As we go to press today we have just learned of the passing of long-time member Joe Brauner by phone from Ernie Cooper and Jerry Starr. Joe had been very active as evidenced by his contributions in DDXD as late as two bulletins ago, but his failing health finally claimed Joe the morning of Dec. 4th. We all will sadly miss Joe’s contributions and support. Of all the members of the LPC, perhaps Pat Hartlage knew him best due to several years of regular correspondence with Joe, so we have asked Pat to pen a few words to Joe’s memory. We will also dedicate this issue to his memory. RIP.

JOSEPH W. BRAUNER

We have learned, through Ernie Cooper, of the death of long-time member, Joe Brauner. He was 76. Joe Began his DXing hobby in the suburban Buffalo area in 1924. At one time he lived in Williamsville, where he and his wife Marty hosted an NRG Convention, back in the days when Ray Edge edited DX News. He did considerable CFC work in the 1930's and in his last Muse noted that he had logged 5648 stations. In my term as Secretary, I had considerable correspondence with Joe. He was never one who would sit back and not make his views known—in a positive way. Joe cared. He loved the hobby and NRC. His letters and suggestions were always welcome and it was very helpful to us when Joe thought we were doing something wrong—his ideas gave us direction. Joe will be missed by us here in Louisville. May he rest in peace.

JUAN EVANS

I delivered the presided over all these years over the ruination of Germany, listening to splash and you have no trouble at night.

Evacuated Flying Service U.S. Air., 11/17, New Jersey, 930, Flying Service U.S. and you are capable of learning any lessons from Europe. The 9 kHz separations could work nicely in the U.S. if we have the present modulations in the U.S. where they are, the present ones, or when we go to nine kHz separations. I have no confidence at all that the FCC is capable of selling anything.

It's an honor to be a part in making questions and I can be for sale for ten cents on day after nine kHz separation goes into effect in the U.S.

**WATCH FOR KAA-770 KNR FULLTIME WITH OLDIES**

Bill Hardy - 2301 Pacific Avenue - Aberdeen, WA - 98223

It seems like ages since I've had timber music. It's also been ages since I've had time to do something else. Much has been missed from me.

It is where that is that KAA-770 Seattle changed from 11 to 930 kHz, 11/10. This was just days after new owner Pat O'Day changed the format from classic to oldies. O'Day was afternoon DJ and PD of Seattle station KUSU from 1952 to 1971. If you have the "Cruisin' 1960" album, it's a remake of shows that KUSU's O'Day put together. After leaving KUSU, O'Day bought KGL-650 Honolulu, & KFY-AM (95 Kicks) in Seattle. He bought KUSU this September. On 11/10, he switched the KUSU format to oldies from the 50s, 60s, & 70s.

There was very little difference between KAA's 1 kHz daytime classical format, where Seattle has an excellent fulltime classical stereo FM, KING-FM. Also, educational WCUR-FM is into 1 kHz quite heavily. So KAA was dead last in the ratings when O'Day bought it, but that will change. The station will still be a station that is too hot, or not so hot that way, it will be interesting to see how KAA will do. They'll surely do better as a fulltime station. They're still using their ancient daytime facility, but they're more well known.

I don't think that the dipole will cause all the extra frequencies. It is not so that it will be worse. It could be that the dipole will cause all the extra frequencies. It is not so that it is that the dipole is a problem.

They go off right of course, with the circuit. On a standard 8 kHz amateur radio other than... If you have the "Cruisin' 1960" album, it's a remake of shows that KUSU's O'Day put together. I spent a day at a station in the city of Allende, San Carlos, Costa Rica, with a group of radio amateurs. The station was known for its programming of Costa Rican music and news. I had been there before, but this time I was accompanied by a friend who was also interested in radio.

I noticed at the station that the equipment was quite outdated, with a mix of older and newer models. The station was located in a small town, and the equipment was not as advanced as those in the larger cities.

I asked the station manager about the station's history. He told me that the station had been on the air since the 1950s, and that it had been an important part of the community for many years. The station was known for its coverage of local news and events, and its programming featured a mix of local and national music.

I spent the day at the station, listening to the programming and talking with the staff. I also had the opportunity to listen to some of the music that the station played. The music was a mix of local and international, and it was very different from the music that I was used to hearing.

Overall, my visit to the station was a great experience. It was nice to see how radio stations operate in other parts of the world, and to experience the music and culture that the station played. I hope to return again in the future, and to see how the station has changed and evolved over time.
The page is a newsletter and contains the following sections:

- **THE NIGHT FREQUENCY CHECK LIST**: A list of frequencies for different locations such as Phoenixville, PA, and Ocala, FL.
- **STATICS FROM HQ**: Information about a magazine called "IRCA Almanac".

The text mentions various radio frequencies and locations, along with news about radio stations and their programs. There are also references to "uncle pattern抠 jocks" and "a hint of an ID". The newsletter is dated 11/28/80.
