### ALASKAN RADIO part 1

This listing provides what is the latest compilation of data on Alaska's AM dial. Most of the information has been confirmed through personal monitoring, phone calls to the individual stations, or the latest data from BROADCASTING yearbook. As is often the case, information is subject to change; however as of 1 November, 1984 the information is accurate.

Part II will cover the Alaskan Forces Radio Network, which I hope to complete later this winter. Also, I plan to visit AFRN headquarters and studios later on in January to obtain the latest information.

All geographic locations are indicated on the accompanying map. The reason for omitting the Central and Western Aleutians is not to "cut Alaska short", but in the interest of saving space. Also, the only AM station in the Aleutians is the Navy's 890 at Adak, which I hope to have covered in Part II. I am also due to visit my old home at Adak, during a logistics flight in January and hope to obtain the latest information on the facility.

Surprisingly, much of this information is based on Brian Vernon's well-researched article from DKN Volume 48, Number 23 published on 6 April, 1981. Special thanks to Brian for his offer of assistance in this article.

Of course, if any updates or obvious changes are monitored on any Alaskan stations, it would be appreciated if they would be brought to my attention.

There are still a few AM applications on file with the FCC for new AM stations. These are in the process of being researched, and any updates will be passed on upon confirmation.

Alaska has always been a difficult state to capture on AM east of the Rocky Mountains, hopefully this information will make it a little easier.

FREQ	CALLS	LOCATION	POWER KW	D/N	OTHER
550	KENI	Anchorage	5/5		AdCon 24Hrs.
