SIZE 8 & 10 INTEGRAL GEARHEAD MOTORS

3 Times Torque Load Capacity* of comparable size 8 gearheads

*Will sustain 20 in-oz torque load for 1,000 hours operation and 100 in-oz momentary overload at the maximum ratio.

Gearhead and motor are selectable, individual parts enclosed in the same common motor housing.

Clifton Precision, pioneers in postless gearhead construction, introduces the finest in gearhead design—cage-type, one-piece gearhead housing machined from a single block of metal. In these units, exact duplication of gear centers is accomplished through simultaneous boring of permanently integrated bearing plates (patent pending). Positive and permanent alignment of gear clusters composed of AGMA precision Classes II and III hardened steel gears integral with shafts journald at both ends in ABEC class 5 bearings. Minimize deflection and backlash, maximize torque load capacity, insure smoother operation and extended reliability of performance beyond normal endurance life requirements. Cage-type construction facilitates inspection and lubrication while gearhead is mounted simply by removing motor.

CPPC motors will stand greater heat than ever before due to the use of new materials. See box at lower right.

Write for our free brochure which gives detailed specifications of our entire gearhead range and motor tachometer line, sizes 8, 10 and 11.

CLIFTON PRECISION PRODUCTS CO., INC.
CLIFTON HEIGHTS, PENNSYLVANIA

COVER. The staff report on "interim" packaging in this issue suggested ELECTRONIC DESIGN's art director a symbolic treatment of modular packaging, depicting the interconnection of the modules in a system.

Sidelights On This Issue

The American Rocket Society's show, "Space Flight Report to the Nation," (see p 8) sent imaginations soaring, as befitted its spectacular subject matter. ELECTRONIC DESIGN's chief news editor, Robert C. Haavind, staggering back under a load of abstracts, brochures and press kits, could find only one word to describe the show: massive.

A sobering aspect of the exhibit, Haavind thought, was the frank admission in meeting after meeting that the frontiers of space still are largely uncharted, as are the means of reaching them. This considerable reliance on theories and untested concepts poses an enormous challenge for the men who must choose from among a multitude of theoretical designs the space systems that will work. Such decisions will require men of penetrating technical foresight and strong background. It also raises the specter of politics and company power plays swaying decisions in the wrong directions.

Haavind found electric engines for space repulsion dominating the major exhibits.

The show had a strong intramural flavor. Exhibitors tried hard to impress one another and, from the traffic flow, it would appear that many companies were using the show to chart new team efforts.
Bierman Moves Up

Howard Bierman, associate editor of Electronic Design, will assume the duties of managing editor. He will succeed James A. Lippke, who has entered the consulting field. One of Mr. Lippke’s first assignments will be a training program for new Electronic Design technical editors.

Mr. Bierman has been with the magazine for three years. He is a graduate of City College of New York (B.E.E.). He worked for three years at ITT research laboratories and nine years in the radio-TV design field.

Mr. Bierman has written several books on radio-TV design and is the contributor of technical articles to several encyclopedias.

No Room

In preparing the Electronic Design staff report on “interim” packaging, technical editor Robert Cushman ran into something of a packaging problem himself. So generous was the response to his call for editorial ideas and material, the staff report alone could have filled this issue.

Nothing’s lost, however. Articles that were crowded out of the staff report will appear in future issues.

Raytheon Reliability-Controlled Tubes are certified to have an average life span of more than 10,000 hours when used under approved conditions — with full credit for failure within 1,000 hours — at no increase in price!

Through the use of special design and manufacturing techniques, Raytheon now brings you a line of Reliability-Controlled Tubes to meet your most critical needs for long life and reliability. Each Reliability-Controlled type is monitored by tests far more severe than those normally encountered in service and is backed up by an unprecedented 10,000 Hour Life Certificate.

Applicable to shipments of 100 tubes or more from factory or Raytheon Distributor stock, Raytheon’s 10,000 Hour Life Certificate assures you of:

1. Full credit for any and all tube failures which occur during the first 1,000 hours of service.
2. Proportional credit on the shipment lot to the extent that failures prevent that shipment lot from achieving an average life of 10,000 hours.

Eight Reliability-Controlled types are now available — 6AH6WA, 6AN5WA, 5670, 5654 6AK5W, 5755, 6414, 0A2WA, 5651WA — more types in development. Each data sheet contains a section devoted to operating conditions and ratings recommended to achieve the long and reliable service built into these tubes. Full technical data and complete details on the new Raytheon 10,000 Hour Life Certificate are available from Raytheon Company, Industrial Components Division, Newton 58, Massachusetts.
New Products

Leading off the New Products section in this issue are a dc power supply employing "on-off" regulation, a portable nanovoltmeter, a phase lock discriminator, an antenna contour plotter and a voltage regulator tube.

New Products Directory

All the products presented in this issue are indexed with reference to page and Reader-Service number.

MicroWaves

Coming In Future Issues

The editors of ELECTRONIC DESIGN huddled over a 1962 calendar (and sandwiches) last week and came up with a promising line-up of 16 staff and feature reports for next year. The schedule will be as follows:

Design '62, Jan. 4; microminiaturization, Feb. 15; IRE planning issue, March 1; IRE show issue (two volumes), March 15; IRE report, March 29; microwave antennas, April 12; production, April 26; diodes, May 24; transducers, June 21; transistors, July 5; WESCON planning issue, Aug. 2; WESCON show issue, Aug. 16; WESCON report, Aug. 30; radio frequency interference, Sept. 27; analog computers, Oct. 11; and reliability, Nov. 8.

Here is the highly compact, precision PM 3100 Series wideband DC amplifier supplied to meet your specific OEM needs. Order it the way you want it.... then simply add feedback and bolt it down. With the Model 3102—lowest cost DC amplifier in its performance class—you get specs like these: 1 uv/C drift (better, if desired) ... 50 mgs single-ended input impedance, 10K differential ... gains of 10 to 1,000 or more ... 0.01 % gain stability ... DC to 35KC bandwidth ... 60 millihms output impedance ... output capability of ±15 volts DC at 100 ma. Buy it in or out of a can, with or without a power supply. Use it as a standard amplifier or operationally for integrating, summing, etc. Contact PM for detailed performance specifications.

Model 3102 Features Chopper Stabilization, Solid-State Circuitry, Custom Packaging

PM'S PRECISION WIDE BAND DC AMPLIFIER NOW AVAILABLE TO INSTALL IN YOUR EQUIPMENT
Advanced Systems Focus on Electro-Optics

National Electronics Conference Hears of Laser-Ranging Device, Light-Modulation Scheme and EL-PC Cell Commutator

Alan Corneretto
News Editor

The expanding technology of electro-optics was much in evidence at the giant National Electronics Conference, held earlier this month in Chicago. Among the papers delivered on this specialty were three pointing up the progress in harnessing optical effects for advanced systems and devices. These papers described:

- A means of continuously modulating an optical ruby maser's output at up to 160 mc with potassium dihydrogen phosphate (KDP) crystals. This technique would be applied to an optical-communications system.
- An optical ranging scheme accurate to 50 ft at 15,000 ft. This system, too, is based on an optical ruby maser.
- An 8-channel commutator equivalent to a cascaded T-network switching circuit, but consisting of interconnected electro-luminescent - photoconductive (EL-PC) cells, and reportedly having a usable bandwidth of 2 mc and a switching time of about 250 msec.

Among the products displayed at the conference were an X-band magnetron, said to have operated at 400 C for more than 400 hrs, and a sleep-inducing apparatus that operates by pulsing square waves from a patient's eyeballs to the back of his head.

Gordon Jacobs, a system designer at General Electric Co., Syracuse, N. Y., reported building a light-modulation system using KDP crystals that modulate both the coherent output of a pulsed ruby laser and the incoherent emission of a mercury-arc lamp. The GE system was reported to do this continuously and over wider than usual bandwidths. In the past, maximum light-modulation bandwidth possible with KDP crystals, because of charging-current and heating limitations, was on the order of 1 mc, Mr. Jacobs said.

Like other Pockels-effect modulators, described by Bell Laboratories, Harvard, and Sperry Gyroscope (see p 28), the GE unit consists of a crystal in a re-entrant-cavity oscillator. Polarized light passing through the crystal is speeded or retarded in phase by longitudinal application of a modulating voltage to the crystal.

The power required to drive a KDP crystal reactive load is theoretically dependent only on bandwidth and is independent of the center frequency of the rf carrier involved. As a result, the usual video frequency and high-capacity video transformer were discarded in favor of an rf carrier and low-capacity rf transformer. By using an rf carrier for the wideband signal, rather than modulating directly at a video frequency, broadband performance is achieved and driving power for modulation is reduced. To permit continuous modulation at the frequencies involved, large electrodes capable of carrying high-charging currents are bonded directly to the crystal.

GE reports getting usable bandwidths of 5 mc modulated at up to 160 mc. Modulation power required was about 20 w per mc of bandwidth with the optimum reached at a modulation frequency of 50 mc. Normally, modulating at video frequency requires about 240 w per mc of bandwidth.

A mercury-arc light communication system has been operated over a 1,000-ft link between two buildings at GE using a telescope receiver and a photomultiplier tube in an RC circuit as a demodulator. Up to modulation frequencies of about 100 mc, the signal-to-noise was said to be good, but it deteriorated above 100 mc. Using a mercury-arc-light source, a signal-to-noise ratio of 20 db was obtained easily.

The work at GE is part of the development of optical-communication systems based on continuous-wave optical masers and phase modulation, rather than on absorption modulation of their light. The company hopes for eventual modulation bandwidths of 500 to 1,000 mc.

Pulsed-Laser Ranging Device Under Development for Military

TRG, Inc., Syosset, L. I., N. Y., has developed a ranging system in which pulses from an optical ruby maser bounce off a target and, received by a photomultiplier-
Developmental magnetron, shown without magnet, is one of two that operated more than 400 hrs at 400° C, delivering 235 kw peak output power at X-band. Tube will be tested later at 650° C to determine whether magnetron operation without cooling is possible. Ceramic insulator covers cathode assembly; output flange is in the foreground.

tube detector, yield range data accurate to ±50 ft. at 15,000 ft. As described by Lawrence Goldmuntz of TRG, the short-duty cycle—a high-intensity pulse system—-is able to provide range accuracy because of the short, rapid-rise-time pulses available from the laser. Accuracy also is assured by a quasi-correlation technique used in the receiver. The problem of back scatter was said to have been surmounted by a narrow-bandwidth optical system.

Mr. Goldmuntz reported that in operation a small portion of the admitted light from the laser is scattered into a photo cell, the output of which triggers a horizontal A-scope trace. After triggering, the sweep travels for a preset time corresponding to the maximum target range. On reaching the preset range deflection, the spot returns to the origin and awaits triggering by the next admitted pulse.

The echo pips are applied as Z-axis modulation. They cause the trace to brighten slightly. Because of the character of the admitted waveform and because the intervals between pulses usually are shorter than the range, many nonsynchronized echoes in addition to the true-range echo generally return during one A-scope sweep.

The true-range echo becomes discernible above the statistical background of nonsynchronized echoes and other signals by virtue of many sweeps during one pump light flash and the persistance of the scope screen.

(continued on p 6)

---

The KINTEL Model 501B 4-digit, over-ranging digital voltmeter measures DC from ±0.0001 to ±100.0 volts to an accuracy within 0.01% of reading ±1 digit. An extra fifth digit in the left decade indicates “0” or “1” to provide ten times greater resolution at decade (1, 10, 100) voltage points than standard 4-digit voltmeters. Ranging and polarity indication are entirely automatic. The measured voltage, decimal point and polarity symbol are displayed on an in-line readout in a single plane—no superimposed outlines of “off” digits.

An adjustable sensitivity control permits decreasing sensitivity to allow measurement of noisy signals. Ten-line, parallel input printers can be driven directly, and converters are available for driving other types of printers, typewriters, and cards or tape punches. The input impedance is 10 megohms at null on any range, and an input filter attenuates power-frequency ripple by 60 db. Stepping switches are DC-driven (as in telephone service) at 20 steps per second, are guaranteed to give at least two years of trouble-free service without maintenance.

The 501B is one of a complete line of KINTEL digital instruments. Others include AC converters, AC and DC preamplifiers, ratiometers, comparators, and multi-channel input scanners.

---

**IMPORTANT SPECIFICATIONS**

Display ... Six decades display 5 digits (left digit “0” or “1” only, decimal point, polarity symbol. Ranging and polarity indication are automatic. Projection system readout employs bayonet-base lamps with 3000-hour minimum life rating. Readout contains no electronic circuitry and can be remotely mounted.

Automatic Ranges ... ±0.0001 to ±1000.0 volts DC in four ranges: 0.001 to 1.999; 0.020 to 19.99; 0.200 to 199.9; 20.00 to 1000.0

Accuracy ... ±0.01% ± 1 digit (of reading).

Input Impedance ... 10 megohms on all ranges at null.

Reference Voltage ... Chopper-stabilized supply, continually and automatically referenced to standard cell.

Stepping-Switch Drive ... DC voltage within stepping-switch manufacturers rating applied by transistor drive circuit at rate of approximately 20 steps per second.

Controls ... Three: on-off, sensitivity; and mode of operation (standby, normal, print auto, print remote).

Printer Drive ... Built-in for parallel input printers. Automatic or remote.

Dimensions and Net Weights ... Control unit: 45 lbs, 51/2" H x 19" W x 16" D. Readout: 10 lbs, 3½" H x 19" W x 5" D.

Price: $2995

KINTEL manufactures electronic instruments for measurement and control, and closed circuit TV. Representatives in all major cities. Write for detailed literature or demonstration.

Model MTLR1000

New Perkin Model MTLR1000 combines reliable magnetic amplifier circuitry with a transistorized pre-amplifier that cuts response time to as low as .05 second! You get safe, continuous AC power, precisely controlled by a silicon zener diode reference circuit. Remote sensing and automatically resetting thermal devices for overload protection make this new AC line regulator ideal for remote locations. All static components for added reliability. Now, after years of research, these features are available in one unit for the first time—yours from Perkin.

**SPECIFICATIONS**

- **AC Input:** 95-135v, 60 cps ±10%
- **AC Output:** 110-120v
- **Regulation Accuracy:** ±0.2% for line changes from 105-125v (±0.5% from 95-125v) and load changes from no load to full load.
- **Response Time:** 0.05-0.1 seconds for line or load changes.
- **Total Harmonic Distortion:** 3% max.
- **Power Factor Range:** 0.7 lagging to 0.9 leading.
- **Load Range:** 0-5.5a
- **Dimensions:** 17” W x 16½” D x 5¼” H (Adaptable for rack mtg.)
- **Weight:** 60 lbs.
- **Order direct. Price $349**

**NEWS**

**Electro-Optics . . .**

(continued from p 5)

TRG expects to improve performance of its system by using a double flashing technique in which the ruby would be pumped to threshold with one discharge through the pumping lamp and pumped above threshold by another discharge. This would provide single pulses of controlled spacing. An amplifier for creation of short, intense pulses is also under study as a means of improving system performance. Gains of a factor of two in a 2-in. ruby rod and gains of a factor of 12 in an 8-in. rod were reported by TRG. A third technique being investigated is optical heterodyning in the echo receiver to reduce backscatter effects. Such a receiver would replace the present narrowband optical receiver. Much of TRG's work in this area is supported by the Advanced Research Projects Agency of the Dept. of Defense. The company reports it has the contract to develop a practical ground-to-ground ranging system for such targets as tanks.

**Solid-State 8-Channel EL-PC Commutator Tested**

A net of photoconductive cells actuated by electroluminescent lamps and forming an 8-channel commutator has been built and tested at GE's Electromagnetic Laboratory, Syracuse, N. Y. Among the advantages cited for the device by GE's R. D. Stewart, who described it in a paper at the conference, are: electrical isolation between signal and control sources; ease of matching EL-activating lamps to PC cells (yielding a calculated volume of 0.01 cu in. per EL-PC pair); power gain of more than 40 db; and noise level low enough to permit detection of signals in the low microwave region.

The commutator built at GE uses Ohmic-contact cadmium-sulfide PC cells and orange EL cells. They are arranged in a network equivalent to a cascaded T-net of electromechanical switches. A usable bandwidth of about 2 mc was measured; the device switched in from 100 to 500 msc.

GE expects that EL-PC commutators, despite inherent limitations of low speed and low frequency response, will prove useful where reliability, small size and low-voltage operation are required. The company plans to fabricate deposited-thin-film versions of the commutator.
The EL-PC work reported on by Mr. Stewart is related to GE's neuron simulation project (ED, Sept. 13, p 41). T. E. Bray, told the conference that the first EL-PC neural element is being tested. It has achieved the transfer functions set for it by the Air Force. In its finished form, the 20-input, all-analog device consists of more than 40 multipliers and 20 analog memory elements. It occupies 2.5 cu. in. and consumes 0.5 w.

Displays Include Sleep-Inducer, High-Temperature Magnetron

A relaxing, or sleep-inducing device called Electroson was displayed at the Chicago show by Electronic Polyphase Ionic Corp., Chicago. It operates by emitting current from a head band so that square-wave pulses travel form electrodes over the eyeballs to the back of the patient's head. Sleep is induced in periods ranging from seconds to several minutes, the company reported.

Related to similar devices in use in the Soviet Union and Japan, the unit is basically a multivibrator pulse generator. Its frequency is regulated by changing the time constants of both arms of the multivibrator. Partial wave shaping and major frequency control is achieved by altering the RC time constants in one arm of the multivibrator. A limiter and feedback wave shaper are included to shape peaks. Maximum voltage output is 25 v at 5,000-ohm load; about one ma of current is used and frequency range is from 0.5 to 150 cps.

The patient receives the current through a two-part electrode, one part of which is stainless steel, the other a glass container filled with saline solution. The solution wets a cotton wick that touches both the metal electrode and the patient. Price of the unit was said to be about $350.

Raytheon Corp., Burlington, Mass., displayed a developmental X-band magnetron, said to have operated for more than 400 hrs at 400 C. The tube was designed to work in airborne equipment without blowers, ducting or cooling. The tube is basically a 6-frequency 6249 magnetron. It produces a minimum peak power of 235 kw in the 8,500-to-9,600-mc band, according to the company. High-temperature operation was achieved without any major design innovation, although special material containing a minimum of residual gas is used, Raytheon said. Gold soldering also is employed. The tube is being developed under an Air Force contract, which calls for additional life tests at 650 C. These tests are to begin shortly, the company reported.

Whatever the "variation" you need, the new Bulova inductance substitution box provides the precise measure with three decades of inductance ranging from 0.1 to 111 millihenries.

The Bulova SB-100 uses gold contact subminiature switches to permit low stray capacity and excellent low level contact. Maximum distributed capacity of any selected inductance is less than 20 picofarads, and the maximum useful frequency is in excess of 2 mc. The fully encapsulated coils allow the unit to be used in environmental chambers with a minute inductance change, (approx. + 100 ppm/^\circ C).

The use of direct current up to 50 milliamperes without appreciable change in inductance is permitted. The accuracy of the instrument is ±1% true inductance at 1 volt and 25 ± 10 C. Its zero setting residual inductance is 0.5 microhenry.

This new high frequency inductance substitution box is only one of many recent advances made by Bulova Electronics. For information on these specific units, or on how Bulova experience in mastering component and system reliability can help you, write Department 2257, Bulova Watch Company, Inc., Electronics Division, 61-10 Woodside Avenue, Woodside, N.Y.
Space Report: Soaring Ideas—Down-to-Earth Problems

Guidance, Power-Supply and Propulsion Concepts Presented At Rocket Society's Show Point Up Challenge to Designers

Robert C. Haavind
Chief News Editor

The need for design ingenuity in the space age was well illustrated by the great variety of problems and solutions discussed in myriad sessions and informal discussions during the Space Flight Report to the Nation. The exposition, sponsored by the American Rocket Society, was held from Oct. 9 to 15.

Key electronic areas covered in exhibits that filled New York's Coliseum, included:
- Ideas for space-guidance systems.
- Progress on power-system designs for space.
- Numerous approaches to electrical propulsion for space.

One suggestion for space navigation was based on a mosaic optical system modeled after the structure of the eye. This approach, according to Eugene F. Lally of Jet Propulsion Laboratory, would eliminate the need for inertial systems or position information sent from the ground.

The achievement of such a mosaic setup, in which a computer system would match incoming signals from the mosaic with stored data to make position determinations, awaits the development of suitable microminiature circuitry, Mr. Lally said. Rather than gimballing the mosaic detectors to the spacecraft, several detector mosaics could be placed around the vehicle.

Stars, Planets Would Help Fix Positions In Space

Fixes would be taken by reference to stars and a planet. A scan sequence for establishing both a star and a planet on one mosaic would require attitude control of the vehicle during the acquisition phase. Mr. Lally suggested that added analog information might be obtained in the star-identification process by using detectors that establish the temperature characteristics of the star.

Although a single detector could not perform this, a combination of red-sensitive and blue-sensitive detectors could be used to obtain ratios that would aid in recognition.

Some alternate analog approaches to this type of mosaic system were suggested by Mr. Lally. These were the use of photoconductive detectors scanned by an optical beam; image conversion through use of cooled ionic crystals, which change infrared to visible light; or the illumination of semiconductor junctions. With the latter approach, he suggested that the use of the lateral photoeffect to determine star displacements from the center of the junction area would give a more accurate fix than would be possible with the total junction areas as the revolving element in the mosaic.

These analog methods eventually should give way to pure digital techniques, Mr. Lally predicted, so that smaller and smaller elements could be used. This would simplify the processing involved.

Many Approaches Taken In Space Power Conversion

Reviews of progress in energy sources for space indicated that a wide choice will be
Binary Computer Is Desk-Size

This desk-size binary computer, shown at the American Rocket Society's space exhibit, has a high-speed magnetic-core memory with 512 15-bit words of random access storage. The memory system has a read-restore cycle period of 8 μsec, and an add time of 24 μsec. The console has all arithmetic and control registers on its panel, permitting operator intervention. All logical circuitry and test points are accessible to the operator. Developed by Univac, St. Paul, Minn., the system uses solid-state parallel-logic circuitry with 630 logical elements. The computer costs $34,500.

available to the system designer. A variety of design configurations for magnetohydrodynamic, thermionic, thermoelectric, electrochemical, nuclear and solar conversion power sources for space flight was discussed at several sessions.

Two possible solar-converter designs for a probe toward the sun were discussed in a paper by B. E. Thompson, J. H. Guill and H. Radd of General Dynamics/Astronautics, San Diego. One of the suggested systems was a solar-powered 30-kw turbogenerator. The disadvantages of this system include its weight and the low reliability of the rotating machinery involved. An alternative, according to the authors, is a solar thermoelectric converter made by the General Atomic Div. of General Dynamics. This approach would make use of collector panels with a total area of 1,900 sq ft.

Electric engines captured major attention during the meeting. More activity in this area was urged by Capt. Richard J. Hayes and Ernst Stulinger of the National Aeronautics and Space Administration and Myron A. Hoffman of the Massachusetts Institute of Technology. The speakers cautioned that overemphasis on lunar probes might hamper progress in work on longer space missions.

Ion and arc jet-type engines are nearing the flight-test phase, and numerous electromagnetic engines are under development (ED, Oct. 11, p 8), the speakers noted. The program is making progress despite lack of funds, the speakers said.

PHILCO EPITAXIAL SILICON MESA

FIRST TO COMBINE

120 V (BV_{CBO})
0.5 V (SAT)
150 mc. \( f_T \)

2N2087 NPN CORE DRIVER LINE DRIVER

You would expect Philco, as inventor of industry’s most capable germanium logic transistor—the MADT, to design silicon memory components with extra capability, too. And Philco has done it. 2N2087 and 2N2086 Philco epitaxial silicon mesa transistors offer incomparable combinations of parameters that may well be the special design solutions you require.

The 2N2087 combines 120 BV_{CBO}, 40 h_{FE} min., 0.5 V, max. \( V_{CE} \) (SAT), 150 mc min. \( f_T \), 12 pf max. \( C_{ob} \), and 100 nsec max. \( t_r \).

The 2N2086 combines h_{FE} of 20 min., 0.7 max. \( V_{CE} \) (SAT), 120 BV_{CBO}, 150 mc min. \( f_T \), 12 pf max. \( C_{ob} \), and 100 nsec max. \( t_r \).

These new Philco epitaxial silicon mesa transistors deliver optimum drive for computer memory planes, serve as medium power switches in airborne control systems, and are ideally suited to a wide variety of other applications such as small power supplies, servo amplifiers, and automation controls. For complete information, write Dept. ED102561.

*Important Industry News Written For Fast Scanning by Engineers*

A video system, designed to operate 250 miles above the earth, will be used to observe the placing into test trajectory of an Echo A-12 test payload. Information transmitted to earth by the TV system, developed by Siegler Corp.’s Hallamore Div., Anaheim, Calif., will be recorded on film and magnetic tape. Tests of the 30-in. prototype of the Echo A-12 TV viewer were made by Siegler last May for the National Aeronautics and Space Administration, using an 800-million candle-power searchlight to view the inflation of the Echo balloon.

Optical-maser technology has taken some important steps forward with three developments at Bell Telephone Laboratories. These are:
- A 10-km light modulator using the electro-optic effect in potassium dihydrogen phosphate (to be described by Dr. I. P. Kaminov at the Northeast Electronics Research & Engineering Meeting in Boston, Nov. 14-16).
- Attainment of higher peak emission for given pumping power by substituting mirrors for the silvered ends of a ruby rod and putting a chopper in front of one mirror to hold back the output while the population of upper energy states becomes greater than previously achieved.
- Discovery of a new maser material—neodymium in calcium tungstate—with the emission line in the photographable portion of the infrared (10,600 Å). The resulting optical maser operates with input power of 5 joules at room temperature.

A digital-data recording system has been designed for the University of Michigan to automate microscope readings. The device will be used with a projection microscope to digitize and record X and Y coordinates of selected points. Light-wave interferometers (Moire fringe) attached to the measuring stages of the microscope will produce output signals to two bi-directional transistor-
ized counters. The system will store counter data upon command and, when storage is complete, will automatically initiate recording through an IBM summary card punch. Datex Corp., Monrovia, Calif., is the designer.

Nonmagnetic sealed silver-cadmium cells, designed to eliminate the weight and space limitations of nickel-cadmium batteries, are undergoing operational tests in the Explorer XII satellite. The silver-cadmium cells are said to provide three times as much power as lead-acid or nickel-cadmium batteries, yet take up only a third as much space. The cells are made under the name of Silcad by Yardney Electric Corp., New York City.

Trailer vans loaded with atomic-test equipment have been dispatched by the Defense Department to 46 locations across the country in the Project Vela Uniform program for reliable detection of secret underground shots.

Baby Computer Perfected

No bigger than a loaf of bread, this working computer is said to perform 33,000 mathematical calculations per sec. The model is composed of 5,500 currently available electronic components and weighs 12 lb. Burroughs Corp., Detroit, which developed the machine, utilized the macro-module system of packaging. Shown is the finned heat exchanger, which is the central element in a 'log', or row of triangular chips. The chips contain circuitry and plug into a folding printed-circuit card.

New from Sprague!

The Most Widely-Used Logic Transistor,
Type 2N1499A, Now Has a Smaller Brother...

TYPE 2N979
LOW-COST LOGIC TRANSISTOR

Here is a new Sprague Transistor that is smaller in size, yet identical in performance with the well-known 2N1499A Logic Transistor.

Designed for use in saturated switching circuits, this low-cost, hermetically-sealed MADT® Transistor is capable of switching at frequencies in excess of 10 megacycles.

In addition to computer applications, this rugged transistor is ideally suited for data processing and instrumentation equipment.

There are two major reasons why The Sprague 2N979, as with the 2N1499A, is earning a high level of acceptance:

1. DEPENDABLE PERFORMANCE — Specifically designed with parameters intended for logic circuits, these transistors consistently show low storage time, low saturation voltage, high beta, high switching speed. Their cases are cold welded to insure reliability.

2. ATTRACTIVE PRICE — Available in production quantities, these transistors are first-run devices, not "fall-outs". They are produced on FAST (Fast Automatic Semiconductor Transfer) lines with direct in-line process feedback, especially programmed to insure high production yields.

**Kilomegabit Data Link In Design Stage**

*System for Transmitting 100-mc Analog Data Digitally Would Use 50 Parallel 20-mc Channels in 10-Gc Region*

A DATA-encoding and transmitting system said to handle 10^10 bits of information per sec has been designed at Airborne Instruments Laboratory, Deer Park, N. Y.

The project was begun in anticipation of requirements for passing 100-mc-wide analog information through hostile conditions, according to David Cohen, an Airborne Instruments consultant engineer on the study. Such a need would arise in transmitting analog television signals from satellites and space probes to ground terminals over great distances during short acquisition intervals and in the face of jamming or other interference.

As planned by Airborne Instruments, the kilomegabit data rate would be achieved by storing a long-time sample of analog signals, simultaneously sampling them in time, and converting each sample into digital form by parallel circuitry. Digital signals would be frequency-multi-
plexed into 50 separate channels, where each bit would modulate a separate channel of either a single or several rf carriers.

At the receiving end, each bit would be detected and demodulated in a separate channel and the signals would be reclocked. Shaped and reclocked signals would be reconverted to analog levels and the waveform would be reconstituted by delay-line decoders.

The main problems of implementation are expected to be sampling and digitizing at high speeds. Sample pulses are 5 nsec long. Airborne Instruments is studying thin-film matrices and tunnel-diode networks as means of achieving the high switching speeds.

For transmitting 100-mc video data the encoding system would work as follows:

The 100-mc signal is propagated along a tapped delay line, which stores the tapped portions of the signal in hold circuits for 50 nsec. New information propagated along the line drives digital encoders that convert each analog samples to 5-bit units.

Switching must be very fast because the taps can be only 5 nsec long and must be viewed by the encoder's gate system once every 50 nsec. No more than 5 nsec can be used during line sampling before the bandwidth and independence of the samples are lost. For the delay line, the company is considering a lumped-constant device similar to those used in oscilloscopes.

During transmission, the outputs of flip-flops will key separate subcarriers or separate transmitters. The maximum half-period of these flip-flops is 50 nsec. A bandwidth of about 20 mc is required for each component bit. Because no single transmitter in the 10-Gc range capable of generating the required power was found by Airborne Instruments, the company's designers chose parallel operation.

**Modulation Is Flexible, Despite Limit on Indices**

Use of 50 independent channels of 20 mc avoids problems of tight control of dispersion between the lowest and highest frequency. Many types of modulation are possible, including phase-shift keying, frequency-shift keying and standard amplitude modulation, according to Mr. Cohen. However, because spectrum usage would be great, modulation indices greater than one cannot be used.

The company reports that the basic consideration preventing modulation on a single kilomacgye channel is that the wavelength of the modulation envelope would be

When you've got to attach a connector contact to the end of a coaxial wire, a single precise stroke of a crimping tool (one that crimps braid and inner conductor to the contact simultaneously) is the fastest way, the lowest-installed-cost way, the way that cuts human error in half.

Our COAXICON® contact is designed on this principle: two strokes here is one too many!

COAXICON is a one-piece contact. It can be attached, simultaneously, with a single crimping tool stroke, to the braid and inner conductor of 37 sizes of RG/U coaxial cable up to 1/4" O.D. (see size numbers above). And AMP makes the tools — hand and automatic — that control the crimp.

COAXICON consists of polarized, concentric male and female shells, made from drawn parts. The inner contacts, assembled in the shells, will attach equally to solid or stranded conductors. Where contact density is important, a miniature COAXICON fulfills the requirement.

COAXICON connectors will match cable impedances in the 50-100 ohm range, at frequencies as high as 150 megacycles. Impedance mis-match, incidentally, is only 1.06 to 1.09, even at 500 megacycles.

new miniaturized floating clinch nut

opens design tolerances—simplifies assembly operations and cuts avionic "packaging" costs.

Here at last is a reduced-dimension clinch nut and basket assembly that provides .020" minimum radial float. Because the nut is able to compensate for minor bolt hole misalignment in the component to be attached, production line techniques can be simpler and faster.

This very lightweight type NC4284 nut offers the electromechanical engineer new design opportunities in the assembly of electronic chassis, panels, cover plates and many other "packaging" applications. Due to its very narrow basket this fastener requires less flange width for installation than any other similar-purpose press or stake-in type part.

The retaining basket has a precisely knurled shank which standard ESNA punch and dolly tools firmly embed into aluminum or mild steel sheets, for maximum security against twist-out or push-out forces. The new fastener is easily installed in a drilled or punched hole using a regular drill or arbor press.

ESNA's exclusive red nylon locking insert gives this nut a consistent locking torque through more than 50 on-off cycles. It guarantees reliable fastener performance for assemblies that demand frequent disassembly for maintenance or inspection needs. Yet the smooth grip of the nylon collar will not flake cadmium plating from the bolts. The special formula nylon accepts temperature environments from -65°F to 350°F.

This new floating clinch nut is designed in carbon steel—in sizes No. 4, 6, 8, and 10. Each thread size is available in 2 shank lengths of .040" and .060" for flush installation in sheets of equivalent or greater thicknesses.

For complete specifications and installation instructions on new part NC4284 and many other lightweight avionic fasteners, write Dept. SS8-1057 for a copy of the new Aerospace Catalog No. 960.

NEWS

1 ft in free space. Antenna, atmospheric or Doppler problems that cause path lengths of the various spectral components to vary by 1 ft would cause loss of intelligence.

With division of the signal into 50 parallel channels, path-length variations of as much as 20 ft could be tolerated. This could be done by synchronizing 25 nsec after receiving the first transition. The interrogator in the receiver could be synchrolocked to the first transition to reclock the signals, though special sync codes or channels might be required. Because of reclocking of the signals, the 50-bit storage in the receiving system updates once each 50 nsec. This provides the digital-to-analog converters maximum time to settle.

Airborne Instruments expects that reconstruction of the analog waveform is simpler than the modulation process. Frequency multiplexing with independent detectors and common synchronization would be used. Each detector would decide if the transmission is a 0 or a 1 bit. The analog samples would be reconstructed in groups of 5 bits. To assemble the original 100-mc analog waveform, these samples would be parallel-gated, after stabilization, onto a delay line for parallel-to-serial conversion.

Although the number of components in the complete system would be large, the equipment could be small physically, Mr. Cohen believes. This is mainly because the repetitive nature of the circuitry lends itself to modularized microminiaturization.

None of the hardware has been built, although subsystems reportedly have been breadboarded in low-frequency versions.

Precision Elevator Drives Used For Hard-Based Atlas

Seventy-five precision adjustable-speed elevator drives for hard-based Atlas ICBM squadrons have been delivered to the Air Force.

The special drive controls, developed by General Electric Co.'s Industry Control Dept., Salem, Va., will raise each missile from its 160-ft-deep underground storage silo to surface firing position. The control will regulate elevator speed to within 1/2 of 1 per cent under any load conditions—a 20-to-1 improvement over former controls, GE reports.

Standard Resistor Measured By More Accurate Method

The measurement of the primary standard of resistance has been improved by the National Bureau of Standards.

The new method, making use of a capacitor of very accurately known dimensions, replaces inductive techniques used in the past. The new measurement indicates that the value of the NBS unit resistance is 1.0000003 ohms with estimated error of 2.1 parts per million. The estimated error was based on uncertainty in measurements and allowances for known sources of possible systematic errors other than the speed of light, which was assumed to be 2.997925 \times 10^{10} \text{ cm/sec}.

Dimensions of a cross capacitor made of gage blocks were used to compute the resistance in electrostatic units. The value of the speed of light was used to convert this to electromagnetic units.

Shielded 3-Terminal Components Used in Frequency-Dependent Bridge

The measurements were made with a new type of frequency-dependent bridge using completely shielded three-terminal components. The computable impedance of the cross capacitor at a known frequency was compared with the standard to obtain the new value.

The new value is within a few parts per million of the value obtained from previous inductance-type methods. Aside from greater accuracy, the new technique is simpler than previous ones.

An NBS group under R. D. Cutkosky performed measurements by the new method. The computable cross capacitor was developed by D. G. Lampard and A. M. Thompson.

Frequency-dependent bridge, using completely shielded three-terminal components, is set up for making the measurement of the standard resistor by comparison with the calculated impedance of the capacitor at a known frequency.

Functionalism and esthetics have been mated to stunning effect in many electronic consumer products. This happy union was recognized in the selection of 15 U.S. industrial designs for an international exhibition in Venice, Italy. The exhibits (all photographic) will tour European capitals. The U.S. designs were chosen from nearly 300 entries submitted by members of the American Society of Industrial Designers and the Industrial Designers Institute. Some entries are shown here.
1. Reservation keyset for United Air Lines, designed by Laird Covey, Monroe, Conn., for Teleregister Corp., Stamford, Conn.
2. Burrows moisture recorder, designed by Latbam, Tyler, Jensen, Chicago, for Burrows Equipment Co., Evanston, Ill.
4. Control panel of the Ampex FR-600 magnetic tape recorder/reproducer, designed by Frank T. Walsh and F. Arden Farey of the Instrumentation Div. of Ampex Corp., Hicksville, L. I., N. Y.
5. IBM 7302 core storage unit, designed by C. F. Graser, industrial-design manager, and staff for the Data Systems Div., International Business Machines Corp., White Plains, N. Y.
6. AM/FM radio cabinet, designed by Bronislaw Kapolski for Westinghouse Corp's TV-Radio Div., Metuchen, N. J.

1/4" multiplied by the number of capacitors used on your circuit boards is the amount of space you can save by substituting "VY" Axial-Radial Capacitors for the axial units you may now be using. Leads are inboard the body in radial configuration, yet may be moved to a straight axial position when required. Available in four sizes, 0.5 to 5600 muf. 300 and 500 v ratings.

"Assuming minimum allowance of 1/4" for lead bend at each end of body for axial capacitors

High-Volume Production Of Thin-Film Devices Sought

High-volume production of thin-film devices for experimental Navy electronic systems is in the planning stage.

Under development at Federal Systems Div. of International Business Machines, Inc., Rockville, Md., the equipment will be used for missile-guidance, satellite electronics, communication devices and computing equipment, where savings in weight, space and power are vital.

The new system will be produced with technical guidance from the Naval Avionics Facility, Indianapolis (NAFI), as part of the Bureau of Naval Weapons’ industrial-readiness program.

By combining advances in thin-film technology, controls, gages and monitors into an integrated design, Navy and IBM engineers are developing a precise manufacturing system for continuous vacuum deposition. Thin-film circuits on wafers would be produced continuously at the rate of over 200 sq in. of film electronics per hr, many times faster than previous laboratory methods. The flexibility of the pilot production-line design will allow the fabrication of a variety of electronic devices using combinations of resistive, capacitive, inductive, magnetic or cryogenic film components.

Deposition Takes Place In Four Vacuum Chambers

Basically, the equipment would consist of four vacuum chambers. Access to these chambers is provided by airlocks. Substrates loaded into one end will be carried by a transport mechanism from chamber to chamber. In each chamber, a stencil-like mask will be fitted automatically over the substrate. Then, sensitive controls start the vaporization of the material to be deposited, and maintain its flow at the desired rate. The thickness is automatically controlled.

The four chambers could be separated and operated for batch fabrication. The chemically inert high-vacuum process was chosen to assure purity, reproducibility and uniformity.

The Navy will utilize this new facility to...
evaluate thin-film technologies on a pilot production basis before specifying their use by industry in naval weapons. Additional experimental manufacturing facilities are planned for the Navy as technologies evolve.

Moon-Probe Manipulator To Be Remote-Controlled

A remotely controlled manipulator, designed to operate on the surface of the moon, has been introduced into the broad program of space exploration.

The lunar manipulator, developed by General Mills, Minneapolis, Minn., will be used to investigate problems and techniques in manipulation of remote equipment on the moon. Once on the moon, the manipulator would be controlled from earth by radio signals, the company says. The first experimental manipulator is designed to handle a TV camera.

Subsequent units may perform such tasks as picking up and helping to analyze samples of the moon’s crust. Future manipulators might be used for both external and internal repair of satellites, the company predicts.

As supplier of the lunar manipulator, General Mills is subcontractor to the California Institute of Technology Jet Propulsion Laboratory, prime contractor to the National Aeronautics and Space Administration.

Unmanned NASA vehicle, as it might appear after a landing on the moon, is shown in artist’s concept. General Mills’ lunar manipulator holds TV camera high as it scans surrounding area.
WASHINGTON REPORT

SENATORS DENOUNCE ELECTRONIC RESEARCH WASTE

The Senate's Government Operations Reorganization Subcommittee has confirmed what many electronic researchers, designers and developers knew already: Working on federally supported programs, they have a frustrating time-and-money-wasting job trying to discover what someone else has done or is doing.

Lack of adequate government scientific information for electronics alone is costing the taxpayers $200,000,000 a year, or about a tenth of all federal funds spent in the field, the subcommittee concluded. Chairman Hubert H. Humphrey (D., Minn.), who also is his party's whip in the Senate, called the situation shocking.

Sen. Humphrey urged the White House to issue a "top policy mandate" for "effective and efficient information management." He said quick and decisive action was needed to stop "unwitting, needless duplication of effort" in the electronics field.

"Innumerable scientists and engineers state that it takes less time to perform research than it takes to try and find out if the research has already been performed," Sen. Humphrey complained. "The overall fact is that the federal government today has no coordinated program of science information in electronics—or, for that matter, in virtually any other scientific area."

Meanwhile, the Extent of Government Financing of private and industrial research and development was pointed out by the National Science Foundation. It reported a total outlay of about $10.5 billion in 1960 and said $6.1 billion—58 per cent—represented federal funds. The explosive growth of R&D was shown in a science foundation comparison of 1960 with 1953, when the outlay totaled $3.6 billion and the federal financing share was 34 per cent.

"This largely reflects the federal government's increased utilization of industrial laboratories and facilities for the conduct of R&D projects related to national security and welfare," the report said.

WHITE HOUSE SEEKS TO ALLAY WEST FORD FEARS

President Kennedy's Science Advisory Committee says it is convinced that Project West Ford will not impair astronomical observations or prove harmful to astronauts, as the Soviet Union fears (See ED, Oct. 11, p 21).

Project West Ford, an Air Force communications test involving 75 lb of hair-like satellite-released dipoles, has aroused the scientific community and Russia's space administrators.

A special Science Advisory Committee panel, headed by Princeton's Dr. John W. Tukey, said: "We are convinced that this experiment will not impair our ability to study the skies—either by visible or ultraviolet light or by the reception of radio signals. We also are convinced that it will offer no additional hazard to manned space flight."

ELECTRONIC DESIGN • October 25, 1961
The President's advisers ticked off these "technical facts":
- "At least 100,000 times as many dipoles would be required either to affect radio measurements by absorption or deflection of incoming signals."
- Only "a weak source of interference, localized both in space and in frequency," will be produced by "illumination of the belt by a powerful ground transmitter in the course of the experiment."
- Unaffected will be ground observations—"visual, photographic or photoelectric."
- Manned or unmanned spaceships will be safe so long as they are "adequately protected against the small particles (micrometeriorites) which naturally exist around the earth." These safeguards will do for West Ford filaments, too—"no matter what orbit the spacecraft uses."

**Technical Footnotes to the White House Report** came from Irwin I. Shapiro and Harrison M. Jones of the Massachusetts Institute of Technology, which has charge of the government's venture. Writing in *Science*, a publication of the American Association for the Advancement of Science, they said the copper strands will be spread in a belt 2,300 miles above the earth's surface to reflect radio waves at 8,000 mc. They concluded that the experimental lifetime of the belt will be about two years, that the dipoles will be forced by the sun's rays into the earth's atmosphere and fiery disintegration in about seven years.

**'FIRE PLAN' CONTRACT JANGLES COLD-WAR NERVES**

The Sparton Corp. threw some Washington newsmen into a brief tizzy with the recent announcement that its Jackson, Mich., electronics division was working on a $14,500,000 Navy contract for sonobuoys.

In a paragraph that was blacked out (but still legible) the announcement said production of the anti-submarine devices was being rushed "under the emergency 'Fire Plan'" put into operation by the Navy.

The newsmen hurriedly queried the Pentagon on this previously unreported crash-project crisis. Eventually, they got their explanation: no new emergency, no fire-when-ready orders to crews of planes that drop sonobuoys at sea; the "Fire Plan," said the Pentagon, simply was intra-office slang for work under the third 1961 supplemental appropriation by Congress for Navy contracts.

**RESEARCHERS RATE TRENDS, PRIORITIES**

The Defense Dept. has polled 49 electronics research leaders on the question: which trends in electronics research have the greatest significance to the military or the national economy and why? The consensus: Research in communications and command-control rates higher priority than component-reliability research. Verbatim but unsigned poll replies are detailed in a 95-page report on the project, available for $2.25 from the Commerce Dept.'s Office of Technical Services. The title: "Important Areas of Electronic Research."

**CAPITAL CAPSULES**

The Logistics Management Institute is being organized by Secretary of Defense Robert S. McNamara as a nonprofit fact-finding organization to improve Pentagon procurement practices.

The Air Force has formed the Council of Air Scientists, under Dr. Leonard S. Sheingold, as the nucleus of a pool of military and civilian consultants for coordination of technical projects.

---

**CUSTOM PACKAGING IS NO NOVELTY AT SPRAGUE'S SPECIAL PRODUCTS DIVISION**

★ Sprague Electric Company's SPECIAL PRODUCTS DIVISION was founded originally to meet the electronic industry's needs for reliable packaged assemblies and subassemblies.

★ Sprague has developed and produced packages with countless variations in electrical characteristics and mechanical configurations, in all shapes and sizes, with and without semiconductors, as wiring boards, in encapsulated cases, in cast blocks, in hermetically-sealed packages.

★ In Sprague packaged assemblies, internal components are connected by soldering, welding, wire-wrapping, or printed wiring techniques.

★ Sprague versatility offers several basic types of construction, including molded cellular, high-density "cordwood", and molded multiple-circuit construction, permitting densities in excess of 200,000 standard components per cu. ft.

★ For application engineering assistance without obligation, write or call the Special Products Division, Sprague Electric Company, 347 Union Street, North Adams, Massachusetts.
NEW TAPES TAME DESTRUCTIVE HEAD-HEAT COMPLEX

Scotch® BRAND Heavy Duty Instrumentation Tapes take new speed and friction tensions in stride!

Today's trend to speed-up in the recording of instrumentation data—with tape speeds up to 120 inches per second—can mean "Slow Down, Trouble Ahead!" for tapes that can't cope. On the other hand, "Scotch" BRAND Heavy Duty Tapes love to live dangerously—are made for challenging environments where tape speeds are fast and getting faster, where instantaneous temperatures caused by friction between tape and head shoot up. Two new "Scotch" Tapes—Heavy Duty Tapes 498 and 499—are especially designed for applications where ordinary tapes soon wear out.

They live 15 lives. Actual field tests show that "Scotch" BRAND Heavy Duty Tapes last 15 times as long as standard tapes ... sturdily resist high temperatures, both externally and internally generated. In instrumentation uses, where tensions caused by friction and heat make tape wear an important factor, these Heavy Duty Tapes preserve the integrity of the coating, minimize rub-off and particle redistribution that separate tape from head ... and you from a signal.

When the heat's on for ordinary tape (above 150°F.), the binder softens and coating loosens from backing. Then the dropout count mounts. Not so with "Scotch" Heavy Duty Tapes! They cool withstand the damaging effects of temperatures up to 250°F., without blocking or layer-to-layer adhesion. And excellent resolution is maintained at high and low frequencies.

High conductivity is another feature of "Scotch" Heavy Duty Tapes ... nearly 1000 times that of conventional tapes! Static charges drain off without building up ... you get a smooth, clean tape pass every time, with excellent resolution. This efficient static drain-off makes stray contamination less likely to be attracted to the tape.

At tape-killing temperatures—speeds, tensions, temperatures—we suggest you consider these heavy-duty champions of the tape world: No. 498 and (for extra recording time) No. 499. And for all your needs—in data acquisition, reduction, or control—there is a right "Scotch" BRAND tape for the job.

Call your 3M Representative in all major cities ... he's a helpful guy, a convenient source of supply and information. Consult him for details or write: Magnetic Products Div., 3M Co., St. Paul, Minn.

SCOTCH® and the Plaid Design are registered trademarks of 3M Company.

Hayden Acquires Book, Magazine Publishers

The Hayden Publishing Co., Inc., has acquired control of the Ahrens Publishing Co., New York City, a business-magazine concern specializing in the hotel and restaurant field.

Ahrens, together with the recently acquired John F. Rider, Publisher, Inc., will operate as a separate division of Hayden, according to a statement by Hayden's board chairman, T. Richard Gascoigne, and president, James S. Mulholland, Jr.

John F. Rider will continue as president of the technical-book publishing company he founded. Don Nichols, board chairman; Charles F. Loeffel, board vice chairman; and John C. Cadle, president, will retain their posts with Ahrens.

The acquisition of Ahrens "marks a major step in the diversification of Hayden, providing a full-fledged entry into the merchandising area of business-paper publication," Messrs. Gascoigne and Mulholland said. "We are particularly fortunate in the fact that continuity of Ahrens' management will permit the accelerated development of plans and projects already underway."

High-Temperature Glass Used to Seal Diodes

High-temperature glass sealing of silicon-diode sheets has been achieved with a technique that may provide hermetically-sealed semiconductor devices without the use of cans.

The method is adaptable to volume production and tests indicate that excellent surface protection is provided.

The glass-sealing process, developed by International Business Machines Corp.'s Components Div., Poughkeepsie, N. Y., begins with the formation of a silicon-dioxide surface on a silicon wafer, which has been conventionally masked and diffused. Then a powdered, chemically resistant glass—
Glass seals, fired at temperatures of about 845 C, are said by IBM researchers to withstand severe testing as well as or better than semiconductor seals provided by conventional transistor cans. Several hundred diodes on the silicon sheet shown here can be cut apart ultrasonically without breaking the seals over junction areas, thus promising volume production of devices using these seals.

such as Pyrex, which has a coefficient of thermal expansion about equal to that of silicon—is applied to the oxidized surface. The glass then is chemically fused to the oxide surface by heating to about 845 C. Yields of 95 to 100 per cent were achieved, according to IBM, using an oxide thickness of 5,000 A and glass thickness of 3 microns, with firing time of 10 min.

Individual devices are cut apart with an ultrasonic cutter, and leads are attached through small holes etched through the glass and oxide coating.

Individual planar-diffused diodes made by this technique were subjected to various tests, including the conventional Mil 1-202A and much more severe types. In the military tests the devices were cycled between 25 and 65 C while 80 to 95 relative humidity was maintained. No devices failed in five months. Diodes tested under 20 v reverse bias and similar environmental conditions did not show any changes after two months of testing, according to IBM researchers.

A report on the sealing process was made by J. A. Perri, H. S. Lehman, W. A. Pliskin and J. Riseman of IBM's Components Div. at the recent Electrochemical Society Semiconductor Symposium in Detroit.

New low-cost Transient Control makes silicon rectifiers reliable by clipping voltage spikes

The new Ledex Transient Control guarantees positive dependability of 200 PIV silicon rectifiers. It's a non-polarized device that automatically clips voltage spikes by providing a low resistance shunt for all potentials above 200 volts—on the AC or DC side. It draws no current in normal operation.

As shown in the actual scope shots above, the control will repeatedly clip transients or reverse voltages to a safe level of 200. To the design engineer, it is a guarantee that the maximum voltage will go no higher than 200. Compact, light, and economical, the new development puts low-cost 200 PIV diodes in a reliability class of their own.

While the device is mainly intended for protection of 115 VAC silicon rectifier circuits, it can also be designed to clip spikes and protect other semiconductor circuits at lower or higher control voltages.

□ NEW LEDEX TRANSIENT CONTROL is small (3/4" dia. by 1 1/4" long), lightweight (7/8 oz.) low cost ($1.60 to $2.05 in small quantities). Part No. A-46800-001 has 200 volt control and 2" leads.

□ VALUE ANALYSIS RECTIFIER TRANSIENT CONTROL KIT consists of Transient Control, Silicon Rectifier with built-in Control and outline for evaluation tests to compare costs and reliability with your present circuits. Part No. A-47609-001. $11.00 per kit.

Other Ledex products are ready to go to work as compact solutions to your actuating, stepping or circuit switching applications.

FOR LITERATURE, clip this ad, check boxes above, attach to your letterhead and mail to Ledex Inc., Dayton 2, Ohio; Marsland Engineering, Ltd., Kitchener, Ont.; NSF Ltd., 31 Alfred Place, London, Eng.; AEMGP, 115 Ave. Clement, Boulogne, France.

□ PAT. PENDING

□ NEW LEDEX SILICON BRIDGE RECTIFIER is protected by a built-in Ledex Transient Control. Voltage spikes are automatically clipped at 200. The rectifier is sealed in epoxy resin and meets the general requirements of MIL-E-5400 on insulation, terminals, vibration, shock, sand and dust, fungus and salt atmosphere. Operating temperature is -65°C to +120°C. Part No. A-46501-001 is rated as follows: 115 volt AC input, 100 volt DC output, maximum surge 50 amp for 8 msec. $6.80 to $8.15 in small quantities.

4 MAJOR DIGITAL VOLTMETER ADVANCEMENTS FROM NLS

Now Make 15,000 Highly Accurate DC Measurements/Sec... Measure VDC-Ratio-Ohms to Full 5 Digits... Buy a Quality DVM or Ohmmeter for $1,460... Use Digital Voltmeters in Go/No-Go Testing

**MODEL 15 A/D CONVERTER** — 4-digit instrument bringing high accuracy to high-speed measuring and data logging... 15,000 measurements/sec... accuracy: ±0.01% ± 1 digit from 0 to full scale from 0 to 40°C... any range from ±1 to ±100 v. full scale... true bipolar digital output, high output current, uses internal or external clock... constant input impedance. Price: $6,985.

**M25 5-DIGIT VOLT-RATIO-OHMMEETER** — ultra-reliable instrument measuring DC volts, DC ratio and ohms with full 5-digit resolution of 0.001% and accuracy of ±0.01% of reading ±1 digit over entire range of ±0.001 to ±999.99 v. and .1 ohm to 1 meg... 10 to 1000 meg input... twice speed of fastest stepping switch DVMs... advanced transistor circuitry with ultra-reliable mercury relays with 171 years life expectancy... input filter... remotely programmable... fully automatic... data logging output... AC or low-level DC with accessories. Price: $5,685.

**484A DIGITAL VOLTMETER-RATIOMETER** — most versatile and highest quality instrument at low cost... measures ±0.001 to ±999.9 VDC and DC ratio up to ±99.99x... ±0.01% accuracy... 10 meg input... auto range and polarity... input filter... built-in auto print control... only a few dollars more than cheapest DVMs without such quality features as plug-in stepping switches that can be replaced in seconds for troubleshooting, snap-out readout, wire-wound resistors, epoxy fiberglass circuit boards... measures AC or low-level DC with accessories. Price: $1,460.

**784 DIGITAL OHMMETER** — for precise measuring and logging at low cost... same high quality features as 484A... measures 0.1 ohm to 10 megs with accuracy of ±0.03% ± 1 digit (±0.1% of reading above 5 megs)... auto ranging and auto control for data logging. Price: $1,460.

**MODELS 54, 54A, 55, 55A DIGITAL COMPARATORS** — for go/no-go testing, plug these into any NLS instrument having printer connection... limits set by BCD coded voltages, contact closures, or front panel knobs... each limit can be on any range and of either + or − polarity... signals TOO HIGH, TOO LOW, or OK to recording and control devices. Price: $2,035 to $2,935.

**PERT 7070 Program Packet Offered Free to Industry**

A free program packet is being offered to potential users of a management scheduling and control program.

Collins Radio Co., Dallas, Tex., developers of a PERT (Program Evaluation and Review Technique) is offering the packet, which describes the IBM 7070 computer program. The packet includes a program deck, flow charts, logic diagrams and a description of the company's system.

For the past six months, Collins has been perfecting its use of PERT programming techniques in commercial as well as government contractual work. Developed by the Navy, PERT is said to be particularly effective for the planning and control of complex research and development programs.

Those interested in obtaining copies of the 7070 and 1401 PERT programs should contact Collins' Communication and Data Systems Div., Cedar Rapids, Iowa.

HIGH VOLTAGE SILICON CARTRIDGE RECTIFIERS

Each of the two series of Tarzian Silicon Cartridge Rectifiers shown below includes 18 different types with operating temperatures ranging from —55°C to 150°C ambient. Both the ferrule mounted series and the axial lead series feature low voltage drop and low reverse current. Tarzian High Voltage Cartridges are manufactured to meet standard JEDEC classifications.

**FERRULE MOUNTED SERIES**—This high voltage series is equipped with a ferrule type mounting of silver plated brass and is available in both hermetically sealed glass or phenolic tubing in voltages ranging from 1000 to 10,000 peak inverse volts.

**AXIAL LEAD SERIES**—This high voltage series is available in units ranging in size from 1/8" to 1/4" and lead lengths varying from 1" to 2 1/2". Peak inverse voltage ratings are available from 1500 to 16,000 volts.

---

**TUBE REPLACEMENT SILICON RECTIFIERS**

Tarzian tube replacement rectifiers, in addition to being directly interchangeable with over 95% of all popular vacuum tube rectifiers, are smaller, more compact, and carry DC current ratings as much as three times as great as the tubes they replace. They have proved highly satisfactory in applications requiring high efficiency, long life, rugged construction and wide temperature ranges.

Tarzian solid state rectifiers are available in ten standard models, with special designs and modifications on request. Special tube replacement units designed by Tarzian engineers include special designs with peak inverse voltages to 19,000 volts.

---

**MODULAR SILICON RECTIFIERS**

Modular Silicon Rectifiers can be used individually—as open bridges—or in a variety of circuit combinations, and are designed for printed circuits on terminal strips. Each of the units illustrated and tabulated below is only one of a series of six in the 18-unit Tarzian line.

---

When ordering phenolic tubing as a substitute for glass tubing, add the letter "P" to S.T. Type No.

*Derate 50% for capacitive load in half wave circuits. For capacitive motor, or battery loads, derate DC current by 20%.

*For capacitive loads derate input voltage 50%, and current 20%.
The full line of constant voltage devices tabulated here are used to control output voltage of power sources and as voltage reference elements capable of operating over a wide temperature range. Hermetic sealing and mechanical ruggedness provide long term reliability even under the most adverse conditions. These three power classifications cover a wide range of applications. The regulators also are available in production quantities. Call your nearest Tarzian representative for application assistance.
**NBS Peru Installation to Use Scatter Radar In Space Study**

An installation for ground-based explorations of the upper atmosphere and outer space is being constructed 17 miles east of Lima, Peru. The facility, called the Jicamarca Observatory, is being built by the National Bureau of Standards Laboratories, Boulder, Colo. and the Instituto Geofisico de Huancayo, Peru. The observatory will have a 6-mw pulse transmitter and a 22-acre antenna with 9,216 crossed dipoles mounted 6 ft above a reflecting ground screen.

The antenna will transmit a pulse lasting from 50 to 1,500 µsec. When switched to receiving, it will detect the faint re-radiation of the pulsed radio wave by free electrons in the upper atmosphere.

This scatter-radar technique was developed by K. L. Bowles of the Bureau's Central Radio Propagation Laboratory. The observatory will be used in the measurement of electron densities at heights from 60 to 1,860 miles; the kinetic temperature of the ions at 125 to 1,860 miles; the percentage composition of major ionic components, 125 to 435 miles and 744 to 1,116 miles; and the intensity of the earth's magnetic field.

It also will be used in observations of radar echoes from the sun's corona and from solar gas clouds emitted by solar disturbances; in studies of small-scale irregularities in the outer atmosphere and in studies of the D-region of the ionosphere. Other applications include the calibration of satellite instrumentation.

---

**Causes of failure designed away, to give greater reliability in miniature electrolytic capacitors**

Here are inside facts on the better materials, designs and production techniques which give improved reliability and performance to **iei** capacitors.

1. **No external butt welds.** Leads are flattened, lap-welded to foil terminations, then surrounded by a tough resin that helps absorb strains on the welded connections. Negative leads of polar units are securely soldered to the metal case which hermetically seals the case end.

   Use of soldered and lap-welded connections results in lower ESR (equivalent series resistance) and lower DF (dissipation factor).

2. **Superior etching permits smaller units.** Greater active area without weak spots, permitting smaller size capacitors or larger engineering margins.

3. **Clean-cut foil edges withstand vibration.** No microscopic burrs or slivers to shake loose and short against the case or adjacent turns.

4. **Long-life seal.** Made by compression of flexible bushing. For increased mechanical strength, an outer seal of tough resin is added.

5. **Tighter packed foil.** Allows further miniaturization and maintains high reliability without sacrifice of voltage ratings.

---

**iei** offers full polar, partial polar and non-polar construction in aluminum foil, 85° and 125° tantalum foil. Tantalum wet slug and solid tantalum types in polar only.

For technical specifications, request Forms 2773 and 2745.

CENTRALAB

"TWO-DIMENSIONAL"

PEC

TRIMMER RESISTORS

AS SMALL AS

1/4" x 1/4"

WITH VIRTUALLY NO DEPTH!

All the adjustment you need—in a fraction of space, at a fraction the cost—for military or commercial applications.

These versatile ceramic base units are available as single or multiple trimmers. Fixed resistors can be included on multiple units—either associated with, or independent of the trimmer circuitry, through the flexibility of the PEC technique. They can be supplied in all standard resistance values.

MICRO-MINIATURE (SERIES 3)

Single trimmer measures only 0.250" square, 0.100" deep, rated at .05 watts at 70° C. Multiple trimmers can include up to 5 fixed resistors, depending upon value and voltage rating.

SUB-MINIATURE (SERIES 4)

Single trimmer measures only 0.406" x 0.438" x 0.125", rated at 0.1 watts at 70° C. Triple trimmers can include up to 8 fixed resistors, depending on value and voltage rating.

MINIATURE (SERIES 5)

Single trimmer measures 3/64" x 3/64" x 1/8", Rated at 1/4 watt at 70° C. Available with leads, solder or wirewrap terminals, in a wide range of mounting styles for modern production techniques. One to four variable resistor elements and up to 12 fixed resistors on a single plate. Knob permits adjustment by finger tip, internal or external hex wrench, or screwdriver.

For additional information on these units write for Centralab Engineering Bulletin 42-1216.

NEWS

Planar Transistor Has Current Gain at 1 Pa

A developmental double-diffused planar silicon transistor with a 0.6-micron-thick base region has significant current gain at 1 pa and 1 v, according to CBS Laboratories, Stamford, Conn.

CBS has built and demonstrated models of the microwatt transistor and says it is completing design of a production version.

According to the company, the developmental transistor has a large beta (around 10); a reasonable alpha (above 0.9 at 1 µa collector current); insignificant leakage current, in the millimicroampere range; and can take up to 100 mw. Its speed in a working circuit, however, is relatively slow.

This is said to be not a result of its cutoff frequency but of the load resistance and capacity characteristics of circuitry able to take advantage of the transistor's low power requirements and heat dissipation.

Company engineers say the transistor probably could never be made to operate at above 100 kc; present versions have been used at about 1 kc.

To demonstrate the device, CBS has developed 2- and 4-bit shift registers, multivibrators and other basic computer circuitry. The device is intended for use in computing

Microwatt planar transistor enables shift register to operate on power consumption of only 1.5 µw per bit. Shown is one stage of a multi-stage register developed by CBS Laboratories for its new transistor.
systems where low power and heat requirements, rather than high speeds, are important, the company says. The transistor was developed with the partial support of the Signal Corps.

The CBS shift registers use four transistors per bit and require 1.5 μw per bit; the basic design can be cascaded to 40 bits, CBS says. The multivibrator consumes 3 μa for three transistors using a 1-v supply voltage.

Another application mentioned for the device is special medical electronic circuitry where electric power, rather than output power, is the key requirement.

CBS says it has made design studies of a billion-circuit computer in which its transistor could be used to hold heat dissipation to feasible amounts.

2-Man Sub for Research

This is an artist's rendition of Seapup VI, a two-man research submarine developed by General Mills, Minneapolis. The craft is powered by 16 batteries of 12 v each, can hover at any depth up to 6,000 ft or can touch bottom on ski-type skis. Electro-mechanical arms would perform research tasks. The craft has a low weight-in-air (12,600 lb) and could remain submerged for 12 hr, the company said. Seapup has its own air-regeneration system and can carry a payload of 200 lb besides the occupants, according to the company.

Accuracy Is Our Policy

A number of errors crept into the "Spectrum Analysis Error Nomogram" which appeared in ED, June 7, 1961. The nomogram should be corrected by halving the values on the B scale. Thus, 0.5 cps should be 0.25, 2 cps should be 1 cps, etc.

In Example 1, the answer should be 3.3 per cent, rather than 4.8 per cent. In Example 2, the answer is 1.25 sec, rather than 2.4 sec.

Now, with one instrument, you can instantly measure 1 mv at 1,000 mc! or any rf voltage 1 mv to 10 v, from 500 KC to 1,000 MC. Measuring is as simple as "touch and read;" resolution is high, thermal drift errors are virtually eliminated!

Now, easily and dependably and with utmost accuracy, you can measure millivolts at rf frequencies — and on one simple-to-use instrument, 411A Voltmeter. This remarkable instrument has true linear operation (no correcting networks) and readings are presented on a large, mirror-backed linear meter. Temperature stability is such that there is virtually no change from 10° to 40° C.

Specifications alongside indicate basic features of this important new, time-saving instrument. Other special features include (a) matched diodes protected against burnout (b) probe temperature compensated for low drift (c) amplifier photochopper eliminating contact noise, guaranteeing high sensitivity and zero-drift freedom (d) extra probe tips available including a 500 KC to 250 MC tip; 100:1 Capacity Divider tip, and Type N Tee tip for coax use to 1,000 MC.

Why tolerate a complex, cumbersome voltmeter. Get a new 411A into action on your bench now!

HEWLETT-PACKARD COMPANY

HEWLETT-PACKARD S.A.
Rue du Vieux Billard No. 1, Geneva, Switzerland
Cable "HEWPACKSA" Tel. No. (022) 26.43.30
Optical Space Radar To Be CW
Sperry's Doppler System for Air Force
Based on Electro-Optical UHF Modulator

A CONTINUOUS-WAVE optical radar for use in space is being developed for the Air Force by Sperry Gyroscope Co., Great Neck, N. Y. The classified project is believed to have been made possible by development at Sperry of a light modulator that operates at microwave frequencies. The modulator will be used with a continuous gaseous optical maser to make a Doppler radar for ranging.

The company reports it has built, and is operating, several light modulators based on the Pockels electro-optical effect. The Pockels effect is similar to the Kerr effect, but uses a solid crystal, rather than a liquid cell. In the Sperry modulators, a crystal of ammonium dihydrogen phosphate (ADP) is fixed in a microwave cavity, which is operating at its resonant frequency and has a light polarizer at each end.

While an electric field is impressed across it in the proper direction, the crystal is able to rotate the polarization vectors of light passing through it as a function of the field strength. Therefore, light polarized by the input flat is turned enough to be passed by the analyzing polarizer.

The light's intensity varies with that of the impressed microwave field. A peak voltage across the crystal gives maximum rotation of the light beam, which must be highly collimated for the effect to occur.

Typical operating parameters of the 0.75-x-3.5-in. modulator are reported to be: cavity resonance frequency, 850 mc; bandwidth, 2 mc; modulation factor, 30 per cent. These figures are for operation at 25 C with a power input of 8 w at 50 ohm and an effective aperture of 0.25 in.

One version, operated at extinction at a resonant frequency of 1 Ge in a frequency-doubling mode, provid-
ed a modulation frequency of 2 Gc. However, the company reports, the higher frequencies cause severe heat problems and reduce modulation efficiency. Sperry engineers are studying methods of cooling the modulators to raise their efficiency, which would be greatest at or near the curie point of ADP—about 140 K.

Range of parameters, either achieved or expected, for the modulators built at Sperry are: frequency, 500-2,000 mc; bandwidth, 1-10 mc; beam aperture, 0.25-1 in.; driving power, 2-10 w.

The company says it has not pushed high-frequency systems because of the lack of detectors for frequencies above several gigacycles. Similar Pockels-effect modulators, designed for high-frequency operation, at Bell Telephone Laboratories, Holmdel, N. J., and at Harvard University, Cambridge, Mass., have achieved X-band frequencies, but with pulsing.

Light-Modulation Detector
Designed For 1 Gc Frequency

If detection methods for frequencies above the present limits were available, Sperry says it would broaden its program because of an interest in optical communication systems. The company reports it has developed efficient techniques for detecting modulation of light at frequencies as high as 1 Gc by using mixing and modified photomultiplier tubes.

Sperry is building a cw gaseous optical maser, which it expects to have in operation by the end of the year. At that time it plans to try to modulate the laser’s light with its modulators as a step in the development of the cw doppler radar. Optical masers, which naturally provide extremely narrow, collimated beams, can be designed to give plane polarized light.

In addition to application in doppler radars and pulsed optical radars, which the company also is studying, Sperry modulators are expected to be used in laboratories as controlled-light sources for measuring response in photomultiplier tubes and for measuring relaxation times of optical masers. The modulators also could be used for measuring the velocity of light.

While answering quality control’s demand for inherent stability, Dale resistors also meet production’s need for easy assembly.

Conveniently packaged Dale resistors are available in a wide variety of sizes and terminations to fit every circuit. Meanwhile, inherent stability is assured through Dale’s advanced design and stringently controlled methods of manufacture—methods which are at new levels of achievement as part of Dale’s super-high reliability development program.

SPECIAL PROBLEMS? Let us help you with your requirements for special resistance problems. We make modifications of standard products, resistor networks, matched pairs, etc. Send us your specs.

PROMPT DELIVERY. Whether your need is for a short “test run” or a large production release, Dale offers prompt service, direct from the factory and through a widespread network of distributors.

FOR MISSILES
AND JET AIRCRAFT

Here's an opportunity to lower costs and at the same time improve the performance of your electronic products or equipment by using Edison Model 250 Miniature Time Delay Relays. An exceptionally rigid internal construction permits this relay to withstand vibration to 1500 cps for jet aircraft and missile applications while providing highly reliable performance. Since the operating structure of the relay is independent of the outer shell, damage or deformation of the latter does not affect the timing. The fast rate of contact closure insures positive contact operation under the most severe environmental conditions. These permanently calibrated and hermetically sealed relays are available in a wide range of time delays and operating voltages to meet your particular application requirements. Whether you need time delay relays for tube protection, gyro-erection or for other purposes, you will get better performance at lowest cost with Edison relays. Write for Bulletin 3046 showing timing ranges and operating performance or send your special requirements to:

Electrolytic Cell Compensates For Mass Shift in Gyros

A new device for electrically providing compensating torque to keep precision gyroscopes in balance uses an electrolytic deposition technique.

The device is an electrolytic cell with two equal masses of metal aligned at opposite ends of a small glass electrolyte-filled cylinder. Metal can be removed from either side of the cylinder and plated on the other side by the action of dc current of any waveform. Polarity of the current determines the direction of plating. The resultant shift in mass provides compensating torque to balance the gyro.

Known as the Avcon Mass Shift Compensator, the device was developed to overcome the problem of the interaction of acceler-
tion and mass shift in precision gyrors. The effective mass of a gyro assembly sometimes moves off the spin axis due to minute shifts of balls in bearing raceways or small motions of ball retainers. Deformation can also result from stresses set up by angular motion.

With the use of mass-shift compensators gyrors do not have to be built to as great a precision as previously because of the compensation, according to Edward J. Mullarky, president of Avcon Corp., Scarsdale, N. Y., and inventor of the device.

Avcon is marketing mass-shift compensators that weigh 3 g and are 1-9/16 in. long and 0.25 in. in diam. They are designed for rigid mounting on gyro gimbals and operate on less than 1 mw power. They are capable of providing compensation up to \( \pm 10^{-6} \) g cm/sec to a total of 0.030 g cm.

**YIG Yields New Clues**

New insight into the properties of yttrium iron garnet (YIG) has been gained by two Bell Telephone Laboratories scientists, E. G. Spencer (left) and R. C. LeCraw report that they have measured what appears to be the inherent resonance linewidth of perfect YIG. They found that YIG has a sharper resonance peak than any other ferromagnetic material. This property could widen its use in microwave applications. The Bell scientists reported ferromagnetic resonance linewidths of only 0.14 oersteds at room temperature and 6,000 mc. The best ferrites, they said, have linewidths of about 5 oersteds.

---

**Super-Temp**

Super-Temp has the largest line of wire and cable, the best production facilities, and a nationwide network of engineering representatives ready to serve you at a moment's notice...good reasons to always specify Super-Temp.

For information on availability and prices of amazing new MGT wire and cable write, wire or phone...your inquiry will receive prompt attention.

---

**HOTTEST NEWS**

**in the industry**

Super-Temps new versatile wire and cable with an operating temperature of 1000°F...flexibility...moisture resistant properties is bringing a new high standard of quality to today's most demanding industries.

New design potentials with MGT are literally unlimited and new economies and more efficient operations are being obtained in present equipment.

MGT wires are ideally suited for incorporation in cables of single or multi-conductor constructions. Braided wide shielding of various metals including stainless steel can be used. Jackets of Glass Fiber Braids or other materials compatible with high temperature usage are obtainable.

Below is a test chart showing results from our own and other laboratories.
No hold at count-down
for resistors of

DOCUMENTED RELIABILITY

Now available in quantity ... the resistor reliability developed for Minuteman. New XLT resistor offers proven reliability. The allowed failure rate is 0.0004% / 1000 hours. And a failure is defined as any change of resistance greater than 0.5%.

With Documented Reliability, each XLT resistor has an individual punched data card carrying the complete production history of the unit. Subminiature, hermetically sealed, evaporated metal film XLT's are now available for all applications requiring ultrareliable resistors.

A new brochure, "Resistors with Documented Reliability," is now available. For your copy, write to International Resistance Company, Documented Reliability Dept., 401 No. Broad Street, Philadelphia 8, Pennsylvania.

CAPSULE SPECIFICATIONS

| Power Rating | 1/4 W at 125°C, derating to zero at 165°C |
| Tolerance | ±1% |
| Resistance range | 10 ohms to 100K ohms |
| Temperature coefficient | ±25 PPM/°C, ±50 PPM/-55° to 145°C, ±100 PPM/°C |
| Type | Evaporated metal film |
| Construction | Hermetically sealed glass, helium atmosphere |
| Leads | Weldable (gold-plated Dumet) |
| Body Length | .281 ± .030" |
| Body Diameter | .155 ± .015" |

When Reliability Counts Most
EDITORIAL

Keeping Your Head (If Not Ahead) In the Packaging Revolution

How can an electronics company make sure it is not left behind in the swirl of the “packaging revolution? How can it stay ahead while it continues to make the deliveries that contribute to today’s profits?

ELECTRONIC DESIGN’s editors combed the field for the answers, and present some of them in this issue’s staff report: “Interim” Packaging.

One of the solutions, we found, is to set aside a corner of the engineering laboratory for a packaging R&D group. The important consideration now is not the size of the group, but that the company is sufficiently alert to have one at all.

The functions of the packaging R&D team appear to be:
- To keep abreast of the rapidly advancing state of the packaging art.
- To work aggressively ahead, even if on a tentative basis, by making trial breadboards of advanced packages.
- To serve as a liaison center for vendors of the swelling stream of new packaging products, methods and services. (This means being in a position to take advantage of the “free” application engineering and consulting available.)

If this R&D group is to help the company, the rest of the organization must be alert to its existence.

The circuit designers, for example, should observe and criticize, and let their imaginations be stirred by the experimental packaging techniques.

The product engineers constantly should measure the new packaging “twists” against current designs of their packages.

The manufacturing department’s foremen should anticipate difficulties for their plant personnel in adapting the methods used by the R&D group.

Not only should a group of this sort encourage a natural phasing-in of improved methods, but it also should prepare the company for the day when it tackles its first bid on a “functional-block” system.

Not to have even one packaging R&D man in your plant is to court “liquidation” in the packaging revolution.

W/L on target! New METOHM line exceeds MIL-R-10509D

As a supplement to the unexcelled VITROHM resistors, Ward Leonard now offers to designers of commercial, military and industrial electronic equipment a line of molded metal film precision resistors, designed and tested to exceed the requirements of MIL-R-10509D, characteristics B, C and E. You can stake your reputation on Ward Leonard resistors.

Available in 1/8, 1/4 and 1/2 watt sizes, W/L METOHM precision resistors feature the highest degree of built-in reliability and operating stability. Temperature coefficients, over the range -55°C to +175°C, may be as low as ±25 parts per million. Standard tolerance ±1%. Tolerances down to ±0.1% on special order.

‘interim’ packaging

An ELECTRONIC DESIGN Staff Report

Robert H. Cushman
Technical Editor

Today's Production Methods Can Be Upgraded Progressively to Satisfy Tomorrow's Designs

If the shape of today's electronic packaging were as crystal clear as that predicted for the "functional-block" packaging of tomorrow, there would be no need for this report. Everybody knows that by 1965 (or at least by 2000) the universal method of physically realizing any electronic circuit or system will be splice together a program (from a library of tapes) that will automatically control a machine, which in turn will set each electron neatly in place. And all this will be accomplished at tremendous rates, untouched by any of those human hands that are causing so much trouble in electronic production today.

However, this report is concerned with the lot of present-day designers, caught in an interim trap: they can't ship anything that looks "old fashioned" but must still live with manufacturing departments which seem to have enough trouble with more conventional methods.

We asked: what is the best that can be done today . . . with today's manufacturing equipment, with today's manufacturing personnel, with today's value-analysis squeeze between reliability and cost?

We learned, as we hope the following pages show, that much can be done today to produce better electronic packages.

We found that what counts is not always that a company has found the very best packaging method, but that it follows through on the one it has.

We found that many companies are finding the answer to today's packaging turmoil in progressive schemes that allow them to keep producing while they integrate better methods into their production line. Progressive schemes are likely to have a key role as long as the turmoil persists.

Often, as in the case of the computer-development group at Bendix, this means deciding what element in the package can be frozen while another element is advanced. In the case of the group at Bendix, the motherboards, with their investment in multilayered printed-circuit layouts, were held constant while the modules were reduced in size on the one dimension that did not affect their pin connections to the motherboard. At the same time, the system was progressively miniaturized by mounting the motherboards closer together.

We found that those in nonmilitary fields who were not trying to imitate military packaging appeared to be coming up with ideas that were really better for them. Western Electric's Amplas is a good example of this. Also, we found those in analog areas who wisely were not trying to follow digital packaging.

The most impressive, yet practical, gains appeared to be from stepwise incorporation of new materials and methods with older ways, as well as new designs based on rearrangements of familiar methods. Then, too, we found some new methods that were actually easier than the old, familiar ones.

In general, we found that the trend continues to be a progressive doubling up of functions. The electrical-signal flow, mechanical-stress flow, and thermal-heat flow are being performed more and more by the same material and in the same space. The problem is that these three types of flow paths must not get in the way of circuit maintenance and must be capable of being broken at certain circuit levels for replacing faulty circuit units.

The improvements in packaging appear to be progressing from the extremities of the system to the spinal chord and system envelope container. That is, the modules appear to be better than
the means of interconnecting them; the means of interconnecting the modules into the subsystems seem better than the means of interconnecting these subsystems into the main system; and, often, at the bottom of the order of improvement, is the housing for the entire system.

At present there is every indication that the 19-in. relay track is the predominant main-system type of housing, but for mobile and other nonlaboratory systems there are signs that much more rugged over-all housings are on their way.

As for standardization, we found that the closer one gets to actual standardized systems, the less standardization one finds. As an example of this paradox, consider AMP's all-pervading answer to the interconnection problem—the MECA system. If MECA really were such an all-encompassing system, designers might shun it on principle, lest they find themselves turning to the East in unison—frozen to a master interconnection system.

However, when we visited AMP's application group and later talked to some of the users of this system, we were impressed with how little standardization there actually is once a customer gets involved with a specific application. It appeared that in each case the user, instead of treating the "master system" as a final answer, treated it rather as a guide, finding plenty of latitude within the system to develop his special order. No two modules observed appeared alike.

This report, of necessity, is disjointed. Our purpose is not to show all the good packaging methods that have emerged recently, but to sketch in enough of the good case histories so that engineers, discouraged by the packaging interim, can see that progress is being made.

Packaging Solutions From Engineering Projects

**Digital Packaging**  
An advanced computer-development group achieves a balance between today's modules and tomorrow's computer. Breadboarding with realistic, production-type modules increases the confidence factor in the new computer's final ability, but it means that the modules themselves must be progressively updated to keep the over-all computer competitive.

**Analog Packaging**  
Typically, a special-purpose analog package cannot use the finely divided, highly standardized modular approach of digital packages. Instead, it should go its own way; in this case the project finds that a rather complicated over-all envelope buys simplicity.

Packaging Solutions From User-Conscious Suppliers

**A Systems-Level Interconnection Scheme**  
Reactions of design engineers to one of the first systems-level answers to the twin problems of module interconnection and support. Use of such a vendor-supplied system diminishes the designer's packaging freedom but can speed delivery.

**New Products Update Designs**  
New packaging products, such as flexible and multi-layered printed circuits, are solving a number of problems in one blow.

**Clues From Components**  
Circuit packaging methods of the future are getting their shakedowns in component manufacturing.
Some Project Solutions—

At Bendix:

Packaging Is a Problem in R&D, Too

THE packaging approaches of the advanced-systems development laboratories are worth examining. During the coming turmoil and transition, these laboratories must solve the following problems if they are to justify the large sums invested in them:

- They must have hardware systems to "demonstrate" their grasp of the concepts they preach, both to their customers and to themselves.
- They must be able to "peel off" specific projects if the orders come in.
- They must be continually upgrading their packaging as well as their logic and circuitry if they are to remain competitive.

The advanced airborne digital-computer development group at the Eclipse-Pioneer division of Bendix Corp., Teterboro, N. J., is a good example of a development group trying to maintain a working balance between pushing advanced-systems concepts and continually updating its packaging methods.

Working on company funds, the development group's mission is to enable Bendix to demonstrate that it has the digital-computer ability for major space-vehicle-control projects. The contracts for which Bendix and other companies are preparing their computers are expected to be some of the largest and most important in this country's space and military programs. But the requirements in this area are nebulous in that most of the expected contracts have not yet been formulated by the military.

Meanwhile, the companies preparing to compete in this area are struggling to make the best compromises between how much computer performance to bite off, how much miniaturization they should attempt, and...
what target dates they should schedule for various phases of their system's readiness.

Most of them are wondering if they can achieve the reliability needed for long-term manned space flights.

What does this type of project mean to packaging? Visits to two of the dozen or so industry groups at work in this area (Bendix and Kearfott) proved that packaging must be an integral part of the group. Unlike customary electronic projects where the packaging problems are left to the end and dumped in the laps of lower-ecloln "manufacturing-type" engineers, the packaging occupies a prominent position in these advanced space-computer development groups.

The packaging is so intertwined with the logic, speed, power, cooling, space, and reliability aspects of the design, that in Bendix's 88-man (15 engineers) group, it is very hard for a visitor to tell if a man is working on computer design per se or packaging.

Naturally, the job of squeezing a computer with the power of an IBM 7090 into a suitcase and having the result reliable enough for an interplanetary journey tends to make everyone on the project packaging-conscious.

**Bendix Gets Hardware Running While Upgrading Packaging**

Bendix has the Mark I version of its 1-mc add-time, parallel, asynchronous computer in partial operation. The breadboard shown in Fig. 1 is a good example of the sort of hybrid packaging that probably will be com-

**ON THE SHELF— ARNOLD CORES IN WAREHOUSE STOCK FOR IMMEDIATE DELIVERY**

Let us handle your inventory problems and save you time and money on your magnetic core requirements.

Extensive stocks of four types of Arnold cores in the most popular sizes have been set up in our Marengo, Illinois and Fullerton, Calif. plants. Subject of course to temporary exhaustion of stock by prior sales, these cores will be shipped the same day on orders received at the warehouse by 12:00 noon. When cores are out of stock at the nearest plant, we may be able to ship within 24 hours from the other.

Arnold core products covered by this warehouse stock program include: 1) Siletron C, E and O cores in 2, 4 and 12-mil tape. 2) Type 6T aluminum-cased cores of Deltamax, Square Permalloy and Supermalloy, in 1, 2 and 4-mil tape. 3) Mo-Permalloy powder cores, both temperature-stabilized and unstabilized types, ranging down to "cheerio" sizes. 4) Iron powder toroids, threaded cores and insert cores.

All four products are available in a wide range of selection, for your convenience and economy in ordering either prototype design lots or regular production quantities. *Stock lists, bulletins, etc. are available—write for information. The Arnold Engineering Company, Marengo, Ill.*

ELECTRA ADVANCES THE ART OF MICRO-MINIATURIZATION!

MFS 1/20 METAL FILM RESISTOR

- Resistance Range: 30 ohms to 100 K
- Tolerance: ± 1%
- Dissipation at 125° C: 1/20 Watt
- Maximum Rated Voltage: 200 Volts
- Temperature Coefficient: max. 0.05%/°C
- Encapsulation: Electro's R-5 Coating
- Marking: Tag or Color Band

DC 1/10 X-CARBON FILM RESISTOR

- Resistance Range: 10 ohms to 301 K
- Tolerance: ± 1%
- Dissipation at 70° C: 1/10 Watt
- Maximum Cont. Rated Voltage: 200 Volts
- Temp. Coefficient: max. ± 0.05%/°C
- Encapsulation: Electro's R-5 Coating
- Marking: Tag or Color Band

ELECTRA'S NEW MICRO-MODULE METAL FILM RESISTOR WAFER

(Write for specifications)

To the broadest line of film resistors in the industry, we have added the three new series shown here. We welcome the opportunity to work with companies whose electronic needs call for high reliability precision film resistors to fill their specifications. Such inquiries should be directed to our PRODUCT RESEARCH DEPARTMENT.

ELECTRA MANUFACTURING COMPANY
4051 BROADWAY • KANSAS CITY 11, MISSOURI
CIRCLE 34 ON READER-SERVICE CARD

There are definite advantages and conveniences in using finished production-type modules as "plug-in-logic" during a digital computer's development, Dr. David Blauvelt, group director said. They restrict the laboratory breadboard to a manageable size. They make for rapid system- and subsystem-level changes. They lend themselves to organized trouble-shooting and keep this insidious form of developmental delay to a minimum. They accumulate reliability histories. For high-speed computers, the signal-propagation problems will be shown up in terms of actual modules. (Indeed, with the highly miniaturized nanosecond computers of the future, it may not be possible to breadboard at all, unless actual modules are used).

But perhaps most important, using actual modules indicates early in the design the interconnection problems.

The new approaches suggested during the evolution of the first modules and breadboard for the Mark I have resulted in four different module approaches, each with its own form of interconnection. All the modules developed so far have potential applications in possible special-purpose digital computers which Bendix may "peel off" from its over-all know-how. But Bendix's next complete system approach will be to jump to its No. 3 module design for the Mark II. The Mark II will be a "flying" package, not a breadboard. It will have a 1/2-μsec add time (operating asynchronously at an equivalent clock rate of about 40-50 mc) and is expected to be in operation by next spring.

The Four Module Progressions Show What Bendix Has Learned

The progressive improvements in Bendix's modules tell the story. An over-all view of the progress made in evolving these modules is given in Table 1 which lists the four modules along with their important parameters. Note in particular the relationship
between the packing densities at the module level and at the system level. The most important lesson which Bendix feels it learned is that crowding of parts into a module does not insure the production of a small computer. Only by working with modules breadboarded into an actual operating system was Bendix able to assess in what direction and how far it should go in correcting this situation.

First Package: Soldered Cordwood Sandwich

The main difference between Bendix's first package and other soldered cordwood sandwiches was that Bendix made rather extensive use of fiber-five different printed-circuit overlays to make special-purpose modules out of the basic 10-NOR circuit sandwiches.

The modules are designed to be mounted by miniature connectors and hold-down straps to printed-circuit boards that have wiring on both sides. Tom Lavin, Bendix engineer, pointed out that the wiring on the two sides was purposely run in straight lines and at right angles so that the capacitance effects, critical at the computing rates, would be minimized.

The present package and its manner of end-mounting is ideal for breadboarding, but improvements of this sandwich include a lengthwise connector that will lower the module's center of gravity away from the board and give more connection points with less crowding.

Second Package: Welded 10-NOR

Welded construction was used in the second packaging version in an effort to achieve increased freedom of configuration and to eliminate space-consuming reliability-degrading connectors. Extensions of the welding leads used as module pins would be soldered to the "mother" boards, which would...
then plug groups of welded 10-NORs into the system.

This type of module-interconnection system would, of course, be less handy for module-level changes. However, since many problems at that level are being solved with the plug-in modules in the present breadboard, this would be less important than the progress made toward more compact system interconnections.

A manufacturing attraction of the welded modules is that all the components are accessible for replacement prior to potting. The construction steps in fabricating the welded modules are detailed in pictures on this page. Note that if the pre-potting electrical tests reveal a faulty component it can be replaced by opening the two 5-NOR halves of the modules like a book. Note also how welding affects the configuration.

Steps in Fabricating the Second Module

Components are mounted in copper-lined holding jig which serves as the lower welding electrode. Each of the 10 NOR’s is welded in this manner into a ladder network. Bendix believes this process could be automated to produce a long line of NOR’s which could then be cut up as desired.

By adding another part on to the fixture, the “U” groups can be assembled into units of five NORs.

The ladder networks are folded into “U” groups in special bending fixture.

The 5-NOR units are mounted in pairs to form the complete 10-NOR modules. A multilayered welded-wire matrix separated by Mylar sheet insulation forms the module interconnections.

A strip of laminated glass-epoxy board is slipped over the extensions of the welded-wire matrix which are to serve as the module’s connector pins and the unit is ready for prepotting checkout. A final epoxy potting operation completes these modules.
Third Package:
Single, Self-Jigged NOR

Based on what was learned in designing, manufacturing, and breadboarding the first two packaging progressions, Bendix engineers have developed the package they are designing into their Mark II "flying" version. After comparing the computer systems that would result from the first two packages, Bendix concluded that, although the 10-NOR modules were ideal from the logic standpoint, they were not the most efficient grouping from the system-packaging standpoint.

The third package, therefore, was built around a single NOR logic unit. The engineers felt that by extensive use of multilayer printed-circuit interconnections, these single-NOR's would achieve the best over-all system density.

As Fig. 3 shows, the single NOR units are cleverly assembled in a potting capsule, which also serves as the welding jig. The recesses and component lead holes molded into these capsules are tailored to the shapes of the components so that once the components are laid in place no other holding means are needed while their leads are being welded together. These molds readily can be mass-produced by the epoxy transfer-molding proc-

---

Fig. 3. Third and fourth progressions of the module are built around single-NOR units cleverly potted in their own welding fixtures, using the leads of their components as pins.

MAGNETOSTRICTIVE DELAY LINES

FEATURE TEMPERATURE COEFFICIENT OF 1 PPM FROM O° TO 50°C AND SIGNAL TO NOISE RATIO OF 7 TO 1

ESC now offers complete engineering services and newly expanded production facilities for the design and manufacture of magnetostRICTIVE delay lines. Designed primarily for military ground support equipment, airborne computers and communication equipment, these new magnetostriclve delay lines range from 10 μsec to 10,000 μsec.

The economy and reliability of the magnetostriuctive delay line is particularly well suited for digital computers, aerial navigation systems, missile systems, radar, coding devices and range marker generators. The acoustic wire type of sonic delay line offers the most desired characteristics of a memory line — delay per unit length, bandwidth, and delay stability — in a high density package. Typical of this new product line is the ESC Model 50M02 illustrated above.

World's Leading Producer of Delay Lines
NEW
Hi-G 4PDT microminiature relay

First 4-pole microminiature relay incorporating a balanced armature and featuring a pin arrangement readily adaptable to printed circuit applications. This new relay also features improved sensitivity per pole as compared with two 2-pole microminiature relays.

Type: Type 4B Microminiature
Size: .800" x .800" x .875" max.
Contacts: 4PDT dry circuit to 2 amps resistive
Dielectric Strength: 1000 VRMS at Sea Level
Insulation Resistance: 1000 megohms min.
Optional Terminals: Long or short leads for printed circuit application or hook type for standard wiring. Bracket, studs or straps also available for mounting.

Construction: Balanced armature construction, proven the best approach available for resistance to extremes of vibration and shock, exceeding all present military specifications.

Environmental Characteristics: To meet all military relay specifications for components of this size.

Potting is then accomplished by simply pouring in the resin.

As for interconnection efficiency, the single-NOR uses the extensions of the component leads themselves for module mounting pins. They would be inserted into mating holes (probably staggered because of the tight spacing) in the multiple-layer printed circuit boards and soldered in place by a wave-type soldering machine. Bendix attributes the increase in system density with these modules to the fact that connectors and mounting hardware virtually have been eliminated.

Fourth Package: "Lowered" Single NOR

The final packaging progression seen by Bendix as being within the present state-of-the-art is a further compacting of the single-NOR by using highly miniaturized components. But, rather than scrapping the elaborate multiple-layer printed circuits being developed for current single-NOR, Bendix plans to keep the same general module size on the sides that touch the board and compress the module height as future components...
At Adage:

A Break With Digital Packaging

A MISSILE-checkout digital multimeter illustrates the special type of packaging appropriate to certain military ground-support and vehicle-mounted equipment and corresponding types of industrial installations.

Here, extreme miniaturization was not the overriding aim, though the space available was limited. The goal was an exceptionally rugged and maintainable package, since this type of equipment is useful only if it does its job with little fuss.

The decisions by the builder, Adage, Inc., Cambridge, Mass., which led to the unusual configuration and construction details of this package are noteworthy. They indicate a willingness on the part of the designers to discard standard concepts and to tailor the packaging to meet the rather special conditions of the application.

The first step in Adage’s unfettered approach to this package was to eliminate the 3-in. by 4-in. module size favored by the procuring agency. Adage’s studies indicated that the over-all component density could not be achieved with modules this size. The connectors, interconnecting wiring and module mounting hardware (the really critical items today) would take too much space.

Further, while the 3-in. by 4-in. modules might have been all right for digital circuitry, the precision analog amplifiers, which were an important part of this multimeter system, could not be conveniently broken down into such small modules. Noise and
stray capacitance effects militated against the fragmenting of the analog units among several modules.

Efficient use of the volume and more natural division of the circuitry both dictated the use of fairly large etched card modules.

Space Limitation Led
To Novel Module Shape

Two problems remained: the form factor of the modular cards and provisions for shock and vibration in the module mounting. To achieve accessibility within the specified envelope (electronic equipment typically seems to have to fit into spaces left after nonelectronic engineers have laid out the structural aspects of the system), the module mounting axis had to be parallel to the shortest envelope dimension. This resulted in an unorthodox module: a long, narrow, rectangular shape with the connector centered on one of the long edges.

Because of the unusual module shape and size, there was the problem of how to “rack” or otherwise mount it. The solution was to merge the rack and housing into one integral casting. The racks were formed by recesses cast into the inside of the housing. Another recess was cast into the back of the housing so that the cabling leading to the connectors would usurp little of the internal volume.

The photographs show the complexity of the casting. However, the photographs also show that there was little space left for any other module-board mounting method.

Housing and Cover Made
Of Aluminum Sand Casting

The housing and its cover were thin-walled aluminum sand castings. In the housing casting can be seen the grooves for card modules and inter-module shields. Note the cast-in crenellations, which provide bearing surfaces for the insert-extract levers mounted on the front corners of the modules.

The connectors are fastened to the pads cast in the rear of the assembly. A rear plate provides access to the connector taper pins. A self-storing chassis extender permits access to all the components for in-system checks of the boards.

The levers on the front corners of each module permit the boards to be inserted and extracted with low manual forces and without additional tools.

Adage points out that the surface area on the modules available for components is a high fraction of the total area within the
housing. The firm says that reasonably high component density was achieved in this case without going to high-density techniques, such as cordwood, which compromise component accessibility.

One of the Newer Materials Used to Damp Vibrations

The valleys cast into the rear inside surface of the housing (barely discernible in the photo) and in the inside of the door are lined with an energy-absorbent elastic material selected for its vibration-absorbent characteristics. When a module is inserted, its back edges on either side of the connector push into one of these valleys and compress the elastic slightly.

When the cover is closed and secured the long front edge of the card between the levers also compresses its valley. The elastic linings press the back and front of the module boards together, holding the boards tightly in place and accommodating to any tolerances. As with the other card mounting features, this anti-vibration function takes up very little of the precious envelope volume.

The energy-absorbent cushioning provides an efficient means of overcoming the susceptibility of the large unsupported cards to become sounding boards. Usually, large boards of this sort must be either supported at many points by a rigid metal frame, which moves the resonant frequencies to higher frequencies where the board is "lossy" enough to prevent large, persistent vibration amplitudes, or the module is isolated from mechanical energy in its range of resonant frequencies by shock mounts or vibration isolators.

But both of these techniques are space consumers. The cushioning approach is more effective, Adage said, because it gives the energy transmitted to the boards some other place to go rather than "fanning the air" and fatiguing the component leads.

Adage said that despite the apparent complexity of the casting and the unusual module configuration, the packaging was designed and reduced to hardware in four months after the award of the contract. It was turned over to the customer one week after the promised delivery date and has since performed well electrically and mechanically in acceptance tests.

This package demonstrates that the electronics industry need not blindly follow the space-oriented designs, whether they need extreme miniaturization or not.

Bourns Resiston® Carbon Potentiometers Now Available in Any Trimpot® Configuration

Use Them up to 150 °C—They're Twice as Stable as Competitive Units!

Whatever carbon potentiometer type or configuration you need, Bourns can now fill it with Trimpot Resiston models—potentiometers incorporating the exclusive carbon-film element that virtually eliminates problems of heat and humidity. Most models operate at temperatures to 150°C and under cycling humidity conditions with only half the resistance shift of ordinary carbon potentiometers.

All unit feature infinite resolution and standard resistances up to 1,000,000 ohms. Check the expanded selection below. It offers you eight ways of obtaining high resistance values and infinite resolution without sacrificing reliability. You can get the exact environmental specs you need, and you can find the right price range for your budget. Write for complete data and list of stocking distributors.

Manufacturer: Trimpot® potentiometers; transducers for position, pressure, acceleration. Plants: Riverside, Calif.; Ames, Iowa; and Toronto, Canada

At AMP:

Getting Into the Design Act

AMP INC's MECA interconnection system has been available for over a year. Since it is intended as an all-encompassing answer to the "interconnection problem," ELECTRONIC DESIGN checked the reactions of several engineering-project groups, which have been evaluating it and are starting to incorporate it into some of their systems.

The applications of two of these project groups, one at the National Bureau of Standards and the other at the Federal Systems Division of International Business Machines Corp., were quite diverse. The group at the National Bureau of Standards is using MECA for some of its small data-logging systems in connection with potted soldered cordwood modules. The group at IBM is using MECA for a satellite application in connection with welded modules.

MECA Termed Good For In-Use Maintenance

MECA was chosen for the NBS data systems for the ease with which the modules can be plugged in and out, one of the engineers on the project told ELECTRONIC DESIGN. It was felt that the critical module-to-side-rail rib connection in the MECA system was adequate electrically and that the pluggability that stemmed from this connection more than made up for the fact that soldering the "cordwoods" directly to the motherboard probably would have been the most reliable method.

The NBS engineer said the criterion was not so much just the MTBF (mean-time-

How Does MECA Function?

Whether one cares for AMP's MECA system or not, it is worth analyzing since it represents the first "commercialized" interconnection, in which those hoping to come up with a better all-encompassing scheme should first appreciate what has been attempted in MECA.

The diagram shows the essential electrical and mechanical energy-flow paths. The elements called out by numbers trace the flow of an electrical signal out of the user's circuit module to the motherboard connector. The elements called out by letters trace the progression of the mechanical support loads for the user's circuit module out to the chassis supports for the motherboard. (The thermal paths also could be traced in this manner, but would be more complicated since they would be a combination of the two above paths as well as the air around the module.)

Note how many of the MECA members serve dual mechanical-support and electrical-communication functions. This is the secret of efficient packaging. For example, all the ribs mechanically tie the siderails to the motherboards. By virtue of their friction connection to the female connectors on the plastic containers the ribs also hold the containers down in their "corrals." The long wiping action gives this critical joint its reliability.

Electrically, if the female connector on the module is tied to the user's circuit inside the container, the same rib will carry a signal from the cell to any siderail conductor or any motherboard circuit with which one of the rib's tines makes contact.

Also, consider the MECA system from a "value-analysis" point of view. Note that, although it is a three-dimensional system, it is built up mainly of easy-to-manufacture-and-modify two-dimensional elements. Both the siderails and motherboards can be mass-produced in special configurations for special applications. The one three-dimensional element in the MECA system, the plastic circuit container, also is perhaps the most uniformly repeated element in the system and therefore can be standardized and economically mass-produced by plastic molding machines.
between-failure) but the amount of time spent in trouble-shooting to get the system back in operation, after a failure.

As for the structural integrity of the MECA system, the NBS man recalled that the parts of the first evaluation kit had looked flimsy enough when he received them in knock-down form. But, once assembled, they produced a surprisingly sturdy result. The fact that MECA's side rails are anchored at right angles to the main motherboard increases that board's moment of inertia and helps it to carry beam load without deflection, he said.

The engineer said that for this NBS application his group will plug the motherboards in vertically, but he is not worried about the side-mounted modules working loose. The MECA system is replacing four layers of printed circuitry which did not permit unplugging the modules.

Potting in the NBS project is being accomplished by first metering an amount of resin into the MECA cells, then pushing in the cordwood circuit modules.

**Environmental Tests Indicate MECA Acceptable for Satellites**

The satellite for which IBM is readying a MECA-packaged electronic system is NASA's OAO (Orbiting Astronomical Observatory). In this case MECA will support and interconnect a sophisticated data collection, storage and control system, which must last one year as it directs and records the observations made by the satellite's telescope and, upon ground command, transmits back to the earth.

The engineer in this group contacted by *Electronic Design* said the project has put MECA packages under rigorous environmental tests. (While the OAO may have a fairly serene mechanical environment as it orbits in space—except for thermal stresses resulting from alternate sunlight and shadow—during the boost into orbit it will of course have to withstand the thrust g of the booster as well as the intense vibration caused by the rocket engine's "noisy" burning.)

The engineer said the MECA cubes had not "walked" out of their friction connections during 100 g at up to 2,000 cps. This has lead him to believe that no hold-down is necessary. (However, for this application more module connections than usual—24—are used, some of these being only mechanical and not serving as electrical paths).

But to arrive at a more rugged over-all package, the 8-in. by 11-in. motherboards, each supporting 54 MECA cells, will be compressed together into 12-layer groups with sheets of Mylar between for insulation. Silicon sponge had been tried but found to permit too much "travel" under vibration.

**Reliability Control Stressed in Production**

Why was IBM willing to pay the weight and reliability penalties that would accompany even the best of any "pluggable" system like MECA for equipment that will spend its year of life in a satellite beyond maintenance? With complicated systems the "time-and-place" where maintainability really is needed is when the system is being built up on the factory floor, *Electronic Design* was told. IBM has found that good circuit units go bad just due to handling as they go down the production line and as the system to which they are attached is checked out and readied for the countdown. Even if this were not so, engineers have been known to change their minds and only an interconnection system that permits adjustments and improvements is realistic. (In this connection Harry Wasiele of AMP says that he sees no reason why universal logic system breadboards cannot be made out of MECA).

The MECA package for the OAO is somewhat different from other MECA units. The "U"-shaped female connectors recessed into the cell sides are extended up to form welding posts for the all-welded OAO circuits. These posts are kept below the side-rail height by cutting down the cell sides.

The ends of the OAO MECA cells are full height and when a Dialyl Pthalate cap is put over the cells the result is an even surface along the top of each string. (The cost of having molds made for special modules is in
New MECA Developments

A flexible-circuit connector and a compact computer push-button assembly are two recent developments observed by ELECTRONIC DESIGN in AMP's MECA engineering development group. The flexible circuit connector makes use of the long over-travel connections developed for the MECA cells. The computer push-button assembly uses just about all the elements of the MECA system but rearranges them to accommodate lighted push-button switches. AMP says that this assembly is more reliable and easier to maintain than previous switch assemblies.

the order of $900, AMP told ELECTRONIC DESIGN. Also, the company said some customers have been asking for "upside-down" modules with circuit identifications silk-screened on.)

'Flushed' Coating Replaces Solid Potting In Circuits

Instead of solid potting, a "flushed" coating is used for the circuits housed in the cells. A silicon-phenolic resin is poured into the cells, with the circuit modules in place, and then drained out. What is left clinging to the parts hardens and affords extra strength at less weight than a solid potting. However, an RTV (room-temperature-vulcanizing) silastic will be used for those few higher-powered modules in the system with heat dissipation problems.

The only complaint the engineer at IBM said he has against the MECA system is that he thinks MECA should either have more side-rail conductors or should go to multilayer printed circuit motherboards. (AMP, however, said the IBM circuit, possibly because it has higher circuit density per module, represents an unusual case. It is the only application that has had to resort to printed circuitry on both sides of the motherboard.)

In summary, this user said that MECA was chosen because, of all the "pluggable" systems available, it appeared to offer most regarding weight, volumetric efficiency, and reliability.

At Comar:

New Method 'Saves' Bad Design

In THE flood of new products that probably will continue as long as the revolution in electronic packaging persists, the designer should be alert for products that may "save" bad designs.

The following is a case history of a design good enough in every way except one: it almost defied efforts to produce it.

This engineer estimated that, once a firm accepts MECA as the way to do a packaging job, it can speed the design procedure by some 25-30 per cent. The IBM project has developed its own method of reducing logic diagrams to MECA. The problem is to get used to the fact that, with the side-rail connections the designer has a true third wiring dimension. IBM's method uses an IBM 7090 computer to automatically decide the MECA interconnections.

Cost of MECA Moderate In Many Applications

One user estimated that MECA adds slightly more than $1 to the cost of a circuit module. That is, if a circuit module cost $16, packaged in MECA it would cost about $17. This would be for orders of a thousand modules, he said. AMP's official viewpoint is that for orders of 10,000 cells and over the per-cell cost should be 50¢ to 75¢, depending upon the number of cell contacts.

Both the users agreed that interconnection systems such as MECA and multilayer printed circuit boards have not entirely solved the interconnection problem. What they have done is push the problem around a bit, making the real interconnection culprit the connector by which the motherboard subsystems are inserted into the system wiring. The more circuitry is crowded on motherboards, the more the motherboard connector becomes the weak link.
No hoses, seals or pumps! FC-75 Coolant helps reduce "cube" of new welding transformer by 75%

Electrical resistance welding of tubing has been greatly improved by 3M Brand FC-75 Inert Fluorochemical Liquid Coolant. The Yoder Company has introduced a welding transformer using FC-75 that's only ¼ as large as previous models—yet can raise tube output as much as 60%!

The original water-cooled transformer required hoses, seals, and pumps: FC-75 eliminated these accessories. One water-cooled transformer was a 3 foot cube in size. The new comparable transformer now measures only 9" x 21" x 36"! The transformer primaries and cores are submerged in FC-75. As heat builds up, the coolant liquid vaporizes, carries heat to the transformer case, condenses, and returns to the liquid state.

A secondary conductor system is eliminated, secondary impedance is greatly reduced, and current travels directly from the transformer to the electrode. For example, on one size, amperes are up from 41,000 to 51,000, increasing performance. Less input, smaller generator, motors and starters are required.

With FC-75 coolant, the Yoder Transformer can be pushed to capacity, with safe internal temperatures of 300° F! Corrosion and short circuiting are practically impossible. Units designed to take advantage of FC-75 coolant offer you compactness, more efficiency and less maintenance. See the Properties Profile for full specifications. And write us today for more information on FC-75 and FC-43.

### PROPERTIES PROFILE on 3M INERT LIQUIDS BRAND FC-75 and FC-43

These unique dielectric coolants possess unusual properties that can prove advantageous to the designer of electrical devices and instruments, as well as to the manufacturer. Increased range of operating temperatures, improved heat dissipation which permits miniaturization, and greatly increased protection from thermal or electrical overload are possible with their use.

FC-75 and FC-43 are non-explosive, non-flammable, non-toxic, odorless and non-corrosive. FC-75 is stable up to 750° F. FC-43 to 600° F. Both are completely compatible with most materials—well above the maximum temperatures permissible with all other dielectric coolants. Both are self-healing after repeated arcing in either the liquid or vapor state.

FC-75 and FC-43 have nearly equivalent heat capacities in the liquid and gaseous states.

For more information on FC-75 and FC-43, write today, stating area of interest to: 3M Chemical Division, Dept. KAP-101, St. Paul 6, Minn.
The cost of miniaturization just dropped 20%

Trends can be overpowering. Once established, they're tough to reverse.

Take the cost of miniaturization, for example. As electronic packages get smaller, price tags get bigger. No one seems surprised. It's a trend.

There's a reason, of course. Tiny things are hard to build, especially within space-age reliability requirements.

Amphenol designers decided that if ever a trend needed reversing—it was this one.

'How' was another question. They knew that conventional miniaturized pin and socket connectors were about as small as they were ever going to be. The spring member in the female contact (necessary for a snug, low-resistance connection) took up valuable space and set a lower limit for practical center-to-center contact spacing. The spring was obviously holding up progress in miniaturization. It had to go.

So, it went.

Amphenol designers developed the Wire-Form Poke-Home® contact, a male contact that supplies its own tension and can be crimped or welded before assembly. Overnight, contact spacing plunged from .175 inch to .100 inch. And, best of all, the new contact was less costly to manufacture. (It's built on automatic equipment.)

The trend reversal was well on its way. Amphenol designers had a new contact—the next step: putting it to work in connectors.

To answer the need for an economical micro-miniature rack and panel connector, the Micro-Rac was unveiled. Space-saving Wire-Form contacts and an integral-body dielectric construction made it possible to pack 20% more connections in the same space—and at nearly half the previous cost. As for reliability, after 1,000 repeated insertion and withdrawal cycles, the Micro-Rac retained its original low resistance characteristics.

Next came the Strip Connector, six-inch lengths of Lexan® plastic with contact holes on .100 inch centers. A do-it-yourselfer's delight, strips can be cut and stacked to suit hundreds of applications where a connector is a must—but for which no other economical connector exists. Example: strips can be stacked to form micro-miniature programming boards or instrumentation terminations. They also can be used as economical tape cable connectors, modular connectors, logic card connectors, to mention a few.

Wire-Form contacts can be used separately, too. Example: contacts can be crimped or welded to modules and plugged into special eyelet-type receptacles on printed circuit boards. Non-modular components, such as transistors, become pluggable by crimping Wire-Form contacts to their leads.

And that was that. The trend was reversed.

If you would like more information about Wire-Form Poke-Home contacts, Micro-Rac 52- and 104-contact rack and panel connectors, Strip Connectors for any Amphenol Connector for that matter, call your Amphenol Sales Engineer. Or, write to Dick Hall, Vice President, Marketing. Amphenol Connector Division, 1830 S. 54th Avenue, Chicago 50, Illinois.

BENDIX® SPARK GAP TUBES SPECIALLY DESIGNED TO PROTECT RADAR AND OTHER ELECTRONIC CIRCUITS

These versatile tubes do two major jobs in electronic circuits: first, protect radar and other electronic circuits against voltage overload, keeping high voltage surges from getting through to damage circuit components; second, act as a “triggering” switch in such applications as jet ignition systems. These tubes pass high currents with relatively low voltage drop, handle high voltages in small space. If this spark gap line—ranging from 750 V to 50 KV DC breakdown voltages—doesn’t meet your needs, we’ll design and produce special units for you. Write for details. Electron Tube Products, The Bendix Corporation, Eatontown, N. J. Export Sales: Bendix International, 205 E. 42nd St., New York 17, N.Y.
Teflon contacts had been manufacturing a burned rate that was substantially increased but so was the rejection rate. Rejections soared to a prohibitive 20 per cent. The problem was that the printed-circuit dielectric began to burn during the soldering operation. This not only caused problems during soldering but also caused operational problems when the temperature inside the relay rose to over 100°C. The outgassing from the PCB board’s dielectric would contaminate the relay contacts and produce high-contact resistance.

The new product that “saved” Comar’s relay was a Teflon-encapsulated flexible printed-circuit board by Garlock, Inc., Palmyra, N.Y.

The known temperature inertness of Teflon not only eliminated the burning of the dielectric and the outgassing during high-temperature operation, but, according to Comar, also made it possible for them to automate their soldering operation by passing this was reliable, it was a tedious, costly manufacturing procedure.

To cut the time needed to make connections, Comar turned to a printed-circuit board with a standard dielectric. While this did eliminate the need for time-consuming individual connections between the relay and plug, the printed-circuit board created some problems of its own.

Printed-Circuit Board Lifted Production—And Reject Rate

With hand-wiring, Comar had been producing 3.8 relays per hour with a rejection rate running between 7 and 8 per cent. With the printed-circuit board, Comar’s production rate was substantially increased but so was the rejection rate. Rejects soared to a prohibitive 20 per cent. The problem was that the printed-circuit dielectric began to burn during the soldering operation. This not only caused problems during soldering but also caused operational problems when the temperature inside the relay rose to over 100°C. The outgassing from the PCB board’s dielectric would contaminate the relay contacts and produce high-contact resistance.

The new product that “saved” Comar’s relay was a Teflon-encapsulated flexible printed-circuit board by Garlock, Inc., Palmyra, N.Y.

The known temperature inertness of Teflon not only eliminated the burning of the dielectric and the outgassing during high-temperature operation, but, according to Comar, also made it possible for them to automate their soldering operation by passing
and here's JUST ONE of the ways UNITED helps you cut IC:

REDUCED DOWN-TIME!

for all the dollar-saving facts — that show how United can help you cut Installed Costs through lower engineering costs (and through lower tooling, down-time and acquisition costs), ask for your free copy of the new bulletin "Eyelets and Price Buying." Simply phone the United office in your area or write direct to Fastener Division, United Shoe Machinery Corporation, 2052 River Road, Shelton, Connecticut.

United's complete lines of Eyelets, Eyeleting Machines and Setting Tools are engineered and produced to work together as a coordinated team. This—plus the uniformly high quality and accuracy of United Eyelets—insures fast, efficient production, with costly jams, stoppages and reworks cut to a minimum. In addition, United's system of Standardized Eyelets (with only 7 sizes) greatly reduces down-time for tool changes. Delays caused by tooling lead-time are virtually eliminated, because Standardized Eyelets do away with the need for special eyelet sizes and tools.

ing the whole assembly into an infra-red oven. (The PC boards burned up when this was attempted.)

The oven-soldering was an interesting production innovation in itself. The flexible printed-circuit pads, two per relay, were positioned within the relay with a small ring of solder on each connection and carried through the oven on a moving asbestos belt. Because all of the parts were simultaneously raised to soldering temperatures in this process, Comar said, cold solder joints were completely eliminated and the production rate was increased by 400 per cent. The rejection rate for the relays now is less than 1 per cent.

Life tests showed that the new relays with the flexible Teflon circuits continued to meet the military specification on contact resistance and drop-out rates after 20 million cycles.

Fig. 9. Relays are placed on asbestos conveyor belt which carries them into the oven for automatic soldering. The Teflon in the flexible circuit is able to withstand the temperatures needed for soldering. The first relay in a batch would be soldered in 45 sec and then would be followed by a stream of relays coming through back-to-back.
'Methods in Transition'

Engineers interested in practical avenues for advancing circuit packaging should keep up with the manufacturing methods being used successfully by component producers. The tendency has been for methods first used in making components to be applied later to advancing circuit packaging.

Welding is perhaps the best known example. It has been used for many years for fabricating assemblies inside vacuum tubes and is now being given vigorous competition to soldering for making circuit connections.

But some of the lesser known techniques in component manufacture also should be studied by packaging engineers. Take, for instance, the machine-molding of plastics. One of the newer processes in this field is the epoxy encapsulation of resistors, capacitors and other circuitry inside transfer-molding machines. Diodes (and even transistors) also are being encapsulated in this manner.

To gain an appreciation of the difficulties faced by an engineer in using transfer-molding techniques for encapsulating circuit assemblies and to learn how to go about designing a circuit for encapsulation by this method, ELECTRONIC DESIGN visited the Hull Corp., Hatboro, Pa.

Here Hull's small model shop was working the bugs out of a fairly large (5-in. diam.) encapsulation of a copper coil. We were told by John Hull, vice president, that a few companies had begun to investigate circuit encapsulation in this manner and that it would be justifiable if the demand for a circuit reached 5,000 units within a three-month period.

The process has been made feasible by the development of epoxy molding powders that become "syrup-thin" under heat and thus can be "transferred" under pressure into intricate mold cavities.

The beauty of the method, Mr. Hull says, is that once a production line has been speeded up (the mold costs run from $300 to $1,000 for single-cavity molds, to $5,000 for complicated multiple-cavity molds and the molding machines run in the order of $7,000), as many as 20,000 to 25,000 parts per week can be encapsulated by a single machine and operator. The costs per unit for small parts, such as diodes and capacitors, can be less than 1E as compared to 2E each for cup-and-pellet hand potting.

At Hull:

Polish semiconductors scratch-free with 99.98% pure alumina powders

The surfaces of the semiconductor wafers used in the new high-speed mesa switching transistors and planar diodes must have a superior surface finish, flatness, and parallelism prior to final etching and diffusion. This effect is now being achieved in full production with high-purity alumina abrasives produced by LINDE.

Three particle sizes

Three basic particle size ranges of aluminum oxide powders suitable for polishing silicon and germanium wafers are available for this application, as well as many others. The difference in size and hardness, as listed below, give these 99.98% pure powders their individual properties.

In the initial stage of junction transistor or diode production, the powders can be used for preparing metallographic cross-sections of the assemblies according to standard methods on a horizontal polishing wheel. For semiconductors, LINDE has developed several adaptations of standard techniques.

Extremely uniform

LINDE Types A, B, and C alumina powders are chemically prepared and have an extremely uniform ultimate particle size which obviates any further levigation before use. By simple reference to a specific lot number, succeeding production lots can be ordered with abrasive properties tailored to an individual application.

For data on semiconductor and other critical polishing, check the coupon.

Flame-Plated tungsten carbide coatings precision-finished

Tungsten carbide coatings, applied with the LINDE Flame-Plating process, are being used successfully on hundreds of precision parts, because the coatings are .well suited for finishing down to 1 microinch rms.

Most frequently used precision grinding equipment is diamond wheels, resulting in lowest overall cost on ordinary cylindrical and flat work. On many contour grinding jobs, special grades of silicon carbide wheels are used to do the job, eliminating the high cost and lack of precision associated with shaped diamond wheels. Diamond-abrasive lapping techniques give high finishes.

Get complete data on Flame-Plating precision parts—send the coupon.

Plasma-Plate process applies thin dielectric coatings

Next time you need a low-cost, thin dielectric coating for cathode cups, consult Linde Company. LINDE'S Plasma-Plate process has economically put alumina insulation coatings on molybdenum cups, and has even built structures on mandrels—for example, the grid cage shown below. This inert gas process can apply refractory metals melting up to 7100°F., also metal carbides, borides, and oxides, to a variety of base metals. Discuss your requirements with us. For further information, check and send the coupon.
How to Use SCR's in Power Supplies

In the first part (ED, Oct. 11, p 46) the author described what he thinks is a better approach to the design of silicon-controlled rectifier (SCR) power supplies. Now he sets forth the design steps for his circuit.

Albert C. Leenhouts
Transitron Electronic Corp.*
Wakefield, Mass.

IN THE FIRST part of this article, a new way of using silicon-controlled rectifiers (SCR's) in higher-power dc supplies was described. The over-all circuit diagram for this new type of circuit is repeated here (with possible component values) in Fig. 1. The essential feature is that R18 and C11 provide damping to prevent control loop oscillations, yet that the over-all system be capable of fairly quick response (within a couple of cycles of line) to disturbances.

The design of this type of regulated power supply starts with the analysis of the main current loop, Fig. 2. A number of assumptions and definitions are made to simplify the analysis:

1. The momentary value of the input voltage will be 
   
   \[ E_r \sin \omega t \]

2. During the interval \( \pi / 2 < \omega t < 3\pi / 2 \) which will be considered for the analysis, it will be assumed that \( \sin \omega t \) can be approximated by the straight line relationship \( \pi - \omega t \) (see Fig. 3). Thus

   \[ E_{in} = E_r \left( \pi - \omega t \right) \]  

3. The SCR is fired at the moment \( t_i (\pi / 2 < \omega t < \pi) \).

4. Assumed are a constant dc output voltage \( E_{out} \), and no losses in transformer, choke, diodes or SCR.

Thus, when current \( i \) flows through the primary of the transformer (turns ratio \( n_1 / n_2 \)), the voltage at the primary of the transformer will be clamped to \( n_1 / n_2 \cdot E_{out} \).

The moment at which the voltage across the inductance, \( e_{in} \), reaches zero will be named \( t_o \). The value of \( e_{in} \) is determined by

\[ e_{in} = 0 \to \frac{n_1}{n_2} \cdot E_{out} = E_r \left( \pi - \omega t_o \right) \]  

(2)

Further,

\[ e_L = L \frac{di}{dt} = E_r \left( \omega t_o - \omega t \right) \]  

(4)

As \( i = 0 \) at the time \( t_o \) when the SCR is fired,

\[ i_L = \frac{E_r}{L} \int_{t_o}^{t} (\omega t_o - \omega t) \, dt \]  

(6)

From Eq. 6, it can be seen that:

\[ i > 0 \] during the interval \( \omega t_o < \omega t < 2\omega t_o - \omega t_f \) and the SCR continues to conduct. At the moment \( \omega t = 2\omega t_o - \omega t_f \) the current reaches zero and the SCR turns off, ending the current pulse.

The peak current occurs at the moment \( t_p \):

\[ i_{peak} = \frac{1}{2} \cdot \frac{E_r}{\omega L} (\omega t_o - \omega t_f)^2 \]

(8)

The amount of energy delivered by this pulse into the transformer equals

---

Fig. 1. Over-all circuit for new type of SCR regulated power supply. The component values are for the design example in the text.

\[
\frac{n_1}{n_2} \cdot E_{out} \int_{t_p}^{2t_a - t_p} dt = \frac{n_1}{n_2} \cdot E_{out} \cdot \frac{1}{2} \cdot \frac{E_P}{aL} \int_{t_p}^{2t_a - t_p} (a(t_p - at) - 2at_p + at_p) dt
\]

\[
= \frac{2}{3} \cdot \frac{n_1}{n_2} \cdot E_{out} \cdot \frac{E_P}{aL} \frac{1}{2} (a(t_a - at))^3
\]

(9)

As the SCR operates in a full-wave ac circuit, \(a/\pi\) pulses occur per second. The ideal energy delivered into the transformer is:

\[
\frac{2}{3} \cdot \frac{n_1}{n_2} \cdot E_{out} \cdot \frac{E_P}{aL} (a(t_a - at))^3
\]

(10)

By the law of conservation of energy, this must equal the power dissipated in the load:

\[
\frac{2}{3} \cdot \frac{n_1}{n_2} \cdot E_{out} \cdot \frac{E_P}{aL} (a(t_a - at))^3 = E_{out} \cdot I_{out}
\]

(11)

\[
\Rightarrow I_{out} = \frac{n_2}{n_1} \cdot \frac{2}{3\pi} \cdot \frac{E_P}{aL} (a(t_a - at))^3
\]

(12)

From Eq. (3) and (12) it can be seen that the firing angle \(a(t_a - at)\) of the SCR, required to maintain a given \(E_{out}\) and \(I_{out}\), is determined by the addition of two intervals. The first interval \((\pi - at)\) is determined by \(E_{out}\), the second interval \((a(t_a - at))\) by \(I_{out}\).

\[\text{Output voltages, line frequency, maximum output current, and maximum output voltage is given, resulting in well-determined values for } E_{out}, a(t_a - at) \text{ and } I_{out}. \text{ Therefore the designer's decisions are directed towards } (at, \pi - at) \text{ and } (\pi - at) \text{. From Eq. (2)} \]

\[\text{can be seen that a small value of } (\pi - at) \text{ results in a high ratio } n/n, \text{ of the transformer and thus, according to Eq. (14), to a high average current through the SCR. A value of } (\pi - at) \text{ between } \pi/8 \text{ and } \pi/4 \text{ has proved practical.}

\[\text{From Eq. (7) it can be seen that the duration of each current pulse equals } 2(at, \pi - at). \text{ To make proper use of the SCR's current rating under full-load conditions, an on-off ratio of at least 50 per cent is necessary, resulting in a minimum theoretical value for } (at, \pi - at) \text{ of } \pi/4. \text{ An actual circuit, with component values based on } (at, \pi - at) = \pi/4 \text{ will show an on-off ratio of approximately 60 per cent, which is very acceptable. The difference between the theoretical 50 per cent and the actual value is due to the losses, especially in the transformer, which were neglected in the analysis.}

\[\text{Once values for } (\pi - at) \text{ and } (at, \pi - at) \text{ are chosen, the design procedure is after the eight steps given in the box on p 52. A design example will now be given based on these steps.}

**Design Example Illustrates the Eight Design Steps**

A power supply is required to deliver 100 to 200 v (adjustable) dc at load currents between 0.05 and 0.75 amp. The input voltage will vary between 105 and 125 v; the frequency of the input is 60 cps. A ripple of 2

Fig. 2. Main current loop is that portion of the total regulating loop where the designer must start his efforts to tailor the circuit to his needs.

Fig. 3. Voltages and current in main current loop portion of total loop showing how a straight line approximation, \(E_P(\pi - at)\) can be made for sine curve.
IMMEDIATE QUANTITY DELIVERY FROM STOCK...

your choice of 10 high-performance Beckman® servomotors!

They're on the shelf right now, ready for quantity delivery today! Choose from a wide selection of rugged Beckman servomotors, damping generators, and velocity-damp servomotors. All models are available with regular or flush gear-head mounting faces. Every one is precision built by Heliport to take all the punishment your toughest application can hand out. Check the spec table. You'll find the kind of performance you're looking for.

ORDERING INFORMATION... Write, wire or phone your local Heliport Sales Engineering Rep—or contact Heliport direct.

Fig. 4. Alternate main current loop arrangement which economizes on diodes. It is possible only if output dc voltages are less than seven-tenths of the rms line voltage.

per cent is specified, along with a better than 1 per cent regulation.

Based on the previously mentioned factors, the designer chooses a \((\pi - \theta_d)\) of \(\pi/6\). Therefore \((\theta_d - \theta_f) = \pi/4\). The rest of the design follows the eight steps outlined in the box.

1. \(\theta_d = \frac{105\sqrt{2}}{200}, \theta_f = \frac{115}{300}\)

   Rating of the transformer: 200 x 0.75 = 150 va

2. \(L = \frac{115}{300} \cdot \frac{2}{3}, \frac{105\sqrt{2}}{2} = \frac{4}{2\pi} \approx 20\) mh

3. \(i_f, \text{ choke} = \frac{1}{2}, \frac{125\sqrt{2}}{2} = \frac{1}{4} \approx 7.2\) amp

4. \(I_{av} = \frac{300}{115} = 2\) amp, current

   rating of SCR > 2 amp

5. Minimum voltage rating of SCR: 125\(\sqrt{2}\)

   (A possible SCR then would be 2X1602)

5a. Voltage rating for diodes \(D = 200\) v

   Current rating for diodes \(D = 1\) amp

   (Type 1N2027 satisfies these requirements)

6. Diodes \(D\) must be rated at 300 v and 750 ma.

   (Type 1N2028 satisfies these requirements)

7. For 2 per cent, rms of 100 v = 5.6 v peak-to-peak

   \[ \frac{I_{av} \cdot T_{discharge}}{C_f} < 5.6 \quad \text{v} \Rightarrow \frac{0.75 \cdot 8.3 \cdot 10^{-3}}{C_f} < 5.6 \]

   \[ C_f > \frac{0.75 \cdot 8.3 \cdot 10^{-3}}{5.6} \approx 1.100 \mu f \]

8. When the supply was built it was found that the minimum value of \(C11\) was approximately 20 \(\mu f\). The range of \(R18\) for stable operation over the full input
voltage, output voltage and output current range, extended rapidly for capacitance increases going from 80 ohms to 100 ohms at 40 μF. Further increases at greater capacitance values proved to be insignificant. Thus C11 was chosen at 40 μF, and R18 in the middle of its range at 220 ohms.

A ripple of 1.2 per cent was measured at 100 v, 750-ma load, and the filter capacitor was therefore reduced to 1,000 μF = 250 v. The complete values for the final circuit are shown in Fig. 1.

Test Results Showed Example
More than Met Specs

The supply met its specifications. While in the lower output range the regulation was well within ±1 per cent, it was 1.2 v off at 200 v, 0.75 amp at a 105-v line input voltage. The actual currents and voltages in the main current loop were very close to calculated values:

- \( i_{\text{rms}} \) choke, SCR 7.2 amp 6.5 amp
- \( i_{\text{rms}} \) (SCR) 2.0 amp 2.0 amp
- on off ratio, SCR 50% 60%

Further increase of load current or decrease of line voltage resulted in rapid decrease of the output voltage.

The response times for load variations less than ±50 per cent and line voltage variations between 105 and 125 v were in the order of 25 msec. Total efficiency was measured as 79.5 per cent under maximum load conditions.

Short circuit protection for this type of regulator can be obtained with normal fuses in input or output lines, as all fault currents through current-sensitive devices are limited by the presence of the choke in the primary circuit.

When complete automatic short circuit protection is required, two ways are available. The first is to rate all components vulnerable to currents at the maximum fault currents, particularly L, the SCR, and diodes D and d. The second, and more usual, way is to add electronic circuitry to the feedback system to provide quick turn-off of the supply when a short or overload occurs.

If lower output voltages had been required (< 0.7 \( E_{\text{line rms}} \)), a main current loop as shown in Fig. 4 can eliminate four rectifiers. As the basic operation and performance remain the same, the choice between the arrangements of Fig. 2 and 4 is merely a question of economy.

---

PARTS ARE PART OF CUSTOM POWER...

BUT THE BIG PART IS BRAIN POWER

NJE leads the custom power supply field because of its unparalleled engineering experience...experience that turns simple hardware into sophisticated power sources for computers, military equipment and systems for automation.

Very often your supply must be designed from the ground up, with specialists attacking a completely new problem. In other cases, we can modify an existing design to fit your needs in order to speed delivery and reduce costs.

NJE's completely new plant includes all research and development, engineering, drafting, sheet metal work, stock, painting, meter calibration, transformer production, assembly and testing—all under one roof.

Here are just a few of the leading projects now using NJE power supplies and systems: [U.S. Navy computer memory power supply] ["Hustler" ground support power supply system] [Radar system power supply] [Hawk missile check-out] [F-105 flight simulator power supply system] [Atlas missile check-out] [Nike Zeus].

PRODUCT FEATURES

Fluid-Sphere Gyro Has High Sensitivity

A RADICAL departure from conventional gyro design has resulted in a device that can detect motion too minute to be measured. The miniature gyro's unique sensing ability makes it especially suitable for stabilizing space platforms, carrying extremely delicate equipment.

The new space-system component, according to the manufacturer, Sperry Gyroscope Co., Great Neck, L. I., N. Y., is a fluid-sphere gyroscope, called the SYG-2000. It has a sensitivity believed to be as low as 1/100 of a sec of arc.

The heart of the mechanism is a spinning mass of liquid, confined within a hollow sphere.

In operation a cylinder is constantly rotated by two hysteresis motors at either end. Inside this cylinder is the hollow sphere filled with silicon fluid. Any angular motion of the rotor from this axis produces variations in

Vacuum System Is Automated

SEQUENCING of valves for vacuum processing has been automated. With an air-operated, solenoid-controlled bellows sealing valve, the 401 series of 4-in. vacuum systems has all the advantages of an automated system without loss of the quality and versatility associated with manual systems.

Vacuum Electronics Corp., Terminal Drive, Plainview, L. I., N. Y., has introduced a series of 4-in. vacuum systems that are modular in construction. They are available individually, in groups or as a complete system.

The automatic station achieves pump down to 5 x 10⁻⁹ mm Hg in less than 35 sec with a blanked port. Ultimate pressure is less than 5 x 10⁻¹ mm
pressure between the fluid and the cavity wall. Pressure is sensed by a series of diaphragms buried in the rotor-cavity assembly. Pressure variations force the diaphragms to oscillate at an amplitude proportional to the angular displacement between the rotor and fluid axes. The diaphragms act as elements of a miniature microphone to convert pressure variations into electrical signals.

The two-axis SYG-2000 contains fewer than half the number of parts required by a conventional gyro. Anisoeelastic drift is 0.003 deg per hr per g².

The tolerance requirements for the fluid-containing sphere are so lax that Sperry is able to use an investment casting without further machining.

The unit can be delivered in five to six months at less than $2,000. For further information on this low-cost, high-sensitivity gyro turn to the Reader-Service Card and circle 250.

Hg. The complete cycle is controlled by two push buttons. A start button initiates the roughing cycle. Upon reaching a predetermined pressure setting, a Veeco type "TC" controller automatically switches the valves from roughing to high-vacuum position.

After completing a process, the second, or stop button, is pressed to vent the system automatically in preparation for the next cycle. An automatic bell-jar lift is incorporated in the circuit. After the stop button is depressed, the bell-jar vents and lifts, ready for reloading and recycling.

The 401 series is being offered at prices up to $8,000 with delivery of two to four months. For further information on this automated vacuum system, turn to the Reader-Service Card and circle 251.

New General Instrument Nanocircuits

Source for Silicon Nanocircuits. Now you can design military and industrial computer circuits with high-speed, silicon Nanocircuits whose substrates measure as little as 0.17 x 0.17 inches. Latest example of General Instrument's Nanocircuit Program, these new flip-flops utilize matched pairs of semiconductors and operate at speeds in the nanosecond range. The flip-flop shown, typical of the many configurations available, consists of two planar epitaxial transistors, two microdiodes, six semiconductor resistors and two silicon oxide capacitors. Silicon Nanocircuits need no encapsulation. Each component (preselected and pretested for reliability prior to bonding to the substrate) is passivated by General Instrument's unique Molecular Shield™ process. Nanocircuits are unaffected by external ambients. The coating serves only to provide mechanical rigidity. Complete details on all Nanocircuits and other General Instrument semiconductor devices to meet your specific requirements, are available at the General Instrument engineering sales office or franchised distributor nearest you, call or write today. General Instrument Semiconductor Division, 65 Gouverneur Street, Newark 4, New Jersey.
**PRODUCT FEATURES**

**Multiplier Phototubes**

*With spectral response ranging from S 11 to S 20, multiplier phototubes are being offered for applications ranging from star-tracking to underground geological explorations. Presented here for your information are three types recently announced.*

**Multiplier Phototube Has “Venetian-Blind” Dynode Structure**

The large photocathode area in the 5-in. multiplier phototube RCA-8055 makes it suitable for applications requiring good photon collection from distant or diffuse radiation sources. The 10-stage, head-on type tube utilizes a “venetian-blind” dynode structure. Spectral response of S-11 covers the range of 3,000 to 6,500 A. Maximum response occurs in the blue region at approximately 4,400 A. Design of the tube includes: a semitransparent photocathode having a minimum useful diam of 4.38 in.; a first dynode having large area; a flat window to facilitate the mounting of flat scintillators and 10 dynode (secondary emitter) stages.

Radio Corp. of America, Dept. ED, 50 Rockefeller Plaza, New York 20, N. Y.

P&A: $195; from stock.

**Multiplier Phototubes Have High White Light Sensitivity**

High sensitivity to the white light spectrum is obtained by the application of trialkali photo surfaces to a broad line of multiplier phototubes. Tube diameters range from 1-1/4 to 5 in. The 2-in. K 1927, the 3-in. K 2167 and the 5-in. K 2173 have a typical spectral response of S 20. Peak sensitivity is approximately 4,200 A with 50% of peak response maintained at 7,000 A in the red portion of the spectrum. Particular applications for the tubes lie in the fields of star tracking, missile tracking and satellite tracking. Specifications and operating characteristics include cathode sensitivity in the range of 120 to 150 μA per lumen, with current amplification factors between 200,000 and 300,000 at 1,800 v. Anode dark current at 150 v per stage is 0.03 μA.

P&A: K 1927, $375; 4 to 6 weeks.
Photomultiplier For Severe Environments

The ruggedized construction of the WX 4582 3/4-in. photomultiplier tube makes it suited for underground geological explorations. Flexible leads in polyvinylchloride sleeves are potted with silastic to permit the tube to be soldered directly into the circuit and yet insure against electrical leakage paths. The photocathode of the tube has an S-11 spectral response, peaking at 4,400 A. With 105 v applied per stage, the average anode sensitivity is 9 amp per lumen and the cathode sensitivity is 50 na per lumen. Dark current under these conditions is generally less than 0.01 na. The tube also has applications in portable scintillation counters, industrial computers and punch-card sorting.

Westinghouse Electric Corp., Electronic Tube Div., Dept. ED, Elmira, N. Y.

P&A: on request; immediate.

CIRCLE 51 ON READER-SERVICE CARD

More than just another transistor — available now, a full line of PNP Alloy Junction Silicon Transistors in a smaller case (TO-18) with the same high performance as TO-5.

The engineering problem of getting the exact performance from a substantially smaller unit has for years faced engineers using silicon transistors. Now Sperry offers you PNP Alloy Junction Silicon Transistors in a higher density package than the popular TO-5. These new TO-18s have the same electrical characteristics, are smaller in size, lighter in weight than TO-5 ... and at no increase in price.

*Chopper Transistors — for single use or matched pairs that have the best combination of chopper characteristics available — high breakdown ratings 50 to 80 volts. Two point control of current/voltage offset parameters. Matched pairs to standard tolerance of 100 µV.

Theod. Mark, Sperry Rand Corporation
Voltage Regulator Tube
Maintains Stable Voltage

Voltage is held constant within ±2 v throughout its ambient temperature range of −65 to +400 °C by the ZR-7501 ceramic voltage regulator tube. The tube operates at a design point of 103 v over a current range of 5 to 100 ma. Its dc starting voltage is 150 v max. The two-electrode, cold cathode tube weighs 0.4 oz, is 0.7 in. in diam and 0.75 in. long. It has a vibration-proof mounting that provides insulation of 1,500 v to ground.

General Electric Co., Power Tube Dept., Dept. ED, Schenectady 5, N. Y.
P&A: $132; from stock.

Phase-Lock Discriminator
Utilizes Phase Coherent Detection

The advantages of phase coherent detection are utilized in the phase-lock discriminator model 0447. Tracking loop and output filter parameters are closely controlled by a pluggable selector, in several percentages of the total IRIG bandwidth for each channel.

The Siegler Corp., Hallamore Electronics Div., Dept. ED, 714 N. Brookhurst St., Anaheim, Calif.
P&A: $1,195; 45 days.

Three Dimensional Antenna Contour Plotter

Three dimensional antenna contour plotter model ACP 1 maps angle and amplitude coordinates in the new IRIG format. Used with the companies automatic positioner programmer and two-axis positioner a complete contour plot can be made by "raster scanning" over the sphere of radiation of an antenna missile or scale model of an airframe. Contour increments are selectable, 1, 2 or 3 db. The unit also records antenna patterns.

Scientific-Atlanta, Inc., Dept. ED, 2162 Piedmont Road, N.E., Atlanta 9, Ga.
P&A: $7,200; 60 to 90 days.
Volts

Volts

DC Power Supplies

Employ "On-Off" Regulation

High current, transistorized DC power supplies, series SP employ an "on-off" type voltage regulation circuit. The voltage regulation circuitry is responsive to the power demand of the load and varies the duty cycle to match the demand. A pulse averaging circuit maintains constant voltage output so that the effect of the "on-off" regulation is removed prior to the output terminals. Line regulation is 100 mv from no-load to full-rated load. Ripple is 35 mv rms.

Consolidated Avionics Corp., Dept. ED, 800 Shames Drive, Westbury, N. Y.

P&A: from $450 to $1,125; stock to 8 weeks.

Enjoy new design freedom with JFD differential and split stator trimmer capacitors

Whether you select the diminutive differential or split stator type JFD trimmer, you cut space, assembly and performance problems down to size.

These two versatile solid dielectric JFD trimmers provide excellent stability... extreme compactness... resist shock and vibration. Both employ the superior JFD rotating piston with patented telescoping adjust mechanism and anti-backlash assembly.

Result: velvet-smooth ultra linear tuning... much more capacitance per unit volume... and JFD trouble-free patented design simplicity adds to your product's reliability.

Write today for complete trimmer catalog C-61 or contact your local JFD franchised Industrial Distributor for fast, off-the-shelf delivery.

Features capacity that increases in one gang as capacity decreases in the other gang. The sum of the capacitance of both gangs remains constant in the peak-to-peak area of the tuning curve. Low expansion invar and precision bore glass provides increased stability across a wide operating temperature range (from -55°C to +25°C). 35 standard models available in panel mount and printed circuit types.

Sliding piston differentials or split stators can be designed for use with cash or motor driven mechanisms. For these modifications or any special design to your requirements, please get in touch with one of our sales engineering offices or one of our 25 sales representative's organizations.

Ampex announces
a new twin-tetrode...type 7854...

for special mobile VHF/UHF transmitter applications which require 50% greater plate dissipation than the renowned Ampex 5894

With exceptional reliability assured by unique ratings for both heat sink and forced-air operation, the new Ampex 7854 is applicable for either mobile or base station applications.

The 7854 is designed to assure unrivalled performance as an RF power amplifier, oscillator, modulator and frequency multiplier in land-based and airborne VHF and UHF transmitting equipment — for amateur, professional, military and police.

Typical Operation — Class C Push-Pull RF Power Amplifier and Oscillator

NEW PRODUCTS

Current Regulator

Polar, two terminal device regulates current with a voltage applied. Operating voltage range is 10 to 28 v. Twelve types of regulators are designated KI series and have regulation of ±5% at 70 F and 20 v. Units are potted in a rugged miniature package.

Grafix Co., Dept. ED, 2841 San Mateo Blvd. N. E., Albuquerque, N. M.
Price: 1 to 9, $18.00 ea.

Wireless remote control of four independent functions can be accomplished with this ultrasonic system. Control can be achieved with up to 30 ft separation. Transistor system consists of a hand-held 40-kc transmitter and a compact receiver.

RMS Associates, Inc., Dept. ED, 805 Mamaroneck Ave., Mamaroneck, N. Y.
P&A: $125; 15 days.

Navigation Equipment

High-temperature insulating foam can operate continuously at 2,000 F. Called Eccofoam SI, the material is 95 percent silica and has a fine grained structure with cells less than 100 microns in diameter. It can be glazed to form a waterproof, hermetically-sealed foam. Microwave dielectric constant is 1.8. The material, rugged and readily machined, is available in 6 x 6 x 1/8 in. sheets.

Emerson and Cuming, Inc., Dept. ED, Canton, Mass.

Smaller weight, size and power consumption are featured in two new pieces of airborne navigation equipment. The 51Z-3 Marker Beacon and the 51V-4 Glidescope Receiver both have solid-state design. Model 51Z-3 is for general aviation use, has no moving parts and weighs 2.9 lbs. Model 51V-4 covers 20 channels with no moving parts and weighs only 3.5 lbs.

Collins Radio Co., Dept. ED, P. O. Box 1891, Dallas 21, Tex.

Wire Stripper

Dynamic pressure transducer model 176 provides high frequency response on pressure ranges from 0 to 300 to 10,000 psig. Exposed parts are stainless steel. Linearity deviation is less than 0.25 percent. Unit may be used with either constant voltage or constant current systems.

Taber Instrument Corp., Dept. ED, 107 Goundry St., North Tonawanda, N. Y.

Thermal wire stripper model G-1 is claimed to be the smallest one commercially available. The tweezer style strips 1/4 x 1/4 x 5 in. for easy access to difficult locations. They can strip wire from No. 16 to No. 40 with no adjustments.

Western Electronic Products Co., Dept. ED, 2420 N. Lake Ave., Altadena, Calif.
P&A: $74.50; immediately.

Printed-Circuit Frame

Exposure time is cut in half by this printed-circuit exposure frame. One or two sides of a laminate may be exposed at once. It will take laminates up to 20 x 25 x 1/2 in. and both sides may be viewed after contact.

Colwell Litho Products, Inc., Dept. ED, 123 N. Third St., Minneapolis, Minn.

Static Switch

This 40-w magnetic static switch is suited for use where a solenoid must be switched on-off in continuous use. It functions at 600 on-off cycles per min; turn off time is 5 cycles, while on time is one cycle. Output is 0.4 amp at 100 v ac.

Magnetics Inc., Dept. ED, Butler, Pa.
P&A: $17.00, 1 to 9; stock.

High-Gain Amplifier

For data handling systems, model 3PA6D amplifier has a maximum output range of ±10 v. Power requirements are ±12 v and ±12 v at 10 ma each. The emitter follower output stage can be connected either in phase or out of phase with the input; with feedback brought back to the input, giving a low input impedance; or to the opposite side of the first stage difference amplifier, giving a high input impedance.

Silicone Rubber

Suitable for molding, extruding or calendering, Silastic 241U may be used from -80 to -500 F. Manufacturer claims good flexibility and physical strength after long exposure to temperatures in this range, as well as good electrical properties and low compression set. This compound meets mil spec.

Dow Corning Corp., Dept. ED, Midland, Mich.
Electronic Gages

Measure to 0.000002 in. Transistorized electronic gages include bench comparators, dice thickness gages, and height gages. They are available for use with 110 v ac or self-contained battery.

Techni-Rite Electronics, Inc., Dept. ED, 61 Centerville Road, Warwick, R. I.

Ceramic Rectifiers

Three-amp ceramic stud rectifiers and 10-w Zener regulators make up the Slim-Silhouette series. These devices use 1/3 of the above-chassis area in conventional designs. Due to high-temperature, hydrogen brazing and soldering, the units are said to be unaffected by environmental conditions. They are available with psv from 50 to 1,200 v and tolerances of 2, 5, and 10%.

Argyle Electronics Corp., Dept. ED, Argyle, N. Y.

RF Filters

Have central point multi-circuit rf filtering. This single package contains all the necessary rf filters needed for power lines, lighting circuits, communications lines at missile sites and other applications. Units handling up to 1,000 circuits are now in use, but there is no limit to size or number of circuits.

Filtron Co., Inc., Dept. ED, 131-15 Fowler Ave., Flushing, N. Y.

NEW TR GLASS WITH A

GRIP LIKE A VISE

now available on many FUSITE TERMINALS

Never before has a glass been developed that is so compatible for use with 52% nickel alloy leads.

The result is a compression between the glass and pins so tight that twisting and bending of the pins to the breaking point will not cause rupture or leakage. (Determined by Veeco Leak Detector with sensitivity at 10^-10 std. cc/sec.) Thermal shock is excellent with this new TR-Glass. Salt spray resistance exceeds 100 hours.

Every performance feature is well in excess of Mil Specs. The use of TR-Glass may be considered for all types of Fusite solid glass headers as well as many other style terminals.

Samples on request. Write Fusite, Department C-6

CIRCLE 54 ON READER-SERVICE CARD
Globe's basic high quality motors are designed hysteresis-synchronous and induction in various stack lengths. Our a.c. motors span the torque spectrum through 10 oz. in. at synchronous speed (induction torques are 50% higher). New frame sizes of ½" and 2½" dia. are coming. Units are for 60, 400 cycles, variable frequency, very high cycle, or special square wave power. Our d. c. motors span the same performance and size range.

We furnish gearmotors—using standard odd or even ratio gear reducers—providing the exact speed-torque output you need in one compact package. This is the most efficient way to meet your requirements from the standpoints of good design, reasonable cost, undivided responsibility. Many available for immediate prototype delivery.

GLOBE INDUSTRIES, INC.

OF COURSE, GLOBE MAKES A.C. MOTORS

NEW PRODUCTS

Mylar Capacitors

Metallized mylar capacitors are made in bathtub and tubular types. Ratings range from 100 to 600 wvdc, 0.1 to 35 μf, 125 and 150 C operation. The layer-wound units are claimed to have the capacity and voltage ratings of standard types five times as large.

The Potter Co., Dept. ED, 7351 Lawndale, Skokie, Ill.

Selenium Diodes

Six cell sizes are available in selenium Thyrector diodes. Reverse break-down characteristic enables the device to suppress transient voltages. Units range from 9/32 in. diam to 5 x 6 in. plates. Steady-state ratings are from 30 v rms to 500 v rms, in stacks.

Molded Chokes

Color-coded, fixed inductance rf chokes have good self resonant frequency and current carrying capacity. Units are encapsulated in epoxy resin for mechanical stability and environmental protection. The 2960 series meets MIL-L-LT-7K and range from 0.15 μh to 27.0 μh.

Price: $0.51 to $0.54 from 100 to 249.
WELDED CIRCUIT PACKAGES

Transitron custom-assembles and encapsulates any variety of three-dimensional circuit configurations of conventional, miniature or micro-minature components. Utilization of advanced production processes, including precision welding, assures strong, uniform joints and results in high packing density, light weight and high structural reliability. Typical custom-made packages are:

FLIP-FLOP

A general purpose flip-flop module capable of counting at speeds of 3-5Mc and operating as a logic element at bit rates in excess of 2Mc.

(Tentative Data)
Frequency In excess of 3Mc
Supply Voltage 12 Volts DC ±9%
Power Dissipation (typical) 150mW
Clock Rate In excess of 2Mc
Maximum Load 1.5KΩ

LOW LEVEL AMPLIFIER

Gives high input impedance and low noise performance with a voltage gain of approximately 20.

(Tentative Data)
Input Impedance 500KΩ
Output Impedance 3KΩ
Voltage Gain 20
Equivalent Input Noise Voltage 5µV
Voltage Supply ±18 Volts
Band width DC to 100Kc

3 to 5 WATT AUDIO AMPLIFIER

Contains a stable gain push-pull amplifier circuit capable of up to 5 Watts.

(Tentative Data)
Voltage Supply 18 Volts
Maximum Linear Output (Push-Pull) 3 Watts (20Ω loaded)
Band width 20-20,000 cps

VIDEO AMPLIFIER DOUBLET

Utilizes a stable gain circuit giving a broad flat band width and relatively low noise operation.

(Tentative Data)
Current Gain of approximately 20 per doublet
Equivalent Input Noise Current over entire band width is typically less than 0.02fA RMS

MULTIPLE SEMICONDUCTOR ASSEMBLIES

An extension of standard assembly techniques has resulted in the packaging of a number of devices in the same space normally occupied by one standard transistor package. Transitron's compact packaging features electrical isolation, close thermal proximity between junctions, matching of specific electrical specifications, and reduction of external connections. Three typical Transitron Multiple Assemblies are:

PACKAGED REFERENCE ASSEMBLIES

A further diversification of Transitron's packaged assembly program has produced two new additions to the firm's broad standard line of quality silicon references... Selecting from among its most reliable and stable units, including devices used in the Minuteman missile, Transitron combines for the first time both temperature-compensation and close tolerances in a double anode packaged reference assembly. Further efforts have also produced a low current reference assembly which offers precision tolerance reference voltages (10 to 100 volts) in a package especially suited for high-density circuitry.

For further information, ask for Transitron's "Packaged Reference Assembly" bulletins.

First to introduce the REF-AMP, Transitron, a 5-year pioneer in the development of packaged semiconductor assemblies, is pleased to announce the broad expansion of its Special Products Service Department. In response to the increasing demand for packaged assemblies, Transitron offers the electronic industry a growing line of standard assemblies as well as a highly versatile and flexible custom design service.

Isolation Amplifier

Gain of 40, with an accuracy of 0.1% from -55° C to +125° C, is offered in model 260 transistorized isolation amplifier. Input impedance is 20 K, max output voltage is 40 v rms. Phase shift through the unit is 0 deg within ±2 min and output impedance is 5 ohms or less.

Control Technology Co., Inc., Dept. ED, 41-16 29 St., Long Island City 1, N. Y.

Silicon Rectifier

Rated at 150 amp, the 6RW58 series silicon controlled rectifiers has 9 models. They differ by piw ratings of 50 v to 500 v, from the 6RW56AC to the 6RW56KC. Peak one cycle surge current is 3,000 amps and max gate current to fire the silicon controlled rectifier is 100 ma at 25°C.

General Electric Co., Rectifier Components Dept., Dept. ED, Auburn, N. Y.

Availability: from stock.

Digital Recorder

Transistorized digital recorder features high speed and flexible data input. Model 562A can print up to 5 eleven-digit lines per sec. Four line codes other than 1-2-2-4 binary-coded decimal may be used as inputs, by substituting plug-in cards. Ten-line code operation is also available by card substitution.

Hewlett-Packard Co., Dept. ED, 1501 Page Mill Road, Palo Alto, Calif.
P&A: $1,625 for six digits; 12 weeks.

Heat Sink

Liquid-cooled transistor heat sink dissipates 500 w. At 500 w the heat sink temperature does not exceed 110° F. Maximum wattage dissipation is obtained in heat sink area of 1 sq ft. Temperature gradient is 0.04° F per w.

Electro Impulse Laboratory, Inc., Dept. ED, 208 River St., Red Bank, N. J.

Multiplexing Modules

Input range is 0 to 10 v. A selected channel is gated on by a -6.8 v gating signal. A feedback loop combines the input stage for that channel with the output amplifier to form an amplifier with unity gain and a high input impedance. Model 371 contains two channels of input gates and amplifiers, and an output amplifier. Model 372 contains four channels of input gates and amplifiers.

Epitaxial Transistors

Low-noise, 1,000-mc epitaxial mesa transistors have a noise figure of 4 db and power gains of 20 db at 100 mc. Saturation voltage is 0.3 v typical at 50 ma. Oscillator efficiency exceeds 20% at 400 mc; total device dissipation is 750 mw for these TO-5 packaged transistors.

Motorola Semiconductor Products, Inc., Dept. ED, 5065 E. McDowell Road, Phoenix 8, Ariz.

Digital Voltmeter

Five-digit display is feature of model 650 digital voltmeter. Range is ±0.0001 v dc to ±1,200.0 v dc, with accuracy of 0.05% ±1 count. The unit has automatic polarity sensing and display, an internal calibration cell and an essentially infinite input impedance, except 20 meg on 1,200 v range.

Franklin Electronics Inc., Dept. ED, Bridgeport, Pa.
P&A: $1850; stock to 60 days.

Ultrasonic Welder

Peak acceleration of 30,000 g enables many uses of the Ultrasonic Toolshop. The probe of this unit is vibrated at 25 kc and permits soldering without flux. Other applications of this tool include heatless sealing of plastic. Weight is under 8 lbs and operation is 110 v ac.

Electromation Components Corp., Dept. ED, Norden Lane, Huntington Station, L. I., N. Y.

Direct-Writing Oscillograph

Utilizing a tungsten light source, model 444 offers four to six channels and four selectable chart speeds ranging from 1 to 50 ips. Other features include the use of model 210 galvanometers with sensitivities from 0.4 mv per in. and 2,000 cps (+5%) frequency response. Unit uses ac or dc power by 110 v, 60 cp; other models are available using 12 or 28 v dc.

Century Geophysical Corp., Dept. ED, 515 S. Main St., Tulsa 3, Okla.

Availability: immediate.

Pulse Generator

Repetition rate of 10 mc and a broad range of pulse widths and delays are combined with fast rise time, in model 138. This unit provides both a positive and a negative pulse simultaneously. Low jitter and good waveform enable its use for general laboratory service.

E-H Research Laboratories, Inc., Dept. ED, Oakland, Calif.

Magnetic Switch

Biasing is not needed to keep this switch normally closed. The switches come in a hydrogen, or an inert atmosphere cell. Both the DRG-DT and the DRG-DTH are spdt switches. Contact ratings are resistive; 3 w dc, 10 w ac, for the DT and 20 w dc, 40 w ac for the DTH.

Hamlin Inc., Dept. ED, Lake Mills, Wis.
P&A: $8 up; immediately.

ELECTRONIC DESIGN • October 25, 1961
**Coupling Capacitors**

For uhf applications, these coupling and bypass capacitors have 360 deg current pattern from center terminal and are custom designed. Working voltages are from 350 v dc to 500 v dc and nominal capacity range is 100 pf to 5,000 pf. Units will be made to customer specifications.

Erie Resistor Corp., Dept. ED, 644 W. 12 St., Erie, Pa.

**Voltage Comparator**

Transistor circuit module can detect voltages in range of -6 v dc to +6 v dc. Sensitivity is 0.1 v from -54 C to +71 C. Unit is compatible with T-series digital circuit modules. The unit is 7.8 in. in diameter by 2.5 in. in seated height, with standard 9 pin miniature base.

Engineered Electronics Co., Dept. ED, 1441 E. Chesnut Ave., Santa Ana, Calif.

**Wire Stripper**

Tweezer-like wire stripper operates at 480 F. The ST-6 has separate heating elements in each arm and stainless steel stripping heads. Length is 6 in.; weight is 2 oz. A 6 v, 3 amp ac or dc power supply is needed. Power consumption is 12 w.

Oryx Co., Dept. ED, 13804 Ventura Blvd., Sherman Oaks, Calif.

**Accuracy Is Our Policy**

The New Literature release which appeared on p 205 of the Sept. 27 issue of ELECTRONIC DESIGN described catalog No. 62 offered by Alpha Wire Corp., 200 Varick St., New York 14, N. Y.
...and now for

a spot of welding!

Still at it? Trying to improve potentiometer reliability by building 'em yourself? Well, you're on the right track about one thing—welding's a sure way to eliminate a lot of operational headaches—like gassing contamination of contact metals at high temperature, from organic solder flux. No chance of "cold joints", either, to increase circuit resistance. No soldered connections to come loose under vibration and shock. Welding is the way to reliability!

But why set the wife's drapes afire to get a reliable, all-welded pot? Utilizing welding techniques, Ace produces reliable potentiometers operable at temperatures exceeding 150°C, and able to withstand 50 G's at 2000 cycles. All this plus extremely low contact resistance and longer rated life. All taps, end connections, resistance elements, contact assemblies and terminal leads are specially prepared beforehand—then welded with pure nickel or palladium silver. So, for built-in reliability through sounder construction techniques, see your ACErep!

This 2" AIA Acereg® (shown 1/2-scale) incorporates all these exclusive welding construction features, for superior reliability.

NEW PRODUCTS

UHF Preampiplier

Low-noise figures are characteristic of these tow-stage preamplifiers for channels 14 through 83. GE type 7077 and GL-2689 planar type tubes are used exclusively. All models, PRU-1 through M, have grounded-grid, high-Q resonant-cavity circuits. Power source must be 117 v, 50-60 cps, 20 w. Single-stage models with weatherproof enclosures are also available.

Digital Modules

Designed for 2 mc operation. The DC2M series consists of miniatirized, encapsulated, digital modules, 1.6 x 0.8 x 0.5 in., fully transistorized and assembled through welding techniques. The DC2C series is a family of systems-designed digital circuit cards 2-3/4 x 5-1/2 in. Each card mounts two to four DC2M modules.

Copper-Clad Laminate

Designed for printed circuitry, grade G-10R has a hot peel strength of 2 to 4 lb per in. of width, and from 9 to 11 lb per in. of width at room temperature. This material is available in sheets of 36 x 36 in. and 36 x 48 in. with the usual copper foil thicknesses.

Key Switch

Rotary selector key operated ac switch, has 45 or 90 deg indexing, providing a positive feel during rotation. Standard features include one or two wafers and 2 to 12 positions. Units have either screw or 1/4-in. spade terminals.

Cutler-Hammer, Dept. ED, 315 N. 12 St., Milwaukee 1, Wis.
DC Relay 644

Microminiature 4pdt relay, model JH-12, has standard contact configurations for 2, 4- and 6-pole relays. Rated at 2 amp non-inductive at 29 v dc or 115 v ac, the hermetically sealed relay operates at temperatures from −65 to +125 C. Plug-in, printed circuit and hook-type solder terminals are available. Operate time is 10 msec; release time is 8 msec; weight is 1.4 oz max.

Allied Control Co., Inc., Dept. ED, 2 East End Ave., New York 21, N. Y.

Dice Sorter 470

An automatic dice sorter, the Auto-Sorter TK-500 can gauge and sort 2,400 to 3,200 dice per hr to an accuracy of 0.000040 in. Dice are sorted into 10 categories ranging in size from 0.000050 to 0.00020 in. including "rejects" and "reinspects". Automatic controls, counters and shut-offs are standard equipment.

Techni-Rite Electronics, Inc., Dept. ED, 71 Centerville Road, Warwick, R. I.

Price: $10,500.

Power Supplies 355

Two series offered. The T series, consisting of seven models, has outputs of 0.8 to 30 v at 50 to 200 ma with line and load regulation of ±0.5% and ripple of 0.1%. The M series, consisting of 12 models, has outputs of 9 to 40 v at 500 to 700 ma with line regulation of ±0.1%.

Acoyan Technical Co., Dept. ED, 927 Spruce St., Easton, Pa.
P&A: $60 and $80; stock.

WRITE FOR FULL INFORMATION TODAY! Complete engineering data and detailed specifications on this line of low current relays and sockets is available. Yours for the asking, or phone NE 2-2000.
Long life of the Hathaway Drireed Miniature Relay Form A is typical of the quality built into all our relays...and we have a relay for all your applications—routine or specialized.

Contact rating: 10,000,000 operations at 100 milliamperes, 115 V 60 cps resistive, 10,000,000 operations at 125 milliamperes, 28 vdc resistive. 1,000,000,000 operations dry circuit. Vibration: 20 G's to 2,000 cps, energized or non-energized with no fault operation. Shock: 50 G's for 11 milliseconds. Operate time-typical: 600 microseconds, including bounce, for 28 vdc unit at nominal voltage. Closed contact resistance: .04 to 0.12 ohms initially. Breakdown voltage between contacts: 250 volts rms, 60 cps. Natural contact frequency: 2,700 to 3,200 cps. Weight: 5 grams. Volume: 0.110 cubic inches. Noise: Usable in the low microvolt region. Special circuits available upon request.

**NEW PRODUCTS**

**Block Tape Readers**

Modular design block tape readers are developed for use wherever panel space is at a premium. One or more of these readers may be combined with a single control unit to make up a tape reader for 80-, 96-, or 120-bit frames. The 410 series is an 80-bit unit; the 412, a 96-bit unit and the 415, a 120-bit unit. Combined with the 400 series control unit, they make up the TP-450, TP-452 and the TP-455 tape programmers, respectively.

Electronic Engineering Co. of California, Dept. ED, 1601 E. Chestnut Ave., Santa Ana, Calif.

P&A: from $1,625 to $2,145; 45 days.

**Control System**

Model 1710 has been modified to include closed-loop capability by adding two new units, the 1711 data converter, model 2, and the 1712 multiplexer and terminal unit.

International Business Machines, Corp., Data Processing Div., Dept. ED, 112 E. Post Road, White Plains, N. Y.

P&A: $125,000 to $250,000; early 1962.

**Sampling Oscilloscope**

Calibrated, high resolution measurement of nsec pulse phenomena is possible with sampling oscilloscope model 185B. Conventional controls, direct reading and a standard 5-in. monopulse CRT are features of the unit. With model 187B plug-in dual trace amplifier, the unit has a pass-band from dc to 1-Gc, can be synchronized up to 1-Gc and permits full screen presentation of signals from 0.3 nsec to 100 nsec.

Hewlett-Packard Co., Dept. ED, 1501 Page Mill Road, Palo Alto, Calif.

P&A: model 185B, $2,300; model 187B, $1,000; 4 months.
In years of specializing in air moving and cooling, at times we have been undersold, outmaneuvered and outtalked. But we've seldom been outdesigned or outperformed. Sooner or later most air moving problems come to Torrington. Brochure 102 proves why it should be sooner.

Torrington Manufacturing Company
Torrington - Connecticut
The new EDC makes it easier than ever before to locate and obtain information about recently released electronic products. Improvements suggested by readers include:

- *Simplified code and reference numbers, for new products.*
- *Bold category heads on each page make it easier to find products listed in the locator.*
- *Improved cross references.*
- *An entirely new section - "Index to New Products by Manufacturer." Use it to scan a given company's new product activity.*

EDC is Electronic Design's 27th Issue.
Constant Delay Lines

Packaged in hermetically sealed cases, series PCDL lumped constant delay lines are designed for application on printed-circuit cards. Case height is 0.4 in. max; width is 1.4 in.; length may be varied as required. Time delay to rise time ratios of 5 to 1 have a delay line length of 1.6 in.; ratios of 25 to 1 can be obtained with a length of 5.6 in. Rating is 500 V dc; tolerances can be maintained through a temperature range of -55 to +125 C.

PCA Electronics, Inc., Dept. ED, 16799 Schoenborn St., Sepulveda, Calif.
P&A: from $20 to $150 each; 30 days.

Epoxy Shells

Non-burning epoxy shells can be furnished in a wide range of sizes. Square and rectangular shapes can be molded on special order. Shells of silicone, diallyl phthalate and phenolic can also be supplied.

Cycle Products Co., Inc., Dept. ED, 123 Central Ave., Newark 2, N. J.

Logic Plug-in

A 200-kc clock driver circuit for digital systems, the CD-1 logic plug-in can also be used for driving medium-power indicator lamps or relays. It contains six independent circuits, each able to handle 450 ma at 50% duty cycle. Dimensions are 4-3/8 x 3-3/4 in.

Computer Logic Corp., Dept. ED, 11800 W. Olympic Blvd., Los Angeles 64, Calif.

This 17-inch printed circuit connector of

DAPON® M OPERATES AT 450° F...

STOPS WARPAGE AND MISALIGNMENT

Dimensional stability of compounds based on DAPON M keeps this connector straight and true: contacts are always accurately positioned.

This long connector is home base for hundreds of terminals. By molding it of thermosetting compound based on DAPON M, Viking Industries Inc. solved a number of design problems...

DAPON M gives the connector outstanding electrical and mechanical qualities. The resin permits 450°F continuous operating temperatures, has excellent dimensional stability and resistance to moisture. Its electrical resistance (measured in millions of megohms) remains unaffected by weeks of exposure to 100% relative humidity.

The material is easily molded. It has good hot strength, the piece is strong when cured. Neither cooling jigs nor multiple ejector pins are needed in removing the connector from the mold. Fast cycles are possible. The resin’s high flex, tensile, and compressive strengths result in rugged moldings with high insert holding power and dependable performance.

DAPON M is recommended for use wherever:
- high operating temperatures are encountered
- top electrical qualities are a must
- better strengths are desired
- molding conditions pose a problem.

Toroid-Coil Winder

For small coils. The toroid-coil winder has a 7.5-in. diam bobbin of narrow cross-section allowing a large number of turns to be wound on a single coil. The large diameter is also practical for stacked coils used in dual-coil magnetic amplifiers.

Controlomag Laboratories, Dept. ED, Box 16, Ottsville, Pa.

Price: $940.

Auto-Collimator

Precision angle measuring system, model 700, provides the capability of automatically and continuously measuring angular deviation between the axis of a transmitted and reflected light beam. Features of the system are: automatic acquisition of light source within a ±0.5 deg field-of-view in both elevation and azimuth axes; continuous angle readout information in both azimuth and elevation axes up to ±1.0 deg of arc; angle resolution of ±2 sec.

Automation Laboratories, Inc., Dept. ED, 179 Liberty Ave., Mineola, L. I., N. Y.

Miniature Chopper

Starting voltage of less than 3 v is required at any frequency within a specified range for this miniature 60-cps chopper. It is designed for operational dc amplifiers in computer applications. Nominal drive frequency and voltage are 60 ±5 cps at 6.3 v, aperiodic from 10 to 100 cps. Phase lag is 20 ±5 deg at 60 cps and 25 C.

Oak Manufacturing Co., Dept. ED, Crystal Lake, Ill.

Price: $22.85 each.

New from Mallory

Hermetically sealed 125°C silicon

Cut your costs
rectifiers at economical prices

For the first time, you can now get a glass-to-metal sealed silicon rectifier capable of 125°C operation... at a cost substantially lower than that of "top hat" types. It's the new Mallory Type D rectifier. It brings you a combination of small size, premium performance and down-to-earth economy which opens broad design opportunities in home instruments and commercial and industrial products.

New performance. Take a look at the specifications for three typical ratings. Compare forward drop, leakage current and ambient temperature ratings against any other

rectifier in this price range. Peak reverse voltage ratings from 50 to 600 volts are available.

New miniaturization. Only 0.240" in diameter and 0.405" long, the Type D is ideal for high density packaging. It can be supplied with an insulating sleeve.

New reliability. The Type D is the result of over four years of Mallory research in semiconductor development and production. Our unique cell construction and manufacturing techniques, coupled with the most exacting quality control, assure exceptionally high level of product quality delivered to your plant.

Our engineers are well qualified to help you utilize the new characteristics of Mallory silicon rectifiers in your present or planned circuits. Write today for data and for a consultation.

Mallory Semiconductor Company
Du Quoin, Illinois

with Mallory packaged rectifier circuits

You can reduce prime component costs, and make important added savings in stocking, handling, wiring and assembly costs with Mallory rectifier circuits. In a single compact package, encapsulated in moisture-impervious resin, you get a complete full wave or doubler circuit... ready to mount on a chassis or printed circuit, ideally suited for automated assembly, with cold case for maximum mounting flexibility. The same basic rectifier elements are used as in the Type D sealed rectifier... high in reliability, premium in performance. Type VB doubler circuits come as a 3-terminal package with 400 and 600 PRV ratings, delivering .5 ampere at 100°C and .75 ampere at 50°C ambient. Type FW full wave rectifiers are 4-terminal packages; rated 200, 400 or 600 volts; 1.0 ampere at 100°C, 1.5 amperes at 50°C. Full wave center tap circuits with positive or negative polarity can be supplied.

Write for our new Technical Data Bulletins: No. 11-8 on the Type FW, and 11-9 on the Type VB.

DC Amplifier

Model 4001 is a compact and rugged dc amplifier designed to amplify low level signals from dc to 5 kc. The unit occupies 3.15 cu-in. and weighs less than 5 oz. Linearity is ±0.3%; gain stability ±0.25% for 24 hr; frequency response is ±0.1 db to 500 cps, ±1.0 db to 500 cps.

P M Electronics, Inc., Dept. ED, 6221 University Ave., San Diego 5, Calif.
P&A: 8985 each; 60 days.

Transistor-Plate Capacitor

Range is 0.005 to 0.1 µf; wvdc is 50. The transistor-plate capacitor measures from 0.28 to 0.7 in. sq. The additional area and thick ceramic section resulting from the square design provide for improved reliability and temperature-capacitance characteristics. Coating is durez phenolic, wax impregnation.

Aerovox Corp., Dept. ED, Myrtle Beach, S. C.

Drafting Instrument

Applies tape to charts, printed-circuit masters and other graphic illustration. The Quick Line Tape pen provides straight, curved or irregular lines from 1/32 to 3/16 in. wide. A wheel assembly feeds, applies and burnsishes tape.

W. H. Brady Co., Dept. ED, 789 W. Glendale Ave., Milwaukee 9, Wis.
OAK DECADE SWITCH SECTIONS have been designed to fill a need in those applications where reliable decade counting is required—computers, process controls, L/C/R decade boxes, lab equipment, and other devices having read-in or read-out functions.

Although the decade counting function can be designed into almost any Oak low-power rotary switch, Type A, F, and H switches are particularly well-adapted to this purpose. Oak engineers have developed a special rotor blade design for these switch types to be used in resistance/capacitance/inductance decade boxes. It is a single section switch that not only saves space but also makes maximum use of a minimum number of components.

If yours is an application that calls for a counting function, inquire about Oak Decade Switch Sections. Because of the special nature of these switches, however, please submit details of use or number of functions required to the Oak Applications Engineering department for specific recommendations.

NEW PRODUCTS

Potentiometer-Switch

Step-driven potentiometer-switch series 720 combines a 15/16-in. diam variable resistor, on-off switch and a bi-directional stepping device. For manual or remote control, it can be used in TV and radio applications. Operating pulse is 25 ma for 75 msec. Coil resistance is 5,400 ohms. Switch rating is 3 amp, 125 v ac.

CTS Corp., Dept. ED, 619 N. Michigan Ave., Chicago 11, Ill.

P&A: $3.60; 2 to 4 weeks.

Insulated Terminals

Melamine and dialyl phthalate insulated terminals are offered in stand-off and feed-through types. A total of 48 sizes offer terminal sizes from 0.047 to 0.070 in., insulator lengths of 3/16 to 17/32 in., shank lengths of 0.156 to 0.344 in. Single and double turret, pin and split terminal types are available.

P&A: $0.12; stock.

Oscillograph

Two-channel, direct writing oscillograph model 296 accepts any of the 350 series pre-amplifiers including phase-sensitivity demodulator, carrier and frequency deviation types. The oscillograph has a basic sensitivity of 0.1 v per mm, frequency response to 125 cps within 3 db at 10 mm, peak to peak; non-linearity of 0.5% max and input impedance of 25 K from each lead to ground.

Sanborn Co., Industrial Div., Dept. ED, 175 Wyman St., Waltham 54, Mass.
**Flash-Mount Transducer**

For hydrophones, the flash-mount transducer assembly has a receiving sensitivity of -85 db vs 1 v per ρ-bar and a transmitting sensitivity of +85 db. Resonant frequency is 195 kc ± 10%; impedance at resonance is about 300 ohms; total capacitance is 2,000 pf ± 15%. Transmitting capacity is 50 w at 10% duty cycle.

Erie Resistor Corp., Dept. ED, 644 W. 12th St., Erie, Pa.

*P&A:* $6.50 to $10; 3 to 4 weeks.

**Rectifier Tester**

Silicon control rectifier tester includes all necessary attachments for complete operation. A sweep supply, gate supply and divider for horizontal and vertical are included. The unit will test forward leakage, reverse leakage, gate voltage and gate current. Specifications are: variable sweep supply, 0 to 500 v; variable-gating, 0 to 7 v; vertical output, 50 mv per ma; horizontal output, 1-v out for every 5-v across the unit under test.

*Price:* $165, including all attachments.

**Powdered Epoxy Foams**

Three types, designated Eccofom EFF-4, 10 and 15, weigh 4, 10 and 14 lb per cu ft. Other specs are: compressive strength: 100, 400 and 700 psi; dielectric constant from 108 to 1011 cp, 1.08, 1.15 and 1.28; dissipation factor from 105 to 107 cps, 0.003, 0.006 and 0.01.

Emerson & Cuming, Inc., Dept. ED, Canton, Mass.

*Price:* $3.00 per lb.

**Voltage Variable Capacitors**

Cover 47 to 6.5 pf in ten types: PC122, PC114, PC129, PC128, PC113, PC126, PC124, PC115 and PC141. Q values range from 50 to 125; working voltages, from 25 to 100 v. Uses include frequency multipliers, parametric amplifiers, electronic tuners.

Pacific Semiconductors, Inc., Dept. ED, 12955 Chadron Ave., Hawthorne, Calif.

*P&A:* $5 to $7; stock.

---

Motorola’s new 1N3189 flangeless series consists of three silicon rectifiers, each capable of carrying 1 AMP at 100°C. Available in voltages of 200, 400, and 600 PIV, these quality units offer superior stability, and can be employed in military designs where commercially available MIL-STD-701B “Guidance” types are acceptable.

Especially suited for printed circuit applications, these new flangeless rectifiers do not require heatsinks and are easier and more economical to install than the bulkier studs. Yet, they operate in the stud-like 1 AMP region instead of the milliamp region usually associated with such subminiature axial-lead devices.

Whether you require rectifiers for military or industrial applications, look to Motorola for the best silicon devices at the best prices. Ask about our other devices to MIL “Preferred” and “Guidance” type specifications.

FOR MORE COMPLETE TECHNICAL INFORMATION contact your Motorola Semiconductor district office, or call or write: Motorola Semiconductor Products Inc., Technical Information Department, 5005 East McDowell Road, Phoenix 8, Arizona.
New Sierra 219B 4-range Transistor Tester reads Beta directly in the circuit; also measures Ic, Beta out of circuit.

Less downtime and less danger of damage to transistors under test with this new Sierra instrument—battery-operated, light weight, portable, easy to use.

Maintenance, quality control, incoming inspection and production testing are just a few of the applications where you save time and money by testing transistors, even complete assemblies, without unsoldering leads. Model 219B reads Beta in the circuit, 1 to 120. Ic is measured on a straightforward basis; collector potentials of 3, 6 or 12 vdc may be selected. All controls are on the front panel...an instrument of convenience, speed, accuracy.

Write or phone today for information and demonstration.

NEW PRODUCTS

Servo Preamplifier 410

High-temperature servo preamplifier model 51-100 provides a gain-impedance product of 3.6 x 10^6 and has a nominal gain of 1,200 at 3-k ohms input impedance. Maximum undistorted output is 2 v rms across a 10-k load. It can be used to extend input impedance or gain of other amplifiers.

Servo Development Corp., Dept. ED, 2 Willis Court, Hicksville, L. I., N. Y.

Analog Computer 411

Iterative analog computer series 3200 uses components matched to within 0.01%. Nominal size is 50 amplifiers. Amplifiers have 20-μv drift and 500-μv noise. Inverter bandwidth is 1 mc. Design is completely modular. Pushbuttons select compute, hold, reset, automatic recycle, slave, audible overload indication and automatic-hold modes of operation.

Sytron-Donner Corp., Donner Scientific Div., Dept. ED, Concord, Calif.

Wire Marker 417

Automatic wire marker, called the Markermatic was designed for marking wires with pressure-sensitive bands but can be used to mark any tubular object. The machine uses markers which are supplied in continuous coil form; each coil contains up to 5,000 individual marks.

W. H. Brady Co., Dept. ED, 727 W. Glendale, Milwaukee 9, Wis.

ELECTRONIC DESIGN • October 25, 1961
Frequency Changer

Provides 400 ±50 cps at 115 ±15 v from a 60-cps, 220- or 440-v source. A 10-kva, three-phase static frequency changer, model 361-102-103 maintains output frequency and voltage to within ±1% under conditions of changing output load from no load to full load and changing input frequency and voltage of ±5%. Harmonic content is 3% avg or 4% max.

Transistor Circuit Breaker

Series 433 transistor decade circuit breaker may be interposed between a power supply or signal source and transistor circuitry. They offer positive protection by opening the load within 10 µsec. Trip current may be adjusted to any value between 15 and 150 ma in the single decade model and between 1.5 and 150 ma in the two-decade model. Insertion loss is 0.25 millihms to 1.5 ohms per ma setting over the 150 to 15 ma range.

Orbitec Corp., Dept. ED, 512 30th St., Newport Beach, Calif.
P&A: $160 each, 1 to 5; immediate.

Silicon Transistors

Operation at collector and emitter voltage of 30 v each with a leakage current of 15 nano-amps max at 65 C is possible with types T-2363 and T-2357 silicon precision alloy transistors. Parameter stability is assured through the use of the TO-18 cold welded package with 250 hr baking at 140 C, coupled with an inert can fill.

P&A: $11.44 to $23.10 in quantities of 100 to 999; immediate.

with improved performance over a broader range...at lower cost!

Six new germanium epitaxial switching transistors from Motorola — the 2N960-62, 2N964-66 series — will replace several hundred similar old type devices in 90% of all applications.

With their faster switching time (Kc = 16 nsec) and lower saturation voltage, this new epitaxial mesa switching series will supplant virtually all other germanium micro-alloy, drift, mesa, and other types for high-speed switching applications in many cases at considerably lower prices.

Designed with improved geometry, the new switch series is intended for applications at both high and low current. Current gain and saturation characteristics are specified at three points (10 ma, 50 ma, & 100 ma), thus clearly characterizing device performance over a broad current range.

For applications where the advantages offered by this new epitaxial series are not essential, Motorola also offers eight new non-epitaxial germanium mesa transistors — the 2N968-75 series — at even lower prices.

FOR MORE INFORMATION on either of these important new mesa series, contact your Motorola District Office, or call or write: Motorola Semiconductor Products Inc., Technical Information Department, 5005 East McDowell Road, Phoenix 8, Arizona.

MOTOROLA DISTRICT OFFICES:

CIRCLE 70 ON READER-SERVICE CARD
FROM: Bendix Eclipse-Pioneer

SUBJECT: Aerospace gyro, synchs

SIX LIGHT, RUGGED BENDIX GYRO TYPES MEET BROAD AEROSPACE NEEDS. With the Bendix gyro line, you enjoy a double benefit. First, the line is unusually versatile—includes models for a wide range of applications, such as radar stabilization systems, aircraft and missile guidance and control systems, bombing and navigational systems, and many others. Second, high quality of manufacture is consistently combined with such advantages as light weight, proved accuracy, reliability, and ruggedness.

BENDIX AUTOSYN SYNCHROS FOR MINIATURIZED CIRCUITRY
Where dependability plus size and weight reduction are essential for aerospace applications, these size 5 Autosyn synchros can meet your needs exactly. They’re available as transmitters, control transformers, and differentials. See typical characteristics below. Further, more comprehensive data available on request.

BENDIX GYROS FEATURE: Electrolytic switches for precise erection, long life • 1000-hour operating life • Two-gyro, three-axis control erection rate of 1.3°/min.—with normal erection rate of 2°/min. and fast erection up to 120°/min. for other models.

Eclipse-Pioneer Division

NEW PRODUCTS

Solenoid Magnets
High field strength. Model HF-26 solenoid magnet has typical specifications of 52 kilogauss at 240 kw with a 2-in. bore, and over 95 kilogauss for a 1-in. bore at 500 kw. Bore length is 6 in. Magnet is suitable for use at both depressed and elevated temperatures.
Harvey-Wells Corp., Dept. ED, P. O. Box 189, Framingham, Mass.

Transient Sensing Relay
Solid-state, transient sensing relay has a continuous output of 12 to 28 v dc. Upon receiving a transient pulse of 100 μsec or longer duration, the output is changed to a pulse of 0.5 sec ON; 0.5 sec OFF, for a period of 10 sec and then returns to a continuous output. The output circuit is rated at 500 ma, continuous load. Recycle time is 15 msec.
Accutronics, Inc., Dept. ED, 403 N. Foothill Road, Beverly Hills, Calif.
P&A: $90 each; two weeks.

Transistor Test Set
A dynamic oscilloscope display of Beta (grounded emitter current gain) as a function of collector current is displayed in the T3A-1 transistor test instrument. A complete plot of Beta vs I, from 0 to 500 ma peak current at fixed frequencies of 1-ke and 10-ke. Accuracy is 5% exclusive of oscilloscope error.
Orbitec Corp., Dept. ED, 512 39th St., Newport Beach, Calif.
Price: $1,125.

Casting Compound
A flexible flame-out system, casting compound C9-5041 with hardener H4-3656, is especially designed for encapsulating transformers that are required to meet MIL-T-27A, Class S, Grades 2 and 5. Shelf life is 6 months; pot life at 25 C is 2 to 3 days; cure is 16 hr at 100 C.
Hysol Corp., Dept. ED, Olean, N. Y.
P&A: $2.50 for sample; immediate.
Matched Diode Package

For use as a ring modulator, demonstrator or discriminator in ssb equipment, this matched diode quad package has a temperature range of -65 to +90 C. The four gold-bonded, hermetically-sealed-in-glass germanium diodes are matched in pairs and then the pairs are matched to pairs to obtain a carefully balanced assembly. The package measures 0.325 x 0.700 x 0.730 in. with a 7-pin in-line single-ended plug termination.

Ohmite Manufacturing Corp., Dept. ED, 3640 Howard St., Skokie, I1.

Availability: 10 day delivery.

Cable Assembly

Designed to mate with a jack even if it is recessed below the surface of the panel, the 10BF10 cable assembly has molded, 3-conductor phone plugs at both ends of a 36-in. shielded cable. Built-in cable clamps eliminate strain on the plug terminals.

Switec, Inc., Dept. ED, 5555 N. Elston Ave., Chicago 30, Ill.

Diode Clip

Test components are automatically located in the Daymarc diode clip when dropped in by hand. Four contacts reliably permit error-free measurements. Diodes and components with magnetic leads including glass resistors, capacitors, etc. can be rapidly handled even with bent leads.

Teradyne, Inc., Dept. ED, 87 Summer St., Boston, Mass.
P&A: 865; from stock.

LOOK WHAT ONE MOTOROLA 2N1142 GERMANIUM EPITAXIAL MESA DOES IN THIS CIRCUIT!!

PROVIDES 250 mW @ 160 mc WITH 10 db POWER GAIN AND 45% EFFICIENCY

The latest devices to join Motorola's epitaxial mesa family are four new PNP germanium transistors, the 2N1141-2-3 and the 2N1195. These new Motorola communication amplifiers provide very high power gain and low R-F noise in the VHF-UHF frequency ranges. They not only make ideal drivers for 160 mc power mesas (Motorola 2N1692) in transmitter output stages, but they also solve critical design problems in frequency multipliers, R-F and I-F amplifiers, mixers, and oscillators.

In addition to higher power gain and lower R-F noise, the new epitaxial units also offer typically:

\[ V_{CE(MN)} = 0.185 \text{ V at } I_C = 50 \text{ mA}; \]

\[ 100 \text{ mc } h_{fe} = 18 \text{ db}. \]

LOW NOISE 200 MC AMPLIFIER

5 db noise figure at 15 db power gain

And, this new Motorola 2N1141 series offers performance breakthroughs in the communication field for low-noise R-F circuits and broad-band high-frequency amplifiers. In front-end applications the low noise of this series provides new extended receiver range. A typical low noise, broad-band amplifier circuit is shown below.

LOW NOISE BROAD-BAND AMPLIFIER

Stack Switch

A miniature stack switch, the Tini-Stack consists of a “pile-up” of various miniature springs, insulators, etc., with a max length of contact spring 1-3/4 in.; 3/16-in. mounting centers and 5/32-in.-wide switch parts. Springs are tempered nickel silver, contacts are welded. It is rated at 3 amp, 300 w, ac non-inductive load.
Switchcraft, Inc., Dept. ED, 5555 N. Elston Ave., Chicago 30, Ill.

DC Power Supply

Adjustable response time permits compensation for voltage-time differences between model MRST28-300 static dc power supply and the load inverter. Static line or load regulation is 0.1% and dynamic load regulation is ±6 v; ripple is 1% rms. Measurements are 22 x 36 x 24 in.
Perkin Electronics Corp., Dept. ED, 345 Kansas St., El Segundo, Calif.

New casting resin—Sylgard® 182—is tough, flexible and repairable

Visual inspection ... environmental protection ... ease of processing ... simplicity of repairs — these and other features make Sylgard 182 an important new tool when engineering for value.

Tough yet flexible, this solventless silicone casting resin cushions against shock and vibration from −70 to 225 C ... assures constant dielectric strength in any environment ... resists the effects of ozone, voltage stress, heat aging and thermal cycling.

Processing is simplified since Sylgard 182 and its curing agent are not toxic to the skin ... nor do they give off toxic fumes or heat during blending or curing. Curing time can be controlled by the external heat applied — from as little as 15 minutes at 225 C to 72 hours at 25 C.

Deep sections cure thoroughly. There are no solvent fumes to be trapped ... and visibility is excellent. Applied as a fluid, Sylgard 182 resin flows readily around intricate shapes ... cures even in deep sections without damage from internal stresses or exothermic heating.

Repairability is assured when circuits are embedded in Sylgard 192. Defective components can be removed and replaced after cutting away the cured resin with a sharp knife. New resin, poured over the repaired area, adheres to the existing encapsulant restoring the entire unit to its original condition.

CIRCLE 770 ON READER-SERVICE CARD

Dow Corning is your best source for a broad line of silicone fluids, gels, elastomers and rigid forms for potting, filling, embedding and encapsulating.
specify these silicones

Visually inspect... instrument check and replace faulty parts with ease

Dielectric Gel permits both visual and instrument inspection of potted circuits and components. Poured as a liquid, Dielectric Gel fills all voids, then sets up as a transparent, heat-stable, resilient mass. No significant stresses or exothermic heating develop during cure. Even the most delicate electronic components are safe. Instrument probes can be inserted and withdrawn repeatedly without damaging the outstanding dielectric properties of this Dow Corning silicone potting material.

Circuit Repair is easy to accomplish. Simply cut away the gel surrounding a defective component with knife or scissors. After the circuit is repaired, simply pour new gel into the repaired area to restore original high quality protection.

CIRCLE 771 ON READER-SERVICE CARD

Deep section... rugged protection with repairable Silastic® RTV

Silastic RTV, Dow Corning's fluid silicone rubber that vulcanizes at room temperature, is available in several variations. Select the best one suited for your application or processing requirements. All have excellent dielectric properties, low water absorption, stability under extreme temperatures, resistance to thermal cycling and aging. The newest Silastic RTV cures in thick sections in 24 hours at 77°F. Variations in thickness have no significant effect on curing rate or material uniformity.

Vulcanized Patch. Defective parts embedded or encapsulated in Silastic RTV... even where thick sections are used... can be replaced. The cured Silastic RTV is cut away with a knife, the component replaced, and new Silastic RTV applied to the repair area. The fresh material bonds to the original, restoring the encapsulant's integrity.

Cable Connector 472

An adapter device for interconnecting flat conductor cable with conventional round wire simplifies the introduction of the new flat cable to existing electrical and electronic equipment wiring systems. The connector makes the use of flat conductor cable practical for low-voltage control wiring, intercom systems and remote control wiring.

The Thomas and Betts Co., Dept. ED, 36 Butler St., Elizabeth, N. J.

Interval Timer 471

Push-button interval timers, series 6200, have universal 4- or 3-stud mounting. Dial frame is available with interchangeable dial faces to provide up to four possible variations. A wide choice of time cycles is available with versatility in load circuit wiring.

Vocaline Co. of America, Inc., Bristol Motors Div., Dept. ED, Old Saybrook, Conn.

Vibrating Feeder 480

For semiconductor dice, wafers and other small parts down to fine powders, this vibrating feeder measures 3-in. in diam and 2-3/8 in. high. Escapements are machined directly into the plastic bowl to eliminate the necessity for gravity chutes. The unit may be built right into work stations.

The Minimus Co., Dept. ED, 1582 Manning Ave., Los Angeles 24, Calif.
P&A: $160; immediate.
NEW PRODUCTS

Oscillograph Recorder

A continuous oscillograph recorder conversion for standard oscilloscopes, the Mark II system is for simultaneous viewing and direct recording of oscilloscope traces. The unit uses a direct-printing method on a photo-sensitive material. It weighs 12 lb, is self contained and can be attached to any conventional oscilloscope.

Par Products Corp., Dept. ED, 602 Colorado Ave., Santa Monica, Calif.

Pre-Detection Receiver

For 900, 450 or 225-ke recording. The predetection receiver provides a means of collecting telemetry data for recording prior to demodulation. Playback from magnetic-tape recorder may be fed through the receiver and demodulated. Selection of seven if bandwidths is by means of plug-in bandpass filters.

Dynatronics, Inc., Dept. ED, P. O. Box 2566, Orlando, Fla.

Availability: 90 days.

Switching Transistor

A maximum rise time of 10 nsec and a maximum storage time constant to 18 nsec are features of the 2N976 madt switching transistor. The units are packaged in TO-18 cases and have a minimum gain-bandwidth product of 600 mc and a power dissipation rating of 100 mw.

P&A: $5.78 each in 100 to 999 quantities; immediately.

NEW DVM ENDS MONTHLY

RECALIBRATIONS

New EAI Series 5001 Transistorized Digital Voltmeter will maintain full accuracy without recalibration for more than six months. Accuracy specifications have significance only when supported by such stability. This unique digital voltmeter automatically seeks out the correct range for readings of 100 microvolts to 1199.9 volts. In addition to automatic range changing and 20% over-range, it provides floating input, accuracy of 0.01% full scale plus one digit, full time high input impedance up to 1000 megohms and an average of 200 readings per second. In all, the EAI Series 5001 is an outstanding instrument for laboratory, production and system use. Write for full information today to Dept. ED 10.

verify
events
permanently
in
milliseconds

Brush Operations Monitors' response to signals is virtually instantaneous—less than 4 milliseconds. Multiple high-speed events are clearly defined from start to stop, on a common time base—and at rates up to 500 per second. Portable 30 channel or rack-mounting 100 channel models record sharp reproducible traces with fixed-stylus electric writing that provides the utmost in reliability. "Built-in" transistor switching to eliminate relays is optional. No direct writing recording system can match the capabilities of Brush Operations Monitors for industrial and military analysis and control. Write for complete specifications and application data.
compact
transistor switching
for
millisecond
monitoring

The new Brush Trans-Switcher eliminates relays—greatly simplifies your problems of operations monitoring. Designed to take full advantage of the fast response and high resolution of Brush Operations Monitors, this compact, solid-state switching unit accepts up to 100 different "on-off" signals in a broad range of pulse shapes and amplitudes. Interchangeable, plug-in decade boards are designed to accept different voltage ranges and modes of operation. Avoid the "black box" approach—specify the standard Brush Trans-Switcher for the ultimate in precise, reliable monitoring. Write for complete details.
Solderless Terminals

A complete range of heavy-duty and large wire range terminals has been added to the firm's solderless terminal and connector line. Terminals are available in the 16 to 14 wire range in stud sizes 3 through 1/2-in. in the ring tongue, spade tongue, and flanged spade types. All terminals have brazed barrels.

Waldom Electronics, Inc., Dept. ED, 4625 W. 53rd St., Chicago, Ill.

Microminiature Relays

For dry circuit to high level switching, the 100N series of 6pdt relays conform to and exceed the test specifications of MIL-R-5757D. They feature bifurcated contact construction for longer life and greater reliability.

VLF Bridge

Completely transistorized, high sensitivity, low noise vlf mutual inductance bridge is for measurement of the susceptibilities of paramagnetic materials at cryogenic temperatures. It has its own power supply, signal generator and a built-in null-detecting oscilloscope. It can be tuned to 17 or 155 cps; sensitivity is 2 x 10⁻⁵ μH with reproducibility better than one part in 1,000.

Cryotronics, Inc. Dept. ED, 191 Mill Lane, Mountainside, N.J.

CIRCUIT IDEA FILE

New Transistor Applications

Looking for simplicity in a servo amplifier?

This Class B push-pull servo amplifier using Honeywell's medium power transistors features:

• Temperature compensation—the germanium diode compensates for the transistor emitter diode temperature characteristic.

• Negligible crossover distortion—the same diode applies a slight forward bias so that the transistors are operating Class AB.

• Medium power—rated at 6 watts output into a size 15 servo motor.

• Simplicity—permits a package size limited only by the heat dissipators.

Honeywell's medium power transistors are packaged in a compact case for ease of mounting and versatility of wiring. For specifications and additional information, send the coupon below to: Honeywell, Dept. ED-10-251, Minneapolis 8, Minnesota.

COMPONENTS

Q1, Q2—Honeywell 2N 1658
R1—5 ohms; R2—1,000 ohms
C1—m5pf—D1—1N 91 or equivalent
Vcc—28 VDC—M—Size 15 servo motor
T1—UTC 550-14 or equivalent
Eg—400 cycle generator with Rg=1500 ohms
H1, H2—5" x 5" x 1/16" aluminum plates

CIRCLE 77 ON READER-SERVICE CARD
CURRENT BOOSTER AMPLIFIER

All solid-state, the P5 current booster amplifier is designed to be used as a follower with operational amplifiers to increase the available output current to as high as ±10 ma at ±10 v. Amplifier gain is 0.99 typically; max input signal is ±12 v with minimum input impedance of approximately 50 K. The unit operates as a class AB amplifier.

Price: $48 each; from stock.

STRAIN GAGE TRANSDUCER

Unbonded strain gage pressure transducer, model 2521 has a hysteresis and linearity combined of less than ±0.25% Pressure ranges are 0-5 to 0-5,000 psia; zero balance is ±1% of full scale output; weight is 5 oz; thermal zero shift is ±0.005% F, size is 7/8 in. diam x 3 in.

Bourns, Inc., Dept. ED, 6135 Magnolia Ave., Riverside, Calif.

Price: upon request.

MICRO MANIPULATORS

Type CP VI micro-manipulator is equipped with three combination microscope coarse and fine adjustments. It is sufficiently stable to be used at magnifications of 500X or more. Various types of instrument holders, attachments, special bases and micro-injection equipment are available as accessories.

Brinkmann Instruments, Inc., Dept. ED, 115 Cutter Mill Road, Great Neck, L. I., N. Y.
Induction Fan Motor

Open frame, high slip induction fan motor, model 35YH73 has an output nominally rated at 1/12 hp at 11,000 rpm. Size is 2-5/8 in. in diam by 2-1/2 in. long. Weight is 1.7 lb; duty is continuous with air through motor. Operation is from sea level to 60,000 ft.

Western Gear Corp., Electro Products Div., Dept. ED, 132 Colorado St., Pasadena, Calif.

Pressure Transducer

Wide-range pressure transducer series HPT-10 covers 0 to 100 and 0 to 10,000 psig or psia full scale. Static accuracy is ±1.5% on most ranges. Resolution is 0.22% to 0.33%. Suitable for military environments, it withstands temperatures from −55 to +100 C.

DeJur-Asmco Corp., Instrument Sales Div., Dept. ED, 45-01 Northern Blvd., Long Island City 1, N. Y.

Heat Sink

All aluminum heat sink is designed for soldering of fine wires on electronic components. Tapered jaws give easy gripping action for fine, delicate wires and the model 349 heat sink may be used as a tweezer or a clamp. It measures 3-1/2 in. long.

X-Acto, Inc., Dept. ED, 48-41 Van Dam St., Long Island City, N. Y.

Price: $18.20.

In drafting films, it's the coating that counts

Film Similarities

All drafting films share one common characteristic—every major brand employs a polyester base. This polyester material may vary somewhat in grade (from clear to milky) or in gauge (from .002 to .007). However, its properties remain so nearly identical that no appreciable difference in print-back speed can be noted by exposing diazo material through the uncoated film. Accordingly, all polyester films have these unique features: dimensional stability, transparency, flexibility, moisture-resistance and tear strength.

Coating Differences

These advantages mean nothing to the engineer, draftsman or architect until a surface receptive to pencil and ink is put on the film. Postr applies three distinct micro-coatings to its polyester film, baking these elements and the film at such high temperatures that they are literally fused. This process also "pre-shrinks" the material, endowing Polytex with slightly greater dimensional stability.

More Drafting Latitude

The net result of the exclusive Postr coating process is the most durable drafting film surface available—a surface on which, if circumstances demand, you can use the hardest grade of pencil without destroying the coating. Some pencils work better than others, of course. Plastic-based pencils are best of all when permanency or washability is considered.

Test Offer

To convince you, regardless of previous or present drafting film experience, that Postr Polytex offers a superior coating with outstanding erasibility, pencil and ink adhesion, a free Polytex test kit is yours without obligation. We'll mail a 8 1/2 x 11 drafting film sample, plus a vinyl eraser and drafting pencil assortment, packed in a Postr Pocket Protector. Write for it on your letterhead today. Frederick Post Company, 3644 N. Avondale Avenue, Chicago 18, Ill.

Appearance is not a good indicator of drafting film workability or reproduction quality—see test offer below.
You can put $\frac{1}{2}$ TON on this slide

**New Heavy-Duty Slide from Chassis-Trak**

Now you can rack-mount your heaviest electronic gear, yet keep it readily accessible for checking and servicing. A new heavy-duty Circulating Ball Slide, developed by Chassis-Trak, will easily support equipment in the 1000 lb. range, even under extreme shock and vibration conditions. Secret of the slide's strength is its Circulating Ball design (see phantom view above). Weight is distributed evenly over the balls which rotate in the direction of the pull, resulting in easy sliding action.

The new Circulating Ball Slide is permanently dry-lubricated with Poxylube 75, a bonded molybdenum disulfide film which assures smooth operation for the life of the slide. Easily assembled with standard hardware, the slide is available in lengths from 16" to 24" in two-inch increments and in lengths up to 60" in six-inch increments. Each track is only 1½" wide and 3" high, requiring much less chassis space than other slides in this heavy-duty range.

Get full details on the new CB Slide today.

---

**NEW PRODUCTS**

**Cabinet Ovens**

Suitable for batch production, these standard cabinet ovens have heating capacities from 150 to 500 F. Sizes range from 2 x 2-1/2 x 2-1/2 ft to 3 x 4 x 2-1/2 ft interior dimensions. Accessories include recording controller, powered exhaust system, fresh air filter chamber, and extra shelves.

De Vilbiss Co., Dept. ED, Toledo 1, Ohio.

**Cooling Unit**

Cooling at any current up to 17 amp is provided by the F-3DC Frigistor. Operating voltage is 0.3 volts. It will pump 4.25 w min across a temperature difference of 0 C; at zero w load it will provide a temperature difference of 65 C or more. The unit is intended for use with stud-mounted diodes and transistors.

General Thermoelectric Corp., Dept. ED, P. O. Box 253, Princeton, N. J.

**Modular Power Supplies**

Modular, transistor regulated power supplies are designed for laboratory and prototype work. They may be operated at full ratings without heat sink at up to 35 C ambient temperature. The mounting base temperature is 65 C. Units are available in a full line of specifications ranging from 4.5-6.0 v to 45-55 v.

AC Relay

Occupies less than 1 cu in. and weighs 1.25 oz. For general-purpose use, series 5300 ac relay is rated at 3 amp, 115 v, resistive. It has 1 form C, cross-bar contacts arranged for spdt operation. Coil voltage is 220 v, 60 cps. It withstands 95% humidity, high shock and vibration.

Federal Pacific Electric Co., Cornell-Dubilier Electronics, Dept. ED, Fuquay Springs, N. C.

Availability: 1 to 4 weeks.

Pressure-Sensitive Tape 388

Polyvinyl fluoride film is available with a pressure-sensitive silicone polymer adhesive on one side. Called Temp-R-Tape PVF, the tape offers weatherability, toughness and chemical resistance as well as good electrical characteristics. Samples are 1-in., 5-ya rolls.

The Connecticut Hard Rubber Co., Dept. ED, 407 East St., New Haven, Conn.

P&A: sample rolls, $5.

Precision Brake 379

A solenoid-operated, precision-built brake for sub-fractional hp electric motors is for use in stopping overtravel of motors used in computer mechanisms and tape transports. Braking torque is 2 to 4 in.-lb for shafts up to 3/8 in. Parts are cadmium plated, stainless or bronze. Without load the motor is stopped in less than 20 deg.

Midwest Automatic, Inc., Dept. ED, 510 Third St., Des Moines, Iowa.

Avco and... satellite signal selection

Space vehicles are constantly exposed to many signals as they orbit the earth. Electronic interference, false messages... these are but two of the problems they contend with.

To receive correct commands, a new coder-decoder has been developed by Avco's Electronics and Ordnance Division working with NASA. Built around a single-conversion concept, the Avco unit ignores stray signals, shuns radio noise and interference. Today it is operating in Explorer XI, now orbiting the earth.

Miniaturized to save weight and space, this uniquely selective radio device will pull in only proper information, feed it to the decoder, and actuate the correct on-off controls and other satellite equipment as ordered.

Communications capabilities are among the many contributions of the Electronics and Ordnance Division's experienced engineering talent and skill. For more information on this new satellite receiver-decoder, or answers to your own communications problems, write: Director of Marketing, Communications Operation, Electronics and Ordnance Division, Avco Corporation, Cincinnati 15, Ohio.
The Ins and Outs of System Packaging

Development of the common cabinet drawer was as important a contribution to storage as the wheel to mobility. Use of ball bearings appreciably improves the action of both. Advanced drawer design has been applied by Jonathan to electronic chassis storage in the form of close tolerance, extruded aluminum ball-bearing slides for precision packaging. Now chassis are instantly accessible for maintenance and replacement. Gear of any weight may be accommodated without restriction of length and travel, and with tilting and locking features.

First Precision-Designed Cable Carrier

The new Power-Track Cable Carrier facilitates servicing rack-mounted electronic chassis without disconnecting the power source. It is the first cable carrier with uniform telescopic action in the carrier and the slides. Telescopic supporting arms are mounted to opposing sides of 3-member Jonathan Thinline telescoping chassis slides, forming a carrier along which the cable is supported. This transfers cable weight to the strong, smooth-running arms and ball-bearing slides, effectively preventing damaging vibration and shock.

The telescoping action allows full drawer extension and 90° tilting up and down. Since the cables are unable to sag or bind, there is no longer risk to other stored electronic chassis. Cable is compactly stored in minimum depth. The carrier system meets all applicable military standards.

Write for new 16 page descriptive brochure.

NEW PRODUCTS

DC Power Supplies

Both constant voltage and constant current output are available with dc power supplies known as Digital Set series. The six models cover the ranges of 100 and 1,000 V dc at currents of 100 mA and 1 amp. Repeatability accuracy is 0.01% and absolute accuracy is 0.05%. Ripple is below 0.002%.

Blower Motors

Split-phase 1/2- and 3/4-hp motors come in 115 or 115/230 v models. They are designed for belt-drive blowers and fans. Motors start at less than full-load torque and smoothly accelerate to full performance.

Westinghouse Electric Corp., Industrial Motor Dept., Dept. ED, P. O. Box 566, Lima, Ohio.

Lamp Holder

Midget groove lamp holder, series WE 700, provides the space requirement necessary for the Midget Groove lamp. Unit comes with a standard 6-in. length of 0.22 gauge 0.025 wall PVC wire and the housing is made of 0.010 annealed spring steel.

Webster Electronics Co., Inc., Dept. ED, 237 Lafayette St., New York 12, N. Y.

TELEMETRY BY TELE-DYNAMICS

NEW... 1-watt Transistorized FM Transmitter

If you've a need for light—17 ounces—extremely compact—20 cu. in.—215 to 260 MC telemetry transmitters, specify Tele-Dynamics' Type 1053A.

Providing one-watt true FM output, the 1053A employs dependable silicon transistors for high efficiency and offers better than 0.01% frequency stability. The 1053A will operate reliably at any altitude and under any environment. Pressured o-ring sealed aluminum case keeps out water vapor, salt spray, sand and dust.

This unit, representative of Tele-Dynamics' latest creative effort in the complete telemetry field, is capable of being combined into various custom systems and is low in cost.

For detailed technical bulletins, call the American Bosch Arma marketing offices in Washington, Dayton, Dallas or Los Angeles. Or write or call Tele-Dynamics Division, American Bosch Arma Corporation, 5000 Parkside Avenue, Philadelphia 31, Pa. Telephone Trinity 8-3000.

ELECTRONIC DESIGN • October 25, 1961
Circuit Package

A flat, rectangular enclosure, suitable for multi-element components, thin film and solid-state circuits, the 2-D enclosure has a true glass-to-metal hermetic seal. The number of leads and package dimensions can be varied to conform to a particular miniaturization approach, such as printed circuit, micro-module, and welded mounting techniques.

Force Washers

Temperature-compensated force washers are actually miniature load cells. They approximate the shape of regular bolt washers and come in standard bolt sizes ranging from 3/16 to 1 in. in diam. Temperature compensation is better than 0.5 micro-in. per in. per deg F over a range from 50 to 250 F.

Lockheed Electronics Co., Dept. ED, 6201 E. Randolph St., Los Angeles 22, Calif.

Availability: from stock.

Subminiature Inductor

Smaller by 20% than the companies Wee-Wee Ductor, the Wee-Wee Ductor is a high inductance rf inductor in a range of 0.10 to 1,000 µh. The units are encapsulated, non-flammable, rf-shielded and designed to meet MIL-C-15305B. Volume is 0.0042 cu-in.; weight is 0.38 g; diameter is 0.125 in.

NEW PRODUCTS

Telemetry Discriminators 495

Containing their own power supplies, these two telemetry discriminators are less than 2-in. wide. Model A-135 bandpass filter characteristics are equal to, or less than, 3 dB over pass band and attenuation is equal to, or greater than, 20 dB at the adjacent edges of a signal band. Model A-136 characteristics are identical except that attenuation is 30 dB or greater at adjacent band edges.

Microdiodes 430

Power dissipation is 0.3 w at 25 C with average rectified current up to 0.2 amp at 25 C and 0.060 amp at 150 C for this new line of microdiodes. Elimination of surface failure mechanisms has been verified by complete absence of reverse characteristic degradation during tests which include storage at 200 C and operating life at twice maximum ratings.

MicroSemiconductor Corp., Dept. ED, 11250 Playa Court, Culver City, Calif.

Control Circuit 476

A silent potentiometer, sealed in a transistor case, the CK1114 is designed for either switch, relay or potentiometer application in circuits requiring minimal space and power. It can be driven with 25 mw at 1 v. When illuminated by this power, the photosensitive cell changes resistance from 3 x 10⁸ to 460 ohms. Designed to withstand up to 60 v dc across its terminals, the signal circuit will dissipate up to 50 mw.

Raytheon Co., Industrial Components Div., Dept. ED, 55 Chapel St., Newton 55, Mass.

P&A: $8.25, 1 to 9; immediate.
Interrogation Switch

Desired to exceed MIL-S-6801A, the series 2000 missile interrogation switch features any degree of indexing. Power handling capabilities are up to 5 amp, 115 v ac; 3 amp, 28 v dc resistive and 2 amp, 28 v dc inductive. They are rated to make, break and carry. They can be incorporated into a gear-driven gang installation to provide a switch assembly of 12 positions with a total of 96 poles.
Janco Corp., Dept. ED, 3111 Winona Ave., Burbank, Calif.
P&A: $100 and up; 4 weeks.

Printed-Circuit Kit

Two grid boards measuring 3 x 5 in. are supplied in this printed-circuit board kit. Also included are: an etching tray, etchant, ballpoint resist pen and resist tape.
Cramer Electronics, Inc., Dept. ED, 811 Boylston St., Boston, Mass.
Price: $8.95.

Crossbar Switch

Single-pole double-throw crossbar switch includes five form C gold contacts per crosspoint and up to 120 crosspoints. Within each hold group the "makes" and the "breaks" each have common contact strips for the crosspoints. Dielectric strength is to 750 v ac and 1,000 v dc. Insulation resistance is greater than 10^5 meg at 25 C with 40 to 50% relative humidity.
North Electric Co., Dept. ED, Galion, Ohio.
P&A: $8.40 each in 1 to 9 lots; six weeks.

CIRCUPAKS

NEW IDEA!
MODULAR CIRCUIT PACKAGES
MAKE ENCAPSULATION EASY

CIRCUPAKS are miniature cubes and cylinders, machine-molded of non-burning epoxy. Each has two parts: a header with gold-flashed pins secured in place; a snap-fit case with a hole in the top to be easily filled with encapsulation compound. The case and header fit together precisely ... no other seal is needed during the curing period.
CIRCUPAKS eliminate waste, mess and special molding equipment. When filled and cured each becomes a one-piece, environmentally sealed module that fully protects delicate circuitry. Now quantity production can be automated. Eight different shapes and sizes (square, rectangular and cylindrical) comprise a standard line with "off the shelf" availability. One circuit or one thousand can be encapsulated with equal ease when standard CIRCUPAKS are used. Write for literature or order sample kit.

U.S. DIELECTRIC INC.
Dept. 11
181 GREENWOOD STREET,
WORCESTER, MASSACHUSETTS

SEND FOR SAMPLE KIT

A special kit for experimental work is ready. The three sample sizes shown at left, plus a convenient package of epoxy resin will be sent to you for five dollars ($5). Send check or money order to U. S. Dielectric Inc. at above address.
NEW PRODUCTS

Transistor Tester 370

Power transistor tester model 1885 tests transistors to 50-amp $I_C$, power diodes to 5-amp forward current and Zener diodes to 150-ma leakage current. It measures these parameters: $I_{CBO}$, $I_{CEO}$, $I_{ESO}$, dc beta, input impedance, $Z_{in}$, output impedance $H_{oe}$, $gm$ in $\mu$mhos and mho. Alpha, collector voltages and $V_{CC}$ can also be determined.

Hickok Electrical Instrument Co., Dept. ED, 10525 DuPont Ave., Cleveland 8, Ohio.

Sliding Desk Top 390

Formica sliding desk top provides a smooth surface for writing, servicing or inspection. It occupies 1-3/4 in. of panel space, fitting flush with panels. Usable surface is 11 x 16-7/8 in. It fits standard 19-in. racks or cabinets.

Bud Radio, Inc., Dept. ED, 2118 E. 55th St., Cleveland 3, Ohio.

Circuit Breaker 371

Three-pole miniature circuit breaker model 1526 has a single push-pull actuator. It is for use on 400 cps, 115 or 200 v systems, particularly in aircraft or electronics industries. Ratings available are 1 to 5 amp in steps of 0.5 amp. It meets MIL-C-5809C.

Mechanical Products, Inc., Dept. ED, Jackson, Mich.
Westinghouse announces new 70-amp ratings in "Rock-Top" Trinitron® controlled rectifiers

**Highest rated flag type in the industry.** Type 809 Trinitron controlled rectifier series, in both flag terminal and flexible lead types, now immediately available in production quantities at 70-amp ratings! Exclusive Westinghouse "Rock-Top" construction offers superior electrical and mechanical characteristics for greater performance reliability under all operating conditions. Provides positive protection against arcing at highest voltages. Exclusive new flag terminal design has lower weight... requires less headroom. Outstanding parameters include: n 600 nanosecond switching time e efficiencies in excess of 98% p minimum noise level p peak reverse voltages to 480 volts p ideal parameters for high-speed static switch functions.

Industrial, commercial, and military applications include: high-frequency power generation; variable frequency controls; pulse generation; ignitron firing; welding control. Trinitrons also replace thyatrons, contators, magnetic amplifiers, relays.

For more information, or technical assistance, contact your nearest Westinghouse representative, or write: Westinghouse Electric Corporation, Semiconductor Department, Youngwood, Penna. You can be sure...if it's Westinghouse.
SAVE SPACE WITH THIN, EXTRA-STRONG ELECTRICAL TAPES OF MYLAR®

Here’s a pressure-sensitive tape that packs great strength into thinner gauges (20,000 psi for 1 mil). Tape of Mylar® polyester film saves space because manufacturers can use thinner gauges with no loss in performance... at lower cost per linear foot.

Want more? “Mylar” also provides—flexibility for snug wraps—high dielectric strength (4,000 v/m)—dimensional stability at high humidities—moisture and chemical resistance—resistance to temperatures from -60°C to 150°C. And “Mylar” lasts and lasts because there’s no plasticizer to dry out with age.

Insulation of “Mylar“ gives motors 50 to 100% longer service-free life. Gives capacitors longer-lasting stability, greater reliability. In a wide variety of electrical applications, the advantages of “Mylar” can improve the performance, lower costs. Evaluate “Mylar” for your product. Write for free booklet (SC) detailing properties. Du Pont Co., Film Dept., Wilmington 98, Delaware.

NEW PRODUCTS

Decade Capacitors 503

Heat-treated polystyrene decade capacitors are housed in aluminum cabinets. Type 1419-B has capacitance values up to 1.11 µf in steps of 0.0001 µf, accurate to 1%. Type 1424-A decade provides standard capacitance values from zero to 10 µf. The 1-µf sections are accurate to 0.25%; both 2- and 3-terminal connections are provided.

Price: 1419-B, $262; 1424-A, $325.

Reversing Counters 494

Designed to count “up” or “down”, model 3300 reversing counters are totally solid-state. They count at rates up to 200,000 counts per second. Three to six digit readout capacitors can be supplied. Optional features are dual input channels with A + B and A – B anticoincidence functions, accumulate-count gate control and automatic reset gate and display control.

Beckman Instruments, Inc., Dept. ED, 2200 Wright Ave., Richmond, Calif.
P&A: $1,195 (5 digits); 90 days.

Telemetry Receiver 426

Completely modular, model TMR-6 136-mc telemetry receiver has plug-in rf heads, if amplifiers, demodulators and pre-detection recording converters. Frequency range is 136 to 137 mc; noise figure is 3.5 db; rf bandwidth is 2 mc; image rejection is greater than 65 db.

Defense Electronics, Inc., Dept. ED, 5451-B Randolph Road, Rockville, Md.
P&A: $1,410; 30 to 60 days.

High Capacity Switches 431

Type M switches have a 22-amp steady state current capacity. Maximum differential travel is 0.001 in. and minimum overtravel is 0.005 in. They handle up to 35-amp inrush currents from solenoids and motors. Operating force is 7 to 10 oz; release force is 4 oz min; break distance is 0.010 in. min.

P&A: $2 each, 1 to 9; immediate.

CIRCLE 92 ON READER-SERVICE CARD
How Siegler built ultra-reliability into its new 3 KVA Inverter

by RAYMOND F. KEEGAN
Commercial Engineer, Clevite Transistor

Magnetic Amplifiers Division of The Siegler Corporation has announced the development of a 3 KVA Static Inverter featuring high conversion efficiency, precision voltage regulation, synchronous phase locking, short circuit protection with automatic recovery, and reliable high performance operation in the presence of transient line voltages. The unit is designed for minimum space-weight requirements and meets with Mil Specs Mil-E-5400 and 5272.

Developed to convert nominal 28 VDC to regulated 200 V 400 CPS 3 phase, the unit is designed for military reliability in aircraft, missiles, space vehicles, ground guidance and detection systems.

DESIGN CONSIDERATIONS

Because of the need for highly stabilized output voltages at high current levels, power transistors capable of handling these currents with uniform gain characteristics over a wide operating range were required (Fig. 1). Guaranteed gain spread and low saturation voltage were important factors.

Since aircraft power sources are subject to transient voltages which may damage transistor junctions, extra consideration was given to the selection of power transistors with known collector to emitter voltage capabilities.

The ability of Clevite 2N1146B power transistors to meet the requirements of the design caused Siegler to select them for the high power output and driver stages of the system. Clevite’s 2N1146 series of transistors has specified minimum values of collector to emitter voltage under shorted and open base conditions both measured at high values of collector current to preclude the possibility of secondary breakdown caused by high local current densities (Fig. 2). Collector to base junction leakage current is specified as a maximum value at two voltages at room temperature and at the shorted base collector to emitter voltage at the maximum rated junction temperature.

The Clevite 2N1146 series of high current power transistors is conservatively rated for use in applications requiring a combination of high current gain at high operating currents and high collector to emitter breakdown voltages.

For more complete information write for Bulletin B221-1A

CLEVITE TRANSISTOR
Waltham, Massachusetts
Planar Transistor 383

Silicon epitaxial star planar transistor combines the advantages of epitaxial growth and surface passivation with a star geometry or efficient operation in circuits from dc to 100 mc. Specifications are: frequency range, dc to 100 mc; switching speed at 0.5 amp, 10 nsec; collector saturation voltage, 0.5 v at 0.5 amp; power dissipation, 3 w; gain-bandwidth product, 400 mc.

Motorola Semiconductor Products Inc., Dept. ED, 5005 E. McDowell Road, Phoenix 8, Ariz.

Pneumatic Receiver 391

Strip-scale indicating receiver, designated series 654, is a pneumatic receiver and can be used as a single unit or gang assembled for horizontal or vertical mounting. Range is 3 to 15 psi. Model OBI654 is a single-pointer unit; model 0OBI654, dual-pointer.

The Bristol Co., Dept. ED, Waterbury 20, Conn.

DC To DC Converter 375

Solid-state dc to dc converter is designed for airborne, ground or shipboard computer applications. It may be operated continuously within confined areas restricted to convection cooling. The multiple output 40-w converter furnishes ±3% regulated +15 and −15 v dc and ±5% regulated −6 and +6 v dc output voltages. Efficiency is 65% at 28 v dc input and full load.

Magnetic Research Corp., Dept. ED, 3160 W. El Segundo Blvd., Hawthorne, Calif.

This 14-page factual report compares the six major types of in-line readout devices from the standpoint of viewing distance, viewing angle, speed and method of operation, size, weight, power, cost, reliability and life.

SIMPLIFIED/LOW COST
150 mc SWITCHING
MADE POSSIBLE BY FAIRCHILD SILICON PLANAR 2N709
PERFORMANCE CHARACTERISTICS
Typical propagation time of 2.5 nsec per stage. Combined turn-on and turn-off
time of 5.0 nsec. Excellent gain-bandwidth (typically 800 mc) at high
currents and low voltages.

FAIRCHILD PLANAR RELIABILITY
Reliability is inherent to the Fairchild Planar process because of the integral
oxide surface. All junctions are completely protected against contamination
from the start of manufacture, guaranteeing parameter stability and uniformity.

INITIAL AND OVERALL SAVINGS
The 2N709 is available NOW, at prices practical for the breadboard budget
as well as quantity production. Additional savings result because UHF circuits
can be designed with the 2N709 and require fewer component types as well
as a much smaller total number of components.

THE 2N709:
ELIMINATES NEED FOR NON-SATURATING AND/OR
TUNNEL DIODE CIRCUITS
SOLVES DESIGN AND ASSEMBLY PROBLEMS FOR
APPLICATIONS SUCH AS:
- DIGITAL COMPUTER LOGIC CIRCUITS WITH BIT RATES OF 50 TO 100 mc
- BINARY AND DECIMAL COUNTER AND DECODER CIRCUITS WITH BIT
  RATES OF 100 TO 300 mc

FAIRCHILD
SEMICONDUCTOR
545 WHISMAN ROAD, MOUNTAIN VIEW, CALIF. • YORKSHIRE 8-8161 • TWX: MNVW853
A DIVISION OF FAIRCHILD CAMERA AND INSTRUMENT CORPORATION
A silicon rectifier-type dc power supply, model MRST28-200 has dynamic regulation of ±6 v for instantaneous load changes of full load magnitude. Ripple is 1% rms; dc output is 24-32 v at 200 amp. Magnetic amplifier and transistor regulators maintain static regulation tolerance of 0.1%. Response time is adjustable between 20 and 200 msec.

Perkin Electronics Corp., Dept. ED, 345 Kansas St., El Segundo, Calif.

Nickel-Cadmium Battery

Rated at 8 w-hr, this nickel-cadmium battery can deliver 8 amp. Nominal-load voltage is 5 v. Battery is rechargeable. Unit is made to power a cordless electric drill.

Ultrasonic Cleaner

Producing a 200-kc sinusoidal output, the series 751 ultrasonic cleaner has a focussing device which can achieve cavitation within the liquid cleaner medium rather than at the transducer surface. Operation below the cavitation level is recommended. A wide range of detergents can be used with the cleaner. Unit is thermostat controlled.

B. M. Harrison Electrosonics, Inc., Dept. ED, 801 Winchester St., Newton Highlands, 61, Mass.

P&A: $695 to $795; immediate.
Flexible fastening material for wire harnesses is called Velcro. One material contains small nylon hooks which cling to the nylon loops on another material. The materials separate when pulled apart. They do not use adhesive. The material can be used many times and is said to have a long life.

The Hartwell Corp., Dept. ED, 9035 Venice Blvd., Los Angeles 34, Calif.

Silicon Controlled Rectifier

Capable of blocking 500 v, the type C50E silicon controlled rectifier is of hard solder construction. Transients up to 600 v are handled. Average forward current rating is 110 amp dc, 70 amp at 180-deg conduction angle. One-cycle surge current rating is 1,000 amp. The unit is available as an inverter with specified turn-off times.

General Electric Co., Dept. ED, W. Genesee St., Auburn, N. Y.

Availability: from stock.

Transfer Relay

For switching up to 17 kv ac or dc, the RVS-1 transfer relay is spdt, normally closed, and is designed for long life. Coil is normally 28 v dc; 117-v ac coils can also be furnished. Maximum current at 17 kv is 0.25 amp; at 5 kv, 1.5 amp. Pull-in time is 20 maec.

Resistor Laboratories, Inc., Dept. ED, Drawer 2, 2908 Nebraska Ave., Santa Monica, Calif.

P&A: $34.50; stock.

INLAND
first with solid state 100-watt d-c amplifier

Inland's new Model 579.35 d-c amplifier has a high power output of 100 watts when used with low impedance loads requiring direct current. And this completely transistorized amplifier is packaged in a hermetically sealed can only 2½" x 3½" x 2½".

Designed for use with d-c torquers, in one typical application Model 579.35 provides 65 db power gain between the output of a d-c driver stage and the input terminals of a permanent magnet torque motor. This amplifier has these outstanding performance characteristics:

- The d-c output has magnitude and polarity proportional to the input signal.
- All amplifier circuits use a combination of silicon and germanium transistors (all-silicon models also available).
- Amplifier null and gain are stable and independent of temperature.

Inland also makes a complete line of rotary amplifiers for matched use with Inland's distinctive pancake shape d-c torquers.

A brochure on this new high-power amplifier is available. For your copy and complete data on Inland torquers and amplifiers, write Dept. 3-10.

CIRCLE 96 ON READER-SERVICE CARD
how North Atlantic’s
Phase Angle Voltmeters solve
tough ac measurement problems
... in the lab or in the field.

Designed for critical tasks in circuit development, production and testing, North Atlantic’s Phase Angle Voltmeters provide direct reading of phase angle, nulls, total, quadrature and in-phase voltages— with proven dependability even under field conditions. Your North Atlantic engineering representative can quickly demonstrate how they simplify ac measurement jobs from missile checkout to alignment of analog computers—from phasing servo motors to zeroing precision synchros and transducers.

Shown below are condensed specifications for single-frequency Model VM-202. Other models include high sensitivity, three-frequency and broadband types.

Analog Computers

For industrial process control.
The PC-12 analog computers are assembled from modular components designed to meet process environments of high humidity, corrosive atmosphere and temperature extremes. The components are permanently programmed to meet specific applications.
Availability: assembled from stock components.

FM Transmitter

Rated at 250 w, the 830B-1 fm transmitter includes self-contained multiplexing equipment and FCC approved stereo-multiplex system. The transmitter is pushbutton operated; all rf circuits are tuned from the front panel. The power supply uses silicon rectifiers. The unit may also be used as an exciter for a 5,000-w installation.
Collins Radio Co., Dept. ED, P. O. Box 1891, Dallas 21, Tex.

Pressure Transducer

Static error is ±1%. Model 426 pressure transducer has ranges of 0 to 5 to 0 to 200 psia or psig. Nominal resolution is 0.3 at 10,000 ohms. It is for experimental, industrial and military ground applications in telemetry and control. It withstands vibration to 10 g.
Bourns, Inc., Dept. ED, 6135 Magnolia Ave., Riverside, Calif.

STEVENS Certified THERMOSTATS

Up where the “wild blue yonder” becomes inky black, you can’t afford to gamble on precise, reliable temperature control. And that’s the natural domain of Stevens thermostats. They are compact and lightweight... withstand high G’s... are utterly reliable even under wide temperature swings. For Stevens Thermostats are a product of creative engineering... coupled with the most stringent environmental testing and quality control programs in the industry. If space is your dimension, take the measure of Stevens thermostats first.

DOW EPOXY CAPABILITY SOLVES COMPUTER MAKER'S PROBLEM

This precision memory unit is the heart of a new computer. Long-term, dependable operation calls for the utmost in dimensional stability in the memory unit's laminated frame, to maintain the highly critical spacing of the wire-and-core grid assembly.

The problem: which material will provide the best possible combination of needed properties... dimensional stability, physical strength, resistance to heat, good electrical characteristics plus a self-extinguishing factor? The solution: a brominated Dow epoxy resin.

Because of Dow's unique basic position in epoxy resins, Dow offers manufacturers an unusual capability in supplying materials to fill the most demanding requirements. An example is the self-extinguishing Dow epoxy resin chosen for this application.

Dow offers a wide range of "controlled property" epoxy resins—to meet the exacting needs of today's complex electronic circuitry. Among these materials are Dow brominated epoxies, unusual resins with excellent self-extinguishing properties... flexible epoxy resins... epoxy novolac resins for high temperature use... and specially refined epoxies for the most critical applications.

For information on Dow epoxy resins for many varied applications, including the unusual, write us in Midland, C/O Coatings Sales Department 1955BC10-25.

NEW PRODUCTS

Angle Sensing Instrument

Less than 1-sec rotation is detected by the Refractosyn angle sensor. The device reflects light from a mirror attached to the device being measured. The angle of reflection is indicated on a meter. Device is all solid state.

H H Controls Co., Dept. ED, 7 Leroy Drive, Burlington, Mass.

Camera System

High-resolution, closed-circuit TV camera system is enclosed in an epoxy impregnated fiberglass container. It can be used under conditions far above normal for acoustic shock, vibration and altitude, humidity, temperature and explosions.

Packard Bell Electronics, Dept. ED, 1920 S. Figueroa St., Los Angeles 7, Calif. Availability: 30 days.

Precision Decade Capacitor

Capacitances from 100 pf to 1,111 pf are provided in steps of 100 pf by the type 1423-A decade capacitor. Silver-mica capacitors are used. Each scale is accurate to ±0.05%. Inline readout is provided. Terminal capacitance can be adjusted. Stability is better than ±0.01% per year.

New Cannon KPT/KSP Miniature Designed to MIL-C-26482

Quick disconnect plugs for aircraft, missiles, and all applications requiring miniature plugs. Our standard solder-pot versions, including hermetic seals, are completely interchangeable with all bayonet-lock plugs designed to MIL-C-26482.

Solder pot version now available from Cannon CAPS Distributors

Also KPT/KSP plugs with crimp snap-in contacts and two shore insulator.

Two shore resilient insulators molded out of two different hardness materials (polychloroprene) into a homogenous piece. The rear portion of the insulator is the softer in order that the conductors can be sealed properly, and the front portion is the harder to retain the snap-in contacts. The two shore insulator insures a continuous moisture and pressure seal from front to back to provide superior electrical performance at high altitudes. This method of sealing and contact retention offers the industry a most reliable crimp series meeting the requirements of MIL-C-26482. Write for catalog KPT/KSP-1 to:

Cannon Electric Company, 3208 Humboldt St., Los Angeles 31, Calif.
NEW PRODUCTS

AC-DC Signal Generators

For use as sensing elements in transducers and servo systems, these ac-dc signal generators have rotary or linear outputs. Units have infinite resolution, low reaction torque, and low impedance. Devices do not use slip-rings or brushes.

Giannini Controls Corp., Dept. ED, 1600 S. Mountain Ave., Duarte, Calif.

Safe-Arm Devices

Withstands 50,000 psi. Hermetically sealed, high-pressure safe-arm devices are capable of ignition and actuation as well as high order detonation. They operate under normal squib applications. Operating on 28-v dc, they require no auxiliary electronic equipment or special wiring.

Ordinance Associates, Inc., Dept. ED, 855 El Centro St., South Pasadena, Calif.
Price: $50 to $75.

Multicoders

For multichannel telemetry uses, two multicoders are offered for sampling rates of dc to 50,000 channels per sec. Linearity is less than 0.1%, cross-talk is less than 0.1%. They can be used with transducers where source impedance is up to 100,000 ohms for operation with less than 2% error.

General Devices, Inc., Dept. ED, Princeton, N. J.

Mallory miniature tantalum capacitors

from the industry's widest selection...

- miniature high-temperature types (to 150°C)
- smallest metal-case type made
- encapsulated type for printed circuits
- liquid and solid electrolytes

. . . seven miniature types in all—with the sintered pellet anode pioneered by Mallory.

And six other types—including foil, high temperature, high capacitance.

Write today for our complete catalog on all 13 types... and for a consultation with a Mallory capacitor specialist. Mallory Capacitor Company, Indianapolis 6, Indiana.

Gain is 10 to 10,000 with fixed gains of 10, 20, 50, 100, 200, 500 and 1,000. Model 1010 dc wideband amplifier has an input impedance of 100 meg shunted by 0.001 μf and a source impedance of 5 K max. Drift is less than 2 μv in 500 hr. Design provides full magnetic and electrostatic shielding.

Cubic Corp., Dept. ED. 5575 Kearny Villa Road, San Diego 11, Calif.

Price: $650.

Transistor Header

Microminiature block design of the hermetically sealed transistor header permits the use of transistors 0.93 in. high in a header 0.040 in. high. Miniaturization is achieved by replacing the glass beads, in the transistor head, in which conductors are embedded, with a recessed well of glass.

Hermetic Seal Corp., Dept. ED, North Arlington, N. J.

Solenoid Actuators

Explosion-proof solenoid actuators are for use with the firm’s series CC pilot-operated air valves. They are suitable for Class 1, Group D and Class 2, Groups F and G applications. They are offered for both momentary and maintained contact, air-control valves.

Hannifin Co., Dept. ED, 501 S. Wolf Road, Des Plaines, Ill.
Data loss due to dropouts is eliminated in FM predetection recording-reproducing by Mincom's new, exclusive Tracklok®

This is because, for the first time in the field of instrumentation, the Tracklok makes possible redundant FM data recording at the carrier level. In any desired FM or PM-type carrier system, data loss is eliminated by a 99% skew reduction; existing skew of ±0.3 μs for example, is effectively reduced to ±0.003 μs, a reduction of 100 to 1.

**Reliable Simplicity:** The same reliability that has been typical of Mincom's instrumentation systems for years has been built into Tracklok.

**NEW PRODUCTS**

**Time Pulse Generator**

Completely solid-state digital time pulse generator model PTG 901-3 provides BCD and PDM coded time pulses for use in time correlation of data processing as well as to trigger and/or control events in a system. Standard timing stability is 2 parts in 10⁷ per day. The unit provides BCD output both parallel and serial concurrently.

Power Instruments Corp., Dept. ED, 235 Oregon St., El Segundo, Calif.

**Analog-to-Digital Converter**

Accuracy is 0.5%. The rack-mounted analog-to-digital converter provides an output of eight binary bits or two binary-coded-decimal bits in 8-4-2-1 code. Conversion time is 0.5 μsec.

Power supply is self-contained in the unit.

General Data Corp., Dept. ED, 11602 Ninth St., Garden Grove, Calif.

**Micro Diode**

Reverse leakage is 25 μa or less at 80% Vr. Model MC100 micro diode, rated at 1,000 V, provides conductances of higher than 200 ma at ±1 V and up to 200 ma avg rectified current. They are single junction units, capable of being connected in series. Applications are in power supplies for radar, photo multipliers, radiation detection and video systems.

MicroSemiconductor Corp., Dept. ED, 11250 Playa Court, Culver City, Calif.

P&A: $7; stock.
4 Gold Brand Tubes for Communications

GB-6688A
Strap Frame Grid Pentode, Gm of 16,500

GB-6922
Strap Frame Grid Dual Triode, Gm of 12,500

GB-6360
operation to 200MC, 12W output

GB-6939
... operation to 500MC, 5W output

What does the "GB" (Gold Brand) prefix mean to your application? Just this—assurance of designed-in tube reliability capable of withstanding severe environmental stresses. Look at a few of the tests Gold Brand tubes undergo: shock tests of 500g, vibrational fatigue tests of 2.5g for 96 hours at 50cps frequency, bulb temperatures of 225°C.

GB-6360 - 9-pin twin tetrode for use as a Class C amplifier and oscillator, frequency multiplier and modulator at frequencies to 200MC. Plate dissipation for both sections is 14W, ICAS. As an AF power amplifier and modulator in Class AB; push-pull service, GB-6360 will deliver 12W output (CCS) with total distortion of 2.5%.

GB-6688A - 9-pin, high Gm, sharp cutoff pentode featuring Sylvania Strap Frame Grid. It's designed for use as broadband IF amplifier in communications and instrumentation equipment. Gm is 16,500 mhos. Ib is 13mA. Short, sturdy mount structure plus rugged grid design significantly enhances reliability.

GB-6922 - 9-pin sharp cutoff twin triode, utilizing Strap Frame Grids, designed for use as a multivibrator, cathode follower, VHF amplifier and VHF cascode amplifier. GB-6922 features relatively low heater input power of 6.3V 6 300 mA, Gm of 12,500 mhos, Ib of 15mA. It provides superior performance under long periods of time under cutoff conditions.

GB-6939 - 9-pin twin tetrode using a frame grid with extremely fine diameter wires rigidly brazed to flat side rods. Designed for operation to 500MC, it is capable of delivering 5W (CCS) when used in Class C telegraphy service and 1.8W (CCS) when used in a Class C tripler service with a plate voltage of 180V.

If your application demands premium performance and reliability, specify Sylvania Gold Brand Tubes. Your Sylvania Sales Engineer will be pleased to tell you more. For data on specific types, write Electronic Tubes Division, Sylvania Electric Products Inc., 1100 Main St., Buffalo 9, N. Y.
NEW!
Unique tuner design of
X-Band Tunable Magnetron
improves airborne radar performance

Sylvania-7692A is a highly stable pulsed magnetron offering 220KW peak power output over the 8550 to 9650MC range. It combines a remarkable new tuner design with proven dispenser type cathode in a rugged package capable of withstanding heavy shock and excessive temperatures. (Tests to date indicate 300°C capabilities.)

Inductive Post Tuner, a Sylvania design, provides linear tuning, simplifying local oscillator tracking, eliminating associated compensating equipment of coupled cavity designs. Features include: a single bellows that tunes all posts simultaneously—secure and precise alignment of tuning posts by means of a guide ring that also serves as an effective heat sink—free tuning post length restricted to 0.200 inches, eliminating electrical and mechanical resonances at very high frequencies—electrically and thermally grounding the tuning posts for very low thermal drift.

Reliable dispenser type cathode, incorporated in Sylvania-7692A, features low heater power requirements, therefore low cathode temperatures, high stability, outstanding life. Cathode memory is of extremely short duration—abrupt switches in pulse length do not detract from cathode performance or life. Too, the molybdenum cathode support is virtually unyielding to vibrational stresses, exhibits very low heat loss, permitting zero heater voltage operation at rated operating current.

Vacuum firing up to 1000°C of individual parts prior to assembly effectively de-gasses elements, contributing to reliability and the exceptional starting stability of approximately 0.05% average missing pulse count.

Additional X-band, tunable types from Sylvania include: 7006, 210KW peak power output; M-4164, 220KW peak power output; 7692, 220KW peak power output. Presently under development are significant refinements to the 7692A, including a hydraulically tuned version.

In short, the intensive magnetron development program underway at Sylvania deserves your close investigation. Contact your Sylvania Sales Engineer for up-to-the-minute information. For tech data on specific types, write Electronic Tubes Division, Sylvania Electric Products Inc., 1100 Main St., Buffalo 9, N. Y.

**TYPICAL OPERATION — SYLVANIA-7692A**

- Duty cycle: 0.001
- Pulse width: 1.0 μsec
- Rise of voltage: 200 KV/μsec
- Avg. anode voltage: 27.5 mV/sec
- Peak anode voltage: 22.0 KV
- Avg. power output: 220* W
- Putting factor: 12 MC
- Pushing factor: 0.25 MC/A

*Min. power output: 200W*
**Time Code Generator** 650

IRIG formats A, B, C, and D, in addition to parallel code output, and 1- and 10-pps synchronizing pulses are supplied by the EE.CO 811 time code generator. Frequency stability of the unit is one part in $10^6$ per day under laboratory temperature conditions or 3 parts in $10^6$ per day over wider temperature limits.

Electronic Engineering Co. of California, Dept. ED, 1601 E. Chestnut Ave., Santa Ana, Calif. P&A: 39,750; 60 to 90 days.

**Computer Tape** 387

In heavy duty type due to coating applied to polyester film. Computape magnetic computer tape is designed for high-density, high-resolution recording. Binders have been selected to assure non-aging characteristics. The tape withstands continual exposure to varying climatic conditions.

Computape Inc., Dept. ED, 122 Calvary St., Waltham, Mass.

**Power Supply** 385

Constant voltage and/or constant current power supply model CVC-300-6 has automatic electronic changeover for forming and aging electrolytic capacitors. Operating with constant voltage the unit has an output range of 2 to 300 v and 0 to 6 amp. Its regulation is ±0.1% for both line and load. At constant current, the output range is 0 to 300 v and 0.3 to 6 amp. Line regulation is ±0.1%; load regulation is ±0.1%.

---

**RCA Combines Two Major Advances in a Single Tube**

in RCA-6BH3, 17BH3, and 22BH3 half-wave vacuum rectifiers for TV damper service

Design your new TV horizontal-deflection damper circuits around one of these new Novar rectifiers, and you'll get better performance at less cost, thanks to economical Novar design and the revolutionary RCA Dark Heater.

**High performance, low-cost Novar construction**—These BH3 types are stellar members of RCA's new Novar line of large, all-glass, integral-base receiving tubes that outperform at less cost other high-dissipation receiving tubes of any base configuration and T9 or T12 envelope. BH3's are rated to withstand a maximum peak-inverse plate voltage of 5500 volts; they can supply maximum peak plate current of 1100 ma and maximum dc plate current of 180 ma.

These tubes embody the advantages of new design, the only all-glass, integral-base receiving tube design featuring:

- **Larger internal lead diameter**—for strong cage support and high thermal conductivity for highly effective heat dissipation.
- **Wider pin spacing** (0.172")—minimizes chance of voltage breakdown; hence greater reliability.
- **Pin length of 0.335"**—for firm retention of tube in socket.
- **Pin-circle diameter of 0.687"**—allows use of both T9 and T12 envelope.
- **RCA Dark Heater**—additional assurance of high reliability.

**REVOLUTIONARY RCA DARK HEATER**—Each of these tubes features the new RCA Dark Heater...one of the most significant contributions to tube technology in years. The Dark Heater operates at greatly reduced temperature, as much as 350°K below the 1500 to 1700°K of conventional heaters. The required cathode temperature is reached with the heater operating at approximately 1350°K. Result: longer heater life; reduced chance of heater failure; heater-current stability on life; reduced ac H-K leakage and hum; improved mechanical stability; greater safety factor in established H-K voltage ratings.

For additional information on Novar types, see your RCA Field Representative or write Commercial Engineering, Section J-18-DE-2 RCA Electron Tube Division, Harrison, N. J.

NEW PRODUCTS

Circuit Breakers

Three-phase, overcurrent circuit breakers are offered in two types: manual reset, rated at 100 ma to 6 amp at 440 v; automatic reset, 100 ma to 10 amp at 440 v. They are enclosed in bakelite housings. Applications include motor protection.

E-T-A Products Co. of America, Dept. ED, 6284 N. Cicero Ave., Chicago 46, Ill.
Price: $3.10 and $3.30.

General-Purpose Relay

Comes in 1-, 2- and 3-pole, double-throw, 2-amp contact arrangements and a variety of coil ratings. The general-purpose relay has an operating power of 1.5 w dc or 2 to 3 va ac.
Dimensions are 1.183 x 1.811 x 1.343 in. and weight is 2 oz. max.
Availability: stock.

Semiconductor Housings

For 350°C use. The high-alumina semiconductor housings have a ceramic-metal bond to maintain high-vacuum tightness at high temperatures. Long creepage paths in a compact design are possible. Sizes are from 1/4-in. ID.

Cermaseal, Inc., Dept. ED, New Lebanon Center, N.Y.
Here's One Way to Automate Coffee-Pots With A Servo Pots...

Place dime into coin slot (A). Coin rolls down ramp into position between spring-loaded metal contacts (B). Contact starts motor (C) and coffee-conveyor-belt proceeds to carry cup into position below spout. As coffee cup pushes actuator blade (D), plunger (E) is lowered from spout (F) and coffee starts flowing. Wire-wound pot (O), indicating cup position, sends signal to high gain servo-amplifier (H) and precision drive system (I), causing spout to move toward cup. Wire-wound spout-indicator-pot (J) feeds signal back to amplifier in effort to follow movement of cup. In order to compensate for wind direction and angle of building, wire-wound windage-pot (K) and vertical-sensor-pot (L) send additional aiming signals to servo-motor amplifier. Due to poor linearity, high noise, poor resolution and high starting torque—

typical of wire-wound pots—servo-system is unstable and inaccurate. Coffee misses cup, spills over belt onto floor, where coffee-loving pussy cat (Cafe au lait colored, of course) attempts to keep floor clean. Note that cup (Q) is only half-full. As cup (D) reaches end of belt, paddle (S) is pushed forward causing string (T) to pull trigger of early 18th century solid-propellant missile launcher (Q). Missile dislodges coin, thereby stopping entire system. (Which isn't a bad idea, considering the price of coffee!)

Men who know coffee and servo-systems best® all agree that the above system works perfectly, everytime, by replacing wire-wound with C. I. C. precision film potentiometers.

*Every major aircraft and missile manufacturer uses C. I. C. precision film potentiometers.

**BUT THE BEST WAY YET...**

Whether aiming missiles or coffee, use C. I. C. Precision Film Potentiometers . . . only C. I. C. film pots have infinite resolution, linearity to .01%, low starting torque and microvolt operational noise.
PRECISELY RIGHT

METAL STUD
Precisely machined to closer than .001" tolerance and plated under the most tightly controlled conditions. Photomicrography shows accuracy of plating, resulting in better soldering, and lower contact resistance.

DIMENSIONAL ACCURACY
Teflon body machined on precision lathes to tolerances of .001" maximum. This accuracy assures uniformly high holding strength when installed in chassis.

VIRGIN TEFNON
Only fresh, uncontaminated virgin Teflon is used in Sealectro Press-Fit terminals assuring optimum electrical, mechanical, thermal, and chemical properties.

NEW PRODUCTS

Power Supply

Welding energy of 20 to 225 w-sec, permitting 50 to 120 spot-welds per min, is provided by model 225B power supply. It accumulates energy within 0.5 to 1 sec after each weld and discharges it in a pulse of a few milliseconds. It stores and discharges the same amount of power for each weld, regardless of line fluctuations.

F&A: $1,244; stock.

Temperature Cycling Chamber

For testing airborne instruments, this temperature cycling chamber produces rapid temperature changes between −100 and 300°F. Using a double-compartment principle, the device moves samples from one compartment to another on a conveyor belt. Speed of temperature change is adjustable down to less than one minute.

General Testing Laboratories, Dept. ED, 40-50 Commercial Ave., Moonachie, N. J.

DC Amplifier

Differential dc amplifier model 2640, for amplifying strain-gage and thermocouple signals in the presence of common-mode signals, has a common-mode rejection of greater than 120 db at 60 cps for 1,000-ohms ground line unbalance. Linearity is better than ±0.3% from dc to 1 kc, better than ±0.1% from dc to 300 cps.

Dynamics Instrumentation Co., Dept. ED, 583 Monterey Pass Road, Monterey Park, Calif.
Price: $885.
Connectors

A well-developed sonar system is standard equipment for the Porpoise. That, plus speed, maneuverability, and intelligence, rates him highly adaptable for underwater existence.

An equally well-adapted man-made combination is the Polaris Missile and its subsurface, nuclear-powered launching pad. The Polaris program adds extra-reliability with Anton Series WM-20 Connectors by Lionel. These rugged, dependable devices afford the utmost in reliability and construction, the maximum in quality, design, materials and workmanship...as proven by Polaris.

- Die-Cast housings
- Diathyylene molding
- Five sizes, 34 to 104 contact range
- Also available to accept #16 wire
- Extended insertion/withdrawal life
- Meet applicable MIL Specs

(Special materials and modifications to meet specific requirements)

Delivery time slashed for Anton "special" connectors! New Lionel tooling practices provide rapid delivery of "specials" for unusual applications...within 6-8 weeks* of order date!

* "Standard" catalog units are in-stock items.

Write Dept. 110A-W for Series WM-20 Technical Literature.

Load Cell 555

For machine tools and materials handling processes, the Force Control Cell is actuated by deflections as small as 0.001 in. It is offered in 16 models with capacities of 500 to 500,000 lb of force. Units sustain up to four times rated capacity. Accuracy is within 3%; repeatability, 1%.

Force Controls Co., Dept. ED, 424 W. Eighth Mile Road, Ferndale, Mich.

Price: $450 to $750.

DC-DC Transducer 563

Variable-reluctance pressure transducer model 2302, for direct operation from unregulated 28-v dc and missile power supplies, has pressure ranges of 5 to 5,000 psi. Output is up to 5 v dc, terminal-based linearity is ±0.5%, frequency response is flat to 700 cps, thermal zero shift is ±0.003% per deg F.

Bourns, Inc., Dept. ED, 6135 Magnolia Ave., Riverside, Calif.

Trimmer Capacitors 547

Rated at 1,000 wvdc, glass trimmer capacitors have ranges of 1 to 4.5, 8.5, 12, 18 or 30 pf. For use from -55 to +125 C, they have a temperature coefficient of 400 ±100 ppm per deg C or 0 ±100 ppm. Insulation resistance is 1-K min. They have been life tested for 250 hr at 1,500 v dc.

Erie Resistor Corp., Dept. ED, 644 W. 12th St., Erie, Pa.

P&A: $1.30 up; 3 to 4 weeks.

At Victor’s Electric-Car Division...

where precision is a must

RED/LINE timing relays “Pay Off”!

The design engineers at Victor’s Electric-Car Division sought a way of making their Dyna-Powered Maintenance Truck accelerate automatically and smoothly through the three forward speeds. The answer: Two G-V Red/Line Thermal Relays, each providing a two-second delay between steps. This assures smooth, even acceleration every time. A third Red/Line Relay shuts off the dynamic brake after a fixed time interval, conserving battery power. So, at Victor, G-V Red/Line Timing Relays are “paying off”.

More and more companies are finding the reliable performance of G-V Red/Line Timing Relays makes them best for their products. G-V Red/Line Relays will “pay off” in your product, too. Your customers appreciate the importance of high quality, reliable components. G-V Red/Line Timing Relays are specially designed for industrial applications. They have the precision, reliability and long life needed to “pay off” in industrial use.

Your G-V distributor has them in stock now. Call him or write for Bulletin 131 today.
NEW PRODUCTS

Frequency Meter Relay 360

Accuracy is 1%; input sensitivity is 10 mV rms. The frequency meter relay can be furnished as a continuous reading type or a locking type in which the meter stops reading at a set point and continues when the frequency returns to the set point. Full-scale ranges are 50 kc to 50 cps.

Anadex Instruments, Inc., Dept ED, 14734 Arminta St., Van Nuys, Calif.
P&A: $125 up; 30 days.

Low Density Resin 396

Medium viscosity, low density epoxy casting and potting resin, Isochemrez 444 has high structural stability and can be machined and cut to size. Color is black; specific gravity is 0.67; density is 40 lb per cu ft; shrinkage is 1%. Long pot life hardener and a flexible, low exotherm hardener give diversity in application.

Isochem Resins Co., Dept ED, 221 Oak St., Providence 9, R. I.
P&A: sample 1-qt kit, $9; immediate.

Current Regulator 364

Tolerance is ±5%. The Current regulator current regulator is available in fixed ratings of 1 to 10 ma. A two-terminal device with a high incremental-to-static resistance ratio, it can be used to replace a number of other components. It is epoxy encapsulated and withstands severe environmental conditions.

Circuitdyne Corp., Dept ED, 480 Mermaid St., Laguna Beach, Calif.
P&A: $6.50 to $32; 2 weeks.

When should you use Mercury-Wetted Contact Relays

IF YOUR RELAYS MUST
SWITCH UP TO 100 TIMES PER SECOND
HAVE A LIFE IN EXCESS OF A BILLION CYCLES
BE COMPLETELY RELIABLE AND FREE FROM CONTACT BOUNCE

THEN SPECIFY
P & B MERCURY WETTED CONTACT RELAYS
P&B
MERCURY-WETTED CONTACT RELAYS

An unusual combination of advantages found only in mercury-wetted relays has led many design engineers to specify them for tough switching jobs. Here are but 3 typical characteristics of our JM series:

RELIABILITY. Scaled-in-glass mercury contacts are renewed with every operation. Won't pit or weld. Make or break is positive . . . every time. No bounce, no chatter. Signals ranging from a few micro amps to 5 amps are switched with singular consistency.

LONG LIFE. Think in terms of billions of operations when considering JM series relays. Proper application, of course, is a requisite.

SPEED. Operate time is just less than 3 milliseconds using 2 watts of power. Release time is about 3.2 milliseconds. Thus, relays can be driven 100 times per second.

If your project calls for exceptional relay performance, perhaps the answer lies in our JM Mercury-Wetted contact relay.

JM SERIES ENGINEERING DATA

Contact Rating:
- 5 amperes maximum
- 500 volt maximum
- 250 volt-amp max. with required contact protection.

Contact Configuration:
- Each capsule SPDT. Combination of capsules in one enclosure can form DPDT, 3PDT, 4PDT. (All Form D.)

Terminals:
- Plug-in or hook solder; 8,11,14, or 20-pin headers.

Coil Resistance:
- 2 to 50,000 ohms.

POTTER & BRUMFIELD
DIVISION OF AMERICAN MACHINE & FOUNDRY COMPANY, PRINCETON, INDIANA • IN CANADA: POTTER & BRUMFIELD, DIVISION OF AMP CANADA LIMITED, GUELPH, ONTARIO

Filament Mounting Machine

Automatic filament mounting machine model 1747 is for production of miniature lamps of the butt seal type. It produces the complete bead stem with conductors and mounted filament. All operations, including wire straightening, wire feeding, hook making, filament coiling, filament mounting and bead sealing are fully automatic.

Kahle Engineering Co., Dept. ED, 3322 Hudson Ave., Union City, N.J.

DC Motor

Permanent magnet dc motor is capable of producing torques in excess of 100 in.-lb through a speed range of at least 1 rpm to 15 rpm. Feedback is 8 v dc per 1,000 rpm. All bearings are anti-friction type. Motor is 1-1/2 in. in diam.

Globe Industries, Inc., Dept. ED, 1784 Stanley Ave., Dayton 4, Ohio

Calibration Unit

Isolated balance and calibration unit model BC411, for strain-gage instrumentation, has a plug in printed-circuit card so that sets of calibrations and dummy bridge resistors can be quickly changed. Calibration is two-step, manually controlled, single or double shunt. Both chassis and circuitry are fully isolated.

P&A: $107.50; stock.

© CIRCLE 114 ON READER-SERVICE CARD
Visual and electrical readout is provided by the ST-2 series of crossbar scanners. Rated at 20 million operations per crosspoint, the unit handles 1 amp to 50 v dc; breakdown voltage is not less than 1 kv ac rms. Signal frequency range is dc to 10 mc. Bounce is less than 400 μsec on make, none on break. James Cunningham, Son & Co., Dept. ED, 33 Litchfield St., Rochester, N. Y.
P&A: $1,800 to $2,100; 4 to 5 weeks.

Electrochemical ampere-hour meter has a direct-reading 6-in. scale calibrated in ma-hr. A slide-rule type cursor facilitates reading. Full-scale value is 60 ma-hr. Accuracy is normally 2%.
Curtis Instruments, Inc., Dept. ED, 45 Kisco Ave., Mount Kisco, N. Y.
P&A: $98.50; stock to 4 weeks.

High stability and high gain are claimed for this 400-cps chopper amplifier. Input is 25 mv dc for 40 v rms max ac output. Input impedance is 50 K. Unit operates at 28 v dc, 350 ma, for maximum output. Size is 2-11/16 x 2-5/16 x 3-1/2 in. Military environmental requirements are met.
M. Ten Bosch, Inc., Dept. ED, 80 Wheeler Ave., Pleasantville, N. Y.
With 10^1 ohms open contact resistance. Model MGR-15 magnetic-reed switches are rated at 12 va ac or 3 va dc, resistive. Contact resistance is 40 to 60 milliohms, plus 40-milliohms load resistance. Actuating time is 1 msec. Life is 100 million operations at full rating.

Hamlin, Inc., Dept. ED, Lake and Grove Sts., Lake Mills, Wis.

Positioner Programmer 465

Completely automatic operation of any two-axis antenna positioner having a 1 to 1 and 36 to 1 synchro system is possible with the model PCP 1 Positioner Programmer. Completely solid-state circuits are used; automatic stop is at positioner limits.

Scientific-Atlanta, Inc., Dept. ED, 2162 Piedmont Road, Atlanta 9, Ga.

Price: $750. programmer, $690, limit control.

Terminal Block 380

All common lead terminations are accepted in the Uniblock terminal block. Top and side entry, with feed-thru pins are for applications requiring fast, positive connections. Mechanical connection has a withdrawal pressure of 35 to 40 lb. They can be placed end-to-end, or side-by-side to provide any number of terminations in a relatively small area.

Modular Electronics Co., Dept. ED, 6211 S. La Brea Ave., Los Angeles 56, Calif.

---

**new SERVO CONTROL**

**Positions and Monitors Remote Variacs**

The new 1590-A Remote Control positions motor-driven Variac® autotransformers from a distance. The Control is a servo — the output voltage from the remote Variac is automatically held to the value set by a Variac in the Control Unit. Moreover, if the line voltage supplied to the Control Unit is held constant, the remote Variac can be used as a source of continuously adjustable regulated voltage. Correction speed is fast ... up to 60 volts per second for small 2- and 5-ampere autotransformers.

Other features include: Continuous monitoring of output voltage by meter ... ability to control 120-volt Variac autotransformers of any size ... where continuous monitoring and control are not required, one 1590-A can be switched to control any number of remote units individually ... a built-in circuit breaker protects unit from damage ... the control is completely passive — with no active elements, reliability is high.

Tracking accuracy of the system is ±2% of input line voltage when used with motor speeds listed in table (halving speed increases accuracy to ±1%). Price of the Control Unit is $95.

**Motor-driven, basic Variacs range from $108 to $272:**

For control of 3-gang W30 and W50 Variacs, tracking accuracy is 3%.
NEW PRODUCTS

Electron Beam Gun

Self-accelerated and electrostatically deflected, electron beam gun 2025G operates within a 3-in. circle. Rated at 20 kV, 5 kW, gun welds refractory and reactive metals. It can be used for evaporation in thin film deposition, button melting and zone refining.

High Vacuum Equipment Corp., Dept. ED, 2 Churchill Road, Hingham, Mass.

Multiplexer System

High-speed multiplexer and digital conversion system 7330 scans up to 50 low-level inputs per second, and converts data to digital form with over-all accuracy of ±0.065%. Output is bipolar 14-bit binary decimal code. Operation is manual or automatic. The 10 dc amplifiers used have common-mode rejection of 100,000 to 1.

Delay Lines

Miniature, tapped delay lines of type 3T provide extreme bandwidth in small physical size. Rise time is less than 6% of total delay; attenuation is 0.1 db per usec. Distortion and overshoot are less than 2%. Up to 30 taps can be provided; units meet military specifications. Temperature coefficient is less than 100 ppm per degree C.

Ad-Yu Electronic Lab, Inc., Dept. ED, 249-259 Terhune Ave., Passaic, N. J.

P&A: $46 to $66 ea.; 1 to 2 weeks.

New SYNTRON Power Point

Delivers up to 22 KW

Plagued by the lack of space for your power rectifier circuits?

Looking for more delivered d-c power?

Like to reduce the costs of the rectifier assemblies you're using by 30% or more? Want certified and guaranteed performance? You'll want the new Syntron Power Point**, the new component you mount right at the point of use, right where you need the d-c. It's a single unit replacing the usual complicated assembly of silicon rectifiers, heat sinks, cooling fins, terminal posts and mounting lugs, spacers, etc.

It's a compact unit that supplies a lot of power. Example: a force cooled heavy duty model, measuring only 4 3/8 by 3 1/2 by 4 inches, can deliver 22 kw at the d-c terminals. If you prefer to use the smaller of the two available models, you can get as much as 17 kw d-c. This little fellow is only 4 by 2 1/4 by 2 1/2 inches.

You can get either of these two sizes for single phase or three phase operation . . . current range from 3-25 amps (75 amps on force cooled units).

What about cost? . . . Depending on the number you need, you'll find that the Power Point costs from 30% to 50% less than any comparable silicon rectifier assembly. If you want a firm dollar quote, let us know your requirements and the quantity desired. We'll tell you exact prices along with delivery dates. Usually, delivery is 15 days or less after you order. (We can make it fast because the Power Point is in stock NOW and it's available direct from Syntron or from selected distributors throughout the country.)

Want a quote or more information? A complete data sheet showing performance curves, dimensions, operational characteristics is yours by completing the coupon or by writing Syntron Company, Semiconductor Division, Homer City, Pa. In Canada: Syntron Company Ltd., Stony Creek, Ontario.

**Syntron Trade Mark
Replaces Bridge Assemblies
in 50% less space, 30% less cost

WHERE TO USE THE POWER POINT
• on clutches, computers, for cathodic protection
• business machines, and burglar alarms, and battery chargers
• on motors and brakes and to close circuit breakers
• on motors and brake components and magnetic breakers
• in circuits with telephones, telegraph and other equipment, such as
• vibrators and relays and traffic control
• power supplies for autos and airplanes and electro-plating
• in short: almost anywhere you need d-c power close to the Point of use

SYNTRON
certified SEMICONDUCTORS

Firing Unit
Exploding bridgewire firing unit P-782 has adjustable outputs for static testing of electroexplosive ordnance. Capacitor discharge pulses range from 100 to 2,500 v. Remote plug-in switch may be operated at up to 250 ft from the instrument.
McCormick Selph, Products Div., Dept. ED, Hollister Airport, Hollister, Calif.

Germanium Transistors
Industrial communications requirements are met by germanium alloy diffused mesa transistors of the 2N2188 series. Minimum BVCEO and BVCES for the 2N2188 and 2N2189 is 40 v; for 2N2190 and 2N2191, 60 v. Dissipation is 125 mv max at 25°C ambient. Package is smaller than TO-5.
Texas Instruments Inc., Semiconductor-Components Div., Dept. ED, P. O. Box 5012, Dallas 22, Tex.
Availability: stock.

Frequency-Selective Voltmeter
Amplitude measurements from 3 kc to 2 mc are quickly and accurately made with frequency-selective voltmeter model 2173A. Levels from −80 dbm to +32 dbm are indicated with accuracy of ±1 db. Wide crystal filter is used with demodulator for monitoring sab speech or tone signals.
Rycom Instruments, Dept. ED, 9351 E. 59th St., Raytown 33, Mo.
P&A: $1,045; stock to 90 days.
FOR MILITARY & COMMERCIAL SYSTEMS...

COMPONENTS FROM EAD

where rotation has been a science for 20 years!

At EAD, rotation has been a science since the early days of electronics ... 20 years ago ... when EAD first specialized in the design and production of miniaturized rotating electrical equipment.

For the designer of military or commercial systems, this experience combined with EAD’s single-minded insistence on constant product improvement, means a line of standards and specials to meet the most critical of today’s demands.

EASTERN AIR DEVICES, Inc.
A DIVISION OF NORBUTE CORPORATION
391 Central Ave., Dover, New Hampshire

MOTORS
Fractional, sub-fractional. Induction and hysteresis types with associated gear reductions. Available in 50, 60, 400 cycles, single, dual and variable frequency, dual voltage. Single, two-, three-phase operation. Horsepower from 1/3500 to ½. Dia. from 1” to 6½”.

ALTERNATORS
From 1” to 6½” diameters. Power to 1000 VA. Wide frequency range. Low harmonic content. Sine waves with maximum 2% total distortion. Single, dual- (sine-cosine), three-phase. Dual frequency units, for special applications, produce a combination of frequencies.

SERVO MOTOR GENERATORS
Avail. in Sizes 8, 10, 11, 15 & 18. Damping servo motor generators (tachometers) and temperature compensated, integrating tachometers — supplied as tachometers only with integral servo drive motor. Special voltages, scale factors and different compensation characteristics can be provided.

SERVO MOTORS & INERTIALLY DAMPED SERVO MOTORS
The basic actuating devices in AC automatic control systems. Provide dynamic response, reliability in extreme environments and high efficiency. Supplied with leads or terminals, with special voltages and power ratings and with precision gear heads for any reduction ratio. Sizes 8, 10, 11, 15 & 18.

BLOWERS & FANS
Light weight centrifugal blowers, ring mounted fans and vane axial fans. Capac. to 1000 cfm. Special designs available for high static pressures. Single, double ended. 50, 60, 400 cycles, special frequencies and variable frequency (50-450 cycles, 360-1600 cycles, etc.).

NEW PRODUCTS

Selenium Rectifiers 634

Flat, conduction-cooled selenium rectifiers provide power-handling capability to 250 va or higher in small packages. Units include half-wave, doubler, and bridge configurations in 1-phase or 3-phase circuits, for input up to 130 v rms, output to 10 amp dc.
Radio Receiver Co., Inc., Dept. ED, 240 Wythe Ave., Brooklyn 11, N. Y.

Gallium Antimonide 635

Polycrystalline and single-crystal GaSb is available in ingots of 3/4 in. diam. weight 20 g per linear inch. Zinc or tellurium is used as dopant.
Micro State Electronics Corp., Dept. ED, 152 Floral Ave., Murray Hill, N. J.
Price: $4.25 to $34 per g.

Plotting Board 612

Smith chart plotting board handles standard 8-1/2 x 11 in. charts. Made of white plexiglass, the Mega-Plotter mounts independently rotatable peripheral and radial scales. A snap-on chart clamp is provided.
Kay Electric Co., Dept. ED, 14 Maple Ave., Pine Brook, N. J.
Use Low Cost Allen-Bradley Type J Pots for Constant Impedance Attenuators

The ideal answer for L, T, Bridged T and Bridged H attenuators.

Allen-Bradley dual and triple Type J variable resistors are widely used in attenuators in electronic circuitry because they provide dependably smooth and uniform attenuation plus constant characteristic impedance.

Stability, high wattage, long life, ideal uniformity, plus remarkable compact structure are combined in the Type J to assure top performance. The solid resistance element — made by A-B's exclusive hot molding process — provides smooth control at all times.

With this precise control over the resistance-rotation characteristics during production, A-B attenuators have a consistently uniform attenuation that approaches calibration accuracy... and the characteristic impedance can be held to ±10% over entire rotation — end to end. The virtually infinite resolution eliminates the definite incremental steps of wire-wound units, while freedom from inductance insures excellent high frequency response. For full details on Type J variable resistors, send for Publication 6024.

Non-Linear Systems, Inc. designs first digital voltmeter to satisfy critical standards for missile work

To satisfy the high standards of consistent accuracy and reliability demanded for missile and weapons checkout, Non-Linear Systems, Inc., developed this digital voltmeter. It uses scores of Allen-Bradley fixed resistors. (For example, the latest Series 20 unit, shown above, contains about 1,000 in each instrument.) “In the selection of A-B resistors,” says NLS, “quality and availability have never been a problem.”

A-B resistors have such consistently uniform electrical characteristics that their performance can be accurately predicted over long periods of time under various operating conditions... with complete freedom from catastrophic failure while in service! The hot molding process used exclusively by A-B is the reason for this uniformity and reliability.

To obtain this same measure of superior performance for your equipment, always insist on Allen-Bradley quality fixed resistors available in various types. For full details, send today for your copy of Technical Bulletin 5000 or Publication 6024. Write to: Allen-Bradley Co., 222 W. Greenfield Ave., Milwaukee 4, Wis. In Canada: Allen-Bradley Canada Ltd., Galt, Ontario.

ALLEN-BRADLEY

QUALITY ELECTRONIC COMPONENTS
Miniature Converter

For servo amplifier systems, computers, telemetry and multiplexing equipment. Model 725170 converter is less than 2 in. high and plugs into a nine-pin miniature socket. Special magnetic shielding and isolation of the drive coil from the contact circuit provide for very low noise. Life is 10,000 hr-min.

Minneapolis-Honeywell Regulator Co., Dept. ED, Fall River, Mass.
P&A: $45; stock.

Heat Dissipators

Kit of heat dissipators for transistors, rectifiers, and diodes has 90 units of 18 different sizes and configurations. Snap-on and stud-mounted types are included. Finish is black anodize.

Vemaline Products Co., Dept. ED, Franklin Lakes, N. J.
Price: $50.

Silicon Rectifiers

Rated at 3 amp, silicon rectifiers types 3RC2 through 3RC40 have a peak reverse voltage range of 25 to 400 v. Designed for low-power switching and control applications, they enable rapid firing with a current of 2.5 ma at 125 C in computer circuitry, servo-mechanisms, static inverters, temperature and lighting controls.

International Rectifier Corp., Dept. ED, 233 Kansas St., El Segundo, Calif.
P&A: $6.25 to $53.24; stock.

How to find laminations when you need them fast!

High permeability lamination stock list goes out to purchasing agents and engineers semimonthly

A stock list, mailed every other week, pinpoints the quantities and sizes of our high permeability laminations that are immediately available from stock. It's sent to purchasing agents and interested engineers throughout the country. To get your regular copy, just address a request to Magnetics Inc., Department ED-94, Butler, Pa.

What makes the stock list important? Depleted inventories or stepped-up production means that when laminations are needed, they're needed fast—and in perfect condition. Magnetics Inc. stock list shows what types are available for immediate shipment. In addition, the stock list contains information on the new higher permeability "E" grade laminations. What's more, stocks listed reinforce those maintained at regional outlets on the east and west coast (all connected by teletype to assure fast delivery).

What makes Magnetics Inc. high permeability lamina-

NEW PRODUCTS

Delay Line

With 80 taps. Model DL 356 lumped-constant delay line has a total delay of 4 μsec, a tapped output every 0.05 μsec, rise time of 0.15 μsec. Impedance is 100 ohms, attenuation 4 db max. Applications include phasing of multichannel tape recorders. Size is 1.5 x 1.5 x 1.5 in.
Valor Instruments, Inc., Dept. ED, 13214 Crenshaw Blvd., Gardena, Calif.
Availability: 2 to 3 weeks.

Pyrotechnic Initiator

Heavy-duty pyrotechnic initiator model 1N-113 contains a low-brisance squib which fires at 500 v ac rms or 700 v dc but will not fire with 250 v ac rms applied continually. It is shielded and filtered for protection against rf and other radiation. Mil specs are met.
Valor Instruments, Inc., Dept. ED, 2433 Moreton St., Torrance, Calif.

Telemetry Calibrator

Frequency stability of the model 612 telemetry calibrator is better than 0.1%. The instrument contains 18 separate high stability oscillators which supply simultaneously all IRIG subcarrier frequencies. These frequencies can be deviated by ±7.5% for 3-point calibration and discriminator adjustment. Output impedance is 400 ohms.
Dytronics Co., Dept. ED, 5485 N. High St., Columbus 14, Ohio.
P&A: $2,400; 3 weeks.
**Parallel-data communications system** Mark 1 consists of simple data transmission and reception; Mark 2 and 3 combine transmit and receive systems with error correction and other editing features. Perforated tape is transmitted at speeds of 60 characters per sec or 600 words per min.

Tally Register Corp., Dept. ED, 1310 Mercer St., Seattle, Wash.

**Hook-Up Wire**

Tin-coated, solid copper hook-up wire, Turbotemp Teflon FEP/Nylon, is insulated with fluorinated ethylene propylene and is jacketed with nylon. It is suitable for continuous operation over a temperature range of $-55$ to $+120^\circ C$ at $300 \text{ v rms}$. It has low capacitance and dielectric constant.

**Miniature Ovens**

Designed to control the temperature of crystals and other temperature sensitive components, these miniature ovens cause units mounted in the oven cavity to remain constant in temperature through a wide temperature ambient. Model SO-1042 holds components or crystals; model SO-1047 holds one HC18/U crystal; model SO-1064 holds two HC18/U crystals. Temperature stability is $\pm 1^\circ C$.

Monitor Products Co., Inc., Dept. ED, 815 Fremont Ave., South Pasadena, Calif.

**10 years without periodic maintenance!**

The reed relays in the new Cubic V-70 series of digital voltmeters assure you of a decade of flawless service. These relays (which replace the stepping switches used in conventional DVMs) have been life-tested for 100 million operations—the equivalent of over ten years of normal operation. The V-70 covers the full DC range from 1 millivolt to 999.9 volts. Balance time is 500 milliseconds; maximum readout time, 750 milliseconds; absolute accuracy is 0.01% plus or minus 1 digit. The meter has no vacuum tubes or moving parts; it operates in any position and is heat and shock resistant; the relays require no maintenance. The V-70 series offers the highest operating speed available in its price range: V-70, only $1,580; V-71 (with automatic ranging and polarity), $2,200. For further information, write to Department ED-110.
NEW PC CONNECTOR
for critical computer applications

Now—from Continental—a printed circuit connector that combines all the advanced design features for rugged service in missile, ground support and other critical applications. Expressly designed for high speed automatic wire-wrap connection techniques which combine better reliability with maximum wiring density in minimum space. Type 600-83-10 meets all applicable specifications of Buships MIL-C-21097.

DESIGNERS' DATA FILE
If you're designing around printed circuits you'll want to have Continental's Con-Dex File PC, compiled to help you select and specify the PC connectors best suited to your needs. For your copy, please write to:
Electronic Sales Division, DeJur-amsco Corporation, Northern Boulevard at 45th St., Long Island City 1, New York (Exclusive Sales Agent) Ravenswood 1-8000.

NEW PRODUCTS

Transistor Tester

For service, research or design use. Model 29 transistor tester checks general-purpose, rf, low power and switching transistors of npn and pnp types. It checks manufacturers ratings, indicates shorts, opens and detective transistors, shows leakage and gain.
Shepherd Electronic Industries, Inc., Instant Circuits Corp., Dept. ED, Terminal Drive, Plainview, L. I. N. Y.
Price: $69.

Tapered Header

Diallyl phthalate header has a 6-deg tapered edge for tight fit between header and case, preventing leakage of liquid encapsulant. Header fits standard 9-pin tube sockets. Outside diameter is 0.700 in.
Epoxy Products Div., Joseph Waldman & Sons, Dept. ED, 137 Cott St., Irvington 11, N. J.
Price: $0.20 to $0.095 ea.

Power Supply

Continuously variable output from 0 to 36 v dc at up to 3 amp is provided by dc power supply BL 36/3. Line and load regulation is 0.01%, ripple less than 0.3 mv rms, output impedance less than 0.001 ohms. The convection-cooled supply operates to 50 C ambient. Rack or bench models are made.
Kaiser Electronics, Inc., Dept. ED, 4 Monroe St., Union, N. J.
P&A: $395 up; stock.
Nor Gate

Convertible nor gate, called the N-131-DC
Nand-gate has two triple-input and two dual-
input gates. Addition of external capacitors
converts it to an integrator, a differentiator
or multivibrator. Additional inputs are avail-
able by terminal interconnection. Switching
rates are to 1 mc.

Digital Design Corp., Dept. ED, Box 21,
Clay, N.Y.
P&A: $79; stock to 6 weeks.

Linear Accelerometers

Have self-test circuit. Series 310 linear ac-
celerometers have full-scale ranges of 0.1 to
10 g, natural frequencies from 5 to 40 cps
and output voltages of up to 10 v. The self-
test feature checks the response of all me-
chanical, hydraulic and electronic systems
which accept and respond to the output of
the accelerometer.

Dynamic Measurement Co., Dept. ED, 106
Terwood Road, Willow Grove, Pa.

Power Supplies

Low-ripple power supplies models 1514 and
1515 offer decade output dialing from 500 to
5,060 v. Regulation is within 0.001%, with
variations up to 10 v in the 115-v line. Load
regulation for no-load to full-load output of
10 ma at any voltage, is 20 mv +0.001%:
stability is 0.005% per hr; ripple is 1 mv rms.

Carad Corp., Dept. ED, 3381 Junipero Serra
Bivd., Palo Alto, Calif.
Price: $580 up.
NEW PRODUCTS

Data Acquisition System  536

High-speed, solid-state digital acquisition system samples several hundred channels of analog data at up to 15,000 samples per sec. Converted to four-place digital form, data is stored on magnetic tape or printed out. Input impedance is 10 meg or more. Conversion accuracy is 0.02% of full scale ±1/2 count. Tape section of the Microdac unit has a transfer rate of 30,000 characters per sec. Tape speed is 150 ips, recording density 200 bits per in.

Consolidated Systems Corp., Dept. ED, 360 Sierra Madre Villa, Pasadena, Calif.

DC Amplifier  548

For analog computing and instrument use, model N-15 Nuvamp stabilized dc operational amplifier uses six nuviors and maintains a dc gain of over 10 million while delivering ±100 v into a 6.8-k load. Bandwidth is 4 kc into a 1-µ load. Noise and drift are under 100 µv.

Embree Electronics Corp., Dept. ED, 993 Farmington Ave., West Hartford, Conn.  
P&A: $120; stock.

Molding Compounds  428

Two compounds of fiberglass-reinforced polyester are for molding electrical parts. Grade 1706 has dielectric strength of 400 v per mil and impact strength of 6 ft-lb per in. Grade 1504 is a flame retardant compound with medium impact of 3 ft-lb per in.

The Glastic Corp., Dept. ED, 4321 Glenridge Road, Cleveland 21, Ohio.

Epoxy Resins  515

Low-viscosity, noncrystallizing epoxy resins, called Isochemrez FR, are for applications requiring self-extinguishing properties. Specs are: viscosity, 4,000 cps; tensile strength of 14,300 psi; dielectric constant of 3.89 at 60 cps or 3.83 at 106 cps.

Isochem Resins Co., Dept. ED, 221 Oak St., Providence 9, R. I.  
P&A: $8 per kit; stock.

A NEW IMPORTANT EXCLUSIVE IMPROVEMENT IN THRU CONNECTIONS

The Electroformed Eyelet

Here's a welcome answer to your printed circuitry problems—the Electroformed Eyelet, new from Graphik Circuits. This remarkable thru connection is as strong as an eyelet, as reliable as the finest plated thru-hole. A new GC technique eliminates failures due to gas entrapment as well as other common eyelet troubles caused by vibration, intermittancy, or high electrical resistance at mechanical connections. Economical, too—if a precious metal finish, such as gold, is desired in the thru-hole, use of the Electroformed Eyelet eliminates the need to gold-plate the entire pattern and conductor paths. Extremely close line width and spacing tolerances are possible, as are heavy wall deposits of .005 or greater without danger of excessive build-up on surface conductors.

The Electroformed Eyelet is just one more example of the superb craftsmanship you always find in Graphik Circuits printed circuitry. Write us, or call your nearby Cinch Manufacturing office.
New Power through C and X band

Full-wave, center-tap silicon rectifier circuit package, type CT, are available in voltage ratings from 50 to 600 v. They are for applications in power supplies used in transistor and vacuum tube circuits. Leads may be paralleled to make a high-current rectifier. Two CT circuits can be wired to form a full-wave bridge; three may be wired to form a full-wave three-phase bridge. Circuit will handle 0.75 amp forward current up to 50 C.

P. R. Mallory & Co., Inc., Dept. ED, Indianapolis 6, Ind.
P&A: $0.655 to $1.12 each in 1,000 lots; immediate.

Ferrite Material 462

Low power losses insure a high degree of power conversion for this ferrite material at normal operating frequencies. Material C-2 is used in solid-state converters of the dc to ac or the dc to dc types and magnetic amplifier applications.

Indiana General Corp., General Ceramics Div., Dept. ED, Keasbey, N. J.
Availability: from stock.

VHF Multicoupler 356

Broadband vhf multicoupler model VHM-3 couples up to six receivers to one antenna system over the range of 15 to 70 mc. Noise figure is 4 db with a nominal gain of 16 db for each output. Ripple of the rf passband is less than 3 db. Isolation between outputs is 60 db; between output and input, 90 db.

P&A: $1,985; 60 days.

NEW PPM METAL-CERAMIC TRAVELING WAVE TUBES

Climaxing ITT's long history of pioneering in the traveling wave tube field are these new PPM types covering C and X bands and distinguished by the highest power output over the greatest bandwidths thus far available. The X-band TWT Type X-354 is rated at 5 watts CW from 8 to 12 kilomegacycles; the C-band TWT Type X-370 is rated at 10 watts CW from 4 to 8 kilomegacycles. Type X-368 serves as a driver for the X-354. As in other ITT traveling wave tubes, construction is exclusively metal and ceramic.

Power output and frequency coverage of this caliber result in a new standard of performance. For ECM requirements, frequency diversity radar or any other broadband microwave application, ITT has a complete line of S-band, C-band and X-band TWTs rated from 0.05 to 10 watts CW and to 1 kilowatt pulse output. ITT traveling wave tubes are available for immediate delivery and are backed by the world-wide resources and facilities of the ITT System.
NEW PRODUCTS

Pressure Standard 538

Pneumatic signal generator is made for shop and laboratory work with all pneumatically operated devices. A typical unit provides pitot pressure signals from 1.5 to 110 in. Hg absolute, and static pressure from 0.5 to 35 in. Hg absolute. Accuracy is ±0.015 in. Hg. It provides changes corresponding to 1 Mach per minute or 30,000 ft per minute, and sinusoidal pressures of variable amplitude and frequency.
Garrett Corp., Dept. ED, 9851 Sepulveda Blvd., Los Angeles 45, Calif.

Linear Accelerometers 560

Photo-resistant linear accelerometers models AH1L and AH2L produce 5 or ±2.5 v from 10-v dc excitation without amplification. Other features include: temperature range of -65 to -250 F, overload of 500%, excellent stability and rugged construction. Uses may be in flight-test instrumentation, container drop and shock tests and airborne telemetry.
Data Sensors, Inc., Dept. ED, 13112 Crenshaw Blvd., Gardena, Calif.
Availability: 30 days.

DC Timing Motor 512

Nonferrous winding and cage assembly minimize speed changes due to loading and temperature variations. Series 43100 dc timing motor is for commercial and industrial applications where dc generator or battery power is required. Windings for 6, 12 or 27-1/2 v are standard.
A. W. Haydon Co., Dept. ED, Waterbury, Conn.

Precision Terminations 505

For pulse, video, rf coaxial cables. Types BNC, PL 259 and N precision test terminations use high-grade L% metal film resistors and can be supplied in any value required. Types BNC and PL 259 are rated at 0.5 w; type N, 1 w.
Holland Electronics, Inc., Dept. ED, 772 E. 53 St., Brooklyn 3, N. Y.
P&A: $2.45 up; stock to 1 weeks.
New cost savings for users of dielectric materials

... a progress report on the MYCALEX METHOD
from Jerome Taishoff, President, Mycalex Corporation of America

"I don't have to tell you about the profit squeeze. It's a hard fact-of-life throughout our industry today. That's why we feel the MYCALEX METHOD—the unique molding and finishing technique we recently developed—offers so much promise.

Sample quotations point to cost savings up to 84%.

The many months spent in the developing of this new process enable us to turn out better-performing products for less: savings we, in line with our policy, will pass along directly to our customers. And those savings promise to be substantial! Note the typical parts shown in the photograph below, as well as the two mechanical diagrams. As you can see, this new production technique reveals cost reductions of 78% and 84%, respectively, when compared to previous cost quotations. Just as important, the savings are in addition to the high reliability SUPRAMICA® ceramoplastics and MYCALEX® glass-bonded micas are noted for.

Savings plus quality with the MYCALEX METHOD

Though these intricate parts now cost much less to make—they offer the temperature endurance, total dimensional stability, high dielectric strength and low loss that SUPRAMICA and MYCALEX formulations have been delivering for years.

Choose from any of these famous materials

SUPRAMICA 620 "BB", 560 and 555 ceramoplastics and MYCALEX 410 glass-bonded mica. Maximum Temperature Endurance (unstressed): 1200, 930, 650 and 650°F; Loss Factor (10⁶ cycles/sec.): 0.020, 0.010, 0.013, 0.010; Compressive Strength (psi): 30,000, 25,000, 40,000 and 40,000, respectively.

So for electronic insulation materials with the high-performance properties you must have—at a profit-protecting price—look into the new MYCALEX METHOD. Send your blueprints and drawings for specific quotations and information.

---

General Offices and Plant: 121 Clifton Boulevard, Clifton, N. J.
Executive Offices: 30 Rockefeller Plaza, New York 20, N. Y.

World's largest manufacturer of ceramoplastics, glass-bonded micas and synthetic mica products.
how to build better circuits

Raytheon Circuit-Pak modules can raise your circuit designs to new levels of reliability — at surprisingly low cost. Many years of experience in the refinement of circuit packaging and the development of extensive facilities and capabilities enable Raytheon to provide you with many engineering and economic advantages.

Carefully matched semiconductor devices interconnected by precisely engineered techniques and encapsulated by advanced methods of high temperature epoxy molding assure compact, ruggedized packages. You save by eliminating expensive package development costs and by cutting lead time from design to production units.

Complete facilities are available for efficiently developing any custom design you may require. You may also choose from large stocks of standardized circuit-paks which include 34 new diode quads designed as bridge rectifiers, ring modulators, voltage multipliers, and series strings. For technical data as well as consultation on circuit packaging please call your local Raytheon office listed below.

**NEW PRODUCTS**

**Waveform Generator**

Frequencies from 0.001 cps to 10 kc, continuously variable, are produced by the model 250 waveform generator. Square, triangle, sine, cosine, or ramp outputs are available at up to 30 V, 25 ma. Continuous operation, external triggering, or push-button triggering is available. Frequency accuracy is better than 3%. DC reference level is adjustable.

Exact Electronics, Inc., Dept. ED, P. O. Box 234, Hillsboro, Ore.

*P&A*: $600; 90 days.

**Low-Voltage Power Supply**

Regulated to 0.002%, the model PS110 power supply has a 15 v dc output, adjustable ±1.5 v, with a load current of 0 to 400 ma. Line transients are suppressed in less than 1 µsec. Ripple is 50 µv. Overload protection is provided. Under complete short-circuit, internal regulating transistor dissipates less than 1 w. Unit measures 2-1/2 x 8 x 5 in. and weighs 5-1/2 lb.

Dynex Industries, Inc., Dept. ED, 170 Eileen Way, Syosset, N. Y.

**Voltage Divider**

Decade transformer voltage divider is linear to ±0.5 ppm. Designated type DT-72A, the unit is similar to the firm's previous type DT-72, with improved linearity and extended windings providing taps with ±0.1 and ±1.1 settings. Decade identification above each dial is provided.

*P&A*: $695 to $795.

CIRCLE 130 ON READER-SERVICE CARD
New SOLA "CVDR" d-c supply simplifies
missle-age circuit design, reduces costs.
It's a natural for computers, communications equipment, and
similarly sophisticated electronic gear. Made for today's
stringent operating parameters. Ends costly dependence on
over-engineered d-c power sources.

CVDR provides both line
and load regulation without
tubes or transistors. Line
regulation, ±1%, for ±10%
line voltage changes; 1%
load regulation from zero to
full load; 1% peak to peak
ripple. Fits 19" relay
racks, and measures only 3½"
high. Custom configurations
and power ratings available
on special order.

Line voltage stabilization is by means of the Sola "CV"
self-regulating transformer. Load voltage stabilization is
accomplished by the series "IX" voltage drop in the satu-
orable reactor (see schematic). This voltage drop is con-
trolled by the load current itself.

CVDR is ready right now, off-the-shelf, in units rated 6-
volts, 10-amps ... and 12, 18 or 24 volts, 5-amps. For out-
standing reliability in a-c and d-c power supplies tailored
to every application, see your SOLA representative ... or

EMCOR® STANDARD CABINETS

- Cut enclosure design time. Select your packaging needs from a complete line of standard and heavy duty EMCOR Cabinets.
- EMCOR MODULAR ENCLOSURE SYSTEM Cabinetry provides for thousands of control center combinations.
- Choose from hundreds of EMCOR Cabinet widths, depths and heights offering an exclusive combination of engineered features.
- Engineered simplicity of basic frames and components affords quickest and easiest erection of control center assembly.
- EMCOR Cabinet Engineers backed by the research and development “know-how” of the Roy C. Ingersoll Research Center set the pace for the packaging needs of electronics, instrumentation and electro-mechanical engineers from coast to coast.
- Rugged frame construction surpasses all standard requirements for increased load carrying capacities.
- Compatible cabinet design assures simplified and economical expansion at any time.
- EMCOR Cabinet manufacturing meets rigid quality-controlled craftsmanship standards.
- Nationwide organization of EMCOR Sales Engineering Representatives assist in planning stages and assure customer satisfaction beyond the sale.

NEW PRODUCTS

Precision Calibration Console 727

Resistors, capacitors, ac and dc dividers can be calibrated on the model 5 precision calibration console. Unit is self-checking. Resistance and capacitance is measured relative to certified standards. Capacitance measuring system has an accuracy of 0.01% and resolution of 10 ppm. Voltage ratios are compared with those of decade transformer divider and resistive divider. Equipment compensates for leads and phase differences. Terminals for auxiliary indicators are provided.

Proximity Counter 622

For production-line applications, model SP-1A proximity counter detects objects up to 4 in. from a wire-sensing device. Unit does not require photoelectric or radiation sources for activation. Both nonmetallic and metallic objects are detected. Control circuit is mounted in epoxy. Device weighs less than 10 lb.

Five Mile Electronics, Dept. ED, P. O. Box 301, Olean, N. Y.

Price: $149.00.

Pistol-Shaped Test Meter 718

For difficult-to-reach areas, this pistol-shaped test meter, called PistolMeter, measures current, voltage, and resistance. Revolving jaws can be inserted into cramped quarters. A lock on the meter pointer permits the reading to be taken after the device is removed from the tested conductor. Meter has test leads, a battery charger, and holster.

Federal Pacific Electric Co., Dept. ED, 50 Paris St., Newark, N. J.
AC Motor

Compact, lightweight, continuous duty, 400 cps motor, model 4440, has an output of 1/5 hp, 37 w. Weight is 1.0 lb; length is 3.02 in.; diameter is 1.74 in.; operation is to 80,000 ft. Efficiency is 68%.

Hoover Electric Co., Dept. ED, Hangar Two, Port Columbus Airport, Columbus 19, Ohio.

Load Cell

A precise universal force transducer, the Alinco model 341LS load cell is for rocket and missile testing. Designed for tension and compression service the unit has an output of 3 mv per v ±0.15% in both tension and compression. Standard ranges are from 50 to 250,000 lb.

Allegany Instrument Co., Dept. ED, 1091 Wills Mountain, Cumberland, Md.

Inertia Switch

Time delay inertia switch is gas-damped for maximum reliability. Used primarily in applications where a time delay or acceleration-time integration is required. Can be set to function at ranges as high as 50 g-sec. Variation in time delay between -65 and +250 F is ±25%.

Inertia Switch, Inc., Dept. ED, 311 W. 43 St., New York 36, N. Y.

General Electric High Reliability Tantalytic* Capacitors

Both now qualified for MINUTEMAN
Both now available for other programs

Both Solid and Foil General Electric High Reliability Capacitors are now qualified for the unprecedented MINUTEMAN missile reliability program.

Perfected and qualified under separate MINUTEMAN development contracts, G-E solid and foil types now approach final objectives—a failure rate of 0.001%/1000 hours (under specified test conditions).

To prove such reliability, General Electric logs 250,000 unit test hours each week. The total now surpasses 5,000,000 sequential test hours—smaller samples do not satisfy high-reliability objectives!

So that tomorrow's units will equal those produced today, General Electric calls on unique in-process controls. An outstanding example is the Integrated Reliability Data System which measures and controls each variable from incoming material test to field performance.

To help the customer calculate system reliability, General Electric will provide reliability test data on each rating. This information is up-dated every 1000 hours.

The MINUTEMAN-qualified capacitors described are now available for all electronic systems. For specs, contact your G-E Sales Engineer. For descriptive bulletins, write to Section 430-05, General Electric Co., Schenectady, New York. Capacitor Department, Irmo, South Carolina.

Progress Is Our Most Important Product

GENERAL ELECTRIC
NEW PRODUCTS

Resistor Sorting System

A programmed precision Kelvin bridge, the model CA-989 resistor sorting system uses four-terminal measurements to sort resistors into five adjacent, equal-percentage bands. The bridge also determines resistors falling above the highest or below the lowest band. Band ranges of 0.01% of 0.1% can be chosen by plug-in networks; repeatability is 0.001%. More than 500 resistors can be measured per hr.

Printed-Circuit Connector

With 130 contacts on 0.1-in. contact centers. The double-row printed-circuit connector has staggered terminations. Insulator material is diallyl phthalate; contact material is beryllium copper, gold over silver plate. Current rating is 3 amp; voltage breakdown is 2.200 v ac.

Viking Industries, Inc., Dept. ED, 21343 Roscoe Blvd., Canoga Park, Calif.

Availability: 30 days.

Teflon-Impregnated Packing Material

Containing more than 30% Teflon by weight, styles 5875 and 5881 Teflon-impregnated packing materials resist temperature changes, glazing, swelling, chemicals, and corrosives. Called Lattice Braid, the materials are made for packing active liquids and devices with moving parts. Temperatures from -90 to -500 F are withstood.

Garlock Inc., Dept. ED, Palmyra, N. Y.

LING expands instrumentation for the vibration testing industry — adds three new products for control and programming

MULTI-LEVEL SELECTOR: Top, Model SML-100 allows each of five accelerometer signals, calibrated for operation at predetermined “g” levels, to limit shaker excitation to package; prevents excessive excitation of critical points in test specimen. Built-in calibrator . . . panel selector for automatic operation or individual channel control . . . light indicators identify control accelerometer . . . compatible with existing servo systems. MULTI-LEVEL PROGRAMMER: Center, Model MLP-101-10 is manually preset for change-over at desired frequencies and then automatically holds preset “D” or “g” levels over each band of frequencies. Ten transfer points are provided. The programmer is compatible with existing servo systems. CLIPPER-MIXER AMPLIFIER: Bottom, Model C-MA-10 is a high quality, stable yet economical unit for level control of sine or random noise signals. An internal acceleration clipper may be switched in to provide adjustable clipping of the noise signal, and sine and noise signals may be mixed for complex wave operation. For more information on Ling systems, write Department ED-1061 at the address below.

LING-TEMCOC-VOUGHT, INC.
LING ELECTRONICS DIVISION
1515 SOUTH MANCHESTER, ANAHEIM, CALIFORNIA • Prospect 4 2900
CIRCLE 136 ON READER-SERVICE CARD
ELECTRONIC DESIGN • October 25, 1961
Here is further proof that Ling always provides vibration systems with greatest flexibility, versatility and convenience. The R1007 Master Control Console shown below is recognized as the finest of its kind, and is a prime example of the human engineering incorporated into all Ling equipment.

The R1007 features a signal patch panel in which signal source, signal shaping and equalization are all connected for normal operation. By patching, equipment not used in a given test may be bypassed, or inputs to the various monitors can be changed so almost any point in the signal path can be measured. External signals can be fed into the system's read-out devices, or equipment integrated into the console may be patched for external measurements.

The patch panels graphically display signal flow from left to right and top to bottom, giving the operator a ready picture of system operation.

The R1007 offers pushbutton convenience all the way! Pushbutton selector switches are provided with measuring devices such as VTVM's, X-Y Recorder Log Convertors and Scopes to allow rapid measurement of signals at key points. Pushbuttons light up for visual monitoring.

Whatever your needs in super power electronics, vibration testing, acoustics or sonar, you'll find Ling systems offer highest performance ratings, highest reliability ... setting the industry standard.

**Relay-Assembly Machine**

Made for telephone relays, this production machine aligns and compresses a relay stack-up and tightens four screws. The relay assembly is compressed at a pressure of 3,500 lb by a hydraulic press. A relay is processed in 3-1/2 sec.

Gardner-Denver Co., Dept. ED, Gardner Expressway, Quincy, Ill.

**Miniature Magnetic Amplifier**

Providing 75-w output from a 2-ma signal, the model MA110 magnetic amplifier is made for airborne and missile applications. Output is 110 v, 0.75 amp ac. Response time is 8 msec. Power gain is rated at 40,000. Unit withstands shock and vibration and meets MIL-E-5272-C specifications for humidity. Hermetically sealed and potted, the device measures 3-1/16 x 3 x 2-5/8 in. and weighs 2-1/8 lb.

Dynex Industries, Inc., Dept. ED, 170 Eileen Way, Syosset, N. Y.

**Sub-Plate Chassis Systems**

Detachable chassis sub-plates 4-1/2 in wide can be mounted together in this chassis. Plates can be removed from the main chassis for repairs or replacement. Made for rack mounting, they are 8-1/2 through 21-1/4 in. deep and support 150 lb per sq ft.

Vent-Rak Inc., Dept. ED, 525 S. Webster St., Indianapolis 19, Ind.

**RELIABILITY**

**EVERY TIME**

Another advance by M/M ... QT17 stereo head tapered design to permit easy, foolproof insertion of cartridge tapes.

It's easy for head manufacturers to talk about the _theoretical_ superiority of their particular designs ... but the all-important proof is in the results achieved in actual _mass production_.

Michigan Magnetics' design is conventional yet efficient ... it lends itself to modern production conditions and economies. No one has matched Michigan Magnetics' record for reliability. No one has a quality control and inspection system that can beat M/M ... that's why you get 1000 reliable, dependable heads every time you order 1000 heads from M/M. Take the gamble out of head purchases ... order only from the leading manufacturer of OEM heads for home tape recording equipment ... always specify Michigan Magnetics!

THIS GUARANTEE TAG IS YOUR CUSTOMER'S ASSURANCE OF FIDELITY AND RELIABILITY.
GREATER TRACKING ACCURACY than 12ACP Types!

With electrical characteristics similar to conventional 12ACP types, this 12" 2-gun M1030 Radar and Fire Control Indicator C.R. Tube provides twice the tracking accuracy over a 10" diameter useful area—and with a maximum error of 0.070°. With additional electrodes providing further electrical correction, accuracy can be improved to approximately 0.050°.

Throughout, the ETC Type M1030 is a new, improved design incorporating ruggedized all-glass sealed construction. In addition to the big boost it gives to tracking accuracy, defocussing, line width and angle alignment characteristics have all been materially improved.

Write for ETC Bulletin M1030.

pacing trends IN CATHODE RAY TUBE DESIGN ...since 1937

The M1030 is one of six ETC 12" tubes developed during recent months to provide new concepts in radar tracking and fire control indication efficiency. Types include single- and dual-trace tubes with greatly enhanced defocussing and tracking accuracy. All can be designed with more than two guns for special uses. Inquiries for specific requirement will receive prompt attention.

NEW PRODUCTS

Wirewound Resistors

Rectangular shaped. Called Squaristers, these miniature precision wirewound resistors are offered in values of 1 to 1,200,000 ohms. They have accuracies of up to 0.01% and meet MIL-R-95B and C and MIL-R-9444. Normal temperature coefficient is ±10 ppm per deg C.

Precision Static Inverter

Voltage regulation to ±3% under wide load unbalance, and frequency tolerances of 1%, 0.05%, or 0.01% are provided by the model SIS-3-450042SV static inverter. Unit operates at 500 va, 3 phase, 400 cps. Phase angle errors are 1 deg max under 50% load unbalance. Automatic overload and short-circuit protection is provided. Mil specs are met.

The Siegler Corp., Magnetic Amplifiers Div., Dept. ED, Anaheim, Calif.

Circuit Breakers

Molded-case circuit breakers type QCC are offered in current ratings of 125, 150, 175 and 200 amp in the following combinations: one-pole at 120 and 240 v ac, two-pole at 120 and 240 v ac, two-pole at 240 v, three-pole at 240 v. Interrupting rating is 10,000 amp.

Edge-Reading Meters

Designed to be stacked one atop another, these edge-reading meters can easily be attached to or removed from flush panel mountings. Model 12 meter is a null-type zero center indicator with ranges from 500-0-500 μa to 3-0-3 ma. Model 13 is available as an ammeter or a volt meter, either ac or dc. Maximum size is 1-13/16 x 3/4 in.

Electro-Mechanical Instrument Co., Dept. ED, 8th and Chestnut St., Perkasie, Pa.
Shrinks
Skin-Tight... Then Stops!

New - ALPHLEX®

SHRINKABLE TUBING
With Controlled Shrinkage

Shrinkable Tubing is an irradiated Polyolefin insulation that, when heated to 135°C, shrinks within seven seconds to form a permanent, flexible, light-fitting bond.

Slip it over a group of wires, an exposed connection or component, or even a tool handle needing insulation, apply heat (135°C) for seven seconds - watch it shrink smoothly and firmly to the exact configurations of the object to be covered. Further heating does not affect it.

Alphlex Shrinkable Tubing is supplied in expanded form so that it may easily be slipped over the component to be covered.

HOW TO USE: The use of a hot air gun is recommended, however excellent results may be obtained by oven heating, radiant heat, the heat of a soldering iron, a burner, or dipping in hot fluids.

Available in sizes .02 thru .04 in black, white, red or yellow; in sizes .02 thru .04 in black.

Miniature Rheostat

Rated at 12.5 w, miniature rheostat can be furnished as a standard unit or to meet special requirements. Shafts, bushings, taper windings and other characteristics are available as specified. It is suitable for military or commercial applications.

Tru-Ohm Products, Dept. ED, 3426 W. Diversey Ave., Chicago 47, Ill.

Detector Amplifier

For wide-band fm signals, Model 5100 detector amplifier recovers pcm, pam and fm signals which have been heterodyned to standard 5-mc if. A high-gain, wide-band dc amplifier follows the discriminator which is capable of driving a long 75-ohm coaxial line.

Dynatronics, Inc., Dept. ED, P. O. Box 2566, Orlando, Fla.

Toroidal Coils

Up to 150-h inductance and Q-factors greater than 20 at 200 cps are features of type 0330 toroidal coils. Applications are in commercial and military equipment including aircraft navigation systems. Dimensions are 1-5/16-in. OD, 5/8-in. height.

Components Corporation, Dept. ED, 2857 N. Halsted St., Chicago 14, Ill.

Remote-Control Modules

Dual-channel. Designed for console control of distant power sources, each control module consists of a 3.5-in. high standard rack panel with two sets of controls. Pushbuttons raise and lower output voltage. Vernier controls permit 1-v variation for full rotation; 2.5-in. panel metera monitor voltages at the load.

Mid-Eastern Electronics, Dept. ED, Springfield, N. J.

P&A: $58; stock.
NEW PRODUCTS

FM Limiter Amplifier 725

Dual-channel limiter amplifier is made to recover fm signals which have been heterodyned to a 5-mc if frequency in a receiver system. Designated model 5101, the unit limits an input signal over the range of 7 mv to 2 v rms. The 3-db bandwidth is 0.9 mc. Ratio of the 40-db to the 6-db bandwidth is less than 3. Output is adjustable from 0 to 2 v rms.

Dynatronics, Inc., Dept. ED, P. O. Box 4368, Panorama City, Calif.
Availability: 60 days.

Plug-in Cans 620

Aluminum plug-in cans with 8-pin plugs are offered in heights of 2, 2-1/2, 3, 3-1/2 and 4 in. Base is 2 x 2 in. and 0.04 in. thick with 0.02-in. covers. The mica-filled plug is swaged into the can.

Vector Electronic Co., Inc., Dept. ED, 1100 Flower St., Glendale 1, Calif.
P&A: $0.50; stock.

Silicon Rectifier 713

Coaxial silicon rectifiers have a p-i-n range of 10 to 1,000: 500 ma at 1.2 v and 1 amp at 1.5 v. Elimination of the cooling flange permits greater latitude in packaging and mounting where space is limited. Dimensions are 0.220 in. diameter, 0.330 in. length.

Erie Resistor Corp., Dept. ED, 644 W. 12th St., Erie, Pa.
Availability: 6 weeks.

For new Raytheon miniature right-angle printed circuit test jacks or any of Raytheon's complete line of reliable components for commercial, industrial and military applications, see your Raytheon Distributor. If no Raytheon Distributor is listed for your area, we will be pleased to send you the name of the Distributor nearest you. TEST IN PLACE
with new printed circuit
test jacks from Raytheon

Test compact, closely mounted circuits quickly with new Raytheon miniatures right-angle printed circuit test jacks for .080" test probes. No need to remove in-the-way circuit boards or use test prod adapters. Molded nylon construction features exclusive design beryllium-copper damage-proof spring pin contact. Double gold plating over silver plate assures reliable electrical contact and fast dip-soldering of terminals. All materials meet military specifications. Available in eight MS16108 colors, plus gray and violet.

For more information on the new right-angle printed circuit test jack and other Raytheon styles please write Raytheon Company, Industrial Components Division, 55 Chapel Street, Newton 58, Mass.

AC-DC Volt-Ohm Meter

Combined in a single unit, model M-201 ac volt, dc volt and ohmmeter measures 0 to 300 v ac in six ranges, 0 to +1,000 v dc in seven ranges, and 0 to 500 meg in seven ranges. Covering 20 cps to 700 mc, it is suitable for laboratory, broadcasting and testing applications. Dc input impedance is 122 meg on all ranges.

Borg-Warner Controls, Dept. ED, P. O. Box 1679, Santa Ana, Calif.
P&A: $350; stock.

Paper-Tape Reeler

Bidirectional paper-tape handler model RS-300 is for tape speeds of up to 40 in. per sec with 5 to 8 in. reels. Spring-loaded dancer arms provide positive on-off control of tape feed, maintain constant tension and prevent tape spillage. The modular unit is compatible with the firm's other paper-tape equipment.

Step-Down Autotransformer

For aircraft applications, 9.33-oz autotransformer model 9808-199 is designed to step 115 v down to 6 v. It meets MIL-T-27 and Class T thermal shock requirements. Rated output is 42 va. It is impregnated and encapsulated in epoxy resin.

Varo Inc., Dept. ED, 2201 Walnut St., Garland, Tex.

Need AC-operated military relays?

For reliable switching...
... try "Diamond H"
Series RA and SA relays with a-c coils

These relays for 400 cps and 60 cps operation are identical in size and weight to Hart's widely specified Series R and S d-c relays and meet the same specifications*. They provide the same shock resistance (to 50G), the same vibration resistance (to 20G-2000 cps), and the same performance under temperatures ranging from -65°C to +125°C. Contact ratings from dry circuit to 10 amps, 115 volts a-c resistive and 30 volts d-c resistive.

The "Diamond H" line includes hundreds of standard models and special variations are possible. Ask for literature and specification list.

*Like the R and S series, they meet the requirements of MIL-R-5757C. Models are also available to fill the requirements of MIL-T-6181.
**Wire Stripper**

Semiautomatic thermal wire stripper, model AT-1 Auto-Therm, handles up to 1,000 ends per hr. Any type of insulation including Teflon, Kel-F, polyester and vinyl in sizes of #30 to over 3/8 in. in diameter can be stripped. Coaxial, shielded and irregular shaped insulation can be accommodated.

Western Electronic Products Co., Dept. ED, 2420 N. Lake Ave., Altadena, Calif.
P&A: $395; stock.

**Signal Generator**

Covers 50 kc to 65 mc in six bands. Model G-101 signal generator has a pushbutton attenuator system to provide step-by-step reduction of the rf output signal amplitude from 0.1 v into a 50-ohm load. Level control maintains indicated output to ±1 db regardless of frequency output or per cent of modulation.

Borg-Warner Controls, Dept. ED, P. O. Box 1679, Santa Ana, Calif.
Price: $1,350.

**Plug and Jack Assembly**

For printed-circuit cards, the Polarite device consists of a plug, assembled to the circuit board, and a jack, assembled to the edge connector. Each plug and jack assembly provides 12 discrete combinations. It meets MIL-C-21097A.

The Ucinite Co., Dept. ED, Newtonville, Mass.
Availability: stock.
This WELDMATIC Welding Head is used to produce more modules than all other makes combined.

Here's why—

Fastest Follow-Up
Model 1032 combines (1) near-zero inertia of lightweight electrode arm with (2) minimum friction (thanks to self-adjusting spring loaded linear raceways) and (3) low spring-rate driving force, to supply ultimate acceleration capability throughout the weld formation period. The vital combination of these 3 factors determines the resultant Weld-Schedule optimum “maximum-strength” area.

Absolute Linear Electrode Movement
Long linear ball-bearing raceways allow only perfect, non-wiping action—wiping action being a major contributor to mediocre welds.

True Force Firing
Patented, pure force-firing action is designed into the Model 1032. Weld energy is released to the electrodes only—and exactly—when the preset force is reached, regardless of setup configuration.

Self-Adjusting Raceways
Dual, linear ball-bearing raceways, spring loaded for full compliance, compensate for wear, thermal effects, and normal dirt and provide absolute, lowest constant friction over full electrode arm stroke.

Minimum Movable Mass
All parts moving during follow-up total less than 4 ozs. Die-cast electrode arm and holder, with electroplated high conductivity interfaces, offer highest welding efficiency yet lowest mass.

Full Flexibility and Accessibility
The head features full front 3-dimensional access with fully adjustable arm lengths. The head operates at any desired work position, either singly or in double head combinations.

Full Line of Tailored Accessories Available
Optimum production weld repeatability results through minimizing operator fatigue. Tailored accessories such as actuators, illuminator, magnifiers, riser assembly, horizontal adaptor, etc., provide these results.

NEW PRODUCTS

Test Sequence Controller 606

Programmed by interchangeable plugs, the series 910 test sequence controller provides test-bench automation. Instrument controls equipment operation during test cycle, activates loading devices, and turns equipment on and off. Circuitry, including power supplies, is self-contained.

Slaughter Co., Dept. ED, Piqua, Ohio.
Price: $850 to $875.

Image Orthicons 714

Fiber-optic face plates eliminate the need for lenses and achieve light transmission gains of up to 50 times that obtained with conventional optics. Image orthicon type ZL-7809 has an S-10 photo surface peaking at 4,500 A; type ZL-7810, S-20, at 4,250 A.

General Electric Co., Cathode Ray Tube Dept., Dept. ED, Syracuse, N. Y.
Availability: 30 to 90 days.

High-Speed Counter 710

For high-volume counting. Model HA 4000A counter has speeds up to 15,000 counts per min. Using an optical sensing head, the unit counts anything from small pills to large containers. It consists of one decade of electronic counting followed by five decades of electromechanical registering to reduce the counting load.

Genisco, Inc., Dept. ED, 2233 Federal Ave., Los Angeles 64, Calif.

IN LESS THAN 4 SECONDS

INFEED WITH THE REVOLUTIONARY PRODUCTION AID TOOL!

“PIG-TAILOR”
a revolutionary new mechanical process for higher production at lower costs. Fastest PREPARATION and ASSEMBLY of Resistors, Capacitors, Diodes and all other axial lead components for TERMINAL BOARDS, PRINTED CIRCUITS and MINIATURIZED ASSEMBLIES.

PIG-TAILORING eliminates:
• Diagonal cutters
• Long nose pliers
• Operator judgment
• 90% operator training time
• Broken components
• Slanting terminals

PIG-TAILORING provides:
• Uniform component position
• Uniform marking exposure
• Minimum spacing control
• “S” leads for terminals
• “U” leads for printed circuits

Immediate job start.

Pays for itself in 2 weeks

“SPIN-PIN”®
Close-up views of “SPIN-PIN” illustrate fast assembly of tailstock lead wire to terminal.
• No Training
• No Pilots
• No Clippings
• Uniform Crimps

PAYS FOR ITSELF THE FIRST DAY!

Heat Dissipator

For TO-5, TO-9 semiconductors. Model T8020 medium-power heat dissipator has a thermo-resistance of 16°C per w. Tapered fins are designed for still or forced-air applications. The unit is stud-mounted. It measures 1 in. in diam, has an over-all height of 1 in. and is 5/8 in. from chassis.

Vemaline Products Co., Dept. ED, Franklin Lakes, N. J.

Availability: stock.

Voltage and Current Controls

Up to 200,000 amp and 5 kv can be controlled. Voltage controls and current controls, called Transducers, are static control packages requiring no auxiliary hardware or compensating circuitry. Proportional output is linear within ±0.5% full scale.

Meter Calibrator

Accuracy is 0.25%. Model MC-5400 meter calibrator has 54 full-scale ranges covering 20 µa to 10 amp ac, 2 v to 1,000 v dc, 20 ma to 10 amp ac and 2 mv to 1,000 v ac. Ac ranges are compensated and calibrated for 60 and 400 cps; dc supplies are filtered to 0.5% or better.

Twinco Inc., Dept. ED, 10 Cheney St., Roxbury 21, Mass.

Price: $975.

Hermetically Sealed Limit Switch employs I-S Beryllium Copper Flipper Blades

• FOR SUPER PRECISION ACCURACY
• COMPLETE FREEDOM FROM FATIGUE

The Electro-Snap component illustrated is hermetically sealed, ruggedly constructed to provide an environment-free, super-durable limit switch. The I-S flipper blades of beryllium copper offer excellent electrical characteristics, super precision accuracy and freedom from fatigue. If you have a spring problem, I-S engineers will be happy to explain the unique advantages of Beryllium Copper and make specific recommendations.

Write or call today for the I-S catalog on Beryllium Copper compression springs, flat springs, strip springs, contact strips, contact rings and screw machine parts.

INSTRUMENT SPECIALTIES CO. INC
270 Bergen Blvd., Little Falls, New Jersey
Telephone: Clifford 6-3500
NEW PRODUCTS

Hipot Tester 706

With 5-μa circuit breaker, adjustable from 0 to 5,000 μa, hipot tester provides direct monitoring of either ac or dc output and grounded return. Five models have ranges of up to 2, 5, 10, 20 kV ac or dc and up to 30 kV dc.

Peschel Electronics, Inc., Dept. ED, R.F.D. 1, Patterson, N. Y.
P&A: $540 up; stock to 3 weeks.

Current Rectifier 511

Miniature selenium rectifier is half the size of the unit previously announced. Called the Vac U Sel, it accommodates up to 15 kV with a block reverse voltage of 31.5 kV. It has a paper base, phenolic housing and operates at 130°C.

General Electric Co., Dept. ED, 3325 Wilshire Blvd., Los Angeles 5, Calif.

Stainless Steel Connector 535

For space-chamber applications, Assembly No. 1 stainless steel connector consists of 459 feedthroughs grouped in 17 patterns. Two tubular feedthroughs are designed for thermocouple sensing probe. Outside diameter of connector is 10 in. with a thickness of 5/8 in.

Vacuum Ceramics, Inc., Dept. ED, Cary, Ill.

AC Voltmeter 705

Phase-sensitive model 302-1 transistorized voltmeter is suitable for use in military ground-support equipment. Power supply and internal reference isolation transformer are self-contained in the unit. Power low is isolated from signal low for accurate bridge or floating voltage measurements.

Trio Laboratories, Inc., Dept. ED, Plainview, L. I., N. Y.
Look what you can do with a HUGHES WELDER!

A Complete Line For Electronic Packaging

Hughes Welders are tailored to meet all the tough requirements of high-density electronic component packaging. New type pulse transformers provide short discharge time, optimum welding pulse width—no danger of component heat damage. Voltage regulation in all Hughes Welders assures precise repeatability of every weld—no more rejects. High-efficiency design gives you more usable weld power for your money.

ELEVEN WELDING POWER SUPPLIES TO SELECT FROM for every packaging application, and general-purpose precision welding. Stepless operation allows quick operator training—less human error.

CHOOSE FROM THREE, RUGGED WELD HEADS all with adjustable pressure settings ranging from 2 ounces to 50 pounds. True vertical electrode motion eliminates poor welds caused by skidding or wiping. Hughes also supplies welding handpieces, sequencing controls, and other accessories to simplify your welding problems.

All it takes to establish a complete, versatile precision welding station in your own location is the equipment shown below—a single control unit, two weld heads oriented vertically and horizontally, a weld tensile tester and a lab-standard pressure gauge.
2 Voltage Regulated
Hughes Welders are designed with all-day voltage regulation. Examine the scope patterns showing discharge pulses of two welders; input voltages have been varied from 105 to 125 volts in both cases. The Hughes Welder at left registered 80 watt seconds on every pulse, superimposing the patterns. The unregulated welder at right varied from 65 to 96 watt-seconds in the same test, producing welds of widely varying quality. When your product's reliability is so important, you can't afford to take a chance on welding uniformity — depend on a Hughes Welder.

3 Production Proven
Hughes Welders have logged enviable production records with many of the country's finest electronic firms. Proven by thousands of hours of in-plant operation, they are used extensively for assembling micro-modules, electron guns, vacuum tubes, semi-conductors, and other devices. Heavy-duty transformers and the use of derated components in their construction assures day-in day-out operation without failure.

4 Semi-Automated Welding
To make the most efficient use of manpower on the production line, and to minimize operator "knob-twiddling," Hughes provides two inexpensive multiple-heat-selector units. Both enable a single operator to perform a complete weld schedule at a single station.

The Model VTA-53 allows the use of two or three weld heads having different electrode arrangements, with a single power supply, and permits pre-selection of up to 5 different weld heats. The operator presses the proper switch to select the desired weld heat and uses the appropriate welding head to complete the weld.

The Model VTA-45 performs the same function, but weld heats are pre-set for a desired program and then sequenced automatically with each activation of the weld head.

In each case, the need for the operator making weld heat or pressure adjustments is eliminated and weld quality cannot be affected by errors in judgment.

Hughes offers welding application and training assistance in their laboratory or at your plant. Application data is also available in numerous Hughes technical reports on applied welding techniques.

For additional information contact our representative in your area, or write:

EQUIPMENT SALES
Hughes Aircraft Company
VACUUM TUBE PRODUCTS DIVISION
2020 Short Street, Oceanside, California
Telephone SARatoga 2-2101
Coated Metals 591

Dielectric strength is 400 v. Two types of insulating and printed-circuit materials called Amfoil are available. The first, aluminum or copper foil coated with Teflon is suitable for electrical equipment or as very thin high temperature gasketing. A second laminate is of Tissuglas (1-mil thick) with 3/4-mil copper. This material will operate at temperatures above 300 F.

Transistor Mounting 550

Dissipates 12 w. The Uni-Mount universal transistor mounting will support transistors in several positions. It has transistor, mounting-device, and connecting leads all on one side of mounting wall. One mounting fits all similar transistor packages. Model SR23 fits diamond shape and model SR26 will take large round transistors and diodes.

Accel Electronic Products, Dept. ED, Box 467, Monterey Park, Calif. P&A: quantity discount to $1.00 ea; stock.

KAY Precision Random Noise Generators

1 kc to 1000 mc ... Therma-Node

The Therma-Node is a basic noise source which provides extremely high accuracy by utilizing a basic noise generation technique — thermal noise from a heated resistive element.

- Noise figure — 10 dB
- Output Impedance, 50 ohms unbalanced
- Accuracy: ±0.1 db
- Operates from line or 24 V dc
  2 — 1000 mc, Price $550.00, f.o.b. factory ($605.00 F.A.S., N. Y.)
  1 kc — 300 mc, add $135.00 ($149.00 F.A.S., N. Y.)

1 mc to 3000 mc ... Mega-Node 3000

The Mega-Node 3000 is a calibrated random noise source providing output over a wide frequency and power range. It employs a coaxial-type noise diode with a tungsten filament as a temperature-limited noise generator.

- Noise figure — 0.20 db
- Output Impedance, 50 ohms unbalanced
- Accuracy: ±0.25 db below 250 mc, ±1.0 db below 2500 mc, ±1.5 db at 3000 mc
  Price $790.00, f.o.b. factory ($869.00 F.A.S., N. Y.)

3 mc to 500 mc ... Mega-Node 403-A

The Mega-Node 403-A is a calibrated random noise source providing precise operation over a more limited frequency range at proportionately lower cost.

- Noise figure — 0.19 db
- Output Impedance, 50 ohms unbalanced
- Accuracy: ±0.5 db
  Price $375.00, f.o.b. factory ($413.00 F.A.S., N. Y.)

1120 mc to 26,500 mc ... Microwave Mega-Nodes

The Microwave Mega-Nodes are precision machined and plated waveguide fixtures, utilizing argon, fluorescent, or neon gas discharge tubes. Single power supply operates all units. (Power Supply Price, $125.00) ($138.00 F.A.S., N. Y.)

KAY ELECTRIC COMPANY

O CIRCLE 156 ON READER-SERVICE CARD
NEW PRODUCTS

Sensitive Relay 549

Transistorized sensitive relay CR120F is made for industrial applications such as stop-motion or liquid-level control. Contact rating is 10 amp, 300 v ac; arrangement is dpdt or dpst. Pick-up current is 0.4 ma min. Line supply is 115 v, 60 cps, 4 w.

General Electric Co., Dept. ED, Schenectady 5, N. Y.

Rotary Switch 493

No wearing contacts are used in this new spdt switch. Consisting of a slotted disk passing a beam of light to photosensitive diodes, almost any switching sequence can be provided, with angular accuracy of 0.25 deg. Designed for military or other severe applications, will function at temperatures up to 100 C. A rating of 150 ma at 28 v dc permits control of relays, or as a pulse generator for programming computer systems.

White Avionics, Dept. ED, Terminal Drive, Plainview, N. Y.
Availability: 3 to 4 weeks.

Low-Noise Transistor 527

Planar transistor has a guaranteed maximum noise of 3 db. Designated type 2N2049, the device is made for audio, differential, and dc amplification. With fZ, S of 100 µa and VCEO of 10 v, gain is 80 min. ICEO is 10 ma max, 0.4 ma typical: collector-base voltage is 80 v; power rating is 300 mw.

Fairchild Semiconductor, Dept. ED, 545 Whisman Road, Mountain View, Calif.
P&A: $16 each for 100 to 999; from distributors.

Ruby Rods 619

Needs no silvering. Design of the TIR ruby rods is a roof-top geometry polished into the rod with a 90-deg included angle forming a two-dimensional reflector. Output ends are flat and parallel to the plane of the corner reflector. Four types, SCR 100-UT through 400 UT range in size from 0.040 x 0.040 x 2 in. to 0.3 x 0.3 x 3 in.

Trion Instruments, Inc., Dept. ED, 1200 N. Main St., Ann Arbor, Mich.
P&A: $100 to $200; up to 30 days.
Look to **FAFNIR**

for these six important high performance features in miniature ball bearings

1. **Centerless Honed Raceways** — The only miniature ball bearings with honed inner and outer races. Noise and vibration reduced to new, low levels.

2. **Vacuum-melt Extra-Clean 440C Stainless Steel** — No pits or imperfections in balls, raceways. Provides better finish, super-sensitive performance, low torque values.

3. **Balanced Design** — Each size bearing has its own size retainer. No “make-do’s”. Fafnir “tailor-made” retainers assure optimum pitch circle of balls and bearing balance.

4. **Hardened Retainers** — Hardened 410 stainless steel retainers maintain proper and accurate form when assembled. No distortion. Retainer prongs remain springy, prevent permanent bend.

5. **Heat Stabilization** — Stabilized to 600°F. Standard Fafnir Miniature Ball Bearings take high temperatures.

6. **Precise Tolerances** — Bore, O.D., and internal geometry held to precise tolerances to meet the most exacting customer requirements.

High Atmosphere Research—
Rocket Borne Instrumentation—

Our solid propellant rocketry accomplishment has now opened new frontiers for high altitude investigation—a real challenge to the instrumentation ingenuity of our technical talent.

These combined activities have created an opening for an electrical engineer with instrumentation experience or a physicist with a good electronic background, to investigate the complex instrumentation and physics problems of the upper atmosphere. The position will include group supervision, requires a graduate degree or equivalent experience applicable to this field.

U. S. citizenship required.

are you spending $12.00 for a one cent job?

If you're duplicating drawing details, you're squandering precious hours of costly drafting time. STANPAT, the unique tri-acrylate that is pre-printed with your standard and repetitive blueprint items, cuts time involved from 3 hours to 15 seconds! Figure at current pay rates, this means a $12 job at less than one cent... the STANPAT way. Easily transferred to your tracings by an adhesive back or front, STANPAT relieves your engineer of time-consuming and tedious details, freeing him to concentrate on more creative work.

STANPAT is available in two types of adhesive backs:

• Rubber base for standard drafting and tracing papers
• Resin base to prevent sticking for papers that contain oils

AC Motor

Dual-speed hysteresis synchronous motor type 5003 provides 300 or 600 rpm with input of 115 v., single phase, 1-40 v. Rotor revolves around outside of stator, with motor ring acting as a permanent magnet and the poles shifting as frequency varies. Primary application is tape drive.

Beau Electronics, Inc., Dept. ED, 1060 Wolcott Road, Waterbury, Conn.
P&A: $95; 30 days.

Communications Equipment

Dual sideband unit has four modes of frequency shift key transmission. The TG-2S operates on voice and facsimile, or cw, as well as four modes of frequency shift key. All signals are monitored visually, as well as audibly. This rack mounted unit can be obtained in a case unit as a TG-2SE.

RF Communications Associates, Inc., Dept. ED, 13 Canal St., Rochester 8, N. Y.

Carbon Potentiometer

Measuring 3/4 in. long, trimmer potentiometer model 3001 operates from -65 to 150 C and meets humidity specifications of MIL-STD-202A, Method 106. Rating is 0.2 w at 70 C; resistance range is 20 K to 1 me. The 15-turn unit weighs about 0.06 oz.

Bourns, Inc., Trimpot Div., Dept. ED, 6135 Magnolia Ave., Riverside, Calif.

TOROIDAL COIL WINDING

- you name it, we make it

We produce a full line of coils from 1/8" Fin. I.D. to 30" O.D., wire range #2 - #0 AWG.

Toroidal coils • magnetic amplifiers • potentiometer windings • DC-AC and DC-DC converters • differential transformers • filters • current transformers • variable inductors • power transformers • pulse transformers, or any toroidally wound device.

Fast Service, Reliability, Economy, Send your inquiries.

CIRCLE 164 ON READER-SERVICE CARD
Flexible Coupling

Metallic bellow is the flexible element in the miniature shaft coupling. Two shafts can be coupled in unison without backlash or cyclic angular displacement during rotation. No. 1-MB is for 3/32, 1/8 and 5/32-in. shafts and is 0.7 in. long; No. 2-MB is for 1/8, 3/16, 1/4 and 5/16-in. shafts and is 1 in. long.

Selector Switches

Key-operated selector switches are available with two, three, or four positions. Melamine contact blocks can be supplied with contact arrangements from 1 normally open or 1 normally closed to 4 normally open and 4 normally closed. Ferrules are offered in eight colors.
The Clark Controller Co., Dept. ED, 1146 E. 152nd St., Cleveland 10, Ohio.

Servo Package

Unit has self-contained oscillator and 4 w amplifier, for excitation of ac transducers. Model SSM electronic servo package is transistorized to drive servovalves with dual 1-K, 8-ma coils. Dual-regulated power supply, installed in cabinet or panel-mounted enables operation from standard power lines. Special requirements can be met by minor modifications.
Raymond Atchley Div., American Brake Shoe Co., Dept. ED, 2339 Cotner Ave., Los Angeles 64, Calif.

With a maximum output of 14 volts — 4 watts, Telonic PD Sweep Generators provide a new era in sweep techniques. They operate in 4 different modes — swept RF, modulated swept RF, CW, and modulated CW — selected by a function switch. Their display linearity is better than 1.2:1, and output is flat within ±0.5% over the maximum sweep width.
The instrument's built-in turret attenuators provide a range of 0 to 50 db in 1 db steps with direct dial readout of attenuation value. Provisions for an external marker and fixed plug-in markers are also included.
Available in 7 models covering various frequency ranges up to 1250 mc, the PD units are ideal for high power applications. Since their output level is 100 times greater than that of other sweep generators, the usefulness of sweep techniques is greatly expanded. In fact, the response of a device having as much as 60 or 70 db loss can be easily displayed on a high-gain oscilloscope with a PD unit.
Specifications on all PD models may be obtained from Technical Bulletin T-2178.
Design Sophistication

The TACT System, a product of Texas Instruments creative engineering, is a dramatically new concept in component test equipment design. The Transistor And Component Tester emphasizes digital control of analog functions, reducing analog circuitry to a minimum, and features absolute repeatability—never before achieved in component testing. TACT represents just one of many areas of developmental endeavor in growth-oriented Texas Instruments.

NEEDED NOW . . . senior level engineers experienced in the design and development of electronic test equipment. BS-MS degree in EE or Physics required plus five or more years’ experience in electronic component test systems, commercial test instruments or high speed switching and pulse circuitry.

NEW PRODUCTS

Synchros and Resolvers

Accurate to 5 min. Line of pancake synchros and resolvers, designed for direct mounting and installation in stable platforms and gyros, is offered with narrow stack heights and large internal diameters. They can be obtained as rotor and stator assemblies or with custom flanges and hubs designed for special requirements.

Giannini Controls Corp., Dept. ED, 1800 S. Mountain Ave., Duarte, Calif.

Limit Switch

Rotating-shaft limit switch type CR115E is offered in nine gear ratios ranging from 20:1 to 1,280:1 and can have up to four snap-acting switches to control separate functions or operate simultaneously. A typical application is stopping and starting overhead doors or hoists.

General Electric Co., Dept. ED, Schenectady 5, N. Y.

Wire Stripper

Precision thermo-electric wire stripper model TS 400 can be used as a hand stripper for chassis, harness or cable work or as a bench model for production use. It accommodates AWG sizes 6 to 36 and can be used for Teflon, vinyl, nylon, FEP Teflon, PVC, Kel-F and polyethylene.

Price: $56.50.

Magnetic-Material Analyzer

Determines bias and sensitivity without the use of a recorder, also measures coercivity and retentivity of oxide coating on tape. The magnetic-material analyzer model 910 consists of the 910A magnetizer and the 910B fluxmeter which has a range of up to 100 maxwells.

Acoustronics, Inc., Dept. ED, 156 Olive St., Huntington Station, N. Y.
P&A: $3,250; 60 to 90 days.

PERFORMANCE CHARACTERISTICS OF TUCOR BACKWARD WAVE OSCILLATORS

The spectral purity and stability of Tucor backward wave oscillators are suggested by the curve below. It shows the spectral power distribution of the Tucor T15C1C.

This is a voltage tunable oscillator having a low resonance and noise output through a frequency range of 5.4 to 5.9 Kmc. Further information on this and other Tucor BWO's is contained in Bulletin B-1. Just ask for it.

PnP Germanium Transistors

In TO-36 package. These pnp germanium transistors have a beta range of 20 to 70 at 5 amp Ic and a BVceo range of 40 to 100 v. They have 150-w power dissipation, 0.5 C per w thermal resistance and 100 C junction temperature. Type designations are 2N173, 2N174, 2N277, 2N278, 2N441, 2N442, 2N443, 2N1099, 2N1100, 2N1358 and 2N1412.

Silicon Cartridge Rectifiers

Complete line of kilovolt silicon cartridge rectifiers is offered. Axial-lead, cylinder types consist of 14 LT models, LT1121 through LT1138; five JEDEC models, 1N1730 to 1N1734; and 12 JEDEC models, IN2384 to IN2385. Fuse-clip types LN1133 to LN1149 have ferrule terminals. Axial-lead rectangular types LT1221 to LT1228 and lateral-lead rectangular types LT1221 to LT1238 provide to 10 kv.

Linz-Temco-Vought, Inc., Dept. ED, P. O. Box S-1, Anaheim, Calif.
P& A: $8.80 to $81; stock.

Magnetic-Tape Units

Two types of tape units are designed for use with IBM solid-state computers. The 729 VI reads and writes at speeds to 90,000 characters per sec and can be used with computers from 7070 to 7090. The 729 V operates at 60,000 characters per sec and can be used with systems ranging from the 1401 to the 7090.

International Business Machines Corp., Data Processing Div., Dept. ED, 112 E. Post Road, White Plains, N. Y.
P& A: $950 and $750; 9 to 12 months.

Cathode-Ray Tube

Rugged construction of type WX 4545 cathode-ray tube withstands an acceleration level of 20 g from 55 to 500 cps and vibration of 0.120 in. at double amplitude from 5 to 55 cps. Diameter is 7 in., deflection angle is 70 deg and neck diameter is 7/8 in. Anode operating voltage is 8,000 v.

Westinghouse Electronic Tube Div., Dept. ED, P. O. Box 284, Elmira, N. Y.
NEW PRODUCTS

Trimmer Potentiometer

For military applications, the square trimmer potentiometer weighs 3/4 g and is rated at 1.2 w at 50 C, derating to zero at 105 C. Resistance range is 100 ohms to 20 K at -55 to 105 C. Temperature coefficient is 50 ppm per deg C. Resistance tolerance is ±10%.

Techno-Components Corp., Dept. ED, 18252 Parthenia St., Northridge, Calif.

Price: less than $3.

Rate Gyro

Hermetically sealed rate gyro type RG34-0103-1 provides output up to 50 v for use without additional amplification. Dual wipers on output pot provide low contact resistance through shock and vibration. Starting time is 2 sec; assembly withstands shock to 100 g.

Humphrey, Inc., Dept. ED, 2805 Canon St., San Diego 6, Calif.

Electromechanical Chopper

Less than 1/2 cu in. in volume, model 46 electromechanical chopper weighs 20.5 g. Noise is 0.65 µv rms at 400-cps, 100-ohm load. It withstands 100-g shock, temperatures from -65 to +100 C. Insulation withstands 145 v rms at 400 cps or 200 v dc. Continuous operation life is 2,000 hr.

Linear Accelerometer

Range is ±7.5 to ±250 g. Gas-damped model A514TC strain-gage accelerometer provides relatively constant damping from −65 to −250 °F without heater jacket. In a ±100-g range, frequency response is flat from static to 2,100 cps. Full-scale output is ±20 mv at 5 v.
Statham Instruments, Inc., Dept. ED. 12401 W. Olympic Blvd., Los Angeles 64, Calif.

Gram Electrobalance

Ultimate precision of this new unit is 0.1 µg. While weighing, the unit's precision is 10 parts per million of total load. Loops A and B give a total range of 0 to 1000 mg to this unit. The weighing chamber is 6 x 8 x 3.3/4 in. overall and can be removed for remote location.
Cahn Instrument Co., Dept. ED. 14511 Paramount Blvd., Paramount, Calif.

Ruby Rod

With sapphire overlay. For applications in laser optics, ruby rod has increased capture cross section and reduced cooling area. The overlay can be furnished in the form of a buildup of the sapphire on the ruby rod: it can also be furnished as a sapphire rod, drilled lengthwise with an optically polished inner diameter.
Valpey Crystal Corp., Dept. ED. 1244 Highland St., Holliston, Mass.

Differential Preamplifier

Floating and narrowband differential dc preamplifier 459 C/N extends digital voltmeter range to 1 µv dc and provides stable amplification in the presence of high common mode noise and hum. Isolated input can be floated up to ±300 v. Fixed gains cover −10 to −1000 in five steps.
Cohn Electronics, Inc., Kin Tel Div., Dept. ED, 5725 Kearny Villa Road, San Diego 12, Calif.
P&A: $1,475; 1 week.
NEW PRODUCTS

Power Transistor 680

Low-silhouette 3-amp power transistors are made for driver applications requiring low values of I_{1},
Group includes five units (2N2107-2N2141) with dc gain of 30 to 60,
and five (2N2142-2N2146) with gain ranging from 50 to 100,
at collector currents of 0.5
The I_{C} is 50 μA max at collector-base
voltage of 2 V, and 5 mA max at 30 to 90 V.
Motorola Semiconductor Products Inc., Dept.
ED, 5005 E. McDowell Road, Phoenix, Ariz.
Price: $1.20 to $1.25 ea, 100 up.

Air Damping System 691

Tolerances are 0.0002 in. or closer. Called
the Airpot, the air damping system can be
used in system stabilization, vibration damping
and time delay. Damping constant is adjustable
to 2 lb-in. per sec. Maximum tension
force is 4 lb in two-way and pull-damping
units.
Tech-Ohm Electronics, Inc., Dept. ED, 36-11
33rd St., Long Island City 6, N. Y.
Availability: stock.

Permanent-Magnet Material 678

With 1,400-oersteds coercive force. Designated
Alnico VIII, the permanent-magnet ma-
terial has an energy product of 4.2 million.
Temperature coefficient is low. It is suitable
for periodic focusing of traveling-wave tubes
and for applications where short magnetic
lengths are required.
Indiana General Corp., Indiana Steel Products
Div., Dept. ED, Valparaiso, Ind.

Shaft Encoder Translator 677

Dual-channel shaft-encoder translator model
X-118 converts the gray code outputs of two
13-bit photoelectric shaft encoders into binary-
coded decimal which is converted into visual
decimal displays of input azimuth and elevation
angles. Conversion cycle is 14 μsec.
Harvey-Wells Electronics, Inc., Dept. ED, 14
Huron Drive, Natick, Mass.
P&A: $6,000; 30 days.
Universal communications receiver has two plug-in converter strips for operation from 108 to 152 mc and from 225 to 400 mc. An amplified and delayed AVC circuit holds audio output constant to 3 db from 5 mv to 0.2 v. Output is 1 w into 600 or 8 ohms.

Erco Radio Laboratories, Inc., Dept. ED, 637 Stewart Ave., Garden City, N. Y.

Snap-Action Switch

For extreme environments, type 65 snap-action switch withstands corrosive atmospheres, excessive moisture, temperature extremes and meets immersion test requirements of MIL-E-5272. Rated at 10 amp at 30 v dc or 120 v ac, it measures 0.320 x 0.850 x 11/16 in.

Illinois Tool Works, Inc., Licon Div., Dept. ED, 6615 W. Irving Park Road, Chicago 34, III.

Heat-Sink Wafers

With tight tolerances, Gibotronic pressed-powdered metal or punched-metal sheet heat-sink wafers match the coefficient of expansion of silicon wafers. Pressed-powdered metal wafer compositions include silver-tungsten and moly-nickel; punched types include pure tungsten, molybdenum or nickel-iron.

Gibson Electric Sales Corp., Dept. ED, Delmont, Pa.

Metal-Film Resistors

Rated at 1/4 and 1/2 w, metal-film resistors are 0.300 and 0.475 in. long, respectively. Range is 25 ohms to 500 K. Temperature coefficient is 100 ppm per deg C, standard: ±50 or ±25 ppm can be supplied. Standard tolerance is ±1%; ±0.5%, ±2% and ±5% can be furnished.

American Components, Inc., Dept. ED, 8th Ave. and Henry St., Conshohocken, Pa.
P&A: $0.45 up; stock.
**NEW PRODUCTS**

**Battery-Powered Motor**

Speed variation is 2% or less. Model DBM2-XA 9-v battery-powered motor has a governor-regulator with a constant torque at 2,050 rpm. For applications requiring greater speeds, the governor unit can be removed to provide up to 5,000 rpm.

Jonard International Corp., Dept. ED, 624 Madison Ave., New York 22, N. Y.

**Teflon Wire**

Types K, KK, and KT wire are insulated with Teflon 100 FEP. The Teflon insulation offers exceptional heat resistance up to 200 C, good weatherability, toughness and strength. The wire meets Mil spec W-16878D.

Phalo Plastics Corp., Dept. ED, Shrewsbury, Mass.

**Synchro and Resolver Tester**

Performs seven tests automatically on 60 and 400-cps resolvers and synchros sizes 8 to 37. Suitable for military inspection procedures, model CO5 9114 synchro and resolver tester offers the following readout accuracies: error from electrical zero, ±0.3%; total null voltage, ±0.3%; transformation ratio, ±0.5%; phase shift, ±0.1%.

General Precision, Inc., Kearfott Div., Dept. ED, Little Falls, N. J.

**Spectrum Analyzer**

Broadband spectrum analyzer measures power and coverage of radio and transmitter jamming signals. Using high-powered jammer transmitters, a sample of the rf energy is reduced by 40 db, delivered to the analyzer, and further diminished within the analyzer. The resulting diode current, shown on the meter, is calibrated from 0 to 350 w.

General Mills, Inc., Electronics Group, Dept. ED, 1620 Central Ave., Minneapolis 13, Minn.
**THE EUBANKS AUTOMATIC WIRE STRIPPER**

Fast, accurate, easy to operate and a breeze to set up. For example, just change a dial setting to change your wire length. This is the machine that companies the country over* are using to reduce their wire preparation costs.

- Speeds up to 8,000 pieces per hour
- Single conductor wire, solid or stranded (and some types of shielded and coax)
- Lengths from 1 inch to 50 feet (or longer)
- Wire sizes from 10 to 32 AWG
- Stripping of Teflon®, nylon, fiber glass, vinyl, etc. without damaging the conductor

*We’ll send you a list of users and an illustrated brochure if you’ll drop us a line.

Eubanks ENGINEERING COMPANY
260 North Allen Avenue, Pasadena, California

[Circle 194 on Reader-Service Card]

**Got a glass problem?**

**T.H. GARNER COMPANY IS DIFFERENT**

We machine-draw tubing to your new dimensions and ship in a matter of hours.

If your problem can be resolved by new dimensions (O.D., I.D., length) or tolerances, call us today for service.

Our own glass tube drawing facilities running 24 hours a day give us the flexibility to handle a variety of changes quickly.

Your job is immediately assigned to one of several drawing and cutting systems guaranteed to produce the best quality and yields.

Garnier capacity for millions of parts weekly is built on routine manufacturing to many dimensions in many glass types. Our quality is based on in-plant designed equipment. We can give you tolerance control 366 days a year.

Reliability? Our rejection rate on over a billion parts shipped is less than 1% by actual count.

Send for Complete Data.

**T.H. GARNER COMPANY**
177 S. Indian Hill Blvd., Claremont, Calif. National 6-3526

Serving the electronic and instrumentation field since 1963

[Circle 197 on Reader-Service Card]
Sperry extends 30-day delivery to cover ECM and augmenter TWT's operating in L, S, and X bands

In a dramatic extension of its capability for delivering high-performance microwave tubes on short notice, Sperry Electronic Tube Division has added three system-proved traveling wave tubes to the list of those available in 30 days. Included in the move are tubes operating in L, S, and X bands. They cover a frequency range 1.1 to 11.0 KMc.

APPLICATION FLEXIBILITY

The tubes in this series are particularly suited to application in augmenters and ECM equipment. The inherent broadband characteristic and unusual ruggedness of these PPM focused tubes makes them unusually versatile in airborne applications. A full course of MIL and environment tests, as well as considerable in-system experience have verified these characteristics.

INCREASED POWER POSSIBLE

Although these tubes nominally operate in the 1-2 watt power output range, optimum tuning can increase power to as much as 5 watts. A high mu control grid adds to the versatility of these tubes by allowing remote switching, modulation control and gain adjustment.

SYSTEM DESIGN SIMPLIFIED

Use of these Sperry tubes greatly simplifies system design problems. Low voltage and high gain reduce power supply requirements. Application is further simplified, since ambient cooling is sufficient in most applications and the tubes may be mounted in any position.

For FREE technical information on these Sperry Traveling Wave Tubes, write to Section 562, Sperry Electronic Tube Division, Gainesville, Florida.

The L-Band tube is priced at $1,900., the S-Band tube at $2,195., and the X-Band at $2,540.

For application assistance and quotation, consult your nearest Cain & Co. representative. His address and phone number appear in the adjacent column.
Varian Associates' new VA-126 pulse power amplifier traveling wave tube is particularly well-suited for advanced coherent radar systems employing frequency agility. With high gain and high efficiency over the full bandwidth, the tube offers a new standard in transmitter performance.

The VA-126 produces 3 MW peak and 5 KW average power, from 5.4 to 5.9 kMc. Gain, 35db; efficiency, 30%. Self-centering in electromagnet. Liquid cooled.

The VA-126 has 500 Mc bandwidth and excellent phase stability. These are desirable characteristics for pulse-to-pulse frequency changes, phase coding, chirping (frequency changes within the pulse), and electronically-steerable antenna arrays.

Varian's unrivaled capability in the development of advanced microwave tubes is at your service. For further data on the VA-126, write Tube Div.

Serendipity

A late-to-arrive item concerning plasma amplifiers (see article on facing page) perhaps illustrates why some people are habitually "shot with luck." It seems that a traveling-wave tube being tested at Sperry Gyroscope Co. was behaving strangely—spurious outputs and all that. Instead of trading in the tube for a good one, company engineers looked into the problem and discovered that the oscillations were coming from a small quantity of air trapped in the tube that had somehow been converted into a plasma. One thing led to another and the company is now attempting development of plasma amplifiers and oscillators along these lines. As usual, people who are good turn out to be lucky more often than not.

Designers may soon be specifying plasma amplifiers in their equipment. These essentially circuitless devices appear quite promising in broadband receiver applications. For more details read Progress Reported in Plasma Amplifiers......p163

Better performance and reliability are possible with socketless metal-ceramic planar tubes. The correct use of these tubes is discussed in Application Techniques for Socketless Vacuum Tubes..........p164

A reaction type reference cavity, a voltage tunable magnetron, a new line of coaxial front ends and a series of waveguide thermometer mounts head the Microwave Products...........p170

Progress Reported in Plasma Amplifiers

LASMA microwave amplifiers are approaching the hardware stage under intensive R&D efforts at three laboratories.

A cesium-beam amplifier at Stanford University has shown gains of 15 dB at 1.5 Gc. An argon plasma amplifier developed by Metcom, Inc., Salem, Mass., is reported to have achieved gains of up to 22.5 dB at discrete frequencies between 1.2 and 3.4 Gc. Work similar to that at Metcom is in progress at Microwave Associates, Burlington, Mass., but performance details have not been disclosed by the company.

The Stanford amplifier, being developed by Matthew Allen and George Kino of the university's W. W. Hansen Laboratories, is an extension of earlier experiments by other researchers with mercury vapor. Soviet researchers have followed a similar approach in obtaining some amplification at 35 Gc in ionization gage discharges.

The Stanford amplifier employs cesium vapor at a pressure of about $10^{-3}$ mm of mercury. A plasma is generated by discharge between tungsten electrodes and confined by a magnetic field surrounding the plasma tube. A signal-carrying electron beam is coupled into and out of the plasma by helical windings immersed in the medium. The signal itself, however, is impressed on the beam before it enters the plasma.

The most efficient operation of the device is in the vicinity of its plasma frequency, which varies according to the density of the plasma generated. This imposes a practical frequency limitation of about 30 Gc on a device of this type. Up to this frequency, however, gains of between 30 and 40 db should be possible, according to Dr. Allen.

Tuning would be achieved by controlling the plasma density. An alternate method, promising greater bandwidth, would be to establish regions of varying plasma density within a tube, so that maximum amplification of a given frequency would occur in a region of suitable density.

Work also is in progress to improve the coupling methods. The most desirable approach would be one that coupled the signal directly into the plasma. This concept could be extended so that the plasma itself would radiate, thus acting simultaneously as an amplifier and transmitting antenna.

Metcom's plasma amplifier operates on an entirely different principle. It employs argon at extremely low (micron-level) pressure. The plasma formed in this gas also is surrounded by a magnetic field, but here the amplifier is tuned by varying the strength of the field rather than by varying the plasma density.

Low-kilogauss-level fields are employed, with the frequency increasing as the field strength. A single device readily tuneable over a range of perhaps seven octaves thus could be built, according to Lou Roberts, chief engineer at Metcom.

The company has built amplifiers both in circular and rectangular waveguide sections. The amplifier itself is about 12 in. long, but the active plasma region comprises only about 1 in. of this length. An increase in the active region, thereby improving gains, is being attempted.

Company spokesmen believe that the plasma amplifier is a natural for countermeasures receivers and broadband communications equipment. "Noise is quite low, and only comparatively low voltages are required to operate the amplifier," Richard J. Broderick, Metcom's president, told ELECTRONIC DESIGN.

Mr. Broderick added that a typical amplifier could sell for perhaps $3,000 to $5,000 in sample quantities. ■ ■
Application Techniques for Socketless Vacuum Tubes

Planar metal-ceramic microwave tubes designed for socketless installation can yield improved bandwidth by reduction of circuit shunt capacitances and socket losses. Greater reliability and more flexible packaging also may be obtained. To realize these advantages, however, the designer must appreciate the installation techniques and precautions necessary with these tubes. Soldered connections, in particular, require considerable care. James Rush, active in the application engineering of such tubes, describes proved installation and application techniques.

FIG. 1. Typical socketless planar triodes. The type 7296 tube at left comes with T-bolt for mounting to circuit board or metal chassis. The type 22866 tube at right is designed for direct soldering into coaxial cavities.

FIG. 2. Theoretical gain-bandwidth improvement of socketless tube over socketed tube in a neutralized interstage amplifier employing a 7462 tube. Performance of actual circuits confirms predictions of the graph.

James W. Rush, Jr.
Receiving Tube Dept.
General Electric Co.
Owensboro, Ky.

RECENTLY introduced metal-ceramic planar tubes, resistant to soldering temperatures and mountable by the tube elements themselves, offer designers a number of electrical and mechanical advantages resulting from elimination of tube sockets in their usual form.

Such tubes are available with solder lugs and T-bolt mounting for use on printed-circuit or metal chassis and with concentric flanges for direct soldering into coaxial circuits (see Fig. 1).

By eliminating tube sockets and connectors in their usual form, improved electrical performance is obtained.

For reasons of economy or moldability, the insulator of a tube socket is usually a high-loss-factor material. With the elimination of the socket-insulator losses, higher circuit Q's can be realized, thus leading to better performance through higher circuit efficiency.

Lower Shunt Capacitance Improves Gain-Bandwidth

In many modern circuits maximum gain-bandwidth must be obtained to process the high definition and complex signal pulse.
The expression for gain-bandwidth product is:

\[ G - BW = \frac{g_m}{2\pi C_t} \]

where \( g_m \) = tube transconductance and \( C_t \) = total shunt interstage capacitance.

For wide-band amplification, maximum available transconductance and minimum tube and circuit capacitances therefore are essential. The available tube transconductances are high—up to 50,000 micromhos—and are obtained with relatively small tube capacitances. To fully utilize the high gain-bandwidth product of the tube, the applied circuitry must have low shunt capacitance. Direct soldering of connections to the tube or soldering to clamps or clips supported by the tube assures maximum tube-circuit gain-bandwidth product.

The improvement in gain-bandwidth product theoretically possible with socketless tubes is described in Fig. 2. Performance

The first reliability report is on the complete new antenna test facility at Douglas Aircraft Company's plant in El Segundo, California. All operational equipment was furnished by Scientific-Atlanta, Inc. During the first eight months of operation, the facility was operated 10 hours a day, six days a week for the developmental testing of antennas and radomes.

At Douglas, as well as at test facilities around the country, Scientific-Atlanta instrumentation has been proven to operate dependably. Whenever service or technical assistance is needed, Scientific-Atlanta engineers are there in a hurry.

**Wide Frequency Coverage**

One installation at El Segundo consists of a 20' model range tower and a 5' heavy duty positioner atop a specially constructed 48' supporting tower. A centralized control console containing a wide range receiver, remote tuned signal sources, positioner control and indicator units, rectangular recorders, polar recorders, and a pattern integrator. With the remote tuned signal sources, the operator changes frequency at the console—it's not necessary to climb the tower.

**Many Measurements Possible**

The Douglas installation again demonstrates the versatility of Scientific-Atlanta instrumentation. Complete frequency coverage from 100 mc to 16 kmc is provided with recordings proportional to voltage, power, or db in either rectangular or polar coordinates. Other laboratory measurements performed using Scientific-Atlanta equipment include calibration of microwave attenuators, isolation between operational antennas, and insertion loss or gain.

**More Data Available**—For more details on the Douglas facility, and how Scientific-Atlanta can design, construct, and install an antenna test facility that suits your needs, write to:

**Scientific Atlanta, Inc.**
2162 Piedmont Road, N.E.
Atlanta 9, Georgia
Phone: 875-7291
of actual circuits confirms the predictions of this graph.

Socket lead inductances also can prove troublesome. For years the degenerative effect of cathode lead inductance has limited the high-frequency capabilities for conventional vacuum tubes as much as have transit time effects. The very low value of lead inductances often was wasted by high socket lead inductances, while tube instability often was due to poor grid grounding.

Socketless circuit techniques can contribute significantly to better system reliability. Troubles due to contact wear, failure or corrosion are reduced and there are no socket insulators to crack or deteriorate.

Very low contact resistances can be obtained with direct soldering techniques. Better tube reliability is possible if known and consistent heat sinks are established for the tube.

Tubes have failed as a result of additional acceleration forces resulting from poor socket design. Physical clamping of the tube directly to the chassis assures that the tube sees no more shock and vibration than does the chassis itself. Increased performance gained by socketless circuitry can mean fewer stages for the same system gain.

In some cases socketed tubes, being easy to remove, are replaced selectively to compensate for the performance loss due to a faulty component. This repair procedure usually leads to a more catastrophic failure later on.

Screwed-on or soldered connections to the tube are inspected more easily and do not depend upon an assumed contact pressure.

**Socketless Tubes Cut**

**System Size and Weight**

Since many microwave triodes are miniaturized to achieve low capacitance and transit time, the sockets may be larger than the tubes themselves. System size and weight thus can be reduced by socketless techniques. Often, the socketless tube can double as a terminal strip for the connection and support of other circuit components, such as resistors and capacitors.

Socketless techniques can reduce the cost and design time associated with a socket.

Some of the ceramic triodes are fitted with mounting hardware requiring only a hole in a chassis or printboard. All connections can be made on one side of the board or chassis, thus permitting the use of dip-soldering techniques.

Socketless circuitry of good reliability usually requires soldering either to a tube clamp or tube element. Although the use of high-temperature seals and ceramic insulators greatly reduces the chance of seal damage, the tubes are not indestructable.

Ceramic tubes are tolerant to soldering temperatures as evidenced by successful life tests at temperatures of up to 450 C. However, due to the small sizes of the tubes, very large thermal gradients across the tube seals can provoke tube failure.

To reduce the possibility of tube damage the following precautions should be taken:

- Use a solder with as low a melting point as possible for the intended tube circuit ambient operating temperature.
- Use small-wattage soldering irons to reduce thermal inertia of the soldering heat.
- Preheat the tube whenever possible to reduce further thermal inrush when heat is applied. Ovens, hot plates, IR lamps, etc. can be used to preheat the tube before soldering. If these are not available, thermal shock can be reduced by operating the tube filaments for several minutes before soldering.

These precautions are most important on the smaller coaxial types; the thermal mass of these designs is small and very little thermal resistance is present between the solder surface and the tube seals. The uses of solder forms is highly recommended.

Lug versions can be used with no more than the usual precautions and can be treated as any other soldered-in circuit component. The suggested soldering procedures are conducing to cold-soldered joints, and care must be taken in this respect.

**Titanium In Structure**

**Compatible With Ceramic**

The basic structure of the solderable tubes is of titanium metal and ceramic. The titanium is essential for several reasons—pri-
marily, because its thermal expansion is nearly identical to that of good rf ceramic materials.

However, titanium is very difficult to plate. To provide solderable surfaces the titanium is first nickel-plated, after which a thin gold layer is applied. This gold layer is consumed by amalgamation into the solder, and the nickel undercoat is the surface to which the soldered connection actually is made.

After many solderings, nickel plating can be consumed. The titanium base metal is then exposed and one is confronted with the difficult task of soldering to titanium.

The thickness of the nickel plating must be carefully controlled between two limits. If the plating is too thin, only a limited number of solderings can be made readily; if the plating is too thick, peeling results. However, up to 20 solderings can reasonably be expected without damage. In development work where tubes are removed or resoldered many times, difficulty may be expected in soldering operations, and the use of clamps is preferable.

When it becomes necessary to remove the soldered-in tube the usual techniques apply. The tube can be treated as any other

---

**New! NARDA ferrite isolators designed and manufactured by NARDA MICROWAVE!**

- **broadband coaxial ferrite isolators**
  Excellent electrical characteristics with extreme versatility! 7/8" coaxial line construction allows higher power operation with 7/8" connectors, up to 20 kw peak, 400 watts average. (Normally supplied with Type N, 7/8" connectors; 10 kw peak, 10 watts average.) Features 15 db isolation and 1 db max. insertion loss. VSWR is 1.25 max. based on 2:1 load mismatch; 1.15 max. into matched load. Model 1233: 2.0-4.0 kmc; model 1233-1: 3.0-5.5 kmc; $450. each.

- **low power broadband waveguide ferrite isolators**
  Provide maximum load isolation and minimum insertion loss over full standard waveguide frequency ranges. Extremely useful for maintaining signal source stability and eliminating long line and frequency pulling effects. Front-to-back ratios are the highest available on the market today: C Band—26:1, $250; XN Band—25:1, $225; XB Band—30:1, $235; X Band—30:1, $240.

- **high power broadband waveguide ferrite isolators**
  The only line of high power isolators that covers all of X Band with just two models (8.2-10.0 kmc and 10.0-12.4 kmc), each with front/back ratio of 40:1. Input power rating: 250 kw peak, 300 watts average, achieved through use of special high Curie temperature ferrite materials. VSWR is 1.05 max. with matched load; 1.10 max. with 3:1 mismatch. Only $175 each. Model with same VSWR, 28:1 front/back ratio, 300 kw peak, and 300 watts average, for 7.05-10.0 kmc, $195.

- **other ferrite devices—consult NARDA for:**
  - Circulators
  - Phase shifters
  - Modulators
  - Attenuators
  - Special Isolators

Circle 203 on Reader-Service Card
X-band circulators take 20 kW CW to match state of the art in tubes

New unit tested at 20 kW continuous power; can be used as isolator or duplexer

This high-power CXH3 circulator provides greater than 20 db of isolation over the 7.05 to 8.5 kMc band with a maximum insertion loss of less than 0.3 db. The CXH3—developed under U.S. Army Signal Corps contract number DA-36-039-SC-85372—is typical of circulators Raytheon can supply for any X-band segment at power levels up to 25 kilowatts average and 2 megawatts peak.

Write for technical details on this and other significant developments in high-power microwave ferrite devices to Special Microwave Devices Operation, Raytheon Company, Waltham Industrial Park, Waltham 54, Massachusetts.
connections since contact resistance at these points may seriously lower the tube heater voltage.

A 10-frequency crystal-controlled STALO employing socketless tubes is shown in Fig. 3. The Light Military Electronics Dept. of General Electric Co. chose these tubes to reduce size and weight, to obtain mechanical and electrical stability, and to fulfill the need for maximum gain-bandwidths for the broad-banded multipliers and amplifiers.

Small, T-bolt ceramic triodes are used in each of the 10 crystal channels and frequency selection is made by applying B+ to the desired channel. At the center of the 10 oscillators a "clamp-on" cathode connector is used as a common input to a grounded grid stage. Connections are made around the circumference of the cathode clamp.

The grid of this tube and the remaining larger coaxial triodes—eight in all—use flat sandwich or surface clamps.

The same cathode clamp is used for all the coaxial outline tubes. The wide bandwidths were essential to provide multiplication and amplification over about a 10 per cent operating bandwidth at near 500-mc center frequency.

High-gain stages were needed to reduce their total number for added reliability. Multiplication at wide bandwidths is traditionally difficult and high transconductance triodes as well as socketless circuitry were required for acceptable performance. The unit also satisfied the military specifications for acceleration, vibration and shock.

Additional examples of socketless tube technique are shown in Figs. 4 through 7. These circuits were built to illustrate the application possibilities of the socketless tubes. Although their operation was found satisfactory, these particular assemblies are not in actual production. 

The socketless tubes discussed in this article include EIA type numbers 7077, 7266, 7486, 7481, 7462, 7720, 7625, 7588, 7296, 8081, 8062 and 8083, and GE Development types: Z-2823, Z-2835, Z-2869, Z-2866, Z-2897, Z-2868, Z-2854, Z-2876, Z-2731 and Z-2895.

Developments in microwave amplifier design have been based on crystal-controlled tubes and a variety of solid-state devices. A transistorized, portable, precision standing wave amplifier was announced recently, capable of measuring both very low standing wave ratios and high frequency at the same time.

The FXR amplifier is transistorized, portable, line or battery powered, precision standing wave amplifier. Price: $285. Components include a rechargeable battery.

This ±0.05 db accuracy, the most precise in the industry, holds true for both the full scale meter movement and for each 5 db step on the range switch. The specially designed meter and linear amplifier give a full scale maximum error of ±0.05 db. This marks a significant increase in accuracy over any existing Standing Wave Amplifier. Calibrated range of the FXR is 75 db.

While extreme measurement accuracy was the major design criterion for this transistorized, portable instrument, many other design features are worthy of note: special circuitry and controls for normal, expanded and compressed scale readings (gain normalized on switching)... bolometer resistance checking, protection and current adjustment... selective meter damping... bandwidth selection and frequency peaking... range selection in 5 db steps... battery voltage checking and self-contained battery charging.

Write or call for Bulletin 8813T for details on the most accurate Standing Wave Amplifier available for microwave measurements.

The FXR transistorized precision standing wave amplifier has exceptional accuracy of ±0.05 db.
NOW . . . X BAND
NONDEGENERATE
PARAMETRIC AMPLIFIERS
with a tuning range of 1.1 Gc!

Single-knob tuning over a range of 1.1 Gc in the X band is featured in this nondegenerate parametric amplifier by Texas Instruments Incorporated. Bandwidth is 30 mc and gain is 15 db. Noise figure, including circulator loss and normal second stage, is 4.5 db. Its broadband signal frequency response and fixed pump frequency give you dependable operation with a minimum of tuning adjustment.

**MICROWAVE PRODUCTS**

**Voltage-Tunable Magnetron 667**

Bowl magnet design voltage-tunable magnetron, type ZM-6021, covers the L band in a rated range of 1 Gc to 2.3 Gc at a minimum cw power of 1 w. It operates at a maximum anode voltage of 2,000 v. The unit weighs 3 lb and is a complete rf power course requiring only input power connections and an rf power output connection. It is voltage tunable over all or a portion of its frequency range at a rate of 1.2 mc per v. The unit is designed for use with all types of receivers that use an electronically-swept local oscillator, test equipment and output tubes that cover the L band.

General Electric Co., Power Tube Dept., Dept. ED, Schenectady 5, N. Y.
P&A: $1,350; 60 days.

**Thermistor Mounts 601**

Designed for the measurement of average power from a few µw to 10 mw, model 401 series of coaxial and waveguide thermistor mounts cover the frequency range from 0.01 to 18.0 Gc. They operate in conjunction with rf power instruments capable of operating with a 100- or 200-ohm negative temperature-coefficient detector. The temperature-resistance characteristics of the thermistors used make burn-out virtually impossible. The relatively long time-constant of the series makes these devices suited for the measurement of both cw and pulsed power.

General Microwave Corp., Dept. ED, 47 Gazza Blvd., Farmingdale, N. Y.
P&A: from $75 to $110; stock to 30 days.
Coaxial Front Ends

Designed for operation from 250 mc to 7 Ge, series RF coaxial front ends use a balanced mixer and a 30-mc IF peramplifier to permit octave bandwidth coverage with a minimum of local oscillator power and a maximum of local oscillator isolation. The use of ceramic tubes as IF amplifiers permit the units to be used in severe environmental conditions. Noise figure of 7.5 dB max with an overall bandwidth of 8 mc and a power gain of 20 db eliminate the necessity of special circuitry in the IF amplifier.

R L C Electronics, Inc., Dept. ED, 805 Mamaroneck Ave., Mamaroneck, N. Y.
P&A: $650 ea: 2 to 4 weeks.

Reference Cavity

An accuracy of ±0.003% is provided in a new reaction type reference cavity designed for use in microwave relay links. The cavity is adjustable within a frequency range of 10.7 to 11.7 Ge and exhibits a maximum resonant frequency shift of 1.0 mc over a temperature range of 0 to 140 F. The cavity is equipped with a flange which mates electrically and mechanically with other types of WR 90 waveguide components. Dimensions are 2-1/2 x 1-1/2 x 1-1/4 in.; weight is approximately 6 oz.

Frequency Standards, Dept. ED, P. O. Box 504, Asbury Park, N. J.
P&A: $100 to $150 ea: 45 to 60 days.

MA-4121 silicon point-contact diodes will work in 200 Mc computers

MA-4121 computer diodes have the desired combination of parameters for use in the very fastest switching circuits.

Fractional nanosecond switching—typically 0.5 nsec.

High forward conductance _ 30 mA at 1.0 V (max.)
10 mA at 0.55 V (max.)

Low junction capacitance _ 0.5 pf (max.) at zero volts bias.

They are hermetically sealed in an all-glass package with no soldered end seals, insuring no loss of hermeticity during circuit assembly.

Two years ago Microwave Associates introduced the first 4 nanosecond switching diodes on a commercial basis (1N903 series). They were rapidly adopted as industry standards.

Today the MA-4121 enables you to design computer circuits with almost an order of magnitude increase in speed. This diode is ideal for coincidence circuits, pulse circuits, ultra-high-speed switching, and all types of logic functions.

There is no substitute for capability. There is no substitute for quality. Microwave Associates computer diode technology has proven itself on both counts. We'd like to put our experience to work for you.

*Actual recovery time is so fast that the observed time in a sampling or traveling wave oscilloscope is primarily determined by the wiring configuration.

Isolator 587

C-band. Available with rectangular (CMR-137) or circular (UG344/U) flanges. Three models offer frequency ranges of 5.925 to 6.425 Gc, 6.575 to 7.125 Gc, and 7.125 to 8.400 Gc. Isolation is greater than 40 db; insertion loss is 0.8 db max; vswr is 1.2 max; temperature range -40 to +70 C. Power handling capability is 10 w average.

Kearfott Div. of General Precision, Dept. ED, 14844 Oxnard St., Van Nuys, Calif.

Microwave Coaxial Connector 372

Handling 1 kw cw from 0.03 to 5 Gc, the type ALIT connectors are assembled to type RG-209/U cable. The connector remains sealed even while unmated, and the center contact can withstand a 150-lb pull. Temperatures from -55 to +95 C, 70,000-ft altitudes, salt spray, humidity, sand and dust are withstood. Straight plugs have vswr of 1.2 max; right-angle plugs, 1.25 max.

Cannon Electric Co., Dept. ED, 3208 Humboldt St., Los Angeles 31, Calif.

X-Band Maser 440

Portable X-Band maser weighs about 50 lb. Amplifier involves a permanent magnet enclosed by a Dewar, and operates for 24 hr on one filling of liquid helium. At a gain of 20 db, bandwidth is 10 mc. Unit is gain stable, and the amplifier can be tuned over a 150-mc bandwidth. Noise temperature is under 50 K.

Microwave Technology, Inc., Dept. ED, 235 High St., Waltham 54, Mass.

CIRCULAR WAVEGUIDE ROTATING PROBE SECTIONS

These circular waveguide rotating probes sections provide a continuous 360-degree probe rotation for measuring electrical field mode orientation in circular waveguide. A universal probe mounting is provided with thumb screw lockings at three different longitudinal positions. A vernier protractor type scale is provided to read rotations to a minimum accuracy of ½ degree.

CIRCULAR WAVEGUIDE SLOTTED LINE SECTIONS

Designed for use with the Hewlett Packard 8060B Universal Probe Carriage. Special design techniques are utilized to maintain rotation of the electric field orientation to a minimum in order to ensure true readings. The slot length is a minimum of 8 inches.

CIRCULAR WAVEGUIDE MOVING LOADS

These moving loads consist of a section of circular waveguide in which is mounted a sliding, tapered, low reflection load. A plunger controls the position of the load which is variable at least one wavelength at the lowest waveguide frequency. This permits changing the phase of the residual reflection so that this reflection can be separated from the reflection in the waveguide system.

COAXIAL CRYSTAL DIODE MIXERS

Particularly suitable for applications where maximum performance is desired over a reasonable bandwidth. Double or single ended mixers with fixed or variable L.O. coupling are available in any transmission line. Normal or high intermediate frequencies also are available.

COAX TO WAVEGUIDE TRANSITIONS

Intended for applications requiring an absolute minimum in performance. Frequency range from 1000 to 12,400 mc. APPLIED MICROWAVE is prepared to supply transitions which have a VSWR of less than 1.05 to 1 at any specified frequency and a VSWR of less than 1.10 to 1 over any 10 per cent bandwidth.
WAVEGUIDE SLOTTED LINES

These waveguide slotted lines are precision-fabricated and machined sections which contain a tunable detector probe as an integral part. All units have a residual VSWR of 1.01 to 1 and slope of 0.1 db or less.

DIRECTIONAL COUPLERS

Directional couplers are available in the standard waveguide sizes, with coupling values from 30 to 70 db. Deviation is held to ±3 db over the entire frequency band and directivity is 20 db or better. A load matched for optimum directivity is provided on one of the two secondary outputs. More than one element can be supplied on each coupler.

STRAIGHT WAVEGUIDE SECTIONS

Straight waveguide sections are available in all E.I.A. standard sizes from WR-650 through WR-2300. Because of revolutionary fabrication techniques, the VSWR is 1.02 to 1 or less over the entire waveguide frequency band. Standard length is twelve feet, with other lengths on request.

ANTENNA CAPABILITIES

Parabolic Wolfsenweber Antenna. Diameter of outer periphery is 97'. Base diameter 56'. Height 50'. Consists of six levels of 44 modular panels each level. Ultimate use of these antennas is classified.

Parabolic Torus Antenna. Base diameter 71'. Height 60'. Six levels of 24 modular panels each level. After installation, the overall parabolic contour deviation is ±0.083 inch.

Wideband Amplifiers

Low-noise amplifiers WJ-111 and WJ-112 are designed for unattended field operation. They cover 2 to 4 Gc and 1 to 2 Gc ranges respectively, with guaranteed maximum noise figures of 5.5 and 5.0 db respectively. Amplifiers with lower noise figures over restricted parts of the band can be supplied.

S-Band Parametric Amplifier

Broadband and narrowband amplification, and up-conversion to X-band is performed by the model SPA01 parametric amplifier. Unit, designed for S-band operation, uses a silicon diode as the variable capacitor. Gain is 15 to 20 db and noise figure is 1.5 to 4 db, depending upon application. Broadband bandwidth is 50 to 70 mc; narrowband, 10 to 20 mc.

Transmitters and Receivers

From 6- to 8- and 11- to 15-Gc communication is provided by a series of transmitters and receivers. Transmitter power outputs of 0.1 to 1 w are available in the lower range, and 50 to 500 mw in the upper range. The receivers have a base-band frequency response of ±0.5 db from 50 cps to 8 mc. The systems are made for wide-band data transmission, high-density communications, and video relaying.

Microwave Systems, Alpha Corp., Dept. ED, P. O. Box 1891, Dallas 21, Tex.
Electrostatically focused BWO provides smaller, lighter X-band signal source

New Raytheon tube combines advantages of backward wave oscillators in a rugged compact package ideal for airborne and missile use.

The QKB 830 is especially suitable for local oscillator service in airborne, shipboard, or ground-based equipment such as anti-jam radar receivers. A wide-range tube, it can be tuned from 8.5 to 9.6 kHz by varying a single electrode voltage.

The small size and low voltages of the QKB 830 permit its use as a direct replacement for mechanically tuned klystrons in existing systems. It is also adaptable to many other applications requiring a voltage tunable source having provision for low-voltage pulsed or amplitude modulation.

Write today for technical data or application service to Microwave and Power Tube Division, Raytheon Company, Waltham 54, Massachusetts. In Canada: Waterloo, Ontario.

X-Band Turnstile Switch 452

Two crossed rectangular waveguides with a 45-deg Faraday rotator comprise the model XS04 X-band turnstile switch. The Faraday rotator is in a shorted circular waveguide section. It couples any two adjacent ports and isolates the other ports. The device is a narrow-band unit, said to provide high isolation. Temperature range is -45 to +85 °C.

Motorola, Inc., Solid State Electronics Dept., Dept. ED, P. O. Box 5409, Phoenix, Ariz.

Power Meter 441

Accuracy is ±0.5%. Model 450 power meter has five scales with ranges of 100 μW to 10 mW, calibrated from -30 to +10 dBm. It is designed for use with model 402 waveguide and coaxial thermistor mounts, but can be used with any 100- or 200-ohm, positive or negative temperature-efficient barretter requiring 15-ma bias current.

General Microwave Corp., Dept. ED, 47 Gazza Blvd., Farmingdale, N. Y.

Price: $495.

Traveling-Wave Tube 660

Low-noise traveling-wave tube, type Z-3031, has a saturated power output of 5 mW. Device has a noise figure of less than 14 dB across its 14 to 18 Gc frequency range.
PHILCO ANNOUNCES INDUSTRY'S

FIRST

GERMANIUM

VARACTORS

New Philco varactor types L-4110, L-4111, and L-4112—industry's first germanium varactors—herald new capabilities for harmonic generators, parametric amplifiers, RF tuning devices, and a wide variety of all-solid state power sources.

Philco Germanium Microetch process, heart of the new varactor capability, combines with the low contact potential inherent in germanium to produce large capacitance variation. And large capacitance variation means more efficient frequency conversion—the capability that makes the varactor ideal for harmonic generators.

Originally designed for Philco's own all-solid state power sources, these varactors now are commercially available for your own designs.

Radar echoes are compressed in time by this network, enabling overlapping pulses to be distinguished. Compression ratios from 10 to over 100 are available, with center frequencies as low as 1 mc, and with various bandwidths. Network impedances are from 50 to 1,000 ohms, depending on center frequency.

Ortho Filter Corp., Dept. ED, 7 Paterson St., Paterson 1, N. J.

Dual-Polarized Antennas

Parabolic antennas have 6-, 8-, and 10-ft diameters. Frequencies from 1.7 to 1.99 Gc are covered. Antennas are dual polarized, with cross-talk of 40 db min. Wind of 100 mph and 2-in. radial ice loads are withstood.

Prodelin, Inc., Dept. ED, 307 Bergen Ave., Kearny, N. J.

Availability: Immediate.

Hybrid

Standard sidewall short slot hybrid, model WR-15, covers frequencies from 68 to 72 Gc. Device is 0.5 in. long, has a 0.04 in. common wall, and is cast in beryllium-copper. Unbalance is 0.25 db max, and isolation is 30 db min.

Microwave Development Laboratories, Inc., Dept. ED, Natick, Mass.

Availability: Stock to 30 days.

MICROLINE POWER METERS, measuring both average and peak pulsed power. The 31A1 Average Power Meter, with 3% accuracy, provides greatest precision and bias stability available.

The 31A2 measures peak pulse power directly without computation using Sperry's patented barretter integration-differentiation technique.

Offers improved accuracy over computation from pulse characteristics and average power.

Using the 31A1 and 31A2 with Microline barretters, thermistors and mounts, Microline accuracy is assured!
### Steerable Antenna

Portable 28-ft diameter parabolic antenna is steerable both in azimuth and elevation. The 20-ft mounting tower forms a mobile trailer unit. Designed for field use, the antenna can be put into operation at a remote site by two or three men in a few hours. It operates from 100 to 4,000 mc, withstands winds to 45 mph in operation and 100 mph stand-by, and requires 115-v, 60-cps, 1-kw power.

### Multihole Couplers

Frequencies from 2.6 to 40 Gc are covered by the 45-1 series of precision multihole couplers. Couplers are available in 3, 10, and 20 db ratings. Units have flat coupling and high directivity.

Sperry Microwave Electronics Co., Dept. ED, Clearwater, Fla.

_P&A: $100 to $875; from stock._

### Germanium Switching Diode

For X-band switching, the type SI50 germanium diode is hermetically sealed. With 80-ma bias, insertion loss is 1.5 db. Without bias, loss is 16 db, reflective, holding off 100 mw of the rf signal. Devices can serve as an rf modulator.

Microwave Semiconductor and Instruments, Inc., Dept. ED, 116-06 Myrtle Ave., Richmond Hill, 18, N.Y.

_P&A: $32.50 for samples; from stock._

*Specially selected and calibrated for peak power applications*
**Tunable-X Band Filters**

**MAXIMUM REJECTION • LOW INSERTION LOSS**

**DELIVERY FROM STOCK**

Now, Frequency Engineering Laboratories, world leader in microwave filter technology, introduces a new series of precision tunable bandpass filters covering the range of 7 to 12.5 GHz—assembled and delivered from stock in two weeks or less!

These filters feature a bandwidth of 8 to 12 mc at 3 db and 60 mc at 30 db with 2 db insertion loss... VSWR of 1.5 max. at F0... temperature stability of 3 cps/Mc/C maximum drift over wide temperature range... two direct-coupled $T_E_{111}$ mode cylindrical cavities with single tuning control... counterdiad and calibration chart or slotted shaft adjustment. Price: $398.00 each (less quantity discount).

Frequency Engineering Laboratories' 14 years of experience in the development and production of high performance microwave filters is available to you without obligation. Look into our capabilities for special preselectors with balanced mixer as well as low bandpass and band rejection filters for both high and low power applications. Write for Bulletin P-26102 or send specific bandwidth and other requirements to Department KF.

---

**Waveguide Switches**

Mechanical, three- and four-port waveguide switches are for use in RG/96/u, RG/98/u, RG/99/u and RG/138/u waveguides. Loss is about 0.3 db over entire waveguide band; isolation is greater than 40 db between ports; VSWR is 1.15 or less. Hardened steel alignment shaft sets rotor.

Technical Research Group, Antenna and Microwave Dept., Dept. ED, 9 Union Square, Somerville, Mass.

**Dual Polarized Adaptor**

Circular waveguide feed parabolic antennas can be adapted to polarized transmission with the model DPA-6000 dual polarized adaptor. Device has two inputs, one for each polarization, with 35 db isolation. Frequencies from 5,800 to 7,750 mc are covered.

Mark Products Co., Dept. ED, 5439 W. Fargo Ave., Skokie, Ill.

P&A: $225.00; from stock.

**Frequency Multiplier**

Output frequencies from 1 mc to 40 Gc are provided by a line of parametric frequency multipliers. Varactors are active elements. Power output ranges from microwatts to tens of watts, with bandwidths from 0.1% to greater than microwave passbands. Efficiency at lower frequencies is as high as 85%.

P&A: $550 fob Cambridge; six weeks.
Dual-Polarized Horns

All standard waveguide sizes from WR-430 through WR-2300 are available. These dual-polarized horn antennas have either waveguide or coaxial inputs. The vawr is less than 1.2 for 30% for the frequency band. Decoupling between inputs is greater than 30 db. Standard aperture is between 0.5 and 0.5. Units are weatherized, and can be pressurized and anticed.

Waveguide Circulator

Four-port waveguide circulator model CBX-205, for communication-link applications, covers 5.925 to 6.425 Gc with 20-db minimum isolation. Power handling capability is 300 w avg.; operating temperature range is -55 to +71 C. Standing-wave ratio is low.

Rantec Corp., Dept. ED, Calabasas, Calif.

Klystron Oscillators

Wide-range klystron oscillators of series KL-280 provide 10 mw min. Three models cover 1 to 6-Gc; pulsed and cw versions are made. A tuning mechanism which tracks dc tuning voltage and piston position to a linear tuning dial is optional. Size is 10-1/2 x 2 x 3 in. Type TNC female rf output connectors are standard.

Empire Devices, Inc., Dept. ED, Amsterdam, N.Y.

NEW in Alfred Series 620 Oscillators:

- BUILT-IN FEEDBACK LEVELER

Holds power output constant to ± 3/4 db over these ranges... 1 to 2, 1.4 to 2.5, 2 to 4, 4 to 8, 7 to 11 Gc. Feedback Leveler unique in holding output variation to approximately ± 0.1 db over any 100 Mc interval. Feedback method makes RF flatness independent of RF level or microwave tube aging. Components being developed for leveling above 11 Gc.

- SYMMETRICAL NARROW BAND SWEEP

Up to ± 5% of band width; about any center frequency. A significant time saver for component testing.

PLUS ALL THESE FEATURES, STILL EXCLUSIVE WITH ALFRED

- Drift — less than ± 0.02% per hour.
- Residual FM — less than 0.0025% peak.
- Adjustable Frequency Markers — time-saving indicators of band limits or intermediate frequency values.
- Quick Look Readout — shows frequency range, markers and sweep time at a glance.
- Ten Frequency Ranges, 1 to 26 Gc — covering 1–2; 1.4–2.5; 2–4; 4–8; 6.5–11.5; 8–12.4; 8.2–12.4; 10–15.5; 12.4–18; 18–26.5 Gc. (Internal leveling to 11 Gc only.)
- 0.5 microseconds rise and fall response to AM — equivalent to a 2 megacycle band pass.
- Frequency accuracy ± 1% unswept or swept.
- Direct coupled external sweep connection — response dc to 10 kc. Ideal for external frequency programming.

GET COMPLETE DETAILS — Alfred's policy is to publish specifications — not to withhold them. All specifications are guaranteed as stated. For detailed information on Series 620 oscillators, contact your Alfred engineering representative or write to:

ALFRED ELECTRONICS

CIRCLE 215 ON READER-SERVICE CARD
**UHF Power Generator**

**20-WATT OUTPUT**

**TYPE SLRD**

with INCREASED FREQUENCY RANGE

275 to 3000 mc

**Unique Features**

- Output more than 20 watts from 500 to 1700 mc, at least 1 watt from 275 to 3000 mc.
- Calibrated output meter plus 80 db attenuator.
- Direct-reading frequency scales.
- Band switch without interchangeable cavities.
- Short-time stability, better than $5 \times 10^{-4}$.

**APPLICATIONS**

The Type SLRD Generator will accomplish many tasks for which several instruments have been necessary in the past. Its high output power makes it ideal for antenna measurements. It can also be used as a generator for impedance, VSWR and attenuation measurements, and for calibration procedures for which a known power is necessary.

**AVAILABLE FROM STOCK**

**ROHDE & SCHWARZ**

ELECTRONIC MEASURING EQUIPMENT FOR THE UNCOMPROMISING

CIRCLE 216 ON READER-SERVICE CARD

---

**Absorbers**

For anechoic chambers. The Series VHP absorbers eliminate the need for baffles. Typical reflection level at X-band is down 60 db for normal incidence, down 40 to 50 db for both polarizations at angles 60 to 65 deg from normal, and attenuation through the material over 50 db.

B. F. Goodrich Sponge Products, Dept. ED, Shelton, Conn.

**Coaxial Hybrid Rings**

Operating over a 15% bandwidth from 950 to 6000 mc, type CJ hybrids have a 0.2-db insertion loss and a 25-db isolation. Devices consist of a circular coaxial line with four branch arms. Input and output impedance is 50 ohms.

Microlab, Dept. ED, 570 W. Mount Pleasant Ave., Livingston, N. J.

P&A: $120 to $150; from stock.

**Ferrite Switch**

V-band switch model R-227LS covers a frequency range of 3% at 70 Ge. The 2.5-in. long device has isolation greater than 20 db, insertion loss of 1 db max, and vswr of less than 1.30:1. Switching time is less than 1 μsec. The four-port switch is one of a line of ferrite components for K and V bands.

Ferrotec, Inc., Dept. ED, 217 California St., Newton 58, Mass.

Availability: 45 days.

---

ELECTRONIC DESIGN • October 25, 1961
Low Noise TWT's with PPM Focusing

S, C and X-Band, Metal-Ceramic, PPM Focused, Magnetically Shielded, 10 mw Output and 30 db Gain with Maximum Broadband Noise Figure of 10 db.

Typical of MEC's advanced family of metal ceramic low noise traveling-wave tubes is the new M2105. Rugged and reliable, this tube is the result of engineering skill and manufacturing care appropriately combined to form a production tube with truly reproducible characteristics.

Shielding of the tube and its focusing structure, an advantage of the PPM format, eliminates the effect of stray magnetic fields and permits use of tubes in close proximity to magnetic materials or to each other. Elimination of the focusing solenoid and power supply reduces power consumption to less than 3 watts, including heaters, and does away with auxiliary cooling.

Reliability—A Built-in Feature of MEC Tubes

Metal-ceramic construction gives MEC tubes a headstart on reliability. They are evacuated at higher temperatures (650°C), producing a higher vacuum and cleaner environment for long cathode life.

Inherently rugged, they provide superior performance over environmental extremes. (The M2105 withstands 15 g shock and 15 g vibration between 5 and 2000 cycles with no degradation in performance. Temperature compensation work is now being completed.) MEC construction features also include a stacked ceramic gun and a helix rigidly supported by three ceramic rods. Critical turn spacing is accurately maintained to assure uniform gain characteristics from tube-to-tube. The tube can be operated in any position without change in characteristics.

Typical Low Noise TWT Tubes in Production

---

**Waveguide Arc Detector**

Optical sensing device operates in the L-band, 1.12 to 1.7 Ge. The detector, model S61-1, can be used as a protective device on high-power radar systems. Prisms in the waveguide direct light from arcs to photo diodes. Reaction time is 5 to 10 mSec. System includes waveguide section, arc detector assembly, amplifier, power supply, and test light source.

FXR, Inc., Microwave Div., Dept. ED, 25-20 50th St., Woodside 77, N.Y.

P&A: $1,600; 60 to 120 days.

**Millimeter Waveguide Switches**

Operation in 7 mSec is provided by these waveguide switches. Devices handle frequencies from 18 to 40 Ge. Switching power is 28 v dc, 0.25 amp. Units measure 1.42 x 1.3 x 1.56 in, weigh 2 oz, and meet MIL-E-5272 specs.

Quantatron, Inc., Dept. ED, 2520 Colorado Ave., Santa Monica, Calif.

**Coaxial Mechanical Switch**

Switching speed is 10 mSec. Model C115LCS coaxial mechanical switch operates up to 6 Ge. Insertion loss is 1.3 max; isolation is 25 db min, and vswr is 1.3 max. Actuation requires 8 w. E & M Laboratories, Dept. ED, 15145 Califa St., Van Nuys, Calif.

Availability: 30 days.
Ferrite Isolators

Cover L to X bands, Broadband coaxial ferrite isolators operate from 1 to 11 Gc using three units instead of four as previously required. Isolation is 10 db, maximum insertion loss is 1 to 1.4 db; VSWR is 1.25 max. Frequency bandwidths closely fit the requirements of test equipment.

Scientific-Atlanta, Inc., Dept. ED, 2162 Peidmont Road, N. E., Atlanta 9, Ga.

Corner Reflector Antenna

Frequency range is 0.4 to 1 Gc. Corner reflector antenna, model RA-105, is said to have a gain 10 db greater than a dipole antenna. Unit meets MIL-STD-449 requirements.

Empire Devices, Inc., Dept. ED, Amsterdam, N.Y.
Ranter technology

Over the years, a company normally becomes "pegged" into one or two specific categories of interest. Rantec has variously been described as "those people who make antennas" or "they're in ferrites."

We would like to take this opportunity of outlining Rantec's broad level of design, development and production capability.

Electronically-Primed Tube 443

Rated at 20 w, model T48V4 broadband plug-in type TR tube has a peak power of 10 kw. Operating frequency is 200 to 600 mc; recovery time is 100 μsec at 3 db. It is for 7/8-in. coaxial-line use. Tubes for 1-5/8 and 3-1/8-in. lines and for L-band waveguide cavities can also be furnished.

Tucor, Inc., Dept. ED, 59 Danbury Road, Wilton, Conn. Availability: 60 days.

Standing-Wave Indicator 435

Pen-sized, external standing-wave indicator permits calculation of standing-wave ratios by moving the indicator probe along the transmission line. The indicator is calibrated glass, gas filled, which glows in direct proportion to standing-wave value.

Control Technology Corp., Dept. ED, 6255 Industrial Court, Greendale, Wis.

Direct-Reading Wavemeters 659

Accuracy within ±0.05% is provided by the Data-Dial direct-reading wavemeters. Model 3102, with integral crystal detector output, covers frequencies from 0.9 to 2.1 Gc, while the model 3103 has a range from 2.35 to 3.75 Gc. Compensation for residual nonlinearity is provided in the readout.

General Communications Co., Dept. ED, 677 Beacon St., Boston 15, Mass.

Antenna Feed Systems

Rantec feed assemblies are used on parabolic tracking and acquisition antennas ranging in size from 10 to 85 feet.

Antennas

Rantec tracking antennas are currently in operation at missile ranges throughout the free world. In addition, Rantec's airborne antennas are in quantity production for major missile and airframe programs.

3-channel, high isolation, low insertion loss multiplexer

Telemetry Antenna Multiplexers

Rantec multiplexers are used on a large number of missile and space programs, including Mercury, Titan, Polaris, Discoverer, Midas, Nike Zeus, Nike Hercules, Subroc, Samos, X-17, Centaur, etc.
Special Test Equipment and R-F Sub-Systems

From the number of essential microwave components available in Rantec's standard line, considerable flexibility exists for designing special test equipment, simulators and radar sub-systems.

Ferrite Circulators

In addition to the units shown, Rantec has developed many other filters for special applications. An impressive staff of engineers is available to handle complicated "state-of-the-art" problems.

Operation from -30 to +70 C without temperature compensation is provided by these three-port circulators. Devices for 5.4 to 12.7 Gc operation are available. Units have 20 db min isolation, 0.5 db max insertion loss, and 1.2 max vswr. Up to 10 w cw or average power are handled. Typical bandwidth is 0.5 Gc.

Sylvania Electric Products, Inc., Dept. ED, 1100 Main St., Buffalo 9, N.Y.

Availability: 30 to 45 days.

Swept Oscillator

Sweep rates from 0.01 to 1 sec in four ranges, continuously variable. Model 64 swept oscillator provides for external sweep and dc coupling for frequency programming. Sweep may be low to high or high to low. It is offered in three units covering S, C and X bands.

Sperry Microwave Electronics Co., Dept. ED, Clearwater, Fla.
P&A: $2,750; stock.

Glass Seal Connectors

Both TNC and TM connector types are available in this series of glass seal connectors. Configurations include bulkhead jacks, panel receptacles, bulkhead receptacles, and adapters.

From the number of essential microwave components available in Rantec's standard line, considerable flexibility exists for designing special test equipment, simulators and radar sub-systems.

Ferrite Devices

A wide variety of advanced ferrite devices is available in frequency ranges from below L-band through K-band.

These products are "typical" of Rantec's know-how, but represent only a part of the total picture. Write or call Rantec for complete product information in any of the above categories.

RANTEC CORPORATION
CALABASAS, CALIFORNIA
**MINIATURE TYPES**

**Series TBP**

Covering frequencies from 200 mc to 1000 mc, Telonic TBP filters may be selected with pass band widths from 2.5% to 25% of center frequency. Insertion loss is extremely low for a miniature type. Sectional style of construction allows fast design and delivery of units to meet your exact requirements.

**CAVITY TYPES**

**Series TCF**

Telonic Cavity Band Pass filters are available with center frequencies ranging from 300 mc to 2000 mc. Bandwidth is determined by cavity coupling and may be specified from 2.5% to 25% of center frequency. TCF filters consist of 1 to 2 capacity-loaded sections enclosed in a milled aluminum case to provide maximum protection in areas of environmental stress.

---

**Waveguide Switches**

High speed waveguide switches, type MA-3470, are available as units from 5.4 to 9.8 Gc. Typical switching time is 2 nsec. Driving power required is about 75 mw. Insertion loss is 0.5 db, isolation is 20 db. Units handle up to 4 w cw, 150 w peak. Switches are all solid-state.

**Coaxial Attenuators**

Up to 7 w of microwave power can be attenuated, modulated, or switched by the series SMA coaxial switch-modulator-attenuators. Attenuation modulation over 70% up to 100 mc is possible. Attenuation range is 20 db. Model N400 operates from 7 to 12 Gc, and model N401 from 5.5 to 10 Gc. Typical insertion loss is 1.5 db. Switching time is 10 nsec.

Somerset Radiation Laboratory, Inc., Dept. ED, 192 Central Ave., Stirling, N. J.

P&A: $195 and $195 for N400 and N401; from stock.

**Lens Antenna**

X-band lens antenna model ALXN-1A radiates a circular polarization with a hemispherical radiation coverage. Two units installed on any airborne vehicle provide complete tracking coverage for yaw, pitch or roll. The ellipticity ratio is better than ±1.5 db over a hemisphere; the signal is constant to ±2.4 db over hemispherical coverage.

Canoga Electronics Corp., Dept. ED, P. O. Box 550, Van Nuys, Calif.

**Parametric Amplifiers**

S-band, single-knob tunable parametric amplifiers have a stable 20-db gain at 15 mc or up to 30 db gain with the same bandwidth product. With one knob it can be tuned over 200 mc of the 500-mc range with gain at band edges of 18 to 20 db; with two knobs it can be tuned over 500 mc. Noise is 3 db max.

Sylvania Electric Products Inc., Dept. ED, P. O. Box 997, Mountain View, Calif.

P&A: $10,000; 90 days.
Hundreds of Polarad Calibrated Field Intensity Receivers are in use today throughout the world. Why?

...because the FIM series, in production since 1956, offers ±1 dB accuracy because of its self-contained signal generator.

...because the Model FIM-2 is the only single unit microwave system capable of measuring rf interference and susceptibility. It has been designed for measurements in accordance with all military RFI specifications.

...because the FIM-2 is an integration of two instruments in one, it is always available in your laboratory as either a sensitive microwave receiver or an accurate signal generator.

...because UNIDIAL® tunes both the receiver and signal generator simultaneously; and, the front-panel meter indicates average, peak, slide-back peak or quasi-peak value of rf signals, the Polarad of FIM-2 is the most convenient instrument in use today.
Now the most complete Microwave Receiver has the highest frequency coverage (if we are permitted the redundant superlative). As microwave work advances into higher and higher frequencies, the Model R keeps pace. Now Polarad has added frequency coverage from 45.3 to 84.2 mc. It's done, by the way, with a unique set of mixers incorporating integral crystals; and a local oscillator. Polarad's development engineers have designed the Model R Receiver with the most capabilities that can be put in a single box. The Model R is an AM-FM receiver; a pulse receiver; and a sensitive microwave power meter all rolled into one. It has a direct reading frequency dial, UNIDIAL® tuning control, AGC and AFC, as well as audio, video, recorder and trigger outputs. Hundreds and hundreds of Model R users know Polarad will continue to keep their basic microwave test receivers as advanced as their own research. Have you checked the many jobs a Model R can do for you? Ask your local Polarad representative.

SPECIFICATIONS

FREQUENCY RANGE: 400 to 84,200 mc covered in 9 plug-in tuning units. A broadband tuning unit covering 2000 to 15,000 mc is available for antenna pattern measurements.
SENSITIVITY: To -65 dbm depending upon frequency range.
FREQUENCY DIAL ACCURACY: ±1%.
RANGE OF LINEARITY: 60 db with AGC.
I-F BANDWIDTH: 3 mc.
VIDEO BANDWIDTH: 2 mc.
Microwaves

Shielded Ferrite Isolators 457

For use in compact systems, these ferrite isolators are magnetically shielded. Devices are custom designed. They operate from 1 to 11 Gc, with typical bandwidths of 1 or 2 Gc. Isolation-to-insertion-loss ratio is 10 to 1, and 

Sylvania Electric Products, Inc., Dept. ED, 1100 Main St., Buffalo 9, N. Y.

Availability: custom designed, four weeks.

Gold-Plated Thermistors 438

Precision gold-plated thermistors series 111 are housed in crystal-dioxide type cartridges and fit all detector mounts and holders designed for types 1N21 and 1N23.

Microwave Semiconductor & Instruments Inc., Dept. ED, 116-06 Myrtle Ave., Richmond Hill 18, N. Y.

Price: $10 up.

Pulse Magnetron 653

For airborne radar systems, the model BLM-071 pulse magnetron is rated at 100 kw peak power for a duty cycle of 0.001 max. The device provides a fixed frequency between 15.9 and 16.1 Gc. Input and output terminals may be pressurized to 30 psia. Pulse duration is 0.6 to 1.2 usec; Efficiency is about 30%. Unit measures 6-3/4 x 5-7/8 x 4 in. and weighs 8 lb.

Bomac Laboratories, Inc., Dept. ED, Salem Road, Beverly, Mass.

Microminiature Coaxial Connectors

Microdot's microminiature connectors—including the world's smallest 50-ohm coax connectors—are available in over one million combinations. Plugs are available in straight or angle screw types and slide-on versions. Receptacles include printed circuit and bulkhead feed-thru types. Only highest quality materials are used. Conductors are of silver-plated copperweld or cadmium bronze. Center contacts are of gold-plated coin silver. Housings are silver-plated brass to assure minimum electrolysis with aluminum panels. “Teflon,” “Kel-F,” polyethylene, and neoprene are used as dielectrics, jackets, bend relief caps, and pin protectors.

Microdot Inc., 220 Pasadena Avenue, South Pasadena, California.

Circle 751 on Reader Service Card

Crimp-type Connectors

These solderless, coaxial connectors are available in a variety of mounting configurations, including snap-locking versions. Male and female connectors may be mounted interchangeably. Mated length is 115/32”. Working voltages: 1,000 V. maximum, at sea level; 500 V. maximum, at 60,000 feet. VSWR; less than 1.2 up to 2,000 mc. Life: 5,000 matings, minimum, without electrical deterioration. Tensile strengths of the crimps exceed the breaking strength of the cable. Hard gold plated Beryllium copper and TFE plastic are extensively used to assure optimum reliability.

Microdot Multi-pin Connector Kit

NEW MICRODOT MICROMINIATURE MULTI-PIN CONNECTORS

These rugged, reliable "43" Series Microdot Microminiature Multi-pins are only 1/4 the size, 1/3 the weight of previously available miniature multi-contact connectors. Yet performance equals or exceeds MIL-C-26482 and applicable paragraphs of MIL-C-26500. Ready now for advanced applications, these connectors pack up to 61 power contacts—or 19 coaxial contacts—or a combination of both—into a shell the diameter of a quarter.

Improved three-keyway design of the "43" Series prevents pin engagement with insert face, permits 14 alternate positions for each insert layout by "clocking" shell keyways rather than inserts. Inserts come in a variety of straight power, straight coaxial, and combination power-coaxial layouts. The Multi-pin design accommodates a mix of male and female contacts in either plug or receptacle without changing inserts, allowing hot or cold leads to either side. Closed-entry, crimp or solder contacts are gold-plated pure coin silver to resist wear, maximize ampere ratings and conductivity, minimize temperature rise and resistance. Positive, push-pull, quick disconnect coupling eliminates need for safety wire. Operating force is always in direction of plug travel.

With all parts interchangeable, the "43" Series Microdot Microminiature Multi-pins are available now in disassembled kit form (for bench assembly or on-the-spot field circuit design), or factory assembled (as basic connectors) or as complete assemblies (with Microdot cable). Write today for illustrated, detailed Bulletin MP-0.

Antenna Mount 444

Servo controlled, model 28 antenna mount is for use in telemetry reception and tracking of aircraft missiles and satellites in shipboard and ground applications. Features include gyro stabilization, solid-state ac servo system and automatic-beam crossover switching from 3 to 9 db. Azimuth rotation is 710 deg.

TEMPEC, Inc., Dept. ED, 7833 Haskell Ave., Van Nuys, Calif.

Ferrite Isolators 451

For missile and aircraft use, lightweight ferrite isolators can be furnished in any frequency from 4 to 11 Gc. They are designed for severe environments. A typical unit, an X-band isolator, has an isolation to insertion-loss ratio of 20, 10% bandwidth, weighs 4 oz and is 2-11/16 in. long.

Sylvania Electric Products Inc., Dept. ED, 730 Third Ave., New York 17, N. Y.

Antennas for 6 to 8.5 Gc 469

Diameters of 4, 6, 8, and 10 ft are available on these antennas. Operating frequencies range from 5,925 to 8,500 mc. Feed is flange-mounted, permitting continuous polarity rotation through 360 deg. Feed may be inserted in either front or rear of antenna.

Technical Appliance Corp., Dept. ED, Sheridan, N. Y.

Coaxial Switches 352

Ten-nsec switching speeds are provided by these solid-state coaxial switches. The series, designated No. MA-3464, have spst or multiple-pole, multiple-throw configurations and operate from 150 to 4,700 mc. Driving power is

more usable sensitivity 10 mc to 44,000 mc IN ONE TUNING HEAD

10 to 100 mw. Insertion loss is 1 db max closed and 35 db min open. Eleven switches in the series handle 150-w peak power, and two operate at 10 kw at 1,100 mc.

Clamp-On Probe

RF interference in power leads is measured without direct connection to leads. Model RA-105 probe clamps onto the leads. Unit has flat response, and has the same transfer impedance as the firm's noise and field-intensity meters.

Empire Devices, Inc., Dept. ED, Amsterdam, N. Y.

Variable Attenuators

Precision variable attenuators offer interference-free operation even at low rf levels in high exterior fields. Attenuation range is 35 db min, calibrated at 5-db intervals at a single frequency. Insertion loss is 0.3 db max. Models 611, calibrated, and 613, uncalibrated, operate from 8.2 to 12.4 Gc; model 711, calibrated, operates from 12.4 to 18 Gc.

Waveline, Inc., Dept. ED, Caldwell, N. J.

Broadband RF Switch

Range is 200 to 400 mc. Model RFS-LU broadband rf switch has 0.2-sec switching time. Insertion loss is 1 db max, closed; 60 db, open. Impedance is 50 ohms. Control pulse requirements are 6 v, closed; 400 ma, open. Applications include in-gating receivers at rf to remove high-level, pulse-type interference.

RMS Engineering, Inc., Dept. ED, P. O. Box 6354, Atlanta 8, Ga.

P&A: $60; 2 to 4 weeks.

This Cooling Unit will dissipate 1,000 watts and keep the heat sink temperature at 25°C above ambient. In addition to the unit illustrated, a rack mounted cooling unit is available to mount at the bottom of a standard equipment rack and requires 10 1/2" of panel height. Ambient air is drawn in through the front and hot air is exhausted from the rear. Flexible tubing carries the cooling liquid to the heat sink within the rack.

These packaged cooling units are completely self-contained and consist of a liquid circulator, a liquid to air heat exchanger, a reservoir, and flow and temperature interlocks as required. They transfer the heat from congested locations, where high temperature is detrimental to the operation of other components, to remotely located locations where the heat can be dumped conveniently and where it will not affect the operation of other equipment.

LOW POWER SILICON DIGITAL MODULES

Delco Radio’s new silicon digital modules operate on less than 4 mW of power per logic stage. They are rugged enough to withstand extreme environmental conditions and are small and lightweight. Encapsulated in light foamy epoxy, each module weighs less than 12 grams and occupies less than one-half cubic inch. The basic set of modules includes a bistable multivibrator, a diode NOR gate, a power driver, a monostable multivibrator and an astable multivibrator. From these basic units larger computer subassemblies can be assembled, such as shift registers, adders, binary counters, decimal counters and timing devices. A range of applications—from small scale switching circuits to large computers can be satisfied with these modules. Environmentally proved to:

NEW LITERATURE

Potentiometers

Four-page brochure No. 7 on adjustment pots summarizes key information on 20 basic models. Includes resistances, terminal types, power ratings, operating temperatures, dimensions and prices. Cutaway drawings of 4 models illustrates internal construction and outstanding design features. Bourns, Inc., Trimpot Div., 6135 Magnolia Ave., Riverside, Calif.

Connector Plugs

Four-page illustrated folder features the KPT/KSP series Cannon plugs, designed to meet the requirements of MIL-C-26482. Contains all pertinent information in quick reference and tabular form to aid buyers and engineers in the selection of these plugs. Handy section on ordering nomenclature is included. Schweber Electronics, 60 Herrricks Road, Mineola, L. I., N. Y.

Insulation Papers

Specification sheets and a listing of physical and chemical test methods for kraft and glassine electrical insulating papers show caliper, density, conducting articles, moisture content, dielectric strength, ash content, pH water extract, basic weight and coverage. Physical and chemical test methods sheet lists formulas used in calculating specs. Minnesota Mining and Manufacturing Co., 900 Bush Ave., Saint Paul 6, Minn.

Silicone Rubber

Eight-page illustrated technical bulletin S-4 describes various silicone rubber compounds for use as wire and cable insulation. Typical properties of silicone rubber are shown in tables. Illustrations also show typical silicone rubber and wire and cable constructions and applications. General Electric Co., Silicone Products Dept., Waterford, N. Y.

X-Ray Analytical Instruments

Twenty-eight page catalog titled “X-ray Analytical Instrumentation” contains specifications and operating data on seven key instruments for research and production control. Text illustrates applications in the fields of atomic energy, chemicals, electronics, medicine, metallurgy, mining, petroleum, plastics, rubber and railroads. Philips Electronic Instruments, 750 S. Fulton Ave., Mount Vernon, N. Y.
Planar Diodes

Over 200 planar diodes are described in this 12-page catalog. Electrical and physical specifications for individual diodes and matched pairs and quads are given. Fairchild Semiconductor Corp., 4300 Redwood Highway, San Rafael, Calif.

High Fidelity Audio Tubes

Twelve-page bulletin ETD-2622 describes extent and features of growing line of audio tubes designed specifically for hi-fi. Contains specifications on current line of 26 amplifier, preamplifier, and rectifier tubes, as well as information on design features and manufacturing processes. General Electric Co., Receiving Tube Dept., Owensboro, Ky.

High Permeability Alloys

Comprehensive 40-page booklet contains material on permeability and core loss of high permeability "49" and HyMu "80" alloys at 60 and 400 cycles. Gives comparison of permeability between Epstein strips, stamped rings, and 1 DU laminations. Also describes a new approach to core loss calculations. Magnetic Metals Co., Hayes Ave. at 21 St., Camden, N. J.

Copper-Nickel Alloys

Four-page, 2-color bulletin describes the properties, characteristics, and applications of Neutroloy ultra-fine wire, a copper-nickel alloy used in precision instrumentation. Illustrations, charts, and diagrams show resistance and weight, physical characteristics, and resistance change vs temperature. Molecu Wire Corp., Eatontown-Freehold Pike, Scobeyville, N. J.

Silicon Controlled Rectifiers

More power capability than any SCR on the market today... that's the new 150 ampere 6RW56. And another new type with gate sensitivity so high you can turn it on with a photocell... that's the 1.5 ampere C5 controlled rectifier. They're the two newest in the General Electric SCR line, and they provide you with important design advantages!

* For extra high power consider this: Type 6RW56 offers 500 volts PRV; 3000 ampere 1 cycle surge current. Truly the highest powered SCR you can get in production quantities... and it's available from stock!

* For lowest power switching and control applications consider this: Type C5 requires typically 50 microamperes gate current to fire. All-diffused and all-welded in a TO5 package, it blocks up to 400 volts repetitively, can take a surge of 18 amperes. And we guarantee holding current at a maximum of 2 ma at room temperature.

Like every General Electric low, medium and high current SCR, they're thoroughly characterized and tested... tightly spec'd... and the C5 gives you transient PRV ratings.

NEW LITERATURE

Capacitors

Eighty-six page catalog in nine sections includes a facilities brochure and eight tabulated divisions covering capacitor construction utilizing metalized paper, metalized Mylar, Mylar and foil, Kraft-Mylar interleaf, and high-stability capacitors. Details electrical and environmental data and application notes, plus sets of performance curves. Electron Products, 430 N. Halstead St., Pasadena, Calif.

Test Report On Relays

Environmental test report on relays is actually a compilation of test reports gathered from the company's Quality Assurance Program, which is conducted on a scheduled basis. Tests were conducted using instrumentation and test equipment that meets standards and tolerances set forth in the company's System of Procedure Specs. Control Dynamics Corp., 7420 Fulton Ave., North Hollywood, Calif.

Expansion Assembly Methods

Twelve-page booklet contains a full case history on expansion fitting, together with photos illustrating expansion fitting bearing raceways. Includes tables of expansion coefficients and nomograms for calculating rates of thermal expansion and determining temperatures required. Cincinnati Sub-Zero Products, 3932 Reading Road, Cincinnati 29, Ohio.

Industrial Cathode Ray Tubes

Revised and condensed catalog arranged in easy-to-read reference chart style provides data on the principal characteristics and ratings, as well as physical dimensions, for the complete line of industrial and government cathode ray tubes. Continental Electronics Corp. of California, Industrial and Government Div., 2724 Leonis Blvd., Los Angeles 58, Calif.

Control Cables

Thirty-page catalog gives complete data about multiconductor cables used in control circuits. First section describes extra flexible Bronco 66 certified 600-v line ranging from 5 to 60 conductors in sizes 18 through 10 awg. Shielded control cables for communication and telemetering circuits are covered, as are station control cables. Western Insulated Wire Co., Los Angeles, Calif.
Crystal Filter Technology 276
Illustrated 12-page brochure called "What Every Engineer Should Know About Crystal Filters At A Cocktail Party", relates crystal filter technology to typical cocktail party subjects. Includes log-log frequency vs bandwidth chart indicating the theoretical and practical limits of crystal filter design. Itek Electro-Products Co., 75 Cambridge Parkway, Cambridge 42, Mass.

Potcore and Toroidal Coils 277
Eight-page catalog includes information on typical Q vs frequency response curves, outline drawings, and specifications such as applicable MIL specs. Descriptions of a number of typical components are included, such as A-size and B-size potcore coils, and cherrio and wedding-ring toroidal inductors and transformers. Bulova Watch Co., Electronics Div., 40-01 61st St., Woodside 77, N. Y.

Semiconductor Product Guide 278
Ten-page catalog 60S16R2 includes data on the full line of silicon and germanium transistors for military, industrial, consumer and computer applications, silicon rectifiers, tunnel diodes, and photocells. Classification guide on pages 2 and 3 offers a quick device-finder, indexed by application, to save time. Radio Corp. of America, Semiconductor & Materials Div., Somerville, N. J.

Infrared Detectors 279
A state of the art report on the capabilities of ambient temperature indium antimonide photoconductive infrared detectors is available. The paper describes characteristic changes with ambient of parameters of single crystal indium antimonide together with information theory based on applications of 1-sec time constant detectors. Block Associates, Inc., 385 Putnam Ave., Cambridge, Mass.

Power Supplies 280
Precision resistance welding power supplies featuring solid-state design, dual watt-second ranges and optional voltage regulation are described in Catalog 101. A table of specifications is included along with a cross-reference of power supplies, welding heads and hand pieces. Unitek Corp., Weldmatic Div., 950 Royal Oaks Drive, Monrovia, Calif.
IDEAS FOR DESIGN

$50
"Most Valuable of Issue"
Award For Wide Band AC Amplifier

Peter Laakmann, project engineer with the American District Telegraph Co., New York, N. Y., has won ELECTRONIC DESIGN's twelfth $50 Most Valuable of Issue Award.

Mr. Laakmann receives the award for his Idea for Design, "AC Amplifier Is Wide Band, Less Bulky," which appeared in the August 2 issue. The idea described a method for reducing bulk and expense of a multistage transistor amplifier by ac coupling the stages.

Simple Transistor Circuits Generate Phantastron Sweeps

Negative- or positive-going ramp voltage waveforms, similar to the output of a phantastron, can be generated by relatively simple transistor circuits.

In the circuit shown, an npn transistor is used in a simple common emitter connection to generate a ramp. The transistor is normally saturated by the current through $R_s$. Applying a negative pulse to the cathode of diode $D$ cuts the transistor off and allows its collector to rise to the $B^+$ supply. When the period, $t_o$, of this pulse is over, the transistor will tend to saturate through $R_s$. However, the negative waveform coupled from the collector through $C$ tends to cut $Q$ off. The net result is a negative ramp voltage of good linearity. The slope is determined primarily by the value of $C$, $R_s$, and the dc current gain of the transistor.

Similar ramp waveforms of opposite polarity can be generated by using a pnp transistor and making the necessary circuit changes.

The above technique was found extremely useful in designing economical driving and zero-set circuits for the Beam-X switch.

Arpad Somlyody, Circuit Design Analyst, Electronic Components Div., Burroughs Corp., Plainfield, N. J.

If this idea is valuable to you, give it a vote by circling Reader-Service number 746.

Sequential Counter Stepper Uses Error-Correcting Code

Here is a rather unconventional circuit we designed for a sequential scanning application that produces successive high-power pulses on 16 output leads. At the same time, these pulses are counted in a redundant binary code.

As shown in the figure by mirror symbols, the circuit has a seven-bit "address register" using two cores per bit. An output from each core feeds through a diode into a core matrix having 16 cores. Fourteen "selector wires" pass through each core in a different polarity combination, according to a modified Reed-Muller code.

When the clock pulse resets the address register, seven of the 14 selector wires carry currents. In only one core will these currents combine to exceed the threshold and set the core.

The selected core is subsequently reset, either by a bias current or by a reset clock pulse. As a result, voltages are induced in seven of 14 translator wires; each core is threaded by seven wires and bypassed by the remaining seven.

The very first cycle is started by a three-transistor "starter circuit" which detects lack of response to the first clock pulse and routes the next one to core No. 1 of the matrix, thus forcing its selection.

The counter-stepper tolerates at least one component failure, and often several, with little degradation. Certain short circuit failures may cause marginal operation. The transistors must be capable of passing pulses of 200 to 300 ma, but their parameters are quite uncritical. Output currents of up to 3 amp have been obtained with 2-amp turn clock drives, while more typical operation calls for 1-amp turn drive. Typical advance time is 4 $\mu$s, using cores made of low-coercive force ferrite, having 1/4 in. OD, 1/8 in. ID and height.

Ernest R. Kretzmer, Member of Technical Staff, Bell Telephone Laboratories, Murray Hill, N. J.

If this idea is valuable to you, give it a vote by circling Reader-Service number 744.

VOTE FOR IDEAS VALUABLE TO YOU

Vote for the Ideas which are valuable to you. Other engineers will vote for the Ideas which are most valuable to them. The Idea which receives the most "Valuable" votes will be judged "Most Valuable of Issue." Its author will receive a $50 award.

Choose the Ideas which suggest a solution to a problem of your own or stimulate your thinking or which you think are clever.

The Ideas chosen as the most valuable in each issue will be eligible for the $1,000 Idea of the Year award.

So vote for the Ideas you find most valuable. And, after you've voted, why not send in an Idea of your own?

Successive pulses can be obtained on the 16 output lines of this ferrite-cored scanning circuit.
SEVENTH ANNIVERSARY AWARDS

IDEAS-FOR-DESIGN

How You Can Participate

Rules For Awards

Here’s how you can participate in Ideas for Design’s Seventh Anniversary Awards:
All engineers readers of ELECTRONIC DESIGN are eligible.

Entries must be accompanied by filled-out Official Entry Blank or facsimile. Ideas submitted must be original with the author, and must not have been previously published (publication in internal company magazines and literature excepted).

Ideas suitable for publication should deal with:
1. new circuits or circuit modifications
2. new design techniques
3. designs for new production methods
4. clever use of new materials or new components in design
5. design or drafting aids
6. new methods of packaging
7. design short cuts
8. cost saving tips

Awards:
1. Each Idea published will receive an honorarium of $20.
2. The Idea selected as the most valuable in the issue in which it appears will receive $50.
3. The Idea selected as the Idea of the Year will receive a Grand Prize of $1,000 in cash.

The Idea of the Year will be selected from those entries chosen Most Valuable of the Issue.

Most Valuable of the Issue and Idea of the Year selections will be made by the readers of ELECTRONIC DESIGN. The readers will select the outstanding Ideas by circling keyed numbers on the Reader-Service cards. Payment will be made eight weeks after Ideas are published.

Exclusive publishing rights for all Ideas will remain with the Hayden Publishing Co.

(Use separate sheet if necessary)

I submit my Idea for Design for publication in ELECTRONIC Design. I understand it will be eligible for the Seventh Anniversary Awards—$20 if published, $50 if chosen Most Valuable of Issue, $1,000 if chosen Idea of the Year.

I have not submitted my Idea for Design for publication elsewhere. It is entirely original with me and does not violate or infringe any copyrights, patents or trademarks or the property rights of any other person, firm or corporation.

Hayden Publishing Company, Inc. shall have the exclusive publication rights to these Ideas for Design selected for publication in Electronic Design. This right extends to the subsequent use of the Idea for Design by Hayden in any of its other publications. Honorariums, if any, for subsequent publication shall be solely in the discretion of Hayden Publishing Company, Inc.

We asked engineers, architects, designers and draftsmen this question: "What irritates you most in a drawing pencil?"

Many of them said, "A degree that suddenly changes its character. You start your drawing with a 2H. When it wears out, you reach for another 2H — but this one draws like a 3H."

This can never happen with Castell. Its grading is so rigidly controlled, you can go back to your unfinished drawing months — or even years — later, without any perceptible change in line or color. It produces the same image density and sharpness of detail. No degree in a pod can match the consistent uniformity of Castell’s superb 20 degrees, 8B to 10H. Draws perfectly on all surfaces, including C R O N A R and M Y L A R base films. Join the masters of your profession. Buy Castell; call your dealer today.

IDEAS FOR DESIGN

Temperature Monitor Uses Silicon Transistor Sensor

A temperature-monitor circuit considered for one of NASA’s satellites made use of the base-emitter voltage change with temperature of a silicon transistor. The complete circuit, shown in the figure, was compact and very reliable, was stable with age and was easily designed for various output voltages and temperature ranges.

The primary design equation is:

$$I_b = a \frac{V_b - V_{be}}{r_T - R_e}$$  (1)

where $V_b$ is the base voltage set by the base-biasing resistors, $V_{be}$ is the base-emitter voltage.

To design the circuit, the cold-end point is determined and used in the expression for $V_{be}$. This is equal to $V_b$ at the cold-end point:

$$V_b = 0.6 - 0.002 (T - 20)$$  (2)

The base-biasing resistors are then chosen to give the voltage found by Eq. 1. The slope of the current vs temperature curve is found to be, neglecting the effects of $r_c$:

$$\frac{\Delta I_b}{\Delta T} = \frac{0.002}{R_c}$$

Actually $r_c$ is inversely proportional to emitter current, causing the nonlinearity at the low temperature end. Thus,

$$R_c = 0.002 \frac{\Delta T}{\Delta I_e} = 0.002 R_e \frac{\Delta T}{\Delta V_e}$$  (2)

where $R_e$ is the collector resistor, $V_e$ is the output voltage.

Temperature monitor makes use of the base-emitter voltage change with temperature of a silicon transistor. Plot shows circuit output-current dependence on the temperature.

ELECTRONIC DESIGN • October 25, 1961
This circuit can easily be used with a current readout device simply by putting the readout device in the collector instead of $R_c$. The first part of Eq. 2 is then applicable.

W. H. Follett, Electronic Engineer, Ball Brothers Research Corp., Boulder, Colo.

If this idea is valuable to you, give it a vote by circling Reader-Service number 745.

Complementary-Pair Multi 736 Has Long Pulses, Small Capacitor

Built around a pair of complementary transistors, a one-shot multivibrator was designed which:

a) required no power until triggered
b) handled large load currents
c) sustained long pulse periods with a relatively small-sized capacitor.

The circuit’s transistor pair is regeneratively coupled by resistor $R$ and capacitor $C$. Since the output current is $\beta_1 \beta_2$-times the base current required to saturate $Q_1$, timing capacitor $C$ can be approximately $\beta_1 \beta_2$ smaller than would be possible in a conventional multivibrator.

More precisely, if the “ON” period is chosen to be $t = R_{eff} C$, $R_{eff}$ can be calculated to be: $R_{eff} \cong R \beta_1 \beta_2 (1-0.63)$. And, of course, $C = t/R_{eff}$.

Kermit Norris, Technician, Jordan Electronics, Alhambra, Calif.

If this idea is valuable to you, give it a vote by circling Reader-Service number 736.

**CAP-POT BREAKS PRICE BARRIER AT $2.**

The high-performance, miniaturized potentiometer with the plus advantage of sealed assembly now available at only $2.00, in production quantities. The Cap-Pot is the ideal trimmer, offering excellent resolution, unique and ideal configuration, extra-high reliability, and low cost. Unit measures 5/8" in diameter maximum. Element and wiper are entirely self-contained within combination knob and screwdriver-slot control. Choice of wire or solder lug terminals. Color-coded knobs are available for function call-out. Your best buy in high performance trimmers!

**SPECIFICATIONS**

- Power rating: 0.8 watts @ 40°C
- Resistance range: Linear to 10,000 ohms
- Resistance tolerance: ±10% or closer on specification
- Effective rotation: 300° ±5°
- Dielectric strength: 900 V rms at sea level for 1 minute
- Torque: 0.2 to 8.0 oz-in
- Mechanical rotation: 310° ±5°

BOOKS

Time-Harmonic Electromagnetic Fields

Presents graduate-level mathematical techniques for handling electromagnetic engineering problems. Topics covered include plane, cylindrical and spherical wave functions, perturbational and variational techniques, and microwave networks.

Operational Electricity

Designed for nonelectrical engineering undergraduates, this text introduces the theory and characteristics of electrical circuits and machines.

NEW CECO HIGH OUTPUT
SOLID-STATE VIDEO AMP
(8 VOLTS, 18 MCS)

SPECIFICATIONS
45 db gain
25 db gain control range
5 cps to 18 mc ± .5 db
2° maximum overshoot
2° maximum tilt on
60 cps sq wave
20 nano sec rise time
8.2 db noise figure
75 ohms in and out
8 volts output peak to peak
10 volts maximum input
19" rack, 3½" high
117 V, 50-60cps power in

Equalization units are supplied to compensate for any length of cable up to one mile of RG-11 U. or 1000 feet Foam 111; ± .5 db to

±0.25° BORE SIGHT ACCURACY FOR USNS RANGE TRACKER

The accuracy and flexibility of LTV Electronics’ multi-polarized antennas are being proved in history-making operations aboard the Navy’s first Pacific Missile Range tracking ship— the USNS Range Tracker. Operated remotely or manually, this advanced antenna gives linear, dual linear, right or left circular polarization without a change of elements so that one antenna may now be used for a particular tracking mission regardless of polarization shifts. Multi-polarized antennas cost no more than comparable helical arrays—yet they offer these important advantages: greater operational flexibility, a four-to-one savings in element height, rugged design, broader location freedom, and their low-drag, lightweight construction permits lightweight pedestal mounting.

LTV Electronics can deliver multi-polarized arrays on short notice to meet the requirements of your communications, tracking, telemetry, command control or other applications. For full performance and delivery details, write P. O. BOX 1500 • ARLINGTON, TEXAS

Magnetic Control of Industrial Motors, Part 1, 2
Treats magnetic devices and accessories as used for control of industrial motors. Part 1—AC Control Devices and Assemblies; Part 2—AC Motor Controllers.

Prediction and Optimal Decision
Considers the question of whether "science" can verify recommendations to managers and, if so, in what way. Discusses the extent to which the scientist can assist the executive in making decisions.

Managerial Performance Standards

Adaptive Control Systems

Iterative Arrays of Logical Circuits
Examines the behavior of one- and two-dimensional iterative networks, pertinent to information processing, switching theory, and computer design.

Lectures on Communication System Theory
Theoretical discussions are presented with emphasis on methods of applying mathematical models and techniques to the design, analysis and evaluation of reliable systems. Sections are written by authorities in the field.

Transistor Logic Circuits
A discussion of binary arithmetic, Boolean algebra and minimization techniques leads to the application of diodes and transistors in logic circuitry.

GUDEBROD BROS. SILK CO., INC.

Now—AGASTAT MODULAR DESIGN

GUDELACE®

the lacing tape with a NON-SKID tread
You can't see it, but it's there! Guadelace is built to grip—Gudebrod fills flat braided nylon with just the right amount of wax to produce a non-skid surface. Gudebrod construction means no slips—so no tight pulls to cause strangulation and cold flow.

But Guadelace is soft and flat—stress is distributed evenly over the full width of the tape. No worry about cut thru or harshness to injure insulation...or fingers.
Specify Guadelace for real economy—faster lacing with fewer inserts.

Write for free Data Book.
It shows how Gudebrod and other Gudebrod lacing materials fit your requirements.

GUDEBROD BROS. SILK CO., INC.

NOW—AGASTAT MODULAR DESIGN

solid state "custom" specs with standard circuitry
New AGASTAT solid state time/delay/relays offer you greater reliability, wider timing ranges, and more design flexibility than has ever been available before in solid state relays. The unique "modular sandwich" construction simplifies production, speeds delivery of custom-made units.

Modular design makes possible the dependability of standardized circuit elements. Highest grade matched semiconductor components form the basis for reliability in these pre-assembled, pre-tested modules.

Choose from six basic circuit options for the range and operating type you need...0.01 sec. to 10-hour delays, on pull-in or drop-out. All units are only 1/4 in. sq. at base, weigh 3 to 5 oz., operate from 18 to 32 vdc, and handle loads up to 5 amperes. They are unaffected by polarity reversals, immune to voltage variations and transient spikes. Available with plug-in or solder lug terminals.

The solid state AGASTAT relay is a product of over 30 years' time delay relay experience, your assurance of performance to match the promise. For full technical information or applications assistance write Dept. S3-410.

Communications Engineers
for assignments on advanced programs
in Space and Surface Communications

ITT Federal Laboratories, a division of International Telephone and Telegraph Corporation, is engaged in research, design, development and manufacture of a variety of highly advanced electronic communication systems. Some of the systems we have developed, or are now participating in, include COURIER, ECHO, RELAY, DEW LINE, WHITE ALICE, ACE HIGH and MED-TROPO. Positions are available for engineers experienced in one or more of the technical areas listed below.

SPACE COMMUNICATIONS
- UHF and SHF Receiver and Transmitter (100 watts to 100 kw)
- Space Communications System Design
- Satellite Radio Communications Design and Development
- Microwave Antenna Design and Testing

SURFACE COMMUNICATIONS
- Multiplexing and Switching, Sub-Systems and Equipment
- Radio Transmission Systems and Equipment
- Long-line Communications Design and Practices
- Communications Terminating Equipment for Voice, Low and High Speed Data

ANTENNA SYSTEMS (Communications)
- Antennas and Feed Systems, VLF, MF/HF, UHF, SHF
- Fixed, Transportable, Mobile; All Power Levels, Environments
- Scanning and Reflector Types, Arrays, Normal and Hardened

SWITCHING SYSTEMS
- Store and Forward; and Line Switching Systems Design
- Digital Data Transmission Development
- Data Instrumentation Engineering

DIGITAL SYSTEMS
- Core, Tape, Drum and Disc Memories
- Logic Design
- Systems Integration
- Physical Design and/or Installation

We also have similar openings in the areas of:
- Human Factors Engineering
- Electronic Display Equipment Programming Analysts and Data Processing

A minimum B.S.E.E. and from two to ten years of experience in one or more of these areas are required. For details about these career opportunities, address your inquiry and resume to Manager, Professional Staff Relations, Dept. C.

YOUR CAREER
Congress Urged to Increase Aid for Postgraduate Study

The need for postgraduate education and fellowships, rather than undergraduate scholarships, has been pointed out to a Senate education subcommittee. We need to "expand and stimulate graduate education," Paul H. Robbins, executive director of the 56,000-member National Society of Professional Engineers, said. He feels the administration's proposed undergraduate-scholarship program would stress quantity, rather than quality, of college students.

Mr. Robbins also recommended support for technician education, pointing out the need for technicians who can relieve the engineers of routine, repetitive tasks.

President Kennedy's proposal to establish a loan program for improving classrooms, laboratories and equipment met with Mr. Robbins' approval.

High-speed computing facilities at University of California at Los Angeles have been more than tripled with the installation of an IBM 7090 data-processing system. The first of its kind on a university campus, according to UCLA, the system will be used for scientific, medical and engineering research.

Engineers plan to study automatic control, as well as the development of computer hardware, thus using the computer to help design computers.

Chemists will analyze giant molecule crystals with the help of the 7090.

Prof. Magnus R. Hestenes, head of the UCLA computing facility, says the time is near when "any university will find it very difficult to maintain any major program of research without the use of a high-speed computer."

UCLA conducts 20 courses in numerical analysis and computer programming and design. Last year 700 students were involved in computer education, use or design at the university.

Engineering and medicine have united in a series of research projects conducted jointly by doctors from Highland View Hospital in Cleveland and professors from Case Institute of Technology.

Two Case computers will be used for medical diagnosis—to record, store, describe and analyze the electrical signals obtained from muscles, brain and the heart.

YOUR CAREER

A team of physicists from Radio Corp. of America has received the Journal Award of the Society of Motion Picture and Television Engineers.

Edward C. Hutter, John A. Insole and Thomas H. Moore of the Astro-Electronic Div. of RCA are co-authors of a paper on "Electrostatic Image and Recording." It was designated the outstanding paper originally published in the monthly SMPTE Journal during 1960.

The paper describes a method of image recording using a transducer for the simultaneous pickup and electrostatic storage of optical instrumentation.

ENGINEER-IMPROVEMENT COURSES AND SEMINARS

One-Day Seminars

The Industrial Education Institute, Nov. 8-16

The Industrial Education Institute of Boston is presenting a one-day seminar on Systematic Retrieval and Correlation of Information and Technical Data. The seminar schedule is as follows: Chicago, Hotel Sheraton-Blackstone, Nov. 8; Cincinnati, Hotel Sheraton-Gibson, Nov. 13; Cleveland, Hotel Pick-Carter, Nov. 16.

The seminar will be conducted by Freeman H. Dyke, Jr. The individual registration fee, which includes attendance, luncheon, coffee break, supplies and reference material, is $50. A 10 per cent team discount is extended to companies having three or more men attending. For information, write Industrial Education Institute, 221 Columbus Ave., Boston 16, Mass.

Controlling Costs of Industrial Experimentation

New York, Nov. 20-21; Philadelphia, Dec. 18-19

A two-day seminar on Controlling and Reducing Costs of Industrial Experimentation will be presented by the Industrial Education Institute of Boston. It will be offered in New York, Hotel Belmont Plaza, Nov. 20-21 and in Philadelphia, Hotel Sheraton, Dec. 18-19.

Dr. William Mendenhall will conduct the seminar. The registration fee, which includes attendance, luncheon, coffee break, supplies and a package of reference material, is $100. A 10 per cent team discount is extended to companies that have three or more men attending. For information, write Industrial Education Institute, 221 Columbus Ave., Boston 16, Mass.

ELECTRONIC DESIGN • October 25, 1961
Engineering and Management
UCLA, Jan. 22-Feb. 1

A ten-day course on Engineering and Management will be offered by the University of California at Los Angeles Extension, beginning Jan. 22.

Designed for engineering and management personnel, the course will stress design, installation, and administration of systems. Emphasis will be on oral communication and understanding of human relationships.

The Fourteenth Annual Industrial Engineering Institute, featuring lectures by noted industrial engineers, will follow the course. There are no formal educational requirements. For further information write: Reno Cole, University Extension, UCLA, Los Angeles 24, Calif.

Automation, Computers, and Instrumentation at Georgia Tech, Feb. 12-16

Georgia Institute of Technology and the Instrument Society of America will sponsor a one-week course on Automation, Computers, and Instrumentation, Feb. 12-16, 1962, on the Georgia Tech campus, Atlanta.

The course is designed to orient technical personnel in the latest concepts of instrumentation, analog computers, digital computers, and automation. Special emphasis will be placed on problems dealing with the replacement of human effort by the appropriate automatic equipment.

Tuition, including supplies and textbooks, will be $125. Contact Director, Short Courses and Conferences, Georgia Institute of Technology, Atlanta 14, Ga.

PAPER DEADLINES

Nov. 1: For the 1962 International Solid-State Circuits Conference to be held Feb. 14-16 at Philadelphia, the conference, sponsored jointly by the University of Pennsylvania and the IRE, will stress circuit design in such advanced areas as solid-state memory; storage and logic; solid-state microwave amplification, oscillation and conversion; solid-state devices performing an integrated circuit function; unconventional power supplies, and cryogenic and optoelectronic applications.

Papers should be sent in abstract (300 to 500 words) along with pertinent illustrations to Richard H. Baker, Room C-237, MIT Lincoln Laboratory, Lexington, Mass.

Nov. 15: Deadline for 100-word abstracts and 500-word summaries to be presented at the 1962 National Winter Convention on Mil-

Project Surveyor engineering openings

Hughes Space Systems Division has immediate openings for Electronic Engineers, Mechanical Engineers, Physicists and Aeronautical Engineers to work on Project Surveyor—a spacecraft which will soft land on the moon. Once there, Surveyor instruments will perform a variety of scientific tests: drills will pierce and analyze the moon's surface; high quality television pictures will be transmitted to earth; other instruments will measure the moon's magnetic and radiation characteristics. To accomplish this step into space, Project Surveyor requires the talents of imaginative junior and senior engineers and scientists to augment its outstanding staff. Experience is preferred but not required. A few of the openings include:

circuit designers

Involves analysis and synthesis of systems for: telemetry and command circuits for space vehicles, high efficiency power supplies for airborne and space electronic systems, space command, space television, guidance and control systems, and others.

systems analysts

To consider basic problems such as: the requirements of manned space flight; automatic target recognition requirements for unmanned satellites or high speed strike reconnaissance systems; IR systems requirements for ballistic missile defense.

infrared

Includes systems analysis and preliminary design in infrared activities involving: satellite detection and identification; air-to-air missiles; AICBM, infrared range measurement; air-to-air detection cryogenics and others.

An equal opportunity employer.

CIRCLE 903 ON CAREER INQUIRY FORM
at MOTOROLA in PHOENIX:

Leadership in action

Project leaders at Motorola are engineers and scientists who have won their right to leadership — with ideas, talent, and dedication — while working on challenging assignments in Project Groups. These teams are carefully selected — to get the optimum combination of experience and capabilities, and to utilize each man's talents to the fullest. Opportunities for individual advancement and career fulfillment are broadened and enhanced by Motorola's widely-diversified activities in advanced military electronics. Leadership in action is a vital force at Motorola. It provides the stimulus for challenging the state-of-the-art in Project Group assignments, assuring engineers and scientists of ever-broadening horizons for tomorrow. And Arizona's world-famed climate and beauty add to the whole family's year-round health and pleasure.

Immediate Opportunities

- Systems Test Equipment Design
- Communications and Navigation
- Systems Analysis and Preliminary Design
- Missile and Space Guidance and Control
- Digital Circuity Design
- Microwave and Radar
- Reliability and Components
- Solid State Devices

All qualified applicants will receive consideration for employment without regard for race, creed, color, or national origin.

Write Phil Nienstedt Dept. 1002

MOTOROLA

MILITARY ELECTRONICS DIVISION, WESTERN CENTER
P. O. Box 1417, Scottsdale, Arizona

Motorola also offers opportunities at
Chicago, Illinois, and at Culver City and Riverside, California

YOUR CAREER

Electronics. This will be held at the Ambassador Hotel, Los Angeles, Calif., on Feb. 7, 8, and 9.

Subjects include: system and technical management, instrumentation, reliability, undersea warfare and sonar systems, radar and fire control systems, aerospace ground equipment, reconnaissance and electronic warfare, missile and space systems and subsystems, tracking, telemetry and command systems, military equipment design and product engineering, military systems requirements and environments, information and data handling systems, and navigation and air traffic control systems.

Authors are requested to send abstracts and summaries plus short biographies to Matthew E. Brady, Space Technology Laboratories, P. O. Box 95001, Los Angeles 45, Calif. Confidential papers must be cleared by authors and sent to Major James L. Bilbie, USAF, U. S. Air Force Systems Command, Regional Office, 6381 Hollywood Blvd., Los Angeles 28, Calif. These will be considered for publication.

ADVANCE WITH TI!

NEW GROWTH OPPORTUNITIES
IN SYSTEMS AND COMPONENTS

RF DESIGN ENGINEER. To design new, completely solid state RF components for missile and space flight test equipment. Experience in VHF, UHF, and VHF transmitter design, with background in design and development of solid state RF circuitry, FM techniques, automatic frequency control. Thorough knowledge of miniaturized missile electronic packaging.

MICROWAVE DEVICE ENGINEER. To initiate advanced developmental programs involving broadband parametric amplifiers, radiometers, tunnel diode devices, ferrite phase shifters, switches, etc. Experience in microwave device design or microwave measurements with emphasis on solid state physics.

DIGITAL DESIGN ENGINEER. Experience in at least 3 of these areas: 1. logic design of digital computer equipment, 2. application of computers to real time systems, 3. circuit design with transistors and magnetic devices, 4. programming of general purpose computers.

TEST EQUIPMENT ENGINEER. For advanced work in high-speed switching and pulse circuitry for computer applications. Broad experience in industrial areas of component instrumentation design, in quality control work, with background in systems intergradation.

Advance your career with Texas Instruments. Send confidential resume to:

Lord Dyna-damp® Circuit Boards
Introduce higher reliability
and greater design freedom

Higher reliabilities are now within reach—Lord has added built-in damping to printed circuitry.

Here’s what Lord Dyna-damp Circuit Boards can mean for your aerospace application: control of resonant response ... amplitudes and G levels reduced to only 1/3 the response of standard boards ... protection of sensitive components against vibration, shock, noise ... tighter spacing of boards in high-density packages ... freedom to use lighter, smaller, less rugged components.

Excellent damping is unaffected by time, operating temperature, frequency, weathering, corrosive conditions, normal processing.

You can use Dyna-damp Boards with no change in your processing. They can be soldered, etched, solvent-cleaned, thru-plated, drilled, sheared, punched. Available in 18” x 18” size with NEMA G-11 skin (MIL Spec. P-13949B). Unclad, or clad one or both sides with 2 oz. copper. Three thicknesses: 1/16” and 5/32”.

Get detailed information on this latest advance in vibration/shock/noise control from your nearest Field Engineering Office listed here or the Products Dept., Erie, Pennsylvania.
**PULSE POINTERS**

**Electro-Pulse 10 mc pulse generator called 'workhorse of engineering lab'**

Unique circuit techniques provide unusual time base stability and low-jitter performance.

Modular plug-in construction gives the instrument extreme versatility. It is quickly and easily adapted to provide a broad number of optional performance capabilities. Maintenance is likewise simplified.

A variety of functional modules are designed to accommodate particular instrument functions. Front panel and controls are integrated for both electrical and mechanical standardization.

Exclusive repeatable digital dial settings, coupled with modular plug-in (front and rear) construction, make it unusually simple to program the instrument.

Through interchange of standard output amplifier modules, a wide choice of output characteristics may be obtained. Other options provide for peak current (500 ma), maximum voltage (20 volts), mixing of multiple channel outputs, and addition of complementary outputs from a single channel.

Extended performance capabilities (in addition to standard modulations) include: pulse train generation to 10 mc, coherent double pulse rate generation, multiple-channel pulse generation, and DC biased pulse generation.

One of 33 cataloged instruments in Servo's broad Electro-Pulse product line (which includes as many as 200 standard pulse and digital circuit modules—both tube and transistor types), the E-P 10 mc pulse generator couple

---

**Computer makers eye high rep rate and 10 nanosecond rise time**

Workhorse of the engineering lab... with a wide range of rep rates, delay times, and pulse widths... the modular Electro-Pulse 4550A pulse generator is designed to fulfill the demand for ultra-reliable generation of variable parameter test pulses at very high rep rates.

Featuring fast rise time of 10 nanoseconds, rep rate going out to 10 mc, and variable delay and width, this flexible pulse instrument finds wide application in the development and test of components, logic circuitry, and high clock rate digital systems.

Typical applications of the compact, transistorized 10 mc pulse generator include:

- High-speed flip-flop design
- Multi-megacycle range clock pulse generation and regeneration
- Shift register drive
- Pulse timing for thin-film magnetic material switching
- High-speed code conversion circuit design
- Digital computer arithmetic and input-output development
- High rep rate resolving time studies

Solid state techniques are emphasized throughout the design. This provides maximum instrument reliability... together with minimum power drain, heat generation, size, and weight.

---

**A wide choice of output characteristics is available by simply interchanging standard modular plug-in output amplifiers.**

---

**For all-purpose dependability, see the compact 3350A**

Adaptable to console mounting in variety of test systems.

- Rep rate: 0.5-500 KC
- Output: ±35 V into 95 ohms
- Pulse delay: continuously variable
- 0-10,000 usec in 5-decade range
- Pulse width: continuously variable
- 0.05-10,000 usec

Wide-range performance covers a multitude of general-purpose applications in radar, navigational systems, digital computer, control system, and other pulse circuit test and design.

ELECTRONIC DESIGN • October 25, 1961

210
These four new broadband, medium power Traveling-Wave Tube Amplifiers give you at least 1 watt output for one milliwatt input over their complete frequency ranges. They provide significant range expansion for your present signal generators and electronic sweepers.

Compact, rugged and dependable, these amplifiers incorporate lightweight, periodic-permanent-magnet TWT's; each instrument weighs just over 30 lbs. New modular construction combines in a single instrument a portable bench amplifier and a neat, clean rack mount unit.

All four models incorporate specially designed circuitry to provide amplitude modulation from dc to 100 KC, with internal amplification so that small modulation signals cause a large output power change. Very low spurious phase modulation is assured through incorporation of electronic regulation in the helix, anode and filament supplies.

**Common Specifications**

- **Input, Output Impedance:** 50 ohms, SWR less than 2.5
- **Connectors:** Type N, female
- **Front Panel Controls:** Gain
- **Meter Monitors:** Anode, helix, collector and cathode current
- **Dimensions:** 16¾" x 5¾" x 18¾" deep (cabinet convertible to rack mount)
- **Weight:** 31 lbs.

**Data subject to change without notice. Prices f.o.b. factory.**

Call your HP representative today for full information on these versatile TWT Amplifiers.

PLANAR CONSTRUCTION for excellent stability, high reliability. Collector cut-off current reduced by a factor of 20 to 1 over mesa types. Uniform beta over a wide current range. Maximum storage temperature = 300 °C.

EPITAXIAL CONSTRUCTION for low saturation voltage and improved switching times.

MINIATURE CASE for extremely high density packaging. Uses same lead arrangement as TO-18 package but requires only 40% of the TO-18 headroom.

BROAD SILICON LINE The new 2N1708 planar-epitaxial transistor is another example of RCA’s advanced silicon technology, application-oriented to today’s performance and miniature packaging requirements. The 2N1708 complements the other RCA silicon planar switching transistor types: USA 2N706, 2N706, 2N706-A, 2N708, 2N696, and 2N697.

Check the data on these outstanding RCA types. For information on RCA computer transistors and multiple switching diodes, call your RCA Field Representative. All these types are immediately available in quantity. For further technical information, write to RCA Semiconductor and Materials Division, Commercial Engineering, Section J-18-NN-4, Somerville, N.J.
