EDITORIAL

with Steve Whitt

✉ Landsvale, High Catton, Yorkshire YO41 1EH
e-mail: editor@mwcircle.org ☎ +44-1759-373704

The last few weeks have continued to produce some great DX for listeners in Europe & elsewhere, so we make no excuse for a bulging column from Martin Hall. Even at my location near York I have heard several new personal firsts and many personal rarities. Astonishingly, in just one month I've heard 21 US states and 7 Canadian provinces! Amazing! With conditions as they are I'm afraid I have to keep Editorial pared down to a minimum and regrettably carry over & truncate some feature articles, (sorry fellas!).

Also this month Andy Robins has had to take a break from producing the Utility Column for domestic reasons. Hopefully he'll be back very shortly.

North American News -Reminder

I'm sure most of you will be aware that Barry Davies has stood down from editing the North American Newsdesk in Medium Wave News. Barry has been producing this column since its inception in March 1994 so surely he deserves a rest :-) and a big "thank you". Now I would like to introduce Barry's successor.

Step forward... Andrew Brade. Andrew probably needs little introduction as his name regularly pops up in MWN and here on this list, but I expect that he will properly introduce himself in his first column. Welcome aboard, Andrew

Pacific Asian Log

The classic Pacific Asian Log of mediumwave [AM] radio stations on air across the entire region has now been updated at www.radioheritage.net.

Produced by Bruce Portzer in Seattle WA, this extensive radio guide covers literally thousands of AM radio stations and is hosted by the Radio Heritage Foundation. It draws on monitoring by many volunteers across the region, as well as information directly from broadcasters so it's accurate and up to date. You can search the database or download a pdf version for your own non-commercial use by visiting www.radioheritage.net/PAL_search.asp today.

Thank you

Thanks to Bernhard Hein in Germany who tells me that he's using his Perseus receiver and Wellbrook loop to do a weekly noon time bandscan across the winter months to research winter daytime propagation.

Thanks also to postal communication from Roger Bunney, which unfortunately got overlooked as it was on paper!

Season's Greetings

This is the last issue of MWN before the holiday season so it behoves me to wish everyone a peaceful and enjoyable break from daily routine. So for the last time this year, 73s and see you on the other side of New Year.

Good listening

73s *Steve* .

I don't think I've experienced such a preponderance of K=0, which seems to underlie the excellent MW DX noted recently. -Ed.

DERBYSHIRE DALES DX TRIP

with John Faulkner & Tim Bucknall

On 20th November, Tim Bucknall and I drove to the eastern edges of the Derbyshire Dales in search of DX from the Far East. We used the Perseus SDR receiver and ran out a 300m beverage in a north-easterly direction. This was laid on the ground and terminated via 600 ohms.

We had been planning this trip for a while but the poor conditions at the time made us think twice about venturing out. However, we thought we would give it a go in the end and just regard it as a trial so we could see how it would all fit together: The suitability of the chosen site; the tools we were using to run out the beverage and coil it back in again and also to see how Perseus performed on a long beverage antenna.

Everything fell into place very nicely and, despite the poor conditions, we had several interesting catches. We operated from a car. The Perseus and laptop were powered by a quiet mains inverter which itself was powered by a heavy duty leisure battery. The only real source of interference we would have had to contend with was the electronics from the car, so a 60m coax feeder was used to distance the beginning of the beverage from us. The beverage performed very well indeed and gave good nulls to many nearby European stations, such that we were also able to catch several Russian stations on LW which would otherwise have been blocked by nearer countries. The Perseus did not complain once about the high signal levels which were presented to it. Here is the log:

153 R Unost, Taldom. Time pips and ID. Equal levels Donbach. F 1600 20/11
163.995 MR-1, Ulaan Baatar. Carrier. Vw 1450 20/11
198 R Mayak, Olgino. ID under BBC R4's time signal. W 1600 20/11
207 UR-1, Kyiv. "Govorit Kyiv" ID. Mixing equal levels Aholming. F 1600 20/11
209 MR-1, 3 sites listed, 3 carriers visible! Vw 1451 20/11
225 R Rossii, Surgut, Siberia. Time pips and ID under Warsaw. Vw 1600 20/11
227 MR-1, Altai. Carrier visible. Vw 1449 20/11
234 R Rossii, Angarsk, Siberia. Time pips and ID // 261. Presume Angarsk since Arman is listed as off at this time. Vw 1600 20/11
270 R Rossii, Novosibirsk, Siberia // 261kHz. Vw 1600 20/11
279 R Rossii, Selenginsk, Ykaterinberg or Gorno-Altysk. ID and time pips // others. Vw 1600 20/11
603 CBS Lukang. Music // 1521. 1359 & F 1500 20/11
612 R Mayak, Pertozavodsk, northern Russia. Lively Russian pops and chat. G 1747 20/11
702 V weak oriental music. Vw 1500 20/11
711 UNID. Oriental YL. W 1502 20/11
846 Voice of Kuanghua, Kuanyin. Good peaks. talk by Chinese YL, peaking over Moscow. F 1502 20/11
1287 R Kompania, probably Syktyvkar, northern Russia. ID. W 1443 20/11
1386 UNID Chinese. No IDs or //s found. Long Chinese YL talk. F 1700 20/11
1467 HKLN KBS, Mokpo. Presumed with Korean talk and chimes at toh G 1554 20/11
1467 TWR Bishkek, Kyrgyzstan. ID in Kyrgyz. G 1600-1700 20/11
1467 IRIB Qom. Persian music and OM talking in Farsi. G 1700 20/11
1476 R Thailand, Lamphun. Presumed with Thai pops at 1542, killed by ORF sign-on. F/G 1600 20/11
1494 Xinjiang PBS, Urumchi // 5060 W 1510 20/11
1521 CBS Changchih. Chinese music before CRI Urimchi sign-on // 603. F 1355 20/11
1521 CRI Urumchi. "Govorit Kitaya" Sign on at G 1400. 20/11
1557 WYFR, Kouho, Taiwan. Usual American religious rant. G 1400 20/11

So, it was a reasonably successful trip and we plan to try a few more DX trip in the near future when conditions improve - hopefully in December.

John Faulkner & Tim Bucknall; Near Chesterfield in the Derbyshire Dales with Perseus SDR; 300m beverage on the ground @ 35 degrees

E100 FOUR VARIANT SHOOTOUT

Gary DeBock, Puyallup, WA USA November 2008

Curious how a stock E100 stacks up against a Murata IF filter model, or a Slider loopstick model? Or is the DX performance of a fully modified (filter plus Slider loopstick) model worth the cost? Here is your chance to find out!

Introduction The Eton E100 has truly captured the imagination of the Ultralight radio enthusiast group by providing many superlative features in a very small package. With 1 kHz tuning steps, 200 memories, scanning features, 9 or 10 kHz selectable tuning and many other refinements, it has become the digital Ultralight radio of choice for transoceanic DXers, as well as for domestic DXers requiring fairly decent stock selectivity and relative freedom from urban RF issues.

The E100 in stock form is capable of very competitive domestic DX performance, especially on the higher AM frequencies. Its stock IF filter provides it with the best selectivity in the Ultralight radio class, in combination with unsurpassed sensitivity on the X band, and other upper band frequencies. In the recent Summertime Shootout equipment review posted on dxer.ca, it was one of the top two performers, being narrowly edged out by the new

Sangean DT-400W only because of its typically modest low-band sensitivity.

Despite this, the E100 is unique in the Ultralight genre as the perfect platform for DX performance modifications. With its 455 kHz IF, the simplest possible two-lead loopstick and very accessible circuitry, the stock E100 can potentially be modified into a state of astonishing

DX effectiveness-- and has been done so repeatedly by a group of fanatical experimenters here in Washington state. The stock IF filter can be replaced by a premium Murata ceramic type, the CFJ455K5. The tiny flat loopstick can be removed in favor of a much larger, innovative Slider model. Unfortunately, in these days of tight money, such performance modifications come with a price tag that can easily exceed the cost of the stock unit. As such, many E100 DXers have wondered whether these selectivity and sensitivity improvements are really cost effective, and how the different modifications would “shake out” in an actual

competitive “shootout.” All these questions, and others, will be answered in this comprehensive article—from perhaps the ultimate E100 performance enthusiast.

Stock E100

Although it was discontinued by Eton recently, the stock unit can currently still be obtained from various sources as an “NOS” (new old stock) unit, with the lowest price being a current Durham Radio/ DXer.Ca special at \$44.97 (plus \$12.95 shipping to the U.S.). The stock unit can provide competitive domestic and transoceanic performance in comparison to other Ultralights, particularly on the higher frequencies. It is typically at a disadvantage to the Sangean DT-400W and Sony SRF-T615 (and others) on the lower frequencies because of a sensitivity limitation, which is entirely due to a mediocre stock loopstick. When aligned, however, the stock E100 is capable of thrilling its owner with some impressive DX, and currently holds the stock Ultralight DX distance record for a 3LO-774 (Melbourne, Australia) reception by Kevin Schanilec from Alaska’s Kenai Peninsula (7,684 miles, or 12,372 km).

Murata IF filter-modified E100

The stock IF filter in the E100 already places it at the top of the Ultralight selectivity class,

but it will hardly impress serious transoceanic DXers. Razor-sharp selectivity is essential to split off the relatively weak 9 kHz overseas DX from domestic pests, and DXpedition enthusiasts have been the primary group demanding such a super-selective E100. During experimentation in the summer of this year, fellow Puyallup, Washington resident Guy Atkins was asked to suggest a suitable E100 upgrade IF filter, which would transform the model’s fairly good selectivity into a razor-sharp state, suitable for any domestic or 9 kHz transcontinental DXing mission. Because of the 455 kHz IF of the model

and the related availability of many premium upgrade filters, Guy was able to choose the perfect replacement for the E100: the Murata CFJ455K5 ceramic filter, nominally 2.3 kHz at –6 dB.

Truly a premium filter (at a premium price of around \$53 from Icom), the CFJ455K5 will fit inside the E100 cabinet after removal of some plastic, and careful installation by an experienced technician [a service currently only offered by Steve Ratzlaff (steveratz@wildblue.net), a highly experienced ex-Navy technician, for a labor charge of \$50]. The installation requires preparation of miniature coaxial cables and very detailed circuit board soldering, and is not recommended for beginners. However, for those able to perform or arrange an installation, the filter’s performance is truly impressive. It is the same narrow filter as that used in the Eton E1, and provides equivalent superlative selectivity.

The filter-modified E100 is capable of receiving many domestic DX stations only 10 kHz away from extremely strong locals, and on the ocean coasts, is also capable of receiving fairly strong 9 kHz-split transoceanic DX right next to domestic pests. Since the new Murata filter is always in the E100’s IF circuit (i.e. not switched in), the on-frequency audio will typically have a slightly “muffled” quality, and intelligibility can often be improved by tuning 1 kHz up or down from the DX station’s frequency. This practice also improves the audio quality of mp3 recordings on a filter-modified E100. Since the stock loopstick is still being used, however, sensitivity is not improved over the stock unit, and weak-signal performance (especially on low-band DX signals) still leaves much to be desired. Those DXers looking for greatly improved sensitivity will probably choose either to have an external antenna connector modification (to use their EWE’s, K9AY’s, beverages, etc.) or a Slider loopstick modification (to greatly enhance sensitivity as a stand-alone DXing portable), or both.

Slider loopstick-modified E100

The “Slider” is an innovative type of antenna using a movable coil to allow the peaking of each DX signal on the loopstick itself, before it enters the E100’s front end. Developed during summer experimentation to greatly boost the E100’s wide-band sensitivity, the Slider functions like a built-in preselector, providing a measure of selectivity in addition to its huge sensitivity boost. This enables it to avoid the failings of other transplanted loopsticks (such as those in the SRF-39FP) which boosted sensitivity at the expense of selectivity.

The 7.5” Slider loopstick-equipped E100’s have astonishing sensitivity for their size, and have been tested and found fully competitive with RF-2200’s, ICF-S5W’s and other top AM portables in weak signal capability. Because of the E100’s digital tuning convenience and memory capability, however, a Slider-equipped E100 can often exceed these analog portables in overall DXing performance.

The experimental models constructed by John Bryant and myself consist of a movable coil of 40/44 Litz wire which slides along an Amidon 7.5” x .5” Type 61 ferrite bar, optimizing sensitivity on each individual frequency. This gives the Slider-equipped E100 superb sensitivity from 520 to 1710 kHz, far exceeding the stock loopstick’s performance, and that of every other stock or hot-rodded Ultralight portable. *The Slider loopstick modification is also unusually easy for beginners to perform*, with only two highly-accessible soldering connections to make on the E100’s back circuit board, followed by the construction of a custom frame (plastic or wood) to hold the antenna.

By itself, the Slider antenna opens up a new world of weak-signal DX possibilities for the E100 owner, and is especially effective in rural or isolated locations, where its superior sensitivity can really shine. It is also moderately competitive in 9 kHz split DXing along the ocean coasts, especially on the frequencies 4 or 5 kHz away from domestic locals. Since the E100’s stock IF filter is reasonably selective (for the basic Ultralight class), and since the Slider coil’s peaking function provides a slight measure of selectivity, the Slider-only E100 can usually receive most of the TP’s available on a “fully modified” (Murata IF filter + Slider loopstick) model, although with much more domestic splatter.

The Slider coil’s peaking function has also been found effective in reducing the E100’s reception of image, spurious signals and general overloading from an external antenna such as a long wire, EWE or other high-gain design. The peaking of the coil on the DX station’s frequency helps to filter out these unwanted nuisance signals, and make it possible for suburban DXers to use their E100’s with reduced overloading. Further information on this Slider advantage will be found in a companion article to this one, to be published soon by John Bryant.

An ideal hobbyist project, the Slider loopstick (and frame) can be constructed with parts costing about \$35, and give the DXer a great sense of satisfaction in boosting the sensitivity of his E100 up to a tremendous level. Full information and instructions are posted in a 7-page article on dxer.ca, and are suitable for any beginner. It’s the Ultralight equivalent of last century’s simple but thrilling Heathkits, making even novices feel like they’ve hit an amazing home run in electronics.

Sorry Part 2 continues next issue . We ran out of room.

NORTH AMERICAN NEWS

✉ Sand Gap, Bursea, Holme-on-Spalding Moor York YO43 4DF

with Andrew Brade

e-mail: na-news@mwcircle.org

Hello to all – I'd like to begin by thanking Barry for the sterling work that he has done in previous editions. He has set a high standard.

Here is my first round up of what's been happening on the North American AM dial. May I express my gratitude to the organisations which make this resume possible? Thanks this month to: - IRCA, KOJE, ABDX, DXLD.

- 710 KIRO** The parent company of KIRO radio has announced that it will split the station into two different FM and AM stations next year, one dedicated to sports and the other for news. Bonneville International, owners of KIRO, says that starting next year 710 ESPN Seattle will broadcast sports only. Their news operation will broadcast on 97.3 FM, which has already been broadcasting KIRO radio. Bonneville has secured the rights to air Seattle Mariner and Seahawks games, the two biggest professional sports franchises in the state. The schedule will be supplemented by programs from the ESPN Radio Network. (Associated Press via ABDX)
- 1130 KPHI** Honolulu HI – New – Filipino ethnic programming.
- 1300 WJFK** Baltimore MD - becomes **WJZ** – a rare re-assignment of a three-letter call sign, which was last used on AM in 1953. Format is ESPN.
- 1300 KKOL** Seattle, WA – changes format to business from talk.
- 1310 KNOX** Grand Forks ND - is off the air due to transmitter trouble; its talk format has temporarily moved to KCNN 1590 East Grand Forks MN.
- 1570 WECU** Winterville NC – granted an increase in its daytime power from 3.8kW to 8kW. Nighttime power remains unchanged at 200W, both non-directional.
- 1600 WLuz** Bayamon Puerto Rico – becomes silent.
- 1630 KRND** Fox Farm WY – has applied for change to directional antenna with different orientations day and night (DA-2). The new pattern is a figure-of-eight roughly north-south, so it may mean that KRND is not heard quite as often in Europe.

Here is a general round up of what's been happening on the North American AM dial courtesy of our friends at the **International Radio Club of America**.

CANADIAN RADIO NEWS

AM FREQUENCY CHANGES

790 CFCW Camrose AB Approved to move to 840.

FORMAT CHANGES

600 CKPK Vancouver BC Continues on the air by relaying The Peak-100.5 FM. Format changed from OLD/NOS to AAA.

AM TO FM CONVERSIONS ON THE AIR

600 CKPK Vancouver BC Northwest Broadcasters recent news reports that station will throw the switch off at 1900 PST on 13NOV08 with format going to 650 CISL and CKPK FM 100.5.

OFF THE AIR

560 CHVO Spaniard's Bay NL Silent after moving to FM-103.9 at 1730NST on 7th October 2008.

590 CKRS Jonquiere QC Moved to FM 11/2008.

PROPOSED AM TO FM CONVERSIONS

1550 CBE Windsor ON Applied to move to FM-97.5/91.5. This will replace the never implemented nested FM relay on 102.3 MHz. CBE will go silent after the usual three month simulcast period. Excluding a few 40 watt low power relay transmitters this is the last (assuming that CBI will also actually move) English language CBC station on AM between Manitoba and Newfoundland. (Deane McIntyre VE6BPO, AB, WORLD OF RADIO 1435, DXLD)

1340 CKCR Revelstoke BC Applied to move to FM-106.1.

1020 CKVH High Prairie AB Applied to move to FM-93.5.

1230 CJNL Merritt BC has applied to move to 101.1FM, but the transmitter would remain on the air as a relay CHNL-610.

1310 CHLW St.Paul AB Applied to move to FM-97.7.

Rádio Clube Paranaense 1430 AM terminating its activities

One of the more traditional broadcast radios in Brazil closing down - Rádio Clube Paranaense AM, Curitiba, the third oldest in the country, announced the dismissal of its entire department of journalism. With that the whole production of the station comes to an end and the station becomes a mere repeater of Rádio Eldorado AM, São Paulo.

Rádio Clube, better known as B2, was until October 2007 rated #3 among AMs in Curitiba. At that time the entire team of sportscasters was fired and Clube became part of Eldorado São Paulo. Its schedule was then filled mostly by rebroadcasts of Eldorado, leaving only part of the morning and a brief slot in the afternoon with local programming. Tu Rádio via finndxer

WORLD NEWS

(Europe, Asia, Africa)
with Ton Timmerman

H. Heijmanspln 10, 2024 JJ Haarlem, The Netherlands
e-mail:world-news@mwcircle.org

Dear friends,

Not much shocking news this time. Most attention is paid to the very nice conditions towards The Americas and Asia. I think it is one of the best DX-seasons ever!

Albania

The two Fllake powerhouses tonight. I measured 1215.07 and 1457.97 kHz today Nov 21, at 1720 UT. I guess the technicians tried to adjust the txs recently? Between 1940 and 1955 UT noted 1394.65 kHz in TWR Hungarian. Few stations on 1458 kHz co-channel, but all nearly in 1457.99 - 1458.01 kHz, no significant offset could be traced, when listened to the bfo pitch.

On Nov 23 at 1730-1755 UT Fllake noted on 1215.12 and 1457.58 kHz. (*Wolfgang Büschel via wwdxc BC-DX TopNews*)

The 1215 kHz one is drifting down now. First measurement on 1214.90, now (1754 UT) on 1214.83 and going down. I have the 1458 station on 1457.983. (*Mauricio Molano Sanchez, mwoffsets via wwdxc BC-DX TopNews*)

Australia

The 1611 kHz frequency has been purchased by The Vision Radio Network. They commenced test transmissions on 6th of November and will commence broadcasting on 1st of December. The following is from their web site at <http://www.vision.org.au> :

“Vision Radio Network is now broadcasting a test transmission into Melbourne on 1611AM in preparation for Vision's official launch on 1st December. 1611AM Melbourne when it comes on air on 1st December will effectively double Vision's potential audience. The number of people living and working within listening distance to this one station is about the same as the number of people who live within the listening radius of all our other 336 stations combined. 1611AM is an established Narrowcast radio frequency broadcasting from a site situated to the west of Melbourne. Initial indications are that 1611AM gives extensive but not complete coverage across the wider Melbourne area. We'd love you to email us and let us know where you are listening from and how reception is at your place. 1611's position at the top of the AM dial also means that some older radios may have difficulty tuning in; however most modern radios should have no problem with reception. If you know people living in Melbourne please tell them about 1611AM, and please pray for us thanking God for this wonderful opportunity. Melbourne 1611AM is another step towards fulfilling our vision of Christian radio for every Australian” (*H.R. Boekeman dxing.info via DXLD*)

Austria

The demise of ORF's foreign-language programming for shortwave transmission has already been discussed. But in fact this is just a minor aspect in an affair of much larger scale: ORF is facing bankruptcy in 2012, at least according its management, thus 1000 job positions will be axed by then. This can not be achieved without firing people, something that was taboo until now. ORF will leave its Königberg main seat in favour of another location in Vienna. Symphony orchestra, facility management, IT, rights management will be outsourced, the shares in the transmitter operator ORS (at present 60 percent) will be reduced.
<http://derstandard.at/?url=/?id=1227287274469>

In such a situation of course nobody cares for SW. In an earlier interview ORF head Alexander Wrabetz stated that he wants to close it down, together with the MW service on 1476 kHz.

So I would not be surprised if the plug will be pulled without any fanfare on New Year's Eve. If so it would be up to ORS what will happen with the Moosbrunn site. On their website I could not find any mention of shortwave at all, but perhaps it would be too speculative to draw any conclusions from this circumstance (Kai Ludwig, Germany, Nov 27, dxldyg via DX LISTENING DIGEST)

China

The Jinan-Huangtai site is using 918 kHz with a 200 kW Harris transmitter with a 50 kW Harris unit as reserve. Weifang is on 1548 kHz, but I doubt with anything near 200 kW. The sites for Shandong PBS News Sce mentioned in various web sources are: 891 kHz: Dongying, 918 kHz: Binzhou, Dezhou, Heze (10 kW), Jinan-Huangtai (200 kW), Jining, Laiwu, Rizhao (10 kW), Tai an, Yantai (10 kW), 1467 kHz: *Beizhen (1 kW), Dezhou (1 kW), *Xin Xian (1 kW), 1485 kHz: *Dan Xian (1 kW), Liaocheng (1 kW), *Lu Xian (1 kW), *Pingyi (1 kW), *Tai an (1 kW), *Weihai (1 kW), 1548 kHz: Linyi (7.5 kW), *Longkou (10 kW), *Qingdao (10 kW), *Rongcheng (10 kW), Weifang (10 kW) (*Alan Davies-THA; wb, SW TXsite*)

Croatia

I've just read in one Serbian webforum that 1134 kHz Zadar-Rasinovac, 600 kW, which transmits Glas Hrvatske (Voice of Croatia) 1355-0630 UT in the (very) near future will stop broadcasting in analog mode. The staff is waiting for the new DRM transmitter to arrive, and then they will install it, and then GOOD BYE 1134 kHz AM!! The transmitter will broadcast ONLY in DRM mode, so enjoy Glas Hrvatske on AM 1134 kHz while you still can! (*Dragan Lekic via DXLD*)

Hongkong

Hong Kong's Chief Executive-in-Council has granted Wave Media a 12-year licence to broadcast a new radio channel on AM 810 kHz, the Commerce & Economic Development Bureau says. Wave Media will broadcast 24 hours a day, mainly in Cantonese. Like other licensees it must provide news & weather reports, current affairs, arts & cultural programmes, public announcements, and shows for young people and senior citizens. It will start broadcasts within two years of today's licence grant, and will provide a \$2 million performance bond to ensure it begins service as committed. It will be bound by all commitments made in the licence application, including its pledge to uphold freedom of expression. (*Government of Hong Kong via medianetwork*)

Hungary

In Hungary, Régió Rádió from Mohács has begun broadcasting on the frequency of 1485 kHz mediumwave. In addition to Hungarian, Régió Rádió can be heard with identifications in German ("Radio Regional"), English ("Radio Region") and a Slavic language. Information about this station was first published by Patrick Robic on the DXing.info Community. (*DXing.info*)

Kiribati

The Radio Kiribati AM transmission that normally provides broadcasts covering the entire nation has now been off the air for five weeks because of problems with its transmitter and funding shortages. The national broadcasting station is now transmitting only on FM, which can only reach the capital atoll of South Tarawa and the nearby Line and Phoenix Group islands. This is the latest in a series of developments that have led the Kiribati governmental Broadcasting and Publications Authority (BPA) to slash staff, and the government to terminate some members of the BPA's board of directors.

This is the second time Radio Kiribati's AM transmission has been off the air because of technical problems with its aging transmitter, which Engineering Manager Kautabuki Rubeiariki describes as out of date and beyond its lifespan of eight years. "Our transmitter has been used for the last 11 years three years beyond its lifespan" he said, "Even though it's repairable, in the long run, the

problem will continue because of wear and tear of other components.” The Engineering Manager says the only solution to bring back permanent national AM transmission is to purchase a new AM transmitter at a cost of almost 100,000 Australian dollars including transport costs to Kiribati, installation by the manufacturer and other local costs. ”I’ve prepared a project document for this and it’s now being scrutinized by the mother ministry, Transport, Information and Communications, the Ministry of Finance and Cabinet, which will give the final approval,” Rubeiariki said, “If they react favourably, national broadcasting can be back on air in time before the next sitting of parliament, which is on air during sessions, before the end of this year,” he said. (*Pacific Magazine via Medianetwork*)

Latvia

In Latvia, Radio Merkurs has been testing on 1485 kHz since August 8. Radio Merkurs continues with the same format and the same 1-kilowatt transmitter that were used by Radio Nord on 945 kHz until mid-summer in the capital Riga. Information about this new station was first published by Yuriy Dymbovskiy in Riga on Open-dx. (*DXing.info*)

Some remarks about issue of Radio Merkurs broadcasting (I guess someone translated this issue from Russian into English (from open-dx), but some details lost). This is not the same transmitter that was carrying Radio Nord. Radio Nord was broadcasting from Ulbroka with 2.7 kW, but Radio Merkurs is broadcasting from Riga (Agenskalns, Western Riga). Power should be 1 kW, but most likely power used now is much lower (maybe about 100 W).

After absence in the end of August and in September radio station is on air again since September 30 (not only non-stop music like it was before, but also some programs). Though transmission isn't considered test anymore, engineers are still trying to improve quality of reception.

Usually I hear Radio Merkurs with SINPO: 55454 or 55555 depending on atmosphere noise and probably also on power of transmitter that changes sometimes (Receiver SONY ICF-SW7600GR with ferrite antenna, South-Eastern part of Riga, about 6 km from transmitter).

This transmitter in Agenskalns is carrying not only Radio Merkurs, but also a plenty of FM stations, though many people are worried that antenna is too old and because of strong wind can fall down. Radio Merkurs is the same radio station as former Radio Nord 945 kHz - the same programs, the same music and the same DJs. Relocation was necessary as land of Ulbroka mediumwave transmitter (945 kHz) was sold to someone, future of 9290 kHz Ulbroka transmitter is also unclear. I heard rumours about cancelling all relays via this transmitter December 31.

55! 73! Yuri Dimbovsky, Riga, Latvia (17/11-2008)

Nigeria

917 kHz, new station Radio Gotel, Yola, has address "Modire (After Yola Bridge), Off Yola-Mubi Expressway, Jimeta-Yola, Adamawa State" or "P. O. Box 5759, Jimeta-Yola". They also use email addresses "radiogotel @ yahoo.com" and "radiogotel @ gmail.com".

According to Mr. Kwaji Tari Kwaya (Headof Engineering) Radio Gotel "... is a private radio station established by an illustrious son of Adamawa State of our great country Nigeria. The station is meant to inform, entertain and educate listeners in the following languages: English, Hausa, and Fulfulde alongside musical entertainments in various local languages of Adamawa State. The Station began full Broadcast on the 29th June, 2008 and is always on the air from 0600 to 2400 hrs Nigerian time [0500-2300 UTC]; Period of broadcast therefore is eighteen (18 hrs) daily". Radio Gotel also uses slogan "Voice of the People" and one of the regular programmes has been "Heart to Heart" live show hosted by Mr. Hiram Lokodi "every week day" between 2303-2400 Nigerian local time. The Head of Programmes is Mr. Mohammed El-Yakub. (*Ilpo Parviainen via DXLD*)

Sweden

EXTRA GRIMETON RADIO/SAQ TRANSMISSION: There will be a transmission with the Alexanderson alternator on 17,2 kHz on December 6 2008 at 10:45 UTC. The reason for the extra transmission is the opening of a new "Alexanderson Institute" at Campus Learning Centre in Varberg, the near by city. We do not require any QSL-reports this time and will not verify.

P.S. We still intend to continue with our annual transmission on Christmas Eve (morning), Dec 24, at 08:00 UTC with tuning up from 07:30 UTC.

Switzerland

In 2009, the 5 Swiss MW frequencies will be available for private broadcasters. I concern the following frequencies, power and times: 531 Beromünster (500 kW) 0500-1800, 558 Monte Ceneri (300 kW) 0500-2400, 765 Sottens (500 kW) 0500-2400, 1485 Savièse (1 kW) 0000-2400, 1566 Sarnen (300 kW) 0000-2400.

The new MW broadcaster (if there is a candidate) will be announced in July 2009. The owner of the license must be located inside of the country, the mode of transmission can be in analogue or digital. More details here <http://www.bakom.admin.ch>. The frequency list just gives the Geneva schedule allocations. 765 is not available because it's still in use by SRG SSR. However, Bakom's announcement in German adds that this is the case "vorderhand", some weasel wording which is presumably meant to hint that this is not a definite, to-stay thing. For now Bakom just asked for statements if somebody is interested in broadcasting on mediumwave at all. If somebody declared its interest they will put the requested frequency on tender or probably allocate it freehand if only a single party wants to use it. Otherwise no further action will be taken. *(Kai Ludwig via DXLD)*

Tajikistan

One good tip to offer from Newfoundland is Tajikistan on 972 kHz, VOA's R. Aap Ki Dunya broadcast to Pakistan. Noted with a pre-sign-on announcement at 0050 with contact info for VOA, then on with VOA ID and Yankee Doodle signature at 0100. All in Urdu language, as far as I know. Listed as 500 kW from Orzu. *(Jim Renfrew, Chuck Hutton, Saul Chernos NRC-AM via DXLD)*

Ukraine

At last, in the end of year 2008, the National Radio Company of Ukraine got the financial help for the needs of National and International radio broadcasting in Ukraine. The help was aimed for maintaining the transmitting facilities of the Ukrainian Radio, which were put out of operation during some time or have been leased by the Voice of Russia. So from the 24-th of October the following transmissions were added to existing ones, all times UT:

Three transmitters were planned to be added for broadcasting the UR1 channel: in Oktiabrsk (Crimea) 150 kW on 648 kHz; in Krasne (Lviv) 1000 kW on 936 kHz; in Vinnitsa 30 kW on 1530 kHz.

Three transmitters were switched again on UR2 channel "Radio Promin" on 549 kHz: in Brovary (Kyiv) 150 kW; in Luch (Mykolaiv) 500 kW; in Krasne (Lviv) 70 kW.

The 1000 kW transmitter in Luch (Mykolaiv) up to now has been leased by the Voice of Russia. Now it resumed broadcasting of the third channel of the Ukrainian Radio UR3 "Radio Kul'tura" on the traditional frequency of 1431 kHz.

On 936 kHz the Lviv 1000 kW transmitter broadcasts the RUI programs to Europe from 2300 to 0300. It's a pity that such additional transmissions of the Ukrainian Radio can be guaranteed only to the end of this year. The future of them depends on the Ukrainian budget 2009. *(Olex Yegorov, via DXLD)*

Andrew also tells me that in after hearing **Celtic Music Radio 1530 kHz** the Glasgow Community radio station he received the following information from an email he sent; “Hi Andrew, Yes, it definitely was our signal! It's good to know we're getting so far, yet frustrating, as we still have a fairly large "dead zone" in the centre of Glasgow, only a couple of miles from the transmitter!

We're broadcasting from a site just down river from the centre of Glasgow, 70W EIRP. Normally during the daytime we get a useable signal for around 15-20 miles, but occasionally we get lucky! As well as your report, we've had reports from Manchester, Dublin and Sweden. I guess you'll probably also know the name "Chicago", of Radio Caroline engineering fame. He's our RF consultant, and was involved in the set up of the transmitter. We seem to sometimes just "get lucky" - a combination of weather, atmospherics and tides - and remote reception improves. We're surprisingly sensitive to the tides - our TX is on the riverbank, and you can see the transmitter power varying as the tide goes in and out!”

TK-L Thomas Knauf-Lapatzki, Römö, Denmark. Icom R-75, 400m beverage-on-ground (BOG) at 275°, 23m EWE at 310°.

Guido tells us: “I made two one weekend dx-peditions the last month. One to Walsoorden in the Netherlands and another one in Kasterlee here in Belgium. This resulted in quite some loggings and a lot of personal first loggings. Especially the conditions towards the Far east where very good. It's a pity that I don't have such listening possibilities at home., but I have still some work with the Perseus files. Some audiofiles can be found at <http://www.schotmans.net/walsoorden/waltz.htm>

Another DX-peditioner is **Thomas**, who writes: “As usual I spent a week from 25/10 to 1/11 on the Danish North Sea island of Römö, in a private holiday house about 2.5 km from the sea. In comparison with the BOG, the EWE had a signal loss of 24-30 dB, in spite of reasonably wet ground, and was therefore not suitable to receive weak stations from the prairies, plains and mid-west/west coast. Unfortunately, it wasn't possible to take the beverage in a more northerly direction, because there was a street from the village Kongsmark to the next village Lakolk. On the other hand it was very easy to utilise the street in the Caribbean direction of 275 degrees for extending the longwire in parallel”.

Stefan spent some time at Wilhelm Herbst's DX183 recently. “Some logs are attached for you, not that spectacular towards US/CAN because I dedicated on my list of the "not verified stations". But I omitted all the east coast stuff”.

Turning to the subject of propagation, **John W** tells us: “A few logs from me - nothing exciting but 700 WLW is not an easy channel here. CFBC is dominant on 930 - odd no sign of CJYQ and 1050 CHUM was the best I've heard them for a long while”.

John F had rather more exciting results: “The last month has been good for North American reception, but conditions on November 6th were excellent and provided me with the best North American reception I have ever experienced from home. Manitoba stations 680 CJOB, 920 CFRY, 1290 CFRW, 1330 WLOL and 1570 CKMW were logged, giving me my first reception of this province from home, as were several stations from less common states such as Wisconsin, Nebraska, Wyoming, Colorado, North Dakota, Minnesota, South Dakota and even Baja California! My log this month includes more than 100 transatlantic stations and **23 personal firsts**, making this my biggest ever monthly log contribution to MWN”.

Paul C also experienced fine conditions: “An excellent month with a few great openings to the west coast. I count 15 Personal Firsts in the log ... and the Perseus receiver has really showed its value as a great DX tool. I was delighted to finally log California, through KNX and heard the San Diego station on 1700 (just over the border in Mexico) on a few occasions during the month.

Jack's experience is similar to **John W's**: “There were some good nights, but I didn't experience such impressive conditions as everyone seemed to have further north. There were certainly plenty of quite strong North American signals that often appeared earlier in the evening and lasted longer into the morning, but the West Coast continues to elude me. The new Kaz antenna is working very well though so there's still hope”.

Conditions in continental Europe have been good over the last month, as **Max** notes: “Again, nice conditions; highlight this time were personal firsts 1470 CJVB Vancouver and 1400 Emisora Mariana de Bogotá which is audible in our local mornings. Also, 1413 JOIF KBC Fukuoka is now a regular!” Writing again on 24/11 he adds: “This morning I experienced for the first time reception as late as 1043UTC. CJVB 1470 was weak but clear on a very quiet MW band. Amazing!”

Friedhelm says: "The last few weeks have DX my heart beat faster. That was the best thing here in Lünen I have heard so far. And with my modest investment. I hope that some good receptions will follow".

Hans comments: "Nice to be back with logs for the circle! I had more or less no logs during the last 5 months. The conditions behaved so poor that even standard stations did not appear. I checked the band 2 or 3 times a week, but most mornings nothing happened! I know I am too far into Continental Europe for real great DX possibilities, but I didn't believe it could be that bad. So much about the bad - things changed! Yesterday morning (24/11) I did the normal turn around on the band. Not much around at 0615, I was near to pull the plug that day. When I came to 1510 kHz and found Sports talk. My experience tells me this could not be WWZN! The signal was weak with fair peaks at times. WLAC in Tennessee came in mind with a similar format. At 0700no ID came up. I was just stopped the recording to create a new file while the announcer says: "Sportsradio 15-10 K-G-A Everything Sport". Right in this moment the signal reach a fair level! Believe me, I was nearly falling from my chair after that! This all on my short beverages showing in the wrong direction. A pity that I did not give more attention on 1500 kHz at the same time. This had to be KSTP in St Paul! I am about 70 percent sure I catch that station. Martin, you know how happy I am about this really great logs. Good and bad are mostly together, so also here at my location. I found an S-9 noise between 1375 and 1395 since last Sunday. Maybe it has something in common with the snow and temperature below 0°C? For the unforeseeable future no logs on 1390 kHz. A big loss because it is/was the most useable DX channel, especially since Big L gave up on 1395. Less noise only on the new Loop antenna. The Wellbrook LFL 1010. A great little antenna that copies the T/A signals well. A week ago I received my Perseus. Its a second hand machine from a fellow Austrian DXer. I have to wait until I get my new Laptop computer. Anxiously waiting to use this little wonder!"

Steve also writes about his experiences: "I have omitted regulars heard probably >75% of days in November such as the VOXM network, CBC in Newfoundland, CKAC, CHIN, WWKB, CFRB etc unless something notable observed. After lots of effort and many days of quiet ionosphere I finally got signals from the West Coast of North America! I was reflecting on the trans-Atlantic DX signals I've been hearing this season & I asked myself: Where is WINS these days? - on 1010kHz 9 times out of 10 CFRB is fully dominant; in previous years that was not the case. Where is CJYQ? - I grew up using CJYQ as the beacon for trans-Atlantic DX; this year it has been a poor signal or virtually non-existent (even when other Newfoundland stations are strong. I can only assume that this is a propagational effect maybe associated with solar minimum? Am I alone wondering?"

DX TIP: WEGP 1390 continues to frequently miss its legal ID at the TOH thereby leaving a 10 second window of silence which might reveal an ID from a station underneath.

Comment re 14th Nov: I don't think I've experienced these sorts of conditions at home before:

- 1) Newfoundland faded in with a good signal before 1830utc 13/11 (yesterday CBG 1400)
- 2) USA fading out at 1100 utc (today WWKB 1520)
- 3) Asia audible at 1200 utc (right now CRI sign-on 1521kHz)

effectively that means I am hearing long distance MW DX signals 23 hours a day - quite unusual (but a good case for recording signals if one wants to keep sane, get some sleep and keep family & work together).

Comment re 27th Nov: Around 2300utc 26/11 I felt that conditions were not very good since I only could hear the more powerful regular signals from across the Atlantic.

I was surprised therefore at 0019 to catch an excellent signal on 700 from WLW (never this good!). I then noticed a strange effect. There were strong signals in a very narrow portion of the MW band approx 700-800kHz. 730 was very good in French. 740 was very good with nostalgia style tunes. 800kHz had 2 or 3 stations mixing at strength.. 760 had (presumed) WJR.

In contrast the rest of MW band was not special - though oddly 1470 was dominated by a Venezuelan station with a network programme that mentioned radio Anzoategui.

Overall this last month has been amazing serving up 20 US States and 7 Canadian Provinces whilst listening at home!!!

Here in **Clashmore** the best conditions of this season have been experienced during the last month, with many less common stations noted. The last few days of October provided good morning openings to Alaska, Hawaii, the North American west coast, mid-west and prairies. Then conditions tailed off for a few days, but were outstanding again to these areas on 5th and 6th November, with Japanese stations also coming in well during the early afternoons. We then had a quiet spell before they picked up again towards 14th November, when conditions again improved to the west coast, prairies and mid-west, and Japanese stations were again coming in very well indeed. Propagation remained fairly good until 22nd November, when they were again outstanding, particularly favouring Oregon and Washington states, slowly declining thereafter. I still have many unchecked Perseus recordings for this extended period of good reception, and will be presenting any unusual logs to the e-List and to DX Loggings when I have time to check them. Andrew Brade was a welcome guest here between 20th and 24th November, and had carefully selected the time of his visit for best propagation, and I expect he will be reporting his logs in due course. You will note that long-haul DX loggings below 700 kHz are limited – this is because the Faroes transmitter on 531 kHz has sidebands extending to at least +/- 170 kHz, raising the noise floor of the receiver here by about 10 dB and wiping out any weak signal DX that might be getting through during the late morning period – **mah**.

On a different theme, **Bernard** writes: “This letter may come as a surprise, but I wanted to claim the first “ultralight” TA logging. I got interested in “ultralight” after the first article in MWN, and I acquired a Sony SRF59. I have played with it, but I find the analogue tuning very restrictive, although the receiver obviously has potential. Anyway, to cut a long story short when I read about the Sangean DT400W I decided to try for one, and with the help of a friend who is on line (as you will gather I am not) we ordered from Jubees in Georgia, and the DT400W arrived here this week. The total cost - \$88.47. As it is the USA version it can be switched between 9 kHz and 10 kHz spacing. I am very impressed and had already had some good UK loggings, when last night I caught my first, and I hope not the last TA – 1390 WEGP. I always enjoy reading the DX Log and the outstanding loggings being made. I have no qualms about the Perseus, it seems we must use whatever tools we have to further our knowledge of MW reception conditions. Also, I agree with the decision to use “personal first” rather than “UK first”. *Thanks for your interesting letter, Bernard, and what is I believe the first ultralight log to be received for DX Loggings. However, I’m sure there will be some challenges to your claim for the first TA reception using ultralight – I believe several US DXers may have beaten you to it! This is a fascinating aspect of the hobby, and I look forward to receiving more ultralight loggings from you and from other members. Good DX!* – **mah**.

In a similar vein, **Tim** says “(My afternoon logs of 4/11) were heard on my Dad’s Sangean ATS505 barefoot, during excellent Asian conditions. Not quite ultralight DXing, maybe “Bantam Weight” DXing hi hi!”

The **deadline** for the January 2009 DX Loggings is **Boxing Day, Friday 26th December**. I look forward to receiving your logs by then, preferably electronically/via e-mail using the Word pro-forma, which I can supply on request. I regret that I am unable to accept logs of more than 20 stations in manuscript, paper or fax copy, and all contributions should follow the format used in DX Loggings as closely as possible. Please also remember that I don't automatically include loggings sent to the MWC e-List, so please copy me separately if you would like them included in DX Loggings.

Merry Christmas, and best wishes for 2009 Martin

Thanks go to the following this month: Rha-Ronald Hagensen in Germany, GH-Ge Huijbens in Belgium, MvA-Max van Arnhem in the Netherlands, BD-Barry Davies in Carlisle.

Well known Medium Wave DXer Patrick Martin in Oregon, USA has just received a QSL from 970 KFBX Fairbanks AK. Nothing unusual in that except it's Patrick's 3000th Medium Wave QSL from 95 countries! The v/s was Chief Engineer Scott Diseth.

That's it for another month, my in-tray is now empty. So, until it's partially full again which hopefully will not be too long, I will say 73s for now – Clive.
