News from Headquarters

It's time once again to warm up the receiver, and begin another season of DX listening. Autumn is often the best time to DX, especially for transpacific and transatlantic stations. The summer static is gone, and the midwinter anomaly hasn't yet set in. You can get the ball rolling by perusing this and other recent DX Monitors for juicy DX tidbits. And once you hear them, report them to DX Monitor, the best BCB DX publication around.

FCC MAINTAINS STATUS QUO

According to the Los Angeles Times, October 22, the FCC voted 4 to 0 to retain the geographic restriction that assigns "K" calls to radio & TV stations west of the Mississippi, and "W" calls to stations east of the river. The agency had proposed last February to eliminate the restriction, but the arguments against were apparently stronger than the arguments for the change. Thanks to Steve Mittman for this bit of information.

SOME STATISTICS

Last season, IRCA members sent in a total of 1771 tips to the two DX Worldwide columns. 1044, or 59% appeared in DXWW-East, and 727, or 41%, appeared in DXWWW. Here's a summary of the reports by region: (TA-Transatlantic, PA-Pan American, TF-Transpacific)

Thanks to Phil Bytheway for compiling the statistics. Conclusions are left as an exercise for the reader.

WANTED: SHORT ARTICLES

We're in need of some short, typewritten articles for DX Monitor. They would be used as "filler" at the end of the regular columns. If you feel like writing a short article on a radio station, a receiver, your latest DXpedition, or something else related to BCB DXing, then type it up on 8½x11 paper and send it in. We'll be happy to print it.

RELATIONSHIPS BETWEEN SOLAR ACTIVITY, THE EARTH'S MAGNETIC FIELD AND

MEDIUM WAVE DXING

PART ONE

Randy Seaver, Chula Vista, CA Copyright, 1987

1. INTRODUCTION

The relationship between "good" high-latitude or trans-polar medium wave DX openings and "quiet" Earth geomagnetic field activity has been postulated, debated and discussed over the last 25 years in the medium wave DX bulletins (e.g., Nelson (1969-77), Scrimgeour (1968) and others). DXer's have faithfully listened to the WWV broadcasts of A Index and solar flux in hopes of finding that rare DX opportunity. The tables or plots of the A index have been published regularly in the DX bulletins. The promise of the "next sunspot minimum" has been held out each decade to DXers as a "golden age" of good high-latitude DX.

In order to help DXers understand the relationships of the sun, the geomagnetic field and high-latitude DX, this article will cover some of the basic geophysical phenomena, the records for the past 30 years, and a projection of what we can expect in the next year or ten.

This will not be a comprehensive study of the geophysical phenomena, but will only address the general characteristics. If more detail is desired by the reader, the listed references can be reviewed. Ratcliffe's <u>Sun. Earth and Radlo</u> (1970) is an excellent introductory book, while Rishbeth and Garriott's <u>Introduction to Ionospheric Physics</u> (1969) provides a more detailed discussion of the ionospheric processes. Davies (1965), <u>Ionospheric Radio Propagation</u>, is an excellent technical book. A layman's description of solar phenomena, the Earth's magnetic field and basic ionospheric processes can be found in encyclopediae and other general physics reference works. The best available details of the effects of the auroral zone and geomagnetic activity on medium wave DX are found in the Nelson (1969-77) articles.

Most of the statements, ideas and figures in this article have come from the reference material.

2. SOLAR ACTIVITY

The sun produces a prodigious amount of energy over a wide range of wavelengths. The most important wavelengths in the radiation spectrum are those of hydrogen alpha, Lyman alpha, and helium. This energy provides the light and heat required for the Earth to sustain life. Some of the energy produced by the sun is in the form of an unsteady stream of charged particles, mostly protons and electrons, from the sun's corona along lines from the sun's magnetic field, called the "solar wind". This stream of particles varies with time, both short-term (minutes or hours) and long-term (year-by-year). The solar wind travels away from the sun at speeds of 300 to 1000 kilometers per second.

The sun's energy output is remarkably constant, varying by no more than a few tenths of one percent over several days. But variations in the energy output exist. Atmospheric disturbances on the sun, such as sunspots, result in additional energy release in the form of electro-magnetic waves at certain wavelengths. An intense local magnetic field on the sun is associated with sunspots, creating anomalies in the sun's magnetic field characteristics.

"Solar flares" are bursts of energy, usually at the hydrogen alpha wavelength but often including X-rays and cosmic rays, that are usually associated with sunspots, are short-lived, and vary in strength and frequency of occurrence. High energy particles can travel at nearly the speed of light, reaching the Earth in about eight minutes.

The sun has a rotation period of approximately 27 days, so variations in the sun's magnetic field, sunspot number, solar wind and energetic particles tend to repeat in 27 day cycles. These cycles are called Bartels cycles after a physicist who defined the period to track times of unsettled magnetic field conditions related to the solar rotation period.

Until the nineteenth century, the only measure of solar activity was the number of sunspots observed on the face of the sun by astronomers and solar physicists. Figure 1 shows the historical record of average monthly sunspot number from 1700 to the present. The data indicates that there is an approximate eleven year period between sunspot minima. The actual sunspot cycle is 22 years, when account is taken of the alternation of the magnetic polarity of the sun. There is also some evidence of an 90 year cycle in the maximum sunspot number. The increase from the minimum sunspot number to the maximum averages about 5 years. The maximum sunspot number varies from cycle-to-cycle, with the highest mean value ever recorded in the mid-1950's.

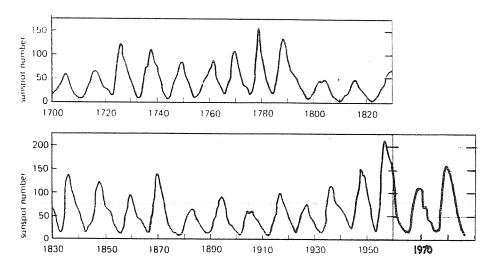

FIGURE 1. Sunspot record for 1700 to 1985.

The solar energy output is monitored in many ways by physicists all over the Earth. The National Oceanic and Atmospheric Administration, centered in Boulder, Colorado gathers information on a regular basis and produces a wealth of data. Measurements of the daily solar indices of relative sunspot number and 2000 Mhz solar flux, solar radio waves, solar wind, solar magnetic field, etc. are collected and published on a monthly and yearly basis by NOAA.

3. EARTH'S GEOMAGNETIC FIELD

The Earth is surrounded by a magnetic field, within which it behaves as if it were a ball of magnetized iron with north and south magnetic poles. More than 95% of the Earth's magnetic field originates from within the Earth's interior. The remainder comes from electric currents induced in the Earth's crust, and from electrical currents flowing in the upper atmosphere of the Earth resulting from ionization by solar radiation.

Figure 2 shows an idealized distribution of the Earth's magnetic field, showing the geomagnetic axis and equator displaced from the geographic axis and equator. Geomagnetic field lines flow from one pole to the other along lines of force very similar to a dipole with an Earth-centered axis. The magnetic intensity at the poles is twice that at the equator. The actual magnetic field of the Earth is somewhat different from that of a uniformly magnetized sphere because the distribution of magnetic elements over the Earth's surface is not uniform.

The geomagnetic North Pole was located at 78.3 degrees North latitude and 69.1 degrees West longitude in 1965, according to the Enitannica. The geomagnetic South Pole is approximately opposite the North Pole at 78.5 degrees South latitude and 111 degrees East longitude. The location of the geomagnetic poles varies somewhat over decades of time.

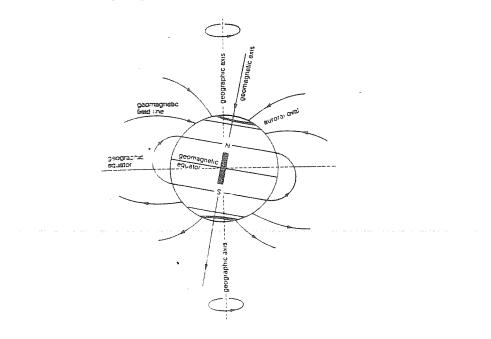

FIGURE 2. Earth's Idealized Magnetic Field.

The main magnetic field creates a cavity in interplanetary space called the magnetosphere in which the Earth's magnetic field dominates any field carried by the charged particles of the solar wind. The magnetosphere shape, shown in Figure 3, resembles a comet due to its interaction with the solar wind. It is compressed on the side of the Earth towards the sun and tail—like on the side away from the sun. Some particles from the solar wind or from solar radiation penetrate the magnetosphere and, with other charged particles are trapped by the magnetic field in a circular belt around the Earth known as the Van Allen belt.

The geomagnetic field lines are concentrated near the magnetic poles, but are displaced pole-ward on the side of the Earth towards the sun by the solar wind effects on the magnetosphere. The field lines are displaced toward the equator on the night side of the Earth.

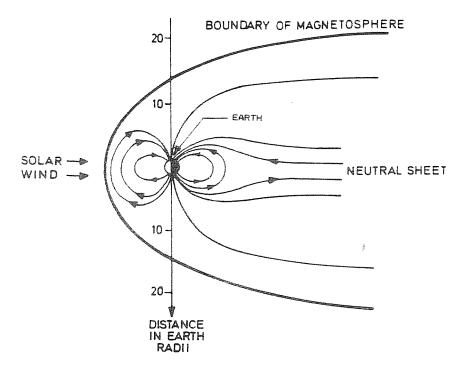

FIGURE 3. The Earth's Magnetosphere.

The Earth's ionosphere is composed of neutral molecules, ionized molecules and free electrons. The ionized molecules and electrons are caused by various forms of radiation, including solar radiation. The ionosphere has been defined in several regions, with the D-region between 50-80 kilometers altitude, the E-region between 80 and 120 kilometers, and the F-region above 120 kilometers. The D-region largely disappears at night, but the E-region and F-region retain a significant number of free electrons.

Radio wave propagation occurs by a series of ionospheric refractions from the E and/or F-regions (depending on wave frequency and incidence angle) and Earth surface reflections. Radio wave absorption occurs during the transit of the ionosphere by a wave, with most absorption occurring at altitudes below 90 kilometers. More absorption occurs at lower altitudes for a given electron density than at higher altitudes because the number of electron collisions per second decreases exponentially as altitude increases.

The charged particles carried by the solar wind and the higher energy particles caused by solar activity such as solar flares can precipitate into the Earth's upper atmosphere along the geomagnetic field lines, resulting in higher—than—normal electron densities. The auroral oval is a band within which the charged particles precipitate into the ionosphere. The auroral oval is 5 to 10 degrees wide, typically between 65 and 75 degrees geomagnetic latitude, and is roughly centered on the magnetic pole, as shown in Figure 4 for the Northern hemisphere.

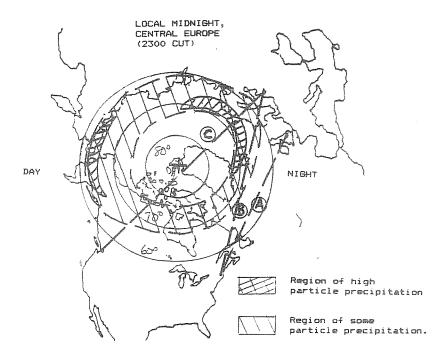

FIGURE 4. Northern Hemisphere Auroral Zone Location.

This precipitation can occur down to 50-60 kilometer altitudes, and causes high absorption to any radio wave that passes through the auroral oval above those altitudes. This is why the auroral ovals act as a curtain or shield for radio waves traversing the ovals, as shown in Figure 5. Radio waves can pass under the "curtain" but they suffer high absorption if they enter the "curtain above 50-60 kilometers altitude.

When the Earth's geomagnetic field is quiet, the oval is located closer to the pole and the area of high precipitation is reduced. When the magnetic field is active, the auroral oval is located further from the pole and there are larger areas of high particle precipitation down to a lower altitude. There is some indication that the auroral oval width decreases and "shrinks" toward the geomagnetic pole at the start of a major geomagnetic disturbance, then "expands" as the disturbance progresses.

When a geomagnetic storm occurs, defined as a geomagnetic disturbance of large amplitude, an auroral display is often noted in parts of the auroral ovals. Precipitation of very high energy particles and solar X-rays or ultraviolet rays can cause other more severe events, such as polar cap absorption in which the precipitation occurs over the entire polar region. This can cause high radio wave absorption and refraction within the auroral oval.

When there is a major geomagnetic storm, the auroral ovals may be located in the mid-latitudes, and radio waves from the North, West and East may suffer high absorption because their path passes through the auroral "curtain". Radio waves from the South are unaffected by the auroral oval, unless the oval boundary is south of the receiver. This is the familiar "auroral" conditions experienced frequently in the Northern United States, where Caribbean and South American stations are dominant on most medium wave frequencies.

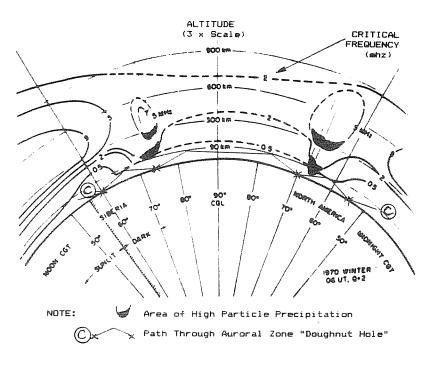

FIGURE 5. Typical Auroral Zone Cross-Section.

4. GEOMAGNETIC FIELD INDICES

The Earth has an average magnetic field strength that varies from about 0.3 gauss at the equator to about 0.7 gauss at the poles. The variations in the magnetic field strength are measured by many observatories all over the Earth's surface. During the period of a quiet sun, the geomagnetic force varies during the day by about .00020 gauss at the equator and 0.00050 gauss at the poles (20 and 50 gammas, where a gamma is 0.00001 gauss). There are seasonal variations and sporadic disturbances caused by solar activity and lunar effects. Charged particles flowing in the magnetosphere and ionosphere generate electric currents, which cause variations in the magnetic field intensity.

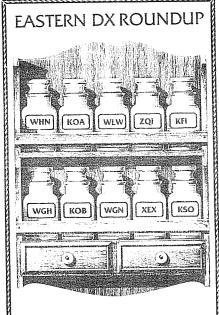

Geomagnetic activity indices, such as the K index and the A index, are used to measure the variations in the magnetic field strength. The K index is a local index of the 3-hourly range in magnetic activity relative to an assumed quiet-day curve at the recording site. It consists of a single digit 0 through 9 for each 3-hourly interval. However, there are 20 potential values of K because each number can have a + or - associated with it. For instance a K value of 3+ is one-third of the difference between 3 and 4, while 4- is two-thirds of the difference. A planetary K index (Kp), based on the K-index for 13 selected stations around the world, is available since 1932.

The local $\underline{a}\underline{a}$ index is based on the local \underline{K} index by:

$$K = 0$$
 1 2 3 4 5 6 7 8 9
 $A = 0$ 4 7 15 27 48 80 132 207 400

The <u>aa</u> value can be multiplied by two to get the geomagnetic intensity in terms of gamma. For example, a disturbance of 66 gammas is an <u>aa</u> = 33 and a K of 4+.

Add a little spice to your life...

Editor: Tim Kridel Deadline: Fridays Box 147 Middle Island, NY 11953

Greetings! I hope DX has been better for everyone else than it has been for me. Between work and school, I managed to DX a bit, but not as much as I would like. On 1150 kHz, I heard the ID "WSGN" by a man, over a station carrying "Talknet." I have WSGN listed as being on 610 kHz in Birmingham, AL. It's possible that I heard the call sound like WSGN. I'd appreciate your help on this one, especially from you southern DXers.

With that, here's this week's dynamic

duo. "Holy dangerous DX. Batman ... "

Gary A. Heisey (GH-PA) Box 310F RD1; Osterourg, PA; 16667 Philco radio, 4' floppy loop

(TK+NY) Yer editor Bearcat DX-1000, longwires, Palomar loop

690 KGGF KS, Coffeyville 10-7 0659 Poor, alone, briefly w/ WLW slop, Cuban to south, no Canadian. Spot for farm product, man said "It's 6:00 at KGGF Coffeyville. 49° outside," into local nx. Channel then became snowy. (GH-PA)

LA, New Orleans 10-8 0700 Fading w/ 690 WTIX oldies, Chubby Checker song, into

local nx w/ Mutual nx jingle. KGGF appeared w/ farm report. Nice but brief action on 690 recently. (GH-PA)

NC, Goldsboro 10-1 1945 Fair, then in mess, w/ contest promo, "WFMC" ID by 730 WFMC man. Soft relig mx (WHLO format). (GH-PA)

TX, Houston 10-8 2120 Fair w/ mod fade in Canadian null. "Hello, you're on 740 KTRH KTRH," talk program about football. Caller had ticket stub from first Cilers game. #862-8622. Much wanted, no KRMG. (GH-PA)

VA 10-4 1915 Good, alone in Canadian null, w/ slogan "The Tri-State Tradition, radio 740 WSBQ- Harrison, Middlesboro, Tazewell." C&W mx. Maybe another new stn. 740 WSBQ (GH-PA) (Possibly, but if they're new, how could they already be a tradition? Has anyone else heard this station? -TK)

940 WESA PA, Charleroi 10-8 1250 Many "New 98.3 Class FM" IDs, asking for listener input about their new stn. Partial IDs at 10 mins before the top of hour only. "WESA FM and AM, Charleroi." Never ments AM frequency. Oldies and newies mixed format, but good selection. (GH-PA)

WV, Huntington 10-7 2015 Fair o/ clutter w/ "The new 93.7 W-Nix" IDs. Oldies newles format. "W-Nix is WAMX," location at top of hour, but faded. Was WGNT 930 WAMX according to Geov Parrish. (GH-PA) (Sorry about the order, folks. -TK)

TX, Dallas 10-8 2202 Great sig, mod fading, o/ weak WTIC and strong SS to 1080 KRLD south. Twins vs. Tigers baseball, w/ ID "News radio 1080, KRLD- Dallas-Ft. Worth." (GH-PA)

PA, Lehighton 10-12 2037 Poor o/ pop stn w/ "Ode to Billy Joe," ad for 1160 WYNS Security Savings in Westlake, Juice Newton song, ID "WWWWYYNS." (TK-NY)

 $\frac{NJ}{ID}$, Atlantic City 10-18 1243 Good to fair w/ talk show "Community Round Table" $\frac{NJ}{ID}$ "WUSS Atlantic City," into "True Life Ministries at 1301. (TK-NY) 1490 WUSS

NY, Brewster 10-18 1228 Good w/ 1500 slop. Kenny Rogers song, CNN nx at 1230, 1510 WPUT wx by woman, ID "Voice of Putnam County," into more mx. (TK-NY)

The above column had so many typos that it was almost to the point of being written completely on "Wite-Out." Thanks to Gary Heisey for some great DX, without whom this week's column would not have been possible. Robert Ritchey, where are you? 73s to all, and win one for the Gipper...

A chip on the shoulder is a sign there's wood higher up.

Jazzbeaux Still Reigns in His Purple Grotto

By Paul D. Colford

"ILES DAVIS. Wayne Shorter, Jack De-Johnette and other jazz names high-lighted the recent "Live Under the Sky" concert tour of Japan. And WNEW disc jockey Al (Jazzbeaux) Collins, who went along as emcee.

found a few people waiting for him as well.

In Osaka, the owner of a 1954 album by trumpeter Charlie Shavers sought out Jazzbeaux to autograph the collection, one of whose tracks carries a narration by the broadcaster that he had all but forgotten. In Tokyo, he was remind d of the Jazzbeaux Club that formed years ago after he released a recording of two so-called hip fairy-tales written by Steve Allen.

Jazzbeaux has been around Jazzbeaux has been around.

Since he returned to WNEW-AM/1130 in
January, following a stint in San Francisco,
he's been playing the jazz that's close to him
during the predawn darkness from his "Purple
Grotto." To hear the disc jockey tell it, this mythical setting took shape when he first joined the station, in 1950. "I first broadcast out of a studio that really was

painted purple, in shades as deep as the color of eggplant," he recalled. "And sitting there, I got a subterranean feeling about the place.

Jazz needs something atmospheric, so I told the listeners that I was speaking from the purple grotte, with stalactites and mushroom patches and all. Pretty soon, I got calls from people wondering where exactly was the purple grette. So I knew I had something."

Soon he was also spinning tales of the owl. Harrison by name, who lived in the grotto. The owl liked to steal pencils out of Jazz-beaux' hand and grind them down into a fine sawdust. "People still send yellow pencils to the studio." he said.

Despite Jazzbeaux long association with radio, he also merits a footnote in the long history of NBC-TV's

Al 'Jazzbeaux' Collins

Tonight" show because he was host for several weeks in 1957 between the reigns of Steve Allen and Jack Paar. During this interim period, the program was called "Tonight: America After Dark" and Jazzbeaux worked on camera with newspaper columnists Earl Wilson and Bob Considine.

"Not too many people remember me doing that." he said. "It's become one of those real tough trivia questions. But heck, I even shaved off my beard to do the thing." Newsday August 26, 1987 via Karl Zuk

I'll keep the comments short, as there are 10 little fingers straining to hit the typewritter keys, hi. The same little fingers broke the on/off switch to our FRG-7 last week! T

Continued from page 7

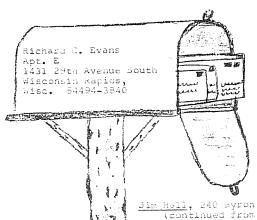

this year. (DN-CA)

The A index for a given station is calculated by finding the mean of the eight as index values for the given day.

The planetary $\underline{\mathsf{Kp}}$ index for each three-hour time period is calculated from the K index from 13 observatories around the world. The planetary $\underline{a}\underline{p}$ index is based on the Kp index. The planetary Ap index is the mean of the eight ap index values.

Since the K and Δ indices are based on the variations in magnetic field intensity, some of which are caused by solar activity, we would expect a strong relationship between the indices and sunspot number or sular flare activity.

Part Two, a statistical analysis of recent DX seasons, will appear in next weeks DX Monitor.

EASTERN DX FORUM

Reports from members living east of the Mississippi giver

Deadlines: Fridays

This column typed: 10/18/67

Jim Hell, 240 syron Road, Fittsburgh, Fenn. 15237 (continued from last week) ... Upon my return to Pittsburgh, I realized that the Antenna farm at zyron was once again in shambles. After inspecting thousands of feet of wire in the wooded areas, I found 7 out of 9 longwire/Bev?mini-Bev's in need of repair. Also brought nearly 400' of 14AMG strand beck from FLETC in GA which was added to one of the LA mini-Bev's. Now thereis a fine 940' (aprox.) sev. for Latins, and it is terminated with resistor

and groundrod in a creek and performs quite well. Others were also repaired with new resistors added (does anyone out there use carbon type resistors?), and to top off the xint performance of these I added coaxial leadins to the 12 terminal ant. switchboard of my own design, of which 9 are presently in use. Boy, did I notice a difference with the coax lead-ins interaction and reradiation between wires is much less. Also, as noted in a forum a few years back, termination w/resistor even on longwires can sure make a difference, as evidenced again with a 300-foot TA wire. I believe Pat Lartin once commented about good results with terminated longwires as well. With the 14AMG wire at about 70 deg. and terminated/gnded with copper groundrod, compared to a 14AWG of equal length/height but unterminated, TA's show better rignels on the grounced antenna. So I stress again that if you have aimed your longwires for certain bearings, experiment with I generally use a copper rod of about adding resistors and groundrods. 5-feet, although I believe former TRCA president Richard Wood in Hawaii once quoted 10-feet as a standard, but it's probably difficult to bound into the ground with a sledgehammer or mallet. On a related topic, does anyone have information on using a λ wavelength length of wire places after the resistor on a terminated antenna, used in place or a groundrod? I neard of this from Weil Kazaross when he was actively experimenting with such in Egunquit, Raine. Onto other subjects perore closing: Ric heald said he'u be looking into the problem about the light print in current DXM's - I hope this problem can be alleviated as it's tough to read the fine print in some of the columns. Complements out to John Johnson for a fine-looking CDXR, and Tim hall for the useful Verification Signers column (looking veri-good, Tim, hi). Gary seisey, how about reporting those Cubans to ONWS-E (9/12 ED/R) - need reporters for the column, hi. Craig bans to I was in North Attleboro, MA the weekend of 9-19/20 - tried phoning Fealy, I was in North Attleboro, MA the weekend of \$-19,40 - 12.00 from "The King Fhilip" in Grentham, but kept getting out off, then Finolly made it through to the operator in Pawtucket but didn't have the regulated to the operator. Jim--roe) I'll be in the erea (Try an AT&T cred card, Jim--rce) I'll be in the area \$1.35 in coins. again around the beginning of Nov. If you still have your Trake R7A for again about the beginning of the sale I may be interested. Finally, it's good to see a lot of new names appearing in the pages of the DXM - let us hope that these new contributors keep supporting IRCA and the DAN columns. We all look forward hearing from 73's and good DY. YUU in our columns.

Rick Evans, 1431-E 29th Ave South, Wisconsin Rapids, Wisc. 54494-3840

A correction to my Forum of 10/10. Make it only 24 states and 3 proveheard here so far. I'd like to claim 34 states but then I'd have to keep quiet about the next 10 I hear, hi. Two more veries in, to couble in total in a week. A picture card from KDAL-610, and a v/l from WNDZ-750, signed by Roger hee, who is better known as Roger Linsor, a longtime NRCA member and former IRCA member. Now up to 163 heard here with 4 veries. 73.

IRCA - The #1 Choice of the Broadcast Band DW er

Editor: Ric Heald • 8539 Bellamy Way • Sacramento, CA 95828 USA • (916) 386-8677

DEADLINES - WEEKLY ON TUESDAY 11 DAYS PRIOR TO PUBLICATION DATE

 \Box BILL HARDY, 2301 PACIFIC AVE., ABERDEEN, WA 98520

My first forum of the new season finds us all doing well. Billy is 16 months old and doing great. He's now walking, and climbing as well. He loves to turn the switches on the FRG-7 and turn the dials. He also enjoyed the portable radio we took on vacation. If anyone has the heritage to be a DX'er Billy is the one!

Ric, our condolances to you on the loss of your mother. We're thankful we could visit you, your father and your sister in Lacey. (Thanks Bill and

Nancy, and little Billy too-RtH.)

It seems that my Almanac "desk" is a 12" by 36" table stuck in the garage. That's about the only place I can type without waking Billy. He's such a joy that I'm not getting anything else done when he's awake! Accordingly, the Almanac is proceeding slowly, but all the letters are now out to the networks. I'm lucky that Dave Legler is going to sort most lists on his computer; they'll then be typeset, so the Almanac should be easier to read without that blurry "dot matrix" look of the last edition.

Associated Press has reverted to not publishing their station list. So if everyone would check the AP list in the last edition of the Almanac to confirm whether their locals and regulars (day and night) still have AP network, please send that information along to me. I expect I'll also have trouble getting station lists from Mutual (including Larry King), Satellite News Network (also Satellite Music Network), Transtar, CNN Radio and Music of Your

Life. I'd like to hear from DX'ers in all parts of America about their stations. Please check in the next couple of weeks and send it to me about 30 days after you read this in DX Monitor. Thanks very much.

Thanks to the people who sent comments last spring about Almanac content. The AM/FM simulcast list will be back. Unfortunately, the Canadian section will be limited to an update of John Oldfield's twin article, as nobody volunteered to compile it. There'll be a brief summary of foreign DX, like a mini-foreign log. And other items are in the works. Changes, additions, updates to the last Almanac are still welcome here in the next 30 days or possibly more. I still need imput on your local countdown shows such as American Top 40, too. Rich Toebe needs all slogans you hear so he can see if they're current; and please keep supporting Dale Park's IRCA Sportscentre.

73 and good DX.

RIC HEALD, 8539 BELLAMY WAY, SACRAMENTO, CA 95828 (916) 386-8677 FRI/SAT Well, this week it's the Bill and Ric show. Plenty of room in these pages for the rest of western America and Canada.

Bill, KRAK 1140 has AP news after 1800 PLT weekdays and 24 hours on the weekends, that is, all day on the hour weekends, not 24 hours of news, hi. And they carry American Country Countdown 0900-1200 PLT Sundays. As for Larry King, I'm too busy listening to my hero, Ray Tallifierro on KGO, hi.

On the local scene, I've met someone at work who knows the former PD/GM of now defunct KHWY 1030. She said the financial backers backed out because the financial return wasn't happening as quickly as they expected. Guess they thought three years would bring them great riches. Guess they didn't check into business (new business) returns and didn't know about a new business altogether. I know in the travel business, you don't look for a profit at a new travel agency until at least the fifth year. But then again, those of us who have been in the radio biz know full well there's too many hobbyist and

amateurs, who for them, is a personal toy. I know, I worked for one, hi.
I've tracked down one of my AN noise makers to my next-door neighbor's security lights. I think Rob Harrington had a similar problem a few years ago. I'm on firendly terms and he's an ex-CB'er and knows about radio QRM and is checking into a way to silence or, at the least, trim the noise down. But, now add to my KNL an occasional pulsating noise. I've flat out kissed off the low end of the BCB band. And to top it off, all the wiring in this neighborthe old is underground! However, the area is developing fast with new tracts so the noise could be traveling from another area.

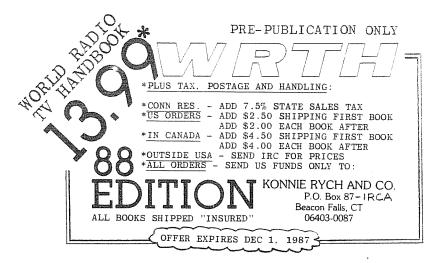

In a personal letter, Bill Hardy explained why I was hearing KGNR on FM and sort of wiping out KSAN. Seems it's not that all uncommon when an FM is atop

their AM tower. Yes, but at 12 miles?

BEST is advertising the GE Superadio II for \$10 less than I paid for the original Superadio on sale. Is II version any better, or is it like the "new" (now discontinued) Radio Shack TRF which turned out to be not as good as the original, or are they trying to be competitive with Chicken Shack's version of the Superadio?

I've thought about buying a multi-band radio to listen to the various police agencies, but after hearing the cops' two-ways crackle all evening five nights a week, I really don't want to know who we're having as guests next, hi

Guess that's a wrap for this week, In closing, we were told a couple months ago that metro Sacramento has the dirtiest air north of Los Angeles. Now comes the good news, ranking 7th in state population, Sacramento also ranks 2nd in the homicide rate. Swell. I keep telling myself I left Eureka for a better career, hi. Best of DX and see y'all in 7. 73 de RtH.

A DXer's TECHNICAL GUIDE

Second Edition

Would you like to know how a receiver works? Would you like to improve yours to make it better? Do you like experimenting with antennas? Do you like to tinker with radios? Would you like to see a review of a particular receiver?

If you answered yes to any of these questions, then you should get a copy of A DXer's Technical Guide. The book is 120 pages long and filled with valuable information on receivers, antennas, and accessories, including the following:

- * Receiver performance:
- * Receiver reviews (more than 30 of them);
- * Audio filters:
- * Tape recording;
- * Loop antennas (ferrite and air core);
- * Beverage and longwire antennas:
- * Tuners and phasing units:
- * Receiver construction and modification.

Although intended for the medium wave DXer, the book is also useful to the longwave DXer, shortwave listener, and ham.

A DXer's Technical Guide can be purchased for \$5.50 (members); or \$6.50 (nonmembers) from IRCA, P.O. Box 21074, Seattle, WA 98III. U.S. funds, please. Add 52.00 for overseas airmail.

Jim Hall, 240 Byron Rd., Pittsburgh, PA 15237-4015

with some evenings in mid-October producing rather auroral reception conditions. Of interest are the possible Central Americans from Guatemala, quite a rare country in the northeast. The frequencies of 580 and 650 have been especially productive. Also a few interesting XE's which I need help on (i.e. 1110, 1050, 580). Some TA's have also been showing, but so far the season has yet to produce very good propagation from Europe -- it seems they are trying, and I've noticed them gradually getting better. Only TA of special interest is an uniD on 981, in @2341 10/20 quite strong at times with male opera and lang. by lady (tentatively SC). Any help on this one? I assume it to be Algeria, although at the time 891 was only pr-fr. With that, here are some of the more interesting LA's logged in October:

PAN-AMERICANA DX

- 550 <u>VENEZUELA</u>, Caracas YVKE 2333 10/18: Fr w/"Mundial" ID, mixing w/Cuban. '87 WRTH lists slogan as R. Okey. (Hall-PIT unless noted)
- 555 NICARAGUA, Chinandega HTC555 0539 10/17: TC, ref's to Contres & Nicaraguan/CA affairs, in SS. Best ever / very readable.
- JAMAICA, Kingston 0244 10/17: Briefly on top w/Carib. reggae //700.
- 570 <u>VENEZUELA</u>, Villa de Cura YVLX 0022 10/14 : Rumbos fr //9660/670 w/SS nx/doorbells.
- 580 VENEZUELA, Maracaibo YVMJ 0530 10/18: Fr/gd w/Cuban hetting notched. Proud
 "LV de la Fe' ID by man, later same ID voiced c/Ven. pop mx by woman. Regular now.

 JAMAICA, Galina 0405 10/18: Mixing w/several LA's w/West Indian-accented EE m.
 - t MEXICO, presume XEAV 0247 10/17: In turbulent SSLA mess w/unID 1D's incl''Mexico'.
 Anyone (John Wilkins et al) have the common 1D for this one?
 - t GUATEMALA, Guatemala City TGY eve 10/18: V. frequent ments "Progreso", ref. to El Salvador, very possibly a "R. Progreso" ID later (non-Cuban) by man. 580 has opened up nicely for LA's lately, but still unsure of TGY here. unID, morning 10/18: An SSLA (perhaps XE)o/u the YV w/Sunday morning SS hymns.
- 580.2 CUBA, unk loc : Rebelde up a bit hetting 580 profusely on a good night. Commonly heard here //Rebelde net. Sounds weaker since the low-band Cuban rearrangement (570/590/610/620). Power estimate is 5kW. FCC Cuban Standard BC List says 2000 watts.
- 590 CUBA, unk loc 0749 10/12: There is a flea-powered Radio Rebelde xmtr operating on 590 //net -- occ audible under the always-dominant Cuban R. Reloj outlet.
- 640 <u>CUBA</u>, Las Mercedes 0126 10/13: Ip Cuban Rebelde xmtr audible weakly u/the highly powered Cuban R. Progress on freq. Steve Mittman take note of 2 Cubans here on 640.
- 650 HONDURAS, El Progreso HRVW 0352 10/17: HRVW w/"LV de Centro America" ID by m. Pr/fr in mix w/CA pops.
 - ***PANAMA, Panama City HOS22 0400 10/18: Poor IDed while reviewing tape -- "R. Mia" slogan by man, mixing w/Honduras/weakened WSM/other SSLA's (YV and/or D.R.). Did not seem to s/off @0400 per '87 WRTH, but channel became a mess after 0400 and was hard to tell if they were still in there.
 - CUBA, Media Luna 0123 10/13: 1p Rebelde's in mess of LA's u/WSM. //5025 et al. t DOMINICAN REPUBLIC, Santo Domingo HIAT 0359 10/18: While reviewing tape a "Universal" (ID) was heard out of SS merenque mx. Unneeded though.
- "Universal" (ID) was heard out of SS merengue mx. Unneeded though.

 680 CUBA, Pinar del Rio/Ciego de Avila 0122 10/13: Rebelde net stn, fr strength. Pwr
 Tevel still sounds lp although WRTH says 30 & 10 kW for 2 Rebelde outlets here.
- 700 JAMAICA, Montego Bay 0245 10/17: //560 w/Carib-EE m ancr ment Cat Stephens. CUBA, unk loc 0115 10/13: Reloj pgm occ surfacing in mess.
- 830 VENEZUELA, San Antonio de los Altos YVLT 0100 10/12 : "R. Sensacion" ID and 2 men alternating several Venezuelan network slogan names out of apparant sports (soccor).
 850 JAMAICA, 01d Harbour 0246 10/17 : Briefly in //700/560 in extreme mess.
- 860 CUBA, CMBM 0715 10/18: R. Metropolitana w/R. Progreso pgm //Progreso net, for early morning filler. Not an uncommon practice of Cubans in early morning hours. Around this time Cubans often boom in here this morning Cuban Progreso net stn's were audible //640/660/690/740/810/820/870/880/900/920. All freq's were in, believe it or not, from poor on some to xint on others. Often the entire Cuban Rebelde and Reloj nets are also audible at one given time!
- 910 <u>CUBA</u>, Camaguey CMFA 0815 10/18: Fr //1380/1370/1360 (all 3 in gd/fr/pr) w/'Radio Cadena Agramonte' pgms of rural Cuban mx. Mixing on freq. with Cuban minuteman. <u>CUBA</u>, unk loc (Matanzas?) 0716 10/18: 1p Reloj stn here w/standard fare. All //'s in at the time: //950/940/930/920/1270/1180a/960/700/750/790, at various levels.

CUBA, Matanzas/Union de Reyes CMDD morn 10/18: Radio Reloj mixing w/CMNG at v. good 920 level. New.

CUBA, Pilon/Baracoa CMNG morn 10/18: R. Progreso // barely in there //net w/Cuban

- MoR mx. Been after this outlet for years. Mixing w/above Reloj. t <u>GUATEMALA</u>, San Pedro Carcha TGJL (or unID) 0200-0235 10/19: Presume this is R. 925 Imperial reported by Geo. Hakiel awhile back. Poor through 0229, when an IS was played about 7 or 8 times, into apparant SS items by male. No ID noted as stn was fadey and disappeared almost completely by about 0237. Will keep after this one. Anyone have them on tape, and can anyone with SW background ID the musical 15 (possibly played on marimba). +after reviewing tape I'm almost certain it's a marimba.
- MEXICO, Mexico City XEQ 0549 10/19: LOUD in OC of CBM w/"La Q" ID by w. SS ranch mx. CUBA, Guantanamo/Cienfuegos CMFD/CNMD 0723 10/18: V. pr but audible at times just 940
- 960 over mess //Reloj net w/time standards/nx. Not often hrd here.
- unID svce 0725 10/18: u/WLUP-Chicago; basic Cuban mx and m/w in SS. 1000
- MEXICO, o XEG 0534 10/19 : Occ v. loud/dominant w/ranchera de Mexico. "La Ranchera 1050 de Monterrey" ID by m @0531.
 - t MEXICO, Mexicali XED 0500 10/19: W/"buenos noches" greetings, "international" ment, and pos "La Gran D". If them, it's my best Mexican catch as Mexicali is out by CA. Fmt seemed to be a mx pgm with offerings from other LA countries (SS). May have been XEG, but there were definately 2 on freq. taking turns. If XEG uses some type of "La Gran" ID I'd say it was not XED. Any help here?
- MEXICO, Mexico City XEEP 0300a 10/19: Several "Radio Educacion" ID's by m/w. In 1060 o/u Cuban. CUBA, Baracoa CMMQ eve 10/17: //1070 pgm. Typical Cuban, Trinchera Antiimperialista
- /LV de la COA -- Carib./Cuban pop vocals, some of which I recognized from hearing on R. Rebelde last year. CUBA, Guantanamo CMMP eve 10/17+: Uptempo Cuban pops //1060. Deep hetting from
- 1070 possible Colombian notched.
- 1070.1 t COLOMBIA, (Barranquilla) 0050 10/17: Presume the vf Emis. Atlanticos w/ref's to Col/Barranquilla, pr/fr.
- VENEZUELA, Barcelona YVQJ 0015 10/17: Poor/mixing with Cuban/Haiti/KRLD/other(s). 1080 "R. Barcelona" ID noted while reviewing tape.
 - ****HAITI, Port-au-Prince 4VRD 0013 10/17: Fr to very good levels w/Carib. vocal mx in FF, occ well on top for long periods. TC's and talk by m ancr in FF (not FF potois/ Creole) and ID "Radio Cacique" (pgm was apparantly rebroadcast from Port-au-Prince's 4VCPS 990/1000). Also 0017 10/19: W/"R. Nationale Haiti" by FF m into FF-Caribbean pops, mixing w/Cuban/KRLD. No WTIC in semi-AU cx.
- uniD, 0124 10/17: Caught m ancr in PP or possibly FF. Is an LA so will keep trying-1090 hoping for something exotic. Anyone get Brazil here?
- unID, LA carrier from high 1090 stn, often hrd hetting out 1090. i.e. 0419 10/17. 1090.7
- COLOMBIA, unID svce 0440 12/18: Fr w/UCARACOLU net ID 0459. 1100
- 1110 t MEXICO, presume Mex. City 0307 10/16: Heard same newspaper ad as hrd on Mexico-730 years ago (R. Festival) , "Ay Nacional! Ay Nacional!" by m. u/WBT and not much else hrd. Is this a major Mexican newspaper (Rick Evans/John Wilkins etc)? Is it exclusive to Mexico only?
- 1130 t COLOMBIA, Neiva 0143 10/16: V. tentatively picked out // to 4945 SW here on 1130. 2 men in SS w/ref's to Colombia. No ID, no positive //. uniD, 0157 10/16 : Mixing heavily with others w/back-to-back SS tearjerkers. Cuban
- likely. CUBA, o CMBW eve 10/17: Noted //1080/1120, pr/fr w/WRVA. Cuban vocal mx & "RCH" IDs. 1140 CUBA, Entronque Bueycito CMNQ 0216 10/17: M ancr w/Cuban rumba, "R. Bayamo" 10 1150
- later by w. Audio seems over-mod. here.
- 1163
- unlD, carrier @0128 10/16 SAME?
 unlD, carrier @0234 10/17 SAME?
 HAITI, Port-au-Prince 4VRS 0127 10/19 : French patois/Creole church pgm ending 0127. 1163.2 1170 TC and 2 "R. Soleil" ID's in FF by girl, into rlgs pgm w/db/chime opening. Under semilocal WWVA.
- DOMINICAN REPUBLIC, Santo Domingo HIBE 0125 10/14: Poor-v. gd w/'R. Mil' ID by deep-voiced man, 'R. Mil' SID by girls, Dominican vocalist promo, into festive SS vocal Also 0005 10/15+ w/'Esta es H-1-B-E' by m, fol/by SID into Dominican pops. Mixing w/ 1180 R. Marti-FL.
 - ****t GUATEMALA, Guatemala City TGT eve 10/14: Subdued SS m & w w/nx coverage of CA/US affairs, several lite IS-like signatures (one on trumpet, fol/by one on marimba), and lots of short vocal-less casual/EZL mx interludes. Mixing w/HIBE/CMOD/attenuated WHAM/ possibly other LA and often succumbed to rumble and Reloj het/xmtr noise. Het partiall notched. Several ments Guat. Only log of R. Sonorama in the last few years I could find was by Fritz Mellberg in 12/3/83 DXWW-W. Do you have this taped, Fritz, or can you ID IS? Almost surely not the US's R. Marti pgm to Cuba. No ID copied. VENEZUELA, unk svce 0130 10/14 : Presume a YV w/ments Venezuela @0130 ID break from sports. Usual common YV (YVOR) was not //5040 SW, though, and the other YV (YVNJ) seen unlikely. Also possible ments of a couple Colombian cities, so may have been an HJ,
- although several other YV's on BCB had sports (soccor) this eve , possibly same event CUBA, Neuva Gerona CMOD 0051 10/14: Reloj outlet on about 1179.9 hetting out 1180. Mixing w/other SSLA's. Noted on 1179.5 0627 10/16. 1180a

1190 <u>CUBA</u>, Yaguajay 0624 10/16: R. Sancti Spiritus fr-gd//1210 w/Cubano mx.

1203.9 unID, carrier 0312 10/16, pr/fr.

1210 CUBA, o R. Sancti Spiritus //1190 pgm, fr. Same time/date.

1220.7 unID, possible LA 0313 10/16 .

1290 CUBA, Rancho Veloz CMEO 0235 10/17: Poor in domestic mess, //840, Cuban MoR.

1489.6 unID, carrier @0159 10/19+. May be a domestic stn.

- 1550 COLOMBIA, Bogota HJZI 0800 10/12: "R. Fantasia" (:SS fan-tah-see'-ah) ID's by man and woman, tropical mx. Other SSLA under. "R. Fantasia...radio en Bogota....15-50 kHz...en Colombia..." & unID SID by girls.
- CUBA, Ciego de Avila CMIR 0525+ 10/12: To v. gd peaks w/QXR off, o/unID EE talker w/smooth instrumental/jazz (no vocal mx). Occ breaks for short anmts/facts and TC's by SS w. Around 0552 another SSLA broke through for a few min, sd/lk a Venezuelan (2 listed either 24-hr?). 0600 the famous "...victorio libre en America....Radio Enciclopedia desde..." (:SS en-the-clo-pay'-de-ah). One of the more enjoyable Cubarnetworks to listen to. Over 0700 hr a descending 3-note marker on piano (or some type of keyboard) was hrd.
- 1570 TURKS & CAICOS ISLANDS, South Caicos BWI 0421 10/12: Turks & Caicos Beacon Unlimited LOUD/on top easly w/"...Reaching out, touching you, this is the mighty 15-70, Atlantic Beacon" by man, into church syce.
- 1580 t COLOMBIA, Barranquilla HJQZ 0600 10/16: V. poor w/"...15-80 kHz, LV ? ???, en Colombia" in mess, into Colombian T40/pop. Presume LV de las Estrellas as often hrd.

 ANTIGUA. St. Johns VOA relay 0045 10/13 w/Voice of Americals "Caribbean Report" for
- ANTIGUA, St. Johns VOA relay 0045 10/13 w/Voice of America's "Caribbean Report", fo.

 ANGUILLA, 0023 10/12: Caribbean Beacon good w/m ancr filling in pgmming gap with 49,
 TC, and greeting good evening to listeners. Record: "Amazing Grace", later same sosson a zylophone, then "Up Front" w/"01d Time Religion" asking each listener to send in \$1. Time to change frequency, hi. (Dermitt-PA) (Send in \$1 as rp for a verie...e!)
