REFERENCE

Other Radio Station References

People occasionally ask who publishes an AM Atlas, a TV list or specialized information, such as the geographic coordinates of FM transmitters or station telephone numbers. What follows should be helpful; however, prices and availabilities may change at any time.

North American Radio Guide, 1991, AM and FM stations of the U.S. and Canada by geography, giving music formats, National Public Radio affiliates and stations carrying sports, includes TV stations. No powers, heights or coverages, 158 pp. \$7.95 plus \$1.50 shipping from WF Innovations, Box 93142, Milwaukee WI 53203.

Broadcasting and Cable Market Place, 1992, with a new publisher. At \$159.95 plus \$5 shipping, it has been the "bible" of the industry with programming, technical and personnel data for AM-FM-TV stations. Lists consultants, engineers, attorneys, FCC addresses; about 1,000 pages. From R. R. Bowker Co., P.O. Box 31, New Providence NJ 07974-9903, and is in many university libraries.

NRC FM Log, spring 1992 ed., printed on drilled sheets for placing in a binder, with the main information, including stereo, formats and technical data, arranged by frequency with cross references by geography and call letters. U.S. and Canada; relying on the "FM Atlas" as one of its information sources, 325+ pp., \$19.95 from NRC Publications, P.O. Box 164, Mansville NY 13661-0164.

NRC AM Log, similar format to above; shows daytime/nighttime powers and if a station has a directional antenna, \$19.95 postpaid. Also available from the National Radio Club—a product catalog for \$1.00, listing additional publications, including a planned book of AM radio station maps.

M Street Radio Directory, 1991 ed., about 670 pages listing FM-AM stations geographically with technical parameters, addresses, telephone numbers and music markets with excellent cross reference by call letters, as well as by frequency. Lists radio markets and ratings, Birch and Arbitron. \$29.95 plus \$4 shipping from M Street, P.O. Box 3568, Alexandria VA 22302

National Technical Information Service, U.S. Department of Commerce, Springfield VA 22161; (703) 487-4650. Ask for their latest "Catalog of FCC Licensing Data on Microfiche," At last report, their *FM Engineering Data Base in Order by Location* (FCC No. FM-122), was \$20 for 13 sheets. Same price for data arranged by frequency (FCC No. FM-123).

World Radio-TV Handbook, 1992 ed., better for shortwave and AM worldwide, but some coverage of FM. About 575 pp., \$19.95 plus \$1.70 shipping from DX Radio Supply, P.O. Box 360, Wagontown PA 19376.

The Traveler's Country Music Radio Atlas, 1992, has maps by states listing: "AM High Power," "FM High Power," "AM Low Power," "FM Low Power," \$6 for one copy with shipping, 80 pp., with generous quantity discounts from Hanael Publishing, P.O. Box 369, Port Hueme CA 93044-0369.

IRCA AM-FM Almanac, 5th ed., 1991, more than 200 comb-bound pages of AM-FM radio lore, including AM stereo stations. FM data includes national networks, talk programs, play-by-play sports and simulcasts with an AM station; \$16 U.S., \$16 Canada, \$19 overseas air mail, IRCA Bookstore, 9705 Mary Ave., N.W., Seattle WA 98117.

Highway Radio, by William J. Stank, 116 pp., with maps showing AM stations over 1 Publishing, 1231 Airport Road, Box 177, Allentown PA 18103. Publisher's comments: "Intended as a radio travel atlas."

Buick Radio Guide and other AM-FM radio lists by city or state; the Buick one covers 24 U.S. metro areas; \$4.50 per set from Art Vuolo, P.O. Box 219, Ypsilanti MI 48197.

[Send this to "FM Atlas," Adolph MN 55701-0024, U.S.A., or copy it.]

Notify me when the 15th edition *FM Atlas* is available. Also,

- ☐ send your radio and electronics catalog.
- ☐ enclosed is \$3 for a sample copy of the monthly *FM Atlas* newsletter along with subscribing information.

UNITED STATES:

Maps of the United States are arranged in a geographical order from east to west, and Canada from west to east. Selected stations in bordering states or countries are shown on individual maps. Stations sharing time with another station, or those scheduled to change frequency, are shown on the maps, with both the new and old frequencies given. Minor, ten-watt educational FM stations and low power FM translators and boosters are shown in reduced size. For technical, stereo, SCS and programming data on the various stations consult the Station Directories, immediately following the FMaps, "NonID" and station multiple-city identifications are listed in the Station Directory by frequency, starting on p.

KEY TO SYMBOLS

d A station with a directional antenna, listed after height, by-frequency section

h A station transmitting with a horizontal-only signal

t An FM translator or on-channel FM booster

v A station transmitting with a vertical-only signal (receiving antenna should be mounted vertically). Stations without a "v" or "h" in the by-frequency part of the book have both polarizations, or circular polarization, with v and h powers the same unless shown otherwise

* A noncommercial station, usually educational, "public," or religious

\$ A station broadcasting all or part of its daily schedule in multiplex stereo

† A station with a Subsidiary Communications Service (SCS, SCA, or in Canada, SCMO). If in parentheses (), it is at 57 kHz, if by itself at 67 kHz, and if following a comma: †, at 92 kHz.

§ A station sharing time with a nearby station on the same channel; shown on maps only

- A station with its antenna below the average surrounding terrain

Program [music] codes (given in Part I of the Station Directory after city): b beautiful/easy listening, c classical/"Fine Arts," e ethnic, f folk music, g gospel and religious, j jazz, k country (including polkas), l Latin/Spanish, m middle of the road music, n news, o rock oldies (stations having this format exclusively), p progressive rock, r rock including top hits, s soul/rhythm and blues ("urban"), t talk. Up to two letters are used to indicate stations having two distinct types of music, or intermixing records of two main types (such as "op" for "classic rock"). **Language codes** (given just to the left of the program codes in Part I of the Station Directory): E English (for stations in Quebec and Latin America), F French, P Portuguese, S Spanish.

SCS symbols (following † in Part I of the Station Directory): A ABC network relay, B relays of networks other than ABC, C relays of AM, FM stations, cable audio, or campus carrier current stations; D digital paging, usually at 57 kHz; E ethnic or foreign language, F farm occasional audio preceded by a tone), R music (foreground, usually rock), S sports and special events (occasional audio), T talk (usually talking book for the blind, but may include instructional programs), U tones, telemetry chips or warbles—used for transmitter control—listed only if on a majority of the time; V WV National Bureau of Standards time, W weather (such as relay of a nearby NOAA weather station), X medium speed data, miscellaneous data, Z high speed frequency-shift data. Stations with only an open carrier SCS are not listed.

Part I: Geographical Directory Example

Aura	Ava	City
95.9 WKD-FM	107.9 WYSY-FM	103.9 WXAN

Watts				
100000	3000	50000	Hit Super-102	Nonld

Because the 13th edition *FM Atlas* came out at the end of 1990, there was no 1991 edition. As a new edition is prepared, the first project is to see how the maps need updating. The Station Directory by geography is updated monthly, keying in data from that month's *Medial* newsletter. The directory—a frenetic frequency is updated the final week of the book's preparation—a frenetic process, typing from handwritten notes in the margin of a master copy—with last-minute changes added so that the book you receive has data fresh as of when it is sent to the printer [Patterson Printing of Benton Harbor MI]. It was obvious from the clutter in GA that a new state map would be needed, separating it from AL (which was grouped with MS), and creating a separate LA map. Maps of MI, MN and OH were redrawn, but TX continues in its dizzy way, with not enough station changes to warrant a new set of maps. Some day, changes there will be made, and I thank those who have made suggestions for improvements.

I'm also holding the line on price increases, hoping this edition will be sold out sooner, clearing the way for the 15th edition in 1993. Now it's up to you to use this book as you travel, as you explore the FM dial from home, or if you're in the business you can use its coverage data, the maps and format information on the various stations to compile your own market data—whether your interest is in finding possible channels on which to place FM translators, looking for major market stations with unused SCS facilities, upgrading your station and possibly moving it to a nearby larger city, comparing one station's coverage with another, or if you'd like to drop an FM channel into an interesting city which might be un-served or underserved. Helping in the latter process is our FCC FM Coverage Curves and explanation of all the FM station classes with distance separations in kilometers and miles—at \$4.00 from "FM Atlas," Box 24, Adolph

Because it uses a narrow bandwidth, music on SCS is not stereo and has about the same fidelity as AM radio, but enjoys FM radio's consistent coverage and ability to fight static and interference. Sometimes there is a problem of crosstalk to the SCS from the main station programming. This can be helped by use of good SCS components, good engineering at the FM station, a good receiving antenna and location free from multipath and/or weak signals. Some stations use SCS for program relaying, finding it reliable and of good enough fidelity to send talk shows or network news to nearby stations, thus avoiding the cost of satellite dishes at all the stations.

There are FM stations broadcasting two distinct programs on SCS at both 67 and 92 kHz. Usually the 92 kHz frequency is for light rock music with vocals or ethnic programming, but a few radio reading services and the Children's Sonshine Network, based at WCSG *91.3 Grand Rapids MI, can be found at 92 kHz in various cities. Virtually all FM stations have phased out the old 41 kHz signal, because that was not compatible with FM stereo. Still WWDB 96.5 Philadelphia is said to have an active 41 kHz when engaged in weekday monophonic talk broadcasting, but not on weekends when 96.5 blossoms in stereo with big-bands music.

Until SCS catches on with more people, listening to the various music or talk programs carries with it an eliteness not enjoyed elsewhere in the broadcast frequencies—and adapters sell for as little as \$18! The *FM Atlas* continues to be the only widely-distributed, popular-priced source to list SCS-equipped stations showing whenever possible exactly what the various stations are using their subcarriers for, with data more refined than previously.

New Maps Reflect FM Growth in Several States

Because the 13th edition *FM Atlas* came out at the end of 1990, there was no 1991 edition. As a new edition is prepared, the first project is to see how the maps need updating. The Station Directory by geography is updated monthly, keying in data from that month's *Medial* newsletter. The directory—a frenetic frequency is updated the final week of the book's preparation—a frenetic process, typing from handwritten notes in the margin of a master copy—with last-minute changes added so that the book you receive has data fresh as of when it is sent to the printer [Patterson Printing of Benton Harbor MI]. It was obvious from the clutter in GA that a new state map would be needed, separating it from AL (which was grouped with MS), and creating a separate LA map. Maps of MI, MN and OH were redrawn, but TX continues in its dizzy way, with not enough station changes to warrant a new set of maps. Some day, changes there will be made, and I thank those who have made suggestions for improvements.

I'm also holding the line on price increases, hoping this edition will be sold out sooner, clearing the way for the 15th edition in 1993. Now it's up to you to use this book as you travel, as you explore the FM dial from home, or if you're in the business you can use its coverage data, the maps and format information on the various stations to compile your own market data—whether your interest is in finding possible channels on which to place FM translators, looking for major market stations with unused SCS facilities, upgrading your station and possibly moving it to a nearby larger city, comparing one station's coverage with another, or if you'd like to drop an FM channel into an interesting city which might be un-served or underserved. Helping in the latter process is our FCC FM Coverage Curves and explanation of all the FM station classes with distance separations in kilometers and miles—at \$4.00 from "FM Atlas," Box 24, Adolph

Because it uses a narrow bandwidth, music on SCS is not stereo and has about the same fidelity as AM radio, but enjoys FM radio's consistent coverage and ability to fight static and interference. Sometimes there is a problem of crosstalk to the SCS from the main station programming. This can be helped by use of good SCS components, good engineering at the FM station, a good receiving antenna and location free from multipath and/or weak signals. Some stations use SCS for program relaying, finding it reliable and of good enough fidelity to send talk shows or network news to nearby stations, thus avoiding the cost of satellite dishes at all the stations.

There are FM stations broadcasting two distinct programs on SCS at both 67 and 92 kHz. Usually the 92 kHz frequency is for light rock music with vocals or ethnic programming, but a few radio reading services and the Children's Sonshine Network, based at WCSG *91.3 Grand Rapids MI, can be found at 92 kHz in various cities. Virtually all FM stations have phased out the old 41 kHz signal, because that was not compatible with FM stereo. Still WWDB 96.5 Philadelphia is said to have an active 41 kHz when engaged in weekday monophonic talk broadcasting, but not on weekends when 96.5 blossoms in stereo with big-bands music.

Until SCS catches on with more people, listening to the various music or talk programs carries with it an eliteness not enjoyed elsewhere in the broadcast frequencies—and adapters sell for as little as \$18! The *FM Atlas* continues to be the only widely-distributed, popular-priced source to list SCS-equipped stations showing whenever possible exactly what the various stations are using their subcarriers for, with data more refined than previously.

The Canadian Radio-Television Commission, in authorizing FM stations to transmit SCMO (the Canadian term for SCS) has cautioned stations to engage in more creative activity on their subcarriers than providing only background music, pointing out prophetically: "As demands on the FM spectrum increase, particularly for specialized broadcasting services to limited segments of the population, the possibility of a more meaningful use of SCMO will have to be considered." Indeed, CHIN-FM 100.7 Toronto was denied permission for a South Asian Radio Services' SCMO in 1991 by the CRTC because of possible financial impact on other licensees and independent producers of ethnic programming in the area.

It is possible to purchase SCS adapters and receivers from mail-order firms, but the installation of an adapter in most receivers takes some technical expertise. FM receivers made in the early 1960s with a jack marked "multiplex output" will readily accept an SCS adapter, but the newer receivers with FM stereo built in present more of a problem; the signal is filtered out by the time it reaches the earphone or audio out jacks.

services exist on the secondary audio signal (SAP) of various TV stations. The most obvious use of SCS is in transmitting background music to stores, offices and factories which pay a subscribing fee to obtain the service. It is illegal to utilize FM/SCS in a commercial place without paying the fee, but for private in-home listening there should be no problem. If a person contemplating buying an SCS receiver has doubts as to the legality of its use, he or she should contact a local station known to have an SCS for permission to monitor the hidden transmissions.

16 Bowery, 4/F, New York, N.Y. 10013

CHUNG WAH COMMERCIAL BROADCASTING CO., N.Y. LTD.

中華商業廣播電台

Just as increasing numbers of people eavesdrop on public safety bands with scanner receivers and others like to listen in on citizen's band and amateur transmissions (all of which are private communications and not "broadcasting"), so there is good reason to monitor the goings-on in the quasi-private world of SCS radio. In Minnesota, for example, the Talking Book for the Blind network brings daily newspaper readings, articles from magazines, the latest books and even evening audio pornography. Information for farmers, in-school instruction and foreground music occupies the SCS of Wisconsin Public Radio. In several large metropolitan areas across the country there is ethnic programming, including Chinese, Korean, Greek, Haitian French and Russian. Some of these areas having talk and foreign language programs on that medium.

Despite the fact that SCS listening requires equipment not easily found in having background music, for instance.

FM-SCS in almost all parts of North America, except unknowingly—in a store hear the world of entertainment, information and instruction that is carried on unadvertised and unpromoted, the average listener seldom gets the chance to reception requires a special receiver or converter to decode. Because it is center of the station frequency). SCS ("Subsidiary Communications Services")

FMedia! is a good way for you to keep this FMed Atlas updated. Contact the publisher for subscribing information (see back page coupon).

FM: Far More in Reception if You Do it Right

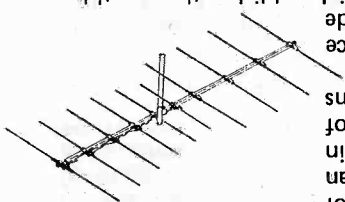

Despite the crowding of the FM dial by new stations and translators, it is still possible to improve your reception range and search out new stations and unique formats. This is best done if you can install an outdoor high-gain antenna (one made specifically for the FM band of 88 to 108 mhz), and which can be rotated in various directions. It is best to aim the antenna away from your strong local stations to minimize overloading of the receiver. That way, you'll be able to hear broadcasters from other cities. When the signals are strong without multipath you'll get both stereo and SCSubcarriers (if your tuner or receiver is equipped for such).

The best antenna is a yagi or log-periodic made especially for FM like your local electronics store might sell. Some newer antennas are in kits which are shippable by most parcel delivery services. If interference from strong local stations continues to be a problem you can cut down on that by using a "trap" which attaches in parallel to the lead going to the 300-ohm input of your tuner, or a tunable FM booster which can either cut down the signal of offending stations or amplify weaker ones. Avoid the use of mast-mounted preamplifiers for FM, since those can invite overload from strong nearby signals to creep in and destroy your reception. Even the most rural of residents must watch out for that, as new stations develop to give primary service almost everywhere.

Serving those who have an interest in long-distance FM (and TV) reception is the nonprofit Worldwide TV-FM DX Association, which publishes the monthly "VHF-UHF Digest." That publication lists occurrences of long-distance reception, such as FM skip, sources of equipment and tips on improving your chances to tune in "DX" (or long distance reception). Annual dues are \$17 U.S., \$18 Canada, and \$27 outside North America. Sample copies of their publication are \$2.00 from WFTDA, P. O. Box 514, Buffalo NY 14205-0514. Some club members have developed techniques to improve the selectivity of FM tuners and car radios, and on antenna phasing, with two receiving antennas and a control which allows for the "tuning out" of nearby stations on the same frequency so that more distant stations can be received.

SCS: From Muzak to Pornography (from an essay in the 1976 *FMed Atlas*)

Riding "piggyback" on many FM stations are voice, music and data signals intended for reception in specific locations or by members of specific groups. Through the process of multiplexing, by which FM stereo is also possible, certain stations transmit a signal on a subcarrier (usually at 67 or 92 KHz from the

THE FM RADIO NEWSLETTER
FM Atlas Publishing

FMedia!

Since January, 1987, I have published a newsletter devoted to FM radio. It generally runs eight pages per month, three columns per typeset page with official and unofficial news on FM radio and related technologies (hence the plural title). It typically includes listings of new FM station grants, call letter and format changes, stations adding stereo or an SCS, and historical information. There's a controversial feature, "AM Happenings Most Likely Caused by FM," a report on industry developments, FM Forum and more.

FMetal Newsletter Helps Update the FM Atlas

Without the valued input from readers who have consistently reported on the FM station developments in their areas, this book would not be as complete as it is. Some of these people have been readers since the *FM Atlas* first appeared in 1972, preceded in 1971 by the

FM Station Atlas.

noted on page 8, "Key to Symbols."

systematically listed nonID and multi-city identifications. Other features of this book are "weather"] in favor of a nearby larger city. This book is the only place where you will see stations in lead off with the city of license, often "burying" it ["KXKT Atlantic-Omaha station regularly mentions other cities, besides its city of license, on the hour. FCC requires "strict nonIDers." A multi-city identification is listed in Part II of the Station Directory if a station is on the top of the hour, but as early as 10 minutes before or up to 10 minutes after) are called "FM-95." Stations which give only their legal, licensed call letters once an hour (usually on the Station Directory, is generally uttered or sung without station call letters—such as "NonID (or "nonidentification"). More than just a "slogan," a nonID, listed in Part II of

or modified radio. See separate article below on FM/SCS. that component identified by the T symbol. You can tune in FM-SCS with a special adapter things. You'll see SCSes listed in Part I of the Station Directory, with the stations having background music, foreign language shows, reading to the blind, data to computers, or other always different from the programming found on the main channel, and could be SCS or SCA. A subcarrier, which certain stations have. The SCS, when present, is almost with large type on the maps, and boosters are included in the "FM Translators" listing.

power of the originating station. Boosters and translators with 250 or more watts are shown within the 60 dB primary signal of a station. Boosters can have up to 20 percent of the segregated section between the two directories. An FM Booster operates on channel, and river for a maximum radius of 13 km. Translators are shown on the maps and in a special, east of the Mississippi for a coverage radius of 8 km, and 250 watts at 107 m west of that a different frequency from the primary station. Translators are limited to 250 watts at 32 m part of a city where terrain or distance makes direct reception difficult. Usually operates on

has a separate stereo identity. WFSQ *91.5) and Sacramento CA (KXJZ *88.9 and KXPR *90.9), each service city (and there is no network involved), as in Tallahassee FL (WFSU *88.9 and monophonic, the other stereo. But when dual-service stations arise in the same When state networks get into the act with two services, invariably one will be distribution of the program in stereo to outlying stations might be too great. stereo generator for that one program. Also, costs of microwave or satellite the program is in stereo, but said it would be too much bother to turn on the *Kellor's American Radio Company*. An MPR spokesperson acknowledged that broadcast in stereo, including the Sunday afternoon rebroadcast on 91.1 are not the market by one. Even the few musical programs remaining on 91.1 are not

multipath affecting the regular FM than the DAB signal, but at least one "gap filler" transmitter was used to boost the DAB, whereas FM had no in-town boosters or translators to similarly help it. The NAB endorsed the Eureka DAB system, which operates outside the FM band, but has recently opened the door to other systems. Concerns of broadcasters are very real—an out-of-band DAB system might entice many speculators to enter broadcasting and add competition for limited advertising dollars, while an in-band system favors FM stations already on the air, and puts AM radio at a greater disadvantage than it now faces. Creating a new band for DAB is seen by some as being similar to Docket 80-90 which greatly expanded the number of FM stations on the air, particularly in small and medium-sized cities. Many of those new stations are unbuilt construction permits (CPs), and among those that did get on the air a high proportion are unprofitable, increasing the attractiveness of their joining a local marketing agreement with another station.

FCC Translator Rules' Loopholes to Benefit the Public?

There won't be an FM translator "industry," FM translators will be strictly a secondary service with no such thing as "low power FM," like there is in TV. So decreed the FCC, prior to publication of the 13th edition *FM Atlas*. Both third parties and licensed broadcasters, however, are taking advantage of rules allowing for higher power FM translators—stations which relay another station usually on a different frequency—to fill in coverage gaps, or in the case of noncommercial stations to increase coverage. One of the supposed "abuses" the out-of-town translators into another market. A loophole in the new rules allows continued funding by the primary station until March 1, 1994, and I have heard speculation that it might be extended indefinitely, at least for operators of existing or "grandfathered" translators.

FM Listening Holds at High Levels

The dramatic growth in FM vs. AM listening appears to have halted, with FM maintaining its 77 percent share of the audience of persons 12 years and older, "the level first achieved in 1989," according to RADAR (Radio's All Dimension Audience Research). Teenagers are among FM's most dedicated fans, with 81 percent "listening solely to FM, as compared to 28 percent of persons 55+." Even among the group 55 and above, just 27 percent listen only to AM, 35 patronize both bands, while 10 percent report no radio listening. [Fall, 1990 report.]

WLOL Minneapolis Swallowed Up by Minnesota Public Radio; Death Knell to 91.1 Stereo

In a move almost unprecedented in the annals of commercial radio, a major market FM station was sold to a public entity. Minnesota Public Radio bought WLOL 99.5 Minneapolis for \$12 million. Despite protests from the Minnesota Broadcasters Association about the loss of 28 jobs at WLOL and "continuing concern about the expansion of MPR and the continual reliance on commercial sales, including too much underwriting and too much commercial activity," the FCC granted the transfer application, *91.1 moved to 99.5 as KSJN, and KNOW-FM, a monophonic news and talk station took over the 91.1 spot, reducing the number of stereophonic stations in

Nobody knows where it will lead, but Digital Audio Broadcasting (DAB) is a technology which could displace regular FM and AM radio in favor of multipath-free FM-like sound on the existing band or a new "L" band in the 1500 mhz (1.5 GHz) range, or even a higher part of the spectrum. DAB systems operating within the existing 88-108 mhz band show promise, but have yet to be tested. Out-of-band DAB systems have mainly been tested on vacant UHF TV channels, with little testing in the proposed higher gigahertz ranges. Test results on buses in Las Vegas failed to prove much differences between regular FM and a DAB version of the same program. At "Radio 1991" in San Francisco, sponsored by the National Association of Broadcasters, there was more
