved in a design normally used and priced for the radio-TV market. As a result, these ELMENDO dipped Mylar*-Paper capacitors can be used in the most critical applications with a substantial saving in cost.

ELMENDO dipped tubulars are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged moisture-proof coat. Special winding design provides insulation resistance comparable to competitive polyester film units.

SPECIFICATIONS

CAPACITANCE RANGES:	see table below.	tolerance ±10%.
VOLTAGE RATINGS:	100VDCW, 200VDCW, 400VDCW, 600VDCW, 1600VDCW, (1000VDCW upon request).	
INSULATION RESISTANCE:	@ 25°C.: 5000 megohm-microfarads or 100,000 megohms minimum, whichever is the lesser. @ 110°C.: 70 megohm-microfarads or 1400 megohms minimum, whichever is the lesser.	
POWER FACTOR:	1.0% maximum at 1kc.	
TEMPERATURE RANGE:	-55°C. to +110° with no voltage derating.	
CAPACITANCE CHANGE VS. TEMPERATURE:	From 25°C. to -55° (-9.0% max.) From 25°C. to +110°C. (+10.0% max.)	

	L	H	W	S
DP-1	3/4	11/16	7/16	1/4
DP-2	7/8	3/4	1/2	7/16
DP-3	1-1/4	7/8	5/8	23/32
DP-4	1-11/32	15/16	11/16	27/32
DP-5	1-9/16	1-1/16	7/8	1-3/32

L, H, and W dimensions are maximum and include highest capacitance values in each size. Since dipped unit size varies with size of winding, lower capacities will have smaller dimensions, particularly in values of "H" and "W". If size is critical, inquiry as to exact size for value required is recommended. For example, although maximum "H" dimension of a DP-5 is 1-1/16", some units will have a corresponding size of only 13/16". Tabulation of size vs. capacity similar to "DM" mica units will be published when completed.

LONG TERM OPERATING STABILITY AT FULL RATED VOLTAGE AND RATED TEMPERATURE EXTREMES IS ±2% MAXIMUM.

PAPER DIELECTRIC CAPACITORS CP TYPE

MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS — STEATITE CASE

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2 1/4" long.

DIMENSIONS FOR CP TYPE CAPACITORS

	Max. Diameter	Max. Length
CP-1	23/64"	1-1/8"
CP-2	27/64"	1-3/8"
CP-3	31/64"	1-3/8"
CP-4	9/16"	1-5/8"
CP-5	3/4"	2"
CP-6	51/64"	2"

Part numbers can be read as follows: First one or two numbers indicate voltage rating in hundreds of volts. CP indicates type of capacitor. Next number between the dashes indicates case size. Last three digits indicate capacity, the first two being significant figures and the last the decimal multiplier.

ANNOUNCING THE NEW PRINTED CIRCUIT TRIMMER

The Elmenco Type 46 trimmer series has been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped-in" the circuit and firmly held until soldered.

This printed circuit trimmer, available at present only in the Type 46 style, is identified by the prefix letter "PC". All capacitance ranges listed for Type 46 are available, designated as part numbers PC460 through PC468.

For list price add \$0.05 to list price of standard Type 46 trimmer.

ARCO POLYSTYRENE DIELECTRIC CAPACITORS

Arco Polystyrene Dielectric Capacitors are designed for use in precision networks, servo systems, analog computer circuits, and a wide variety of applications calling for high stability, high insulation resistance, low dielectric absorption, and low dissipation factor. All units are tested 100% for voltage, tolerance, insulation resistance, and dissipation factor. In addition, all capacitors are subjected to an accelerated life test to guarantee high reliability. Arco polystyrenes are hermetically sealed in non-magnetic enclosures with compression glass seals.

TYPE EK

Miniature Ceramic Cased Electrolytics

Astron Type EK ceramic cased subminiature electrolytics are small capacitors, designed for all industrial and commercial applications. Using a steatite case, they are second only to hermetically sealed metal cased units in moisture and humidity resistance. High capacity, low voltage and extremely small size are the features that make the Astron EK highly suitable for application in transistorized circuitry and miniature electronic instruments and equipment.

ACTUAL SIZE

TYPE TES

Solid Electrolyte Tantalum Capacitors

The Astron Type TES solid electrolyte tantalum capacitor is a subminiature metal case, hermetically sealed unit, containing solid materials only. A new development in solid state technology allows the use of a semiconductor electrolyte, resulting in capacitors of improved reliability over a wide range of environmental conditions.

The tantalum oxide dielectric endows these capacitors with long shelf life and stability even at maximum rated temperature. The solid manganese dioxide electrolyte can never leak or corrode even if the seals are damaged or destroyed. The dissipation factor is low over the temperature range of -80°C. to +85 C. and the capacitor variation averages ±3% of the 25°C. value. TES capacitors are polar units. The case is the negative terminal.

ASTRON CORPORATION
EAST NEWARK, N. J.

METEOR* SUBMINIATURE PAPER CAPACITORS

For 125°C. Operation without voltage derating

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability, less than 5% change, over entire temperature range of -65°C. to +125°C., due to use of ASTRON-developed high-temperature impregnant X-250*.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.

- Built to exceed stringent requirements of Specification MIL-C-25A.
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve, will soldered-on tangential or L type bracket screw neck mounting style; or stud-base mounting style.

TYPE AQF (50V)
SUBMINIATURE GLASS-TO-METAL
SEALED TUBULARS
For Transistorized Applications
50 Volt Rating —
Extended Foil Construction

METALITE[®]

Metalized Paper Capacitors for 65°C. and 85°C. Operation

METALITE CAPACITORS

Feature:

- Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.
- As much as 75% reduction in size over conventional paper-foil capacitors.
- Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.
- Temperature Range (Metal cased units) -65°C. to +85°C.; (cardboard cased Type ML) -55°C. to +65°C.
- Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.
- Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

METALITE[®] TYPE MQCF

85°C. Operation

Glass-to-Metal Sealed SUBMINIATURE TUBULARS

- Smallest paper capacitor type available.
- Temperature Range —65°C. to +85°C.
- Non-inductively wound. Mineral wax impregnated and filled. Tinned, non-ferrous metal cases.
- Capacitor section grounded to case (Type MQC) with glass-to-metal terminal at one end. Available also with capacitor section insulated from case (Type MQCF) with glass-to-metal terminal at each end.
- Lead length 1 3/4" minimum. Standard capacitance tolerance: ±20%.

TEMPERATURE COMPENSATING
CERAMIC CAPACITORS
DISC (TCD)

CHARACTERISTICS AND APPLICATIONS: Changes in ambient temperature affect the values of the various components which make up any receiver. This alters the exact frequency of resonance as is illustrated by some "drifty" tuners which must be retuned after they have warmed up. It is possible to control this by introducing reactive components of such temperature characteristics that if of such values as to offset the undesired changes.

Available Capacitance-temperature characteristics range from a change of plus 100 parts per million per degree centigrade (P100) to a negative change of 5600 parts per million (N5600).

ALL-PURPOSE CERAMIC CAPACITORS

SKOTTIE STYLE TXD all purpose ceramics provide the highest available capacitances at 250°C. In the smallest possible size. These capacitors exhibit less capacitance change with temperature than the limits specified in the EIA RS-198 specification for Z5U ceramics. This specification allows a maximum capacitance change of +22% and -56% along a temperature range of +10°C. to +85°C.

TEMPERATURE COMPENSATING DISC CAPACITORS

Centralab's disc type temperature compensating capacitors are fast becoming the most popular unit to replace mica types in all applications. Because of the inherent stability of TC ceramic dielectric material and smaller size, Centralab DTZ and DTN find many applications in frequency determining and resonant circuits — BETTER THAN MICA FOR ALL APPLICATIONS. All 600 volt DC working, 1200 volts DC test.

TYPE RC — TUBE-R-CAP**

The Tube-R-Cap is a radial lead ceramic tubular capacitor and resistor in parallel in the same space as a tubular capacitor alone. Permanent bonding of the resistor and capacitor minimizes chance of shorts or opens. Ideal for printed circuit boards. Typical uses are Grid Resistor, Cathode By-pass, Resistor loaded tuned circuit, plate load resistor with R.F. by-pass and tone compensation.

CERAMIC CAPACITORS (Cont'd)

CERAMIC TRIMMER CAPACITORS

Centralab Ceramic Trimmers are small in size, light in weight and are easily mounted. Equal stability over 180° rotation is maintained even under adverse environmental conditions.

Simplicity of mechanical design makes Centralab Ceramic Tubular Trimmer Capacitors a dependable and economical approach to fine tuning. They are specifically designed to compensate for variations in tube capacities. Because of this smooth linear rate of capacity change, the ceramic tubular trimmer has also found ready acceptance in precision applications. All units 600 volts DC working — 1200 volts DC test.

COMPACT METALIZED-PAPER CAPACITORS

Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on other style C-D metalized capacitors, write for Bulletins 142-3-4, 152 and 152-1.

TEMPERATURE RANGE: -40°C to $+60^{\circ}\text{C}$.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

"SILVER-MIKE" MOLDED MIDGET MICA

HIGH-STABILITY "SILVER-MIKE"† UNITS

Type 22R miniature "Silver-Mike" capacitors are especially adapted for use in circuits where accuracy and stability of capacity is of prime importance. They are rated at 500 volts D.C.W. and tested at 1,000 volts D.C., molded in low-loss red plastic and fully protected against physical damage or changes in characteristics due to varying atmospheric conditions.

STANDARD TOLERANCE ±5%, but in no instance less than ±1mmf. For capacity Tolerance of: 20% deduct 10% from List; 10% deduct 5% from List; 3% add 10% to List; 2% add 15% to List; 1% add 25% to List. (Applies also to 1R, 1DR, and 5R.)

SIZE: 1/2" x 1/4" x 3/16"

Types 1R, 1DR, and 5R "Silver-Mike" capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. Ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, tuning circuits and other similar applications.

*When JAN-C-5 unit must be supplied, order according to specific CM type designations listed in C-D Mica Bulletin—Series 422.

CORNELL

DUBILIER

"Super"
ENCAPSULATED Molded-Case MIDGET MICA CAPACITORS

Cornell-Dubilier "SUPER MICADONS" represent an entirely new conception in Midget Mica Capacitor construction. The vastly improved design and construction of the new "C-D SUPER MICADONS" now makes it possible to produce miniature units of greatly increased capacitance and superior quality over conventional units of the same case size. Every characteristic desirable in a mica capacitor has been incorporated into one compact, miniature sized unit. No mica capacitor of conventional design has achieved this comprehensive quality.

CORNELL DUBILIER

MOTOR START CAPACITORS A. C. Electrolytic Types

Over 25 years of design, development and engineering are represented in present-day CORNELL-DUBILIER MOTOR CAPACITORS. Only the highest-purity materials, the most modern processing techniques and most rigid quality controls are built-in to C-D Motor Capacitors. Ratings, styles and sizes are available for any known REPLACEMENT application. Consistent Dependability and Long Life are characteristic of these C-D units.

C-D types ETB, EBJ, ETLJ and ETRJ are identical in appearance, differing only in their respective VOLTAGE ratings. Units are housed in round aluminum containers and supplied with a black "electrical" kraft cardboard external sleeve. Terminals are combination solder-lug and self-tapping screw, except for the 1" and 1 1/8" diameter containers, in which case only solder-lug type terminals are furnished. End-Caps and/or Mounting Brackets are available on order.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC". Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting, permit a wide variety of assembly methods.

SPECIFICATIONS—Straight line capacity. Air gap is 0.0247" nominal. Tested at 1000 V, R.M.S., 60 cycles.

"VU" CAPACITORS

VU

FEATURES—The "VU" is a multiply designed VHF tuning capacitor using completely original concepts. With its conventional "bump constant" circuit, rather than tuned cavity technique, can be efficiently used up to 500 mc/megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal to metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 mc/megacycles.
