EDITORIAL

with Steve Whitt

☑ Landsvale, High Catton, Yorkshire YO41 1EH e-mail: <u>mwneditor@mwcircle.org</u> ☎ +44-1759-373704

I must admit that I have not found time to switch on my receiver throughout the summer, and my K9AY is in bits since it was wrecked in a Spring gale. However I notice that some interesting DX is appearing along with a few "UK firsts" making their way across the Atlantic. Perhaps this heralds another interesting season on the MW bands?

Utility Column.

I'm afraid to report that we are on the hunt again for a column editor.

Andy Robins writes;

"I deeply regret to say that this will be my last. My full-time job is evolving and is taking up a lot more of my time, and so I must unfortunately pass the column along to other hands. I hope you won't have too much trouble finding a new volunteer.

Let me just say in closing that it has been both a pleasure and a privilege working with you and everyone at MWC. Among other things the Circle's bulletin is the best DX publication I've ever seen bar none, and I've seen quite a few since getting into the hobby in the late 1960's."

Thanks for the very kind words, Andy. I hope that we don't have too much difficulty finding someone to fill your shoes. If you are interested in non-broadcast activities and feel you could compile a column for MWN please contact me (the ed) for a chat.

Treasurer's Report MWN 55#04 with Martin A Hall

First of all, I'd like to thank Clive Rooms for the considerable effort he's put in as Treasurer for the MWC, over more years than I can remember. It's a measure of the contribution that Clive has made that his responsibilites have had to be shared out amongst several members who have volunteered to take on some of the work needed to administer the Circle.

This is the first of what I hope will be a regular brief report on what's happening with the Circle finances, and in a future report I intend to briefly describe what everyone running the Circle actually does on a volunteer basis to serve our members. It's only now I've become Treasurer that I'm beginning to fully appreciate the amount of time and unpaid effort that goes into making the Circle "tick".

Overall, the transfer of responsibilities has gone remarkable smoothly, thanks to Clive's patience in dealing with questions and the complexities of changing signatories on the Circle's bank accounts. The only minor hiccup has been that the MWC's PayPal account had to be closed at the end of June, and it wasn't until 26 August that I was able to open a new one. This has not been as straightforward as you might imagine, and had to be put on hold while a new bank account was set up (something requiring lots of paperwork to satisfy UK government regulations intended to counter money laundering activities). Our PayPal e-mail address has changed to payment@mwcircle.org , and by the time you read this the website should have been updated to re-establish the MWC shop and facility to renew membership using PayPal as a means of payment.

World News

Apologies for a missing column this month. Hopefully we'll catch up with the news next month.

Lord Haw Haw Microphone discovered - up for auction

The microphone used by wartime traitor Lord Haw Haw has been rediscovered after 64 years.

Haw Haw (real name William Joyce) used the device to broadcast German propaganda to Britain during the dark days of WW2. It was seized by British Tommy Cyril Millwood from a German radio station near Hamburg at the end of the war.

Millwood's daughter has now decided to sell the collection and the microphone will be going under the hammer at Bosleys of Marlow.

Gunner Cyril Millwood found the microphone as he stormed a radio station in Hamburg during the last days of the Second World War \rightarrow

Also being sold are a pile of scripts the infamous broadcaster wrote and read out over the airwaves.

Famous for his 'Germany calling' catchphrase, in January 1946 Joyce became the last person in Britain to be hanged for high treason.

The American-born son of an Irish father and English mother, he became a chief propagandist for the Third Reich after fleeing to Germany just before the war.

During his broadcasts he urged Britons to surrender but only succeeded in whipping up hate and turning himself into a figure of ridicule. One of the recovered scripts, dated April 19, 1945, just before Germany's fall, shows Joyce's determination to paint a positive picture of Germany's war prospects.

It reads: "Strong German fighter and battle-aircraft units intervened in the defensive fighting again yesterday and brought definite relief

to the ground troops in their arduous struggle. They destroyed another 95 enemy tanks and assault guns despite strong opposition, put a further 20 out of action and brought down 109 aircraft".

Joyce made his last recording on 30 April, 1945 - the day Hitler killed himself - and was captured shortly afterwards.

Steven Bosley, the auctioneer who is selling the items, said: "Cyril Millwood was a gunner with 258 Battery, 65th Anti-Tank Regiment.

"After the D-Day landings he fought through France, Holland and Germany and entered Hamburg days after Joyce's final broadcast.

'The 65th ended the war in Kiel and remained in the Hamburg district to sort out prisoners. He managed to get hold of a number of items that he successfully brought home with him. They were just kept in his loft all these years. His family were aware he had some mementoes from the war but didn't really know what they were. I'm sure they would be highly sought after by historians".

The items are expected to fetch up to £4,000 and they will be sold at Bosleys auctions in Marlow, Bucks, on September 2. (*I'll report back next month to see if my bid was accepted* O)

And finally ..

September often is one of better months for MW DX in Europe and past experience seems to indicate that the best period for MW DXing is the year after sunspot minimum. Hopefully this will manifest it self in the coming months...

Now on with the show $73s \ Steve$.

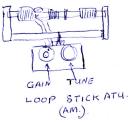

MAILBAG

with Herman Boel

Papeveld 3, B-9320 Erembodegem (Aalst), Vlaanderen (Belgium) e-mail: <u>mailbag@mwcircle.org</u> 2 +32-476-524258

John Robert Sadler has sent two more letters with information on his antenna experiments

"The main reason I am writing is to tell you about my project for the Sony ICF-M260. I have now added a loopstick ATU. It has two controller potmeters and variable capacitator with two coils protected with components and a directional ferrite rod. On 16 February I logged 14 stations from the

Ukraine and Russia and many more were still coming in."

In the second letter John enclosed a photo... "The ATU now has a booster mounted on the loop and there is also a further loopstick attached to the frame. Both are very sensitive. In the casing there are two coils: one for AM-SW and one for AM-MW. The booster has three coils: one for LW, one for utility Dxing, and one for general use."

Thanks for the info on the experiments, John, and keep up the good work!

Barry Davies sent in a comment to the Circle changes as laid out in the previous MWN:

"Paper or electronic MWN?"

I prefer the electronic version.

- + I can save MWN in an easy access and orderly file.
- + I can print off the parts I want to study in A4 easy to read size.
- + My wife prefers to read the articles/comments in the paper version.

? What's wrong with the present set up?

Publish in public domain?

Again I think the present set up is right for a radio CLUB.

MWC Website.

On a day to day basis I do not use it. What might make me put it on my "Favourites" tab? If there was something current/must check section. E.g. A posting on the egroup said more info on club website. E.g. A January-March update to an All Time List.

Selling CDs/articles?

Again I think things like the All Time North American list should be on line. For me I can print off the parts I want to study in A4 easy to read size. I think they should be free on line. If a member wants a CD/articles in their hand they should be asked for costs."

Thanks for all the letters!

73 - Herman -

SUMMER DX-PEDITION

with John Bryant: Winradio 313e, E100 Slider + Wellbrook Phased Array

Grayland DXpedition Report July 12-14 2009

I finally made my long-delayed first trip to the renowned Grayland DX site for the mornings of July 12, 13 and 14. Mid-July is about the mid-point of our traditional Summertime Down-Under Season and I hoped to do some ferrite bar antenna testing, try out the new DSP ULR and add to my Trans-Pacific Stations Heard count in Ultralighting. I did not hope for much premium DU DX because the NW DXers had been reporting what appeared to me to be a below average DU Season from their home QTHs.

As far as I know, no one had yet tested the waters directly at the Pacific shore, though, so I was hopeful. In the actuality, I was happily surprised with the number of DXable DU and TP signals present on all three mornings, though I had the distinct impression that the signal levels were rather weaker than usual. I would have been unable to ID more than half of the signals (many at just above mumble level) were it not for having gained considerable experience with parallels and specific program content over the years. Station identifications heard were rare; signals were just too weak even on the Winradio 313e and present for too short a time to catch many pure IDs. That being said, the DX was much more numerous and interesting than I anticipated.

With local dawn about 1225 UTC (5:25AM), I was at the dials on Sunday morning at 1015 (3:15AM). Below 900 kHz, the band was FULL of DU/TP carriers and between 900 and 1400 kHz, 50% of the channels contained a decent carrier. There were maybe 10 threshold audios present and the strongest signal that I've ever heard from Radio Tahiti-738. Things did not really start showing in audio until about 1120 and then for the next 75 minutes, I had the best New Zealand opening that I've had in years. Well over a dozen Kiwi's were present in moderate level audio. Most of the usual suspects were logged, but there were also a number of second and third tier stations present. The propagation was definitely very southerly. I bagged three completely new Kiwi stations and six that were new Ultralight loggings. In the early part of dawn enhancement, I found one Japanese signal (1134) and a couple of Aussies. Late post-dawn, about 1245, the propagation changed, there was a 15 minute burst of fairly strong Aussie audio and I garnered 6 of the biggest Guns before the band closed completely. Sunday morning was EXCELLENT, though the levels did seem to be below average.

Monday morning was very different from the previous AM. It was mostly Aussie all morning, after a surprise early showing of all of the Biggest Japanese Guns. As predicted by Nick Hall-Patch, the JJs opened early in dawn enhancement, going away soon after 1200 (dawn at the transmitters, I believe) leaving a band full of Big Gun and a few second tier Aussies, along with the odd major Kiwi. I added one new all-time Aussie and four more new Ultralight loggings. It was a good but not great morning, with the Big JJs being a pleasant surprise. Again, for the most part, the levels seemed down, though the post-dawn Aussies came up rather well.

Tuesday AM finally brought what I had expected from the modest home-location DX reports: a modest DU morning with a very few Kiwi's and mostly Big Gun Aussies. Nevertheless, I was able to log three new Ultralight Aussie loggings and two Kiwi's. One of the high points of the DXpedition was logging my sole brand new Aussie, 927 Sports, 2UZ from Melbourne.

Although I complained about the weak signals, this DXpedition brought me five totally new stations, four in New Zealand and the Aussie. After somewhere around 60 DXpeditions to Grayland over 20 years, it has been a while since I've added so many stations. I also added fifteen

new Ultralight-logged stations, bringing my TA station count to 151. Since I've only heard about TP 250 stations in 20 years of DXing, I suspect that I'll have a very difficult time getting my Ultralight count up to 200. It won't be for lack of trying, I assure you.

Gary DeBock was able to join me at the Grayland motel Saturday evening and Sunday AM and will be reporting his loggings and antenna testing results separately. (Man, you should see those big passive PVC loops!!!) Both of us will be reporting our somewhat disappointing test results with the Tecsun PL-300WT/Grundig G8 separately in the near future. It was great to get to know Gary face-to-face better and we both really enjoyed having Guy Atkins drive down from Puyallup to join us for Sunday lunch. All in all, it was an excellent DXpedition.

Loggings

576 AUSTRALIA 2RN, Sydney, Jul 13 1245 – R National program noted in passing at moderate level. New on Ultralight.

594 AUSTRALIA 3WV, Horsham, Jul 14 1121 – Noted in passing at fair level with Aussie talk by male. New on Ultralight.

594 JAPAN JOAK NHK1, Tokyo, Jul 13 1132 – JJ talk at moderate level.

612 AUSTRALIA 4QR, Brisbane, Jul 12 1254 – Noted in passing with Aussie talk in post-dawn. Heard all three mornings.

621 AUSTRALIA 3RN, Melbourne, Jul 14 1222 – Good level briefly running //792, of course. Also heard on the Ultralight.

648 NEW ZEALAND NZ's Rhema, Gisborne, Jul 12 1140 – Typical Rhema EZL music program at poor to fair level.

657 NEW ZEALAND Southern Star, Wellington, Jul 12 1142 – Typical Southern Star cont. Christian and EZL music at poor to fair level. Heard all three mornings.

675 AUSTRALIA 2CO, Corowa, Jul 13 1248 – Movie reviews at moderate level. New on Ultralight.

684 AUSTRALIA 2KP, Sydney, Jul 12 1258 – Preparing for ABC News, fading long after dawn. Heard all three mornings.

693 JAPAN JOAB, NHK2 Tokyo, Jul 13 1132 – // Other NHK2. JJ Talk at moderate level.

702 AUSTRALIA 2BL, Sydney, Jul 12 1305 – Last audio on the band with ABC News fading rapidly. Heard all three mornings.

729 AUSTRALIA 5RN, Adelaide, Jul 14 1235 – Noted in passing at good level in the post-dawn Aussie-peak. //792.

729 AUSTRALIA 5RN, Adelaide, Jul 12 1244 – Typical ABC RN news/commentary in late postdawn. Fair.

738 TAHITI Radio Tahiti, Papeete, Jul 12 1016 – Was the only signal all morning to be at genuinely good levels. Primarily FF programming in the pre-dawn enhancement period. Replaced about 1130 or so with the Aussie. Heard all three mornings.

738 AUSTRALIA 2NR, Grafton, Jul 12 1245 – Noted in passing with talk and ABC News in progress at 1302. Heard all three mornings.

747 JAPAN JOIB, NHK2 Sapporo, Jul 13 1133 – // other NHK2s at moderate level. JJ Talk.

747 AUSTRALIA 4QS, Toowoomba, Jul 14 1227 – Noted during the post-dawn 'Aussie Peak.' Somewhat rarely heard and I forgot to attempt to log on my Ultralight set-up. Rats!

756 NEW ZEALAND 1YA, RNZ National, Auckland, Jul 13 1253 – Noted in passing at moderate level.

774 JAPAN JOUB, NHK2, Akita, Jul 13 1135 – // other NHK2s. Best of the bunch at moderate to good peaks.

774 AUSTRALIA 3LO, Melbourne, Jul 12 1250 – Was here at mumble level all AM, rose to fair level, post-dawn. Heard all three mornings.

783 NEW ZEALAND Access Radio, Wellington, Jul 13 1255 – Noted in pure Spanish (not Tagalog/SS) discussing Bolivia at very good level. Sounded weird to hear this on a DU channel.

792 AUSTRALIA 4RN, Brisbane, Jul 13 1120 – Heard all morning at sometime moderate level with typical RN news/talk.

828 AUSTRALIA 3GI, Sale, Jul 12 1204 - Heard throughout the DXpedition.

828 JAPAN JOBB, NHK2 Osaka, Jul 13 1136 – // other NHK2s at moderate level.

846 AUSTRALIA 2RN, Canberra, Jul 14 1142 – This heard at good level //792 4RN, Brisbane. New on Ultralight. This station seems to have a long-standing policy against QSLing. Should I waste another report?

855 AUSTRALIA 4QB, Pialba, Jul 13 1257 – Noted fading, //828.

891 AUSTRALIA 5AN, Adelaide, Jul 12 1200 – ABC News on the hour with another DU audio beneath. Heard throughout the DXpedition.

909 NEW ZEALAND S Star, Napier-Hawkes Bay, Jul 14 1245 – Somewhat rare one caught here in the burbles as the band began to fade. Good level on Ultralight and 313e.

927 AUSTRALIA 3UZ, Sports 927, Melbourne, Jul 13 1225 – Sportstalk at fair level. Presume this as is only Sportstalk listed. New station on 313e and also on E100+Wellbrook.

936 AUSTRALIA UNID Aussie ABC NewsTalk, Jul 14 1145 – This likely either 7ZR ABC Hobart or 4PB ABC NewsRadio, Brisbane. Heard at poor level and did not ID. Definite ABC programming.

963 NEW ZEALAND Southern Star, Christchurch, Jul 12 1205 – EZL //657 kHz at fair to poor level.

972 SOUTH KOREA HLCA, Dangin, Jul 13 1138 – Male talk in KK and possible JJ. Fair to poor level.

981 AUSTRALIA UNID Aussie, Jul 13 1235 – Running pops show at moderate level. Most likely 3HA Hamilton, VIC, though could have been 2NM Muswellbrook, NSW. Not enough to report, even tentatively.

1008 AUSTRALIA 1008 Newstalk ZB, Tauranga Jul 12 1205 //1035 //1044. New station and new Ultralight logging for me.

1035 NEW ZEALAND 1035 NewsTalk ZB, Wellington, Jul 12 1210 – Typical ZB programming //1044. Fair to poor.

1044 NEW ZEALAND NewsTalk ZB, Dunedin, Jul 12 1220 – //1035 and 1098 at fair to good level.

1071 NEW ZEALAND Radio Trackside, Ashburton, Jul 12 1227 – Really pleased with this 6 kilowatter. Was a totally new station for me and was in at fair level with continuous horseracing calls on the 313e and the E100+Wellbrook. New station and new Ultralight logging for me.

1098 NEW ZEALAND NewsTalk ZB, Christchurch, Jul 12 1230 – Parallel to other ZBers, over/under Marshall Islands Open Carrier.

1107 AUSTRALIA 2EA, Sydney (pres), Jul 12 1233 – Presume this one with Aussie talk, noted in passing. 1116 AUSTRALIA 4BC, Brisbane, Jul 13 1125 – Heard all AM at sometimes moderate level.

1134 JAPAN JOQR, Tokyo, Jul 12 1112 – Barely audible JJ talk.

1143 AUSTRALIA 4HI, Emerald (pres), Jul 13 1240 – Presume this one that QSLed last year with oldies+talk at moderate level.

1215 NEW ZEALAND NewsTalk ZB, Kaikohe, Jul 14 1204 – 'Number One in Late Night Talk, Newstalk ZB' in at good level briefly. Last heard as 1ZE, at least a decade ago, before the privatization of most of Kiwi AM stations. Heard also on Ultralight.

1251 NEW ZEALAND R Rhema, Auckland, Jul 12 1235 – Noted //648 with Rhema's EZL at fair level for a new Ultralight log.

1287 JAPAN JOHR, Sapporo, Jul 13 1127 – Typical teen mx/talk programming at fair level. 1377 NEW ZEALAND RadioSport, Levin, Jul 12 1237 – American-owned Radio Sport continues to run American sports programming in their deep overnight. At max dawn caught a NASCAR program at good level for a brand new station with both the 313e and the E100+Wellbrook.

1386 NEW ZEALAND Radio Tarana, Auckland, Jul 12 1137 – Usually Bollywood music program at fair to good level all morning. Possibly the best Kiwi on the band.

1503 NEW ZEALAND RadioSport, Wellington, Jul 13 1300 – Noted with late peak with a USA sports program discussing ML Baseball. Believe this the one here at mumble level throughout the expedition. New station logged on Ultralight.

1512 AUSTRALIA 2RN, Newcastle, Jul 13 1155 – Radio National at fair to poor level //738.

Australia – 25 stations; New Zealand – 17 stations; Japan – 7 stations; Tahiti and South Korea. Five totally new stations and 14 new Ultralight station loggings.

(the above list had to be abridged in the interest of space)

Gary deBock adds...

When John Bryant mentioned to me that he was planning a mid-July trip to Grayland to chase DU's (South Pacific DX from Australia, new Zealand and the nearby islands), I eagerly booked a room at the Grayland Motel to chat with him about various Ultralight radio experimentation, and to test out various hot-rodded pocket radios is the very tough mission of DU-DXing.

Recently the Ultralight radio community has been thrilled with the introduction of the Tecsun PL-300WT and Grundig G8 DSP-enhanced pocket radios, and this was an excellent chance to test their AM selectivity against the premium Murata CFJ455K5 filters installed in the modified Eton E100 and CCrane SWP Slider models (developed last year, in cooperation with Steve Ratzlaff, Guy Atkins and John Bryant).

Besides this, during the spring I had experimented with different frame designs for tuned passive loops, and had discovered a way to make practical, lightweight PVC-framed loops much larger than the traditional 4' wooden-frame designs. Inexpensive, practical PVC-framed tuned passive loops of

up to 9 feet per side were developed at my home in Puyallup, WA, providing extremely high DXing gain when inductively coupled to any type of portable radio. Wistfully thinking about how effective such monster PVC-frame antennas would be at Grayland, I quickly modified the design to develop a collapsible frame 8' (diagonal) version that would fit in my compact car for ocean beach runs, and which could be easily assembled in total darkness within a half minute. An all-PVC altazimuth tilting base was also developed to optimize nulls on these monster loops, which was also small enough to fit in my compact car (along with both the 8' and 6' collapsible-frame PVC loops). This would be my first chance to test out these fanatical creations!

John and I had a great 4-hour chat on Saturday night about our mutual experimentation, DXing in Oklahoma and other matters. But with the notoriously early dawn enhancement for DU-DXing, we had to cut it short to prepare for DXing at around 1030 UTC (0330 local time). John and I would both test out the new DSP Ultralights against the Slider E100's developed last year, while I would also try out the Slider C.Crane SWP units, developed with Steve Ratzlaff last winter. John's objective was primarily to chase new Ultralight DU loggings with his Wellbrook Array, while my goal was to evaluate both the new DSP Ultralights and the new 8' collapsible-frame PVC loop.

Because an 8' Loop is a little too large to set up indoors (except perhaps in an auditorium), my DXing station was set up in total darkness at a picnic table location on Grayland Beach Road around 1400 UTC. Light drizzle made the process interesting, but the 8' Loop itself had already been completely waterproofed, and the main challenge was in juggling a vast collection of receivers, recorders and logs to evaluate everything within a short 2-hour dawn enhancement period. I was using a slightly modified Sony ICF-2010 (with a 30" transplanted loopstick) as my SSB spotting receiver, and it again proved extremely valuable in evaluating propagation shifts, DU station carrier strengths, etc. I thought that this modified ICF-2010 was great for AM sensitivity – but that was before I tried inductively coupling it to the 8' passive loop!

John and I both noticed a great signal from Tahiti-738 at the beginning of the dawn enhancement around 1130, with a strong domestic (KCBS-740) only 2 kHz away. This gave us a chance to test out the DSP-provided selectivity in the PL-300WT against the Murata filter selectivity in the Slider E100's. We both immediately came to the same conclusion – the Murata filter had a clear advantage in limiting the domestic splatter, and providing a superior S/N ratio.

The ICF-2010 spotting receiver checked various "big gun" DU frequencies (567, 612, 639, 657, 702, 738, 774, 792, 891, and 1116) for possible audio, and found weak audio on most of them after 1200 UTC. Bringing the modified ICF-2010 into the inductive influence of the 8' passive loop was a real surprise, however – once the loop was tuned to match the frequency, it typically boosted the modified ICF-2010's received signal by about 3 LED lights, making weak-sounding DU audio much stronger. Grabbing the C.Crane SWP Slider Ultralight radio and repeating the process, I was amazed that some stations like 4BC-1116 and 4RN-792 boomed in like locals, and provided very strong audio for MP3's.

It took a while to develop a routine for chasing the weaker DU's with this all-new setup, but once the modified ICF-2010, C.Crane SWP Slider and 8' passive loop were used as a team to maximum advantage, the results were thrilling. The exciting thing was that the 8' passive loop seemed to provide its turbo-level boost to any portable brought within 3' of its massive coil, whether it was a 30" loopstick ICF-2010, a 7.5' loopstick CCrane SWP Slider, or stock analog Tecsun R9012. Although I wasn't really trying for new Ultralight DU's, I did manage to receive quite a few loggings on Sunday morning:

531 UnID. Weak music around 1227, but no ID's.

567 2YA. The strongest NZ station of the morning, had talk program at 1247.

612 4QR. In and out with talk around 1237.

- 639 R Fiji. Weak choral music at maximum dawn enhancement.
- 648 UnID. Moderate audio around 1213, presumed R Rhema.
- 657 2YC. Music at 1156, almost as strong as 2YA-567.
- 670 KPUA (Hilo, Hawaii) booming in with ID at 1259 for strong MP3.
- 738 R Tahiti. Strong in French at 1226 over 2NR co-channel Aussie
- 774 3LO. Strong with talk at 1232.
- 792 4RN. Instrumental music booming in at 1240.
- 891 5AN. Moderate signal with talk program, still there at 1305.
- 1116 4BC. Extremely strong signal with "Sharina the Psychic" program at 1214.

After collapsing the 8' loop and returning to the Grayland Motel, I was more than a little surprised when John pronounced the morning as "low average." From the biased perspective of the gain provided by the 8' loop, I thought it was my best DU morning out of the 5 Grayland trips so far. Local-sounding MP3's from 4BC-1116, 4RN-792 and KPUA-670 are available upon request (as well as a photo of the 8' collapsible-frame PVC Loop).

So what is the verdict on the 8' tuned passive loop, as compared with other DXpedition antennas? To be sure, there are certain advantages and disadvantages with every antenna, depending upon the location and situation. Every antenna has tradeoffs, but in the case of the monster passive loop, the comparison with a beverage antenna is particularly interesting.

Both systems can provide great DXing gain, but a beverage antenna can optimize DXing in one direction of choice. It also can be easily transported to a DXing location, but requires a great deal of real estate for effective operation. It requires no construction, and can be easily connected to an indoor location.

A very large tuned passive loop has a "figure 8" reception pattern in general, but can effectively null out pest stations (especially in combination with an altazimuth base). It also provides an additional tuned circuit to aid in selectivity, and rejection of nuisance signals. It comparison to the beverage, it requires very little space for normal operation, but more space for transportation. It can be erected at a picnic table location at a public park, and smaller versions can be set up in motel rooms. Tuned passive loop antennas are generally less susceptible to electrical noise, and can be optimized for LW frequencies. But they must be physically near the receiver for best operation.

In summary, a comprehensive article describing the PVC Loop experimentation will be completed shortly, with variant articles describing the Collapsible Frame variant, the Longwave variant, the 18" and 2' Tabletop variants, and 6', 7', 8' and 9' Fixed-Frame MW variants, and the Waterproof variant articles published shortly after. It is hoped that this fascinating experimentation will provide some exciting new antenna options for MW DXers, especially those with modest radios.

73 and Best Wishes, Gary DeBock (in Puyallup, WA)

FLAG ANTENNA AMPLIFIER

with Barry Davies uses and reviews the Wellbrook FLG100

The technical stuff from Wellbrook Communications for the "FLG100" can be found at the end of this review. I was interested in three things.

- 1. How much did it boost desired signals over my passive EWE/FLAG antenna?
- 2. Did the boost cause problems from Euro stations swamping stations to my West.
- 2. EWE and FLAG comparative performance. (The FLG100 is good for both.)

Background to my tests.

I am interested in nulling signals to my South East and boosting signals to my North West.

I used five stations. 1071 Newcastle upon Tyne (to my East), 1026 Belfast (to my West), 999 Preston (to my South), 936 Hawes (to my South East), 675 Holland (to my South East.) All monitoring done around 1200 UTC using the PERSEUS receiver with antenna running to my North West.

1. Signal boosted? Yes. Looking at the desired station on 1026 my passive EWE gave me -79dBm or on the S meter 8. On the FLAG only -83dBm or S 7. i.e. the FLAG is very deaf against the EWE. Using the FLG100 amp the EWE gave -62dBm and the S meter jumped to 12 from 8. Using the FLG100 on the FLAG gave -59dBm and the S meter jumped to 10 from 7. Still deafer but from a higher base thanks to the amp. The increase in signal level of 17dB with the EWE is consistent with the gain of 18dB mentioned for the FLG100, but the increase in gain of 24dB with the FLAG is greater than expected. Martin Hall suggests that this anomaly, and the deafness of the passive FLAG may be the result of poor impedance matching or poor earthing; alternatively, perhaps a better match to the input of the FLG100.

Of course increase in signal level is of no great benefit unless it results in an improvement in signal-to-noise ratio (SNR), or signal-to-interference ratio. I haven't undertaken any measurements of SNR, but subjectively can report that interference from European stations is lower with when using the FLG100.

2. Did the FLG100 cause swamping of desired channels? I don't think so although I do need the PERSEUS preselector on to cancel the "CLIP" warning. I can hear 830, 1010, 1290, 1380 and 1540 around dawn. However, I guess you will be able to judge this from my logs after 17/08/09 hi!

EWE or FLAG	kHz	Bearing	Nulled	Omni Mode	Null Improvement
EWE	1071	East	-73dBm	-60dBm	13dB
FLAG	1071	East	-83dBm	-61dBm	22dB
EWE	999	South	-74dBm	-63dBm	11dB
FLAG	999	South	-79dBm	-65dBm	14dB
EWE	936	S.E.	-73dBm	-57dBm	16dB
FLAG	936	S.E.	-86dBm	-58dBm	28dB

3. Turning now to the nulling performance.

EWE	675	S.E.	-78dBm	-66dBm	12dB
FLAG	675	S.E.	-86dBm	-68dBm	18dB

Conclusion.

Not a lot lost in signal strength but bigger nulls with the FLG100 and FLAG antenna. A definite improvement in performance compared with the passive antennas. In future I am leaving the FLG100 plugged into my FLAG. (Barry & thanks to MAH for the proof reading.)

Wellbrook Notes on the FLG100

The Flag Antenna Amplifier Model FLG100 is designed to provide a high impedance match to a Flag or similar loop antenna whilst providing additional gain. The FLG100 amplifier is based on the proven design of the Wellbrook ALA100 Large Aperture Loop antenna. A key feature of the FLG100 is the very high antenna to feed-line isolation.

FLG100 FEATURES

- Very low IMD ensures good performance in presence of strong BCB signals
- Ideal for LW/MW DX and 160m Ham Band
- Antenna to feeder isolation equiv. to 10pF at 1.8MHz
- 18dB gain compared to Flag with a 800 to 50 Ohm transformer
- Very high rejection of power-line noise
- Compatible with the Wellbrook Array Phasing Unit
- Close Phased Matched amplifier for Flag Arrays
- Can be used with EWE, Pennant and KAZ delta loops

FLG100 DESCRIPTION & SPECIFICATION

The FLG100 consists of a 800 to 50 Ohm matching transformer a high gain balanced broadband amplifier using 4 low noise RF power transistors. The amplifier is encapsulated in synthetic resin and housed in a ABS box, this ensures reliable operation in all weather conditions. The FLG100 provides very low noise performance and a large signal handling ability. Rejection of power line/mains borne noise is accomplished by using a balanced amplifier.

Power consumption: Frequency coverage:	12 volts at 140mA 100kHz to 10MHz	
Intermodulation typically With two signals	2nd order -124dBm s of 32mV (-17dBm) (Test free	
Intercept point typically: (Test freq. 0.8M)	2nd order +90dBm Hz+1.0MHz)	3rd order +42dBm
1dB compression point:	+26dBm	
Output: 50 o	hms, BNC	

THE MIGHTY KBC

with Max van Arnhem

The Mighty KBC Radio is a well known station, not only for the shortwave listener but also for the mediumwave Dxer. The station is located on an industry area of the town of Ede in the central part of The Netherlands. As this is not far from my home, I decided to visit KBC and talked to Eric van Willegen, owner of KBC Productions/ KBC Import-Export and The Mighty KBC Radio. The company has registered internationally the name "K-PO" and sells it's radio-communications products all over the world (www.k-po.com).

Eric told enthusiastically about his radio work during the last 35 years. He started several pirate stations on FM, medium wave and shortwave. During the legendary days of the offshore stations like Radio Veronica and Radio Northsea, the Dutch PTT was very active in raiding illegal stations. His stations were raided about ten times, which resulted nearly in imprisonment.

In those days several names were used like Radio Salerno, K-PO and later on KBC Radio. The letters K-PO and KBC are just random names and have no meaning.

The KBC people have been involved in many radio projects in and outside The Netherlands. KBC was founded in 1989 and started with audio productions. During that time, KBC received the American Top 40 each week, first hosted by DJ Casey Casem, followed by Shadow Stevens. After some editing, this four hours lasting American Radio Show was broadcast on a legal Belgium Radio Station called 'FM 107'. Amazingly the same program could be heard every Saturday afternoon during the Dutch Broadcasts coming from the offshore station Radio Caroline, broadcasting from the MV 'Ross Revenge' and at several other land based stations in the Benelux.

Since the founding of **KBC** Productions no radio transmissions were aired. However on 23th of December 2006, the station The Mighty KBC started transmissions legally via transmitters in Lithuania on 1386 kHz medium wave with 500 kW and 100kW on shortwave. Later on, the station continued on shortwave via hired airtime in Lithuania. Medium wave was left because the use of 1386 kHz was expensive and only possible with an airtime of one hour at a time.

Reception reports on 1386 kHz were received as far as Spain and Portugal.

Due to the contacts of KBC Productions several jingles of the Mighty KBC were produced in the USA. Well known programs like The Wolfman Jack Radio Show and Big L shows presented by Chloé & Chirps are aired regularly. On Sundays KBC transmits Big L Shortwave with Roger Davis. Nowadays the station can be heard on 6055 kHz from 21.30 till 22.30 UTC. Also there is a Sunday morning transmission directed to the USA on 6110 kHz between 02.00 and 03.00UTC.

The station has its own website with the complete schedule: www.kbcradio.eu

Although the station is now on shortwave, Eric told me that he likes to be on medium wave again. He is involved in an international project with Big L to get on the air again on medium wave. He prefers to return on 1395 kHz which license is still owned by Big L. If this project will succeed is still uncertain.

After an informative talk and discussion about radio on shortwave and medium wave, Eric showed me how The Mighty KBC Radio shows are produced. By means of the computer it was impressive to see

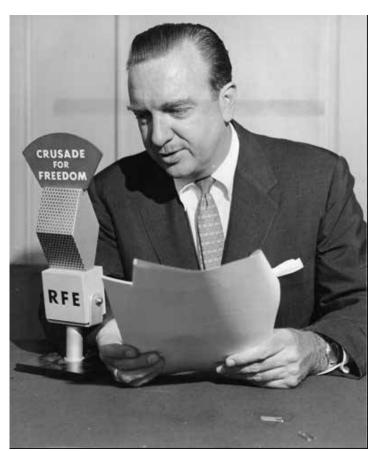

how he is able to mix jingles and programs of Wolfman Jack to a complete new Wolfman Jack show. He manages by cutting and pasting to get Wolfman Jack (who died in 1995) announcing the nowadays KBC shows.

After this impressing production of a new radio show, Eric showed me his international company with all radio equipment. It was nice to see and hear about a station we all know from medium wave and shortwave and that proves to be still very active and alive and with lots of plans for the future.

WALTER CRONKITE RIP

with the Guardian

Walter Cronkite, the CBS television news anchorman whose solemn tones heralded his country's best of times and worst of times, and who was repeatedly voted the most trusted man in America, has died at the age of 92. In the 1960s and 70s, a period of increasing national uncertainty, millions of Americans relied on his richly reassuring bass to inform them of the truth or otherwise of the rumours they had heard in the office or the subway.

He wept as he announced President John Kennedy's assassination, he shouted encouragement when the Apollo astronauts lifted off for the moon, he probably did more than any other person to turn middle America against the war in Vietnam, and his nightly count of the days US diplomats had been held hostage in Tehran crippled the Jimmy Carter presidency.

Astonishingly, no one thought to question the phrase that became his professional

trademark, intoned at the end of each nightly bulletin: "And that's the way it is."

That, in fact, was simply the way it appeared to Cronkite. As one of the founding fathers of America's network television news and as managing editor of the CBS evening news for 19 years, his evaluation of world events helped shape his country's electronic reporting into the extraordinarily insular and inadequate chronicle it has become. That, in turn, opened the door to Rupert Murdoch's current brand of unashamedly partisan news coverage.

During Cronkite's reign, the standard television bulletin, from which most Americans drew their picture of the world, lasted for 22 minutes. The consequent pressure to condense or omit meant that events in vast tracts of the globe remained unknown across the world's most powerful nation.

For all Cronkite's insistence that he was a reporter rather than a front man, there was little evidence that he tried to inculcate a mission to inform at CBS. The prevailing philosophy was, and remains, to offer all the news that fits. With no national press to fill the gap, it has meant that for generations of Americans the broad sweep of foreign policy has wavered on tides of popular ignorance.

Walter Leland Cronkite was born in St Joseph, Missouri, the son and grandson of dentists, and grew up experiencing some of the worst effects of the depression. He recalled in later life that "while my mother denied it to her dying day, I know darn good and well that she made hamburgers out of dog food".

The family moved to Texas when he was 10 and he gained his first journalistic experience as a student at the University of Texas, doing part-time sports reporting for a local radio station. When

the Houston Post offered him a job, he immediately abandoned his studies. After a brief period as an announcer at KCMO radio, in Kansas City, Missouri, at the age of 23 he joined the United Press news agency and became one of its first war correspondents.

America was not yet a combatant in 1939, so he was assigned to the European theatre and remained there throughout the war. He used to tell a rueful story of how he missed his first chance of a world scoop at the time of the D-day landings. He had embarked on a preliminary bombing mission over the Normandy beaches on the understanding that he could break the invasion news on his return (the rival Associated Press was being punished for transmitting a test flash in which it prematurely announced the assault). In the event, while Cronkite was still awaiting transport from RAF Molesworth to London, the Allied supreme commander, General Eisenhower, broke the news himself.

At the end of the war, Cronkite reported on the Nuremberg trials of the Nazi leaders and was then appointed UPI's bureau chief in Moscow, just as the cold war got under way. It was a tough period for western journalists, faced with a Stalinist paranoia which regarded anything not reported by the government-controlled media as a state secret. The physical conditions were also trying and it was with some relief that Cronkite returned to America in 1948.

In 1950 he was poached by Edward Murrow of CBS to develop the news department of the network's television station in Washington. "We literally figured it out as we went along," he said later. "For an old newspaperman it was like carrying a printing press around." But the analogy is inept: print has always been simply the vehicle for the editorial message. Television, as Marshall McLuhan shrewdly observed, itself became the message and Cronkite was one of those who failed to resist the trend.

But, Washington being the village it is, an exception was made for the national political conventions. For years they got the wall-to-wall treatment usually reserved for sport, not least because they had similar ingredients.

From 1952 onwards Cronkite was the CBS anchorman at these five-day marathons, and his reputation grew accordingly. In time his career had so far outlasted that of the politicians that he easily outgunned them in popularity. Presidential hopefuls of all stripes were desperate to be interviewed by him to help secure the national exposure on which their election depended.

The most famous comment he actually voiced came in a 1968 documentary, made after the Tet offensive in Vietnam, when he declared that the time had come for America to negotiate with North Vietnam "not as victors but as an honourable people". A startled President Lyndon Johnson said to his press secretary: "If I've lost Cronkite, I've lost middle America." A news magazine wrote that it was as if Lincoln himself had ambled down from his memorial and joined an anti-war demonstration.

Cronkite's period as CBS anchorman lasted from 1962 to 1981 and, though he was then designated a CBS special correspondent, the network seemed so concerned he would overshadow his successor that it made little use of him. "It's not the way I wanted it," he acknowledged, "I'd love them to make better use of me, but that's internal politics." Instead he found himself acting as host to an assortment of celebratory and feel-good offerings on American public television and its plethora of cable channels.

While at KCMO, he met Betsy Maxwell, and they married in 1940. She died in 2005, and he is survived by two daughters, Nancy and Mary, and a son, Chip.

Walter Leland Cronkite, journalist, born 4 November 1916; died 17 July 2009

LOOPSTICK TRANSPLANT

Gary DeBock puts the PL-300WT on the operating table

With nothing better to do on a relatively warm day off, I decided it was finally time for a competitive Shootout of the most sensitive and selective Ultralight radios ever used to chase TP's here, and at Grayland.

As most of the fanatics who enjoy this type of activity will recall, in the early days of the ULR boom, experienced TP DXers quickly became bored waiting for the rare propagation openings which would allow reception of Asian stations on their SRF-59's, and other modest units. Since some of these DXers had just enough technical knowledge to put their stock ULR's in serious jeopardy, a strange mission of transplanting monster loopsticks and narrow filters commenced in early 2008, with mixed results. Nothing much was really accomplished until sensitivity and selectivity improvements were made in combination, such as in the Eton E100, with the 7.5" Slider loopstick, and Murata CFJ455K5 narrow IF filter (a concoction of John Bryant, Guy Atkins & me).

Recently China's Tecsun company introduced their PL-300WT with the innovative Si473x series DSP chip, from Silicon Labs. Although Tecsun's manufacturing process unfortunately produced mixed results for AM sensitivity in their new model, the DSP chip has certainly succeeded in providing a quantum leap in selectivity for stock Ultralight radios. In testing against the Murata CFJ455K5 premium ceramic IF filter in modified E100 units, the DSP-enhanced selectivity of the PL-300WT was found to be competitive or superior on all frequencies (NB: at least for domestic channel spacing; see notes below concerning hearing

splits with the PL-300WT). Accordingly, immediate efforts were made to transplant a 7.5" loopstick into the PL-300WT, and test the radio against other heavily modified TP-chasing Ultralights. Because of the design of the DSP chip's varactor component, a single fixed inductance from the loopstick (anything from 180-450 uh, depending on the individual varactor) is used to optimize AM sensitivity on all frequencies. This means that a fixed coil loopstick will provide maximum sensitivity throughout the AM band, once the correct inductance is found to match the varactor. Assuming that the radio's final sensitivity would at least match that of the E100 and C.Crane SWP Slider loopstick models, such a system would provide a significant increase in DXing convenience, by avoiding the need to slide a coil to peak the radio's sensitivity.

Today, such a full competitive Shootout was finally conducted, in which the new Tecsun PL-300WT with a 7.5" fixed-coil loopstick was compared with the Eton E100 (with a 7.5" Slider loopstick and CFJ455K5 Murata filter) and the C.Crane SWP (with the same 7.5" Slider loopstick and CFJ455K5 Murata filter). As modified, the cost of the PL-300WT unit was about \$85, while the other two units cost about \$150 each.

The Shootout was conducted in mediocre summer conditions, with the fringe stations quite weak. Despite this, an accurate evaluation of the radios' relative performance was possible.

In relative sensitivity, the fixed-coil Tecsun PL-300WT slightly outperformed the CCrane SWP Slider model, which in turn slightly outperformed the Eton E100 Slider model. This was the

judgment after all 3 radios were tested in the reception of four extremely weak fringe stations: KARI-550, KGMI-790, CFAX-1070 and Auburn TIS-1700. A large part of the PL-300WT's advantage was its ability to tune in the stations on their fundamental frequencies without muffled audio, a side-effect of the Murata CFJ455K5 narrow filter in the E100 and SWP models. In the Murata filter-modified models, tuning in fringe stations 1 kHz off frequency improved the audio, but slightly decreased their signal strength. This is unnecessary in the PL-300WT.

In the selectivity comparisons, three very tough fringe stations were tuned in adjacent to local pests: KPAM-860 in the shadow of KHHO-850, KFFX-1080 in the shadow of KPTK-1090, and KUTI-1460 in the shadow of KSUH-1450. This type of competition tested not only the sensitivity and selectivity of the modified radios, but nulling ability as well. To improve audio quality in the Murata filter-equipped radios, the stations were all tuned in 1 kHz farther away from the local QRM than their fundamental frequencies (ie 861 for KPAM-860, and 1079 for KFFX-1080).

The DSP-enhanced PL-300WT once again proved to be competitive with the other units, providing excellent rejection of the splatter from the local pests. The adjacent-channel rejection provided by the DSP chip was almost exactly equivalent to that provided by the Murata CFJ455K5 premium IF filter in the modified E100 and SWP units, and all three units were able to solidly receive the fringe stations without significant local splatter. The balanced-frequency audio provided by the PL-300WT, however, would be preferable for the recording of MP3's in an actual DXing situation.

In summary, the DSP-enhanced AM selectivity of the new Tecsun PL-300WT (and presumably the Grundig G8) is a major breakthrough for transoceanic Ultralight DX chasers, especially in combination with effective external antennas. It looks like an exciting fall DX season is coming!

Further notes from Nick Hall-Patch:

The Grundig G8 seems to be the same radio as the Tecsun PL-300WT, and available from various sources, including Amazon.com and UniversalShortwave. As the PL-300WT is only available from China at present, with high shipping charges, purchasing the G8 is a cost effective option in North America. Strangely, some sellers are using misleading pictures and descriptions in their advertising, and even an enquiry toEton Corporation resulted in claims that the G8 was not a DSP chipbased radio, and yet it does appear to be a rebranded PL-300WT.

During a visit to Grayland, John Bryant and Gary noticed a greatsignal from Tahiti-738 with a strong domestic (KCBS-740) only 2 kHzaway. This gave them a chance to test out the DSP-provided selectivity in the PL-300WT against the Murata filter selectivity in the SliderE100's (the filter modification is described in the Technical Columnin the 25 October 2008 DXM). They concluded that the Murata IF filterhad a clear advantage in limiting the domestic splatter, and provided superior S/N ratio under these circumstances.

This radio does have its quirks. At least one user has received onethat is insensitive on AM out of the box (alignment was notattempted); another has heard hets, particularly on local stations, strong enough to warrant return to the vendor; detuning from a stationcan cause AGC problems; and there are "digital" noises heard whentuning about, though not when actually listening. Also, one will noteheterodynes from 1400 to 1430 kHz, which, according to Gary, are acongenital issue in the G8/PL-300WT models, and show up in all theseunits.

The Ultralightdx group (http://groups.yahoo.com/group/ultralightdx/)contains a wealth of late breaking information on the Tecsun PL-300WT/Grundig G8, including extensive tests, alignment procedure of the stock loopstick antenna etc. from the likes of Gary, KevinSchanilec, Steve Ratzlaff and John Bryant. There is also an Englishlanguage manual posted there, which seems to be otherwise difficult tocome by. Excellent informative reading if you're interested in thisinnovative little radio.

A few comments on the Grundig G8 by Mark Connelly, WA1ION

The supplied documentation is very sparse compared to the PDF manual for the equivalent Tecsun PL-300WT which is on the Ultralight Yahoogroups website. Without that I wouldn't have been able to do a couple of very important things.

The beeping when you access controls, turn the unit on or off, etc. could wake the dead and HEADPHONE USE DOESN'T DISABLE IT. You certainly wouldn't want this with someone else sleeping in the room, for instance. Frankly I don't know why you would EVER want this. Luckily, disabling the beeps is covered by the ONLINE manual.

The online manual also assisted me in getting 1 kHz AM frequency steps. As mentioned earlier, the instruction sheet in the box is pretty flamin' useless for things many of us want to do.

The appearance of actual dBu and dB signal-to-noise numbers is intriguing, though even on steady groundwave local AM and FM signals, these values seem to jump around a fair amount. I'll have to see how these agree with predicted signal levels as well as what I note on my Perseus and SDR-IQ.

I'm not seeing the automatic tuning/memory set-up as useful as it would seem that only strong signals would be stored, as on a digital TV scan. DXers, of course, are interested in WEAK signals.

Now, to the IMPORTANT STUFF – DXing with the thing:

AGC action is very choppy with minor changes of strength on weaker signals causing major audio output changes. This is most evident during fading but is even noticeable on modulation when the carrier level is apparently near some threshold. You get a "pumpy" rendering of AM station audio in such cases. Sorta bogus.

Selectivity, as noted by others, is quite good when you are talking about adjacent 10 kHz multiple AM stations in the Americas and, presumably, 9 kHz channel stations elsewhere. But when the separation gets much less than 5 kHz (as on Morocco-612 received adjacent to CHNC/WGIR-610), the DSP filtering scheme is not as good as the tight Murata filter installed in a CCrane SWP or in an Eton E100. It cannot compete with the sharp edges of DSP filtering in the Perseus or SDR-IQ.

When you off-tune a bit on a conventional receiver, you sometimes get better treble. But if I listen to a local like WBZ-1030 and 'QSY' to 1031, the audio actually gets muddier rather than crisper. Weird. Even off-tuning slightly on the Perseus brightens the audio before you tune far enough to make the signal "fall off the cliff". On the G8, even going out to 1033 kHz still renders WBZ audio not much different from the muddy audio when on 1031. You'd think it would progress from slightly trebly to annoyingly scratchy and then to gonzo as you moved further off-tune.

AM sensitivity is OK for the size of the portable but is "nothing to write home about". It can barely pull out stations such as WDDZ-550 (RI) – approximately 44 dBu, something that's easy on a Kaito '1103 for instance. I think this radio and the stock E100 are similar in sensitivity. The smaller Sangean DT400W is about as good and the even smaller Sony SRF39-FP may actually be better. This baby definitely needs the transplant of a larger ferrite rod if you aren't planning to couple it to an external loop, longwire, etc.

Shortwave only really works with the whip scoped to minimum! If I extend it, my strongest AM locals (WRKO-680: 115 dBu, WEEI-850: 84.5 dBu, WWZN-1510: 83.1 dBu) come out in various places as well as appearing as cross-modulation (along with 60 Hz AC hum) on shortwave stations' audio. Again, "sorta bogus". I didn't even try longwave. By all reports, it's execrable.

So, it's a mixed review for the Grundig G8, but at least for some, it's a reasonable amount of performance and DX fun for a \$50 (US) price tag.

NORTH AMERICAN NEWS

with Andrew Brade

Sand Gap, Bursea, Holme-on-Spalding Moor York YO43 4DF

e-mail: <u>na-news@mwcircle.org</u>

Hello again.

Here is what's been happening on the North American AM dial. May I express my gratitude to the organisations which make this resume possible? Thanks this month to: - IRCA, DX Mid-America, ABDX, NRC DX News, FCC, DXLD.

78	80	CFDR	Now switched to FM
10			

1360	WKAT	North Miami, FL changes religious language to Spanish

- 1390 WRIG Schofield-Wasau MI Changes from oldies to Fox sport
- **1460** CJOY Is the latest Canadian to apply for FM.
- **1660 WFNA** Charlotte NC now WBCN. Same format.

Here is a general round up of what's been happening on the North American AM dial courtesy of our friends at the **International Radio Club of America and NRC.**

1550	WZRK	Lake Geneva, WI	This silent station applies for D1 1300/0
			along with a change in CoL to Northbrook,
			Illinois.
1570	WTLK	Taylorsville, NC	1000/244 ND to 900/198 ND
1590	NEW	Star ID	Application for U2 50000/450 dismissed.
11000	/700.	This amendment reques	ts U4 12000/700.
1590	WABV	Abbeville SC	Licensed for U1 1000/27, WABV submitted an application for D3 14000/0 moving all the way to Whitney, Nevada and changing frequencies to 1370. This amendment is for D1 250/0 back at Abbeville and back on 1590.
1600	NEW	Billings MT	Applies for U2 5000/1250.
1600	NEW	Dalhart YX	Having been issued a CP for U2 3000/250, this yet-to-be-built station applied for U4 2500/270 moving to Vega, Texas, which has now been dismissed.

CONSTRUCTION PERMITS ON THE AIR

The following CPs are on the air:

740	WCXZ	Harrogate TN	U1 900/7 is on the air from a new, taller, tower reducing the day power.
750	KHWG	Fallon NV	U4 U1 7500/250 is on the air.
790	KBRV		U1 50000/29 is now on, increasing the day
			power.
800	KINY	Juneau AK	Returns to U1 10000/7600 after operating on an
			STA for the pastyear.
810	KLVZ	Brighton CO	U4 10000/430 is on the air. They continue to
0.0.0		- 1 MG	use two transmitter sites.
930	WSFZ	Jackson MS	U2 3800/3100 is now on the air.
960		WLPR	Prichard AL Is now on with U1 5000/32,
			lowering the night power and eliminating the
0.0.0			directional operation.
990		Pittsburg CA	U4 10000/5000 is on.
1030	WNVR	Vernon Hills IL	Is back on with U7 10000/120 CH 3200 after
			suffering transmitter equipment damage (see
1040		~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~	Issue 27) and operating on an STA since April.
1040	WPBS	Conyers GA	D1 50000/0 CH 5500.
1040	KURS	2	U1 360/61.
1060	WKNG	1	D1 50000/0 CH 5000 is now on the air.
1100	WISS		D1 2500/0 CH 1600 is on the air.
1180	KYES	Rockville MN	This new station is on the air with U7
			50000/5000 CH 8000 is on the air blasting away
			from seven towers (using two during day and
			nighttime operation and six at night). The day
			and night patterns are virtually a circle,
			while the nighttime pattern shoots 99% of the
			signal to the northeast with a small lobe off
			the back. Rockville is a small community
			located southwest of St. Cloud.
1200	WJES	Saluda SC	U1 10000/4 CH 6100 is now on, moving up from
			1190 kHz.
1200	KFNW	West Fargo ND	U4 50000/13000.
1230	KXO	El Centro CA	Is now on with U1 830/1000, relocating their
			transmitter to a new 295' tower (co-located
			with KXO-FM). Since the new tower is
			approximately 100' taller than their old

			tower, KXO is required to reduce the daytime
			power to cover the same 'footprint'.
1220	KZEE	Weatherford TX	U4 1600/200 is on the air. Both day and night
			patterns favour the west and northwest.
1230	KLAV	2	U1 1000/1000.
1230	KSIX	Corpus Christi TX	U1 720/720 is now on from the taller (thus
			reduced power levels) #4 (daytime) 277' tower
			of KEYS-1440.
1270	WRLZ	Eatonville FL	U4 25000/5000 is now on.
1280	KPTQ	Spokane WA	U4 5000/125 is now on.
1300	WCKI	Greer SC	U1 1000/94 is now on, adding nighttime
			service.
1310	KGLB	Glencoe MN	U4 2500/270 is on, moving from St. Peter,
			relocating to a new two-tower site. The new
			daytime pattern is a balloon-shaped plot due
			west with a small lobe off the back. The new
			nighttime plot is kidney-shaped headed NW.
1330	WLBB	Carrollton GA	U1 1000/34 is on the air, doubling the daytime
			power.
1340	WIRY	Plattsburg NY	Now on with U1 1000/940.
1400	WGHC	Clayton GA	U1 1000/1000 is on the air [call letters
			corrected from last issue]
1400	KIHH	Eureka CA	U1 790/790 is on the air.
1450	KWES	Ruidoso NM	U1 1000/910. Their application for U1 5000/201
			has been dismissed.
1460	WNPL	Golden Gate FL	U4 7000/2000 is on the air using four towers
			day and night.
1460	WQXM	Bartow FL	U5 10000/155. The new day pattern is basically
			a round balloon directed to the E-NE.
1490	WKDR	Berlin NH	New station is on with U1 1000/930.
1500	WPMB	Vandalia IL	U1 250/2 is now on, adding night operation.
1540	WOGR	Charlotte NC	D3 2400/0
1550	KIVA	Albuquerque NM	U1 10000/27 is now on the air from the same,
			but slightly shortened, tower.
1560	KGOW	Bellaire TX	U4 50000/15000 is on the air after building a
			new nighttime site consisting of nine towers.
			The new night pattern shoots the majority of
			the power to the southeast, with minor lobes
			to west, northwest, northeast and east.
1590	WCGO	Evanston IL	U2 7000/2500 is on the air, doubling the
			daytime power.
1600	WATX	Algood TN	U1 2500/20 is on, increasing the day power and
			moving up 10 Hz from 1590.

FACILITY AND PARAMETER GRANTS

The following CPs have been granted:

640	WMEN	Royal Palm Beach,	FL	7500/460 DA-2 to 50000/25000 DA-2
680	WRGC	Sylva, NC		1000/250 DA-N to 5000/210 DA-N
680	KFEQ	St. Joseph MO		Licensed for U4 5000/5000, KFEQ has been
				granted an STA for U1 1870/1250. A farmer,
				plowing at the KFEQ 3-tower site, snapped one
				of the guy wires causing a tower to topple.
				KFEQ will be using tower # 3 only day and
				night at those reduced powers until the downed
				tower can be replaced and necessary tuning of
				the array is completed. DXers living east and
				west of St. Joseph should give 680 a try, as
				their night pattern delivers all of their
				signal due north and south.
730	WLTQ	Charleston SC		U1 5000/103.
770	WEW	St. Louis MO		Licensed for D1 1000/0, WEW has a CP for U4
				10000/200. This amendment requests U7
				10000/200 CH 10000.
830	WQZQ	Goodlettsville TN		CP granted for D1 2000/0 at, moving here from
				1550 kHz at Clarksville, a move of ~ 25 miles.

860	KTRB	San Francisco CA	Licensed for U4 50000/50000 (although the
			patterns are electrically the same) using 4
			towers day & night, KTRB has a CP to build 3
			new 600' towers to be used only for daytime
			operation leaving the nighttime facilities as is. This amendment requests to scrap the
			previous plans and now use of one of KFAX-
			1100's towers for daytime only use, making
			their facilities U2 50000/50000.
870	KPRM	Park Rapids, MN	25000/1000 DA-N to 40000/1000 DA-N
900	new	Bend, OR	50000/2000 DA-2 to 50000/2400 DA-2
900	KALI	West Covina ca	U4 5000/79 moving its daytime site to that of
			KAHZ-1600 Pomona. The new day pattern sends a
			large (almost) circular lobe to the southwest. The night transmitter remains as previously.
920	WEZZ	Brantley AL	D1 450/0 CH 450, moving from 930 kHz at
			Monroeville.
940	KDIL	Dillon, MT	10000/350 DA-2 to 1000/250 DA-2
940	KICE	Bend, OR	10000/60 DA-2 to 10000/95 DA-2
960	WSVU	North Palm Beach FL	U4 2400/1400.
1010 1030	KPCW	Tooele UT	CP granted for U4 50000/194 CH 42000. 5000/370 DA-2 to 5000/650 DA-2
1030	KWFA KURS	Tye, TX San Diego, CA	360/61 ND to 360/61
1040	WZNA	Moca PR	Licensed for U4 5000/245, WZNA has a CP for U4
			9000/245. This amendment requests U4 9000/250.
1080	WNWI	Oak Lawn, IL	3000/900 DA-N to 3000/2600 DA-N
1080	WOAP	Owosso, MI	1000 ND-D to 50000/4500 DA-2
1090	KUCU	Farmington, NM	1500/250 DA-2 to 10000/250 DA-2 (CP)
1090	KPTK	Seattle WA	Licensed for U4 50000/50000, KPTK has a CP for the same facilities, but making adjustments to
			both patterns. This amendment makes further
			adjustments to both day and night patterns.
			This suggests they are having trouble getting
			the new parameters in tolerance.[??]

Venezuela

Venezuela steps up control of television and radio

Venezuela is taking dozens of radio stations off the air and putting stricter rules on cable and satellite television, a minister said yesterday, as part of President Hugo Chávez's battle with private media firms.

Disodado Cabello, the public works minister who also oversees Venezuela's broadcasting watchdog, said 154 FM radio stations will be taken off the air and shifted into public hands in what he called "democratizing the airwaves." He recently said 86 AM radio stations will also be hit as the government

steps up efforts to turn Venezuela into a socialist society.

"The use of the radio-electric spectrum is one of the few areas where the revolution has not been felt," Mr Cabello said in a presentation to legislators about the need for reform in the sector. President Chávez and his supporters describe their drive to broadcast a pro-government message as a "media war" with private news companies. Venezuela's media is highly polarized with biased coverage the norm on both government and private networks.

The president has vastly expanded the number of publicly owned television and radio stations since he took office in 1999. Some are directly owned or financed by the government, while others are operated by cooperatives and community groups. In 2007 President Chávez did not renew the concession for a widely watched critical private TV station RCTV.

Mr Cabello also announced plans to apply Venezuelan broadcasting regulations to cable and satellite television stations that produced more than a third of their content in the oil-exporting nation. The new rules for subscription television seemed to be aimed specifically at RCTV, which now broadcasts only on cable. RCTV was Venezuela's most popular television station, watched by millions because of its soap operas. The station was highly critical of President Chávez and played an active role in a failed coup against him in 2002. *Andy Sennitt, RN Media Network 10.7.2009*

New NDB news page on the Web

Michael Oexner, who is the source of the updates above, has set up a new blog to pass along similar updates in the future. Check it out at <u>http://ndbchangeblog.blogspot.com/</u> where you can also sign up for automatic e-mail updates as they occur.

More fantastic receptions reported

Just as I was closing the book on this column, NDB List member Mike Tuggle in Hawaii reported two mind-boggling catches: CC 305 kHz Cocos (Keeling) Islands in the Indian Ocean west of Australia, and OY 300 kHz Bandung, Indonesia. I don't recall hearing about any reported receptions of the Cocos NDB in the western hemisphere since Mike Mideke caught it in southern California back in the mid 1980's. Well done, Mike (both of them)!

For those who might have missed his recent report to the Circle's e-mail list, Michael Oexner also had a good month:

"Well known British MW DXer Martin Hall was so kind to provide me with two DVDs containing Perseus recordings made at Clashmore. Martin's QTH is located on the Stoer peninsular in the north-west highlands of Scotland at 58° 13' N, 5° 21' W, GR NC028310. Given Martin's excellent MW DX catches from his location I always wondered what NDB DX might be like from there.

"The recordings were made on 2 December 2008 around 1157 UTC when MW conditions were particularly good to Alaska and Hawaii and on 3 February 2009 around 2157 UTC and cover ten minutes for each date. Martin uses Beverage antennas of around 500m length - for further details please have a look at <<u>http://myweb.tiscali.co.uk/clashmoreradio/receiving_equipment.html</u>>.

"I started out analyzing the 2157Z recordings and was overwhelmed by the amount and signal strength of transatlantic NDBs I was able to receive. Lots of Canadian NDB signals to begin with, but also other countries such as Antigua, Bahamas, Dominica, Dominican Republic, Greenland, and Puerto Rico. And to put some icing on the cake the recordings also contained three special gems that haven't been received and reported in Europe so far: MQ-402 St. Pierre and Miquelon and 3 NDBs from the USA, LNT-344 on 345.023 kHz and SUH-356 on 357.017 kHz from Maine, and PVC-389 from Massachusetts. Also RNB-363 from New Jersey was found on 361.951 kHz.

"On the 1157Z recordings I found six Alaskan NDBs: VIR-281, PVQ-376, LUR-385, HBT-390, ICW-525 and ADK-530. Plus lots of Canadian stations from provinces like NT, NU, AB and BC. I tried for the two most common Hawaiian NDBs POA-332 and LLD-353 but they have never been logged on European soil so far, and I couldn't find them on the recordings either - okay, this might have been too good to be true.

"All in all the recordings contain a real goldmine of NDB DX: over 80 Canadian NDBs (some new for Europe), 10 from Greenland, over 30 from Iceland (two of which have never been reported to the REU online database before, for the link cf. below), 6 from Alaska etc."

Congratulations to Michael for his apparent European "firsts" from the USA and Canada. Experienced NDB listeners maintain that some of the best DX occurs as a new solar cycle begins. The receptions described above seem to bear that out.

73, Andy

Medium Wave News 55/04

BBC News

BBC local radio football commentaries on DAB only

BBC Radio Humberside has announced that it will be carrying full commentary on football matches involving all three teams in its area - Hull City, Scunthorpe United and Grimsby - this season. However, in order to do that, the station will sometimes split its frequencies three ways, and followers of Grimsby will have to get a DAB radio to hear commentary on their team's match when the two other sides are playing simultaneously.

Radio Humberside Editor Derek McGill said: There is excellent DAB digital radio coverage in Grimsby so Mariners fans will need to prepare by making sure they have access to a DAB radio for the occasions when we will be splitting our frequencies to cover three simultaneous games.?

Similarly, BBC Bristol will, for the first time, cover the home games of Bristol City and Bristol Rovers on DAB. Away games will be on 94.9 FM, with regular programmes continuing on medium wave 1548 kHz and the other FM frequencies.

Andy Sennitt comments: This seems to be a move by the BBC to give an extra

incentive to some listeners to purchase a DAB radio. It does, however, mean that fans of clubs who live just a little way outside the DAB coverage area may be unable to listen to the commentary on their favourite team. It will be interesting to see how these arrangements work out.

Commercial Radio Founder of Northsound steps down

1 August, 2009 Andrew Lewis, the founder and chairman of Northsound, has decided to step down from his position after almost 30 years. Mr Lewis founded the station in 1981 and has been Chairman since

Dee Ford, Group MD, Radio at Bauer Media, said: "Andrew Lewis is one of Scotland's leading businessmen. His depth of broadcasting knowledge and invaluable insight greatly contributed to our current number one position in the market. Through all the twists and turns of the past 28 years he has always provided wise counsel and I am personally delighted that Andrew has graciously offered to remain available to us in an informal capacity. His legacy will live on through the multi-award winning stations he founded".

Mr Lewis, commented: "Northsound is a wonderfully successful company and to have been involved with such a talented, enthusiastic team has been an absolute privilege. I've enjoyed each of our 28 years and know I leave these very special stations in the hands of a highly experienced team that is passionate about broadcasting. There was never going to be a good time to step down, so I think

today's celebration is as good a time as ever. I wish everyone at Northsound and the many talented people who have gone on to work elsewhere in the industry all the very best for the future."

Club Asia has gone into administration.

An Ofcom spokesman said, "We have been notified that Club Asia have gone into administration. "Yesterday, a presenter from Club Asia told BizAsia.co.uk that he hoped a new buyer would have been confirmed by the time he came back from his holiday in a week's time. A question mark has been hanging over Club Asia's future for the past couple of years but any talk of takeovers and mergers had been denied on numerous occasions.

11 August, 2009

7 August, 2009

Today's developments will certainly add a new take on the competitive London market. Since its launch in 2003, Club Asia has attempted to give commercial rival Sunrise Radio a run for its money. However, it has suffered several setbacks including a decline in listening figures and inconsistency in programming.

Radio today.co.uk reports that Club Asia: administrators have been appointed and will continue to broadcast .

Administrator Rod Weston commented: "The business has encountered difficulties due to current harsh economic conditions. We are keeping the station on air whilst marketing it for sale as a going concern. We have already received substantial interest and are liaising with a number

of interested parties. We are hopeful that a sale will be achieved as Club Asia has a number of valuable strengths."

He added: "Media companies have really felt the strain as businesses seek to reduce costs. However, with its strong listener base and niche appeal, Club Asia has great potential to thrive as the upturn starts to take effect."

RSL & LPAM News

It is expected that the following three football clubs' will continue broadcasting their home matches as they did last season. (Ofcom continue to state that no "Sporting Stations' are broadcasting!)

Football Club	Station	September 2009	October 2009
Crystal Palace	Palace Radio 1278 kHz	12 Scunthorpe	3 Blackpool
		19 Derby	24 Nottingham For
		29 Sheff Wed	
Blackburn	Radio Rovers 1404 kHz	12 Aston Villa	17 Burnley
		26 Bolton	
Rushden and	Radio Diamonds 1503 kHz	12 Grays Ath	3 Altrincham
Diamonds		19 Mansfield	17 Tamworth
		29 AFC Wimbledon*	

* Tuesday evening game

Member Phil Attwell reports details of Radio Diamonds. Their web site is <u>www.radiodiamonds1503am.co.uk;</u> email

<u>radiodiamonds@rushdendiamonds.fc.co.uk;</u> and telephone number 01933 654181 according to the website you can also liste n online

Their schedule is normally as follows:10-11am-Music Jam; 11-12pm-Diamond Minors ;12-1pm-American Zone; 1-2pm-Classic Footie Zone; 2pm-2.45-Over 2 You; 2.45-3pm-1st Half ; 3.45-4pm-Score Centre; 4pm-4.45pm-2nd half; 4.45-5pm-Final score centre; 5-6pm-Manager/Player Interviews.

A rare MW RSL station up coming: **Radio Rockingham; 1602 AM** - Rockingham, nr Corby; PA relay broadcast On air from: 19/09/09 to 20/09/09 Contact: Diane Smith Telephone: 01280 820 438 Email: diane.smith@arb-teamwork.com.

The Motor sport RSL at Croft on Tees known as **Radio Croft** will broadcast on **1602 kHz**-on the 12 and 13 September. Contact: Diane Smith telephone: 01280 820 438

The LPAM station at **Pinehurst School Swindon 1278 kHz** is not now broadcasting. (Dave Kenny BDXC-UK).

Many thanks to the following reporters:

AB Andrew Brade, Holme-on-Spalding Moor, East Riding of Yorkshire. AOR AR 7030 plus and Perseus SDR, Wellbrook phased array 290°, 305m beverage at 220°. Recording on Sony MZ-NH1 minidisc + Total Recorder.

BD Barry Davies, Carlisle, Cumbria. Perseus, 3.7m x 10.0m Flag + FLG100 amp.

FW Friedhelm Wittlieb, Lünen, Germany. Grundig Satellite 700 with martens fram-antenna.

- HP Hans Pammer, Loosdorf, Austria. Perseus, Icom R75, AOR 7030 Plus, MFJ 1026 (mod.),
 K9AY, 75m Beverage at 215°, 65m Beverage at 225°, Zoom H2 Audio Recorder.
- JW John Williams, Hemel Hempstead, Herts. AOR 7030, 40m long wire.
- jw-c John Williams using Winrad software. Logs extracted from Perseus recordings made by mah in Clashmore, Sutherland. The antenna at the time was a 550m beverage at 338 degrees, terminated.
- mah Martin Hall, Clashmore, Sutherland. Perseus SDR, RPA-1 preamp, beverages, all terminated: 513m at 233°; 506m at 279°; 168m at 175° (BOG). TotalRecorder.

PC Paul Crankshaw; Troon, Ayrshire; Perseus SDR, EWE, MFJ-1025 Phaser (modified).

Rha Ronald Hagensen, Ottersberg, Germany. AOR 7030+, 22m longwire in direction 315°, 28m in direction 290° & the 42m longwire in direction 065° - all with new MB-100 Baluns incorporated!

TB Tim Bucknall, Congleton, Cheshire. Icom IC-R9500 + Wellbrook ALA1530 outdoor loop.

John provided some logs extracted from a Perseus recording I sent him, played back using the WinRad software, and a small selection is included above. John struggled with WinRad, and during a telephone discussion, we established that the software wasn't running on his PC in the same way that it does on mine, though we couldn't figure out the reason. This didn't reduce his enthusiasm for SDRs, and he concluded his log by writing "I did enjoy listening to the recordings

(despite the frustrations) and Perseus is certainly the way forward - I may be going down this road soon!"

Tim sent an interesting letter with his logs, and writes: "Early signs are that we have a good season ahead. MW seemed in fine form last night (24 August), even if it wasn't spectacular stuff". Tim was not impressed with the Ofcom inspector who came to investigate the source of digital QRM he's experiencing on the MW band; the outcome of the visit is that "Ofcom will not take any further action unless I move my receiving antenna from ground level to roof height, which I am unable to do" – not a very satisfactory result, but hopefully you will still be able to catch some DX - mah.

Hans comments on conditions: "I'm afraid, but the poor conditions continue at my location. I can offer you about 10 logs dating back the last 7 weeks. A pity that the former top channels 1390 and 1470 are now under interference from the new Spanish stations. Because of my location in the center of Europe they can not be nulled out." **Friedhelm** mentions: "Logs (attached) from North Africa and the Middle East; and, what a surprise for me, also from Argentina and Venezuela."

Paul also writes about conditions: "After hearing very little from South America over the summer I moved the ewe much further round to the north, to its 'winter position'. Naturally South American stations then started cropping up in logs on the e-list! There have been a few openings to the Great Lakes but generally signal strengths have been pretty weak."

Conditions here in **Clashmore** have been rather mixed. Reception of South American stations during July and the first half of August was rather patchy, with only the occasional day when low power Argentinian stations were coming in well. Stations from Chile, Paraguay, and Uruguay were elusive, and on the best of days only the more common stations were heard. All these on the South American (233 degree) beverage. After mid-August I turned my attention to reception on the North American (279 degree) beverage, and immediately found this direction to be rather more rewarding. Stations tend to be weak at this time of the year, and I was surprised that not only were low power east coast stations being received, but that stations from as far west as Minnesota were also coming in. The older loggings that I've submitted this month from Perseus recordings made in September last year give us a guide to what might be expected early in September this year, for those of us living in the north of England and Scotland – low power east coast stations around 0600. And it won't be long now before prairies and west coast stations start to appear, so get your antennas set up!

That reminds me of my recent correspondence and discussions with **Andrew** and **Barry** about antennas. **Reception of exotic DX is much more dependent on the quality of your antenna than it is on your receiver.** So if you don't have a decent antenna, why not set up a FLAG, EWE, ALA100, or similar for the next couple of months, even if it's only temporary. They don't take up much garden space, are unobtrusive, and perform rather better than random wires; and if you can lay out a beverage, so much the better. I can't get out a beverage to the north-east due to the position of my house, so I'm hoping to set up a FLAG or similar in the garden in time for the autumn Asian DX season. The Alaskan beverage will hopefully be erected by the time you read this - last year 1000 KOMO was coming in on this antenna as early as 1 September. **Good DX! – mah**

The **deadline** for the October 2009 DX Loggings is **Tuesday**, **22nd September**. I look forward to receiving your logs by then, preferably electronically/via e-mail using the Word pro-forma, which I can supply on request; all contributions should follow the format used in DX Loggings as closely as possible. All logs of stations transmitting from outside Europe are welcome. In common with the other sections of MWN, DX Loggings aims to include as many members as possible, and I'd like to ask those of you who listen to MW DX, but who haven't yet shared your catches, to make a special effort and send me a contribution for the next issue. Good DXing! 73, Martin
