Webmaster	Rémy Friess	webmaster@mwcircle.org

STOP PRESS:

This month we welcome the following new and re-joining members to the Circle: Hannu Romppainen, Paltamo, Finland; Hugh Cocks, Loule, Portugal; Robert Underwood, Witney; Mark Davies, Anglesey; Harald Kuhl, Goettingen, Germany (rejoin); and Alan Giddings, London. Welcome to the Circle!

SWEDEN SAQ will be back on air on 19th February at 0900 and 1300 hours UTC. Tune to 17.2kHz for their distinctive CW signal. All correct reports are verified with a QSL. Each broadcast will be about 30 minutes long allowing the transmit aerial to be fine-tuned.

www.alexander.n.se/saq_sandning.htm

Apologies: This month we have a monster DX logs column so I apologise that I have had to carry forward features by John Williams, Les Rayburn and Andy Ikin.

Stop Press Deadlines:	26 th February for March 2006	26 th March for April 2006
Cover illustration: Irish stamp from 1976 commemorating 50 years of broadcasting in Ireland

Lucky 13! Membership Renewal Time

If your membership subscription to the Circle is due to run out at the end of March 2005 you will find an appropriate renewal included with this issue of MWN. Please note that if you do not renew promptly the next issue will be the last copy of MWN that will arrive through your letter-box.

MEMBERSHIP FEES FROZEN FOR 13th YEAR RUNNING!!

Unique Benefits of Circle Membership:

10 issues of printed MWN

e-MWN instantly available via the internet

MWN e-news service (e-mail)

Big discounts on WRTH/PWBR books

Reprint service (print and CDs)

When you renew your membership please do consider the benefits of taking out a 2 or 3 year membership. These reduce the administration costs of the Circle and make print runs much more predictable so they help us hold down subscription rates. Members also benefit by avoiding any forthcoming increase in membership rate (just how much longer we can hold subscription at current levels we don't know!). [N.B. we are expecting postage rate increases here in the UK in the next few months] And our overseas members save on commission charges from their bank when converting funds to Sterling; one transfer for a 3 year membership attracts one third of the bank fees associated with three separate annual fees.

	1 year to Mar 2007	2 year to Mar 2008	3 year to Mar 2009
UK	£12	£22	£33
Europe (Inc Eire)	£16/30Eu	£30/50Eu	£45/75Eu
Rest of World	Airmail £21 / \$35US	£39 / \$65US	£59 / \$95US
	Surface £16 / \$27US	£30 / \$50US	£45 / \$75US

Payment

All payments should be made to "Medium Wave Circle". In the UK a cheque or Postal Order is preferred. All overseas non-cash payments (e.g. bank draft, International Postal Money Order, Girocheque) must be in GBP Sterling. Cash payments can be accepted in GBP Sterling or the equivalent in any major currency (please do not send coins through the post). We recommend registered post for cash sent via the post. If you cannot transfer money we will accept correctly franked International Reply Coupons at a rate of 2.5 per GBP (e.g. 25 IRCS = GBP10);

We are pleased to accept payments via PayPal. You can send your payments to contact@mwcircle.org but **you must add 5%** to the above rates to cover the Paypal administration charge.

Exchange rates

When calculating any currency other than £ or \$ please send enough money to ensure that it is adequate to pay for your membership after the bank has taking its commission (typically 2-4%) on the conversion to ££ Sterling.

If you are sending any currency other than £ Sterling I would definitely recommend that you take out a 2 or 3 year membership to avoid the cost and inconvenience of changing money each year at your bank. Furthermore such a subscription will protect you against membership rate increases and adverse changes in currency exchange rates.

Treasurers Report

Clive Rooms writes; “2005 was an excellent year for the Circle. We made an operating profit of more than £900, membership level was stable, our e-list was busier than ever and MWN continues to grow.”

If any member would like a copy of the 2005 Accounts, I can send them as a Word file attachment. Contact me at treasurer@mwcircle.org Alternatively, a copy can be had via snail-mail for an sae to my address on page 2.

Technical – AOR 7030

Peter Chalkley from Luton informs “Whether you're aware of it AOR have a new remote for the 7030. It's larger than of old, the buttons are different sizes for the operating groups. Depending on the version of your reciever there is a replacement cpu (which is carried out by you) that comes with the remote. Cost is £17.95 remote, £10 replacement cpu then £3 postage. A guide is supplied. The old version remotes are still available. Mine is the post, after I nearly destroyed mine taking apart to clean the contacts.” More info needed but nothing on the www.aoruk.com website.

Technical – Eton E1

The Eton Corporaton of Palo Alto, California issued a recall on January 11, 2006 on certain E1 units for quality control issues. Their statement from Sales Director Ryan Giordano, states that affected units are found in the range of 3067 to 5462. The serial number on this model can be found on the back of the radio under the tilt stand. The simultaneous use of batteries and the AC adapter may cause battery heat-up, leakage and possible rupture.

Eton is in the process of issuing a recall notification. Affected customers may contact Eton Customer service at 800 872-2228 or 650 903-3866. Eton will make arrangements with customers for prepaid return shipping to Eton. Eton Corporation will send the customer a fully tested E1 replacement plus a complimentary FR200 emergency radio.

Thank you

Thanks to everyone using the e-list. In 2005 we exceeded 3000 messages for the first time and October had a record breaking 607 messages, driven by the excellent radio conditions prevailing at the time.

Thank you to everyone who has contributed to the DX Logs column which has been at bursting point for four months. Sadly that has squeezed out some feature articles, but DX of the recent quality hasn't happened for at least a decade.

I'd like to thank Clive, on behalf of all the members, for being Circle Treasurer for a decade during which time he has exercised excellent financial control over the club (unlike his predecessor). This means that Clive has never been forced to increase club subscriptions – quite an achievement!

Thanks to Stefano Valianti for a good idea for the illustrations on MWN covers for Volume 51. There is still time however to let me have YOUR suggestions though.

73s

Steve

Solar Cycles 22-23

The next solar minimum will likely occur during the latter half of 2006 with cycle 24 peaking in 2010. In August 2005 the first signs of cycle 24 (in the form of duopoles - both positive and negative polarities with the expected polarity alignment for cycle 24) were observed on 3 occasions. (Graph from Jan Alvestad: The red line is the monthly smoothed sunspot number while the blue line is the actual monthly sunspot number.)

ANTENNA WIRES

by Bjarne Mjelde

www.kongsfjord.no

Antenna Wires – Which Is Better?

Are we really using the optimum wires for our beverage, longwire and air core loop antennas? The question has matured over some time, so we may ask questions about the conventional wisdom concerning antenna wires, including the following; Is copper really better than iron, steel or aluminium? And do we really need PVC coating (insulation) of the wire? If so, for what? I have seen statements in DX magazines and on the net strongly advising against non-copper antenna wire and uninsulated wire, but these recommendations seem more based on prejudice than fact, see www.w8ji.com on the subject of insulation or not.

Ever since I began to erect "proper" antennas, I have used insulated copper wire, usually 1.5 mm² (somewhere between AWG14 and AWG15). Not because 1.5 mm² was necessarily perfect for the job, but because it made a good compromise between strength, weight and price. Smaller wires (such as 0.75 mm²) tend to break easily, while thicker wires (such as 2.5 mm²) are heavy and need more supports to avoid sag. Copper is rather expensive. You can find good prices, especially if you know somebody in the production or distribution line, but in general it is difficult to find 1.5 mm² insulated wire in 100-meter rolls for less than €0.20 per meter. 2.5 mm² is usually 50% more expensive.

My goal was to find out if copper is superior to other metals for signal levels and for signal to noise ratios, and if insulation is necessary.

Metals to consider

Apart from insulated copper, I have found two other candidates for antenna wire, both abundant on electric fence systems: Galvanised steel and aluminium.

Galvanised Steel

The wire I found consisted of seven leads wrapped around a plastic core, resembling ordinary copper wire (sans the plastic core). Steel rusts. Stainless steel rusts too, just not quite as fast. Zinc galvanisation prevents the steel from oxidising (and thus, rusting). There are several grades of galvanisation. If you live in a demanding climate with frequent changes between freezing and thaw, high air humidity, high air salinity and so on (such as I do), you should not compromise on the protection of the wire.

Aluminium

This is not a wire, but a string. As most people will know, aluminium does not rust the way iron and steel do. The surface will oxidise and protect the inner parts from further deterioration.

Which makes a better antenna?

There was only one way to find out. Put insulated copper, galvanised steel and aluminium side by side and see which heard best. Of course, when erecting an antenna, conductivity itself (where copper excels) is only one of several considerations you must make. Sometimes, weight is an issue. Sometimes, supports, or lack of supports, when erecting a beverage is an issue which makes strength an issue. Visibility may be an issue. Flexibility (the "smoothness" of the wire) may be an issue. Price may be an issue – especially when considering a beverage array with several long beverages.

Which is the best ear?

I tested insulated copper, galvanised steel and aluminium of comparable thickness in A-B tests using beverage-on-grounds (BOGs) of 140 meters and 300 meters. I compared signal levels on

MW, and on 15 Mhz. The short version of many measurements is this: Galvanised steel and aluminium seemed to have almost identical signal pick-up. Insulated copper always came up on top, however by a very small margin. 140 meter BOG, MW: Less than 3dB difference. 300 meter BOG, MW: Less than 5dB difference. 140 meter BOG, 15 MHz: Around 5dB difference. I am inclined to assume that the difference is proportional with length, and with frequency. My very unscientific guess is that if you are putting up a normal longwire, or a large air core loop, you will not hear any difference in signal levels.

Which is less noisy?

Many people believe that the insulation around the copper wires prevents weather-induced static noise. It doesn't. My insulated copper beverages will hear S9+20 noise during blowing snow conditions (like gale force winds and snowfall, or gale force winds and new fallen snow). I shouldn't have these noise levels if the insulation was working. When I compared the three wires in gale force wind and heavy rainfall, there was no difference at all in noise levels. I have put up a steel wire beverage at 1-m height on the beach right through a "forest" of >1 meter Sand wild rye which are in constant movement. There is no noise from this physical contact.

Which is more flexible?

Insulated copper, without a shadow of doubt. If this is important for you, steel or aluminium should not be chosen. The smooth PVC surface makes less friction on support rods if you are erecting a supported beverage. But there are work arounds. I use electric fence PVC insulators on top of my supports. They are smooth, and allow steel or aluminium wires to run free.

Which is stronger?

Steel, by a comfortable margin. Aluminium is very strong as well, insulated copper a distant third. If you are erecting a supported beverage and the distance between support rods are long, you can put a lot more tension on the non-copper metals to minimise sag. In addition, steel and aluminium stretches very little. Copper stretches a lot, often requiring re-tightening of beverages or air core loops.

Which is lighter?

For comparable sizes, aluminium. It is extremely lightweight and would be an excellent alternative if you have long runs between the support rods. Steel is also much lighter than copper – of course with copper being a heavier metal by itself the PVC coating adds a little weight too. Also there is less wind in steel and aluminium (again for comparable sizes) since the PVC adds area. When your beverage is up against a gale force side-wind, you will see that this really matters.

Which is stealthier?

Visibility may be an issue. Sometimes, you would want an antenna to be seen (so that people don't run into it by accident). Sometimes, you would want it to be as invisible as possible (so that you don't irritate your neighbours with your large garden air core loop). Although the PVC-coated copper wires come in many different colours that can match your requirements for visibility, I find the steel wire to be the one with the best stealth factor.

Which is cheaper?

The prices I have found here in Norway indicate that for comparable sizes, aluminium is the cheapest and insulated copper the most expensive.

Which is best durability?

Ah – the jury is still out on this one. The PVC insulation prevents the copper from oxidising. This should ensure excellent long-term performance. I simply don't know if the metals used in electric fences will last as long – with steel the problem will be with the quality of the galvanisation. If at some point it wears off, you will probably have to replace it. Aluminium should be a long-term performer. Just look at the Yagis that the radio amateurs use.

Conclusions:

- For most practical purposes, galvanised steel and aluminium are excellent antenna material. The difference in gain will only matter in very low-noise environments and for very long antenna runs. For short beverages and longwires, I am fairly sure that there is no practical difference in antenna gain.
- I assume – although it is as yet untested – that the same will apply for large air core loops like the K9AY, and for EWE's.
- If strength or weight is an issue, then galvanised steel or aluminium are the materials to be chosen. If on the other hand, flexibility and antenna gain is an issue, then insulated copper wire is the better choice.
- The PVC insulation usually found on copper wires will NOT protect against weather-generated static noise. It may protect the leads better in the long run, but for steel, the quality of the galvanisation is probably the most important factor for long life.

Footnote: Remember you can consider electric fence wiring too. In my experience most electric fencing wire uses 6 strands (sometimes 9) of thin stainless steel woven into a thin polypropylene rope. Recently I've seen an equivalent product advertised on the web that uses 6 tinned copper wires and advertises itself on the basis that it is 75 times more conductive than standard electric fence wire. Electric fence wire is strong and highly visible. As for cost in the UK, 500m of the new copper wire version is £29.50 compared with £21 for conventional fence wire. - Editor

ROGUES GALLERY

Recently Barry Davies sent in a mystery photo of several avid MWC members which I've reproduced below. Just for fun, can you name the people in the picture? Answers next month.

The only clue is that this photo is nearly 20 years old!

(Have you got any photos worth including in MWN? Please let the Editor know.)

WORLD NEWS

[Europe, Asia, Africa] 16, Whitmore Ct, Little London, Silverstone, Northants, NN12 8UP
With Jeff Weston e-mail: world-news@mwcircle.org ☎ 01327 858472

Afghanistan

On the MW of interest was a station from Afghanistan heard many times on the low power channel of 1602 kHz at sunrise and sunset, 8.00 pm local time etc. often parallel to Radio Afghanistan on 1107 kHz. They are playing a lot of Hindi film music and at first I mistook them for some AIR station. The VoA Medium Wave station in Afghanistan on 1296 kHz was also heard at excellent level with various programs at dark (*Jose Jacob, VU2JOS, via ARC MV-Eko, 12 Dec 05*).

The US Broadcasting Board of Governors (BBG) intends to negotiate a non-competitive contract with Harris Corporation, for a MW broadcasting system and ancillary equipment for installation at a remote location in Afghanistan. It is expected that a 200 kW, containerised system operating at 621 kHz will be ordered. On-air is scheduled for approximately September 15, 2006. The Radio TV Afghanistan (RTVA) staff at the Pol-e Charkhi Transmitting Station has been thoroughly trained in the operation of the Harris DX MW transmitters and have successfully operated two Harris 400DX MW transmitters for over two years. The RTVA Management has specifically requested that the BBG provide only Harris Corporation transmitter equipment to meet this requirement. Full details of announcement [<http://www.fbodaily.com/archive/2006/01-January/15-Jan-2006/FBO-00966138.htm>] (*Media Network weblog, 17 Jan 06*).

Armenia

The exact mailing address is: Public Radio of Armenia, (English, German, French...) Service, 5 Alex Manoogian St., 375025 Yerevan, Armenia. A small correction to the address given in WRTH and Passport (*PRA via Rumen Pankov, Bulgaria, wwdxc BC-DX Jan 5 via DXLD*).

Croatia

594 HRV - DRM - Hrvatski Radio 1/Glas Hrvatske, Deanovec (10). Is this really only 10kW ? Here at my location it is very strong so that it even blocks most of the time even 594 D - HR-Skyline from Hoher Meissner (90) and Rodgau-Frankfurt (250 kW). And those are much closer to me. If they do manage to get thru, then it's simply unlistenable. Something is odd ? HRV now spoils reception of 590 VOXM NF unless it gets very strong. If this DRM goes on, then this low-sunspot-cycle will probably be the last one we may enjoy for TA reception. (*Jurgen Bartels, 10km east of Wilhelmshaven, Northern Germany, mwdx, 02 Jan 06*).

Here in Antwerp, Belgium, more of the same. And indeed it almost always blocks 590, even when tuning to that channel in LSB the DRM is grumbling quite a bit., (*Guido Schotmans, mwdx, 02 Jan 06*). Noted DRM Deanovec today around 1430UT, when listened on Audi A4 car radio. Croatian DRM was much stronger than HR signal, which originate some 160 kilometres North of Stuttgart, and DRM signal even spoiled Madrid 585 and Lyon 603 kHz also. (*Wolfgang Bueschel, mwdx, 02 Jan 06*).

Germany

Is anyone else also surprised at the nighttime strength of the DRM signal on 1485 kHz? WRTH 2006 says it's just 300 watts from SWRF Germany, but I wonder if it's higher powered than that. Or is it highly directional, with south east England in the main line of fire? Listening recently in Reading and Kent it's easily the strongest station on that frequency. In Kent it's possible to null most of the DRM out in order to hear Spain, but in Reading I can't null it well enough to get QRM-

free Classic Gold from only down the road in Newbury, which is putting a fairly strong groundwave signal into Reading. Although strong, it doesn't seem to be spreading onto adjacent channels. Any observations from the rest of the UK? (*Chris Greenway, BDXC-UK, c 10 Jan 06*).

Like Chris I have also noticed the unusually high strength of the DRM signal on 1485. It seems to me that DRM interference to AM signals is much higher than would be the case from an equivalent-powered AM transmitter. For example the DRM from Croatia on 594 kHz is causing havoc, even in western Europe, although a similar-power AM transmitter in Croatia on this frequency was barely even audible in the UK. When Germany was conducting DRM trials on 693 kHz a couple of years ago, the interference to BBC Radio 5 was much worse than when the German transmitter operated in AM. I wonder if part of the reason for this may be that the DRM modulation is very intense compared to AM, its like a constant white noise, whereas the intensity of AM varies depending on the programming, and it not such a steady, constant, noise. Certainly DRM is very troublesome to AM signals and I'm really surprised, given the interference it can cause, that the ITU has permitted it to be used within existing AM broadcast bands. It should have been allocated its own separate spectrum to avoid this problem. But unfortunately its probably too late now to change this. Hopefully the London tests on 26 MHz will be successful as 26 MHz is a good place for DRM - well away from any AM broadcasts! (*Dave Kenny, BDXC-UK, 10 Jan 06*).

There are three DRM txs on air from Germany on 1485 kHz. D - DRM - Südwestrundfunk - "Das Ding" programme, various (0.4 - 0.65) - 24hrs in German; txs in Kaiserslautern (0.3) and Wolfsheim (0.65 kW). D - DRM - Oldiestar Radio, SFB Berlin (1 kW) - 24h - - - - Since November 28, 2005, SWR - Suedwestrundfunk put an additional DRM mode transmitter at Wolfsheim(Mainz) on air in order to TEST two DRM txs on "SFN - (Single Frequency Network)" in DRM mode, under these special condition. The distance between both stations is about 55 kilometres. DRM unit at Wolfsheim is fed by landline from Kaiserslautern. 1485 kHz - I guess the 150 meters tall pipe mast - or the 102 meters tall lattice reserve mast - at Wolfsheim produces that gain of just 650 watts final stage power, to huge signal level you discovered in U.K. recently. TX location Wolfsheim (near Mainz) is home of the AM mode transmission on 1017 (x1016 kHz in 1950-1978). Started May 03, 1950 with 70 kW by French occupant zone authorities, made by LORENZ; to be increased from 70 to 120 kW in 1957. Replaced by SIEMENS [RIZ Zagreb] made 300 kW tx of 1966 til 1974 year, another Siemens [RIZ] unit by 600 kW put on air from 1975-1995 at nighttime towards GDR target, old 300 kW unit used at daytime only then. At present SWR ContRa program on air via TELEFUNKEN tx unit with 100 kW only in DAM mode - dynamic amplitude modulation - , latter since 1996. This is a former 50 kW unit, originally located at SWR Freiburg (828 kHz) til 1995. During modulation pauses, carrier power is reduced from 100 to 40 kW only, in order to save main power energy. (*Wolfgang Bueschel, BDXC-UK, 11 Jan 06*).

DRM has been a pest on 1485 for at least a year. At night I cannot hear BBC Humberside anymore which is SE of me by about 30 miles. Channel always dominated by DRM. I guess many broadcasters adversely affect by DRM won't complain because they want to use DRM. I'm still baffled why no one has attempted band-planning DRM on the MW band. DRM clearly does not coexist with AM (from the AM listener's point of view) so why not assign a couple of channels as DRM only channels and let DRM transmitters congregate together. If DRM expands then add extra channels. At the moment with no band-planning it just makes MW a worse place to listen. *Cynic mode on*: Rotten noisy AM is a good reason to persuade people to switch to DRM, so could this be a deliberate policy of DRM jamming AM? *Cynic mode off*. (*Steve Whitt, c 13 Jan 06*).

Greece

Hi! I got a message from Greek Orestiada on 1080. Their street address is wrong in WRTH and in the list. It should be Euripidou 35. (*73 from Björn Fransson, emwg, 11 Jan 06*).

Italy

According to RAI's Andrea Borgnino, starting with April RAI will begin its DRM testing phase from former MW location of Milano 2, on 693 kHz. Announced power is 20 kW. (73s, *Andy Lawendel, BDXC-UK, 26 Jan 06*).

Latvia

Due to lack of funds at Radio Tatra International, the RTI relays via Kuldiga 1350 (provided by Krebs TV) will end on 1 February. (*Bernd Trutenau-LTU, mwdx, 26 Jan 06*). But RTI claims on 29 Jan that it is continuing.

Nepal

The neighbouring station Radio Nepal was heard on 576, 648, 792, 810 and 5005 kHz from sign on at 2135 but not on the listed 1143 kHz. WRTH 2005 and others list sign on at 2345. (*Jose Jacob, VU2JOS, via ARC MV-Eko, 12 Dec 05*).

Netherlands

As 2005 ends, there is no sign of the new Dutch commercial station Radio Voetbal (Radio Football) which was supposed to start on 1 September on 1332kHz. The only evidence of its existence is a single page website at www.radiovoetbal.nl which gives the mobile telephone of the owner, Koos Appelboom. Mr Appelboom does indeed have a broadcasting licence, and a contract was signed by him with the licensee for 1332 kHz, 'Telecom Vision International' (TVI), which owns the regional commercial station Hot FM based in Huiseen, East Gelderland. But the website Radio.nl reports that Mr Appelboom has not kept any of the promises he made to TVI, and they have as yet received no money from him. So it seems unlikely that Radio Voetbal will ever see the light of day. [<http://www.radiovoetbal.nl/>] (*Steve Whitt, 02 Jan 06*).

Special broadcasts from Dutch radio ship on 1602 kHz this weekend. The website of Dutch commercial broadcaster Radio Seagull says: "We are proud to inform you about the live broadcast from the ship during the weekend of 14th and 15th of January 2006. We celebrate our New Year get together with as many Waddenzee and Seagull staff members as possible. It will be a jam broadcast with programs in Dutch (Radio Waddenzee), in German (Radio Marabu) and in English (Radio Seagull) and a mixture of all. Tune in to 1602 AM, listen to the internet or look for 913 on SKY and listen in. Radio made for the sake of fun. See if it worth while listening to as well. The breakfast show (7-10 CET) will be from the land studio, after that the watery wireless takes over." The ship in question is the converted lightship LV8, purchased last year by Radio Waddenzee/Radio Seagull, and anchored in Harlingen. (*Media Network weblog, c 13 Jan 06*).

A row has broken out in the normally tranquil Dutch town of Bloemendaal, 25 km from Amsterdam. The local council says that Radio Bloemendaal, the station operated by the town's Dutch Reformed Church since 1924, has to move its antenna from the current site to a new location in a nearby national park. Local people are furious at the decision, which they say will ruin the landscape. The council argues that it's difficult to find a suitable site in the area as a mediumwave mast cannot be constructed immediately next to housing. The council is due to take a decision on the matter at its meeting tomorrow. Radio Bloemendaal broadcasts on mediumwave 1116 kHz on Sunday and Christian Festivals at 0800-2000 UTC, and Tuesday at 1100-1230 UTC, with occasional additional broadcasts. Media Network profile of Radio Bloemendaal [<http://www2.rnw.nl/rnw/en/features/media/dossiers/bloemendaal000405.html>] (*Radio Netherlands Media Network weblog, 28 Jan 06*).

Pakistan

New transmitters recently added: 1134 Quetta, 1170 Peshawar, 1332 Lahore. Powers not known.

(*ARC MV-Eko, 12 Dec 05*). I can confirm that the new transmitter in Lahore on 1332 is indeed on the air. Also active are two other new MW transmitters: 1134 Quetta and 1170 Peshawar, which are also not listed in WRTH 2006. They are said to be 100 kW each. *Chris Greenway (in Islamabad), Jan 24, DXLD (24/1-2006)*

Portugal

RCP-Rádio Club Português via R.Comercial 1035 kHz 100 kW Belmonte (Benavente) & 783 kHz 10 kW Canidelo (near Porto) is gone. We stumbled on R.Comercial normal prgr on 1035 kHz only this evening, and after a phone call to RC, I learned the changes occurred some time (surely late) this week stemming from a radio authority (ANACOM) note claiming RC txs can only air RC prgrs. Curiously, another "product" from the RC group (Média Capital), viz. the defunct R. Nacional, was aired via RC MW txs for a few years' time. He also informed a 2nd tx (probably 50 kW or even 100 kW) was also commissioned and intended for Canidelo, but it's not operational yet. Unfortunately, the RCP can only be listened to via VHF-FM & internet. Média Capital is owned by the Spanish group PRISA, RT Luxembourg and a Port. shareholder. Whether this notification by ANACOM was to adequately prevent the use of the MW txs for some foreign relay (RTL does them) I don't know, but that wouldn't be too surprising. (*Carlos Gonçalves - POR (8/1-2006) via mediumwave.info*).

Further to my y/day's rpt., I really don't know what to say... or what to think about all this. Today, Sunday, at 1200, 1035 kHz was again (and still is as I write, 1905), airing R.Club Português. At 1215, I phoned R.Comercial again, and this other technician was not aware of what happened, which gives a poor image of how the stn seems to work these days, to say the least...or then the chap who took over the following shift thought that something was wrong (?) and decided to feed RCP into the RC MW txs again. With no responsible figure to ask for an accurate info., I'd say the stn is cutting itself a poor figure... Unlike the RDP or even R.Renascença, R.Comercial & its sister stns is being noted not to be at ease when it comes to ask for data on them, which is... silly, to put it politely. (*73, Carlos Gonçalves (8/1-2006)*).

Russia

Regional programmes from Radio Pomorye in Arkhangelsk 918 kHz have been limited a bit. Whereas the morning transmission 0400-0500 remains unchanged, the afternoon segment has been noted to be only 10 minutes Monday and Friday, remaining a full hour 1500-1600 on Tuesday-Thursday. The station carries Radio Rossii when no regional programme is broadcast. (*Ullmar Qvick, ARC MV-Eko 12 Dec 05*).

The German and Russian programmes of Deutsche Welle are back on the air on 693 kHz mediumwave in Moscow, following a week of disruption after the airtime provider lost its licence. Deutsche Welle Director Erik Bettermann has thanked the Russian Minister for Telecommunications, Leonid Reiman, for speeding up the process of sorting out new licences. Transmissions resumed yesterday evening. It isn't clear if the BBC transmissions in Moscow on 1260 kHz have also returned to normal. Yesterday, BBC Monitoring reported that the transmitter was still off the air as of 1040 UTC, and so far there is no indication on the BBC's Russian website that it is back on the air. (*RN media network weblog, 29 Dec 05*).

The BBC has not yet submitted the necessary documents for resuming broadcasting on medium wave to the Federal Competition Commission, a news conference at RIA-Novosti was told today by Boris Boyarskov, head of the Federal Service for Supervision of Compliance with the Law in the Sphere of Mass Communications and Preservation of Cultural Heritage. "BBC broadcasts (on medium wave) will begin when they submit documents to us in line with the established procedure. To date these documents have not reached us. After they arrive, we will not delay them for a single

day," he said. BBC broadcasts on medium wave were suspended after the company won two frequencies by taking part in a tender under the Federal Competition Commission on 21 December. (Source: RIA Novosti, Moscow, in Russian 1202 gmt 23 Jan 06 via BBC Monitoring, via R Netherlands Media Network weblog).

Radio Liberty loses MW broadcasts in St Petersburg. Radio Liberty broadcasts on medium wave have been stopped in St Petersburg. A correspondent of the St Petersburg Radio Liberty office, Tatyana Valovich. [Valovich] It's the medium waves, unfortunately. We were told a long time ago that we would lose that transmitter. It was supposed to be from 1 July, but they must have brought it forward to 1 January. Unfortunately we weren't warned about it here in the St Petersburg office. The FM broadcasts stay, but we have lost the medium wave broadcasts. This is a contract agreement, rebroadcast for us by Radio Baltika, there's nothing political in it. It's quite normal, it was envisaged. [Presenter] Tatyana Valovich said that the Radio Liberty management, which is in Prague, did not officially warn the St Petersburg office that medium wave broadcasts were to be axed. (Source: Ekho Moskvyy radio, Moscow, in Russian 0900 gmt 2 Jan 06 via BBC Monitoring, via R Netherlands Media Network weblog).

South Africa

Ikwewezi FM has migrated to FM frequencies at Pretoria and Johannesburg, and the Medium Wave transmitters at Ga-Rankuwa and Welgedaght has been switched off permanently. (Callie Tydeman, Sentech Ltd, via John Plimmer, 24 Jan 06). The number of MW stations in South Africa is diminishing with 1098 and 1404 Khz Ikwewezi FM now permanently off air from South Africa , the remaining stations are

<u>kHz</u>	<u>Location</u>	<u>kW</u>	<u>kHz</u>	<u>Location</u>	<u>kW</u>
567	Cape Town	25	1287	Johannesburg	2
576	Meyerton	50	1422	Johannesburg	1
657	Meyerton	50	1485	Johannesburg	1
702	Pretoria	100 (curtain array to SW)	1548	Johannesburg	10
846	E. Cape	100 omni dir			

Not much left eh! The tragedy is that there are lots more broadcasters who would like to go on MW but our regulating body ICASA has such strict rules no one can get a license. But still more stations in Botswana, Angola, Mozambique, Lesotho and Swaziland. (John Plimmer, Montagu, Western Cape Province, South Africa, mwdx, 29 Jan 06).

Swaziland

Observed via DX Tuners web receiver sited at Johannesburg, SA, fading in around 1600 UT 6 January 2006 and going ota around 0010 UTC the following day: A station broadcasting on MW 1377 kHz from Sandlane, SWZ, formerly known as Radio Cidade International, was observed variously identifying as "Liberty Radio" or "Radio Liberty, 1377 k of love" [yuk!]. Programming continues to be in Portuguese and English, with lots of music - including a show presented in Portuguese called "Cidade Tropical" - spiritual messages and some religious programming. Reception varied from poor to fair. A Google search only turned up one reference to the station - "Liberty Radio 13.77 AM" - with a programme guide, which didn't seem to bear much relation to what I was hearing, even allowing for local time (UTC +2). This is on the website of the Universal Church of the Kingdom of God, at http://www.uckg.org.za/radio_programs.htm An audio clip of both Liberty Radio and it's predecessor Radio Cidade International can be heard at the Interval Signals Online website at www.intervalsignals.net (Dave Kernick, via hcdx).

NORTH AMERICAN NEWS

✉ 20 Ryehill Park, Kirklington, Carlisle CA6 6BH

with Barry Davies

e-mail: na-news@mwcircle.org

Welcome to another round up of what's been happening on the North America AM dial. My grateful thanks to the organisations which provide the news. Thanks this month to: - IRCA, Radio and Records.com, North American Radio Logbook, DX-midAMerica,

- 700 C * * *** Calgary AB. A gospel station is planned here. The station, if approved, would run 20kW at night.
- 920 CJCH** Halifax NS. The station drops oldies and goes back to talk over night with the X Zone talk show with Rob McConnell. (ed. SW JF)
- 1270 CHAT** Medicine Hat AB. The FM station is up and running. The AM station ID now runs, "CHAT 94.5 FM, today's country." The 1270 channel closes end of March.
- 1330 WJNX** Fort Pierce FL. The format switched from SS news/talk to Mexican music. The station slogan is "La Gigante."
- 1350 WLOU** Louisville KY. This urban gospel station has been sold. No news on any format changes.
- 1490 WTJV** De Land FL. New calls for this currently silent station. (ex WNDA) The station is due to return with a SS format.
- 1500 WTWP** Washington DC. The station owners, Bonneville, are rebranding the station as "Washington Post Radio." The full changes will take affect in March. The owners say the new format will be "diverse." The WTOP call letters and rolling news format will still be available on 820 AM and 103.5 FM. WTWP AM may carry an NPR style "long form news service" but we will have to wait and see exactly what a "diverse" format is! In 40 years of DXing and constant change elsewhere, I have never known anything but WTOP on 1500. (ed) You can still hear the WTOP calls during programmes but OM Alan Merriman reports the station is already IDing as WTWP at the top of the hour.
- 1600 WRJE** Dover DE. The format is black gospel music. The station slogan is "Rejoice Heaven 16 hundred."
- 1650 KHRO** El Paso TX. The station flips from hard rock to a talk format.
- 1670 WMWR** Dry Branch GA. Format flips from talk to SS MX with the slogan "Viva." (ed)
- 1700 WEUP** Huntsville AL. The often announced calls are here officially now. (ex WEUV)

Programme Clocks

Times to listen for ID clues **other** than HH: 59m50s!

FOX SPORTS RADIO (pre 0700utc) HH:02–HH:06, HH:24–HH:26, HH:44–HH:46, HH:57–HH:00
(post 0700utc) HH:02–HH:06, HH:27–HH:28, HH:47–HH:48

Thanks to OM Steve Whitt for the Fox clock. Please do send me details of any alterations/additions. Best wishes around the Circle.

Antigua

New mediumwave transmitter site planned for Antigua's ABS Radio

The Prime Minister of Antigua, Baldwin Spencer, has told parliament that the Government will relocate the mediumwave transmitter of state-owned ABS Radio from Radio Range to a potential site at Parham. "There have been ongoing complaints from residents of Upper Ottos. And the MP from St. John's Ts Rural South Hon. Winston Williams has been making strong representation for the relocation and we are responding to that situation. Hopefully we will have that relocation taking place early in the New Year." said the Prime Minister.

Spencer said plans were also afoot to get a new transmitter for ABS Radio since the one currently used on 620 kHz is getting too old. "The 20 foot container that houses the transmitter is about 25 years old. The roof is rotten and many areas leak water to the room where 15,000 volts of electricity are located. That is extremely dangerous".

Antigua Sun via Radio Netherland Media Network weblog, .12.2005 (but not found on www.antiguasun.com)

Bahamas

Slogans noted by Walt Salmaniw, travelling around in the Caribbean:

810 ZNS3 Freeport "the Service in the North"
1240 ZNS2 Nassau "Inspiration 1240" and "Excellence in Christian Broadcasting"
1540 ZNS1 Nassau "Covering the entire Bahamas, this is ZNS, Nassau"

Walt Salmaniw, Victoria, BC, Canada, IRCA 3.1.2006 via DXLD

Jamaica

(Excerpt) The Public Broadcasting Corporation of Jamaica (PBCJ) is slated to commence operations during the first quarter of the next financial year. The company will be operating from 5 South Odeon Avenue, the former office of the now defunct Jamaica Broadcasting Corporation (JBC).

Jamaica Information Service via Andy Sennitt, Radio Netherland Media Network weblog 23.12.2005 via DXLD

Johnny Walker DJ awarded MBE

30 December, 2005

Johnnie Walker has been awarded an MBE in the New Year's honours list for his services to broadcasting.. He made his name in the 60s with the pirate ship Radio Caroline. His night-time show was essential listening for 86% of the night-time audience, which increased to over 20 million Europe-wide on the night of 14 August 1967, as Walker and 'Caroline' continued in defiance of Government legislation which silenced all the others. The Times reports that Johnnie said he was pleased that he had been forgiven for being a pirate radio disc jockey in the 1960's. "Having defied Her Majesty's Government in 1967 with the pirate radio ship Radio Caroline, I never expected to see my name in the Honours," he said. "Her Majesty obviously has a forgiving nature and I'm most grateful and honoured. It's a wonderful start to my 40th year on the radio." (www.thetimes.co.uk)

BBC buys Indian stake

4 January, 2006

Citizens of Bombay and other big cities in India could be listening to Desert Island Discs in FM quality this year, following the success of the BBC winning FM radio licences on the sub-continent. Monisha Shah, BBC Worldwide's director of emerging markets, said: "The BBC brand is huge here and, while content will need to be local, there may be an opportunity to supply English-language content such as chat shows and documentaries." The BBC World Service does transmit on short wave in the country, but the sound quality is poor and listeners have to change frequencies to maintain a continuous service.

BBC Worldwide, the broadcaster's commercial arm, has spent £4 million taking the stake in Mid Day Multimedia's radio subsidiary, Radio Mid-Day West. The publicly listed Mid Day is a Bombay newspaper publisher that also owns one station in the city. It is the first time that the BBC has become involved in a commercial radio venture in or out of Britain. An Indian radio joint venture backed by the BBC has won seven FM licences, giving it a foothold in major cities including Delhi, Mumbai and Chennai.

Under the country's rules governing foreign media investment, the BBC's stake in Radio Mid-Day West is capped at 20%, with Mid-Day Multimedia the main shareholder and promoter. BBC Worldwide is planning to invest around £4m in the venture. (www.thetimes.co.uk)

Commercial Radio News.

UTV Radio Stations Increases Revenue

4 January, 2006

Ulster Television, which bought Wireless Group and its raft of Scottish radio stations earlier this year for £98.2m, yesterday said the integration of the assets was complete and that it expected to boost revenues by 50% across its new UK radio division.

However, the company warned in a trading update that the television advertising market remained difficult. It also said that revenue from this source was expected to be down by about 3.5% in the six months to the end of 2005.

The all-cash deal, which was struck in June, resulted in the creation of the UTV Radio division – formed from Wireless's 16 stations, including TalkSport, Another station, Edinburgh-based AllTalk, is due to be launched in next month.. The company said revenue at the former Wireless stations was up 5% in the six months since the acquisition – which it said should "comfortably

outperform the radio advertising market" in the UK. A spokesman for UTV said the group could not break down the performance of its Scottish stations.

John McCann, UTV's chief executive, said: "We are very pleased with the performance of UTV Radio, especially talkSport where revenues are well ahead of last year." It also said that "cost synergies" had been instituted to achieve the estimated savings of £1.5m in the first full year of ownership – but declined to reveal how these had affected the Scottish stations. UTV added that advertising revenue at its Irish radio stations continued to enjoy good growth and should be up by about 16% in the second half.

The Wireless acquisition also heralded a £7m payday for former Sun editor Kelvin MacKenzie, who was chairman and chief executive of the company. Ulster Television, which bought Wireless Group and its raft of Scottish radio stations earlier this year for £98.2m, yesterday said the integration of the assets was complete and that it expected to boost revenues by 50% across its new UK radio division. (<http://www.theherald.co.uk/business/52188.html>)

Media buyers forecast 15% slide in GCap's ad revenue 13 January, 2006

Advertising revenue at GCap Media, the radio group, could fall as much as 15 per cent this month compared with January last year, leading media buying agencies say. A group of agencies, which between them have access to about a third of GCap's advertising, say that the company has underperformed the rest of the UK radio market.

Although sources at the agencies said last night that late bookings were still coming in for this month, the consensus in the advertising industry is that it has been a difficult start to the year for GCap. Analysts blamed some of the decline on recent changes at the group's flagship station, Capital Radio in London, where GCap halved the amount of advertising airtime last month. Capital Radio accounts for an estimated 10 per cent of GCap's overall advertising revenue. Last week, meanwhile, GCap said it would relaunch Capital Radio, after the station fell to third place in the Rajar listener figures in November last year.

The predictions of a revenue slump at GCap come after the company said in November that operating profit for the half year to October had fallen 27 per cent to £14.7 million. Revenues fell 11 per cent to £111.6 million. Ralph Bernard, GCap chief executive, said at the time: "These results are extremely disappointing and I believe in no way reflect the full potential of the portfolio of assets owned by the group." (www.thetimes.co.uk)

Audience measurement 25 January, 2005

If Kelvin MacKenzie had succeeded in pushing through his system of electronic measurement of radio audiences, he would have "inflicted disaster" on the sector, according to David Elstein. Mr Elstein, chairman of the Commercial Radio Companies Association, told guests at the body's annual reception in London that as it is, "the damage done to our trading currency by one rogue station group will take much time and effort to repair".

He was referring to Mr MacKenzie's crusade against the paper-and-pen diary system of recording listening, used by audience research body Rajar, when he was running TalkSport. Mr MacKenzie took control of the national speech station eight years ago, when it was called Talk Radio. His crusade to replace the diary system with electronic audience measurement only ended last year, when TalkSport owner Wireless Group, which Mr MacKenzie ran, was bought by UTV.

Last year Rajar carried out various tests on audiometers, and then announced that a new contract would be awarded in the first quarter of this year, to start in 2007. (www.guardianmedia.co.uk)

UK Radio News

The combined BBC spend and commercial radio revenue of the UK radio industry is believed to have increased during much of the five year review period of this report up to 2005, except for a moderate 2% decline in 2001. Although the commercial radio industry has been one of the fastest growing advertising media during the past decade, the industry revenues are largely influenced by developments in the overall advertising sector, which was hit by a recession at the beginning of the review period, resulting in a moderate nominal decline in industry revenue in 2001. Nonetheless, this was followed by nominal growth in the following four years. In 2004, UK radio revenues increased by 5% which is expected to be followed by further growth of 3% in the current year, taking the value to GBP 1218 million. The slight slowdown in growth projected for the current year, is a reflection of the more uncertain economic conditions, which in turn affect levels of advertising spending.

The UK Radio Industry report analyses the historic and forecast performance of the UK radio sector in terms of BBC programming spend and revenues derived from commercial radio through advertising and sponsorship. The report covers analogue and digital radio and includes data on programming and market trends. The report analyses trends over a five year historical and a detailed five year forecast period. The report includes an analysis of the market size, market drivers, market trends and an overview of the industry structure and profiles of the leading BBC and commercial radio operators. The report is updated quarterly to combine the up-to-date development and trends with the latest data available on the radio sector in the UK. (<http://press.namct.com/content/view/5014/127/>)

RSL & LPAM News

With the exception of Manchester Utd, Ofcom still do not list these stations as broadcasting!

Football Club	Station	Feb fixtures	March fixtures
Crystal Palace	Palace Radio 1278 kHz	4 Cardiff 14 QPR* 25 Norwich	4 Leeds 18 Ipswich
Blackburn	Radio Rovers 1404 kHz	1 Man Utd 25 Arsenal	11 Aston Villa 18 Middlesborough
Manchester Utd	Manchester Utd Radio 1413 kHz	4 Fulham 25 West ham	11 Newcastle 25 Birmingham
Barnsley	Oakwell 1575 kHz	4 Bristol City 14 Port Vale* 25 Colchester	4 Swansea 25 Bournemouth

*Evening kick off

URY York 1350 kHz has returned to the air on Sunday 8th Jan at 0900utc with a mighty 1000mW reports Steve Whitt. Dave Kenny BDXC –UK reports the following: “I have investigated a number of former LPAM stations which are no longer being heard and it would appear that the following stations are off air and unlikely to resume on the medium wave: Newbold Radio (Bracknell); Gara Sound (Mansfield); Carlett Radio (Wirral College), Harlow Hospital Radio”. Also mentioned via David Lamb) Subcity 1350 is unlikely to restart due to problems with the transmitter and interference with other equipment in the building. I reported in November that St Albans HR **1287 kHz** was off air and has yet to return. I wrote to Hemel Hempstead HR (who relay their broadcasts on 1287 kHz) and they tell me that they hope to have the station on air some time in the near future. However, **Hemel HR 1350 kHz** has been off air for the past week (since 21 January).

This from Tim Foulsham Director Radica Broadcast Systems Ltd., "We've just installed a new LPAM, which may present some DX opportunities Queen's Radio, Queen's University Belfast, 1134 kHz 1W EMRP, www.queensradio.org They are currently on test transmissions and launch officially on 6 February." (See log from mah ed)

Long Wave Radio

Simon Hardwick (Drivetime Presenter/Head of Production at Atlantic 252 1999-2000) informs us [via Andy Sennitt] that the official UK Longwave Atlantic 252 tribute site is now online. It features many audio and picture memories including anecdotes direct from the DJ's and staff who made the station possible between 1989 and 2001. Simon mentions that they're looking for scans of photos, memorabilia and airchecks to add to the site.

Isle of Man station to launch 1May

3 January, 2006

The Isle of Man Communications Commission has agreed an extension to the licence start date for Isle of Man International Broadcasting (longwave 279 kHz), which now plans to launch by 1 May. Station founder Paul Rusling admitted there have been problems. "Effectively one of our shareholders had a shift in investment policy and that line of funding dried up. Certain policies of the alternative funders that we had immediately available were not acceptable to us and we dug in our heels and ran out of money."

However, Rusling says preparation of the technical aspects of the station, the name of which still hasn't been revealed, is progressing well. He added: "We are now confident of being able to launch around Easter, but will not give a date until the facilities are all operational." The cost of broadcasting from an offshore platform — put at £3 million — means the first broadcasts could be at a lower power than originally planned. However, IMIB hopes after a 'proving period' the station will be successful and able to grow. It is also planned to make transmissions available on mobile phones and over the Internet. (Source: Isle of Man Today)

In response to my email sent to the station I received a comprehensive reply from Paul Rusling. Many thanks Paul and good luck with the station!

Many thanks to the following reporters:

- BD Barry Davies, Carlisle, Cumbria. AOR AR 7030 , 130m longwire.
- BGM Brian Martlew, Warrington. AOR 7030, Wellbrook ALA100 and 1mx1m tuned loop.
- BIH Bernt-Ivan Holmberg, Möklinta, Sweden. NRD545 / R75mod; see below for antennas.
- DvK Dick van der Knaap, Holten, Netherlands. AOR AR7030plus with home made filter/pre amplifier/phasing unit, 2 x 500m beverages.
- DX183 Wilhelm Herbst, Fjerritslev, Denmark. Loggings made in conjunction with guests Kai-Uwe Scherliess (26/12-2/1), Ronald Hagensen (31/12-8/1), Christoph Meyer (3/1-15/1) and Manfred Manke (8/1-12/1); 21 beverages.
- GG Giampaolo Galassi, Italy. R75, K9AY.
- GSc Guido Schotmans. AOR AR7030. GSc Loggings were made at home in Merksem-Antwerp, using an ALA-1530. GSc^{-L} loggings were made at my weekend cottage in Lommel using a ½ K9AY.
- JF John Faulkner, Sutton-in-Ashfield, Notts. AOR AR7030, Wellbrook ALA1530 loop, EWE antenna, homebrew antenna phaser, Dream DSP-IF filter.
- JW John Williams, Hemel Hempstead. AOR 7030 and 40m long wire.
- JWe Jack Weber, Hertfordshire, WINRADIO G313i, Wellbrook ALA1530.
- KB Ken Baird, Sorn, Ayrshire, Scotland. Antennas: Beverages 200m West, and 500m NW. Rx:NRD 545, NRD 515, HF225E, RA17.
- mah Martin Hall, Clashmore, Sutherland. NRD-545, RPA-1 preamp, beverages: 513m at 240°, unterminated; 506m at 290°, terminated; 588m at 315°, terminated; 550m at 340°, terminated.; TotalRecorder, Technics RS-BX404 cassette deck.
- PC Paul Crankshaw, Troon, Scotland. AOR AR7030, 3.5x10m EWE, RecALL-PRO.

- PCh Peter Chalkley, Luton Beds. AOR7030 with 40ft long wire.
- PL Paul Logan, Linaskea, N. Ireland. Yaesu FRG7700 /Kenwood R5000 with 100m terminated wire.
- Rha Ronald Hagensen , Ottersberg , Germany . AOR 7030plus , longwires 22m at 315° and 28m at 290° , beverage 243m at 345° , Mizuho antenna coupler AT-2000.
- SW Steve Whitt, High Catton near York. AOR7030+ and HF225 Europa with dual loop K9AY. Also some time with a 370m NW Beverage from 15/10.

Propagation conditions during January have been excellent at times, resulting in another bumper log of quality contributions. Here in Clashmore, conditions were particularly good in the first half of the month, with the 10-13th being outstanding. Unfortunately I had to be away from the dials on 14-15th when I'm sure the splendid conditions would have been ongoing. The second half of the month has been patchy, with the DX much harder to find, and from the 25th has been poor - mah.

Steve writes: "I had my first and only good x-band session this season between 10-14 January. I can't explain why this should be when other trans-Atlantic DX has been coming in pretty much on a daily basis. One factor may be local QRM but I'm fairly certain it is not the only effect at work".

Brian says: "After an absence from the hobby of a number of years I've finally found the time to dig out all my radio gear, update a few bits and pieces and see what can be heard. Unfortunately I missed all the really good conditions back in October and November but I managed to take advantage of a few good openings this month. There's nothing spectacular in my list but that's hardly surprising as I haven't got round to putting up an outdoor antenna yet (Wellbrook ALA100 in the loft and an old, trusty 1mx1m tuned loop). As luck would have it, I seem to be suffering from particularly high noise levels on a number of clear channels - particularly 1390, 1470 and the X-band. Before too long I hope to have the ALA100 outdoors and a EWE in action too which will hopefully help with the noise levels". Welcome back - mah.

"Please find attached some loggings. Although I am pleased with them, I wish I had more. Didn't get those few acres of ground near the sea as new years present... ;-)", writes **Guido**.

Bernt-Ivan notes: "Have used a new antenna the last few month, a BoG of RG58 cable, 360 meters pointing in 120degrees. With three transformers it can be used both directions 120/300 degrees. A very low-noise antenna almost eliminates the powerline noises which is present on all other antennas! Maybe a little weaker signals than on a wire up in the air but definitely much better S/N ratio".

Ken: "As usual I have not really logged most of the 30 odd stations I listed as common/ regulars a few months ago. Come the end of the season, it will however be interesting to count the stations logged. It will also be interesting to see Martin's count hi! I had a bit of a busy time running up to the festive season, and also during it, resulting in almost no real dxing done between mid Dec and 9th Jan. I did have grand plans to spend a lot of the holidays on ghost shifts to, but I don't know where time went".

"One Jan day by 0900 everything was beginning to fade. However at 1026, mid band still hanging on, and even 1170 was drowning the ILR piffle. But low freq end completely gone almost. 1250 still hanging on with the "good going" non stop lift music, as opposed to slow classical. I have noticed it often as one of the last to go. Highlights, 760 daytimer, and Texas 1660, and the 1710 novelty. Noted ESPN on 1660, and 1390, but no ids, and SS on 1660 as well".

John F tells us about his station improvements: "I have made two big leaps forward with my medium wave DXing this month. Firstly, I installed the Dream DSP software which has dramatically improved the selectivity of my AR7030. This software adds an additional (DSP) IF filter after the rx and has brick wall selectivity, fully variable from 0 – 20kHz! This is done by

feeding 9.5kHz SSB audio out of the line-out socket on the rear of the Ar7030, into the laptop's sound card via the mic input, I can then use Dream to demodulate AM/FM/CW/SSB with a significant improvement in selectivity. The second leap forward was when I constructed an EWE antenna on the back garden. This has very directional properties which have to be heard to be believed! The nulling power of the EWE is greater than that of the beverages I use when I DX mobile in Derbyshire and the effect this has is similar to when phasing the loop and the longwire, only I don't need to keep fiddling with the controls on the phaser unit to achieve the null! However, the loop can still be phased with the EWE if required to provide even deeper nulls!".

Paul C comments: "As for the month's listening - well I'm still finding my feet with the EWE - it's bringing in a lot of stations which are new to me. I use 1300 WOOD almost as a beacon now - I can hear it most evenings around midnight, yet prior to the EWE I think I heard it once! I spent one evening chasing sundown DX - homing in on the big 50k stations around 40 mins before sunset and it was interesting to find 830 WCCO, 840 WHAS, 1020 KMOX, 1130 KWKH and 1190 WOWO that way".

Paul L tells us: "All in all conditions have been very good - the 11th to 13th were excellent - with one of my all time best catches - KXEL all on its own on 1540. (mp3 attached). Have been struggling with local noise / beverage stealers! this month but enough coming through to make it all worthwhile".

John W: "A few logs from me - not as many as the last 2 months! Conditions have been mixed - recently not much around (for me). Surprisingly WTAM 1100 and KXEL 1540 came through OK - not certain who I was listening to with my UNID on 1390 though?"

Wilhelm writes on 16 Jan: "It's cold outside, below zero, grey sky - best time to listen to AM radio stations. The conditions are still good up till excellent. On some days it has been a 'never ending story', that means American west coast up till 1400 UTC plus Alaska".

Although e-mailed in plenty of time, **Jack's** logs only arrived just as I was completing the log, but I managed to squeeze them, nevertheless. He writes: "January proved to be a much more interesting month for me than December. The middle of the month in particular brought lower noise levels, stable reception and reduced splatter, which provided several personal firsts. It's interesting also that propagation on a couple of days mostly missed the east coast and allowed stations from slightly further west to get through without being buried in a messy jumble of TA signals. Let's hope we get some more of the same before the solar cycle starts to turn".

Due to the record size of the log, I've had to omit some loggings again this month. Apologies for logs out of order 1340-1360 kHz last month - and a few minor corrections are included in this month's log. Thanks again to SW for checking audio clips of all my UK Firsts and other stations. If anyone else would like to listen to any of my DX recordings, please e-mail me with your request - mah.

The **deadline** for the March DX Loggings is **Monday 20th February**. I look forward to receiving your logs by then, preferably electronically/via e-mail using the Word pro-forma, which I can supply on request. Please remember that I don't automatically include loggings sent to the MWC e-List, so please copy me separately if you would like them included in DX Loggings.

73's Martin

Congratulations to each and every contributor and to Martin for producing the largest DX logs column in the 50 year history of the Circle. Well done! - Editor

This month they were: BD-Barry Davies, MvA-Max van Arnhem, GS-Guido Schotmans, SW-Steve Whitt. Thanks one and all.

A couple of months ago, Steve Whitt managed to log 1600 WMQM Memphis TN, the first time it has been heard in the UK. Steve has enlisted the help of IRCA member Jim Pogue to try and obtain a QSL from the station. Jim lives in Memphis and he informs Steve that any European DXers who are having difficulties in verifying Memphis AM stations, then Jim will be happy to help out with a visit to the station concerned.

Jim's contact address is:

jpogue@midssouth.rr.com or write to him at P.O. Box 3777, Memphis, TN 38173-0777

USA. Jim is also organising the special QSL card for United Radio Broadcasters of New Orleans.

That's it for another month, I'll be back when I have enough material for another column. Until then, good DX – Clive.
