NOTES &c FROM NJPC
Mike Hardester sends along a copy of the notification he received from FBIS & Sup't of Documents, actually ADVERTISING the new FBIS logs. It says that the 26th ed. is corrected to 6/1/74. Normally they are 18 months behind, and the previous publicity indicated as much, so one would suspect that 6/1/73 is more like it. AM geographic and alphabetic list is $2.65, order # P&H 134-74 PART I. AM by frequency is also $2.65, same #, but PART II. Address orders to Sup't. of Documents, U.S. Gov't Printing Office, Washington, DC, 20402. All orders postpaid, include payment w/ order. Let see what happens this time, hi.

Holding pattern includes some pix, 2 Hagan articles (awaiting proper stuff to redraw diagrams at HQ) and one from Tull (awaiting editing & re-typing), plus a page of verie-signers. Likewise or annual report for year ended October is still out, the accountant says we can't publish it yet until we file notice w/IRS. Our intentions are good, anyway, hi. Also holding a list of stuff for DXCHANGE which RS doesn't know I have, hi. I'll type it up for next issue & run his header on it, hi.

New stations, changes, skeds, etc. . . .

GREAT BRITAIN - BBC cuts for economic reasons will affect both TV and radio. Radios 1 and 2 on 1214 kHz and 200 kHz will sign on weekdays at 0600 and Sundays at 0555 as now and will sign off at 0430. Local BBC stations will also be affected by these schedule changes. Radios 1 and 2 will merge 1400-1700 and 1900-2000. Radios 3 and 4 will merge for 6 hours per week with what would have been Radio 3 programs and this will include 3 hours on Saturday afternoon. Radio 3 will s/off a little earlier. This plan is due to begin early in 1975. (Brownless) Ken also sent in a list of IB stations. Since it is identical to the one from Terry Greenhill that was run several issues ago (except for power, generally lower in Ken's list) I won't run it again. Our thanks to Ken for taking the time to send the list. (ED)

INDONESIA - The Indonesian Government is coordinating the progressive movement of all private stations from SW to MW. During 1975-79, high powered MW facilities are to be built at Jakarta, 250 kW; Ujung Pandang, 300 kW, Bandung, 200 kW; Surabaya and Semarang 20 kW. No frequencies given. (NIZIZA)

MALTZ - Radio Canada International apparently used the Deutsche Welle relay at Cypcio, 1750 kHz, during November, but a revised sked as of 12/1 shows no use of Malte by Canada. The Nov.-Mar. IN sked, however, shows:

- 0400-0445 Arabic

The 600 kW transmitter is beamed to Near East/North Africa. (Hauzer)

REAL excitement, fun and games around here, couple days before Christmas shot with replacing motor mount and water pump on the (trusty??) old car. Would also like to welcome couple new area DXers to the club. By now Frank Blystone of Bonestown and John Silliman of Girard should be members, also special thanks to John, without his help my water pump would have been operating in one day, instead of 3!!

First off I'll hit some 111 general changes, a bigger changes section will be near the end of DDX.

Not much to report since last time but here it is:
12/21 21:57, strong on 940, assumed to be un tester (WPG, perhaps?)
12:29, WFLA-520-910, very weak v/ WCN, 0940, & at times, an 86...\text{noteworthy}.
Cuba muted, of course. 3:00, WFLA-520-910, 0940, 12/29 0940-12:54am, all
very weak on 940. 12/28 0940 out of KFLF-1500-910, all but buried by a relatively
strong WUP. KFLF seemed to have rather long announcements (announced, however)
but no TT or my noted. So that their TT? 1:30 s/on finally for CBN-740.
Anything from the NB is very tough here & there's no obvious reason for it.
Earl Jefferson believes RX makes a better sense to me than WBA's "Rewrite NK". (You suppose you stared at the radio for that?) WBA's
11/26, it was busy working for "WWB"-L100, until they began 50Kw non-directional operation at
12:29am on 11/26/74. Lately DX has been good here, especially on 86. I'm DXing
v/ WCN & WMC nightly. I love it! 10:00, WCN, 0940.

bought the very new TIN7 from KX-1200 in Lincoln, Neb. I heard WIL-1200 in 1953, then WIS-1200 in 1956, and finally WIB-1200 in 1960. The KX-1200 was sold by KX-6, and the WIL-1200 was sold by WIL-3. The WIS-1200 was sold by WIS-4, and the WIB-1200 was sold by WIB-5. I have been listening to these stations for many years, and I enjoy them very much. I hope to write a letter to each of them and to the NRC about our DXing.
12/16 - I am now out of school for the Holidays, and have reported so far to

My Christmas and Happy New Year to all of us. DX as far as I have reported it is to Mrs. Cline Gardner and their son DX report (wax).

11 Regent Street - Kingston, Ontario - KUL 435

Merry Christmas and Happy New Year to all of us. DX as far as I have reported it is to Mrs. Cline Gardner and their son DX report (wax).

It was WVT-1290 which tested on MV Nov 26, 1215-1225. They have a 5/10 the last Monday of each month between these times. A few weeks ago, I heard DX was on the air, and I heard a few weak signals a few weeks ago, but I couldn't pick up on it. In my last, I heard DX to have some sort of requests so far, and I'm not sure if WVT is the positive reply arrived on 12/9.

It's been a long season, and I hope all DXers are enjoying the holidays. I'm happy to report that we have some new DXers joining us, and I'm sure you'll enjoy hearing from them as much as I do.

This graph shows the daily variation in AFR, the Fredericksburg index of geomagnetic/auroral disturbance in the Earth's magnetic field. High values of the A index usually result from a heavy influx of electrically charged particles into the upper atmosphere following certain types of solar disturbances. The severe medium-wave signal absorption produced by one of these events is most intense in higher latitudes and affects the United States and Europe; on such a night reception from the south is favored. The maximum absorption for some events may be delayed a few days after the geomagnetic disturbance or may occur immediately. Extended periods of low geomagnetic activity are necessary but not sufficient to guarantee excellent high latitude reception throughout the MW band; other ionospheric effects such as sporadic E and the winter anomaly may mask what would otherwise be excellent conditions following prolonged quiet.
